BIOLOGY MAJOR

ADMISSION TO THE MAJOR

Students are encouraged to begin their major in the first year so that they can take maximum advantage of upper-level biology courses and research opportunities in later years. However, the major can certainly be successfully completed if begun during sophomore year, and many students are able to combine the biology major with a semester abroad.

A prospective biology major begins with a series of two core introductory courses. Students should begin the core series with BIOL181 and its associated laboratory course, BIOL191, which are offered in the fall semester. BIOL181 is offered in a number of small sections rather than a single large lecture class. These small sections allow for problem-based learning at a more individualized pace as students master the first semester of university-level biology. Students should enroll separately for the lab course, BIOL191. These courses do not have prerequisites or co-requisites, but it is useful to have some chemistry background or to take chemistry concurrently. In the spring semester, the prospective major should take BIOL182 and its laboratory course, BIOL192. An optional spring course, BIOL194, is offered to students of BIOL182 who wish a challenging reading and discussion experience in addition to the lectures.

MAJOR REQUIREMENTS

The biology majors program of study consists of the following.

- The two introductory courses, BIOL181-BIOL182, with their labs, BIOL191-BIOL192.
- At least six elective biology courses at the 200 and 300 levels
  - including one mid-level cell/molecular course (either MB&B208, BIOL210, BIOL212, or BIOL218) and
- Note: No more than three of these mid-level courses (listed above) may be counted towards the six advanced elective requirement.
- Important Information for Double Majors: At least two elective courses (200-level and above) that are counted toward the Biology major cannot be simultaneously used to fulfill any other major.
- In addition, if a student is double majoring in Biology and NS&B, NS&B/BIOL213 cannot count toward the 6 electives required for the Biology major; however, NS&B/BIOL 213 will fulfill the Column 2 breadth requirement.
- Two semesters of general chemistry (CHEM141-CHEM142 or CHEM143-CHEM144)
- Any three additional semesters of related courses from at least two different departments:
  - organic chemistry (CHEM251 or CHEM252)
  - physics (PHYS111, PHYS112, PHYS113, or PHYS116)
  - mathematics (MATH117 or higher),
  - statistics (MATH132, BIOL320/BIOL520, QAC201 ECON300 or PSYC200)
- computer science (COMP112, COMP211, or higher)
- earth and environmental sciences (E&ES280 E&ES320)
- NOTE: Two Statistics courses, even from different Departments cannot both be counted as cognates

Biology majors are allowed to apply at most one elective course or one cognate course taken credit/unsatisfactory toward fulfilling the major requirements; however, this is discouraged because good performance in amor courses is an important aspect of a student’s transcript.

A strong chemistry background is especially recommended for students planning to enter graduate or medical school. Most medical and other health-related graduate schools require two years of college-level chemistry, including laboratory components, as well as a course in biochemistry.

- Students planning to go on to medical, dental, or other health professions graduate school should note that a year each of introductory biology, physics and math (such as calculus or statistics) and tow years of chemistry (general and organic) are required for admission, including any laboratory components.

Electives may be chosen from among the following courses at the 200, 300, or 500 levels. See WesMaps for current course offerings. The courses are grouped thematically for your convenience only.

ANTH202

counted toward the major. Two Wesleyan courses that fall into this category are

Depending on the student’s specific program, and with prior permission of

Biology majors are allowed to apply at most one elective course taken credit/
unsatisfactory toward fulfilling the major requirements; however, this is
discouraged because good performance in major courses is an important aspect
of a student’s transcript.

Courses in the BIOL 400 series (such as research tutorials) contribute toward
graduation but do not count toward the major.

The following courses do not have prerequisites and, as such, are appropriate for
non-majors.

Additional courses that may be credited to the major: BIOL320, E&ES234,
MB&B228 and MB&B383, and ECON300. MB&B228 may be counted as long as
neither MB&B208 nor MB&B383 is counted toward the major.

The Biology Department expects its majors to develop a broad and integrative
understanding of the theory and practice of biology across a range of disciplines
and levels of biological organization. The curricular requirements of the

STUDENT LEARNING GOALS

The Biology Department expects its majors to develop a broad and integrative
understanding of the theory and practice of biology across a range of disciplines
and levels of biological organization. The curricular requirements of the
major are designed to provide enough flexibility for each student to choose a
disciplinary emphasis of most interest and fulfill the additional expectation of
achieving some depth of knowledge in a particular area through a relatively
intensive classroom or laboratory experience. In this context, we want our
students to develop skills in critical and quantitative thinking, creative problem
solving, and intuition for the process of scientific reasoning. We also encourage
our students to engage in ethical thinking about biological research and the role
of biology in society and sustainability. A complete program of study in biology
entails the application of these skills to designing or conducting original research
(including scholarly research via scientific databases), writing about and orally
communicating scientific concepts, as well as the comprehension and critical
interpretation of primary scientific literature. Our ultimate goal is, therefore, to
train students to use their biological knowledge and skills to become effective,
scientifically informed citizens and professionals.
ADVANCED PLACEMENT

Students who have received a grade of 4 or 5 on the AP exam may receive one university credit toward graduation.

Students with a score of 4 or 5 may place out of one of the two Introductory Biology Courses - BIOL181 or BIOL182 but must first consult with an instructor teaching these courses.

Students interested in placing out of MB&B181 in the fall semester should contact Professor Michelle Murola (mmurola@wesleyan.edu) regarding the placement exam.

No follow-up course is required. These courses are considered essential background for our upper level courses; students are highly encouraged to enroll in both semesters.

However, we recommend against this for almost all students, especially those who may be interested in the biology major. Although some of the MB&B181/BIOL181 material will be familiar from a high school AP course, the depth and rigor of MB&B181/BIOL181 provide a strong foundation as you move forward to more advanced courses. Alternatively, students with AP 4 or 5 may consult individually with the BIOL182 faculty regarding placing out of this second-semester introductory course. However, both courses are considered essential background for our upper-level courses; students are highly encouraged to enroll in both semesters.

PRIZES

Dr. Neil Clendeninn Prize. Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed his or her sophomore year and in that time have exemplified those qualities of character, leadership, and concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

The Peirce Prize. Awarded in successive years for excellence in biology, chemistry, and geology.

TRANSFER CREDIT

Up to two outside credits for biology courses may also be applied from another institution (during a study-abroad program, for example). Prior permission must be obtained from the departmental liaison (Professor David Bodznick (dbodznick@wesleyan.edu)) to ensure creditability of specific courses from other institutions.

RELATED PROGRAMS OR CERTIFICATES

Environmental Studies Certificate. The Environmental Studies (ENVS) program is interdisciplinary and offers both a certificate and a linked major. The ENVS linked major is a secondary major and requires a student to also have a primary major in another department, program, or college. ENVS majors write a senior thesis or essay in environmental studies that is mentored by a professor in another department, program, or college (e.g., biology). There is also an opportunity to earn an ENVS certificate, which does not require a senior thesis or essay. See: wesleyan.edu/coe/academics/ (https://wesleyan.edu/coe/academics).

Informatics and Modeling Certificate. The Integrative Genomic Science pathway within this certificate will be of particular interest for life science majors. See wesleyan.edu/imcp/igs.html (https://wesleyan.edu/imcp/igs.html).

Neuroscience and Behavior Program. Several faculty members in the Biology and Psychology departments also participate in the Neuroscience and Behavior Program that, at the undergraduate level, constitutes a separate major. Information about that program can be found at wesleyan.edu/nsb (https://wesleyan.edu/nsb).

The graduate program is an integral part of the Biology Department’s offerings. Not only are graduate students active participants in the undergraduate courses, but, also, upper-level undergraduates are encouraged to take graduate-level courses and seminars (500 series). Research opportunities are also available for undergraduates, and, frequently, these involve close interaction with graduate students.

BA/MA PROGRAM

[wesleyan.edu/grad/degree-programs/bama.html (http://www.wesleyan.edu/grad/degree-programs/bama.html)]

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are advised to begin research by their junior year if they intend to pursue the BA/MA in biology. Seniors can apply by December 1 and will be notified of their status by the end of January. Admission is competitive and based on GPA, faculty recommendations, and research experience.

ADDITIONAL INFORMATION

The seminar series features distinguished scientists from other institutions who present lectures on their research findings. One objective of these seminars is to relate material studied in courses, tutorials, and research to current scientific activity. These seminars are usually held on Thursdays at noon and are open to all members of the University community. Undergraduates are especially welcome.

HONORS

To be considered for departmental honors, a student must

- Be a biology major and be recommended to the department by a faculty member. It is expected that the student will have at least a B average (grade point average 85) in courses credited to the major.
- Submit a thesis based on laboratory research, computational research, or mathematical modeling. The thesis is carried out under the supervision of a faculty member of the department.

CAPSTONE EXPERIENCE

As a capstone experience, senior biology majors are encouraged to participate in one of the following opportunities for intensive scientific engagement: a hands-on laboratory or field course, participation in lab research (typically begun prior
to senior year), or enrollment in an advanced (300-level) seminar or class. A series of faculty-student dinners during fall and spring of senior year provide further opportunities to discuss emergent scientific issues and approaches and their relation to students’ career goals.
