PSYCHOLOGY (PSYC)

PSYC105 Foundations of Contemporary Psychology
This course will include an introductory-level presentation of ideas and research findings in the major areas of psychology. It will serve as both preparation for upper-level courses in psychology and as a valuable contribution to students' liberal arts education. This course will help students discover what psychology is and what psychologists do. Not only will students learn the basic content of psychology, but the course should help them to think critically about such everyday issues as, In what ways are we like other humans, and how do we differ? What do babies perceive and think? Why do we dream? Content areas include history of psychology, methods of psychological research, biological basis of human behavior, motivation and emotions, learning and memory, sensation and perception, cognitive and social development, personality, intelligence, and psychopathology.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: None

PSYC105F Foundations of Contemporary Psychology (FYS)
This course will introduce the field of psychology through digital projects that include data collection and analysis, video production/editing, graphic design, and script writing. Students will learn about contributions of the brain to our behavior, sensation and perception, emotions, development, learning, mental health, memory, our social world, and more.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: None

PSYC105Z Foundations of Contemporary Psychology
This course will include an introductory-level presentation of ideas and research findings in the major areas of psychology. It will serve as both preparation for upper-level courses in psychology and as a valuable contribution to students' liberal arts education. This course will help students discover what psychology is and what psychologists do. Not only will students learn the basic content of psychology, but the course should help them to think critically about such everyday issues as, In what ways are we like other humans, and how do we differ? What do babies perceive and think? Why do we dream? Content areas include history of psychology, methods of psychological research, biological basis of human behavior, motivation and emotions, learning and memory, sensation and perception, cognitive and social development, personality, intelligence, and psychopathology.

Prereq: None

PSYC112F Psychoanalysis Then and Now: From Freud to Psychosocial Studies (FYS)
Psychoanalysis appears to be little more than an anachronism within the context of modern Psychology, and yet it nonetheless is leading a surprising afterlife—at once defunct as an institutional player and yet at the vanguard of cultural theory and clinical psychology practice. This course traces the trajectory of Psychoanalysis from its origin in Freud's theory of unconscious mental processes and his talking cure to its current manifestations in the field of Psychosocial Studies. We consider how psychoanalysis is an inherently critical practice with the capacity to uniquely situate an individual in relation to social forces that have influenced their personal development, without reducing a person to their social context and/or family history. The course begins with exploration of foundational psychoanalytic concepts (the unconscious, transference, resistance, the drives) and moves to consider the dimensions of social-unconscious processes in groups, institutions, and nations. We also explore how psychoanalysis can inform the psychosocial study of subjectivity, ideology, the intergenerational transmission of trauma, and current sociopolitical issues.

Gen Ed Area: SBS-PSYC
Prereq: None

PSYC113F What is “Typical?” Diversity in Human Development (FYS)
Much of psychological research aims to describe & understand human behavior by studying how typical people think or act in typical circumstances. However, quite a lot can be learned by looking beyond the average and examining the variability of human behaviors, experiences, and abilities. This First Year Seminar will explore the ways that atypical development, neurodivergent minds, and non-normative populations can broaden our understanding of human development. Students will develop academic writing skills while critically engaging with psychological research.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: None

PSYC114F Race in Everyday Space: The Psychological Impacts of Racism (FYS)
"We are all products of a racialized society, and it affects everything we bring to our interactions" (Oluo, 2018, p. 15). This seminar uses psychological theory and research as well as interdisciplinary scholarship (e.g., ethnic studies, history, sociology) to critically unpack this statement. Through the semester we examine the nature and experience of racially marginalized communities in the United States, and engage in critical analysis of the ways in which systems of power affect the everyday lives of racially marginalized communities. As a First Year Seminar, this course will emphasize the continued development of written and verbal communication skills.

Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: None

PSYC115F Your Brain on College: Applying Neuroscience to College Life (FYS)
This course introduces first-year students to reading, writing, and discussing research in neuroscience. We will cover topics related to how the brain perceives and changes in response to experiences that are common in college or university, including building friendships, learning new information, time management, and coping with stress. Students will be encouraged to apply research to their own experiences through several short writing reflections. Students will also develop an APA-style literature review over the course of the semester.
PSYC117F Psychological Science and the Good Life (FYS)
How can we use psychological science to help improve our coping, resilience, and well-being? We are in an intense period of adjustment - historical change in how society functions, a recent shift to a world with Covid-19, and, for you, the transition to Wesleyan and college. Fortunately, psychological science has given us many helpful research findings about how the mind and brain work, how to improve well-being, and how to change our own behaviors and mindsets for a better life. In this course, we will learn about the scientific findings that point us toward well-being, and we will practice the skills that are supported by such evidence. The aim of the course is to leave with a better understanding of psychological science, a toolkit of research-supported practices we can use in our everyday lives, and a supportive community.

Prereq: None

PSYC116F How our Bodies and Minds Shape our Social and Physical Lives
Over the past few decades, psychology has embarked on a serious journey to understand how our minds influence our bodies in ways that are important for our health. However, alongside this journey runs another, equally fascinating one, exploring how our bodies can influence our minds in ways that are important for our social lives. Throughout this course we will examine key insights from both these perspectives. First, we will investigate how the ways in which we think and feel can influence physiological processes that shape our health. Then, we will take a look at how our physiological states can shape our minds by influencing how we think and feel, and the judgments that we form about ourselves and others. We will explore these topics by taking a critical look at some of the most provocative and, at times, controversial methods, ideas, and findings that have emerged from this field of scientific inquiry. This course will involve lecture, readings, visual media, and in-class discussion.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: None

PSYC200 Statistics: An Activity-Based Approach
This course will introduce the concepts and methods used in the analysis of quantitative data in the behavioral and life sciences. The approach will emphasize activity-based learning. Lectures will be used for the initial presentation and wrap-up of topics, but most class time will be devoted to activities in which students perform analyses. The topics covered will include descriptive statistics, sampling distributions, estimation, hypothesis testing, analysis of variance, and regression.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105

PSYC201 Psychological Statistics
This course provides a general introduction to the use of statistics in everyday life and in psychological research. Special emphasis will be placed upon the development of critical thinking skills for evaluating the validity of statistically-based claims found in the media and in published research. In addition, the course will focus on the practical application of statistics and the logical connection between various analytic techniques. Both descriptive and inferential statistics will be discussed, and students will learn to clean and analyze data using Microsoft Excel and specialized statistical software (e.g., SPSS and/or R).

Offering: Host
Grading: Cr/U
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105 OR PSYC101

PSYC202 Qualitative Research Methods in Psychology
The goal of the course is to introduce students to basic research strategies for investigating human thought and behavior, with a focus on qualitative methods. The course provides detailed introduction to different qualitative methods, including interview, observation, case study, content analysis, archival, life history, and narrative techniques. Attention is given to the framing of research questions, design of studies, the ethics of psychological research with humans, and assumptions about human nature. The course is problem- and project-based, providing hands-on research experience.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC204 Methods of Interpretation
Projects incorporating issues of race, gender, and class will be the focus of this methods course. Feminist, phenomenological, experiential, textual, and ecological methods of interpreting gender, race, and class in multimedia formats will be explored.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC261

PSYC205 Research Methods in Psychopathology
How do psychological researchers study unusual and distressing human experiences? This combined laboratory and lecture/discussion course provides an introduction to methods used in the study of clinical and subclinical phenomena. With an emphasis on methodological pluralism in the ‘psy’ disciplines, the course covers both quantitative and qualitative approaches, exploring the intersections between diverse modes of inquiry. Throughout the semester, students conduct a team research project on a psychological topic of the group’s choosing, proceeding through each stage of the research process.
Along the way, we consider the historical context of psychological science, as well as contemporary debates about the nature of psychopathology. We also think critically about the relationship between research methods and the topic(s) under investigation, asking questions such as: Why do psychologists use the methods that they use? How is research in psychology different from research in the other sciences and humanities?

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC206 Research Methods in Cognitive Development and Education
This course introduces students to translational research in psychology—research that draws on psychological science to inform practice. The first third of the course will cover basic research methods, fulfilling the requirement for the major and preparing students to critically read, interpret, and engage in research. Then, we will investigate a series of case studies in which people have attempted to take basic research in developmental science and apply it to education settings. Example research-based interventions we might choose to study include mindfulness, growth mindset, early numeracy, reading instruction, teacher development, and anti-bias education. We will ask questions like: Which aspects of the research did the interventions account for, and which aspects were set aside? What are the factors that facilitate or block the use of research in practice? How are research-based interventions evaluated, and how do the outcomes of those evaluations affect our interpretations of the original research findings? What tradeoffs are made when putting research findings into the real world? How do seemingly small details about how interventions are designed and implemented affect the research-practice interface? Through our discussions, we will cover some core topics located at the bridge between research and practice such as practitioner expertise, science communication, participatory action research, educational design, and implementation science.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC207 Research Methods in Developmental Psychology
The goal of this course is to introduce students to basic research strategies and methods, with a focus on those pertinent to developmental psychology. Course materials will focus on conceptual, design, and analytic issues. This course is designed to provide students with the knowledge, skills, and understanding to conduct and evaluate research. In the service of these goals, students will participate in lectures, readings, discussions, and hands-on projects.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC208 Research Methods on Emotion
This course will focus on methods and techniques to study emotions in their social context, including emotional narratives, interviews, experiments with emotional stimuli (e.g., mood induction), surveys, and daily diaries. We will investigate which methods and techniques are best suited to study various positive and negative emotions. The course will give special attention to ethical issues in emotion research.

Prereq: PSYC200 OR QAC201 OR ECON300 AND PSYC105 OR PSYC105F

PSYC209 Research Methods in Ecological-Community Psychology
The focus of this course is to introduce the student to the historical and conceptual foundations of ecological and community psychology. Special emphasis will be placed on research ethics and framing research questions that address social problems. Students will learn about study design and mixed-method approaches that will provide a foundation to engage in research and practice.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC210 Research Methods in Cognition
This course will examine the experimental method as a means of gaining knowledge about human cognition. Students in this course will learn about general research methods in cognitive psychology related to experimental design, understanding and interpreting research, and ethical issues involved in research with human subjects. Classic research paradigms in cognitive psychology will be explored through the use of interactive demonstrations and in-class experiments.

Prereq: (PSYC105 AND PSYC200) OR (PSYC105 AND ECON300) OR (PSYC105 AND QAC201)

PSYC211 Research Methods in Clinical Psychology
The goal of this course is to introduce students to basic research strategies and methods of psychological science, with a focus on those most relevant to clinical psychology.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: (PSYC105 AND PSYC200) OR (PSYC105 AND QAC201) OR (PSYC105 AND ECON300) OR (PSYC105 AND PSYC201) OR (PSYC105 AND MATH132)

PSYC211Z Research Methods in Clinical Psychology
The goal of this course is to introduce students to basic research strategies and methods of psychological science, with a focus on those most relevant to clinical psychology.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC213 Research Methods in Social Psychology
The course examines research methods and techniques used in social psychology, including observation, correlation, and experimentation. Students will learn about study design, research ethics, and how to collect and analyze data, as well as effective ways to report results. All students are expected to undertake a research project.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC214 Research Methods in Sleep Research
Have you ever read an empirical research article and wondered where the authors got the idea for their research study? Have you ever thought about how
researchers decide on which participants to select and what questions to ask of their study participants? How can we assess the value of a theoretical idea based on empirical evidence? And why might there be conflicting findings when researchers test the same phenomenon?

This course is designed to help students explore these and other questions related to research methods in psychology, with a focus on sleep research. This is an interactive lecture and lab-based course. Through a series of hands-on lab assignments, students will acquire the necessary skill set to be able to critique, analyze, and design psychological research. Students will explore both qualitative and quantitative methodological designs used in psychological research (e.g., experiments, interviews, and surveys). Additionally, students will gain skills in conducting basic statistical analyses (e.g., correlation, t-test, ANOVA). The course will culminate with a final project in which students will design an original research study.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC215 Research Methods: Behavioral Methods in Animal Research
This is a research methods course that provides an understanding of the different approaches to animal research, particularly those using rodent models. It provides students with an understanding of the different techniques employed by researchers and the questions they address. This course provides students with HANDS-ON EXPERIENCE WITH ANIMAL RESEARCH USING RODENT MODELS. Students will learn how to handle and inject rats and will also get a sense of how to design a behavioral experiment, including the use of control groups and counterbalancing. The course will follow a lecture/discussion/lab format where students will learn about different forms of conditioning (operant/classical) and how these apply to various behavioral tasks such as operant responding, autoshaping, decision-making, locomotion testing, etc. (see readings for more examples). One class each week will take place in the lab to provide students with hands-on experience with rats and the testing apparatuses. Students will be assigned a rat for the semester that they will use to collect and analyze data during lab classes. This will be combined with regular class discussion of research articles dealing with each topic, including some of the earlier reports and more recent applications. The focus of the course will be on trying to prepare students to design and carry out behavioral/animal research in a laboratory setting.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105 OR [NS&B213 or BIOL213 or PSYC240]

PSYC216 Research Methods in Diversity Science
This course introduces students to the research methods important to conducting scientific inquiry into topics related to inequality, oppression, and disparities in life outcomes across a broad range of experiences of marginalization (e.g., gender, race, sexuality, and the experiences at the intersections of these domains). In the process of introducing research methods pertinent to diversity science, we also discuss foundational and contemporary research in diversity science.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105 AND (PSYC200 OR PSYC201 OR QAC201 OR ECON300)

PSYC217 Research Methods in Neuroscience and Behavior
This course introduces students to general research methods common for studying behavior and its biological underpinnings. Students will learn to design, conduct, and interpret research related to behavior and biology. Topics will include general research design (e.g., correlational vs. experimental studies, cross-sectional vs. repeated measures), discussions of ethical considerations in research, tools for measuring behavioral and physiological/neurological variables, and appropriate interpretation and presentation of results. Students will complete a behavioral research study during the semester.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105 AND (PSYC200 OR PSYC201 OR QAC201 OR ECON300 OR MATH132)

PSYC220 Cognitive Psychology
Cognitive psychology, a major branch in the field of psychology, is the scientific study of human adult mental processes. The goal of this course is to provide a broad introduction to the issues, methods, and phenomena that characterize the field. These will be brought to life with selected examples of influential empirical studies and, occasionally, practical applications. In seeking constraints on theories of how the mind works, we will draw primarily on studies of adult human behavior (e.g., reaction time, task accuracy), individuals with localized brain damage (e.g., visual agnosia), and measures of brain activity (e.g., as inferred using fMRI techniques). Computer models and nonhuman animal studies will also be considered. Broad topics will include attention, perception, memory, knowledge, reasoning, and decision making. The course is lecture-based but will incorporate discussions, demonstrations, video, and group activities.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Identical With: NS&B220
Prereq: PSYC105

PSYC222 Sensation and Perception
This course explores our perceptual systems and how they create and shape our experience of the world around us. We will consider the neurophysiology of perceptual systems as well as psychological approaches to the study of perception, covering all of the human senses with a special emphasis on vision. Class demonstrations will introduce students to interesting perceptual phenomena.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Identical With: NS&B222
Prereq: PSYC105 OR [NS&B213 or BIOL213 or PSYC240]

PSYC225 Cognitive Neuroscience
This course provides an introduction to cognitive neuroscience—the study of how the brain enables the mind. We will begin with an overview of the neural substrates of cognition and the tools for understanding the structure and function of the human brain. Then we will cover neural processes that support sensory perception and attention, memory, motor control, language, executive control, and emotional and social functioning. We will also discuss mechanisms of brain evolution, development, and repair, and their implications for various diseases and disorders.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Identical With: NS&B225
PSYC226 Psychological Theories of Learning and Motivation
The goals of this course are to help students develop practical, evidence-based skills for effective classroom learning, understand and appreciate research on the neuroscience of learning and motivation across species, and apply theories of learning and motivation to understanding human behavior. Course objectives for achieving these goals include: implementing evidence-based practices; dispelling myths about learning; explaining mechanisms of memory consolidation and factors that modulate it; distinguishing between and identifying components of operant and classical conditioning; and explaining how each theory of motivation can be used to understand why people behave in certain ways.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Identical With: NS&B238
Prereq: PSYC105 OR [NS&B213 or BIOL213 or PSYC240]

PSYC227 Motivation and Reward
This course will focus on motivation and reward, providing students with a background in and understanding of the various theories and approaches to studying the topic of motivation, including an introduction to some of the history and the current advances in the field. The course uses animal and human research to try to unravel the brain areas and neurotransmitter systems involved in different forms of reward, including food, sex, and drugs, and examine cases of disordered motivation such as drug addiction, obesity, and disordered gambling.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-NSB
Identical With: NS&B227
Prereq: PSYC105 OR [NS&B213 or BIOL213 or PSYC240]

PSYC228 Clinical Neuropsychology
This introductory course will examine the relationship between brain functioning and cognition, behavior, and emotion through the study of human brain disorders. The course will begin with a brief overview of basic human regional neuroanatomy, followed by an exploration of neuropsychological assessment and intervention (its history, rationale, goals, and procedures). These topics will provide a foundation for the discussion of more specific topics in neuropsychology (e.g., traumatic brain injury, dementia, psychiatric disorders, cerebrovascular disorders, seizure disorders, learning disabilities, autism) and the role that neuropsychologists play in the evaluation and treatment of individuals with these disorders.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-PSYC
Identical With: NS&B228
Prereq: PSYC105 OR [NS&B213 or BIOL213 or PSYC240]

PSYC230 Developmental Psychology
This course is an introduction to human behavior and psychological development focusing on infancy and childhood. We will examine theory and research about physical, social, emotional, language, brain and cognitive development, with emphasis on cognitive development.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC230Z Developmental Psychology
Please note: readings and assignments will be due during winter break, prior to arriving on campus for Winter Session. Please visit the Winter Session website for the full syllabus -- http://www.wesleyan.edu/wintersession.

In this two-week, full-credit course, students will learn how children develop across different domains -- physical, cognitive, language, social-emotional, identity, personality. We will emphasize the primary research literature in developmental science and expose students to the fundamental methods and theories used to study how children develop. In the process, we will learn to appreciate the beauty and detail of human development, as well as the ingenuity of research in the field over the last several decades.

Please note that the course is broken up into two chunks with a week-long break in the middle. Students will have a writing assignment to work on during the break.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: None

PSYC239 Functional Anatomy of the Human Brain
The human brain is an organ with the consistency of firm Jell-O, weighing about 2.5 pounds in an adult. It is made of 86 billion neurons and approximately the same number of non-neuronal cells. Contrary to common misconceptions, we use all the neurons in our brains, not just a small fraction of them from the regions dedicated to the function being performed. Brain cells organize in distinctive anatomical structures, which are interconnected through complex circuits that control nearly every function of the body, such as learning and memory, thinking, consciousness, and aesthetic appreciation. Its malfunction results in a variety of diseases, including senility, mood disorders, and motor/sensory dysfunctions. This course will examine in some detail the complex organization of the brain and how it performs some of its basic functions. The course will familiarize students with the medical terminology and neurological concepts for a general understanding of the human brain and spinal cord, being of special interest for pre-med students, NS&B, biology, and psychology majors; and anyone simply interested in how the brain works.
Offering: Crosslisting
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B239, BIOL239
Prereq: [NS&B213 or BIOL213 or PSYC240]

PSYC240 Behavioral Neurobiology
This course will introduce the concepts and contemporary research in the field of neuroscience and behavior. The course is intended for prospective neuroscience and behavior majors (for whom it is required) and for biology and psychology majors who wish a broad introduction to neuroscience. The initial few weeks will be devoted to fundamental concepts of neuroanatomy and neurophysiology. Subsequent classes will deal in-depth with fundamental problems of nervous system function and the neural basis of behavior, including neurotransmitter systems; organization of the visual system and visual perception; the control of movement; neurological and neuropsychiatric disorders; the neuroendocrine system; control of autonomic behaviors such as feeding, sleep, and temperature regulation; the stress response; and language, learning, and memory. Experimental results from a variety of species, including humans, will be considered.
Offering: Crosslisting
Grading: OPT
There is a wide range of variability in sexuality and gender. This course reviews the experiences of people with various sexualities, gender identities, and gender expressions, as well as how people come to develop beliefs about sexuality and gender.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC250 Personality
What does personality mean? Can you measure it? Who studies it and why? This course is designed to give a deeper understanding of these questions that psychologists interested in personality study, how they study these in a scientific manner, and how they use this knowledge to help others.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC251 Psychopathology
This course provides an overview of psychopathology, the study of "abnormal" behavior or mental disorders. From various theoretical perspectives, the ways that abnormality is defined will be considered. You will learn what we know and don't know about the phenomenology, diagnosis, and causes of mental disorders. Major domains of psychopathology, the symptoms and behaviors associated with common mental disorders, and the mechanisms hypothesized to be involved with them will be covered. The ways that different paradigms steer the development and implementation of treatments will be examined. This course is not designed to help resolve personal experiences with mental illness. This class will challenge widely accepted ideas about mental illness. You will learn to think critically about how mental illness is understood by society, mental health professionals, and clinical researchers.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105

PSYC253 Educational Psychology
This course will focus on three major topics and how they relate to current educational policy debates. The first topic will be an examination of the fundamental purpose of school. We will discuss theoretical and empirical perspectives on why schools exist and ways in which school purpose varies by school type (e.g., public, private, charter) and location (e.g., by state and country). The second topic to be covered relates to the implementation of school mission. In this context, we will reflect on how theories of child development, student motivation, classroom management, and pedagogy inform instructional practice. Finally, the third major topic that will be covered is how to determine whether schools are achieving their stated goals. We will examine the appropriate (and inappropriate) uses of assessment for understanding whether students are learning, whether teachers are effective, and whether a school has a positive or negative climate.

Prereq: None

PSYC259 Discovering the Person
This course surveys major developments in psychology and psychiatry from 1860 to the present. Through readings and lectures, the course introduces the major schools, theories, and systems in the American "psy" sciences. We examine the kinds of persons who were "discovered," the techniques of discovery, the
PSYC265 Culture in Psychology: An Introduction to Theory and Research
Culture is central to the study of mind and behavior. This course will provide students with an introduction to theory and research on culture in psychology. We will discuss what culture is, the methods that psychologists use to study culture, and how much of our behavior is universal or culture-specific. We will explore how culture influences how we think, feel, and behave.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC266 Psychology of Communities: Identity, Activism, and Social Engagement
This course serves as an introduction to community psychology. Students will read about, research, and discuss major topics in the field, including the ecological framework, diversity paradigms, social change, and empowerment.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

PSYC267 Global Mental Health
During the past half-century, mental health professionals have increasingly explored the international reach and cross-cultural relevance of their work. Practitioners have traveled from country to country in order to work with local populations, including those experiencing traumatic circumstances such as war and natural disasters. Professional organizations such as the American Psychological Association have developed guidelines and recommendations for multicultural competence. Researchers have investigated the cross-cultural epidemiology and expression of mental health challenges; for example, according to the World Health Organization, one in four people across the globe will experience a mental disorder at some point in their lives.

What does it mean to establish the global prevalence of mental disorders? Is psychological distress, including the distress that results from traumatic exposure, experienced and interpreted in the same way in all cultural contexts? While some scholars have argued that mental disorders are a global epidemic requiring a uniform, universal response, others have suggested that the exportation of psychological discourse and approaches from Western countries has eclipsed local expressions of distress and indigenous healing traditions. This course will explore these questions and controversies using the tools and frameworks of multicultural psychology. We will place particular emphasis on the social, cultural, structural, and environmental determinants of mental health. We will address mental health disparities between high- and low-income countries, as well as the meanings of psychiatric explanatory models in advantaged and disadvantaged communities. Populations of focus will include migrants, refugees, internally displaced persons, and the urban homeless. Throughout the course, we will explore the growing research in the field of indigenous psychology, which promotes local knowledge, as well as the structural competency movement, which emphasizes the socio-institutional origins of health disparities.

PSYC286 Contemporary Literacy: What Does It Mean to Be Literate in the 21st Century?
What does it mean to be literate in the 21st century? Through this course, students will delve into the process of literacy development and explore the implications of our global technological society for literacy development and literacy education. Topical explorations will include the cognitive and neuroscientific development of literacy, adolescent literacy considerations, media and digital literacy, and the potential effects of an ever-increasing digital society on literacy abilities and functions. Critical literacies, including critical media literacy, will be explored as a special topic.

Students will embark on an investigation into the abilities of American schools and educational media developers to meet dynamic, contemporary literacy demands by evaluating multiple forms of literacy tools aimed at children and teens. The course will also provide a discussion of research standards in the field of literacy and encourage critical evaluation of empirical research.

PSYC287 Understanding Inequality: Psychological and Educational Perspectives
This class focuses on recent work by psychologists, economists, and education researchers examining the effects of growing inequality on our collective mental health and on the school-related performance of children in particular. One class theme is that U.S. economic inequality has grown substantially in the past few decades, so that we now have one of the highest levels of inequality of any advanced industrialized country in the world. A second key theme is how few Americans are aware of the extent of these changes and their effects on the well-being of children and adults. The course also focuses on the nature of the "American Dream" and how distorted perceptions of social mobility affect many Americans' concerns about inequality. The overall class concentrates on how these economic realities and related psychological misperceptions have combined to create a cascade of negative psychosocial and educational consequences, ranging from "deaths of despair" in adults, to increased mental health issues in children, to the growing polarization of educational opportunities and outcomes at all ages. Among the topics that will be covered are: the growth of wealth and income inequality in U.S. (including comparisons with other advanced, industrialized countries); psychological research on how people perceive and misperceive inequality; the moral nature of inequality in relation to thinking about distributive justice; the psychological literature on the consequences of inequality; and, finally, the limitations of a meritocracy for addressing these consequences. This course fulfills the Category 1 requirement for the Education Studies Major and Minor, and an elective credit for the Psychology Major.

Prereq: None

PSYC288Z Zero to Infinity: The Psychology of Numbers
What are the origins of mathematical thinking, and why do some people become experts while others get nervous calculating a tip? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their intuitive understanding of numbers, geometry, and space to successfully navigate their environments. Yet, individual differences in math achievement emerge early in development and often persist throughout children's education. In this course we read and discuss both foundational and cutting-edge articles from cognitive science, education, and psychology to understand how mathematical thinking develops. We will also tackle questions such as: How do culture and varying social contexts affect numerical understanding? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? This class will involve a blend of synchronous class-time meetings and asynchronous work.

PSYC291 Language and Thought
This course provides a close examination on the relationship between language and thought, a central question in cognitive science and a very active area of research and theory in recent years. Students will be exposed to theoretical and empirical work evaluating several prominent hypotheses about language and thought, including the hypothesis that the language you speak influences or even determines the thoughts you can think. The case studies to be evaluated will include object kinds, number, spatial relations, time, gender, theory of mind, and causality.

PSYC293 Towards Antiracist Psychological Science
What does it mean to conduct "antiracist" studies that "decenter whiteness"? What investigative practices are warranted and what scientific foundations are necessary for doing innovative, antiracist research? This course takes up these questions, grounding exploration of scientific practices in a fuller understanding of psychology's history and epistemology. We examine past practices that fostered and sustained racist beliefs, consider race theories, and explore key concepts including reflexivity, positionality, diversity, elite capture, race theory, indigenous psychologies, and social justice. These and related concepts along with historical, philosophical, and theoretical analyses are engaged to locate research methods and professional practices that move toward realizing antiracist science.

PSYC295Z The Science of Happiness
This course is being offered as a blend of synchronous class meetings and asynchronous work involving small group discussions.) Positive psychology is the study of human happiness. The field has compiled an enormous research base offering evidence of the fundamental components of well-being and flourishing. While former work used a narrow, Western definition of happiness, the discipline later broadened its focus to include traditionally Eastern concepts such as social harmony and compassion. More recently, the field has been redefined through second-wave and third-wave positive psychologies, both of which seek to break free from the binary concepts of "positive" and "negative" in favor of a dialectic approach, while utilizing concepts of flourishing through suffering found in indigenous psychology, and including models for systemic change found in social work, sociology, and economics.

This course will trace the history and development of positive psychology from its inception to the current state of the field, using a positive psychology text supplemented by journal articles. Core concepts will be discussed and critiqued. It will require students to keep "flourishing Journal" and complete out-of-class activities for personal reflection upon and practice of individual experiences of happiness. Additional course requirements include shorter and longer reflection papers, in-class discussion, and a final project.

PSYC301 Social Media and Development: Constructing the Self Online
Humans typically develop their view of themselves, or their self-concept, through interactions with others in their community. For adolescents, this takes place typically within school environments and other community institutions as they begin to rely less on their parents. With the dawn of social media, these interactions are taking place on a global scale with increased anonymity. How does this social and technological change impact how teens and young adults form their views of themselves? What implications do these changes have for adults who work with adolescent populations? This course will explore these questions, illuminating an understanding of the accepted model of self-concept development and the impacts of social media. Students will also explore related concepts of self-esteem and social development. This course will use empirical research to examine and critique the overall negative view of social media usage amongst adolescents, and train students to probe commonly accepted viewpoints using careful scholarship. The course will provide a discussion of research standards in the field of social media research and encourage critical evaluation of empirical research.

PSYC304 Celebrating Learner Differences: Creating Inclusive Classrooms Using Research
How do humans develop the capacity to learn? This course will focus on the dynamic influence of the cognitive, social emotional, and demographic factors involved in this process, using a research-based framework. Students will be encouraged to evaluate the learning process throughout K-12 educational settings and will explicitly learn to read and critique research in the learning sciences. Students will also evaluate the utility of research in different learning settings and the effectiveness of associated pedagogical tools and strategies.

The course will begin with a discussion on learning sciences research and explicit instruction for research evaluation. Topical considerations will include the development of human memory, executive function, attention, and other cognitive processes that underlie learning and information processing. Students will also explore background factors, including socioeconomic status, and social emotional factors, including motivation and emotion, as predictive and associated factors for learning and information processing.
This course fills the Category 1 requirement for the Education Studies Major and Minor. It satisfies the ELECTIVE only requirement for the PSYC major.

**PSYC311 Children’s Learning from Media**

Children are surrounded by media that aim to teach them, from television shows that introduce Spanish, to books that promote kindness, to apps that explain the biological world. How do children learn from the wide range of educational media they encounter? In what ways do media set the stage for children’s expectations about the world? And does our modern, digital era suggest a shift in children’s education? In this course, we will explore theoretical questions and empirical research to better understand how children learn from media and how different forms of media affect cognition and behavior. We will focus primarily on infancy and early childhood as periods of tremendous growth and increasing exposure to media, but will also discuss media use during middle childhood and adolescence. We will consider topics that have been well-studied and important questions that remain unanswered in the field. We will also turn a critical eye to the historical lack of representation (i.e., race, gender, disability, sexual orientation, family structure, etc.) in children’s media and discuss necessary changes. Throughout the course, we will engage critically with empirical research, develop ideas for testing unanswered questions, and practice communicating about research to the public.

**PSYC313 Psychology of Power, Status, & Inequality**

Differences in power and status can be found in almost every society around the world. This course will provide an introduction to power and status by focusing on the theories and methods that contemporary psychologists use to understand these fundamental aspects of social life. First, we will explore who is more likely to gain power and status (e.g., personality characteristics of powerholders); the methods that people use to do so (e.g., asserting one’s dominance or expertise); and the influence of power and status on basic psychological processes, such as attention, emotion, and perception. The second part of the course will review the potential consequences of power and status on various aspects of our lives, from decision-making and goal pursuit to interpersonal and intergroup relationships, as well as health and well-being. Throughout the course we will discuss not only how power and status dynamics give rise to inequality, but also how their effects may, in turn, be shaped by the degree of inequality in a given society. The course will involve lecture, discussion, and readings of relevant primary sources.

**PSYC316 Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives**

The goal of this seminar will be to critically investigate the concept of schizophrenia as a unitary disease construct, from historical, neuroscientific, and phenomenological approaches, and the implications of these views for our understanding of treatment of the disorder. How are we to make sense of a psychiatric disorder that has changed so substantially in definition over time, with wide interindividual difference in symptom expression and functional outcome, a wide array of competing theories regarding etiology and biological mechanisms, and correspondingly diverse treatment interventions? We will engage these questions through three separate units that will evaluate the disorder from three different levels of analysis: (1) readings in the history of psychiatry and the perspective they cast on schizophrenia as a unitary disease concept; (2) an analysis of contemporary work in neuroimaging and experimental cognition in the disease and the current status of creating a coherent account of neurocognitive mechanisms of the disease, as well as a neurocognitive approach to novel interventions; and (3) new work on understanding the experience of the disease from first-person accounts and the systematic analysis of these accounts as a window to understanding heterogeneity in the disease and novel approaches for therapy.

**PSYC316Z Schizophrenia and its Treatment**

Please note: readings and assignments will be due during winter break, prior to arriving on campus for Winter Session. Please visit the Winter Session website for the full syllabus - http://www.wesleyan.edu/wintersession.

The goal of the seminar will be to critically investigate the concept of schizophrenia as a unitary disease construct, from historical, neuroscientific, and phenomenological approaches, and the implications of these views for our understanding of treatment in the disorder. How are we to make sense of a psychiatric disorder that has changed so substantially in definition over time, with wide interindividual difference in symptom expression and functional outcome, a wide array of competing theories regarding etiology and biological mechanisms, and correspondingly diverse treatment interventions? We will engage these questions through three separate units that will evaluate the disorder from three different levels of analysis: (1) readings in the history of psychiatry and the perspective they cast on schizophrenia as a unitary disease concept; (2) an analysis of contemporary work in neuroimaging and experimental cognition in the disease and the current status of creating a coherent account of neurocognitive mechanisms of the disease, as well as a neurocognitive approach to novel interventions; and (3) new work on understanding the experience of the disease from first-person accounts and the systematic analysis of these accounts as a window to understanding heterogeneity in the disease and novel approaches for therapy.
PSYC317 Seminar in Adoption & Culture
This seminar uses psychology theory and research, as well as interdisciplinary scholarship from across the social sciences and humanities, to critically examine the psychological experience of being adopted. We will examine the nature and experiences of adoption, including international, domestic, transracial, and same-race adoptions. We will draw on critical scholarship that highlights systems of power and questions the established “truths” of adoption (e.g., adoption as saving an orphan). Further, we will examine the ways in which belonging to a minoritized culture, race, or ethnicity impacts the ways in which individuals experience adoption. Example topics include adjustment, birth family, identity, migration, and well-being.

PSYC318 Culture and Subjectivity
This is a course about neoliberal culture, its distinctive social and psychological characteristics, and possible alternative conceptions of the social and forms of subjectivity in the 21st century. Neoliberalism is a contested signifier that designates both an economic program and a cascade of cultural changes that began coalescing and accelerating in the early 1980’s and has continued to exert an influence that has only recently been challenged by the resurgence of nationalism ushered in by the Trump era which has reverberated across the globe. Over the course of its development, neoliberalism has had widespread ramifications not only as an economic doctrine that spurred and intensified globalization but also as a cultural ideology that has influenced self-concept and modes of social relating. This course focuses on the concept of human subjectivity and how subjectivity appears within a neoliberal horizon. The critical psychologist Thomas Teo states, "society, culture, and history provide forms (molds) of subjectivity, whereby (developing) individuals have the agency to sometimes choose, expand or change forms, and in rare circumstances, they may even be able to transcend these forms. Under normal circumstances, however, humans adapt, (ful)fill, and actively 'suture' into these forms, allowing for variations and new actualizations. " To elucidate the current cultural molds informing neoliberal subjectivity, the historical development of neoliberal economic doctrine and its implementations will be studied, followed by an examination of neoliberal cultural products (e.g. Serial TV and Social Media) considering both their content and form. Finally, recent reactionary phenomena will be considered in relation to the effects of neoliberalism as well as what social and subjective alternatives exist within our current indeterminate conjuncture.

PSYC322 Psychology of Decision-Making
We make decisions all the time. The vast majority of decisions have little consequence, though some are monumental and can deeply affect our lives. The broad goal of this course is to explore the science of judgment and decision-making. We will leverage concepts and research from the fields of psychology, neuroscience, and economics to understand how an individual makes judgments and decisions, why these decisions are subject to bias, and whether humans are “rational” decision-makers. Along the way, we will examine major questions that have guided decision research, consider domains where decision-making could be improved, and think of practical applications of course concepts to everyday life. Foundations of Contemporary Psychology (PSYC 105) is strongly recommended as a prerequisite (plus any courses listed under individual sections), as this is an upper-level course (that relies on student contributions) in the Psychology Department.

Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC261

PSYC325 Healthy Places: Practice, Policy, and Population Health
The built environment influences many aspects of health and well-being: psychological stressors (crime, noise, and violence), what people eat, the water they drink, the air they breathe, where (or if) they work, the housing that shelters them, where they go for health care, what social networks are available for support, and how political power is distributed and public resources allocated. How cities, suburbs, and rural areas are managed; local policy; and planning and design decisions can all help determine whether the places we live will be threats to public health and, perhaps more important, to an aging society. The focus of this course connects the fields of planning, psychology, and public health to explore contemporary challenges (and innovations) in the 21st-century built environment. Students will explore the multiple forces that impact population health, how to analyze these determinants, and what roles planning and public health agencies, as well as other institutions such as local governments, civil society, the private sector, and communities themselves, can play in research and action aimed at improving physical and mental health.

Prereq: None

PSYC328 Current Research in Early Childhood
Early childhood is widely seen as a time when the environment exerts particularly strong influences on individuals, with large effects on children’s risk or resilience for healthy developmental outcomes. Research in this area provides a way to consider and evaluate claims about this developmental period. What knowledge does society need about this period to promote healthy development for all children? Where do children learn social skills? Why do children play with some toys but not others? How does timing affect the impact of early interventions? What foundational skills help all children learn to read? By what mechanisms does economic poverty affect development?

This advanced seminar will explore current research in early childhood. We will focus on the period from birth to five years, drawing on empirical work in developmental psychology, cognitive science, and education to discuss major topics and debates. These include cognitive and academic foundations for later schooling; emotional development and social skills; social identity and sense of self; self-regulation and executive functions; play; adverse factors in development; risk, resilience, and vulnerability; culture, socioeconomic status, and poverty; developmental neuroscience; early childhood education; and public policy. Guest visits by experts in some of the areas will complement our readings and discussions.
PSYC329 Neural Costs of War
This course focuses on stress reactions that result because of exposure to war, combat, and related atrocities. You will learn about the diagnosis of PTSD, including its development and history. There is a strong emphasis on the neural and cognitive mechanisms for stress-related psychopathology and the overlap of psychological and neural systems with the damaging effects of traumatic brain injury. While interactions of these mechanisms with social and cultural processes are considered, the primary emphasis is on the neural and cognitive mechanisms.

To be fully prepared for this course, students should have a solid grounding in neuroscience and behavior, as well as basic psychopathology.

PSYC332 Seminar in Cognitive Neuroscience
This seminar is an in-depth analysis of the ways that scientists study the neural basis of cognition in humans. Topics to be covered include the representation of visual categories, the neural influence of attention, episodic memory, theories of spatial cognition, and decision-making. Through reading and discussion of primary research articles, we will evaluate the methods and theoretical debates in each domain, while recognizing and integrating common themes that link across the field. Students will also learn how to work with simple computer models and simulations (using Python), in order to gain a strong foundation in the computational principles that underlie recent advances in the field of cognitive neuroscience.

Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105

PSYC333 Psychology of Human Sexuality
This course introduces the psychology of human sexuality in its evolutionary, physiological, reproductive, and social contexts. We'll explore various psychological theories of human sexuality, as well as sexual motivations, sexual anatomy, sexual response, sexual pleasure, gender and gender identity, sexual orientation, sexual behavior, sexuality across the life span, safe sex, and consent.

In addition, this course covers contemporary issues that may arise each week, such as sex education, gender diversity, and sexual orientation. For example, National Coming Out Day is during October, and the benefits and drawbacks
of self-disclosure will be discussed using excerpts from the podcast SexEd Debunked, which details a personal coming out story. In light of the current political climate, it is anticipated that politically sensitive topics may be discussed in class to sort out myths from evidence supported by scientific research.

The course emphasizes current research in psychology, sexology, and sociology and will be inclusive across cultures, races, ethnic groups, gender, sexual orientation, and relationship orientation. This course is also intended to be responsive to student questions and to provide a space for discussions in a non-judgment, inclusive, and accepting environment.

**PSYC340 Seminar on Migration and Child Development**
How do the current politics of borders and citizenship impact the well-being of migrant children, youth, and families? How do U.S. immigration policies intersect with what research tells us about what children need to thrive? Is there a role for psychologists to inform today's discourse on immigration policy? These are a few of the questions that we will be exploring throughout our time in this class.

Through class readings, discussions, and course assignments, we will examine why and under what circumstances children and families migrate to the United States. We will explore how various parts of the migration experience relate to child and adolescent development. Together we will analyze contemporary immigration policies through the lens of developmental psychology. Students will learn to grapple with the opportunities and limitations of developmental science to inform immigration policies that matter for the day-to-day lives of immigrant children and families.

**PSYC343 Sleep and Psychosocial Functioning in Youth**
Have you ever wondered whether it's worthwhile to pull an all-nighter in hopes of improving your grades on an exam the next day? Have you ever noticed that you snack more when you're having trouble sleeping? And why is it that some individuals seem to have the most energy late at night, while others are most alert early in the morning? This course is designed to orient students to the fascinating world of sleep and psychosocial functioning. We will briefly explore the architecture of sleep and analyze theoretical explanations for the functions of sleep. The bulk of the course will focus on examining predictors and consequences of ("normal") sleep in relation to various aspects of psychosocial functioning, including mental health, interpersonal relationships, technology use, cognitive functioning, and chronotype. We will examine these associations specifically within the context of late childhood, adolescence, and emerging adulthood. As part of this course, you will have the opportunity to track your own sleep via an objective sleep monitor and keep a sleep diary for part of the course.

**PSYC347 Science of Suicide Risk & Prevention**
This course will explore the science of suicide research, prevention, and intervention. Topics will include terminology, epidemiology, historical and contemporary theories of suicide, ethical and methodological challenges to suicide research, risk and protective factors, empirically supported approaches to prevention and intervention, suicide in the media and popular culture, and emerging issues and controversies in the field of suicidology. In many ways, the field of suicide research is young and knowledge is rapidly changing. Special attention will be paid to novel methodological advances in clinical psychological science. The course will use books, empirical articles, class discussion, critical thinking, exams, and writing assignments to accomplish its learning objectives. This course is not designed to resolve personal experiences with suicidal thoughts, suicide loss, or mental illness nor will it address assessing suicide risk among friends or family members.

PSYC356 Seminar in Intergroup Peace and Conflict
This seminar is an in-depth analysis of key psychological readings on the topic of intergroup peace and conflict. Topics covered include key psychological theories in intergroup relations used to articulate the reasons and sources for intergroup conflict (i.e., Social Identity Theory, Realistic Group Conflict Theory), topics covering how intergroup conflict is perpetuated (i.e., revenge, collective memory and collective victimization), strategies to reduce conflict and promote peace (i.e., contact theory, norm interventions, intergroup dialogues, protest), and behaviors that ideally progress beyond conflict (i.e., apologies, forgiveness, reconciliation, reparation). Additionally, the course examines philosophies of peace. Students in the course will not only discuss psychological strategies that are used to move toward peace, but critically consider/reconsider what a peaceful society means and what one would actually look like. Through reading and discussion of theoretical and experimental research articles, we will not only evaluate the methods scholars use to study these real-world issues, but also critically analyze and deconstruct the theoretical underpinnings influencing how psychologists approach and evaluate intergroup conflict and peaceful societies.

PSYC359 Making the Psychological: Discovering, Manufacturing, Circulating
Psychology aims to explain human experiences and thoughts, including unconscious ones. Using scientific methods, psychology produces valid representations of human nature, names them, and circulates that knowledge for both its truth value and usefulness to society and individuals. Despite much success in these aims, the validity of much of psychology’s knowledge is in being challenged - as evidenced in recent concerns about the reproducibility of experiments. We will examine the epistemic grounds of psychology’s truth claims and consider alternative models that understand the truth claims to be enactments, constructions, or ideologies that rehearse cultural beliefs. Case studies of science-based knowledge eventually found to be inaccurate or exaggerated (priming research; the power pose) are used to examine how some truth claims are generated and challenged, and cases of robust research are used to explore how some truth claims acquire credibility inside and outside the laboratory. We ask, too, how these claims travel to be taken up as new ways for individuals to experience the self and social world, and examine the public’s and our own aspirations to expand consciousness and act otherwise. Students will develop case studies of psychological knowledge, its validation, circulation, and effects in the world.

PSYC361 The Psychology of Prejudice and Discrimination
This seminar offers a social psychological analysis of different forms of prejudice and discrimination, including racism, sexism, anti-Semitism, heterosexism, and
PSYC326 Health Psychology: the Psychology of Illness and Wellness
This course provides an introduction to the rapidly growing field of health psychology. The mind and body are inextricably bound. Nowhere is the profundity of this connection more on display than in the context of physical injury or medical illness. We will synthesize foundational writings with selections from current research to explore the psychological theories, methods, and interventions used to support medical patients and promote physical health and well-being. We will consider the various ways psychology can enhance health promotion and medical treatment outcomes, and, through the lens of health equity, examine how social and structural factors influence them.

PSYC365 Seminar on Emotion
The objective of this course is to explore the use of the language of theater in the illumination of psychological questions. Material for the course will be about half drama, half readings from social psychology. Among the issues to be explored are politics as theater, audience effects, role-playing as a teaching and therapeutic technique, the actor's identity problems, and general theory of the mask.

PSYC370 Advanced Psychology Seminar for Thesis Writers
This is an advanced seminar course for students completing a thesis (Senior Honors or BA/MA) in a psychology lab or related research discipline. The course will allow students an opportunity to develop skills that are relevant for thesis writers. A specific focus of the course will be on developing research presentation skills. This course will also provide students an opportunity to practice how to effectively discuss their thesis topic with a broader audience.
Offering: Host
Grading: Cr/U
Credits: 0.50
Gen Ed Area: SBS-PSYC

PSYC375 Advanced Research in Social Psychology: Social Representations of Crime in Children's Television
This is an advanced research seminar examining the relationship between adult understandings about crime and criminals and the images depicted in children's entertainment. Working with the instructor, students will become part of an active research lab, collecting and analyzing qualitative data that will ultimately contribute to a project that aims to connect early childhood media exposure to adult understandings about such things as the "causes" of crime, the demographics of crime, and solutions to crime. Students will gain significant knowledge about and fluency with social representation theory, as well as hands-on experience using a variety of qualitative data analysis techniques.

PSYC376 Advanced Research in Adolescent Racial Identity and Resistance
Students in this advanced research course will contribute to ongoing research studies in the area of adolescent ethnic-racial identity and sociopolitical development. Students will be introduced to community- and school-based research methods with marginalized youth and families. Students will contribute to different aspects of the research such as literature reviews, collecting and analyzing qualitative and/or quantitative data, data management, and manuscript preparation.

Gen Ed Area: NSM-PSYC
Prereq: None

PSYC377 Advanced Research in Racism and Intergroup Relations
Students in this advanced research course will contribute to ongoing research studies on the topics of race, racism, and intergroup relations. Students will be introduced to social psychological and cultural psychological research methods within the study of racism and intergroup relations. Students will contribute to different aspects of the research process such as literature reviews, collecting and analyzing quantitative and/or qualitative data, data management, and manuscript preparation.

Prereq: None

**PSYC382 Advanced Research in Decision Making**

This course is designed to allow students to conduct supervised research in the area of the cognitive psychology of reasoning and decision making. Working as a team with the instructor and other members of the research group, students will undertake a semester-long experimental research project on a topic in reasoning and decision making.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: SBS-PSYC
Identical With: NS&B382
Prereq: None

**PSYC383 Advanced Research in Learning and Memory**

This advanced research course is designed to allow students to conduct supervised research in the area of human learning and memory. Students will become familiar with both classic and contemporary studies in memory and undertake a semester-long experimental research project that seeks to answer a current question in the field of memory research either individually or as a group. Students will get to work on all aspects of the research project, including reviews of the background literature; generation of research ideas; the design, conduct, and analysis of a study; and a write-up of research findings in a journal-article format.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Identical With: NS&B383
Prereq: None

**PSYC384 Advanced Research in Cognitive Development**

This course is designed to allow advanced students to conduct a supervised group research project in cognitive development. Working with the instructor, students will conduct an experiment that seeks to answer a current question in the field of cognitive development.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: None

**PSYC385 Advanced Research in Digital Learning**

This hands-on research seminar provides advanced and applied experience in the design, delivery, and evaluation of digital learning. Students will have the opportunity to develop skills in curricular design, the review of research focused on project-based learning strategies, the design of evaluation research, support for digital learning in diverse educational environments, and the collection and analysis of quantitative and qualitative learning data.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: None

**PSYC386 Advanced Research in Sleep**

This advanced research course is designed to provide students with an in-depth understanding of how to critique and analyze psychological research. Specifically, we will focus on research within the field of sleep and psychosocial functioning. This seminar course takes an intensive lab-based approach. Students will have access to a comprehensive dataset that includes assessments of stress, anxiety, depression, physical activity, interpersonal relationship quality, personality, procrastination, and chronotype. Based on this data, students will be expected to commit to a semester-long project, which involves analyzing data and reporting findings on a self-selected topic. Upon completion of this course, students will have a strong working knowledge of the field of sleep and psychosocial functioning. This course also provides opportunities for students to develop analytical, writing, critical thinking, and presentation skills. Students also will gain data analytic skills using the Statistical Package for the Social Science (SPSS) program.

Offering: Host

Gen Ed Area: SBS-PSYC
Prereq: (PSYC105 AND PSYC200)

**PSYC388 Advanced Research in Measurement**

In this advanced seminar on psychological measurement, students will receive individualized mentoring from the instructor on each aspect of the course, including conducting an in-depth literature review on a topic, developing a new measurement instrument, gathering and analyzing pilot data using a variety of advanced statistical methods (e.g., factor analysis, Rasch measurement, item response theory), and writing a professional paper reporting on the results and future directions.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-PSYC
Prereq: PSYC105

**PSYC389 Advanced Research in Social and Historical Process**

Students will become familiar with core theories on the temporal dynamics and cultural diversity of psychological phenomena. Students will work collaboratively on empirical projects that engage and appraise the theories.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: SBS-PSYC
Prereq: PSYC105

**PSYC390 Experimental Investigations into Reading**

Experienced readers can easily recognize thousands of words. The mental dictionaries of these readers are efficiently organized to allow rapid and seemingly effortless word recognition. There are still many unanswered questions about the processes involved in visual word recognition. In this class, students will work together with the instructor to design and carry out an experimental investigation relating to reading and word recognition. The semester will provide students with a chance to integrate all aspects of the experimental process: idea formation, experimental design, data collection and analysis, interpretation, write-up, and presentation.

Offering: Host
Grading: A-F
Credits: 1.00

**PSYC391 Advanced Research in Cultural Phenomenology**

This seminar is designed for seniors doing theses in cultural psychology to share their ideas and for juniors who are thinking about a thesis to explore various research directions.

Offering: Host
tasks may include study design, data collection, clinical interviewing, data
and self-injurious behaviors. Depending on the semester and student interests,
supervised research in clinical psychology, specifically in the area of suicide

**PSYC397 Advanced Research in Clinical Psychology**

This advanced research course provides students the opportunity to conduct supervised research in clinical psychology, specifically in the area of suicide and self-injurious behaviors. Depending on the semester and student interests, tasks may include study design, data collection, clinical interviewing, data management, data analysis, and manuscript preparation. Weekly lab meetings will focus on current topics in clinical research and will include student presentations. All students will complete a research paper in journal article format. It is expected that those enrolled in this course will work independently and take initiative to extend their learning in the areas most consistent with their interests.

Note: This course is not designed to resolve personal experiences with suicidal thoughts, suicide loss, or mental illness, nor will it address assessing suicide risk among friends or family members.

Credits: **1.00**

Gen Ed Area: **SBS-PSYC**

Prereq: None

**PSYC399 Advanced Research in Gambling, Drugs, and Junk Food**

This advanced laboratory course provides in-depth training in the experimental methods of behavioral neuroscience of motivation and reward and provides students with hands-on experience with animal research using rodent models. The capstone of the course gives students the opportunity to carry out an independent group animal research project in the lab, which may require a slightly heavier time commitment for the duration of the experiment (typically around two weeks). Students will learn how to handle rats in a behavioral neuroscience research setting and how to design and carry out an experiment to measure reward and motivation using diverse apparatuses such as operand (Skinner) boxes or conditioned place preference chambers. Research typically focuses on rodent models of gambling, diet-induced obesity, and drug addiction. The course also focuses on strengthening students’ scientific writing and oral presentation skills.

In addition, the course contains a service learning component in which students will work to develop a brief presentation/talk on a topic related to gambling, eating disorders, or drug addiction. Students will practice their talk in class with the aim of presenting it to local middle and high school students, in order to provide more information and education about these topics and the state of current research surrounding them.

PSYC500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop BEFORE the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.
