FALL 2018

August
1. 21 Tuesday Graduate housing opens
2. 26 Sunday New international undergraduate students arrive
3. 28 Tuesday Graduate Orientation begins, 8 a.m.
4. 29 Wednesday Class of 2022, new transfer, visiting, and exchange students arrive
5. 31 Friday Course registration for Class of 2022, new transfer, visiting, and exchange students

September
1. 1 Saturday University housing opens for all undergraduates, 9 a.m.
2. 3 Monday Classes begin
3. 9 Sunday GLS Fall Orientation for new students
4. 10 Monday GLS classes begin
5. 14 Friday Drop/Add Period ends, 5 p.m.
6. 28 Friday For courses in which students have a choice of grading mode, the final choice must be made by 5 p.m.
7. 28-30 Friday–Sunday Family Weekend

October
1. 12 Friday Last day to withdraw from 1st-quarter classes
2. 19 Friday 1st-quarter classes end
3. 19-24 Friday–Wednesday Fall Break begins at the end of classes on October 19 and ends on October 24, 8 a.m.
4. 20 Saturday Homecoming
5. 24 Wednesday 2nd-quarter classes begin. *2nd-quarter classes may be added or dropped during the five working days following the first class meeting

November
1. 20 Tuesday Thanksgiving recess begins at the end of classes
2. 26 Monday Thanksgiving recess ends, 8 a.m.
3. 30 Friday Last day to withdraw from full-semester and 2nd-quarter classes

December
1. 7 Friday GLS classes end, undergraduate and graduate classes end
2. 8–11 Saturday–Tuesday Reading Period begins on December 8 and ends on December 11, 5 p.m.
3. 10-16 Monday–Sunday GLS final examinations
4. 11-15 Tuesday–Saturday Undergraduate final examinations begin December 11, 7 p.m., and end December 15, 5 p.m.
5. 16 Sunday University housing closes, noon

SPRING 2019

January
1. 3 Thursday All Fall 2018 grades submitted to the Registrar’s Office. Grade entry system closes, 11:59 p.m.
2. 21 Monday On-campus Enrollment Period for undergraduates and graduates begins
3. 22 Tuesday University housing opens for all undergraduates, 9 a.m.
4. 23 Wednesday Course registration for new transfer, visiting, and exchange students
5. 24 Thursday Classes begin
6. 27 Sunday GLS Spring Orientation for new students
7. 28 Monday GLS classes begin

February
1. 6 Wednesday Drop/Add Period ends, 11:59 p.m.

Wesleyan University: A Brief History

Wesleyan University was founded in 1831 by Methodist leaders and Middletown citizens. Instruction began with 48 students of varying ages, the president, three professors, and one tutor; tuition was $36 per year.

Today Wesleyan offers instruction in 46 departments and 45 major fields of study and awards bachelor of arts and graduate degrees. The master of arts degree and the doctor of philosophy are regularly awarded in 11 fields of study. Students may choose from more than 900 courses each year and may be counted upon to devise, with the faculty, some 900 individual tutorials and lessons.

The student body is made up of approximately 2,900 full-time undergraduates and 140 graduate students, as well as 100 part-time students in Graduate Liberal Studies. A full-time faculty of about 300 is joined each semester by a distinguished group of visiting artists and professors. But despite Wesleyan’s growth, today’s student/instructor ratio remains at 8 to 1, and about three-quarters of all courses enroll fewer than 20 students.

Named for John Wesley, the founder of Methodism, Wesleyan is among the oldest of the originally Methodist institutions of higher education in the United States. The Methodist movement was particularly important for its early emphasis on social service and education, and from its inception Wesleyan offered a liberal arts program rather than theological training. Wesleyan’s first president, Willbur Fisk, a prominent Methodist educator, set out an enduring theme at his inaugural address in September 1831. President Fisk stated that education serves two purposes: “the good of the individual educated and the good of the world.” Student and faculty involvement in a wide range of community-service activities reflected President Fisk’s goals in the 19th century and continues to do so today.

Wesleyan has been known for curricular innovations since its founding. At a time when classical studies dominated the American college curriculum, emulating the European model, President Fisk sought to put modern languages, literature, and natural sciences on an equal footing with the classics. When Judd Hall, now home to the Psychology Department, was built in 1870, it was one of the first American college buildings designed to be dedicated wholly to scientific study. Since the 1860s, Wesleyan’s faculty has focused on original research and publication in addition to teaching.

The earliest Wesleyan students were all male, primarily Methodist, and almost exclusively white. From 1872 to 1912, Wesleyan was a pioneer in the field of coeducation, admitting a limited number of women to study and earn degrees alongside the male students. Coeducation succumbed to the pressure of male dominance, and 1912 saw the return of coeducation, heralding a dramatic expansion in the size of the student body, and gender parity was achieved within several years.

In 1953, is the oldest program of its kind and grants the master of arts in liberal studies (MALS) and the master of philosophy in liberal arts (MPhil) degrees. During this same period, the undergraduate interdisciplinary programs, the College of Letters, the College of Social Studies, and the now-defunct College of Quantitative Studies, were inaugurated. Wesleyan’s model program in world music, or ethnomusicology, also dates from this period. Doctoral programs in the sciences and ethnomusicology were instituted in the early 1960s.

During the 1960s, Wesleyan began actively recruiting students of color. A number of Wesleyan faculty, students, and staff were active in the Civil Rights Movement, and the Reverend Martin Luther King Jr. visited campus several times. By 1968, women were again admitted as exchange or transfer students. In 1970, the first female students were admitted to Wesleyan’s freshman class since 1909. The return of coeducation heralded a dramatic expansion in the size of the student body, and gender parity was achieved within several years.

Wesleyan’s programs and facilities expanded as well, and new interdisciplinary centers were developed. The Center for African American Studies, which grew out of the African American Institute (founded in 1969), was established in 1974. The Center for the Arts, home of the University’s visual and performance arts departments and performance series, was designed by prominent architects Kevin Roche and John Dinkeloo and opened in the fall of 1973. The Mansfield Freeman Center for East Asian Studies was established in 1987. The Center for the Americas, which combines American studies and Latin American studies, was inaugurated in 1998. The Center for Film Studies, with state-of-the-art projection and production facilities, opened in 2004.

An addition to the Freeman Athletic Center opened in 2005 with the 1,200-seat Silloway Gymnasium for basketball and volleyball, the 7,500-square-foot Andersen Fitness Center, and the Rosenbaum Squash Center with eight courts.

Fall 2007 marked the opening of the Suzanne Lemberg Usdan University Center and the adjacent renovated Fayerweather building, which retains the towers of the original Fayerweather structure as part of its facade. The Usdan Center overlooks Andrus Field (home of Corwin Stadium and Dresser Diamond), College Row, and Olin Library, and houses dining facilities for students and faculty, seminar and meeting spaces, the Wesleyan Student Assembly, the post office, the box office, and retail space. Fayerweather provides common areas for lectures, recitals, performances, and other events; it contains a large space on the second floor, Beckham Hall, named for the late Edgar Beckham, who was dean of the college from 1973 to 1990. In winter 2012, the historic squash courts building (41 Wyllys Avenue) on College Row was renovated; now renamed Boger Hall, it is the state-of-the-art home for the Gordon Career Center, the Paoletti Art History Wing, and the College of Letters.

Michael S. Roth ’78 became Wesleyan’s 16th president at the beginning of the 2007–08 academic year. He has undertaken a number of initiatives that have energized the curriculum and helped to make a Wesleyan education more affordable for many. He has emphasized a three-year degree program that can save families as much as $50,000; eliminated loans for most students with a family income below $60,000, replacing them with grants; and ensured that other students receiving financial aid are able to graduate without a heavy burden of debt. Allbritton Hall, opened in 2012, has become a hub of civic engagement—encompassing the Patricelli Center for Social Entrepreneurship, the Allbritton Center for the Study of Public Life, and the Jewett Center for Community Partnerships. Four new interdisciplinary colleges also have been launched: the College of the Environment, the College of Film and the Moving Image, the College of East Asian Studies, and the College of Integrative Sciences. Another new initiative, the Shapiro Creative Writing Center, brings together the College of the Humanities, the College of Letters, and the MALS program. Since 2011, applications for admission have increased substantially to record levels. During this time Roth oversaw the most successful campaign in Wesleyan’s history. The campaign raised a total of $482 million, including more than $270 million in support of one of Wesleyan’s highest priorities: new endowment and annual funding for financial aid.
WESLEYAN’S CURRICULUM

Wesleyan University is dedicated to providing an education in the liberal arts that is characterized by boldness, rigor, and practical idealism. At Wesleyan, students have the opportunity to work at the highest levels, discover what they love to do, and apply their knowledge in ways the world finds meaningful. While Wesleyan has no core requirements, the University has established General Education Expectations that are designed to encourage breadth within the student educational experience. Students select courses in consultation with advisors, creating customized itineraries of study in three intellectual spheres: the arts and humanities (HA), the social and behavioral sciences (SBS), and the natural sciences and mathematics (NSM).

OPEN CURRICULUM

When students direct their own education in consultation with intensively engaged faculty advisors, they learn to think independently, explore questions from multiple points of view, and develop habits of critical thinking that are hallmarks of a liberal education. Wesleyan upholds the principle that student choice fosters the drive to explore freely and seek connections across courses, generating the intellectual excitement that can fuel liberal education as a lifelong pursuit. With the freedom to sample liberally from across the curriculum, students are able to experience the surprise of unexpected ability in fields new to them and to make fruitful connections across subject areas that do not traditionally intersect. This can generate innovative depth of study and new ways of seeing—with students posing questions from one discipline to the assumptions of another.

MAJORS, MINORS, AND CERTIFICATES AT WESLEYAN — AREAS OF STUDY

With a large variety of majors, minors, and certificates (http://www.wesleyan.edu/academics), Wesleyan students have the opportunity to work at the highest level, discover what they love to do, and apply their knowledge in meaningful ways.

MAJORS

A degree of disciplined mastery in a major field of learning is an important dimension of a liberal arts education. The major may help a student prepare for a specific profession or may be necessary for a more specialized education in graduate school or other postbaccalaureate educational institution. Majors can take several forms—a departmental or interdepartmental major or a college program (College of Letters or College of Social Studies). Generally, students declare a major in the second semester of their sophomore year—when they have sampled widely from different areas of the curriculum, have completed the first stage of their General Education Expectations, and are ready to develop deeper knowledge in a particular area of study.

LINKED MAJORS, MINORS, AND CERTIFICATES

Some majors (College of Integrative Sciences, environmental studies) may only be declared as linked majors in conjunction with another major. In addition to major fields of study, Wesleyan also offers optional minor fields of study and certificates (similar to interdisciplinary minors). Students may not declare more than a combined total of three majors, certificates, and minors.

GENERAL EDUCATION EXPECTATIONS

Wesleyan’s open curriculum challenges students to create their own plan for general education. Academic coherence here does not rely on a core curriculum or a set of required courses; instead, students propose their academic plan to their faculty advisors and recalibrate it with their advisors each semester as their discoveries lead them to pursue new areas or deepen existing strengths. By the end of the first two years, students are expected to have earned at least two course credits in each of the three areas (HA, SBS, NSM), all from different departments or programs. In the last two years, students are expected to take one additional course credit in each of the three areas. A student who does not meet the expectation of a total of nine general education course credits by the time of graduation will not be eligible for University Honors, Phi Beta Kappa, honors in general, and honors in certain departments, and may not declare more than a combined total of two majors, certificates, and minors.

COMPETENCIES

To help students identify and describe the skills they gain on their journey through Wesleyan’s open curriculum, we’ve developed a flexible framework of four competencies to reflect on and consider as students build—and share—their own personal narrative about their Wesleyan experience. The four competencies are: Mapping: Navigating Complex Environments; Expressing: Writing, Expressing, Communicating; Mining: Quantitative Analysis and Interpretation; and Engaging: Negotiating Intercultural Differences.

Mapping is defined as the ability to examine the relationship of objects and spaces in the material and imagined worlds. It involves developing tools to create, manipulate, and navigate constructed and natural environments and charting movement through and interactions with space and its consequences. Expressing is defined as the ability to express thoughts, ideas, and emotions to others effectively and concisely through a variety of media. Mining is defined as the ability to use numerical ideas and methods to describe and analyze quantifiable phenomena. It involves learning about the measurement, analysis, summary, and presentation of information, including about the natural world, as well as answering questions, solving problems, making predictions, and testing and constructing theories by employing mathematical, statistical, logical, and scientific reasoning. Engaging is defined as the ability to comprehend and respect diverse cultural heritages and perspectives in relation to their wider historical and social contexts. It involves reading, speaking, or understanding a second or third language (contemporary or classical); gaining experience working, studying, or traveling abroad, or in other unfamiliar cultural contexts; and participating in the political and social life of local and global communities.

ACADEMIC ADVISING

An academic advisor is assigned to each first-year student from faculty who are either teaching a course the student will take in the first year or teaching in a field in which the student has expressed interest. Once a student declares a major, the advisor is assigned from that department or program. Students, with the help of faculty advisors, typically put together an academic itinerary that includes lecture-style courses, smaller seminars, laboratories, and performance courses. Every student is given the opportunity to take a seminar course specially designed for first-year students. These first-year seminars (FYS) vary dramatically—from presenting the work of a specific thinker to introducing an unfamiliar area of study—but all tend to emphasize the importance of writing at the university
level and the methods used to collect, interpret, analyze, and present evidence as part of a scholarly argument. Faculty teaching these classes highlight the type of writing associated with their respective disciplines and help students improve how they develop, compose, organize, and revise their written work. Each FYS is limited to 15 students.

**WESMAPS AND WESPORTAL**

WesMaps (http://www.wesleyan.edu/wesmaps) is the indispensable online guide to the curriculum used by students to map their academic schedule each semester. WesPortal contains both personal information added by students and official information that helps track their progress toward fulfilling General Education Expectations, majors, and University requirements. WesPortal is an important advising tool for students and their faculty advisors. WesPortal applications provide students with online access to their course schedule, grades, academic history, Moodle, course registration, student accounts, campus events, and more. Using these applications, students and their advisors are able to make informed decisions leading to a thoughtful academic experience.
STUDENT ACADEMIC RESOURCES

Wesleyan provides a range of academic services to students in support of learning both inside and outside the classroom. The Writing Workshop and Math Workshop are important resources available to all students. Student Academic Resources (SAR) includes programs for intellectual enrichment and academic support. One key element of SAR is the work of Academic Peer Advisors (APAs). APAs are upperclass students who work during new student orientation and throughout the academic year to support Wesleyan’s faculty advising program, enhance student access to academic resources, and strengthen students’ academic skills. In addition, the Deans’ Peer Tutoring program provides content-based tutoring services for most courses and is available to all students.

The goals of SAR are to foster a community culture that recognizes the relationship between intellectual growth and personal development; to ensure that students know about and are encouraged to seek out appropriate services; and to share information among programs and constituents to ensure the provision of high-quality and accessible services that facilitate academic achievement for all students. More information is available on the academic resources (http://www.wesleyan.edu/sar) website.

CAREER ADVISING

Employers and graduate schools look for applicants who can write well, think critically, and solve problems independently. Because of their liberal arts training, Wesleyan students attain these skills in the context of a wider knowledge of human experiences. While students need not prepare narrowly for their careers, Wesleyan encourages them to give careful thought to their lives after graduation.

The Gordon Career Center works with students of all class years to:

- Translate their liberal education, and campus and community experiences, into a lifetime of meaningful work
- Explore their interests, personality, skills, and experiences to identify potential career options that fit their unique profile
- Write professional resumes, CVs, cover letters, and personal statements for job, internship, fellowship, and graduate/professional school applications
- Find meaningful summer opportunities to bolster and build professional skills and experiences related to their career aspirations
- Conduct successful job and internship searches, prepare and practice for interviews, and build strong relationships with employers and Wesleyan alumni
- Research and connect with professional schools, graduate schools, and degree programs; craft competitive applications; and navigate the school decision-making process
- Transition to life after Wesleyan, whether through employment, a fellowship, graduate or professional school, a service program, volunteer opportunity, or personal adventure

The Gordon Career Center uses an intuitive and modern career management platform, Handshake (http://wesleyan.joinhandshake.com). This mobile-ready recruiting application is designed to help students discover and explore jobs, internships, organizations, and events all personalized to their specific career interests.

HEALTH PROFESSIONS AND PREMEDICAL ADVISING

Health professions graduate schools welcome students with a liberal arts background. A liberal arts education does not exclude the scientific and quantitative knowledge required to become an outstanding health professional; rather, it includes courses from these disciplines within a larger intellectual context. Students are encouraged to explore and test their interest in a given health profession through internships, summer employment, volunteer positions in a clinical setting, and shadowing health professionals before applying to graduate school. The Gordon Career Center (https://wesleyan.edu/careercenter) and the Office of Community Service (http://www.wesleyan.edu/jccp) provide information about volunteer opportunities on campus and in the local community for students considering the health professions. Experience in conducting research may also be very useful in learning about a field and developing the skills needed to contribute to the field and to evaluate the work of others. Students with a particular interest in the natural sciences have the opportunity to participate in laboratory research projects under the supervision of Wesleyan faculty who are principal investigators with on-campus research groups that may also include graduate students. In recent years, undergraduates have also participated in public health and clinical research both on and off campus. Some student researchers have been coauthors of papers published in scientific journals or have presented the results of their research at scholarly meetings. Beginning with the first week of the first year and continuing beyond graduation, a specialized health professions advisor is available to assist students and graduates interested in any of the health professions with academic planning, identification of summer opportunities and meaningful postgraduation employment, and preparation for and navigation of the application process to health professions graduate schools. The Wesleyan Health Professions Panel offers current students and those within five years of graduation a letter of institutional sponsorship at the time of application to medical, dental, or veterinary school. The success of Wesleyan’s alumni in various health fields attests to the quality of our undergraduate curriculum and our career advising. The percentage of applicants with Wesleyan undergraduate degrees accepted into medical school is significantly above the national average.

PREBUSINESS

Wesleyan alumni are sought after in the business world. A significant number of the organizations that recruit Wesleyan students are business concerns. Recent top employers have included Amazon, Bloomberg, BlackRock, Booz Allen Hamilton, Citi, Google, IBM, JPMorgan Chase, and Venture for America. Wesleyan has a reputation among employers for producing students who have well-developed organizational and leadership skills. A Wesleyan student in almost any major who does well and plans his or her courses with an eye toward meeting entrance requirements for professional study will be well prepared for business school. It is rare for undergraduates to go directly to a top-tier business school without work experience. In fact, many of the top-tier business schools require two to four years of work experience for competitive candidates. Students interested in fields such as banking and consulting should plan to take quantitative courses offered by a number of academic departments to seek an internship in their field of interest as early as sophomore year.

PRELAW

Law schools have long recognized that liberal arts institutions provide the best possible preparation for future attorneys. They look for students who possess particular intellectual skills: the ability to think critically, analyze a situation, extract pertinent information, and communicate effectively, both orally and in writing. Any academic major is acceptable to a law school. Traditionally, popular subjects of study for prelaw students have included history, government, economics, English, American studies, and philosophy. Now, however, law schools also encourage science majors and students with a background in the
arts to apply. Wesleyan students participate in community service and other work related to law, including with the Northern Virginia Capital Defender Office, the NYS Task Force, Legal Aid Society (NYC), and Justice at Work, as well as with private firms in various locations. The Gordon Career Center (http://www.wesleyan.edu/careercenter) has a designated prelaw advisor who provides resources and information for students considering careers in and related to law. Students and graduates are encouraged to meet with an advisor individually, attend informational workshops, and seek faculty assistance to navigate the law school selection and application process.
ACADEMIC REGULATIONS

- Degree Requirements (p. 11)
- Major (p. 11)
- GenEd Expectations (p. 12)
- Academic Standing (p. 13)
- Honors (p. 13)
- Academic Review and Promotion (p. 14)
- AP, IB, and Other Prematriculation Credit (p. 15)
- Acceleration (p. 16)
- Nondegree (p. 16)
- Transfer Students (p. 16)
- Study Abroad (p. 17)
- Internal Special Study Programs (p. 17)
- External Special Study Programs (p. 19)
- Advanced Degrees (p. 20)
- General Regulations (p. 21)

DEGREE REQUIREMENTS

Wesleyan University confers only one undergraduate degree, the bachelor of arts. Degrees are awarded once a year at Commencement. Students who complete the requirements for the degree at other times during the year will be recommended to receive the degree at the next Commencement. Based on a modification voted by the faculty, the requirements for this degree specified below are for students entering Wesleyan in and after the fall of 2000. Students who entered Wesleyan prior to the fall of 2000 must refer to the appropriate section of the degree requirements and academic regulations at wesleyan.edu/registrar/academic_regulations/prior_2000.html (https://wesleyan.edu/registrar/academic_regulations/prior_2000.html).

GRADUATION REQUIREMENTS

The requirements are (1) satisfaction of requirements for a major; (2) satisfactory completion of 32 course credits, no fewer than 16 of which must be earned at Wesleyan or in Wesleyan-sponsored programs; (3) a cumulative average of 74 percent or work of equivalent quality; and (4) at least six semesters in residence at Wesleyan as full-time students for students entering in their first year (for students entering as sophomore transfers, at least five semesters in residence at Wesleyan as full-time students; for students entering as midyear sophomores or junior transfers, at least four semesters in residence at Wesleyan as full-time students). A semester in residence is defined as any semester in which a student attends classes on the Wesleyan campus, has attempted at least three credits, and received at least one grade. If a conversion to semester hours is required, each Wesleyan credit may be assigned a value of four semester hours.

All courses taken at Wesleyan will be listed on the student’s transcript. However, there are limits on the number of credits students can count toward the total of 32 course credits required for the bachelor of arts. No more than 16 credits in any one subject (i.e., course code) can be counted toward the degree requirements. All course credits posted to a student’s academic records will be considered for oversubscription including prematriculant, study-abroad, and/or transfer credits. A course offered in more than one subject designation (i.e., cross-listed) will count in all subjects in which it is offered. A student who exceeds these limits will be considered oversubscribed, and the additional course credits may not count toward the 32 required for the bachelor of arts.

In addition, the student may count toward the 32 credits a maximum of the following credits:

- Physical education courses and student forums
- No more than one credit in physical education
- A maximum of two credits of student forums
- A combined maximum of two credits in physical education and student forums
- Teaching apprenticeships—a maximum of two teaching apprentice credits
- Tutorials—a combined maximum of four individual and group tutorial credits
- Independent study and education in the field—a combined maximum of four independent study and education-in-the-field credits
- A maximum of four times each of repeatable courses
- A maximum of one-half Center for the Study of Public Life internship credit

While a maximum of two credits earned before matriculation by entering first-year students may count toward the Wesleyan degree, all such credits that have been duly approved by Wesleyan departments will be listed on the student’s transcript. This applies to Advanced Placement (AP), International Baccalaureate (IB), and Advance-Level exams, as well as any college-level courses taken with college students and taught by a college teacher on a college campus, provided that the course meets Wesleyan’s transfer credit criteria. Aside from AP credits and other credits regularly awarded on the basis of centrally administered examinations, no course that is listed for credit on a student’s high school transcript may be used for Wesleyan credit.

MAJOR

To satisfy the major requirement, a student must complete a departmental major, an interdepartmental major, or a collegiate program (College of East Asian Studies (p. 69), College of Letters (p. 79) or College of Social Studies (p. 82)). A student will graduate if the requirements of one major are fulfilled in conjunction with the completion of other degree requirements.

Students may apply for a major any time after the drop/add period in the semester in which they have reached second semester sophomore standing. However, application for admission to the College of Letters or the College of Social Studies should be submitted by first-year students during their second semester. Eligibility requirements are set by the department, program, or college, which may deny access or the privilege of continuation to any student whose performance is unsatisfactory. Students who have not been accepted into a major by the beginning of their junior year have a hold placed on their enrollment. Students may not declare more than a combined total of three majors, certificates, and minors.

DEPARTMENTAL MAJOR PROGRAMS

The departmental major is an integrated program of advanced study approved by the major department. It consists of a minimum of eight course credits numbered 201 or higher. No more than four course credits in the departmental major may be elected from other than the major department. Please see
The University offers two kinds of interdepartmental majors:

- **INTERDEPARTMENTAL MAJOR PROGRAMS**

  The University offers two kinds of interdepartmental majors:
  - **Interdepartmental majors.** These are archaeological studies; environmental studies; feminist, gender, and sexuality studies; Latin American studies; medieval studies; Russian, East European, and Eurasian studies; and science in society. The list may change from time to time.
  - **University majors.** A student may propose a university major program involving two or more departments, provided that an ad hoc group of at least three members of the faculty approves and supervises the program. Students contemplating a university major should be accepted for admission to a regular departmental major, since the proposal for a university major must be approved by the Committee on University Majors. Deadlines for application are November 1 for the fall semester and April 1 for the spring semester. Additional information about the application procedure may be obtained from the Office of the Deans.

  All interdepartmental major programs, like departmental major programs, must include at least eight course credits numbered 201 or higher. Other conditions, including additional courses, may be imposed.

- **COLLEGIATE PROGRAMS**

  In the spring of the first year, an undergraduate may apply for admission to the College of Letters, the College of Social Studies, or the College of East Asian Studies. All of these programs offer an organized course of study continuing through the sophomore, junior, and senior years that leads to the degree of bachelor of arts.

  Graduation Requirements for the number of credits that may be counted toward the bachelor of arts degree and oversubscription.

**COMPREHENSIVE EXAMINATION**

In those departments in which a comprehensive examination is required, passing the examination is a condition of graduation. The major departments determine the nature and scope of the examinations, the amount of supervision to be given to the student in preparation for them, and the time and place of their administration. Both oral and written examinations may be required.

A student who passes the comprehensive examination with a grade deemed creditable by the major department may be excused by the department from the final examination of the last semester in any course in that department and in any other departmental course included in the major program. The student may substitute the grade attained in the comprehensive examination for the final examination grade in each of the designated courses. In all such cases, permission of the course instructor is required to substitute the final examination grade.

If a student fails to qualify for the degree in the senior year solely through failure to attain a satisfactory grade in the comprehensive examination but has satisfied all other requirements for graduation, the student may be permitted to take a second comprehensive examination.

**GENERAL EDUCATION EXPECTATIONS**

The inclusion of courses that fulfill Wesleyan’s general education expectations is vital to the student’s educational experience at Wesleyan. To assist in the experience, the faculty has divided the curriculum into three areas: natural sciences and mathematics (NSM), the social and behavioral sciences (SBS), and the humanities and the arts (HA). The faculty has assigned a general education designation to a course when appropriate, as well as established a distributional expectation for each general education area. In consultation with their advisors, first-year and sophomore students are encouraged to select courses from all three areas to experience the full dimension of intellectual breadth vital to a liberal education.

General education courses in the natural sciences and mathematics introduce students to key methods of thought and language that are indispensable to a liberal education as well as to our scientifically and technologically complex culture. They are intended to provide scientific skills necessary for critically evaluating contemporary problems. These courses apply scientific method, utilize quantitative reasoning, and enhance scientific literacy. They also provide a means of comparison to other modes of inquiry by including historical, epistemological, and ethical perspectives. The natural science and mathematics division has made special efforts to design and present a variety of courses that meet these objectives and are appropriate for future majors in the humanities, arts, and social sciences, as well as those interested in majoring in one of the natural sciences or mathematics.

General education courses in the social and behavioral sciences introduce students to the systematic study of human behavior, both social and individual. They survey the historical processes that have shaped the modern world, examine political institutions and economic practices, scrutinize the principal theories and ideologies that form and interpret these institutions, and present methods for analyzing the workings of the psyche and society.

General education courses in the humanities and the arts introduce students to languages and literature, to the arts and the mass media, and to philosophy and aesthetics—in short, to the works of the creative imagination as well as to systems of thought, belief, and communication. These courses provide both historical perspectives on and critical approaches to a diverse body of literary, artistic, and cultural materials.

The General Education Expectations are divided into Stages 1 and 2. The expectation for Stage 1 is that all students will distribute their course work in the first two years in such a way that by the end of the fourth semester, they will have earned at least two course credits in each of the three areas, all from different departments or programs. To meet the expectation of Stage 2, students must also take one additional course credit in each of the three areas prior to graduation, for a total of nine general education course credits. Credits earned prior to matriculating at Wesleyan as a first-year student cannot be used to fulfill Wesleyan’s General Education Expectations. However, courses taken prior to matriculating at Wesleyan may be considered for general education equivalency credit for transfer students. Students may also request in advance that individual courses taken on an approved study-abroad program or a sponsored domestic study-away program be considered for equivalency. Courses taken on Wesleyan-administered study-abroad programs or through the Twelve-College Exchange are coded for equivalency.
When a course has multiple general educational area assignments (NSM, SBS, HA), a student must select one general education area assignment by the end of the drop/add period. Student forums and individual and group tutorials never carry a general education designation.

A student who does not meet these expectations by the time of graduation will not be eligible for University Honors, Phi Beta Kappa, honors in general scholarship, or for honors in certain departments, and may not declare more than a combined total of two majors, certificates, and minors.

**ACADEMIC STANDING**

**SEMESTER CREDITS AND COURSE LOAD**

Students are expected to earn four credits in each of eight semesters. Students who plan a course schedule with fewer than four credits must have the approval of their class dean and faculty advisor. Students who enroll in fewer than three credits may have their enrollment in the University revoked. A student who plans a course schedule with five or more credits must have the approval of the faculty advisor. Candidates for the undergraduate degree may not enroll as part-time students (fewer than three credits). A three-credit program is the minimum required to be considered a full-time student and for which full tuition will be charged. The exception is for seniors completing the second half of their senior thesis who need only this credit to fulfill all degree requirements. They may enroll for only the one thesis credit in their last semester, which will not count as a semester in residence.

**GRADING SYSTEM**

A student’s academic performance in individual courses taken at Wesleyan will be evaluated either by letter grades (A-F) or by the designations credit (CR) or unsatisfactory (U). At the discretion of the instructor, all the students in a course may be restricted to a single grading mode, or each student may be allowed to choose between the two modes, also referred to as student option (OPT). Instructors announce the grading options in WesMaps. In courses in which students have a choice of grading mode, the final choice must be made no later than 14 days after the drop/add period ends.

Whenever the credit/unsatisfactory mode is used, the faculty member is expected to submit to the Office of the Registrar a written evaluation of the student’s work in the course.

A student’s work in courses using letter grades is evaluated as follows: A, excellent; B, good; C, fair; D, passing but unsatisfactory; E, failure; and F, bad failure. These letter grades (with the exception of the grade of F) may be modified by the use of plus and minus signs.

The numerical equivalents of the letter grades are:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>98.3</td>
</tr>
<tr>
<td>A</td>
<td>95.0</td>
</tr>
<tr>
<td>A-</td>
<td>91.7</td>
</tr>
<tr>
<td>B+</td>
<td>88.3</td>
</tr>
<tr>

<td>51.7</td>
</tr>
<tr>
<td>F</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEQUENCE COURSES**

The granting of credit in two-semester courses (indicated by the "Required Course Sequence" notation in WesMaps) is contingent upon successful completion of both semesters. A student who has failed the first semester of a required course sequence may not continue in the second semester without the permission of the instructor and the class dean. A student who receives the grade of E (but not F) at midyear in a course running through the year and who is permitted by the instructor to continue the course in the second semester may receive credit for the first semester at the completion of the course upon the recommendation of the instructor to the class dean. At that time, the instructor may also recommend a revision of the first-semester grade. If this is not done, the grade for the first semester will remain recorded as E, but credit will be given for the first semester’s work. A student who fails the second semester of a two-semester course loses credit for both semesters.

**HONORS**

**DEAN’S LIST**

Wesleyan acknowledges high academic achievement at the end of each semester. Students who earn a semester GPA of 93.350 or better will be named to the Dean’s List and will have a permanent transcript notation of this achievement. To be eligible, a student must have earned the GPA on at least three letter-graded credits at Wesleyan during the semester and have no unsatisfactory or failing grades. Students with incomplete grades or outstanding credit will be evaluated after the grade and/or credit is posted to the Wesleyan transcript and, if eligible then, they will be added retroactively to the appropriate semester’s list.

**HONORS PROGRAM**

(See Wesleyan’s Online Thesis Guide (http://www.wesleyan.edu/registrar/honors/honors_program.html) for more information)

A degree with honors can be earned two ways: (1) departmental honors will be awarded to the student who has done outstanding work in the major field of study and has met the standards for honors or high honors set by the respective department or program; (2) honors in general scholarship will be awarded to the student who is a university major or whose thesis topic or methodology is outside of the domain appropriate for the award of honors in the student’s major department(s) or program(s). The candidate for honors in general scholarship must have a minimum grade point average of 90.00, fulfill general
education expectations, and submit a senior thesis that meets the standard for honors or high honors set by the Committee on Honors.

Honors recognizes a BA attained with distinction, either in the major or in general scholarship. Honors recognizes the successful completion of a mentored, independent honors capstone project that has been evaluated by qualified examiners and that meets the standards for excellence in the major or those of the Honors Committee when completed in general scholarship. A student may receive no more than 2.0 credits for any one thesis. Students who major in more than one department, program, or college may submit a thesis in one of their majors or separate theses in more than one major. With the agreement of each of their departments, programs, or colleges, students may submit the same thesis for honors in more than one major.

In the fall semester of the senior year, all candidates for honors must either enroll in a senior thesis tutorial or, if they are pursuing an alternate route to honors, must ask their department to forward their names to the Honors Committee. Students who wish to pursue Honors in General Scholarship must follow the established guidelines and apply to the Honors Committee, normally in the second semester of the junior year. Thesis registration normally takes place in April. Beginning with the Class of 2018, honors candidates who complete their graduation requirements in December are required to submit and register their thesis with the University on the first day of classes of the following spring semester.

University Honors is the highest award Wesleyan bestows. To be eligible, a student must fulfill General Education Expectations, earn high honors (either departmental or in general scholarship), be recommended for University Honors, and who are not registering for classes or for a thesis tutorial in the spring are required to submit and register their thesis with the University on the first day of classes of the following spring semester.

University Honors is the highest award Wesleyan bestows. To be eligible, a student must fulfill General Education Expectations, earn high honors (either departmental or in general scholarship), be recommended for University Honors, and who are not registering for classes or for a thesis tutorial in the spring are required to submit and register their thesis with the University on the first day of classes of the following spring semester.

**ACADEMIC REVIEW AND PROMOTION**

The University expects students to make good use of Wesleyan’s educational resources. A student is expected to satisfy the requirements for the degree of bachelor of arts within eight semesters. To remain in academic good standing, an undergraduate is expected to maintain a cumulative average of 74 percent and to satisfy the following earned-credit requirements. Pending credit for an incomplete or absent-from-final-examination with a provisional failing grade may not be considered credit earned. Students who are provisionally required to resign over the summer due to a credit deficiency or who are at risk for required resignation due to failing provisional grades on incompletes must submit earned credit or completed work two to three weeks prior to the start of fall semester classes. Upon submission of a grade for an incomplete or absent-from-final grade, a student’s academic status will be reviewed. Promotions in class standing are made at the end of each semester.

**REQUIREMENTS FOR PROMOTION**

- **To be promoted to sophomore standing,** a student must have satisfactorily completed at least six credits.
- **To be promoted to junior standing,** a student must have satisfactorily completed at least 14 credits and been accepted into a department/program major.
- **To be promoted to senior standing,** a student must have satisfactorily completed at least 22 credits and made acceptable progress toward the completion of the major.

**ACADEMIC DISCIPLINES**

Students whose academic performance is deficient will be subject to the following forms of academic discipline, according to the seriousness of the deficiencies. For purposes of academic review, one course is the equivalent of .75 to 1.50 credits. Failing grades on partial-credit courses (.25 and .50) are treated as the equivalent of a D.

**PHI BETA KAPPA**

The oldest national scholastic honor society, Phi Beta Kappa at Wesleyan is limited to 12 percent of the graduating class each year. Election to the society is based on grades and fulfillment of the eligibility requirements described below.

Fall election is based on grades through the end of a student’s junior year and fulfillment of the General Education Expectations (stages I and II). Normally, between 10 and 15 students are elected in the fall; transfer students are not eligible for consideration in the fall.

Spring election is based on grades through the end of a student’s first semester the senior year and fulfillment of the General Education Expectations (stages I and II). Transfer students are eligible for consideration in the spring. It is preferred that students complete their General Education Expectations in their first semester senior year. However, a rationale for second-semester completion is not required, provided that the secretary of the Gamma Chapter continuously monitors those students to guarantee completion of stage II of the General Education Expectations.

In addition to fulfilling the General Education Expectations, students are expected to have a grade point average of 92 or above to be considered for election in the spring. The minimum grade point average for the fall election is 93. Students are nominated by their major departments.
Warnings. The mildest form of academic discipline, applied to students whose academic work in one course is passing but unsatisfactory (below C-) or who have earned fewer than three but more than two credits in a single semester.

Probation. The category of academic discipline used when the academic deficiency is serious, usually involving failure to achieve the requisite cumulative average of 74 percent, failure in one course, or passing but unsatisfactory work in two. One passing but unsatisfactory grade continues a student on probation. A student on probation is required to meet regularly with the class dean and perform at a satisfactory level in all courses. Failure to do so usually results in more serious discipline. A student who receives more than two incompletes without the class dean’s permission may also be placed on probation.

Strict probation. The category of discipline used in very serious cases of academic deficiency, usually involving at least one of the following conditions:

- Failure in one course and passing but unsatisfactory work in another
- Passing but unsatisfactory work in three or four courses
- One failing grade or passing but unsatisfactory work in two courses while on probation
- Credit deficiency for promotion
- Earning two or fewer credits in a single semester

Students on strict probation are required to attend all classes, to complete all work on time, and to meet regularly with their class dean. They may not receive an incomplete without the class dean’s approval. One passing but unsatisfactory grade continues a student on strict probation.

Required resignation. The category of discipline used when the student’s academic performance is so deficient as to warrant the student’s departure from the University for the purpose of correcting the deficiencies. The notation “resigned” will be entered on the student’s official transcript. The performance of students who are required to resign will usually involve at least one of the following deficiencies:

- For all students:
  - Failure to earn the required number of credits for promotion
- If a student is in good standing:
  - Failure in two or more courses, or
  - Failure in one course and passing but unsatisfactory work in two others
- If a student is on probation:
  - Failure in one course and passing but unsatisfactory work in one other, or
  - Passing but unsatisfactory work in three or more courses
- If a student is on strict probation:
  - Failure in one or more courses
  - Passing but unsatisfactory work in two or more courses

Students who are required to resign may not be on campus or in university housing, nor may they participate in student activities or the life of the university community while on this status. Students who are required to resign may apply for readmission through their class dean after an absence of at least two semesters. The process of application for readmission requires a demonstration of academic preparedness and fulfillment of all the specified requirements for return. Students readmitted after being required to resign will be placed on strict probation.

Separation. The category of discipline used when the student’s academic deficiencies are so serious as to warrant the student’s departure from the University without eligibility for readmission. The notation “separated” will be entered on the student’s official transcript. Separation is imposed if a student’s academic performance warrants required resignation for a second time.

Appeals. Students who are required to resign or are separated from the University may appeal their status to the Academic Review Committee, a subcommittee of the Educational Policy Committee. A student who wishes to appeal must notify his or her class dean two days prior to the scheduled date on which appeals will be reviewed. Information about the appeals procedure will be provided by the student’s class dean. Appeals are reviewed by members of the subcommittee of the Educational Policy Committee with attendance by the class deans and the vice president for student affairs. A student may elect to attend his or her review or participate via telephone. The committee’s decisions are final.

ADDITIONAL INFORMATION ON CREDIT, INTERNATIONAL BACCALAUREATE CREDIT, AND OTHER PREMATRICULATION CREDIT

A student who has completed an Advanced Placement (AP) course or its equivalent while in secondary school and has achieved a score of 4 or 5 in the corresponding AP examination may be granted one or two credits toward the Wesleyan degree of bachelor of arts with the appropriate department approval.

Students who have completed the International Baccalaureate (IB) course of study and have received a score of 5, 6, or 7 on the corresponding IB examinations may be granted one or two credits for the higher level examination and .75 credits for the subsidiary-level examination toward the Wesleyan degree of bachelor of arts with the appropriate department approval.

Students wanting to post any prematriculation credit (e.g., for advanced exams, including but not limited to Advanced Placement, International Baccalaureate, and A-level) must consult their class dean. The awarding of prematriculation credit is determined at the discretion of the relevant department. The department may stipulate additional conditions for the award of such credit, such as successful completion of a specific University course or courses. Detailed information about prematriculation credit may be obtained from the Registrar’s website or the Deans’ Office.

Other prematriculation credits that the University will post on the Wesleyan transcript are courses taken with college students and taught by a college teacher on a college campus, provided the courses meet Wesleyan’s transfer credit criteria. Please see Transfer of Credit (p. 19) for further details.

A maximum of two credits earned before matriculation will apply toward graduation. This includes Advanced Placement credit, International Baccalaureate credit, and college transfer courses posted to the Wesleyan transcript. While a maximum of two credits will be counted toward the Wesleyan degree, all such credits that have been duly approved by Wesleyan departments will be listed on the student’s transcript. These credits may contribute to oversubscription in any one department.

Students may use up to two prematriculation credits awarded for the purpose of class promotion. However, students are not permitted to use this credit to
reduce the course load, to clear up failures or unsatisfactory work, or to count toward fulfillment of the general education expectations.

**ACCELERATION**

A student may complete work for the bachelor of arts degree in fewer than the expected eight semesters, but in no less than the required semesters in residence. Requests for acceleration should be made in writing to the student’s class dean. This may be accomplished by (1) applying up to two prematriculation credits, such as approved transfer credits, Advanced Placement credits, A-level or Cambridge Pre-U credits, or International Baccalaureate credits; (2) transferring preapproved summer credit at Wesleyan or another institution; (3) completing independent study or education-in-the-field projects during a summer or an authorized leave of absence; (4) transferring preapproved credit taken at another institution while on an approved leave of absence; or (5) completing additional Wesleyan credits (beyond the expected course load per semester) during the academic year.

**NONDEGREE UNDERGRADUATE STUDENTS**

Wesleyan offers the following opportunities to take undergraduate courses on a nondegree basis. All nondegree students are subject to the following policies:

- An application is required; students must have a high school diploma or the equivalent (with the exception of High School Scholars) and must be approved for admission by one of the programs below.
- Admission to nondegree status does not constitute admission to Wesleyan University. Nondegree students who wish to apply for admission to degree candidacy may do so through the Office of Admission (http://www.wesleyan.edu/admission). Their applications will be reviewed according to the same rigorous standards as those of other candidates for admission. Nondegree undergraduates who become admitted to degree candidacy will be expected to satisfy normal degree requirements. Please note that candidates admitted as first-year students may only count two credits taken prior to matriculation (admission to degree candidacy) toward the degree.

**Auditor.** Subject to any conditions set by the instructor, permission to audit does not include permission to have tests, examinations, or papers read or graded. Wesleyan alumni and members of the community who are not registered students are permitted to audit undergraduate courses, subject to the following conditions:

- That the presence of an auditor not compromise undergraduates’ access to the course;
- That the auditor receive permission of the instructor;
- That the terms of the auditor’s participation in the work of the course be mutually agreed upon in advance with the instructor;
- That no academic credit be awarded to an auditor and no transcript issued.

**Center for Prison Education.** Wesleyan offers the Center for Prison Education (http://www.wesleyan.edu/cpe), awarding undergraduate credit to incarcerated students who are admitted to and complete courses in the center. All students in the center are subject to Wesleyan academic and nonacademic policies as well as center policies. Center courses are offered on-site at the correctional institution.

**Community Scholars.** Admissions will be handled by Continuing Studies (http://www.wesleyan.edu/nondegree); admissions of international students will be reviewed by the director of the Office of Study Abroad (http://www.wesleyan.edu/ogs/osa). Individuals accepted for this category may enroll in up to four courses per semester with the instructors’ approval as long as their enrollment does not displace a degree-seeking student. The tuition is a per-credit charge, based on Wesleyan’s full-time tuition. Housing and financial aid are not available. For information about becoming a Community Scholar, please visit wesleyan.edu/nondegree/ (https://wesleyan.edu/nondegree).

**Residential Scholars.** Admission will be handled by Continuing Studies (http://www.wesleyan.edu/nondegree); admission of international students will be reviewed by the director of the Office of Study Abroad (http://www.wesleyan.edu/ogs/osa). Individuals accepted for this category must enroll full-time, pay full tuition, and live in university housing. Financial aid is not available. For information about becoming a Residential Scholar, please visit wesleyan.edu/nondegree/ (https://wesleyan.edu/nondegree).

**High School Scholars.** Wesleyan permits outstanding juniors and seniors from selected area high schools to take one course in the fall semester and one course in the spring semester at Wesleyan. Application is made through the guidance counselor at each high school. The completed application should be submitted to the Office of Admission (http://www.wesleyan.edu/admission). Permission is granted by the course instructor.

**TRANSFER STUDENTS**

Students wishing to apply to Wesleyan as transfer students must have been enrolled for at least one full academic year at another postsecondary academic institution and must have obtained the equivalent of at least six Wesleyan credits. Students who do not meet these conditions must apply for admission as a first-year student.

It is expected that transfer students will keep pace with the class to which they are officially assigned by the Office of the Deans; that is, the number of Wesleyan semesters available to transfer students to earn the Wesleyan degree will be determined by their class standing on entry. For certain exceptional cases and upon petition to the class dean, students may be granted an additional semester to complete requirements for the bachelor’s degree. Please see Degree Requirements (p. 11) for semester-in-residence requirement.

Transfer students entering as first-semester sophomores are expected to apply for acceptance into a major after the drop/add period of their second semester at Wesleyan. Transfer students entering as second-semester sophomores are expected to apply for acceptance into a major after the drop/add period of their first semester at Wesleyan. Transfer students who enter as juniors must apply for acceptance into a major program as soon as possible, but no later than the end of their first semester at Wesleyan.

Credits approved for transfer from other institutions may be considered by the student’s major department for inclusion in the major. Transfer students are encouraged to comply with Wesleyan’s general education expectations. Transfer credits earned prior to matriculation at Wesleyan may be evaluated for general education equivalency. Please note that grades in courses must be a C- or better.
to be eligible for transfer of credit. No more than two credits may be transferred from one summer.

**STUDY ABROAD**

Students may earn Wesleyan credits by enrolling for nonresident study in either of the following types of programs abroad:

- Wesleyan-administered programs
- Wesleyan-approved programs

The only way in which courses taken abroad during the academic year can be credited toward a Wesleyan undergraduate degree is by prior approval from the Office of Study Abroad (OSA). Details regarding the application process are available in the OSA, on the OSA website (wesleyan.edu/cgs/osa [http://wesleyan.edu/cgs/osa]), and through a student’s electronic portfolio.

**WESLEYAN-ADMINISTERED PROGRAMS**

The Wesleyan-administered programs are:

- **France**: Vassar-Wesleyan Program in Paris
- **Italy**: Eastern College Consortium (ECCO) Program in Bologna
- **Spain**: Vassar-Wesleyan Program in Madrid

Study on these programs does not count toward the semester-in-residence requirement.

**WESLEYAN-APPROVED PROGRAMS**

The Office of Study Abroad maintains a list of programs preapproved for Wesleyan credit in a wide range of countries in Africa, Asia, Europe, the Middle East, Oceania, and the Americas. In certain circumstances, the Office of Study Abroad may grant ad hoc approval for a program not included on the preapproved list. See the OSA website for details (wesleyan.edu/cgs/osa [http://wesleyan.edu/cgs/osa]), including the preapproved program list.

**STUDY ABROAD REGULATIONS, GUIDELINES, AND FINANCIAL PROCEDURES**

Copies of the regulations, guidelines, and financial procedures are available on the OSA website and through a student’s electronic portfolio.

Application for study abroad entails gaining the preapproval of a faculty advisor. Up to four course credits are normally allowed for each of two semesters. Permission for up to a fifth course credit in any given semester may be granted by the program director in the case of Wesleyan-administered programs and by the Associate Director of Study Abroad for Wesleyan-approved programs and must also be approved by the advisor. Grades earned will be reported on the Wesleyan transcript and will be counted in GPA calculations. Students automatically receive credit toward graduation for this preapproved program of instruction. This is the only way in which credit is given for courses taken abroad, except for courses taken abroad during the winter session or summer, which are processed as transfer credit.

Credit toward completion of a major, certificate, or minor is not granted automatically for courses taken abroad. Students must consult with the relevant chair or advisor when applying for study abroad and must have courses for major, certificate, or minor credit preapproved before departure or, in the event that course information is not available before the program begins, at the point of course registration. Such credit is not granted retroactively, and students who need to change course selections on arrival abroad must seek approval at the time of registration through their advisor and the Office of Study Abroad. It is the responsibility of the student to check with the class dean concerning progress toward graduation and the possibility of oversubscription. General education credit may be granted for courses taken on administered and approved programs abroad only if requested through the Office of Study Abroad.

Students placed on strict probation at the end of the semester and students on medical leave are not eligible to study abroad the following semester; exceptions may be made in the latter case. Any grade of incomplete (IN), deferred grade (X), or absent from final exam (AB) must be resolved two weeks prior to the student’s departure date, and students with such grades on their transcript should consult with their class dean about the resolution process.

All university academic regulations apply to students studying for Wesleyan credit abroad, and withdrawal from a study-abroad program will be treated in the same way as withdrawal from the University. Wesleyan may withdraw a student from a program abroad or place a student on medical leave, should it be deemed advisable to do so.

**Fees.** Students are considered to be enrolled at Wesleyan while abroad. They are therefore charged Wesleyan tuition and are eligible for financial aid. Application for financial assistance should be made to the Financial Aid Office. Tuition charges cover the academic and administrative portions of the program expense. Expenses such as room and board, transportation, and cultural activities will be paid by students either through Wesleyan or directly, depending on the program. This financial arrangement applies to all study abroad for credit during the academic year.

- **Wesleyan-administered programs.** For information and application, students should contact the Office of Study Abroad.
- **Wesleyan-approved programs.** Besides applying directly to the sponsoring institution, students must fill out and submit to the Office of Study Abroad a Wesleyan application for permission to study abroad.

**INTERNAL SPECIAL STUDY PROGRAMS**

**WESLEYAN INTERSESSIONS: SUMMER AND WINTER SESSIONS**

The University offers two intersessions: Summer Session and Winter Session. Course credit earned through intersessions is eligible to count toward the graduation requirement. Participation in intersessions does not count as a semester in residence. An intersession does not constitute an academic semester at Wesleyan. All students in intersessions are subject to Wesleyan academic and nonacademic policy and are also subject to intersession policies. Courses taken during intersessions are subject to the same academic regulations as courses taken during the regular academic year. Students should consult their class dean about how intersession performance may affect their academic standing.
or check the Deans’ Office website for clarification. Students are not eligible to do independent study or education in the field and take an intersession course simultaneously. (For summer transfer credit, please see External Special Study Programs - Transfer Credit)

Graduate Liberal Studies (GLS). Wesleyan undergraduates, normally rising juniors and seniors, may take courses in the Graduate Liberal Studies program subject to approval by the instructor of the course, their class dean, faculty advisor or major department chair, and the GLS director. Participation in this program does not count as a semester in residence. Wesleyan undergraduates attending GLS are subject to its academic rules and regulations. All grades and course work attempted by Wesleyan undergraduates in GLS courses will be recorded on the student’s undergraduate record and transcript. For more information, visit wesleyan.edu/masters (https://wesleyan.edu/masters), e-mail masters@wesleyan.edu, or visit the office at 74 Wyllys Avenue.

Independent Study. A student may obtain academic credit for certain forms of independent study during a summer or an authorized leave of absence. Activities such as independent reading, special work under supervision, and educational tours may earn credit provided that (1) these plans have been approved in advance by the relevant Wesleyan department and the class dean, and (2) all requirements specified by the approving department in the form of an examination, paper, or equivalent assignment have been satisfied. Please note that senior theses or senior projects may be undertaken only as senior thesis tutorials or projects and not as independent study. No more than two credits may be earned in a semester or summer for such special work. See “Fees,” below. Forms for independent study, along with other useful resources, are available in the Office of the Deans or online at wesleyan.edu/studentaffairs/forms.html (https://wesleyan.edu/studentaffairs/forms.html).

Education in the Field. Approved education-in-the-field programs are listed under the sponsoring departments or colleges. They may be taken during the summer, during an authorized leave of absence, or during an academic term. At the discretion of the department involved, up to two course credits per semester may be granted for education in the field. Students must consult with the department in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation. Credit and a grade for education in the field will be posted to the student’s transcript once a grade report has been submitted by the faculty sponsor.

Students pursuing an education in the field during the summer or while on an authorized leave of absence during the academic year are not eligible for financial aid and will be charged a special tuition rate (see below). Students enrolled full time may also pursue an education in the field in conjunction with regular courses (for a combined total of at least three credits) and will be charged the full tuition rate. In no case will financial aid to a student in this category exceed the amount of aid the student would have received as a regular full-time student at the University.

Education-in-the-field programs are under the general supervision of the Educational Policy Committee. Information concerning specific procedures for the supervision and evaluation of education-in-the-field programs may be obtained from the sponsoring department or college. Forms for education in the field are available at the Office of the Deans or on the Office of the Deans’ website.

No more than four credits earned through independent study and education in the field combined can be counted toward the graduation requirements.

**FEES FOR INDEPENDENT STUDY AND EDUCATION IN THE FIELD AND CREDIT FROM UNACREDITED INSTITUTIONS**

Students should contact the Student Accounts Office (237 High Street; studentaccounts/tuition.html (https://wesleyan.edu/studentaccounts/tuition.html)) for information about fees for pursuing an independent study, enrolling only in an education in the field, or taking a course at an unaccredited institution.

**TEACHING APPRENTICE PROGRAM**

The Teaching Apprentice Program offers undergraduate students the opportunity to participate with a faculty member (who serves as a master teacher) in the teaching of one of the faculty member’s courses. The apprentice is enrolled in an apprenticeship tutorial conducted by the master teacher. The tutorials focus in varying degrees on the subject matter of the course and on the teaching activity itself. Apprentices are awarded one course credit for successful completion of the semester tutorial.

The Teaching Apprentice Program has two main objectives:

- To provide an opportunity for advanced students to deepen their understanding of a subject while gaining insight into the teaching process; and
- To improve the learning environment in courses designed primarily for first-year and sophomore students by adding a student teacher who can bridge the intellectual gap between instructors and beginning students.

The apprentice is viewed as a member of a teaching team rather than as a teaching assistant. While the interaction between the apprentice and the master teacher can take many forms, faculty are urged to design the role of the apprentice to stimulate greater participation in the learning activity by students in the course. Normally, the apprentice and master teacher have, in some prior activity, established the sort of intellectual rapport that will promote an effective team relationship.

Apprentice proposals should be developed by the master teacher with input, when possible, from the prospective apprentice. Applications should describe the teaching role to be played by the apprentice, the academic course work to be done in the apprenticeship tutorial, and the basis on which the apprentice will be evaluated. Applications must also meet the guidelines for apprenticeships established by the department or program and approved by the Educational Policy Committee. Faculty members must submit applications to the Office of Academic Affairs in October to apply for a spring semester apprentice and in April to apply for a fall semester apprentice. The following policies apply to teaching apprentices and teaching apprenticeships:

- If a student serves as an apprentice in the same course more than once, the student may receive no more than a total of one credit for teaching in that course.
- Teaching apprentices may not teach in group tutorials or student-forum courses.
- A student may not count more than two course credits earned in apprenticeship tutorials toward degree requirements.
TUTORIALS

Individual tutorials, numbered 401-402 and 421-422, are available only to sophomores, juniors, and seniors. A tutorial may not be given when a comparable course is available in the same academic year. Students may not count more than four course credits combined of individual and group tutorials toward degree requirements. Tutorial forms must be approved by the chair of the department or program in which the tutorial is given.

Tutorial applications should include a concise description of the work to be done, including the number of hours to be devoted to the tutorial, the number of meetings with the tutor, a reading list, and a description of the work on which the student’s performance will be evaluated. Tutorials should be submitted through the drop/add system.

Tutorials for one credit should be added during the drop/add period. Partial-credit tutorials beginning after the drop/add period must be added to a student’s schedule within five days of the start of the academic exercise. The minimum credit amount for any tutorial is .25 credit.

Group tutorials, numbered 411-412, are proposed and taught by a faculty member. Tutorials should be submitted through the drop/add system. For information about tutorials during the summer term, please contact the Summer Session office.

STUDENT FORUMS

Student-run group tutorials, numbered 419-420, must be sponsored by a faculty member and approved by the chair of a department or program and by the relevant academic dean. Proposals for a student forum must be submitted by the department or program chair to the Office of Academic Affairs by the end of exams prior to the semester in which the course will be offered. Application forms and instructions are available at the Office of the Registrar. A student may count two student forum course credits toward degree requirements but is limited to a combined maximum of two credits in physical education and student forum courses.

EXTERNAL SPECIAL STUDY PROGRAMS

TRANSFER OF CREDIT

A student may obtain credit toward the Wesleyan degree for courses taken during the academic year at another accredited U.S. institution or in the summer session of another accredited U.S. or international institution if (1) the courses have been approved in advance by the relevant Wesleyan department, program, or college, and (2) the grades in the courses are C- or better. (Courses taken prior to matriculation do not require preapproval and may include courses taken at an accredited international institution during the academic year.) Departments, programs, or colleges may impose other conditions for the transfer of credit, such as a higher minimum grade, review of coursework, passing a departmentally administered exam, etc. The Wesleyan academic record will not reflect grades earned at another institution; only credits may be transferred. The final amount of credit transferred to the Wesleyan transcript will be determined in accordance with Wesleyan’s policy on transfer credit and the evaluation of the appropriate department. (As a guideline, it should be noted that one Wesleyan unit is equivalent to four semester hours, or six quarter-hours.) A student may post a maximum of two non-Wesleyan credits (2.5 credits with a course that offers a lab) in any given summer. Study-abroad credits earned by students who currently are withdrawn or required to resign will not be accepted. Forms for permission to transfer credit are available at the Office of the Deans or on the Office of the Deans’ website (http://www.wesleyan.edu/studentaffairs/forms.html).

A student who wishes to receive Wesleyan credit for work done at an unaccredited institution must secure the sponsorship of a Wesleyan faculty member, the approval of the chair of the corresponding Wesleyan department, and the approval of the class dean prior to undertaking the work. (Courses taken prior to matriculation do not require preapproval.) To apply for credit, a student should write a statement that describes the work to be done and indicates the amount of academic credit sought. The statement should be endorsed by the faculty sponsor and the department chair and submitted to the class dean. The faculty sponsor will be responsible for evaluating the completed work and reporting the amount of credit earned to the class dean. For fees please see wesleyan.edu/studentaccounts/tuition.html (https://wesleyan.edu/studentaccounts/tuition.html).

TWELVE-COLLEGE EXCHANGE PROGRAM

The Twelve-College Exchange Program is a cooperative program for residential student exchange between Wesleyan and the following colleges: Amherst, Bowdoin, Connecticut, Dartmouth, Mount Holyoke, Smith, Trinity, Vassar, Wellesley, and Wheaton. Two special programs associated with the Twelve-College Exchange Program are the Williams-Mystic Seaport Program in American Maritime Studies in Mystic, Connecticut, sponsored by Williams College, and the National Theater Institute, in Waterford, Connecticut, sponsored by Connecticut College. Wesleyan sophomores, juniors, and seniors in good standing are eligible to apply to any of the participating institutions for either one semester or the full year. Participation in the Twelve-College Exchange Program by Wesleyan students does not count toward Wesleyan’s residence requirement, but courses are coded for general education equivalency. Catalogs of participating colleges and information about the programs are available in the Office of Study Abroad (http://wesleyan.edu/cgs/osa). All courses taken on a Twelve-College Exchange Program will post to the student’s Wesleyan transcript with grades and count toward the Wesleyan GPA.

Tuition and fees are paid to the host colleges; no fees are paid to Wesleyan. Financial-aid students may apply their Wesleyan assistance, with the exception of work/study benefits, toward expenses at the host college. It is the student’s responsibility to complete any loan negotiations before leaving the Wesleyan campus. A Wesleyan student who participates in the exchange program is expected to abide by the rules and regulations of the host institution.

Students who wish to participate in the Twelve-College Exchange Program must apply through the Office of Study Abroad (http://wesleyan.edu/cgs/osa). Students may apply to only one college at a time. The deadline for submission of completed applications is February 1 for either one or both semesters of the subsequent academic year. However, applications will be considered as long as space is available at the desired institution. Completed and approved applications are sent by Wesleyan to the respective colleges. If rejected by the college of their first choice, students may apply to a second college.
OTHER NONRESIDENT PROGRAMS

A small number of programs considered by the faculty to be of importance in supplementing the Wesleyan curriculum for students with certain academic interests are treated as approved nonresident study programs. Participants continue to be Wesleyan students, pay regular tuition to the University, and are not placed on leave of absence. Information about these programs can be obtained from the Office of Study Abroad or the faculty member or office listed below. Students planning to participate in these programs should check with their faculty advisor and class dean concerning their progress toward completion of the major and graduation requirements. Participation in these programs does not count as a semester in residence.

The Woods Hole SEA Semester. Through this 12-week program, students spend six weeks at the Woods Hole Center for Oceanographic Research studying the chemistry, biology, physics, and geology of the oceans; marine history and literature; and maritime policy; and designing an independent research project. The second six weeks of the program entail lab research and sailing, navigating, and maintenance aboard a 135-foot vessel. See the chair of the Department of Earth and Environmental Sciences for information about the curriculum and application process.

Semester in Environmental Science (SES) at the Marine Biological Laboratory, Woods Hole. The purpose of this program is to instruct students in the basic methods and principles of ecosystems science in a manner that enhances and supplements existing curricula in natural and environmental sciences at the colleges participating in the SES consortium. The program is interdisciplinary and offers a core curriculum, stressing team research and team study. See the chair of the Department of Earth and Environmental Sciences for information about the curriculum and application process.

The Urban Education Semester. This is a fully accredited academic immersion program combining an interdisciplinary examination of inner-city public education with supervised practical teaching experience in selected New York City public school classrooms. Each semester, students enroll in graduate courses at the Bank Street College of Education and work three days per week under the guidance of distinguished teachers. The Urban Education Semester introduces students to the theory and practice of urban education. Interested students should contact the Gordon Career Center (http://www.wesleyan.edu/careercenter).

Wesleyan-Trinity-Connecticut College Consortium. By special arrangement with Connecticut College and Trinity College, Wesleyan students may enroll, without additional cost, in courses given at these institutions. Normally, students will be permitted to take only courses not offered at Wesleyan. Enrollment is limited to one course per semester. Arrangements for enrollment may be made through the Office of the Registrar (http://www.wesleyan.edu/registrar).

Dual-Degree Programs—Engineering. Wesleyan maintains dual-degree programs with Columbia University, Dartmouth College, and the California Institute of Technology. These programs allow students to earn two degrees in five years combined (three years at Wesleyan, two at the engineering school). While all three partners participate in the sequential 3-2 version, Dartmouth also makes a 2-1-1-1 track available in which students spend the first two years and their senior year at Wesleyan. In addition, Columbia University offers the so-called “4-2 option” in which students complete four years at Wesleyan before pursuing the BS engineering degree at Columbia. Provided that the necessary math and science courses are taken, this option allows students to pursue a wide range majors at Wesleyan before entering the engineering school.

AFROTC. Qualified Wesleyan students may participate in the Air Force Reserve Officer Training Corps (AFROTC) program hosted by Yale University’s AFROTC detachment. Students who wish to transfer credits for courses they successfully complete through this program may do so if (1) the courses have been approved in advance by the relevant Wesleyan department, and (2) the grades in the courses are C- or better. Students who wish to request the transfer of credit to their Wesleyan degree must do so through the same process and under the same guidelines as transfer credit from any other accredited institution. For details on how to transfer credit, please refer to Transfer of Credit from Other Institutions. For general information or assistance with any aspects of Wesleyan AFROTC participation, please contact Dean Wood, coordinator of veteran and AFROTC affairs, at jpwood@wesleyan.edu. For more information about Yale’s AFROTC program, please contact Yale AFROTC Detachment 009, 203-432-9431 or airforce@yale.edu.

ADVANCED DEGREES

BA/MA PROGRAM IN THE NATURAL SCIENCES, MATHEMATICS, AND PSYCHOLOGY

Wesleyan offers a BA/MA program as a formal curricular option for students who are interested in an intensive research experience. The program has a research orientation and includes course work, seminars, and, in some cases, teaching. The program provides a strong professional background for either further advanced study or employment in industry. The expected period for completion of the program is 10 semesters for those students who complete the BA in eight semesters. Students who finish the BA degree in less than eight semesters are eligible to apply. Departments and faculty advisors will pay careful attention to the course work and research backgrounds of students completing the BA in less than eight semesters to be sure they are able to meet all the expectations of the program in less than 10 full semesters of study and research. Further information on the BA/MA program is available at wesleyan.edu/grad/degree-programs/bama.html (http://www.wesleyan.edu/grad/degree-programs/bama.html).

MA AND PhD PROGRAMS IN PHYSICAL SCIENCES, MATHEMATICS, AND MUSIC

The University offers work leading to the MA degree in astronomy, computer science, earth and environmental sciences, mathematics, and music, and to the PhD in biology, chemistry, ethnomusicology, mathematics, molecular biology and biochemistry, and physics. Theses and dissertations are required for these degrees. An interdepartmental program leading to the PhD is offered jointly by the chemistry and physics departments. An interdepartmental program in molecular biophysics leading to the PhD is offered by the departments of molecular biology and biochemistry.

Graduate instruction is scheduled within an academic year consisting of two academic semesters from September to June. Summer work consisting of independent study or research is expected. No evening courses or summer school courses are available. Tuition remission and service as a teaching assistant are parts of the financial aid package offered to MA and PhD students. Information on the graduate programs is available at wesleyan.edu/grad/ (https://wesleyan.edu/grad).
MA IN CURATORIAL PRACTICE

This program is designed to enhance the professional student’s skills as a performing arts presenter, manager, producer, and curator, allowing each participant to advance in the field or, if the student is new to the field, enable him/her to pursue a position at a presenting institution or as an independent curator. Students gain an understanding of performance and movement-based artistic and curatorial practice; the social, cultural and historical context of these practices; and the ability to write and speak about this work in a variety of contexts. For more information, visit wesleyan.edu/icpp (https://wesleyan.edu/icpp).

THE MALS AND MPHIL IN GRADUATE LIBERAL STUDIES

Graduate Liberal Studies offers courses in the arts, humanities, mathematics, sciences, and social sciences leading to the master of arts in liberal studies (MALS) or the master of philosophy in liberal arts (MPhil). Courses meet on campus or in various combinations of online teaching modes, featuring schedules designed for professionals who are part-time students. Students are expected to complete all graduation requirements within six years. For more information, visit wesleyan.edu/masters (https://wesleyan.edu/masters), e-mail masters@wesleyan.edu, or visit the office at 74 Wyllys Avenue.

GENERAL REGULATIONS

The University expects all students to fulfill faithfully and effectively their responsibilities as members of the Wesleyan community. A student may be suspended or be required to withdraw from the University or from any course at any time when, in the judgment of the class dean or the faculty, respectively, the student fails to meet this obligation satisfactorily.

UNIT OF CREDIT

One unit of Wesleyan credit requires 120 to 160 hours of academic work. This work typically consists of 40 hours of scheduled class time, which is made up of 39 hours of class meeting time, and one scheduled final exam or the equivalent of at least one hour of additional work. In addition, 80 to 120 hours of out-of-class work are expected. A one-credit course that does not conform to a standard meeting pattern of at least 40 hours must still require 120 to 160 hours of academic work. For courses that award more or less than one unit of credit, the required hours of academic work are normally prorated to conform to the above formula.

1 The established standard meeting times allow up to 10 minutes for transition to and from other classes.

ENROLLMENT

Students must comply with the regulations for matriculation with the University as announced by the registrar. A student who does not enroll in the University by the announced deadline will be considered administratively withdrawn from the University. Students who enroll in fewer than three credits may be subjected to disenrollment.

MEDICAL REPORT

Every student entering the University for the first time must submit health information as requested by the director of University Health Services.

PAYMENT OF BILLS

It is the student’s responsibility to see that payment deadlines are met. Failure to do so prevents the student from enrolling, participating in course preregistration, and participating in the housing selection process. Diplomas, grades, and transcripts also will be withheld until university bills have been paid.

SELECTION OF COURSES

Detailed information concerning course offerings is given in the Wesleyan University Course Catalog; WesMaps (http://www.wesleyan.edu/wesmaps), Wesleyan’s online curriculum home page; and the Course Supplement, a condensed listing of all course offerings for each semester. These publications should be consulted for information concerning time and place of class meetings, additions or changes, and cancellations.

CHANGES IN AND WITHDRAWAL FROM COURSES

Students may not add courses (including tutorials) to their schedules after the drop/add period. Exceptions will be made for courses that start after the beginning of the semester, provided that the required drop/add or tutorial forms are submitted to the Office of the Registrar (http://www.wesleyan.edu/registrar) within five class days after the start of the course.

A student who withdraws from a course, the only option after the drop/add period, will receive a notation of “W” and the course will remain on the student’s transcript. The deadline for withdrawal by choice and without penalty from a full-semester course is one week before the end of classes. A student may withdraw from a first- and third-quarter course one week before the end of the corresponding quarter. For second- and fourth-quarter courses, the deadline for withdrawal corresponds to the withdrawal deadline for full-semester courses. To withdraw the student must submit to the Office of the Registrar (http://www.wesleyan.edu/registrar) by the stated deadline a withdrawal slip signed by the instructor, the faculty advisor, and the class dean.

An instructor may require a student to withdraw from a course if the student fails to meet the announced conditions of enrollment. The student will be required to submit a completed withdrawal slip to the Office of the Registrar (http://www.wesleyan.edu/registrar) to make the withdrawal from the course official.

Students who withdraw from the University before the stated withdrawal deadline will also be withdrawn from their courses. For a student withdrawing after the stated withdrawal deadline, the courses will remain on the transcript and they will be graded accordingly.
AUDITING

Subject to any conditions set by the instructor, a registered Wesleyan student may be permitted to audit a course without charge. At the end of the semester, the instructor may add to the grade roster the name of any student who has attended with sufficient regularity to have the course listed in the academic record as audited, without credit. Permission to audit does not include permission to have tests, examinations, or papers read or graded. Wesleyan alumni and members of the community, please see Nondegree Undergraduate Students (p. 16).

CLASS ATTENDANCE

A student is expected to attend class meetings regularly. Since the faculty intends that class attendance be primarily the student’s responsibility, no precise limitation of absences has been prescribed for all students. It is understood, however, that absence from class is regarded as the exception, not the rule. An instructor should notify the class dean of any student who is absent from class for one week or three consecutive classes, whichever comes first. Students on strict probation must attend all classes in which they are enrolled.

Instructors are entitled to establish definite and precise rules governing attendance. Any student who is repeatedly absent without excuse from scheduled academic exercises at which attendance is mandatory may be required to withdraw from the course.

UNSATISFACTORY PROGRESS REPORTS

It is expected that faculty will submit in a timely manner an Unsatisfactory Progress Report (UPR) to the class dean for any student who is doing unsatisfactory work. UPRs help the class deans identify students who are having academic difficulties and allow the deans to work with instructors to reach out and work with these students. Early intervention proves to be the most effective method for helping students experiencing academic difficulties. UPRs should be submitted for:

- Students who are doing unsatisfactory work (lower than C-) or experiencing difficulties that will result in unsatisfactory work;
- Students who are experiencing substantial difficulty with the course even though they may have a satisfactory grade of C or better;
- Students who are on strict probation. The Deans’ Office notifies instructors if such a student is in their course.

SUBMISSION OR CHANGE OF GRADES

Only the instructor of record can submit or change a course grade, unless the instructor is no longer employed by the University or has become unavailable, in which case the department chair, upon review of the student’s work, may submit a grade. Grades can only be given for work assigned and submitted during the academic term, except in the case where a student has requested an incomplete (please see Incompletes/Completion of Work in Courses), in which case work assigned during the semester may be submitted no later than the first day of classes of the subsequent semester. A change of grade may be made on the following grounds:

- Administrative error
- Error in calculation of grade
- Lost work submitted during the academic term was found
- Submission of outstanding work from an incomplete whereby the final grade is not lower than the provisional grade

INCOMPLETES/COMPLETION OF WORK IN COURSES

All the work of a course must be completed and submitted to the instructor by the last day of classes. The only exceptions to this are final examinations and, in courses without a registrar-scheduled final examination, significant assignments such as final take-home exams, semester-long projects, and term papers, which must be due no sooner than the first day, and no later than the last day, of the exam period, and preferably at the time slot reserved for the registrar-scheduled examination. A student who is unable to meet these deadlines, for the reasons listed below, may request the permission of the instructor to meet the requirement no later than 30 days after the last day of exams. If the instructor grants the extension, a grade of Incomplete (IN) must be submitted to the registrar at the time grades are due. Grades of Incomplete must be accompanied by a provisional grade. If the student does not submit the outstanding work in the course by the deadline, the provisional grade will become the final grade.

Any provisional incomplete grades remaining by the end of the drop/add period of the subsequent semester will automatically be converted to the provisional final grade by the Office of the Registrar (http://www.wesleyan.edu/registrar).

A student may receive up to two incompletes per semester by this method. To receive incompletes in more than two courses, the student must petition his or her class dean. The petition can be granted only on grounds of illness, family crisis, or other extraordinary circumstances. To petition for a brief extension of the Incomplete deadline, based on these same criteria, students must make a request to their class dean. The class dean will make the decision about whether the petition will be granted in consultation with the Vice President for Student Affairs and the course instructor.

Incompletes will not be granted for summer or winter sessions. Rare exceptions to this policy may be made in the case of serious emergencies, by petitioning the class dean. For the impact of incompletes on students’ records for the purposes of academic review, students should consult their class dean. Students on strict probation will not be allowed to receive incompletes without the prior approval of their class dean.

Students who started at Wesleyan prior to Fall 2018 can petition for an extension of the incomplete deadline based on the policy that was in place in 2017.

REPEATABLE COURSES

Courses that may be repeated receive a designation in WesMaps and may be taken twice at most for a letter grade (AF). Please see Graduation Requirements (p. 11) for additional regulations governing repeatable courses.

COURSES RETAKEN FOR LOW GRADE

A student who receives a C- or below in a non-repeatable course may repeat the course once. The original grade remains on the transcript and both grades are
calculated in the grade point average. The course may count only once toward general education expectations and the 32 graduation credits.

**Failed Courses** (below D-): Students who fail a course may add this course to their plans during pre-registration or drop/add.

**Low Grades** (C- to D-): A student who wants to retake a course due to a low grade may submit an enrollment request for the class only during the drop/add period. The registrar will flag the enrollment request to indicate that the course is being repeated due to low grade.

**REGULATIONS GOVERNING THE SCHEDULING OF CLASSES**

Classes will meet each week for three class periods of 50 minutes each, for two class periods of 80 minutes each, or for one class period that corresponds as closely as possible to the standard time periods described below.

**MEETING PATTERNS**

Classes that meet three times weekly may meet only on Monday, Wednesday, and Friday. Classes that meet twice weekly may meet within regulated times on Tuesday and Thursday or Monday and Wednesday afternoons, or on any two mornings combining Monday, Wednesday, or Friday (MW, MF, or WF). Courses that meet once weekly may meet in the afternoon or evening on any day. Classes and laboratory sessions should be scheduled between 8 a.m. and 4:10 p.m. and in the evenings after 7:10 p.m.

**MORNING CLASSES**

On Monday, Wednesday, and Friday, classes are scheduled for three periods of 50 minutes each beginning at 8:50 a.m., 9:50 a.m., or 10:50 a.m. On Tuesday and Thursday, classes are scheduled for two 80-minute periods beginning at 8:50 a.m. and 10:20 a.m.; any combination of two on Monday, Wednesday, or Friday (MW, MF, or WF) may be scheduled at 8:20 a.m. or 10:50 a.m.

**AFTERNOON CLASSES**

On Monday, Wednesday, and Friday, classes are scheduled for three periods of 50 minutes each. Monday and Wednesday or Tuesday and Thursday classes are scheduled for two periods of 80 minutes each. All afternoon classes should begin at 1:20 p.m. or 2:50 p.m.

Exceptions to these rules require approval by the Educational Policy Committee. Ordinarily, classes should not overlap more than one standard period between 8 a.m. and 3 p.m. Saturday classes may be scheduled as desired by departments.

All additional required components of class schedules beyond the regular meetings should be announced, with dates and times if possible, on the online course catalog listing before the preregistration period begins. All dates and times should be announced no later than the first class meeting. Thereafter, additional components may only be required if alternatives are available for students who have academic or required varsity athletic schedule conflicts.

**READING PERIOD**

This period is designated for students to prepare for examinations and complete assignments due at the end of the semester. To protect the integrity of that period, the faculty have established the following regulations:

- Final exams, comprehensive examinations covering materials from the course of the entire semester, are to be given only during the formal exam period established by the faculty.
- Classes can be held only during the class period established by the faculty; make-up classes should be held during that established class period.
- In courses without a registrar-scheduled final examination, significant assignments such as final take-home exams, semester-long projects, and term papers must be due no sooner than the first day, and no later than the last day, of the exam period, and preferably at the time slot reserved for the registrar-scheduled examination.
- Student organizations should not schedule retreats, programs, or meetings that require student attendance during Reading Period.
- Departmental, program, and college activities that require student participation should not be held during Reading Period, with the exception of oral and written examinations covered by alternative exam calendars.
- Sessions or information programs that require student attendance should not be held during Reading Period.

**SCHEDULED FINAL EXAMINATIONS**

The schedule of final examinations will be issued in advance. The time of any examination may be changed by unanimous request of the class and with the approval of the instructor, but it must be set within the period designated by the faculty for examinations, and the change must be reported promptly to the registrar. The faculty has voted to comply with the following guidelines:

- That “hour exams” be limited to 50 minutes so that students who are scheduled to leave for other classes may not be placed at a disadvantage
- That final examinations be limited to three hours unless otherwise announced before the examination

If a student is absent from the final examination with the permission of the instructor, a grade of absent will be assigned. A grade of absent will be accompanied by a provisional grade that will become the final grade if the final examination is not made up by the end of the first full week of classes of the subsequent semester. The exam should be scheduled at a time mutually agreed upon by student and instructor, where both should be aware of the policy governing on-campus housing availability during times when the University is not in regular session. Grades are due in the Office of the Registrar (http://www.wesleyan.edu/registrar) no later than the date published in the academic calendar.

If a student has three or more final examinations on one day or four in two days, the student may request a rescheduled examination from one instructor.

**STUDENT GRIEVANCE PROCEDURE**

The process for appealing a grade or contesting any aspect of a course (including the scheduling of classes and examinations) is:

1. The student discusses the grade or the contested issue with the instructor of the course; if the student is not satisfied that a reasonable explanation has been provided, or if the student wants to address an issue in confidence, then
2. The student appeals to the department/program chair; if not satisfied, then
3. The student appeals to the academic dean of the department or program’s division (Arts and Humanities, Social Sciences and Interdisciplinary Programs, or Natural Science and Mathematics); if not satisfied, then
4. The student appeals to the provost.

Only the instructor of the course may change the grade; therefore, a grade appeal beyond the instructor will succeed only with the consent of the instructor.

MAKE-UP EXAMINATIONS FOR SUSPENDED STUDENTS

Students who have been suspended from the privileges of the campus for a limited period are held responsible ultimately for all of the work in their courses. Giving make-up examinations to a suspended student upon the student’s return is entirely at the discretion of the instructor. The instructor may waive any examinations or quizzes given to the class during the period of the suspension and may base the student’s grade on the rest of the record, or the instructor may require the student to take make-up examinations or submit additional work.

LEAVE, WITHDRAWAL, READMISSION, AND REFUND POLICY

The following categories indicate the conditions under which a student’s registration at Wesleyan may be interrupted. These designations are recorded on the student’s permanent record.

LEAVE OF ABSENCE

An undergraduate may take an approved leave of absence for a specified period, normally not to exceed two semesters. Students who interrupt their enrollment at Wesleyan by taking a nonacademic leave for more than four consecutive semesters must apply for readmission. Leave-of-absence application forms are available in the Office of the Deans, (http://www.wesleyan.edu/studentaffairs/forms.html) the Office of the Registrar, (http://www.wesleyan.edu/registrar) or on their respective websites.

For academic and nonacademic leaves, the deadline for submission of leave-of-absence applications is December 1 for the spring semester and April 1 for the fall semester. Academic and nonacademic leaves will not be granted after the drop/add period at the beginning of each semester.

Students who do not enroll or renew their leave by the end of the drop/add period in the expected semester of return will be administratively withdrawn from the University. Application for readmission is available online and will be considered by the Office of the Deans.

ACADEMIC LEAVE

A student on academic leave must earn a minimum of three course credits per semester (full-time status) at another institution. Academic leave is limited to one year but may be renewed for an additional year upon request to the class dean and the faculty advisor. Students may not go on an academic leave to study abroad. Please see Transfer of Credit (p. 19) for transfer credit criteria. Credits earned while on leave must be processed two weeks prior to the semester in which a student returns for purposes of class-year classification.

NONACADEMIC LEAVE

Wesleyan permits students to interrupt their college careers for a semester or year of nonacademic experience. Students may receive assistance from the Office of the Deans (http://www.wesleyan.edu/studentaffairs/about/classdeans.html) and from the Gordon Career Center (http://www.wesleyan.edu/careercenter) in exploring opportunities for the period of the leave. Nonacademic leave is limited to one year but may be extended upon request to the faculty advisor and class dean. Students will be reclassified to the appropriate class year at the end of the semester in which they file their leave.

Students who have obtained prior approval may earn academic credit while on leave and will be reclassified, if appropriate, once these credits are posted to their transcript.

MEDICAL LEAVE

A medical leave is authorized by the vice president for student affairs on the basis of a recommendation from the medical director of University Health Services (UHS) or the director of Counseling and Psychological Services (CAPS). Students on a medical leave must leave campus and focus on the evaluation of, treatment for, and management of the illness or condition that necessitates the leave. The appropriate class dean will communicate the terms of the leave as well as the conditions and procedures for returning to Wesleyan. When a medical leave is authorized, students are withdrawn from the courses in which they are enrolled. In exceptional cases, some incomplete grades may be granted, depending on course content and the date of the leave. (Note that any semester in which a student takes a leave and receives at least one grade is counted as a semester in residence for purposes of graduation.)

WITHDRAWAL

The five forms of withdrawal fall into three main categories: voluntary, involuntary for academic reasons, and involuntary for nonacademic reasons. Withdrawal from the University does not include withdrawal from courses if it occurs after the course withdrawal deadline.

VOLUNTARY

Withdraw. A student has voluntarily left Wesleyan.

IN VOLUNTARY FOR ACADEMIC REASONS

• Required resignation. A student has been asked to leave the University for academic reasons, with the privilege of applying for readmission after the recommended period of absence.

• Separation. A student has been asked to leave the University for the second time for academic reasons and does not have the privilege of applying for readmission.

IN VOLUNTARY FOR NONACADEMIC REASONS

• Suspension. A student has been asked to leave the University for other than academic reasons for a specified period.

• Dismissal. A student has been asked to leave the University for other than academic reasons without the privilege of applying for readmission.

READMISSION

Students who have withdrawn or have been required to resign may apply to the Office of the Deans (http://www.wesleyan.edu/studentaffairs/forms.html) for readmission. The readmission application requires a $50 fee and other accompanying materials specified at the time of departure. Students wishing to enter the University for the fall semester must notify the Office of the Deans (http://www.wesleyan.edu/studentaffairs/about) of their intent by May 1 and submit readmission materials by June 1; for the spring semester, notification must be made by November 1 with materials submitted by December 1.
Candidates are strongly urged to meet all requirements well in advance of deadlines, since housing assignments and financial aid awards cannot be made until readmission is granted. Credits earned while away are subject to the conditions described in Transfer of Credit (p. 19).

**REFUNDS**

The following guidelines govern refunds to student who terminate enrollment before the end of the semester.

- **Tuition and fees.** If a student leaves the University prior to the end of the drop/add period, 100 percent of tuition will be refunded. If a student withdraws after the drop/add period, tuition will be refunded on a prorated basis. The Student Accounts Office maintains a schedule of the percent of tuition to be refunded that is based on the number of weeks in the semester that have passed. When a student receives financial assistance, a prorated reduction in aid will be calculated based upon the revised charges. No refunds will be given for withdrawals from the University after the ninth week of the semester.

- **Fees.** The Student Activity Fee is refundable if a student is absent for an entire semester, but it is not prorated for periods of less than one semester.

- **Residential comprehensive fee.** The housing portion of the fee will be prorated according to the number of days of occupancy; no housing portion refunds are granted for the final two weeks of a semester. Dining refunds will be based on the unused portion of the plan at the time of the withdrawal.
# Key to Symbols and Abbreviations

AFRICAN AMERICAN STUDIES

The African American studies major offers a substantial interdisciplinary, comparative, and cross-cultural approach to the study of the experiences of people of African descent in the black Atlantic world, especially in the United States and the Caribbean. The major, which features courses in the humanities, social sciences, and the arts, enables students to apply, critique, and reimagine the methodologies and insights of many disciplines to their understanding of the cultural, historical, political, and social development of people of African descent. The curriculum enables students to better understand the social structures and cultural traditions created by Africans in the diaspora and to better understand Western conceptualizations of race, the relationship between issues of race and identity, and the histories and influences of people of African descent.

Students who graduate with a major in African American studies go on to pursue advanced degrees and careers in fields such as law, medicine, literature, education, business, public policy, African American studies, and the sciences.

The intellectual work of the African American studies program is enriched further by the programming of the Center for African American Studies. The center’s offerings deepen classroom and campuswide conversations about contemporary and historic matters relating to African American studies and to the African diaspora.

FACULTY

Lois Brown
BA, Duke University; PHD, Boston College
Class of 1958 Distinguished Professor; Professor of African American Studies; Professor of English; Professor, Feminist, Gender, and Sexuality Studies

Khalil Anthony Johnson
BA, University of Georgia Athens; MPHIL, Yale University; PHD, Yale University
Assistant Professor of African American Studies

Elizabeth McAlister
BA, Vassar College; MA, Yale University; MA, Yale University; MPHIL, Yale University; PhD, Yale University
Professor of Religion; Chair, African American Studies; Director, Center for African American Studies; Professor, African American Studies; Professor, Feminist, Gender, and Sexuality Studies; Professor, American Studies

Ashraf H.A. Rushdy
BA, University of Alberta; MA, University of Alberta; PHD, Cambridge University
Benjamin Waite Professor of the English Language; Professor of English; Professor of African American Studies; Professor, Feminist, Gender, and Sexuality Studies

Nicole Lynn Stanton
BA, Antioch College; MFA, Ohio State University
Dean of the Arts and Humanities; Associate Professor of Dance; Associate Professor, African American Studies; Associate Professor, Environmental Studies

AFFILIATED FACULTY

Katherine Brewer Ball
BA, Occidental College; MA, New York University; PHD, New York University
Assistant Professor of Theater; affiliated faculty

Rachel Ellis Neyra
BA, Freed Hardeman College; PHD, SUNY at Stony Brook
Assistant Professor of English; Assistant Professor, African American Studies

Anthony Ryan Hatch
AB, Dartmouth College; MA, University of Maryland College Park; PHD, University of Maryland College Park
Associate Professor of Science in Society; Associate Professor, African American Studies; Associate Professor, College of the Environment; Associate Professor, Sociology; Associate Professor, Environmental Studies Program

Jay Clinton Hoggard
BA, Wesleyan University; MA, Wesleyan University
Professor of Music; Professor, African American Studies

Renee Johnson Thornton
BA, SUNY at Binghamton; MALS, Wesleyan University; PHD, University of Rhode Island
Dean for the Class of 2022; Research Affiliate, African American Studies

Axelle Karera
BA, York University; PHD, Pennsylvania State University
Assistant Professor of Philosophy; Assistant Professor, African American Studies

Rashida Z. Shaw McMahon
BA, Wesleyan University; MA, Northwestern University; PHD, Northwestern University
Assistant Professor of English; Assistant Professor, African American Studies

Tyshawn Sorey
BM, William Paterson College of NJ; MA, Wesleyan University; PHD, Columbia University
Assistant Professor of Music; Assistant Professor, African American Studies

H. Shellae Versey
BS, Tuskegee University; MPH, Columbia University; MS, University of Michigan; PHD, University of Michigan
Assistant Professor of Psychology; Assistant Professor, Environmental Studies; Assistant Professor, African American Studies

Tiphanie Yanique
BA, Tufts University; MFA, University Houston Univ Pk
Professor of English; Director, Creative Writing; Professor, African American Studies

VISITING FACULTY

Casey Hayman
BA, University of Massachusetts Amherst; MA, University of Massachusetts Amherst
Visiting Assistant Professor of African American Studies

Jesse Nasta
BA, Wesleyan University; MA, Northwestern University; PHD, Northwestern University
Visiting Assistant Professor of African American Studies

EMERITI

Gayle Pemberton
African American History, 1444-1877

The three elective courses must be 200-level or transfer any other course to meet these requirements. Students may not substitute students' chosen area of concentration. The major program must include the three required core courses, the required junior colloquium, and the three studies core courses: AFAM202, AFAM203, or AFAM204.

MAJOR REQUIREMENTS

The African American studies major consists of eleven semester courses. At least seven of these courses must be cross-listed with African American studies: the three required core courses, the required junior colloquium, and the three elective courses. All courses must be letter-graded and must be completed at Wesleyan. One research tutorial can be counted toward the eleven required courses; all courses taken away from Wesleyan and used to fulfill the student’s chosen area of concentration. The major program must include the following:

Required core courses (3 courses). Students are required to take and successfully complete all three of the core courses. Students may not substitute or transfer any other course to meet these requirements.

</tr>
</tbody>
</table>

Junior colloquium (AFAM301). This course is required of all majors and should be taken in the first semester of the junior year.

Elective courses in African American studies (3 courses). Majors must complete one elective course in each of the following three areas:

- Literature and literary theory
- Social and behavioral sciences (any AFAM SBS course except history)
- The arts (art, art history, dance, film, creative writing, music, theater)

The three elective courses must be 200-level or higher. These courses should be cross-listed with African American studies, although in special circumstances students can petition to use a course that is not formally cross-listed with AFAM as one of their electives.

Field of concentration (4 courses). Each major must take four courses that represent an area of concentration. Concentrations may be conceived either disciplinarily (with the four courses coming from a single department) or thematically (with courses selected from different disciplines but designed around a specific topic). Concentration courses do not necessarily have to be cross-listed with AFAM. One 100-level course can count in the concentration. None of the four courses taken in the field of concentration can count toward the AFAM core courses or the AFAM elective courses. We strongly recommend that students design their concentrations in consultation with their major advisor.

COURSES FOR NON-MAJORS

The African American studies program offers FYS courses especially designed for first-year students. First-year students also are admitted to many other courses, and students should review the individual course listings on WesMaps for details about enrollment.

STUDENT LEARNING GOALS

Our students are trained in cross-cultural, interdisciplinary, and critical approaches to the study of the experience of people of African descent in the Atlantic world, especially in the United States and the Caribbean. The major in African American studies features an array of courses in the humanities, the social sciences, and the arts.

Students who major in African American studies

- will develop sophisticated critical reading, writing, and research skills and will apply these in their studies of the histories and influences of people of African descent.
- will demonstrate their familiarity with the foundational ideas, theories, and methodological approaches of African American studies.
- will develop and apply analytical skills that are rooted in the discipline of African American studies and that are informed by interdisciplinary approaches to research.
- will use their enhanced analytical skills to demonstrate their understanding, assessments, and critiques of Western conceptualizations of race, issues of race, and identity, African American intellectual traditions, cultural production, and political histories.
- will apply, critique, and reimagine the methodologies and insights of many disciplines to their understanding of the cultural, historical, political, and social development of people of African descent.

STUDY ABROAD

In an increasingly interdependent world, understanding of other societies is an essential aspect of one’s education. Through the opportunity to study in another country and culture, Wesleyan offers its students access to a wealth of knowledge and experience that can enrich the personal, academic, and professional lives of participants. African American studies majors have completed semester-abroad and study-abroad programs in cities such as Paris, Johannesburg, Mexico City, and London. For more information please view
the Office of Study Abroad website at www.wesleyan.edu/cgs/OSA (http://www.wesleyan.edu/cgs/osa).

**LANGUAGE REQUIREMENT**

There is no foreign language requirement for African American studies majors. We do encourage our students, however, to learn at least one additional language.

**PRIZES**

**W. E. B. Du Bois Prize:** The W. E. B. Du Bois Prize is awarded each year to a graduating African American studies major. The prize recognizes academic excellence on three major criteria: a range of courses within the African American studies major, coursework outside the major, and evidence of independent research. The faculty of the program select the recipient of the prize.

**John G. Monroe Prize:** The Center for African American Studies inaugurated the Monroe Prize in 1985 in honor of former Wesleyan professor John G. Monroe. The Monroe Prize is awarded to the sophomore or junior in the University who submits the best essay on any subject in African American studies. Essays should be submitted for consideration to the program office by April 1.

**Vanguard Prize:** The Vanguard Prize was established by black alumni in tribute to the black members of the Class of 1969, whose perseverance and pioneering leadership earned them designation as the Vanguard Class. The prize is awarded annually to a graduating senior who has achieved academic excellence and contributed to maintaining Wesleyan’s racial diversity. The faculty of the program select the recipient of the prize.

**Brody Prize:** The Erness Bright Brody Prize was established by Ann duCille in 2002 in honor of former Chair of the African American Studies Program, Erness Bright Brody. The prize is awarded annually to a senior African American studies major. The award is based on the program faculty’s familiarity with and assessment of students’ proficiency in written expression, especially exposition, although creative writing may also be considered. Essays should be submitted for consideration to the program office by April 1. The faculty of the program chooses the recipient of the prize.

**HONORS**

The honors thesis is produced during a student’s senior year and is a yearlong independent research project. Students are eligible to write an honors thesis if they have achieved at least a B+ average in all of their African American studies courses. Eligible students who wish to write a thesis must apply to the program by the last day of classes in their junior year. A detailed description of the process for earning honors in African American studies is available on the program website.

**CAPSTONE EXPERIENCE**

Majors are required to undertake one substantial research or artistic project under faculty supervision. This may take the form of an honors thesis, a senior essay done through a yearlong individual tutorial, or a research paper of at least 15 pages in length that is generated in a 300-level African American studies program seminar. Any work done to fulfill the research requirement must receive a grade of B- or better.
ALLBRITTON CENTER FOR THE
STUDY OF PUBLIC LIFE

The Allbritton Center for the Study of Public Life continues Wesleyan’s commitment to preparing students for lives as active citizens and for leadership. It seeks to support Wesleyan’s tradition of the scholar-teacher by encouraging faculty research in a manner that directly benefits and enhances student learning. The center reflects changes that have transpired across the social-scientific disciplines. These include the creation of new multidisciplinary ventures, the growing number of studies employing multiple methodologies, and the rethinking of the idea of the public in a variety of intellectual and social movements. In addition, university-based intellectuals have been rethinking their connection to the greater public and, consequently, are forging knowledge-seeking alliances with innovators and leaders in government and the corporate world. Social scientists are developing innovative and productive relationships with other sectors of the public, including artists, grassroots activists, and independent scholars. Our students are energized and excited by these developments. The center enables Wesleyan to focus resources; encourage curricular innovation, new research, and scholarship; and foster greater public understanding and responsibility.

FACULTY

Peggy Carey Best
AB, Earlham College; PHD, Union Institute Grad School
Director, Service Learning; Visiting Assistant Professor of Sociology; Coordinator, Service Learning

Makaela Jane Kingsley
BA, Wesleyan University; MA, Wesleyan University
Director, Patricelli Center for Social Entrepreneurship; Adjunct Instructor in Public Policy

Peter Rutland
BA, Oxford University; DPHIL, York University
Colin and Nancy Campbell Professor in Global Issues and Democratic Thought; Professor of Government; Director, Allbritton Center for the Study of Public Life; Professor, Russian, East European, and Eurasian Studies; Tutor, College of Social Studies

Clifton Nathaniel Watson
BA, University of Connecticut; MA, North Carolina Central Univ; PHD, Fordham University
Director, Jewett Center for Community Partnerships; Adjunct Assistant Professor of Public Policy

VISITING FACULTY

Robert Cassidy
AMERICAN STUDIES

Wesleyan’s Department of American Studies provides a broad grounding in the study of the United States in a hemispheric and global context. American studies majors draw on the intellectual resources of a variety of departments including anthropology, English, history, religion, and sociology, as well as interdisciplinary programs such as Latin American studies, African American studies, and feminist, gender, and sexuality studies. Individually designed concentrations, which are the hallmark of the department, allow students to forge interdisciplinary approaches to the particular issues that interest them, from visual culture and aesthetics to racial politics and gender systems.

Alongside its interdisciplinary emphasis, American studies at Wesleyan stresses a comparative approach to the study of the United States. Such prominent features of U.S. cultural development as settler colonialism, franchise colonialism, slavery, immigration, imperialism, capitalism, mass culture, gender and sexuality, race and ethnicity, political culture, the importance of modern social and political identities, and state development are juxtaposed to similar processes and phenomena in a variety of nations in the Americas. By studying cultural phenomena across national boundaries, American studies majors develop a rich understanding of the complex histories that have resulted from the conflict and confluence of European, Indigenous, African, and Asian cultures throughout the Western Hemisphere and the Pacific.

FACULTY

Matthew Carl Garrett
BA, Bard College; MA, Stanford University; MPHIL, Cambridge University; PHD, Stanford University
Associate Professor of English; Associate Professor, American Studies; Coordinator, Social, Cultural, and Critical Theory

Coordinator, Disability Studies

AMERICAN STUDIES MAJOR

ADMISSION TO THE MAJOR

To major in American studies, students should submit a major declaration request through their WesPortal and present a completed application to the administrative assistant at the Center for the Americas. The major application can be downloaded from the AMST website (http://www.wesleyan.edu/amst). The AMST chair will review applications and approve accepted applications through the WesPortal system. Majors are expected to complete an Introduction to American Studies course (AMST174 to AMST178) before the end of their junior year. Transfer students should meet with the department chair to discuss which courses taken elsewhere can be offered as substitutes for Wesleyan courses.

MAJOR REQUIREMENTS

Majors in American studies must take 11 courses (12 for honor candidates). The department recommends that first-year students and sophomores considering the major enroll in a survey course. These courses offer an introduction and overview of important issues and questions in American studies and provide a solid foundation for advanced work in the major.
JUNIOR CORE COURSES

Junior core courses constitute the foundational base for the major. AMST200 and one junior colloquium are required of every major. The colonialism course situates American studies in a hemispheric frame of reference and introduces a variety of theoretical and methodological approaches to an intercultural analysis of the Americas. Junior colloquia explore in-depth a range of theoretical perspectives utilized in American studies, consider the history and changing shape of the multifaceted American studies enterprise, and engage students in research and analysis. Students may take more than one junior colloquium and count the second one as an elective.

CONCENTRATION AND ELECTIVES

In addition to junior core courses and the senior requirement, the major includes seven upper-level electives that focus on the cultures of the Americas. The heart of each major’s course of study consists of a cluster of four courses among those electives that forms an area of concentration (these should be numbered AMST201 and above).

A concentration within American studies is an intellectually coherent plan of study (developed in consultation with an advisor) that explores in detail a specific aspect of the culture(s) and society of the United States. It may be built around a discipline (including history, literary criticism, government, or sociology), a field (such as cultural studies, ethnic studies, or queer studies), or a “problematic” (such as ecology and culture or politics and culture). As models and inspiration for prospective concentrators, we have developed descriptions of seven standing concentrations—queer studies, race and ethnicity, cultural studies, material culture, visual culture, historical studies, and literary studies—that we encourage majors to select or adapt. Majors may also devise their own concentrations. Among the latter in recent years have been concentrations in urban studies, disability studies, media studies, social justice, education, and environmental studies. In addition, to ensure chronological breadth, majors must include in their major at least one course that has a majority focus on American culture(s) in the period before 1900.

HONORS

Candidates for honors in American studies must complete and receive honors on a senior thesis. The American Studies Department requires students who want to write an honors thesis submit a completed application to the department. Consult the chair of the department, Professor J. K. Kauanui (catalog.wesleyan.edu/departments/amst/ugrd-amst/jkauanui@wesleyan.edu) for information about the application. See also the link to Honors (http://www.wesleyan.edu/amst/Honors.html) on the AMST website (http://www.wesleyan.edu/amst) for more information about the honors process in American studies.

CAPSTONE EXPERIENCE

Every American studies major must complete a capstone experience to fulfill the major. This capstone experience can be fulfilled in one of three ways. Theses in the American Studies Department include research projects on a range of topics with a variety of methods. A senior can undertake a two-term honors thesis in an honors thesis tutorial (AMST409 and AMST410 AMST410) with a thesis advisor. This enables the major to stand as a candidate for honors in American studies. Second, a senior can enroll in a one-semester senior essay/project tutorial (AMST403 AMST403 or AMST404 AMST404) to undertake an essay or project (for instance, a play or screenplay). Third, a major may take an advanced 300-level seminar originating in or cross-listed with American studies, or, with the permission of the American studies faculty advisor, outside American studies, for AMST capstone credit. Most majors who enroll in an advanced 300-level seminar are seniors, though some students take a capstone seminar earlier. A major can have more than one capstone experience. For instance, a major could take more than one advanced 300-level seminar and write an honors thesis or a senior essay or project.

HEMISPHERIC AMERICAS AND TRANSNATIONAL AMERICAN STUDIES

Students are also asked to consolidate a hemispheric/transnational American studies focus by taking two courses that build on the comparative foundation supplied in AMST200. Hemispheric Americas and transnational American studies courses are identified on the AMST website (http://www.wesleyan.edu/amst) (under “for majors”). Courses used to meet this requirement may also, as appropriate, be counted toward concentration, elective, or senior seminar requirements. A senior essay or thesis that utilizes a hemispheric or transnational American studies approach may count toward this requirement.

STUDENT LEARNING GOALS

Ultimately, our goal for our majors is that they develop a critical, theoretically informed understanding of the United States as a political, social, and cultural formation that exists in and had its inception in a transnational context of settler colonialism, imperial expansion, and global capitalism. In addition, we want our majors to develop the skills in research and writing that will allow them to apply that understanding to concrete and particular issues and convey the results of their analysis effectively. Our majors learn about the interdisciplinary field of American studies in its most expansive and robust form, including emphases on indigeneity, race/ethnicity, gender, sexuality, disability, and class.
ANTHROPOLOGY

Anthropology is the study of the complexity and diversity of human and nonhuman life in an interconnected world. The Anthropology Department at Wesleyan offers courses on anthropological theories and methods, and topics including urban anthropology, globalization, media studies, consumer culture, archaeology, social movements and activism, development and humanitarianism, and race, gender, and sexuality. Anthropology provides excellent preparation for a variety of careers that require an understanding of cultural difference in a transnational world. Social justice and ethical concerns have always been central to the discipline of anthropology.

DEPARTMENTAL ADVISING EXPERT

Margot Weiss

ANTHROPOLOGY MAJOR

ADMISSION TO THE MAJOR

If you plan to major in anthropology, you should take ANTH101, the department’s required gateway course, during your first or second year. A minimum grade of B in ANTH101 is required for acceptance into the major. Students enrolled in ANTH101 during the spring of their sophomore year may declare the major if their midterm grade is a B or higher.

MAJOR REQUIREMENTS

In addition to ANTH101, majors are required to earn a minimum of nine anthropology credits, eight of which must be numbered 201 or higher. These must include:

- two core courses in anthropological theory, ANTH295 and ANTH296, offered in fall and spring, respectively. As the precise topics of these courses will sometimes vary in consecutive years, it may be possible to repeat one or the other for credit and to fulfill the requirement, as long as the topics are different.
- our required course in anthropological methods, ANTH208. We recommend that students take ANTH208 in their sophomore or junior year.
- an individually designed area of concentration consisting of four elective courses (see below).
• a capstone experience, which may consist of a thesis, essay, or a senior seminar paper (see Honors/Capstone tab).

Students should work out their plans to fulfill the major requirements with their advisor by keeping their Major Certification Form up to date.

Concentrations. Concentrations are flexible specializations that reflect your particular specialization within anthropology. Working with your major advisor, you decide on a coherent set of four courses as your concentration. We encourage you to include one course from outside anthropology. There are three standing concentrations:

• Difference, Inequality, and Social Justice
• Local Distinctions, Global Connections
• Producing, Consuming, and Performing Culture

You can also design your own concentration in consultation with your major advisor. Full descriptions of our concentrations are here (http://www.wesleyan.edu/anthro/concentrations.html).

STUDENT LEARNING GOALS

Our overarching goal is to provide students with sophisticated ways of understanding both human unity and human difference. We want students to think critically about discourses that divide the world into fully modern western Selves and not-yet-modern non-western Others, but to do so without romanticizing cultural differences. We want them to appreciate how anthropological theory is constructed and used in understanding particular cases. Our approach is premised on complex global interconnectivity that interrogates boundary-making projects and explores the fabrication of national, cultural, and regional differences in a historical perspective. This means zooming in to understand how translocal ideologies and forces are negotiated in local settings, but also zooming out to link up localities and build a contingent picture of the interconnected world we inhabit.

STUDY ABROAD

Majors are encouraged to take advantage of study-abroad programs and, with the approval of their advisor via the Major Certification Form, students may count up to three of their study-abroad courses for concentration or elective credit. Theory and methods courses may not be substituted. A grade of B or higher is required for study-abroad courses to count toward the major. The Office of Study Abroad (http://www.wesleyan.edu/cgs/osa) has information about specific programs, application procedures, major credit, etc.

ADDITIONAL INFORMATION

Cross-listed courses: Various departments and programs offer cross-listed or other courses that can be counted toward the anthropology major. These include African American studies, American studies, archaeology, biology, classical studies, earth and environmental sciences, history, religion, sociology, and feminist, gender, and sexuality studies. If outside courses are to be counted toward the anthropology major, your advisor must approve them using the Major Certification Form.

Double majors: Anthropology majors have combined anthropology with a range of other majors, including science in society; feminist, gender, and sexuality studies; American studies; environmental studies; English; dance; music; African American studies; film; and both art history and art studio; as well as the certificates in writing and in social, cultural, and critical theory. All the requirements for the two majors must be met, except when faculty representatives of the two departments approve alterations in your program. We generally expect students writing a thesis for honors in both majors to enroll in ANTH400 in their fall semester and enroll in a tutorial in the other department or program in their spring semester. Please consult with the department chair and/or a department advisor.

HONORS

Only theses are eligible for honors or high honors. A minimum grade of B+ in either ANTH295 or ANTH296 is required for the pursuit of honors.

CAPSTONE EXPERIENCE

Senior majors are required to complete a thesis, essay, or a senior seminar paper as their capstone experience.

Theses. Only theses are eligible for departmental honors. A thesis is an independent, two-semester (or more) research project. In the fall semester of their senior year, students writing a thesis should enroll in ANTH400, a research and writing seminar in which students pursue individual research projects in a group context. In the spring semester of their senior year, thesis candidates should enroll in an individual thesis tutorial (ANTH410). It is strongly recommended that students contemplating a thesis either enroll in an individual tutorial (ANTH402) in the spring semester of their junior year, in which they would begin library research on their area of interest, or else take a course that is relevant to their research concerns.

Essay. An essay is also a serious research commitment: It is an independent, one-semester (or more) research project. In the fall semester of their senior year, essay writers should enroll in ANTH400. They will complete a draft of their essay in the fall semester and submit a final version by the first day of the spring semester.

Seminar papers. Students who select this option should take a 300-level course (or an advisor-approved 200-level course) that involves a substantial research paper in their senior year. The course must be designated and approved by the major advisor in the student’s Major Certification Form prior to spring break of their senior year.

Students wishing to write a thesis must submit a proposal to the department. Students wishing to write a thesis or essay involving fieldwork with human subjects must complete the Ethics Questionnaire. Both are due the Friday before spring break of their junior year.

• more on Thesis Proposals
• more on Ethics Questionnaires
• more on the Goffe Wesleyan Summer Experience Grant (to support summer fieldwork in Anthropology)
• Check out previous anthropology thesis projects on WesScholar here (http://wesscholar.wesleyan.edu/anth_etd)!
ARCHAEOLOGY PROGRAM

Archaeology is the discipline most directly concerned with the understanding and explanation of past societies through the study of their material remains. The reconstruction of these societies through the interpretation of material culture permits archaeology to span both the prehistoric and the historic periods. While certain archaeology courses originate within the program, others are cross-listed from the departments of Anthropology, Art and Art History, and Classical Studies. Majors design their own curriculum in close consultation with their advisor according to the specific area of concentration within the discipline.

FACULTY

ARCHAEOLOGY MAJOR

ADMISSION TO THE MAJOR

To apply to become a major in archaeology, a student must have taken or be currently enrolled in either a Gateway or a Thinking Through Archaeology course and earn a grade of B or better. Following electronic application, admission will be determined by a meeting of the ARCP faculty.

MAJOR REQUIREMENTS

A major in archaeology consists of at least nine different courses numbered 200 and above:

- One Gateway course—see list above
- One Thinking Through Archaeology course—see list above
- One course in each of the four areas—see lists below
  - Anthropology
  - Art history
  - Classical civilization
  - Methods and theory
- Two electives in archaeology or related disciplines
- Senior essay/thesis tutorial (1 or 2 credits)
- Recommended fieldwork

**FIELDWORK**

Archaeological fieldwork, typically carried out over the summer, is an excellent way to acquire hands-on experience and training in archaeological methods and excavation techniques. It also allows students to explore the history and material culture of a region in greater depth and, in some cases, even to conduct research on primary materials from a site that can then serve as the basis for a senior thesis or capstone project.

Fieldwork opportunities are offered both by our Wesleyan faculty as well as through a number of programs worldwide. For more information and a list of archaeological field programs, visit wesleyan.edu/archprog/fieldwork/ (https://wesleyan.edu/archprog/fieldwork/). Excavation experience is strongly encouraged, and completion of an approved archaeological field school program may be substituted for the methods and theory requirement.

**STUDIES FOR NON-MAJORS**

Since there are no ARCP courses with prerequisites, all of our courses are suitable for non-majors.

**STUDENT LEARNING GOALS**

Archaeology is the discipline most directly concerned with the understanding and explanation of past societies through the study of their material remains. Archaeology majors are expected to master four of six themes or topics:

- History and theory of the discipline
- The nature of archaeological evidence
- The construction of archaeological arguments
- Chronology
- The materiality of social, political, and economic organization
- The intersection of archaeological evidence with past and present identities

Majors are also required to take at least one course in each of the departments that contribute to the Archaeology Program (Anthropology, Art History, Classical Civilization) in order to expose them to different disciplinary approaches to the study of material culture.

**STUDY ABROAD**

Study abroad is possible at a number of institutions with well-established archaeology programs, some of which include tours of archaeological sites in addition to coursework. Wesleyan students have recently participated in semesters abroad at these institutions:

- University College London (UK)
- St. Andrews University (Scotland, UK)
- Intercollegiate Center for Classical Studies in Rome (Italy)
- College Year in Athens (Greece)

Interested students should consult the Office of Study Abroad (http://www.wesleyan.edu/cgs/osa) for details about transferable credit.

**ADDITIONAL INFORMATION**

- We encourage students to take the Gateway course before their chosen Thinking Through Archaeology course. However, as we have no prerequisites for entry to archaeology courses, it is possible for students to complete these requirements in reverse order.
- With prior approval from the chair of the Archaeology Program, the methods and theory requirement may be fulfilled by academic credit from a field school program. We strongly encourage minors to gain fieldwork experience in archaeology.
- Upon the discretion of the archaeology chair, one nonfieldwork archaeology credit may be transferred in to cover a Gateway or area requirement.
- No more than two courses cross-listed with the student’s major will be counted toward the archaeology minor.

**HONORS**

See Capstone Experience below.

**CAPSTONE EXPERIENCE**

All majors must write a senior honors thesis or a senior essay that involves interpretation of material remains. This may include work on objects in the archaeology and anthropology collections or research tied to a project of a Wesleyan faculty member. Students pursuing honors both in archaeology and in a second major are required to take at least one of their two required thesis tutorials in the archaeology program (i.e., either ARCP409 or ARCP410).

**ARCHAEOLOGY MINOR**

**ADMISSION TO THE MINOR**

To declare the minor, a student must achieve a grade of B or above in a designated Gateway course.

MINOR REQUIREMENTS

The archaeology minor requires a minimum of six credits in archaeology. These must include

- One designated Gateway course
- One designated Thinking Through Archaeology course
- One course in each of four areas (anthropology, classical civilization, art history, methods and theory)

For a listing of the different courses in each of these categories, please see Major Requirements (p. 37).

To apply for the minor, please submit a declaration to add the minor through the Major/Minor/Cert Declaration application in your student portfolio.
ART AND ART HISTORY

The Department of Art and Art History is the administrative umbrella for two distinct major programs: art history and art studio. Majors within the department can be pursued in both areas. Students majoring in one area are allowed to count toward the 32 courses required for graduation up to 16 courses in the department. (University regulations regarding the maximum number of courses allowed in a department should be applied to the major itself: art history or art studio. Thus, majors in either program may count toward their graduation requirements no more than 16 credits in their major program (of which no more than 3 may be 100-level courses, and no more than 13 may be 200-level and above. These 16 would include 2 credits of thesis in the case of students majoring in art studio or writing a senior thesis in art history.) Students double-majoring in both programs of the department are permitted to take up to 20 credits in the department, providing that 2 of these credits are for senior thesis tutorials. In addition to listed courses, a limited number of tutorials, internships, and teaching apprenticeships are available under special conditions. Prior approval must be obtained to transfer credit from another institution. Review and approval by a faculty member in the area of study must also be made after completion of such course work.

ART HISTORY MAJOR

MAJOR DESCRIPTION

The Art History Program aims to provide student majors with a strong historical and theoretical understanding of the visual and material environment created by humankind. Art History is founded on the premise that artifacts embody, engage, and shape the beliefs and values of the persons, groups and societies who made, commissioned, and used them. Students will learn to document and interpret changes in human society by taking works of art and other objects of material culture as their primary sources. They will also critically analyze and interpret written texts to help reconstruct and illuminate the contexts—social, economic, political, philosophical, and religious—in which artifacts were produced, used, and understood.

The study of Art History around the world requires knowledge of both objects and languages, including foreign languages and traditional and recent theoretical languages pertaining to cultural production. To this end, courses in the program present students with a wide variety of analytical tools that span established methods of formal, stylistic, historical, and iconographical analysis as well as newer post-structuralist approaches and critical theories of race, gender and socioeconomic relations. Students also have opportunities to cultivate skills in archaeological and spatial approaches to the discipline, including such digital platforms as GIS.

A major in Art History prepares students to pursue a variety of professional goals. Our graduates have built successful careers in higher education, museum work, the art market, architectural history and practice, urban planning, landscape architecture, historic preservation, publishing, cultural property law, and other fields.

ADMISSION TO THE MAJOR

By the end of the sophomore year, a prospective major should plan to have taken one 100-level introductory course and at least two other courses in art history. For admission to the major, the student must have at least a B average in courses taken in art history and a B average overall.

MAJOR REQUIREMENTS

A minimum of ten credits is required for the Art History major. These include a one-credit introductory course (numbered in the 100 range), seven intermediate and advanced courses (numbered in the 200 and 300 ranges, distributed as outlined below), and two elective courses. The design of the major’s requirements ensures that students gain geographic breadth and historical depth, while having the opportunity to define their own interests and to chart their own path through the major.

Students complete an introductory course (numbered in the 100 range). There are two ways to satisfy this requirement: a survey course that introduces a broad range of artworks over an extended time-span, or a writing-intensive course whose topic is more focused.

In addition, student majors complete seven intermediate and advanced courses (numbered in the 200- and 300 range, respectively) that together fulfill the following geographic and historical requirements:

Students complete courses in four of the five geographic areas:

- The Americas
- Europe
- East Asia
- South Asia
- Africa

And they elect courses in three of the four following historical periods and categories:

- Ancient
- Medieval
- Early Modern
- Modern

Any single course may be counted toward only one of these area or period requirements.

Two of these seven courses must be seminars (numbered 300 or above), which foster more advanced skills in reading, writing, and independent research. These
courses often include some mix of regular presentations, collaborative learning, and/or a substantial research paper.

The introductory course and all seven of the courses satisfying historical period and geographic area requirements must be taken at Wesleyan.

The remaining two major course requirements are electives that allow students to pursue their own commitments within Art History. Electives may be drawn from additional Art History courses or those cross-listed with Art History. Art History courses taken abroad, or classes in cognate fields, such as Anthropology, Archaeology, Art Studio, CEAS, FGSS, Film, Foreign Languages, History, Music, Religion; Social, Cultural, or Critical theory; Sociology, and/or Urban Studies. Students carefully select these elective courses in consultation with their major advisor. In order for these electives to count as credits towards their Art History major, they must be petitioned, ideally prior to enrollment, and approved by the major advisor.

In order to become conversant in Art History as a global practice, students must demonstrate proficiency in at least one foreign language. Proficiency is defined as a minimum of two full years of study at the college level, or the equivalent, as measured by a placement test administered by the language department in question. Up to two courses in a foreign language may count as electives towards the Art History major. German, French, and Italian are normally considered the most useful for the study of European art. Students concentrating in the history of Asian art are encouraged to study a relevant Asian language. Other languages may be relevant depending on a student’s course of study. For those languages not formally taught at Wesleyan, there are alternative ways of studying them, developed through the Center for Global Studies. See https://www.wesleyan.edu/cgs/

Ten courses is the minimum number required for the Art History major. To take full advantage of the program, students are encouraged to take more than the ten required courses and/or to pursue honors projects in Art History.

### GENERAL EDUCATION

Candidates for honors in art history are required to be compliant with the University’s General Education Expectations (through Stage 2).

### STUDENT LEARNING GOALS

Art History majors acquire the following skills, which will serve them in their coursework as well as in their careers beyond Wesleyan:

- Visual analysis, including knowledge of a broad range of objects and places, as well as the ability to analyze in depth the form, materials, and meanings of specific works, buildings, and sites.
- Textual analysis, including close reading of primary and secondary sources in both historical and theoretical genres.
- Historical awareness, or an understanding of how a given object, building, or site relates to the culture(s) that produced them, including their history, religion, politics, philosophies, and social structures.
- Intercultural literacy, including proficiency in at least one foreign language and knowledge of artistic production in several world regions.
- Methodological sophistication, including experience with more than one art historical methodology and knowledge of critical theories.
- Expository writing, or the ability to articulate and substantiate a complex argument in writing.
- Research, including how to formulate a research question and relevant methodology as well as to locate, read, and evaluate appropriate sources.
- Originality, or the ability to think independently and create new knowledge.

### STUDY ABROAD

A significant number of art history majors study abroad, most commonly during the fall or spring semester of their junior year. Study abroad can be a very constructive component of an art history major especially, as it enables students to visit collections and museums in other parts of the world and to apply and deepen foreign language skills. When selecting a study abroad location, students should take into consideration their language abilities and the requirements of programs of interest. Many programs that involve language immersion require the completion of a minimum of two years of language study at the college level prior to studying abroad. While abroad, advanced students may want to use their time to identify artworks or collections that could serve as the basis for an honors thesis during their senior year. Beyond semester-long study abroad programs, students may wish to consider going abroad in the summer months, whether on a shorter length study abroad program or to undertake independent research (juniors may apply for John T. Paoletti Summer Travel Fellowships).

### ADVANCED PLACEMENT

A student who has completed an Advanced Placement (AP) art history course or its equivalent while in secondary school and who has achieved a grade of 5 in the art history AP examination will be granted one AP course credit, but only after completing an intermediate-level course in art history at Wesleyan and receiving a grade of B+ or higher. Credit is not awarded for an AP score of less than 5. AP credit may not be counted toward the completion of major requirements.

### LANGUAGE REQUIREMENT

In order to become conversant in Art History as a global practice, students must demonstrate proficiency in at least one foreign language. Proficiency is defined as a minimum of two full years of study at the college level, or the equivalent, as measured by a placement test administered by the language department in question. Up to two courses in a foreign language may count as electives towards the Art History major. German, French, and Italian are normally considered the most useful for the study of European art. Students concentrating in the history of Asian art are encouraged to study a relevant Asian language. Other languages may be relevant depending on a student’s course of study. For those languages not formally taught at Wesleyan, there are alternative ways of studying them, developed through the Center for Global Studies. See https://www.wesleyan.edu/cgs/

### PRIZES

Alumni Prize in Art History. Awarded to a senior who has demonstrated special aptitude in the history of art and who has made a substantive contribution to the major.
Beulah Friedman Prize. This prize recognizes work of outstanding achievement by a student in the history of art. The prize is awarded to seniors.

John T. Paoletti Travel Research Fellowships in Art History. Funds are available to support student research and travel in the summer following the junior year that will result in a senior thesis project. Paoletti Travel Research Fellowships are intended for advanced students who have demonstrated a commitment to art historical study and a strong aptitude for writing and research.

TRANSFER CREDIT

A minimum of five courses within the major must be taken at Wesleyan. All study abroad must be preapproved by the Office of Study Abroad (to receive Wesleyan credit) and by the student’s major advisor (to receive credit toward the major requirements). Courses at other educational institutions in the United States must also be preapproved by the student’s major advisor. In both cases, transfer of major credit will be awarded only if the student submits a course description and detailed syllabus in advance of taking the course. Preapproved credits for study abroad or courses taken at other U.S. institutions can be used to satisfy the 200-level electives for the major but may not count toward the geographical and/or chronological distributional requirements. Transfer students should consult with the art history program director for further information.

ADDITIONAL INFORMATION

Students interested in pursuing museum internships may apply for education-in-the-field credit. To be approved, the internship must involve work that is the equivalent in intellectual content and rigor to a Wesleyan art history course, as demonstrated in substantive research and writing. Students are expected to provide a description of the project(s) they will be working on and the name of their supervisor, who will coordinate the project with an on-campus advisor. Students also must provide examples of the work they did when they return to campus before credit is given. Note, too, that the University charges additional tuition for education-in-the-field credits taken in the summer or while on an authorized leave of absence during the academic year.

HONORS

Students seeking honors in Art History undertake an independent, two-semester research project under the guidance of a faculty advisor which results in a senior thesis. This project offers qualified students a unique experience to provide a detailed proposal and preliminary bibliography for the project by the first Monday after classes start during the fall term of the senior year. In addition to conforming to the University’s general requirements and deadlines for honors, candidates in Art History participate in a senior colloquium that meets in October and February and culminates in April in “senior talks,” twenty-minute public presentations based on students’ completed theses.

For more information and an application form, see the document “Honors in Art History: Regulations and Procedures,” available in the department office and via download:

Honors in Art History: Regulations and Procedures (https://www.wesleyan.edu/art/arthist/form/honors_regulations_procedures.pdf)
Honors Evaluation Procedures (https://www.wesleyan.edu/art/arthist/form/honors_evaluation_procedures.pdf)
Honors Application (https://www.wesleyan.edu/art/arthist/form/honors-app.pdf)

CAPSTONE EXPERIENCE

The honors program in art history serves as the capstone experience for the major.

ART HISTORY MINOR

ADMISSION TO THE MINOR

The art history minor is intended to reach students who would like to incorporate the study of artworks and architecture into their work in other disciplines and/or who discover art history later in their college career. The art history minor maintains the geographical breadth, historical depth, and academic rigor that is characteristic of the major but comprises fewer art history courses and does not require study of a foreign language. Art history minors may not write honors theses. For admission to the minor, students must have taken a minimum of three art history courses and have a B average in art history, as well as a B average overall.
The Art History Program director will admit students to the minor and certify them upon its completion. To sign up for the minor, students need to complete a minor declaration form found in their WesPortal.

Upon completing the minor, students must submit a completed minor certification form.

Students will not be required to declare an official minor advisor, but they are encouraged to meet with the art history faculty on an as-needed basis and to take part in program events.

**MINOR REQUIREMENTS**

To complete a minor, students need to take six credits with the following requirements:

- Completion of a 100-level course. Students may choose from any of the 100-level courses offered in any given semester or year.
- Completion of five courses numbered 200 or above. These courses must include study in three of the following five geographical areas: The Americas, Europe, East Asia, South Asia, and Africa. The five courses must also include study in two of the following four historical areas: ancient, medieval, early modern, and modern. One of these five courses must be a seminar (numbered in the 300 range).
- All of the courses offered by or cross-listed with the Art History Program are eligible for the minor.
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments may count toward the minor, except for courses cross-listed with art history.
- One course in art history taken elsewhere may count toward the minor, subject to the program director’s pre-approval.

**ART STUDIO MAJOR**

**MAJOR DESCRIPTION**

**ART STUDIO: ARCHITECTURE, DIGITAL ART, DRAWING, GRAPHIC DESIGN, PAINTING, PHOTOGRAPHY, PRINTMAKING, SCULPTURE, AND TYPOGRAPHY**

The art studio program enables students to become fluent in visual language—its analytical and critical vocabulary and the rigors of its technique and method—as a means to explore intellectual issues and human experience. To this end, students learn technique while searching for a personal vision, beginning with basic studies in drawing and introductory art history, proceeding through study of various media, and working toward the successful completion of the major’s comprehensive requirement—the presentation of a one-person exhibition in the spring of their senior year. The program seeks to reflect the diversity of technical and intellectual approaches practiced in the field of visual art and is open to interdisciplinary experimentation as well as traditionally focused studies.

**ADMISSION TO THE MAJOR**

At the time of application for major status, a student is expected to have completed ARST131 and one art history course, along with another art studio course. The prospective major must consult with an art studio faculty member (in the proposed area of study) who is willing to serve as advisor. Some faculty may expect the student to have completed outstanding work in a second-level course within a particular medium (for example, ARST352 or ARST340) before agreeing to support a major applicant. Together, student and major advisor devise a program of study for the final two years. Admission to the major requires a review by the art studio faculty and a minimum academic average of B and an average of B+ for at least three courses in the department, two of which must be in the art studio program.

**MAJOR REQUIREMENTS**

Students majoring in art studio must satisfactorily complete 11 courses in the department:

- ARST131
- At least eight courses numbered 200 or higher:
  - four art studio courses—at least one of which must be in either of the three-dimensional areas of sculpture or architecture
  - four art history courses
    - one Classical through Renaissance
    - one post-Renaissance (ARHA110 preferred)
    - one non-Western
    - one additional course from the offerings
- two semesters of senior thesis

1 In the rare case a student finishes all of his/her graduation requirements in January of the senior year, he/she may complete the major with only one semester of thesis tutorial, still exhibiting in the Spring.

That breaks down to five art studio courses, four art history courses, and two semesters of thesis. Further course study in art studio and art history is recommended. On occasion, 100-level art history courses may be substituted for the requirement of 200-level courses. Majors are required to fulfill their general education as described by the University guidelines, since all are required to complete a senior thesis for honors. Teaching apprentice tutorials in the department will not be counted toward the major.

In the final year of study, each student will develop a focused body of work and mount a solo exhibition. That exhibition is the culmination of a two-semester thesis tutorial and is developed in close critical dialogue with a faculty advisor. The exhibition is critiqued by the faculty advisor and a second critic and must be passed by a vote of the faculty of the art studio program. The senior thesis exhibition provides a rare opportunity for the student to engage in a rigorous, self-directed, creative investigation and in a public dialogue about his/her work.

**GENERAL EDUCATION**

Art studio majors are required to fulfill their general education requirements as described by the University guidelines, since all are required to complete a senior thesis for honors.
STUDENT LEARNING GOALS

The art studio program faculty has set the following goals for student achievement or success in the major:

• Exploration of and proficiency with a wide range of media and technique, at the introductory level and beyond
• Honing observational skill
• Fluency in visual language
• The development of technical facility enabling students to explore their personal visions through making art
• Broad awareness of current and historical art and its theoretical and historical context
• Critique methodologies, and the ability to analyze art from diverse intellectual traditions and technical approaches
• Development of independent studio practice, ideation, and methodology, culminating in a one-person exhibition senior year

ADVANCED PLACEMENT

No Advanced Placement credit is accepted in art studio.

TRANSFER CREDIT

A major is obliged to consult with his/her advisor and receive approval for off-campus study, leaves, or addition of a second major. Off-campus study in the senior year is not encouraged and requires additional approval of the program director. Students should also consult carefully when planning off-campus study before they have been accepted to the major. An art studio faculty member must approve coursework taken outside of Wesleyan in advance, and a portfolio review is required after the course is completed to transfer credit toward the major. Transfer of course credit toward the major is not automatic, even from a Wesleyan-approved program. A student may count no more than three art studio and art history courses taken outside the Wesleyan department toward the major without specific permission of the faculty. Students transferring to Wesleyan who wish to receive credit toward the major for art studio courses taken at another institution should seek approval from the department prior to enrollment; portfolio review is required, transfer of course credit is not automatic.

HONORS

All art studio majors are required to complete an honors thesis, the senior thesis exhibition. The studio faculty vote to determine high honors, honors, pass, or fail, on the criteria of originality, mastery of medium, depth and range of investigation, and coherence of the exhibition.
ASTRONOMY

The Wesleyan Astronomy Department provides outstanding opportunities for undergraduates who wish to major in this fascinating subject, either in preparation for graduate school or as an end in itself. Our unique program blends coursework with research opportunity and provides students access to professional-quality telescopes, instrumentation, and computers. A principal strength is our active research faculty who will work one-on-one with undergraduates employing state-of-the-art instrumentation and computers to investigate areas of current astronomical interest.

Our students go on to graduate programs, including the best in the country, or to a variety of rewarding careers in and out of science. Many of our students are co-authors on research papers based on work performed during their undergraduate careers. In addition, we offer a comprehensive range of coursework that will prepare students for a variety of directions in life, including graduate study.

ASTRONOMY MAJOR

ADMISSION TO THE MAJOR

The standard introductory course for potential majors and other science-oriented students is ASTR155. It may be taken in the first or sophomore year. It assumes a good high school preparation in physics and some knowledge of calculus. Potential majors with a good knowledge of astronomy may place out of this course by demonstrating proficiency in the material; anyone wishing to do so should speak with the instructor. ASTR211 is a sophomore-level course appropriate for interested nonmajors as well as a gateway course to the major.

MAJOR REQUIREMENTS

The astronomy major is constructed to accommodate both students who are preparing for graduate school and those who are not.

The basic requirement for the major is successful completion of the required courses as well as four upper-level astronomy courses. The required upper-level courses are taken one each semester in the junior and senior years.

Additional upper-level physics courses are also recommended but are not required. Ability to program a computer in at least one of the widely used languages in the sciences, such as C, Fortran, or IDL, is also highly recommended. This does not necessarily mean that students should take a computer science course. Potential majors with graduate school aspirations should complete or place out of the basic physics and mathematics courses listed above, preferably
by the end of their sophomore year, and should also take ASTR155 and ASTR211 during their first two years.

Since physics GRE scores are an important admission criterion at most astronomy graduate schools, those planning to go on for a PhD are advised to double major in physics. This can be accomplished by taking several of the following additional courses, normally in the junior and senior years: PHYS324, PHYS313, PHYS315, and PHYS316. Check the published requirements for the physics major for more details and speak to your advisor.

Additional mathematics courses, such as MATH229, may also be chosen. Click here (catalog.wesleyan.edu/departments/ugrd-astr/) for more detailed information about the astronomy major, including a sample eight-semester course plan.

STUDENT LEARNING GOALS

In this major, students are expected to acquire or develop:

• a broad understanding at an introductory level of the foundational concepts and recent discoveries that have shaped modern astronomy and astrophysics;

• proficiency at an advanced level with the theoretical concepts and observational tools employed in four or more distinct subfields of astrophysics;

• firsthand experience with the process of science through participation in research;

• the technical and research skills needed to pursue graduate study in astronomy;

• analytical abilities and computing skills useful for careers outside of professional astronomy.

BA/MA PROGRAM

[grad/degree-programs/bama.html (http://www.wesleyan.edu/grad/degree-programs/bama.html)]

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience.

ADDITIONAL INFORMATION

All astronomy majors are to enroll each year in the .25-credit courses ASTR430 and ASTR431. These discussion courses provide a broad exposure and introduction to research and education topics of current interest to the astronomical community. Majors are also encouraged to serve as teaching apprentices in a general education course at least once during their junior or senior year, to take part in the observing program with the department’s 24-inch telescope, and to participate in the department’s public outreach activities.

HONORS

Students considering graduate school are strongly urged to do a senior thesis project (ASTR409/ASTR410); honors in astronomy requires completion of a senior thesis. Students with an interest in planetary science are advised to look at the course cluster information on that topic.

CAPSTONE EXPERIENCE

Research is an integral part of an undergraduate education in astronomy, and all majors are required to complete a senior research capstone that provides experiences beyond those obtained as part of their academic coursework. The capstone, to be completed during the twelve months prior to graduation, can take several forms:

• completion of a senior thesis project

• non-thesis related astronomy research

• in-depth investigation of a current research topic, including a short written report

In all cases, students must present some aspect of their experience in a public forum, e.g., by speaking in the ASTR 431 research seminar, presenting a poster at the Wesleyan summer research program poster session, or making a presentation at a professional conference.

GRADUATE ASTRONOMY PROGRAM

The Astronomy Department offers graduate work leading to the degree of master of arts. The small size of the department permits individualized instruction and a close working relationship between students and faculty. Students are expected to become involved in the research programs of the department early in their graduate careers. They also are expected to select courses offered in the areas of observational and theoretical astronomy and astrophysics; a graduate student normally takes at least one 500-level astronomy course each semester. Additional courses in physics and mathematics are recommended according to individual student needs. Two years are usually necessary to complete requirements for the MA degree. However, the department also offers a five-year combined BA plus MA program for Wesleyan students. Eligible astronomy majors who complete their undergraduate requirements in four years can enroll for a fifth year and obtain a master’s degree upon successful completion of one year of graduate coursework and a thesis. Primary research activities in the department include mapping the local interstellar medium, probing the atmospheres of extrasolar planets, observations of young stars and protoplanetary disks, investigations of x-ray binary star systems, and studies of the massive black holes that reside at the centers of galaxies.

COURSES

The student will normally enroll in at least one 500-level course in astronomy each semester. Depending on the year, the courses are ASTRS21, ASTRS22,
ASTR524, ASTR531, ASTR532, or ASTR555. These courses are similar in content to the 200-level courses of the same name but with some supplementary materials and special assignments. These supplements are designed especially for graduate students. A minimum of 10 non-seminar credits, with grades of B- or better, is required for the MA degree. These include two credits for research leading to the thesis, which is also required. The student may expect to take four to six courses in physics, mathematics, or other sciences after consultation with the faculty of the department. In addition, students are required to participate in the department’s seminars on research and pedagogy in astronomy, which are offered each semester.

**PROGRESS AND QUALIFYING EXAMS**

To be admitted to candidacy, a student must take a written and oral qualifying examination demonstrating satisfactory understanding of several areas of astronomy, fundamental physics, and mathematics. This examination should be taken after the first year of study. If performance in this examination is not satisfactory, the student will either be asked not to continue or to repeat the examination.

**TEACHING**

The emphasis in the program is on research and scholarly achievement, but graduate students are expected to improve communication skills by classroom teaching, formal interaction with undergraduate students, and presenting talks to the observatory staff and to the community.

**RESEARCH**

The research interests of the current faculty are:

- **Dr. William Herbst**—star and planet formation
- **Dr. Ed Moran**—extragalactic X-ray sources and supermassive black holes
- **Dr. Seth Redfield**—exoplanets and the interstellar medium
- **Dr. Roy Kilgard**—high-mass X-ray binary populations and statistical challenges in high energy astrophysics
- **Dr. Meredith Hughes**—planet formation

The department is well-equipped for instruction and research. Facilities include a network of MacOS X workstations, a CCD attached to a 24-inch reflector, a 20-inch refractor equipped for observational work, and the substantial astronomical library of the Van Vleck Observatory. Members of our faculty are frequently awarded observing time on world-class telescopes, including the Hubble Space Telescope, Chandra X-ray Observatory, and dozens of ground-based telescopes.

**THESIS / DISSERTATION / DEFENSE**

Each candidate is required to write a thesis on a piece of original and publishable research carried out under the supervision of a faculty member. A thesis plan, stating the purpose and goals of the research, observational and other materials required, and uncertainties and difficulties that may be encountered, must be submitted to the department for approval after admission to candidacy. The thesis, in near-final form, must be submitted to the faculty at least one week prior to the scheduled oral examination. In this examination, the student must defend his or her work and must demonstrate a high level of understanding in the research area. The oral examination may touch on any aspect of the student’s preparation. It is expected that the student will submit the results of his or her work to a research journal for publication.

**CONCENTRATIONS**

Planetary science is an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology. The subject matter is planets, including those around other stars (exo-solar systems). The science questions include the most important of our times: How do planets (including Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? The discovery of even microbial life beyond Earth would rank as one of the greatest human achievements of all time, and this quest lies squarely within the purview of planetary science.

**ADDITIONAL INFORMATION**

For additional information, please visit wesleyan.edu/astro/grad-program (http://wesleyan.edu/astro/grad-program).
BIOLOGY

These are thrilling times to study biology. Advances in molecular biology, epigenetics, and bioinformatics are leading to extraordinary new insights in every field, from evolution and ecology to development, cell biology, genetics/genomics, and neuroscience. These research areas are providing essential information as we address the urgent challenges of biodiversity conservation, global climate change, epidemiology, and human health and well-being. Biology is also at the heart of new ways of understanding ourselves as human beings in relation to other living things. Connections between biological disciplines are raising key questions in new ways, while biological knowledge has become fundamentally integrated with social and medical ethics, public policy, and journalism.

The Biology Department offers a broad range of courses that emphasize the process of scientific inquiry and current experimental approaches. Our courses also consider real-world implications of biological issues: the ethics of embryonic stem cell research, gender issues and reproductive technologies, the AIDS epidemic, and the impact of human activity on natural communities. Biology courses can be the start of a dedicated career in research, medicine, conservation, public health, bioethics, sustainable resource use, and many other areas. They can also bring the intellectual excitement of these investigations to students whose major focus is in the arts, humanities, or social sciences. We welcome students of all backgrounds and interests to join us.

FACULTY

Gloster B. Aaron
BA, Oberlin College; PHD, University of Pennsylvania
Associate Professor of Biology; Chair, Neuroscience and Behavior; Director, WesMASS; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences

Ann Campbell Burke
AB, New York University; MA, Harvard University; PHD, Harvard University
Professor of Biology; Chair, Biology

Barry Chernoff
BS, SUNY at Stony Brook; MS, Adelphi University; PHD, University of Michigan
Robert Schumann Professor of Environmental Studies; Professor of Earth and Environmental Sciences; Professor of Biology; Director, College of the Environment; Chair, Environmental Studies Program; Professor, Environmental Studies

Frederick M. Cohan
BS, Stanford University; PHD, Harvard University
Professor of Biology; Professor, Environmental Studies; Professor, Integrative Sciences

Joseph David Coolon
BS, Kansas State University; PHD, Kansas State University
Assistant Professor of Biology; Assistant Professor, Integrative Sciences

Stephen H. Devoto
BA, Haverford College; PHD, Rockefeller University
Professor of Biology; Professor, Neuroscience and Behavior

Laura B. Grabel
BA, Brandeis University; MAA, Wesleyan University; PHD, University of California, San Diego

Michael P. Weir
BS, University of Sussex; PHD, University of Pennsylvania
Professor of Biology; Professor, Integrative Sciences; Co-Coordinator, Informatics and Modeling

AFFILIATED FACULTY

Laverne Melón
Assistant Professor of Biology, starting July 1, 2019

VISITING FACULTY

James Paul Mulrooney
PHD, Wesleyan University
Visiting Assistant Professor of Biology

EMERITI

Allan Berlind
BA, Swarthmore College; MA, Harvard University; PHD, Harvard University
Professor of Biology, Emeritus

David Bodzinck
BS, University of Illinois Urbana; MAA, Wesleyan University; PHD, University of Washington
Professor of Biology, Emeritus

J. James Donady
BS, SUNY at Stony Brook; PHD, University of Iowa
Professor of Biology, Emeritus
UNDERGRADUATE PROGRAM
DEPARTMENTAL ADVISING EXPERTS

All departmental faculty

BIOLOGY MAJOR

ADMISSION TO THE MAJOR

Students are encouraged to begin their major in the first year so that they can take maximum advantage of upper-level biology courses and research opportunities in later years. However, the major can certainly be successfully completed if begun during sophomore year, and many students are able to combine the biology major with a semester abroad.

A prospective biology major begins with a series of two core introductory courses. Students should begin the core series with BIOL181 and its associated laboratory course, BIOL191, which are offered in the fall semester. BIOL181 is offered in a number of small sections rather than a single large lecture class. These small sections allow for problem-based learning at a more individualized pace as students master the first semester of university-level biology. Students should enroll separately for the lab course, BIOL191. These courses do not have prerequisites or corequisites, but it is useful to have some chemistry background or to take chemistry concurrently. In the spring semester, the prospective major should take BIOL182 and its laboratory course, BIOL192. An optional spring course, BIOL194, is offered to students of BIOL182 who wish a challenging reading and discussion experience in addition to the lectures.

MAJOR REQUIREMENTS

The biology majors program of study consists of the following.

- The two introductory courses, BIOL181-BIOL182, with their labs, BIOL191-BIOL192.
- At least six elective biology courses at the 200 and 300 levels
  - including one mid-level cell/molecular course (either MB&B208, BIOL210, BIOL212, or BIOL218) and
- **Note:** No more than three of these mid-level courses (listed above) may be counted towards the six advanced elective requirement.
- **Important Information for Double Majors:** At least two elective courses (200-level and above) that are counted toward the biology major cannot be simultaneously used to fulfill any other major.
- In addition, if a student is double majoring in biology and NS&B, NS&B/BIOL213 cannot count toward the six electives required for the biology major; however, NS&B/BIOL 213 will fulfill the Column 2 breadth requirement.

- Two semesters of general chemistry (CHEM141-CHEM142 or CHEM143-CHEM144)
- Any three additional semesters of related courses from at least two different departments:
  - organic chemistry (CHEM251 or CHEM252)
  - physics (PHYS111, PHYS112, PHYS113, or PHYS116)
  - mathematics (MATH117 or higher),
  - statistics (MATH132, BIOL320/BIOL520, QAC201, QAC231, ECON300 or PSYC200)
  - computer science (COMP112, COMP211, or higher)
  - earth and environmental sciences (E&ES280, E&ES270)

- **Note:** Two Statistics courses, even from different Departments cannot both be counted as cognates

Biology majors are allowed to apply at most one elective course or one cognate course taken credit/unsatisfactory toward fulfilling the major requirements; however, this is discouraged because good performance in major courses is an important aspect of a student's transcript.

A strong chemistry background is especially recommended for students planning to enter graduate or medical school. Most medical and other health-related graduate schools require two years of college-level chemistry, including laboratory components, as well as a course in biochemistry.

- Students planning to go on to medical, dental, or other health professions graduate school should note that a year each of introductory biology, physics, and math (such as calculus or statistics) and two years of chemistry (general and organic) are required for admission, including any laboratory components.

Electives may be chosen from among the following courses at the 200, 300, or 500 levels. See WesMaps for current course offerings. The courses are grouped thematically for your convenience only.

### CELL AND DEVELOPMENT BIOLOGY

</tbody>
</table>
The Biology Department expects its majors to develop a broad and integrative understanding of the theory and practice of biology across a range of disciplines and levels of biological organization. The curricular requirements of the major are designed to provide enough flexibility for each student to choose a disciplinary emphasis of most interest and fulfill the additional expectation of achieving some depth of knowledge in a particular area through a relatively intensive classroom or laboratory experience. In this context, we want our students to develop skills in critical and quantitative thinking, creative problem-solving, and intuition for the process of scientific reasoning. We also encourage our students to engage in ethical thinking about biological research and the role of biology in society and sustainability. A complete program of study in biology entails the application of these skills to designing or conducting original research (including scholarly research via scientific databases), writing about and orally interpreting primary scientific literature. Our ultimate goal is, therefore, to
counted toward the biology major must be used to fulfill only the biology major
cannot be simultaneously used to fulfill another major.

Depending on the student’s specific program, and with prior permission of the chair, up to two biology courses from outside the department may be
counted toward the major. Two Wesleyan courses that fall into this category are ANT202 and ANTH349.

Additional courses that may be credited to the major: BIOL320, E&ES234, MBB&B228, CHEM323 and CHEM383, and ECON300. MBB&B228 may be counted as long as neither MBB&B208 nor CHEM383 is counted toward the major.

Biology majors are allowed to apply at most one elective course taken credit/unsatisfactory toward fulfilling the major requirements; however, this is discouraged because good performance in major courses is an important aspect of a student’s transcript.

Courses in the BIOL 400 series (such as research tutorials) contribute toward graduation but do not count toward the major.

COURSES FOR NON-MAJORS

The following courses do not have prerequisites and, as such, are appropriate for non-majors.

</table>

STUDENT LEARNING GOALS

Cross-listed courses that are included on the list above are automatically credited to the biology major. At least two elective courses (200-level and above) that are
train students to use their biological knowledge and skills to become effective, scientifically informed citizens and professionals.

**ADVANCED PLACEMENT**

Students who have received a grade of 4 or 5 on the AP exam may receive one University credit toward graduation.

Students with a score of 4 or 5 may place out of one of the two Introductory Biology courses - BIOL181 or BIOL182 but **must first consult** with an instructor teaching these courses.

Students interested in placing out of MB&B181 in the fall semester should contact Professor Michelle Murola (mmurola@wesleyan.edu) regarding the placement exam.

No follow-up course is required. These courses are considered essential background for our upper-level courses; **students are highly encouraged to enroll in both semesters**.

However, we recommend against this for almost all students, especially those who may be interested in the biology major. Although some of the MB&B181/BIOL181 material will be familiar from a high school AP course, the depth and rigor of MB&B181/BIOL181 provide a strong foundation as you move forward to more advanced courses. Alternatively, students with AP 4 or 5 may consult individually with the BIOL182 faculty regarding placing out of this second-semester introductory course. However, both courses are considered essential background for our upper-level courses; students are highly encouraged to enroll in both semesters.

**PRIZES**

**Dr. Neil Clendeninn Prize.** Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed his or her sophomore year and in that time have exemplified those qualities of character, leadership, and concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

**The Peirce Prize.** Awarded in successive years for excellence in biology, chemistry, and geology.

**TRANSFER CREDIT**

Up to two outside credits for biology courses may also be applied from another institution (during a study-abroad program, for example). Prior permission must be obtained from the departmental liaison (Professor [jrkirn@wesleyan.edu](mailto:jrkirn@wesleyan.edu) John Kirn [jrkirn@wesleyan.edu]) to ensure creditability of specific courses from other institutions. Information and a downloadable form can be found here [https://www.wesleyan.edu/romance/aptransferofcredit.html](https://www.wesleyan.edu/romance/aptransferofcredit.html)

**RELATED PROGRAMS OR CERTIFICATES**

**Environmental Studies Certificate.** The Environmental Studies (ENVS) program is interdisciplinary and offers both a certificate and a linked major. The ENVS linked major is a secondary major and requires a student to also have a primary major in another department, program, or college. ENVS majors write a senior thesis or essay in environmental studies that is mentored by a professor in another department, program, or college (e.g., biology). There is also an opportunity to earn an ENVS certificate, which does not require a senior thesis or essay. See: wesleyan.edu/coe/academics/ [https://wesleyan.edu/coe/academics/](https://wesleyan.edu/coe/academics/).

**Informatics and Modeling Certificate.** The Integrative Genomic Science pathway within this certificate will be of particular interest for life science majors. See wesleyan.edu/imcp/igs.html [https://wesleyan.edu/imcp/igs.html](https://wesleyan.edu/imcp/igs.html).

**Neuroscience and Behavior Program.** Several faculty members in the Biology and Psychology departments also participate in the Neuroscience and Behavior Program that, at the undergraduate level, constitutes a separate major. Information about that program can be found at wesleyan.edu/nrb [https://wesleyan.edu/nrb](https://wesleyan.edu/nrb).

The graduate program is an integral part of the Biology Department’s offerings. Not only are graduate students active participants in the undergraduate courses, but, also, upper-level undergraduates are encouraged to take graduate-level courses and seminars (500 series). Research opportunities are also available for undergraduates, and, frequently, these involve close interaction with graduate students.

**BA/MA PROGRAM**

[wesleyan.edu/grad/degree-programs/bama.html](http://www.wesleyan.edu/grad/degree-programs/bama.html)]

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are advised to begin research by their junior year if they intend to pursue the BA/MA in biology. Seniors can apply by December 1 and will be notified of their status by the end of January. Admission is competitive and based on GPA, faculty recommendations, and research experience.

**ADDITIONAL INFORMATION**

The seminar series features distinguished scientists from other institutions who present lectures on their research findings. One objective of these seminars is to relate material studied in courses, tutorials, and research to current scientific activity. These seminars are usually held on Thursdays at noon and are open to all members of the University community. Undergraduates are especially welcome.

**HONORS**

To be considered for departmental honors, a student must

- Be a biology major and be recommended to the department by a faculty member. It is expected that the student will have at least a B average (grade point average 85) in courses credited to the major.
- Submit a thesis based on laboratory research, computational research, or mathematical modeling. The thesis is carried out under the supervision of a faculty member of the department.

**CAPSTONE EXPERIENCE**

As a capstone experience, senior biology majors are encouraged to participate in one of the following opportunities for intensive scientific engagement: a hands-
on laboratory or field course, participation in lab research (typically begun prior to senior year), or enrollment in an advanced (300-level) seminar or class. A series of faculty-student dinners during fall and spring of senior year provide further opportunities to discuss emergent scientific issues and approaches and their relation to students’ career goals.

GRADUATE BIOLOGY PROGRAM

The Biology Department offers graduate work leading to the degree of doctor of philosophy. The primary emphasis is on an intensive research experience culminating in a thesis, though the student will also be expected to acquire a broad knowledge of related biological fields through an individual program of courses, seminars, and readings. The low student-faculty ratio in the department ensures close contact between students and their dissertation advisors. Faculty and invited outside speakers offer regular research seminars, and graduate students present their work as it progresses at a biweekly departmental colloquium. Additional courses and lectures of interest offered by other departments are also available to biology students. All graduate students have the opportunity for some undergraduate teaching with faculty training and supervision. Teaching assistants are involved primarily in preparing materials for, and assisting in, laboratory courses and in evaluating student work. In the later years of the PhD program, some classroom teaching opportunities may be offered. Students are encouraged to spend a summer at the Marine Biological Lab in Woods Hole, Cold Spring Harbor labs, or another institution offering specialized graduate courses. Funds are available to support such coursework and to facilitate student travel to scientific conferences.

COURSES

The PhD is a research degree demanding rigorous scholarly training and creativity; the result is an original contribution to the candidate’s field. The student and a faculty committee will work out a program of study for the first two years at the time of matriculation. This program will take into account the student’s proposed field of interest and prior background in biology and related sciences. No specific courses are required, but, rather, a subject-matter requirement is used to ensure a broad background. Before taking the qualifying examination, all students must have at least one substantive course above the introductory level (at Wesleyan or elsewhere) in each of five subject areas: genetics/genomics/bioinformatics; evolution/ecology; physiology/neurobiology/behavior; cell biology/developmental biology; and biochemistry/molecular biology. The adequacy of courses that have been taken at other institutions will be evaluated by the faculty committee through its meeting with the student. Students whose focus is bioinformatics may substitute two upper-level courses on laboratory or field course, participation in lab research (typically begun prior to senior year), or enrollment in an advanced (300-level) seminar or class. A series of faculty-student dinners during fall and spring of senior year provide further opportunities to discuss emergent scientific issues and approaches and their relation to students’ career goals.

PROGRESS AND QUALIFYING EXAMS

A qualifying examination will be taken before the end of the second year. The examination is designed to test the student’s knowledge of biology and ability to think critically. It includes a written research proposal, followed by an oral examination to discuss the proposal and evaluate the student’s breadth in biology. The examination will be administered by four faculty members of the department (or associated departments), chosen by the student and his or her research advisor. The examining committee will include the research advisor and one member whose research field is clearly outside the student’s area of special interest.

TEACHING

A minimum of three semesters as a teaching assistant is required.

RESEARCH

Graduate students start their research experience with two or more semester-long practica in laboratories. These are designed to provide complementing experiences to prepare students for their thesis research. Research projects are available in the following areas:

- Aaron Lab—epilepsy, the hippocampus, and the cortex
- Bodnick Lab—neuroethology
- Burke Lab—development and evolution
- Chernoff Lab—conservation, evolution, and genetics of fish
- Cohan Lab—evolutionary genetics and speciation of bacteria
- Coolon Lab—ecological and evolutionary functional genomics
- Devoto Lab—muscle development in zebrafish
- Grabel Lab—embryonic stem cell neurogenesis
- Johnson Lab—regulation of cell movement during development
- Kirn Lab—developmental neurobiology of vocal learning in songbirds
- Naegele Lab—development of GABAergic interneurons and neural stem cell therapy
- Singer Lab—evolution and ecology of plant-animal interactions
- Sultan Lab—ecological and evolutionary plasticity in plants
- Weir Lab—molecular genetics; bioinformatics

All graduate students present their research in biweekly seminars attended by all members of the department, to encourage students to become fluent and comfortable with their presentation skills.

THESIS / DISSERTATION / DEFENSE

The most important requirement is a PhD thesis, an original contribution to biology that merits publication. The candidate will receive advice and guidance
from the thesis director but must demonstrate both originality and scientific competence. Normally, the candidate will choose a thesis topic during the second year of graduate work in consultation with appropriate faculty. A thesis committee of three members, chosen by the student and thesis advisor, will meet with the student and advisor at least twice a year to review progress. This committee determines when sufficient experimental work has been completed and must approve the final written document.

**ADDITIONAL INFORMATION**

For additional information, please visit wesleyan.edu/bio/graduate (https://wesleyan.edu/bio/graduate).
FRIES CENTER FOR GLOBAL STUDIES

MISSION
The Fries Center for Global Studies is committed to helping all members of the Wesleyan community achieve the knowledge, language skills, and sensitivity each person will need in order to exercise effective and responsible citizenship in an increasingly interdependent world.

VISION
Our emphasis on intercultural communication, experience, and knowledge reflects the value we place on adaptability, compassion, and cultural self-awareness with respect to the world beyond our borders. These qualities and practices put Wesleyan’s liberal arts program at the forefront of global education and are the hallmark of responsible global citizenship.

GOALS & STRATEGIES
The Fries Center for Global Studies pursues its goals by drawing on resources at hand: the Wesleyan curriculum, faculty, student body, and staff; the Office of Study Abroad; Fellowships; Language and Intercultural Learning; and Language Resources and Technology. Our strategies are designed specifically to:

- Identify and expand opportunities for students and faculty wishing to pursue a global perspective in the field of their choice;
- Offer the support needed for each department, program, center, and college to develop global perspectives in accordance with its own aims and in partnership with other academic units;
- Provide a forum for inquiry and debate concerning the pedagogies and administrative strategies best suited to the cultural demands of the contemporary world;
- Help students transcend disciplines while coordinating their curricular, cocurricular, and extracurricular experiences in accordance with the demands of a global education;
- Increase the mobility of the Wesleyan student body and faculty in support of a more vibrant cross-cultural debate and in accordance with the needs and goals of each academic unit;
- Increase the vibrancy of global discussions on campus through facilitating visits to campus by key scholars, artists, and activists;
- Promote relevant partnerships with peer institutions in the United States and with targeted institutions abroad;
- Promote collaborative teaching and research across disciplinary and cultural boundaries;
- Develop curricular opportunities that will allow students to develop a global education tailored to their needs and aspirations.

FACULTY

Stephen Angle
BA, Yale University; PHD, University of Michigan
Mansfield Freeman Professor of East Asian Studies; Professor of Philosophy;
Director, Center for Global Studies; Professor, East Asian Studies
The Center for Jewish Studies offers interdisciplinary courses in Jewish and Israel studies. All courses (required and elective) are counted toward the Certificate in Jewish and Israel Studies. The Center for Jewish Studies courses and workshops are taught by its core and affiliated faculty, as well as by distinguished visitors and scholars including film directors and internationally acclaimed writers and artists. The Center for Jewish Studies offers an innovative Hebrew program based on a unique model of incorporating language skills with cultural events, and all Hebrew courses are counted toward the Israeli track in the Certificate for Jewish and Israel Studies. In addition, the Center for Jewish Studies offers Wesleyan and the general community rich and innovative events and series linked to other departments, programs, and colleges at the University. Among them, the annual Contemporary Israeli Voices series in the fall, the annual Ring Family Wesleyan University Israeli Film Festival in the spring, the annual Samuel and Dorothy Franke Memorial Lecture, and the annual Jeremy Zwelling Lecture. To be engaged with the larger Wesleyan community, the Center for Jewish Studies sponsors WEseminars presented by its faculty.

**FACULTY**

Dalit Katz  
BA, Hebrew University; MA, Hebrew University  
Adjunct Associate Professor of Religion; Director, Center for Jewish Studies

**VISITING FACULTY**

Amir Bogen  
BA, College of Management Academic; MA, Tel Aviv University  
Silverberg Scholar in Residence in Jewish Studies
CENTRAL FOR THE HUMANITIES

The Center for the Humanities at Wesleyan University provides high-level academic programming to energize the campus and promotes innovative research and scholarship through our faculty and visiting fellows program. In addition, faculty offer courses that are either based on current research projects or experimental in nature.

STUDENT FELLOWS

Teresa Naval, Belen Rodriguez, Natalie Ruby, Jackie Manginelli, Elena Harris-Bauer, Isabel Steckel, Anna Anpostolidis, Samuel Morreale
Chemistry is the science of molecules. Scientific, medical, and technological phenomena ultimately are understood in terms of molecular structure and interactions. Understanding chemistry is essential to effective work in all sciences, and some knowledge of chemistry is useful in such fields as law, government, business, and art. Many aspects of our high-technology society can be understood better from the viewpoint of chemistry.

The following are typical important chemical problems: the structure of DNA, the molecular details of the resistance of bacteria to penicillin, the chemistry of biofuel production, the synthesis of new molecules that might be expected to have medical applications, the consequences of putting electrons and photons into molecules, the details of what happens as two molecules collide, the fundamental basis of the energies of molecules, and the synthesis of nanomaterials. These are all areas of research by Wesleyan faculty and their undergraduate and graduate coworkers.

David L. Beveridge
BA, College of Wooster; MAA, Wesleyan University; PHD, University Cincinnati
MAJOR REQUIREMENTS

To major in chemistry, a student should complete a year of Introductory Chemistry (CHEM141/CHEM142 or, preferably, CHEM143/CHEM144, and the associated lab CHEM152), unless the student has been given Advanced Placement credit. In addition, a year of organic chemistry (CHEM251/CHEM252), the concurrent laboratories (CHEM257/CHEM258), and a year of physical chemistry (CHEM337/CHEM338) are required. One year of advanced laboratory is required (CHEM375/CHEM376). Chemistry majors are also required to register for and attend two semesters of CHEM521/CHEM522. The major is completed by electing a total of at least three credits from 300-level courses (other than CHEM337/CHEM338). All courses other than seminars that are required for the chemistry major must be taken under a letter-grading mode (A–F). One of the three 300-level electives may be replaced by two semesters of research (CHEM409/CHEM410 or CHEM423/CHEM424). Seminars or journal clubs cannot be counted as electives. All chemistry majors are strongly encouraged to do research with a faculty member, both during the academic year and over at least one summer. Financial support for summer research is generally available.

Students must either (i) complete calculus courses through MATH122, (ii) receive an Advanced Placement score of a 4 or 5 on the BC calculus exam, or (iii) place into a course beyond MATH122 on the Math Placement Exam. Students must take one year of physics (PHYS111/112 or PHYS113/116) or receive an Advanced Placement score of a 4 or 5 on AP physics exam. Students who do not study inorganic chemistry in CHEM144, either through exemption or because they have satisfied the introductory chemistry requirement with CHEM141/CHEM142, must select CHEM361 as one of their 300-level electives.

Before or during the second semester of the sophomore year, a student interested in majoring in chemistry should consult with the chair of the Chemistry Department or the departmental advisors for specific areas of chemistry (analytical, biochemistry, inorganic, organic, and physical) concerning a suitable program of study. If the student does opt for the chemistry major, these people may also assist in the choice of a major advisor for the student. Students who intend to be multiple majors are strongly advised to consult with their chemistry advisors at the beginning of their junior year to plan their chemistry program.

A chemistry major planning graduate work in chemistry usually takes at least one additional 300-level chemistry course (excluding CHEM337/CHEM338) and two semesters of undergraduate research, CHEM409/CHEM410 or CHEM423/CHEM424. When feasible, an intensive continuation of research during at least one summer is encouraged. The preparation of a senior thesis based on this research (CHEM409/CHEM410 or CHEM423/CHEM424) provides extremely valuable experience and is strongly recommended.

Graduate courses may be elected with permission. A chemistry major planning to attend medical school, teach in a secondary school, or do graduate work in such fields as biochemistry, geochemistry, environmental science, or chemical physics may request permission from the departmental curriculum committee to replace one of the elective credits in the concentration program with an appropriate course offered by another science or mathematics department. A similar substitution may be requested when appropriate as part of an interdepartmental major. Independent research is encouraged. A solid mathematical background is important to those students who plan to do graduate work in chemistry. Such students should also try to take PHYS113 and PHYS116 prior to their junior year. MATH221 and MATH222 are recommended to those whose interests lie in physical chemistry.

UNDERGRADUATE PROGRAM

DEPARTMENTAL ADVISING EXPERTS

Michael Calter, Organic; Stewart Novick, Physical; T. David Westmoreland, Inorganic, Analytical and General

CHEMISTRY MAJOR

ADMISSION TO THE MAJOR

Students who anticipate the possibility of majoring in chemistry should, if possible, take CHEM143/CHEM144 as first-year students. The program for majors is described in detail below. Students who have scores of 4 or 5 in the chemistry Advanced Placement examination or 5, 6, or 7 on IB courses in chemistry should consult with the department chair about the possibility of advanced placement in organic chemistry (or, in exceptional circumstances, in physical chemistry). A student whose interest in biochemistry arises from a desire to understand biological systems at the molecular level may choose to study biochemistry as a chemistry major. (See biological chemistry track below.)
**BIOLOGICAL CHEMISTRY TRACK**

The Chemistry Department recognizes that a number of students each year are interested in a major program containing both a strong biology or biochemistry component and somewhat less emphasis on chemistry than the standard chemistry major. In response to this interest, the Chemistry Department now offers a biological chemistry track. This track would, for example, be an excellent preparation for medical school or graduate school in biochemistry. (Students interested in chemistry as a profession are advised to take the standard chemistry major track, which provides a better preparation for graduate school in chemistry.)

To begin a major in the biological chemistry track, a student should complete a year of Introductory Chemistry (CHEM141/CHEM142 or, preferably, CHEM143/CHEM144, and the associated laboratory, CHEM152), unless the student has been given Advanced Placement credit. In addition, one year of organic chemistry (CHEM251/CHEM252), the concurrent laboratories (CHEM257/CHEM258), and a semester of biology (BIOL181/MB&B181) are required. One year of advanced laboratory (CHEM375/CHEM376) and two semesters of CHEM521/CHEM522 are also required. MB&B395/CHEM395 may be substituted for one semester of CHEM375/CHEM376 by petition. Also required are CHEM383 and CHEM381. The two-semester physical chemistry sequence, CHEM337/CHEM338, can be substituted for CHEM381 with the second semester of this sequence then counting as one of the three electives. Students who have been exempted from CHEM144 must take CHEM361 to gain familiarity with inorganic chemistry.

The three electives normally required for chemistry majors should be taken from the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM309</td>
<td>Molecular and Cellular Biophysics</td>
<td>1</td>
</tr>
<tr>
<td>CHEM/MB&amp;B321</td>
<td>Biomedical Chemistry</td>
<td>1</td>
</tr>
<tr>
<td>CHEM/MB&amp;B325</td>
<td>Introduction to Biomolecular Structure</td>
<td>1</td>
</tr>
<tr>
<td>CHEM/MB&amp;B386</td>
<td>Biological Thermodynamics</td>
<td>1</td>
</tr>
<tr>
<td>CHEM387</td>
<td>Enzyme Mechanisms</td>
<td>0.5</td>
</tr>
<tr>
<td>CHEM390/</td>
<td>Practical Methods in Biochemistry</td>
<td>1</td>
</tr>
<tr>
<td>MB&amp;B340</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MB&amp;B208</td>
<td>Molecular Biology (or any other chemistry</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>courses, 300-level or higher)</td>
<td></td>
</tr>
</tbody>
</table>

One upper-level MB&B course can be used as an elective upon prior approval by the faculty advisor. (Note, however, that only one MB&B course, including MB&B208, not cross-listed with chemistry, may count as an elective toward the major.) Students must either (i) complete MATH119 & MATH120 or MATH121, (ii) receive an Advanced Placement score of a 4 or 5 on the AB or BC calculus exam, or (iii) place into a course beyond MATH121 on the Math Placement Exam. Students are strongly encouraged to take one year of physics (PHYS111/112 or PHYS113/116) or receive an Advanced Placement score of a 4 or 5 on AP physics exam. One of the electives may be replaced by two semesters of research (CHEM409/CHEM410 or CHEM423/CHEM424). Other seminars or journal clubs cannot be counted as electives. Participation in the weekly biochemistry evening seminar (CHEM587/CHEM588) and in research, both during the academic year and over at least one summer, are strongly recommended. Students who intend to be multiple majors are strongly advised to consult with their chemistry advisors at the beginning of their junior year to plan their chemistry program.

**COURSES FOR NON-MAJORS**

Nonscientists are encouraged to consider CHEM118, CHEM119, CHEM120, or CHEM141/CHEM142 as part of their program to meet NSM requirements. CHEM118 provides an interdisciplinary view of the DNA molecules and their impact on society at large. CHEM119 studies the basic chemistry of several diseases, including AIDS, cancer, bacterial infections, and the drugs used to treat them, as well as psycho-therapeutic drugs. CHEM120 covers basic chemical principles and then shows how these principles relate to important issues in the real world, such as global warming, alternative energy, genetic engineering, and the treatment of diseases. CHEM141/CHEM142 is an introduction to chemistry that includes quantitative material. CHEM141 can be taken as a single-semester course toward the NSM requirements and can be taken by students who have had no high school chemistry.

Scientists majoring in areas other than chemistry can prepare themselves better for work in their discipline by having a grounding in chemistry, which will enable them to understand molecular phenomena. The Chemistry Department offers two yearlong tracks of Introductory Chemistry (CHEM141/CHEM142 or CHEM143/CHEM144). The CHEM143/CHEM144 sequence, requiring some prior chemistry and calculus, provides a more sophisticated introduction and represents a better preparation for science majors. The CHEM141/CHEM142 sequence requires no previous exposure to chemistry or calculus and emphasizes environmental and biological applications. CHEM152 is taken concurrently with CHEM141 and CHEM143 in the fall semester or with CHEM142 or CHEM144 in the spring semester. CHEM251/CHEM252 normally follows Introductory Chemistry. The laboratory courses, CHEM257 and CHEM258, are usually taken concurrently with CHEM251/CHEM252, respectively. The two courses, Introductory Chemistry and Organic Chemistry, plus the laboratory sequence, CHEM152, CHEM257, CHEM258, are required for admission to medical, dental, and veterinary schools.

**STUDENT LEARNING GOALS**

Students graduating with a BA degree in chemistry should be able to:

- **Apply the scientific method.** The student should understand how to develop and test scientific hypotheses.
- **Understand data.** The student should understand how chemical data is produced, interpreted, and applied.
- **Perform laboratory experiments.** The student should have the ability to carry out standard chemical experimental procedures safely and successfully.
- **Apply quantitative tools.** The student should be able to select and apply appropriate quantitative techniques (e.g., calculus, statistics, chemical group theory, or computational modeling) to chemical questions.
- **Use the primary literature.** The student should be able to search for and understand publications from the primary scientific literature.
- **Critically evaluate scientific claims.** The student should be able to critique claims and arguments made in the chemical literature.
- **Communicate.** The student should be able to present chemical data and their interpretation effectively in written, visual, and oral formats.
- **Practice science with integrity.** The student should adhere to established professional ethical standards in the generation, documentation, and presentation of chemical data.
- **Appreciate chemistry as an interdisciplinary science.** The student should understand how to apply chemical perspectives to topics from related fields.
STUDY ABROAD

A semester abroad is possible if adequately planned in advance. Students should discuss plans with their chemistry major advisors.

ADVANCED PLACEMENT

Placement in CHEM141 or CHEM143. Freshmen interested in environmental and/or biochemical material may take CHEM141. Those more interested in quantitative and inorganic materials should take CHEM143. Potential majors and other students will have a solid grounding in chemistry by taking either CHEM141, CHEM142 or CHEM143, CHEM144. CHEM152 is taken concurrently with CHEM141 or CHEM143 in the fall semester and CHEM142 or CHEM144 in the spring semester. Faculty will be available to discuss this at the Freshman Academic Forum. (http://www.wesleyan.edu/studentaffairs)

Requirements for medical, dental, or veterinarian school are satisfied by either CHEM141, CHEM142 or CHEM143, CHEM144, plus CHEM152, followed by CHEM251, CHEM252 (Organic Chemistry) and the labs CHEM257, CHEM258. Note: If CHEM144 was not taken (because of Advanced Placement credit or because sequence CHEM141/CHEM142 replaced CHEM143/CHEM144) then CHEM361 must be among the electives for the major.

For freshmen and new students to receive 2 credits:

Score of IB 6 or 7. Students can receive 1.00 credit by completing CHEM144 with a minimum grade of B. No credit will be granted if a students takes either CHEM141, CHEM142, or CHEM143.

Score of IB 5. Students can receive 1.00 credit by either completing CHEM144 with a minimum grade of B, or completing a full year of organic chemistry (CHEM251 & CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, or CHEM143.

Score of IB 4. Students are not eligible to receive Wesleyan credit.

Note: A chemistry major is required to study inorganic chemistry. The requirement can be met by taking either CHEM144 or CHEM361 or both.

Special note: AP students who intend to major in chemistry should consult with the department chair as soon as possible.

ENGLISH A-LEVELS

For freshmen and new students:

Students with a grade of A on the Chemistry A-Levels can receive 1 credit by completing CHEM144 with a minimum grade of B or completing the yearlong organic chemistry (CHEM251 and CHEM252) with a grade of B or higher. No credit will be granted if the student has completed any of the following courses: CHEM141, CHEM142, or CHEM143.

Special note: Students with Chemistry AP, IB, or A-Levels scores who intend to major in chemistry should consult with the department chair as soon as possible.

TRANSFER CREDIT

Not all general chemistry or organic chemistry courses taken at other institutions will satisfy the criteria for transfer credit to Wesleyan. It is the students’ responsibility to find an acceptable course(s) and to have the course(s) preapproved by the Chemistry Department. Below are general guidelines for requests for transfer of credit for general and organic chemistry.

For Transfer of Credit:

• The instructor of the equivalent Wesleyan course (CHEM141 or CHEM142 for Introductory Chemistry and CHEM251/ CHEM252 for Organic Chemistry) for the current academic year must approve all transfer of credit requests. Such approvals are solely at his/her discretion.

• Permission should be requested before the course is taken. The student should submit:
  • the “Permission to Transfer Credit From Another College or University” form available on the Dean’s Office website (http://www.wesleyan.edu/deans/forms),
  • the title, author(s), and edition of the textbook used in the course,
  • the syllabus for the course, including which specific chapters of the textbook are actually covered in the course,
  • the length of the lectures,
  • the total number of actual class hours, excluding time taken for examinations, and
  • the name and contact information for the course instructor.

These materials must be compiled by the student and sent to the faculty member currently teaching the equivalent Wesleyan course; simply sending a copy of the syllabus or a link to a course website is not sufficient.

ADVANCED PLACEMENT CREDIT FOR THE INTERNATIONAL BACCALAUREATE (IB) COURSES IN CHEMISTRY

For freshmen and new students to receive 2 credits:

Score of IB 6 or 7. Students can receive 2.00 credits by completing one full year of organic chemistry (CHEM251 and CHEM252) with a minimum grade of B. No credit will be granted if a students takes CHEM144 with a minimum grade of B. No credit will be granted if a students takes either CHEM141, CHEM142, or CHEM143.

Score of IB 5. Students can receive 1.00 credit by either completing CHEM144 with a minimum grade of B, or completing a full year of organic chemistry (CHEM251 & CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, or CHEM143.

Score of IB 4. Students are not eligible to receive Wesleyan credit.

Note: A chemistry major is required to study inorganic chemistry. The requirement can be met by taking either CHEM144 or CHEM361 or both.

Special note: AP students who intend to major in chemistry should consult with the department chair as soon as possible.

ENGLISH A-LEVELS

For freshmen and new students:

Students with a grade of A on the Chemistry A-Levels can receive 1 credit by completing CHEM144 with a minimum grade of B or completing the yearlong organic chemistry (CHEM251 and CHEM252) with a grade of B or higher. No credit will be granted if the student has completed any of the following courses: CHEM141, CHEM142, or CHEM143.

Special note: Students with Chemistry AP, IB, or A-Levels scores who intend to major in chemistry should consult with the department chair as soon as possible.

TRANSFER CREDIT

Not all general chemistry or organic chemistry courses taken at other institutions will satisfy the criteria for transfer credit to Wesleyan. It is the students’ responsibility to find an acceptable course(s) and to have the course(s) preapproved by the Chemistry Department. Below are general guidelines for requests for transfer of credit for general and organic chemistry.

For Transfer of Credit:

• The instructor of the equivalent Wesleyan course (CHEM141 or CHEM142 for Introductory Chemistry and CHEM251/ CHEM252 for Organic Chemistry) for the current academic year must approve all transfer of credit requests. Such approvals are solely at his/her discretion.

• Permission should be requested before the course is taken. The student should submit:
  • the “Permission to Transfer Credit From Another College or University” form available on the Dean’s Office website (http://www.wesleyan.edu/deans/forms),
  • the title, author(s), and edition of the textbook used in the course,
  • the syllabus for the course, including which specific chapters of the textbook are actually covered in the course,
  • the length of the lectures,
  • the total number of actual class hours, excluding time taken for examinations, and
  • the name and contact information for the course instructor.

These materials must be compiled by the student and sent to the faculty member currently teaching the equivalent Wesleyan course; simply sending a copy of the syllabus or a link to a course website is not sufficient.
• The student must achieve at least a B- to get credit for the course.
• Courses taken elsewhere may not be counted toward a chemistry major at Wesleyan (except by special petition to the Curriculum Committee of the Chemistry Department).
• The Chemistry Department will not normally accept an online chemistry course for Wesleyan credit.

**BA/MA PROGRAM (HTTP://WESLEYAN.EDU/GRAD/DEGREE-PROGRAMS/BA-MA.HTML)**

[wesleyan.edu/grad/degree-programs/bama.html]

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. Students apply in their junior or senior year and if accepted, can continue for a year beyond the bachelor’s degree and obtain a master’s degree in one additional year. The fifth year is tuition free.

**ADDITIONAL INFORMATION**

**Undergraduate research.** Research is an important part of the program for most majors. Wesleyan’s small but excellent graduate program makes it possible for majors to work at the cutting edge of discovery in chemistry. Every full-time faculty member is involved in significant research. Undergraduates participating in the departmental research program normally attend a research seminar in their area, and most research groups have weekly meetings to discuss new results. Students involved in significant research have an opportunity to continue in the University’s BA/MA program.

**Seminars.** Seminars are a vital part of the intellectual life of the Chemistry Department. Weekly departmental seminars on Friday afternoons (CHEM521/CHEM522) are followed by refreshments and discussions in the chemistry lounge. Important scientists from other universities and research laboratories are the speakers. In addition, chemistry students and faculty speak at weekly research seminars in chemical physics, organic/inorganic chemistry, and biochemistry. Programs for each semester are available on the chemistry website.

**HONORS**

Honors are awarded based on the evaluation of senior theses.

**CAPSTONE EXPERIENCE**

The recommended capstone experience is research followed by a senior thesis. Successful completion of the Integrated Lab sequence CHEM375/CHEM376 is considered a capstone for those students not doing research in chemistry.

**GRADUATE CHEMISTRY PROGRAM**

The Department of Chemistry offers a graduate program leading to a Ph.D. in Chemistry. The faculty-to-graduate student ratio ensures that each student knows every faculty member and has the opportunity to become well acquainted with several areas of chemistry. A customized program of study is set up for each student, whose progress is monitored by a three-member faculty advisory committee.

Emphasis within the program is on developing skills for chemical research, rather than on conforming to a uniform program of study. Course requirements, progress examinations, preparation and defense of research proposals, seminar presentation, and teaching assignments are all designed with this goal in mind.

Interested students are encouraged to visit the websites of individual faculty (http://wesleyan.edu/chem/people) members to explore research areas and opportunities available in the department.

**COURSES**

Course requirements are intended to achieve two basic goals.

• **Acquisition of background knowledge.** A central core of material is basic for all well-trained chemists. Therefore, graduate students are initially expected to develop or demonstrate knowledge of an appropriate one-semester course in each of the areas of organic chemistry, inorganic chemistry, biochemistry, physical chemistry, and quantum chemistry.

• **Continued scholarly growth.** Graduate students are expected to take one course or its equivalent every semester. This may be a regular advanced course in chemistry or a related discipline, a seminar, or a tutorial designed to meet the special needs of an individual student.

**PROGRESS AND QUALIFYING EXAMS**

Progress examinations are given multiple times each academic year. Based on articles in the current literature, these examinations are designed to encourage graduate students to keep up with the latest developments in chemistry. In addition, they are a valuable tool for monitoring the expected steady growth of a student’s ability to read the chemical literature critically, as well as identifying any areas where he or she is deficient. Students are required to pass a specified number of exams, which they usually accomplish in two to three years.

**TEACHING**

Teaching skills are honed and assisting duties are given to each student as a means of developing communication skills. As these develop, more responsible and demanding tasks will be assigned whenever possible.

A one-hour seminar talk is expected of each student at least once a year beginning in their second year.
RESEARCH

After taking three research rotations in different laboratories through the first semester, students are usually then able to choose a research mentor.

Proposal writing is one of the most important parts of the entire graduate program in chemistry. Writing scientific proposals teaches evaluation of the literature, integration of knowledge from several areas, formulation of scientific questions, design of a research project to answer those questions, scientific writing, and the defense of a project proposal. Two proposals are required: one during the second year related to the student’s research and a second, in the fourth year, on a separate topic.

THESES | DISSERTATIONS | DEFENSE

The thesis research and dissertation—an original contribution worthy of publication—is the single most important requirement. Finally, the candidate defends the thesis before his/her committee and then presents a final seminar to the department.

CONCENTRATIONS

CHEMICAL PHYSICS
Guiding Committee: Lutz Hüwel, Physics; Joseph Knee, Chemistry; Stewart E. Novick, Chemistry; Brian Stewart, Physics

Beginning students in the chemistry or physics graduate programs may petition their department for admission to the interdisciplinary program in chemical physics. The philosophy underlying the program is that the solution to contemporary problems must increasingly be sought not within a single traditional specialty but from the application of different disciplines to particular problems. Students in the program will pursue a course of study and research that will familiarize them with both the Physics and Chemistry departments and, in particular, with those areas of overlapping interest that we broadly categorize as chemical physics.

REQUIREMENTS FOR THE DEGREE OF DOCTOR OF PHILOSOPHY

Students entering the program will choose an interdepartmental committee to oversee their progress toward the PhD degree. Students will still receive a PhD in either chemistry or physics. Chemical physics students will be expected to take courses from both departments. The core of the program of courses consists of quantum chemistry (offered by the Chemistry Department), quantum mechanics (offered by either department), electrodynamics (offered by the Physics Department), statistical mechanics (either department), and mathematical physics (Physics Department). For details of the course offerings, see the course listings under chemistry and physics.

Seminars. Students will participate in the weekly chemical physics seminar series and will be expected to present at least one talk per year.

Examinations. Students will follow the examination policy of their sponsoring department. Those chemical physics students pursuing a PhD in chemistry will take periodic progress exams based on the current literature, and in their second year they will take an oral qualifying exam that includes a short written proposal of their future PhD research. A second proposal, external to their research, is submitted in the fourth year. In addition, there is a final oral PhD thesis defense. For details, see the requirements for the PhD in chemistry. For those chemical physics students pursuing a PhD in physics, there are three formal examinations:

A written examination at an advanced undergraduate level (taken in the third semester), an oral PhD candidacy examination (taken no later than the fifth semester), and a final oral PhD thesis defense. For details, see the requirements for the PhD in physics.

Research. Students in chemical physics may do research under the direction of any member of either department. To aid the student in this selection and to sample the flavor of research activities in both departments, students will participate briefly in the research of each department. During the first year, students will rotate among as many as two research groups from each department, spending between four and six weeks in each group. It is anticipated that a student will be able to make a formal choice of a research advisor by the end of the first academic year at Wesleyan.

MOLECULAR BIOPHYSICS

The Chemistry Department participates in an interdisciplinary program of graduate study in molecular biophysics with the departments of Molecular Biology and Biochemistry (MB&B), Biology, and Physics. The program provides a course of study and research that overlaps the disciplinary boundaries of chemistry, physics, biology, and molecular biology and is designed for students with an undergraduate background in any one of these areas. Students in the program are enrolled in one of the participating departments and fulfill canonical requirements of the department. In addition, they take advanced courses in molecular biophysics and pursue dissertation research with one of the faculty in the program. Centerpieces of the program are the weekly interdepartmental journal club in molecular biophysics and an annual off-campus research retreat. Both activities bring together students, research associates, and faculty from all participating departments and foster interdisciplinary collaborative projects.

The program is affiliated with interest groups such as the New York Structural Biology (NYSB) and the New York Bioinformatics and Computational Biology (NYBCB) groups. All students are encouraged to join and attend national meetings of the Biophysical Society.

Students interested in this program may indicate their interest on the application for admission to the Chemistry, MB&B, Physics, or Biology departments. Application forms for these departments are available at: https://admission.wesleyan.edu/apply/.
CLASSICAL STUDIES

The Department of Classical Studies is dedicated to the interdisciplinary study of the societies of ancient Greece and Rome. Our faculty offer a wide array of courses in language and literature, art and archaeology, history, science, mythology, and religion. Courses in classical civilization require no knowledge of Latin and Greek and range from introductory lecture courses to smaller seminars that consider critical approaches and scholarship central to the study of the ancient world. Recent courses have covered diverse topics including gender and sexuality, Roman law, death and the afterlife in Greece and Egypt, Rome and the Caesars, Alexander the Great, and the archaeology of Pompeii. Latin and Greek are offered at all levels, so students can either start the languages at Wesleyan or build on high school preparation. Introductory courses enable students to begin reading original texts by the second semester, and advanced courses engage with both ancient texts and critical approaches to those texts in modern scholarship. Many of our majors choose to complement their coursework at Wesleyan with a summer or semester spent in Greece or Italy.

Studying classical antiquity is not only rewarding in itself; it is also excellent preparation for many academic and professional pursuits. The department has sent recent majors to top graduate programs in classics, classical archaeology, and ancient history. Our alumni have also gone on to successful careers in such varied areas as law, medicine, business, journalism, music, arts administration and museum work, and education at all levels, both as teachers and administrators.

The Classical Studies Department offers two majors: a Classical Civilization major and a Classics major. For the requirements for the two majors, see the relevant subsections.

Classical civilization courses fall into four categories:

- **100–199**: First Year Seminars (FYS) are small, topical seminars reserved for first- or first-and-second-year students.
- **200–275**: Survey courses provide an introductory overview of one aspect of the ancient world. These courses generally have high enrollment limits and have no prerequisites.
- **276–299**: Lower-level seminars are smaller courses that focus on special aspects of the ancient world and provide opportunity for discussion and specialized research but do not require any previous knowledge of classical civilization and thus have no prerequisites.
- **300–399**: Advanced seminars are small courses that explore special aspects of the ancient world and provide opportunity for discussion and specialized research. These courses may have prerequisites or may require permission of instructor.

Courses in Greek and Latin fall into three categories:

- **101–102**: First-year language courses that are intended for those with little or no prior training in the languages provide basic training in Latin and Greek and some exposure to the culture of the ancient world.
- **201–202**: Second-year, or intermediate, courses, intended for those with a year of college training or the equivalent high school training (typically four years), introduce students to selected texts in their literary and historical contexts and provide an introduction to critical approaches to classical literature.
- **203–299**: Advanced language and literature seminars focus on a rotating set of authors, genres, or periods and provide greater opportunity for discussion and specialized research.

Students unsure of what level of language course to take should consult with a member of the department.

FACULTY

Abderrahman Aissa  
BA, University of Colorado Boulder; MA, University of Colorado Boulder  
Adjunct Assistant Professor of Arabic

Kate Birney  
BA, Yale University; MT, Harvard University; PHD, Harvard University  
Associate Professor of Classical Studies; Associate Professor, Archaeology;  
Associate Professor, Art History

Christopher Parslow

Robert Rich Professor of Latin, Emeritus
**DEPARTMENTAL ADVISING EXPERTS**

Kate Birney, Greek Archaeology; Christopher Parslow, Roman Archaeology, Latin, History; Andrew Szegedy-Maszak, Classical Civilization, Greek History; Eirene Visvardi, Greek

**CLASSICAL CIVILIZATION MAJOR**

**MAJOR DESCRIPTION**

The classical civilization major is designed to provide students with a basic knowledge of at least one ancient language and a comprehensive understanding of Greek and Roman civilization. Since the field of classical studies encompasses many different disciplines, students have the opportunity to adapt the program to their particular interests. Students interested in ancient Mediterranean archaeology may major in classical civilization or in archaeology (see listing for the archaeology program). Because of the heavy language requirement for graduate school admission, however, students interested in graduate work in classics should give serious consideration to the classics major.

Students can either follow the general track or pursue one of three specialized tracks: Poetry and Performance, Archaeology/Archaeological Science or History and Social Justice [see here](https://wesleyan.edu/classics). All tracks are rigorous and incorporate both language and cultural study; the specialized tracks offer an opportunity to do more interdepartmental and comparative work. While all pathways through the major share the same foundational courses in language, history, and material culture, students pursuing specialized tracks can take 2 complementary courses outside of the department as part of their elective courses, provided their course of study has been approved by their major advisor.

**ADMISSION TO THE MAJOR**

Greek and Latin are integral to the study of the Classical world, so prospective majors in classics (CLAS) or classical civilization (CCIV) are encouraged to begin their study of one or both of those languages early in their careers at Wesleyan or to continue their studies by enrolling in upper-level language classes. Competence in either language through at least the intermediate level is required for completing either a CLAS or a CCIV major. While there are no specific courses required for admission to the major, prospective majors should also plan to take at least one course offered by the department in the history, literature, art and archaeology of the Greek or Roman world prior to declaring their major to familiarize themselves with the interdisciplinary nature of the field. The department requires that all students seeking admission to the CLAS or CCIV major, as well as those who are majors, maintain at least a B-average in courses taken within the department.

All students entering the major are required to complete the major declaration form on which they will outline the path they plan to pursue: selection of potential courses; track, if any; selections outside the department and how they will be in conversation with the major course selections to form a meaningful curricular whole. This initial outline will indicate the student’s aimed trajectory. Upon completion of the major, students will complete the final section of the form where they will have the opportunity to explain changes in their initial trajectory and reflect briefly on their choices and development as a whole. [see Form](https://wesleyan.edu/classics/Major%20Declaration%20Form.pdf)

**MAJOR REQUIREMENTS**

Requirements for the classical civilization major are a minimum of 10 courses in classical civilization, Greek, and Latin, including at least:

- Three language courses numbered 102 or higher.
- One introductory ancient history survey (CCIV231, CCIV232). This requirement should be completed by the end of the junior year.
- One course at any level in material culture.
- Two classical civilization seminars (CCIV courses numbered 276-399). An advanced Greek or Latin course (numbered above 202) may be substituted for one of the classical civilization seminars.

The first year of Greek or Latin (courses numbered 101 and 102) may not be counted toward the required minimum of 10 courses, but a full year of the student’s second classical language may count as one course toward that minimum.

The table below offers a comparison of potential course trajectories through the general and specialized tracks. See also Classics Major (p. 66).

**STUDENT LEARNING GOALS**

The Classical Studies Department offers two majors, Classical Civilization and Classics, both of which provide the opportunity to study all facets of the ancient world alongside the study of at least one of the classical languages through the intermediate level. The major in Classics places more emphasis on literature and textual studies, reading a range of works in poetry, drama, history and philosophy. The major in Classical Civilization encourages the parallel exploration of both the literary and archaeological remains of the Greeks and Romans, either through a general track or one of three specialized tracks. For a detailed description of the two majors and major requirements, see below. Through coursework, participation in study abroad, and independent research, majors in both concentrations develop expertise in these five areas, all of which will equip them for a variety of personal and professional pursuits:

- Linguistic agility. Reading knowledge of Latin and/or Greek, which confers a deep understanding of language—how it works and how to make it work for us—and an ability to critically analyze texts in a variety of media and genres.
- Interpretive acumen. Analytical ability to recognize patterns in texts and artifacts; to filter data to identify key ideas and structures; and to weigh and evaluate differing perspectives.
- Creativity. Integrating different categories of evidence (archaeological sciences, cultural studies, language) to ask questions of the past and to use constructive analogy to apply the approaches to classical studies to addressing questions outside the discipline.
- Effective communication. Present polished ideas and arguments to different types of audiences, using oral, written, digital, and performative media.
- Diversity, inclusion, and social justice. Rich understanding of the historical, material, and physical environment of these two civilizations—and how they interacted with the cultures around them—fosters intercultural awareness.
and a sympathetic capacity demonstrated in the ability to inhabit multiple perspectives.

**STUDY ABROAD**

Majors in both classics and classical civilization are encouraged to apply to study abroad, usually in the junior year. Wesleyan’s list of approved programs includes two that are particularly appropriate for departmental majors.

In Rome, the Intercollegiate Center for Classical Studies provides regular college credit and the opportunity to study firsthand the monuments and culture of ancient and modern Italy. Students interested in applying to the center are urged to take CCIV232, which is generally offered every other year, and to begin the study of Latin and/or Greek before the year in which they hope to be in Rome, since no first-year Latin or Greek courses are offered at the center. Applicants with a strong background in Greek and/or Latin will have a better chance of admission. Applications for spring term are due in early October and for fall term, in early March.

The College Year in Athens (CYA) program offers either a full year or one semester of study in ancient and modern Greek language, history, art, and archaeology; the program also offers advanced Latin and numerous courses in postclassical and modern Greek culture, politics, and history. CYA has a rolling admissions policy, but to avoid paying a large deposit with admission, applications must be received by mid-October for spring term and by mid-May for fall term.

Other options are also available. Students should consult with a faculty member well in advance of the term in which they hope to be abroad to discuss credit, the application process, and how their plans will influence their selection of courses at Wesleyan.

On their return to campus after study abroad to study classics, classics and classical civilization majors must take at least one additional language class numbered 201 or higher.

**ADVANCED PLACEMENT**

Students who receive a 4 or 5 on the Latin Advanced Placement exam may receive one Wesleyan credit after having completed with a passing grade a Latin course at Wesleyan at the level of LAT201 or higher.

**PRIZES**

The department awards three prizes annually.

Ingraham Prize. The gift of Robert Seney Ingraham, Class of 1888, and his wife, for excellence in New Testament Greek or, in years when a course in that subject is not given, for excellence in a course in Greek elective for juniors and seniors.

Sherman Prize. Established by David Sherman, D.D, Class of 1872, for excellence in classics.

Spinney Prize. The gift of Joseph S. Spinney, trustee 1875–82 and 1888–93, for excellence in Greek. Awarded for the best original essay on some aspect of Greek or Roman civilization.

**ADDITIONAL INFORMATION**

Notes for both classics and classical civilization majors:

- As a practical matter, students who have had no classical languages before coming to Wesleyan and who wish to major in classics should begin Greek or Latin in their first year or take an intensive summer course before the sophomore year. Students interested in the classical civilization major are also urged to begin language study as soon as possible.
- Students interested in studying at the Intercollegiate Center for Classical Studies in Rome (see above under Study Abroad) should plan to take CCIV232 (offered in alternate years) before the term in which they plan to study abroad.
- Where appropriate, students may ask to have courses in other departments substituted for classical civilization courses.
- Students interested in teaching may have an opportunity to serve as teaching apprentices in introductory Latin or Greek courses.

**HONORS**

Majors interested in completing a senior thesis for departmental honors should consult with the faculty as early as possible and must submit a senior thesis proposal to the department by April 15 of their junior year. Enrollment in the senior thesis tutorial in the fall will be contingent upon the department’s approval of the proposal.

**CLASSICS MAJOR**

**MAJOR DESCRIPTION**

A major in classics will concentrate on Greek, Latin, or a combination of both languages. Students considering graduate school in classics should choose the classics major track and are strongly urged to acquire a firm grounding in both languages. It is recommended, though not required, that students considering graduate work in classics learn a modern foreign language (preferably Italian, French, or German) and that they take courses in other subjects related to their particular area of interest (literature, history, philosophy, religion, art, archaeology).

**ADMISSION TO THE MAJOR**

Greek and Latin are integral to the study of the Classical world, so prospective majors in classics (CLAS) or classical civilization (CCIV) are encouraged to begin their study of one or both of those languages early in their careers at Wesleyan or to continue their studies by enrolling in upper-level language classes. Competence in either language through at least the intermediate level is required for completing either a CLAS or a CCIV major. While there are no specific courses required for admission to the major, prospective majors should also plan to take at least one course offered by the department in the history, literature, or art and archaeology of the Greek or Roman world prior to declaring
their major to familiarize themselves with the interdisciplinary nature of the field. The department requires that all students seeking admission to the CLAS or CCIV major, as well as those who are majors, maintain at least a B- average in courses taken within the department.

All students entering the major are required to complete the major declaration form on which they will outline the path they plan to pursue: selection of potential courses; track, if any; selections outside the department and how they will be in conversation with the major course selections to form a meaningful curricular whole. This initial outline will indicate the student’s aimed trajectory. Upon completion of the major, students will complete the final section of the form where they will have the opportunity to explain changes in this initial trajectory and reflect briefly on their choices and development as a whole. [see Form (https://wesleyan.edu/classics/Major%20Declaration%20Form.pdf)]

**MAJOR REQUIREMENTS**

A minimum of 10 courses in Greek, Latin, and classical civilization, including at least:

- Six courses in Greek or Latin beyond the introductory level (courses numbered 201 or higher).
- One introductory ancient history survey (CCIV231; CCIV232). This requirement should be completed by the end of the junior year.
- One classical civilization seminar (CCIV courses numbered 276-399).

The first year of Greek or Latin (courses numbered 101 and 102) may not be counted toward the required minimum of 10 courses, but a full year of the student’s second classical language may count as one course toward that minimum.

The table below offers a comparison of potential course trajectories through the general and specialized tracks. See also Classical Civilization major (p. 65).

COLLEGE OF EAST ASIAN STUDIES

The College of East Asian Studies (CEAS) challenges students to understand China, Japan, and Korea through the rigors of language study and the analytical tools of various academic disciplines. This process demands both broad exposure to different subjects and a focused perspective on a particular feature of the East Asian landscape. Japan, China, and Korea are related yet distinctive civilizations. Each has its own traditions and patterns of development. These traditions have played an important role in the development of culture around the globe and remain formative influences today.

Students interested in East Asian studies will be guided by the expectations for liberal learning at Wesleyan and by the CEAS’s interdisciplinary approach. Language, premodern history and culture, and the sophomore Proseminar provide the common core of our program. The Proseminar exposes students to a wide variety of intellectual approaches to East Asian studies and thereby provides a foundation for students to focus in more depth in particular areas.

FACULTY

Scott W. Aalgaard
BA, University of Victoria; MA, University of Victoria; MA, University of Chicago; PHD, University of Chicago
Assistant Professor of East Asian Studies

Talia Johanna Andrei
BA, Rutgers University; MA, Columbia University; MPHIL, Columbia University; PHD, Columbia University

Su Zheng
BA, Central Conservatory of Music; MA, New York University; PHD, Wesleyan University
Associate Professor of Music; Associate Professor, East Asian Studies; Associate Professor, Feminist, Gender, and Sexuality Studies
DECISIONS OF THE EDITORIAL BOARD

The College of East Asian Studies (CEAS) has two mutually reinforcing core missions: to cultivate an outstanding group of students with strong language abilities, wide-ranging knowledge about East Asia, and an area of particular expertise; and to promote knowledge of and engagement with the histories, cultures, and contemporary significances of East Asia across the campus, curriculum, and broader community.

STUDY ABROAD

All CEAS majors are required to study abroad to develop their language competency and acquire a more concrete grasp of a specific East Asian cultural context. This requirement may be fulfilled through a semester or one year in an approved program.

For more information, see wesleyan.edu/ceas/majoring/studyabroad.html (https://wesleyan.edu/ceas/majoring/studyabroad.html).

Questions about study abroad should be addressed to Prof. Xiaomiao Zhu (China), Prof. Naho Maruta (Japan), or Prof. Hyejoo Back (Korea).

LANGUAGE REQUIREMENT

CEAS majors are expected to reach a minimum of advanced-level (completed third year) competency in Chinese, Japanese, or Korean. Majors who are native speakers of Chinese, Japanese, or Korean are expected to study another East Asian language. All students need to maintain a grade of B or above by the time they reach advanced-level competency. All students must take a minimum of four semesters of East Asian language courses; this may mean being required to take language classes beyond the advanced level. Evaluation of an individual student’s language competence will be undertaken by the relevant language
coordinator, who will also determine how language courses not taken at Wesleyan count toward this requirement.

Questions about Chinese should be addressed to the Chinese language and cocurriculum coordinator, Prof. Xiaomiao Zhu. Questions about Japanese should be addressed to the Japanese language and cocurriculum coordinator, Prof. Naho Maruta. Questions about Korean should be addressed to the Korean language and cocurriculum coordinator, Prof. Hyejoo Back.

**CAPSTONE EXPERIENCE**

All majors must complete a written or (with approval) creative project during their senior year. This should involve the use of East Asian language materials to the extent that the student's preparation permits. There are several ways in which this requirement can be fulfilled:

- Write a substantial essay, focusing on East Asia, as assigned in a regular class. The instructor must approve of this project and may suggest revisions as needed. Similarly, faculty approval is required also for a creative project done in the context of a class or as a tutorial. If the class instructor is not a CEAS faculty member, the essay or the creative arts project must be approved by the student's CEAS advisor. Please note that this class can simultaneously fulfill other requirements.
- Write a one-semester senior essay in a tutorial, preferably given by a CEAS faculty member. The tutorial may be for a full credit or for 0.5 credit.
- Write a senior thesis, typically in a two-semester tutorial with a CEAS faculty member.
- Furthermore, each student will be expected to present his or her research at a poster presentation toward the end of the spring semester of the senior year. This presentation is in addition to and apart from the actual research project.

**COLLEGE OF EAST ASIAN STUDIES MINOR**

**ADMISSION TO THE MINOR**

Upon completion of any College of East Asian Studies (CEAS) course, students may apply to enter the CEAS minor. Students must fill out an online application [here](https://docs.google.com/forms/d/e/1FAIpQLScnBKS3CD9ypUcTFwW9u5SeOubPlyd69FFp4yVXaExlg4jdg/viewform?usp=sf_link) and then submit a minor declaration via the Minor Declaration Tool in the electronic portfolio.

**MINOR REQUIREMENTS**

The minor requires completion of any five CEAS courses and intermediate-level competence completed second year in Chinese, Japanese, or Korean. Starting with the class of 2020, only courses taken for a grade may be counted towards the minor.

No more than two of the five courses may be language courses. No more than two of the five courses can be performance or studio art courses. No more than one of the five courses can be a study abroad course.

The rule that no more than two of the five courses can be language courses means that students beginning their Chinese, Japanese, or Korean language study at Wesleyan may have to take as many as seven courses to fulfill the minor (because four courses would be required to reach intermediate competence, but only two will count toward the minor).

Note that while the CEAS major requires that native speakers of a Chinese, Japanese, or Korean language must study a different Chinese, Japanese, or Korean language, that does not apply to the minor, so a native speaker of Korean, for example, can pass the intermediate competence standard without taking any language classes and can simply take any five CEAS classes. All students, including native speakers, must contact a language instructor and pass a placement exam in order to certify intermediate competence. Please contact the appropriate language coordinator (Chinese--Zhu, Japanese--Maruta, Korean--Back) immediately if you intend to exercise this option.

To graduate with a minor in CEAS, seniors must complete their minor certification form in their portfolio.
COLLEGE OF FILM AND THE MOVING IMAGE

The College of Film and the Moving Image explores the motion picture in a unified manner, combining the liberal arts tradition of cultural, historical, and formal analysis with filmmaking at beginning and advanced levels. The department offers a major and a minor.

FACULTY

Stephen Edward Collins
BA, Wesleyan University; MFA, University of Texas Austin

FILM STUDIES MAJOR

ADMISSION TO THE MAJOR

The requirements for admission include a minimum overall academic average of B (85.0) and the successful completion by the middle of the sophomore year of two designated entry-level courses with a grade of B+ or better in each. Entry to the major is possible only after completion of these two courses and application to the film major. To apply, students must meet with the department chair by the first semester of their sophomore year and place their names on the list of potential majors. Students on this list will receive an application form. Students who do not meet with the department chair will not receive an application or be considered for the major. Film studies faculty will evaluate applications based on performance in film studies classes (including but not limited to grades) and any other factors deemed pertinent.

Because of the prerequisites and major requirements, students transferring to Wesleyan after their first semester sophomore year are not able to declare the film studies major.

MAJOR REQUIREMENTS

- All students must take two designated prerequisite courses and earn a grade of B+ or better in each to be eligible for the major.
After entry to the major, students must take the required production course.

- Students must also take a minimum of six film studies electives.
- Students may count a maximum of 16 credits in any single department toward the 32 credits required for graduation. Credits that exceed this limit will count as oversubscription.

### ADDITIONAL OPTIONS

Selection of options is dependent upon students not exceeding 16 total film credits (the maximum allowed in any department by the University prior to oversubscription).

- Students have the OPTION to take two senior theses courses for an honors project (one in fall, one in spring).
- Students have the OPTION to take up to three additional film/digital production courses. (Note that a senior thesis film counts as two additional production courses.)
- Students have the OPTION to take up to three additional screenwriting/television writing courses. (Note that a senior thesis screenplay/teleplay counts as two screenwriting/television writing courses.)
- Note that OPTIONAL COURSES count toward graduation but not toward fulfillment of the major.

Please see our departmental website for further information regarding the specifics of our major (wesleyan.edu/filmstudies/). Please be aware that cross-listed courses must be counted in all departments in which they are listed.

Course offerings vary from year to year and not all courses are available in every year. With prior approval by the department chair, one history/theory course from another institution may be transferred to the Wesleyan major. The department does not offer group or individual tutorials other than senior thesis projects, but uncredited opportunities to work on individual senior films are available. Consult the chair of film studies for further details. The Film Studies Department does not offer credit for internships.

Students may become involved in film studies in ways other than class enrollment. The College of Film and the Moving Image houses the Wesleyan Cinema Archives. The Film Board (composed of Wesleyan students) runs the Wesleyan Film Series. The College of Film also hosts the Wesleyan Freshman/Sophomore Filmmaking Club.

### PREREQUISITE CLASSES

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>FILM304</td>
<td>History of Global Cinema</td>
<td>1</td>
</tr>
<tr>
<td>FILM307</td>
<td>The Language of Hollywood: Styles, Storytelling, and Technology</td>
<td>1</td>
</tr>
</tbody>
</table>

### REQUIRED COURSES AFTER ENTRY INTO THE MAJOR

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>

STUDENT LEARNING GOALS

The College of Film and the Moving Image (CFILM) encompasses the Film Studies Department, the Center for Film Studies, the Student Film Series, and the Wesleyan Cinema Archives. The College approaches the moving image as an art in all its various forms, whether fiction, documentary, experimental, live-action, or animated, and in all its various venues, whether in cinemas, on television, in galleries, on the Internet, or on consumer/home formats. The College is designed specifically for liberal arts undergraduates who benefit most from the marriage of image making, history, and studies.

OUR PEDAGOGICAL GOALS

Our broad goal is to foster the critical understanding of cinema and television as art forms. To all students, both general education and majors, we offer a unified perspective that enables students to think critically about form and the choices that visual storytellers must face. This orientation toward intensive aesthetic analysis is unique in undergraduate film and media programs. No other liberal arts film program features such a broad and deep background in analysis and history coupled with sensitivity to film’s immediate and intimate relationship with audiences.

Our majors develop a critical and creative approach to the medium based on a strong visual vocabulary, extensive viewing, and a grasp of film production. Production and studies are mutually reinforcing in this environment. Our 16mm and digital production courses facilitate deeper comprehension of film and television’s formal complexities and demand a higher level of critical and analytical thinking. Likewise, students steeped in history and analysis bring a robust visual vocabulary and awareness of formal problem-solving to the tasks of filmmaking. Upon graduation, majors know how to make a movie; are experienced in all forms of film and television writing; understand film history; can offer original solutions to artistic problems; and are capable of extending our knowledge of cinema.

Our major demands and rewards original critical thinking. We believe that true learning involves synthesis, discovery, and original thought. Our students must face the challenge of defining and resolving artistic, historical, and analytical problems on their own, while also learning to work in collaboration. We encourage students to develop a personal vision, take risks, problem solve, and learn from failure as well as success.

FILM STUDIES MINOR

ADMISSION TO THE MINOR

The department offers a six-course minor that provides an opportunity for you to participate in our basic introductory courses and a selection from a large group of cross-listed courses, as well as a group of courses that we have not yet cross-listed. You can link your film minor to your primary major or pursue an entirely new area. For instance, you might focus on various cluster groups if so desired: television, cultural and media studies, international or global cinema, German cinema, Asian cinema, or writing for film and/or television and the media.

In accordance with the University guidelines, students minoring in film studies must complete six courses for a grade (no pass/fail) and achieve a B average. Tutorials, education in the field, and student forums do not count toward the minor.

Before becoming eligible for the minor, you must complete FILM307 with a grade of B or better, which would then count toward fulfillment of the minor and activate a minor course registration chart with the department (see department administrative assistant). Transfer courses cannot be used as a prerequisite, nor can they count toward fulfillment. After acceptance into the minor, you may submit courses taken overseas or at other universities to be considered on a case-by-case basis for credit.

MINOR REQUIREMENTS

FILM307 should be taken during the first or sophomore year. Students must meet with the minor administrator, Logan Ludwig (lludwig@wesleyan.edu), to declare the minor. After that, they may choose as convenient to complete the five additional courses before graduation.

Naturally, all course selections are subject to prerequisites from other departments, as well as enrollment restrictions, but with such a wide list of choices (and the list grows each year), there should be no problem in finding five classes.

COURSES

The list of courses currently recognized as part of the film studies minor includes.

(Please note that not all courses will be available every semester.)

COLLEGE OF INTEGRATIVE SCIENCES

The College of Integrative Sciences (CIS) aims to equip students with the creative and quantitative skills needed to address current and emerging global challenges in science and technology. These challenges are multifaceted, requiring problem-solving approaches that integrate expertise from multiple perspectives.

The CIS promotes an interdisciplinary and integrative approach to scholarship and learning across mathematics and the life, physical, and behavioral sciences. By encouraging creative synergies among faculty and students of disparate disciplines, the CIS academic structure complements existing departments and has the flexibility to evolve with the needs of an ever-changing world.

Research is key to the CIS. With a faculty mentor, student researchers pursue inquiry-based learning that explores open questions and provides new perspectives. They develop the necessary problem-solving skills and build expertise at the frontiers of science. Through research, students are transformed from consumers into creators of knowledge.

Students interested in the CIS are advised to follow a course of study that emphasizes a core science background, achieved by pursuing a major in one of the departments or programs in natural science and mathematics (NSM). The linked major offered by the CIS combines the intellectual depth in one area (the major) with breadth achieved through courses and research in the linked major.

FACULTY

Manju Hingorani
BS, University of Bombay; PHD, Ohio State University
Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Barbara Jean Juhasz
BA, Binghamton University; MA, University of Massachusetts Amherst; PHD, University of Massachusetts Amherst
Jeffrey L. Shames Professor of Civic Engagement; Associate Professor of Psychology; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences; Coordinator, Civic Engagement

Daniel Krizanc
BS, University of Toronto; PHD, Harvard University
Professor of Computer Science; Professor, Integrative Sciences; Professor, Environmental Studies; Co-Coordinator, Informatics and Modeling

Daniel Moller
MS, Louisiana Technical University; PHD, Louisiana Technical University
Assistant Professor of the Practice in Integrative Sciences

Ishita Mukerji
AB, Bryn Mawr College; PHD, University of California, Berkeley
Fisk Professor of Natural Science; Professor of Molecular Biology and Biochemistry; Director, College of Integrative Sciences; Professor, Integrative Sciences; Professor, Environmental Studies; Coordinator, Health Studies; Co-Coordinator, Molecular Biophysics

Michelle Louise Personick
BA, Middlebury College; PHD, Northwestern University
Assistant Professor of Chemistry; Assistant Professor, Integrative Sciences

Francis W. Starr

BS, Carnegie Mellon University; MS, Boston University; PHD, Boston University
Professor of Physics; Professor, Integrative Sciences; Professor, Molecular Biology and Biochemistry; Coordinator, Integrated Design, Engineering and Applied Science

Ellen Thomas
BS, University of Utrecht; MS, University of Utrecht; PHD, University of Utrecht
Smith Curator of Paleontology of the Joe Webb Peoples Museum of Natural History; Harold T. Stearns Professor of Integrative Sciences; University Professor in the College of Integrative Sciences; Research Professor, Earth and Environmental Sciences

Greg A. Voth
BS, Wheaton College; MS, Cornell University; PHD, Cornell University
Professor of Physics; Chair, Physics; Professor, Integrative Sciences

Michael P. Weir
BS, University of Sussex; PHD, University of Pennsylvania
Professor of Biology; Professor, Integrative Sciences; Co-Coordinator, Informatics and Modeling

AFFILIATED FACULTY

Gloster B. Aaron
BA, Oberlin College; PHD, University of Pennsylvania
Associate Professor of Biology; Chair, Neuroscience and Behavior; Director, WesMASS; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences

David L. Beveridge
BA, College of Wooster; MAA, Wesleyan University; PHD, University Cincinnati
Co-Director, Susan B. and William K. Wasch Center for Retired Faculty; Professor, Integrative Sciences, Emeritus; Co-Coordinator, Molecular Biophysics

Michael A. Calter
BS, University of Vermont; PHD, Harvard University
Professor of Chemistry; Associate Professor, Integrative Sciences

Christopher James Chenier
BA, Bard College; MA, University of Delaware
Digital Design Technologist; Adjunct Assistant Professor, College of Integrative Sciences; Adjunct Assistant Professor of Art

Frederick M. Cohan
BS, Stanford University; PHD, Harvard University
Professor of Biology; Professor, Environmental Studies; Professor, Integrative Sciences

Karen L. Collins
BA, Smith College; PHD, Massachusetts Institute of Technology
Edward Burr Van Vleck Professor of Mathematics; Professor of Mathematics; Professor, Integrative Sciences

John Richard Cooley
BA, Yale University; MBA, University of Connecticut; MS, University of Michigan; PHD, University of Michigan
Visiting Scholar in the College of Integrative Sciences

Joshua Boger
University Professor of the Sciences and Mathematics, Emeritus; Smith Curator of Paleontology of the Joe Webb Peoples Museum of Natural History; Harold T. Stearns Professor of Integrative Sciences; University Professor in the College of Integrative Sciences; Research Professor, Earth and Environmental Sciences

Candice M Eton

BS, Kansas State University; PHD, Kansas State University
Assistant Professor of Biology; Assistant Professor, Integrative Sciences
BA, New York University; BFA, New York University; PHD, Harvard University
Assistant Professor of Physics; Assistant Professor, Integrative Sciences; Assistant Professor, Molecular Biology and Biochemistry; Assistant Professor, Chemistry

William Herbst
BA, Princeton University; MAA, Wesleyan University; MSC, University of Toronto; PHD, University of Toronto
John Monroe Van Vleck Professor of Astronomy; Professor of Astronomy; Professor, Integrative Sciences

Cameron Donnay Hill
BA, Yale University; PHD, University of California, Berkeley
Assistant Professor of Mathematics; Assistant Professor, Integrative Sciences

Scott G. Holmes
BS, College of William and Mary; PHD, University of Virginia
Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Mark A. Hovey
BS, Ohio State University; PHD, Massachusetts Institute of Technology
Associate Provost; Professor of Mathematics; Professor, Integrative Sciences

Meredith Hughes
BS, Yale University; PHD, Harvard University
Assistant Professor of Astronomy; Assistant Professor, Integrative Sciences

Ruth Ineke Johnson
BS, University of Witwatersrand; PHD, Cambridge University
Associate Professor of Biology; Associate Professor, Integrative Sciences

Roy E. Kilgard
BA, Valdosta St University; PHD, University of Leicester
Associate Professor of the Practice in Astronomy; Associate Professor of the Practice, Integrative Sciences

Tsampikos Kottos
BA, University of Crete; MS, University of Crete; PHD, University of Crete
Professor of Physics; Professor, Integrative Sciences; Professor, Mathematics

Timothy C.W. Ku
BS, University of Rochester; MS, University of Michigan; PHD, University of Michigan
Associate Professor of Earth and Environmental Sciences; Associate Professor, Integrative Sciences

Robert P. Lane
BA, Colgate University; PHD, California Institute Tech
Associate Professor of Molecular Biology and Biochemistry; Chair, Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

James Lipton
BS, U Nebraska Lincoln; MSC, Cornell University; PHD, Cornell University
Professor of Computer Science; Professor, Integrative Sciences

Psyche Loui
BS, Duke University; PHD, University of California, Berkeley
Assistant Professor of Psychology; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences

Amy MacQueen
BA, Columbia University; PHD, Stanford University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Michael A. McAlear
BS, McGill University; PHD, McGill University

Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Edward C. Moran
BS, Pennsylvania State University; MA, Columbia University; MPhil, Columbia University; PHD, Columbia University
Professor of Astronomy; Director, Van Vleck Observatory; Professor, Integrative Sciences; Co-Coordinator, Planetary Science

Brian Hale Northrop
BA, Middlebury College; PHD, University of California LA
Associate Professor of Chemistry; Associate Professor, Integrative Sciences

Stewart E. Novick
BS, SUNY at Stony Brook; MA, Harvard University; PHD, Harvard University
Joshua Boger University Professor of the Sciences and Mathematics; Professor of Chemistry; Professor, Integrative Sciences

Alison L. O'Neil
BS, Binghamton University; PHD, Montana State University
Assistant Professor of Chemistry; Assistant Professor, Neuroscience and Behavior; affiliated faculty

Donald B. Oliver
BS, Brandeis University; MAA, Wesleyan University; PHD, Tufts University
Daniel Ayres Professor of Biology; Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Rich Olson
BA, Cornell University; PHD, Columbia University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Seth Redfield
BM, New Eng Consv Music; BS, Tufts University; MS, University of Colorado Boulder; PHD, University of Colorado Boulder
Associate Professor of Astronomy; Chair, Astronomy Department; Associate Professor, Integrative Sciences; Co-Coordinator, Planetary Science

Mike Robinson
BS, University of Sussex; MS, McGill University; PHD, McGill University
Assistant Professor of Psychology; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences

Irina M. Russu
BS, University of Bucharest; MAA, Wesleyan University; PHD, University of Pittsburgh
E. B. Nye Professor of Chemistry; Professor of Chemistry; Professor, Integrative Sciences

Meng-ju Renee Sher
BA, Wesleyan University; MA, Harvard University; PHD, Harvard University
Assistant Professor of Physics; Assistant Professor, Integrative Sciences; Assistant Professor, Environmental Studies

Colin A. Smith
BA, New York University; PHD, University of California, San Francisco
Assistant Professor of Chemistry; Assistant Professor, Molecular Biology and Biochemistry; Assistant Professor, Integrative Sciences

Brian A. Stewart
BS, Stanford University; PHD, Massachusetts Institute of Technology
Professor of Physics; Professor, Environmental Studies; Professor, Integrative Sciences

Erika A. Taylor
BS, University of Michigan; PHD, University of Illinois Urbana
Associate Professor of Chemistry; Faculty Director, McNair Program; Associate Professor, Environmental Studies; Associate Professor, Integrative Sciences

T. David Westmoreland
BS, Massachusetts Institute of Technology; PHD, University of North Carolina at Chapel Hill
Associate Professor of Chemistry; Chair, Chemistry; Associate Professor, Integrative Sciences

VISITING FACULTY

Christopher S. Weaver
BS, Hobart College; CAS, Wesleyan University; MALS, Wesleyan University; SM, Massachusetts Institute of Technology
Distinguished Professor of Computational Media in the College of Integrative Sciences

COLLEGE OF INTEGRATIVE SCIENCES MAJOR

ADMISSION TO THE MAJOR

Students must apply for admission to the College of Integrative Sciences (CIS). Students must download and complete application materials (https://www.wesleyan.edu/cis/about/CIS-ApplicationSupplemental.pdf), which include:

- A description of the proposed research activity
- A letter of reference from the proposed faculty mentor, as well as a second letter from another reference

Normally, the deadline for applications is the Friday immediately prior to spring break. Please allow time to prepare your project description prior to the application deadline.

Students are eligible for the CIS Linked Major if they have chosen an NSM major and enrolled in at least one semester of the Research Frontiers Seminar (CIS221 or CIS222). Students should have an interest in interdisciplinary research.

MAJOR REQUIREMENTS

In addition to majoring in one department or program in NSM, students in the CIS take the following courses for a minimum of six and a maximum of nine credits.

OUTLINE OF THE LINKED MAJOR

- CIS221/CIS222 (.5 credits/semester). This is a sophomore-level course designed to introduce students to ongoing research projects in the NSM division. All students interested in applying to the college are required to attend the course for at least one semester. The course involves weekly visits from different faculty members and their students from across the division to discuss their research programs. Potential CIS students are encouraged to take the course during their entire sophomore year to get exposure to the variety of research conducted in the NSM division.
- Two upper-level electives (2 credits). Upper-level courses should provide core-skills from a discipline outside the primary major. Accordingly, these courses are typically hosted by a department other than the student’s foundational major. The course catalog contains a list of courses identified as interdisciplinary and appropriate for the college. Courses not on this list may potentially be used to fulfill elective requirements, based on consultation with the CIS academic advisor. In general, the specific electives used to fulfill this requirement must be determined in consultation with a student’s CIS linked-major advisor.
- Two semesters of a journal club or seminar (.5–1 credit). The two journal clubs/seminar series must be in different disciplines. CIS221/CIS222 cannot be used to fulfill this requirement.
- Senior capstone colloquium (.5 credits). Two semesters of the capstone colloquium are required. In this course, senior CIS fellows present their research to their peers/junior CIS fellows.
- Research (2–4 credits). Research credits normally come by enrolling in Advanced Research Seminar or Senior Thesis Tutorial. Two credits of research is the minimum requirement. Four research credits are achieved by taking research for a full credit each semester in the junior year and the senior year. Students are strongly encouraged to write a thesis based on their research during their senior year. In unusual cases, the two-credit minimum can also be satisfied through (paid) credits for summer research.
- One summer research experience. All students are required to spend at least one summer performing research, preferably the summer after their sophomore year, immediately following acceptance to the college. Students are supported during the summer by a CIS fellowship (unless doing the research for credit).
The College of Letters (COL) is a three-year interdisciplinary major for the study of European literature, history, and philosophy, from antiquity to the present. During these three years, students participate as a cohort in a series of five colloquia in which they read and discuss (in English) major literary, philosophical, and historical texts and concepts drawn from the three disciplinary fields, and also from monotheistic religious traditions. Majors are invited to think critically about texts in relation to their contexts and influences—both European and non-European—and in relation to the disciplines that shape and are shaped by those texts. Majors also become proficient in a foreign language and study abroad to deepen their knowledge of another culture. As a unique college within the University, the COL has its own library and workspace where students can study together, attend talks, and meet informally with their professors, whose offices surround the library.

**FACULTY**

*Charles Barber*
BA, Harvard University; MFA, Columbia University
Writer-in-Residence in Letters

*Joseph J. Fitzpatrick*
BA, Harvard University; PHD, Duke University
Assistant Professor of the Practice in Letters; Assistant Professor of the Practice, Russian, East European, and Eurasian Studies

*Tushar Irani*
BA, Colgate University; PHD, Northwestern University
Associate Professor of Letters; Associate Professor of Philosophy

*Ethan Kleinberg*
BA, University of California, Berkeley; MA, University of California LA; PHD, University of California LA
Professor of History; Professor of Letters; Executive Editor, History and Theory

*Typhaine Leservot*
BA, University of Caen; MA, University of North Carolina at Chapel Hill; PHD, University of North Carolina at Chapel Hill
Associate Professor of French; Associate Professor of Letters; Co-Coordinator, African Studies

*Ulrich Plass*
MA, University of Michigan; PHD, New York University
Professor of German Studies; Chair, College of Letters; Professor, Letters

*Gabrielle Piedad Ponce-Hegenauer*
BA, University of Illinois Urbana; MFA, Johns Hopkins University; PHD, Johns Hopkins University
Assistant Professor of Letters

*Daniel Smyth*
BA, University of Chicago; MA, University of Chicago; PHD, University of Chicago
Assistant Professor of Letters; Assistant Professor, Philosophy

*Jesse Wayne Torgerson*
BA, Biola University; MA, University of California, Berkeley; PHD, University of California, Berkeley
Assistant Professor of Letters; Assistant Professor, Medieval Studies; Assistant Professor, History

**AFFILIATED FACULTY**

*Gabriela Jarzebowska*
Visiting Scholar in the College of Letters

**VISITING FACULTY**

*Elizabeth A. Bobrick*
BA, Marlboro College; MA, Johns Hopkins University; PHD, Johns Hopkins University
Writing Consultant; Visiting Assistant Professor of Letters; Visiting Scholar in Classical Studies

**EMERITI**

*Howard I. Needler*
BA, Oxford University; BS, Yale University; MA, Oxford University; PHD, Columbia University
Professor of Letters, Emeritus

*Laurie Nussdorfer*
BA, Yale University; MA, Princeton University; MSC, London School of Economics and Political Science; PHD, Princeton University
William Armstrong Professor of History, Emerita; Professor of Letters, Emerita

*Paul Schwaber*
BA, Wesleyan University; MA, University of California, Berkeley; PHD, Columbia University
Professor of Letters, Emeritus

**DEPARTMENTAL ADVISING EXPERTS**

*Tushar Irani; Typhaine Leservot; Ethan Kleinberg; Ulrich Plass; Gabrielle Piedad Ponce-Hegenauer, Khachig Tölölyan; Jesse Torgerson; Kari Weil*

**COLLEGE OF LETTERS MAJOR**

*Khachig Tölölyan*
BA, Harvard University; MA, University of Rhode Island; MAA, Wesleyan University; PHD, Brown University
Professor of English; Professor of Letters; Editor, Diaspora; Professor, German Studies

*Kari Weil*
BA, Cornell University; MA, Princeton University; PHD, Princeton University
University Professor of Letters; University Professor, Environmental Studies; University Professor, College of the Environment; Co-Coordinator, Animal Studies
ADMISSION TO THE MAJOR

Students wishing to major in the College of Letters (COL) must submit an application in the spring semester of their first year, immediately after spring break. Sophomore transfer students may apply before or during orientation. Applicants must show that they will have the level of proficiency in a foreign language that is required by the study abroad program they plan to pursue. Application forms and information can be found on the COL website under “Apply to the Major” (wesleyan.edu/col/apply.html).

MAJOR REQUIREMENTS

The program consists of five components and leads to eleven course credits:

- Five colloquia designed to acquaint students with works of predominantly European literature, history, and philosophy (respectively)
  - The ancient world
  - The Middle Ages and Renaissance
  - The early modern period (16th–18th centuries)
  - The 19th century
  - The 20th–21st century
- Four electives. The minimum required is one in history, one in philosophy, one in literature/representation, and one in the major’s target foreign language-literature. These specialized seminars allow students to shape their COL major around a particular interest.
- Study abroad, in the spring semester of the sophomore year (or in certain situations, in the summer following sophomore year), usually in Europe, Israel, or in another country (if approved by the director of the COL) where the major’s selected foreign language is spoken.
- One comprehensive examination in April/May of the junior year, covering the texts read in the first three colloquia.
- One senior thesis or essay, whose topic can be chosen from a very wide range of disciplines. This work, along with the specialized seminars, allows COL students to further shape their major along their own interests.

In all these contexts, much emphasis is put on the development of skills in writing, speaking, and analytical argument. Students are encouraged to take intellectual risks, and for this reason letter grades are not given in courses taken for COL major credit; also, COL seminars generally require papers rather than final examinations. Instead of giving grades, tutors write detailed evaluations of their students’ work at the end of each semester, and these are kept on record (and discussed with each student upon request). Our general goal is cultivation of “the educated imagination.”

STUDENT LEARNING GOALS

The College of Letters (COL) is a three-year, interdisciplinary major for the study of European literature, history, and philosophy, from antiquity to the present. During these three years, students learn how to think and write critically about texts in relation to their contexts and influences—both European and non-European—and in relation to the disciplines that shape and are shaped by them.

Through a required sequence of five colloquia in antiquity, the Middle Ages, the Early Modern period, the 19th and then the 20th and 21st centuries, students learn about the emergence of the constitutive idea of Europe out of Jerusalem, Athens, and Rome, and Europe’s changing identity and cultures over the ages. Over these three years, students also learn about the emergence and change of the disciplines as well as the forms of argumentation associated with each. Collaborative team-teaching in the first three colloquia fosters this pedagogical goal, ensuring that distinct disciplinary perspectives are both represented in conversation and in the classroom. Finally, majors become proficient in a foreign language through study abroad, where they also deepen their knowledge of another culture.

Assessment of these goals takes place continuously over the three years of the major. In lieu of grades, students receive lengthy written evaluations for each of their COL courses, which address both written work and class participation. Study abroad is required in the second semester of the sophomore year, and in order to be accepted for the program of their choosing, students must prove that they have acquired the necessary level of language proficiency. When abroad they take courses taught in the foreign language and when they return they must continue to maintain proficiency by taking at least one upper-level seminar in that language. Toward the end of their junior year, majors take comprehensive examinations that are planned, administered, and graded by two external examiners, representing different disciplines and with specializations in different time periods. The written portion of the comprehensive exam tests knowledge of the material covered in the first three colloquia and evaluates the students’ ability to analyze and draw from a variety of sources in order to develop and support coherent, integrative, and interdisciplinary arguments about them. The oral portion of the exam tests the students’ ability to orally defend and/or expand their arguments in a face-to-face conversation. In keeping with the COL’s preference for evaluations over grades, the examiners’ grading scale of Credit, Honors, and High Honors accompanies a detailed written evaluation of the student’s work on both parts of the exam. During the senior year, students must complete an honors project in their choice of disciplines and media. Senior theses (taking place over two semesters) are evaluated by two professors who are not the student’s advisor, in order to ensure an objective assessment. One of the two evaluators is always a non-COL professor. Honors essays (over one semester) require one evaluating professor who is not the advisor.

By virtue of the Junior Comprehensive Examinations, the COL also undergoes its own yearly self evaluation. The evaluations written for each student by the external examiners are also made available to the COL director, who looks to see if there is a trend in the overall strengths and weaknesses among the students. In addition, the examiners are asked to give their assessment of the entire COL program, first in a meeting with us and then in a letter that they may write together or individually. These assessments are shared with the department as a whole and any suggestions for changes to the program or the teaching are taken seriously. Indeed, it is because of these yearly assessments that we have made significant changes in our curriculum and, most notably, in the sequence of the colloquia.

ADDITIONAL INFORMATION

Life in COL. The College of Letters attempts to integrate the social and intellectual lives of its members by inviting guest lecturers and by providing opportunities for students and faculty to meet such guests and one another informally. There are also regular informal social gatherings in the College of Letters library. The structure of the College of Letters and the smallness of its classes bring about a close rapport between tutors and students and a lively and continuing dialogue among students of different classes.

After graduation. The academic standards of the College of Letters are reflected in the fact that its graduates have consistently entered the best graduate and professional schools, including schools of law, medicine, and business...
administration, as well as communications and the liberal arts. They also have won national fellowships and scholarships.
COLLEGE OF SOCIAL STUDIES

The College of Social Studies (CSS) offers a distinctive blend of teaching methods, subject matter, and educational structure. Its collegial organization combines tutorials and courses in social theory within the college with individually selected courses from other departments and programs in the University to achieve an integrated education in the social sciences. Founded in 1959, the CSS has provided an unusual educational opportunity for many Wesleyan students whose careers upon graduation have ranged from medicine to law, forestry to college teaching, international business to screenwriting.

FACULTY

Richard P. Adelstein
BS, Massachusetts Institute of Technology; JD, University of Pennsylvania; MAA, Wesleyan University; MAT, Harvard University; PHD, University of Pennsylvania
Woodhouse/Sysco Professor of Economics; Professor of Economics; Tutor, College of Social Studies

John P. Bonin
BA, Boston College; MA, University of Rochester; PHD, University of Rochester
Chester D. Hubbard Professor of Economics and Social Science; Professor of Economics; Tutor, College of Social Studies; Professor, Russian, East European, and Eurasian Studies

Sonali Chakravarti
BA, Swarthmore College; MA, Yale University; MPhil, Yale University; PHD, Yale University
Associate Professor of Government; Tutor, College of Social Studies

Douglas C. Foyle
AB, Stanford University; MA, Duke University; PHD, Duke University
Associate Professor of Government; Tutor, College of Social Studies

Giulio Gallarotti
BA, Hunter College; PHD, Columbia University
Professor of Government; Co-Chair, College of Social Studies; Tutor, College of Social Studies; Professor, Environmental Studies

Erik Grimmer-Solem
BA, Brigham Young University; DPhil, Oxford University; MPhil, Cambridge University; MSC, London School of Economics and Political Science
Professor of History; Tutor, College of Social Studies; Professor, German Studies

Kerwin Kaye
BA, University of Colorado Boulder; MA, University San Francisco; PHD, New York University
Assistant Professor of Sociology; Tutor, College of Social Studies; Assistant Professor, Feminist, Gender, and Sexuality Studies

Ioana Emy Matesan
MA, Arizona State University; PHD, Syracuse University
Assistant Professor of Government; Tutor, College of Social Studies

Cecilia Miller
BA, LeTourneau College; DPhil, Oxford University; MPhil, University of St Andrews
Professor of History; Co-Chair, College of Social Studies; Professor, Medieval Studies; Tutor, College of Social Studies

J. Donald Moon

DEPARTMENTAL ADVISING EXPERTS

Giulio Gallarotti; Cecilia Miller

COLLEGE OF SOCIAL STUDIES MAJOR
ADMISSION TO THE MAJOR

Interested students apply for admission to CSS during the spring of their first year. Each applicant is interviewed by a team consisting of a CSS tutor and usually two current CSS students. All CSS majors must complete the economics prerequisite either by taking ECON101 and achieving a grade of CR or a letter grade of at least C- or by taking ECON110 (for which a full-year of college-level calculus is required) and achieving a grade of CR or a letter grade of at least C-. Students are well-advised to have this required course work behind them before entering the CSS. However, some students who have not completed the economics prerequisite are admitted each year on the condition that they must complete the prerequisite in the fall term of the sophomore year. A student who has taken an introductory economics course in the first year but has not achieved a grade of C- or higher (or CR) must take another economics course, which will normally be a 200-level elective, and achieve a grade of CR. A score of 4 or 5 on the AP exams in both microeconomics and macroeconomics or a score of 5 or higher on the IB exam in economics is sufficient to satisfy the prerequisite. Failure to complete the economics prerequisite by the end of the fall term in the sophomore year will result in separation from the CSS.

MAJOR REQUIREMENTS

Sophomore year. There are no letter grades in the sophomore year. At the heart of the program in the sophomore year are the weekly tutorial and tutorial essay that are designed to develop conceptual and analytic skills as well as precision in writing and argument. The academic year is composed of three trimesters of eight weeks each, and each student takes a trimester tutorial in history, government, and economics. Due to their intensive nature, tutorials account for more than half of the student’s academic work during the year. A semester-length colloquium in social theory in the fall and selected courses within and outside the social sciences complete the sophomore program. Comprehensive examinations, administered by external examiners at the end of the sophomore year, produce the only official grade for sophomores.

Junior year. The second semester of the junior year involves a philosophy colloquium on the modes of inquiry in the social sciences and a sequence of two seven-week tutorials building on the sophomore tutorials, each carrying one course credit. Students will also take several of their elective courses in the three CSS disciplines to enhance their research skills and the ability to accomplish major writing projects in the social sciences. Juniors also have the option of studying abroad in their first semester.

Senior year. In addition to a CSS Senior Colloquium in the first semester, the senior year requires completion of a substantial piece of written work. This requirement can be fulfilled by either an honors thesis (two semesters) or a senior essay (one semester). In all cases it is a sustained and serious investigation of an intellectual problem.

GENERAL EDUCATION

Completion of the University’s General Education Expectations at both stages I and II is also required of CSS majors, although majors have until the end of the junior year to complete stage I expectations.
COLLEGE OF THE ENVIRONMENT

The linked-major program in environmental studies (ENVS) is the secondary major to a primary major. Students cannot obtain the BA degree with ENVS as their only major. Students must complete all the requirements for graduation from their primary major in addition to those of ENVS as their linked major. Each student will work closely with an ENVS advisor to develop an individual course of study. ENVS requires an introductory course, the sophomore seminar, six elective courses, senior colloquium, and a senior capstone project (thesis, essay, performance, etc.) on an environmental topic that is researched, mentored, and credited in the primary major program. In addition, students must take one course in any subject that fulfills the writing essential capability.

FACULTY

Barry Chernoff
BS, SUNY at Stony Brook; MS, Adelphi University; PHD, University of Michigan
Robert Schumann Professor of Environmental Studies; Professor of Earth and Environmental Sciences; Professor of Biology; Director, College of the Environment; Chair, Environmental Studies Program; Professor, Environmental Studies

Visiting Scholar in the College of the Environment

### Environmental Studies Major

#### Admission to the Major

The following requirements are necessary to complete the ENVS linked-major:

- An introductory course or an AP 4 or 5 on Environmental Science AP Exam  
- Sophomore Seminar ENVS201  
- Three core electives, one from each area  
- Three additional electives, whether or not in the core list  
- Two semesters of senior colloquium, ENVS391, ENVS392  
- A senior capstone project course

One of the following introductory courses serves as the gateway to the ENVS linked-major program:

- BIOL197/E&ES197  
- E&ES199  
- With the exception of BIOL197/E&ES197 or E&ES199, all other courses must be at the 200 level or higher  
- Two courses that are either student forums or research tutorials may be substituted for non-core electives

#### Major Requirements

A total of six elective courses are required; two must be at the upper level of academic study (usually 300 level or higher), and one elective must come from each of the three following core areas:

### Core Electives Area 1

<table>
<thead>
<tr>
<th>Code</th>

</table>

Students will choose an additional three electives with their ENVS advisor. These electives may be selected from the entire list, in addition to those courses listed in core elective areas 1–3 above. Three of the elective courses must constitute a disciplinary or thematic concentration including at least one upper-level course (usually at the 300 level). Thematic concentrations are encouraged to be interdisciplinary. Courses selected from the three core areas above may be used as part of the concentration. Students are encouraged to develop their own thematic concentrations that require approval by their ENVS advisor. The following are some possible examples.

EXAMPLE 1—CONSERVATION

STUDENT LEARNING GOALS

- Competence beyond the major-track introductory level in interpreting environmental information
- Develop a deeper understanding of the complex connections between environmental issues and social or political issues
- Develop the analytical and critical capacities necessary to formulate compelling arguments about environmental issues
- Engage both scholars and the lay public in discourse about environmental issues (mode of expression varied)
- Engage with scholars in the field who are making important environmental contributions
- Practical and theoretical experiences in environmental issues by undertaking a senior project

METHOD OF EVALUATION

Self-assessment. Upon entering the major, students will write a one-page self-assessment. This assessment will be posted to the student’s electronic portfolio and made available to the student’s advisor. In the assessment, students will describe their reasons for selecting the major, their current strengths and weaknesses with respect to environmental studies, and their personal goals within the major, including plans for a concentration. They will be encouraged to integrate the program’s learning goals in their self-assessment. Students will periodically meet with their environmental studies advisor to reflect on their progress in the major, using their self-assessment as a frame of reference. At minimum, these meetings will occur once per semester during the course scheduling period. Because environmental studies is inherently multi-disciplinary and because every student is linked to a primary major, student trajectories within the major are highly individualized. The self-assessment will make these plans explicit, and will help both the student and advisor chart the most successful path through the major.

Senior capstone and senior colloquium. Every major completes a capstone project during their senior year. The format of the capstone is typically determined by the students’ primary departments (e.g., thesis, essay, performance, exhibit). The purpose of the capstone experience is to challenge students to think creatively, deeply, and originally about an environmental issue and to produce a significant work that uses their expertise from their primary major. All capstone projects are formally evaluated by at least one faculty member. In addition, several times throughout their senior year, students present progress reports of their projects in the senior colloquium; faculty and student-peers attending the colloquia provide feedback for improvement.
Senior reflection. As a book-end to the self-assessment, seniors will be asked to reflect on their experiences in the major. They will analyze their personal development in environmental studies and how the program impacted their development. These reflections will be recorded in the form of a questionnaire. Also, during one of the final colloquia in the spring, students will be encouraged to share their thoughts in a group setting and this will be recorded.

HOW THE DEPARTMENT/PROGRAM USES ASSESSMENT INFORMATION

The self-assessment and the subsequent iterative process between student and advisor of discussing the assessment will help to maximize student success in the program. The capstone projects and, more informally, the oral presentations in the senior colloquium, will help faculty evaluate the success of the curriculum in fulfilling the learning goals of the program. Both the iterative process of the self-assessment and the senior reflection will help inform curricular needs. For a multi-disciplinary program with faculty spread across all three divisions, the three common experiences (self-assessment, senior capstone/senior colloquium, and senior reflection) will be critical for the evaluation of both students and the program. Once a year, a committee will use information from these common experiences to discuss the state of the program. A summary of these discussions, including any recommendations for change, will be shared with the full ENVS faculty.

ADDITIONAL INFORMATION

With the exception of the introductory courses, 100-level courses do not count toward the major.

- Up to three courses from the primary major may be counted toward the ENVS-linked major.
- Students may substitute two reading or research tutorials, or one tutorial and one student forum, for two electives with approval of the ENVS advisor. Only one tutorial may count within a concentration; only one student-run forum can count toward the concentration.
- Up to three credits from study-abroad programs may be used for non-core elective courses, including for the concentration, with prior approval of the ENVS advisor and as long as the credits from abroad are accepted by Wesleyan.
- One course in the student’s entire curriculum must satisfy the essential capabilities for writing.

With the approval of the advisor and a written petition by the student, certain internships (e.g., Sierra Club, state agency, EPA, NOAA) may be substituted for one non-core elective.

CAPSTONE EXPERIENCE

The ENVS linked-major program provides a capstone experience that includes a senior project and a full year of senior colloquia. The purpose of the ENVS capstone experience is to challenge students to think creatively, deeply, and originally about an environmental issue and to produce a significant work that uses their expertise from their primary major. The students will then have the opportunity to present and discuss their research in the ENVS391/ENVS392 with seniors and faculty.

Senior capstone project. The creative exploration of a critical environmental issue through independent research is an essential part of ENVS. All ENVS majors must complete a senior capstone project in one of three categories discussed below, though students are encouraged strongly to pursue a project in either of the first two categories. The topic must concern an environmental issue and must be approved in advance by the ENVS advisor. The student must be officially enrolled in one or more courses while they complete the research project. The students must submit to the director of ENVS no later than the last day of classes in the spring semester in their junior year a three-page research prospectus on their planned course of research. This plan must be signed by the potential mentor of the senior research. The mentor does not have to be a member of the ENVS faculty.

- **Category 1.** The capstone project may take any of the forms accepted by the primary department as a senior project (e.g., senior thesis, senior essay, senior performance, senior exhibition, senior film thesis). The senior project is submitted only to the primary department and is not evaluated by ENVS. Students may select an interdisciplinary thesis topic such that they solicit the help of more than one mentor if permitted by the primary department.

- **Category 2.** The capstone project may be a thesis submitted in general scholarship. The student must have a mentor for the thesis, and the topic must be approved by the ENVS advisor.

- **Category 3.** In the event that the student cannot satisfy the conditions for the above categories, the student may register for and complete a Senior Essay: Environmental Studies (ENVS403/ENVS404). The mentor can be any Wesleyan faculty member and the topic must be approved by the ENVS advisor. If the student cannot find a mentor, then it will be the responsibility of the ENVS program director to find a suitable reader or to evaluate the written work. The due date for the senior essay is set between the student and the mentor.

Senior colloquium. The ENVS Senior Colloquium provides students and faculty the opportunity to discuss, but not evaluate, the senior projects. Students will make 10-minute presentations on their projects followed by five minutes of discussion. Any interested faculty may attend, but the project mentors and ENVS advisors will be especially invited. Two weeks prior to their presentation, students will distribute a one- to two-page summary of their research findings to enhance the level of discussion for their topic. The colloquium may also invite several presentations by faculty or outside speakers. Students must be formally enrolled in the colloquium each semester of their senior year.

Additionally, all declared ENVS majors will be invited to the dinners and to the colloquium to enrich their early experience and encourage them to begin thinking about their future projects; their attendance is encouraged only and they do not enroll in the colloquium until their senior year.
DANCE

The Dance Department at Wesleyan is a contemporary program with a global perspective. The curriculum, faculty research, and pedagogy all center on the relationships between theory and practice, embodied learning, and the potential dance making has to be a catalyst for social change. Within that rigorous context, students encounter a diversity of approaches to making, practicing, and analyzing dance in an intimate learning atmosphere. The program embraces classical forms from ballet, Bharata Natyam, Javanese, and Ghanaian, to experimental practices that fuse tradition and experimentation into new, contemporary forms.

The emphasis of the major is on creating original scholarship, be it choreographic or written, that views dance within a specific cultural context, interrogates cultural assumptions, and is informed by a critical and reflective perspective.

Preregistration is possible for many dance courses. All students interested in registering for dance classes should access WesMaps concerning procedures for acceptance into specific courses. Students majoring in dance or indicating strong curricular commitment to dance will be given enrollment preference in all permission-of-instructor courses.

DANCE MAJOR

ADMISSION TO THE MAJOR

• Successful completion of the required sequence courses:
  • DANC249 (fall)
  • DANC250 (spring)

• An admissions interview with the prospective major’s advisor

MAJOR REQUIREMENTS

Coursework for the major includes composition, dance techniques, dance histories, research methods, pedagogy, ethnography, improvisation, anatomy, repertory, and dance and technology.
The major is designed to provide broad and deep exposure to the discipline of dance as a critical, embodied, reflexive and socially engaged research method. The department conceives of dance performance broadly, embracing traditionally staged performances, site-based works as well as mediated and interdisciplinary performative modes. Students take courses in choreography, improvisation, pedagogy, research methods, dance ethnography, history, and dance techniques as well as unique interdisciplinary courses that integrate varied modes of learning. The curriculum focuses on providing students with the skills to develop new knowledge and produce original research expressed through performance, writing and their vital intertwining into new hybrid forms.

1. Majors will develop keen intercultural competence. One of the fundamental tenets of the major is that the analysis of dance through practice and observation is central to the study of cultures and is a vital aspect of exploration in cross-cultural inquiry. Students should develop a proficiency in the understanding of dance in its cultural manifestations, leading them beyond knowledge of a culture or an appreciation of diversity to an understanding and celebration of difference.

2. Majors will develop an awareness of the ways in which dance structures and is structured by culture. This includes a thoughtful understanding of the problematics of spectatorship; the role of the artist in society; as well as issues of embodiment, difference and performativity.

3. Majors will develop an understanding of the basic principles of dance making through creative process work including choreography, improvisation and public enactments. They will acquire the ability to develop an idea or research question through the elements of dance performance such as: the skilful exploration and application of movement vocabulary; choreographic form; and the consideration of framing devices. They will develop the ability to structure original ideas and to create powerful original work.

4. Majors will develop an intercultural understanding of the elements of physical expression and performance artistry and will attain and/or maintain intermediate (or above) technical proficiency, based on sound kinesiological principles. They will develop these skills in at least two of the following techniques: modern/contemporary, Bharata Natyam, West African, ballet, black vernacular forms/hip hop, and South East Asian dance forms (when available).

5. Majors will develop strong reflective and critical awareness of the research methodologies available in Dance Studies articulated in written, choreographic and performative forms.

6. Majors will develop the ability to work collaboratively to complete complex tasks through engagement with all elements of performance production, including technical theater, scenographic design and publicity.

**HONORS**

Dance majors who wish to be candidates for departmental honors must complete senior research in the form of a thesis. Projects are not eligible for the award of honors. The student’s proposed research design will be revised and finalized in consultation with the student’s prospective tutor and should reflect the special interests and talents of the individual student. The award of honors or high honors is based on the scope and excellence of the thesis and on the student’s creative work.

To receive the award of honors, a thesis must follow these guidelines:

- The honors thesis typically consists of approximately 20 minutes of group choreography (usually two 10-minute dances) and an 80- to 100-page research paper situating the choreography within an aesthetic and historical context.
- It must involve enough work to warrant two credits.

Each honors candidate is required to make a commitment to candidacy in advance. The student must file a written statement of his or her intention to stand for departmental honors with both the department and the Honors College. The department will nominate candidates for departmental honors to the Honors College. Nominations will occur only if it appears reasonably certain that the candidate’s work will be completed on time and in the desired form. The
department in cooperation with the Honors College will arrange suitable mid-April deadlines for performances and the submission of theses.

Each honors thesis will have two readers. One of these must be chosen from outside the Department of Dance. The department will base its recommendation for departmental honors upon the readers' written evaluations and joint recommendations.

**CAPSTONE EXPERIENCE**

All majors complete a capstone experience, either a one-semester senior project or a two-semester senior thesis.
The Earth and Environmental Sciences Department (E&ES) at Wesleyan University covers many aspects of the natural world, on Earth and on other planets. Course topics range from active volcanoes to climate change to eco-conservation. The E&ES major is designed to prepare students for graduate school, as well as provide a basis for a variety of careers in the private or public sectors. Courses in geology, environmental science/environmental chemistry, environmental science/ecology, and planetary geology lead to different areas of specialization and career options.

Many E&ES students work with faculty on research projects that range from climate studies to active volcanoes in the Andes, from the structure of the Grand Canyon to the structure of the planet Venus, from nearby coastal areas (Long Island Sound) to faraway lagoons (Vieques Island, Puerto Rico). The culmination of the major is a capstone course where students perform independent research in the field (Puerto Rico, Death Valley, or Hawaii).

**FACULTY**

Barry Chernoff  
BS, SUNY at Stony Brook; MS, Adelphi University; PHD, University of Michigan  
Robert Schumann Professor of Environmental Studies; Professor of Earth and Environmental Sciences; Professor of Biology; Director, College of the Environment; Chair, Environmental Studies Program; Professor, Environmental Studies

Kim Diver  
BA, Carthage College; MA, Syracuse University; PHD, Syracuse University  
Associate Professor of the Practice in Earth and Environmental Sciences

Martha S. Gilmore  
BA, Franklin & Marshall; MSC, Brown University; PHD, Brown University  
George I. Seney Professor of Geology; Professor of Earth and Environmental Sciences; Director, Graduate Studies; Co-Coordinator, Planetary Science

James P. Greenwood  
BS, SUNY at Binghamton; MS, Brown University; PHD, Brown University  
Assistant Professor of Earth and Environmental Sciences

Timothy C.W. Ku  
BS, University of Rochester; MS, University of Michigan; PHD, University of Michigan  
Associate Professor of Earth and Environmental Sciences; Associate Professor, Integrative Sciences

Suzanne B. O’Connell  
BA, Oberlin College; MS, SUNY at Albany; PHD, Columbia University  
Professor of Earth and Environmental Sciences

Phillip G. Resor  
AB, Dartmouth College; MS, University of Wyoming; PHD, Stanford University  
Associate Professor of Earth and Environmental Sciences

Dana Royer  
BA, University of Pennsylvania; PHD, Yale University  
Professor of Earth and Environmental Sciences; Chair, Earth and Environmental Sciences; Professor, Environmental Studies

Johan C. Varekamp  
BS, University of Utrecht; MS, University of Utrecht; PHD, University of Utrecht  
Smith Curator of Mineralogy and Petrology of the Joe Webb Peoples Museum of Natural History; Harold T. Stearns Professor of Earth Science; Professor of Earth and Environmental Sciences; Professor, Environmental Studies; Professor, Latin American Studies

**AFFILIATED FACULTY**

Peter M. LeTourneau  
BA, Ricker College; MA, Wesleyan University; PHD, Columbia University  
Visiting Scholar in Earth and Environmental Sciences

Ellen Thomas  
BS, University of Utrecht; MS, University of Utrecht; PHD, University of Utrecht  
Smith Curator of Paleontology of the Joe Webb Peoples Museum of Natural History; Harold T. Stearns Professor of Integrative Sciences; University Professor in the College of Integrative Sciences; Research Professor, Earth and Environmental Sciences

**VISITING FACULTY**

Nick Hastings  
BS, Brown University  
Visiting Instructor in Earth and Environmental Sciences

**EMERITI**

James T. Gutmann  
BA, Amherst College; MAA, Wesleyan University; PHD, Stanford University  
Professor of Earth and Environmental Sciences, Emeritus

Peter C. Patton  
BA, Franklin & Marshall; MAA, Wesleyan University; MS, Colorado St University; PHD, University of Texas Austin  
Alan M. Dachs Professor of Science, Emeritus

**UNDERGRADUATE PROGRAM DEPARTMENTAL ADVISING EXPERTS**

All program faculty

**EARTH AND ENVIRONMENTAL SCIENCES MAJOR**
ADMISSION TO THE MAJOR

GATEWAY COURSES FOR THE MAJOR

To declare E&ES as a major, students are required to have completed an E&ES gateway course (E&ES101, E&ES115, E&ES197, or E&ES199), and to have completed (or be currently taking) two gateway courses (or higher) in biology, chemistry, mathematics, or physics.

MAJOR REQUIREMENTS

- E&ES gateway course (E&ES101, E&ES115, E&ES197, or E&ES199).
- Earth and environmental scientists need a broad background in the natural sciences. Therefore, E&ES majors are required to take one year (two semesters) of gateway courses from two of the following disciplines for a total of four courses: biology (BIOL181/BIOL182), chemistry (CHEM141/CHEM142 or CHEM143/CHEM144), mathematics (MATH117/MATH118, or MATH121/MATH122), or physics (PHYS111/PHYS112 or PHYS113/PHYS116). Upper-level courses in these disciplines can be substituted, as can statistics courses for mathematics. Students are urged to complete these introductory courses within their first two years. Students considering professional work in the sciences are encouraged to take gateways in more than two disciplines, including any associated lab courses, as well as upper-level coursework in other natural science and mathematics disciplines.
- The Sophomore Field Course (E&ES195). This course is typically taken during the spring semester of the sophomore year.
- The Senior Seminar (E&ES497). This capstone is typically taken in the senior year.
- For the Class of 2020 and earlier: Seven upper-level courses, comprised of three "cores" and four "electives." Lab courses associated with the primary courses are required. Up to two upper-level natural science or math courses taken in other departments can count as electives, as can statistics courses for mathematics. Students must cover the following thematic areas: two from "Earth and Planets" (numbered 201-233 and 301-333), two from "Hydrosphere, Biosphere, and Atmosphere" (numbered 234-266 and 334-366), and one from "Methods" (numbered 267-299 and 367-399). Lab courses associated with the primary courses are required. The remaining two courses may come from any thematic area. Also, the following can be used: Up to two upper-level natural science or math courses taken in other departments, and up to two preapproved

For the Class of 2021 and later: Seven upper-level courses. Five of these courses must cover the following thematic areas: two from "Earth and Planets" (numbered 201-233 and 301-333), two from "Hydrosphere, Biosphere, and Atmosphere" (numbered 234-266 and 334-366), and one from "Methods" (numbered 267-299 and 367-399). Lab courses associated with the primary courses are required. The remaining two courses may come from any thematic area. Also, the following can be used: Up to two upper-level natural science or math courses taken in other departments, and up to two preapproved
courses from study-abroad programs. At least four of the upper-level courses must be Wesleyan E&ES courses. Tutorials and the senior thesis do not count towards the requirement.

The Department of E&ES does not require completion of Wesleyan’s General Education Requirements to complete the major. Honors students are required to complete Wesleyan’s General Education Requirements through stage II.

**CAREER OPTIONS AND THE E&ES MAJOR**

Earth and environmental sciences majors go on to pursue a wide range of careers, limited only by their own imaginations. E&ES courses can be selected to help prepare for a student’s long-term interests. The course listings below are not requirements, but suggested guidelines. Students interested in academic or research careers should consider involvement in research or producing a senior thesis.

Geology. These courses can help prepare students for academic careers or jobs in industry or government in natural resource or geohazard management (e.g., USGS, water resources, mining and energy industries).

**GENERAL EDUCATION**

Candidates for honors in E&ES are required to complete the University’s General Education Expectations through stage II.

**STUDENT LEARNING GOALS**

Students graduating with a BA degree in earth and environmental sciences should be able to:

- **Decipher the structure, composition, and dynamics of the earth system.** The student should understand the structure and composition of earth’s spheres (geosphere, hydrosphere, atmosphere, biosphere), and how these spheres interact with one another and change over time.

- **Apply the scientific method.** The student should be able to develop and test scientific hypotheses.

- **Understand data.** The student should understand how earth and environmental sciences data are produced, interpreted, and applied.

- **Apply quantitative tools.** The student should be able to select and apply appropriate quantitative techniques to earth and environmental sciences questions (e.g., calculus, statistics, spatial analysis).

- **Use the primary literature.** The student should be able to search for and understand publications from the primary scientific literature.

- **Critically evaluate scientific claims.** The student should be able to critique arguments made in the earth and environmental sciences literature.
• Communicate. The student should be able to present earth and environmental sciences data and their interpretation in a variety of written, visual, and oral formats.

• Conduct research. The student should be able to carry out an original research project, including: the identification of a research problem; the formulation of a hypothesis; the design of the methodology; the collection, processing, and interpretation of data; and the presentation of findings in written, visual, and oral formats.

RELATED PROGRAMS OR CERTIFICATES

• The College of the Environment, which includes the environmental studies-linked major and Environmental Studies Certificate, provides a linkage between the sciences, public policy, economics, and the arts and provides a wide variety of career options.

• The Planetary Science Group and the Planetary Science Course Cluster seek to understand the origin and evolution of the solar system in which we live and the other solar systems that we have identified in our galaxy.

• The Service-Learning Center and Service-Learning Course Cluster seek to broaden students’ understanding of course content through activities that are, at the same time, of service to the community.

BA/MA PROGRAM

[wesleyan.edu/grad/degree-programs/bama.html](https://wesleyan.edu/grad/degree-programs/bama.html)

This program provides an attractive option for science majors to enrich their course and research background. The course requirements for the BA/MA are the same as the MA. It is important for students interested in the BA/MA program to plan a course of study early enough (nominally in the junior year) to meet the MA requirements over both the senior and MA years. Admission is competitive and based on GPA, faculty recommendations, and research experience.

HONORS

Candidates for honors in E&ES are required to complete the University's General Education Expectations through stage II.

GRADUATE EARTH AND ENVIRONMENTAL SCIENCES PROGRAM

The Earth and Environmental Sciences Department offers a program leading to the degree of master of arts in earth and environmental sciences. This program is designed for students who desire further training prior to initiation of a doctoral program at another university or for whom the master’s degree will be the terminal degree. Graduate students are offered a unique opportunity for accelerated and personal instruction in a small department setting, with strengths in geology, volcanology, ocean sciences, planetary science, and environmental science. All admitted students are offered a full tuition waiver, stipend, and benefits for this two-year program.

COURSES

Students who possess the equivalent of a Wesleyan E&ES BA degree are required to take six upper-level course credits (of which at least four must be in E&ES) and two MA thesis research credits (E&ES494 and E&ES550). In addition, students are required to take three years (six semesters) of courses from a minimum of two of the following disciplines: mathematics, chemistry, physics, and biology. Students who do not possess the equivalent of a Wesleyan E&ES BA degree must complete or have completed 11 upper-level courses in the sciences or mathematics, and at least five of these must be E&ES courses. All students are expected to enroll in E&ES557 each semester it is offered. A student’s thesis committee will decide the required coursework for the MA. All full-time graduate students are expected to complete all courses with a grade of B- or better. Failure to achieve these minimal expectations incurs automatic dismissal from the program.

PROGRESS AND QUALIFYING EXAMS

Thesis Proposal and Thesis Committee. Upon admission to the program, the student will meet with the E&ES Graduate Program Committee to discuss the general requirements and goals of graduate study. Students should select an advisor, thesis topic, and thesis committee by the end of the first semester. After students have made a choice of faculty advisor and thesis committee, they must, in cooperation with the advisor, write a one- to two-page thesis proposal, in which they provide an outline of the proposed research. The thesis committee will read the proposal and discuss it with the student before acceptance of the research project. At the beginning of each semester, and at the beginning of the summer, each graduate student will be asked to prepare a written summary (two to three pages) of their progress and accomplishments and meet with their thesis committee. This summary will be reviewed by the thesis committee to discuss and evaluate the student’s progress; failure to make adequate progress can be grounds for dismissal from the program. The discussion of the committee will be summarized by the student’s advisor and relayed to the student in writing.

Qualifying Exam. Competence in general knowledge about the earth and environmental sciences will be assessed by a written examination taken after the end of the second semester. The thesis advisor, in concert with the E&ES faculty, will construct several questions. The student will then have two days to answer
these questions. The student can use any written source for guidance ("open book" format), and each answer should not exceed one page (single-spaced). The committee and any interested E&ES faculty will then meet with the student to have a 30-minute conversation about the questions and answers. Based on the outcome of the exam, the committee may suggest coursework or independent study on particular topics.

TEACHING

Graduate students are expected to fully participate in the scholarly activities of the department, including teaching opportunities, attending departmental seminars, and presenting their own work to the Wesleyan and scientific communities.

THESIS | DISSERTATION | DEFENSE

Thesis and Oral Examination. The culmination of the master's program is the completion and acceptance of a thesis and its successful oral defense. The format of the written work is to be discussed and agreed upon with the student's advisor and committee. The advisor and thesis committee, in consultation with the student, will agree upon the schedule of the defense. All members of the thesis committee must have read and must approve, in writing, a complete thesis before a defense can be scheduled. Practically, this requires that a thesis draft, already vetted by the advisor, be made available to the remainder of the thesis committee at least one month before any proposed defense date. Once the committee has agreed that the thesis is ready to defend, the form for scheduling the defense can be obtained from the E&ES Department. The student is responsible for following all University requirements for the format and scheduling of the thesis. The oral examination will focus on the thesis.

CONCENTRATIONS

Planetary science is an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology. The subject matter is planets, including those around other stars (exosolar systems). The science questions include the most important of our times: How do planets (including Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? Certainly, the discovery of even microbial life beyond Earth would rank as one of the greatest human achievements of all time, and this quest lies squarely within the purview of planetary science.

Program of Study. MA or BA/MA students in the natural sciences and mathematics may elect a course of study resulting in the planetary science concentration. The concentration is designed to engage students in the research results, skills, and methods of planetary science. The planetary science concentration requires:

- Completion of a minimum of four courses from the list below with a grade of B- of better. At least one of these courses must be from a department outside the student's home department.
- Students are also required to attend the Planetary Science Seminar, ASTR555/E&ES555.
- All students must complete a written thesis on a topic relevant to planetary science. A member of the student’s thesis committee will be from the planetary science concentration committee. The planetary science concentration will be designated on the student’s transcript upon the successful completion of this program of study and MA requirements of the student’s home department. For more information, please contact the any of the members of the planetary science concentration committee or the graduate school.

Planetary Science Concentration Committee: Martha Gilmore, Earth and Environmental Sciences; James Greenwood, Earth and Environmental Sciences; William Herbst, Astronomy; Meredith Hughes, Astronomy; Seth Redfield, Astronomy

ECONOMICS

Economics involves the study of social relationships pertaining to the production and allocation of the means of life. One branch, macroeconomics, addresses issues relating to the performance of the economy as a whole, such as economic growth, unemployment, and inflation, while the other, microeconomics, studies the relationships that make up an economy, addressing problems of income and wealth inequality, corporate power, industrial performance and global trade, and financial flows. Students majoring in economics find that they acquire an excellent preparation for careers in academics, business, consulting, law, and government.

FACULTY

Richard P. Adelstein
BS, Massachusetts Institute of Technology; JD, University of Pennsylvania; MAA, Wesleyan University; MAT, Harvard University; PHD, University of Pennsylvania
Woodhouse/Sysco Professor of Economics; Professor of Economics; Tutor, College of Social Studies

Mahama Samir Bandaogo
BS, University of Oregon; MA, University of Washington; PHD, University of Washington
Assistant Professor of Economics

John P. Bonin
BA, Boston College; MA, University of Rochester; PHD, University of Rochester
Chester D. Hubbard Professor of Economics and Social Science; Professor of Economics; Tutor, College of Social Studies; Professor, Russian, East European, and Eurasian Studies

Karl David Boulware
BBA, Baruch College; MA, Duke University; PHD, University of Alabama
Assistant Professor of Economics

Gillian Brunet
BA, Smith College; PHD, University of California, Berkeley
Assistant Professor of Economics

Martin Gosman
BBA, University of Wisconsin at Madison; MBA, University of Wisconsin at Madison; PHD, University of Wisconsin at Madison
Adjunct Professor of Economics

Richard S. Grossman
AB, Harvard University; MA, Harvard University; MSC, London School of Economics and Political Science; PHD, Harvard University
Professor of Economics; Chair, Economics

Christiaan Hogendorn
BA, Swarthmore College; PHD, University of Pennsylvania
Associate Professor of Economics

Abigail S. Hornstein
AB, Bryn Mawr College; MPHIL, New York University; PHD, New York University
Associate Professor of Economics

Masami Imai
BA, U. of Wisconsin Eau Claire; PHD, University Calif Davis
Professor of Economics; Professor, East Asian Studies

Joyce Jacobsen
BA, Harvard University; MSC, London School of Economics and Political Science; PHD, Stanford University
Provost and Senior Vice President for Academic Affairs; Andrews Professor of Economics; Professor of Economics

Anthony Bruno Keats
BA, Macalester College; MA, Tufts University; MA, University of California LA; PHD, University of California LA
Assistant Professor of Economics

Melanie Khamis
BS, London School of Economics and Political Science; MS, University of Warwick; PHD, London School of Economics and Political Science
Associate Professor of Economics; Associate Professor, Latin American Studies

David Julian Kuenzel
DIP, University of Tübingen; MA, University of Washington; PHD, University of Washington
Assistant Professor of Economics

Jeffrey Kendall Naecker
BA, University of California, Berkeley; MA, Stanford University; PHD, Stanford University
Assistant Professor of Economics

Wendy Rayack
BA, Oberlin College; MA, University of Wisconsin at Madison; PHD, University of Wisconsin at Madison
Associate Professor of Economics; Tutor, College of Social Studies

Damien Francis Sheehan-Connor
BA, Amherst College; MD, Tufts University; PHD, University Calif Santa Bar
Associate Professor of Economics; Tutor, College of Social Studies

Gilbert L. Skillman
BA, University Kentucky Lexingt; MA, University of Michigan; PHD, University of Michigan
Professor of Economics; Tutor, College of Social Studies

Gary W. Yohe
BA, University of Pennsylvania; MA, SUNY at Stony Brook; MPHIL, Yale University; PHD, Yale University
Huffington Foundation Professor of Economics and Environmental Studies; Professor of Economics; Professor, Environmental Studies

VISITING FACULTY

Michael William Lorenzo

DEPARTMENTAL ADVISING EXPERT

Masami Imai

ECONOMICS MAJOR

ADMISSION TO THE MAJOR

Completion of ECON110 with a grade of C+ or higher and completion of, or enrollment in, ECON300 are required for entry into the economics major. A student who fails to obtain a grade of C+ or better in ECON110 may be admitted to the major only after that student obtains a grade of C+ or better in ECON300.

MAJOR REQUIREMENTS

All students majoring in economics must complete a minimum of eight graded courses numbered 200 or above. Of these eight, three must be the core courses ECON300, ECON301, and ECON302. Of the five electives, three must be upper-tier courses, numbered 303 to 399, or ECON409. No more than one senior thesis, individual, or group tutorial may be counted toward fulfillment of the major. The teaching apprenticeship tutorials, ECON491 and ECON492, may not be counted toward the major. ECON110, ECON300, ECON301, and ECON302 must be taken at Wesleyan; no more than two elective courses taken elsewhere may be counted toward the economics major. Courses taken elsewhere must be approved by the department chair prior to enrollment and will generally be designated as lower-tier electives if approved. If the course material warrants counting a course taken elsewhere (or a tutorial numbered 401, 402, 411, or 412) as an upper-tier elective, the student must submit materials from that course (or tutorial) to the department chair along with a petition requesting that it be treated as an upper-tier elective immediately upon return to campus (or upon completion of the tutorial). University requirements for graduation permit a student to count no more than 16 credits in any one department toward the 32 courses required for graduation. The teaching apprenticeship tutorials, ECON491 and ECON492, are included in these totals for the purpose of determining oversubscription in a department.

STUDENT LEARNING GOALS

ASSESSMENT PLAN

1. Learning Goals
   a. Knowledge of basic economic principles, important economic issues, and major economic institutions
   b. The capability to read and understand the scholarly literature
   c. The capability to engage in theoretical and empirical analysis of economic problems.

2. Published: Departmental web page

3. Method of Assessment
   a. Performance in sequential curriculum

The curricula for ECON have three stages, each stage presuming a certain level of economic literacy and competency.

To enter the major, students must pass ECON110, an introductory course that requires completion of 2 semesters of college calculus. This course or ECON101, the non-calculus introductory course, is a prerequisite for all 200-level electives in the major. Majors must then take the “core” method and theory courses, ECON300 (Quantitative Methods in Economics), ECON301 (Microeconomic Analysis), and ECON302 (Macroeconomic Analysis). ECON300 and at least one of the other core courses are prerequisites for all 300-level electives. These upper-level electives require students to undertake term research projects using the analytical methods acquired in the core courses. ECON majors must take at least three 300-level electives.

RESPONSES TO ANNUAL SENIOR SURVEY

Several questions on the annual senior survey speak directly to the learning goals listed in part 1 of the assessment plan.

Senior responses can be distinguished by major, providing data on our seniors’ self-assessments of the developments in their knowledge and skills.

SENIOR ESSAYS AND HONORS THESSES

In addition to the research projects assigned in their 300-level electives, ECON majors may elect to undertake intensive independent research projects in their senior year. Honors theses generally involve a year-long research project, while essays may be written during a single-semester tutorial. Honors theses in ECON are evaluated by two faculty readers in addition to the tutor.

ADVANCED PLACEMENT

No advanced placement credit will be given for ECON110 under any circumstances. Subject to the University’s regulations, students who have received a score of 4 or 5 on either the Microeconomics or Macroeconomics Advanced Placement Exam or a score of 5 to 7 on the International Baccalaureate Exam will be eligible for a prerequisite override for courses requiring ECON101. These students will receive one credit toward graduation, but not toward the major, for their exam score upon completion of ECON301, in the case of the microeconomics exam, or ECON302, in the case of the macroeconomics exam, with a grade of C+ or better. A student may receive at most one Advanced Placement credit in economics.
The economics curriculum consists of three types of courses:

**Introductory courses.** The department offers two different one-semester courses at the introductory level. ECON101 presents the basic concepts, methods, and concerns of economic analysis without using calculus. This course covers both micro- and macroeconomic issues and is well suited for students who do not plan to major in the discipline but who want a general introduction to economic analysis and institutions. It also serves as a prerequisite for many of the 200-level electives in the department. ECON110 is intended for students who think that they may wish to major in economics and combine this interest with a strong mathematical background. The course covers the same topics as ECON101 but requires a year of college-level calculus or its equivalent. ECON110 develops the mathematical foundations that are essential to the further study of economics. Any one of the following satisfies the mathematical prerequisite for ECON110—MATH120, MATH121, MATH122, MATH221 or placement out of MATH122, a score of 4 in the AB calculus AP exam, or a score of 3 on the BC calculus AP exam. First-year students contemplating an economics major should acquire the requisite mathematical background as soon as possible. Students may take ECON110 after completing ECON101 (although ECON101 is not a prerequisite for ECON110) this may be an attractive option for prospective majors who are in the process of acquiring the necessary mathematical background for ECON110. In any case, all students who wish to major in economics must complete ECON110.

**Core courses.** Core courses develop the central tools of theoretical and empirical economic analysis and are required for all economics majors. The first core course, ECON300, is the gateway course to the major. ECON301 and ECON302 are designed to provide majors with the basic theoretical concepts and analytical techniques that economists use to study social issues. ECON300 is a prerequisite for both ECON301 and ECON302; students must have completed ECON110 and its mathematical prerequisites before taking ECON300. ECON300 should be taken as early as possible, preferably immediately after ECON110, but no later than the spring term of the sophomore year if a student wishes to be admitted to the economics major by the beginning of the junior year. All prospective economics majors are strongly encouraged to complete ECON300 and one other core course by the end of the sophomore year; majors are expected to complete the entire core sequence by the end of the junior year.

**Elective courses.** There are four levels of elective courses. First, as staffing allows, the department offers 100-level First-Year Initiative (FYI) courses that are intended for first-year students and have no economics prerequisites. FYI courses cannot be counted toward completion of the economics major. Higher-level elective courses apply analytical tools acquired from the introductory and core courses to specific areas or fields of economics or develop these analytical tools to a more sophisticated level. The department offers two tiers of regular elective courses that may be counted toward completion of the major. The topics covered in these electives are predetermined and specified in WesMaps.

- **Lower-tier electives,** numbered 203 to 299, have either ECON101 or ECON110 as a prerequisite. They are intended to introduce both majors and nonmajors to the application of economic theory and methods in a wide variety of topics and to the connections between economics and related fields such as psychology, law, government, history, and area studies. Students who successfully complete CSS220 or CSS320 may count either or both of these courses for one credit each toward the economics major at the 200 level.

- **Upper-tier electives,** numbered 301 to 399, require prior completion of ECON300 and at least one other core course. These electives apply economic theory and methodology to the same broad range of topics and areas in economics as the lower-tier electives but at a more sophisticated level. Upper-tier electives enable students to read the professional literature in economics and to begin to produce their own original research. Upper-tier electives require a substantial research paper or other project, and a student may choose to expand this research project into an honors thesis by working with a faculty advisor in a senior thesis tutorial. In some cases, for example, ECON270 and ECON371, electives may be taught at both the 200 and 300 levels. In such cases, students may not earn credit toward the major for both courses.

Finally, in addition to regular electives, students may pursue independent research in an individual or group tutorial offered by a faculty member in the department (ECON401, ECON402, ECON411, or ECON412). Any student standing for honors in economics will take at least one senior thesis tutorial (ECON409 or ECON410). Students may also take teaching apprenticeship tutorials (ECON491/ECON492).

All courses counted toward the economics major must be taken for a letter grade.

**HONORS**

Honors and high honors in economics are awarded on the basis of a completed honors thesis representing two semesters of independent research. The department offers two options. The traditional route for an honors candidate is the two-semester senior honors thesis tutorial sequence (ECON409 and ECON410), in which the student begins thesis research with a faculty advisor in the fall, continues in the spring term, and completes the thesis by the deadline set by Honors College (usually mid-April). The second path allows a student to expand a research paper that was completed in an upper-tier elective by taking either ECON409 or ECON410 with a suitable faculty advisor and completing the thesis by the deadline set by Honors College in the spring term. Honors candidates must present their work in progress to the faculty at the end of the fall semester. Other details of the honors program in economics are provided on the department’s website.

Theses are evaluated by the department based on the recommendations of a committee of readers including the thesis advisor and two other members of the faculty. All work is judged by the same standards, regardless of whether the student has taken both ECON409 and ECON410 or taken only one of these. All candidates for honors should have at least a B+ average in their economics courses prior to their senior year and a three-year cumulative average of B or better for all courses. A student who does not meet these requirements may petition the department for an exception; the petition must be signed by the student and by the faculty member who has agreed to supervise the project. The petition should speak to the student’s capability to undertake independent research and to the feasibility of the proposed project.

**ECONOMICS MINOR**

**ADMISSION TO THE MINOR**

Completion of ECON110 with a grade of C+ or higher and completion of, or current enrollment in, ECON300. A student who fails to obtain a grade of C+ or
higher in ECON110 may declare the minor only after the student obtains a grade of C+ or higher in ECON300.

MINOR REQUIREMENTS

Students minoring in economics must complete five graded courses in addition to ECON110.

- Three are the core courses: ECON300, ECON301, and ECON302.
- One of the two electives must be an upper-tier elective, numbered 305 to 399.
- One of the two electives may be either an upper- or lower-tier elective (205 to 299).
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments, including CSS, may count toward the minor.
- One elective course in economics taken elsewhere may count toward the minor as the lower-tier elective only, subject to the department chair’s approval.
The English Department offers courses that foster critical thinking about the relationships among literature, culture, and history. Students of English become adept critics of poetry, novels, essays, and plays. They develop knowledge of the history of literary culture and about the evolving genres, forms, and ideologies of literary expression. They study the relation of literary texts to their historical contexts, and they learn to read both literary and non-literary texts critically. As they develop their knowledge, students of English hone their skills as critical writers and explore their potential as creative voices.

**Faculty**

**Sally Bachner**  
BA, Reed College; MA, Princeton University; PHD, Princeton University  
Associate Professor of English

**Marina Bilbija**  
BA, University of Sarajevo; MA, University of Pennsylvania; PHD, University of Pennsylvania

BA, Radcliffe College; MA, Yale University; MAA, Wesleyan University; PHD, Harvard University  
Professor of English, Emerita

**Richard S. Slotkin**  
BA, Brooklyn College; MAA, Wesleyan University; PHD, Brown University  
Olin Professor of English, Emeritus

**William W. Stowe**  
BA, Princeton University; MAA, Wesleyan University; MPHIL, Yale University; PHD, Yale University  
Benjamin Waite Professor of the English Language, Emeritus

**Alfred Turco**  
BA, Brown University; MA, Harvard University; PHD, Harvard University  
Professor of English, Emeritus

**Ann duCille**  
BA, Bridgewater State College; MA, Brown University; MA, Brown University; PHD, Brown University  
Professor of English, Emerita

**DEPARTMENTAL ADVISING EXPERTS**

Several professors serve as Advising Experts each year. Responsibility for transfer of credit and study-abroad courses for non-majors is assigned to a specific faculty member and can change from year to year. Please refer to the department website: wesleyan.edu/english/contact/ (https://wesleyan.edu/english/contact).

**ENGLISH MAJOR**

**ADMISSION TO THE MAJOR**

Students considering majoring in English should consult the department website (wesleyan.edu/english (https://wesleyan.edu/english)). Potential majors must
take ENGL201 Ways of Reading in their first or second year. Students who have taken the course and received a grade of B- or better will be admitted as majors during the spring term of their sophomore year. Students who take the course during that term will be admitted provisionally, pending the receipt of a grade of B- or better. In exceptional circumstances, and with the approval of the department chair, students who have not taken ENGL201 by the end of the sophomore year may be admitted to the major contingent on completion of ENGL201 in the junior year.

MAJOR REQUIREMENTS

The English major at Wesleyan consists of 10 full-credit courses at the 200-level or higher, or the equivalent of partial credit courses. All but three of these credits, and all courses taken to meet the literary history, literatures of difference, and theory requirements, must be taken at Wesleyan or in the department’s Sussex Program. With approval of a major advisor, one upper-level course from outside the department that bears on the study of literature may also be counted toward the minimum 10 credits. Appropriate credits transferred from other institutions may also be counted toward the 10-credit requirement.

A major program consists of the gateway course, ENGL201 Ways of Reading, and three overlapping sets of courses: requirements, concentration, and electives.

Required courses. In addition to ENGL201 Ways of Reading, one course of each must be taken in the following areas:

- Literary History I
- Literary History II
- Literatures of Difference
- Theory

Descriptions are available on the department website (http://www.wesleyan.edu/english).

Concentration. Four courses in any one of these specialized areas of study:

- American Literature
- British Literature
- Creative Writing
- Race and Ethnicity
- Theory and Literary Forms

Descriptions are available on the department website (http://www.wesleyan.edu/english).

Electives. Other courses numbered 200 or higher. One FYS in English may be counted as a major elective.

COURSES FOR NON-MAJORS

The department offers several FYS courses especially designed for first-year students. First-year students may also be admitted to many other department courses; please check individual listings for details.

STUDENT LEARNING GOALS

- Develop skills in reading, interpreting, discussing, and writing about literature. English majors learn to be adept critics of poetry, novels, essays, and plays.
- For many students, experiment with or develop the ability to produce new works of literature.
- Build knowledge of the history of literature and develop critical thinking about the relationships among literature, culture, and history.
- Become conversant with literary theory.

STUDY ABROAD

The English Department encourages its majors to consider the valuable experience of study abroad. Since 1990 the English Department has sponsored a Spring Semester Study Abroad program at the University of Sussex in Brighton, England. The program is limited to a select group of English majors who study with regular Sussex students for two full British terms, earning five Wesleyan credits. Sussex courses may be counted toward major requirements. Students pay Wesleyan tuition and receive Wesleyan financial aid. Study abroad policies are described in detail on the departmental website. (http://www.wesleyan.edu/english/students/studyabroad.html)

ADVANCED PLACEMENT

Students with AP scores of 4 or 5 in either English Literature or English Composition, or with scores of 5–7 on an English A1 or English A2 International Baccalaureate exam, will receive one course credit. No extra credit is given for taking more than one exam. This credit does not count toward the major.

PRIZES

The Department of English annually gives out an array of academic awards, fellowships, and prizes. Fellowships and writing prizes may require applications and submission of writing samples. Full explanations are available at the department website (http://www.wesleyan.edu/english).

TRANSFER CREDIT

Students may obtain transfer credit in English for courses taken at other universities in the United States in the summer or during a leave of absence. Courses must be approved by the Department of English faculty member responsible for transfer of credit. Students should expect to provide documentation from a course catalog to receive advance permission. In most cases, on completion of courses taken at other universities, students will need to show additional documentation (e.g., syllabi and assignments) demonstrating their coursework to receive transfer credit. No more than two credits may be earned during a summer. More detailed information can be found on the department website (http://www.wesleyan.edu/english/students/credit.html).
HONORS

The bachelor’s degree with honors in English is awarded on the basis of an outstanding academic record and an honors thesis written during the senior year. Students are eligible to write a critical thesis if they have an average of 91.7 in the courses counting toward the major (at least six courses by the end of the junior year) and have completed a substantial research paper in a departmental course designated research or research option. Students wishing to write a creative thesis need not fulfill the research requirement, but they must have a 91.7 average in courses counting toward the major and have received an A- or better in at least two creative writing courses that count toward the major, one of which must be an intermediate or advanced workshop taken at Wesleyan. A detailed description of the process for earning honors can be found on the department website (http://www.wesleyan.edu/english/students/honors.html).

CAPSTONE EXPERIENCE

English majors may undertake capstone experiences in several ways. Students who are eligible and who qualify to be candidates for honors may enroll in a two-semester honors tutorial that culminates in the submission of an honors thesis. Students may also propose a one-semester senior essay project. In addition, in each of the major concentrations, students are required to complete a 300-level seminar. This seminar may be taken before the senior year.
FEMINIST, GENDER, AND SEXUALITY STUDIES

The Feminist, Gender, and Sexuality Studies (FGSS) Program is administered by the chair and other members of the program’s core faculty. Core faculty are those who are actively involved in the program, who teach FGSS courses, advise FGSS majors and senior theses, and may serve as program chair. The program sponsors an annual symposium and the Diane Weiss Memorial Lecture.

FACULTY

Lois Brown
BA, Duke University; PHD, Boston College
Class of 1958 Distinguished Professor; Professor of African American Studies; Professor of English; Professor, Feminist, Gender, and Sexuality Studies

Lisa Cohen
BA, Brown University; MPHIL, Yale University; PHD, Yale University
Douglas J. and Midge Bowen Bennet Associate Professor of English; Associate Professor of English; Associate Professor, Feminist, Gender, and Sexuality Studies

Christina Crosby
BA, Swarthmore College; MAA, Wesleyan University; PHD, Brown University
Professor of English; Professor, Feminist, Gender, and Sexuality Studies

Natasha Korda
BA, Columbia University; PHD, Johns Hopkins University
Professor of English; Director, Center for the Humanities; Professor, Feminist, Gender, and Sexuality Studies

Victoria Pitts-Taylor
BA, Ohio University; PHD, Brandeis University
Professor of Feminist, Gender, and Sexuality Studies; Professor, Science in Society; Professor, Sociology

Jennifer Tucker
BA, Stanford University; MPHIL, Cambridge University; PHD, Johns Hopkins University
Associate Professor of History; Chair, Feminist, Gender, and Sexuality Studies; Associate Professor, Environmental Studies; Associate Professor, Science in Society; Associate Professor, Feminist, Gender, and Sexuality Studies

AFFILIATED FACULTY

Abigail Huston Boggs
BA, Wesleyan University; PHD, University Calif Davis
Assistant Professor of Sociology; Assistant Professor, Feminist, Gender, and Sexuality Studies

Laura B. Graber
BA, Brandeis University; MAA, Wesleyan University; PHD, University of California, San Diego
Lauren B. Dachs Professor of Science and Society; Professor of Biology; Professor, Feminist, Gender, and Sexuality Studies

Laura Grappo
BA, Wesleyan University; MA, Yale University; MPHIL, Yale University; PHD, Yale University
Assistant Professor of American Studies; Assistant Professor, Feminist, Gender, and Sexuality Studies

Lori Gruen
BA, University of Colorado Boulder; PHD, University of Colorado Boulder
William Griffin Professor of Philosophy; Professor of Philosophy; Professor, Science in Society; Professor, Feminist, Gender, and Sexuality Studies; Coordinator, Animal Studies

Kerwin Kaye
BA, University of Colorado Boulder; MA, University San Francisco; PHD, New York University
Assistant Professor of Sociology; Tutor, College of Social Studies; Assistant Professor, Feminist, Gender, and Sexuality Studies

Hari Krishnan
BA, University of Manitoba; MFA, York University; PHD, Texas Womans University
Associate Professor of Dance; Associate Professor, Feminist, Gender, and Sexuality Studies

Elizabeth McAlister
BA, Vassar College; MA, Yale University; MA, Yale University; MPHIL, Yale University; PHD, Yale University
Professor of Religion; Chair, African American Studies; Director, Center for African American Studies; Professor, African American Studies; Professor, Feminist, Gender, and Sexuality Studies; Professor, American Studies

Jill G. Morawski
BA, Mount Holyoke College; MA, Carleton University; MAA, Wesleyan University; PHD, Carleton University
Willbur Fisk Osborne Professor of Natural Science; Professor of Psychology; Chair, Science in Society; Professor, Science in Society; Professor, Feminist, Gender, and Sexuality Studies

Catherine Poisson
BA, Sorbonne; MA, New York University; PHD, New York University
Associate Professor of French; Associate Professor, Feminist, Gender, and Sexuality Studies

Patricia M Rodriguez Mosquera
BA, Autonoma University of Madrid; MA, Autonoma University of Madrid; PHD, University of Amsterdam
Professor of Psychology; Professor, Feminist, Gender, and Sexuality Studies

Mary-Jane Victoria Rubenstein
BA, Williams College; MA, Columbia University; MPHIL, Cambridge University; MPHIL, Columbia University; PHD, Columbia University
Professor of Religion; Chair, Religion; Professor, Science in Society; Professor, Feminist, Gender, and Sexuality Studies

Ashraf H.A. Rushdy
BA, University of Alberta; MA, University of Alberta; PHD, Cambridge University
Benjamin Waite Professor of the English Language; Professor of English; Professor of African American Studies; Professor, Feminist, Gender, and Sexuality Studies

Anu (Aradhana) Sharma
BA, Eugene Lang College; MA, Columbia University; MA, Stanford University; PHD, Stanford University
Associate Professor of Anthropology; Associate Professor, Feminist, Gender, and Sexuality Studies

Elise Springer
FEMINIST, GENDER, AND SEXUALITY STUDIES MAJOR

ADMISSION TO THE MAJOR

The prerequisite for becoming a feminist, gender, and sexuality studies (FGSS) major is taking one of the gateway courses. These courses are designated annually. Students ordinarily take a gateway course during either semester of the sophomore year and declare the major in the spring semester. Gateway courses include:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>FGSS200</td>
<td>Sex/Gender in Critical Perspective (FGSS Gateway)</td>
<td>1</td>
</tr>
<tr>
<td>FGSS277</td>
<td>Feminist Philosophy and Moral Theory (FGSS Gateway)</td>
<td>1</td>
</tr>
</tbody>
</table>

MAJOR REQUIREMENTS

Students are assigned to faculty advisors and should familiarize themselves with requirements for writing a senior honors thesis, since these may affect curricular choices for the junior year. In the fall semester of the junior year, the student ordinarily takes FGSS209. During this semester the student, in consultation with the advisor, develops a major proposal that lists the courses that will compose the student’s major course of study, including a written rationale for the student’s chosen concentration within the major. The Major Proposal Form, approved by the advisor and with the concentration rationale attached, is submitted to the Feminist, Gender, and Sexuality Studies Program office by the end of the fall semester of the junior year.

The concentration rationale is a brief explanation (500 words) of the student’s chosen concentration within the major and describes the courses the student has chosen to constitute it. The major as a whole consists of 10 courses as follows: Three core courses (a gateway course, FGSS209 and FGSS405), two distribution courses (FGSS courses from an area outside the concentration), the four courses comprising the concentration, and senior research in the form of the senior essay or senior honors thesis. The senior year is devoted to completion of the coursework for the concentration, work on a senior essay or thesis, and participation in the senior seminar. Only two credits transferred from another institution may be applied to the major.

Every major must take the following courses:

- **One gateway course.** These are designated annually and serve as introductions to the interdisciplinary field of feminist, gender, and sexuality studies. Gateway courses examine gender as a factor in the politics and practices of the production of knowledge and of social and cultural life, with particular attention to the intersection of gender with other identity categories and modes of power—race, class, sexuality, and ethnicity.
- **FGSS209.** This course traces contemporary developments in feminist theory and considers how feminism has been articulated in relation to theories of representation, subjectivity, history, sexuality, technology, and globalization,
among others, paying particular attention to the unstable nexus of gender, sexual, racial, and class differences.

• FGSS405. Set up as a workshop, the goal of this course is to develop an enabling and challenging intellectual environment for majors to work through intensively the theoretical, methodological, and practical concerns connected with their senior research projects.

CORE COURSES
GATEWAY AND REQUIRED COURSES
In 2018-2019, these include:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>FGSS200</td>
<td>Sex/Gender in Critical Perspective (FGSS Gateway)</td>
<td>1</td>
</tr>
<tr>
<td>FGSS209</td>
<td>Feminist Theories</td>
<td>1</td>
</tr>
<tr>
<td>FGSS277</td>
<td>Feminist Philosophy and Moral Theory (FGSS Gateway)</td>
<td>1</td>
</tr>
<tr>
<td>FGSS405</td>
<td>Senior Seminar</td>
<td>1</td>
</tr>
</tbody>
</table>

Distribution requirement. A distribution requirement of two FGSS courses that must be from two different disciplines and should not overlap in their content with courses that make up the student’s concentration in the major.

Concentration. Four courses forming the area of concentration should represent a coherent inquiry into some issue, period, area, discipline, or intellectual approach related to feminist, gender, and/or sexuality studies. Normally, the courses will be drawn from various departmental offerings and will be selected in consultation with an advisor.

STUDENT LEARNING GOALS

The Feminist, Gender, and Sexuality Studies (FGSS) Program is an interdisciplinary program staffed by faculty with wide-ranging research interests from across the university. The FGSS Program major and curriculum enable students to engage in critical analyses of the construction of gender and sexuality as categories of analysis and experience within the broad matrices of race, class, and ethnicity, and the ways in which these categories inform knowledge production. Our curriculum has a broad offering of courses with wide subject, geographic, and thematic coverage. Majors have excellent opportunities for developing their own areas of concentrated study and for individually designed research. Our courses offer students historical and contemporary explorations of women, gender, and sexuality from a variety of disciplinary and interdisciplinary perspectives on Africa, the Caribbean, East Asia, Europe, Latin America, and South Asia, as well as the U.S.

FGSS expects its majors to:

- become skilled at reading and writing critical feminisms;
- have a well-developed understanding of the interdisciplinary, transnational and intersectional concerns of the field; and
- interrogate the historical and contemporary, local and transnational forces underlying social and economic injustice and inequality in order to promote greater possibilities for freedom and social justice.

In other to achieve these goals, students should be able to:

- form an argument using evidence
- critically evaluate the arguments of others
- analyze texts from a variety of disciplines

TRANSFER CREDIT

Only two credits transferred from another institution may be applied to the major.

CAPSTONE EXPERIENCE

Completion of a senior essay (one credit) or an honors thesis (two credits) on a theme or topic related to the student’s area of concentration within the major is required. Rising seniors wishing to write a senior honors thesis must have an average of B+ in all courses that count toward the major, including the gateway course, FGSS209, and three of the four courses from the student’s area of concentration. Prospective thesis writers must submit to the feminist, gender, and sexuality studies program chair by the last Friday in April in the second semester of the junior year a statement indicating the topic of the thesis and name of the thesis tutor.
GERMAN STUDIES

Interdisciplinary in nature, the academic field known as German studies has undergone rapid development in recent years. At Wesleyan, the German Studies Department takes an active part in internationalizing the curriculum, educating students for a world in which a sophisticated understanding of other cultures and their histories has become increasingly important. A background in German studies can prepare students for careers in many fields. Among them are teaching, translation, publishing, arts administration, journalism, law, international business, and library sciences. German studies also prepares students for graduate study in literature, linguistics, philosophy, art history, history, psychology, the natural sciences, music, and other disciplines. At every level, the department’s courses taught in German stress the four basic skills: reading, writing, listening, and speaking. These courses develop students’ awareness of how language functions to convey information, express emotions, and communicate thought. The department’s courses taught in English focus on the specific historical experiences of German-speaking countries and the contributions of those countries to many realms of human endeavor. These courses often raise the question of translation, asking how successfully cultural phenomena specific to a particular place and time can be expressed in another language.

The topics of courses offered by members of the department and the affiliated faculty include German literature from the 18th century to the present, philosophy, literary theory, art history, German film from its origins to the present, political science, environmental studies, and history. A number of courses, taught in English in other departments, are cross-listed and can be counted toward the major.

For more information about German Studies, please visit our department website. (http://www.wesleyan.edu/german)

FACULTY

GERMAN STUDIES MAJOR
MAJOR DESCRIPTION

THE GERMAN CURRICULUM FOCUSES ON THREE MAJOR PERIODS.

ENLIGHTENMENT, WEIMAR CLASSICISM, ROMANTICISM (1650–1830)

The 18th century laid the foundation for the emergence of modern Germany. Many literary and philosophical works exhibit the immense joy, hope, anxiety, and work that went into reorganizing the relationship between the individual, society, and the world after religious and hierarchical certainties collapsed in the upheaval of the Thirty Years’ War and the armed conflicts and revolutions that followed. Unlike other European cultures, the German-speaking area undertook this reorganization without a territorially unified state. The powerful desire for cultural and political unity gave rise to ideas about the function, value, and precarious status of individuality, and to concepts of art, nature, Bildung, and progress that continue to inform ways in which we think of the world today.

LIBERALISM, MODERNISM, FASCISM (1830–1945)

With the deaths of Hegel in 1831 and Goethe in 1832, the formative period for a culturally unified Germany came to an end. Contradictions in German liberalism—between universalist values and an increasingly exclusionary construction of national identity—created a widening rift between writers and thinkers who were committed to revolutionary change and those whose work drew on images of a preindustrial way of life. With the establishment of the German nation in 1871, accompanied by a rise in militarism and colonial aspirations, both progressive and reactionary tendencies in German culture became even more pronounced. These tendencies beset the Weimar Republic, during which Jews and other minorities enjoyed unprecedented freedom of expression, yet authoritarian “solutions” to economic convulsions and social conflict increasingly gained adherents. When the Nazis came to power in 1933, they consigned artistic modernism to the category of “degenerate art.” Many leading cultural figures were forced into exile. Those who remained in the country either tolerated or supported the regime.

COLD WAR, POSTMODERNISM, NEOLIBERALISM (POST-1945)

German culture since the end of the genocidal Nazi era has been defined by twin desires for a new beginning and for a retrieval of the humanist and progressive elements of the German tradition. While in socialist East Germany the claim to represent that tradition became official state policy, in West Germany the influence of American and British popular culture gave rise to new forms of cultural expression. Yet many modernist writers collided with a post-traumatic society in which former Nazis still occupied important offices (West Germany) or historical responsibility for fascism was denied outright (East Germany and Austria). Not until the cultural revolution of the 1960s did the conformist postwar culture begin to give way to a new diversity, and in the 1970s and 1980s new feminist, queer, and immigrant voices emerged. With the end of the German Democratic Republic in 1990, Germany entered the current era in which it has found itself playing a challenging new political role as the dominant culture in which former Nazis still occupied important offices (West Germany) or historical responsibility for fascism was denied outright (East Germany and Austria). Not until the cultural revolution of the 1960s did the conformist postwar culture begin to give way to a new diversity, and in the 1970s and 1980s new feminist, queer, and immigrant voices emerged. With the end of the German Democratic Republic in 1990, Germany entered the current era in which it has found itself playing a challenging new political role as the dominant country in the EU. The current refugee crisis and the accelerating growth of economic inequality have spawned new forms of cultural activism, especially in the visual and performing arts.

MAJOR REQUIREMENTS

The German studies major requires satisfactory completion of nine credits’ worth of courses. At least five credits must be earned in courses taught in German above the level of GRST211, with at least three of the five being GRST seminars at the 300-level or courses taken in Germany. Majors are strongly encouraged to spend a semester or a summer participating in an approved program in Germany. Courses taken there count toward the major, provided the subject matter is relevant to German studies and the instruction and assignments are in German. A maximum of three courses in one semester or five courses in two semesters taken in Germany may be counted toward the major. For students who have not taken GRST213, one credit of intensive language instruction in Germany may count toward the major. Before enrolling in courses in Germany, students must obtain approval from their major advisor. Students must take at least one 300-level German studies course at Wesleyan upon their return.

STUDENT LEARNING GOALS

The German studies major is designed to allow students to explore the rich and diverse cultures of the German-speaking countries through a flexible interdisciplinary program that stimulates the students’ creative and critical capacities and can serve as the basis for future academic or professional study or employment.

The specific goals are as follows:

• Knowledge of the German language: Courses are designed to enable students to achieve at least advanced mid-level proficiency in speaking and comprehending spoken German, according to the ACTFL guidelines. Students will have ample opportunity to become fluent and accurate writers of German in a variety of genres and contexts.

• Intercultural literacy: Students can expect to gain insight into unfamiliar cultural attitudes and artifacts, which enables them to be open-minded and competent participants in their own and foreign environments.

• Historical breadth: Students will be able to acquire insight into the development of the German-language cultures from the Enlightenment to the present and those cultures’ impact on Western civilization and other cultures.

• Knowledge of the field of German studies: Through their courses, majors become acquainted with techniques of textual interpretation, with the scope of the field, and with prevailing research methods and disciplinary tools.

• Experience in German-speaking countries: Students will receive strong encouragement and support to experience a German-speaking country firsthand through study abroad during the academic year or the summer, internships, thesis/capstone research, or study or teaching after graduation.

ADMISSION TO THE MAJOR

To become a German studies major, a student should have no grade lower than a B in any course taken in the department. The department recognizes the diversity of student interests and goals by giving its majors great flexibility in designing their programs of study. Students should work closely with their major advisors to put together coherent courses of study and assure that they will make steady progress toward mastery of the German language. The department strongly recommends that majors fulfill Stages I and II of the General Education Expectations.

STUDY ABROAD

For more information about studying abroad in Germany, please visit our department website. (http://www.wesleyan.edu/german/studyabroad.html)
Please make sure to check the application procedures and deadlines for your program as well as those for Wesleyan’s Office of Study Abroad (http://www.wesleyan.edu/cgs/osa), located in Fisk Hall 201.

Those students for whom study abroad is not possible during the fall or spring semester should consult with the department about the possibility of taking courses during the summer.

**ADVANCED PLACEMENT**

See Advanced Placement Credit (http://www.wesleyan.edu/registrar/general_information/ap_ib_credit.html) information. Students with prior knowledge of German should take the online placement examination before registering for courses. For information about the placement test, please contact Emmanuel Paris-Bouvret (eparis@wesleyan.edu) in the Fries Center for Global Studies.

**PRIZES**

Students who demonstrate excellence in the study of German may be candidates for prizes given from the Scott, Prentice, and Blankenagel funds. Students seeking modest funding for special projects can apply for the Helmut and Erika Reihlen Fund (http://www.wesleyan.edu/german/scholarships_prizes.html).

**ADDITIONAL INFORMATION**

*German Haus* is a wood-frame house at 65 Lawn Avenue, with six single rooms and one double, that provides a vibrant center for German-themed events and activities on campus. Whether discussing current events over coffee and pastries, interpreting poems, watching classic or contemporary films, or hearing about faculty members’ research, the residents and their guests can explore a multitude of interests.

**HONORS**

- **Eligibility.** To become a candidate for honors in German studies, a student must have earned a B+ or better in all German studies courses above GRST211.
- **Candidacy.** A prospectus must be handed in and approved by the prospective tutor or the department chair by the end of the Reading Period in the spring of the junior year. Enrollment in senior thesis tutorials (GRST409 and GRST410) is required. Candidates for honors in German studies and another department or program may be required to have two thesis tutors. The two departments or programs must agree in advance about the tutoring arrangement and evaluation of the honors project.
- **Honors projects.** Honors can be earned only for two-semester projects.
- **Deadlines.** Deadlines for nomination to candidacy and submission of the honors project are set by the Committee on Honors.
- **Evaluation and award of honors.** Honors projects will be evaluated by the tutor(s) and at least two other readers. A student receiving high honors may, at the department’s discretion and subject to the guidelines of the Committee on Honors, be nominated to take the oral examination for University Honors.

**CAPSTONE EXPERIENCE**

Students who wish to undertake a one-semester capstone project have wide latitude as to the topic, medium, and form they choose. They should discuss their idea with a member of the department and enroll in an individual tutorial (GRST401 or GRST402) supervised by a German studies or affiliated faculty member.

**GERMAN STUDIES MINOR**

**ADMISSION TO THE MINOR**

Any student who intends to earn the minor in German studies should speak with a faculty member of the department by the end of the sophomore year. Satisfactory completion of the minor will be certified by the department.

**MINOR REQUIREMENTS**

The minor requires six course credits with a minimum GPA of B. Four of the courses must be above the GRST211 level and taught entirely in German; at least two of these must be taken at Wesleyan. The other two courses may be in either English or German; they must be taken in the Wesleyan German Studies Department. All courses counted toward the minor must be taken for a letter grade. Exceptions will be made for students majoring in the College of Letters and the College of Social Studies. Please note, GRST101, GRST102, and GRST211 do not count towards the German Studies minor.
GOVERNMENT

Wesleyan’s Department of Government is dedicated to exploring “who gets what, when, and how,” as Harold Lasswell defined political science in 1935. The department might well be called a department of political science or a department of politics; it is called the Department of Government for historical reasons. Department faculty today uphold a tradition, more than a century old, of distinction in scholarship and teaching. Each tenured or tenure-track Department of Government faculty member is affiliated with a concentration representing one of the four major subfields of political science: American politics, comparative politics, international politics, or political theory. We offer introductory courses in each of these four concentrations (American is GOVT151; international, GOVT155; comparative, GOVT157; and theory, GOVT159), a range of upper-level courses (201-368), and specialized research seminars (369-399). In addition, we offer courses in research methodology, individual and group tutorials, and tutoring of senior honors theses. Courses numbered 201-368 are ordered according to field of study, not level of difficulty.

FACULTY

Joslyn Barnhart Trager
BA, Reed College; MA, Claremont McKenna; PHD, University of California LA
Assistant Professor of Government

Professor of Government, Emerita

GOVERNMENT MAJOR

MAJOR DESCRIPTION

A government major will give you the opportunity to acquire broad knowledge of political science and to study in depth a particular concentration, either American politics, comparative politics, international politics, or political theory. Each concentration has its own introductory course, survey courses, and advanced seminars. Concentrators in American politics, comparative politics, and international politics are required to take the introductory course and three upper-level elective courses in the chosen subfield. Concentrators in political theory are required to take four courses in the political theory subfield. In addition to taking four courses within the chosen concentration, majors are required to take at least one course in each of at least two of the three subfields outside the concentration. This requirement assures that majors acquire breadth across the discipline as well as depth in at least one subfield.

ADMISSION TO THE MAJOR

To be admitted as a government major, your academic history must show that you have completed at least one government course with a grade of B- or better.

MAJOR REQUIREMENTS

BASIC REQUIREMENTS

- To complete the major requires nine approved government credits
- You may count toward the major only one introductory course (GOVT151, GOVT155, GOVT157, or GOVT159)
- Five of the eight remaining courses must be upper-level Wesleyan GOVT courses in the range 201-399
- The remaining three courses numbered 201 or higher may be:
  - Tutorials in the Government Department (maximum two; only one thesis tutorial may count)
  - A course in a “cognate” discipline (maximum one; must be approved in advance by your GOVT advisor)
  - Political science courses at other U.S. institutions or abroad (maximum two; or three in a year of study abroad)
  - Additional Wesleyan government courses in the range 201-399

THE FOLLOWING MAY NOT COUNT TOWARD THE MAJOR:

- Student forum courses
- Teaching apprenticeships
- First-year seminars except FYS versions of GOVT151, GOVT155, GOVT157, or GOVT159, which count the same as the regular versions of each course
- Internships either in the United States or abroad
- The Government Department does not grant credit or waive prerequisites for Advanced Placement, International Baccalaureate, or courses taken on ad-hoc programs (e.g., summer study abroad) prior to matriculation at Wesleyan. The only pre-matriculation credits that the department will accept are the government (political science, politics, etc.) credits that the University has authorized from a transfer student’s previous full-time institution.

MAJORS MUST CHOOSE AND COMPLETE A CONCENTRATION:

- Four courses, at least three of which must be taken at Wesleyan, complete a concentration as follows:
  - American politics: GOVT151 and three upper-level American politics courses
  - International politics: GOVT155 and three upper-level international politics courses
  - Comparative politics: GOVT157 and three upper-division comparative politics courses
  - Political theory: Any four political theory courses

BREADTH ACROSS THE DISCIPLINE:

- In addition to taking four courses within the chosen concentration, majors are required to take at least one course each in at least two of the three
subfields outside the concentration. This requirement assures that majors
acquire breadth across the discipline as well as depth in at least one subfield.

GENERAL EDUCATION EXPECTATIONS

• Stage 2 must be complete to receive honors in government.

PACING

• Majors with fewer than four government courses by the end of the junior
year must drop the major.

For more information, please visit the department’s majoring page (http://
www.wesleyan.edu/gov/about_major/majoring.html).

COURSES FOR NON-MAJORS

Many students take government courses without majoring in government. We
sometimes offer First-Year Seminars (FYS), but demand for our regular courses
is high, so we cannot offer as many FYS courses as we would like. First-year
students and sophomores are welcome, however, to take the introductory
courses we offer in each of our four concentrations. Another option is QAC201,
the social science methodology course that is offered by the Quantitative
Analysis Center and that is cross-listed as GOVT201 (it counts toward the
government major). Most of our survey courses are open to first-year students
and sophomores, although majors usually have preference.

GENERAL EDUCATION

• Stage 2 must be complete to receive honors in government.

• For more information about Government Department regulations
involving the General Education Expectations, please visit the Government
Department’s majoring page. (http://www.wesleyan.edu/gov/about_major/
majoring.html)

STUDENT LEARNING GOALS

Students who complete the government major should be able to explore
systematically a range of political issues and modes of argumentation, drawing
on the knowledge, analytical abilities, and quantitative or qualitative skills
they have acquired through their courses. They should also be better prepared
to think critically, write clearly, and speak effectively. By acquiring these
capabilities, government majors prepare themselves for lives of contribution in
public service, education, law, business, journalism, and other fields.

STUDY ABROAD

For more information about deciding to study abroad, applying to study
abroad, and getting faculty preapproval for study-abroad courses, please
visit the department’s study abroad page (http://www.wesleyan.edu/gov/
department_policies/studyabroad.html).

Up to two courses on an approved one-semester study-abroad program may
count toward the major. Majors on full-year programs may count a third course
with the approval of their major advisor. A student seeking major or university
credit for a study abroad course must give the preapproving faculty member
a course title and a written course description before the first meeting of the
study-abroad course, either in person before departing (preferable) or by e-
mail from abroad (if the title and course description are unavailable before
departure).

No credit will be approved toward the major for internships, introductory
courses, or certain School for International Training courses.

Students may count toward the major no more than two credits earned in
courses taken away from Wesleyan, whether in a study-abroad program or in
another U.S. institution, except in the case of a full year of study abroad, in which
case the faculty advisor has full discretion on whether to authorize credit for a
third course toward the major.

Independent study projects conducted abroad may be included among the two
study-abroad courses that may be counted toward the government major (up to
three for a student studying abroad for a whole year). A student’s major advisor
may choose to give tentative approval for an independent study project, subject
to a review of the written work after the student’s return.

ADVANCED PLACEMENT

The Government Department does not grant credit or waive prerequisites for
Advanced Placement, International Baccalaureate, or courses taken on ad-
hoc programs (e.g., summer study abroad) prior to matriculation at Wesleyan.
The only pre-matriculation credits that the department will accept are the
government (political science, politics, etc.) credits that the University has
authorized from a transfer student’s previous full-time institution.

PRIZES

In addition to honors and Phi Beta Kappa nomination, the department offers
six prizes to students who excel in the government major. A list of recent prize
winners (http://www.wesleyan.edu/gov/for_majors/studentachievements.html)
of these prizes are listed on the Wesleyan Government Department website.

Davenport Prize: To senior majors who show excellence in the study of political
science

Parker Prize: To a sophomore or junior who excels in public speaking

Rich Prize: To a senior whose orations are judged best in composition and
delivery

Skirm Prize: To the best research or writing project completed by a government
major in his or her junior year

Titus Prize: To support the summer studies of a deserving Wesleyan junior
majoring in government, the College of East Asian Studies, or the College of
Social Studies

White Fellowship: To major who show excellence in the study of political
science

The department is also formally represented in the Public Affairs Center (http://
www.wesleyan.edu/pac) on committees that award Davenport Grants and
the Hallowell Prize in the study of social science, as well as on the committee
that awards the Carol A. Baker ’81 Memorial Prize for the development and
recognition of the accomplishments of junior faculty.
TRANSFER CREDIT

For information on how to apply for Government Department authorization to transfer credit from U.S. academic institutions, please visit the department’s transfer of credit page (http://www.wesleyan.edu/gov/department_policies/transfercredit.html). For information on how to apply for Government Department authorization to transfer credit from approved study-abroad programs, please visit the department’s study abroad page (http://www.wesleyan.edu/gov/department_policies/studyabroad.html).

Requests for Government Department-approved transfer of credit from U.S. academic institutions must be made before the first class meeting of the course whose credit you wish to transfer.

Approval will be granted if, and only if, the course for which you wish to transfer credit is

- Upper level. Introductory courses may not be counted.
- In the field of government (political science, politics).
- Equivalent in terms of contact hours, content, and requirements to Wesleyan courses.
- Offered at a four-year, accredited institution.
- Graded. Credit/no credit courses may not be transferred.

RELATED PROGRAMS OR CERTIFICATES

- Civic Engagement Certificate (p. 197)
- Environmental Studies Certificate (p. 197)
- International Relations Certificate (p. 199)

For a full list of all certificates, please visit Wesleyan’s course listing (WesMaps (http://www.wesleyan.edu/wesmaps)). Government courses count toward several of them, and Government Department faculty are involved in several certificates in addition to those listed above.

HONORS

For more information on honors at Wesleyan in general, University Honors regulations, evaluation of honors theses, and recipients of honors in government in previous years, please visit the department’s honors page (http://www.wesleyan.edu/gov/about_major/honors.html).

To be eligible for honors in government you must (1) be a government major on track to complete the major requirements in a timely fashion; (2) achieve a university grade point average of 90.00 or above, calculated at the end of the spring semester of the junior year; and (3) have completed stage I of the General Education Expectations.

To become a candidate for honors in government, the student must meet the three eligibility conditions and must complete the Thesis Application Form (http://www.wesleyan.edu/gov/forms/GOVTHesisApplication.pdf). Before submitting the form, the student should meet with a potential tutor (tenured, tenure-track, or full-time visitor in the Government Department) to discuss the proposed thesis project. After the Government Department faculty reviews the applications, students will be notified whether or not their thesis proposal has been approved and, if so, will be given the name of their thesis advisor. In some years, students who meet the eligibility requirements will not be able to stand for honors in government because there may be no full-time government faculty member to serve as a tutor. Each available government faculty member decides for whom he or she will serve as a thesis tutor.

Students may count either GOVT409 or GOVT410, but not both, toward the eight upper-level courses needed to complete the government major. Only one thesis tutorial credit may count toward the major.

To receive honors in government, students must (1) complete the government major; (2) complete both stage I and stage II of the General Education Expectations; (3) write a thesis judged to be of honors quality; and (4) maintain a university grade-point average of 90.00 or above through the end of the first semester of their senior year.

CAPSTONE EXPERIENCE

A government thesis involves one-on-one tutorials (GOVT409/GOVT410) with a supervising faculty member for a full year, culminating in the submission of an honors thesis, many of which are about 100 pages long.

Seniors seeking a capstone experience lasting a single semester can choose either an individual undergraduate tutorial (GOVT401/GOVT402) or a survey course or seminar that requires a final independent research paper at least 15 pages in length whose topic is chosen by the student. It is not unusual for students to take several such courses during their junior and senior years, sometimes exploring related topics from several different angles. In some advanced survey courses or seminars, students may engage in a capstone experience that culminates in a work of nontraditional scholarship—service learning, public blogs, civic engagement, etc., rather than a standard research paper.
HISTORY

Why history?

History is a way of understanding the whole of the human condition as it has unfolded in time. Without history, nothing makes sense: from the meaning of words to the formation of identities, to institutions, states, and societies. History straddles the boundary between the social sciences and humanities. Like the other social sciences, it has established methods of investigation and proof, but it differs from them in that it encompasses, potentially, every area of human culture from the beginning of recorded time. Like the other humanities, it uses ordinary language and established modes of telling its stories, but it is constrained by evidence left us from the past.

Majoring in history will help you develop valuable skills transferable beyond the classroom: critical thinking, interpretation, and persuasive writing, as well as analytical and research skills for tackling complex questions. These are all essential to doing a job well after you leave Wesleyan. History is inherently complex and requires the ability to acquire knowledge from large amounts of information and assess evidence and conflicting interpretations of the past. As a history major you will learn to make sense of complexity and tell a good story.

FACULTY

Paul Hilding Erickson  
BA, Harvard University; MA, Univ of Wisconsin Madison; PHD, Univ of Wisconsin Madison  
Associate Professor of History; Associate Professor, Environmental Studies; Associate Professor, Science in Society

Demetrius L. Eudell

DEPARTMENTAL ADVISING EXPERTS

For Fall 2018, all members of the history department on duty, except Ethan Kleinberg, Bruce Masters, William Pinch, Victoria Smolkin, Gary Shaw and Ying Jia Tan.

For Spring 2019, all members of the history department on duty, except Ethan Kleinberg, Paul Erickson and Ying Jia Tan.

HISTORY MAJOR

ADMISSION TO THE MAJOR

How do I join?
Any history faculty member may serve as an advisor by agreement with the student. If you are not certain which faculty member would be an appropriate advisor for your intended course of study, you should meet with the department chair, Demetrius Eudell (deudell@wesleyan.edu). Talk to your advisor or the chair and then go to your portfolio and declare the history major.

MAJOR REQUIREMENTS

REQUIREMENTS FOR THE HISTORY MAJOR FOR THE CLASS OF 2019

What next?
The breadth of topics covered by the Department of History allows students to create geographic, thematic, or chronological unity in their own unique course of study. A history major will develop two concentrations by choosing four courses from each of two thematic modules. (The full list of modules is provided below.)

To be a history major, you need 11 credits; at least 8 must be history credits in two modules. There are no prerequisites to declare a history major.

There is only one required course for all history majors: HIST362. It is offered only in the fall and should be taken in your junior year.

What counts?
- At least 8 of the 11 courses must be history courses, and at least 2 of those should be history seminars.
• You may also count one first-year seminar (HIST 100–149) and one senior research tutorial toward the major.
• Two courses taken outside of Wesleyan, for example, during the semester abroad, may be included among the history courses.
• Up to 3 courses in other departments, programs, or colleges may be counted toward the total of 11 required courses with the approval of the student’s advisor.

Is there a senior research project?
Yes. See the Honors/Capstone section for more details.

What are the modules?
Modules are fields of concentration that provide a thematic, geographic, or chronological unity for the courses you take for the history major. Any one course may belong to several modules, but for the major it may be counted only toward one module; any non-history course counted toward the 11 courses required for the major must be within a module. HIST362 cannot be included in any module, but the two additional seminars required for the major must be.

Students consult with their advisors to identify the modules and the courses needed to complete the major. With advisor approval, students may occasionally create their own coherent module.

The modules reveal the richness and depth of the history curriculum. The department offers modules in many subjects and you can also fashion your own. In fact, over 40 different modules have been pursued by students. For a fuller description, go to Descriptions of Modules (http://www.wesleyan.edu/history/Modules/Description%20of%20Modules.html) Some of the currently popular modules include:

• Europe
• North America
• Empires & Encounters
• Revolutions & Social Movements
• War & Violence
• Visual Arts & Culture
• Religion
• Intellectual History
• Economy & Society
• Contemporary History
• Nation & Ethnicity

You may also go to the Department of History’s Modules page (http://www.wesleyan.edu/history/Modules/Courses%20in%20Modules.html) for more information.

REQUIREMENTS FOR THE HISTORY MAJOR FOR THE CLASS OF 2020 AND BEYOND

In general: The major program in history consists of at least nine history courses. These must include one Introduction to History course (numbered 150–189), normally taken as a first-year student or sophomore, and eight other courses, numbered 200 or higher. Students must also complete two modules and fulfill a capstone research requirement.

In detail, a major will have:

• nine history courses, including
  • one Introduction to History course numbered between 150 and 189, normally taken as a first-year or sophomore at Wesleyan
  • A minimum of eight other HIST courses, including the following:
  • All majors must include at least one course focused on the period before 1800 in their nine HIST courses. It can also count toward a module.
  • HIST362, the required seminar that all majors must take, typically during the fall semester of the junior year
  • two other HIST seminars, numbered 300 or above, taken at Wesleyan
  • Note that only two history courses taken outside of Wesleyan may be counted toward the nine required history courses and these will count as non-seminar classes.

• Modules: Students pursue two modules, each composed of four courses with a thematic, geographic, or chronological unity, assembled from both history and non-history department courses. Students may create their own modules, but most select their modules from the large list prepared by the department faculty. In either case, students work closely with their advisors to identify their modules and the specific courses that are at the core of their major programs.

• Here are a few things to remember about the courses in your modules:
  • A course may be used in only one of a student’s modules.
  • Most courses in modules will be HIST courses, but up to three courses from other departments or programs may count towards the modules.
  • HIST362 cannot be included in any module.
  • Pre-1800 courses may count towards modules.

Research Project: Every major must complete a substantial research project completed at Wesleyan under departmental faculty supervision.

STUDENT LEARNING GOALS

Majoring or minoring in history develops valuable skills transferable beyond the classroom. Learning goals broadly include: critical thinking, flexible interpretation of diverse source material, and persuasive writing, as well as analytical and research skills for tackling complex questions.

History students learn to make sense of complexity and to tell a good story.

Important departmental learning goals are met incrementally as students combine diverse courses and course types:

1. Introduction to History courses (numbered 150–189) provide key foundational elements of historical work, beginning to teach students the following:
   a. how to read like a historian, searching for details and doubting what the author says
   b. how to research history in both primary and secondary sources
   c. how to develop historical writing both in terms of argument and style
   d. how to manage historiographical informatics: library, internet, and archival searching skills, bibliographic software for an ongoing career bibliography
   e. introduction to archives where possible, including material culture where appropriate
   f. introduction to both digital and quantitative concepts for history

2. 200-level history courses continue learning goals from category 1 but also contribute to specific regional and period knowledge acquisition and the ability to synthesize and then analyze historical material in written and oral expositions.
3. **Issues in Contemporary Historiography (HIST 362)** develops advanced skills in critical historical reading; pointed writing to summarize what students read; recognition of key historical concepts; and the ability to research and plan a compelling, large-scale research project. These build on learning in categories 1 & 2.

4. Upper- or 300-level history seminars focus on specific areas of knowledge and develop real subject expertise and research acuity. Students develop and execute research projects, critically assess previous historians’ work, and refine their expository skills in writing and speech.

5. **Research requirement:** All history majors develop and deploy their skills in a senior research project, the capstone of their historical learning, through a senior thesis, a senior essay written in a tutorial, or as an extra assignment in a 300-level seminar. Students work under close faculty supervision and are given detailed feedback on their progress. This project brings together analytical skills, research skills (including finding and organizing large amounts of complex and diverse material), and skills in making a case and writing persuasively and professionally.

Assessment is continuous and complex. It occurs within each individual course and assignment but also through advisors’ monitoring of students’ overall progress, including student self-assessment and the shaping of student’s specific substantive learning goals through two subject modules, and through the capstone research assessment, requiring departmental certification of adequate research standards.

**LANGUAGE REQUIREMENT**

**Is there a foreign language requirement?** There is no foreign language requirement for history majors, but the department strongly advises all history majors to learn at least one foreign language.

**TRANSFER CREDIT**

Transfer credit must be preapproved by the appropriate department before the course is taken. All preapproved credits will be posted to the student’s transcript for graduation credit. However, history majors wishing to count transfer credit toward the history major must consult with their history advisor in advance, and upon their return to Wesleyan provide their advisor with syllabi and other materials, such as exams and papers, from the course(s) that they wish to apply toward the history major. Once approved by the advisor, it may count for major credit.

**CAPSTONE EXPERIENCE**

**APPLIES TO ALL CLASS YEARS**

All history majors apply their skills in a senior research project. It can be a senior thesis or a senior essay written in a tutorial or in a 300-level seminar. The senior research project gives all history majors an opportunity to explore a topic they are passionate about.

- **Research Project:** Every major must complete a substantial research project completed at Wesleyan under departmental faculty supervision.
  - This project may take the form of an honors thesis or a senior essay done through an individual tutorial (e.g., HIST409 or HIST403) or a research paper completed in an advanced seminar in one of the student’s chosen modules, with the approval of the student’s advisor and the instructor of that course. A paper completed in an advanced seminar must be in addition to the course’s normal requirements.

**HISTORY MINOR**

**ADMISSION TO THE MINOR**

**Why history?** The minor in history offers students interested in history an avenue to gain coherent expertise in the field without committing to the eleven-credit coursework and research required for the major. The department intends the minor to be an opportunity to offer students a cluster of courses organized along thematic, geographical, or temporal lines that establishes some depth in the subject, its modes of analysis, and methods of investigation.

The minor is simple. Take six Department of History courses, two of which need to be seminars numbered 300 and above.

**MINOR REQUIREMENTS**

**What next?** The minor program in history consists of six semester-courses. These six courses must include the following:

1. Two Department of History seminars numbered 300-399.
2. One pre-1800 course: at least one of the six courses must be chiefly concerned with the pre-industrial era.

The following stipulations also apply:

- At least five of the six courses must number 150 or higher.
- Only courses taught by faculty appointed in history may count toward the minor.
- Tutorials, education in the field, and student forums cannot be counted toward the minor.
- AP or IB credit cannot count toward the minor.
- Students may declare a history minor at any point in their undergraduate career via WesPortal>Academics>Major/Minor/Certificate Declaration.
- There is no minimum grade average to complete the minor, and there are no required gateway courses or course sequences for entry into the minor.
Latin American Studies (LAST) is an interdisciplinary program designed to provide an integrated view of Mesoamerica, South America, and the Caribbean. This interdisciplinary approach is complemented by concentration in a specific department. A student who completes the program will receive a degree in Latin American studies with concentration in a particular department. A double major in the department of concentration is an option for Latin American studies majors.

Faculty

Robert T. Conn
BA, Dartmouth College; PhD, Princeton University
Associate Professor of Spanish; Chair, Latin American Studies; Associate Professor, Latin American Studies

Departmental Advising Expert

Robert Conn

Latin American Studies Major

Admission to the Major

Admission to the Latin American studies major (LAST) requires (a) competence in either Spanish or Portuguese; (b) an academic record that shows ability both in Latin American studies and in the intended department of concentration; and (c) a judgment by core LAST faculty that you are likely to be able to maintain a grade point average of B- or better in all courses taken at Wesleyan that are cross-listed with LAST. For additional details, please visit wesleyan.edu/last/formajors.

Major Requirements

Twelve semester courses are required to complete the LAST major, (1) six in LAST and at least six in a department of concentration; or (2) seven in LAST and five in a department concentration. The five or six courses in the concentration need not be cross-listed with LAST. Acceptable departments of concentration are those with an affiliated LAST faculty member, currently anthropology, economics, earth and environmental sciences, government, history, music, religion, sociology, Romance languages and literatures, and theater. With the approval of the chair, students may concentrate in other departments that have faculty members with substantial knowledge of and interest in Latin America and/or the Caribbean. LAST majors may not concentrate in another program (e.g., AMST) or in a college (e.g., CSS).

Mandatory LAST courses at Wesleyan. Of the 12 courses required to complete the LAST major, at least eight must be taken at Wesleyan. On petition to the chair, an exception may be made for (1) students who transferred to Wesleyan and who seek LAST major credit for courses taken at their previous institution(s) or (2) students participating in the Twelve-College Exchange Program who seek LAST major credit for courses taken at one of the other participating colleges.

- Of the 12 courses required to complete the LAST major, two are mandatory: LAST226 and LAST245. Each of these mandatory courses must be taken at Wesleyan.
- One additional LAST-cross-listed social science course is also mandatory. It, too, must be taken at Wesleyan.
- LAST majors must also complete stage II of the General Education Expectations.
To graduate as a LAST major, students must maintain an average of B- or better in all courses taken at Wesleyan that are cross-listed in the LAST major, whether or not the student elects to place these courses on the major certification form.

**Non-LAST courses at Wesleyan that may count toward the LAST major.**
In exceptional circumstances, Wesleyan courses that have significant Latin American content but are not cross-listed with LAST may count toward the major. Students must petition the LAST chair to obtain LAST major credit for such courses.

**Courses at Wesleyan that may NOT count toward the LAST major.**
- No Spanish language courses except SPAN221 may count toward the LAST major—only Spanish literature courses.
- No 100-level Spanish courses will be accepted for credit toward the LAST major.
- No more than one music course involving primarily or exclusively performance may count toward the LAST major.
- No student forum courses may count toward the LAST major. Also, LAST does not sponsor student forum courses.
- No more than one introductory (100-level) course in a student's department of concentration may count toward the LAST major.
- No more than one thesis tutorial credit may count toward the LAST major.

**Courses taken at other institutions in the United States.** No course taken at another institution in United States may count toward the LAST major, whether taken during the summer or during the academic year. On petition to the chair, an exception may be made (1) for students who transferred to Wesleyan and who seek LAST major credit for courses taken at their previous institution(s) or (2) for students participating in the Twelve-College Exchange Program who seek LAST major credit for courses taken at one of the other participating colleges.

**STUDY ABROAD**
Latin American studies majors are encouraged to spend a semester or a year on a program in Latin America approved by the University’s International Studies Committee. LAST faculty members regard study abroad as a serious part of the major, so students should discuss their plans with their advisors or with the chair as soon as possible. Please note that at least eight of the 12 courses required to complete the LAST major must be taken at Wesleyan. For more information, please visit wesleyan.edu/last/studyabroad.html (http://wesleyan.edu/last/studyabroad.html).

Credit is regularly granted toward the LAST major through the following programs:
- CIEE in Buenos Aires, Argentina
- CIEE in São Paulo or Salvador da Bahia, Brazil
- Brown in Rio de Janeiro, Brazil
- CV Starr Middlebury School in Latin America, various cities, Chile
- University of Kansas in San José, Costa Rica
- CIEE in Santo Domingo, Dominican Republic
- Duke in the Andes, Quito, Ecuador
- IFSA Butler at the Universidad Autónoma de Yucatán, Mérida, Mexico
- Augsburg College Center for Global Education, Mexico and Guatemala

**LANGUAGE REQUIREMENT**
Admission to the major requires competence in either Spanish or Portuguese.

**PRIZES**
LAST awards the Levy-Spira Prize for excellence in Latin American studies.

**ADDITIONAL INFORMATION**

**Majors Committee.** The Latin American Studies Majors Committee, chosen by the student majors, works with the program’s faculty to plan a variety of events. The committee is primarily responsible for organizing the informal brown-bag lunch series, where majors and professors meet to discuss student and faculty research projects, to explore possible changes in the curriculum and study-abroad options, and to plan additional program activities. The committee also facilitates student participation in faculty searches involving the Latin American Studies Program or the Center for the Americas.

**HONORS**
Departmental honors are awarded to majors who complete a senior thesis of exceptional quality and who have a distinguished record of coursework in the program. For additional details concerning the honors program, please visit wesleyan.edu/last/formajors/theses.html (http://wesleyan.edu/last/formajors/theses.html).

**CAPSTONE EXPERIENCE**
Majors must also complete the LAST research requirement by writing a paper at least 20 pages in length that is centrally concerned with Latin America, that is on a topic of the major’s own choosing, and that receives a grade of B- or better. For additional details concerning the research requirements, please visit wesleyan.edu/last/formajors/researchrequirements.html (https://wesleyan.edu/last/formajors/researchrequirements.html).
LESS COMMONLY TAUGHT LANGUAGES

Instruction in the less commonly taught languages is offered at Wesleyan through coursework and through the Self-Instructional Language Program (SILP), which allows students to work independently with the assistance of a native speaker and use of texts and technological resources.

Courses in languages such as American Sign Language or Hindi are offered periodically, when student academic interests and/or when courses in various departments support the study of such languages. Such courses are offered under the LANG (Language) designation, are usually yearlong courses, and may be used in preparation for study abroad and in support of academic interests.

Through SILP, students can petition to continue the study of a language offered through the Less Commonly Taught Language Program. If relevant to their academic endeavors, students can petition to study a language not in the curriculum. The application process is competitive, and priority is given to SILPs that are continuations of languages already offered at Wesleyan.

FACULTY

Emmanuel Paris-Bouvret
Director, Language Resources and Technology; Director of Language Resources and Technology; Coordinator, Less Commonly Taught Languages; Adjunct Instructor in Romance Languages and Literatures

VISITING FACULTY

Joseph M. Basile
BA, University of Connecticut; MA, New York University
Visiting Instructor in American Sign Language

Keith Vinci
BS, University of Connecticut; MA, Southern Connecticut State University
Visiting Instructor in American Sign Language

Leslie A. Warren
BA, University of Vermont
Visiting Instructor in American Sign Language
MATHEMATICS AND COMPUTER SCIENCE

The Department of Mathematics and Computer Science offers undergraduate majors in mathematics and in computer science. We also participate in the Informatics and Modeling Certificate Program. The department's graduate programs include a PhD in mathematics and MA programs in mathematics and in computer science.

Each student's course of study is designed to provide an introduction to the basic areas of mathematics or computer science and to provide the technical tools that will be useful later in the student's career. The course of study is planned in consultation with the student's faculty advisor and the department's advisory committees, DADCOM for mathematics and CADCOM for computer science.

The department's graduate programs include a PhD program in mathematics and MA programs in mathematics and in computer science. The research emphasis at Wesleyan at the doctoral level is in pure mathematics and theoretical computer science. One of the distinctive features of our department is the close interaction between the computer science faculty and the mathematics faculty, particularly those in logic and discrete mathematics.

Graduate students at Wesleyan enjoy small classes and close interactions with faculty and fellow graduate students. Graduate students normally register for three classes a semester and are expected to attend departmental colloquia and at least one regular seminar. The number of graduate students ranges from 17 to 21, with an entering class of three to six each year. There have always been both male and female students, graduates of small colleges and large universities, and U.S. and international students, including, in recent years, students from Bulgaria, Chile, China, Germany, India, Iran, and Sri Lanka. All of the department's recent PhD recipients have obtained faculty positions. Some have subsequently moved to mathematical careers in industry and government.

For additional information, please visit wesleyan.edu/mathcs/graduate/ (http://www.wesleyan.edu/mathcs/graduate).

FACULTY

Ilesanmi Adeboye
PHD, University of Michigan
Assistant Professor of Mathematics

Wai Kiu Chan
BS, University of Hong Kong; MPHIL, University of Hong Kong; PHD, The Ohio State University
Professor of Mathematics

Karen L. Collins
BA, Smith College; PHD, Massachusetts Institute of Technology
Edward Burr Van Vleck Professor of Mathematics; Professor of Mathematics; Professor, Integrative Sciences

David Constantine
BS, Eastern Nazarene College; PHD, University of Michigan
Assistant Professor of Mathematics

Norman Danner
BA, University of California, Berkeley; PHD, Indiana University Bloomington
Associate Professor of Computer Science; Vice-Chair, Mathematics and Computer Science

Adam Fieldsteel
BA, Brown University; MAA, Wesleyan University; PHD, University of California, Berkeley
Professor of Mathematics; Chair, Mathematics and Computer Science

Cameron Donnay Hill
BA, Yale University; PHD, University of California, Berkeley
Assistant Professor of Mathematics; Assistant Professor, Integrative Sciences

Mark A. Hovey
BS, Ohio State University; PHD, Massachusetts Institute of Technology
Associate Provost; Professor of Mathematics; Professor, Integrative Sciences

Sara Kalisnik Verovsek
PHD, Stanford University
Assistant Professor of Mathematics

Daniel Krizanc
BS, University of Toronto; PHD, Harvard University
Professor of Computer Science; Professor, Integrative Sciences; Professor, Environmental Studies; Co-Coordinator, Informatics and Modeling

Constance Leidy
BS, Tulane University; PHD, Rice University
Associate Professor of Mathematics

Han Li
BS, Nankai University; PHD, Yale University
Assistant Professor of Mathematics

Dan Licata
BS, Brown University; PHD, Carnegie Mellon University
Assistant Professor of Computer Science

James Lipton
BS, U Nebraska Lincoln; MSC, Cornell University; PHD, Cornell University
Professor of Computer Science; Professor, Integrative Sciences

Victoria Ursula Manfredi
BA, Smith College; MS, University of Massachusetts Amherst; PHD, University of Massachusetts Amherst
Assistant Professor of Computer Science

David Pollack
MA, Harvard University; PHD, Harvard University; SB, University of Chicago
Associate Professor of Mathematics

Felipe A. Ramirez
BS, Colorado St University; PHD, University of Michigan
Assistant Professor of Mathematics

Christopher Rasmussen
BA, University of Virginia; MS, University of Virginia; PHD, University of Arizona
Associate Professor of Mathematics

Saray Shai
BS, Israel Institute of Technology; PHD, University of St Andrews
Assistant Professor of Computer Science

Sebastian Zimmeck
LLM, University of California, Berkeley; MS, Columbia University; PHD, University of Kiel; PHD, Columbia University
Assistant Professor of Computer Science

AFFILIATED FACULTY

Tsampikos Kottos
BA, University of Crete; MS, University of Crete; PHD, University of Crete
Professor of Physics; Professor, Integrative Sciences; Professor, Mathematics

Phillip Wesolek
BS, University of Wisconsin at Madison; MS, University of Illinois at Chicago; PHD, University of Illinois at Chicago
Visiting Scholar in Mathematics

VISITING FACULTY

Daniel Christopher Alvey
BS, US Military Academy
Graduate Student, MATH-PHD; Visiting Instructor in Mathematics

Justin Alexander Bryant
BS, Seattle University
Graduate Student, MATH-PHD; Visiting Instructor in Mathematics

Alyson Hildum
BA, Colorado School Mines; PHD, Brandeis University
Visiting Assistant Professor of Mathematics

Freda Li
BA, Bryn Mawr College
Graduate Student, MATH-PHD; Visiting Instructor in Mathematics

Zonia Karina Menendez
BS, College of New Jersey
Graduate Student, MATH-PHD; Visiting Instructor in Mathematics

Peter R. Merkx
BS, Duke University; MS, University of Oregon; PHD, University of California, Santa Barbara
Visiting Assistant Professor of Mathematics

Andre Oliveira
Graduate Student, MATH-PHD; Visiting Instructor in Mathematics

Mitchell Vern Riley
MSC, University Wstrn Ontario; BS, University Of Queensland
Graduate Student, MATH-PHD; Visiting Instructor in Mathematics

Kelly Marie Thayer
BA, Regis College; PHD, Wesleyan University
Visiting Assistant Professor of Computer Science

EMERITI

Ethan M. Coven
BA, University of Rochester; MA, Yale University; MAA, Wesleyan University; PHD, Yale University
Professor of Mathematics, Emeritus

Michael S. Keane
BA, University of Texas Austin; MS, University of Gottingen; PHD, University of Erlangen-Nummer
Professor of Mathematics, Emeritus

Michael D. Rice
BS, Western Mich University; MS, Western Mich University; PHD, Wesleyan University
Professor of Computer Science, Emeritus

Lewis C. Robertson
BS, University of Chicago; MS, University of Chicago; PHD, University of California LA
Professor of Mathematics, Emeritus

Philip H. Scowcroft
BA, Harvard University; MA, Cornell University; PHD, Cornell University
Edward Burr Van Vleck Professor of Mathematics, Emeritus

Carol S. Wood
AB, Randolph Macon W College; MAA, Wesleyan University; PHD, Yale University
Edward Burr Van Vleck Professor of Mathematics, Emerita

DEPARTMENTAL UNDERGRADUATE ADVISING EXPERTS

DADCOM provides advice and transfer credit approval for students in mathematics. CADCOM provides advice and transfer credit approval for students in computer science.

COMPUTER SCIENCE MAJOR

ADMISSION TO THE MAJOR

To declare the computer science major, a student must have

- earned a C or higher in COMP211;
- either earned a C or higher in COMP212 or be enrolled in COMP212 and be earning a grade of C or higher based on completed work; and
- either earned a C or higher in MATH228 or MATH261 or be enrolled in MATH228 or MATH261 and be earning a grade of C or higher based on completed work.

Note: The MATH228 or MATH261 requirement applies to students declaring the computer science major after June 30, 2016.

MAJOR REQUIREMENTS

To complete the computer science major, a student must complete the following courses:
• Gateway courses:
  • COMP211 and COMP212 (Computer Science I and II).

• Core courses (one course from each of the following four areas):
  • Models of computation: any COMP course numbered 300-305.
  • Algorithms: any COMP course numbered 310-315.
  • Programming languages: any COMP course numbered 320-325.
  • Systems: any COMP course numbered 330-335.

• Two additional electives.

• Mathematical foundations:
  • MATH228 (Discrete Mathematics) or MATH261 (Abstract Algebra).
  • Any other 200+ level MATH course.

Notes:

• Any COMP course at the 300+ level except COMP409-COMP410 can be used
  as an elective for the major.

• No course may be used to satisfy more than one requirement.

• At most one individual or group tutorial may be used as an elective unless
  prior approval is given.

• Only 1.0-credit courses taken A–F may be used to satisfy major
  requirements.

STUDENT LEARNING GOALS

• Understanding abstraction: At its heart, computer science is the study
  of abstractions for the purpose of understanding computation, and as
  such, students must learn appropriate levels of abstraction for solving
  computational problems. All courses in the curriculum contribute to this
  goal.

• Programming: Students must learn how to program in a high-level language,
  as such programming is the primary tool in computer science. This is typically
  how students are first exposed to the field, and our majors achieve this goal
  in their first or sophomore years by taking the gateway sequence COMP211–
  212.

• Analysis: Students must learn how to reason about computation; this
  includes analyzing algorithms and proving properties such as correctness
  and complexity, and requires an understanding of appropriate mathematical
  tools. The courses that focus primarily on this goal are COMP312 (Design and
  Analysis of Algorithms) and COMP321 (Design of Programming Languages).

• Creation: Students must learn how to create original computational
  structures; this requires an understanding of fundamental techniques in
  algorithm and data structure design and an ability to combine established
  techniques in novel ways. All courses in the curriculum contribute to this
  goal.

• Limits: Students must understand not only how to analyze and create
  computational structures, but also the limits of computation itself; this
  requires an understanding of the mathematical foundations and formalisms
  of computer science. This goal is primarily addressed in COMP301 (Automata
  Theory and Formal Languages).

TRANSFER CREDIT

The transfer credit policy for the COMP major is:

• You can transfer at most 2 courses per semester (or summer, or winter
  session) away towards the COMP major.

• You can transfer at most 4 courses in total towards the COMP major.

• You must take at least 2 of COMP211, COMP212, and MATH228 at
  Wesleyan.

• You must take at least three 300-level COMP courses used to satisfy the
  major requirements at Wesleyan.

RELATED PROGRAMS OR CERTIFICATES

Informatics and Modeling Certificate. The department is an active participant
in the Informatics and Modeling Certificate (wesleyan.edu/imcp) The certificate provides a framework to guide students in developing analytical skills based on the following two pathways:

• Computational Science and Quantitative World Modeling
  (CSM): wesleyan.edu/imcp/csm.html
• Integrative Genomic Sciences (IGS): wesleyan.edu/imcp/igs.html

The CSM pathway introduces students to modeling techniques and provides students with a foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena. The IGS pathway introduces students to the interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics. The department offers courses that support both pathways, such as COMP211 and COMP212, and also offers special interdisciplinary courses for the IGS pathway, such as COMP327 and COMP350. The certificate requirements are described in the links for the two pathways.

BA/MA PROGRAM

This program provides an attractive option for mathematic majors to enrich
their course and research background. Students are advised to begin research by
their junior year if they intend to pursue the BA/MA. Admission is competitive
and based on GPA, faculty recommendations, and research experience. For
more information, visit wesleyan.edu/grad/degree-programs/bama.html.

Advanced undergraduates may enroll in graduate (500-level) courses.

ADDITIONAL INFORMATION

COLLOQUIA AND SEMINARS

Lectures. The departmental colloquium series presents lectures on recent
research by invited speakers from other institutions. Advanced undergraduates
are welcome and encouraged to attend these colloquia and to participate in the
computer science seminar.

HONORS

An undergraduate may achieve the BA with honors in computer science via the
following route:

• The honors thesis, written under the supervision of a faculty member under
  conditions monitored by the University Committee on Honors.
**CAPSTONE EXPERIENCE**

We encourage all students to participate in faculty research via individual tutorials and/or a Senior thesis. There is no mandatory capstone experience.

**MATHEMATICS MAJOR**

**ADMISSION TO THE MAJOR**

Every student is welcome to major in mathematics. Students are advised to finish calculus up to MATH222 and linear algebra (either MATH221 or MATH223) before making the decision.

**MAJOR REQUIREMENTS**

- A year of differential and integral calculus (typically MATH121 and MATH122)
- MATH221 or MATH223
- MATH222
- An elementary knowledge of algorithms and computer programming. (Successful completion of either COMP112 or COMP211 satisfies this requirement.)
- MATH261 and MATH225
- A coherent selection of four additional electives, chosen in consultation with an advisor from the department. Any MATH course at the 200+ level can be used as an elective for the major.

**Notes:**

- Students who have completed a year of calculus in high school may place out of one or both of MATH121 and MATH122.
- An AP score of 4 or 5 on the AB calculus exam indicates the student should begin in MATH122.
- An AP score of 4 or 5 on the BC calculus exam indicates the student should consider beginning in any of MATH221, MATH222, or MATH223.
- Students may not earn credit for both MATH221 and MATH223.
- Students must complete either MATH228 or MATH261 by the end of their junior year.
- With advance approval from the departmental advisory committee, mild adjustments are allowed. For example, a Wesleyan course with substantial mathematical content but that is not listed in MATH may be used toward the four-elective requirement. Please note, however, that both MATH225 and MATH261 must be taken at Wesleyan to complete the major, and substitutions for these courses will not be approved.

**STUDENT LEARNING GOALS**

The department has the following learning goals for mathematics majors:

- Develop a basic understanding of, and computational facility with, major objects of mathematical and applied interest, such as functions, vector spaces, and groups.
- Understand abstract mathematical reasoning, e.g., understand an abstract system of rules, find examples of objects that satisfy those rules, conjecture theorems from those examples, and prove those theorems.
- Understand some mathematical applications and ways to use mathematics in practice, and be able to make connections to topics outside of the strict course content.
- Students should be able to write about and speak about mathematics, clearly and elegantly.

**LANGUAGE REQUIREMENT**

Undergraduate majors in mathematics are encouraged to study languages while at Wesleyan; majors who are considering graduate study in mathematics should note that graduate programs often require a reading knowledge of French, German, and/or Russian.

**BA/MA PROGRAM**

This program provides an attractive option for mathematics majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit wesleyan.edu/grad/degree-programs/bama.html (http://www.wesleyan.edu/grad/degree-programs/bama.html). Advanced undergraduates may enroll in graduate (500-level) courses.

**ADDITIONAL INFORMATION**

**COLLOQUIA, SEMINARS, AND MATH CLUB**

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in graduate seminars. All students interested in mathematics are invited to attend the annual Coven-Wood Lecture Series in Mathematics. The first talk in the series is accessible to students at all levels. The undergraduate Math Club hosts informal talks in mathematics and other mathematical activities.

**HONORS**

An undergraduate may achieve the BA with honors in mathematics via one of several routes:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.
- A strong performance in a suitable sequence of courses, normally including some graduate courses, selected in consultation with a member of the department’s advisory committee. The candidate also is expected to prepare a public lecture on a topic chosen together with a faculty advisor.
- The comprehensive examination, offered by the department and/or by visiting consultants to select students nominated by the faculty.
GRADUATE MASTER OF ARTS IN MATHEMATICS AND COMPUTER SCIENCE

The department offers the MA in mathematics and also in computer science. The requirements for the master of arts degree are designed to ensure a basic knowledge and the capacity for sustained, independent scholarly study. At least three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree. Any program leading to the MA degree must be planned in consultation with the departmental Graduate Education Committee.

COURSES

Six one-semester graduate courses in addition to the research units MATH549 and MATH550 or COMP549 and COMP550 are required for the MA degree. The choice of courses will be made in consultation with the faculty advisor and the departmental Graduate Education Committee.

THESIS | DISSERTATION | DEFENSE

The general preliminary examinations. The general preliminary examinations occur in the summer after the candidate’s first year of graduate study and cover algebra, analysis, and topology (or computer science, in the case of students including this option among their three first-year subjects).

Special preliminary examination. For a graduate student to become an official PhD candidate as recognized by the department, the student has to pass the Special Preliminary Examination, an oral examination that must be passed by the end of the student’s third year of graduate work. The student’s Examination Committee determines the subject matter content of the Special Preliminary Examination. This committee is chaired by the student’s dissertation advisor and must include at least two additional faculty members of the department. The Special Preliminary Examination will be based primarily, but perhaps not exclusively, on the student’s field or specialization. Specific details of the form and content of the examination shall be determined by the Examination Committee at the time the subject matter content is discussed.

TEACHING

After passing the preliminary examinations, most PhD candidates teach one course per year, typically of 20 students, supervised by senior faculty.

GRADUATE DOCTOR OF PHILOSOPHY IN MATHEMATICS

The doctor of philosophy degree demands breadth of knowledge, an intense specialization in one field, a substantial original contribution to the field of specialization, and a high degree of expository skill.

Five years are usually needed to complete all requirements for the PhD degree, and two years of residence are required. It is not necessary to obtain the MA degree en route to the PhD degree. Students may choose to obtain the MA in computer science and the PhD in mathematics. Any program leading to the PhD degree must be planned in consultation with the departmental Graduate Education Committee.

Among possible fields of specialization for PhD candidates are algebraic geometry, algebraic topology, analysis of algorithms, arithmetic geometry, categorical algebra, combinatorics, complex analysis, computational logic, data mining, elliptic curves, ergodic theory, fundamental groups, Galois theory, geometric analysis, graph theory, homological algebra, Kleinian groups and discrete groups, knot theory, logic programming, mathematical physics, model theory, model-theoretic algebra, number theory, operator algebras, probability theory, proof theory, topological dynamics, and topological groups.

COURSES

At least 16 one-semester courses are required for the PhD degree. Several of the courses are to be in the student’s field of specialization, but at least three one-semester courses are to be taken in each of the three areas: algebra, analysis, and topology. First-year students are expected to take the three two-semester sequences in these areas. However, students interested in computer science may replace coursework in one of these areas with coursework in computer science, with the permission of the departmental Graduate Education Committee. One of the 16 courses must be in the area of logic or discrete mathematics, as construed by the departmental Graduate Education Committee.

LANGUAGE REQUIREMENT

Students must pass reading examinations in either French, German, or Russian. It is strongly recommended that PhD candidates have or acquire a knowledge sufficient for reading the mathematical literature in all three of these languages. Knowledge of one of these three languages is required.

GRADUATE master of arts in mathematics and computer science
meet standards of quality as exemplified by the current research journals in mathematics.

- **Selection of dissertation advisor.** A graduate student should select a dissertation advisor by the end of the student’s second year of graduate work.

- **Defense of dissertation.** The final examination is an oral presentation of the dissertation in which the candidate is to exhibit an expert command of the thesis and related topics and a high degree of expository skill.
The medieval studies program provides an interdisciplinary context for students who wish to study the European Middle Ages. Students normally concentrate on one of three fields: art history and archaeology, history and culture, or language and literature. They are also expected to do coursework in the other fields. In certain cases the program may also provide a framework for students wishing to cross the somewhat arbitrary temporal, topical, and geographical boundaries of medieval studies to consider such problems as the relationship between classical and medieval literature or art, or the broader history of the preindustrial European societies.

Students have a number of opportunities to experience medieval materials firsthand, including working with rare manuscripts in Special Collections, singing in the Collegium Musicum, or participating on an archaeological dig. The Medieval Studies Department brings distinguished visitors to campus each year to give public talks and to work one-on-one with students. Field trips to places such as the Cloisters Museum in New York City and to concerts in the nearby area foster a sense of community in addition to providing access to materials.

The skills typically acquired by medieval studies students—knowledge of European history, ability to analyze “foreign” texts, experience handling artifacts and manuscripts, and familiarity with Latin—provide good preparation for advanced degrees, whether in the humanities, law, or other professional schools.

FACULTY

Jane Alden
BMU, Manchester University; MMU, King’s College; PHD, University of North Carolina at Chapel Hill
Associate Professor of Music; Associate Professor, Medieval Studies

Francesco Marco Aresu
MA, Indiana University Bloomington; MA, Stanford University; PHD, Harvard University
Assistant Professor of Italian; Assistant Professor, Medieval Studies

Michael Armstrong Roche
BA, Harvard University; MA, Harvard University; PHD, Harvard University
Associate Professor of Spanish; Associate Professor, Medieval Studies; Associate Professor, Latin American Studies

Michael Meere
BA, Northwestern University; MA, University of Virginia; PHD, University of Virginia
Assistant Professor of French; Assistant Professor, Medieval Studies

Cecilia Miller
BA, LeTourneau College; DPHIL, Oxford University; MPHIL, University of St Andrews
Professor of History; Co-Chair, College of Social Studies; Professor, Medieval Studies; Tutor, College of Social Studies

Ruth Nisse
BA, Columbia University; PHD, University of California, Berkeley
Professor of English; Chair, English; Associate Professor, Medieval Studies

Jeff Rider
BA, Yale University; MA, University of Chicago; PHD, University of Chicago
Professor of French; Chair, Medieval Studies; Section Head; Professor, Medieval Studies

Gary Shaw
BA, McGill University; DPHIL, Oxford University
Professor of History; Associate Editor, History and Theory; Professor, Medieval Studies

Jesse Wayne Torgerson
BA, Biola University; MA, University of California, Berkeley; PHD, University of California, Berkeley
Assistant Professor of Letters; Assistant Professor, Medieval Studies; Assistant Professor, History

AFFILIATED FACULTY

Melissa R. Katz
MA, Brown University; MS, University of Delaware; PHD, Brown University
Visiting Assistant Professor, Medieval Studies; Visiting Assistant Professor of Art History

DEPARTMENTAL ADVISING EXPERTS

Clark Maines, Ruth Nisse, Jeff Rider, Gary Shaw

MEDIEVAL STUDIES MAJOR

ADMISSION TO THE MAJOR

There are no requirements for admission to the medieval studies major. For information about the program, please visit our website at wesleyan.edu/medistud/(http://wesleyan.edu/medistud).

MAJOR REQUIREMENTS

Each student concentrating in medieval studies will be guided by a principal advisor within the field of specialization and two other faculty members from other fields of medieval studies. In some cases a consulting faculty member may be chosen from a field that is not an integral part of medieval studies but that is closely related to the student’s main area of interest (e.g., classics, linguistics). At the beginning of the fifth semester, each student is expected to submit for approval by his or her advisor a tentative schedule of courses to be taken to fulfill the requirements of the major. Subsequent changes in this schedule may be made only with the approval of the advisor.

Medieval studies majors take classes in a broad range of fields, including art history, archaeology, history, languages and literature, music history, manuscript studies, and religious studies. They are required to take 10 upper-level courses that will normally conform to the following:

- Four courses in the student’s chosen field of specialization
- Two courses in a second field of medieval studies
• One course in a third distinct field of medieval studies
• Three additional courses in any area of medieval studies, or in an outside field deemed, in consultation with the advisor, to be closely related to the student’s work in subject matter or method. For example, a student specializing in medieval history may count toward the major a course in ancient history or historical method, while a student specializing in medieval literature may include a course in classical literature or in the theory of literary criticism.

A student may take more than four courses in his/her primary area of specialization, but only four will be counted toward the major.

At least one of the courses in the primary area of specialization should be a seminar, as should at least one of the courses in either the second or third fields.

STUDENT LEARNING GOALS

Medieval studies majors, through the study of methods in their chosen disciplines, will be expected to master the following skills:
• An ability to interpret intersections among the many cultures, religions, ethnicities, and identities of the European middle ages.
• The critical use of historical evidence across a range of disciplines.
• A comparative approach to medieval texts in various genres.
• The ability to construct arguments informed by ideas of temporalities and geographies that are currently debated by scholars in medieval studies.

STUDY ABROAD

Students majoring in the program are encouraged to spend at least one semester of study abroad and will be provided with assistance in planning their work abroad and in securing financial support for foreign study. Programs of study must be approved in advance by the student’s advising committee.

LANGUAGE REQUIREMENT

All medieval studies majors are expected to have, at the latest by the beginning of their senior year, reading knowledge of at least one modern European foreign language. Latin is also strongly recommended. Ways of satisfying the language requirement can be determined by the advising committee of each student.

HONORS

Honors and high honors are awarded by vote of the medieval studies faculty to students whose coursework is judged to be of sufficiently high quality and who have done outstanding work on one or more of the following writing projects: a senior thesis, a senior essay, or a seminar paper nominated for honors or high honors by the instructor in the seminar. All writing projects will be evaluated by the individual advising committee before a recommendation for program honors is made. Students must file a statement of intent with the Honors Program and with the program chair before October 15th of the senior year. By vote of the medieval studies faculty, those who have been recommended for high honors in the program may be nominated for University Honors.

CAPSTONE EXPERIENCE

Students in the program are normally expected to complete at least one long paper that may be a senior thesis, a senior essay, or a seminar paper.

MIDDLE STUDIES MINOR

MINOR REQUIREMENTS

The medieval studies minor provides students with a basic knowledge of the European Middle Ages in the valuable context of an interdisciplinary framework.

Students minoring in medieval studies complete six courses cross-listed with MDST or approved by the chair of the medieval studies program. No more than three of these courses may be taken in any one department and at least two must be taken in arts and humanities and two in social sciences. At least four of these courses must be taken at Wesleyan; one or two may be taken while studying abroad or during the summer.

Minors are strongly encouraged to take at least two years of a modern foreign language. Minors who anticipate going on to graduate work in the medieval or early modern period are strongly encouraged to take at least two years of Latin as well.
MOLECULAR BIOLOGY AND BIOCHEMISTRY

Molecular Biology and Biochemistry (MB&B) focuses on the molecular basis of life — on mechanisms by which cells process, integrate, and act on information to create and propagate living organisms. In keeping with the culture of liberal education at Wesleyan University, the MB&B major is designed to accommodate a broad range of academic interests and allow students to concentrate in particular disciplines such as molecular biology, biochemistry, biophysics, structural biology, cell biology, genetics, epigenetics, genomics, and computational modeling. The interdisciplinary nature and flexibility of the MB&B major also enables students to couple their affinity for biological sciences with other majors, including chemistry, mathematics and computer science, science in society, psychology, government, economics, etc. MB&B provides foundational training for a range of professional careers in medicine, public health, pharmaceutical/biotechnology industry, public policy, science journalism, and teaching, among others. We welcome students of all interests and backgrounds to join us.

FACULTY

Cori Anderson
BS, Wheaton College; PHD, Dartmouth College
Assistant Professor of the Practice in Molecular Biology and Biochemistry

Manju Hingorani
BS, University of Bombay; PHD, Ohio State University
Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Scott G. Holmes
BS, College of William and Mary; PHD, University of Virginia
Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Robert P. Lane
BA, Colgate University; PHD, California Institute Tech
Associate Professor of Molecular Biology and Biochemistry; Chair, Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Amy MacQueen
BA, Columbia University; PHD, Stanford University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Michael A. McAlear
BS, McGill University; PHD, McGill University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

- General Undergraduate Program: Don Oliver (http://wesleyan.edu/academics/faculty/doliver/profile.html)
MOLECULAR BIOLOGY AND BIOCHEMISTRY MAJOR

ADMISSION TO THE MAJOR

Students are encouraged to begin coursework toward the MB&B major in the first year so that they can take maximum advantage of upper-level MB&B courses, research, and study-abroad opportunities in later years. However, the major can certainly be completed successfully if initiated during sophomore year.

A prospective MB&B major can begin with the core introductory biology series (MB&B181/Biol181 and MB&B182/Biol182; associated laboratory MB&B191/Biol191 and MB&B192/Biol192) and/or the core general chemistry series (CHEM141/CHEM143 and CHEM142/CHEM144; associated laboratory, CHEM152). MB&B181 is offered in small sections rather than a single, large lecture class. These small sections allow for problem-based learning at a more individualized pace as students master the first semester of university-level biology.

MAJOR REQUIREMENTS

The molecular biology and biochemistry major requires the following coursework:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introductory Courses</td>
<td>MB&amp;B181 Principles of Biology I: Cell Biology and Molecular Basis of Heredity</td>
<td>1.5</td>
</tr>
<tr>
<td>&amp; MB&amp;B191 Principles of Biology I--Laboratory</td>
<td></td>
<td></td>
</tr>
<tr>
<td>&amp; MB&amp;B182 Principles of Biology II</td>
<td>1.5</td>
<td></td>
</tr>
<tr>
<td>&amp; MB&amp;B192 Principles of Biology II--Laboratory</td>
<td></td>
<td></td>
</tr>
<tr>
<td>General Chemistry</td>
<td>CHEM141/143 Introductory Chemistry I</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>CHEM142/144 Introductory Chemistry II</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>CHEM152 Introductory Chemistry Laboratory</td>
<td>0.5</td>
</tr>
<tr>
<td>Gateway Molecular Biology</td>
<td>MB&amp;B208 Molecular Biology</td>
<td>1</td>
</tr>
<tr>
<td>Organic Chemistry</td>
<td>CHEM251 Principles of Organic Chemistry I</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>CHEM252 Principles of Organic Chemistry II</td>
<td>1</td>
</tr>
<tr>
<td>Mathematics</td>
<td>Select one Mathematics course (calculus or statistics recommended)</td>
<td>1</td>
</tr>
<tr>
<td>Physical Chemistry</td>
<td>MB&amp;B381 Physical Chemistry for the Life Sciences</td>
<td>1</td>
</tr>
<tr>
<td>Biochemistry</td>
<td>MB&amp;B383 Biochemistry</td>
<td>1</td>
</tr>
<tr>
<td>Advanced Laboratory</td>
<td>MB&amp;B394 Advanced Laboratory in Molecular Biology and Genetics</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>or MB&amp;B395 Structural Biology Laboratory</td>
<td></td>
</tr>
</tbody>
</table>

Note: Many MB&B majors take 200- and 300-level courses over the curriculum requirement to better prepare for graduate or medical school.

Electives

Select two elective courses, at least one of which must be a 300-level MB&B course

Students are encouraged to take our seminar course, MB&B209, in the spring of their first or second year.

Two consecutive semesters of research for credit (in the same laboratory) (MB&B421, MB&B422) with an MB&B faculty member (or a preapproved faculty member in another department conducting research in molecular biology/biochemistry/biophysics) can be substituted for the 200-level elective. Honors thesis (MB&B409 and MB&B410) does not count as an elective.

MB&B381 may be replaced by two semesters of introductory or general physics (PHYS111/PHYS113 and PHYS112/PHYS116) or physical chemistry (CHEM337 and CHEM338). In this case MB&B381 may count as the required 300-level elective.

For potential elective courses outside of MB&B, including study-abroad courses, students must consult with their faculty advisor and the MB&B chair in a timely manner.

Majors interested in a concentration in molecular biology should take MB&B394, which is offered every spring semester and generally taken in the junior or senior year. Students interested in the molecular biophysics certificate should take MB&B395, which is offered every other year in fall semester.

MB&B majors are also encouraged to attend the MB&B/biology seminars (Thursdays at noon), the chemistry colloquium (Fridays at 3:30 p.m.), and/or the biological chemistry seminars (Mondays at 4 p.m.), wherein distinguished scientists from other institutions are invited to present their research to our community.

COURSES FOR NONMAJORS

Non-life-science majors are encouraged to consider MB&B103, MB&B107, MB&B119, MB&B181, or MB&B182 as part of their program to meet NSM requirements. See WesMaps (https://www.wesleyan.edu/wesmaps) for current course offerings.

MB&B228 is an introductory biochemistry course for nonmajors intending to pursue a medical degree.

STUDENT LEARNING GOALS

- Acquire mastery of core foundational knowledge of molecular biology and biochemistry
- Acquire selective familiarity with our primary literature and bioinformatic databases
- Achieve familiarity with major questions at the forefront of our field
- Acquire mastery of analytical, quantitative, and creative approaches to analyze problems in our field and to synthesize them in order to create logical hypotheses and experimental plans
- Acquire ability to use multidisciplinary approaches to synthesize a cogent experimental plan
- Acquire mastery of important methodologies in our field
- Acquire mastery of a subset of hands-on methodologies in our field
• Acquire proficiency in oral, written, and visual modes of effective scientific communication

**ADVANCED PLACEMENT**

Prospective MB&B majors who have achieved a score of 4 or 5 in AP Biology may consider replacing one of the introductory biology courses (MB&B181 or MB&B182) with an upper-level course. Students must consult with an MB&B faculty member if they wish to try to place out of an introductory course. Permission to place out of MB&B181 is based on a short interview with one of the MB&B faculty instructors and a short placement test.

Prospective MB&B majors who have achieved a score of 4 or 5 in AP Chemistry must meet the chemistry department requirements for advanced placement credit.

**PRIZES**

**Hawk Prize:** The gift of Philip B. Hawk, Class of 1898, as a memorial to his wife, Gladys, to the students who have done the most effective work in biochemistry.

**Scott Biomedical Prize:** Awarded to a member or members of the molecular biology and biochemistry senior class who have demonstrated excellence and interest in commencing a career in academic or applied medicine.

**William Firshein Prize:** In honor of founding faculty member William Firshein, awarded to the graduating MB&B student who has contributed the most to the interests and character of the molecular biology and biochemistry department.

**American Society for Biochemistry and Molecular Biochemistry Honor Society:** The ASBMB Honor Society recognizes exceptional undergraduate juniors and seniors pursuing a degree in the molecular life sciences. Students are recognized for their scholarly achievement, research accomplishments, and outreach activities in the molecular life sciences.

**American Society for Biochemistry and Molecular Biochemistry Research Award:** The ASBMB awards exceptional rising seniors pursuing a degree in the molecular life sciences who have developed an exciting research project. More information is available on the ASBMB web page (http://www.asbmb.org/education/studentchapters/awards/ugresearch).

**Dr. Neil Clendeninn Prize:** Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has demonstrated excellence and interest in commencing a career in molecular biology and biochemistry. MB&B majors not interested in laboratory work are encouraged to gain exposure to current research through journal clubs and seminars.

**HONORS**

To be considered for departmental honors, a student must:

• be an MB&B major and be recommended to the department by a faculty member. The student is expected to have a B average (grade point average 85) in courses credited to the major.
• submit a thesis based on laboratory research or library research, performed under the supervision of an MB&B faculty member.

**GRADUATE MOLECULAR BIOLOGY AND BIOCHEMISTRY PROGRAM**

The Molecular Biology and Biochemistry (MB&B) Department supports a graduate program with emphasis in molecular genetics, molecular biology, biochemistry, and molecular biophysics. The MB&B graduate program is designed to lead to the degree of doctor of philosophy. A master of arts degree is awarded only under special circumstances. The department currently has 20 graduate students, and the graduate program is an integral part of the departmental offerings. Graduate students serve as teaching assistants in undergraduate courses, generally during their first two years. The emphasis of the program is on an intensive research experience culminating in a dissertation. The program of study also includes a series of courses covering the major areas of molecular biology, biochemistry, and biophysics; journal clubs in which current
research is discussed in an informal setting; practica designed to introduce first-year students to the research interests of the faculty; and several seminar series in which either graduate students or distinguished outside speakers participate. The low student-faculty ratio (2.5:1) allows programs to be individually designed and ensures close contact between the student and the faculty.

COURSES

Ideally, incoming students will have completed courses in general biology, cell and molecular biology, genetics, biochemistry, general chemistry, organic chemistry, physical chemistry, and calculus. Deficiencies in any of these areas would normally be made up in the first year. A core curriculum of graduate courses in the following areas is given on a two-year cycle:

- nucleic acid structure,
- biosynthesis and its regulation,
- regulation of gene expression,
- regulation of chromosome dynamics,
- structural mechanisms and energetics of protein-nucleic-acid interactions,
- protein structure and folding,
- protein trafficking in cells,
- physical techniques,
- molecular genetics,
- the cell cycle,
- biological spectroscopy,
- bioinformatics and functional genomics, and
- molecular, biochemical, and cellular bases of cancer and other human diseases.

Additional graduate course electives are also available. Within this general framework, an individual program of study tailored to fit the student’s background and interests is designed in consultation with the graduate committee and the student’s advisor.

PROGRESS AND QUALIFYING EXAMS

The criteria for admission to candidacy for the PhD will be performance in courses, aptitude for research, a written qualifying examination at the end of the third semester, and the oral defense of an original research proposal by the middle of the fourth semester.

RESEARCH

- control of DNA replication
- mechanism of protein secretion
- global regulations of ribosomal biogenesis in the yeast S. cerevisiae
- mechanisms of DNA replication and repair
- protein-protein and protein-nucleic-acid interactions
- the structural dynamics of nucleic acids and proteins
- chromosome structure and gene expression
- UV resonance Raman spectroscopy of biological macromolecules
- biological assembly mechanisms
- protein fiber formation in disease
- enzyme mechanisms
- the olfactory system and new frontiers in genome research
- elucidation of membrane protein function by x-ray crystallography

ADDITIONAL INFORMATION

For additional information, please visit the department website (http://wesleyan.edu/mbb/grad_studies).
The Music Department is based on the belief that all of the world’s musics warrant close study and that all musicians should cultivate the ability to engage with unfamiliar musical traditions. The department provides performance opportunities for the entire Wesleyan community through orchestra, Chinese orchestra, concert choir, the Collegium Musicum, organ, South Indian voice and percussion instruction, wind ensemble, jazz orchestra, Korean drumming and creative music ensemble, laptop ensemble, Javanese gamelan, West African drumming, South Indian music, steel band, and taiko. These offerings are supplemented by an extensive private lessons program. Courses in music history, music as a cultural practice, music theory, and composition are offered at both undergraduate and graduate levels. Music majors design their own programs of study in consultation with an advisor. Program proposals must demonstrate a balance between performance, historical/cultural study, and music theoretic/compositional investigation. Each proposal is reviewed by the director of undergraduate study and ratified by the entire department.

**FACULTY**

**Jane Alden**  
BMU, Manchester University; MMU, King’s College; PHD, University of North Carolina at Chapel Hill

Adjunct Professor of Music, Emeritus

PRIVATE MUSIC LESSON INSTRUCTORS

Stan Scott - Banjo
Roy Wiseman - Bass
Garrett Bennett - Bassoon
Julie Ribchinsky - Cello
Charlie Suriyakham - Clarinet
Pheeroan Aklaff - Drums
Peter Craig Edwards - Traditional Fiddle Styles
Peter Standaart - Flute
Robert Hoyle - French Horn
Cem Duruoz - Guitar
Tony Lombardozzi - Guitar, Jazz and Blues

Megan Sesma - Harp, Classical and Folk
Stan Scott - Mandolin/Guitar/North Indian Vocal
Libby Van Cleve - Oboe
Eugene Bozzi - Percussion and Drums
Carolyn Halsted - Piano
William Braun - Piano
Fred Simmons - Piano, Jazz
John Bergeron - Recording Studio Production
Garrett Bennett - Saxophone
Robert Earhart - Trombone
Nancy Brown - Trumpet, Classical
Allison Lazur - Tuba
Marvin Warshaw - Viola
Perry Elliot - Violin Performance
Priscilla Gale - Voice
Chai-lun Yueh - Voice
Giacomo Gates - Voice, Jazz

UNDERGRADUATE DEPARTMENTAL ADVISING EXPERTS

Jay Hoggard; B. Balasubrahmaniyan

MUSIC MAJOR

MAJOR DESCRIPTION

Major programs are put together by the students in consultation with their advisors. The programs reflect the individual interests and needs of the students. The department requires that a program proposal, including all music courses previously taken and those planned for the future, be submitted at the time of application to be a major. A major program should have a healthy balance between courses in music history and culture; courses in music analysis, theory and composition; and courses in performance. It is a fundamental principle of the Wesleyan music program that the study of music and the experience of music should reinforce and inspire each other. A major program must show evidence of work in at least one musical tradition outside the area of the student’s prime concentration. The understanding that comes with new experiences is an essential part of the music opportunity at Wesleyan.

A music major’s possible foci of study include Western classical music; new and experimental music; African American, Indonesian, Indian, and African musics;
and European and American music outside the art tradition. These and other possibilities are not mutually exclusive but can be studied in combinations that reflect the interests of individual students. The music profession is international. In many areas of music study, at least one foreign language is essential.

**ADMISSION TO THE MAJOR**

**PREREQUISITES TO THE MUSIC MAJOR:**

<table>

</tr>
<tr>
<td>MUSC 405 through MUSC 499</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

Note: MUSC405 satisfies the prerequisite but will not count toward the requirements for the major.

**MAJOR REQUIREMENTS**

Music majors take four courses in each of three capabilities: theory/composition, history/culture, and performance. Two additional courses from the MUSC300-level Seminars for Music Majors bring the number of music credits to 14. The required senior project or senior honors thesis brings the total number of music credits to 15 or 16, respectively. Diversity of musical experience is a core value of the Music Department and is expected of all music majors. To move toward this goal, at least two of the 14 music credits must be outside the student’s main area of interest.

The Music Department expects its majors to continue to refine and extend their performance skills throughout their undergraduate careers, which may mean accumulating more than 15 or 16 credits in music. No more than 16 credits in music may be counted toward the 32 credits required for graduation, however, and students must therefore complete 16 or 17 credits outside of music.

**COURSES FOR NON-MAJORS**

With the exception of MUSC300, all classes offered by the Music Department are open to non-majors.

**GENERAL EDUCATION**

Music majors are advised to complete their General Education Expectations (three each of HA, NSM, and SBS courses). Prospective majors who have not taken enough courses outside of the Music Department may be refused entry into the major. Students who fail to fulfill the General Education Expectations are generally not considered for department prizes and honors.

**STUDENT LEARNING GOALS**

**AT GRADUATION, MUSIC MAJORS WILL BE ABLE TO:**

- Think analytically and critically about musical languages, histories, and cultures
- Write effectively about music
- Perform and/or create music with proficiency and creativity
- Engage unfamiliar traditions and paradigms of humanly organized sound with sensitivity and insight
- Apply their musical knowledge and skills within broader investigations of the human experience

**ADVANCED PLACEMENT**

**AP THEORY CREDIT IS CONSIDERED AS FOLLOWS:**

**AP THEORY CREDIT ON THE STUDENT’S WESLEYAN TRANSCRIPT**

- Counts as one of the 4 theory/composition requirements for the music major
- Student needs to complete 3 additional theory/composition courses for the major

**PASSED THE AP TEST WITH A 4 OR 5 BUT WILL NOT HAVE THE CREDIT ON THE STUDENT’S WESLEYAN TRANSCRIPT**

- Student may begin theory coursework at a higher level
- Student will still be required to take 4 theory/composition courses for the major

**STUDENTS WITH QUESTIONS REGARDING AP THEORY**

- Should meet with the theory faculty of the Music Department teaching MUSC103 to discuss options

**PRIZES**

**MERIT-BASED AWARDS THAT MAY BE AWARDED ANNUALLY:**

**ELIZABETH VERVEER TISHLER PRIZE**

GWEN LIVINGSTON POKORA PRIZE
Established in 1993, awarded annually to the outstanding undergraduate student in music composition.

LEAVELL MEMORIAL PRIZE
Awarded annually to a senior who has done outstanding work in music and whose work manifests the ideals of the World Music Program in the Music Department.

LIPSKY PRIZE
The gift of the Reverend and Mrs. Bailey G. Lipsky in memory of their son, Francis Jules Lipsky, Class of 1931, to the member of the choir possessing in the highest degree unfailing kindliness, quiet dignity, and brilliant scholarship.

SAMUEL C. SILIPO PRIZE
Awarded annually for the most valuable player(s) of the Wesleyan orchestra.

ADDITIONAL INFORMATION

SPECIAL ACTIVITIES
The department supports a number of unusual activities, many of which are available to the student body in general as well as to music majors. Among them are ensembles in various Asian, African, American, and European traditions, as well as a variety of chamber ensembles.

PRIVATE LESSONS PROGRAM
Private lessons are available for many instruments and voice in Western art music, African American music, and a variety of other musics from around the world. Lessons are considered one-credit-per-semester courses. An additional fee, $780 per semester, is charged for these private lessons (financial aid may be available to students eligible for university financial aid). Approved music majors in their junior and senior years are eligible for partial subsidy when taking one (1) private lesson, per semester, for academic credit with a private lessons teacher.

DEPARTMENTAL COLLOQUIUM
An ongoing departmental colloquium is intended for the entire music community. It includes presentations by Wesleyan faculty, students, and outside speakers and encourages general discussion of broad issues in the world of music.

FACILITIES
The study facilities include a working collection of musical instruments from many different cultures; a music-instrument manufacturing workshop; a 45-piece Javanese Gamelan Orchestra; a large formal concert hall and a small multipurpose concert hall; an electronic music studio coupled to a professional recording studio; a computer-arts studio capable of producing electronic music, video art, and environmental simulations; a music and record library; an electronic keyboard lab; and an archive of world music.

MUSC530 Department of Music Colloquium 0.25

HONORS
The senior project requirement may be satisfied by the completion of an honors project, a project that may encompass a composition, a concert, etc., but the honors project always contains a substantial written component; for this reason it is called the honors thesis. An honors thesis satisfies the departmental requirement for a senior project, even if it is not awarded honors. The honors thesis tutorial is always a two-semester undertaking.

CAPSTONE EXPERIENCE
All music majors are required to complete a senior project by the end of their final year. The purpose of the project is to give focus to the major by means of independent, creative work and to encourage independent study with the close advice and support of a faculty member. Students who choose to undertake an honors thesis may count this as their senior project.

GRADUATE MUSIC PROGRAM
The World Music Program offers degrees at both the master’s and doctoral levels. The MA in music has concentrations in scholarship (ethnomusicology/musicology), experimental music/composition, and performance. The PhD is in ethnomusicology only. Many musics are represented by faculty members through teaching and performing African American, Indonesian, West African, the Caribbean, East Asian, South Indian (Karnatak), Euro-American, and experimental music, and there are many opportunities for individual and ensemble study/performance.

Director of Graduate Studies in Music: Roger Mathew Grant
COURSES

DEGREE OF MASTER OF ARTS
A total of 11 credits of coursework. Students are required to take MUSC510, four graduate seminars other than MUSC510 (two in the area of concentration), two performance courses, a course outside the department, a two-semester thesis tutorial (MUSC591/MUSC592), and four semesters of MUSC530.

DEGREE OF DOCTOR OF PHILOSOPHY
Satisfactory completion of courses totaling at least 12 credits. Students are required to take three core seminars (MUSC519, MUSC521, MUSC520/MUSC522), three elective graduate-level seminars other than the core seminars (two of which may be satisfied with appropriate courses already taken at the master's level), two credits of performance (in different musics), one course outside the department, two credits of thesis tutorial (MUSC591/MUSC592), and four semesters of MUSC530.

LANGUAGE REQUIREMENT
One foreign language is required for the MA. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

Two foreign languages are required for the PhD: one field language and one research language. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

PROGRESS AND QUALIFYING EXAMS
Qualification for the degree of doctor of philosophy. At the conclusion of the second year in residence, students take a qualifying examination consisting of a set of essays and a follow-up oral examination.

THESIS | DISSERTATION | DEFENSE

• Thesis and defense. The thesis must constitute an archivable product displaying mastery of and an original contribution to the understanding of an aspect of world music. The MA thesis may follow various formats and modes of musical investigation, but performance per se does not constitute a thesis without substantial written ancillary materials. Work such as bibliographies, translations, and journals do not normally constitute theses. After completing all department requirements and acceptance of the thesis by the committee, the candidate is scheduled for an oral thesis defense administered by the committee.

• Dissertation and defense. The dissertation must constitute an archivable product displaying mastery of and an original contribution to the understanding of an aspect of world music. After completing all department requirements and acceptance of the dissertation by the committee, the candidate is scheduled for an oral dissertation defense administered by the committee.

ADDITIONAL INFORMATION
For additional information, please visit the department website at wesleyan.edu/music/graduate. (http://wesleyan.edu/music/graduate)
Neuroscience and Behavior

Neuroscience is a discipline that probes one of the last biological frontiers in understanding ourselves. It asks fundamental questions about how the brain and nervous system work in the expression of behavior. As such, the field takes on a clear interdisciplinary character: All scientific levels of organization (behavioral, developmental, molecular, cellular, and systems) contribute to our understanding of the nervous system. Neuroscience has been a field of particularly active growth and progress for the past two decades, and it is certain to be an area where important and exciting developments will continue to occur.

At Wesleyan, the neurosciences are represented by the teaching and research activities of faculty members in the departments of biology and psychology. The neuroscience and behavior (NS&B) curriculum is both comprehensive and provides diverse approaches to learning. Through lecture/seminars, lab-based methods courses, and hands-on research experience, students are afforded a rich educational experience. Unique among schools of comparative size, Wesleyan has small but active graduate programs leading to BA/MA and PhD degrees. This attribute, together with the high success rate of faculty in obtaining research grant support, further enhances the education of undergraduates by providing additional mentoring, more research opportunities, and access to state-of-the-art laboratories. The mission of the NS&B program is to provide the foundation for a variety of career options in science, medicine, and private industry. For more information, see wesleyan.edu/nsb/ (http://wesleyan.edu/nsb).

Faculty

Gloster B. Aaron
BA, Oberlin College; PHD, University of Pennsylvania
Associate Professor of Biology; Chair, Neuroscience and Behavior; Director, WesMASS; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences

Barbara Jean Juhasz
BA, Binghamton University; MA, University of Massachusetts Amherst; PHD, University of Massachusetts Amherst
Jeffrey L. Shames Professor of Civic Engagement; Associate Professor of Psychology; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences; Coordinator, Civic Engagement

John Kirn
BA, University of Denver; MA, Bucknell University; PHD, Cornell University
Professor of Biology; Professor, Neuroscience and Behavior

Matthew M. Kurtz
BA, Reed College; MA, Princeton University; PHD, Princeton University
Professor of Psychology; Chair, Psychology; Professor, Neuroscience and Behavior

Psyche Loui
BS, Duke University; PHD, University of California, Berkeley
Assistant Professor of Psychology; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences

Janice R. Naegele
BA, Mount Holyoke College; PHD, Massachusetts Institute of Technology

Alan M. Dachs Professor of Science; Professor of Biology; Professor, Neuroscience and Behavior

Alison L. O’Neil
BS, Binghamton University; PHD, Montana State University
Assistant Professor of Chemistry; Assistant Professor, Neuroscience and Behavior; affiliated faculty

Andrea L. Patalano
BA, Brown University; MA, University of Michigan; PHD, University of Michigan
Professor of Psychology; Professor, Neuroscience and Behavior

Mike Robinson
BS, University of Sussex; MS, McGill University; PHD, McGill University
Assistant Professor of Psychology; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences

Charles A. Sanislow
BS, Northern Michigan Unv; MA, Ball State University; PHD, Duke University
Professor of Psychology; Professor, Neuroscience and Behavior

Helen B. Treloar
BS, University of Melbourne; PHD, University of Melbourne
Assistant Professor of the Practice in Neuroscience and Behavior

Affiliated Faculty

Stephen H. Devoto
BA, Haverford College; PHD, Rockefeller University
Professor of Biology; Professor, Neuroscience and Behavior

Visiting Faculty

Nihal C. de Lanerolle
BA, Cambridge University; DS, University of Sussex; MA, Cambridge University; PHD, University of Sussex
Adjunct Professor of Neuroscience and Biology

Departmental Advising Expert

Gloster Aaron

Neuroscience and Behavior Major

Admission to the Major

One or more of the foundation courses in biology (BIOL181, BIOL182) are prerequisites for the advanced NS&B courses offered by the Biology Department. Although not legislated as prerequisites, NS&B213 and NS&B laboratory courses provide important conceptual and practical background for independent research in the junior and senior years. The ideal course sequence would include
BIOL181 and BIOL182 along with chemistry in the first year. In the sophomore year, one would take NS&B213. The other required courses and research tutorials would be spread out over the last two years. For information on the pathway through the major, please visit wesleyan.edu/nsb/pathways.html for further information.

To be admitted to the major during March of the sophomore year, a student must have completed, with grades of C- or better, at least two of the full-credit courses listed in foundation and core courses that follow. At least one of these credits must be either NS&B213 or BIOL181.

MAJOR REQUIREMENTS

FOUNDATION COURSES

- BIOL181 Principles of Biology I
- BIOL191 Principles of Biology I-Laboratory
- BIOL182 Principles of Biology II
- BIOL192 Principles of Biology II-Laboratory
- CHEM141/CHEM142 Introductory Chemistry I/II or CHEM143/CHEM144 Principles of Chemistry I/II
- CHEM251/CHEM252 Principles of Organic Chemistry I/II
- Two additional courses from the following (beginning with the graduating class of 2016):
  - Physics (PHYS111 or PHYS112 or PHYS113 or PHYS116)
  - Psychology (PSYC105)
  - Mathematics (MATH117 or higher); and/or
  - Computer science (COMP112 or higher)

CORE COURSE

- NS&B213 Behavioral Neurobiology

ADVANCED COURSES

Five advanced courses from the following list are required for students; two must be cross-listed with biology; two cross-listed with psychology; and one, a research tutorial or methodological course. Some courses appear in both Biology and Psychology lists but may be counted only once, in either category.

Cross-listed with biology

- NS&B224 Hormones, Brain, and Behavior
- NS&B239 Functional Anatomy of the Human Brain*
- NS&B245 Cellular Neurophysiology
- NS&B252 Cell Biology of the Neuron
- NS&B254 Comparative Animal Behavior
- NS&B299 Waves, Brains, and Music
- NS&B303 Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function
- NS&B317 Neuroethics
- CHEM323/NS&B323 Biochemistry of Neurodegenerative Disease
- NS&B325 Stem Cells: Basic Biology to Clinical Application
- NS&B328 Chemical Senses
- NS&B343 Muscle and Nerve Development
- NS&B345 Developmental Neurobiology
- NS&B347 Mammalian Cortical Circuits
- NS&B351 Neurobiology of Learning and Memory

Cross-listed with psychology

- NS&B220 Cognitive Psychology
- NS&B221 Human Memory
- NS&B222 Sensation and Perception
- NS&B225 Cognitive Neuroscience
- NS&B227 Motivation and Reward
- NS&B228 Clinical Neuropsychology
- NS&B239 Functional Anatomy of the Human Brain*
- NS&B316 Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives
- NS&B317 Neuroethics
- NS&B329 Neural Costs of War
- NS&B341 Psychology of Learning and Memory
- NS&B342 Music Perception and Cognition
- NS&B348 Origins of Knowledge
- NS&B353 Neurobiology of Neurological Disorders*
- NS&B356 Neurodevelopmental Disorders*

Research methods and practica

- BIOL320 Quantitative Methods for the Biological and Environmental Sciences
- MATH132 Elementary Statistics
- NS&B210 Research Methods in Cognition
- NS&B215 Research Methods: Behavioral Methods in Animal Research
- NS&B243 Neurohistology
- NS&B247 Laboratory in Neurophysiology
- NS&B250 Laboratory in Cellular and Behavioral Neurobiology
- NS&B280 Applied Data Analysis
- NS&B383 Advanced Research in Learning and Memory
- NS&B390 Experimental Investigations into Reading
- NS&B392 Behavioral Methods in Affective Neuroscience
- NS&B398 Advanced Research in Auditory Cognitive Neuroscience
- NS&B399 Lab in Gambling, Drugs, and Junk Food
- NS&B409/NS&B410 Senior Thesis Tutorial or NS&B423/NS&B424 Advanced Research Seminar for two semesters, both in the lab of the same faculty member
- PSYC200 Statistics: An Activity-Based Approach

Note: MATH132 can be taken to meet requirements for either the methodological or foundation major requirements, but not both. Methodological courses cannot be credited toward the requirements of advanced courses cross-listed with biology or psychology. *Courses listed in both categories A. or B. can be counted only in A. or B. but not both.

Courses of relevance outside the program. Though not requirements of the major, students should be aware that courses in organic chemistry and molecular biology, as well as courses in non-neuroscience areas of biology and psychology, complement the NS&B major and should be considered, in consultation with your advisor, when planning your program of study.
SUBSTITUTING OUTSIDE COURSES FOR CREDIT TO THE MAJOR

Foundation courses: A student who has taken foundation courses outside of Wesleyan may be able to apply them to the major. As a general rule, courses acceptable to the biology, chemistry, and physics departments for university credit are acceptable to the NS&B program for substitution for foundation courses.

Advanced courses: Advanced courses, inside or outside of the University, might be acceptable as substitutes for the advanced courses of the NS&B major. In general, only one such course can be substituted, and approval must be obtained in advance from the program director.

UNDERGRADUATE RESEARCH

NS&B majors are encouraged to become involved in the research of the faculty. Research tutorials and senior thesis tutorials are taken with mode of grading and amount of credit to be arranged with the research supervisor. Research tutorials are numbered NS&B411/NS&B412, NS&B409/NS&B410, and NS&B423/NS&B424. These courses can fulfill the research methods requirement or can receive graduation credit. For the most up-to-date information on NS&B faculty research, please visit our program website (http://www.wesleyan.edu/nsb).

STUDENT LEARNING GOALS

Our program offers a curriculum that encourages fluency across multiple disciplines in the field of neuroscience and behavior. Immersion in this field requires thinking across multiple levels of analysis and an appreciation for how complex and broad questions can be made amenable to scientific inquiry. In terms of goals, we have three areas of knowledge that we expect all students to acquire by the time they have completed the NS&B major:

• Structure: The parts and how they connect. Structural knowledge includes neural development, neuroanatomy, neurotransmitters, and the cell and molecular biology of the neuron.

• Function: How the parts come together to produce systems. Such systems include various sensory, motor, and neuroendocrine systems. Knowledge concerning function is gained by studies of structures and studies of perception, learning and memory, behavior, and cognition.

• Theory: Governing principles that can be proposed from all the above. Examples of theories include those that address the relationships between brain and behavior, articulate how brain structure and function changes over time, and explain cognitive and perceptual processes.

In addition, it is our goal that all students can skillfully apply and analyze knowledge gained from their studies. Statistics courses, lab-based methods courses, and/or direct experience in research projects serve this goal.

ADVANCED PLACEMENT

AP credit may be used to place out of any of the foundation courses, subject to the guidelines of the department hosting these courses.

PRIZES

George H. Acheson and Grass Foundation Prize in Neuroscience: Established in 1992 by a gift from the Grass Foundation, this prize is awarded to an outstanding undergraduate in the Neuroscience and Behavior Program who demonstrates excellence in the program and who also shows promise for future contributions in the field of neuroscience.

BA/MA PROGRAM

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, please visit http://wesleyan.edu/grad/degree-programs/bama.html.

ADDITIONAL INFORMATION

• Teaching apprenticeships. Students may be appointed teaching apprentices with the approval of the participating faculty member and the Office of Academic Affairs. The apprenticeship position involves assisting a faculty member in the teaching of a course. Concurrently, the apprentice enrolls in an apprenticeship tutorial (NS&B491/NS&B492) that is usually a one-credit course and operates in either the graded or credit/no credit mode.

• Petitioning for exemptions. A student may request a variance from the requirements of the major or for honors by submitting a written petition to the chair of the program. The petition should indicate why the requirement cannot be met and the educational justification for the alternative. The petition will be considered by the NS&B faculty, and the student will receive a statement of the decision by letter.

• Seminars. The program periodically invites neuroscientists from outside Wesleyan to come here and describe their research. These seminars frequently complement course material and give students the opportunity to interact with noted researchers. The talks are usually scheduled for noon on Thursdays. Students are encouraged to attend.

HONORS

To be considered for honors, a student must be an NS&B major and have a B average (grade average 85) in the courses credited to the major. The student must submit a laboratory research thesis that was supervised by a member of the NS&B faculty and be recommended for honors by the NS&B faculty.
PHILOSOPHY

Doing philosophy means reasoning about questions that are of basic importance to the human experience—questions like, What is a good life? What is reality? How are knowledge and understanding possible? What should we believe? What norms should govern our societies, our relationships, and our activities? Philosophers critically analyze ideas and practices that often are assumed without reflection. Wesleyan’s philosophy faculty draws on multiple traditions of inquiry, offering a wide variety of perspectives and methods for addressing these questions.

FACULTY

Stephen Angle
BA, Yale University; PHD, University of Michigan
Mansfield Freeman Professor of East Asian Studies; Professor of Philosophy; Director, Center for Global Studies; Professor, East Asian Studies

Lori Gruen
BA, University of Colorado Boulder; PHD, University of Colorado Boulder
William Griffin Professor of Philosophy; Professor of Philosophy; Professor, Science in Society; Professor, Feminist, Gender, and Sexuality Studies; Coordinator, Animal Studies

PHILOSOPHY MAJOR

MAJOR DESCRIPTION

Doing philosophy means reasoning about questions that are of basic importance to the human experience—questions like, What is a good life? What is reality? How are knowledge and understanding possible? What should we believe? What norms should govern our societies, our relationships, and our activities? Philosophers critically analyze ideas and practices that often are assumed without reflection. Wesleyan’s philosophy faculty draws on multiple traditions of inquiry, offering a wide variety of perspectives and methods for addressing these questions.

Three broad categories organize our curriculum: history, value, and mind and reality. Historical courses focus primarily on classical philosophical texts, tracing the path of a particular philosopher’s work, a conversation within a historical period, or a series of related conversations. Courses in the value area engage critically with ethical, political, aesthetic, cultural, or religious practices and norms. Mind and reality courses consider philosophical questions about language, mind, reasoning, knowledge, and the nature of reality. Though each course is associated with one thematic area for organizational purposes, these three kinds of inquiry overlap significantly in practice.
Our introductory courses (200-249) are intended for both prospective majors and non-majors. (General-Education-only courses, with course numbers below 200, do not count toward the major.)

Intermediate courses (250-300) are generally not appropriate for first-year students, and some have explicit prerequisites. Intermediate-level classes tend to introduce students to a particular area of philosophy or to the discipline’s historical development at a higher level and in more depth than introductory classes.

Advanced courses (301-399) are typically organized as seminars for majors and other students with significant related preparation. In many cases, students participate with a professor in exploring an area of particular relevance to that professor’s research program. Advanced classes may focus on a particular figure in the history of philosophy or on a topic of contemporary importance.

**ADMISSION TO THE MAJOR**

All students planning to major will submit a major request form.

Prospective majors should pay particular attention to the prerequisites for intermediate and advanced courses when planning their schedules. Among other courses, PHIL201, PHIL202, PHIL205, PHIL212 and PHIL231 are required or recommended for a variety of subsequent courses.

Because philosophy ranges over subjects in other disciplines, such as economics, government, mathematics, physics, psychology, and religion, students considering philosophy as a major field are strongly advised to choose a balanced combination of solid liberal arts courses conforming to Wesleyan expectations for generalization.

Students who intend to apply for the social justice track will work with an advisor to submit a concentration proposal by the end of drop/add during their fifth semester.

**MAJOR REQUIREMENTS**

The philosophy major at Wesleyan offers two tracks: a general philosophy track and a social justice track. Both tracks require at least ten courses, including eight PHIL courses.

- **The general philosophy track** encourages students to explore a range of issues and approaches from various historical periods and cultural traditions.
- **The social justice track** emphasizes philosophers’ roles not only as theorists but also as agents of social and political change. Philosophical methods of conceptual and contextual analyses and careful argumentation provide important tools for grappling with real-world injustices. The social justice track supports students in tailoring their philosophical understanding and skills around a particular concern in an area of social justice, such as human rights, equality, social responsibility, environmental justice, etc.

**GENERAL TRACK**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introductory</td>
<td>History: PHIL 201-210</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Values: PHIL 211-229</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mind &amp; Reality: PHIL 230-249</td>
<td></td>
</tr>

<td>Intermediate</td>
<td>History: PHIL 250-265</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Values: PHIL 266-285</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mind &amp; Reality: PHIL 286-299</td>
<td></td>
</tr>
<tr>
<td>Advanced</td>
<td>History: PHIL 301-330</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Values: PHIL 331-360</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mind &amp; Reality: PHIL 361-399</td>
<td></td>
</tr>
</tbody>
</table>

Of the ten courses counted toward the general-track major, at least eight must be offered by the Philosophy Department; as many as two may be given in other departments or programs (e.g., College of Letters, Religion) that are relevant to the student’s program of studies in philosophy and are approved as such by the philosophy faculty.

In addition, students must satisfy the following:

- **Distribution requirement.** Students must count at least one course from each of the thematic areas (history, values, mind and reality).
- **Advanced course requirement.** All students must complete at least two advanced philosophy courses, in any philosophical area, during their junior or senior years.

**SOCIAL JUSTICE TRACK**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introductory</td>
<td>History -or- Mind &amp; Reality</td>

<tr>
<td>Electives</td>
<td>2 electives from PHIL</td>
<td></td>
</tr>
<tr>
<td>Thesis project</td>
<td>Optional</td>
<td></td>
</tr>
</tbody>
</table>

At the core of the social justice major track is a social justice concentration that brings together a student’s specific interests in social justice. Majors will submit proposals for acceptance to the track that will include three philosophy courses and two non-philosophy courses that fit together in a coherent concentration.
BELOW ARE TWO SAMPLE CONCENTRATIONS:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

<td></td>
</tr>
<tr>
<td>ANTH302</td>
<td>Critical Perspectives on the State</td>
<td></td>
</tr>
</tbody>
</table>

Sample Concentration 2: Challenging The Carceral State

Courses numbered below 250 are designed to be appropriate as first courses in philosophy. In addition, many of our courses numbered 250 and above are of interest to majors in related departments. (For example, students majoring in neuroscience or psychology often take PHIL286.)

In addition to the five-course concentration, students must satisfy the following:

- **One core course in either history or mind and reality.**
- **Advanced course requirement.** All students must complete at least two advanced philosophy courses, in any area, during both their junior or senior years.
- **Two other philosophy electives.**

STUDENT LEARNING GOALS

A course of study in philosophy is successful if only three interconnected things can happen:

- First, students are encouraged to practice and refine essential skills. These include close reading, following and evaluating paths of reasoning, participating charitably in dialogue, articulating values and priorities, recognizing alternative ways of framing and addressing a problem, and extending all of these skills into clear written work.
- Second, students become familiar with multiple philosophical approaches, thinkers, traditions, and themes. Good philosophical education does not require any particular canonical content, but students should become adept at recognizing connections across the philosophy curriculum and beyond. In addition to comparing different approaches to the same theme, students should come to appreciate connections among inquiries in broad thematic areas (inquiry into values, inquiry into reality, inquiry into knowledge).
- Third, students come to understand how philosophical inquiry relates to their own perspectives and priorities, including background concerns and academic interests beyond philosophy. No course of study in philosophy is wisely chosen unless it is substantially responsive to the knowledge, experiences, and problems that matter for each student. Working closely with an advisor, each student should find a balance between venturing into multiple philosophical areas and weaving a web of interconnected courses around personally salient priorities.

Graduates will be well prepared not only for graduate work in philosophy, but also for law, medicine, and a range of other academic and professional endeavors.

LANGUAGE REQUIREMENT

Knowledge of foreign languages is particularly useful for the study of philosophy and indispensable for serious study of the history of philosophy. It is therefore strongly recommended that students achieve reading fluency in at least one foreign language.

PRIZES

The Philosophy Department annually awards the Wise Prize for the best paper written in philosophy in the current year. This prize is usually awarded to a senior thesis written in philosophy, but it is not restricted to philosophy theses.

TRANSFER CREDIT

Students who entered Wesleyan as first-year students may count up to two courses taken outside Wesleyan toward the 10 required to fulfill the major. These should be preapproved by the student’s advisor. Under special circumstances, such as a full year spent studying philosophy at a British university, it is possible to count more external credits toward the major. Students transferring into Wesleyan should review their academic histories with their departmental advisor as soon as possible after arriving to determine which philosophy courses taken at previously attended schools will be counted toward the major.

ADDITIONAL INFORMATION

- **Philosophy colloquia.** Every year the department arranges a series of public presentations of papers by visiting philosophers and, occasionally, Wesleyan faculty or students.
- **Majors Committee and Philosophy Club.** The department encourages its majors and other interested students to participate actively in the life of the department by attending departmental talks and social events for majors. Students are also encouraged to organize student-led events and discussions organized by the Majors Committee and Philosophy Club.

HONORS

To qualify for departmental honors in philosophy, a student must achieve an honors level of performance in courses in the department, must declare the intention to work for departmental honors at the beginning of the senior year, must register for senior thesis tutorials in each semester of the senior year, and must write a thesis at an honors level. Theses must be submitted in accordance with Honors College procedures and will be judged by a committee made up of members of the department.
PHYSICAL EDUCATION

Wesleyan does not offer a major program in physical education. A for-credit program emphasizes courses in fitness, aquatics, lifetime sport, and outdoor education activities.

No more than one credit in physical education may be used toward the graduation requirement. Physical education (.25 credit) courses may be repeated once only.

Limited-enrollment courses. Students taking a class for the first time are given preference over students wishing to take a class a second time, and upper-class students have preference over lower-class students. Performance tests may be required to qualify for intermediate and advanced classes.

ATHLETICS AND PHYSICAL EDUCATION AT WESLEYAN—A STATEMENT OF PHILOSOPHY

"I have always thought that sports are an integral part of liberal education...The reason has to do with the difference between being active and remaining passive. Sports provide the occasion for being intensely active at the height of one’s powers. The feeling of concentrated and coordinated exertion against opposing force is one of the primary ways in which we know what it is like to take charge of our own actions."—Louis Mink

Professor Mink, in Thinking About Liberal Education, said that liberal education is an intensive quest for fulfillment of human potential. It challenges the whole person—mind, body, emotions, and spirit—to pursue mastery of skills, broad and focused knowledge, coherent understanding of human experience, and a passionate desire to exploit one’s capacity in the service of human freedom and dignity. As Mink suggests, structured physical activity is a key part of that pursuit. When it is in harmony with the broader educational purposes of an institution, it contributes to them, draws significance from them, and enhances the educational result.

The Department of Physical Education and Athletics provides the Wesleyan University community with a spectrum of activities that will be of benefit in developing healthy, energetic, and well-balanced lives. The objective is to meet the needs of students and to engage other campus constituencies in physical activity. Physical education and athletics at Wesleyan also reflect a commitment to equal opportunity for men and women at all levels of achievement.

Intercollegiate athletics provides the student with the advantage and privilege to achieve a more sophisticated mastery of skills through practice and contests. The pursuit of excellence can be realized through elite NCAA Division III competition with a focus on regular season and New England Small College Athletic Conference (NESCAC) conference play. In the pursuit of excellence, the Athletic Department strives to be the most innovative and successful athletic program in the prestigious NESCAC and a leader at the national level.

Wesleyan University pursues excellence in all of its programs. Athletics, as an integral part of the overall educational process, is uniquely positioned to enhance a liberal arts education. Wesleyan coaches share the same goal as the entire Wesleyan community: to transform the lives of our students. To achieve this goal, the University is committed to support our highly trained and dedicated faculty-coaches who practice their craft in state-of-the-art facilities.

Programmatic balance is a key criterion of physical education. The program is internally balanced to ensure equal opportunity for the pursuit of its several objectives. Moreover, physical education at Wesleyan is designed within the controlling context of liberal education.

FACULTY

Drew Black  
BS, Syracuse University; MA, Kent State University  
Adjunct Professor of Physical Education; Head Coach of Wrestling/Strength and Fitness Coach

PHYSICS

"Physics is the liberal arts education for a technological society."—Joseph Pimbley

Participation in research and proficiency in the main subject areas of physics are the twin goals of the physics program. The major program is designed to develop competency in quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed-matter physics. Preparation in mathematical and computational methods is an integral part of the program.

Interested and qualified students may pursue several opportunities for advanced work, including graduate courses and participation with graduate students and faculty in research. The department encourages its students to "do physics" at the earliest opportunity by making arrangements to work with one of the research groups or by arranging an independent research tutorial. Research may be experimental or theoretical and may, but need not, result in a senior honors thesis. Most majors who intend to write a thesis begin research no later than the junior year and continue it through the summer into the senior year. Current research interests include chaos theory, soft condensed-matter physics, granular flow, third sound in superfluid films, laser plasmas, spectroscopy, collision studies involving excited atoms and molecules, and wave transport in complex media.

Many students also take advantage of Wesleyan's computing facilities in their research or coursework. The University has a large computer cluster available to all who are doing research.

Each semester, opportunities exist to serve as a teaching apprentice, course assistant, or department assistant in one of the introductory or intermediate-level courses. Many physics majors have found that this is a stimulating way to learn more about the fundamentals of the discipline and how to teach them. The Cady Lounge in the department serves as a focus for the major by providing a place where students can study and discuss physics. There is also a study room where students in the introductory courses can come to get help and to work together. Students are encouraged to attend the weekly colloquium series and to participate in the weekly research seminars in atomic and molecular physics, chemical physics, condensed-matter physics, and theory. The Society of Physics Students is also a great resource for sharing ideas and questions with like-minded students.

FACULTY

Reinhold Blümel
PHD, Technical University Munich
Charlotte Augusta Ayres Professor of Physics; Professor of Physics; Co-Coordinator, Informatics and Modeling

Fred M. Ellis
BS, University of Massachusetts Amherst; MAA, Wesleyan University; PHD, University of Massachusetts Amherst
Professor of Physics

Candice M Etson
BA, New York University; BFA, New York University; PHD, Harvard University
Assistant Professor of Physics; Assistant Professor, Integrative Sciences; Assistant Professor, Molecular Biology and Biochemistry; Assistant Professor, Chemistry

Lutz Hüwel
PHD, University of Gottingen

Professor of Physics

Tsampikos Kottos
BA, University of Crete; MS, University of Crete; PHD, University of Crete
Professor of Physics; Professor, Integrative Sciences; Professor, Mathematics

Thomas J. Morgen
BA, Montana State University; BS, Montana State University; MAA, Wesleyan University; MSC, University of California, Berkeley; PHD, University of California, Berkeley
Foss Professor of Physics; Professor of Physics

George Mathew Paily
MSC, Indian Institute of Technology
Assistant Professor of the Practice in Physics

Meng-ju Renee Sher
BA, Wesleyan University; MA, Harvard University; PHD, Harvard University
Assistant Professor of Physics; Assistant Professor, Integrative Sciences; Assistant Professor, Environmental Studies

Francis W. Starr
BS, Carnegie Mellon University; MS, Boston University; PHD, Boston University
Professor of Physics; Professor, Integrative Sciences; Professor, Molecular Biology and Biochemistry; Coordinator, Integrated Design, Engineering and Applied Science

Brian A. Stewart
BS, Stanford University; PHD, Massachusetts Institute of Technology
Professor of Physics; Professor, Environmental Studies; Professor, Integrative Sciences

Min-Feng Tu
BS, National Tsing Hua University; MS, California Institute Tech
Assistant Professor of the Practice in Physics

Greg A. Voth
BS, Wheaton College; MS, Cornell University; PHD, Cornell University
Professor of Physics; Chair, Physics; Professor, Integrative Sciences

EMERITI

Ralph F. Baierlein
BA, Harvard University; MAA, Wesleyan University; PHD, Princeton University
Charlotte Ayres Professor of Physics, Emeritus

Richard W. Lindquist
BS, Worcester Poly Institute; MA, Princeton University; MAA, Wesleyan University; PHD, Princeton University
Professor of Physics, Emeritus

Robert J. Rollefson
BA, University of Wisconsin at Madison; MAA, Wesleyan University; PHD, Cornell University
Professor of Physics, Emeritus

William L. Trousdale
Associate Professor of Physics, Emeritus
DEPARTMENTAL ADVISING EXPERTS

- Tsampikos Kottos, Class of 2019
- Brian A. Stewart and Meng-Ju Renee Sher, Class of 2020

PHYSICS MAJOR

ADMISSION TO THE MAJOR

The appropriate course for students considering a physics major depends primarily on their preparation. There are four common gateways into the major beginning in the fall semester.

- PHYS113 is a calculus-based introductory mechanics course requiring one semester of calculus, taken in either secondary school or in college, at about the level of MATH121. A student who has had no calculus is advised to take calculus during the first year, then PHYS113 in the first semester of the sophomore year.
- Students who have had a strong preparation in physics and calculus may take PHYS219. This course is intended for majors but is available to first-year or other students who have had both integral and differential calculus at about the level of MATH121/MATH122 and a solid course in mechanics with calculus at the level of PHYS113.
- Students from both of the above gateways merge into the electricity and magnetism course of PHYS116 in the spring. Students intending to major in physics should complete either track no later than the end of their sophomore year and preferably by the end of their first year.
- Exceptionally well-prepared students may begin with PHYS213. Students who feel that they fall into this category should consult with a member of the physics faculty.

Laboratory courses. The PHYS113/PHYS116 sequence has associated laboratory courses, PHYS123 in the fall and PHYS124 in the spring. These laboratory sections are half-credit courses associated with the lecture courses. PHYS124 is required for the major. We encourage students to take the laboratory courses for a firsthand opportunity to observe, both qualitatively and quantitatively, some of the physical phenomena discussed in the lectures.

MAJOR REQUIREMENTS

To major in physics, you must complete PHYS116 no later than the end of your sophomore year; if you can complete it by the end of your first year, it will give you more flexibility to construct your major. You should also have completed MATH121, MATH122, MATH221, and MATH222 by the end of your sophomore year. It is desirable for those students who are considering graduate work in physics or those who wish to pursue an intensive major to also complete PHYS213 and PHYS214 by the end of the sophomore year. You should note that a few of the advanced courses may not be offered every year, and you should plan your program of study accordingly.

To fulfill the major in physics, a student must complete the following:

- Eight lecture courses, including (a) four core physics courses: PHYS213, PHYS214, PHYS316 and PHYS324 (note that PHYS324 requires MATH222); and (b) at least four other course credits at the 200, 300, or 500 level, not including the laboratory courses or MATH221 or MATH222. For most majors, the department strongly recommends PHYS315, followed in importance by PHYS313 and PHYS358.
- Two laboratory courses: PHYS342 and PHYS345. One of these two labs may be substituted by either one of the following three options:
  - PHYS430;
  - A 1-credit tutorial (PHYS409 or PHYS410) with a physics faculty;
  - A 1-credit research tutorial (which may be taken as two .5-credit research tutorials) with a physics faculty.
- Students planning graduate study in physics should take a minimum of 14 credits at the 200 level or higher in physics, mathematics, and computer science. PHYS313, PHYS315, and PHYS358 are essential. In addition, the department strongly recommends MATH222, MATH226, MATH565, and MATH229. Graduate physics courses may be elected with permission, and experience in computer programming is also extremely valuable.
- Students not planning graduate study in physics and who are interested in applying their knowledge of physics to other areas of the curriculum may choose up to four courses from other departments to satisfy requirement (b) above. This must be done in consultation with the physics major advisor, and the selections must constitute a coherent, coordinated program of study. Preapproved tracks are available to satisfy requirement (b).

COURSES FOR NON-MAJORS

The Physics Department offers two two-semester survey courses covering many of the main subject areas of physics (mechanics, electromagnetism and optics, thermodynamics, and kinetic theory), PHYS111/PHYS112 (no calculus) and PHYS113/PHYS116 (calculus). Associated laboratory courses, PHYS121/PHYS122/PHYS123/PHYS124 are also offered. Either of these two-semester course sequences (with the lab) should satisfy the physics requirement for admission to most schools of medicine, dentistry, or architecture, but occasionally schools require the calculus-based series, so attention to these details is necessary.

STUDY ABROAD

The Physics Department encourages study abroad for majors because it allows our physics majors to play an active part as citizens of the world scientific community. As with any major, careful planning is needed to be sure that requirements for the major are fulfilled, and sophomores intending to declare a physics major are strongly urged to study these requirements for the major so that they can determine the optimum semester to study abroad. At Wesleyan, we believe that the best study-abroad experience will include work done in the major, because this provides the student with a natural community of fellow students with shared interests and backgrounds and greatly facilitates the process of cultural integration. Physics majors are thus urged to consider direct enrollment in a university abroad, where they can take courses related to their major interests.

ADVANCED PLACEMENT

Students may receive a maximum of two physics AP credits; one with a score of 5 on the AP physics C mechanics exam and one with a score of 5 on the AP physics C electricity and magnetism exam. However, special regulations apply. Please
check with the registrar or a departmental advisor. Students may also receive
AP credit with a score of 5 on the noncalculus AP physics exam. Again, special
regulations apply.

RELATED PROGRAMS OR CERTIFICATES

Dual-degree programs in science and engineering. Wesleyan maintains
dual-degree programs with Columbia University, the California Institute of
Technology, and Dartmouth College for students wishing to combine the study
of engineering with a broad background in the liberal arts. For all options,
participating students receive two degrees: a BA from Wesleyan and a BS or BE
in engineering from our partner school. In the most popular option, the so-called
3-2 program, students spend their first three years at Wesleyan, followed by
two years at the engineering school. Only at the end of the fifth year and after
completing all degree requirements from both schools do students receive the
two bachelor degrees. During the first three years, prospective 3-2 students
complete the minimal requirements of their elected Wesleyan major and, in
addition, fulfill science and mathematics requirements for the first two years of
the engineering school and engineering major of their choice. During the two
years at the engineering school, students follow the regular third- and fourth-
year curriculum in whatever field of engineering they selected. During that time,
other courses may also have to be taken to satisfy the degree requirements of
Wesleyan and/or the engineering school.

Two other options exist to pursue an engineering degree. For Columbia
University, the so-called 4-2 option allows students to complete four years at
Wesleyan before pursuing the engineering degree. Otherwise, requirements
are the same as those for the 3-2 program. Dartmouth offers a so-called 2-1-1-1
option in which students spend their junior year at Dartmouth, return to
Wesleyan for their senior year and graduation, and then spend the fifth year to
finish the engineering degree. Contact the department’s dual-degree advisor for
further information. Please also consult with your class dean to ensure that you
can meet all Wesleyan University requirements for graduation.

in Informatics and Modeling enhances student choices and options and is
an ideal supplement for interested physics majors. The certificate program
provides students with a coherent set of courses and practical instruction in two
pathways: (1) integrative genomics science and (2) computational science and
quantitative world modeling.

BA/MA PROGRAM

This is a curricular option for those students who feel the need for the intensive
research experience that an additional year of study can afford. During the
additional year, the student will do additional coursework and write an MA
thesis based on original research. Students interested in this possibility should
consult their physics major advisors as early as possible, since it takes some
planning to complete the requirements for both the BA and MA degrees. For
more information, please visit wesleyan.edu/grad/degree-programs/bama.html
(http://www.wesleyan.edu/grad/degree-programs/bama.html).

HONORS

To be a candidate for departmental honors in physics, a major must submit
a thesis describing the investigation of a special problem carried out by the
candidate under the direction of a member of the Physics Department. In
addition, the candidate must have attained a minimum average in the eight
lecture courses applied to the major, except those taken in the final semester
of the senior year, of B (85.0) for honors and B+ (88.3) for high honors. Honors
status is voted by the faculty on the basis of student’s thesis work.

CAPSTONE EXPERIENCE

The Physics Department offers the following capstone experiences:

- Two-semester senior thesis
- Seminar in atomic and molecular physics (PHYS507/PHYS508)
- Seminar in condensed matter physics (PHYS505/PHYS506)
- Seminar in theoretical physics (PHYS509/PHYS510)

GRADUATE PHYSICS PROGRAM

The Physics Department offers graduate work leading to the PhD and MA.
The small size of the program (12 full-time faculty and about 15 graduate
students) permits the design of individual programs of study and allows the
development of a close working colleagueship among students and faculty. The
department wants its students to do physics right from the start, rather than
spend one or two years solely on coursework before getting into research. To
this end, graduate students are expected to join in the research activities of the
department upon arrival. An interdisciplinary program in chemical physics is
available to interested students. For more details, see the listing for chemical
physics in the Chemistry Department.

REQUIREMENTS FOR THE DEGREE OF MASTER OF ARTS

A minimum of eight credits with grades of B- or better is required for the MA
degree. These may include three credits in research leading to the thesis, which
is also required. Course selection is flexible and is done in consultation with the
faculty advisor and with the members of the student’s committee.

REQUIREMENTS FOR THE PHD DEGREE

For the PhD degree, in addition, students must have taken (or placed out of)
five PhD-level graduate core courses and five advanced topics courses. Students
must have demonstrated proficiency in the main subject areas of physics by
the time they have completed the program. Each student, after passing the
first examination (see below), selects an advisory committee of three faculty
members. The committee assists the student to design a program of study,
monitors progress, and makes annual recommendations to the department
regarding the student’s continuation in the program. The advisory committee
also administers subsequent examinations, as described in Overview and
Requirements.

Each student who has passed the candidacy examination (described in Overview
and Requirements) is required to present an annual informal talk on his or her
thesis work in a departmental seminar.

COURSES

In consultation with the advisory committee (or, for incoming students, with
the graduate advisor), each student plans a program of study that will ensure
an adequate grasp of the main subject areas of physics, e.g., quantum theory,
including atomic and condensed-matter physics, electromagnetism and optics,
classical dynamics, and thermal and statistical physics. While these would normally be graduate-level (500) physics courses, under special circumstances, either a lower-level physics course, a course in a related discipline, or a tutorial may be chosen.

PROGRESS AND QUALIFYING EXAMS

Three formal examinations serve to define the various stages of the student’s progress to the degree. The first, usually taken at the beginning of the second year, is a written examination on material at an advanced undergraduate level. Advancement to the second stage of candidacy depends on passing this examination as well as on coursework and demonstrated research potential. Usually during the second semester of the second year, each student takes the PhD candidacy examination, which consists of an oral presentation before the student’s advisory committee, describing and defending a specific research proposal. (The proposal might, but need not, grow out of previous research or be adopted by the student as a thesis topic.) The committee then recommends to the department whether to admit the student to the final stage of PhD candidacy or whether to advise the student to seek an MA degree.

TEACHING

Although the emphasis in the program is on independent research and scholarly achievement, graduate students are expected to improve their skills in teaching and other forms of oral communication. Each student is given the opportunity for some undergraduate teaching under direct faculty supervision. While this usually consists of participation in teaching undergraduate laboratories, direct classroom teaching experience is also possible for more advanced and qualified students.

RESEARCH

Current experimental research areas are concentrated in atomic/molecular physics and condensed matter physics. Current interests include Rydberg states in strong fields, molecular collisions, photo-ionization, laser-produced plasmas, quantum fluids, granular and turbulent fluid flows, lipid membranes and hydration dynamics, single-molecule biophysics, and optoelectronics of renewable energy materials.

Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, and wave transport in complex media.

THESIS | DISSERTATION | DEFENSE

Each candidate is required to write a dissertation on original and significant research, either experimental or theoretical, supervised by a member of the faculty. The work must be defended in a final oral examination administered by the advisory committee. This oral examination covers the dissertation and related topics and is open to all members of the Wesleyan community. It is expected that the candidate will submit the results of his or her work to a scholarly journal for publication.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/physics/graduate (http://wesleyan.edu/physics/graduate).
Psychology is the scientific study of mind, brain, and behavior. Areas of psychology represented in the department include human development, social psychology, cognitive psychology, cultural psychology, neuroscience, and psychopathology. Psychology majors receive broad training across these areas, have opportunities to pursue topics of particular interest in greater detail, and develop skills in research methods and statistics. Many majors also take advantage of opportunities to work in research laboratories, to serve as teaching assistants, and to participate in service learning courses. Students interested in this major are strongly encouraged to visit the Psychology Department (http://www.wesleyan.edu/psyc) and to download and read the Department Majors Manual for more detailed information, as early planning is important for preparing to declare and complete the major.

**AFFILIATED FACULTY**

**Cynthia Matthew**
Visiting Scholar in Psychology

**VISITING FACULTY**

**Stacy Nicole Fambro**
Students wishing to declare a major in psychology should prepare as early as possible because declaration must be done during sophomore year. Psychology does not admit students to the major after the end of the sophomore year. Junior transfer students have until the end of the first week of the junior year and must meet all admission requirements, as listed below, at their previous institution.

At the time of application, a student must demonstrate that he or she (1) has taken two full-credit courses in the field of psychology at Wesleyan and received a B or higher in each course; (2) has completed the introductory psychology (or a replacement breadth course that allows an AP or IB credit in place of introductory psychology), research methods, and statistics requirements for the major (these same courses may be used to fulfill the first requirement as well); and (3) has fulfilled the University’s stage I General Education Expectations. If a student is enrolled in courses needed to complete these requirements during the second term of the sophomore year, the student should still declare the major; we will just not formally admit the student until the end of the term upon successful completion of these courses. Students with outstanding requirements to complete are required by the Dean's Office to either declare a second major or submit a major deferral form to their class dean in the event they are unable to successfully complete the admission requirements for psychology. Transfer students must receive a B or higher in each of two psychology courses from their previous institution.

Ten psychology credits and General Education Expectations stages I and II are required for completion of the major. Nine of the 10 credits required for the major must be taken for a grade. Courses in introductory psychology and psychological statistics must be taken for a grade. Required elements of the major are introductory psychology (one credit), psychological statistics (one credit), research methods (one credit), one breadth course from each of three areas of psychology (three credits), a specialized course (one credit), and three additional elective credits that can come from any courses and tutorials associated with the major. (This description includes the already-completed requirements for admission to the major.) All courses must be completed by the end of the senior year.

**INTRODUCTORY PSYCHOLOGY**

PSYC105, a lecture class that provides a broad overview of the field, is required for the major and should typically be the first course taken in the major. The course must be taken graded if used for the major. The course should be taken in the first or second year. One can alternatively transfer a psychology AP or IB credit in place of this course (see the Advanced Placement section). Only one can be counted toward the major.

**PSYCHOLOGICAL STATISTICS**

A psychological statistics course provides an introduction to data analysis in psychology. PSYC200 or PSYC280 is typically used to fulfill this requirement, but ECON300 is acceptable as well. The course must be taken graded if used for the major. A course in statistics should be taken in the first or second year (some research methods require statistics as a prerequisite). Only one may be counted toward the major.
RESEARCH METHODS
A research methods course trains specific skills for evaluating and performing research. Research methods courses are numbered PSYC202-219. Some of these courses are more general, while others are focused on particular applications as indicated by their titles. A 200-level course in research methods should be taken in the first or second year (some research methods require statistics as a prerequisite).

BREADTH REQUIREMENT
Students are expected to develop knowledge across the entire field of psychology. Toward this goal, students must choose a minimum of one course from each of the three columns below. These breadth courses (numbered PSYC220-279) can be taken throughout one's four years. When possible, a student should start with breadth courses of particular interest so that he or she can later do more advanced work in these areas.

SPECIALIZED
These courses (PSYC300-399) aim to ensure that students study at least one subfield of psychology in depth. These courses have a variety of formats, including seminars and advanced research labs, and admission is typically by permission of instructor. A student must take at least one specialized course that deepens the knowledge she or he gained in a breadth course.

ELECTIVES
To reach the 10 course credits necessary for the major, one may count any other courses, tutorials, or teaching apprenticeships offered by the department or creditable to the major with the exception that only one introductory psychology and one statistics course may be counted towards the major, and no more than two teaching assistantships and four tutorials (or six including senior thesis tutorials) may be counted towards the major. For electives, two half-credit courses may be used in place of one full-credit course. Some courses (cross-listed with psychology or hosted in other departments) can be used as electives for the major but fulfill no other requirements and cannot be used for admission to the major. See Department Majors Manual (http://www.wesleyan.edu/psyc/about-major_guides.html) for details.

COURSES FOR NON-MAJORS
PSYC105 is appropriate for nonmajors.

GENERAL EDUCATION
Stage I General Education Expectations must be satisfied at the time of admission to the major (six different departments, please refer to WesMaps for GenEd area and department). Students enrolled in courses needed to complete admission requirements during the second term of their sophomore year should still declare the major but will not be formally admitted until the end of the term upon successful completion of these courses. Students with outstanding requirements to complete should either declare a second major or submit a major deferral form to their class dean in the event they are unable to successfully complete the admission requirements for psychology. Fulfilling stage II General Education Expectations is required for completion of the major.

STUDENT LEARNING GOALS
The psychology department learning goals are organized by four objectives:

Objective 1: Knowledge Base in Psychology
- To understand and interpret basic theoretical perspectives, scientific principles, and empirical findings in three major content areas of psychology: (1) neuroscience and/or cognition, (2) psychopathology and/or developmental psychology, and (3) social and/or cultural psychology.
- To learn how to formulate research questions and conduct psychological studies.
- To obtain skills in statistical and data analysis techniques, quantitative and qualitative, and apply these techniques to psychological studies.

Objective 2: Scientific Inquiry and Critical Thinking
- To critically assess scientific methodologies in psychology and human behavior, including:
  - understanding hypothesis formation;
  - applying standardized, reliable, and valid outcome measures; and
  - applying sound data-analytic techniques.
- Integrate knowledge and methodologies across different kinds of observation in the study of human behavior and mental processes, including
Objective 3: Ethical and Social Responsibility

- Recognize the necessity for ethical behavior in all aspects of the science and practice of psychology
- Critically evaluate relations of psychological and behavioral knowledge with social policy, public health, and clinical practice.
- Use psychological knowledge to clarify social disparities, and to promote human well-being and change in a multicultural and global context.

Objective 4: Communication

- Acquire effective communication skills by disseminating research findings through skill-building in oral expression and expository writing.

STUDY ABROAD

Any courses taken abroad must be preapproved by the department chair.

ADVANCED PLACEMENT

Students who receive an AP score of 4 or 5 or an IB (International Baccalaureate) score of 6 or 7 and complete a full-credit breadth requirement course with a grade of B or better, can receive one credit for the AP score. This credit will fulfill the introductory course requirement only if it appears on the Wesleyan transcript. After completing the necessary breadth course, the student must contact the Registrar’s Office for the AP credit or contact the Deans’ Office for the IB credit to have it transferred. AP/IB credits count as transfer credits. AP/IB credits apply toward oversubscription. The AP/IB credit counts as the one nongraded course allowed toward the major. AP/IB credits may not be used toward major admission. The preregistration system is now granting a prerequisite override for courses in which PSYC105 would satisfy the requirement for students with an AP score greater than 3.

TRANSFER CREDIT

Students may transfer up to three psychology credits from other departments or institutions (including AP/IB psychology) or, if from study abroad, three psychology credits plus one credit from within the United States. These courses must be preapproved by the department chair. Even though a transfer credit may have been approved toward a University credit, it must also be specifically approved toward the psychology major. Transfer credits cannot be counted toward admission to the program except for transfer students. (Please request the Registrar’s Office or your class dean to send a copy of your transcript from your previous institution to the psychology department, so that all your psychology courses can be reviewed for acceptance to the major.) With the chair’s preapproval, transferred courses can be used to fulfill specific department requirements (e.g., a breadth course, a statistics course). Some transfer courses are not given a full (1.00) transfer credit and therefore the 10 credit requirement needs to be completed with other psychology courses.

RELATED PROGRAMS OR CERTIFICATES

Concentrations: Students are not obligated to do a concentration within psychology, and the vast majority of students do not specialize in a particular area. However, we do have two concentrations within the major—in cognitive science and in cultural psychology. These are essentially ways of traversing the major (with a few additional courses) for students who would like to organize their coursework around either of those two themes. Concentrations are not declared at major declaration. Rather, a requirements worksheet for each concentration is to be turned in by early February in the second semester of the senior year. Students who successfully complete the requirements will receive a departmental certificate indicating completion.

- Cognitive Science Concentration. Cognitive science is the interdisciplinary study of mental processes. Many areas of psychology contribute to the study of cognitive science, including cognitive psychology, developmental psychology, and cognitive neuroscience, fields that most typically use scientific research methods to study human mental processes. Beyond psychology, scholars use diverse methods to study mental processes in humans and nonhumans, including fields such as philosophy of mind, neuroscience and behavior, artificial intelligence, linguistics, education, and others. The focus of coursework within our department involves understanding the mental and underlying neural processes involved in areas such as human perception, attention, memory, language, and reasoning; as well as the development of these processes over the life span; and participation in laboratory research is expected. See the Cognitive Science Concentration Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.

- Cultural Psychology Concentration. Cultural psychology considers how the vast domain of culture and society is studied by psychologists, how cultural dynamics influence individuals, and how cultural practices define the various psychologies we practice. Many areas within psychology contribute to the study of cultures, including psychological measurement; social psychology, both experimental and qualitative; clinical psychology; developmental psychology; historical psychology; and cultural psychology. Beyond psychology, scholars in allied human sciences contribute to better understanding the dynamic relation of culture and psychology. Methods and theories abound in culture and psychology. Some focus on comparative research, others on ways of bringing the presence of underrepresented populations into scholarly projects, and some examine sociopolitical differences both between and within societies. While investigating social structures such as race, ethnicity, religion, gender, sexuality, and class is often central to works in this area, also of importance is understanding how such forces come to manifest themselves within the field of psychology and in our collective psychologies. See the Cultural Psychology Concentration Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.

BA/MA PROGRAM

The psychology department offers the BA/MA degree program. Wesleyan senior psychology majors may only enroll in the fall semester. For more information, please visit the Office of Graduate Student Services (http://www.wesleyan.edu/grad).

HONORS

By the beginning of their spring semester junior year, psychology majors who have earned at least a B+ average in all psychology courses and at least a B average in all nonpsychology courses are eligible to pursue honors in psychology by writing a thesis. A student must have a faculty advisor to write a thesis. An advisor should be secured by spring of the junior year through discussion with
appropriate faculty. Honors will be awarded only if both the advisor and a second faculty reader evaluate the thesis worthy of honors.

**CAPSTONE EXPERIENCE**

Students interested in research opportunities are encouraged to develop statistics and research methods skills as early as possible, to develop broad knowledge in the research area of interest, and to then apply for permission of the instructor to enroll in an advanced research seminar. Speaking with individual faculty members about research opportunities that might be available in their labs is also appropriate.
The Quantitative Analysis Center (QAC) coordinates support for quantitative analysis across the curriculum and provides an institutional framework for collaboration across departments and disciplines in the area of data analysis. Through its programs, it facilitates the integration of quantitative teaching and research activities and provides experiential learning opportunities in statistical computing across academic fields and disciplines. The Center contributes to the development of digital and computational studies initiatives, sponsors data analysis labs, and oversees the Data Analysis Minor (p. 157) and the Applied Data Science Certificate (p. 196) programs.

**FACULTY**

Robert Ira Kabacoff  
BA, University of Connecticut; PhD, University of Missouri, St. Louis  
Professor of the Practice in Quantitative Analysis

Emmanuel I. Kaparakis  
Director of Centers for Advanced Computing; Director, Center of Quantitative Analysis; Adjunct Assistant Professor of Quantitative Analysis

Valerie L. Nazzaro  
BA, University of Connecticut; MA, University of Connecticut; MS, University of Connecticut; PhD, University of Connecticut  
Assistant Professor of the Practice in Quantitative Analysis

Pavel V Oleinikov  
Associate Director, Quantitative Analysis Center; Adjunct Assistant Professor of Quantitative Analysis

**AFFILIATED FACULTY**

William S. Boyd Jr  
BA, Rhodes College; MA, The University of Memphis; PHD, University Tennessee Memph  
Visiting Scholar in the Quantitative Analysis Center

Jennifer S. Rose  
BA, University of Rhode Island; MA, University of Rhode Island; PHD, University of Rhode Island  
Professor of the Practice in the Center for Pedagogical Innovation; Director, Center for Pedagogical Innovation; Director, Institutional Review Board; Professor of the Practice, Quantitative Analysis Center

**VISITING FACULTY**

Stephen Busemeyer  
BA, University of Hartford  
Visiting Instructor in Quantitative Analysis

Jielu Yao  
BS, Fudan University; MSC, National University of Singapore  
Research Fellow in the Quantitative Analysis Center

**ADVISORY BOARD**

Francis Starr, Professor of Physics, Chair  
Erika Franklin Fowler, Associate Professor of Government  
Daniel Krizanc, Professor of Computer Science  
Manolis Kaparakis, Director of Centers for Advanced Computing, ex officio  
David Baird, Vice President for Information Technology and CIO  
Marc Eisner, Professor of Government and Dean of the Social Science  
Diane Klare, Head of Research Services, Olin Memorial Library

NOTE: at least one of the electives should be a 300 level course

**ADDITIONAL INFORMATION**

- There may be prerequisite courses required for some of the courses that count toward the minor, such as calculus. These prerequisites do not count toward the minor, and students attempting to complete the minor are not excused from these prerequisites.

- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.

- Computer science majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.

- Economics majors and minors cannot count ECON300 toward the minor and must instead complete one course from each of the other two foundation groups.

- Students cannot count more than one course toward this minor that is also counted toward completion of any other of their majors or minors.

- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the minor, subject to the QAC Advisory Committee’s approval (where routine approval may be delegated to the QAC Director).

- A more advanced course can substitute for the basic knowledge course, subject to approval. Students with good quantitative skills are strongly encouraged to do this.

- Students cannot receive both the data analysis minor and the Applied Data Science Certificate (p. 196).
The Religion Department offers a cross-cultural, interdisciplinary, and critical program that explores the variety of religious experiences and expressions. In addition to courses that demonstrate the power and limits of various critical approaches to the study of religion, the department provides opportunities to analyze practices of interpretation, systems of belief, and patterns of religious behavior; the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection.

A range of courses is available to students interested in taking one or two courses. Clusters of courses can be devised in consultation with members of the department for those who wish to develop a modest program in religion in support of another major. A student who chooses a double major must fulfill all requirements for the religion major.

**FACULTY**

**DEPARTMENT ADVISING EXPERT**

Mary-Jane Rubenstein

**RELIGION MAJOR**

The department offers four categories of courses through which students organize their curriculum of studies. Please note that some courses fit more than one category; check the “additional requirements and/or comments” section of the WesMaps listing for a course’s official designation(s). None of our courses have prerequisites.

- **REL151.** The purpose of this course is to introduce students to the academic study of religion. It is not designed to survey the religions of the world or present an overview of global religious diversity. Rather, it uses a series of empirical case studies to explore methodological and theoretical issues in the study of religion by examining (1) the various intellectual tools used in religious studies; (2) the social, political, economic, and cultural context of those tools; and (3) the debates arising from their use.

- **Historical Traditions courses.** Many courses in the department deal with the historical content of major religious traditions such as Buddhism, Christianity, Hinduism, Islam, and Judaism, as well as shamanic, Afro-Caribbean, and classical and modern Chinese traditions. These courses examine the texts, histories, institutions, and rituals of these religions. In this category there are both survey courses (generally numbered at the 200-level) and seminars (generally numbered at the 300-level). In general, courses that are not thematic approach or method and theory courses are considered historical traditions courses.

- **Thematic Approach courses.** Thematic approach courses examine specific problems, questions, or themes that intersect with the study of religion. These include gender, race, politics, sex, law, science, and colonialism. Thematic approach courses may focus on one religious tradition or draw comparatively between traditions, but all are intended to provide tools for exploring and analyzing historical and contemporary phenomena.
• Method and Theory courses. These courses review and critically analyze methods, theories, and strategies employed by scholars of religion. Method and theory courses include the department’s RELI398, which is required of allmajors and to be taken in the junior year. The task of this course is to reflect upon the theoretical and methodological pluralism in the field of religious studies with the opportunity to apply these theories and methods to specific texts, concrete issues, or other cultural formations.

**ADMISSION TO THE MAJOR**

All majors are required to take RELI151, in which they must earn a grade of B- or better. This introductory course is taught every semester. Majors are required to take it before the end of their junior year. It is strongly encouraged that students take RELI151 in their first two years at Wesleyan.

**MAJOR REQUIREMENTS**

To complete a major in religion, students are also required to take a minimum of 11 courses (10.25 credits) (with a maximum of 15.25, including thesis credits) numbered 200 or above.

The minimum of 11 courses (10.25 credits) will be distributed as follows:

• RELI151, with a grade of B- or better
• Four courses in three areas of historical traditions
• Two courses in thematic approaches
• Two courses in method and theory, one of which must be RELI398
• A tenth course, which may be taken in any of these areas. Alternatively, the student can include one Hebrew course (HEBR202 or higher) or a different fourth-semester language course with substantial religion content (see the Language section, under Additional Information).
• RELI404 (.25 credit)

**Note:** Although some courses may fit more than one category, they cannot be included more than once in the overall count of courses taken.

**STUDENT LEARNING GOALS**

Our students are trained in cross-cultural, interdisciplinary, and critical approaches to the study of religion. They are expected to understand the power and limits of these approaches to the study of religion, and to demonstrate the ability to analyze practices of interpretation, systems of belief, and patterns of religious behavior. Each student will develop critical reading, writing, and research skills, and apply these to topics in the history, philosophy, and ethnography of religious traditions, including the effects of religion in society; the imbrication of religion with science and secularism; and the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration. They will demonstrate these skills relative to various forms of religious phenomena such as myths, rituals, and texts.

**LANGUAGE REQUIREMENT**

Religion majors are strongly encouraged to develop knowledge in an ancient and/or modern foreign language. One upper-level Hebrew course (202 or higher) can count toward the major as a tenth course. Language courses besides Hebrew (such as Arabic, Sanskrit, etc.) can count toward the major once approved by the department chair. Such a course should be the equivalent of a fourth-semester language course, whose syllabus includes at least one-third religion content. For example, the course might look at religious writings, it might address some aspect of the role of religion or religious groups in society, or it might explore debates about religion, secularism, or modernity.

**HONORS**

Religion majors with a B+ (88.3) average in the department may choose to write a senior honors thesis. Candidates for honors must submit to the department chair a two- to three-page proposal abstract and bibliography by the last Friday of April of their junior year. The proposal should be a description of the intellectual problem of the thesis and the method to be used (whether it will be historical, ethnographic, etc.). Students should list three faculty members who would make good thesis tutors, in order of preference. The department will determine which theses will move forward with which faculty and may reject some proposals. Students will be notified of the department’s decision before classes end in May. A student must be general education stage 1-compliant by graduation to be awarded honors or high honors. A passing grade, honors, or high honors will be awarded after a student’s work has been presented to a departmental colloquium.

**CAPSTONE EXPERIENCE**

**Assessment Portfolio and Capstone Symposium.** During their time in the major, students will assemble a portfolio of three papers (at least four pages in length each) that they have written in the department: one from the introductory course (RELI151), one from the Major’s Colloquium (RELI398), and a third of their choice that was written in their junior or senior year. Taken together, these papers should give evidence of the development of the students’ learning, as well as their command of critical, analytical, and interpretative skills.

In the drop/add period of the spring term, all senior majors enroll in a .25-credit pass/fail tutorial (RELI404), for which they will write a three- to four-page paper reflecting on the portfolio of papers they have assembled and perhaps on other work in the department. This paper allows students an opportunity to assess the arc of their intellectual development as a religion major. Papers will be submitted to the department chair and distributed to faculty members for evaluation. In the spring semester, faculty and senior majors will meet for a symposium discussion of these self-assessments, to be followed by a festive meal.

**STUDY ABROAD**

The department enthusiastically encourages students to study abroad and will count up to two courses taken outside Wesleyan toward the major.
RELIGION MINOR

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio and e-mail the chair (mrubenstein@wesleyan.edu) of their interest.

MINOR REQUIREMENTS

Students wishing to complete the minor must take five courses, arranged as follows:

- RELI151 with a grade of B- or higher
- Two courses in at least two areas of “Historical Traditions,” as listed in our Description of Programs in Religion (https://iasext.wesleyan.edu/regprod/wesmaps_page.html?subj_page=RELI). In this category there are both survey courses (generally numbered at the 200-level) and seminars (generally numbered at the 300-level).
- Two additional courses of the student’s choice. One of these courses may include RELI398, though this is not required.
- The department will accept, as one of the courses for the minor, either one course taken abroad or one course that is cross listed but not taught by members of the department.

Generally, tutorials and student forums do not count, though the chair (mrubenstein@wesleyan.edu) may count one after hearing compelling reasons from the student.

Religion courses must be taken for credit with standard letter grading, though special cases may be considered by the chair. (mrubenstein@wesleyan.edu)
ROMANCE LANGUAGES AND LITERATURES

The Department of Romance Languages and Literatures (RL&L) is a cornerstone of the humanities at Wesleyan and the University’s gateway to the French-, Italian-, and Spanish-speaking worlds. We represent literary and cultural traditions that extend from the Middle Ages to the present. We teach languages, literatures, and cultures that span Europe, Asia, Africa, and the Americas. Our students develop and apply their knowledge and skills through the extracurricular activities and study-abroad opportunities that we promote. Through a network of collaborations across departments and divisions, we support a wide array of majors, academic programs, and initiatives.

ADDITIONAL INFORMATION
Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

FACULTY

Francesco Marco Aresu
MA, Indiana University Bloomington; MA, Stanford University; PHD, Harvard University

DEPARTMENTAL ADVISING EXPERTS

Jeff Rider, French Studies; Olga Sendra Ferrer, Hispanic Literatures and Cultures;
Ellen Nerenberg, Italian Studies; Andrew Curran, Romance Studies

FRENCH STUDIES MAJOR

MAJOR DESCRIPTION

The French studies major provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment. It enables them to develop an in-depth knowledge of French-language literatures and critical approaches and, through them, an awareness of French and Francophone modes of thought and expression. It also offers them the opportunity to develop simultaneously a broad knowledge of French and Francophone cultures through a flexible, interdisciplinary program combining coursework in a number of fields that may serve as the basis for future work or further academic or professional studies.

ADMISSION TO THE MAJOR

Our criterion for admission to the minor is a grade of B or higher in FREN215 or its equivalent.

MAJOR REQUIREMENTS

The major consists of a minimum of eight courses:

• Four FREN courses numbered 220-399.
  • FREN215 or the equivalent is the prerequisite for all FREN courses numbered 220 or higher.
  • Courses numbered 220-299 are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
  • 300-level courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
  • Four other courses whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. These courses may be in French or English and may include:
    • Courses from the French section’s normal offering of 200- or 300-level courses.
    • Courses listed FIST (French, Italian, Spanish in translation).
    • Courses taken through approved study-abroad programs.
    • Courses offered by other departments and programs on campus that treat French or Francophone culture, politics, or history. These courses must be approved by the student’s major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST major or the Romance studies RMST major where the student is combining French with one or two other Romance cultures.

STUDENT LEARNING GOALS

The French studies major provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment. It enables them to develop an in-depth knowledge of French-language literatures and critical approaches and, through them, an awareness of French and Francophone modes of thought and expression. It also offers them the opportunity to develop simultaneously a broad knowledge of French and Francophone cultures through a flexible, interdisciplinary program combining coursework in a number of fields that may serve as the basis for future work or further academic or professional studies.

STUDY ABROAD

All majors are strongly encouraged to spend at least one semester studying abroad in a French-speaking country. We encourage students to participate in Wesleyan’s program in Paris (the Vassar-Wesleyan Program), but other Wesleyan-approved study-abroad programs currently exist in Cameroon, Madagascar, and Senegal. Wesleyan also sends one exchange student a year to
the Institut d’Études Politiques in Paris. Students who would like information on other programs or who have strong academic reasons for wishing to participate in other French-based programs should contact the Associate Director of Study Abroad.

**ADVANCED PLACEMENT**

See wesleyan.edu/romance/french/aptransferofcredit for more information.

**TRANSFER OF CREDIT**

See wesleyan.edu/romance/french/aptransferofcredit for more information.

**HONORS**

See wesleyan.edu/romance/french/honors for more information about honors.

**CAPSTONE EXPERIENCE**

See wesleyan.edu/romance/french/honors for more information about capstone experience options.

**FRENCH STUDIES MINOR**

**ADMISSION TO THE MINOR**

Our criterion for admission in the minor is a grade of B or higher in FREN215 or its equivalent.

**MINOR REQUIREMENTS**

The French studies minor provides students with a command of the French language sufficient to live and work in a French-speaking environment. It enables them to develop a good knowledge of French-language literatures and cultures, and, through it, an awareness of French and Francophone modes of thought and expression. The minor consists of a minimum of five courses:

- **Four FREN courses numbered 220-399:**
  - FREN215 or the equivalent is the prerequisite for all FREN courses numbered 220 or higher.
  - Courses numbered 220-299 are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
  - 300-level courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged.
- One FRST course.

The other credit may be in French or English and may include any one of the following courses:

- A course from the French section’s normal offering numbered 220-399.
- A course listed FIST (French, Italian, Spanish in translation).
- A course taken through approved study-abroad programs.
- A course offered by other departments and programs on campus that deal partly or primarily with France or a Francophone region. This course must be approved by the student’s minor advisor.

Although there is no overall GPA requirement to stay in the minor, a grade of B or higher is required to receive minor credit for a course.

**HISPANIC LITERATURES AND CULTURES MAJOR**

**MAJOR DESCRIPTION**

The major in Hispanic literatures and cultures is designed for students committed to achieving fluency in Spanish and a knowledge of the literatures and cultures of the Spanish-speaking world. The major emphasizes both the history and cultural diversity of a world whose geographic reach is vast and whose heritage extends from the Middle Ages to the present. The major focuses primarily on literary and related modes of representation (such as performance, film, and the visual arts) yet recognizes course work outside the department in related fields, as described below. Students majoring in Hispanic literatures and cultures have the flexibility to tailor the major to their intellectual interests as long as they meet our expectations for coherence.

**ADMISSION TO THE MAJOR**

Students qualify for this major with a grade of B or better in SPAN221 or the equivalent. Exceptions require the approval of the Spanish section.

**MAJOR REQUIREMENTS**

- Nine (9) courses minimum numbered 203 and above. Students who count SPAN 203 must also take SPAN 221.
- Five (5) courses minimum in SPAN at Wesleyan numbered 221 or above. At least one in each of the following categories:
  - Before 1700 (Medieval, Spanish Golden Age or colonial Latin America, normally SPAN230-249);
  - Post-1700 Spain (normally SPAN250-269);
  - Post-1800 Latin America (normally SPAN270-299).
- One (1) course in SPAN at Wesleyan during their senior year.
A grade of B or better in courses taken for the major. Exceptions require the approval of the Spanish section.

Tutorials (for course assistants, essays, or honors) do not count toward the major.

Language courses taken abroad do not count toward the major.

Courses in Related Fields.

Courses taken in Spanish on selected programs abroad may count toward the major if they have a strong interpretive dimension, with a focus on reading, writing, discussion, representation, or form (e.g., how genre, rhetoric, and/or style shape meaning). Such courses may also treat the subject’s history or the debates within it. Courses that meet these criteria are ordinarily found in anthropology, art history, history, music, philosophy, and sociology. They can also be found in economics, government, and psychology when the course focuses primarily on how the field is represented, conceived, or used in public debates or contexts.

Courses offered through the medium of English by other Wesleyan departments and programs primarily on the Hispanophone (including the U.S. Hispanic) world may count toward the major. These courses must be approved by the student’s major advisor.

With the advisor’s approval, majors may count courses in related fields as follows:

- For students who do not study abroad, up to two (2) courses through the medium of English.
- For students who study abroad, four (4) courses maximum on selected programs abroad and one (1) course through the medium of English at Wesleyan.

Important Additional Information.

Courses must be taken for a letter grade, unless the student is also majoring in COL.

Students majoring in both HISP and LAST may count no more than four (4) courses toward satisfying requirements of both majors concurrently.

Advising. Upon acceptance into the major, students will meet with their assigned HISP advisor in order to review their plan for completing the major. Advisees will meet with the advisor at least once each semester for the purpose of revising their progress and discussing any other matters related to their interest and goals in Spanish.

STUDENT LEARNING GOALS

Students who complete the major in Hispanic literatures and cultures gain the knowledge and skills needed to successfully pursue their academic and professional interests:

- the language proficiency to live, study, and work in a Spanish-speaking environment, in the United States or abroad;
- strong communicative skills, in both Spanish and their native language;
- the capacity to understand diverse points of view; and
- the ability to draw on a wide range of sources to stimulate their own creative and critical capacities

STUDY ABROAD

The following programs abroad are recommended for majors in Hispanic literatures and cultures:

- Vassar-Wesleyan Program in Madrid (Spain)
- Universidad de los Andes in Bogotá (Colombia)
- CIEE in Buenos Aires (Argentina)
- Middlebury in Chile (Various cities)
- CIEE in Santo Domingo (Dominican Republic)
- IFSA Butler at the Universidad Autónoma (Mérida, Mexico)

Students may petition for ad hoc approval of other programs abroad. For more information concerning study-abroad opportunities, visit the Office of Study Abroad, 201 Fisk Hall.

ADVANCED PLACEMENT

See wesleyan.edu/romance/spanish/aptransferofcredit for more information.

TRANSFER OF CREDIT

See wesleyan.edu/romance/spanish/aptransferofcredit for more information.

HONORS

See wesleyan.edu/romance/spanish/honors for more information.

CAPSTONE EXPERIENCE

Students are encouraged to present a substantial piece of work during their senior year that is comparative and transnational in nature, either within the framework of a single course (a term paper, for instance) or as their senior essay or thesis.

ITALIAN STUDIES MAJOR

MAJOR DESCRIPTION

The study of Italian language, literature, and culture brings into proximity humanistic tradition and global concerns. The excellent language training Wesleyan students receive serves as the base from which to explore Italian history, culture, and society from the Middle Ages to the present. The rich and renewing curriculum enables students to develop and refine capabilities Wesleyan has defined as essential. Those capabilities that Italian studies fosters
and increases include writing, speaking, interpretation, intercultural literacy, and effective citizenship—skills that are in service to a variety of professions and courses of study. The small classes, typically conducted through the medium of Italian, a characteristic of Wesleyan’s Italian curriculum, allow professors and students to work closely on a variety of critical topics. The cross-disciplinary composition of the major allows students to explore their interests in an array of different departments (history, the College of Letters, art history, classics).

**ADMISSION TO THE MAJOR**

Students qualify for this major with a grade of B or better in ITAL111 or the equivalent.

**MAJOR REQUIREMENTS**

- Nine courses above the level of ITAL102 (i.e., ITAL111 and higher) are required. Sophomores who are satisfactorily completing ITAL102 and intend to pursue Italian will be admitted to the major even though that course does not itself count for the major;
- All courses that count toward the major must be taken for a grade. Normally, only courses passed with a B or better will count for the major. Students are expected to request permission from the Italian section to count courses with a lower grade toward the major;
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged;
- One of the nine required courses may be taken in English;
- For students placing into ITAL221 or higher, three of the nine required courses may be taken in English;
- One course in Italian at Wesleyan following study abroad is required;
- All students are required to take at least one course for the major in their senior year.

**ADDITIONAL INFORMATION**

- The Italian major is designed to allow students to start Italian at Wesleyan in their first or second year and complete the major. Completion is further helped by spending one semester abroad in Italy through the ECCO program or another program.
- Students are highly encouraged to satisfy the post study-abroad course requirement in the semester they return to campus.
- Four credits from the ECCO program in Bologna are accepted: Only one of these may be on a topic that is not Italian in nature (i.e., economy of Russia taken at the UniBo).
- Lecce credit is accepted only for students who have completed ITAL102 only before study abroad.
- If a student attends a study-abroad program other than ECCO, a review of the number of credits that will be accepted into the major is required.

**STUDENT LEARNING GOALS**

The Italian studies major combines the study of Italian language, literature, film, and culture, bringing humanistic tradition together with current global concerns. The major is designed to provide students with a comparative, international, and interdisciplinary education. Language training at Wesleyan serves as the base from which to explore Italian history, culture, and society from the Middle Ages to the present. Likewise, the in-depth study of a variety of texts (literary, filmic, and cultural) enhances the study of the language. The study of a foreign language and culture complements students’ understanding of their own native cultures, enriching their critical understanding of it. Small classes taught through the medium of Italian, along with the extracurricular activities and study-abroad opportunities, allow students to study in detail and collaborate on a variety of critical topics and foster abilities considered essential in an ever-globalizing world, such as critical thinking, intercultural interpretation and literacy, and effective citizenship. These skills, in turn, prepare students for a variety of professions and lifelong inquiries.

**STUDY ABROAD**

**ECCO program in Bologna, Italy.** Wesleyan University cosponsors with Vassar College and Wellesley College a program in Italy for up to 15 students from each of the three colleges without regard to their choice of major. ITAL102 or the equivalent of one year of college-level Italian is the prerequisite for participation. Students may choose to participate in either the fall or spring semesters, or (optimally) both. For fall or full-year participants, the program begins with a seven-week (two-credit) intensive language and culture course that consists of three weeks in Lecce in the month of August, followed by a short break, and then four more weeks in Bologna before the beginning of the academic year. Spring-only participants will have a similar three-week (one-credit) course in Bologna in January. A full complement of courses taught in Italian dealing with Italian literature, history, government, art history, and other areas is offered at the program’s center, taught by faculty from the Università di Bologna and by the program director.

Qualified students are strongly encouraged to enroll in courses at the Università di Bologna, and, thus, students with good language skills will have a wide range of fields from which to choose, including economics, government, and the natural sciences. All courses carry one Wesleyan credit. Since the Italian studies major emphasizes linguistic and cultural competency, most courses taken at the Università di Bologna in Italian will normally count for the major. Only one course that is not Italian in nature, yet taught in Italian (i.e., The Economy of Russia) taken at the Università di Bologna will be accepted.

The cost of the program is approximately equivalent to that of staying on the home campus for the same period, and it includes round-trip air transportation between New York and Italy. Applications for the fall semester are due by March 1, for the spring semester, by October 1, and must be submitted to the Office of Study Abroad (http://wesleyan.edu/ois).

Students participating in Wesleyan’s Program in Bologna for any duration may receive credit for four courses. Students attending study-abroad programs other than ECCO are required to have those credits reviewed by their advisor before they will be accepted for the major. Learn more at: wesleyan.edu/romance/italian/studyabroad.html (http://wesleyan.edu/romance/italian/studyabroad.html).

**ADVANCED PLACEMENT**

See wesleyan.edu/romance/italian/aptransferofcredit (http://wesleyan.edu/romance/italian/aptransferofcredit.html) for more information.

**TRANSFER OF CREDIT**

See wesleyan.edu/romance/italian/aptransferofcredit (http://wesleyan.edu/romance/italian/aptransferofcredit.html) for more information.
**ADDITIONAL INFORMATION**

**Course assistantships in Italian.** Majors and other accomplished students returning from overseas may apply to serve as a course assistant for elementary Italian. Students may not receive academic credit for this exercise; rather, they will receive a stipend for their work. Students should express their interest to the faculty advisor in the spring for the following fall semester and in the early fall for consideration for the spring semester. Please note that students may serve as course assistant for only one course at the University per semester.

**HONORS**

See wesleyan.edu/romance/italian/honors (http://wesleyan.edu/romance/italian/honors.html) for more information about honors.

Captstone experience

See wesleyan.edu/romance/italian/honors (http://wesleyan.edu/romance/italian/honors.html) for more information about capstone experience options.

**ROMANCE STUDIES MAJOR**

**MAJOR DESCRIPTION**

The Romance studies (RMST) major provides students the opportunity to develop a broad knowledge of two or more of the Romance cultures taught at Wesleyan (French, Italian, Spanish) through a flexible, interdisciplinary program combining course work in a number of fields that may serve as the basis for future work or further academic or professional studies. Students who are interested in this major should contact the chair of the department.

**ADMISSION TO THE MAJOR**

Students qualify for this major with a grade of B or better in any combination of two of the following courses or the equivalent: FREN215, ITAL111, or SPAN221.

**MAJOR REQUIREMENTS**

- Determination of a major (five courses in your primary language) and minor (four courses in your secondary language) focus.
- A minimum of two comparative projects. The idea is to suspend, for a moment, the nationalist assumption that languages and cultures exist in isolation from each other. Writers, artists, scientists, and businesspersons routinely cross borders and languages. We ask you to do the same in two short or long papers, to be completed at Wesleyan or during study abroad. A comparative project means simply that, in consultation with a course instructor, you will draw substantially on both your Romance major languages and cultures to explore a problem that interests you. The project could be about border-crossing movements, reception, influence or adaptation, intertextuality, or dialogue between languages, literatures, and/or cultures. Or it could be an exploration of an issue that interests you (the environment, health care, urban planning; food, science, queer identities, fashion, etc.) in cross-cultural perspective, drawing on both your major languages and cultures. The projects may also be more informal or essayistic reflections (the equivalent of two short papers in length) on something significant you have learned or a perspective gained through study of two languages and cultures that you are unlikely to have learned through English only, a single foreign language, or another major. These essays may draw on work or study abroad or on the multiple courses you have taken at Wesleyan in your major languages. They may be written in English or in one of your major languages. If you write in English you are expected to draw on sources in your major languages.
- Nine courses at or above determined levels (FREN223, ITAL111, SPAN221) in two Romance languages.
- At least one course taken in both the student’s primary and secondary languages in the student’s senior year.
- Students are expected to earn a B or better in courses that count for the major. Students wishing to count a course with a lower grade toward the major are expected to consult with the chair of Romance Languages and Literatures (who will consult with the department) about it as soon as the grade is recorded.
- Courses must be taken for a letter grade, unless the student is also majoring in COL.

**STUDENT LEARNING GOALS**

The Romance studies major provides students with the proficiency in two Romance languages (among French, Italian, and Spanish) to live, study, and work successfully in the corresponding French-, Italian-, and/or Spanish-speaking environments. They learn about their literatures and other cultural forms such
as film and, through them, about their modes of thought, expression, and creative achievement. As a result, they improve their ability to communicate in French, Italian, and/or Spanish as well as their native language; become more adept at understanding other points of view; and learn to draw on a wide range of sources to stimulate their own creative and critical capacities. Students are encouraged to bring the resources of their two Romance cultures to bear together on problems that interest them, providing a depth of perspective unavailable in English only or a single foreign language. Finally, students explore the enormous cultural diversity of the French-, Italian-, and/or Spanish-speaking worlds through a flexible interdisciplinary program (often including study abroad) that can serve as the basis for future work or further academic or professional studies.

**STUDY ABROAD**

All majors are strongly encouraged to spend at least one semester studying abroad in a Romance-language-speaking country. In addition to Wesleyan’s own programs in Bologna, Madrid, and Paris, there are currently Wesleyan-approved study-abroad programs in Argentina, Brazil, Cameroon, Chile, Costa Rica, Ecuador, Italy (Florence, Rome), Madagascar, Mexico, and Senegal. Wesleyan also sends one exchange student each year to the Institut d’Etudes Politiques in Paris. Students who have strong academic reasons for wishing to participate in other programs may also petition the Fries Center for Global Studies for permission to do so. For information on the approved programs and the petition process, contact the Fries Center for Global Studies (http://www.wesleyan.edu/cgs/osa).

**ADVANCED PLACEMENT**

See wesleyan.edu/romance/romancestudies/aptransferofcredit (http://wesleyan.edu/romance/romancestudies/aptransferofcredit.html) for more information.

**TRANSFER OF CREDIT**

See wesleyan.edu/romance/romancestudies/aptransferofcredit (http://wesleyan.edu/romance/romancestudies/aptransferofcredit.html) for more information.

**ADDITIONAL INFORMATION**

Students are responsible for ensuring that major communications with the primary language advisor about the essay or thesis work also go to the secondary language advisor at the same time (and vice-versa: communications with the secondary language advisor should go to the primary language advisor).

**HONORS**

See wesleyan.edu/romance/romancestudies/honors (http://wesleyan.edu/romance/romancestudies/honors.html) for more information about honors.
RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

The Russian, East European, and Eurasian studies (REES) program offers an interdisciplinary range of courses in Russian language, history, politics, literature, culture, and film, as well as in the culture and society of Eastern Europe and Eurasia. We encourage students to study abroad; our students have done research in Russia, Ukraine, Georgia, and other countries in the area. Russia continues to play a major role in global affairs, and the study of Russia occupies an important place in the Wesleyan curriculum, for both majors and nonmajors.

The major in Russian, East European, and Eurasian studies is designed to provide students with a thorough understanding of contemporary Russian culture and society, its history, its political and economic institutions, and its place in the world. Students are strongly encouraged to spend a semester or a summer in Russia (or another country in the area, if appropriate). At the end of their studies students should have achieved an advanced level of fluency in the language and should be able to work with Russian sources to conduct original research in their chosen area of specialization. They should be able to read or watch Russian media and understand the historical and cultural references that frame Russians' understanding of their world. Students should also have a basic familiarity with the historical, cultural, social, and political developments of the other post-Soviet states beyond Russia and have the opportunity to explore these countries in more detail if they so desire. The major prepares students for careers in research and cultural analysis, education, law, artistic production, diplomacy and public service, business, and communication.

FACULTY

Irina Aleshkovsky
MA, Vilnius State University
Adjunct Professor of Russian, East European, and Eurasian Studies

Susanne Grace Fusso
BA, Lawrence University; MA, Yale University; PHD, Yale University
Professor of Russian, East European, and Eurasian Studies; Chair, Russian, East European, and Eurasian Studies

Peter Rutland
BA, Oxford University; DPHIL, York University
Colin and Nancy Campbell Professor in Global Issues and Democratic Thought; Professor of Government; Director, Allbritton Center for the Study of Public Life; Professor, Russian, East European, and Eurasian Studies; Tutor, College of Social Studies

Victoria Smolkin
BA, Sarah Lawrence College; PHD, University of California, Berkeley
Associate Professor of History; Tutor, College of Social Studies; Associate Professor, Russian, Eastern European, and Eurasian Studies

Roman Utkin
MA, Kazan State University; MPHIL, Yale University; PHD, Yale University
Assistant Professor of Russian, East European, and Eurasian Studies; Assistant Professor, Feminist, Gender, and Sexuality Studies

EMERITI

Priscilla Meyer
BA, University of California, Berkeley; MA, Princeton University; MAA, Wesleyan University; PHD, Princeton University
Professor of Russian Language and Literature, Emerita; CPE Instructor

Justine Quijada
BA, University of Chicago; MA, Columbia University; PHD, University of Chicago
Assistant Professor of Religion; Assistant Professor, Russian, East European, and Eurasian Studies; Assistant Professor, College of the Environment

Sasha Rudensky
BA, Wesleyan University; MFA, Yale University
Associate Professor of Art; Associate Professor, Russian, East European, and Eurasian Studies

John P. Bonin

AFFILIATED FACULTY
ADMISSION TO THE MAJOR

Students normally declare a major in Russian, East European, and Eurasian Studies in the spring of sophomore year. Interested students should begin their study of Russian language as early as possible and should consult a REES faculty member before declaring the major. To be accepted into the program, students must have a minimum overall average of B in courses related to the major.

MAJOR REQUIREMENTS

There are two possible concentrations in the REES major.

- **Language, literature, and culture.** Majors must complete three years of college-level Russian or the equivalent, as well as five more courses, three of which must be in literature or culture, one of which must be either a course or a full-credit tutorial conducted in Russian. If a student places out of one or more semesters of language, he or she must take enough courses in REES to add up to a total of 11. For example, a student who places out of two semesters of first-year Russian would take four more semesters of language plus seven more courses.

- **Social sciences.** Majors must complete two years of college-level Russian or the equivalent, as well as seven more courses chosen in consultation with an advisor. These courses must include at least one in the category of politics and economics, one in the category of history and religion, and one in the category of literature and culture. If a student places out of one or more semesters of language, he or she must take enough courses in REES to add up to a total of 11. For example, a student who places out of two semesters of first-year Russian would take two semesters of language plus nine more courses.

STUDY ABROAD

Majors are strongly encouraged to participate in either a summer or a semester program of study in Russia, for which academic credit will be given. Students may study in Eastern Europe or Central Asia as long as the program includes a language component. For a semester of study abroad on an approved program, four credits will count toward graduation, of which two will count toward the REES major. For a summer of study abroad on an approved program, two credits will count toward graduation, of which one will count toward the REES major.

HONORS

To qualify to receive honors or high honors in Russian, East European, and Eurasian studies (REES), a student must write a senior thesis that will be evaluated by a committee consisting of the tutor, a second reader from the REES faculty, and one additional reader either from REES or from the faculty at large. This committee makes the final decision on departmental honors. Only a two-semester senior thesis may be submitted for honors in REES.

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MINOR

ADMISSION TO THE MINOR

Any student who intends to earn the minor in REES should speak with the program chair by the end of the junior year at the latest.

MINOR REQUIREMENTS

The minor in REES consists of six courses, in which the student must achieve a GPA of B. These courses must include RUSS101 and RUSS102 or two semesters of Russian language study at the appropriate level and four more REES courses, of which one must be taken in each of the three areas of politics and economics, history and religion, and literature and culture (see course list). The fourth course may be in any of the three areas or may be a semester of intermediate or advanced Russian. Two of the courses may be taken during study abroad (with prior approval). All courses except RUSS101 and RUSS102 must be taken for a grade. Students should plan the minor in consultation with REES faculty.

Satisfactory completion of the minor will be certified by the program.
SCIENCE IN SOCIETY PROGRAM

The sciences and scientifically sophisticated medicine and technology are among the most important and far-reaching human achievements. Scientific work has affected people’s intellectual standards, cultural meanings, political possibilities, economic capacities, and physical surroundings. Scientific research has also acquired significance, direction, authority, and application within various cultural contexts. To understand the sciences as human achievements is, in significant part, to understand the world in which we live.

The Science in Society Program (SISP) is an interdisciplinary major that encourages the study of the sciences and medicine as institutions, practices, intellectual achievements, and constituents of culture. Students in the program should gain a better understanding of the richness and complexity of scientific practice and of the cultural and political significance of science, technology, and medicine. The major is well suited for students interested in a variety of professional and academic pursuits after graduation, since it encourages students to integrate technical scientific knowledge with a grasp of the historical and cultural setting within which it is understood and used.

FACULTY

Paul Hilding Erickson
BA, Harvard University; MA, Univ of Wisconsin Madison; PHD, Univ of Wisconsin Madison
Associate Professor of History; Associate Professor, Environmental Studies; Associate Professor, Science in Society

Lori Gruen
BA, University of Colorado Boulder; PHD, University of Colorado Boulder

DEPARTMENTAL ADVISING EXPERT

Jill Morawski
SCIENCE IN SOCIETY MAJOR

MAJOR DESCRIPTION

The major consists of three components: courses offered within the Science in Society Program (SISP) in the history, philosophy, and social studies of the sciences, medicine, and technology; at least two years of coursework in a single scientific discipline; and an area of concentration to provide depth in a related discipline. Students can either complete their area of concentration in anthropology, FGSS, history, philosophy, religion, or sociology, or they can concentrate in a scientific discipline by completing a major in that science as part of their SISP major (the first two years of the science major satisfy the SISP science requirement).

First- and second-year students interested in the Science in Society Program should begin their science courses as soon as possible. Most students take their first course in the program as a sophomore. The core courses in the history of science or sociocultural studies of science are especially recommended as first courses in the program.

ADMISSION TO THE MAJOR

Students who declare their major in SISP must specify the fields in which they plan to complete their science requirement and their area of concentration. Students who seek to add the major after their sophomore year will only be admitted after review to ensure that they are in a good position to complete the major. All students who declare the major must submit a statement of their goals in the major, for advising purposes, and for later evaluation of how well those goals were met. There are no other requirements for admission to the major.

MAJOR REQUIREMENTS

Students may enroll in the program either as a stand-alone major or as a joint major with one of the science departments (astronomy, biology, chemistry, earth and environmental sciences, molecular biology and biochemistry, neuroscience and behavior, physics, or psychology). All students must take one course each in history of science, philosophy of science, and sociocultural studies of science, along with three additional courses in the program (including at least one 300-level seminar). Students for whom the program is a stand-alone major must also take a minimum of four major-track courses in one of the science departments and a structured three-course area of concentration in either anthropology, FGSS, history, philosophy, religion, or sociology. Students who undertake the joint major with a science must complete all requirements for a science major in place of the area of concentration. Further information about program requirements, policies, and its learning goals can be found at wesleyan.edu/sisp (http://wesleyan.edu/sisp).

STUDENT LEARNING GOALS

The faculty of the Science in Society Program have approved the following list of learning goals for all students undertaking the major in science in society:

- Scientific competence: Competence beyond the major-track introductory level in a scientific discipline, indicated by students' performance in appropriate courses in that science;
- Core competence in science studies: Improved understanding of the sciences and/or medicine as historically developing, socially and culturally situated practices of inquiry and conceptual understanding; that understanding should have both multidisciplinary breadth and greater depth within a particular disciplinary area of concentration.
- Disciplinary depth: Those students whose area of concentration is in a discipline that incorporates the sciences and medicine as objects of inquiry should improve their understanding of how that discipline conceives and approaches the sciences and/or medicine and how its approach connects to other ways of understanding the sciences and medicine; those students whose area of concentration is fulfilled by a second major in a scientific discipline should improve their understanding of how practices and achievements of that science are historically, culturally, and philosophically situated and how their scientific understanding and their core competence in science studies can be mutually informative.
- Scientific contextualization: Improved skills for engaging their scientific understanding in relevant ways with specific issues or concerns of broader social, cultural, political, and/or philosophical significance and for acquiring and assessing relevant technical background for such issues that go beyond their prior scientific training.

STUDY ABROAD

Many SISP students go abroad for a semester as a junior. Students can normally count only one course from study abroad toward the six required courses in SISP, although some students also get credit for science courses or toward their area of concentration.

TRANSFER CREDIT

Courses may be transferred from other institutions to replace one of the science in society requirements, but we review these requests very stringently, and we only accept courses clearly equivalent in level and field to courses we would accept at Wesleyan.

HONORS

To be eligible for departmental honors, a student must meet two criteria. First, all work done in the core courses of the Science in Society Program, including electives, must be considered, on average, to be very good (equivalent to a B+ or better). Second, a senior thesis deemed excellent by its readers is necessary for honors, and a genuinely distinguished thesis is needed for high honors.

CAPSTONE EXPERIENCE

The Science in Society Program offers three options for students seeking a senior capstone experience for their work in the major:

- All students are required to take one or more 300-level seminars in the program. These courses, on a wide range of topics, each with a term paper or other independent research component, provide many opportunities for what can become capstone projects, and students are encouraged to choose
their seminar courses and their research topics in those courses with this possibility in mind.

- Students with a suitable topic and faculty sponsor have an option of writing a senior thesis, which can lead to departmental honors for those eligible. Interested students should consult members of the faculty in the spring of their junior year to help refine their proposed topic and find a suitable advisor. For further information on this option, see wesleyan.edu/sisp/for_majors/honors_thesis.html.

- Students with a suitable topic and faculty sponsor may undertake a senior essay or other independent capstone project as an independent tutorial.

Neither thesis tutorials nor senior essay tutorials can count toward the six courses in the program that are part of the major requirements. The required courses provide indispensable background for undertaking independent projects. Students considering writing a thesis are encouraged to be well along with the core major requirements before beginning the thesis as first-semester seniors.
Sociology

The program is designed to help students develop new frameworks for analyzing a broad array of social relations—from everyday life interactions to large-scale historical and structural transformations—and to cultivate a critical appreciation for the academic discipline of sociology.

FACULTY

Robyn Kimberley Autry
BS, University of Colorado Boulder; MS, Univ of Wisconsin Madison; PHD, Univ of Wisconsin Madison
Associate Professor of Sociology; Chair, Sociology

Abigail Huston Boggs
BA, Wesleyan University; PHD, University Calif Davis
Assistant Professor of Sociology; Assistant Professor, Feminist, Gender, and Sexuality Studies

Peggy Carey Best
AB, Earlham College; PHD, Union Institute Grad School
Director, Service Learning; Visiting Assistant Professor of Sociology; Coordinator, Service Learning

Jonathan Cutler
BA, Tufts University; MA, Union Theological Seminary; PHD, CUNY The Graduate Center
Associate Professor of Sociology

Greg Goldberg
BA, New York University; PHD, CUNY The Graduate Center
Associate Professor of Sociology

Professor of Sociology, Emerita

Rob Rosenthal
BA, Rutgers University; MA, University Calif Santa Bar; PHD, University of California, Santa Barbara
John E. Andrus Professor of Sociology, Emeritus

DEPARTMENTAL ADVISING EXPERTS

Robyn Autry; Jonathan Cutler

Sociology Major

Admission to the Major

Students who wish to declare the major must have successfully completed SOC151 and have completed or be currently enrolled in one additional sociology department course including:

- SOC202 or SOC212, or
- a course approved by petition to the department

Major Requirements

Majors must complete a total of 10 courses in fulfillment of the major requirements; this includes the capstone requirement.
• Three sociology department foundations courses
  • SOC151
  • SOC202
  • SOC212

• Four sociology department topical courses (SOC220-SOC412)

• Three additional topical courses from any combination of:
  • SOC220-SOC325
  • SOC401 or SOC402 (sociology department individual tutorials, including education in the field)
  • SOC411 or SOC412 (sociology department group tutorials)
  • Advisor-approved courses taken outside the Wesleyan Department of Sociology, including study-abroad credit, sociology-relevant courses at Wesleyan, and sociology courses taken at other institutions.

All sociology majors must enter their senior year having taken a minimum of three courses within the Wesleyan Department of Sociology. This includes at least one of the two required courses (SOC202 or SOC212).

**STUDY ABROAD**

Study abroad is fully compatible with completing the major, but students who plan to go abroad for a semester are expected to discuss with their major advisors how such studies will fit into their overall academic program before finalizing their plans.

**ADDITIONAL INFORMATION**

• **Major advising.** Each major is assigned a faculty advisor with whom the student works out a program of study.

• **Transfer students.** Major declaration and completion requirements are subject to the approval of the sociology department faculty. Transfer students are encouraged to meet with the department chair, and then petition to use prior coursework credits toward fulfillment of the Wesleyan Department of Sociology declaration and completion requirements.

• **Double majors.** Please consult with the department chair or a department advisor.

• **Education-in-the-field credit.** Students, whether majors or nonmajors, seeking education-in-the-field credit must provide the department, in advance, with an acceptable prospectus of their work and assurance of professional guidance during the field experience. Students must submit research papers based on this experience. These papers should refer substantially to sociological literature pertinent to their field experience.

In planning their programs, students should examine the full list of WesMaps (http://www.wesleyan.edu/wesmaps) course offerings. Other information about the sociology major is available in the department office, Public Affairs Center 122.

**QUALIFYING FOR HONORS**

The Department of Sociology offers a two-semester Honors Thesis Seminar (SOC 405-406) supervised by a member of the sociology department faculty who serves as thesis advisor for students enrolled in the seminar. Students selected for participation in the seminar work individually with the seminar advisor and meet weekly with other thesis writers in a process directed toward the formulation and production of an original piece of imaginative and sophisticated scholarship. Consideration focuses on the potential for successful completion of a project that is both creative and well-formulated.

All rising senior majors interested in qualifying for the Honors Thesis Seminar should attend the annual spring Thesis Seminar meeting hosted by the Thesis Seminar advisor. Attendance at this meeting is mandatory as the first step towards participation in the honors program and provides the best opportunity for students to ask questions and gain a fuller understanding of the thesis process. The meeting is usually scheduled after the annual spring due date for honors theses completed by graduating seniors, and is usually followed by an individual meeting with the advisor to discuss participation in the seminar.

Enrollment in the Honors Thesis Seminar, SOC 405, is selective; registration is by permission of the instructor (POI) during the fall drop/add period. Because review of honors candidacy is not completed until well after the close of spring semester pre-registration, rising seniors interested in the honors program should pre-register for a full schedule of courses as if completion of the major will not include the thesis seminar.

Department faculty may also elect to work with a senior major toward completion of an honors thesis outside of the context of the Thesis Seminar. Independent thesis tutorials are established at the discretion of members of the sociology department faculty.

**CAPSTONE EXPERIENCE**

**Capstone Course Requirement.** Advanced majors are required to craft a substantial capstone research project. There are two routes toward completion of this project:

• **Advanced Research Seminar.** Students enroll in an Advanced Research Seminar during the sixth, seventh, or eighth semester. Enrollment in these special-topic seminars, numbered SOC399, is limited to 15 student majors per course. These seminars feature in-depth engagement with advanced course materials and culminate in a significant research paper.

• **Honors Thesis.** Students who qualify for the honors program write an honors thesis in the Thesis Seminar (SOC405-SOC406) during the seventh and eighth semesters. See section entitled "Qualifying for Honors" for full information on the honors program.
Theater

The Theater Department considers the critical and creative study of each theatrical area to be an essential component of a liberal arts education. Offerings include courses in acting; civic engagement and outreach; criticism, ethnography, history, and literature; costume, lighting, scenic, and media-based design; directing; performance studies; theory; performance art; playwriting; puppetry; and solo performance.

Many theater courses are cross-listed with academic departments in all divisions, as well as Wesleyan’s colleges. Theater faculty and majors are committed to collaboration within and across departments. The Theater Department strongly encourages students to attend performances and lectures sponsored by all performing and visual arts departments.

Each year the department sponsors productions and other events in a variety of theatrical forms; some are directed by faculty members or guest artists, while others are directed by undergraduates. Theater courses and productions reflect the interdisciplinary and multiple interests of the faculty and majors. Theater Department productions take place in the Center for the Arts Theater, the Patricelli ’92 Theater, and other spaces on campus. The Center for the Arts (CFA) is a state-of-the-art facility with 400 seats. The Patricelli ’92 Theater is a historic brownstone building with a traditional proscenium. Both theaters are highly flexible and can be used as black boxes. Site-specific performances take place across campus: in the Davison Art Center, the Center for African American Studies, and the Russell House, to name a few. All theaters and alternative spaces are available to faculty and senior thesis productions. The theater department is part of the Center for the Arts, a complex of studios, classrooms, galleries, performance spaces, departments, and programs that provide a rich, interdisciplinary environment for study and performance.

Faculty

Katherine Brewer Ball  
BA, Occidental College; MA, New York University; PHD, New York University  
Assistant Professor of Theater; affiliated faculty

Rebecca Foster  
BA, Northwestern State U; MFA, University of Virginia  
Technical Director and Production Manager of Theater and Manager of ’92 Theater; Adjunct Assistant Professor of Theater

Ronald S. Jenkins

Retired Artist-in-Residence, Theater
DEPARTMENTAL ADVISING EXPERTS

Ron Jenkins, Marcela Oteiza (Dance Dept)

THEATER MAJOR

MAJOR DESCRIPTION

The theater major is an integrated program of study, one that provides a solid knowledge of the different areas of expertise that are involved in stage production and criticism. Gateway courses provide an introduction to theater techniques, principles, literatures, and discourses. Advanced courses prepare students to articulate their visions of theater both on stage and in writing. Honors theses, essays, and creative endeavors present majors with the opportunity to engage in in-depth scholarly and/or artistic research.

Students with strong interest in both theater and other fields of study may wish to pursue a double major. The option offers attractive possibilities for maximizing the benefits of Wesleyan’s broad curriculum. Such an option is not uncommon but requires careful and early planning.

Declaration to become a major is usually made in the second semester of the sophomore year. The department embraces a broad definition of theater and believes in embodied learning: process, performance, and critical perspectives are equally stressed. Our majors focus on two or more aspects of theater and learn to articulate their artistic vision both on stage and in writing. The department welcomes analysis, criticism, artistic innovation, and theater inquiry of all sorts.

Beginning fall 2018, the Theater Department has adopted revisions to the major requirements, implemented as an option for the classes of 2019, 2020, 2021 and 2022. Students in the class of 2023 that declare the Theater Major will be required to fulfill the revised requirements.

ADMISSION TO THE MAJOR

One of the areas revised within the Theater Major includes expansion of the Gateway Course options. By creating category requirements, rather than specific courses, the Theater Department has opened up options for students to begin their path through the study of theater in areas other than acting, such as playwriting, design, or performance practice.

Gateway courses for students electing to follow the non-revised major plan (only applicable for the classes of 2019, 2020, 2021 and 2022):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>THEA105</td>
<td>Production Laboratory (One 0.5 credit in the technical aspects of scenic, costume, or lighting design)</td>
<td>0.5</td>
</tr>
</tbody>
</table>

Gateway to the theater major for students electing to follow the revised major plan (applicable for the classes of 2019, 2020, 2021 and 2022, and mandatory beginning with the class of 2023):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

Theater Arts Course

This includes courses in the areas of design, acting, playwriting, advanced technical theater, and performance practice.

Theater Methods Course

This includes courses in the areas of dramatic literature, theater history, criticism, visual literacy and applied theater

For course category designations, please consult the full catalog description here (https://catalog.wesleyan.edu/courses/thea).

A pdf list is available by contacting the Theater Department office – dalger@wesleyan.edu.

MAJOR REQUIREMENTS

(IN ADDITION TO GATEWAY COURSES)

Students will be required to select a major plan upon declaration.

Students in the classes of 2019, 2020, 2021 and 2022 will be able to choose which set of requirements they will fulfill to graduate as a Theater major.

Requirements for students electing to follow the non-revised major plan (only applicable for the classes of 2019, 2020, 2021 and 2022):

- Three (3) credits in Theater Arts courses: One credit must be a design course (THEA359 - set design, THEA383 - costume design, THEA360 - media design or THEA305 - lighting design); One credit must be either Performance Practice or Performance Practice in Design (THEA427/THEA431/THEA433/THEA435/THEA437). Only one credit of any Performance Practice course may count towards this category requirement.
- THEA302. Please note that certain courses in other departments may fulfill one of two theater history prerequisites (the gateway THEA203 or THEA302) only if approved by the theater faculty. Please consult the section “Courses cross-listed with other Wesleyan departments, colleges, and programs” in the Theater Handbook.
- Two courses in dramatic literature, visual literacy, theory, criticism, and/or service learning. One of them may be an FYE course. Specialty courses in other departments may fulfill one of the two requirements only if approved by the theater faculty. Please consult the section “Courses cross-listed with other Wesleyan departments, colleges, and programs” in the Theater Handbook.
- One credit of THEA329/THEA331 (earned in .25- and .5-credit increments).
- One credit of THEA427/THEA431/THEA433/THEA435/THEA437.

Total major program requirements: 2.5 credits (Gateways) + 6 credits = 8.5 credits
Requirements for students electing to follow the revised major plan (applicable for the classes of 2019, 2020, 2021 and 2022, and mandatory beginning with the class of 2023):

- Three (3) credits in Theater Arts courses, which must include one design course (THEA359 - set design, THEA383 - costume design, THEA 360 - media design or THEA305 - lighting design). Only one credit of Performance Practice (THEA427/ THEA431/ THEA433/ THEA435/ THEA437) may count towards this category requirement.
- Two (2) credits in Theater Methods courses. Only one course may be 100-level.
- One (1) credit of Technical Theater (THEA329/ THEA331) earned in .25- and .5-credit increments through participation in department production related positions.
- One (1) credit in the Expanded Field of Theater, which includes, but is not limited to, performance studies, practice-based research and service learning courses.

Total major program requirements: 2.5 credits (Gateways) + 7 credits = 9.5 credits

For course category designations, please consult the full catalog description here (https://catalog.wesleyan.edu/courses/thea). A list of all course designations is available on the Theater Department website and posted in the lobby of the Theater Building. A pdf list of courses is also available by contacting the Theater Department office – dalger@wesleyan.edu.

**GENERAL EDUCATION**

Completion of Stage 1 and 2 of General Education Expectations is a prerequisite for high honors in theater.

**STUDY ABROAD**

Students are encouraged to spend a semester at Wesleyan-approved programs abroad or to petition for approval of other programs in countries of their choice. For information, contact the Office of Study Abroad (http://wesleyan.edu/studyabroad).

Wesleyan preapproved programs with focus on theater:

- British American Drama Academy, London
- Moscow Art Theatre Semester
- CIEE, Buenos Aires
- C.V. STARR, Chile
- For Wesleyan policy on the programs not on the approved list, contact the Office of Study Abroad (http://wesleyan.edu/studyabroad).

**PRIZES**

**Rachel Henderson Theater Prize**: Awarded annually to the student who, in the estimation of the theater faculty, has contributed most to theater at Wesleyan over the course of his or her undergraduate career.

**Outreach and Community Service Prize**: Awarded to the senior theater major who, through his or her work in the Theater Department, has done a significant service in the community.

**J.Peter Adler ’90 Memorial Fund**: Established in 1997 with gifts from family and friends in memory of J. Peter Adler ’90, the J.Peter Adler Memorial Fund provides two awards per year to support a student theater production: one in the fall and one in the spring semester. An avid theater lover, J.P. participated in Second Stage while at Wesleyan as a non-theater major. He died suddenly in 1995. The Adler Fund is awarded with preference to first-time directors of Second Stage productions and, whenever possible, to non-theater majors. The fund may also support student theater productions associated with the Theater Department or other entities, such as senior thesis productions.

**HONORS**

Preliminary honors proposals with a bibliography are due one week after the end of spring break in the junior year. Students can submit proposals for either critical or creative honors theses.

Preliminary proposals will be judged based on clearly expressed objectives and evidence of research and preparation. Judgments will be based equally on preliminary research, clarity of the objectives of the process, and rationale for staging a given production. Please consult the section “Application Guidelines for Honors in Theater” in the handbook.

The Honors Committee will award honors on the basis of the readers’ evaluations. All departmental readers must recommend honors for a candidate to be successful. Students are entitled to copies of the readers’ comments. The honors tutor is responsible for assigning a grade for the courses THEA409 and THEA410; this grade need not reflect the decision of the Honors Committee to award or deny departmental honors.

High honors in theater is by invitation only and requires an oral exam conducted by the Honors Committee. The Honors Committee will invite qualified students according to the following criteria: consideration of the readers’ evaluations, originality of research and thesis topic, the student’s performance in courses as reflected in his or her transcript, compliance with the General Education Expectations, and the extent to which the student’s educational experience reflects the philosophy, goals, and diversity of the department.

Please see wesleyan.edu/theater (http://wesleyan.edu/theater) for details on prerequisites for applying for honors theses.
WRITING PROGRAM

Wesleyan offers students a vibrant writing community and a multitude of ways to pursue their interest in writing. Writers, editors, and publishers visit campus throughout the year, and students support more than 20 magazines, journals, and literary groups. The curriculum emphasizes academic writing in many subject areas and also offers courses in fiction writing, creative nonfiction, poetry, screenwriting, playwriting, and mixed forms. The establishment of the Shapiro Creative Writing Center at 167 High Street signals the importance the University attaches to writing. The Shapiro Center serves as a hub for writing activities and provides a venue for readings, workshops, colloquia, informal discussions, student-generated events, and receptions. Its lounge is open to all students enrolled in creative-writing courses. The Shapiro Center also houses writing faculty, including fiction writer Amy Bloom, the Distinguished University Writer-in-Residence.

The creative writing concentration in the English major. This concentration allows students to pursue creative writing at a high level in the context of advanced literary study. The concentration fosters the study of the history and practice of individual genres and of new hybrid forms and offers students the opportunity to work closely with the University's full-time writing faculty: the Shapiro-Silverberg Professor of Creative Writing, the internationally renowned poet Elizabeth Willis; Lisa Cohen, a writer of creative nonfiction, fiction, and poetry; and editor Anne Greene. Recent visiting faculty includes such distinguished writers as Hilton Als, Andre Aciman, Paul La Farge, Douglas A. Martin, and Clifford Chase. Enrollment in creative-writing courses in the English Department is not limited to English majors.

Creative writing in the College of Letters. Creative writing has long been an important component of the College of Letters curriculum, with an entry-level and an advanced course offered every year and open to students in all majors. COL majors are encouraged to write creative honors theses.

The Writing Certificate. The University's Writing Certificate (p. 202), essentially a minor, is open to students working in any major who wish to make writing an area of concentration. Courses that may count toward the certificate are drawn from many departments. They range from fiction writing, poetry, and creative nonfiction to journalism, biography, arts and film criticism, translation, and writing about science. In addition to fulfilling the coursework requirements for the certificate, students create a portfolio of their work and present their writing in public. The certificate sponsors a number of courses that carry the WRCT designation.

The Writer's Block. This small residential community provides an opportunity for first-year students and upper-class students with a particular interest in writing to live together and collaborate on formal and informal programs.

FACULTY

Rachael Barlow
MA, Indiana University Bloomington; PHD, Indiana University Bloomington
Associate Director for Assessment; Adjunct Assistant Professor of Academic Writing

Amy B. Bloom
BA, Wesleyan University; MSW, Smith College
Shapiro-Silverberg Professor of Creative Writing; Professor of the Practice in Creative Writing; Professor of the Practice, English

Elizabeth Ann Hepford

AFFILIATED FACULTY

Amity Gaige
BA, Brown University; MFA, University of Iowa
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

Ariel Victoria Levy
BA, Wesleyan University
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

Gregory Pardlo
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

Said Sayrafiezadeh
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

Salvatore Scibona
BA, St. John's College; MFA, University of Iowa
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

Brando Skyhorse
BA, Stanford University; MFA, University Calif Irvine
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

VISITING FACULTY

Douglas Edward Bauer
BA, Drake University; PHD, SUNY at Albany
Visiting Writer in the Shapiro Writing Center

Tess Bird
BA, University of Connecticut; MSC, Oxford University; PHD, Oxford University
Andrew W. Mellon Postdoctoral Fellow for Writing in the Social Sciences

Tim Kreiner
BA, Oberlin College; MA, University of California, Davis; PHD, University of California, Davis
Visiting Assistant Professor of Academic Writing
UNIVERSITY MAJOR

The University Major affords first and second-semester sophomores the opportunity to design a program that responds to their individual interests and aptitudes, that provides the excitement and the challenge of using the methodologies of two or more disciplines, and that gives sophomores the chance to work independently on an entire program, developing the necessary background and integrating the courses chosen in order to achieve the objectives that are set.

A student who wishes to arrange a University Major should discuss their intended program with members of the faculty in the student’s fields of interest. The purpose of the discussions is to help the student clarify preliminary plans and select the three faculty members who will serve as sponsors.
UNDERGRADUATE MINORS

- African Studies Minor (p. 182)
- Archaeology Minor (p. 38)
- Art History Minor (p. 43)
- Caribbean Studies Minor (p. 183)
- College of East Asian Studies Minor (p. 71)
- Data Analysis Minor (p. 157)
- Economics Minor (p. 99)
- Education Studies Minor (p. 187)
- Film Studies Minor (p. 74)
- French Studies Minor (p. 164)
- German Studies Minor (p. 110)
- History Minor (p. 118)
- Integrated Design, Engineering & Applied Science Minor (p. 190)
- Medieval Studies Minor (p. 129)
- Planetary Science Minor (p. 194)
- Religion Minor (p. 161)
- Russian, East European & Eurasian Studies Minor (p. 170)

AFRICAN STUDIES MINOR

Students interested in studying Africa at Wesleyan choose from an exciting variety of courses from across the Wesleyan curriculum: art history, dance, economics, English, feminist gender & sexuality studies (FGSS), history, government, music, and Romance languages & literatures.

MINOR REQUIREMENTS

The African studies minor allows students to create a coherent course of study by taking at least 5 courses that offer breadth and depth in the study of the continent. It enables them to develop an understanding of African history, contemporary issues facing the continent, and the creative and intellectual contribution of Africans. The minor consists of a minimum of 5 courses.

Although there is no overall GPA requirement to stay in the minor, a grade of B or higher is required to receive minor credit for a course.

</table>

Four additional African Studies courses from History, the Social Sciences, or Humanities with the following conditions:

- No more than 3 total History courses may count.
- No more than 2 MUSC and/or DANC may count.
- No more than one 100 level may count.

African History (See WesMaps for a complete list)

- AFAM203 African American History, 1444-1877
- ARHA299 African History and Art

- ARHA300 Iberian Expansion and the "Discovery" of Africa in Travel Narratives and Art, 1420–1640
- HIST212 Modern Africa
- HIST217 Africa to 1800
- HIST226 Queen Mothers, Unruly Women: Histories of Gender and Sexuality in Africa
- HIST267 Development in Question: Conservation in Africa
- HIST302 Reproductive Politics and the Family in Africa
- HIST334 Social History of Islam in Africa

Social Studies (See WesMaps for a complete list)

- ECON366 The Economics of Developing Countries
- GOVT324 Africa in World Politics
- GOVT355 Political Theory and Transitional Justice

Humanities (See WesMaps for a complete list)

- DANC260 West African Dance I (and subsequent sections of West African Dance II and III; Two dance courses must be taken to fulfill the one credit requirement)
- ENGL221 The African Novel I: Nervous Conditions
- ENGL223 The African Novel II: After Achebe
- MUSC295 Global Hip-Hop
- MUSC445 West African Music and Culture—Beginners
- SPAN264 Orientalism: Spain and Africa

Students are encouraged, but not required to study Arabic, French, Portuguese, or to pursue study of an African language through the Self-Instructional Program (SILP). Students who complete 1 credit of coursework through SILP may count their language instruction as 1 credit out of the total 5 credits.

Students are encouraged to study abroad in Africa, and they may count 1 course taken abroad to fulfill one of the additional history, social sciences, or humanities course requirements. The study abroad course must focus on the study of Africa, or an African region.

ADDITIONAL INFORMATION

Students may also create their own University Major (http://www.wesleyan.edu/studentaffairs/resources/majordeclaration/umajor.html) centered on the study of Africa:

FURTHER RESEARCH, LANGUAGE, AND STUDY ABROAD OPPORTUNITIES

RESEARCH

Besides participating in a variety of study abroad programs throughout the year, Wesleyan students often undertake their own original research in Africa as part of completing senior honors theses for their respective departments.

Theses are available here. (http://wesscholar.wesleyan.edu/etds)

LANGUAGE

Students who wish to study an African language are encouraged to submit a petition through the Language Resource Center and the Self-Instructional Language Program (http://www.wesleyan.edu/lctis/silp.html) (SIPL).
STUDY ABROAD
Information on current programs may be obtained from the Office of Study Abroad (http://www.wesleyan.edu/studyabroad), and should be discussed with a member of the African studies faculty cluster.

ARCHAEOLOGY MINOR

ADMISSION TO THE MINOR
To declare the minor, a student must achieve a grade of B or above in a designated Gateway course.

MINOR REQUIREMENTS
The archaeology minor requires a minimum of six credits in archaeology. These must include

- One designated Gateway course
- One designated Thinking Through Archaeology course
- One course in each of four areas (anthropology, classical civilization, art history, methods and theory)

For a listing of the different courses in each of these categories, please see Major Requirements (p. 37).

To apply for the minor, please submit a declaration to add the minor through the Major/Minor/Cert Declaration application in your student portfolio.

ART HISTORY MINOR

ADMISSION TO THE MINOR
The art history minor is intended to reach students who would like to incorporate the study of artworks and architecture into their work in other disciplines and/or who discover art history later in their college career. The art history minor maintains the geographical breadth, historical depth, and academic rigor that is characteristic of the major but comprises fewer art history courses and does not require study of a foreign language. Art history minors may not write honors theses. For admission to the minor, students must have taken a minimum of three art history courses and have a B average in art history, as well as a B average overall.

The Art History Program director will admit students to the minor and certify them upon its completion. To sign up for the minor, students need to complete a minor declaration form found in their WesPortal.

Upon completing the minor, students must submit a completed minor certification form.

Students will not be required to declare an official minor advisor, but they are encouraged to meet with the art history faculty on an as-needed basis and to take part in program events.

MINOR REQUIREMENTS
To complete a minor, students need to take six credits with the following requirements:

- Completion of a 100-level course. Students may choose from any of the 100-level courses offered in any given semester or year.
- Completion of five courses numbered 200 or above. These courses must include study in three of the following five geographical areas: The Americas, Europe, East Asia, South Asia, and Africa. The five courses must also include study in two of the following four historical areas: ancient, medieval, early modern, and modern. One of these five courses must be a seminar (numbered in the 300 range).
- All of the courses offered by or cross-listed with the Art History Program are eligible for the minor.
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments may count toward the minor, except for courses cross-listed with art history.
- One course in art history taken elsewhere may count toward the minor, subject to the program director's pre-approval.

CARIBBEAN STUDIES MINOR
The Center for the Americas, in conjunction with faculty across campus who teach courses that fall within the category of Caribbean Studies, sponsors a Caribbean studies minor. The Director of the Center for the Americas serves as the administrator for minor certification.

The site of Columbus’s first landing and the hemisphere’s first Iberian settlement, what we now call the Caribbean, is temporally, geographically, and historically at the Center of the Americas. Colonized by Spain, France, England, the Netherlands, Denmark, and the United States, populated by streams of labor from Africa and Asia, as well as by peoples from Europe and the Middle East, the Caribbean has extraordinary diversity in its people, languages, and cultures. It is a microcosm of contemporary global problematics: immigrant, indigenous, settler, and diasporic communities negotiating their current status as polities while preserving individual pasts and identities.

The Caribbean studies minor at Wesleyan focuses upon aspects of this region. It draws upon faculty and curricula from many departments and programs at Wesleyan: American studies, Latin American Studies, African American Studies,
College of Letters, Anthropology, English, Religious Studies, and Music, among them. It is by its diverse nature constituted as always multidisciplinary.

**MINOR REQUIREMENTS**

The minor in Caribbean studies consists of five credits.

- AMST200 is required as a foundation course for the minor.
- The four additional courses may be drawn from courses that fall within the category of Caribbean studies. The Caribbean studies courses in Wesleyan’s curriculum from 2013–14 to 2018–19 are listed here; the listing will be updated annually.

* While a specific distribution of the four electives across disciplinary and interdisciplinary fields is not required, no more than three courses in a single disciplinary field may be counted for the minor. Those courses on the list that are marked with asterisks are not primarily focused on the Caribbean but include it in a broader hemispheric context or transnational perspective. Students including asterisked courses in their minor are asked to focus paper topics or research projects on the Caribbean if that is an option in the course. No more than two asterisked courses may be counted among a student’s four electives. A student counting two asterisked courses must submit evidence of a paper or research project with a Caribbean focus for at least one of the two courses.

- No more than one 100-level course may be counted for the minor.
- While there is no 100-level GPA requirement to declare or remain in the minor, a grade of B or better is required for all courses counted for the minor.
- Students who study abroad in the Caribbean (or elsewhere) would be allowed to count two courses for the minor so long as the courses are focused within Caribbean studies. To be counted for the minor, study-abroad courses have to be approved by the Director of the Center for the Americas.

**College of East Asian Studies Minor**

**Admission to the Minor**

Upon completion of any College of East Asian Studies (CEAS) course, students may apply to enter the CEAS minor. Students must fill out an online application (https://docs.google.com/a/wesleyan.edu/forms/d/e/1FAlpQLScnBk33CD9ypUTFW9u856rOubPLy69FFPjAYyVxaExT4jgdg/viewform?c=0&w=1) and then submit a minor declaration via the Minor Declaration Tool in the electronic portfolio.

**Minor Requirements**

The minor requires completion of any five CEAS courses and intermediate-level competence completed second year in Chinese, Japanese, or Korean. Starting with the class of 2020, only courses taken for a grade may be counted towards the minor.

No more than two of the five courses may be language courses. No more than two of the five courses can be performance or studio art courses. No more than one of the five courses can be a study abroad course.

The rule that no more than two of the five courses can be language courses means that students beginning their Chinese, Japanese, or Korean language study at Wesleyan may have to take as many as seven courses to fulfill the minor (because four courses would be required to reach intermediate competence, but only two will count toward the minor).

Note that while the CEAS major requires that native speakers of a Chinese, Japanese, or Korean language must study a different Chinese, Japanese, or Korean language, that does not apply to the minor, so a native speaker of Korean, for example, can pass the intermediate competence standard without taking any language classes and can simply take any five CEAS classes. All students, including native speakers, must contact a language instructor and pass a placement exam in order to certify intermediate competence. Please contact the appropriate language coordinator (Chinese--Zhu, Japanese--Maruta, Korean--Back) immediately if you intend to exercise this option.

To graduate with a minor in CEAS, seniors must complete their minor certification form in their portfolio.

ECONOMICS MINOR

ADMISSION TO THE MINOR

Completion of ECON110 with a grade of C+ or higher and completion of, or current enrollment in, ECON300. A student who fails to obtain a grade of C+ or higher in ECON110 may declare the minor only after the student obtains a grade of C+ or higher in ECON300.

MINOR REQUIREMENTS

Students minoring in economics must complete five graded courses in addition to ECON110.

- Three are the core courses: ECON300, ECON301, and ECON302.
- One of the two electives must be an upper-tier elective, numbered 305 to 399.
- One of the two electives may be either an upper- or lower-tier elective (205 to 299).
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments, including CSS, may count toward the minor.
- One elective course in economics taken elsewhere may count toward the minor as the lower-tier elective only, subject to the department chair’s approval.

ADDITIONAL INFORMATION

- There may be prerequisite courses required for some of the courses that count toward the minor, such as calculus. These prerequisites do not count toward the minor, and students attempting to complete the minor are not excused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- Economics majors and minors cannot count ECON300 toward the minor and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course toward this minor that is also counted toward completion of any other of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the minor, subject to the QAC Advisory Committee’s approval (where routine approval may be delegated to the QAC Director).
- A more advanced course can substitute for the basic knowledge course, subject to approval. Students with good quantitative skills are strongly encouraged to do this.
- Students cannot receive both the data analysis minor and the Applied Data Science Certificate (p. 196).
EDUCATION STUDIES MINOR

The Education studies minor is designed to help students look critically at educational institutions, practices, and thinking in the United States and abroad—from the elementary to the university level. The majority of the courses required for the minor focus on the psychological and sociological dimensions of education. Courses from other parts of the university focus on the tools and skills for analyzing education and on broader contexts within the history and philosophy of knowledge. Another category of courses provides students with concrete teaching experience in a variety of instructional settings. The goal is to help students acquire a deeper understanding of education and its relationship to society.

The minor does not provide the course credentials for CT State Initial Educator Certification that are required for teaching positions in public schools. Visit Alternate Route to Certification (http://www.wesleyan.edu/cse/ARC%20MES%20partnership%20May%202017.pdf) for more information.

SUPERVISING FACULTY

STEVEN E. STEMLER (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/SSTEMLER/PROFILE.HTML)  
Associate Professor of Psychology

ANNA SHUSTERMAN (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/ASHUSTERMAN/PROFILE.HTML)  
Associate Professor of Psychology

ADMISSION TO THE MINOR

Students are strongly urged to consult with one of the supervising faculty as they develop their plans for fulfilling the requirements.

Declare the minor through the Major/Minor/Certificate Declaration link via WesPortal>Academics>Major/Minor/Certificate Declaration. It is best to do this as early as possible so that you can receive e-mails and updates about the minor from the supervising faculty who will help you with academic planning.

MINOR REQUIREMENTS

The Education studies minor is awarded to students who complete seven courses from an approved curriculum. Successful candidates must earn either a grade of B or better in each course or maintain a B+ or better average for the seven courses used for the minor. The courses must include at least one course in each of the following categories:

1. Cognitive and psychological influences on learning and schooling
2. Social and structural analyses of education
3. Statistics
4. Broader contexts
5. In-school experience

The two additional courses should be chosen from those listed in categories 1 and/or 2. The courses may be completed in any order consistent with their prerequisites.

The supervising faculty maintains a suggested course list below. Students may contact one of the minor’s supervising faculty to discuss other courses that might fulfill the requirements.

The Category 5 in-school experience requirement does not need to be credit-bearing. If the experience is something other than one of the listed courses below, the experience must be fully documented and fully meet the Category 5 criteria. Contact one of the supervising faculty to discuss how to document fulfilling this category.

The field of education research is replete with quantitative data that can inform theory and practice. Furthermore, there is a push to make educational decisions “data-driven.” To participate in these central conversations, students need to have a grasp of basic statistical principles.

WRCT140 & EDST140 & EDST140L
Teaching English as a Second Language and Teaching English as a Second Language

* Courses that have specific prerequisites that must first be completed are indicated with an asterisk.

**FILM STUDIES MINOR**

**ADMISSION TO THE MINOR**

The department offers a six-course minor that provides an opportunity for you to participate in our basic introductory courses and a selection from a large group of cross-listed courses, as well as a group of courses that we have not yet cross-listed. You can link your film minor to your primary major or pursue an entirely new area. For instance, you might focus on various cluster groups if so desired: television, cultural and media studies, international or global cinema, German cinema, Asian cinema, or writing for film and/or television and the media.

In accordance with the University guidelines, students minoring in film studies must complete six courses for a grade (no pass/fail) and achieve a B average. Tutorials, education in the field, and student forums do not count toward the minor.

Before becoming eligible for the minor, you must complete FILM307 with a grade of B or better, which would then count toward fulfillment of the minor and activate a minor course registration chart with the department (see department administrative assistant). Transfer courses cannot be used as a prerequisite, nor can they count toward fulfillment. After acceptance into the minor, you may submit courses taken overseas or at other universities to be considered on a case-by-case basis for credit.

**MINOR REQUIREMENTS**

FILM307 should be taken during the first or sophomore year. Students must meet with the minor administrator, Logan Ludwig (lludwig@wesleyan.edu), to declare the minor. After that, they may choose as convenient to complete the five additional courses before graduation.

Naturally, all course selections are subject to prerequisites from other departments, as well as enrollment restrictions, but with such a wide list of choices (and the list grows each year), there should be no problem in finding five classes.

**COURSES**
The list of courses currently recognized as part of the film studies minor includes. (Please note that not all courses will be available every semester.)

**FRENCH STUDIES MINOR**

**ADMISSION TO THE MINOR**

Our criterion for admission in the minor is a grade of B or higher in FREN215 or its equivalent.

**MINOR REQUIREMENTS**

The French studies minor provides students with a command of the French language sufficient to live and work in a French-speaking environment. It enables them to develop a good knowledge of French-language literatures and cultures, and, through it, an awareness of French and Francophone modes of thought and expression. The minor consists of a minimum of five courses:

- Four FREN courses numbered 220-399:
  - FREN215 or the equivalent is the prerequisite for all FREN courses numbered 220 or higher.
  - Courses numbered 220-299 are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the
German Studies Minor

Placement Test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.

- 300-level courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged.
- One FRST course.

The other credit may be in French or English and may include any one of the following courses:

- A course from the French section’s normal offering numbered 220-399.
- A course listed FIST (French, Italian, Spanish in translation).
- A course taken through approved study-abroad programs.
- A course offered by other departments and programs on campus that deal partly or primarily with France or a Francophone region. This course must be approved by the student’s minor advisor.

Although there is no overall GPA requirement to stay in the minor, a grade of B or higher is required to receive minor credit for a course.

German Studies Minor

Admission to the Minor

Any student who intends to earn the minor in German studies should speak with a faculty member of the department by the end of the sophomore year. Satisfactory completion of the minor will be certified by the department.

Minor Requirements

The minor requires six course credits with a minimum GPA of B. Four of the courses must be above the GRST211 level and taught entirely in German; at least two of these must be taken at Wesleyan. The other two courses may be in either English or German; they must be taken in the Wesleyan German Studies Department. All courses counted toward the minor must be taken for a letter grade. Exceptions will be made for students majoring in the College of Letters and the College of Social Studies. Please note, GRST101, GRST102, and GRST211 do not count towards the German Studies minor.

History Minor

Admission to the Minor

Why History? The minor in history offers students interested in history an avenue to gain coherent expertise in the field without committing to the eleven-credit coursework and research required for the major. The department intends the minor to be an opportunity to offer students a cluster of courses organized along thematic, geographical, or temporal lines that establishes some depth in the subject, its modes of analysis, and methods of investigation.

The minor is simple. Take six Department of History courses, two of which need to be seminars numbered 300 and above.

Minor Requirements

What next? The minor program in history consists of six semester-courses. These six courses must include the following:

1. Two Department of History seminars numbered 300-399.
2. One pre-1800 course: at least one of the six courses must be chiefly concerned with the pre-industrial era.

The following stipulations also apply:

- At least five of the six courses must number 150 or higher.
- Only courses taught by faculty appointed in history may count toward the minor.
- Tutorials, education in the field, and student forums cannot be counted toward the minor.
- AP or IB credit cannot count toward the minor.
- Students may declare a history minor at any point in their undergraduate career via WesPortal>Academics>Major/Minor/Certificate Declaration.
- There is no minimum grade average to complete the minor, and there are no required gateway courses or course sequences for entry into the minor.

Integrated Design, Engineering & Applied Science Minor

The broad and deep challenges of society demand nimble minds that can utilize an integrated skill set that includes design, engineering, and applied science. The Integrated Design, Engineering & Applied Science (IDEAS) program prepares students to succeed at the intersection of design, the arts, and engineering. Students develop foundational knowledge in design and engineering by working in collaborative groups on project-based studies. The core courses of the IDEAS minor provide a basis in both the technical and aesthetic aspects of design. These courses serve as the basis for more focused studies in a broad array of elective modules that span design and engineering disciplines.

Admission to the Minor

Students should complete two required courses, one focusing on Design & Engineering (CIS170, CIS175, IDEA173), or IDEA350 and one on Design & Arts (ARST190, ARST233, or ARST283) to be admitted to the IDEAS minor. Declare the IDEAS minor through your WesPortal.
MINOR REQUIREMENTS

A minor in IDEAS requires six credits. Students must complete two project-based design courses, one focusing on engineering, and one on the arts. The remaining four elective courses come from course “modules.” Some courses offered on an irregular basis are not listed in modules, but may be used for electives, subject to approval from the minor advisor. In addition, students will assemble a digital or physical portfolio of their work from project-based courses to complete the minor.

STUDENT PORTFOLIO

Regardless of the module completed, students pursuing the minor will assemble a portfolio of their work from the courses completed to fulfill the minor. It will be expected that each student in the minor will begin the design of an online and/or physical portfolio in the required project-based minor courses. In consultation with an advisor, projects will be added to this portfolio and reviewed before completion of the minor. The portfolio will be used for both for the assessment of individual students, as well as the success of the minor.

REQUIRED PROJECT-BASED DESIGN COURSES

Students must complete one course from each group below.

</tbody>
</table>

ELECTIVE COURSES FROM MODULES:

The course modules provide topical focus in the wide array of areas in Design, Engineering, and Applied Sciences. The IDEAS modules consist of four courses above the two required courses, to make the total of six courses in the minor.

Some of the proposed modules include courses listed among those that will satisfy the two-course distribution requirement listed above. Students will most efficiently complete such a module by selecting a required course that also contributes to the module. Students will work with an advisor to help them achieve the appropriate depth of study in the module area. Related courses that are not offered on a regular basis may be approved for minor credit, subject to review by the minor advisor. Students may propose substitutions or alternate modules, which must have approval from the advisor of the minor. Typically, introductory (100-level) courses may not be counted toward the elective requirement.

2D DESIGN

The study of communication design ranging from letterpress printing and the history of books to contemporary graphic design and on to web design, always referencing production and its technology.

**PERFORMANCE DESIGN**
Stage design for theater or dance, sets, costumes, and lighting.
MEDIEVAL STUDIES MINOR

MINOR REQUIREMENTS

The medieval studies minor provides students with a basic knowledge of the European Middle Ages in the valuable context of an interdisciplinary framework.

Students minoring in medieval studies complete six courses cross-listed with MDST or approved by the chair of the medieval studies program. No more than three of these courses may be taken in any one department and at least two must be taken in arts and humanities and two in social sciences. At least four of these courses must be taken at Wesleyan; one or two may be taken while studying abroad or during the summer.

Minors are strongly encouraged to take at least two years of a modern foreign language. Minors who anticipate going on to graduate work in the medieval or early modern period are strongly encouraged to take at least two years of Latin as well.

### PLANETARY SCIENCE MINOR

Planetary science is an emerging interdisciplinary field that seeks to understand the origin and evolution of the solar system in which we live and the other solar systems that we have identified in our galaxy. The science questions include the most important of our times: How do planets (including the Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? This field has grown significantly over the last decade with major advances in our understanding of Mars and the outer solar system and the discovery of hundreds of exoplanetary systems. Planetary research is a primary focus of NASA’s current and future missions.

The planetary science minor will give students exposure to fundamental themes, tools, and topics that are relevant to future careers in the planetary science, general sciences, and for the educated citizen.

### MINOR REQUIREMENTS

The planetary science minor consists of 5 graded courses plus at least 3 offerings of the 0.25 credit Planetary Science Seminar.

**Advanced Courses**

0.75
To qualify for the minor a student must complete AST/E&ES 555 Planetary Science Seminar during at least three of the four semesters available in their junior and senior years. We encourage students to complete all four semesters if possible in order to obtain complete coverage of our cycle of topics.

E&ES/ASTR555
Planetary Science Seminar

**Research (Optional)**

While research in the area of planetary science is not required, we hope that most students seeking this minor will elect to do research with a member of the Planetary Science Group. Research can be done during the semester or over the summer.

---

**RELIGION MINOR**

**ADMISSION TO THE MINOR**

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio and e-mail the chair (mrubenstein@wesleyan.edu) of their interest.

**MINOR REQUIREMENTS**

Students wishing to complete the minor must take five courses, arranged as follows:

- RELI151 with a grade of B- or higher
- Two courses in at least two areas of “Historical Traditions,” as listed in our Description of Programs in Religion (https://iasext.wesleyan.edu/regprod/wesmaps_page.html?subj_page=RELI). In this category there are both survey courses (generally numbered at the 200-level) and seminars (generally numbered at the 300-level).
- Two additional courses of the student’s choice. One of these courses may include RELI398, though this is not required.
- The department will accept, as one of the courses for the minor, either one course taken abroad or one course that is cross listed but not taught by members of the department.

Generally, tutorials and student forums do not count, though the chair (mrubenstein@wesleyan.edu) may count one after hearing compelling reasons from the student.

Religion courses must be taken for credit with standard letter grading, though special cases may be considered by the chair. (mrubenstein@wesleyan.edu)

---

**RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MINOR**

**ADMISSION TO THE MINOR**

Any student who intends to earn the minor in REES should speak with the program chair by the end of the junior year at the latest.

**MINOR REQUIREMENTS**

The minor in REES consists of six courses, in which the student must achieve a GPA of B. These courses must include RUSS101 and RUSS102 or two semesters of Russian language study at the appropriate level and four more REES courses, of which one must be taken in each of the three areas of politics and economics, history and religion, and literature and culture (see course list). The fourth course may be in any of the three areas or may be a semester of intermediate or advanced Russian. Two of the courses may be taken during study abroad (with prior approval). All courses except RUSS101 and RUSS102 must be taken for a grade. Students should plan the minor in consultation with REES faculty.

Satisfactory completion of the minor will be certified by the program.
CERTIFICATES

Certificates provide curricular options that complement current departmental and interdisciplinary majors. They are designed to bring coherence to programs of study that include courses from many departments and programs. For each program, model curricula are provided to guide students in their choice of courses. Wesleyan currently has twelve certificate programs in place.

- Certificate in Applied Data Science (p. 196)
- Certificate in Civic Engagement (p. 197)
- Certificate in Environmental Studies (p. 197)
- Certificate in International Relations (p. 199)
- Certificate in Jewish and Israel Studies (p. 199)
- Certificate in Middle Eastern Studies (p. 199)
- Certificate in Molecular Biophysics (p. 200)
- Certificate in Muslim Studies (p. 200)
- Certificate in South Asia Studies (p. 202)
- Certificate in Writing (p. 202)

CERTIFICATE IN APPLIED DATA SCIENCE

COORDINATOR: DIRECTOR OF QAC

To earn the Applied Data Science Certificate, students must complete seven graded courses and the capstone Data Analysis Practicum.

</tr>
</tbody>
</table>

NOTE: at least one of the electives should be a 300 level course

The capstone Data Analysis Practicum that includes an ethics and epistemology seminar discussion as well as completing an independent data science project.

ADDITIONAL INFORMATION

- Some of the courses that count toward the certificate may have a prerequisite, such as calculus. These prerequisites do not count toward the certificate, and students attempting to complete the certificate are not excused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the certificate. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective
courses, they can take either MATH232 or COMP212 and complete two applied elective courses.

- Computer science majors cannot count courses in the foundations groups already covered by their major toward the certificate. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- It is strongly recommended that students who are not mathematics or computer science majors take courses in the computing foundations group to satisfy the certificate requirements. They can also substitute either MATH232 or COMP212 for one of their applied elective courses.
- Economics majors and minors cannot count ECON300 toward the certificate and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course towards this certificate that also counts toward completion of any of their majors or minors.
- Up to two courses taken elsewhere may substitute as appropriate for any of the above courses and toward the certificate, subject to the QAC Advisory Committee’s approval (where routine approval may be delegated to the QAC director).
- Students can substitute a course from among the applied data science and applied elective courses for the basic knowledge course, subject to approval.
- Students cannot receive both the data analysis minor and the applied data science certificate.

### CERTIFICATE IN CIVIC ENGAGEMENT

Civic engagement encompasses a wide range of activities in which individuals work to strengthen their communities, to realize common goods, to enhance the capacities and dispositions necessary for democratic self-rule, and, in general, to deliberately shape their common life. Wesleyan University prides itself on enrolling and nurturing students with a strong social consciousness. Students participate in a wide variety of formal and informal “civic” activities in Middletown and around the world. These activities include volunteer work, practica, and service-learning courses. This certificate is designed for students interested in reflecting upon these activities and integrating their civic and academic efforts.

**Requirements.** During their sophomore through senior years, Civic Engagement Certificate (CEC) students will complete a series of structured academic and cocurricular activities, including courses, volunteering, practica, and opportunities for reflection that will enable them to develop a broad understanding of the varied components of civic engagement.

We can think of civic engagement as applied democratic theory. As “theory,” mastery requires the development of a theoretical understanding of both the principles of democracy and the institutional and social requisites of a democratic society (see Requirements 1 and 5 below). As “applied,” mastery of civic engagement requires the practical understanding of social processes that results from actual engagement in the community (Requirements 3 and 4). Thus, the certificate requires students to take a set of courses to acquire an understanding of how democratic processes (including the practices and institutions of civil society) work; to acquire the firsthand experience of civic engagement and civic life by participating in approved civic activities; and, finally, through both coursework and other means, to reflect on the connections among these and to integrate them effectively (Requirements 1, 2, and 5).

- **Requirement 1:** Six courses dealing with civic engagement are required. Courses are grouped into the following categories (listed on WesMaps [http://www.wesleyan.edu/wesmaps])
  - The Individual in Society
  - The Practice of Democracy
  - Ethical Reasoning
  - Volunteerism and Activism
  - Education and Public Scholarship
  - Civic Engagement in Cross-Cultural Perspective
- **Requirement 2:** Three reflection papers are required, one per year of the certificate. These papers, along with one document from each relevant course, will be archived during the process of completing the certificate.
- **Requirement 3:** A minimum of 40 hours of service work coordinated through the Office of Community Service and Volunteerism (OCS)
- **Requirement 4:** A practicum
- **Requirement 5:** The senior seminar, a .25 credit capstone course (CSPL302)

Note: CEC requirements fulfilled before a student is admitted may be counted toward the certificate at the discretion of the CEC Advisory Panel.

**Admission.** Students will be admitted to the CEC by self-declaration. They will be considered part of the certificate group after they have formally applied to participate and discussed their plans with the faculty coordinator. The application will consist, in part, of a reflection paper explaining the place of civic engagement in the applicant’s own life and plans to fulfill the CEC requirements.

**Additional Information.** Contact the faculty coordinator, Barbara Juhasz, at bjuhasz@wesleyan.edu.

### CERTIFICATE IN ENVIRONMENTAL STUDIES

Environmental studies is a multidisciplinary, integrative study of a broad range of environmental issues. Environmental science (such as climatology or conservation biology) is one aspect. But environmental studies also brings together the spectrum of foci that are necessary to solve, evaluate, comprehend, and communicate environmental issues. Thus, environmental studies includes sciences, economics, government, policy, history, humanities, art, film, ethics, philosophy, and writing.

For students to engage contemporary environmental issues, they must obtain expertise in the area of their major and gain broader perspectives in environmental studies through a set of introductory and elective courses that increase the breadth of their understanding to complement their specialty. The aim of the program is to graduate students who have both a specialty and breadth of perspective so that they can interpret environmental information; understand the linkages to social, political, or ethical issues; and formulate well-reasoned opinions.

The certificate is granted for a minimum of seven credits as follows:
The CSM pathway requires the following:

The IGS pathway introduces students to the emerging interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics. The sequencing of genomes of humans and several other model organisms has led to a new challenge in the life sciences—to successfully integrate large amounts of information to build and evaluate models of how organisms work. This is inherently an interdisciplinary problem that involves bridging conceptual frameworks and ways of thinking among the life sciences, information sciences, and philosophy. Faculty in complementing fields such as biology and computer science are working together to explore and develop new courses in this emerging field. As the disciplines advance, tomorrow’s students in the life sciences and in information sciences will benefit from strong conceptual frameworks in informatics, biology, and bioethics, and in the links between them.

The CSM pathway introduces students to modeling techniques and provides students with a solid foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena such as the collision of galaxies, protein folding, and the behavior of markets. Its principal pedagogical and intellectual goal is to make students aware of the power of the quantitative, algorithmic method for understanding the world. The idea is to provide a course of undergraduate studies that imparts sufficient general knowledge, intellectual depth, and experience with quantitative reasoning and modeling techniques for students to be comfortable and proficient in incorporating this intellectual experience for a better understanding and more control of the natural and social worlds. Students can use this experience as an enrichment of their major and liberal arts education or as a stepping-stone to pursue, if desired, a more intensive specialization in any of Wesleyan’s quantitative reasoning departments.

• Students interested in the CSM pathway should contact Reinhold Blumel (rblumel@wesleyan.edu).
• Students interested in the IGS pathway should contact Michael Weir (mweir@wesleyan.edu) or Danny Krizanc (dkrizanc@wesleyan.edu).

CERTIFICATE IN INTERNATIONAL RELATIONS

Students seeking the International Relations Certificate are required to take a foreign language to the intermediate level, introductory government, history, and economics courses, and five advanced global systems and area studies courses, some of which must focus on developing countries. The foreign language requirement is met by coursework through the intermediate college level in any foreign language or demonstration of proficiency gained elsewhere (four semesters or the equivalent). Introductory courses should ideally be taken during the student’s first two years at Wesleyan. Advanced courses should be identified from the international relations course list in WesMaps. At least one advanced course must be taken from each of three different disciplines, at least two must be taken from the global systems section of the list, and at least two more must be taken from the area studies section of the list. Two of the area studies courses must focus on developing countries.

Students are urged to study abroad, preferably in a non-English speaking country, to improve language skills. Internships in foreign-policy fields (with international organizations, government agencies, multinational corporations, or nonprofit organizations) are encouraged.

A maximum of two courses taken at other institutions, either in the United States or abroad, may be counted toward the IR Certificate after they have been approved by the appropriate Wesleyan department chair for Wesleyan major credit. Once this approval has been given, the IR Certificate Committee will determine which of the requirements the course might fulfill.

Wesleyan courses that count toward the certificate are listed under IR Certificate courses on the Fries (http://www.wesleyan.edu/cgs) Center for Global Studies website (http://www.wesleyan.edu/cgs). To receive the certificate upon graduation, students will be required to have an overall GPA of B+ or higher in the advanced courses submitted for certification (if only five courses are listed). The GPA requirement is waived if qualifying students take a sixth advanced course. Certification will appear on the student’s transcript after graduation.

The program requires students to take seven courses in Jewish and Israel studies and Hebrew courses taught by core faculty, affiliated faculty, and distinguished visitors.

• Courses are grouped into four pathways (clearly labeled in WesMaps (http://www.wesleyan.edu/wesmaps)):
  • Israel Studies
  • Religion of the Jewish People
  • Jewish Literature and Culture
  • History of the Jewish People
• Courses required for the certificate:
  • Two courses taken in the Religion Department and the History Department. Please consult the director and WesMaps (http://www.wesleyan.edu/wesmaps) for course offerings.
  • Five additional courses chosen from an array of courses included in the Certificate Program.

Candidates for the certificate are strongly encouraged to study Hebrew. Students pursuing the Israel Studies pathway may count more than two Hebrew courses towards the certificate.

Students can enroll in this certificate program through their electronic portfolio at the same time that they declare a major. To receive the certificate, students must maintain a B+ average in courses in the program.

Please consult the director of the Center for Jewish Studies, Dali Katz (dkatz01@wesleyan.edu), with any questions regarding the requirements and/or the Certificate in Jewish and Israel Studies.

CERTIFICATE IN MIDDLE EASTERN STUDIES

The Certificate in Middle Eastern Studies requires eight courses, of which at least one course must be from the courses listed under the Jewish and Israel Studies Certificate and one must be on the Muslim Middle East. Additionally, the eight required courses include

• Two courses (one full year) or equivalent at the intermediate level (second year) of Hebrew or Modern Standard Arabic (waived if the student demonstrates proficiency). Elementary language courses do not count toward the eight required courses for this certificate.
  • One gateway course
  • One course on historical texts and traditions
  • One course on contemporary society and politics
  • Three electives

Students who are granted a waiver of the language course requirement by the certificate director will take additional electives to complete eight courses toward the certificate. With the approval of the certificate director, one relevant tutorial and two relevant study-abroad courses may count toward the certificate. Normally, no more than two courses from any one department or program may count toward the certificate (this does not apply to language courses or to the gateway course).

Admission to the Certificate. Students may apply for admission to the certificate at any point in their undergraduate career at Wesleyan. For tracking, advising, and cocurricular purposes, they are encouraged to sign on early. Seniors who

CERTIFICATE IN JEWISH AND ISRAEL STUDIES

The certificate program offers undergraduate students a multidisciplinary and interdisciplinary training in Jewish and Israel studies. Over a three-year cycle, courses are offered in various departments and in a number of academic areas including Jewish religion, Jewish history and culture, Israel studies, and Jewish letters. The certificate program gives students an opportunity to forge coherence in that large part of the curriculum that falls outside the major.
wish to obtain the certificate should contact Professor Bruce Masters at the start of their spring semester to establish their eligibility. They will need to provide copies of their transcripts for certification.

Interested students should contact Professor Bruce Masters at bmasters@wesleyan.edu.

CERTIFICATE IN MOLECULAR BIOPHYSICS

Molecular biophysics is an interdisciplinary area of research situated at the intersection of molecular biology, chemistry, chemical biology, and molecular physics. Molecular biophysics, as a field of endeavor, is distinguished by analytical and quantitative research inquiry based on molecular and macromolecular structures, diverse molecular spectroscopic methods, biophysical chemistry, functional bioenergetics, statistical thermodynamics, and molecular dynamics. Topics of active research interest by University faculty in molecular biophysics include protein structures and folding, molecular models of enzyme mechanisms, protein-DNA and protein-RNA interactions, and the nature of gene expression and regulation at the molecular level. As a consequence of recent advances stemming from the human genome project, the field of structural bioinformatics finds an increasingly important emphasis in our program. A parent organization for this field of research is the U.S.-based Biophysical Society, with some 7,000 members, with sister societies worldwide.

In addition to satisfying departmental requirements, all participating students, undergraduate and graduate, engage in independent research projects under the direction of participating faculty and participate regularly in weekly meetings of the Molecular Biophysics Journal Club, in which research papers from the current literature are presented and discussed. Journal club students also meet regularly with seminar visitors in the area of molecular biophysics. Undergraduate and graduate students are also expected to present (either orally or with a poster) at the annual molecular biophysics retreat. At Wesleyan, students participating in the molecular biophysics program have the opportunity to select research projects with varying degrees of emphasis on biophysics, biochemistry, biological chemistry, and molecular biology. The common element among participants is an emphasis on a quantitative, molecular-based mode of inquiry in research. Students are also encouraged to present their work at an international scientific meeting, and the program typically provides some financial support for their expenses.

Undergraduate students majoring in chemistry and/or molecular biology and biochemistry (MB&B) can choose to obtain a Certificate in Molecular Biophysics. The certification program involves following the prescribed major in each department. Within the chemistry and MB&B majors, students are expected to take the following courses to fulfill major requirements (note: all courses are cross-listed):

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MB&amp;B/ CHEM395</td>
<td>Structural Biology Laboratory</td>
<td>1</td>
</tr>
<tr>
<td>MB&amp;B/ CHEM383</td>
<td>Biochemistry</td>
<td>1</td>
</tr>
<tr>
<td>Select one of the following:</td>
<td></td>
<td>1-2</td>
</tr>
<tr>
<td>MB&amp;B/ CHEM381</td>
<td>Physical Chemistry for the Life Sciences</td>
<td>1-2</td>
</tr>
</tbody>
</table>

In both the MB&B and chemistry majors students must take either two (MB&B) or three (CHEM) elective courses to complete the major. To achieve certification, students must choose their elective courses in the area of molecular biophysics. Elective courses can be chosen from a set of courses offered by participating faculty (see course cluster). In addition, students must do independent research for at least two semesters under the direction of one of the program faculty. It is possible to be jointly mentored; however, at least one mentor must be a faculty participant in the molecular biophysics program.

Graduate students in chemistry, physics, or the life sciences may elect to participate in the interdisciplinary program in molecular biophysics. Program participants pursue a course of study and research that often overlaps the disciplinary boundaries of chemistry, biology, molecular biology, and physics. Graduate training opportunities are available for students with undergraduate background in any one of these areas. Individualized programs of study are provided so that each student obtains the necessary interdisciplinary background for advanced study and research in molecular biophysics.

Interested students should contact Professor Ishita Mukerji at imukerji@wesleyan.edu.

CERTIFICATE IN MUSLIM STUDIES

More than one-fifth of the world’s population currently self-identifies as Muslim. A 2015 Pew Research Center report projects this will rise to nearly 30% by 2050. For many individuals and groups, "Muslim" is more than a marker of religion, it represents a set of contested communities; ethnicities; histories; regions and neighborhoods; politics; and artistic, literary, and musical traditions that may or may not have a recognizable connection to Islam. Despite this diversity, many hold notions of Muslim identity that act as a shared horizon of belonging or association.

Certificate students must complete six appropriately designated courses. Each course offered will carry two designations—topic and region—in order to ensure that students engage an appropriately diverse distribution of courses.

All courses will be listed according to one (or more) of the following topical categories:

- Contemporary society and practice: Courses primarily concerned with the study of contemporary Muslim communities (cont)
- Literary, artistic, and musical studies (la&m)
- Historical inquiry (hist)

All courses will be listed according to one (or more) of the following regional categories:

- Middle East and North Africa (MENA)
- South, East, and Southeast Asia (SESA)
• Sub-Saharan Africa (SSA)
• North America and Europe (NAE)

The six courses designated as appropriate for the certificate must include:

• One gateway course (i.e., a course entirely about Muslims that serves as a way to offer an introduction to Muslim studies).
• At least one course in each of the topical categories.
• At least one course in three of the regional categories.
• No more than three courses can come from one of the above categories.

These requirements endeavor to diversify the student’s exposure to disciplinary and divisional offerings in Muslim studies while allowing him to focus on specific topics of particular interest.

Courses are considered appropriate for the certificate if they include at least 25% material on Muslims. Internships in appropriate organizations will be considered for credit so long as they are accompanied by a 10-page assessment of learning outcomes to be assessed by the director.

To help students develop proficiency in the study of social, cultural, and critical theory, this certificate encourages students to seek out theory-intensive courses in a wide range of disciplines and departments at Wesleyan.

To qualify for the Social, Cultural and Critical Theory (SCCT) Certificate, a student must successfully complete six authorized courses, hosted by at least three different departments or programs. All classes must be taken on a graded (A-F) scale. The minimum grade required in each course is a B-. Courses taken on a CR/U scale count only in the case of COL majors and CSS majors; for the latter, only CR/U courses taken during their sophomore year count. Of the six courses that count for the certificate, no more than two may be lecture courses.

Courses that are not listed as SCCT courses on WesMaps or included on the certificate’s website (wesleyan.edu/theory) may be used to fulfill certificate requirements if deemed suitable by the certificate director.

Up to two of the six courses may be taken during a semester abroad, and up to three may be taken during a year abroad. With authorization from the certificate director, students may also count up to two courses transferred from another U.S. institution.

Students who wish to earn the certificate should meet with the certificate’s director, Professor Matthew Garrett (mcgarrett@wesleyan.edu), preferably in the fall of their junior year. Students will ideally have completed at least two courses before the beginning of their junior year and will fill out an application form (available on the website). This application must be reviewed by one of the directors and then submitted to Erinn Savage (esavage@wesleyan.edu) at the Center for the Humanities, 95 Pearl Street.

Upon completing the requisite six courses, students should submit a “certificate completion form” (also available on the website) to Erinn Savage at the Center for the Humanities. This form must be completed and submitted by the end of classes during the spring semester of the senior year.

CERTIFICATE IN SOUTH ASIA STUDIES

Wesleyan has a remarkable collection of faculty, courses, and resources for all students interested in studying the cultures of South Asia (with primary focus on India, Pakistan, and Bangladesh). The University not only enjoys the distinction of having an Indian music studies program but also a diverse group of scholars devoted to the wider region and its diaspora in fields as diverse as anthropology, art history, cultural studies, dance, history, literature, and religion. Certificate faculty will help Wesleyan students better pursue the wide range of opportunities in South Asian studies—both scholarly and artistic—as the subcontinent gains increasing global prominence.

Students are required to take seven courses designated as appropriate for the certificate. Up to three of these may be taken away from Wesleyan (e.g., on a study abroad program). Of the seven required courses:

- One must be a gateway course (i.e., a course entirely about South Asia that combines two or more of the below-listed distribution categories in such a way as to offer an introduction to South Asian studies).
- At least one course in three of the distribution categories.
- No more than three courses can come from any one of these categories.
- The distribution categories are as follows:
  - Contemporary Society and Practice (CSP): Courses primarily concerned with the study of contemporary South Asian communities, their practices, and their productions
  - Historical Inquiry (HI): Courses primarily concerned with the historical study of South Asia
  - Language (L): Courses in which students gain comprehension in South Asia’s languages
  - Performance Traditions (PT): Courses in which students obtain training in the performance of a specific form of art

Interested students should contact William Pinch at wpinch@wesleyan.edu.

CERTIFICATE IN WRITING

The Writing Certificate is designed to provide a flexible framework within which students from all majors can develop proficiency in creative writing (poetry, fiction, creative nonfiction, screenwriting, playwriting) and forms of nonfiction such as criticism, (auto)biography, science writing, political and literary journalism, and writing about academic subjects for nonspecialists.

Goals. This certificate provides opportunities for students to acquire the critical and technical vocabulary for analyzing their own and others’ writing; become skilled editors; learn to write and analyze writing in a variety of genres and styles; learn to present specialized subject matter to nonspecialist audiences; explore, through practice, the many ways in which the written language can function;
and participate in a community of students and faculty who share a passion for writing.

**Community.** Wesleyan supports a thriving community of writers who regularly come together for formal and informal readings of their work, discussions, workshops, meetings, and gatherings with writers, editors, and publishers visiting campus, and with the full-time and part-time writing faculty. Students working toward the certificate will be integrated into these activities and will contribute to the public presence of writing on campus. Some activities will be organized specifically for certificate candidates.

**Advising.** The instructors of writing courses and the members of the Writing Certificate Committee are available to students seeking guidance on possibilities for graduate study and careers involving writing.

**Admission and Requirements.** To earn the certificate, students must take at least five full-credit courses. These include

- At least one course designated as an entry-level craft or technique course, but no more than two such courses;
- Three electives, one of which may be a second entry-level craft or technique course, at least one of which must employ a workshop format, and one of which must be a Permission-of-the-Instructor course. One one-credit senior thesis or senior essay tutorial may be counted as an elective if the thesis entails creative writing.
- WRCT350, a one-credit credit/unsatisfactory course, in which the participants work on compiling and revising portfolios of their work and present their work in class and to the public in events organized for this purpose.
- Students must achieve a GPA of at least 3.5 in the courses counted toward the certificate.

**Admission to Certificate Candidacy.** Students may apply for candidacy in their sophomore or junior year. They must have taken—for a letter grade—one of the courses listed as eligible for the certificate and received a grade of B+ or better. (COL and CSS students concerned about the grade requirements should see Frequently Asked Questions [http://www.wesleyan.edu/writing/certificate/frequently.html].)

Interested students should contact Anne Greene, certificate coordinator, at agreene@wesleyan.edu.
ANIMAL STUDIES CLUSTER

CO-COORDINATORS
- LORI GRUEN (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/LGRUEN/PROFILE.HTML)
- KARI WEIL (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/KWEIL/PROFILE.HTML)

Animal Studies is an emerging field that builds on scholarship in the humanities, social sciences, and sciences to investigate past and present relations between human and non-human animals, the representation of those relations, their ethical implications and their social, political, and ecological effects in and on the world. It is a field of critical importance today as the complex, but fragile interdependence of all life becomes increasingly apparent, and as scholars, artists, and activists seek ways to understand and enhance the lives of all animals. Wesleyan Animal Studies fosters scholarship on human-animal relations from a range of disciplinary and interdisciplinary perspectives.

CHRISTIANITY STUDIES CLUSTER

CO-COORDINATORS
- R (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/LGRUEN/PROFILE.HTML)
- STEVEN HORST (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/SHORST/PROFILE.HTML)

Christianity has been a defining force in European and Euro-American history and culture, and has profoundly influenced the visual arts, theater, music, poetry, and philosophy. It has also spread throughout the world. The Christianity Studies cluster offers a way to study it without the constraints of a conventional major. As befits its place within a university curriculum, Christianity Studies courses are taught by people who come from a variety of faith commitments, including secular ones.

PATHWAYS
The Christianity Studies cluster offers a set of courses, changing from year to year, which can be grouped under the following headings, as pathways to assist in gaining a coherent understanding of Christianity. These are:

Christian Thought
Christianity’s Role in the Development of Modern Institutions
Christianity and Contemporary Social Debates
World Christianity
Christian Origins
Christian Writers
Christianity in Music
Christianity in the Visual Arts*

Although these pathways should provide assistance in devising a more coherent educational experience, those marked with an asterisk also suggest links to various information available through the internet, such as bibliographies, important texts, and musical and video clips.

## DISABILITY STUDIES CLUSTER

### CO-COORDINATORS
- Margot Weiss (http://www.wesleyan.edu/academics/faculty/mdweiss/profile.html)
- Megan Glick (http://www.wesleyan.edu/academics/faculty/mglick/profile.html)

Disability Studies is an interdisciplinary field that studies the systems of classification—medical, legal, social, cultural, historical—that organize bodily and psychological difference. Scholars in Disability Studies begin from the perspective that definitions of dis/ability vary historically and cross-culturally, and that bodily norms derived from these definitions have political, social, and economic ramifications for both disabled and nondisabled people. The field explores disability as a social and historical construction, a political identity, and a lived experience.

Health Studies Cluster

Co-Coordinators
- Peggy Carey Best (http://www.wesleyan.edu/academics/faculty/pcbest/profile.html)
- Ishita Mukerji (http://www.wesleyan.edu/academics/faculty/imukerji/profile.html)

Training for the health professions requires knowledge of a broad array of subjects, both science and non-science. For those seeking careers in a wide variety of health professions such broad-based training begins at the undergraduate level. Increasingly, emphasis is placed on the quantitative, medical knowledge required for patient care, the interpersonal and communication skills required for working in health care teams, and the cultural competencies needed for working with a rapidly changing patient demographic. The health studies course cluster offers students information about the types of courses at Wesleyan that provide appropriate background for those seeking careers in the health professions.

The goal of current health professions graduate programs is to create health professionals who have the knowledge, skills and flexibility to succeed in today’s rapidly evolving health care environment. In addition to the commonly required science courses in biology, chemistry, and physics, studying anthropology, sociology, ethics, psychology, and statistics is an important aspect of preparation for any of the health professions, along with the ability to integrate and apply the knowledge obtained to improve health outcomes for all populations. Having appropriate courses listed in the cluster encourages students to sample the breadth of the curriculum while still achieving proficiency in the recommended areas. There are multiple courses in any one disciplinary area that can provide the needed information and conceptual foundation, so the cluster highlights many different courses offering appropriate content. We want to encourage students to pursue an integrative, interdisciplinary approach to their education in this area.

Students and advisors are encouraged to make use of the cluster listing when selecting courses to fulfill major, minor and certificate requirements, as well as general education expectations. By choosing from cluster courses students will gain proficiency in the health studies area while also mastering the in-depth disciplinary perspective that comes with their chosen major.

**QUEER STUDIES CLUSTER**

**COORDINATOR**

- MARGOT WEISS (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/MDWEISS/PROFILE.HTML)

Queer Studies focuses on the social production and regulation of sexuality, asking: How does sexual normativity structure and shape diverse social and political institutions? What are the intersections of sexual marginality and other axes of difference (gender, race, ethnicity, disability, class, indigeneity, nation)? How does the social organization of desire produce forms of oppression and of resistance in varied places and times?
The Course Cluster in Queer Studies at Wesleyan includes courses across the humanities, the humanistic social sciences, and the interdisciplinary programs. Particular research and teaching strengths at Wesleyan include queer theory, theories of difference and embodiment (including disability and trans studies), queer of color critique, and transnational sexuality studies. Wesleyan Queer Studies courses are listed on WesMaps (https://iasext.wesleyan.edu/regprod/1wesmaps_page.html?subj_page=XQST).

If you have questions regarding Queer Studies at Wesleyan, please contact the cluster’s coordinator, Professor Margot Weiss (mdweiss-at-wesleyan.edu (mdweiss@wesleyan.edu)).

### SERVICE-LEARNING CLUSTER

**COORDINATOR**
- Peggy Carey Best (http://www.wesleyan.edu/academics/faculty/pcbest/profile.html)

Service Learning (SL) integrates experiences outside the classroom with an academic curriculum taught within the classroom. As one form of experiential education, service learning seeks to broaden students’ understanding of course content through activities which are, at the same time, of service to the campus and/or surrounding community. Through structured reflection on their service, students are able to test and deepen their understanding of theoretical approaches in virtually any discipline.

The Allbritton Center (http://www.wesleyan.edu/allbritton) for the Study of Public Life provides support and resources for faculty interested in incorporating service learning into their courses. Service-Learning Initiative Grants (http://www.wesleyan.edu/slc/facultyresources/obligations_support.html) (SLIGs) provide faculty with funds to develop their new service-learning courses. Faculty who teach service-learning courses often work closely with the Jewett Center for Community Partnerships (http://www.wesleyan.edu/jccp).

COURSES & PROJECTS (HTTP://WWW.WESLEYAN.EDU/SLC/PROJECTS-COURSES.HTML)

GETTING INVOLVED

Wesleyan students have a long history of getting involved in the greater Middletown community. Much of this is done through volunteer and community service through the Jewett Center for Community Partnerships (http://www.wesleyan.edu/jccp). But some academic courses—service-learning courses—also have a service component to them. In the past, students enrolled in service-learning courses at Wesleyan have:

- Conducted the homeless count required by the United States Department of Housing and Urban Development for the Middlesex Supportive Housing Coalition;
- Examined the effect of local preschools on preparing kindergarteners to be school-ready, for the Middletown School Readiness Council;
- Studied the North End landfill to determine whether the methane it produced could be harvested economically;
- Taught 20th century music compositional techniques to Middletown High School students;
- Taught dance classes at the Green Street Arts Center;
- Aided medical research at the Community Health Clinic.

If you think Wesleyan students might be able to help in a project your organization or agency is doing, planning, or just imagining, the first step is an informal discussion with the Director of the Allbritton Center.

FACULTY RESOURCES

Getting Started with Service Learning

When integrated into an academic course, community service provides a pedagogical tool that allows students to develop a deeper understanding of course material. The service can take many forms such as volunteer work, research for local organizations, teaching opportunities, policy-related work, community organizing activities, as well as other forms of service activities. Students may work directly with local community members through direct engagement activities or work on campus in the service of the members of the university community.

Faculty who want to explore developing a service-learning course should feel free to contact the Director for Service Learning, Peggy Carey Best (pcbest@wesleyan.edu), or the Director of the Allbritton Center to discuss their ideas. Information about service-learning courses, including syllabi, from almost all disciplines is available at the Jewett Center for Community Partnerships (http://www.wesleyan.edu/ccp) (JCCP) in Allbritton, 3rd floor. The Director for Service Learning and other Allbritton Center staff members can assist faculty members in identifying potential community partners.

Service-Learning Initiative Grants (http://cascadewww-staging.wesleyan.edu/slc/facultyresources/obligations_support.html) (SLIGs) provide faculty with funds to support the development of a new service-learning course (transportation costs, materials, training, and stipend).

Transportation (http://www.wesleyan.edu/jccp/about/vaninfo.html) for students in service-learning courses to their community placements may be arranged through the Jewett Center for Community Partnerships.

URBAN STUDIES CLUSTER

CO-COORDINATORS
- JOE SIRY (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/JSIRY/PROFILE.HTML)
- DANIELLE GANDOLFO (HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/DGANDOLFO/PROFILE.HTML)

Urban Studies is an area in which Wesleyan students can have both curricular and professional interests. Several University Major proposals in the last few years have been in the area of Urban Studies, and a number of Wesleyan students go on to graduate school and/or careers in areas such as Architecture, Geography, Public Policy, Urban Policy, and Urban Planning.

AFRICAN AMERICAN STUDIES (AFAM)

AFAM111 Introduction to Critical Philosophy of Race
This first-year seminar (FYS) course will examine contemporary figures in the emerging field of critical philosophy of race. We will attempt to examine what contributions (if any) the critical philosophy of race has provided not only to philosophy as a discipline but also to more traditional and established modes of thinking race and racism. We will do so by exploring issues such as the differences between critical philosophy of race and critical race theory, as well as the historical role of race and racism in philosophical thinking, and by attending to the major debates currently held in this emerging tradition.

AFAM115F Freedom School (FYS)
From the point of view of the U.S. nation-state, education has always been a hegemonic means to control knowledge, to calibrate unequal forms of citizenship, and to promote the social reproduction of power. Yet as W.E.B. Du Bois wrote in 1903, "education among all kinds of men [sic] always has had, and always will have, an element of danger and revolution, of dissatisfaction and discontent. Nevertheless, men [sic] strive to know." Drawing inspiration from the 1964 Freedom School Curriculum and spanning from enslavement to emancipation to the long civil rights movement, this course explores how people of African descent in the United States, and black women in particular, have used education to empower themselves, produce social change, and redefine the terms under which change may occur.

AFAM152F Staging America: Modern American Drama (FYS)
Can modern American drama--as cultural analysis--teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexualities Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

AFAM177F August Wilson (FYS)
During his lifetime, the world-renowned African American playwright August Wilson graced stages with award-winning and -nominated plays from his "Pittsburgh Cycle." This course examines the 10 plays of this cycle in the order that the playwright wrote them, from JITNEY (1982) to RADIO GOLF (2005). We will pay special attention to the playwright's use of language, history, memory, art, and music within his oeuvre.

AFAM200 Introduction to Africana Studies
The aim of this course is to provide an interdisciplinary examination of the complex array of social practices that have shaped the role of Africa and the African diaspora in world history. The class will focus on both classic and modern texts that provide an introduction to the dynamics of African American and African diaspora thought and practice. Topics include What is Africana studies?, black studies to Africana studies, Africa and the origin of civilization, creating
the African diaspora, transatlantic slave trade, Islamic slave trade, the Haitian revolution, African independence, the intersections of racism, black nationalism, black feminism, the case for reparations, and the future of Africana studies.

AFAM201 Haiti: Between Anthropology and Journalism
This course will examine how anthropology and journalism make their subjects vis-à-vis the broader significance of the knowledge they create and their publics. Using the works of anthropologists and journalists, we will consider how and why Haiti has long been regarded as something of an oddity within the Caribbean and the world. Branded the “nightmare republic” since it gained independence in 1804, in the public sphere Haiti remains conceptually incarcerated with clichés and stereotypes that obscure understanding of its complex role in global history. Attention will be paid to the 2010 earthquake, current conditions, and possible futures. Our ultimate aim is to explore the myriad possibilities of anthropological and journalistic representations.

AFAM202 Introduction to African American Literature
This course is a survey of the history and traditions of African American literature from its earliest origins to its most modern manifestations. We will examine, in particular, the poetry, essays, and fiction produced by people of African descent from the 18th to the 21st centuries. The courses will focus on the ways African Americans used literature to document their New World experiences, bear witness to enduring traditions, and shape American society. We will work with poetry, drama, short fiction, essays, and novels, alongside music and visual culture, as we explore African American literary and cultural aesthetics, African American literary history, and issues of class, gender, and place.

AFAM203 African American History, 1444-1877
This course examines the historical interactions between peoples on three continents—Africa, Europe, and the Americas—and the consequences of European colonization, trans-Atlantic slavery, and racial capitalism. Focusing on a period from the Antiquity to the late 19th centuries, we will explore how European notions concerning Africa its peoples evolved over millennia in response to shifting political, economic, and demographic circumstances. We will chart how Africans and their descendants in the Americas experienced and responded to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.

AFAM206 Introduction to African American Women’s History
This course offers a solid foundation in the history of black women in the United States, from the 17th-century beginnings of North American slavery to the present. Using a broad range of primary and secondary sources, from writings by and about enslaved women to films and documentaries, we will examine the experiences, voices, and contributions of everyday black women as well as famous figures in African American women’s history. Major questions of the course will include how black women forged political and social movements that transformed the United States, even as they faced the constraints of slavery, segregation, and gender-based exclusion. Students will practice reading, thinking, speaking, and writing critically about a range of historical sources and questions, with an aim of understanding how race, gender, class, legal status, and sexuality have intersected to shape the lives of African American women throughout U.S. history.

AFAM212 Modern Africa
What is African Modernity? We will examine this question as we survey the major historical transformations in Africa since approximately 1800. Important themes include: African political innovations, the abolition of the slave trade and its effects, European colonialism, African adaptation and resistance, nationalism and decolonization, and Africa’s role in shaping major global events. We will also study the impacts of religious and social transformations amid rapid economic and political change. Finally, we will examine African visions for post-colonial development and how to shape the future of the continent.

During the semester we will also cover some of the issues surrounding African history as a discipline. No single course can cover more than a sliver of the complexity and variety in the continent. For this reason, we approach the study of Modern Africa as comparative history. However, students satisfactorily completing this course will be able to write knowledgeably about African history
and will have the foundation necessary to undertake further study about Africa with sensitivity to the complexity of its recent past.

AFAM219 African American Urban Politics, Economy, and Policy
This course provides an introduction to the political experience and public policies that have significantly shaped, and continue to shape, the social and political life of African Americans and the urban environment. Although the course will explore historical themes, it will be mostly contemporary in its temporal focus. Topics will include African American political thought, leadership, and black political economy as well as voting, participation, party politics, and elected office (i.e., legislative and executive). Additional topics include housing and labor markets, healthcare reform, and issues of gender, class, age, and sexual identity at the intersections of black politics. Finally, the class will explore the role of race and police relations.

AFAM222 Slavery and the Literary Imagination
Enslavement in America and the New World was inextricably linked to the written word. What, then, does it mean to write the story of enslavement, loss, forced migration, liberation, and restoration? How does one tell the story of enslavement when that effort depends on articulating the unspeakable?

The works and writers examined in this course will prompt students to consider how one revisits history and what is required to imagine, write, and rewrite the stories and histories of people, places, and nations. We will discuss the ways in which specific literary forms enable, contain, and transform unwieldy, complicated, and stunning stories of enslavement, liberation, self-determination, activism, racialization, and nationhood.

Our readings will include an array of well-known, understudied, and newly recovered primary works and materials by and about individuals such as William Wells Brown, Charles Chesnutt, Frederick Douglass, Briton Hammon, Jupiter Hammon, James Mars, Pauline Hopkins, Mattie Jackson, Mary Prince, Chloe Spear, and Phillips Wheatley. Additional primary materials will include writings published in 18th- and 19th-century newspapers such as the "Boston Weekly Newsletter," "The Connecticut Journal," "The Liberator," and "North Star."

AFAM224 Afrofuturism (FYS)
Mainstream readings of the African American literary and cultural canon have tended to emphasize texts with a social realist bent, those that present their audience with a supposedly "authentic" version of the African American experience. However, as cultural critic Greg Tate observes, 20th-century African American literary history includes "huge dollops of fantasy, horror, and science fiction" because, in his view, "Black people live the estrangement that science fiction writers imagine." While Tate's statement perhaps overly generalizes the black experience, there seems to be something to his notion that, in part because of the fact that they were forced to live an often "alienated" experience in America, there has always been a strong element of the speculative in black literary and cultural expression. This course traces this under-examined speculative strain in 20th and 21st-century African American literature, music, film, and visual art, as black artists explore, or speculate, on the possibilities that imagining alternative realities and modes of living open up. The course will focus especially on speculative and Afrofuturist aesthetics as they manifest in hip hop music and culture. We will examine the ways that black artists have employed elements of the speculative genres in order to re-envision the African American past, present, and future—rendering versions of historical African American experience and subjectivity that exceed traditional notions of "authenticity," complicating contemporary regimes of identification, and presenting alternative visions of the futures of blackness.

AFAM225 The African Novel II: After Achebe
Chimamanda Ngozi Adichie’s 2003 novel, PURPLE HIBISCUS, summons Chinua Achebe, the "grandfather of African literature," in its opening line: "Things started to fall apart at home when my brother, Jaja, did not go to communion." While Achebe is a formative influence on Adichie and on many other contemporary African writers, the central preoccupations of African literature have shifted considerably in recent years. This class will consider recent topics animating the field. These include debates about Afropolitanism, the role of publication houses and prize committees in the canonization and circulation of texts, queer African literature, African-language literature, and the position of African literature vis-à-vis world literature. Readings will be chosen from among the newest novels and short stories in publication.

AFAM226 Afro-Surrealism
Amiri Baraka coined the term "Afro-Surreal" to describe the writer Henry Dumas’s "skill at creating an entirely different world organically connected to this one." In his 2009 "Afro-Surrealist Manifesto," D. Scott Miller builds on Baraka’s observations and distinguishes Afro-Surrealism from Afrofuturism in the former’s concern with the "RIGHT NOW." Indeed, in the "right now" of 2018, Afro-Surrealism seems to be having a moment, with the success of films like "Sorry to Bother You" and "Get Out," the musical and filmic work of Donald Glover/Childish Gambino, the visual art of Kara Walker and Kehinde Wiley, and the literature of Paul Beatty and Colson Whitehead, among others. This course will examine this contemporary resurgence of the Afro-Surreal, and trace its echoes in black popular music, in the work of African American literary figures like Dumas, Toni Morrison, Bob Kaufman, Ralph Ellison, Jean Toomer, and Zora Neale Hurston, and through its African and Afro diasporic foundations in the
work of artists inspired by Léopold Senghor's Nègritude movement. All of these artists "distort reality for emotional impact," as Miller puts it, and we will aim to connect these distortions of the "right now" to the material reality of life under regimes of anti-blackness and racial oppression that these Afro-Surreal works lays bare.

AFAM2235 Activism and Theories of Change
In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education. When do they strengthen one another, and when do they collide? What ethical or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an activist for women's rights, queer rights, and economic justice. We will also consider the strategies of other recent movements such as Occupy, Black Lives Matter and gun safety activism, and we will allow time to discuss events that may occur in real time over the course of the semester. This course will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

AFAM240 From the Banjo to Dembow: Afro-Caribbean Music in Motion
This course analyzes the global circulation of Afro-Caribbean musicians, dancers, audiences, musical styles, and even musical instruments from the beginning of European colonialism to the present day. We will seek to understand the political interconnections between the Caribbean and the wider world by focusing our attention on specific "musical itineraries." These will include, among others, the creation of the banjo by enslaved people in the Caribbean and the instrument's role in black resistance in North and South America, the musical aftershocks of the Haitian Revolution in Cuba and Louisiana, the production of black internationalist politics at weekly "regge" dances led by Jamaicans in early 20th-century Costa Rica, and the rise of reggaetón between Panama, Puerto Rico, Cuba, the Dominican Republic, and the United States.

We will question how these musical itineraries propelled black political movements and shaped larger ideas about race, nation, diaspora, and the meaning of "the Caribbean" itself. No prior musical knowledge is required for this course.

AFAM247 Contemporary African American Poetry and Its Past
In this course, students will engage African American poetry after 1960. Alongside gaining a thorough understanding of the currents of literary history from the civil rights movement through the age of Obama, students will gain an appreciation of what traditions contemporary poets engage. Using ANGLES OF ASCENT: A NORTON ANTHOLOGY OF CONTEMPORARY AFRICAN AMERICAN POETRY as the primary text for the course, students will be able to gain a comprehensive overview of the rich literary moment of which they are a part. At the same time, students will explore the meaning of the anthology itself as a mechanism of canon-making. How does being part of a canon affect the possibilities in one's literary production?

By engaging the traditions upon which contemporary African American poets build their own poetics, students will gain a deeper understanding of the poetry itself. In addition, students will read critical works by the poets as part of their course-work gaining insight into the poets' creative processes. In addition to developing their critical voices through analytical papers, students will have a chance to develop their own poetics through a semester-long poetry collection assignment.

AFAM250 Integrative Learning Project 1: Reflecting About the Liberal Arts
The Integrative Learning Project is a .50 credit course that allows students to learn to describe in a coherent and engaging narrative the various academic and non-academic activities, projects, and experiences that have been important for them while in college and to practice doing so for a variety of audiences (e.g. employers, graduate schools, etc.). Participants should be students who are interested in crafting a narrative about their personal and intellectual development, and who want to be able to talk about what skills they have cultivated during their time at Wesleyan and what they still want to learn.

All sophomores, juniors and seniors are welcome in this course. This course requires a willingness to discuss one's strengths, achievements, weaknesses, and failures. Students will not only engage in reflection about their skills and experiences, but will also have the opportunity to design an online portfolio in WordPress, the world's most popular content management software, and test the portfolio with different audiences by employing user experience design (UX) principles and research methodologies. Students can take this course more than once, but only once per academic year.

AFAM252 Writing on the Land of Freedom: The Pastoral in African American Literature
Landscape figures prominently and powerfully in the African American literary imagination. Writers have crafted evocative meditations on the natural world as they grapple with sobering realities of life, dramatic assertions of self, and transformative historical moments. This course will consider African American literary invocations of idealized, mythological, sacred, and knowable land and move toward a delineation of the African American pastoral aesthetic and tradition. We will read novels, poems, short stories, essays, letters, and journal entries by writers such as David Bradley, Charles Chesnutt, Lucille Clifton, Rita Dove, Charlotte Forten Grimké, Zora Neale Hurston, Randall Kenan, Victoria Earle Matthews, Gloria Naylor, and Marilyn Nelson.

Prereq: None

AFAM260 Blues People: Race, Ethnicity and Popular Music
This course explores African American history in the United States through sound and song. As Ronald Radano, one of the scholars we will read this semester, has argued, the ways we discuss music can have a tangible influence on the social and political world, because debates about music stand in for larger social issues with real-life consequences. We will read texts that demonstrate how music has facilitated the creation of identities in the United States that recognize and celebrate difference, while offering alternate visions for what it
means to be (and sound) American. We will read music as primary sources in order to investigate how musical genres may act as reservoirs of shared history and collective identity. And through diverse topics—from blues music and the rise of Jim Crow to 19th century tribal dancers draped in American flags on the Pine Ridge reservation to connections between elevator music and the Spanish American war—we will learn about how music and race have intersected with broader themes in U.S. history such as segregation, assimilation, internment, imperialism, and global capitalism.

AFAM261 Beyond the Talking Book: Reading African American Literature in the Newspapers
The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some lesser known ones) in their original publication context, the magazine archives of The Christian Recorder; The Anglo-African Magazine; The Colored American Magazine; The Crisis; The Crusader; Opportunity; and Fire!! The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context—as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students’ literary close-readings skills, this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnutt, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins’ Of One Blood) in its original installment format, week-by-week. Reading these works serially will also enable them to play closer attention to each installment’s relationship to its surrounding texts and images.

AFAM265 Music and Downtown New York
This course will explore the history and simultaneous flourishing of four distinct music communities that inhabited and shaped downtown New York City during two especially rich decades (the 1950s and 60s): urban blues and folk revivalists; an African American jazz-based avant-garde; Euro-American experimentalists; and Lower East Side rock groups. These four vanguard musical movements—at the heart of dramatic cultural shifts at the time, with reverberations and legacies that remain relevant up to the present day—are an essential part of American history. Much of the course will be devoted to discovering their points of convergence and divergence, especially in conversation with broader contemporaneous currents, including the Civil Rights Movement and related notions of freedom, shifting youth cultures, music and politics, and avant-garde aesthetics.

Drawing from primary sources, we will read about and listen to recordings of a wide variety of musicians, view a broad cross-section of film from the era, identify aesthetic and cultural trends, and study the local industry that supported them, including record labels, coffee houses, clubs, and concert spaces. Projects throughout the semester include written papers, individual and group presentations, and adding content to an interactive collaborative Google map of the neighborhood.

AFAM266 Black Performance Theory
What does it mean to perform identity, to perform race, to perform blackness? How is blackness defined as both a radical aesthetic and an identity? In this course, we will focus on theater and performance as a resource for thinking about black history, identity, and radical politics in excess of the written word. Following recent work in Black Studies and Performance Studies, this class will pay particular attention to the doing of blackness, the visible, sonic, and haptic performances that give over to a radical way of seeing, feeling, and being in an anti-black world. Plays, films, and texts might include works by Fred Moten, Alexander Weheilye, Brandon Jacobs-Jenkins, Suzan Lori-Parks, Danai Gurira, Shane Vogel, Adrienne Kennedy, Sarah Jane Cervenak, Dee Rees, Celine Sciamma, Saidiya Hartman, Huey P. Copeland, Darby English, Lorraine Hansberry, Hilton Als, Spike Lee, Isaac Julien, Martine Syms, Tavia Nyong'o, and Daphne Brooks.

AFAM268 Contemporary Art in Africa and Diaspora
The main focus of this course is contemporary African art and art of the African diaspora. We begin with a brief survey of painting by African-American artists of the late nineteenth and twentieth century—an artistic flowering accompanied the independence of African nations after 1957. Contemporary African artists must address overriding issues of social and political importance. Their work speaks eloquently to such issues as the desire for peace, the struggle against pollution and climate change. As art becomes increasingly trans-cultural, the art of the African diaspora takes on a new cultural meaning.

AFAM269 Race, Incarceration, and Citizenship: The New Haven Model
This course will explore the elements of local responses to contemporary criminal justice issues, drawing on current research projects in New Haven, Connecticut. The course will explore a variety of promising practices, which
emphasize community engagement and individual citizenship over incarceration and punishment. Topics will include evidence-based practices to reduce criminal recidivism, mental health issues in the criminal justice system, treatment engagement, and the creation of valued roles in the community. Students will have the opportunity to participate in federal research studies.

AFAM271 The Prison State: Race, Law, and Mass Incarceration in U.S. History
The United States incarcerates more people than any other country in the world. And people of color make up a highly disproportionate number of the over 2 million individuals incarcerated in the U.S. today. For example, Black people are incarcerated at more than five times the rate of whites. This course will explore the historical causes and origins of the United States' mass incarceration crisis. Beginning with slavery and continuing through the rise of prisons, debt peonage, Jim Crow, and beyond, the course will explore how efforts to police, detain, and control Black bodies have been at the center of U.S. law and legal practice since the nation's founding.

AFAM274 Reel Black: African American Life in Film
This course will focus on African Americans and film and explore the emergence and influence of African American actors and filmmakers. We will consider the political and aesthetic agendas that have shaped the tradition and discuss the ways in which film adaptions of African American literature reveals the possibilities and the limitations of the filmic enterprise. Our screenings and discussions of well-known and understudied film figures will complement our explication of films that have grappled with understudied African American histories, civil rights, identity, and class. Possible screenings include works by Oscar Micheaux, Julie Dash, Charles Burnett, Steven Spielberg, Steve McQueen, Ava DuVernay, and Spike Lee.

AFAM275 Race and Place in Early American Writing
This semester, we will examine early American texts that are preoccupied with the intersection between the unsettled (and often unsettling) categories of race and place. In the wake of colonial contact and in the midst of chattel slavery, people in varying positions of power and subjection took to the pen in order to reify or resist white supremacy and its attendant discursive and physical violence and violation. With an eye toward the strategic uses of memory and witnessing by those who were displaced and/or enslaved, we will read primary texts from the 17th to the mid-19th century that were written by people of color. To conceptualize race and nation is to think relationally, so we will also take up texts about people of color, which are often animated by the seductive effects of nostalgia and sentimentality.

AFAM276 Intertextual Aesthetics in African American Culture: From Signifyin(g) to Sampling
Intertextuality, the integration of references to multiple texts into a single artistic work, has long been considered a hallmark of postmodern aesthetics. This course will begin from the premise that this intertextual approach was a foundational aesthetic technique for African American cultural producers long before any discourse around postmodernism entered the lexicon. From David Walker’s “sampling” of the Declaration of Independence in making his 1830 Anti-Slavery Appeal, to Kara Walker’s incorporations of imageries and artistic techniques of the antebellum South to comment on contemporary realities of blackness, African American artists have long made use of intertextual aesthetics not merely in the service of postmodern indirection, but in order to represent the realities of black lived experience in America. This course will investigate the transmedial history of this intertextual black aesthetic, examining African American literature, music, film, and visual art, and will consider various ways in which black intertextual aesthetics have been theorized, from Henry Louis Gates’ notion of “signifyin(g),” to discussions of hip hop sampling and Black Twitter. As mass-mediated technologies have proliferated in the 20th and 21st centuries and representations of “Blackness” write large have exponentially multiplied in the popular imagery, contemporary artists increasingly sample and signify on these representations themselves. So a significant piece of our work in the course will be in analyzing the ways that the intertextual aesthetic is mobilized in the contemporary moment to speak to material realities of postmodern blackness, and to articulate nuanced black subjectivities in the face of subjection.

AFAM277 New England Bound: Slavery and Emancipation in the North
This course examines struggles over Black slavery, freedom, and community formation in New England, with a primary focus on Middletown and Connecticut. We will explore the lived experiences and freedom struggles of Black individuals and communities, from revolutionary Black sailors to Middletown’s first free Black abolitionists. The course, which satisfies the Early AFAM History requirement for the major, will particularly invite students to grapple with Wesleyan’s and Middletown’s complex relationships to slavery and emancipation. As we will learn, slavery and the slave trade played central roles in New England’s culture and economy, especially here in Middletown. Like in other New England ports, Middletown merchants made a fortune from the transatlantic slave trade and the plantation economy that supported it, even selling enslaved Africans on Middletown’s Main Street. And southern slaveholders were among the first Wesleyan students in the 1830s. At the same time, free African Americans and their allies made Middletown a stop on the Underground Railroad and a center of the antislavery movement, laying the groundwork for Connecticut’s eventual abolition of slavery and for high-profile court cases like the Amistad trial. Combating popular images of the “free North,” this course will show slavery’s central role in Middletown’s local and state history, while also exploring how the Connecticut River tied Connecticut to regional and even global currents of slavery and anti-slavery.

AFAM278 When Europe Met Africa: Portugal, Spain, West Africa, 1440–1650
This course looks at Iberian overseas expansion, from the early 15th to the late 17th century. The Portuguese and Spanish sea-borne empires may be termed the first globalization. This course, which focuses on West Africa, is interdisciplinary. It combines art history and history to integrate images and written documents.
African artists depicted Europeans, just as European painters and sculptors represented Africans. These images tell us much about how members of one culture viewed the distant peoples with whom they were just coming into contact. The earliest European Renaissance paintings of Africans show them as dignitaries and often as rulers (e.g., "The Adoration of the Magi"). This reflects the presence in Europe of African dignitaries, both secular and religious. At the same time, African sculptors represented Portuguese soldiers and missionaries in ivory carvings, so it is possible for us, 500 years later, to compare these representations. The earliest European Renaissance paintings of Africans show them as dignitaries and often as rulers (e.g., "The Adoration of the Magi"). AFAM279 Award-Winning Playwrights
With textual analysis and intellectual criticism at its core, this course examines the dramatic work of award-winning playwrights through theoretical, performative, and aesthetic frames. The first half of our investigation explores companion texts written by premier playwrights. In the latter end of the course, we examine singular texts written by acclaimed newcomers. A select range of reviews and popular press publications help to supplement our discussions. In all cases, we are interested in surveying the ways in which these playwrights work within varying modes of dramatic expression and focus their plays on such topics as class, ethnicity, era, disability, gender, locale, nationality, race, and/or sexuality.

AFAM280 Religion and the Social Construction of Race
In this course we examine aspects of the intersections between race and religion in a number of historical and social contexts. We place at the center of our discussions the question of how race and religion are co-constructed categories that function as a prism through which people come to understand and experience their own identities and those of others. We will privilege interpretations that emphasize (1) the intersectionality of race and religion as a process in which power plays a pivotal role; and (2) the means through which communities form collective identities. We will read a range of historical analysis and primary source materials from the U.S. and the Caribbean. After a theory module, we will examine a colonial-era captivity narrative, antebellum pro-slavery document, missionary works, analyses of anti-Semitism, works on Rastafari, Haitian Vodou, Jonestown, the Christian White Supremacy movement, as well as the contemporary U.S. relationship to the Middle East.

AFAM282 Mixed in America: Race, Religion, and Memoir
This course examines the history of mixed-race and interfaith identities in America. Using the genre of the memoir as a focusing lens, we will look at the various ways that Americans of mixed heritage have found a place, crafted an identity, and made meaning out of being considered "mixed." How has being multiracial or bi-religious changed in the course of history in this country? What has occasioned these changes, and what patterns can we observe? We will explore questions of racial construction; religious boundary-making; rites of passage; gender, sexuality, and marriage; and some literary and media representations of mixed-heritage people.

AFAM284 African American Philosophy
This course will examine the philosophical questions that have been of particular interest to African American philosophers. We will explore the domains of knowledge in which African American philosophers and thinkers have felt compelled to intervene. We will approach these questions by engaging with canonical historical figures such as DuBois, Douglass, and Cooper, and then we will assess the extent to which contemporary African American philosophers have remained (and continue to be) concerned with the same questions, albeit with different discursive methodologies. The purpose of this course is to trace the philosophical articulation of race, racism, identity, politics of freedom, and subject formation in the history of African American philosophical thought.

AFAM286 When Harlem Was in Vogue
This course will examine the aesthetics and politics of the first Modern African American cultural movement, known today as the Harlem Renaissance. In our readings of key literary texts by authors such as Alain Locke, Jessie Fauset, Zora Neale Hurston, Eric Walrond, Langston Hughes, Claude McKay, Nella Larsen, and Jean Toomer, we will discuss both the national and global contexts of so-called "New Negro Writing" and focus on debates surrounding representation, "respectability," and racial authenticity. During this course students will read canonical and popular literary works by early 20th-century African American authors in tandem with the vibrant body of literary criticism that emerged from this cultural moment in order to arrive at a richer understanding of how the early 20th-century African American canon was curated and proliferated. To this end, we will pay special attention to the role of anthologies and literary magazines (such as "The Crisis," "Opportunity," and "Fire!!!") in collating an emergent modern African American literary tradition. At the end of this course, students will not only be familiar with the key authors and works of the Harlem Renaissance, but also with the central debates about the direction and uses of African American art.

Grading: A-F
AFAM291 Afro-Asian Intersections in the Americas
This course explores a range of historical, cultural, and political intersections between African and Asian diasporic people in the Americas from the late 19th century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the United States and abroad, and the 1992 Los Angeles uprising. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to interracial buddy films like Rush Hour (1998), to the contemporary fiction of writers such as Patricia Powell and Charles Johnson. AFAM298 Richard Wright and Company
This course offers an in-depth consideration of the work and career of Richard Wright, a defining figure in 20th-century African American literature, and seeks to understand Wright's interactions with a wide array of mentors, protégés, and enemies. By placing Wright amidst the network of supporters, admirers, and detractors who surrounded him, we will gain a deepened understanding of Wright's development and a useful map of 20th-century African American literary expression and American literary history more broadly. Writers to be covered in the course may include, along with Wright, Hannah Arendt, James Baldwin, Gwendolyn Brooks, Horace Cayton, Ralph Ellison, James T. Farrell, Dorothy Canfield Fisher, Chester Himes, Langston Hughes, Zora Neale Hurston, Alain Locke, Gertrude Stein, Margaret Walker, John Williams, and Frank Yerby. Offering: CrossListing

AFAM299 African History and Art
This course traces the art and cultural history of selected West African societies from the 12th century to the early 20th century. Each week we will focus on a single work of art, as that work illuminates social and cultural history. The objects will include royal bronze sculpture from the Kingdom of Benin (16th century); a carved ivory vessel from Guinée or Sierra Leone (16th century); a horned initiation mask made of woven fiber from Senegal (19th century); and a map of the Sahara made in Spain by a Jewish artist in 1375. Each object sheds light on the history, religion, and culture of the region from which it comes.

The trans-Saharan trade was crucial to both North and West Africa. From Morocco came the Muslim religion, as well as Islamic architecture. In 1445 the Portuguese mariners arrived on the Atlantic coast of West Africa. From that moment on, West Africa has been part of a global economy. Already by 1500, the growth of Creole Euro-African communities is reflected in artwork.

"Art" is best understood in the specific historical context and the culture in which it develops. To us, removed in space and in time from these African societies, architecture, sculpture, and ritual performance help to illuminate the lives of the people we are studying. Ultimately, we will consider such questions as, Does African art exist? What is "African art"? Who defines art--Africans or Westerners? Offering: CrossListing

AFAM300 Black Phoenix Rising: Death and Resurrection of Black Lives
The Black Lives Matter Movement has renewed our collective need to theorize the value of black lives within a deluge of death and disappearance in black communities. This movement is part of a deep transnational tradition in black radical praxis that aims to transform scholarly, activist, and public discourse and public policies concerning the systemic and epistemic effects of institutional racisms and the prospects for antiracist futures. How might we envision a black radical praxis that simultaneously recognizes the vitality of black lives and challenges the cultural ideas and social practices that generate and justify black people's death and suffering? This seminar traces a genealogy of black radical praxis that interrogates the necropolitics of race and positions this system of power against the prospect of thriving black people. In doing so, the course erects an interdisciplinary theoretical framework that features scholarship in critical race science studies, intersectionality, and transnational cultural studies as they inform how a black radical praxis can contribute to the uprising and raising up of black communities. AFAM301 Junior Colloquium: Defining African American Studies
Between 1896 and 1914, W.E.B. Du Bois organized an annual conference at Atlanta University devoted to documenting and analyzing the oppressive structural conditions shaping black life in the United States. Though arguably the genesis of African American studies as a systematic academic endeavor, these sociological conferences also joined a long intellectual tradition that has always exceeded and often resisted the Western academy. This colloquium examines how the African diaspora has generated knowledge both within and beyond the ivory tower—from cargo holds to quilombos, prisons to abortion clinics, newsrooms to classrooms, from music studios to dancehalls and soundstages. Students will engage closely with several defining texts, methods, movements, and moments concerning black life in the Americas. Ultimately, we seek possibilities toward defining an African American studies program and praxis that addresses the political, social, intellectual, and epistemic needs of the 21st century. AFAM304 Philosophy of Memory in African American Literature
This course will consider the importance of memory in African American literature and will explore the many ways in which authors of African descent engage, transform, and build on long-established intellectual traditions of the mind. Students will explore the importance of the idea of "memory" to these intellectual traditions of the mind and will trace the praxis of remembering as a literary act through African American literature of the long 19th century. Finally, students will explore how persons of African descent are dehumanized through a systematic reduction of their mental capacities in these same philosophical traditions of the mind. We will discuss the ways in which memory specifically figures into this dehumanization and how authors of African descent used these very theories to resist the reification and overdetermination of both their literary works and their selves.

AFAM305 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice
Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover's voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet's effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric's history and practice. In this course, we will read from African American, African diasporic, Caribbean, Latin/o/a, and Indigenous poetic traditions, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

AFAM306 Visual Storytelling: Race, (In)Visibility, and the American Landscape
What is visual storytelling, and how does this medium enable or frustrate our efforts to behold the landscape and the individuals who occupy it? What histories, tools, and perspectives enable rigorous and inspiring creative processes that culminate in inclusive, restorative narratives? Students will develop their own visual storytelling concepts and projects and together will consider realities and mythologies of place, inclusion and exclusion, human-land relationships, visibility and invisibility, built and threatened environments, and the work of the visual storyteller in 20th- and 21st-century America.
Assignments and student projects will be informed by the semester-long study of visual artists such as Edward Mitchell Bannister, Carole Bayard, Romare Bearden, Robert Duncanson, Gordon Parks, Henry Ossawa Tanner, and Carrie Mae Weems and the works of writers such as Kimberly Ruffin, Nikky Finney, and Jamaica Kincaid.

AFAM324 Integrative Learning Project 2: Senior Capstone
The Integrative Learning Project is a .50 credit course that allows students to learn to describe in a coherent and engaging narrative the various academic and non-academic activities, projects, and experiences that have been important for them while in college and to practice doing so for a variety of audiences (e.g. employers, graduate schools, etc.). Participants should be students who are interested in crafting a narrative about their personal and intellectual development, and who want to be able to talk about what skills they have cultivated during their time at Wesleyan and what they still want to learn.

This course is intended for seniors who wish to document and reflect about their lives and history visible. Readings may include works by Gwendolyn Brooks, Octavia Butler, Langston Hughes, Randall Kenan, Gloria Naylor, Marilyn Nelson, Natasha Trethewey, Alice Walker, Dorothy West, and Richard Wright.

AFAM325 Race and the Enlightenment: A Historical and Philosophical Enquiry
It was during the Enlightenment Era (c. 1760-1800) that scientific reasoning, a belief in progress, and new claims on personal and political liberty swept away a tenacious medieval worldview. It was also during this era, however, that the notion of race crystallized in European and North American thought. Today, we still live with implications of this major shift, be it in classification schemes, anatomical prejudices, or ethnographical myths. This is particularly true for Africans or people of African descent. This class will bring some of the Enlightenment’s most prominent thinkers into dialogue with the emergency of the concept of race theory. In particular, we will focus on the clash between the Enlightenment era’s belief that “all men were created as equals” and the various ways that the Black African came to be studied within “natural history” and various philosophical models. This historical backdrop will lead us not only to a discussion of the economic imperatives of human slavery but to a series of contemporary reflections on the status of the Enlightenment put forward by postcolonial critics. Note: This class is offered in the contest of the Wesleyan’s Center for the Humanities “Grand Narratives/Modest Proposals” theme and speakers series.

AFAM328 Brown, Black, and Queer Forms and Feelings
Given how brutally not neutral the world is to black, brown, and queer forms of life and pleasure, this course thinks with “otherwise” spaces, figures, and feelings, like the queer club, the dance floor, abnormality, errancy, illegality, fugitivity, rage, indifference, and love. We will take up José E. Muñoz’s invocation of a “minoritarian theory of affect” that insists that “whiteness is a cultural logic which can be understood as an affective code that positions itself as the law.” We will study affect beyond whiteness through attention to sonic forms and “audio-visual shapes” in African diasporic, Latina/o/x, and Caribbean arts.
We will consider the diasporas and collectives grouped together in the terms “minoritarian,” “brown,” and “black” as abnormals that generate alternative logic which can be understood as an affective code that positions itself as the law. We will study for radical potentiality in the beautiful, obscene, and off-kilter affects of brown, black, and queer aesthetic and poetic forms.

AFAM334 Special Topic: Something in the Air: Mining the Oral/Aural Tradition in African American Poetry
In his book-length manifesto, Poetry as an Insurgent Act, Lawrence Ferlinghetti claims that “the printing press killed poetry.” What he seems to be lamenting—at least, in part—is the privileging of the written word to the detriment of poetry’s musical, or aural, qualities. In this advanced-level workshop, we will focus on the poem as something intended to be read aloud and listened to. This course will also examine the roots and evolution of the African American oral poetic tradition with special attention paid to the rhetorical strategies derived from the black church, adopted by civil rights leaders and speech writers, and used to varying degrees by poets ranging from those of the Black Arts Movement of the 1960s and ’70s to practitioners of contemporary hip-hop and spoken word. Some of the poets under consideration include Amiri Baraka, Oscar Brown Jr., Jayne Cortez, Gil-Scott Heron, June Jordan, The Last Poets, Carl Hancock Rux, Sonia Sanchez, Patricia Smith, Jessica Care Moore, Laini Mataka, and Saul Williams.

AFAM344 The Haitian Revolution Beyond Borders
In 1791, enslaved people rose up against their masters in the French colony of Saint-Domingue, at the time the most profitable plantation society in the world. Thirteen years later, their efforts would culminate in the declaration of independence of Haiti, a nation founded on the pillars of antislavery, anticolonialism, and racial equality. This course investigates the regional and global significance of this revolution through its interconnections with Haiti’s neighbors in the Caribbean and across Latin America. First, we will look at the immediate implications of Haiti’s founding for the fate of New World slavery during the Age of Revolutions. Next, we will consider Haiti’s long-term impact on national identities, racial formations, and future revolutionary struggles in the Americas over the course of the 19th and 20th centuries.

AFAM350 The Law, the Citizen, and the Literary and Cinematic Imaginations
In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimagined in literature and cinema. Among the topics discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporality. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they reveal the rifts and conjunctions among the categories citizen, “savage,” “gente sin razón,” slave, illegal, pervert, and deviant.

AFAM353 Blackness in the Anthropocene
To deny the “unprecedented” geological impact of humans’ force on nature is now practically untenable. Theorists in the humanities, nonetheless, remain unimpressed with what this “new era” has afforded us in terms of critical potential. From accusations that what we now call the “Anthropocene” has merely established a hegemony of brute facts at the expense of critique, to concerns about the multiple ways in which the term continues to obscure catastrophic socio-ecological relations, it is fair to say that the scenes of the “Anthropocene” are still contested terrains. The aim of this course is to investigate the Anthropocene’s many forms of socio-political erasures and theoretical “blind-sights.” We will examine the ways in which Anthropocene discourse have been powerful at disavowing racial antagonism in our current ecological crisis. More specifically, in this course, will study the ecological negative effects on black communities around the globe with the aim to questions the shortcomings of ethics in Anthropocene times. We will explore questions like “who are ‘recognizable/legitimate’ victims in environmental disasters,” “do events like hurricane Katrina or the migration crisis teach us anything about our human condition,” and “what is the post’ in post-humanism.” We will read philosophical works ranging from Immanuel Kant and Baruch Spinoza to Rosi Braidotti and Karen Barad.

AFAM364 Friendship and Collaboration: In Theory, In Practice
How do we conceive of friendship, collaboration, love, and collectivity? In an interview, Michel Foucault stated that the relational task of the homosexual was to “invent, from A to Z, a relationship that is still formless, which is friendship: that is to say, the sum of everything through which they can give each other pleasure.” This course considers theories and performances of relationality, queer belonging, and friendship with an emphasis on forms of belonging and recognition that exceed normative protocols. We will ask how queer practices, black thought, brown study, and indigenous epistemologies inform our own imaginations of collaborative projects. Beginning with philosophical determinations of friendship, we will branch out to imagine ways in which artists, lovers, friends, and/or cohabitators enact togetherness. Artists and projects to be discussed include: Andy Warhol’s Factory, Hugo Ball, Emily Johnson, Black Salt Collective, My Barbarian, Harriet’s Apothecary, General Sisters, the Critical Indigenous Photographic Exchange, Betalocal and more.

AFAM365 Black Leadership in Historical Perspective
This course uses the lens of history to evaluate why some individuals are considered most effective as civic, elected, bureaucratic, and appointed leaders in African American history. The course will analyze social scientific models of leadership and then go into the historical record to discover meaningful and illuminating patterns. Careful consideration is given to the distinctive challenges posed by race, class, gender, sexual orientation, and institutional settings.

AFAM371 Sister Acts: Black Feminist/Womanist Theater of the African Diaspora
This course surveys the dynamism and scope of contemporary feminist/womanist drama written by black women playwrights of the African Diaspora. Reading select plays from Africa, Canada, the Caribbean, England, and the United States, alongside theory and criticism, we examine the impact of race, gender, identity, and sexuality politics on black feminist/womanist theater. Throughout our study of these dramatic texts, their performances, and their subsequent critiques, we are equally invested in the bridges and the gaps, the audibles and the silences, and the overlaps and the divides, as they are formed. Significantly, this analytic undertaking involves a simultaneous critique of the role of the playwright, the spectator, and the critic of black feminist/womanist theater. At all times, consideration is given to the ways in which these playwrights collectively use theater as a platform to explore black and female and diasporic subjectivities across regional, national, and, at times, linguistic differences.

AFAM375 Black Global Cities
In this course, we will analyze representations of cities and Black urban modernity in Afro-diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa, Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial sites Black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week’s readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discreet, bounded places. To this end, we will trace how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabebe Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as Girlhood (2014), Black Panther (2018), The Harder They Come (1972), Bad Friday: Rastafari After Coral Gardens (2011), Welcome to Nollywood (2007).

AFAM387 Anthropology of Black Religions in the Americas
This course examines Afro-Creole religions and cultural expressions in selected communities throughout the Atlantic world. How were religious communities created under colonial domination? Under what conditions were religions shaped, and what shapes did they take? How are African-based religions produced through aesthetics and the ritual arts of spiritual talk and sermons, song, dance, drumming, and medicine-making? How do these religions continue to survive, thrive, and, in some cases, grow in the current historical period? This course will pay special attention to the yearly ritual cycle and its attendant festivals: Christmas, carnivals, Lent, Easter, saints’ days, feasts, and pilgrimages, as well as the emergent spiritual and aesthetic traditions such as Capoeira and Rara. We will study Orisha religions such as La Regla de Ocha, or Lukumi, in Cuba...
and the Latino U.S.; Candomble in Brazil; Vodou in Haiti; and Garifuna traditions and spiritism in Puerto Rico.

**AFAM388 Wesleyan Ensemble for 20th and 21st Century Classical and Contemporary Music Part 1**

This ensemble class offers a unique opportunity for graduate and undergraduate performers and composers to explore and perform various acoustic, electronic, and electroacoustic works by various composers of experimental and new music in America and Europe after 1950. Additionally, composers who are enrolled in the course may be asked to compose pieces that are specifically designed for any number of the ensemble participants. Through extensive ensemble rehearsals and individually scheduled rehearsal labs that will culminate in a performance (or multiple performances), students will develop a deep understanding and appreciation of contemporary music performance techniques and collaborative processes. It is expected that students will gain skills that pertain to the reading of scores, the execution of complex rhythmic and melodic passages, and extended instrumental performance techniques. Advanced Western musical literacy is required in order to succeed in this course. All instrumentalists (including the human voice) are encouraged to participate.

AMERICAN STUDIES (AMST)

AMST117F Social Norms and Social Power (FYS)
This FYS is an interdisciplinary exploration of the privileges and penalties associated with “the normal” in the United States. We will think through the intersections of queerness, race, ethnicity, class, disability, and gender in terms of social power, drawing on novels, ethnographies, memoirs, and films. Throughout, we will pay particular attention to the ways bodily difference and social identity interarticulate with “normality” to locate individuals within hierarchical power structures, and we will think creatively about ways to challenge this.

AMST118 The Anthropology of Social Movements
Intentional efforts to shape society are always in a process of becoming. In this course, we examine how social movement actors disrupt dominant cultural scripts and forms of dualistic thinking that block our collective recognition of the fundamental interconnectedness of all aspects of social life. First, we will survey a range of social theories that propose ways to rethink the binaries that structure social life--such as mind/body, theory/practice, feeling/thinking. Then we will consider a series of ethnographic cases in the contemporary period to identify the similarities and differences between them.

The methods of inquiry in this course seek to replicate the challenges of seeing theory and practice as interlocking processes. As such, students will work in affinity groups all semester to design and execute an action at Wesleyan or in the Middletown area that addresses a social issue they are passionate about. This capstone project will be based on scholarly research and thoughtful, collaborative practice.

AMST119 Reading Difference
How do we make sense of literary texts that are “different”—whether in culture, language use, form, or subject matter? This course is an introduction to writing that challenges the reader to “make sense” of works that depart from the familiar, whether through racial, ethnic, or gendered difference; sexual orientation; linguistic/cultural use; or formal experimentation. Throughout the
course, the emphasis will be on strategies of interpretation, including such topics as cultural expectation, "bad" English, realism and the avant garde, and tradition and modernity. We will look at a varied list of works, including Jiro Adachi's THE ISLAND OF BICYCLE DANCERS, Christopher Anani's GRACELAND, Susan Sontag's NOTES ON "CAMP," and Guillermo Gómez-Peña's NEW WORLD BORDER, among others.

AMST122 Sample, Remix, Reuse, and Replay: Approaches to Musical Adaptation in Audiovisual Culture
Many of the musics we listen to and encounter are palimpsests, collages, and assemblages. Texts are layered upon and juxtaposed against pre-existing texts, creating polyvalent dialogues and contrasting and complementary systems of meaning. This class introduces students to questions and controversies of adapted and remixed musical media in 20th and 21st century society, analyzing the ways music and other texts and materials (e.g., paintings, plays, places, novels, technologies, genres, historical events, preexisting music) are adapted through processes of revision, remix, remediation, sampling, restaging, and reinterpretation to create new layers of meaning. The course will consider the roles of film, television, video games, music video, digital audiovisual formats and technologies, and related audiovisual media. We will journey from the recycling of preexisting classical music in video games to the remediation and transmission of live operas to the movie theater screen in the MET Live in HD series, from compositions that translate the visuality of iconic paintings into sound to the practice of remix and sampling in hip hop culture, from the digital adaptation of operatic conventions in Final Fantasy VI to cover versions that complicate listeners' expectations of gender performance, from the live performance of video game soundtracks by a symphony orchestra in Video Games Live and Pokémon: Symphonic Evolutions to the compilation mixtape scores of Hollywood films, and from Tan Dun's Internet Symphony for the YouTube Orchestra to the urban neighborhood of Washington Heights in New York City is repurposed, staged, and cast as a central character in the Heights or how American political history is adapted and revitalized in Hamilton. Themes in the course include, among others, the changing roles and responsibilities of musicians in an age of digital globalization; the power of musical media and referential texts to structure human experience; and the role of the composer and listener as manipulators and interpreters of musical meaning across comparative audiovisual texts. This seminar draws on the classroom community's interdisciplinary backgrounds and interests as well as readings and case studies that cross and challenge disciplinary boundaries. Students can achieve success in this course without previous musical knowledge.

AMST125F Staging America: Modern American Drama (FYS)
Can modern American drama—as cultural analysis—teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Tōzake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

AMST150 Indigenous Middletown: Native Histories of the Wangunk Indian People
Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern New England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call "Middletown," also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although regarded as "extinct" by settlers in the aftermath of King Philip's War, 1675-1678, the Wangunk continue to live into the 21st century.

AMST170 Postmodernism and the Long 1980s
This introductory immersion in the practice of art history offers an opportunity to gain expertise in visual analysis and historical interpretation through a guided investigation of art and critical theory in the United States during the 1980s. The central debates of this tumultuous decade--still very much with us today--brought the contested paradigm of postmodernism to a fever pitch. Two key exhibitions provide bookends: in "Pictures" (1977), techniques of appropriation diagnosed a new kind of slippage between reality and representation; in 1993's "Whitney Biennial," the period's sustained engagement with gender, sexuality, race, and the relationship between art and politics achieved decisive (and controversial) visibility. Between these poles, artists turned to the street, navigated the "ends" of painting, and invented new forms to confront an increasingly image-soaked media-public sphere. The course attends to the strategies of photoconceptualism, painting, sculpture, video, and site-specificity by which artists intervened in a polarizing historical moment that saw the expansion of neoliberal economics and political conservatism, a sharpened divide between rich and poor, the AIDS crisis, and the geopolitical realignments of the late Cold War.

AMST172 Memory Image: Introduction to Art (As) History

One premise of art history is that works of art necessarily register or encode the time and place of their making. Some art practices operate historically in more than an art historical past through citation, or by actively responding to the socioeconomic, technological, or cultural conditions of their present. Others engage directly in the project of historical representation and research, recasting these activities through painting, photography, installation, and performance (from experiments in abstraction to queered archives and restaged mass protests). Spanning a series of case studies from post-Holocaust New York School painting to post-Katrina site-specificity, this course provides an introduction to the practice of art history by way of recent works of art that have made the resources (and limitations) of historical methodology a subject of investigation. What is the role of art as historical memory in an increasingly image-soaked world?

AMST174 Popular Culture and Social Justice: An Introduction to American Studies

This course explores the interlocking histories of popular culture and social justice in the 20th- and 21st-century United States, with particular focus from mid-century to the current moment. By focusing on the ways in which social justice movements and ideologies have utilized and been informed by trends in art, film, television, music, and commercialism, we will interrogate critical concepts in the field of American studies, such as citizenship, belonging, difference, and equality. Topics covered will include feminism(s), antilynching, civil rights, labor and poverty, pro-choice, disability rights, queer liberation, leftism and countercultures, environmentalism, and animal rights.

Questions addressed will include, How has popular culture both advanced and hindered the progress of social justice movements? How has the idea of "social justice" changed over time? Which groups are included? What aims are articulated? How has the media portrayed and influenced social and political problems, and how has the rise of new media (from radio to television to the Internet and beyond) created new spaces for debating power and inequality?

AMST175 Soundscape and Aurality in American Culture: An Introduction to American Studies

This course is intended as an introduction to interdisciplinary thought, to American studies as a field, and to the hemispheric and transnational intellectual direction of the American Studies Program at Wesleyan. Its goal is to answer the question, What is American studies? The focus for this semester is the emerging scholarship on sound and aurality that addresses, as a special issue of AMERICAN QUARTERLY argued recently, the following questions: What role can sound play in analyzing contemporary debates around empire, immigration, and national culture? Where is sound in the cultural and political legacies of American culture and where is it in the long history of nation-building? What role have hearing and listening played in American formations of race, ethnicity, sexuality, gender, and class, and how has the birth of recorded sound in the late 19th century informed those formations? How are new sound technologies and sonic media practices impacting American identities in the age of globalization? What are the political economies of sound? Does citizenship have a sound? Over the course of the semester, we will listen to archived sounds as well as sample new ways of interpreting the enculturated nature of sound, from the howling wilderness of the colonial era to the aural pluralism of digital media and music in the Internet era.

AMST176 Race, Indigeneity, and Citizenship: Introduction to American Studies

This course is intended as an introduction to the interdisciplinary field American studies. Turning to the entangled histories of settler colonialism, slavery, imperialism, immigration, racism, and disenfranchisement, the class will examine how different peoples become American and how differently situated people(s) negotiate state-structured systems of racial exclusion and assimilation in relation to democracy, equality, and self-determination. How has he field of American Studies taken up questions of indigeneity and race? How has the field of ethnic studies challenged American Studies? What are the current linkages between American Studies, Critical Indigenous Studies, and Critical Race Studies? How have nationalities and citizenship in the United States been structured by white supremacy? What are the differences between indigeneity, race and ethnicity? What is “color-blind” ideology? What can we make of pervasive assertions that we are living in a “postracial” America? How can American Studies provide the necessary frameworks for understanding the Trump era with regard to race, indigeneity, and citizenship?

AMST177 American Movies as American Studies: An Introduction to American Studies

Our aim is to see how movies from the 1930s to the present can help us grow as critical (and self-critical) American studies thinkers (and have fun—even as we question the effects and implications of this fun—doing it). Talkies appeared as a complex mass-cultural form of American studies—exported all over the world—precisely when the academic field of American studies emerged in the early 1930s. From the get-go, movies involved in mass-disseminating America’s inventions of power have made available—in very entertaining ways—critical insight that can blow the whistle on how the reproduction of Americans and American ideologies are pulled off. Together we will explore the modern Americanization of power and focus our conversations on four intersecting concerns that movies are particularly good at illuminating: (1) how culture industries (including movies) shape consciousness, needs, desires, incentives, and sense of belonging and limit our sense of what constitutes problems and solutions; (2) how social critique (even movie critiques of movies) can be mass-popularized; (3) how America makes Americans, especially, into workers (even if they hate what they do and wonder about what and who they are working for) and weapons of various sorts (even if they are frightened and wonder about what and who they are fighting for and against); and (4) how and why America constructs difference (e.g., gender, race, individuality, national identity). This seminar is a thinking-intensive and imagination-intensive critical project designed to introduce students to compelling big-picture concerns—systemic matters—vital to American studies.

AMST178 Sites of the Self: Maps, Gardens, Houses: An Introduction to American Studies
We are where we are. We make ourselves out of the places we create and inhabit. This course examines three of the artifacts/sites central to culture: maps, gardens, and houses. Each attempts to reveal an immaterial ideal in a material form. Maps give a "god's eye" view of the world's totality; gardens recreate lost paradises; and houses embody their inhabitants. Using literature, images, and film, we will discuss global maps—from medieval mappamundi to satellite imagery; visions of paradise, celestial and earthly; private and public gardens, emphasizing the central role of Frederick Law Olmstead; and ideas about houses, ranging from the 19th century designer and horticulturist Andrew Jackson Downing to the 20th century Buckminster Fuller, often credited as the originator of the geodesic dome, one example of which is Spaceship Earth at Epcot Center, in Walt Disney World. We will end with an examination of the recent proliferation of design shows on Home and Garden TV.

AMST199 Prizing the Book: Book Prizes, the Literary Canon, and U.S. Culture
This course examines selected texts by U.S. winners of major literary prizes, including the Nobel, the National Book Award, the National Book Critics Circle Award, the Pulitzer, and the Newbery. How important are these prizes in constructing a literary canon and criteria for judging literary value? What role do they play in reflecting and creating contemporary U.S. culture? In particular, we will read the individual award-winning texts for how they define, problematize, and resolve (if they do) peculiarly American concerns: race, American identity, the frontier and home, the burden of the past and the fear of the future, the new world and its relationship to the old world(s).

AMST200 Colonialism and Its Consequences in the Americas
Why does colonialism matter to the fields of American studies, Latin American studies, and Caribbean studies? What have been the consequences of colonialism for the nations that make up the Western Hemisphere? This course offers a transnational, hemispheric approach to the study of the Americas through a comparative analysis of colonial ventures and their consequences. With a focus on the interactions of Indigenous, European, and African peoples, the course introduces diverse theoretical and methodological approaches to a range of issues and topics. We examine the distinctions between franchise colonialism and settler colonialism; the organization of production, including state labor systems, chattel slavery, and indenture; governance and colonial bureaucracies; the formation of colonial cultures, the emergence of race as a social category, and the ascendancy of white supremacy; independence movements and the emergence of nation-states; and contemporary indigenous politics and decolonization struggles.

AMST201 Junior Colloquium: Critical Queer Studies
This junior colloquium will give you a solid theoretical foundation in the field of queer studies. Although "queer" is a contested term, it describes—at least potentially—sexualities and genders that fall outside normative constellations. However, as queer studies has been institutionalized in the academy, in popular culture, and in contemporary political movements, many argue that today, "queer" has lost its political charge. This course, a reading-intensive seminar, will give you the opportunity to explore this history and these debates. We will start with some of the foundational works in queer theory and then move to tensions and unlikely correspondences between queer theory and critical race theory, trans studies, queer anthropology, Marxism, feminist theory, and disability studies. Rather than understanding queer studies as a singular or bounded school of thought, we will continuously problematize queer studies as a field and a mode of analysis, asking, What kinds of bodies or desires does queer describe? What are the politics of queer? What are the promises of queer theory, and what are its perils? What is the future of queer?
This course is excellent preparation for a queer studies concentration in American studies. Students should expect to end the semester confident of their ability to read queer theory, critique it, and imagine the uses to which queer theory might be put.

AMST202 Junior Colloquium: Representing Race in American Culture
This junior colloquium offers an introduction to several key critical issues and debates concerning the representation of race in American culture. In addition to reading several accounts and critiques of how racial minorities have been represented by the dominant culture, we will also consider how racial subjects have theorized ways of representing themselves in response to the burden of such stereotyping and objectification. The course is organized around two case studies. The first of these will focus on one of American culture’s “primal scenes” of racial representation: blackface minstrelsy. Considering a variety of critical, literary, and visual texts, we will examine how African American images and culture became a way for working-class and other whites to negotiate their own identities and how African American artists and intellectuals have responded to this troubling legacy. In the second half of the course, we will turn our attention to questions of cultural representation that originate from the racial context often deemed to be the opposite of the African American experience: that of Asian Americans. If African Americans have long been the target of overtly negative stereotypes, Asian Americans have been subjected to what one critic has called “racist love”—that is, a tradition of putatively positive stereotypes that have produced a different set of representational problems for Asian Americans. Together, these case studies will allow us to explore a wide range of models for thinking and writing about race in American culture.

AMST203 Junior Colloquium: Biopolitics, Animality, and Posthumanism

This course asks what it would mean for the field of cultural studies to begin to include the category of the "human" within investigations of more traditional categories of social difference (including race, gender, sexuality, and so on). Historically, the category of the human has been taken for granted, as a biological marker imbued with particular intellectual and physical capabilities. Relatedly, the discourse of the human is often invoked in movements for political equality, inclusion, and enfranchisement (i.e., the call to "human rights"). Yet recent literature within the field of American studies broadly, and, more specifically, within the area of critical animal studies, has called these assumptions into question. In this junior colloquium, we will explore these critical turns in the field by considering the boundaries between the animal, human, and technological realms.

Important concepts addressed will include the utilization of animals as research subjects, food, and labor; the "nonhuman personhood" movement; intersectionalities between ideas of social difference and the posthuman; concepts of disability, debility, and capacity; technological enhancements of the human body; and cybercultural identities. Students will have the opportunity to engage with a wide variety of materials, including writing from the areas of critical race studies, feminist theory, and postcolonial theory. (Note: Students need not have familiarity with biopolitical theory; rather, the course will provide a primer in this area during the beginning weeks of the semester.)

AMST206 Junior Colloquium: New England and Empire

Using history and literature, this Junior Colloquium focuses on the role of New England in the transformation of the United States from colony to world power. Major forces effecting this metamorphosis have their roots in this area. Mercantile entrepreneurship and the drive of commerce and trade, such as the slave trade, the ivory trade, and the West and East Indies (China and India) trades, opened the larger world to merchants and consumers in New England. Discourses of race, religion, civilization, and science created universities, produced missionaries and merchants, explorers and colonizers, writers and artists who went to the far corners of the world—the Caribbean, Hawaii, China, and Japan—and brought the world back home. The vaunted mechanical and technological ingenuity of the Yankee peddler, seen in a grandiose version in the eponymous inventor of the famous Colt revolver, backed territorial expansion and insinuated New England culture in to those newly acquired territories. A developing sense of racial entitlement and racial confidence legitimated expansion—into Cuba, Puerto Rico, Guam, and the Philippines—and produced military and cultural imperialism. The domestic, woman-centered "parlor" culture of New England both displayed the wealth of empire and hid its existence.

AMST208 Junior Colloquium: Visual Culture Studies and Violence

In this course, we will interrogate the politics of violence, focusing on the relationship between the production of visual culture(s) and acts of individual, collective, and state aggression. We will ask, How have images served to propagate climates of violence against marginalized persons? What are the ethics of looking at pain, torture, and exploitation? Do such images help us to work toward social change or create attitudes of indifference? How do images of war, prisons, pornography, death, crimes, famine, and disease shape our understandings of citizenship, nationality, and identity? Finally, how does the representation of difference—race, gender, sexuality, class, and disability—inform and/or transform conceptions of violence and its place in the visual field?

AMST210 America's Lure: The Politics of the Transnational US University

Over the course of the last decade the number of international students traveling to the United States has more than doubled. As of 2016, over a million students travel annually to U.S. campuses. In popular culture, governmental rhetoric, and statements from university administrators, this movement has been ascribed to the "lure" of American institutions of higher education and the knowledge, prestige, and futures they are thought to provide access to while simultaneously providing evidence of the successful internationalization of the U.S. university. Students will engage queer, feminist, postcolonial, indigenous, and critical race studies as we historicize and theorize this phenomenon while grappling with the transnational dynamics of the U.S. university from its founding as a central institution of settler colonialism in the 17th century through to the current moment of the so-called global, neoliberal university.

AMST212 Edgar Allan Poe and Literary Culture

Edgar Allan Poe is best known for his grotesque characters and macabre plot-twists. But though Poe seems capable of offering readers only a very specific form of literary experience - dark, brooding, atmospheric - what's striking about his work when taken as a whole is its variety. Poe was a writer of short stories, a poet, a novelist, an essayist, and an editor. He invented the detective story, wrote science fiction, and published tales of romance, family discord, and horror. This course sets out to appreciate Poe's eclectic literary output in the context of the emergent nineteenth-century publishing industry, seeing Poe - whether playing the role of novelist, poet, or critic - most of all as a writer struggling to earn a living in the 1830's and 1840's.

AMST213 African American History, 1444-1877

This course examines the historical interactions between peoples on three continents--Africa, Europe, and the Americas—and the consequences of European colonization, trans-Atlantic slavery, and racial capitalism. Focusing on a period from the Antiquity to the late 19th century, we will explore how European perceptions concerning Africa, its peoples, and their evolution over millennia in response to shifting political, economic, and social circumstances. We will chart how Africans and their descendants in the Americas experienced and responded to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.

AMST218 Introduction to Queer Studies

This course will examine major ideas in the field of queer studies. Relying upon theoretical, historical, and cultural studies texts, we will consider the representation and constructions of sexuality-based identities as they have been formed within the contemporary United States. We will explore the idea of sexuality as a category of social identity, probing the identities of lesbian, gay, bisexual, and transgender to try to understand what they really mean in various cultural, social, legal, and political milieus. In doing so, we will ask, What does it mean to study queerness? What do we mean by "queer studies"? How do institutions—religious, legal, and scientific—shape our understandings of queer identities? In what ways do sexuality and gender interact, and how does this interaction inform the meanings of each of these identity categories? How do other social categories of identification—race, ethnicity, and class—affect the ways in which we understand expressions of queerness? Moreover, what does studying queerness tell us about the workings of contemporary political, cultural, and social life?

AMST219 Introduction to Native American Studies: (Mis)Representation

From Pocahontas to Chief Wahoo, Native Americans have been portrayed as noble savages, brave warriors, spiritual shamans, and Indian princesses, greatly shaping the collective imaginings of Native peoples. This class offers an introduction to the broad field of Native American studies with a focus on the themes of identity and (mis)representation. We will draw on work in anthropology, history, literature, art, film, politics, and current events to explore the complex relationship between historical and contemporary issues that indigenous peoples face in North America, with a focus on the United States. Keeping in mind popular culture and historical narrative, we will examine the foundations of Native (mis)representations, their constructions in-step with colonization, and their connections to critical issues facing Native communities, including legal and cultural identities, cultural revitalization, environmental racism, health inequities, gender and sexuality, and sovereignty. This class also pays special attention to resiliency in Native communities and the creative ways that Native peoples and communities engage with social media, art, design, film, activism, and more, to reclaim and reshape Native representations and Native imaginings.

AMST222 Political Sociology

In the first part, we will talk about the state and citizenship. The state has been conceptualized in different ways by different theorists. What is the state really? Why do states do what they do? We hear terms like "the straight state," "the welfare state," "the penal state," "the regulatory state," "the submerged state"—what do these mean? How do they govern? How do they govern the way they do? What are some of the peculiar characteristics of the American state?

We cannot really talk about the modern state without talking about the other key element of the polity: the citizens. What is citizenship? Who is a citizen? These questions have remained central to political and social thought, and become politically salient in the context of the recent elections. We will talk about the theory of citizenship: political and cultural fault lines of citizenship in diverse societies; politics of naturalization; political, civil, and social rights, and the relationship between sexuality and citizenship.

In the second part of the course, we will learn about neoliberalism, and how the state and democratic citizenship have transformed in the US in the neoliberal era. We will talk about increasing inequality, penalization, changing patterns of civic participation, and policy changes that have transformed the legal terrain within which democratic citizenship operates.

In the third part of the course, we will directly engage with contemporary politics, and ask how the political, economic, and social transformations of the past few decades matter for electoral politics. What do voters want? How does voter ignorance impact on policies and electoral outcomes? What have been the trajectories of the left and conservative movements in the US? We are told that populist politics is on the rise in the US. What does populism mean? What varieties of it do we see in contemporary American politics? How about the salience of fear in American political discourse? How does fear work in contemporary American politics? How do politicians and fringe organizations mobilize and capitalize on racial and religious fears?

AMST224 History of American English

What is American English and how did it get to be what it is? This course will begin with the general history and development of the English language, looking at central issues such as sound (e.g., the Great Vowel Shift, Grimm’s Sound Shift), and responding to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.
Change laws, sense (e.g., grammar, vocabulary, usage), and standardization (e.g., orthography, dictionaries). What makes our particular kind of English "American"? We will learn about the role of different groups in its development: Native Americans, African Americans, and immigrant languages of various kinds, including Yiddish and Spanish. In addition, we will analyze the workings of class, youth culture, and gender. Throughout, the class will examine questions at the heart of our language debates: a "national language," "Ebonics," and bilingual education. If English is today the international "lingua franca," is American English particularly the language of power? What are the different kinds of power exerted by, for instance, business English and slang?

AMST225 Latinidad: Introduction to Latina/o Studies
This course will introduce major themes within the field of Latina/o studies, using an interdisciplinary approach to analyze the experiences of Latinas/os within the United States and throughout the Americas. Employing a range of historical, theoretical, political, and cultural texts, this class will ask students to think about a number of issues central to the field of Latina/o studies, including migration, language, nationalism, indigeneity, education, labor, assimilation, and cultural imperialism. This course will also look at the ways in which intersectional identifications, including race, sexuality, and gender, operate within frameworks of Latinidad.

Methodologically, this course will draw from such diverse fields as ethnic studies, history, political science, border studies, gender theory, sexuality studies, critical race theory, and urban studies. As we utilize a broad range of texts and synthesize diverse perspectives and ideas, students will be asked to interrogate formative concepts, such as the border, America(s), and the nation. Central class queries will probe the boundaries of Latina/o identity, the working of intersectional identities, patterns of migration, and the ways in which institutional power shapes the contemporary Latina/o experience.

AMST228 Sex, Money, and Power: Anthropology of Intimacy and Exchange
Sex and money—intimacy and economy—are often imagined to occupy distinct and separate spheres. Sex and intimacy are located in the private or domestic realm, in spaces of leisure, feelings, care, and personal connections. Money and economy, on the other hand, are purportedly public, located in the market and tied to labor, rationality, and impersonal (non)-relations. This course brings these spheres together, focusing on the links, exchanges, and circuits between the intimate and the economic in diverse cultural contexts across the Americas. Case studies will be drawn from sex work and tourism; marketing and pornography; reproduction, domestic labor, transnational adoption; marriage; class and sexual lifestyle; labor and carework; the global market in organs and body parts; outsourced surrogacy; sex stores and commodities; and sexual activism and identity politics. We will be centrally concerned with the relationship between economic, cultural, and political formations and with the differences race, ethnicity, nation, class, gender, and sexuality make. Throughout, we will ask, How do practices and bodies accrue value? When are intimacies—sexual and social—commodified? How have transnational flows complicated relationships between sex and money? How do these intersections constrain and/or empower people? And, finally, who benefits from such arrangements, and who does not?

AMST230 The United States Since 1901
"I am certain that history has equipped modern American liberalism with the ideas and the knowledge to construct a society where men will be both free and happy." - Arthur M. Schlesinger Jr., January 1949

This course will explore the history of the United States from 1901 until recent times. The central focus will be on politics and society, although economics, foreign relations, war, intellectual trends, ethnic and racial relations, and other topics will also be discussed. The unifying theme will be the emergence of modern liberalism during the Progressive Era and its dominance in American politics and thought by the mid-20th century. Although intellectuals hostile to the New Deal and liberalism emerged in the 1930s and 1940s, as time passed, conservative ideas and organizations acquired increasing influence, ultimately conquering the Republican Party and changing the Democratic Party as well. Thus, political divisions that emerged in the 1890s continue to this day.

AMST231 Rightwing Movements in the Age of Trump
This course explores the socio-cultural, ideological, and affective contours of contemporary American far-right political culture. Course readings theorize the nature of ‘rightwing’ politics in general, provide ethnographic insights into particular movements and policy platforms, and trace the rising impact of rightwing attitudes in the age of Trump. We focus on connections and disconnections between a range of communities that comprise the so-called ‘big tent’ of the American right, including white supremacists, free market libertarians, Christian fundamentalists, and conspiracy theorists. Over the course of the semester, students will gain conceptual tools for better understanding what is at stake for these groups and how those stakes shape their political
practices and goals. We will also reflect on how this knowledge might shape our own political viewpoints and tactics moving forward.

AMST232 American Architecture and Urbanism, 1770–1914

This course considers the development of architecture and urbanism in the United States from the late 18th through the early 20th century. Major themes include the relationship of American to European architectures; the varied symbolic functions of architecture in American political, social, and cultural history; and the emergence of American traditions in the design of landscapes and planning for modern cities, especially Boston, New York, Philadelphia, Washington, D.C., Chicago, Los Angeles, and San Francisco. The course considers houses for different sites and social classes, government buildings, churches and synagogues, colleges, and commercial architecture of different kinds includes the origins of the skyscraper. Urban environments include cemeteries, public parks, streets, and civic centers. Movements include neoclassicism, the Gothic and Romanesque revivals, the Chicago School, the Arts and Crafts movement, and the City Beautiful movement. Major figures studied include Thomas Jefferson, Benjamin Latrobe, Frederick Law Olmsted, Frank Furness, Henry Hobson Richardson, Louis Sullivan, the early work of Frank Lloyd Wright, Greene and Greene, Bernard Maybeck, Julia Morgan, and McKim, Mead and White.

AMST233 Global Queer Studies

This course explores global experiences of LGBT/Q life, bringing an explicitly transnational lens to a field too often dominated by U.S.-centered perspectives.

Drawing on queer ethnography and film, we will explore the contours of queer and trans life around the globe, from the lives of gay men in Indonesia to Muslim yan daudu in Nigeria, gay tourism in post-Revolutionary Cuba, queer mati work among working-class Afro-Surinamese women, lesbian activism in India, LGBT asylum claims in Canada, the queer art of Carnival in Trinidad and Tobago, the everyday lives of lalas (lesbians) in China, and the transnational lives of Filipino gay men in New York. Our aim is to expand Western categories and concepts of sexuality, gender, identity, and desire (both hetero- and homo-normative), and to understand how sexual/gendered identities, cultures, and politics are shaped by colonialism, imperialism, racialization, migration, transnational media, and global capitalism.

This semester will feature a lecture/film series as part of our course, with visiting scholars Erin Durban-Albright (on postcolonial homophobia in Haiti), Martin Manalansan (on QTPOC Filipino lives), and filmmaker Harjant Gill (on gender/ sexuality in India).

AMST234 What Was the Public Sphere?

The democratic revolutions of the 18th century are often thought to have originated with the emergence of modern reading publics—groups of strangers who, through the alchemy of print, came to understand themselves as coherent entities capable of exercising political power against the state. The “public sphere” is central to American identity in particular, from the debates that raged in newspapers before the ratification of the Constitution to the calls for civility that have appeared more recently on Twitter and in New York Times op-eds. This course will explore the relationship between print culture and political action by reading 18th- and early-19th-century American literature. We will consider the material and social conditions that gave rise to the public sphere. We will examine the role of rational discourse in adjudicating political claims. We will ask whether the public sphere ever actually existed, and whether it does—or can--exist in our current historical moment.

AMST235 American Literature, 1865–1945

Together we will explore not only the complexities of American literature from the 1860s to the 1940s but how this literature excels as a usable critical resource that can advance our understanding of how America has "ticked" as a culture; a socioeconomic system that established and sought to maintain class, gender, and racial difference; and a political power structure. In our ongoing analyses of the relationship of literary form and social form, we will trace connections between historical developments such as the gothic genre and gender ideologies, domestic romance and the social reproduction of labor, realism and mass-urbanism, naturalism and immigration, and modernism and imperialism. The creative works of Emily Dickinson, Elizabeth Stuart Phelps, Fanny Fern, Mark Twain, Stephen Crane, Henry James, Charlotte Perkins Gilman, Charles Chesnutt, F. Scott Fitzgerald, Langston Hughes, Meridel Le Sueur, Ernest Hemingway, Eugene O’Neill, Nathanael West, William Faulkner, Richard Wright, and Zora Neale Hurston will help equip us to be more imaginative readers of literature, ourselves, and America. This literature offers us expansive insights into what was at stake in America’s production of "the modern." We will experience the aesthetic pleasures and critical pleasures of reading great writing.

AMST236 Religion and National Culture in the United States

This lecture/discussion course offers sustained analysis of the role of religion in the intellectual life of the nation. We will examine both the work of American theologians and the ways that other American intellectuals have thought about religion and its function as a language of authority in both state and society. We will consider the ramifications of conceptions of the United States as a Protestant and millennial nation and the challenges to that conception posed by the growing diversity of religions in the country. The variety of spiritual practices and the clashes between religion and science generated debates that continue to haunt both the study of religion and political life. From participation in a transatlantic evangelical culture to the rise of the social gospel and theological modernism through the fundamentalist response to liberal religion and Darwinism, the course charts the influence of Protestant Christianity in American culture and evaluates claims about the development of a distinctively American religious style. The replacement of overt anti-Catholicism and anti-Semitism with the notion of a Judeo-Christian heritage that celebrated the incorporation of Protestant, Catholic, and Jewish traditions into American civil religion figures as the central dynamic of the 20th century. The course concludes with a consideration of contemporary religious developments, including New Age formations and the growing presence of Buddhism, Hinduism, and Islam, and the continuing centrality of religion(s) in the national culture.
AMST237 Histories of Modern U.S. Gender and Sexuality
This course will explore constructions of U.S. gender and sexuality from the late 19th century to the present. We will consider ideologies of gender and sexuality as social, political, economic, and biomedical systems, as well as lived, material realities. Particular attention will be paid to intersectional politics, by interrogating how categories such as race, class, disability, and national identity operate in relation to gender and sexual politics. Topics covered will include: the scientific “invention” of hetero- and homosexuality; anti-miscegenation law; gender-based immigration regulations; ideas of normative domesticity and kinship; labor patterns and gender-based disparities; gender- and sexuality-based rights’ movements, including first, second, and third wave feminisms and LGBTQIA liberation; and reproductive technologies and rights.

AMST239 Native Americans and Health: Community Empowerment and Wellness
Health disparities are well documented among indigenous populations in North America. Native Americans and Alaska Natives continue to suffer from morbidity and mortality rates higher than other Americans in many categories, including chronic liver disease and cirrhosis, diabetes and obesity, assault/homicide, intentional self-harm/suicide, and chronic lower respiratory diseases. This seminar provides a historical overview of topics in health and health care, emphasizing the impact of social history—colonial histories and their sequelae, to be exact—on the etiology and epidemiology of health disparities in Native North America. Throughout the course, we will interrogate the changing sources of morbidity and mortality among indigenous peoples in the U.S., including the policies and practices that have been implemented to limit disease and improve health. Organized thematically, we focus on significant diseases or health issues, such as diabetes or alcoholism, as well as public health and community responses, initiatives, and interventions. Much of the material will engage with indigenous voices, centering what indigenous peoples say, feel, and do about health disparities, with the goal of moving toward indigenous models and understandings of disease, health, and well-being.

AMST240 Hipsters
This course will focus on the contemporary hipster subculture after examining a critical genealogy and racial history of the origins of the concept. From black jazz artists and zoot-suitors in the 1940s who defined “hip” and “cool,” to the post-World War II burgeoning literary scene of the Beat Generation that codified the figure of the hipster as an American bohemian strangled by social conformity, there has been a cultural politics of being "in the know." Derived from the term used to describe these earlier movements, the term “hipster” reappeared in the 1990s and became especially conspicuous in the 2000s to the present. Today’s hipsters are generally associated with whiteness, indie music, a vintage fashion sensibility, liberal political views, organic and artisanal foods, as well as racial gentrification in urban neighborhoods in Brooklyn and select cities such as Portland, OR and San Francisco. Perhaps curiously, members of this subculture typically disassociate themselves from this cultural category, as outsiders often use the termhipster as a pejorative. In an attempt to understand why hipsters differentiate their actions from the hipster stigma, students will study the contemporary discourse about hipsters, along with a historical analysis of the term and its use in popular culture to get a better understanding of race, class, gender, and the commodification of style. Other topics for exploration include stereotypes, authenticity debates, hipster racism, so-called “blipsters,” the death of irony, hipster chic, “hipster run-off,” the resentment of hipsters, and forecasts of “the end of the hipster.”

AMST241 Childhood in America
Probably the first literature we fall in love with, children’s literature shapes individuals and cultures in profound ways, investing us with important mythologies and guiding our identities and behaviors. This course will examine fairy tales, some works from the “golden age” of children’s stories, and some contemporary works. We will enrich our reading of the fiction with some of the central theorists of this genre, including Bruno Bettelheim, Jack Zipes, and Maria Tatar.

AMST242 Mixed in America: Race, Religion, and Memoir
This course examines the history of mixed-race and interfaith identities in America. Using the genre of the memoir as a focusing lens, we will look at the various ways that Americans of mixed heritage have found a place, crafted an identity, and made meaning out of being considered “mixed.” How has being multiracial or bi-religious changed in the course of history in this country? What has occasioned these changes, and what patterns can we observe? We will explore questions of racial construction; religious boundary-making; rites of passage; gender, sexuality, and marriage; and some literary and media representations of mixed-heritage people.

AMST243 American Literature from the Colonial Period to the Civil War
This lecture course marks a path through American literature, moving from European fantasies and narratives of the conquest of the New World to representations of slavery, industrialization, and U.S. national expansion. We will begin by considering the role of “America” (both the idea and the real continents) in world history; the questions we raise will return often as we look closely at the literature. Whether sermon, imperial report to the metropole, memoir, poem, or novel, the forms of our texts differentiate them as much as their content sometimes unites them; therefore, we will examine the consequences, both political and aesthetic, of literary conventions. We will pay special attention to the relationship between texts and images (illustration, painting, iconography).

AMST243A American Literature on Fire: Conquest, Capitalism, Resistance: 1492-1865
We begin with a 1938 Langston Hughes poem, a north star shining light on American exceptionalism and then move back in time: from Columbus’s dismemberment and enslavement of the Arawaks when demanding gold; to Cabeza de Vaca’s feel-good handbook for the conquest of indigenous peoples; to Puritan inventions of a “God” that pulls the trigger; to Franklin’s blowing the whistle on a mercantile capitalism he supercharged with a secular work ethic; to a Declaration of “Independence” in 1776 that provoked alternative declarations written by workers, women, and ex-slaves in the 19th century; to Poe’s readings of a Divided States of America (race, gender, domesticity) as gothic; to Douglass’s representations of the tactical artfulness of slave culture; to Hawthorne’s deconstruction of the Americanization of power; to Thoreau’s entwining of collective protest and what he hoped would be an individualized escape route; to Melville’s attacks on imperialism, racism, and class domination; to Elizabeth Stuart Phelps’s critique of domestic slavery; to Stowe’s socially transformative anti-slavery novel (whose sentimentalization recirculated stereotypes). During our literary-intellectual time travel, we will engage some of America’s most “on fire” writers who make possible insights into the ideological foundations of American cultures, identities, and hegemonies that provocatively illuminate America’s situation today (and offer some lessons for how to change it).

AMST244 Comparative Race and Ethnicity
This course is an introduction to the sociological study of race and ethnicity in comparative and historical perspective. This is not a course about the experiences of particular races or ethnic groups in any particular part of the world. Rather, this course explores how ideas about racial difference take hold in different parts of the world in different ways and with very different consequences. Through comparisons of Western and non-Western societies, we will investigate how race and ethnicity operate as markers of social exclusion in distinctive ways.

AMST245 Personalizing History
How much are we shaped by our historical times and places? How much power do we have to make our historical conditions respond to our needs and desires? These questions and others are at the foundation of this course, which includes both memoir writing and memoir reading. We will construct narratives about our times and selves in a series of writing workshops. There will be some exercises where you will be asked to research specific aspects of your times and places. For example, you might be asked to research and write about such questions as when and where you were born, what were the major cultural or political currents of that time, and how was your early childhood influenced by them? Or you may be asked to bring in a photograph of someone important in your personal history and write about that person.

The memoir is a distinct genre, with topics/themes particular to it. Some of the most important are memory itself, childhood, place and displacement, language, loss/trauma/melancholia/nostalgia, self-invention or transformation, family, and generational differences. The class will engage with these topics in the analysis of the readings and also in the writing of memoirs. Specific techniques will be highlighted for writing practice: the catalog, diction, dialogue, metaphor, description, point of view, and narrative structure, including temporal organization, the doubled narrative, and the narrative frame.

AMST246 Social Movements
How, when, and why do social movements emerge? What motivates individuals to participate? What transforms problems into grievances and grievances to action? How should movements be organized, and what tactics should they use? What factors explain movement success and failure (and how should success and failure be defined)? What is a social movement, anyway? This course seeks to introduce some of the major ways scholars have approached such questions and, at the same time, to give a sense of both the high drama and the everyday details of social movement activism, using historical and sociological case studies. Course readings concentrate on U.S. movements, including racial justice, class, gender, and sexuality-based activism.

AMST249 Art After 1945
This course examines artistic production in the United States between 1945 and 1980. Artists in this period attempted to respond to the "caesura of civilization" brought about by the Holocaust and World War II, to contend with the consolidation of postwar consumer capitalism and mass culture, and to situate their work in relation to the far-reaching social upheavals of the 1960s and ’70s. Practices linked to the early twentieth century avant-garde (such as abstraction, the readymade, Dada, and surrealism) echoed in these years, reconfiguring themselves in relation to emergent discourses around information technology, feminism, post-humanism, and cultural studies, to name just a few important intellectual loci. The boundaries of the art object and its contexts of reception transformed radically in these years as artists developed new forms and new models of spectatorship to confront a world that had placed enormous pressure on traditional concepts of humanist subjectivity. Topics include New York School painting, pop art, minimalism, process art, conceptual art, performance, and site-specificity. A broader creative ecosystem inclusive of mass culture, design, dance, music, experimental architecture, and photography will additionally be considered.

AMST250 Decolonizing Indigenous Middletown: Native Histories of the Wangunk Indian People

Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call “Middletown,” also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although regarded as “extinct” by settlers in the aftermath of King Philip’s War, 1675-1678, the Wangunk continue to live into the 21st century.

AMST251 Contemporary Puerto Rican Art and Literature

This course studies the works of contemporary Puerto Rican filmmakers, performance artists, poets, novelists, painters, conceptual artists, musicians and sound artists. Puerto Rico continues to be one of the U.S. military’s and its corporate guises’ favorite laboratories; its beauty and complexity are part of what filmmaker Beatriz Santiago Muñoz calls a “chimerical ecology.” In this course, we will think with this key phrase, “chimerical ecology,” and many aesthetic survival strategies generated by contemporary Puerto Rican literature and art. We will consider the many forms of camouflage set into play in this “chimerical ecology,” which reveal the multiple forms of destruction at work by the U.S. war machine, the debt crisis, tourism, and other forces, and the forms of resistance, transformation, and life that only art help us sense. How do you prepare to see what is camouflaged? How do you get ready for what you don’t know? Can we reshape our sensorium to feel out and make possibilities that capitalism and settler colonialism render impossible? We will study what appears to hide out in language and visual codes, along with the disidentifying discourses, counter-discourses, aesthetics, poetics, and live art forms that transform the sensorial experiences of space. Students who do not read and think in Caribbean Spanishes are very welcome to take this course, but a minimally playfully bilingual attitude is encouraged.

AMST253 Television: The Domestic Medium

Of all the mass media, television is the most intimately associated with domestic and familial life. Its installation in American homes over the postwar decade coincided with a revival of family life that encouraged an emphasis on private over public leisure. Most television is still watched at home, where viewing practices are interwoven with domestic routines and provide a site for negotiating family and gender relations. Television production is shaped at several levels by the images broadcasters and advertisers have of viewers’ domestic lives: Broadcast schedules reflect socially conditioned assumptions about the gendered division of family roles; a common televisual mode of address uses a conversational style in which performers present themselves to viewers as friends or members of the family; and families or surrogate families figure prominently in the content of programming across a wide range of genres, including sitcoms, primetime dramas, daytime soaps, and talk shows. Sitcoms, in particular, have responded to and mediated historical shifts in family forms and gender relations over the past 50 years, and they will be a focus in this course.

We will explore how television has both shaped and responded to larger cultural discourses about family and gender from the postwar era into the 21st century.

AMST255 Anarchy in America: From Haymarket to Black Lives Matter

Anarchism as a political philosophy and practice is an important but little-known aspect of American culture and society. This lecture/discussion course will introduce students to select aspects of anarchist political thought and praxis in the United States and the ways that anarchism has been represented positively, vilified, or dismissed. The class will have three parts: histories; philosophies and theories; and activism. In the history section, we will examine key events and periods from the late 19th century to the early 20th century, including the Haymarket affair; the plot to murder American industrialist Henry Clay Frick; the labor-organizing work of Lucy Parsons; the assassination of President William McKinley; the activism, incarceration, and eventual deportation of Emma Goldman and Alexander Berkman; and the execution of Ferdinando Nicola Sacco and Bartolomeo Vanzetti. In the philosophy and theory segment, we will examine anarchist theory as radical critique and review various political traditions including individualist anarchism, socialist anarchism, anarcha-feminism, black anarchism, queer anarchism, indigenous influences and critiques, and other schools of thought. In the activism section, we will examine the diverse ways, including violent and nonviolent means, by which people mobilize and organize for political change through direct social and political action.

AMST256 Race and Medicine in America

This course will trace ideas of race in American medical science and its cultural contexts, from the late 19th century to the present. We will explore how configurations of racial difference have changed over time and how medical knowledge about the body has both influenced and helped to shape social, political, and popular cultural forces. We will interrogate the idea of medical knowledge as a “naturalizing” discourse that produces racial classifications as essential, and biologically based.

We will treat medical sources as primary documents, imagining them as but one interpretation of the meaning of racial difference, alongside alternate sources that will include political tracts, advertisements, photographs, and newspaper articles. Key concepts explored will include slavery’s medical legacy, theories of racial hierarchy and evolution, the eugenics movement, ”race-specific” medications and diseases, public health politics and movements, genetics and modern “roots” projects, immigration and new technologies of identification, and intersections of race and disability.

AMST257 Darwinian Fictions

This class tracks the discourse surrounding evolutionary science as it circulated through various spheres of American intellectual life in the decades after the Civil War. If the ideas proposed by Charles Darwin and Herbert Spencer
fundamentally changed the way scientists and politicians understood the natural world and human beings’ relation to it, these ideas would also influence the way writers understood the function of literature. Best summed up by Emile Zola’s suggestion that, through literature, we are capable of “possess[ing] knowledge of man, scientific knowledge of him, in both his individual and social relations,” authors during this period began to explore the literary possibilities of evolutionary science. By reading works of literature alongside influential scientific treatises, this course encourages students to think about the kinds of knowledge literary experience gives us access to, and the relationship between literary knowledge and other disciplinary forms that emerged at the turn of the twentieth century.

AMST259 Discovering the Person
This course surveys major developments in psychology and psychiatry from 1860 to 1980. Through readings and lectures, the course introduces the major schools, theories, and systems in the American “psy” sciences. We examine the kinds of persons who were “discovered,” the techniques of discovery, the extensions of psychological ideas to institutions and policy formulations, and the consequences of these discoveries for public as well as private life. We examine psychological phenomena that were located, catalogued, and explained by these sciences, including irrationality, sexuality, cognitive powers, personality, emotional processes, neurotic behaviors, intelligence, addictive tendencies, and the will. Attention is also given to the scientific grounds for investigating persons, the empirical evidence sought in the century-long process of discovering and naming psychological kinds, and the modes of producing this knowledge (aggregate methods, case study, and theories). Readings include primary source documents, histories of the disciplines, and philosophical analyses.

AMST260 Bioethics and the Animal/Human Boundary
In this course, we will explore the construction of the animal/human boundary through the lens of bioethics. We will define bioethics as the study of the ethical consideration of medical, scientific, and technological advances and their effects on living beings. At the same time, we will pay close attention to the cultural contexts in which these advances emerge, imagining the realms of scientific progress and popular culture as mutually constitutive. We will consider topics such as cloning, organ transplantation, pharmaceutical testing, and gestational surrogacy, with a focus on the late 20th and early 21st centuries.

We will begin by interrogating how ideas of the “animal” and the “human” are constructed through biomedical and cultural discourses. We will ask, How is the human defined? By intelligence or consciousness levels? By physical capabilities or esoteric qualities? Similarly, how has the human been defined against ideas of the animal? Or, what ethical justifications have been cited in the use of animals in biomedicine? What makes certain species “proper” research subjects and others not? What do these formulations tell us about our valuation of animal and human life, and what kinds of relationships exist between the two? To answer these questions, we will consult a wide range of interdisciplinary scholarship, from authors in the fields of animal/ity studies, bioethics and medicine/science history, sociology, anthropology, and philosophy. Students will also be exposed to the basics of biopolitical theory.

AMST261 Pirates, Puritans, and Pequots: Literatures of the Renaissance Atlantic
This course opens the traditional canon of Renaissance literature westward, examining the connections between English Renaissance authors and the slaves, indigenes, and colonists living in and around England’s emerging colonies in the New World. What picture emerges when New World authors ranging from Puritans to pirates to Pequots are put in sustained dialogue with the points of view of investors, planners, and dreamers “at home” in England? We will answer this question by surveying a variety of texts and objects including travel narratives, pirate plays, utopian fictions, indigenous craftwork, maps, eccentric political tracts, diaries, colonial promotion materials, and early ethnographies produced by authors all around the Atlantic rim (some even in 17th-century Connecticut). Together, we will think about the relationship between these objects and slavery, religious radicalism, indigenous-European relations, inter-European conflict, exploration, and trade.

AMST262 Beyond the Talking Book: Reading African American Literature in the Newspapers
The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some lesser known ones) in their original publication context, the magazine archives of The Christian Recorder; The Anglo-African Magazine; The Colored American Magazine; The Crisis; The Crusader; Opportunity; and Fire!! The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context--as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students’ literary close-readings skills, this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnutt, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins’ Of One Blood) in its original installment-format, week-by-week. Reading these works serially will also enable them to play closer attention to each installment’s relationship to its surrounding texts and images.

AMST264 Introduction to Asian American Literature
This course surveys how Asia and Asian Americans have figured in the U.S. cultural imaginary from the middle of the 19th century to the present, from Herman Melville’s American epic Moby-Dick to Ruth Ozeki’s comic novel about transnational television, trade, and activism My Year of Meats. As the choice of these framing texts suggests, we will be exploring two kinds of representations.
On the one hand, we will examine the narratives, tropes, and images through which dominant American culture has envisioned its incursions into Asia and the reciprocal movement of Asians into the United States; on the other, we will also explore the ways in which Asian Americans have sought to represent their own varied and uneven encounters with U.S. culture. The course is organized chronologically in order to emphasize the ways in which these cultural artifacts reflect and influence their social and historical contexts. In the latter half of the course, as we enter the period beginning with the 1970s in which Asian American literature becomes an institutional category in its own right, we will add to this historical framework a number of other analytical frames that have emerged from within Asian American Studies itself: cultural nationalism; gender and sexuality; postcoloniality; cultural assimilation; and globalization.

AMST266 Future Visions: Temporality and the Politics of Change
What is the time of political change? This course explores alternative temporal frameworks embraced by artists, writers, activists, and interdisciplinary scholars from diverse social and cultural locations. We ask, How do concepts of temporality help us understand, resist, contest, and transform prevailing social orders?

We will begin by assembling some conceptual tools for understanding the relationship of time to historical change and to racial, sexual, cultural, and national difference. Drawing on psychoanalysis, literary theory, history, trauma studies, anthropology, African American studies, queer theory, feminist studies, and postcolonial studies, we will explore the telos of modernity and narratives of liberal progress. We will then consider some of the critical and oppositional possibilities of being out of sync with dominant temporal frameworks, asking, Are there other, perhaps more livable, temporalities? Next, we will consider the possibilities for memory and memorialization to work against historical forgetting and cultural amnesia—alongside the ways historical pasts might be appropriated to serve nationalist ends. Finally, we will turn to the question of the future as found in meditations on utopias and dystopias; in political, cultural, and ecological justice movements; in ideologies of newness; and in rhetorics of apocalypse.

Our readings include three texts that highlight the form and futures of political change: Theresa Hak Kyung Cha’s Dictée, an avant-garde text that uses multiple genres (poetry, autobiography, history, photography, etc.) juxtaposing historical trauma and aesthetic experimentation; Kim Fortun’s Advocacy After Bhopal: Environmentalism, Disaster, New Global Orders, an experimental ethnography of environmental disaster and its aftermath; and Octavia E. Butler's Kindred, a speculative fiction about time travel and the memory of slavery. As we consider social change, revolutions, and new "ends" and beginnings, students are invited to explore current social justice movements.

AMST267 Music and Downtown New York
This course will explore the history and simultaneous flourishing of four distinct music communities that inhabited and shaped downtown New York City during two especially rich decades (the 1950s and 60s): urban blues and folk revivalists; an African American jazz-based avant-garde; Euro-American experimentalists; and Lower East Side rock groups. These four vanguard musical movements—at the heart of dramatic cultural shifts at the time, with reverberations and legacies that remain relevant up to the present day—are an essential part of American history. Much of the course will be devoted to discovering their points of convergence and divergence, especially in conversation with broader contemporaneous currents, including the Civil Rights Movement and related notions of freedom, shifting youth cultures, music and politics, and avant-garde aesthetics.

Drawing from primary sources, we will read about and listen to recordings of a wide variety of musicians, view a broad cross-section of film from the era, identify aesthetic and cultural trends, and study the local industry that supported them, including record labels, coffee houses, clubs, and concert spaces. Projects throughout the semester include written papers, individual and group presentations, and adding content to an interactive collaborative Google map of the neighborhood.

AMST269 New World Poetics
God and money, love and beauty, slavery and freedom, war and death, nation and empire: The themes of early American poetry will carry us from London coffeehouses to Quaker meetinghouses, from Massachusetts drawing rooms to Jamaican slave-whipping rooms. Our texts will range from pristine salon couplets to mud-bespattered street ballads, from sweetest love poems to bitterest satire. Digging deeply into the English-language poetry written, read, and circulated after the first English settlement in North America, we will trace the sometimes secret connections between history and poetic form, and we will listen to what these links can tell us about poetry and politics, life and literature in our own time. Our poets ignored false divisions between art and society, and so will we.

Grading: A-F
AMST271 The 1850s
The 1850s was a period of tremendous social unrest in the United States. And yet, for all of its upheavals, the decade that immediately preceded the Civil War also witnessed the publication of some of the country’s most iconic works of literature, what a later generation of scholars would call the “American Renaissance.” This course sets out to explore the relationship between literature and its historical context(s). What were the material, political, and economic conditions that led to the production of so many great works of American literature? How does a literary text overcome its own embeddedness in history to become a “classic,” a work of universal, timeless value? Keeping our own historical moment in mind, this class will examine the 1850s to determine whether periods of political turmoil produce better literature. (Let’s hope that they don’t.)

AMST272 Cultural Studies of Health
Nothing is more fundamental to the human condition than our most basic right—the right to healthy life. Tragically, this right is inequitably distributed across human bodies and populations, especially along axes of race, gender, class, age, and nationality. In fact, persons residing in the U.S. do not have a right to healthy life. Issues of health and illness are, quite literally, matters of life and death that are shaped by broader political and economic institutions in human societies. In neoliberal nation states like the U.S., the guardian of the right to live a healthy life is a highly bureaucratic and technological form of corporate medicine. Medicine comprises a network of social institutions and technoscientific practices that people have created and use to diagnose and heal our bodily and psychic ills. While the practice of medicine has produced dramatic improvements in life expectancy and quality of life for billions of people, most people on the planet do not have access to basic medical care. Who thrives, who gets sick, who dies, and why constitute core questions for social justice.

This course investigates the complex embroidery of biosocial and cultural processes that shape the unequal experiences and meanings of health. Cultural studies of health document the role of medicine as a great instrument of power that both generates and alleviates suffering. As more and more areas of social life and parts of bodies are falling under the control of medicine (a process called medicalization), we must ask, What are the dynamics and implications of medicalization for human societies and cultures? Drawing on provocative readings and media from diverse fields in sociology and cultural studies of science, technology, and medicine, this course will investigate these questions and more with an emphasis on the answers to them might contribute to social justice and improve the conditions necessary for human thriving.

AMST273 Diasporic South Asian Writing and American Studies
The South Asian diaspora spans the world; communities are located in Africa, the Middle East, England, North and South America, the Caribbean, as well as Southeast Asia. Using novels, poems, short stories, and film, as well as scholarship on history, this course will focus upon the literary and cultural production of the South Asian diaspora in the United States. We will examine the conditions of historical arrival and identity-making under shifting regimes of politics, economics, and culture. What does being in the United States mean for the claiming of “Indian” and “American” identities, and how is this inflected by relationships with other ethnic or racial communities? The relationship with an often romanticized “India” is a central question, expressed through the concepts of diaspora, exile, and transnationalism. Consequently, what are the conditions of “authenticity,” and of cultural authority? What aesthetic forms, questions, and issues express or preoccupy the artists of the South Asian American community?

AMST274 Economics of Wealth and Poverty
Who are the very wealthy and how do they acquire their wealth? Why is poverty still with us after almost 50 years of antipoverty programs? What explains rising inequality in the distribution of income and wealth? These are just a few of the questions that we address in this course. The problem of scarcity and the question of production for whom are basic to the study of economics. Virtually all courses in economics give some attention to this topic, yet few study the distribution of income in depth. This course takes a close look at evidence on the existing distribution of income and examines the market and nonmarket forces behind the allocation process. Our investigation makes use of U.S. economic history, cross-country comparisons, and fundamental tools of economic analysis. Topics include normative debates surrounding the notions of equality and inequality, analytic tools for measuring and explaining income inequality, determinants of wage income and property income, the importance of inheritance, the feminization of poverty, and the economic analysis of racial discrimination. A central subject throughout the course is the role of policy in altering the level of poverty and inequality.

AMST275 Introduction to African American Literature
This course is a survey of the history and traditions of African American literature from its earliest origins to its most modern manifestations. We will examine, in particular, the poetry, essays, and fiction produced by people of African descent from the 18th to the 21st centuries. The courses will focus on the ways African Americans used literature to document their New World experiences, bear witness to enduring traditions, and shape American society. We will work with poetry, drama, short fiction, essays, and novels, alongside music and visual culture, as we explore African American literary and cultural aesthetics, African American literary history, and issues of class, gender, and place.

AMST276 Revolution Girl-Style Now: Queer and Feminist Performance Strategies
Looking to the rich cultural history of queer and feminist performance in the U.S., this course examines performances of gender, sexuality, obscenity, and refusal. In this class, we will ask how the terms “feminist” and “queer” come to determine a specific piece of theater or performance art. Is it the author’s own political affiliation that establishes the work as feminist? Is it the audience’s
reading that gathers a work of art under a queer rubric? Furthermore, where does feminist performance meet queer performance? Topics will include feminist body art, AIDS activism, queer nightlife, installation and performance art, video art, and memoir. Focusing in on strategies for engaging the many meanings of the words "queer" and "feminist," we will pair theoretical readings with theatrical sites. Authors and artists to be discussed will include Judith Butler, Paula Vogel, Holly Hughes, Beth Henley, Karen Finley, Samuel Delany, Nao Bustamante, Rebecca Schneider, Anna Deavere Smith, José Muñoz, Jill Dolan, Sylvia Rivera, Sharon Hayes, Sharon P. Holland, Bikini Kill, boychild, Lucy Lippard, Laurie Weeks, and Dean Spade.

AMST284 Early North America to 1763
From the arrival of the earliest fishing ships off the coast of Newfoundland to the fall of New France at the close of the Seven Years' War, North America was the site of entangled encounters. Overlapping imperial claims and the construction of new societies took place on a continent long inhabited by powerful Indigenous groups. This course will examine North America as a contested and negotiated territory in which imperial plans were subjected to local contexts and contingencies. Using primary and secondary sources, we will examine major events (explorations, encounters, and wars), the rise and fall of imperial powers (French, British, Dutch, and Spanish), and the daily realities that shaped experiences in North America (trade, religion, sex, forced migrations, and disease).

AMST286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice
This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism—queer left, black radical, trans, immigration, prison abolition, and sex work—in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called "ivory tower." We will explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activism, the work of a radical imagination, art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization—past or present—of their choice.

AMST287 Contemporary Art Since 1980
This historically rooted introduction to contemporary art sets an anchor around 1980 and moves through the major debates of the last thirty-five years. This period gave rise to a remarkable range of historical transformations: a post-communist Europe; an economically prominent China; the AIDS crisis and queer activism; increasingly molecular degrees of technological mediation in everyday life; the consolidation of a globalized network of travel, communication, and capital; climate change; and a seemingly perpetual "war on terror," to name only a few. This course attends to the changing vocabulary of approaches by which artists both intervened in these conditions and positioned their work in relation to a longer view of the history of art. Rather than a strictly chronological survey, the course attends to specific theoretical frameworks (postcolonial, feminist, poststructural, etc.) and formal techniques (painting, sculpture, installation, video projection, social practice, public intervention, web-based art, etc.) that fuel current practice.
AMST288 African American Urban Politics, Economy, and Policy
This course provides an introduction to the political experience and public policies that have significantly shaped, and continue to shape, the social and political life of African Americans and the urban environment. Although the course will explore historical themes, it will be mostly contemporary in its temporal focus. Topics will include African American political thought, leadership, and black political economy as well as voting, participation, party politics, and elected office (i.e., legislative and executive). Additional topics include housing and labor markets, healthcare reform, and issues of gender, class, age, and sexual identity at the intersections of black politics. Finally, the class will explore the role of race and police relations.

AMST289 All the Feels: Affect Theory and Cultural Studies
Butterflies in your chest. Perspiration on your upper lip. A racing heart. Every day we manage sensorial and embodied experiences; quite often these negotiations illuminate the ways in which powerful norms and institutions shape our daily lives. This course explores the relationship between the individualized experience of feeling and power by introducing students to the vibrant field of affect studies. A recent "turn" in critical theory, affect theory is interested in embodiment, the senses, and sensorial experience, questioning the dominance of rationality and cognition by exploring the role emotions and feelings play in our social worlds. This course will focus predominantly on affect theory as it emerged from queer, feminist, and racialized minoritarian discourses in order to, ultimately, contemplate the ways theories of affect, feeling, sensation, embodiment, and emotion open up literary and cultural texts.

AMST291 Afro-Asian Intersections in the Americas
This course explores a range of historical, cultural, and political intersections between African and Asian diasporic people in the Americas from the late 19th century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the United States and abroad, and the 1992 Los Angeles uprising. We will also study forms of cultural interracialism, from African Americans’ mania for kung fu in the 1970s, to interracial buddy films like Rush Hour (1998), to the contemporary fiction of writers such as Patricia Powell and Charles Johnson.

AMST292 American Jewish Humor
This course is a look at American Jewish history through one particular lens—that of the peculiar phenomenon of Jewish humor. There is a long history of Jews and humor that has nothing to do with the immigrant experience in America, but the immigrant experience in America nonetheless has a great deal to do with the humor that has been produced by Jews in this country, particularly in the 20th century. We will read some historical background on American Jews and some humor theory as our foundation for our understanding of film viewings, short stories, stand-up comedy performances, and musical recordings. By looking at the way Jewish humor changed throughout the 20th century, we should, in the end, be able to chart the way the lives of American Jews were changing and have a deeper understanding of the American Jewish experience.

AMST293 Politics of the Body
This course explores the operations of power on and in the body, drawing on the interdisciplinary fields of queer, disability, and transgender studies. We will examine the ways bodies are marked as deviant, abnormal, and/or pathological, considering where processes of sexed, raced, gendered, and able-bodied normalization intersect and where they diverge. Case studies will range from turn-of-the-century sexology to the modern freak show, the politics of passing, the science of homosexuality, the pleasures of trans and queer embodiment, the contemporary biopolitics of AIDS, eugenics, and U.S. citizenship. Readings include theoretical, historical, and ethnographic approaches to power, difference, and the body. We will also read several memoirs to help us ground the body politics of life lived in the intersections of queer, tran, and disability.

AMST294 Mapping Culture
What is a culture? How can it be intimately wrapped up in a location and how can that be mapped out to better understand its inner workings? In the face of globalization and pervasive online communities, what can conventional wisdom--"location, location, location" and "all politics is local"--tell us about the importance of actual places in cultural formations? We will first orient ourselves with a wide range of music-mapping projects, as well as projects that directly address the significance of a location (Nile Project, Playing for Change). From a base in the interdisciplinary field of ethnomusicology, we will then examine how scenes and subcultures can congeal in particular places and times, mapping them in New York City's Lower East Side (punk), Greenwich Village (urban folk revival), and South Bronx (early hip hop). Deploying a broad conception of culture, we will cover other art forms (e.g., graffiti and other street art) and social formations. Haight-Ashbury (SF) 1960s counterculture, Laurel Canyon (L.A.) 1970s singer-songwriters, Chicago 1980s post-disco house, and London 1980s post-punk goth will provide complementary case studies. These examples will provide models before students embark on their own to map out a culture of their choice as their final project, using either Google Maps or Story Maps. Readings on theories of place and of subcultures will provide blueprints for issues to be explored, including how group identity and a sense of community can be locally constructed and the significance of physical in-person contact in a world of increasingly virtual relationships.

AMST298 From Seduction to Civil War: The Early U.S. Novel
This course examines the relationship between nation and narrative: the collective fantasies that incited reading and writing into the 19th century. We will study the novel as a field of literary production both in dialogue with European models and expressive of changes in national culture, a form that both undermined and reinforced dominant ideologies of racial, gender, and class inequality during this turbulent period of national formation and imperial expansion. We will consider the ways the pleasure of novel-reading depends upon, even as it often disavows, the world outside the story. Throughout our reading, we will trace the ways these novels both reflect and participate in the historical development of the United States during a period that spans national founding, the consolidation of northern capitalism and an exacerbated North/South division, expansion into Mexico and the Pacific, and civil war. Through close attention to literary form, we will continually pose the question, What is the relationship between literary culture and historical change? We will examine who was writing, for whom they wrote, and the situation--political, commercial--in which the American novel was produced and consumed. We will begin with the novel of sentiment and seduction and conclude with reflections on slavery and racial revolution on the eve of the Civil War, all the time asking about the ways the novel might seduce us into either tolerating or resisting the way of the world.

AMST302 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice
Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover’s voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet’s effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric’s history and practice. In this course, we will read from African American, African diasporic, Caribbean, Latina/o/x, and Indigenous poetics, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

AMST313 After Orientalism: Asian American Literature and Theory After 2000
From early articulations of cultural nationalist pride to today’s transnational, intersectional, deconstructive, feminist, and queer critiques, Asian American studies is a field that has radically expanded and transformed since its original emergence out of the Third World and student strikes of the late 1960s. This course seeks to take the temperature of Asian America today by exploring a range of contemporary works published after the millennium, more than 30 years after the field’s inception. Alongside a selection of novels, poetry, short stories, and graphic novels by some of the most acclaimed contemporary writers in America, we will also consider critical and theoretical texts that offer different perspectives on our contemporary historical moment, exploring frameworks of
modernity, postmodernity, neoliberalism, and the university as ways of situating contemporary Asian America's aesthetic innovations.

Though not required, it is strongly recommended that students have taken ENGL230 Introduction to Asian American Literature or a comparable substitute prior to enrolling.

AMST314 The United States in the Pacific Islands
The relationship between the United States and the nations and territories that comprise the Pacific Islands is complex and has historical and continuing significance in international and global affairs. American involvement in the Pacific was, and continues to be, primarily structured by strategic interests in the region. Oceania has been greatly affected by American colonial rule, temporary engagement, and neocolonial hegemony including economic, military, and cultural power. How did the United States come to dominate the Pacific basin? Using an expanded definition of the Western frontier, we will examine the Pacific as a region that was subject to imperialist development that was an extension of the continental expansion. The course will focus on the history of American influence in Hawai‘i that culminated in unilateral annexation in 1898 and statehood in 1959, as well as the historical and contemporary colonial status of Guam and American Samoa, where questions of self-determination persist. We will also examine the Pacific as a nuclear playground for atomic bomb testing by the U.S. military and the U.S. administration of the Trust Territory of the Pacific after World War II until the self-governance of the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau in the 1980s and 1990s.

AMST315 Entertaining Social Change
Our seminar advances critical entertainment studies. The fundamental question we will bring to all texts is: how has the systemic critique of social contradictions been popularized in modern times? We will consider the diverse strategies that progressive songwriters/performers, radical historians (working with cartoonists), and mainly moviemakers have developed to entertain Americans—teach, fascinate, persuade, provoke, and move them through laughter, tears, and not least of all ideas—so that Americans will be more inclined to entertain social critique that inspires social change. We will explore the popularizing (and selling) of social critique in several genres: art (Barbara Kruger); graphic history (Howard Zinn, Paul Buhle); songs/song lyrics of protest singers (Woody Guthrie, Pete Seeger, Phil Ochs); folk-rockstars such as Jackson Browne, Ani DiFranco, Father John Misty; the political development of hip-hop (Gil Scott-Heron, NWA); politically edgy comedy (Jon Stewart, Stephen Colbert); and movies (Spike Lee’s MALCOLM X and WHEN THE LEVEES BROKE, STRAIGHT OUTTA COMPTON, EL NORTE, SMOKE SIGNALS, NETWORK, WHERE TO INVADE NEXT, MATEWAN, WALL STREET, THE BIG SHORT).

AMST316 Television Storytelling: The Conditions of Narrative Complexity
This course examines the industrial and cultural conditions for the development of relatively complex forms of storytelling in commercial U.S. television. Narrative complexity is a cross-generic phenomenon that emerged over the 1980s and has proliferated within an increasingly fragmented media environment. In class discussions and individual research projects, students will analyze particular programs in-depth, with attention to their industrial and social conditions of production, their aesthetic and ideological appeals, and the cultural tastes and viewing practices they reflect and promote. We will also consider how television studies has responded and contributed to the increased prestige of certain types of programs.

AMST317 Disability, Embodiment, and Technology
In this course, we will explore the relationship between the body and technology through the lens of disability studies scholarship. We will address the following questions: How is the dis/abled body imagined in technological discourse? How have technological advances transformed understandings of the dis/abled body? How do bodies shape constructions of disability, and how do other categories of difference—including race, gender, and sexuality—work to constitute ideas of able-bodiedness? Finally, how does the treatment of disabled bodies, and their relationship to technological progress, speak to broader anxieties about the nature of human embodiment in the modern world?

To consider these and other questions, we will consult a wide range of texts, focusing primarily on disability studies scholarship but also including perspectives from scholars of law, history, ethnography, queer studies, critical race studies, and science and technology studies.

AMST319 Anarchist Anthropology and Militant Ethnography
Today, anthropology is better known as a discipline that still grapples with its colonial past more than as a discipline that has an affinity with anarchy. In Fragments of an Anarchist Anthropology, David Graeber suggests that anthropology shares a particular affinity with anarchist theory because of its history of working within “stateless” societies and how it accounts for the range of human possibilities in terms of social organization, power, and authority. Thus, he calls for the need to create a body of social theory gravitating around anarchism. This includes developing methods for radical critical engagement and understanding of social processes. Anarchist thought and practice has left its mark on a series of high-profile social movements over the past few years, such as the uprisings in the Arab world, indigenous autonomous zones in Latin America, Occupy Wall Street, and Black Lives Matter. In turn, some anthropologists have taken up militant ethnography, a burgeoning approach to qualitative research that is consciously politicized, enabling activist-researchers to engage directly with radical social movement(s). We will explore: anthropological theories and practices of democracy; the power of the state; social movements; and the anthropology of politics, culture and power. Topics include: collectivism, autonomy, solidarity, anarcho-primitivism, anarchist ecology (including non-hierarchical connections with the natural
world, non-market productions, relationships, ethics, political insurrections and revolutionary movements, experimental societies and utopian communities, power structures, democracy and horizontal power. As the study of domination is informed by the legacy of slavery and the enduring structures of settler colonialism, the case studies for this course will be drawn primarily (though not exclusively) from the Americas.

AMST321 Globalization and Localization in Youth Cultures
This course takes globally circulating forms of commercial youth culture (especially popular music, fashion, movies, and television) as sites for analyzing interconnected processes of cultural change and cultural continuity. Using ethnographically based studies of youth in a variety of national contexts, we will approach young people as agents who draw on locally embedded resources in consuming global cultural forms and also create new, hybridized forms of culture that have both local and global roots. In these emerging youthscapes, cultural flow is not simply from "West to Rest" but is multidirectional, as locally produced hybrid forms circulate across national boundaries and sometimes back to Western markets. In mapping such flows, we will focus on their implications for identity formation among youth. In what ways, we will ask, do young people in particular sociocultural locations use the production and/or consumption of commercial cultural forms in orienting themselves vis-à-vis global and local worlds and in imagining and pursuing possible futures?

Designed primarily for anthropology majors, the course also admits students from other majors with serious interests in ethnographic youth-cultural research.

AMST327 Brown, Black, and Queer Forms and Feelings
Given how brutally not neutral the world is to black, brown, and queer forms of life and pleasure, this course thinks with "otherwise" spaces, figures, and feelings, like the queer club, the dance floor, abnormality, errancy, illegality, fugitivity, rage, indifference, and love. We will take up José E. Muñoz's invocation of a "minoritarian theory of affect" that insists that "whiteness is a cultural logic which can be understood as an affective code that positions itself as the law." We will study affect beyond whiteness through attention to sonic forms and "audio-visual shapes" in African diasporic, Latina/o/x, and Caribbean arts. We will consider the diasporas and collectives grouped together in the terms "minoritarian," "brown," and "black" as abnormalities that generate alternative modes of moving through and feeling ourselves in the world. We will study for radical potentiality in the beautiful, obscene, and off-kilter affects of brown, black, and queer aesthetic and poetic forms.

AMST330 American Utopias in the 19th Century
This seminar will examine expressions, both religious and secular, of the utopian impulse in 19th-century American culture. Communitarian experiments launched by Shakers, transcendentalists, perfectionists, and feminists will be studied as manifestations of social and religious turmoil and will be compared with their literary analogues. Utopianism as a philosophical, literary, and literal approach to solving social problems and constructing a more perfect nation-state has been a persistent and recurrent feature in American history. This seminar explores precursors in the long 19th century to more recent utopian theory and experimentation.

AMST334 Black Power and the Modern Narrative of Slavery
The historical moment immediately after the civil rights and black power movements saw an explosion of African American writing about slavery. In the past half-century, black writers have written award-winning novels that have given unprecedented attention to the intricacies of the life of people who are enslaved and to slavery as a system that they suggested could help us better understand late-20th-century American culture. We will read some of the most important works written by contemporary African American writers to see how and why they transformed the first autobiographical form for black writers—the slave narrative—into a fictional form that has served them as they dissect their own cultural moment.

AMST338 Transnational Feminisms
This course will consider feminist theory, practice, and politics through a transnational lens. Using interdisciplinary methods, including historical analysis, cultural theory, queer theory, critical race theory, and postcolonial and diaspora studies, this course will ask students to engage with a range of texts that contribute to our understanding of what feminist thought is and how a feminist politics might function.

Moving both chronologically and topically, this course will present feminism--as philosophy, scholarly critique, and political movement--as a process (or a range of processes) of trying to come to terms with forms of cultural power, resource inequality, and modes of institutional oppression. As such, the course will interroga
tate concepts such as empire, imperialism, community, and nation. We will think about the ways in which feminism responds to central identifications such as race, ethnicity, sexuality, and gender. Formative class queries will focus on the ethical project(s) of feminism(s), diverse and contradictory such as race, ethnicity, sexuality, and gender. Formative class queries will respond to global issues of rights and recognition.

AMST342 Black Leadership in Historical Perspective
This course uses the lens of history to evaluate why some individuals are considered most effective as civic, elected, bureaucratic, and appointed leaders in African American history. The course will analyze social scientific models of leadership and then go into the historical record to discover meaningful and illuminating patterns. Careful consideration is given to the distinctive challenges posed by race, class, gender, sexual orientation, and institutional settings.

AMST343 Imitations of Life: Experimental Bodies at the Interface of Science and Culture
This seminar will examine scientific and cultural practices of corporeal simulation, or, practices of bodily substitution, imitation, and re/modeling. Topics examined will include: reproductive surrogacy; gender reassignment surgeries; experimental subject protocols; prosthetic enhancements; xenotransplantation; biometrics and alternative forms of bodily imaging; the use of nonhuman animals as human proxies; the rise of personalized medicine, and more. Students will engage with a wide range of case studies and theoretical materials from interdisciplinary perspectives. Special attention will be paid to the relationship between scientific discourses of “universality” and “particularity,” where socio-cultural forms of difference (e.g., race, gender, disability, etc.) are at once ignored and exacerbated. While most of the material addressed in the class will relate to recent phenomena, we will also be attentive to relevant histories of corporeal differentiation and reimagining.

AMST344 Transgender Theory
This seminar will consider theoretical, political, and social understandings of what has been broadly defined as "transgender" identities. We will begin by interrogating the concept of gender itself, probing the centrality of Judith Butler’s theory of gender performativity and questioning modes of gender compulsoriness and inevitability. We will consider the relationship between the study of gender and scholarly disciplines including queer theory and feminist theory as well as American studies. The course will then focus more centrally on transnarratives of self and fights within queer and feminist communities over emerging trans articulations of personhood. Finally, the class will consider the diverse ways in which trans subjects struggle over the meaning(s) of trans narratives and the ways in which political rights and cultural legibility may be accessible or at times nonexistent for transpeople.

In understanding transgender theory as a scholarly field, this course will focus on the following questions: What does it mean to be transgender? How can we (or can we?) delineate different modes of trans being (e.g., transsexual identity, genderqueer) in a meaningful way? What does it mean to transform a central tenet of one’s core self? Or, does the process of transgender existence consist more of a concretion of the real rather than a transformation of the self? How can trans narratives become legible to social and political articulations of personhood?

AMST350 The Law, the Citizen, and the Literary and Cinematic Imaginations
In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimagined in literature and cinema. Among the topics discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporalities. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they reveal the rifts and conjunctions among the categories citizen, “savage,” “gente sin razón,” slave, illegal, pervert, and deviant.

AMST351 Queer of Color Critique
This course will examine and interrogate the field of queer studies with particular focus on the ways in which queer scholarship and queer political movements function alongside critical race theory, ethnic studies, and sociopolitical antiracist efforts. Students will be asked to consider the history of queer studies and queer politics, the contemporary state of queer movements, and future visions of queer life. We will take an interdisciplinary approach, and we will rely upon a diverse range of theoretical, historical, and cultural studies texts. We will explore the normative parameters of both sexual and racial identities, probing the terms of identification to consider their meaning in the contemporary moment and in relationship to various cultural, social, legal, and political milieus. Throughout the course we will consider, What does it mean to study queerness and to study race? How do institutions—religious, legal, and scientific—shape our understandings of both queer and racial identities? In what ways do sexuality and race interact, and how does this interaction inform the meanings of each
of these identity categories? Furthermore, how have queer movement and scholarship both supported antiracist efforts and, also, how have they been complicit in cultural and institutional forms of racial oppression? How do other social categories of identification such as gender, ethnicity, and class, shape the ways in which we understand expressions of race and queerness?

AMST352 Diaspora, Border, Migration: Contemporary Latina/o Politics and Culture
This course employs concepts of diaspora, border, and migration to consider the ways in which Latinas/os become legible as subjects in contemporary U.S. political thought and cultural life. We will consider struggles for Latina/o legal rights, the relationships between the Latina/o workforce and issues of global labor patterns and economic exploitation, and popular cultural narratives depicting Latinas/os and U.S.-Latin America relations.

The course will explore the terms diaspora, border, and migration in depth, both to contend with these concepts as important ideas in the fields of Latina/o studies and American studies and also to use these terms to interpret, analyze, and decipher the role(s) Latinas/os play in a world built from a legacy of a colonial past and heading toward a neoliberal, globalized future. We will use an interdisciplinary approach, addressing a range of texts from different scholarly disciplines, including history, cultural studies, postcolonial theory, American studies, and political science, as well as popular cultural texts, such as films, comics, and music.

In this course, we will interrogate the ways in which people, ideas, and resources fluctuate, ebb, and flow to track the consequences of such shifts. In trying to understand Latinas/os as a people or peoples, and Latinidad as an identity, we will question the nation-state as a regulatory force, try to unravel the significance of cultural hybridity, and discuss the effects of globalization and global capital in the contemporary world.

AMST353 Health, Illness, and Power in America
In this class, we will explore the intersecting histories of health, illness, and power in America. Special attention will be paid to the ways in which discourses of the healthy body have undergirded notions of citizenship and belonging in the nation. We will consider how processes of disease, disability, and contagion have been imagined through the lenses of social difference, including race, gender, sexuality, and class. We will address civil institutions designed to manage individual and population health, and we will consider theories of political power in the making of the "modern" body.

Sample topics covered will include immigration policies and contagious disease scares; STDs and the politics of public health campaigns; physical fitness and the value of bodily labor under capitalism; the management of diseases that are symptomatic and those that are not; race- and gender-based approaches to medicine and medical difference; clinical trials and the ethics of human experimentation; regulations surrounding blood and organ donation; changing rituals of bodily hygiene; preventative medicine and the call to personal responsibility; mental health policies and institutions; and pride movements surrounding the "unhealthy" body.

AMST362 Television Storytelling: Consuming Darkness
This course investigates how and why a "dark sensibility" has emerged in television serials, with attention to its implications for television storytelling, on the one hand, and for viewer practices and subjectivities, on the other hand. While most evident on premium and basic cable channels, where it crosses dramatic and comedic genres, the downbeat tone has also been selectively incorporated into broadcast television and processed for wider distribution. What industrial and sociocultural conditions have enabled such an affective shift in an industry that, since its early days, has been known for telling reassuring stories and promoting an ethic of consumption? Does the shift constitute a break, or can it be interpreted as an intensification of features long present in television formats? Is the contemporary taste for darkness among demographically valued viewers merely a marker of distinction, or does it reflect and reinforce a significant shift in mood among segments of the professional middle class? Can narratives about flawed protagonists, failed institutions, and limited possibilities nourish new forms of hope and provide resources for remaking subjectivities and reimagining futures? AMST363 Kill Anything That Moves: The Vietnam War in Literature and Film
This course examines various forms of literature and film to understand the legacies of one of the most transformative events in American culture and history: the Vietnam War. "Kill anything that moves" were the orders that American soldiers reportedly received while on the ground in Vietnam, yet, to a large extent, the historical focus on the American experience of the conflict has overshadowed other perspectives. Thus, this class will take a comparative approach, exploring works by canonical and noncanonical American, Southeast Asian, and Southeast Asian American authors and directors. Among the diverse genres we will study are prose, poetry, graphic narrative, and narrative and documentary film. To think about the Vietnam War's broader relevance, we will situate the works under study within current debates concerning refugees, genocide, human rights, and the complex politics and aesthetics of war representation. Students will have the opportunity to investigate an under-studied aspect of the Vietnam War toward the end of the semester.

AMST375 Black Global Cities
In this course, we will analyze representations of cities and Black urban modernity in Afro-diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week's readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discrete, bounded places. To this end, we will trace how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabeba Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as Girlhood (2014), Black Panther (2018), The Harder They Come (1972), Bad Friday: Rastafari After Coral Gardens (2011), Welcome to Nollywood (2007).

AMST391 Religion and the Social Construction of Race
In this course, we examine aspects of the intersections between race and religion in a number of historical and social contexts. We place at the center of our discussions the question of how race and religion are co-constructed categories that function as a prism through which people come to understand and experience their own identities and those of others. We will privilege interpretations that emphasize (1) the intersectionality of race and religion as a process in which power plays a pivotal role; and (2) the means through which communities form collective identities. We will read a range of historical analysis and primary source materials from the U.S. and the Caribbean. After a theory module, we will examine a colonial-era captivity narrative, antebellum pro-slavery document, missionary works, analyses of anti-Semitism, works on Rastafari, Haitian Vodou, Jonestown, the Christian White Supremacy movement, as well as the contemporary U.S. relationship to the Middle East.

AMST393 Materia Medica: Drugs and Medicines in America
This course investigates the identification, preparation, and application of drugs and medicines in the United States, emphasizing the period before the 20th-century institutionalization of corporate research and development. Topics include early modern European prospecting for medicinal plants, the development of an international drug trade, and the formation of national pharmaceutical markets in the United States in the 19th century. Participants will explore the production, circulation, and restriction of medical knowledge through local practice, public and private institutions, trade and commerce,
and regulation. In addition to knowledge of the social history of drugs and medicines in the United States, students are expected to develop competencies in historical research using primary and secondary sources. The final weeks of the course are devoted to applying historical knowledge to contemporary debates in global public health, including international pharmaceutical research, drug development, and epidemic disease.

AMST398 Queer/Anthropology: Ethnographic Approaches to Queer Studies
This advanced seminar brings together queer theory with cultural anthropology to ask, Can there be a queer anthropology? Cultural anthropology and queer theory are sometimes opposed—some anthropologists find queer studies excessively theoretical, narrowly interested in Western forms of knowledge and power, and given to abstracted critique rather than social explication. Yet even as anthropologists problematize queer theory’s assumptions, methods, and boundaries, queer theoretical insights and frameworks have generated new questions and approaches in the anthropology of sexuality—just as anthropology’s interest in the global, the comparative, and the ethnographic have enriched new work in transnational queer studies. This course explores the possibilities of productively juxtaposing, combining, and even opposing anthropology and queer theory.

ANTH103 Gifts and Giving
What is a gift? A commonplace understanding is that a gift is something given gratuitously and without the expectation of a return (just look the word up in any dictionary). Why, then, upon receiving a gift, do we feel indebted to the giver? And rather than gratuitous, isn’t most gift giving occasioned by socially significant events and regulated by relatively rigid rules? This course is an in-depth examination of gift giving as one of the most powerful forces binding individuals and groups in society. Students will become familiar with critical anthropological and philosophical debates about the gift and consider their application to contemporary forms of gift giving in the United States, including philanthropy, volunteerism, and new types of giving made possible by recent advances in technology, such as organ donation and surrogacy. We will attend to the economic, political, and gender dimensions of gift giving in their remarkable power to make or break social bonds and undermine or reinforce hierarchical relationships at all levels of local and global society.

ANTH111 Hawai‘i: Myths and Realities
This course explores the symbolic myths of Hawai‘i and Kanaka Maoli (Native Hawaiians) in contrast to material realities relating to colonialism, land, nation, gender, race, rank, class, self-determination, and contests over indigenous and Western sovereignty. The course covers the precolonial period, examines Captain Cook’s ventures in the Hawaiian Islands, the founding of the Hawaiian Kingdom, constitutional development of the Hawaiian Nation, the Kamehameha Dynasty, Calvinist missionization, the history of written literacy, the privatization of Hawaiian land use, gender transformations, the colonial regulation of sexuality, plantation labor, Kalakaua’s governance, the reign of Queen Lili‘uokalani, and the U.S.-backed overthrow of the monarchy. From the U.S. takeover, the course will examine the unilateral annexation and 20th-century colonial policy to 1959 statehood with an emphasis on indigenous self-determination, decolonization, and indigenous nationalism through the contemporary period in relation to both U.S. federal policy and international law. Films will complement the course readings and lectures.

ANTH112 Talking Trash
Every day, we make conscious and unconscious decisions that define what we consider clean or dirty, good or bad, valuable or expendable. As the familiar saying goes, “one man’s trash is another man’s treasure.” At an individual and societal level, our ways of wasting affect both the world we inhabit and our place within it. This course draws on readings in archaeology, anthropology, history, psychology, material culture studies, and environmental science to explore one of humanity’s most prodigious products and greatest legacies: trash. We will study conceptions of waste from different times, places, and perspectives, as well as the impact of refuse on our everyday behavior, systems of ethics and meaning, and interactions with the environment.

ANTH113 Care and Suffering
In this introductory course, we will explore the production and representation of human suffering, in addition to the modes of care deployed by healers, kin groups, aid workers, and state actors to alleviate the suffering of others. We will begin by mastering dominant approaches within anthropology for studying affliction. We will then examine case examples of bodies in distress. We will discover that suffering is inherently social: it is shared, socially produced, and communicated through socially learned and sanctioned meanings. Suffering is also social in the sense that it often begs a moral response. With that in mind, we will turn our attention to different regimes of care—such as experimental, pharmaceutical, and humanitarian care—and explore their limitations, paradoxes, and transformative possibilities. Taken as a whole, the course will invite students to question the creation and reproduction of suffering, while at the same time critically reflecting on dominant norms and forms of “doing good.”
As a first-year seminar (FYS), this course will also guide and support students in fostering skills as academic researchers and writers. We will start from the position that college-level academic writing is its own genre, distinct from the kind of writing typically taught in high school, and that the steps required to hone this skill are not always transparent, self-evident, or without challenges. As such, the course will include detailed instruction, regular in-class writing exercises, and three take-home writing assignments designed to introduce students to the main principles of successful academic writing.

ANTH150 Indigenous Middletown: Native Histories of the Wangunk Indian People
Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern New England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call “Middletown,” also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although
regarded as "extinct" by settlers in the aftermath of King Philip's War, 1675-1678, the Wangunk continue to live into the 21st century.

**ANTH165 Between Journalism and Anthropology**
This first-year seminar (FYS) course will introduce students to how journalism and anthropology make their subjects vis-à-vis the broader significance of the knowledge they create and their publics. Using journalistic and anthropological accounts, we will consider how and why Haiti has long been regarded as something of an "oddball" within the Caribbean and the world. Branded the "nightmare republic" since it gained independence in 1804, in the public sphere Haiti remains conceptually incarcerated with clichés and stereotypes that obscure understanding of its complex role in global history. Attention will be paid to the plethora of coverage of the 2010 earthquake, current conditions, and possible futures. Our ultimate aim is to consider the limits of each discipline to explore the myriad possibilities in anthro-journalism.

**ANTH201 Key Issues in Black Feminism (FGSS Gateway)**
This course surveys key issues in the historical development of black feminist thoughts and practices through readings of canonical works especially from the 1980s and '90s that contribute to this extensive body of knowledge. Our aim is to engage black feminist and womanist theorists, activists and artists from the diaspora who are exploring intersections of race, class, sexuality, religion, and other indices of identity affecting their daily lives. To that end, we will take an interdisciplinary approach to unpacking the historical tensions and politics and poetics in theory/practice, representation/self-making and expression/performance. We will also examine more recent turns in #BlackLivesMatter, #SayHerName and #BlackGirlMagic and conclude with Post-Zora Interventions—feminist interrogations on the borders anthropology, art, and activism.

**ANTH202 Paleoanthropology: The Study of Human Evolution**
Paleoanthropology is the study of human origins, of how we evolved from our apelike ancestors into our modern form with our modern capabilities. Drawing on both biological anthropology (the study of fossils, living primates, anatomy, genetics, and human variation) and archaeology (the study of material culture, such as tools, art, food remains), this course will examine what we know about our own evolutionary past and how we know it. The history of paleoanthropology—how our views of our past have changed—will also be explored. The course will include hands-on laboratory sessions utilizing fossil casts, stone tools, and other materials from the archaeology and anthropology collections.

**ANTH203 Sex, Money, and Power: Anthropology of Intimacy and Exchange**
Sex and money—intimacy and economy—are often imagined to occupy distinct and separate spheres. Sex and intimacy are located in the private or domestic realm, in spaces of leisure, feelings, care, and personal connections. Money and economy, on the other hand, are purportedly public, located in the market and tied to labor, rationality, and impersonal (non)-relations. This course brings these spheres together, focusing on the links, exchanges, and circuits between the intimate and the economic in diverse cultural contexts across the Americas. Case studies will be drawn from sex work and tourism; marketing and pornography; reproduction, domestic labor, transnational adoption; marriage; class and sexual lifestyle; labor and carework; the global market in organs and body parts; outsourced surrogacy; sex stores and commodities; and sexual activism and identity politics. We will be centrally concerned with the relationship between economic, cultural, and political formations and with the differences race, ethnicity, nation, class, gender, and sexuality make. Throughout, we will ask, How do practices and bodies accrue value? When are intimacies—sexual and social—commodified? How have transnational flows complicated relationships between sex and money? How do these intersections constrain and/or empower people? And, finally, who benefits from such arrangements, and who does not?

**ANTH204 Approaches to Archaeology**
Archaeology is the study of the past through its material remains. This course will introduce students to a range of approaches that archaeologists use to interrogate material culture (artifacts and other physical remains) and, in some cases, written records, to present interpretive reconstructions of past human history, societies, cultures, and practices. The course includes archaeological approaches to prehistoric cultures through to ancient, medieval, and early modern societies.

**ANTH205 Future Visions: Temporality and the Politics of Change**
What is the time of political change? This course explores alternative temporal frameworks embraced by artists, writers, activists, and interdisciplinary scholars from diverse social and cultural locations. We ask, How do concepts of temporality help us understand, resist, contest, and transform prevailing social orders?

We will begin by assembling some conceptual tools for understanding the relationship of time to historical change and to racial, sexual, cultural, and national difference. Drawing on psychoanalysis, literary theory, history, trauma studies, anthropology, African American studies, queer theory, feminist studies, and postcolonial studies, we will explore the telos of modernity and narratives of liberal progress. We will then consider some of the critical and oppositional possibilities of being out of sync with dominant temporal frameworks, asking, Are there other, perhaps more livable, temporalities? Next, we will consider the possibilities for memory and memorialization to work against historical forgetting and cultural amnesia—alongside the ways historical pasts might be appropriated to serve nationalist ends. Finally, we will turn to the question of the future as found in meditations on utopias and dystopias; in political, cultural, and ecological justice movements; in ideologies of newness; and in rhetorics of apocalypse.
Our readings include three texts that highlight the form and futures of political change: Theresa Hak Kyung Cha’s *Dictee*, an avant-garde text that uses multiple genres (poetry, autobiography, history, photography, etc.) juxtaposing historical trauma and aesthetic experimentation; Kim Fortun’s *Advocacy After Bhopal*: Environmentalism, Disaster, New Global Orders, an experimental ethnography of environmental disaster and its aftermath; and Octavia E. Butler’s *Kindred*, a speculative fiction about time travel and the memory of slavery. As we consider social change, revolutions, and new “ends” and beginnings, students are invited to explore current social justice movements.

**Prereq:** None  

**ANTH207 Anthropology of Time**  
In this course, we will examine time as a cultural phenomenon. At once absolute and highly malleable, one of the objective dimensions of our existence and experienced with such subjective variation, time is a central concern for many different cultural worlds, even as those different worlds render time entirely differently from each other. Time is also a particular pre-occupation of anthropology, both as a concept and a significant methodological and ethical concern (as it is embedded in ideas like progress, evolution, development, the “backward”). Accordingly, this course will track between ethnographic explorations of different cultural accounts of time - what time is, what it does, and what it should be - and methodological and theoretical conceptualizations of temporality, futurity, and the dangers of “freezing” cultural systems and actors in static time-frames.  

**Offering:** Host

**Prereq:** None  

**ANTH208 Crafting Ethnography**  
This course is an introduction to the craft of ethnographic research and writing. In the first half, we will explore some of the research methodologies anthropologists use to understand, interpret, and analyze culture. Each student will choose an ethnographic field project for the semester and practice ethnographic methods (participant observation, interviewing, virtual ethnography, auto-ethnography, visual representation, and more). In the second half of the course, students will begin to write their ethnography, practicing writing in a variety of styles and genres (including realist, reflexive, dialogic, engaged, and experimental). Guided, weekly peer workshops throughout the semester will give students a chance to hash out and talk through questions of ethics, positionality, representational politics, and the improvisational felicities and challenges that arise during fieldwork and writing. This course will give students a solid grasp of ethnographic methods and how anthropologists construct ethnographies. It is ideal preparation for ethnographic theses and essays during senior year.

**Prereq:** ANTH101  

**ANTH209 Tradition & Testimony: Protecting Native American Sacred Lands, Ancestral Remains, & Cultural Items**  
This course will explore the historic genesis of present-day U.S. and international policies toward Native American peoples and other indigenous communities. In addition, studies will include traditional indigenous and tribal perspectives, investigate indigenous-specific origin stories and the connections these stories have with historic events and places, and take a hard look at repatriation policies. Students will investigate several case studies involving current issues Native American communities are facing in repatriation and protecting sacred places, both local and national.

**ANTH210 Haiti: Between Anthropology and Journalism**  
This course will examine how anthropology and journalism make their subjects vis-à-vis the broader significance of the knowledge they create and their publics. Using the works of anthropologists and journalists, we will consider how and why Haiti has long been regarded as something of an oddity within the Caribbean and the world. Branded the “nightmare republic” since it gained independence in 1804, in the public sphere Haiti remains conceptually incarcerated with clichés and stereotypes that obscure understanding of its complex role in global history. Attention will be paid to the 2010 earthquake, current conditions, and possible futures. Our ultimate aim is to explore the myriad possibilities of anthropo-journalism.

**ANTH211 Health and Social Justice**  
How does health become a matter of social justice? In the context of a growing prominence of activist and advocacy groups that work toward health and justice, this course will consider: how and why health advocacy groups emerge; what goals, values, and assumptions inform their work; and how they use science and other cultural resources to make claims. We will also consider the implications of activist efforts for challenging structural inequalities, state and corporate power, and the cultural authority of science and medicine. Case studies will cover a range of geographical sites in the U.S. and abroad and represent the diverse forms that such collectives assume. We will consider, for example, groups that mobilize around broad constituencies (e.g., women’s health) or in response to specific health threats (e.g., cancer, HIV, and toxic exposures), as well as those more broadly committed to social justice, equity, and “health for all.” In addition to exploring the above questions, readings and class discussion will be designed for students to master some of the concepts and ideas central to medical anthropology, science and technology studies, and allied fields, such as embodiment, medicalization, biosociality, hegemony, citizenship, and the production of scientific and lay knowledge. The role of the scholar-activist will also be addressed, including the particular ethical and methodological questions that arise when scholars seek to combine research and activist agendas.

**ANTH217 Resisting Racism, Extraction, and Dispossession in the Americas**  
This course looks at land-based social movements as responses to the legacies of empire and colonialism. We will begin with an overview of the ideologies of economic and political “progress” that justified the dispossession of indigenous and racialized groups in the Americas. Then we will turn away from the logic of imperial domination to consider alternative forms of knowledge and practice that posit new relationships between nature and society. Of special focus will be a range of ethnographies of land-based movements including the Zapatistas, Garifuna, and MST (Movimento Sem Terra) as well as feminist, indigenous, and
ANTH225 Rightwing Movements in the Age of Trump
This course explores the socio-cultural, ideological, and affective contours of contemporary American far-right political culture. Course readings theorize the nature of 'rightwing' politics in general, provide ethnographic insights into particular movements and policy platforms, and trace the rising impact of rightwing attitudes in the age of Trump. We focus on connections and disconnections between a range of communities that comprise the so-called 'big tent' of the American right, including white supremacists, free market libertarians, Christian fundamentalists, and conspiracy theorists. Over the course of the semester, students will gain conceptual tools for better understanding what is at stake for these groups and how those stakes shape their political practices and goals. We will also reflect on how this knowledge might shape our own political viewpoints and tactics moving forward.

ANTH226 The Anthropology of Social Movements
Intentional efforts to shape society are always in a process of becoming. In this course, we examine how social movement actors disrupt dominant cultural scripts and forms of dualistic thinking that block our collective recognition of the fundamental interconnectedness of all aspects of social life. First, we will survey a range of social theories that propose ways to rethink the binaries that structure social life--such as mind/body, theory/practice, feeling/thinking. Then we will consider a series of ethnographic cases in the contemporary period to identify the similarities and differences between them.

The methods of inquiry in this course seek to replicate the challenges of seeing theory and practice as interlocking processes. As such, students will work in affinity groups all semester to design and execute an action at Wesleyan or in the Middletown area that addresses a social issue they are passionate about. This capstone project will be based on scholarly research and thoughtful, collaborative practice.

ANTH230 Anthropology of Cities
This course is an introduction to the practice of urban anthropology. Attention is placed on the intellectual challenges recent local and global urbanization trends present to us in our attempts to think and write about cities today. We will reflect upon the production of space and place, the creation of "other spaces" through borders and limits, and the making of meaning through everyday practices and experiences in the city. We will consider how cities become foremost spaces for the exercise and contestation of power, for social cohabitation and conflict, and for cultural creation and repression. Class discussions will also focus on fieldwork methods and problems of ethnographic representation and writing in preparation for a research project that will culminate in an urban mini-ethnography.

ANTH231 Post-Zora Interventions: Art, Activism and Anthropology
Inspired by the pedagogies of Paolo Friere, this experimental course situates the pioneer ethnographer, novelist and playwright Zora Neale Hurston at the avant-garde of innovative approaches in anthropology. In addition to exploring Hurston's textual and performative oeuvre within and outside of the discipline, we will also examine anthropologists who turn to the expressive arts to make their works as well as artists who deploy ethnographic methods and are inspired by anthropology as their subject. Paying particular attention to black feminists projects produced at the intersections of art and activism, we aim to consider the broader context within which these occur. In the process, we will critically question the aesthetics of politics and politics of aesthetics as we contemplate the imperatives and impulses of those who challenge and subvert conventional ethnographic and creative practices to make a case for post-Zora interventions in the "urgency of now" of these times.

ANTH232 Alter(ed)native Approaches: Middletown Lives
In this city, there's a restaurateur who was a paratrooper, a minister who is a barber, a barista who's a glass blower, an unmarked house that was part of the Underground Railroad, the old factory where the modern baseball plate was invented, and a landfill with stories to tell. Working with different community partners and integrating a wide range of methods from the humanities to the social sciences, this course seeks to identify, interpret, and document various (un)known stories and histories of people, places, and spaces in contemporary Middletown. Our primary theoretical aim is to consider what is interdisciplinarity. How can it be put into practice? And what is its potential for the making of public engagement and scholarship? To this end, we take a contemplative approach to learning to raise fundamental epistemological and pedagogical questions concerning research as praxis. In the process of this engagement, we will create a public anthropology project--a living archive--intended to benefit our broader community and environment. This is a service/learning course.
This semester will feature a lecture/film series as part of our course, with visiting scholars Erin Durban-Albright (on postcolonial homophobia in Haiti), Martin Manalansan (on QTPOC Filipino lives), and filmmaker Harjant Gill (on gender/sexuality in India).

### ANTH240 Hipsters

This course will focus on the contemporary hipster subculture after examining a critical genealogy and racial history of the origins of the concept. From black jazz artists and zoot-suitors in the 1940s who defined “hip” and “cool,” to the post-World War II burgeoning literary scene of the Beat Generation that codified the figure of the hipster as an American bohemian strangled by social conformity, there has been a cultural politics of being “in the know.” Derived from the term used to describe these earlier movements, the term “hipster” reappeared in the 1990s and became especially conspicuous in the 2000s to the present. Today’s hipsters are generally associated with whiteness, indie music, a vintage fashion sensibility, liberal political views, organic and artisanal foods, as well as racial gentrification in urban neighborhoods in Brooklyn and select cities such as Portland, OR and San Francisco. Perhaps curiously, members of this subculture typically disassociate themselves from this cultural category, as outsiders often use the term hipster as a pejorative. In an attempt to understand why hipsters differentiate their actions from the hipster stigma, students will study the contemporary discourse about hipsters, along with a historical analysis of the term and its use in popular culture to get a better understanding of race, class, gender, and the commodification of style. Other topics for exploration include stereotypes, authenticity debates, hipster racism, so-called “blipsters,” the death of irony, hipster chic, “hipster run-off,” the resentment of hipsters, and forecasts of “the end of the hipster.”

### ANTH242 Development and Beyond: Living and Imagining Alternatives

This four-week intensive course will examine radical challenges, in theory and on the ground, to mainstream development strategies promoted by international organizations such as the World Bank and the IMF that seek to end poverty and promote growth. After the 1980s, considered by many as “the lost decade” of development, some scholars and practitioners declared the development enterprise as fundamentally wrong: It was a misguided and violent neocolonial project that could never provide the answer to inequality and poverty. These radical critics argued for imagining and building a “post development” era. In this course, we ask, What is “postdevelopment” as a concept, how does it emerge out of and materialize on the ground among dispossessed communities, and to what effect? We will focus on lived and imagined alternatives to development. We spend the first week at Wesleyan, pouring over the conceptual and political underpinnings of mainstream development discourse as well as its critics. After a quick overview of modernization theory and neoliberal development policies, we will focus on postdevelopment critiques and alternatives coming out of Latin America, in particular. We will then encounter lived alternatives in Oaxaca, Mexico. We will spend three weeks conducting in-depth research and work with marginalized communities that are rejecting capitalist development and building and experimenting with living a “good life” (buen vivir) on their own terms.

### ANTH243 Medical Anthropology

Situated at the intersection of the clinical and social sciences, medical anthropology seeks to understand bodies, afflictions, healing, and care in cross-cultural contexts. This course serves as an introduction to the exciting field of medical anthropology. Students will begin by mastering dominant approaches within medical anthropology for studying the body as a site of meaning, a moral battleground, a biosocial entity, an object of regulation and control, and a tool of resistance and change. We will then turn our attention to different kinds of bodies in distress and to the therapeutic responses they invoke (or fail to invoke) from healers, doctors, kin groups, aid workers, and state actors. Of particular concern will be those aspects of healing that challenge commonsense notions of how therapies work and where they may fall short. Specific concepts and topics to be covered include illness narratives, idioms of distress, structural and symbolic violence, culture-bound syndromes, nurture/nurture debates, ritual healing, high-tech medicine, and humanitarianism.

### ANTH244 Television: The Domestic Medium

Of all the mass media, television is the most intimately associated with domestic and familial life. Its installation in American homes over the postwar decade coincided with a revival of family life that encouraged an emphasis on private over public leisure. Most television is still watched at home, where viewing practices are interwoven with domestic routines and provide a site for negotiating family and gender relations. Television production is shaped at several levels by the images broadcasters and advertisers have of viewers’ domestic lives: Broadcast schedules reflect socially conditioned assumptions about the gendered division of family roles; a common televisual mode of address uses a conversational style in which performers present themselves to viewers as friends or members of the family; and families or surrogate families figure prominently in the content of programming across a wide range of genres, including sitcoms, primetime dramas, daytime soaps, and talk shows. Sitcoms, in particular, have responded to and mediated historical shifts in family forms and gender relations over the past 50 years, and they will be a focus in this course. We will explore how television has both shaped and responded to larger cultural discourses about family and gender from the postwar era into the 21st century.

### ANTH249 From Metropolis to Megalopolis

What is the urban experience today? Are the old European metropolises, the global cities of New York or Tokyo, and the new megalopolises of the Global South commensurate entities? What are the theoretical and methodological challenges we face in thinking about “the urban” today, given the vastly different histories, trajectories, and physical and social realities of cities around the world? This course is an introductory and interdisciplinary survey of urban theory. We will critically examine “the city” as a transcultural category of analysis and focus on issues of anthropological concern regarding the experience and epistemology of urbanization and urban life. No prior background in urban studies is expected, but an interest in theory is a must.

ANTH256 Predators, Prey, and PETA: Changing Human-Animal Relationships

Animals are all around us—in homes and laboratories, farms and forests, zoos and supermarkets. We all know this. In fact, this seems so natural that the remarkable ways we incorporate animals into our lives often go unnoticed. What makes an animal a predator in one setting, prey in another? A companion tobefriend or a trophy to fight over? This class explores human-animal relationships from a long-term perspective from prehistory to the present. Drawing on readings in archaeology, anthropology, psychology, biology, and other disciplines, we will examine an array of topics, including hunting, domestication, emotional attachments, taboos, scientific research and testing, and animal rights.

ANTH259 Development, Disasters, and Beyond

Development is one of the most important ideas of our time—it is a powerful way of organizing the world (Third and First Worlds, or North and South) and intervening in it to bring about certain kinds of cultural, political, and economic transformations. Our purpose in this course is to critically examine the ideas, practices, institutions, and effects of development through an anthropological lens. While development is certainly a potent way to exert power over and regulate Third World Others, it is also a fiercely contested space of struggle and a discourse of entitlement. Rather than position development as all bad or all good, this course aims to keep this messiness of development in focus and approaches it both as a project of rule and a project of rights. We will take up specific topics such as neoliberalism and structural adjustment, humanitarianism, dams, environment, and empowerment.

ANTH267 Anthropology of Black Religions in the Americas

This course examines Afro-Creole religions and cultural expressions in selected communities throughout the Atlantic world. How were religious communities created under colonial domination? Under what conditions were religions shaped, and what shapes did they take? How are African-based religions produced through aesthetics and the ritual arts of spiritual talk and sermons, song, dance, drumming, and medicine-making? How do these religions continue to survive, thrive, and, in some cases, grow in the current historical period? This course will pay special attention to the yearly ritual cycle and its attendant festivals: Christmas, carnivals, Lent, Easter, saints’ days, feasts, and pilgrimages, as well as the emergent spiritual and aesthetic traditions such as Candomble and Rara. We will study Orisha religions such as La Regla de Ocha, or Lukumi, in Cuba and the Latino U.S.; Candomble in Brazil; Vodou in Haiti; and Garifuna traditions and spiritism in Puerto Rico.

ANTH268 North America Before Columbus

Sometime before the end of the Pleistocene, people living in Siberia or along the Pacific Coast of Asia traveled east and found an hemisphere of arctic, temperate, and tropical climates uninhabited by other humans. Over the next 12,000 years or more, populations diversified into, and thrived in, a range of environments—the last great experiment in human adaptation. This course will follow that process as it unfolded across the continent of North America, from the earliest Paleoindians through 1491. Particular emphasis will be on the nature and timing of the colonization(s) of North America from Asia, the impact of environmental diversity across the continent, and the rise of complex societies.

ANTH269 Race, Incarceration, and Citizenship: The New Haven Model

This course will explore the elements of local responses to contemporary criminal justice issues, drawing on current research projects in New Haven, Connecticut. The course will explore a variety of promising practices, which emphasize community engagement and individual citizenship over incarceration and punishment. Topics will include evidence-based practices to reduce criminal recidivism, mental health issues in the criminal justice system, treatment engagement, and the creation of valued roles in the community. Students will have the opportunity to participate in federal research studies.

ANTH279 Eating Others: Histories and Cultures of Animal Edibility

For many people, animals form a significant and cherished part of their diet. Indeed, humans have used other animals as sources of nutrients for hundreds of thousands of years. What can these animal-based dietary practices tell us about humans and their relationships with other animals? Of course, these inter-species relationships have varied as radically across time and cultures as the dietary practices that have shaped them. To better understand some of these practices and the relationships they generate, this course will explore the following questions: How did animal-based food practices develop from predomestication to the contemporary era of industrialized animal agriculture? How have cultural categories of “edibility” developed in different cultural contexts? What is meat, and how does it differ from inedible flesh? How has gender, class, race, sexuality, and other categories of difference intersected with and shaped animal consumption practices in different times and contexts? How has animal consumption shaped and been shaped by animal ethics, philosophy, and scientific knowledge production? How has large-scale animal consumption contributed to the ecological crises of the Anthropocene, and how have these in turn affected animal consumption practices? What is the future of animal-based food?

This course will use ethnographies, historical and legal analyses, and philosophical inquiries to examine the histories and cultures of animal edibility. Specifically, it will focus on topics including human evolution, animal domestication, slaughter practices, industrialized animal agriculture, indigenous ecological ontologies, hunting, dairy and egg consumption, cannibalism, cultural conflicts over the edibility of specific species, and recent technological innovations that can produce animal products without animals.

ANTH286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice
This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism—queer left, black radical, trans, immigration, prison abolition, and sex work—in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called "ivory tower," explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activism, the work of a radical imagination, art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization—past or present—of their choice.

ANTH290 Style and Identity in Youth Cultures
This course focuses on young people's engagements with commercially provided culture and their implications for identity formation. We begin in the postwar United States, when producers of symbolic goods, such as movies, music, and clothes, began aggressively tailoring products for young people; over the rest of the 20th century and into the 21st, new youth-oriented cultural commodities and sites of consumption have been used by young people in diverse ways to define themselves in relationships to adult society and to other young people. We will examine young people's intensifying involvement with the cultural market, with attention to both the diversity of youth-cultural formations that have emerged within the United States and to the global circulation of Euro-American youth culture. Using case studies, we will consider the ways in which young people's consumption practices have both reinforced and transgressed intersecting boundaries of class, race, gender, and nationality. An overarching concern in the course will be to assess whether or to what extent particular cultural practices may help prepare young people for positions of privilege, reconcile them to structural disadvantages, or provide them with resources to challenge the dominant society.

ANTH295 Theory 1: Anthropology of Affect
Theory 1 and Theory 2 are core courses for the major, designed to elucidate historical influences on contemporary anthropological theory. While precise topics may vary from year to year, the overall goal of the courses remains the same: to familiarize students with the main traditions from which the discipline of anthropology emerged and to explore the diverse ways in which contemporary anthropological practice defines itself both with and against them. This semester our topic will be anthropology and capitalist globalization.

ANTH296 Theory 2: Anthropology and Capitalist Globalization
This course examines a history of the capitalist globalization through an anthropological lens. Our broad concern is with power, social change and justice, and how anthropologists have historically shed critical light on the economic, cultural, and political struggles that define capitalist modernities across the globe. We will read range of both classic and contemporary theoretical and ethnographic works on this topic. This course is divided into 3 units. The readings in Unit I introduce the basic concepts and debates that have shaped anthropology's engagement with transnational capitalism and social change. Unit II probes the cultural dimensions of global economic processes, such as factory work, finance, affective labor, class identities, logos and brands, and consumption. We use and expand upon the concepts learned in Unit I through ethnographic work. In Unit III we consider the impact of contemporary neoliberal capitalist transformations on political imagination and struggles. We read ethnographic texts that look at mobilizations in and against neoliberal capitalism, which are rethinking the meanings of freedom and democracy and enacting new forms of subjectivities, communities, and economic relations.

ANTH301 The United States in the Pacific Islands
The relationship between the United States and the nations and territories that comprise the Pacific Islands is complex and has historical and continuing significance in international and global affairs. American involvement in the Pacific was, and continues to be, primarily structured by strategic interests in the region. Oceania has been greatly affected by American colonial rule, temporary engagement, and neocolonial hegemony including economic, military, and cultural power. How did the United States come to dominate the Pacific basin? Using an expanded definition of the Western frontier, we will examine the Pacific as a region that was subject to imperialist development that was an extension of the continental expansion. The course will focus on the history of American influence in Hawai’i that culminated in unilateral annexation in 1898 and statehood in 1959, as well as the historical and contemporary colonial status of Guam and American Samoa, where questions of self-determination persist. We will also examine the Pacific as a nuclear playground for atomic bomb testing by the U.S. military and the U.S. administration of the Trust Territory of the Pacific after World War II until the self-governance of the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau in the 1980s and 1990s.

ANTH302 Critical Perspectives on the State
This course builds on Marxist, poststructuralist, feminist, anarchist, and cultural analyses to take a critical approach to the state—what it is and what it does. We will examine how the state is imagined by those who write about it and struggle against it. Where does the state begin? How do states act, and what are the consequences of these acts? How is rule consolidated and how are individuals and communities annexed to the project of rule? How do people engage with state acts and ideologies? We will read texts drawn from a variety of disciplines, including anthropology, feminist theory, political theory, philosophy, sociology, and geography, that examine the nature, everyday workings, and effects of state power. Drawing upon ethnographic examples from around the world, we will analyze how states are cultural artifacts that produce and regulate people’s identities and bodies, reproduce social inequalities, and engender resistances of all sorts. Some of the topics we will discuss include bureaucracy, governmentality, the security state, the prison industrial complex, terror and militarism, law and justice, citizenship, democracy, refugees, anti-state movements, the "man" in the state, and welfare and post-welfare politics.

Prereq: None

ANTH303 Ritual
Religion can be defined through beliefs or traditions or texts, but it always takes physical form through ritual. Ritual is the one universal in religion, but the question of how to understand ritual is possibly the most contested question in the study of religion. Can a ritual be read like a text? How do symbols produce effects, and how should we understand these effects? What is performative speech and how does it work? How does ritual behavior reflect and shape social relationships? This course introduces students to the major approaches to the study of ritual. The readings draw heavily, but not exclusively, on anthropological approaches to ritual, both classic texts and recent innovative approaches focusing on language and embodiment. Students will pick a ritual that they are interested in and will attend that ritual several times over the semester, conducting practical fieldwork exercises and applying the theories we read in class. The assignments culminate in a paper in which students will be required to analyze “their” ritual using the theory we read together in class. For these assignments, students are encouraged to define ritual broadly and creatively. The goal of the class is to gain an understanding of theoretical approaches to ritual by applying these theories to the social world around them.

ANTH304 When Words Collide: Narratives of Conquest
On April 21, 1519, Hernán Cortés, 550 Spanish soldiers and sailors, and 16 horses (the first to tread on the American continent) dropped anchor near the island of San Juan de Ulúa, off the coast of Mexico. The chain of events that this arrival set into motion culminated in the conquest of Mexico and Spanish colonization of Latin America. But there are many sides to any story. Often, one is celebrated, retold, and written down—it becomes history. Intentionally or unintentionally, others are suppressed, obscured, or forgotten. In this course, we will use primary and secondary sources, including written and pictorial documents, to compare multiple sides of this particular story: Spaniards’ accounts of conquests in Mexico and Guatemala and various indigenous narratives of these invasions.

ANTH305 Infrastructure Matters: Power, Protest, and the Grid
This course is an anthropological exploration of infrastructure: the material grids that exist beneath society, economy, and culture. Infrastructures are the foundation upon which everyday life rests and depends; they also materialize foundational political ideals like freedom, progress, equality, and nature. Infrastructures such as ports, rails, and roads embody the connections and disconnections of the globalized world. While meant to remain invisible, out of sight and out of mind, diverse infrastructures—from Michigan’s corroded pipes to mega-dams on the River Nile—have become lightning rods for political protest and demands for justice, rights, and a good life. Taking an anthropological perspective, this course asks: why has infrastructure taken on vital importance to the modern nation-state? How is infrastructure implicated in the reproduction of racial, gendered, and classed identities and inequalities? What happens when infrastructures fail? Through multi-disciplinary readings and a course-long visual research project, this course challenges students to see the world beneath their feet in new ways and to trace the material connections that define and sustain modern life itself.

ANTH306 Mobilizing Dance: Cinema, the Body, and Culture in South Asia
This course focuses on questions of “mobility”—cultural, social, and political—as embodied in two major cultural forms of South Asia, namely “classical” dance and cinema. Using Tamil cinema and Bharatanatyam dance as case studies, the course focuses on issues of colonialism and history, class, sexuality and morality, and globalization. The course places the notion of “flows of culture” at its center and examines historical, social, and aesthetic shifts in these art forms over the past 150 years.

The course is both studio- and lecture-based. It includes learning rudimentary Bharatanatyam technique, watching and analyzing film dance sequences, and
ANTH307 Indigenous Politics
This seminar will feature select historical moments, geographical sites, and case studies to explore the complexities of life for indigenous peoples in the Pacific Islands and North America subject to the authority of the United States, Canada, and Mexico. The course will examine indigenous peoples’ varied political status in relation to questions of sovereignty and self-determination, structures of domination and resistance, and myriad forms of indigenous agency. Readings will focus on the recognition and assertion of collective rights, treaty rights and land claims, and self-governance under independent states’ and international law. Films and guest lectures will complement the required texts.

ANTH308 Television Storytelling: The Conditions of Narrative Complexity
This course examines the industrial and cultural conditions for the development of relatively complex forms of storytelling in commercial U.S. television. Narrative complexity is a cross-generic phenomenon that emerged over the 1980s and has proliferated within an increasingly fragmented media environment. In class discussions and individual research projects, students will analyze particular programs in-depth, with attention to their industrial and social conditions of production, their aesthetic and ideological appeals, and the cultural tastes and viewing practices they reflect and promote. We will also consider how television studies has responded and contributed to the increased prestige of certain types of programs.

ANTH309 Anthropology of Digital Media
Networked media technologies, from the Internet to mobile phones, are reshaping many aspects of daily life, selfhood, and society. While digital and electronic media seem to make the world smaller, ostensibly facilitating global flows of capital, people, goods, and ideas, this course examines how these technologies co-constitute particular kinds of subjects, accommodating some uses and modes of living more than others. Digital platforms and services, for example, are often designed with elite, technically savvy users in mind, yet are taken up transnationally in diverse and unexpected ways. Media, like other technologies, never exist separately from social life as independent agents of change, but instead emerge through contingent histories, material realities, constellations of discourse, and unequal distributions of power. This course introduces students to the anthropology of digital media and culture, drawing on empirical, ethnographic accounts from a variety of theoretical perspectives, including feminist technology studies, actor-network theory, queer theory critiques, new materialisms, postcolonial studies, and social informatics. Topics include space and place online, media publics, new transnationalisms, design anthropology, big data, social networks, virtuality and embodiment, the social construction of users, mobility and disability, and telecommunication infrastructures.
We will consider emerging media practices in cross-cultural and transnational settings to examine the situated contexts of design and use, while asking broadly what consequences these technologies have for our social worlds. This course requires intensive reading and writing, including a final project that can be undertaken in a variety of ways, such as an original ethnographic or creative project exploring an emerging media practice.

ANTH310 Ethnographic Encounters: The Americas between Darkness and the Good
Ethnography is both a primary research method and a genre of text within anthropology. As a research practice, it involves “deep hanging out” among a group of people in order to understand how they organize, make sense of, and live in the world. As a form of writing, it seeks to convey ethnographic insights to wider academic and non-academic audiences. Ethnographic texts are not mere descriptions of people’s lives; however; they are deeply informed by theory, disciplinary trends, and the historical contexts within which they are produced.
This course will take a critical, hands-on approach to understanding ethnographic theory and practice. Beginning with canonical texts from the early 20th century, we will track how ethnographic standards have been defined, contested, modified, and reworked over the course of a century. As such, students will gain an appreciation for the range of ethnographic modalities, from salvage and interpretive ethnography to more recent approaches that privilege critical, morally engaged, postmodern, and postcolonial perspectives. While the temporal lens of the course will be broad, spanning almost a century, the geographical focus will be limited to the continents of North and South America. Thematically, we will explore three intersecting topics that are highly relevant—-but by no means exclusive—to “the Americas.” They include (1) colonialism, health, and subjectivity; (2) the workings of neoliberalism; and (3) ethnography between “darkness” and “the good.” The hands-on portion of the course will allow students to apply what they learn during the semester toward designing and implementing their own ethnographic research project.

ANTH311 Representing China
This course will introduce perspectives that anthropologists, ethnographers, writers, filmmakers, artists, and photographers have taken to understand contemporary social life in China. Students will learn to differentiate the strengths and weaknesses of each perspective and, at the same time, will develop their own nuanced appreciation for Chinese culture and recent Chinese history. Beginning with basic concepts of family and family relationships, we will survey gift giving and banqueting, changes in the role and status of women, education, organization of the workplace, rituals, festivals, and changes since the beginning of the reform and opening up in the early 1980s. Anthropological essays and ethnographies will be supplemented by short stories, first-person narratives, and class presentations of films, photographs, and art-works to illuminate the different ways that natives and foreigners represent Chinese culture. Lectures will provide cultural and historical context for these materials. No previous knowledge of China or Chinese is required for this class.

ANTH312 Eat, Grow, Save: The Anthropology of Food and Justice

This course uses the lens of justice to examine the politics of food. We will look at the cultural and political-economic dynamics of food production and consumption, considering questions of taste, class, labor, marketing, and food sovereignty. We will also examine the environmental and social impact of food production and the consumption choices we make, from organic, to vegan, to animal proteins, to foraging and hunting. We will use a range of texts, including ethnographies, theory, film/documentary/TV shows, creative nonfiction, fiction, cookbooks, blogs, and magazine articles.

ANTH314 How to Think Like an Archaeologist

Archaeologists think about material culture, time, society, technology, art, religion, food—almost everything. They think about things from particular disciplinary perspectives. This course will introduce students to some of the theoretical and methodological approaches employed by archaeologists. In addition to archaeological case studies, discussions will draw on everyday life at Wesleyan, in Middletown, and in students' home communities for examples illustrating archaeological perspectives. For example, Wilkie's STRUNG OUT ON ARCHAEOLOGY: AN INTRODUCTION TO ARCHAEOLOGICAL RESEARCH explains archaeological concepts with examples drawn from her experiences at Mardi Gras. The course is designed for non-majors with no background in archaeology, but it will be sufficiently rigorous to fulfill ARCP major requirements.

ANTH315 Anarchist Anthropology and Militant Ethnography

Today, anthropology is better known as a discipline that still grapples with its colonial past more than as a discipline that has an affinity with anarchy. In Fragments of an Anarchist Anthropology, David Graeber suggests that anthropology shares a particular affinity with anarchist theory because of its history of with working within "stateless" societies and how it accounts for the range of human possibilities in terms of social organization, power, and authority. Thus, he calls for the need to create a body of social theory gravitating around anarchism. This includes developing methods for radical critical engagement with and understanding of social processes. Anarchist thought and practice has left its mark on a series of high-profile social movements over the past few years, such as the uprisings in the Arab world, indigenous autonomous zones in Latin America, Occupy Wall Street, and Black Lives Matter. In turn, some anthropologists have taken up militant ethnography, a burgeoning approach to qualitative research that is consciously politicized, enabling activist-researchers to engage directly with radical social movement(s). We will explore: anthropological theories and practices of democracy; the power of the state; social movements; and the anthropology of politics, culture and power. Topics include: collectivism, autonomy, solidarity, anarcho-primivism, anarchist ecology (including non-hierarchical connections with the natural world), non-market productions, relationships, ethics, political insurrections and revolutionary movements, experimental societies and utopian communities, power structures, democracy and horizontal power. As the study of domination is informed by the legacy of slavery and the enduring structures of settler colonialism, the case studies for this course will be drawn primarily (though not exclusively) from the Americas.

ANTH316 Critical Global Health

What does it mean to approach global health as not an applied science but an ethnographic object? This course will explore this question by bringing critical, social science perspectives to bear on global health issues and interventions. This course covers three areas of scholarship. First, we will examine the processes by which social inequalities produce patterns of health and disease in globalizing contexts. This will be followed by an interrogation of the term "global health," in which we will trace its emergence as a discourse and enterprise and unpack its contested meanings. While some view global health as a clinical practice, others conceptualize it as a business, security concern, charitable duty, or human right; yet another camp probes the term's ideological construction. We will consider how such vantage points are underpinned by cultural assumptions and ethical agendas that, in turn, can determine how, and to whom, care is delivered. As a third area of inquiry, we will investigate the implications and unintended effects of doing global health by probing such questions as, When are good intentions not good enough? How useful is biomedicine for alleviating locally defined problems? Under what conditions does global health exacerbate the social inequalities it seeks to overcome?

ANTH317 Culture and Consumption

This seminar examines the formation, development, and contemporary forms of cultures of consumption in EuroAmerican societies and their gobal exportation and adaptation to diverse local situations. The course is premised on the idea that the spectacular and continuous rise of commodity consumption that began in the late 17th century is as much a cultural as an economic process, one that both shaped and was shaped by shifts in ideas about personal and social development. Once associated with negative meanings of waste, excess, and depletion, consuming, especially of clothes, domestic goods, new foods and beverages, and artistic forms, came to be seen as a critical dimension of self-fashioning and sociability. While the course situates these developments in the context of expanding markets and new modes of distribution, it will emphasize the post-purchase moments of consumption, that is, the ways in which consumers incorporate goods into their everyday lives. Among the themes we will consider are the gendering of consumption, the social dynamics of taste, and fields of study. Although dominant societies tend to claim that indigenous peoples are either entirely extinct due to genocide or diluted due to racial and cultural mixing, indigenous refers to the wide range of relations to region and nation of the more than 370 million indigenous people who are spread
across 70 countries worldwide. Some indigenous peoples define themselves by their historical continuity with precolonial and presettler societies; others by ties to territories and surrounding natural resources; others in relation to distinct social, economic, or political systems; and still others by their distinct languages, cultures, and beliefs. Attempts at the historical erasure and subsequent memorialization of indigenous peoples serve the colonial goals of refuting indigenous claims to land and rights and have been the primary means by which dominant populations asserted their own modernity while denying it to putatively "primitive" indigenous peoples. Today, nation-states continue to impose this notion of the "pre-modern" savage as a mechanism of control in their negotiations with indigenous peoples' legal status and land rights. This course will focus on a range of cases studies including indigenous peoples in North America contending with the states of Canada, the United States, and Mexico; Indigenas encompassed by select countries in South America; Aboriginal peoples in Australia, the Sami (across various countries in Scandinavia), the Ainu (Japan), the Maori (New Zealand), and Palestinians (Israel-Palestine). Topics will include indigenous peoples' struggles for autonomy and survival; self-determination and political status under international law; the UN Declaration on the Rights of Indigenous Peoples; the UN Permanent Forum on Indigenous Issues; land struggles and the protection of natural resources; cultural resurgence and revival of select traditions; and varied forms of political resistance and decolonization.

ANTH319 Toxic Sovereignties: Life after Environmental Collapse
What politics emerge at the borders of life and non-life? Representations of the human species as being on the brink of environmental collapse have become increasingly common, as the specters of climate change and catastrophic environmental disaster seem to bear down ever more heavily upon us. At the same time, the increasing entanglement of human bodies with various forms of chemical and otherwise man-made pollutants presage a slightly different future, one in which, if the human species does not outright disappear, it will be fundamentally transformed. This course explores different forms of political and social action that have emerged in response to these seemingly epochal shifts. Our focus is on the ways in which the shifting borders between human life and its artificially produced absence can serve as productive sites of new political forms and transformations of older ones, even as they also generate tremendous social and cultural anxiety.

ANTH324 Globalization and Localization in Youth Cultures
This course takes globally circulating forms of commercial youth culture (especially popular music, fashion, movies, and television) as sites for analyzing interconnected processes of cultural change and cultural continuity. Using ethnographically based studies of youth in a variety of national contexts, we will approach young people as agents who draw on locally embedded resources in consuming global cultural forms and also create new, hybridized forms of culture that have both local and global roots. In these emerging youthscapes, cultural flow is not simply from "West to Rest" but is multidirectional, as locally produced hybrid forms circulate across national boundaries and sometimes back to Western markets. In mapping such flows, we will focus on their implications for identity formation among youth. In what ways, we will ask, do young people in particular sociocultural locations use the production and/or consumption of commercial cultural forms in orienting themselves vis-à-vis global and local worlds and in imagining and pursuing possible futures?

Designed primarily for anthropology majors, the course also admits students from other majors with serious interests in ethnographic youth-cultural research.

ANTH349 The Human Skeleton
The human skeleton is a window into our past, providing the framework for biographies of individual lives and narratives about the evolution of our species. Through lectures and hands-on laboratory sessions, students will learn the complete anatomy of the human skeleton, with an emphasis on functional and evolutionary perspectives. We will also explore the applications of human osteology in forensic anthropology and bioarchaeology. By the conclusion of the course, students will be able to conduct basic skeletal analysis and will be prepared for more advanced studies of the skeleton in medical, forensic, archaeological, and evolutionary contexts.

ANTH361 Television Storytelling: Consuming Darkness
This course investigates how and why a "dark sensibility" has emerged in television serials, with attention to its implications for television storytelling, on the one hand, and for viewer practices and subjectivities, on the other hand. While most evident on premium and basic cable channels, where it crosses dramatic and comedic genres, the downbeat tone has also been selectively incorporated into broadcast television and processed for wider distribution. What industrial and sociocultural conditions have enabled such an affective shift in an industry that, since its early days, has been known for telling reassuring stories and promoting an ethic of consumption? Does the shift constitute a break, or can it be interpreted as an intensification of features long present in televisual formats? Is the contemporary taste for darkness among demographically valued viewers merely a marker of distinction, or does it reflect and reinforce a significant shift in mood among segments of the professional middle class? Can narratives about flawed protagonists, failed institutions, and limited possibilities nourish new forms of hope and provide resources for remaking subjectivities and reimagining futures?

ANTH372 Archaeology of Death
The material culture and biological remains associated with death represent a major component of the archaeological record. Funerary assemblages can provide information about, for example, ritual practices, beliefs, social organization, the division of labor, diet, and health. Tombs and monuments are important elements of sacred landscapes. The course will examine how archaeologists and biological anthropologists investigate and analyze mortuary facilities, grave goods, skeletal remains, and sacred landscapes to make inferences about the past.

ANTH395 The Anthropology of Religion
What do we study when we study religion? We can observe practices, record speech, examine objects and actions—but what do these things tell us? If religion is about belief, what can we say about belief from documenting actions? Perhaps we must conclude that religion is not about belief, but if so, are in danger of "explaining away" the very phenomena we seek to understand? This course will introduce students to a cross-cultural, comparative perspective on religious practice and belief in order to critically reflect on the role of methodology and research design in the study of religion and the social sciences more broadly. How do we know what we know? How do we plan research in order to find out what we want to know? The course has a significant methods component. Students will be expected to do field research exercises in a local religious community and prepare a methodology research proposal for a fictional or real project as a final assignment. Methodological exercises will be interspersed with ethnographic texts that allow us to reflect on how religion is studied, experienced, and explained. Students planning theses or other research projects with an ethnographic component, in any social science field, may use the class and the final assignment to conceptualize and plan their projects.

ANTH398 Queer/Anthropology: Ethnographic Approaches to Queer Studies
This advanced seminar brings together queer theory with cultural anthropology to ask, Can there be a queer anthropology? Cultural anthropology and queer theory are sometimes opposed—some anthropologists find queer studies excessively theoretical, narrowly interested in Western forms of knowledge and power, and given to abstracted critique rather than social explication. Yet even as anthropologists problematize queer theory’s assumptions, methods, and boundaries, queer theoretical insights and frameworks have generated new questions and approaches in the anthropology of sexuality—just as anthropology’s interest in the global, the comparative, and the ethnographic have enriched new work in transnational queer studies. This course explores the possibilities of productively juxtaposing, combining, and even opposing anthropology and queer theory.

ANTH399 Rereading Gendered Agency: Black Women’s Experience of Slavery
Slavery systematically influenced both the production and reproduction of race, class, and gendered identities. Black women’s individual and collective response to that peculiar institution and its attempts at dehumanization and destruction highlights the impact of gender, race/color, and class on the making of different yet complex patterns of opposition and resistance. This course considers interdisciplinary research techniques and analytical approaches to unpack various forms of gendered agency. The ultimate aim is to reread black women’s experiences of enslavement, particularly as these relate to conscious struggles to carve out a sense of personhood to allow for exploration of creative gender-specific responses to the cultural dynamics of power. This course includes a performance component.

ARABIC (ARAB)

ARAB101 Elementary Arabic I
This course is a first-year elementary I course in modern standard Arabic (MSA) that will introduce students to the basic skills of reading, writing, speaking, and listening. In this level, the class will focus on speaking as an effective way of learning (speak it to learn it). Students will learn Arabic letters and their sounds, write and create basic words and sentences, and be able to converse basic dialogues comfortably in the target language. Oral drills and speaking activities will be done in the classroom, and the class will be conducted primarily in Arabic.
Offering: Host
Grading: Amp Graded
Credits: 1.50
Gen Ed Area: HA-LANG
Prereq: None

ARAB102 Elementary Arabic II
This course is a second-year elementary I course in modern standard Arabic (MSA) that will continue to stress the basic skills of reading, writing, speaking, and listening. This course will focus on speaking as an effective way of learning (speak it to learn it). Students will continue to learn MSA grammar, write and create paragraphs, and begin to converse comfortably in the target language. Students are expected to develop better listening, speaking, reading, and writing skills in Arabic and to become familiar with Arabic culture. Oral drills and speaking activities will be done in the classroom, and the class will be conducted primarily in Arabic.
Offering: Host
Grading: A-F
Credits: 1.50
Gen Ed Area: HA-LANG
Prereq: ARAB101

ARAB201 Intermediate Arabic I
This course is a second-year, lower intermediate course in modern standard Arabic (MSA) that will continue to focus on the four basic skills of reading, writing, speaking, and listening. In this level, students will be able to speak enough Arabic to communicate at a basic level with a native speaker on a variety of topics. Students should be able to write simple texts on everyday themes and read uncomplicated authentic texts on familiar or concrete topics, as well as newspaper articles and storybooks. Culture will continue to be integrated in the classroom. The class will be conducted primarily in Arabic.

ARCHEOLOGY (ARCP)

ARCP112 Talking Trash
Every day, we make conscious and unconscious decisions that define what we consider clean or dirty, good or bad, valuable or expendable. As the familiar saying goes, "one man's trash is another man's treasure." At an individual and societal level, our ways of wasting affect both the world we inhabit and our place within it. This course draws on readings in archaeology, anthropology, history, psychology, material culture studies, and environmental science to explore one of humanity's most prodigious products and greatest legacies: trash. We will study conceptions of waste from different times, places, and perspectives, as well as the impact of refuse on our everyday behavior, systems of ethics and meaning, and interactions with the environment.
ARCP153 Single Combat in the Ancient World
This course celebrates the clash of warriors in warfare, sport, and spectacle in the classical world. Using primary sources and archaeological evidence, the class will survey traditions of combat in ancient art, literature, and society, beginning with Greek and Near Eastern epic; the modes of warfare in Greek society; ancient Olympic combat sports; and, finally, Roman gladiator spectacle. We will examine the role of violent sport in Greek and Roman society, the reception of the competitors, and the use of these events for political or nationalistic ends.

Throughout the course we will explore the flexibility of concepts such as military ethics, "western" warfare, violence, honor, and excellence, both in the classical world and in our modern lives.

ARCP204 Approaches to Archaeology
Archaeology is the study of the past through its material remains. This course will introduce students to a range of approaches that archaeologists use to interrogate material culture (artifacts and other physical remains) and, in some cases, written records, to present interpretive reconstructions of past human history, societies, cultures, and practices. The course includes archaeological approaches to prehistoric cultures through to ancient, medieval, and early modern societies.

ARCP215 The Art and Archaeology of Anglo-Saxon England, 400—1100
This course will consider the art, architecture, and archaeology of the British Isles from the withdrawal of the Roman legions in the fifth century to the end of the reign of Henry II in the 12th century. It will draw on material from church history to help understand the transition from paganism to Christianity and the struggle between Celtic and Roman Catholicism. It will draw on material from history and archaeology to help understand the complex relations between the waves of invading Saxons and the native English in the early medieval period, the Vikings in the late 9th and 10th centuries and the Norman invasion in 1066. Finally, the course will focus on the development of towns and on the place and role of both royal commissions and parish architecture in the life of those towns.

ARCP234 Art and Society in Ancient Pompeii
This seminar surveys the art, architecture, and material remains of the cities buried by the eruption of Mt. Vesuvius in 79 CE. Through readings, class discussions, and student research presentations, we will explore the ways in which this material can be used to study the social and political life of a small Roman city and examine the unique evidence for reconstructing the private life of Roman citizens, from their participation in local politics and government, to their religious beliefs and lives, to the interior decoration of their homes and their burial customs.

ARCP242 Tablets, Temples, and Cities: Near Eastern Art and Archaeology
History starts in the Near East with many firsts in human culture: domestication, writing, cities... Throughout its long history, the ancient Near East has produced a unique corpus of material culture, architecture, and textual records. In this course, we will survey the art and archaeology of the ancient Near Eastern civilizations with contextual information about the cultures that created them. Every week we will progress chronologically and will explore broader socioeconomic, political, and cultural changes by discussing art historical, archaeological, and textual evidence. We will look at examples from Anatolia, Mesopotamia, and the Levant, and compare these to one another. Students will gain a larger understanding of commonalities and differences in the cultural expressions of these cultures. The last section of this course will be dedicated to current issues concerning the archaeology and cultural heritage of the Middle East.

This course will also have various hands-on components: We will learn about textile production by using spindle whorls, learn about cuneiform writing by making clay tablets, and create our own seals based on ancient Near Eastern imagery and mythology.

ARCP244 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt
This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

ARCP245 Climate, Change, and the Ancient World
Climate change has recently become shorthand for Global Warming, the clearcutting of rainforests, and the burning of fossil fuels. Yet while anthropogenic climate change on the global scale is indeed a modern phenomenon, climate change itself is nothing new, and human societies have been negotiating their natural world for millennia: adapting to changing conditions by inventing new technologies, adopting new social structures, and even modifying the landscapes around them.
Examples from around the world, including Africa, the Mediterranean, Australia, the Americas, Asia, and the British Isles, will be used to examine how past societies perceived and interacted with their environments. Aspects of collecting, analyzing and interpreting various climate proxies, and the theoretical foundations for interpreting their relevance to archaeological questions, will constitute major components of this course.

ARCP248 Who Owns the Past? Cultural Heritage, Archaeology, and Politics
"Who controls the past controls the future; who controls the present controls the past." - George Orwell, 1984
When Orwell wrote these words, there was no ISIS destroying non-Islamic monuments, no Saddam Hussein claiming to be a Babylonian king, and no cultural heritage news appearing on our Facebook feeds every day. Yet this statement is still as relevant as it was in Orwell's dystopia. Cultural heritage is an important part of state ideologies, national identities, and politics in the Middle East. The idea of controlling or owning the past is not new however; even ancient Near Eastern kings and rulers used their heritage or their conquests over older temples and monuments as a tool to claim political power.
In this course students will become familiar with the concept of cultural heritage, both tangible and intangible; learn about cultural heritage institutions and laws; and understand how these institutions protect heritage in different situations. By looking at past and modern case studies from Egypt, Turkey, Iraq, Iran, Afghanistan, Palestine, Israel, Syria, the U.S., and examples from other parts of the world, students will learn about the role of archaeology, colonialism, international politics, and indigenous cultures in creating, identifying, and protecting (or destroying) cultural heritage.

ARCP256 Predators, Prey, Pets, and PETA: Changing Human-Animal Relationships

Animals are all around us—in homes and laboratories, farms and forests, zoos and supermarkets. We all know this. In fact, this seems so natural that the remarkable ways we incorporate animals into our lives often go unnoticed. What makes an animal a predator in one setting, prey in another? A companion to befriend or a trophy to fight over? This class explores human-animal relationships from a long-term perspective from prehistory to the present.

Drawing on readings in archaeology, anthropology, psychology, biology, and other disciplines, we will examine an array of topics, including hunting, domestication, emotional attachments, taboos, scientific research and testing, and animal rights.

ARCP258 Archaeometry: How to Science the Heck out of Archaeology

What does it mean to have meteoric elements in "Trojan War era" weapons? How should we understand "Barbarian Ware" of supposed invaders when we now identify local clay fabrics? This seminar is an introduction to the various classes of material culture and the scientific methods utilized today to answer such elusive archaeological questions. We will get hands-on experience with chromatography to identify organic commodities such as perfumes and wine, microscopy to characterize ceramic fabrics and technology, and XRF spectrometry to analyze various inorganics such as colored pigments, bronze implements, and lithic monuments. Based on this knowledge, class sessions will present and assess well-known case studies. We will discuss the conservation of material culture in order to better understand and preserve our past. What should a curator do with deteriorating Roman glass? Should a Preclassic Maya vessel with chocolate be cleaned for display? Is an Egyptian ushabti authentic? As a final project, students in close consultation with the instructor will conduct background research on a cultural artifact of their choice and design a program of archaeometric analyses to produce a poster that addresses intriguing archaeological questions of their own.

ARCP267 Museum Collections: Ethical Considerations and Practical Applications

Serving as a broad overview to the practice of museology, this course introduces students to theories supporting the foundation of museums and the stewardship efforts found within collections. Topics covered will include the origins of museums and collecting, and philosophies behind historic and current museum policies. Ethical considerations surrounding highly publicized issues such as looted artifacts, repatriation, and cultural patrimony will also be covered. Finally, students will explore the practical aspects of creating and sustaining collections, preservation of objects, and interpretation and exhibition development. Although topics covered in this course will apply to a variety of museums, the general focus will be on anthropology and archaeology collections. Readings and class discussions will be supplemented with hands-on activities using the Wesleyan University archaeology and anthropology collections.

ARCP268 North America Before Columbus

Sometime before the end of the Pleistocene, people living in Siberia or along the Pacific Coast of Asia traveled east and found an hemisphere of arctic, temperate, and tropical climates uninhabited by other humans. Over the next 12,000 years or more, populations diversified into, and thrived in, a range of environments—the last great experiment in human adaptation. This course will follow that process as it unfolded across the continent of North America, from the earliest Paleoindians through 1491. Particular emphasis will be on the nature and timing of the colonization(s) of North America from Asia, the impact of environmental diversity across the continent, and the rise of complex societies.

ARCP285 Off with its Pedestal! The Greek Vase as Art and Artifact

This course explores the dual role of the Greek vase—as objet d’art and as material culture. The first half of the course will trace the origins and development of Greek vase painting from Mycenaean pictorial vases to the masters of Attic Red Figure, examining the painters, the themes, and (often titillating!) subject matter in its social and historical context. The second half will focus on the vase as an artifact and tool for reconstructing social values and economic trends throughout the Mediterranean. We will look at rip-offs, knock-offs, and how much Attic pottery was really worth, and evaluate the use of pottery as an indicator of immigration or cultural imitation. The course will include work with 3D scanning and digital optimization, as well as the construction of a virtual museum exhibit.

ARCP286 Unearthing Early China: Art and Archaeology

This course introduces early China by examining major archaeological discoveries from prehistory through the second century CE. We will analyze the formal and material features of early Chinese artifacts from important archaeological excavations at sites such as Liangzhu, Anyang, Zhouyuan, and Mancheng. We will discuss the ways in which these artifacts and archaeological sites demonstrate early Chinese cosmological beliefs and ritual practices, especially notions related to heaven, afterlife, and the transition from ancestor worship to the pursuit of personal welfare in immortality. In addition, we will study the iconography and symbolism of objects found in these archaeological discoveries, which would serve as a foundation for the inception of visual arts in the later periods of Chinese history.

ARCP292 Archaeology of Food, Trade, and Power in South India

This course examines patterns of life in premodern South India, focusing on the millennium from about AD 600 to 1600. It explores the persistent practices and institutions that structured social life—agricultural regimes of food production, patterns of local and long-distance trade, and elite discourses of power and authority—as well as historical events and processes that brought change to those patterns. The course capitalizes on South India’s rich array of archaeological evidence, from surface remains and excavated finds to standing architectural monuments, donative inscriptions on stone and copper plates, and
ARCHAEOLOGY: AN INTRODUCTION TO ARCHAEOLOGICAL RESEARCH explains topics investigated include the articulation of cultural space and landscapes; food, subsistence, and modes of agricultural production; domestic architecture and habitation; trade, markets, and monetary systems; and the roles of religion and ritual in legitimating political power. There is an explicit emphasis on methods and their application, including those of epigraphy (the analysis of inscriptions), numismatics (the materially based study of coinage and monetary systems), surface archaeology (survey, documentation, and analysis of exposed surface remains), and the archaeology of buildings. Many class sessions will be devoted to active discussion and analysis of data.

ARCP314 How to Think Like an Archaeologist
Archaeologists think about material culture, time, society, technology, art, religion, food--almost everything. They think about things from particular disciplinary perspectives. This course will introduce students to some of the theoretical and methodological approaches employed by archaeologists. In addition to archaeological case studies, discussions will draw on everyday life at Wesleyan, in Middletown, and in students' home communities for examples illustrating archaeological perspectives. For example, Wilkie's STRUNG OUT ON ARCHAEOLOGY: AN INTRODUCTION TO ARCHAEOLOGICAL RESEARCH explains archaeological concepts with examples drawn from her experiences at Mardi Gras. The course is designed for non-majors with no background in archaeology, but it will be sufficiently rigorous to fulfill ARCP major requirements.

Prereq: None

ARCP341 Visualizing the Classical
This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen--through landscape, sound, light, functionality/monumentality, and spatial relationships--shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

ARCP380 Relic and Image: The Archaeology and Social History of Indian Buddhism
This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (1st–3rd century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts and then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in
this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha’s relics, pilgrimage to the sites of the Eight Great Events in the Buddha’s life, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodh Gaya (site of the Buddha’s enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

ARCP382 Treasure-Trove: Numismatics and the Archaeology of Money
In many parts of the world, lost coins numbering in the millions lie buried in the ground. Periodically, some of these coins come to light in the course of plowing, digging to repair a water main, or prospecting with metal detectors. These “treasure-trove” finds—also known as coin hoards—provide the archaeologist of money with rich evidence of how money was actually used in pre-modern times. Which coins occur together in a hoard; the numbers in which they occur, and the spatial patterning of their findspots all speak volumes about pre-modern economies, circulation patterns, and beliefs about money and value. In this seminar, we explore the evidence of coins and coin hoards, studying them from numismatic perspectives (the images and legends on a given coin type, metals used, weights, fabric), metrological and denominational perspectives (what coins reveal about systems of weights and denominational structures), and statistical approaches (for example, studying patterns of weight loss as indicators of the velocity of circulation and degree of monetization in a given society). The course focuses primarily on a series of case studies and hands-on, in-class lab sessions based on actual numismatic materials, primarily drawn from ancient and medieval South Asia, and classical Greece and Rome. Specialized techniques introduced may include XRF (X-ray fluorescence) as a means of studying the metallurgical contents of coins; students will also be introduced to the Deccan Coin Hoards GIS database and its potential for spatial and statistical analysis of patterns of money use.

ARCP425 Archaeology Lab Research
Advanced students in archaeology have an opportunity to work intensively with departmental faculty to contribute to a variety of ongoing faculty research projects. These collaborations offer the chance for students to refine their research skills, gain exposure to conservation and research methods outside the basic curriculum, and work towards tangible research outcomes. Such outcomes may include research posters, creation of online databases, contributions to published works, contributions to or solo exhibit designs, or senior essay/thesis projects. Faculty projects vary from year to year but currently include studies in Mediterranean palaeoclimate, lab-based scientific study and digital modeling of archaeological artifacts, organic residue or ceramic studies (Binney, the OpenARCHEM project), or museum research projects in the Wesleyan Collections (which comprise approximately 35,000 objects), cataloging, analyzing, photodocumenting and researching artifacts (Cohen, Wesleyan Collections).

Grading: A-F

ART HISTORY (ARHA)

ARHA110 Introduction to Western Art: Renaissance to Modern
This course surveys the development of Western art from the Renaissance through the modern period. We will examine art's changing status within specific social and artistic contexts: from the Church and court of the Renaissance, through the formation of art academies in the late 16th century, to the development of an increasingly individualized artistic practice that led to the formation of an avant-garde. Classes will be organized chronologically and touch upon the following themes and ideas: politics, religion, and patronage; perception and experience; artistic identity and originality; relationships between artistic media; and the rise of a public sphere for art.

ARHA126 El Greco to Picasso: Modern Art's Passion for Golden Age Spain
This course examines the life and afterlife of the Spanish artists of the Golden Age, whose achievements reached unprecedented heights in the 17th century. Centuries later, their works took on new roles as artists of other times and cultures found their own inspiration in works of the past: Manet copied Velázquez, Picasso copied El Greco, and (famously on "Project Runway") Christian Soriano copied Murillo. What allowed these complex works to resonate so strongly in another era? Is such influence automatically a sign of success? And why have the works of Francisco Goya inspired more filmmakers than any other artist? Students will be introduced to the reading of visual art for stylistic, historical, and political content and develop a critical understanding of art and society in Golden Age Spain, as well as insights into the role of art as a cultural currency.

ARHA127 Venice and the Renaissance
Venice - a city built almost impossibly on a forest of stilts sunk into the mud of the lagoon and buttressed by powerful myths of divine origins, permanence, and prosperity - produced some of the most spectacular works of Renaissance art and architecture. This introductory-level course on the art and culture of Venice's "golden age" considers the works of artists such as Carpaccio, Bellini, Giorgione, Titian, Veronese, and Tintoretto and architects such as Codussi, Sansovino, and Palladio in the context of the city's unique setting, social and governmental structure, cultural and political milieu, and larger geopolitical significance. It also positions Venice's artistic production within the broader framework of early modern Europe, exploring its connections with Byzantium and the Islamic world. The course also introduces students to key issues and methods of art history.

ARHA135 Medicine and Art: Viewing the Medieval Body
How did artists understand the body in the later Middle Ages, and how did this help to shape medical, spiritual, and philosophical views of what it meant to be human? What role did art play in the dissemination of scientific knowledge and religious thought, and were these views necessarily in conflict? This course will explore pre-modern depictions of the human body in works of art, scientific treatises, and visual ephemera produced and circulated in the pre-modern period (1150–1550). Topics to be addressed include the visual culture of life, death, and the afterlife; abnormal bodies: saints and monsters; the role of art in illness and healing; and medieval robotics and artificial bodies. Case studies will be drawn from European and Islamic works of art.

ARHA140 Van Gogh and the Myth of Genius
This seminar will investigate in depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth-making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. We will both investigate the formation of this myth and view it critically, balancing it against the artist's own account of his career in his paintings and prodigious correspondence. Van Gogh's extensive, insightful, and fascinating writing begs the question of how one should treat an artist's statements when interpreting his works. We will also examine the role of biography in art. Finally, rather than viewing the artist as an isolated creator, we will situate his work within the artistic landscape of late 19th-century Europe, and especially France, where he spent his most productive years as an artist, 1886–1890.

ARHA151 European Architecture to 1750
This course is an introduction to architecture and related visual art as an expression of premodern Western European civilizations, from ancient Greece through the early 18th century, including Roman, Early Christian, Byzantine, early medieval, Romanesque, Gothic, Renaissance, and Baroque architecture, landscapes, and cities. The focus is on analysis of form in architecture and the allied arts. Emphasis is on relationships between style and patronage. In each era, how does architecture help to constitute its society's identity? What is the relationship between style and ideology? How do architects respond to the works of earlier architects, either innovatively or imitatively? How do patrons respond to the works of their predecessors, either locally or distantly? How are works of architecture positioned within those structures of power that the works, in turn, help to define? How do monuments celebrate selected aspects of history and suppress others? How were the major buildings configured, spatially and materially? Emphasis will be on continuities and distinctions between works across time, seeing Western traditions as a totality over centuries. Lectures and readings convey different historiographic approaches to these issues.

ARHA170 Postmodernism and the Long 1980s
This introductory immersion in the practice of art history offers an opportunity to gain expertise in visual analysis and historical interpretation through a guided investigation of art and critical theory in the United States during the 1980s. The central debates of this tumultuous decade—still very much with us today—brought the contested paradigm of postmodernism to a fever pitch. Two key exhibitions provide bookends: in "Pictures" (1977), techniques of appropriation diagnosed a new kind of slippage between reality and representation; in 1993’s "Whitney Biennial," the period’s sustained engagement with gender, sexuality, race, and the relationship between art and politics achieved decisive (and controversial) visibility. Between these poles, artists turned to the street, navigated the "ends" of painting, and invented new forms to confront an increasingly image-soaked media-public sphere. The course attends to the strategies of photoconceptualism, painting, sculpture, video, and site-specificity by which artists intervened in a polarizing historical moment that saw the expansion of neoliberal economics and political conservatism, a sharpened divide between rich and poor, the AIDS crisis, and the geopolitical realignments of the late Cold War.

ARHA172 Memory Image: Introduction to Art (As) History
One premise of art history is that works of art necessarily register or encode the time and place of their making. Some art practices operate historically in more than an artifactual sense, whether by revisiting the art historical past through citation, or by actively responding to the socioeconomic, technological, or cultural conditions of their present. Others engage directly in the project of historical representation and research, recasting these activities through painting, photography, installation, and performance (from experiments in abstraction to queered archives and restaged mass protests). Spanning a series of case studies from post-Holocaust New York School painting to post-Katrina site-specificity, this course provides an introduction to the practice of art history by way of recent works of art that have made the resources (and limitations) of historical methodology a subject of investigation. What is the role of art as historical memory in an increasingly image-soaked world?

ARHA181 Mughal India: Introduction to the Practice of Art History
Founded in northern India in the early 1500s, the Mughal empire was one of the largest centralized states in the history of the premodern world. During the two centuries of their effective rule over most of the Indian subcontinent, the Mughal emperors and their subordinates were prolific patrons of the arts, overseeing the production of lavishly illustrated books and picture albums and commissioning such architectural masterpieces as the Taj Mahal. This course offers an introduction not only to the art and culture of Mughal India but also to the practice of art history itself, through a sequence of six thematic units exploring and applying different methods that are central to the discipline. Each unit begins with critical reading and discussion of one or two key theoretical or methodological statements, then continues through application to case studies drawn from Mughal India. The units include (1) techniques of visual description and formal analysis, (2) the concept of style and stylistic analysis, (3) the analysis of meaning in visual images (iconography and iconology), (4) models of time and the historical explanation of change, (5) architectural and historical analysis of buildings and their sites, and (6) historiographic assessment of debates and changing interpretations within art history. Each unit culminates in a writing exercise designed to provide students with structured experience in some of the various modes of art historical writing. The course is appropriate as an introduction both to art history and to Mughal art.

ARHA182 Understanding the Arts of Imperial China: Content and Methods
With its long history and diverse culture, Imperial China was known for its rich and complex traditions in art. From the magnificent terracotta warriors and splendid court paintings to delicate blue-and-white porcelain, these artworks not only testify to the complexity of the society that produced them, they also suggest visual principles and ideological premises by which they can be understood. This course offers an introduction to the important roles that art played in the society of Imperial China and discusses their visual principles and ideological premises so we can comprehend the artworks themselves. By examining three large groups of artworks from imperial China—ritual objects and monuments from the early periods, courtly paintings and calligraphy from the middle periods, and commercial goods of factory art from the late imperial periods—we will look at the relationship of form and content, the materiality of artworks, questions of the artist’s agency, and the context in which artworks were produced, transmitted, and consumed. The goal of this course is to encourage interest in the arts and culture of Imperial China as well as basic issues in the field of art history.

ARHA201 Approaches to Archaeology
Archaeology is the study of the past through its material remains. This course will introduce students to a range of approaches that archaeologists use to interrogate material culture (artifacts and other physical remains) and, in some cases, written records, to present interpretive reconstructions of past human history, societies, cultures, and practices. The course includes archaeological approaches to prehistoric cultures through to ancient, medieval, and early modern societies.

ARHA202 Art and Archaeology of the Bronze Age Mediterranean
This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.
Offering: Crosslisting
Grading: A-F
ARHA205 Visualizing the Classical
This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen—through landscape, sound, light, functionality/monumentality, and spatial relationships—shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

ARHA209 Van Eyck to Velázquez: A New Look at Old Masters
This course investigates the art of Northern European and Iberian art in the early modern period (1400–1700). Artists thrived in the lands outside of Italy as art markets expanded, new genres arose to appeal to diversified audiences, and changes in religious belief and practices invigorated the market for devotional art. The establishment of overseas empires brought wealth and exotic goods to the continent while exposing artists to new ideas and new ways of picturing the world. Add to this technical innovations such as the development of oil painting and introduction of canvas supports, and the stage was set for the emergence of the great masters whose works we will encounter in this course—including Rogier van der Weyden, Jan van Eyck, Pedro Berruguete, Hieronymus Bosch, Albrecht Dürer, Pieter Bruegel, Rembrandt van Rijn, Diego Velázquez, Johannes Vermeer, and Francisco Zurbarán.

ARHA211 Early Medieval Art: Judaism, Christianity, and Islam in the Mediterranean, 300–1200

This course explores the art and culture of the Mediterranean region from late antiquity through the 12th century. Case studies of four dynamic cities—Islamic Córdoba, Byzantine Istanbul, Christian Ravenna, and multifaith Jerusalem—will guide our understanding of this pivotal period. Attention will be given to the balance between secular and sacred art and architecture, debates over figural and nonfigural imagery, and relations between majority and minority cultures around the Mediterranean basin. Topics for discussion include iconoclasm and the triumph of the image, imperial ambitions and the shaping of the landscape, and the circulation of luxury goods as a tool of cultural transformation.

ARHA212 Lost Renaissances: Art & Architecture of Medieval Italy and the Mediterranean

This course traces the multiple though now largely forgotten renaissances, or flourishings of cultural and artistic activity fueled largely by the recuperation of the classical past, in Medieval Italy and across the Mediterranean world. We will examine works of art and architecture of Italian centers including Rome, Sicily, Venice, Pisa, Padua, Siena, and Florence. With an emphasis on the art of intercultural relations in the medieval Mediterranean, we will explore and discuss how the intensive interactions of Roman (pre-Christian), Islamic, and Christian communities during the medieval period, ca. 300–1300, were essentially shaped by works of art.

Together, we will debate the relevancy of present-day ideas in art and politics for understanding past cultures (and vice versa), witness an Islamic caliph’s gift of an elephant to a Christian king (and consider how “gifts” could also be “art”), discover the art of hydromancy (water magic), and uncover how a French king in Sicily employed Islamic artists to decorate his pleasure palace. This course explores what the great Spanish historian Americo Castro referred to as “convivencia,” the co-existence of medieval cultures, as recorded in intercultural exchanges across the Mediterranean Sea. Our approach will emphasize an understanding of the complex relations between the waves of invading Saxons and the native English in the early medieval period, the Vikings in the late 9th and 10th centuries and the Norman invasion in 1066. Finally, the course will focus on the development of towns and on the place and role of both royal commissions and parish architecture in the life of those towns.

ARHA213 The Art and Archaeology of Anglo-Saxon England, 400–1100

This course will consider the art, architecture, and archaeology of the British Isles from the withdrawal of the Roman legions in the fifth century to the end of the reign of Henry II in the 12th century. It will draw on material from church history and help understand the transition from paganism to Christianity and the struggle between Celtic and Roman Catholicism. It will draw on material from history and archaeology to help understand the complex relations between the waves of invading Saxons and the native English in the early medieval period, the Vikings in the late 9th and 10th centuries and the Norman invasion in 1066. Finally, the course will focus on the development of towns and on the place and role of both royal commissions and parish architecture in the life of those towns.

ARHA214 The Art and Architecture of Medieval Pilgrimage, 1100-1500

This course introduces students to the art and architecture of the later Middle Ages in Europe and the Mediterranean region as experienced by the travelers who traversed the great pilgrimage routes that crisscrossed the continent, from Canterbury to Compostela, Rome, and Jerusalem. Pilgrimage dramatically shaped the medieval landscape, leaving indelible marks on the natural and built environment. From great cathedrals to humble shrines, luxury goods to cheap souvenirs, lavish illuminated manuscripts to rough traveler’s guides, the visual culture of medieval pilgrimage will be explored from a variety of perspectives and placed into an appropriate social, cultural, and historical context. Comparative discussions of pilgrimage in Judaism, Islam, and secular culture will feature alongside the cultural traditions of European Christianity.

ARHA219 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt

This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced these ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

ARHA221 Early Renaissance Art and Architecture in Italy
This course surveys key monuments of Italian art and architecture produced between ca. 1300 and 1500. Focusing on major centers such as Florence, Milan, Rome, and Venice, as well as smaller courts such as Urbino and Mantua, it considers the works and careers of the most important artists and architects of the period, among them Giotto, Brunelleschi, Donatello, Giovanni Bellini, Botticelli, and Leonardo da Vinci. Monuments are studied in their broader intellectual, political, and religious context, with particular attention paid to issues of patronage, devotion, gender, and spectatorship. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics. Museum trip(s) will expose students to original works of art.

ARHA224 Italian Art and Architecture of the 16th Century
In addition to key monuments of 16th-century Italian art and architecture, this course seeks to introduce students to some of the most important figures of the period: artists and architects—such as Leonardo, Michelangelo, Raphael, Bronzino, Titian, and Palladio; their princely and ecclesiastical patrons—such as Cosimo I de’ Medici and Julius II; and their critics and biographers—such as Dolce and Vasari. Our aim will be to understand the complex artistic and architectural landscape of the period against the backdrop of shifting intellectual and religious trends, such as the Counter-Reformation. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

ARHA233 Art and Culture of the Italian Baroque
This introduction to the arts and architecture of 17th-century Italy addresses one of the core paradoxes of the period: that startling innovation and creativity were not inconsistent with serving the purposes of patrons and ideologies that at first appear rigid and authoritarian. Supported by popes, cardinals, new religious orders, and private collectors, artists and architects such as Caravaggio, Artemisia Gentileschi, Pietro da Cortona, Gianlorenzo Bernini, and Francesco Borromini depicted saintly bodies in moments of divine rapture, opened up painted ceilings to elaborate illusionistic visions, and subjected the classical language of architecture to unprecedented levels of movement. Through lectures and discussions of key primary and secondary sources, we will explore the emotive and ideological power of Baroque art, considering the multitude of ways in which it shaped the visual, political, and religious worlds of its day.

ARHA240 Modernism and Modernity in 19th-Century French Painting
This course looks at factors that contributed to Paris’s rise as the preeminent artistic center in the West at the time of the French Revolution and traces the evolution of French art throughout what would prove to be an extraordinary century of formal advance and experiment ending in Impressionism and Post-Impressionism. The story of French art is one in which timeless ideals and triumphal narratives were continually put under pressure by the imperative to model the contingency of modern experience. Themes we will explore in this class include the significance of a public sphere for art making and the relationship between artistic advance and appeals to an ever-widening public; painting and revolution; history painting; the persistence of classical ideals and their relationship to modern subjects and experience; the new focus on sensation and the rise of landscape painting; the experience of colonialism and racial difference; the decline of narrative in painting in favor of form and surface; the relationship between modern art and academic practice; the rise of feminism and attempts on the part of women artists to find their own voice in a masculine practice; the conflict between the unabashed pursuit of artistic individualism and the need to define collective values and experience; the significance of the decorative to painting at the end of the century; and the relationship between art’s embrace of privacy, domesticity, and intimacy at the end of the century and France’s revolutionary legacy.

ARHA241 Introduction to European Avant-Garde, 1880–1940
This course will introduce students to the major avant-garde art movements from the first half of the 20th century as they took root in France, Germany, Italy, Holland, and Russia. Our focus will be on painting, but we will also look at attempts to go beyond painting in an attempt to gain greater immediacy or social relevance for art. Topics that will receive special emphasis include the relationship between abstraction and figuration, the impact of primitivism and contact with non-Western arts, modernism’s relationship to mass culture, war and revolution, gender and representation, art and dictatorship, and the utopian impulse to have the arts redesign society as a whole.

Offering: Prereq: None

ArHA246 American Architecture and Urbanism, 1770–1914
This course considers the development of architecture and urbanism in the United States from the late 18th through the early 20th century. Major themes include the relationship of American to European architectures; the varied symbolic functions of architecture in American political, social, and cultural history; and the emergence of American traditions in the design of landscapes and planning for modern cities, especially Boston, New York, Philadelphia, Washington, D.C., Chicago, Los Angeles, and San Francisco. The course considers houses for different sites and social classes, government buildings, churches and synagogues, colleges, and commercial architecture of different kinds includes the origins of the skyscraper. Urban environments include cemeteries, public parks, streets, and civic centers. Movements include neoclassicism, the Gothic and Romanesque revivals, the Chicago School, the Arts and Crafts movement, and the City Beautiful movement. Major figures studied include Thomas Jefferson, Benjamin Latrobe, Frederick Law Olmsted, Frank Furness, Henry Hobson Richardson, Louis Sullivan, the early work of Frank Lloyd Wright, Greene and Greene, Bernard Maybeck, Julia Morgan, and McKim, Mead and White.

ArHA249 "Public Freehold": Collective Strategies and the Commons in Art Since 1960
Art since 1960 has forged a contradictory alliance between the legal field of intellectual property and the expanded tradition of poststructural thought. Taking its title from conceptual artist Lawrence Weiner, this course navigates this contradiction via four units, each corresponding to a specific artistic strategy: appropriation, scoring, collaboration, and participation. Testing the limits of the signable, saleable, and stealable, such techniques have thrown traditional concepts of originality and possessive individualism into arrears while giving rise, quite paradoxically, to some of the most celebrated careers and widely reported lawsuits involving allegations of creative property theft. Do such maneuvers amount to specious self-aggrandizement? Or do they indicate a renewed search to locate, foment, and protect sources of creative invention? The ever-expanding horizon of collaborative media access and increased pressures to enclose this new electronic commons have made such questions all the more urgent today.
Artists considered include Claire Fontaine, General Idea, Pierre Huyghe, Juliana Huxtable, Sherrie Levine, Tino Sehgal, Sturtevant, Hito Steyerl, Andy Warhol, and Lawrence Weiner.

ArHA251 Artists Design Exhibitions
This course explores the history and theory of exhibition making as an artistic practice, focusing on major works since the 1960s as well as foundational projects of the early to mid-20th century. Our discussions will generate a working typology, tracking how artist-designed exhibitions have variously served as spaces of public debate and agitation, propaganda spectacles, didactic displays, and sites of aesthetic experimentation. Exhibition design's material supports have been just as disparate: room-scale interiors, multiform spatial sequences, distributed multiples, and outdoor installations on city streets. Across each of these divergent modes, exhibitions are distinguished by their shared potential to create what Walter Benjamin once described as "simultaneous collective reception." As Benjamin's phrase suggests, exhibitions constitute publics, and in this course special attention will be paid to the types of publics--and the types of subjects--that specific exhibition strategies presuppose.

A key concern will be to situate exhibition design relative to other artistic techniques, including installation art, institutional critique, and photomontage. What can the history of exhibition design show us about the new "curatorial condition" of everyday life, in which data specialists now curate information, an artisan cheese shop curates its merchandise, and anyone with a social media account curates a presentation of self? Artists central to this history, and to which this course attends, include: El Lissitzky, Marcel Duchamp, Charles and Ray Eames, the Rosario Group, the Independent Group, Hélio Oiticica, Marcel Broodthaers, Louise Lawler, Group Material, Fred Wilson, and Camille Henrot.

ArHA252 Contemporary Art Since 1980
This historically rooted introduction to contemporary art sets an anchor around 1980 and moves through the major debates of the last thirty-five years. This period gave rise to a remarkable range of historical transformations: a post-communist Europe; an economically prominent China; the AIDS crisis and queer activism; increasingly molecular degrees of technological mediation in everyday life; the consolidation of a globalized network of travel, communication, and capital; climate change; and a seemingly perpetual "war on terror," to name only a few. This course attends to the changing vocabulary of approaches by which artists both intervened in these conditions and positioned their work in relation to a longer view of the history of art. Rather than a strictly chronological survey, the course attends to specific theoretical frameworks (postcolonial, feminist, poststructural, etc.) and formal techniques (painting, sculpture, installation, video projection, social practice, public intervention, web-based art, etc.) that fuel current practice.

ArHA253 Art After 1945
This course examines artistic production in the United States between 1945 and 1980. Artists in this period attempted to respond to the "caesura of civilization" brought about by the Holocaust and World War II, to contend with the consolidation of postwar consumer capitalism and mass culture, and to situate their work in relation to the far-reaching social upheavals of the 1960s and '70s. Practices linked to the early twentieth century avant-garde (such as abstraction, the readymade, Dada, and surrealism) echoed in these years, reconfiguring themselves in relation to emergent discourses around information...
technology, feminism, post-humanism, and cultural studies, to name just a few important intellectual loci. The boundaries of the art object and its contexts of reception transformed radically in these years as artists developed new forms and new models of spectatorship to confront a world that had placed enormous pressure on traditional concepts of humanist subjectivity. Topics include New York School painting, pop art, minimalism, process art, conceptual art, performance, and site-specificity. A broader creative ecosystem inclusive of mass culture, design, dance, music, experimental architecture, and photography will additionally be considered.

ARHA254 Architecture of the 20th Century
The course considers influential works in architecture, its theory and criticism, and ideas for urbanism, mostly in Europe and the United States, from about 1900 to the present. Early parts of the semester focus on the origin and development of the modern movement in Europe to 1940, with attention given to selected American developments before World War II. Later parts of the course deal with Western architecture from 1945 to the present, including later modernist, postmodernist, and deconstructivist work, urbanism and housing, computer-aided design, green buildings, and postwar architecture in Latin America and Japan and in postcolonial India and Africa.

ARHA257 Just Cities: Architectures of Public Encounter
What is "the public," and how has it been conceived, relative to notions of the urban—to the web of ideas, forms, and fantasies constituting "the city"? Can art and architecture play a role in defining the public, or does the public's political and social construction place it outside the scope of specifically aesthetic concerns? This course addresses these and other related questions, positioning art and architecture in their broader cultural and historical contexts. It explores a range of socially charged, experiential, and participatory aesthetic and political practices, characterized by their distinctly public character and decidedly architectural and urban settings. At its core, it is concerned with issues of social justice as they relate to the material spaces of the modern city, and the manner in which those spaces are identified, codified, and made operative in the service of aesthetic, social, and political experience.

This course will be taught by M. Surry Schlabs, Yale School of Architecture.

ARHA258 Contemporary World Architecture
This course is a study of architecture and urban design throughout the world from the 1990s to the present. American topics include public and private development in the "neo-liberal" city in New York, Chicago, Los Angeles, and post-Katrina New Orleans; contemporary museum architecture; sprawl and New Urbanism; and affordable housing, both urban and rural. Major American architects considered include Frank Gehry, Richard Meier, Daniel Libeskind, and Diller Scofidio + Renfro. In Europe, the focus is on contemporary public architecture in Berlin, London, Paris, Valencia, Lisbon, Rome, and Athens, with attention to major works of Sir Norman Foster, Zaha Hadid, Jean Nouvel, Santiago Calatrava, Rem Koolhaas, and Renzo Piano. In China we will study state monuments of the Communist Party in Beijing and issues of preservation and urban development there and in Shanghai. In Japan the recent work of Tadao Ando and Shigeru Ban is a focus, as are selected projects by other architects in Tokyo and Yokohama. Additional lectures will treat airport architecture and sites in India, Jerusalem, Cairo, Guinea, South Africa, Rio di Janeiro, and Quito, Ecuador. The last quarter of the course focuses on green or sustainable architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling and ventilation, timber and rammed-earth techniques, LEEDs certification, wind and geo-exchange energy, green skyscrapers, vertical farming, and zero-carbon cities.

ARHA260 History of Prints
For centuries, printmaking was the only way to reproduce visual images and was vital for the communication of ideas and the spread of artistic styles. This course examines the techniques, production, circulation, and collection of prints in Europe and the United States from the 15th century to the present. In the 19th century, as photography took on the role of reproduction, printmakers reconsidered the artistic possibilities, reemphasizing the artist's touch and turning to renewed political uses. This course supplements lectures with study of the print collection of the Davison Art Center. Topics include aesthetics, connoisseurship, commerce, and technology.

ARHA263 Curatorial Workshop: Images of the Floating World
This course will provide students with practical training in the design and development of a gallery installation in the Davison Art Center (DAC). The theme for this semester is Japanese woodblock prints. We will carry out the many and diverse components involved in creating a gallery installation, from conception to execution, including concept development, catalog and label entries, accessibility, layout, and design. The course will culminate with an installation at the DAC, which will include an accompanying publication as well as permanent online catalog entries for individual prints on the DAC's website.

Images of the floating world, or ukiyo-e, refers to a genre of Japanese art that emerged in the 17th century to depict the pleasures of life of that period—beautiful women, famous kabuki actors, views of famous places, and erotic pictures, among other subject matter. In most cases, these are woodblock prints,
images produced by craftsmen from woodcuts based on originals painted by artists. Because they could be produced quickly, cheaply, and in large numbers, woodblock prints were exceptionally well-suited for the representation of the latest fashions or politics. Ukiyo-e prints made their way to Europe in the 19th century and remain the most popular form of East Asian art in the West. The Davison Art Center has around 600 Japanese woodblock prints in its collection, ranging in date from the 17th to 20th centuries and including works from all the major artists of the Edo period (1615-1868).

ARHA264 Photography and Law: Mugshots, Privacy and Publicity, Obscenity, Copyright, and Evidence
This seminar is designed as an introduction to the major developments in the legal history of photography in transatlantic (US-UK especially) society from the first law cases involving photography in 1840 through to contemporary legal debates about such topics as cameras in the courtroom, sexting, surveillance, photographing police, dash cam and body cam videos, admissibility of photographs as evidence, obscenity and moral boundaries of subject matter, and copyright. A range of secondary historical and theoretical writings will anchor the discussions, but the course will focus primarily on student analysis and interpretation of primary and archival sources (texts of legal cases, law reviews and dissertation, news articles, and documentary and video footage). Students will gain knowledge of how legal history has shaped the history of photography, and new perspectives on the historical origins of contemporary issues in photography and digital imaging. This course should be of interest especially to history majors and non-majors who are interested in law, photography, and culture and will also contribute to the "Visual and Material Studies" module in History.

ARHA267 Contemporary Art in Africa and Diaspora
The main focus of this course is contemporary African art and art of the African diaspora. We begin with a brief survey of painting by African-American artists of the late nineteenth and twentieth century— an artistic flowering accompanied the independence of African nations after 1957. Contemporary African artists must address overriding issues of social and political importance. Their work speaks eloquently to such issues as the desire for peace, the struggle against pollution and climate change. As art becomes increasingly trans-cultural, the art of the African diaspora takes on a new cultural meaning.

ARHA268 When Europe Met Africa: Portugal, Spain, West Africa, 1440–1650
This course looks at Iberian overseas expansion, from the early 15th to the late 17th century. The Portuguese and Spanish sea-borne empires may be termed the first globalization. This course, which focuses on West Africa, is interdisciplinary. It combines art history and history to integrate images and written documents. African artists depicted Europeans, just as European painters and sculptors represented Africans. These images tell us much about how members of one culture viewed the distant peoples with whom they were just coming into contact. The earliest European Renaissance paintings of Africans show them as dignitaries and often as rulers (e.g., "The Adoration of the Magi"). This reflects the presence in Europe of African dignitaries, both secular and religious. At the same time, African sculptors represented Portuguese soldiers and missionaries in ivory carvings, so it is possible for us, 500 years later, to compare these representations.

ARHA275 The American Landscaping in Painting, Literature, Science and the Popular Imagination
In a time of global warming, the issue of mankind's relationship with the natural landscape has never been more pressing. The course will focus on how the field of 19th-century American landscape painting helped stimulate new ideas about our place in the environment—for example spurring the creation of America's National Parks as well as of city parks and greenspaces designed to look natural, such as Central Park in New York. This course will also explore the notion of landscape more largely. What is our personal landscape, and how does it help define our personal identity? How can you detect traces of history in the landscape? In what ways is the American landscape unique, and how did scientists, writers and painters discover and respond to these qualities? How should we respond to the crisis of global warming, which is rapidly transforming and upending our familiar landscape and even placing human existence at risk?

ARHA276 Eccentricity, Gender, and Occidentalism in Edo-Period Art (1615-1868)
This course will explore painting, textiles, prints, and ceramics of Edo-period Japan (1615-1868), with a focus on those produced in Kyoto and Edo (Tokyo). In addition to formal examination of the material and expressive qualities of the works of art under investigation, we will consider how other factors such as location, social background, religious faith, and degree of literacy of Edo-period artists found expression in their work.

ARHA277 Arts of Zen in East Asia
Zen, a school of Buddhism that originated in China and later spread to Japan and Korea, is considered a gateway to East Asian thought and a force that challenges modern materialism. The nature of abstraction, spirituality, and enlightenment can best be approached through the arts associated with this religious school, which include ink painting, calligraphy, ceramics, architecture, and garden design. In this course, we will discuss how the ideas of Zen were elucidated in the visual arts by looking at major works from the 13th through the 20th centuries. We will also examine the ways in which artworks were incorporated in the practice of Zen rituals, especially those related to meditation and the tea ceremony. In addition, we will explore the meanings of pictorial and literary ko' an and how they form visual and textual riddles based on allusion and wordplay. Through a comparative approach, we will analyze the development in the form, style, and iconography of Zen art in East Asia, while tracing the history of Zen Buddhism and its underpinning philosophical concepts related
to enlightenment, emptiness, and beauty. The goal of this course is to form an in-depth appreciation for the arts of Zen in their historical, philosophical, and cultural context.

**ARHA278 Goddesses and Heroines: Images of Women in the Art of China and Taiwan**

This course examines the history of visual representations of women in China and Taiwan from the 12th to the early 20th century. During this period, images of women increasingly appeared in the art of China and Taiwan as guardians and advocates for the weak and the suffering, as well as political or moral allegories. These mythical and legendary figures, such as Guanyin, Mazu, and Nie Xiaoqian, empowered both women and men who were in poverty, peril, or despair. Their heroic and divine images combine traits of feminine qualities highlighted in a male-chauvinistic tradition and symbols of a mega-being beyond any gender-specific definition. By tracing the formation and transformation of images of women in the art of China and Taiwan, this course will explore three themes: (1) the development of female cults in the visual cultures of China and Taiwan; (2) the relationship of feminine representation, human morality, and divine power in Chinese and Taiwanese societies; and (3) the negotiation of political and cultural identities in these societies through the appropriation of female images. The goal of this course is to offer students contextualized knowledge about women’s roles in the arts and visual cultures of China and Taiwan.

**ARHA281 Unearthing Early China: Art and Archaeology**

This course introduces early China by examining major archaeological discoveries from prehistory through the second century CE. We will analyze the formal and material features of early Chinese artifacts from important archaeological excavations at sites such as Liangzhu, Anyang, Zhouyuan, and Mancheng. We will discuss the ways in which these artifacts and archaeological sites demonstrate early Chinese cosmological beliefs and ritual practices, especially notions related to heaven, afterlife, and the transition from ancestor worship to the pursuit of personal welfare in immortality. In addition, we will study the iconography and symbolism of objects found in these archaeological discoveries, which would serve as a foundation for the inception of visual arts in the later periods of Chinese history.

**ARHA282 Art of Dissidents and Recluses: Chinese Literati Painting and Calligraphy**

During the mid-11th century, a group of Chinese dissidents and recluses, known for their independent views on political and social issues, began to explore new forms of artistic expression. The result of their efforts challenged the status quo in Chinese art and eventually developed into a unique tradition, known as literati art. The tradition left a strong imprint in Chinese culture today and its impact can also be felt throughout East Asia, especially Korea and Japan. This course examines this artistic tradition and its legacy in today’s China and East Asia.

**ARHA283 Beyond the Great Wave: Japanese Art and Visual Culture**

Japanese art has been successfully taking, transforming, and incorporating diverse cultural elements form various traditions into its own visual vocabulary. At the same time, the traditional arts of Japan continue to inspire contemporary artists and designers around the world. This course will take an interdisciplinary approach to Japanese art from the ancient period to the present day. We will consider a range of visual media in the context of Japanese literature, history, and religion. We will examine how Japanese art has developed and changed through the ages, and how it has interacted with other artistic traditions. The course will consider both 3D (sculpture and architecture) and 2D (narrative scrolls and screens) media, and will take advantage of the DAC print collection, where we will work with original woodcut prints by artists such as Hokusai.

**ARHA286 Empire and Erotica: Twenty-three Masterworks of Indian Painting**

The history of later Indian painting (16th–19th centuries) is dominated by two distinct stylistic traditions, one flourishing at the court of the Mughal empire, the other at the courts of the various Rajput dynasties that held sway in regions along the periphery of the Mughal domain. The course introduces these two traditions through in-depth consideration of twenty-three representative masterworks, paintings that demand sustained close examination to fully unpack their content, their aesthetic dimensions, and the historical milieu in which they were produced and received. The first half of each session is devoted to a collective “close looking” at one of the key paintings (in the form of a high-resolution digital image), which then leads into broader discussion of related works and larger interpretive themes. Topics to be considered include the
historical connections between the Mughal and Rajput schools; the relationships between painting, poetry, and music; the concerns of natural history painting; and the manner in which both Mughal and Rajput artists appropriated formal conventions from 16th century European prints and paintings. No previous knowledge of Indian art or the methods of art history is assumed or needed to succeed in this course.

ARHA288 Art of No-Return: Modern and Contemporary Chinese Art
With record-breaking auction prices, often in the millions for a single work, modern and contemporary Chinese art has captured international attention over the past two decades. These works, often flamboyant and contentious, reflect the political, social, and cultural changes that China has experienced since the conclusion of its dynastic past in 1911. In this course, we will examine the development of modern and contemporary Chinese art in the context of these changes, from the influx of Western social theories in the 1920s and ‘30s, through the Japanese invasion and the political upheavals during the Mao (1893–1976) and post-Mao eras, to the socio-economic reforms of the 1980s to the present times. We will study leading artists, such as Xu Beihong, Ai Weiwei and Zhang Huan, whose works in painting, sculpture, architecture, installation, and performance art helped to define the new Chinese art. While examining the artworks, we will explore issues related to the tension between Chinese nationalism and Westernization, the adaptation of modern aesthetics and visual technologies, the conflict between state sponsorship and censorship, the changing perception of gender and self-image, the emergence of urban space and consumer culture, and the connection between art and the global economy. The goal of this course is to provide an advanced understanding of Chinese art in the present times.

ARHA290 Mahabharata and Ramayana: The Sanskrit Epics and Indian Visual Culture
This course explores the complex interface between literary texts and visual performance traditions in South Asia, taking as our primary focus the two great Sanskrit epics, Mahabharata and Ramayana. Both epics will be read in abridged translation to provide familiarity with the overall narrative structure and thematic concerns of the two texts, and a number of excerpts from unabridged translations will be studied in detail to arrive at a fuller understanding of the contents of key episodes and of the style and texture of the two works. The first part of the course addresses a series of questions pertaining to the literary versions of the two epics: What is epic as a genre, and what are its social roles? Do the Mahabharata and Ramayana manifest similarities that permit us to identify a distinctive Indian epic type? What are the connections between these epics and the early history of India? Why, and how, did the written texts we have today come to be redacted from bodies of oral tradition? What further transformations did the Sanskrit epics undergo as they were recast in the form of lyric poetry and translated into various vernacular languages such as Hindi, Tamil, and Telugu? In the second part of the course, we will consider the visual manifestations of the Sanskrit epics in the form of classical Sanskrit prints (known literally as “visual poetry”), later dance-drama forms such as Kutiyattam, Yakshagana and Kathakali, contemporary religious pageantry such as the Ram Lila, and, finally, the films of the Hindi- and regional-language cinemas. This course requires no prior knowledge of Indian literature, history, or art and may serve as an effective introduction to the culture and civilization of South Asia.

ARHA291 Duty, Power, Pleasure, Release: Key Themes in Classical Indian Thought
According to thinkers in classical India, the goals of life were fourfold: encompassing the pursuit of social-moral duty (dharma), economic and political power (artha), bodily pleasure (kama), and, finally, release from the endless cycle of birth, death, and rebirth (moksha). The four goals provide a useful key for understanding Indian intellectual history in its classical moment—roughly, the half millennium between the second and seventh centuries. This pivotal era witnessed the definition of new forms of social and political thought, the creation of new types of expressive literature in Sanskrit, and the crystallization of the Hindu religion. In this course, we explore classical Indian thought through a variety of theoretical and literary texts articulating the ideas and values of the age. Most of these works were originally written in Sanskrit, the ancient Indian language of culture and power that served as a lingua franca uniting vast portions of Southern Asia. The emphasis is on close reading and discussion of the translated texts themselves and critical engagement with the ideas and values they present.

ARHA292 Archaeology of Food, Trade, and Power in South India
This course examines patterns of life in premodern South India, focusing on the millennium from about AD 600 to 1600. It explores the persistent practices and institutions that structured social life—agricultural regimes of food production, patterns of local and long-distance trade, and elite discourses of power and authority—as well as historical events and processes that brought change to these patterns. The course capitalizes on South India’s rich array of archaeological evidence, from surface remains and excavated finds to standing architectural monuments, donative inscriptions on stone and copper plates, and various forms of coinage and coin hoards informing on economic life. Specific topics investigated include the articulation of cultural space and landscapes; food, subsistence, and modes of agricultural production; domestic architecture and habitation; trade, markets, and monetary systems; and the roles of religion and ritual in legitimating political power. There is an explicit emphasis on methods and their application, including those of epigraphy (the analysis of inscriptions), numismatics (the materially based study of coinage and monetary systems), surface archaeology (survey, documentation, and analysis of exposed surface remains), and the archaeology of buildings. Many class sessions will be devoted to active discussion and analysis of data.

ARHA296 The Mountains in the History of Art
This course is a comparative study of mountains as artistic inspiration, focusing on the Alps and the Black Forest in Europe, and the Appalachians. In medieval Europe, passes through the Alps and the Black Forest were conduits for the transit of men, goods, and cultural forms. Mountains were not barriers but passageways that linked cultures. In 16th- and 17th-century Europe, Netherlandish artists—Brueghel, Seghers, Ruisdael, Jos de Mompers—first gave full expression to the grandeur, far beyond a human scale, of Alpine scenery.
Gradually, mountains came to be viewed as places of aesthetic beauty and as manifestation of the sublime. Romanticism, in the visual arts, poetry, and music, captures the experience of the Alps as both symbol and physical manifestation of the transcendent. In the paintings of C.D. Friedrich, Constable, and Turner, mountains become the means to express the concept of the Sublime. A deeper understanding of the Sublime may be found in the poetry of Wordsworth and Coleridge. In America, too, mid-19th century painters focused on the mountains. We will study Hudson River School artists represented in CT collections (Church, Cole). The mid-19th century saw the birth of mountaineering as a sport. We will read selections from narratives of climbing expeditions—Leslie Stephen, Mark Twain. After World War One, mountaineering took on a heightened spiritual dimension for men who had survived the horrors of trench warfare. In Austria and Germany, climbing was also identified with nationalism and presumed masculinity. We will look critically at the idea of climbing as masculine ideal. What about women mountaineers—of whom there were many? And what about women artists? We will study the art of the newly rediscovered American landscape painter Martha Wood Belcher. Sadly, climbing was also associated with National Socialism and antisemitism. In fact, however, the development of climbing and skiing in the Alps owes much to Austrian and German Jews. In art, too, during the first decades of the 20th century, mountains were an important source of spiritual inspiration for painters whose work is central to the evolution of modern art.

**ARHA299 African History and Art**

This course traces the art and cultural history of selected West African societies from the 12th century to the early 20th century. Each week we will focus on a single work of art, as that work illuminates social and cultural history. The objects will include royal bronze sculpture from the Kingdom of Benin (16th century); a carved ivory vessel from Guinea or Sierra Leone (16th century); a horned initiation mask made of woven fiber from Senegal (19th century); and a map of the Sahara made in Spain by a Jewish artist in 1375. Each object sheds light on the history, religion, and culture of the region from which it comes.

The trans-Saharan trade was crucial to both North and West Africa. From Morocco came the Muslim religion, as well as Islamic architecture. In 1445 Portuguese mariners arrived on the Atlantic coast of West Africa. From that moment on, West Africa has been part of a global economy. Already by 1500, the growth of Creole Euro-African communities is reflected in artwork.

“Art” is best understood in the specific historical context and the culture in which it develops. To us, removed in space and in time from these African societies, architecture, sculpture, and ritual performance help to illuminate the lives of the people we are studying. Ultimately, we will consider such questions as, Does African art exist? What is “African art”? Who defines art—Africans or Westerners?

**ARHA300 Iberian Expansion and the "Discovery" of Africa in Travel Narratives and Art, 1420–1640**

This seminar is broadly centered on Atlantic history from the early 15th to the middle of the 17th centuries. The course addresses the origins of culture contact between Europe and Africa and the subsequent creation of mixed cultures. We will trace European expansion from the earliest Portuguese sea voyages along the African coast, shortly after 1420, to the opening of maritime commerce to West Africa and the origins of the transatlantic slave trade. We will examine evolving attitudes on the part of both Europeans and African peoples toward each other as documented in travel literature and in artistic representations of Africans by European artists and of Europeans by African sculptors. After Portuguese explorations of Africa began around 1420, the expansion of commerce and the settlement of Europeans, mostly Portuguese, on the West African coast led to a period of extensive métissage (mixture), both cultural and physical, and of remarkable fluidity in attitudes toward Africans. However, by the early 17th century, the Atlantic slave trade had begun to take on important dimensions, setting the stage for the increasingly racist attitudes that would characterize European relations with Africa during the colonial period.

**ARHA310 Muslims, Jews, and Christians: Convivencia in Medieval Iberia**

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as “convivencia.” While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual well-being.

This seminar will explore the works produced by the pluralistic societies of medieval Iberia from the perspectives of art, architecture, history, archaeology, literature, and music. As we study renowned monuments such as the synagogues of Toledo, the Alhambra, and the Way of St. James, we will learn to decode elements such as dress and home decor, food and hygiene, and gardening and agriculture, to expand our picture of culture and lived experience. Finally, we will ask why “convivencia” ultimately failed, and how the medieval Iberian experience can enlighten our own uneasy attempts at building a multicultural, multi-confessional society.

**ARHA322 Landscape and Ideology, 1450–1650**

Landscape, as Denis Cosgrove and others have argued, is a way of seeing the world. As such, it is always a reflection of social systems and cultural practices, as well as an agent that shapes them in turn. By considering ways in which landscape was constructed and instrumentalized through a variety of artistic media—from painting, prints, and maps to villas and gardens—this seminar will consider its historical place in early modern European visual culture while engaging venues through which it continues to be discussed and theorized in the fields of art and architectural history, landscape studies, and cultural geography.

**ARHA339 Modernism and the Total Work of Art**
The term “total work of art” refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner’s ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner’s works and writings provided the dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

**ARHA352 Energy and Modern Architecture, 1850–2015**
This seminar seeks to study the evolution of mechanical systems for heating, ventilating, and cooling in modern architecture from the mid-19th century to the present. The aim is to show how architects, engineers, fabricators, and urban governments worked to develop modern systems of environmental controls, including lighting, both as means of improving the habitability of buildings and health of their occupants. The course will trace the adaptation of technical innovations in these fields to the built environment and how those responsible for it sought to manage energy and other resources, such as funds and labor, to create optimal solutions for different building types, such as factories, theaters, assembly halls, office buildings, laboratories, art museums, libraries, and houses of various kinds, including apartment buildings for higher- and lower-income residents. An important theme will be the relationship of energy systems for individual buildings and urban infrastructure, including water systems, electrical, and other utilities. The last part of the course focuses on contemporary green, or sustainable, architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling, LEED certification, wind and geo-exchange energy, green skyscrapers, vertical farming, and zero carbon cities in the United States, Europe, and Asia.

ARHA375 Heritage, Souvenir, Fetish: Theories and Practices of Collecting
The practice of collecting, stemming from the basic human desire to gather and possess objects, can be found in every society from ancient to modern times. Whether it is objects of cultural heritage, personal souvenirs, or fetish items, the act of collecting constitutes a concrete and tangible statement of ourselves and our relationship to the world while serving as a symbol of the society and times to which we belong. In this seminar, we will examine different traditions of collecting by studying examples from various historical periods in East Asia, Europe, and the United States. These collections range broadly from cultural relics to natural specimens and fine art. We will discuss our case studies in their specific sociocultural context and extract theories and practices commonly shared by them. For each case study, we will analyze the ways in which the collection was formed and organized and how various ideas and concerns were conveyed through collecting. We will explore critical issues, especially those regarding authenticity and forgery, materiality and collecting systems, individual identity and cultural heritage, the relationship between ruins and memory, and that between longing and fetishism. Building on the discussion of these issues, students will also investigate their own case studies. The goal of this seminar is to probe into the nature of collecting and to develop analytical skills to comprehend the significance of a given case.

ARHA379 Sacred Landscapes of Japan
This course examines the religious and visual traditions of Japan through the investigation of sacred sites and their pictorial representation. Such representations of sacred sites were used and viewed in different ways -- as fundraising tools, as advertisements aimed at inspiring viewers to undertake a physical journey to the illustrated site, and also as vehicles for virtual pilgrimage through the representation itself. Often these representations were regarded and treated as sacred in their own right and worshiped as such.

Each week we will immerse ourselves in a sacred site, reading about its history, deities, religious practices, and unique benefits. We will then look at how these were given visual form and the artistic language developed to endow these visual representations with the power to inspire and move contemporary audiences.

ARHA381 Relic and Image: The Archaeology and Social History of Indian Buddhism
This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (1st–3rd century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts and then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha’s relics, pilgrimage to the sites of the Eight Great Events in the Buddha’s life, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodh Gaya (site of the Buddha’s enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

ARHA382 Treasure-Trove: Numismatics and the Archaeology of Money
In many parts of the world, lost coins numbering in the millions lie buried in the ground. Periodically, some of these coins come to light in the course of plowing, digging to repair a water main, or prospecting with metal detectors. These "treasure-trove" finds-also known as coin hoards-provide the archaeologist of money with rich evidence of how money was actually used in pre-modern times. Which coins occur together in a hoard; the numbers in which they occur, and the spatial patterning of their findspots all speak volumes about pre-modern economies, circulation patterns, and beliefs about money and value. In this seminar, we explore the evidence of coins and coin hoards, studying them from numismatic perspectives (the images and legends on a given coin type, metals used, weights, fabric), metrological and denominational perspectives (what coins reveal about systems of weights and denominational structures), and statistical approaches (for example, studying patterns of weight loss as indicators of the velocity of circulation and degree of monetization in a given society). The course focuses primarily on a series of case studies and hands-on, in-class lab sessions based on actual numismatic materials, primarily drawn from ancient and medieval South Asia, and classical Greece and Rome. Specialized techniques introduced may include XRF (X-ray fluorescence) as a means of studying the metallurgical contents of coins; students will also be introduced to the Deccan Coin Hoards GIS database and its potential for spatial and statistical analysis of patterns of money use.

ART STUDIO (ARST)

ARST131 Drawing I
This introduction to drawing gives special attention to the articulation of line, shape, volume, light, gesture, and composition. A variety of media and subjects will be used, including the live model. This course is suitable for both beginners and students with some experience. Individual progress is an important factor in grading. The graded option is recommended. Full classroom attendance is expected.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None
ARST190 Digital Art
This course introduces students to the digital arts: a diverse mix of ideas and techniques brought together by a shared interest in the use of computation and software in creative production. Emphasis is placed on the development of students' ability to problem solve, experiment, and iterate using computers. Assignments and lectures will consider questions of skill, authorship, and information in the digital age while engaging with the history and critique of digital and electronic media in the arts. Students will use Adobe Creative Suite, Rhinoceros 3D, and other tools to complete projects.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Identical With: IDEA190
Prereq: None
ARST233 Studies in Computer-based Modelling and Digital Fabrication
This course operates at the intersection of design and production, introducing students to digital tools critical to contemporary architecture and design. Throughout the semester, students will develop a series of projects that fluidly transition between design, representation, and fabrication with an emphasis on understanding how conceptual design interfaces with material properties. The course will offer a platform for students to research, experiment, and, ultimately, leverage the potential of digital tools toward a wide array of fields and disciplines. Students will be expected to utilize the Digital Design Studio's resources, including 3D printers, laser cutter, and 4-Axis CNC mill, as well as a selection of fabrication equipment housed in the school's metal and wood shops to represent, model, and realize a series of design projects.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Identical With: IDEA233
Prereq: None

**ARST235 Architecture I**

This course is a synthesis of fundamentals of design principles and introduction to design vocabulary, process methodologies, and craft. Emphasis is placed on developing students' ability to examine the relationship between production (the process of creating things) and expression (the conveying of ideas and meaning) involved in the making of architecture. The intent of the course is to develop students' awareness and understanding of the built environment as a result of the investigations, observations, and inquiries generated in the studio.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None

**ARST237 Printmaking**

After a brief introduction to various printmaking media, this course focuses primarily on intaglio. While instruction will be given in many techniques and processes available to the printmaker—etching, aquatint, drypoint, chin-collé, relief—students are expected to adapt these methods to their own particular vision. Students learn to develop a print through a series of proofs with critical consideration as an important input in this progression from idea sketch to final edition. Extensive use is made of the Davison Art Center print collection.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: ARST131

**ARST239 Painting I**

This introductory-level course in painting (oils) emphasizes work from observation and stresses the fundamentals of formal structure: color, paint manipulation, composition, and scale. Students will address conceptual problems that will allow them to begin to develop an understanding of the power of visual images to convey ideas and expressions. The course will include individual and group critiques and museum trips.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: ARST131

**ARST242 Typography**

The fundamentals of fonts, letter forms, typographic design, elements of the book, and an introduction to contemporary graphic design are considered through a progression of theoretical exercises. Once working knowledge of the typeshop and InDesign (software for book design) is acquired, each student conceives, designs, and prints: first, a broadside, then a book. Use is made of the collection in the Davison Rare Book Room at Olin Library. While NOT a required sequence, this course is strongly recommended before taking ARST243.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None

**ARST243 Graphic Design**

This studio course is an introduction to methods for visual communication—thinking and making through text, image, and the interaction of the two. A series of exercises and long-term projects will engage with the many facets of graphic design—typography, image generation, systems, craft, research, and language. Occasional lectures, readings, and presentations will provide historical context and precedent for contemporary graphic design. Through iterative exploration, students will develop a comfort with fundamental graphic design principles and tools.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None

**ARST244 Letterpress and Book Arts**

This course focuses on the editioned self-published artists' book and the role of printed matter within that form. Students are introduced to various methods available to artists for self-publishing. Skills covered range from the use of the printing press, moveable type, and hands-on bookbinding, to digital design and the contracting of press-ready work to professional printing outfits. Through the production of ephemera, broadsides, small editions, and bound volumes, students will learn the rudiments of letterpress and book arts. Class prompts and assignments will call on students to use these media to express, transmit, and archive their personal artistic vision.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None

**ARST245 Sculpture I**

An introduction to seeing, thinking, and working in three dimensions, the class will examine three-dimensional space, form, materials, and the associations they elicit. Through the sculptural processes of casting, carving, and construction in a variety of media, students will develop and communicate a personal vision in response to class assignments.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None

**ARST251 Photography I**

This is a comprehensive introductory course to the methods and aesthetics of film-based and digital photography. The topics of study will include evaluating negatives and darkroom prints, developing film, Lightroom and Photoshop software, inkjet printing, reading light, visualization, photographic design, and history of photography.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: None

**ARST253 Digital Photography I**

This course is an extensive examination into the methods and aesthetics of digital photography. The topics of study will include DSLR camera operation, Adobe Photoshop, Adobe Bridge, and printing as well as, most importantly, a focus on photography as a fine art through both a historical and contemporary viewpoint.

Offering: Host
Grading: A-F

Prereq: None

**ARST260 Introduction to Sumi-e Painting**

We will learn basic technique and composition of traditional Japanese sumi-e painting. Sumi-e is a style of black-and-white calligraphic ink painting that...
offered by students with basic skills cumulatively leading to application in individual or collaborative projects. Through readings, discussions, and design of individual and collaborative work, students are expected to develop and articulate a theoretical basis for conceptualizing and discussing works presented in class, as well as their own creative projects. Students will maintain rigorous documentation of their process and progress in this course using blogs. No previous skills or software experience is required.

Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Identical With: CEAS461
Prereq: None

ARST283 Physical Computing in Art and Design
This course aims to extend students' notions of the potential for the use of computers in the artist's studio by exploring opportunities in technology and art beyond familiar mouse, keyboard, and screen interactions. Moving away from these restrictions, students will learn basic electronics and programming using a microcontroller. The size of a postage stamp, these single-chip computers will provide students a window into the creative uses of computers in interactive, kinetic, and installation art. Combining microcontrollers with sensors placed on bodies, in physical objects, or in the environment, weekly projects will provide students with basic skills cumulatively leading to application in individual or collaborative projects. Through readings, discussions, and design of individual and collaborative work, students are expected to develop and articulate a theoretical basis for conceptualizing and discussing works presented in class, as well as their own creative projects. Students will maintain rigorous documentation of their process and progress in this course using blogs. No previous skills or software experience is required.

Identical With: IDEA283
Prereq: ARST131

ARST285 Generative Art, Computational Media, and Creative Coding
In this course, students will learn to use computers and software as platforms for creative expression. Following a series of intensive coding workshops, students will learn to execute projects involving chance operations, rule-based systems, simulated autonomy, and interactivity. These projects will emerge as animations, drawings, prints, and screen-based artworks. Students will work primarily with the creative coding applications Processing and Grasshopper. These are coding environments designed by artists to facilitate the use of data, mathematics, and computation in visual practice. In addition to learning to program, students will translate their code into physical artifacts using computer-driven hardware such as a CNC router, a laser cutter, and Arduinos. Additionally, students will be exposed to the history and practice of generative and computational art through lectures and student presentations. This conceptual work will emphasize the formal and critical paradigms of computational media and design beginning in the 1960s.

Gen Ed Area: HA-ART
Identical With: CIS285
Prereq: ARST131

ARST323 Topics in Studio Art: Information
Artists in all media have historically responded to common, formal, and ideological motivations. These motivations encompass the very fabric of a liberal arts education. This course is intended to develop such a conversation among the various studio art disciplines as the foundation for making art. The course centers on a topic determined by the instructor. The class will function as a study group (of painters, sculptors, photographers, drawers, printmakers, architects and so on) that tackles the topic through the act of art-making. The topic will be introduced through readings and visual precedents, and through discussion we will determine means to respond as artists, each student in his or her own medium. These individual responses will then be analyzed in group critiques. Later in the semester, students will expand their investigations to include studio disciplines other than their own.

Topic for 2018: INFORMATION
What is information? How does it pertain to art? How does information proliferate? How is it organized? How does it shape our thought and action? How reliable is information? These questions and more will be explored through artistic production and discussion. This course is offered as an elective for studio arts majors but can, at the discretion of the instructor, be offered to majors from other departments with adequate experience in visual arts. For admission to the class, students are expected to be capable of self-expression in at least one visual art medium.

ARST332 Drawing II
This class builds upon the course content covered in Drawing I (ARST131). As we continue to draw from observation, topics will include an in-depth exploration of the human figure and an introduction to color. This course also introduces a concept-based approach to drawing that explores narrative and content. While using brainstorming and ideation techniques, we will experiment with various marking systems, found imagery, processes, and spatial solutions. Further, the development of individual style and studio methodology is an aim in this course.

Grading: OPT
Credits: 1.00
Gen Ed Area: HA-ART
Prereq: ARST131

ARST336 Architecture II
This course is a second-level architecture studio whose focus will be a single, intensive research and design project. As the semester progresses, additional design, representation, and production tools will be introduced and used for developing work for the project, from graphics software to the laser cutter. Additional information about the architecture studio at Wesleyan and its past projects may be found at: http://www.facebook.com/wesnorthstudio

Offering: Host
Grading: A-F
Credits: 1.50  
Gen Ed Area: HA-ART  
Prereq: ARST235

**ARST338 Printmaking II: Relief Printmaking**  
This printmaking course focuses on the relief print. Through an exploration of techniques (subtractive and additive) and materials (e.g., cardboard, wood, linoleum, plastic) students will gain experience in different strategies for making a print. While instruction will be given in many processes available to the printmaker—cutting, inking, paper handling, and printing—students are expected to adapt these methods to their own particular vision. Students learn to develop a print through a series of proofs with critical feedback as important input in the progression from idea sketch to final edition. Extensive use is made of the Davison Art Center print collection. Printmaking I is not a prerequisite for this course.

Offering: Host  
Grading: OPT  
Credits: 1.00  
Gen Ed Area: HA-ART  
Prereq: ARST131

**ARST340 Painting II: The Shifting Landscapes of the Mind, Nature, and History**  
Since the beginning of time, people have created art to document events in nature and society and to convey ideas and emotions as they responded to shifting conditions in the world—be they man-made or natural. Before written language, visual expressions of morality, concepts of the future, and abstract thought in the sciences and religion were represented in painting. Whenever dramatic shifts were experienced in society, painting documented them and commented on them. In this class, the skills and knowledge gained in ARST239 will serve as the foundation upon which students will be challenged to become technically proficient while they explore the topic of shifting landscapes or the shifting viewpoints of the mind, history, and nature. The themes, prompts, and concerns addressed in this course will allow for any formal, conceptual, or stylistic form of expression to resolve them—each student will be working differently. The goal of this class is for students to become fluent with the medium and make aesthetic choices that can best convey their ideas about and responses to each prompt. Lectures and meaningful class discussions will provide information and feedback about historical and contemporary issues and the plans for work. Individual and group critiques as well as museum and gallery trips will complement class work.

Offering: Host  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: HA-ART  
Prereq: (ARST 260) is a prerequisite. In this course, foundation techniques will be expanded upon. We will re-examine traditional techniques and composition, and there will be exploration of new contemporary techniques. Students in this course will create images using various mediums and provide a historical context, while presentations by visiting artists and trips to galleries and museums will introduce students to contemporary work in the medium. Emphasis will be placed on the weekly discussions of students' work.

Offering: Host  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: HA-ART  
Prereq: None

**ARST352 Photography II**  
This is an intensive course intended for students with a solid foundation in photography. The students can choose to work in either film-based or digital media while developing their own unique voice. Topics will include medium-format film cameras, fiber paper, virtual drum scanning, large-format digital printing, and editing and sequencing images. Lectures and class discussions will provide a historical context, while presentations by visiting artists and trips to galleries and museums will introduce students to contemporary work in the medium. Emphasis will be placed on the weekly discussions of students’ work.

Offering: Host  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: HA-ART  
Prereq: None

**ARST353 Photography III - Documentary Practices**  
This is an intensive course that will provide students with a historical, theoretical, and ethical overview associated with documentary photographic practice. It is intended for advanced students that have taken Photography I (ARST 251) or Photography II (ARST 352). Assignments, readings, and discussions will be geared toward the development of a cohesive body of work with focus on research and development of a concept, editing and sequencing of photographs, and fine printing. This course will serve as preparation for thesis work undertaken during the senior year and is recommended for prospective or current majors.

Offering: Host  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: HA-ART  
Prereq: ARST251 OR ARST352

**ARST361 Monotype Printmaking**  
The monotype print is a free form of printmaking more akin to painting or drawing than to traditional printmaking. It is also a process in which the artist encounters fewer technical difficulties than in other traditional printmaking methods. Students in this course will create images using various mediums and methods. We are going to use different material like wood, plexiglass, paper, and textiles. Also, we may use laser cutting or digital printing, to combine with drawing or painting.

The goal of this course is not perfection of technique, but rather students experimenting with material and technique, to produce their own visual images.

ARST484 Data, Art, and Visual Communication
This course looks at the ways the digital arts--broadly defined--can be used to explore the intersections of research, data, design, and art. Following a creative software ”bootcamp,” students will execute projects intended to help them generate, manipulate, and remix data for the purposes of visual communication and art. Students will use Adobe Creative Suite and Processing, an open source programming language, and integrated development environment (IDE) built for electronic arts, new media, and visual design. In addition to working in the studio, seminars, readings, and student presentations will explore the role of data visualization, ”big data,” and the web in culture and society today. No prior software knowledge or coding skills are required. Students working in STEM, humanities, and social sciences are encouraged to enroll.
Astronomy (ASTR)

ASTR101 The Beginnings of Astronomy

The Greeks made many contributions to our understanding of the universe. We will study the Greek contributions to the development of astrophysics and explore the role that they played in the Copernican revolution, during which the true nature of the earth as a planet was first recognized. We will study the geology and comets threatening the earth, travel through space and time, and life in the universe. Through lecture, discussion, and laboratory exercises, we will examine selected topics within the solar system, galaxy, local universe, and cosmology, the formation and evolution of galaxies, the big bang, and the ultimate fate of the universe. Occasional evening sessions will provide the opportunity to observe celestial objects through Wesleyan's telescopes.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Prereq: None

ASTR103 The Planets

More than 100 planets are now known in the universe, eight of which circle the sun. NASA missions and improved telescopes and techniques have greatly increased our knowledge of them and our understanding of their structure and evolution. In this course, we study those eight planets, beginning with the pivotal role that they played in the Copernican revolution, during which the true nature of the earth as a planet was first recognized. We will study the geology of the earth in some detail and apply this knowledge to our closest planetary neighbors—the moon, Venus, and Mars. This is followed by a discussion of the giant planets and their moons and rings. We will finish the discussion of the solar system with an examination of planetary building blocks—meteorites, comets, and asteroids. Additional topics covered in the course include spacecraft exploration, extrasolar planetary systems, the formation of planets, life in the universe, and the search for extraterrestrial intelligence.

Offering: Crosslisting
Grading: A-F
Credits: 1.25
Gen Ed Area: NSM-ASTR
Identical With: E&ES151
Prereq: None

ASTR105 Exploring the Cosmos

This introductory course for non-science majors unveils the universe and how we have come to understand our place in it. We will touch on a full range of astronomical topics, including the mechanics of our solar system, the discovery of planets around other stars, the stellar life cycle, the formation and evolution of galaxies, the big bang, and the ultimate fate of the universe. Occasional evening sessions will provide the opportunity to observe celestial objects through Wesleyan's telescopes.

Offering: Host

Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Prereq: None

ASTR107 The Universe

This course focuses on the modern scientific conception of the universe, including its composition, size, age, and evolution. We begin with the history of astronomy, tracing the development of thought that led ultimately to the big bang theory. This is followed by a closer look at the primary constituent of the universe—galaxies. We end with consideration of the origin and ultimate fate of the universe.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Prereq: None

ASTR108 Conceptual Astronomy: Science Fact vs. Science Fiction

Our conceptual understanding of the world around us is shaped by our experiences, often in subtle ways. In this media-dominated world, the public's predominant exposure to science comes from science fiction in popular culture, especially TV and movies. In this course, we will examine the ways in which popular culture has influenced our collective knowledge about astronomy: the good, the bad, and the really bad. Wide-ranging topics will include asteroids and comets threatening the earth, travel through space and time, and life in the universe. Through lecture, discussion, and laboratory exercises, we will examine these topics through the lens of science to expose the reality of the universe that is our home.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Prereq: None

ASTR111 The Dark Side of the Universe

The physical world we experience is one of normal matter, energy, and--if one looks up at night--stars. But on larger scales, the universe has an exotic and much-less-well-understood side dominated by things we call dark matter, dark energy, and black holes. What are these mysterious components, and what is the relationship between them and the world that is familiar to us? The answers lie at the frontier of modern astrophysics. In this course, we explore the evidence for the existence of these dark components and the current debates regarding their nature and origin. In different ways, each of them has a vital role in the evolution of the universe and its ultimate fate.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Prereq: None

ASTR155 Introduction to Astrophysics

The fundamentals of astronomy will be covered. This course serves as an introduction to the subject for potential majors and as a survey for nonmajors who have a good high school preparation in math and science. We will cover selected topics within the solar system, galaxy, local universe, and cosmology, including the big bang theory of the origin of the universe and the discovery of planets around other stars.

Offering: Host
Grading: OPT
Credits: 1.25
Gen Ed Area: NSM-ASTR
Prereq: None
ASTR211 Observational Astronomy
This course introduces the techniques of observational astronomy. Students will acquire a basic knowledge of the sky and become familiar with the use of Van Vleck Observatory’s telescopes and instruments. Acquisition and analysis of astronomical data via modern techniques are stressed. Topics include celestial coordinates, time, telescopes and optics, astronomical imaging, and photometry. Some basic computer and statistical analysis skills are developed as well. The concepts discussed in lecture are illustrated through observing projects and computer exercises.
Offering: Host
Grading: A-F
Credits: 1.50
Gen Ed Area: NSM-ASTR
Prereq: ASTR108 OR ASTR111 OR ASTR105 OR ASTR107 OR [E&ES151 or ASTR103] OR ASTR155

ASTR221 Galactic Astronomy
The fundamentals of astrophysics are applied to the galaxy and objects therein. Topics include the interstellar medium, stellar populations, galactic structure, formation, and evolution.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Identical With: ASTR521
Prereq: (ASTR155 AND ASTR211)

ASTR222 Modern Observational Techniques
This course reviews the practices of modern observational astronomy, focusing primarily on techniques employed in the optical and x-ray bands. Topics will include a description of the use of digital detectors for imaging, photometry, and spectroscopy in a wide variety of applications. Data acquisition, image processing, and data analysis methods will be discussed. In particular, students will gain hands-on experience with the analysis of data obtained from both ground- and satellite-based observatories. An introduction to the relevant error analysis methods is included. Students will also become familiar with the fundamental techniques that will be necessary when "big data" projects like LSST come on line in the near future: database querying, metadata handling, and modern programming techniques.
Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: NSM-ASTR
Identical With: ASTR522
Prereq: ASTR211

ASTR224 Exoplanets: Formation, Detection, and Characterization
Our ability to place the earth into a cosmic context dramatically improved in the past decades with the discovery of planets around other stars (exoplanets). The study of exoplanets has quickly become a dominant field in astronomy. This course will focus on the fundamentals of exoplanet formation, detection, and characterization (interiors and atmospheres) based on astronomical observables. We will also discuss the assessment of habitability for Earth-like exoplanets and the prospects for the detection of biosignatures.

Identical With: ASTR524
Prereq: (ASTR155 AND ASTR211)

ASTR231 Stellar Structure and Evolution
As the principal source of light in galaxies today and as drivers of chemical evolution, stars play a critical role in the universe. It is important to understand their structure and evolution. Fortunately, we have a fairly well-developed and -tested theory of stellar structure covering both their interiors and atmospheres. In this course, we will provide an introduction to that theory and examine its key results, including a basic description of how stars evolve.

Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Identical With: ASTR531
Prereq: (PHYS213 AND PHYS214 AND ASTR155 AND ASTR211)

ASTR232 Galaxies, Quasars, and Cosmology
This course introduces modern extragalactic astronomy, blending established practices in the field and important recent discoveries. Three major themes will be developed. First, the basics of Newtonian and relativistic cosmologies will be discussed, including modern determinations of the Hubble Law and the observations that have led to the currently favored cosmological model. Next, the universe of galaxies will be investigated: their constituents, structure and kinematics, and multiwavelength properties. Finally, the nature of galactic nuclei will be explored, including the observational consequences of black-hole accretion and the coordinated growth of galaxies and their central black holes. Outstanding research questions related to the topics covered will be highlighted throughout the course.

ASTR521 Galactic Astronomy
The fundamentals of astrophysics are applied to the galaxy and objects therein. Topics include the interstellar medium, stellar populations, galactic structure, formation, and evolution.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ASTR
Identical With: ASTR221
Prereq: (ASTR155 AND ASTR211)

ASTR522 Modern Observational Techniques
This course reviews the practices of modern observational astronomy, focusing primarily on techniques employed in the optical and x-ray bands. Topics will include a description of the use of digital detectors for imaging, photometry, and spectroscopy in a wide variety of applications. Data acquisition, image...
processing, and data analysis methods will be discussed. In particular, students will gain hands-on experience with the analysis of data obtained from both ground- and satellite-based observatories. An introduction to the relevant error analysis methods is included. Students will also become familiar with the fundamental techniques that will be necessary when "big data" projects like LSST come on line in the near future: database querying, metadata handling, and modern programming techniques.

BIOL106 The Biology of Sex

This course is featured as a general education course within the Department of Biology. Serving to complement courses currently offered within biology that only touch upon the subject of sex, this course will dive into specifics regarding sexual behavior and will serve to highlight new discoveries that have been facilitated by novel scientific techniques and approaches. As we study the biology of sex in the animal world, it becomes apparent that sex is achieved in a multitude of ways, many appearing rather bizarre and flamboyant. Yet under these guises, animals are still able to mate and reproduce. Sex is often defined according to sexual reproduction, whereby two individuals that are male and female mate and have offspring. However, many organisms engage in asexual reproduction and/or a combination of the two reproductive strategies. Reproductive anatomy and behavior will be addressed as we explore a variety of organisms, ranging from marine clown fish and their "sex changes" to the (female) marmoset monkey that can give birth to twin male chimeras. As an organism pursues sex, what are the mating strategies? What are the chemicals of sex (pheromones and hormones)? By examining the biology of sex in detail, we will also debate age-old topics such as whether sexual reproduction is sexist, the competing strategies of males and females, and whether human cultural displays are yet another way to decipher quality in a potential mate.
The study of primate social and mating systems can provide insight into human reproductive and contraceptive technologies, and the ethics raised by reproductive issues. This course will cover basic human reproductive biology, new and future technologies, and the ethics raised by reproductive issues.

Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Prereq: None

**BIOL118 Reproduction in the 21st Century**
This course will explore various interesting problems in natural history, using short writing assignments to build familiarity with concepts of organismic evolution. We will commence with the early pioneers in ethology who were the first to describe the behavioral repertoire of a single species and progress onto the more current, comparative approach, in which two animals are compared for a more fine-tuned analysis. Biological jargon will be defined as original research is discussed.

Offering: Host

Identical With: PHIL118, SISP118, FGSS118
Prereq: None

**BIOL137 Writing About Evolution**
This course will focus on the major concepts in the field of animal behavior. We will discuss the selection pressures that shape animal behavior and whether the study of primate social and mating systems can provide insight into human behavior. Other questions include, Why do certain animal species exhibit altruistic behavior and others do not? What are the limiting resources for male and female animals, and why do they behave so differently? This is but a sampling of the subjects to be covered in a course that is specifically designed for students to gain a clearer understanding of the mechanisms that drive the natural world around them. We will commence with the early pioneers in ethology who were the first to describe the behavioral repertoire of a single species and progress onto the more current, comparative approach, in which two animals are compared for a more fine-tuned analysis. Biological jargon will be defined as original research is discussed.

**BIOL145F Primate Behavior: The Real Monkey Business (FYS)**
This course will examine the full spectrum of the primate order. How has evolution shaped these different primate species, and what underlying mechanisms have fueled their development? We will discuss primate ancestry, primate environments, and primate competition, all factors that mediate primate behavior. In addition, we will take the lessons learned from primate studies to determine how humans might use this knowledge toward the preservation and conservation of their nonhuman relatives.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-BIOL
Prereq: None

**BIOL149 Neuroethology: Sensory Basis of Animal Orientation and Navigation**
This course is about the sensory and neuronal processes underlying the ability of animals to orient in and move through their environments. We will consider the basic functions of sensory and nervous systems that underlie the remarkable abilities of animals to orient themselves in personal space, move through their home range, and move through the world in long-distance migrations and in homing. Animals from invertebrates through fish, birds, and mammals will be considered. The format of the course will be seminar/discussion and some lectures with heavy student participation. The course is intended for first-year students with high school-level courses in at least two of the following: biology, chemistry, or physics.

Offering: Crosslisting
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-NSB
Identical With: NS&B149
Prereq: None

**BIOL155 Tiny Organisms with a Big Effect: The Microbiome**
With the advent of advanced sequencing technology, we are able to characterize the microflora that lives on and inside of multicellular organisms, including humans. It follows that there are still many unknowns with respect to the function and dynamics of relationships between bacterial communities and their hosts. These bacterial communities, colonizing humans and other organisms with millions of microbes, have captured the interest of the public. Popular news outlets have made the disparate claims that the right human microbiome can act as a panacea and the wrong microbiome is such a calamity that it can destroy an individual's health. This course will look at the true nature of the microbiome, to the extent that current research has revealed. We will discuss both normal and abnormal bacterial community compositions and any related disease states. Similarly, we will cover changes in microbiome composition over time and with respect to host development. In class, we will also consider the microorganisms of other organisms and how the presence and composition of the microbiome relates to disease states and/or life history.

Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: MB&B155
Prereq: None

**BIOL173 Global Change and Infectious Disease**
Among the most insidious effects of global change are the expanded geographical ranges and increased transmission of infectious diseases. Global warming is bringing tropical diseases, such as malaria, poleward from the tropics; the extreme weather events of a changed world are leading to outbreaks of zoonotic diseases, such as those caused by Hantaviruses; and nonclimatic anthropogenic factors, such as forest fragmentation, are taking their toll on...
human health, for example, by increasing the incidence of Lyme disease. This course will cover the evidence that global change has increased the geographical ranges and rates of incidence of infectious diseases in humans, in agricultural animals and plants, and in endangered species. We will explore how interactions between different anthropogenic effects (for example, habitat loss and pollution) exacerbate the effects of global warming on infectious diseases. We will analyze and critique projections for future changes in geographic ranges in infectious diseases. Finally, we will cover how revolutions in bioinformatics will increase the resolution of tracking and predicting responses of disease organisms to global change. The course has no formal prerequisites and will introduce material from ecology and microbiology, as needed, to allow students to read and interpret the recent literature on global change and infectious disease.

BIOL181 Principles of Biology I: Cell Biology and Molecular Basis of Heredity
This course presents an exploration of the contemporary view of the cell and an introduction to the molecules and mechanisms of genetics and gene function. The course will have two major themes. First, we will focus on the central dogma of molecular biology, describing the process of information transfer from genetic code in DNA through protein synthesis and function. Topics include DNA replication and repair, chromosome dynamics, RNA transcription, protein translation, gene regulation, and genomics. Second, we will focus on cell theory and the underlying molecular mechanisms of cellular activity, including cell signaling, energetics, cell motility, and cell cycling. Lectures will stress the experimental basis of conclusions presented and highlight important details and major themes. The course will also emphasize problem solving approaches in cell and molecular biology.

Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-MBB
Identical With: MB&B181
Prereq: None

BIOL182 Principles of Biology II
This course covers biological principles at tissue, organ, organismic, and population levels of organization. We will review how animals regulate their internal environment to control or adapt to changes in temperature, salt levels, nutrients, levels of oxygen and carbon dioxide, and the presence of infectious agents. We will examine the molecular, cellular, and tissue mechanisms that underlie the hormonal, neuronal, and behavioral processes that underlie these responses. We will learn how these systems develop in the embryo. At the population level, we will review evidence for evolution, including the tenets of Darwin's theory of evolution by natural selection. We will also discuss the nature and importance of variation among organisms, stochastic processes in evolution, and modern theories of speciation and macroevolution. Finally, the course addresses ecological aspects of population biology, including patterns and processes that inform the distribution and abundance of biodiversity, population growth, organisms' responses to environmental variation, and interactions among species. Each of the topics of the course is explored from a comparative viewpoint to recognize common principles as well as variations among organisms that indicate evolutionary adaptation to different environments and niches.

Offering: Host
Grading: OPT

Gen Ed Area: NSM-BIOL
Identical With: MB&B182
Prereq: [MB&B181 or BIOL181]

BIOL186 Introduction to the Biology of Nutrition and Impact on Human Health
This course will introduce students to the concepts of nutrition. It will cover the biology of the different food groups that make a balanced diet (carbohydrates, fats, proteins) and how our bodies obtain energy and important molecules, such as vitamins, from our food. The course will also cover the relevant anatomy involved in digestion and excretion. Other topics such as the effects of food production on the environment, fad diets, and disease states will also be studied, along with the latest hot topics in the news.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Prereq: None

BIOL191 Principles of Biology I–Laboratory
This laboratory course, to be taken concurrently with MB&B181 or BIOL181, provides direct experience with techniques used in cell biology and molecular biology. These include polymerase chain reaction (PCR), electrophoresis, enzyme assays, microscopy, and spectrophotometry. The lab course is a chance to learn these key techniques firsthand.

Offering: Crosslisting
Grading: Cr/U
Credits: 0.50
Gen Ed Area: NSM-MBB
Identical With: MB&B191
Prereq: None

BIOL192 Principles of Biology II–Laboratory
This laboratory course, designed to be taken concurrently with BIOL182 or MB&B182, will introduce students to experimental design, laboratory methods, data analysis, and empirical approaches to developmental biology, physiology, ecology, and evolution. Laboratory exercises use the techniques of electrophysiology, microscopy, computer simulations, and analyses of DNA sequence data. Some exercises will include exploration of physiological processes in living animals.

Offering: Host
Grading: Cr/U
Credits: 0.50
Gen Ed Area: NSM-BIOL
Identical With: MB&B192
Prereq: [MB&B191 or BIOL191]

BIOL194 Principles of Biology II: Advanced Topics
This course provides an optional supplement to the introductory course in physiology, development, evolution, and ecology (BIOL182, which should be taken concurrently). It is designed for highly motivated biology students who seek to enrich their understanding by engaging with current research in an intensive seminar setting. Students in BIOL194 will read and discuss recent journal articles that probe in greater depth some of the subjects covered in BIOL182. Weekly meetings will consist of a short lecture by the professor followed by group discussion of the readings.

Offering: Host
Grading: Cr/U
Credits: 0.25
Gen Ed Area: NSM-BIOL
Identical With: MB&B194
Prereq: BIOL181 or MB&B181

BIOL197 Introduction to Environmental Studies
This interdisciplinary study of human interactions with the environment and the implications for the quality of life examines the technical and social causes of environmental degradation at local and global scales, along with the potential for developing policies and philosophies that are the basis of a sustainable society. This will include an introduction to ecosystems, climatic and geochemical
cycles, and the use of biotic and abiotic resources over time. It includes the relationship of societies and the environment from prehistoric times to the present. Interrelationships, feedback loops, cycles, and linkages within and among social, economic, governmental, cultural, and scientific components of environmental issues will be emphasized.

Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-EEES
Identical With: ENV5197, E&ES197
Prereq: None

BIOL208 Molecular Biology
This course is a comprehensive survey of the molecules and molecular mechanisms underlying biological processes. It will focus on the cornerstone biological processes of genome replication, gene expression, and protein function. The major biomacromolecules—DNA, RNA, and proteins—will be analyzed to emphasize the principles that define their structure and function. We will also consider how these components interact in larger networks within cells to permit processing of external and internal information during development and discuss how these processes become perturbed in disease states.

Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-MBB
Identical With: MB&B208

BIOL210 Genomics: Modern Genetics, Bioinformatics, and the Human Genome Project
Genetics has provided a foundation for modern biology. We will explore the classical genetics and go on to consider how genomics has transformed this field. This course is intended to introduce students to the fields of genetics and genomics, which encompass modern molecular genetics, bioinformatics, and the structure, function, and evolution of genomes. We will discuss important new areas of research that have emerged from the genome projects, such as epigenetics, polymorphisms, transgenics, systems biology, stem cell research, and disease mapping. Students will also discuss bioethical issues we face in this new postgenome era.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: MB&B210
Prereq: ([MB&B181 or BIOL181])

BIOL212 Principles and Mechanisms of Cell Biology
The cell is the smallest structural and functional unit of an organism. Understanding the molecular basis for its behavior and function is critical to understand biological function at all levels, from molecular to organismic. The primary goal of this course is to understand how cells function within the context of the multicellular organism or tissue—an environment that cells regulate as well as respond to. We also focus on the process of scientific discovery in the field of cell biology—how do we know what we know? Hence whilst the textbook will provide background reading, we will also discuss original research in class. We will cover cell and organelle structure and function, trafficking, cell adhesion and motility, proliferation, signal transduction, and cell differentiation, and consider how these processes are integrated to generate coherent cell behaviors, or go awry in disease.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-MBB
Identical With: MB&B212

BIOL213 Behavioral Neurobiology
This course will introduce the concepts and contemporary research in the field of neuroscience and behavior. The course is intended for prospective neuroscience and behavior majors (for whom it is required) and for biology and psychology majors who wish a broad introduction to neuroscience. The initial few weeks will be devoted to fundamental concepts of neuroanatomy and neurophysiology. Subsequent classes will deal in-depth with fundamental problems of nervous system function and the neural basis of behavior, including neurotransmitter systems; organization of the visual system and visual perception; the control of movement; neurological and neuropsychiatric disorders; the neuroendocrine system; control of autonomic behaviors such as feeding, sleep, and temperature regulation; the stress response; and language, learning, and memory. Experimental results from a variety of species, including humans, will be considered.

Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-NSB
Identical With: PSYC240, NS&B213
Prereq: None

BIOL214 MacroEvolution, Pattern and Process
This course covers current areas of research in evolutionary biology. Topics include the evidence for evolution, the nature of variation, adaptive and random evolutionary processes in natural populations, mechanisms of speciation, origin of major groups, reconstruction of the history of life through comparative analysis of morphological and DNA sequence data, evolutionary developmental biology, coevolution of plant-animal interactions, and the application of evolutionary principles to conservation biology.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: [BIOL182 or MB&B182]

BIOL215 Evolution in Human-Altered Environments
Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: BIOL515
Prereq: [BIOL182 or MB&B182]

BIOL216 Ecology
Ecology is the scientific study of interactions between organisms and their environment, both biotic and abiotic. We will look at how these interactions shape fundamental characteristics of populations, communities, and ecosystems. Topics will include predation, competition, symbiosis, and effects of stress and resource limitation in diverse environments. We will cover important consequences of interactions such as coevolution, population outbreaks, ecological coexistence, patterns of biodiversity, ecological succession, species invasions, food web dynamics, nutrient and energy cycling, variation in ecosystem goods and services, and global change.
Offering: Host  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: NSM-BIOL  
Identical With: ENV5216  
Prereq: [BIOL182 or MB&B182]

BIOL218 Developmental Biology  
This course covers the mechanisms of development at the molecular, cellular, and organizational levels. Special attention will be paid to the process of scientific discovery: the experiments. Students will read and discuss both original research articles and the secondary review literature. We will discuss ethical and medical considerations for some of the topics covered.  
Offering: Host  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: NSM-BIOL  
Prereq: [BIOL182 or MB&B182]

BIOL220 Conservation Biology  
This course will focus on the biology of conservation rather than cultural aspects of conservation. However, conservation issues will be placed in the context of ethics, economics, and politics. We will cover the fundamental processes that threaten wild populations, structure ecological communities, and determine the functioning of ecosystems. From this basis, we will explore important conservation issues such as habitat loss and alteration, overharvesting, food web alteration, invasive species, and climate change. We will use readings from the primary literature and field projects to learn about current research methods used in conservation biology.  
Offering: Host  
Grading: A-F

Prereq: [BIOL182 or MB&B182]

BIOL224 Hormones, Brain, and Behavior  
Hormones coordinate the anatomical, physiological, and behavioral changes necessary for developmental, seasonal, and diurnal transition in animals. These molecules have profound effects on the development of the brain and on adult brain function. How do hormones orchestrate brain assembly and the expression of specific behaviors? How do behavior, social context, and the environment influence hormone secretion? This course will provide a critical survey of our understanding of the relationship between endocrinology, the brain, and behavior in a variety of animal systems. Select topics include insect metamorphosis; sexual differentiation of the vertebrate brain and behavior; reproductive and aggressive behavior in birds, lizards, and rodents; song learning and song production in birds; and the effects of hormones on sexual behavior and cognitive function in primates, including humans. The exploration of a variety of systems will provide students with an appreciation of the ways in which the relationships between hormones and behavior vary across species, as well as the extent to which these relationships are conserved.

Prereq: [NS&B213 or BIOL213 or PSYC240] OR [BIOL182 or MB&B182]

BIOL226 Invasive Species: Biology, Policy, and Management  
Invasive species account for 39 percent of the known species extinctions on Earth, and they are responsible for environmental damages totaling greater than $138 billion per year. However, the general population has little knowledge of what invasive species are or what threats they pose to society. In this course, we will explore the biological, economic, political, and social impacts of invasive species. We will begin by exploring a definition of an invasive species and looking at the life history characteristics that make them likely to become pests. Then we will consider the effects of invasive species expansion on the conservation of biodiversity and ecosystem function, as well as their global environmental and political impacts. Finally, we will explore the potential future changes in invasive species distributions under a changing climate.  
Offering: Host

BIOL228 Introductory Medical Biochemistry  
This introductory course will focus on the essential concepts of biochemistry important to students interested in the health professions, including the chemical and biological foundations of cellular metabolism and related disease states. Major topics will include the structure and function of biological molecules in the human body (proteins, carbohydrates, fats, nucleic acids, vitamins), enzyme catalysis, cellular signaling, and digestion, absorption, and processing of nutrients for energy and growth.  
Offering: Crosslisting  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: NSM-MBB  
Identical With: MB&B228  
Prereq: [MB&B181 or BIOL181] AND CHEM251

BIOL229 Geobiology Laboratory  
This laboratory course will explore more deeply some of the concepts introduced in E&ES234. Both the fundamental patterns and practical applications of the fossil record will be emphasized.  
Offering: Crosslisting  
Grading: A-F  
Credits: 0.50  
Gen Ed Area: NSM-EES

Prereq: E&ES101 OR E&ES115 OR E&ES199 OR [E&ES197 or BIOL197 or ENV5197]

BIOL231 Microbiology  
This course will study microorganisms in action, as agents of disease, in ecological situations, and as tools for research in molecular biology, genetics, and biochemistry. Particular emphasis will be placed on new ideas in the field.  
Offering: Crosslisting  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: NSM-MBB  
Identical With: MB&B231  
Prereq: [MB&B181 or BIOL181] OR [MB&B208 or BIOL208]

BIOL232 Immunology  
In this introduction to immunology, particular emphasis will be given to understanding both the innate immune response and its agents as well as the acquired immune response mediated by B and T cells. Cellular and antibody responses in health and disease will be addressed, along with mechanisms of immune evasion by pathogens, autoimmune disease, and cancer.  
Offering: Crosslisting  
Grading: A-F  
Credits: 1.00  
Gen Ed Area: NSM-MBB  
Identical With: MB&B232
BIOL233 Geobiology
Fossils provide a glimpse into the form and structure of ancient ecosystems. Geobiology is the study of the two-way interactions between life (biology) and rocks (geology); typically, this involves studying fossils within the context of their sedimentary setting. In this course we will explore the geologic record of these interactions, including the fundamentals of evolutionary patterns, the origins and evolution of early life, mass extinctions, and the history of the impact of life on climate.
Offering: Crosslisting
Grading: A-F
Credits: 1.00

Identical With: E&ES234, ENVS233
Prereq: E&ES101 OR E&ES115 OR E&ES199 OR [E&ES197 or BIOL197 or ENVS197]

BIOL235 Comparative Vertebrate Anatomy
This course will provide a comprehensive overview of the basic structure and function of the main organ systems in vertebrates. Developmental anatomy will be an integral part of the class because of the importance of embryology to understanding both similarity and variation of common systems in different taxa. The course will consist of both lectures and laboratory sessions for dissection of key systems.
Offering: Host
Grading: A-F
Credits: 1.25
Gen Ed Area: NSM-BIOL
Prereq: ([MB&B181 or BIOL181] AND [BIOL182 or MB&B182]) AND [MB&B191 or BIOL191] AND [BIOL192 or MB&B192])

BIOL237 Signal Transduction
Cells contain elaborate systems for sensing their environment and for communicating with neighbors across the membrane barrier. This class will explore molecular aspects of signal transduction in prokaryotic and eukaryotic cells. Topics will include membrane receptors, GPCRs, kinases, phosphorylation, ubiquitination, calcium signaling, nuclear receptors, quorum sensing, and human sensory systems. We will integrate biochemical functional approaches with structural and biophysical techniques.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-MBB
Identical With: MB&B237
Prereq: [MB&B208 or BIOL208]

BIOL239 Functional Anatomy of the Human Brain
A mass of tissue the consistency of firm jello and weighing about 2.5 pounds in the adult human, the brain is an organ that controls nearly every function of the body. It also enables the highest cognitive functions of humans such as learning and memory, thinking, consciousness, and aesthetic appreciation. Its malfunction results in a variety of diseases, including senility, mood disorders, and motor dysfunctions. This course will examine in some detail the complex organization of the brain and how it performs some of its basic functions. The course will be of special interest to premed students; NS&B, biology, and psychology majors; and anyone simply interested in how the brain works.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B239, PSYC239
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL243 Neurohistology
The aim of this course is to study the microscopic structure of the nervous system. Structural and functional relationships between neurons and glia, as well as the organization of major brain regions (cortex, hippocampus, and cerebellum) will be examined. In addition to traditional histological preparations, modern techniques including confocal microscopy and immunohistochemistry will be studied and performed. Laboratory exercises will include the preparation and visualization of microscopic slides using a variety of techniques. While this course will focus on mammalian nervous system, skills learned in this course will be applicable in a variety of research models.
Offering: Crosslisting
Grading: A-F

Gen Ed Area: NSM-NSB
Identical With: NS&B243
Prereq: [NS&B213 or BIOL213 or PSYC240] OR [MB&B181 or BIOL181]

BIOL245 Cellular Neurophysiology
This course will deal with basic aspects of neuronal physiology, including the function of excitable membranes and the transfer of information between cells (e.g., synaptic physiology, neurochemistry, membrane receptors). In connection with each of these topics, consideration will be given to short- and long-term modification of neuronal function. Toward the end of the course, we will examine the neurophysiology of epileptic seizures as well as the neurophysiology of motor systems.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B245, BIOL599
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL247 Laboratory in Neurophysiology
The course is designed to teach techniques and offer independent research experience. Students study living nervous systems and measure the electrical signals at the heart of nervous system function. In the first part, experiments include intracellular recordings of rest and action potentials, synaptic transmission, sensory coding and integration in simple nervous systems. Students learn surgical and electrophysiological recording techniques working with invertebrate and cold-blooded vertebrate animals including crayfish, mollusks (Aplysia), leeches, fish, and amphibians. In the second part of the course, students will use these techniques in novel, independent research projects.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B247
Prereq: ([NS&B213 or BIOL213 or PSYC240] AND [BIOL182 or MB&B182])

BIOL250 Laboratory in Cellular and Behavioral Neurobiology
The goals of the course are to introduce students to a number of contemporary laboratory techniques in neuroscience and behavior. The laboratory introduces students to experimental method and techniques including neuroanatomy, immunohistochemistry, primary neuronal and astrocyte cell culture methods, analyses of electrical activity in the brain, and behavioral analyses of learning, memory, social behavior, and social dominance in inbred strains of mice.
Students will learn to analyze experimental data and write a series of laboratory reports on the experiments done during class. In addition, students will write a term paper related to one of the experimental approaches.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B250, NS&B555
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL252 Cell Biology of the Neuron
Neuronal cell biology is an important and fast-moving field. The brain cannot be understood without first elucidating the properties and functions of its component neurons. This course will focus on cell biological studies of the nervous system. We will explore the structure and function of neurons, synapses, and circuits. Using both text books and primary literature, we will examine the basic cell biological mechanisms that underlie the formation, function, and plasticity of neurons and circuits. Areas studied will include polarity, synapse formation, synaptic transmission, intracellular transport, plasticity, and regeneration.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-NSB
Identical With: NS&B252
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL254 Comparative Animal Behavior
This course explores the scientific study of animal behavior. All animals face similar challenges and will examine the common, and sometimes unique, behavioral strategies used to meet these challenges. There are two sorts of questions one might ask about the behavior of a given individual or species. First, how is that behavior executed? Second, why is that behavior, rather than another, exhibited? What is the adaptive significance of the behavior? To fully understand the behavior of any organism, both sorts of questions must be addressed. This course will introduce students to the many ways these questions are grappled with for a wide range of organisms. As such, this course will provide an overview of mechanistic, ecological, and evolutionary explanations of behavior.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B254
Prereq: [BIOL182 or MB&B182] OR [BIOL196 or MB&B196] OR [NS&B213 or BIOL213 or PSYC240]

BIOL265 Bioinformatics Programming
This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: CIS265, MB&B265, COMP113
Prereq: [MB&B181 or BIOL181]

BIOL266 Bioinformatics
This course is an introduction to bioinformatics for students with interest in the life sciences. The course is similar to BIOL265 but only meets in the second half of the semester (with BIOL265) and is designed for students with programming background, ideally in Python. The course introduces problem areas and conceptual frameworks in bioinformatics and discusses programming approaches used in bioinformatics such as sequence matching and manipulation algorithms using dynamic programming, clustering analysis of gene expression data, analysis of genetic nets using Object Oriented Programming, and sequence analysis using Hidden Markov Models, Regular Expressions, and information theory.
Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: NSM-BIOL
Identical With: MB&B266, COMP266, CIS266
Prereq: [MB&B181 OR BIOL181]

BIOL290 Plant Form and Diversity
The course begins with an overview of plant evolutionary history, then covers the basic structure and function of the plant body, the plant life cycle in nature, including interactions with animals, and ecological diversity of plants in contrasting habitats. Special events include a field trip to the Smith College Botanic Garden, two hands-on days for working with living specimens, and a special guest lecture by a local plant biologist.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: None
Prereq: [MB&B181 or BIOL181] AND (MB&B182 or BIOL182) AND (BIOL212 or BIOL218)

BIOL295 Physiology and Cell Biology of Cancer
This course focuses on the cellular and physiological aspects of cancer, examining the major hallmarks of cancer. Recent advances in cancer treatment are also covered.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: None
Prereq: [MB&B181 or BIOL181] AND (MB&B182 or BIOL182) AND (BIOL212 or BIOL218)

BIOL299 Waves, Brains, and Music
Pressure waves bounce against the ear, and we create perceptions called sounds from them. We organize sounds to make music, making more waves, and the cycle goes forward. This course will provide an introduction to the fraction of these phenomena that can be measured and analyzed, focusing on the mathematics of signal analysis, auditory physiology, and the physiology of musical perception and production. Periodic waveforms include musical tones and the voltage fluctuations that can be measured from brains. The first third of this course (waves) is an introduction to the quantitative analysis of periodic waveforms, with the goal that the student will have a better understanding of how to interpret the analysis of both musical sounds and neuronal recordings. The second part of the course (brains) examines the known mechanical processes (physiology) by which the mammalian brain analyzes the periodic waveforms that we interpret as sound. The third part of the course uses these lessons to examine original research articles about the neuroscience of music, that is, how neuronal networks produce musical perception.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B299
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL310 Genomics Analysis
This course is an introduction to genomics and analysis for students with interest in life sciences. It introduces current applications of genomics techniques, covers how to build a genomics workflow, and introduces statistical analyses in R programming language. This course assumes little or no prior programming experience and will provide hands-on experience in taking raw next-generation
sequencing data through a custom workflow and ending with analyses in R statistical software.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: CIS310, MB&B311
Prereq: [MB&B181 or BIOL181]

BIOL316 Plant-Animal Interactions
This course will explore the ecology and evolution of interactions between plants and animals, including mutualism (e.g., pollination, frugivory) and antagonism (e.g., herbivory, granivory), that are central to the functioning of ecosystems and the generation of biodiversity. The format will be seminar-style, involving reading, discussion, and student presentations of key papers on chosen topics.

Offering: Host
Grading: A-F
Credits: 1.00

Identical With: BIOL156
Prereq: BIOL214 OR [BIOL220 or ENVS220] OR [BIOL290 or BIOL590] OR [BIOL216 or ENVS216]

BIOL318 Nature and Nurture: The Interplay of Genes and Environment
In this advanced seminar, we consider how genetic and environmental factors interact to shape the development and behavior of organisms, including humans. After an initial series of lectures and discussions on foundational readings, the class will consist of in-depth student presentations and class discussion.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: BIOL518
Prereq: BIOL214 OR BIOL218 OR [BIOL210 or MB&B210] OR [BIOL224 or NS&B224]

BIOL320 Quantitative Methods for the Biological and Environmental Sciences
This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulae. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: ENVS320, E&ES570, E&ES270, BIOL520
Prereq: None

BIOL325 Stem Cells: Basic Biology to Clinical Application
This course will cover recent advances in stem cell biology, including tissue-specific and pluripotent stem cells. Clinical applications will be covered and we will examine the ethics and politics as well as the science of this emerging field.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B325
Prereq: ([MB&B181 or BIOL181] AND [BIOL182 or MB&B182])

BIOL327 Evolutionary and Ecological Bioinformatics
Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene’s descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: COMP327, COMP527, CIS327, BIOL527
Prereq: [BIOL182 or MB&B182] OR [BIOL196 or MB&B196] OR COMP112 OR COMP211

BIOL328 Chemical Senses
The least well understood of the senses, chemical sensation, is key to survival and behavior of many species. This course covers the structure and function of sensory neurons in both the gustatory and olfactory systems, as well as chemosensory irritation. We will examine coding of sensory information to understand how higher cortical areas interpret stimuli. We will look at a variety of animal models and discover common organizing principles across phyla. Emphasis will be placed on the cell biology of these systems. Students will participate in reading, analyzing, and presenting recent studies from different areas within chemical sense to highlight recent findings and where the emphasis in chemosensory research is focused.

Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-NSB
Identical With: NS&B328
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL333 Gene Regulation
This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. An overarching theme is how genomes encode and execute regulatory programs as revealed by a global systems biology approach in modern genomics research.

Offering: Crosslisting
Grading: A-F
BIOL340 Issues in Development and Evolution
This advanced seminar explores the relationship between embryonic development and morphological evolution. The course will include a combination of lectures, discussion, and student presentations of papers chosen from the primary literature. Subjects covered will include broad, fundamental issues such as the concept of homology and developmental characters and phylogeny, as well as the evolutionary significance of specific developmental phenomena such as animal segmentation, direct development, and major morphological transitions in evolution.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: BIOL540
Prereq: BIOL218 OR BIOL214

BIOL342 Molecules to Medicine
This course will explore the process of drug development, including target selection, lead discovery using computer-based methods and combinatorial chemistry/high-throughput screening, organic synthesis, bioavailability, clinical trials, and other factors (some economics and politics) involved in bringing a drug to the marketplace. Critical consideration of the variables to contend with at each step will be described and discussed, including aspects of research ethics and patent law. The basic science of molecular recognition, computer-aided drug design, and the role of factors from synthetic chemistry to toxicology will be presented. Case studies of the development of drugs recently successful in making the journey from molecule to medicine will be discussed, as well as the story of some that did not, and why. Emerging new design strategies such as fusion-protein therapies, crisper technology, and enhanced use of rational design and combinatorial methods will be emphasized, and how pharmaceutical research is evolving in the postgenomic era, particularly with biologics. Job opportunities in the pharmaceutical industry will be discussed.

Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Identical With: MB&B342, CIS342, CHEM342
Prereq: CHEM252 OR MB&B208

BIOL343 Muscle and Nerve Development
This course will examine the structure and function of muscle cells, the development of muscle cell identity, the development of motor neurons, and the interactions between nerve and muscle that lead to a functioning neuromuscular system. The primary focus will be on vertebrate model systems such as chick, mouse, and fish. We will also examine human diseases, including muscular dystrophies and other neuromuscular disorders.

BIOL345 Developmental Neurobiology
Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: BIOL545, NS&B545, NS&B345
BIOL346 The Forest Ecosystem
This course examines basic ecological principles through the lens of forest ecosystems, exploring the theory and practice of forest ecology at various levels of organization from individuals to populations, communities, and ecosystems. Lectures, lab exercises, and writing-intensive assignments will emphasize the quantification of spatial and temporal patterns of forest change at stand, landscape, and global scales.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: E&ES538, ENV5340, E&ES238, BIOL546
Prereq: [BIOL182 or MB&B182] OR [E&ES197 or BIOL197 or ENV5197] OR E&ES199

BIOL347 Mammalian Cortical Circuits
The mammalian cortex is where conscious perception and thought is generated, but the mechanistic details governing those processes are not well known. Studies of those circuits have revealed a heterogeneity of neuronal classes in the cortex and their proposed roles in these processes. Detailed wiring diagrams of local and long-distance cortical circuits are emerging, colored by specific connections that are helping us understand the cortex with these reverse-engineering strategies. Almost all of the readings for this course will be taken from the recent primary literature; areas of the cortex that will be studied include sensory cortex as well as studies of hippocampal cortical circuits.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B347
Prereq: BIOL252 OR NS&B252 OR BIOL245 OR NS&B245

BIOL351 Neurobiology of Learning and Memory
Animals as varied as sea slugs and humans display a number of types of learning, ranging from the capacity to acquire species-specific behavior to the ability to form arbitrary associations. Just as varied are the philosophies governing the choice of how to best study the neurobiology of learning and memory. Through lectures, class discussions, student presentations, and a critical reading of the primary literature, the advantages and disadvantages of these various approaches will be investigated. While the specific focus of this class will be on learning and memory, other ways in which the brain learns will also be explored. Normal brain ontogeny relies to some extent on invariant cues in the animal’s environment, making this process somewhat analogous to learning. In fact, the neural substrates for learning are likely to be a subset of the basic steps used during brain development. Moreover, the developmental rules guiding brain assembly place constraints on the what, how, and when of brain function and learning. Therefore, this course will also cover select topics in basic developmental neurobiology.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-BIOL
Identical With: NS&B351
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL353 Neurobiology of Neurological Disorders
This course aims to provide a foundation in the underlying mechanisms of neurological and psychiatric disorders. We will explore through lectures and readings of primary literature a number of important neurological and psychiatric diseases, including autism, schizophrenia, Alzheimer’s disease, mental retardation, epilepsy, and Parkinson’s disease. This course focuses on the fundamental molecular and cellular mechanisms that underlie neurological disorders and is designed to engage students who wish to study basic aspects of brain function.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-NSB
Identical With: NS&B353, PSYC353
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL354 Agricultural Food Webs
Ecological communities are structured by feeding interactions, and agricultural systems are no exception to this rule. This class will focus on attributes of food webs that impact agriculture, including topics such as natural biological control of insect pests, to soil microbes and nutrient cycling, to causes of honeybee colony collapse disorder. This course includes a rigorous survey of both ecological theory and applied environmental problems. Students will read primary literature from the fields of food web ecology and agroecology and discuss the implications through group work.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-ENV5
Identical With: ENV5353
Prereq: BIOL182 or BIOL197

BIOL356 Neurodevelopmental Disorders
This course aims to provide a foundation in the underlying mechanisms of neurodevelopmental disorders. We will explore through lectures and readings of primary literature a number of important neurological and psychiatric diseases, including genetic disorders such as Down syndrome, Fragile X, and Williams syndrome; spectrum disorders such as autism and fetal alcohol syndrome; ADHD, Tourettes, cerebral palsy, and some motor disorders including developmental coordination disorder, stereotypic movement disorder, sensory ingration disorder, and neonatal hypoxia. This course focuses on the fundamental molecular and cellular mechanisms that underlie neurological disorders and is designed to engage students who wish to study basic cellular aspects of brain function.

Identical With: PSYC356, NS&B356
Prereq: [NS&B213 or BIOL213 or PSYC240]

BIOL360 Neuroplasticity: How Experience Changes the Brain
Neuroplasticity refers to the brain’s ability to change throughout life. In this course, we will examine functional and structural plasticity of the brain. Functional plasticity refers to the brain’s ability to move functions from a damaged area of the brain to other undamaged areas. Structural plasticity refers to the brain’s ability to change its physical structure, as a result of learning or to reorganize itself by forming new connections, strengthening existing connections, or pruning away old synaptic connections. We will examine critical periods in development when sensory experiences change and sculpt the wiring of the brain, how exercise and diet influence adult neurogenesis and cognition, and how neural activity regulates structural plasticity and gene programs. This is a writing-intensive course. Students will analyze the readings through discussions and writing assignments including blogs, short reviews, and commentaries. Students will have opportunities for extensive feedback on their writing and revisions.

BIOL515 Evolution in Human-Altered Environments
Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.
Offering: Crosslisting

BIOL520 Quantitative Methods for the Biological and Environmental Sciences
This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulas. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

Prereq: None

BIOL527 Evolutionary and Ecological Bioinformatics
Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene’s descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

BIOL533 Gene Regulation
This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. An overarching theme is how genomes encode and execute regulatory programs as revealed by a global systems biology approach in modern genomics research.

BIOL537 The Origins of Bacterial Diversity
Wherever there is life, there are bacteria. Free-living bacteria are found in every environment that supports eukaryotes, and no animal or plant is known to be free of bacteria. There are most likely a billion or more species of bacteria, each living in its unique ecological niche. This course will explore the origins of bacterial biodiversity: how bacteria evolve to form new species that inhabit new ecological niches. We will focus on how the peculiarities of bacterial sex and genetics facilitate bacterial speciation. Topics will include the characteristics of bacterial sex, why barriers to genetic exchange are not necessary for speciation in bacteria, the great potential for formation of new bacterial species, the evolutionary role of genetic gifts from other species, and the use of genomics to identify ecologically distinct populations of bacteria.

BIOL545 Developmental Neurobiology
Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.

CENTER FOR GLOBAL STUDIES (CGST)

CGST121 Contemporary Social Issues, Leadership, and Scholarship
The overarching purpose for this course is for you to reflect on how your identity (who you say you are) motivates the actions you take now, which, in turn, shape your long-term goals and commitments. This course is particularly applicable to future national and international fellowship applicants, as almost every scholarship foundation asks similar questions (in one form or another): Who are you? What are you proposing to do? In what way are you the most qualified candidate? Why is this work important?

This course will incorporate best practices for writing personal statements and include theories and best practice for this specific writing style as well as a wide array of perspectives to supplement self-reflection, personal development, and skill building.

Offering: Host
Grading: Cr/U
Credits: 0.25

Gen Ed Area: HA-ENGL
Identical With: ENGL131B
Prereq: None

CGST201 Crossing Identities & Borders: Processing Study Abroad
This course is designed to give students who have studied abroad through the medium of a language other than English the opportunity to process their experience by reflecting on its meaning in terms of their own personal and intellectual trajectory. Students will meet as a group once a week to discuss a reading of common interest. The second weekly meeting or workshop will be held in break-out sessions in the target language, during which time students will discuss the capstone project that this course will allow them to develop: a written essay, a digital narrative, an art installation, or a performance. The workshops are designed so that students may support each other in the pursuit of their personal goals regarding a project that reflects the broadest and deepest meaning of an immersive linguistic and intercultural experience abroad. Assessment is based on the following criteria: industry and initiative; the ability to work independently; willingness to contribute actively to a collective, project-based learning experience; and the final project. Readings will address topics such as identity, culture and mobility. Students will work to develop a collective bibliography with classmates as well as a specific bibliography that accords with their personal interests and objectives.

Offering: Host
Grading: Cr/U
Credits: 0.50
Gen Ed Area: SBS-CGST
Identical With: RL&L201
Prereq: None

CGST202 Preparing to Study Abroad: Culture and Language
This course is designed to facilitate students' preparations to study abroad during the following term. Through exploration of intercultural and language learning theories, intercultural communication strategies, and theories about culture, students will build a foundation for their learning and achieving their individual goals during the semester abroad. The course is open to those who are studying abroad in English as well as those who are studying a language. The course is graded at the end of the term, but ungraded check-ins during the study abroad experience are required for the credit to be awarded.

Offering: Host
Grading: Amp Graded
Credits: 0.50

Prereq: None

CGST203 Returning from Study Abroad: Integrating Your Experience
This course will facilitate returning students' integration of the study abroad experience into their academic and personal lives. Through guided activities, readings, and weekly writing assignments, students will reflect on the many facets of the study abroad experience and how they relate to identity, academic interests, and future plans, including fellowship applications and career opportunities abroad.

Offering: Host
Grading: Amp Graded
Credits: 0.50
Gen Ed Area: SBS-CGST
Prereq: CGST202

CGST208 ¿Convivencia o conflicto?: Las tres culturas de la España medieval a través del arte
For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual wellbeing. This Spanish-language section complements the ARHA 310 curriculum, by exploring the resonance between medieval experiences of identity, pluralism, appropriation, and exchange and our own uneasy attempts at building a multiethnic, multicultural society. This class will be conducted in Spanish. ARHA 208 is open to intermediate and advanced Spanish learners (SPAN 113 and above), bilingual students, and heritage speakers. Enrollment in ARHA 310 is optional but encouraged.

CGST210 Language and Thought: Introduction to Linguistics
What makes human language unique? This course is an introduction to the study of human language and its underlying properties. Much of our linguistic competence lies below the level of conscious awareness, and linguists seek to uncover the subconscious principles and parameters that govern our knowledge of language. This course first explores the core theoretical areas of linguistics: phonology (sound structure), morphology (word structure), syntax (sentence structure), and semantics (meaning). Then, we will explore such topics as the workings of language use, language variation, and first- and second-language acquisition.

Offering: Host
Grading: A-F
Credits: 1.00

Prereq: None

CGST227 Writing Short Fiction in Spanish
This course will introduce students to the fundamentals of writing short fiction in Spanish and will enhance their knowledge of the Spanish language and their skills as effective writers through the reading of great short stories that will inform students' own writing and the development of a personal style. We will examine essential features of fiction (methods of constructing narrative tension, climax, ambiguity, character, different kinds of autobiographies and descriptions, dialogues, and monologues), as well as various fictional styles through our discussion of the writing of our peers and a study of the texts of a number of contemporary Latin American and Latino writers working in a genre that has been crucial in the region's intellectual production.

CGST230 Between Marx and Coca-Cola: European Cinema of the 1960s and 1970s
In the 1960s and early 1970s, a growing sense of alienation and social unrest spread across Europe, making their marks in both society and cinema. Borrowing the words of New Wave director Jean-Luc Godard, these years led to the emergence of "the children of Marx and Coca-Cola." This course, taught in English, will introduce students to a multi-faceted portrait of Europe in the 1960s and 70s through avant-garde and popular cinema from France, Italy, Spain, Germany, and Eastern Europe. We will focus on films that depict global
CGST281 Global Economy: Germany and the World in an Age of Extremes, 1870-1957

This Center for Global Studies discussion course explores the experience of globalization in the German-speaking world from the wars of German unification in 1870 to the emergence of the German Community in 1957. It will analyze German imperialism and overseas investment before 1914; the globalization of the German economy in the First World War; the problem of reparations and other economic challenges faced by the Weimar Republic; and the impact of global protectionism and the Great Depression, the economic forces allowing the rise of Hitler, the economics of war, and the Nazi "New Order." We will explore the reasons for the ultimate failure of the German war effort and the country's catastrophic destruction and defeat in 1945, as well as Germany's postwar division and occupation as well as the gradual reconstruction and reintegration of the Western German economy into a European and global division of labor beginning with the Bizon Agreement and GATT (1947), the Marshall Plan (1948), and the London German External Debt Agreement (1953), culminating in the Treaty of Rome (1957) creating the European Economic Community. The course will be using select German-language historical primary sources to explore this topic, supported by short secondary source narratives in both German and English pitched to intermediate to advanced German speakers/readers. Unlike the parent History lecture class (HIST 280: The Origins of Global Capitalism, 1800-present), this is a discussion course aimed at expanding vocabulary and practicing fluent discussions in the fields of history, politics, and economics.

CGST303 Ukraine and Its Environment

International perspectives on environmental issues are critical in order to address the challenges facing the world. Developing an international perspective requires more than learning from printed literature—it requires in-country experience and the desire to be able to view issues through different cultural lenses. This course will provide such experience by learning about the diversity of Ukrainian environments, people, and cultures both in the classroom at Wesleyan and by traveling to Ukraine during Spring Break. During our time in Ukraine we will receive lectures in English from noted scholars, politicians, professors and scientists on topics such as environmental law, global environmental security, urban environment, environmental policy in developing states, and sustainable development for the developing world. We will travel and learn from scientists at Chernobyl about the regeneration of forest ecosystems, learn from agronomists about agriculture on the steppes, and learn from politicians and scholars about Ukrainian environmental policy and their views of U.S. policies. We will also enter into round table discussions with university students to exchange ideas about potential international solutions and approaches to environmental problems. These are just some of the experiences that are planned for our visit. Ukraine, as a pivotal democracy of the former Soviet Bloc, is an amazing place to witness how a nation wrestles with dramatic changes in policy. At the same time Ukraine is culturally diverse, which presents interesting challenges to formulating fair and cohesive policies.

CGST413 From Black and White to Colors: Israeli Cinema

This Hebrew course will be linked to a new film course, taught in English, and offered in spring 2019. The film course is entitled CJST 249: From Black and White to Colors: Israeli Cinema, a Melting Pot Fragmented. This course is targeted towards heritage Hebrew speakers and students with very advanced knowledge of the Hebrew language. Students will view the same films as the parent class with special attention to the Hebrew language. We will analyze, discuss, and write on each of the films. In addition, students will be required to attend all the screenings in the Ring Family Wesleyan University Israeli Film Festival and to meet with native guest speakers. The focus of the course will be to map the cultural and social changes in Israeli society reflected in the transformation in format and themes of Israeli films. This course may be repeated for credit.

Center for Jewish Studies (CJST)

CJST153F Ethnicity, Race, and Religion in the Middle Ages (FYS)

This course concerns the invention of premodern ideas of ethnicity and race. Our focus will be on a selection of medieval texts dealing with the encounters—real and imaginary—of Western European Christians with other cultures, from the Celtic borderlands to the Mongol Empire. The readings will begin historically with the Crusades and the (often grisly) chronicles written by Christian, Muslim, and Jewish authors. Other genres will include religious polemics, autobiographical narratives of religious conversion, and travel accounts by missionaries, spies, and colonial propagandists. We will also read some later “romances” that re-imagine the crusades in terms of exoticized sexuality, racial transformation, cannibalism, and nationalist fantasy.

CJST210 Jews & America

This course will investigate why Jews came to America and how they and their children adapted to their new home. It will explore American Jews' relations with other groups, including the Irish Americans, African Americans and the white Anglo-Saxon Protestant elite, and Jews in other parts of the world. Finally, the course will consider Jews' quite significant impact on the American economy, politics, society, and culture. Although it will begin with the colonial era, the course will focus primarily on the 19th and especially the 20th centuries.

CJST214 Refugees & Exiles: Religion in the Diaspora

Recent years have seen the on-going tragic refugee crisis, with millions of people being displaced because of war and ecological disasters. That this crisis also has religious overtones is evident by the so-called travel ban in the United States or the rhetoric used by right wing leaders across Europe. This course deals with the meaning of refuge, exile, and diaspora through three perspectives: philosophical, historical, and literary. A variety of case studies—including the contemporary refugee crises in the Middle East, the black transatlantic, and the destruction of the temple in the Hebrew Bible—will raise for us various questions: What does it mean to be violently forced to leave one's home? How is it possible to make sense of such a tragedy? What ethical responsibility do we have toward refugees? What creative power can diaspora muster to the rescue of culture? Assignments in this course will be based on an analysis of a refugee crisis selected by the students.

CJST216 Jesus Through Jewish Eyes

In this course, we explore the visual and textual representations of the vexed relation between Jews and Christians throughout history. Looking at the various ways in which Christianity and Judaism define themselves vis-à-vis the other allows us to understand what mechanisms of cultural appropriation, subversion, and hidden polemics are at work. Special attention will be given to the figure of Jesus as a point of artistic and theological contention. How do artistic representations change our understanding of religious themes? What is at stake for each religion in the encounter with the other? What are the political implications of theological debates? Is this dialogue needed, or even possible, in our post-secular age?

CJST221 From Literature to Cinema and Back: What Happens When Literary Works Are Adapted to Films

Israeli literature has a long history of the written word behind it, which sometimes serves as a burden for Hebrew writers. Israeli cinema, on the other hand, has no tradition of visual representation behind it, no iconic conceptual history. So what happens when a major literary work is adapted to film? Does the film maintain the same approach to the issues that the novel is confronting, or does it find new ways to deal with the subject, reconfiguring the perspective and the hierarchy of its inner elements?

CJST234 Israel in Therapy: Society Under the Influence of TV Series

The course deals with the prototypes of the Israeli character as they appear in the original Israeli TV series In Treatment, and other Israeli TV series, such as Florentine and A Touch Away. We will compare the structure and the characters of the series to other dramatic Israeli series, examine the appearance of the characters, and discuss the similarities and differences between the roles they perform. In addition, we will examine the role of television drama series as a tool to define and characterize our societies, and also look over the five characters that appear in the first season of In Treatment, define them, and examine the five prototypes of the Israeli character they represent.

The instructor is the co-creator and head screenwriter of the original version of the TV series In Treatment as well as the Center for Jewish Studies distinguished Visiting Professor.

CJST241 Judaism(s): Religion, Power, and Identity in Jewish History

This course will offer students an intensive survey of the major currents in Jewish social, political, intellectual, and religious history, while focusing in particular on what it means to be a Jew in the 21st-century. The course explores how Jews are a culture, ethnicity, nation, nationality, race, religion, and more and how Jewishness gets constructed differently across different times and contexts. The course looks both locally and globally at the plurality of Jewish identities. Students will read primary historical texts from prominent Jewish thinkers and writers, as well as texts written about Jews by non-Jews.

CJST244 Introduction to The Hebrew Bible (Old Testament)
The Hebrew Bible is one of the most influential texts in the world. From antiquity to the present, it has served as a source of philosophical, literary, and artistic reflection. It is a fascinating document, combining narrative, poetry, law, prophetic proclamations, and puzzling parables. What kind of book is the Hebrew Bible? Who wrote it and why? How do we approach such a text across the distance of time? Through a systematic reading from the very beginning, we will place the Bible in its historical context while giving special attention to the philosophical and literary questions it raises: Is obedience to authority always justified? Why do good people suffer unjustly? What gender is God? In answering these and other questions, you will gain an understanding of the ways contesting interpretations make authoritative claims.

CJST248 Designing Reality in Israeli Documentary Film
In the last decade, Israeli documentary films have crossed borders not just geographically but also by their form and style. They are bold, courageous and provocative. They have been participating in prestigious international film festivals, receiving important awards and mostly bringing the Israeli audience back to the cinema, having a crowd power like fiction films. So what makes Israeli documentary films a "hot property"? In this class we will look for the answers by watching and discussing 14 Israeli documentary films (among them "Paper Doll," "In Satmar Custody," "Presenting Princess Shaw," "No.17"). The course will raise questions about reality and the construction of reality in Israeli documentary films.

CJST249 From Black & White to Colors: Israeli Cinema, a Melting Pot Fragmented
The course will focus on Israeli cinema as a reflection of a society that was founded as a melting pot for all Jews and became sectorial. Israeli cinema originated as a tool for establishing a unified national identity evolved over the years into a means of expression for ethnically defined subcultures within society. During the course, the students will explore past and contemporary films and will follow the shift they represent in the current Israeli experience turning away from the original Zionist core into several isolated groups distinguished by ethnicity, traditions, and language. We will examine Moroccan, Persian, Georgian, Russian, Yiddish, Ethiopian, Arab, etc. films produced in Israel by local filmmakers digging deep into the experience of immigration, seclusion, rediscovering their roots, and even expressing yearnings to the countries of origin.

CJST272 Ethics After the Holocaust
The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human after Auschwitz. In this course, we will investigate how the Holocaust orients contemporary discussions on questions of guilt, forgiveness, and evil. What does it mean to remember, to forgive, and to forget? Can one ethically represent the Holocaust in art? We will explore these questions using various sources, including works by Hannah Arendt, Adorno, and Emmanuel Levinas, as well as museums, memorial sites, and cinematic representations.

CJST278 American Jewish Humor
This course is a look at American Jewish history through one particular lens—that of the peculiar phenomenon of Jewish humor. There is a long history of Jews and humor that has nothing to do with the immigrant experience in America, but the immigrant experience in America nonetheless has a great deal to do with the humor that has been produced by Jews in this country, particularly in the 20th century. We will read some historical background on American Jews and some humor theory as our foundation for our understanding of film viewings, short stories, stand-up comedy performances, and musical recordings. By looking at the way Jewish humor changed throughout the 20th century, we should, in the end, be able to chart the way the lives of American Jews were changing and have a deeper understanding of the American Jewish experience.

CJST319 Crisis, Creativity, and Modernity in the Weimar Republic, 1918–1933
Born in defeat and national bankruptcy; beset by disastrous inflation, unemployment, and frequent changes of government; and nearly toppled by coup attempts, the Weimar Republic (1918–1933) produced some of the most influential and enduring examples of modernism. Whether in music, theater, film, painting, photography, design, or architecture, the Weimar years marked an extraordinary explosion of artistic creativity. New approaches were likewise taken in the humanities, social sciences, psychology, medicine, science, and technology, and new ideas about sexuality, the body, and the role of women were introduced. Nevertheless, Weimar modernism was controversial and generated a backlash that caused forces on the political right to mobilize to ultimately bring down the republic. This advanced seminar explores these developments and seeks to understand them within their political, social, and economic contexts to allow for a deeper understanding of Weimar culture and its place within the longer-term historical trajectory of Germany and Europe. CJST351 Debate and Destruction: Jews and Christians in the Middle Ages
This course will consider relations between the Jewish minority and their Christian neighbors in England before the Jews’ expulsion in 1290. We will also look at how the Jews are depicted in subsequent Christian writing. We will read texts originally written in Hebrew, French, and Latin (all in translation) as well as English, giving us a sense of the conversations that took place between two groups that were both inextricably bound together and set apart by centuries of conflict and persecution. Among the issues we will explore are the popularity of Jewish-Christian debate as a literary form, the Crusades, gender roles and gender fluidity, Jewish and Christian apocalyptic programs, and the curious afterlife of Jews in Middle English literature.

CJST413 From Black and White to Colors: Israeli Cinema
This Hebrew course will be linked to a new film course, taught in English and offered in spring 2019. The film course is entitled CJST 249: From Black and White to Colors: Israeli Cinema, a Melting Pot Fragmented. This course is targeted towards heritage Hebrew speakers and students with very advanced knowledge of the Hebrew language. Students will view the same films as the parent class with special attention to the Hebrew language. We will analyze, discuss, and write on each of the films. In addition, students will be required to attend all the screenings in the Ring Family Wesleyan University Israeli Film Festival and to meet with native guest speakers. The focus of the course will be to map the cultural and social changes in Israeli society reflected in the transformation in format and themes of Israeli films. This course may be repeated for credit.

CENTER FOR THE HUMANITIES (CHUM)

CHUM214 The Modern and the Postmodern
In this course we will examine how the idea of “the modern” develops at the end of the 18th century and how being modern (or progressive, or hip) became one of the crucial criteria for understanding and evaluating cultural change during the last 200 years. Our readings will be drawn from a variety of areas—philosophy, novels, music, painting, and photography—and we will be concerned with the relations between culture and historical change. Finally, we shall try to determine what it means to be modern today and whether it makes sense to go beyond the modern to the postmodern.

CHUM224 "Public Freehold": Collective Strategies and the Commons in Art Since 1960
Art since 1960 has forged a contradictory alliance between the legal field of intellectual property and the expanded tradition of poststructural thought. Taking its title from conceptual artist Lawrence Weiner, this course navigates this contradiction via four units, each corresponding to a specific artistic strategy: appropriation, scoring, collaboration, and participation. Testing the limits of the signable, saleable, and stealable, such techniques have thrown traditional concepts of originality and possessive individualism into arrears while giving rise, quite paradoxically, to some of the most celebrated careers and widely reported lawsuits involving allegations of creative property theft. Do such maneuvers amount to specious self-aggrandizement? Or do they indicate a renewed search to locate, foment, and protect sources of creative invention? The ever-expanding horizon of collaborative media access and increased pressures to enclose this new electronic commons have made such questions all the more urgent today. Artists considered include Claire Fontaine, General Idea, Pierre Huyge, Juliana Huxtable, Sherrie Levine, Tino Sehgal, Sturtevant, Hito Steyerl, Andy Warhol, and Lawrence Weiner.

CHUM276 Moving Through the Revolutionary Age: British Colonies and Early America, 1774–1815
Thomas Jefferson argued in his 1805 inaugural address that boundaries were less important than principles. Regardless of where they lived, Americans were Americans. British colonists were equally mobile and equally sure that their British liberties followed them wherever they went, which in no small part led to the Revolution. In the period during and after the American Revolution, with the creation of states and colonies in northern North America, people and ideas moved with regularity from one region to the next, thus testing Jefferson’s ideals and extant imperial bonds. This course will examine the movement of peoples and ideas within and across these new boundaries to explore the idea of mobility as a revolutionary, Native, and loyalist ideal. American settlers wanted to push west, and some later moved north; Natives desired to maintain their migratory patterns and traditional lands; and British Loyalists moved to remain members of—and demand changes within—the British Empire, while also relocating to American states when necessary. The borders that divided colonies and separated states were challenged and ignored as soon as they were created. By exploring the political ideals, territorial claims, and movement of people during and after the American Revolution, students will be encouraged to study the Revolution not as an American event, but rather as a North American process shaped by those who moved through it.

CHUM289 Staging Race in Early Modern England
This course analyzes the dramatic representation of race in the plays of Shakespeare and his contemporaries. We will examine the historical emergence of race as a cultural construct in relation to related conceptions of complexion, the humoral body, gender, sexuality, and religious, ethnic, and national identity. Readings focus on three racialized groups: Moors, Jews, and Native American “Indians.” After reading the play-texts in relation to the historical moment in which they were first produced (using both primary and secondary sources) we will then consider their post-Renaissance performance histories, including literary, theatrical, and film adaptations.

CHUM300 Black Phoenix Rising: Death and Resurrection of Black Lives
The Black Lives Matter Movement has renewed our collective need to theorize the value of black lives within a deluge of death and disappearance in black communities. This movement is part of a deep transnational tradition in black radical praxis that aims to transform scholarly, activist, and public discourse and public policies concerning the systemic and epistemic effects of institutional racisms and the prospects for antiracist futures. How might we envision a black radical praxis that simultaneously recognizes the vitality of black lives and challenges the cultural ideas and social practices that generate and justify black people’s death and suffering? This seminar traces a genealogy of black radical praxis that interrogates the neocolonics of race and positions this system of power against the prospect of thriving black people. In doing so, the course erects an interdisciplinary theoretical framework that features scholarship in critical race science studies, intersectionality, and transnational cultural studies as they inform how a black radical praxis can contribute to the uprising and raising up of black communities.

CHUM302 Black Speculative Fictions and the Anthropocene
The genre of black speculative fiction—in the form of literature, art, music, and theory—provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the “future,” black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term “Anthropocene” first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which “humans” had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a “species”? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene’s attendant catastrophes, which include earthquakes, altered ocean waters, and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human? Further, how does artificial intelligence complicate definitions of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

CHUM303 What If? Introduction to Counterfactual History
What if the Roman Empire had never collapsed? What if the South had won the Civil War? What if Hitler had never been born? To ask these questions is to delve into a new field of historical inquiry known as counterfactual history. In the last several decades, the exploration of “what if?” scenarios has become a notable phenomenon in Western culture. As seen in countless novels, films, television shows, comic books, plays, and historical essays, the question of how history might have been different has begun to fascinate audiences as never before.
This course explores the rise of counterfactual history as a new force in contemporary Western culture. After examining the emergence of counterfactual history against the backdrop of recent political, cultural, and intellectual changes that have taken place in the West, we will investigate how “what if?” narratives help us better understand the larger dynamics of history. Counterfactual history, for example, can help us better grasp the deeper aspects of historical causality. Is history driven by great individuals or broad structural forces? If we remove Hitler from German history, do we still witness the rise of Nazism? Studying counterfactual history also helps us appreciate the complexity of drawing moral conclusions about historical events. We can only judge the wisdom of the United States dropping the atomic bomb on Hiroshima in 1945, for example, by contemplating what might have happened had it not been done. Finally, we will also explore how counterfactual histories shed light upon the workings of collective memory. What do accounts of what never happened tell us about the memory of what did?
We will investigate these and other issues from a theoretical as well as from an empirical perspective, examining a wide range of academic scholarship on counterfactual history as well as primary examples of the genre from the
 realms of literature, film, and historiography. Our case studies will span many of the pivotal events of modern history, including the outbreak of the American Revolution, the Civil War, the rise of the Third Reich, the outbreak of World War II, the perpetration of the Holocaust, the dropping of the atomic bomb, and events of the post-9/11 world.

CHUM304 Britons and Other Life Forms
George Eliot wrote in Middlemarch that “if we had a keen vision and feeling of all ordinary human life, it would be like hearing the grass grow and the squirrel’s heart beat, and we should die of that roar which lies on the other side of silence.” This course will require us to think about various ways in which writers conceive of and represent precisely our potential—or, as Eliot suggests, our inability—to comprehend “all” life, or even just “other” life forms. We will consider literary approaches to relationality, with an emphasis on 19th-century British literature: How do these writers envision the connections between individuals and organisms, and how do they conceive of intimacies, environments, and totalities? To what extent do they imagine themselves as able to represent those connections? And how to these understandings impact literary form and political understanding? We will focus on formal questions, such as those of protagonist and minor character, poetic “I” and listener, as well as on two major forces of 19th-century culture: an emergent social theory that tried to conceive of humanity in terms of communities, populations, and “social bodies,” and an increasingly prominent science that was starting to think in terms of environments and ecologies (it’s worth noting that the terms “environment” and “ecology” are 19th-century in origin).

CHUM305 Matter, Community, Environment
In recent years, it has become increasingly difficult to consider human communities without also considering questions of “nature” or “environment.” Actor-network theory condemns nature/society dualisms; ecological theory argues that there is indeed no “nature” or “society”—only the anthropocene; and, drawing from the former two positions, object-oriented ontology conceives of ideas (such as “community” or “society”) as objects and ecological actors. In this seminar, we will consider various approaches taken in recent years to thinking about our relations to the worlds we inhabit. We will attempt to think not only outside a focus on “us” as humans in the first place but even outside a focus on sentient life or life in general. Examining theories of matter, community, and environment, we will discuss and analyze work by philosophers, evolutionary biologists, literary scholars, and sociologists, among others. We will pay special attention to how theorists and critics are blurring the boundaries between nature and society, environment and community, life and matter. In addition to class participation and a series of brief reading responses, students will be required to produce a final paper dealing with any topic related to the course.

CHUM306 Techniques of the Liar: Performance, Artifice, Fraud
This seminar is a cultural and intellectual history of fraudulence, fiction, and faking. It. We will explore both specific performance practices as well as theorizations of artifice, fraud, and authenticity. Topics will include illusion, ventriloquism, and sleight of hand; mimetic acting and the manufacture of “emotion”; dance technique and the concealment of effort; and musical improvisation and the politics of invention. We will also consider the complexities of drag, camp, and minstrelsy and historicize their surrounding discourses, centering the contributions of feminist, queer, and critical race studies. Looking at a range of (predominantly U.S.-based) practices from the mid-19th century to the present, we will consider how artifice and theatricality have been historically reviled as qualities inherent to femininity and queerness, respectively; how “authenticity” is both gendered and racialized; and how hiding, fabulation, exaggeration, and duplicity have also offered means of freedom or resistance.

CHUM307 Anthropocene as Modern Grand Narrative
The Anthropocene refers to the new age in which humankind started to have a significant impact in altering or rupturing the Earth’s system, and the Earth is now moving out of its current geological epoch (the Holocene) and into “a less biologically diverse, less forested, much warmer, and probably wetter and stormier state.” (Steffen, Crutzen, and McNeill 2007, Sciences Module, 614). This course begins by examining the debates on the definition and periodization. It then explores precursors to the concept of the Anthropocene, such as Confucian and Daoist writings on the taming of the natural environment for human needs, the catastrophism vs. uniformitarianism debate, and contesting definitions of sustainability. Finally, It looks at how recent works of environmental history engaged with the concept of the Anthropocene and brought our attention to the impact of the transition from organic economy to carbon economy. Is the Anthropocene a new meta-narrative that professes to be the theory that explains all human activity? Is the Anthropocene a call to arms for environmental justice? Is the Anthropocene just a declensionist fairy tale—one that leads us down a dead end, throwing up our arms in resignation over the irreversible destruction of the natural environment?

CHUM312 Indigenous Religion and the New Age: Inspiration or Appropriation?
Is imitation the sincerest form of flattery? This course examines the way in which indigenous religious practices, images, and ideas become appropriated into New Age religion. In GOD IS RED, Native American philosopher Vine Deloria Jr. argued that indigenous religion is superior to western Christianity and the Christian West has much to learn from it, but many indigenous people understandably object when their practices are copied by outsiders, decontextualized, and used to make a profit. Where is the line between respectfully learning from and disrespectfully appropriating? Why are indigenous practices so appealing to the New Age? How do New Age desires intersect with the needs and desires of contemporary indigenous practitioners, as well as national legal structures and neo-liberal economies? What are the contexts within which decontextualized indigenous practices and ideas become re-contextualized as New Age? We will read and deconstruct the classic manifesto of New Age spirituality THE TEACHINGS OF DON JUAN, examine the Ayahuasca patent case, and consider questions of intellectual property, cultural appropriation, and spiritual tourism.

CHUM313 Concepts of Matter: A Brief Philosophical History of the Concept of Matter

In this course, we will explore changing notions of matter in Western thought from classical Greek thought through the quantum revolution in physics, and philosophical debates about their implications. We will begin with views of matter in Plato, Aristotle, and the ancient atomists and how they were interrelated with views of human beings: the devaluation of matter and the body in Platonist and Gnostic thought, the perhaps surprisingly positive attitude taken toward death without a hope of continued existence by the materialist Lucretius, and the appropriation of Aristotle's hylomorphic philosophy into Christian theology and scholastic science in the late middle ages. We will then look at the emergence of a conception of "material substance" in the 17th century, examining the differences between the mathematical formulations of Galileo and Descartes and those of atomists such as Gassendi. The remainder of the section will focus on the rise of materialism and reactions against it: Descartes and Hobbes on the question of whether human beings are merely machines, the Newton-Leibniz debate about the activity of God in nature, Laplace's demon and the deterministic interpretation of classical mechanics, and the 19th-century reactions of romanticism and spiritualism. Finally, we will examine the radical and counterintuitive changes in the notion of matter occasioned by quantum mechanics, as well as interpretations that put consciousness and subjectivity back into the collapse of the wave function. We will consider whether contemporary physics really has the kind of notion of "material substance" needed for a traditional form of materialism before concluding with readings from philosophers and physicists in the recent revivals of dualism and panpsychism.

CHUM315 Emperor, Caliph, King: Comparing the Byzantines, Abbasids, and Carolingians

This seminar investigates a unique "age of empires" in the wider Mediterranean world—the ninth century—during which imperializing political revolutions inspired intense cultural production among the Byzantines in Constantinople, the Abbasids in Baghdad, and the Carolingians across Europe. Using the cultural artifacts surviving from these "renaissances," we will investigate how political cultures accounted for their own contested identities through myths of rebirth and return, specifically of Greek, Roman, and Persian imperial traditions. The course uses a workshop environment that relies on both collaboration and independent research; students will apply skills of analysis, creative thinking, and persuasive communication to presentations and a (in-translation) source-based research project.

CHUM317 Space and Materiality: Performing Place

Scenography explores and shapes the material world in and through the performative event. In site-specific performances, scenography transforms place and time to create an alternative reality in which the materiality of the artistic design and the performer's body intervene in the architecture of a place and the spectator's reception of meaning. In this course, we will study site interventions through the lens of street performance, immersive theater, and the theatrical apparatus to build a theoretical and hands-on understanding of the material potential and limitations of the four key elements involved in the scenographic project—artistic design, the actor's body, local architecture, and time.

This course is divided in four units: site-specific interventions; street performance; immersive theater; and theatrical apparatus. Each unit includes scholarly readings, assignments in performance and scenography, and a response paper. The final project for the course is a performance intervention devised for a particular site on campus that demonstrates the student's cumulative grasp of site specificity, scenography, and materiality.

CHUM318 Comparing Revolutions: The United States and Early Canada, 1774–1815

The American Revolution didn't just create the United States. Loyalists fled to British colonies in what would become Canada, while Native nations reasserted their sovereignty over ancestral homelands. British, French, American, and Indigenous peoples in North America expanded (or moved) west, established new communities, and struggled to retain (or create) new identities.

Students in this seminar will read widely in the literature of the revolutionary era as it pertains to American, Canadian, and Native groups and will undertake specifically comparative research as part of Professor Lennox's larger book project. What did Benjamin Franklin think of Montreal? Where did Iroquoia go after 1783? How did the creation of states such as Vermont compare to the division of Quebec the same year? What impact did David Thompson's exploration for the Hudson's Bay Company have on Lewis and Clark? By combining close reading of the most recent literature with in-depth exploration of primary sources, this seminar will encourage students to consider the Revolution as a continental rather than national event.

CHUM319 Zionism: A Political Theology

This seminar examines the political theology of Zionism by focusing on the intersections of secular aspirations and theological notions embedded in the ideology and practice of the national Jewish mission.

To this end, the seminar is designed to explore the modern concept of political theology. In analyzing a range of selected primary and secondary sources, it will also bring this concept to bear on an understanding of the Zionist secular adaptations of theological concepts, such as heresy, faith, inner experience, and redemption. Finally, the seminar will focus on how this type of political-theology informed the national Jewish language, symbolism, literature, social institutions, and social and political imagination.

CHUM320 Modern Intellectual History in Global Perspectives

Recently, postcolonial critics have urged historians to reconsider the emergence of ideas central to European intellectual history—including reason, society,
and human rights—as part of a global process. In this course, we will explore intellectual history in dialogue with the non-West. Topics include the Enlightenment, romanticism, nationalism, modernity, and postmodernity. Discussions will address how these movements took shape through a series of cross-cultural exchanges and exclusions.

CHUM322 The Hopelessness Photology of the Syrian Uprising
This course examines the Syrian uprising that started on March 15, 2011, and how photography can be produced to understand the social political factors in the creation of image language in “a hopelessness photology.”

This course explores the trajectory of uprising through popular demonstrations and protest slogans in photography as the sine qua non of a new revolutionary and artistic language in Syria since 2011 so far. In addition, this course will provide a survey of the principles aesthetic and political dimensions through the study of thematic photography based on several critical approaches.

CHUM323 Necropolitics and Black "Fugitive" Politics
In his important essay interrogating the (im)possibility of black sociality, Fred Moten attempts to find an order of black social life which would unfold in the very confrontation between black (social) death and the law. However, as he argues, this form of black life would be “reducible neither to simple interdiction nor bare transgression.” The form of black life that interests Moten is essentially one of “fugitivity.” In a recent response to Moten’s text, David Marriott worries that “by writing blackness as ceaseless fugitivity,” Moten advances “a position in which blackness is only black when it exceeds its racial disavowal” and therefore blackness “can only be recognized as black in so far as it escapes the racism of its history.” In this course, we will trace and follow the implications of Moten’s intervention. More specifically, we will explore what forms and figures of sovereignty an aesthetics and politics of fugitive subjectivity could yield given that “black life” remains arguably the most precarious form of living under various contemporary “necropolitical” apparatuses of sanctioned racial exclusion, control, persecution and—in worse cases—genocide. Key figures will include Frantz Fanon, Achille Mbembe, Jacques Derrida, Michel Foucault, Jared Sexton, David Marriott, Fred Moten, Christina Sharpe, Saidiya Hartman, Alexander G. Weheliye, Elizabeth Povinelli, and Gayatri Spivak.

CHUM324 Race and the Enlightenment: A Historical and Philosophical Enquiry
It was during the Enlightenment Era (c. 1760-1800) that scientific reasoning, a belief in progress, and new claims on personal and political liberty swept away a tenacious medieval worldview. It was also during this era, however, that the notion of race crystallized in European and North American thought. Today, we still live with implications of this major shift, be it in classification schemes, anatomical prejudices, or ethnographical myths. This is particularly true for Africans or people of African descent. This class will bring some of the Enlightenment’s most prominent thinkers into dialogue with the emergency of the concept of race theory. In particular, we will focus on the clash between the Enlightenment era’s belief that “all men were created as equals” and the various ways that the Black African came to be studied within “natural history” and various philosophical models. This historical backdrop will lead us not only to a discussion of the economic imperatives of human slavery but to a series of contemporary reflections on the status of the Enlightenment put forward by postcolonial critics. Note: This class is offered in the context of the Wesleyan’s Center for the Humanities’ “Grand Narratives/Modest Proposals” theme and speakers series.

CHUM330 Women Make the World: Global Technologies and Gender
Women are only recently appearing as actors in global histories of technology, even though they have long been inventors and creative innovators in a wide range of fields from domestic textile production and technologies for household maintenance to industrial manufacture. Initially, scholars located women in relation to specifically gendered objects such as reproductive technologies such as the birth control pill and tools for “women’s work” such as the washing machine. Yet, women have also made “masculine” technological work such as engineering and computer programming their own. Few individual women are credited for their inventions, and one of our challenges will be to locate women’s creative production of technological tools and processes in diverse societies from the Americas, Europe, Africa, and Asia. What constitutes women’s technology, even women’s work, is an unstable category that we will unpack in this class.

Moving beyond the domestic space and the family, women’s technological work contained with new and emerging state projects related to the economy and politics. Women found their technological identities entangled with discourses of state building and, increasingly, after the end of the Cold War, with narratives about international development. These histories of the state overlapped with the domestic, and, over the course of the semester, we will engage with women’s global technological stories in relation to big questions about the family, sexuality, and gender and labor. In turn, these same histories will allow us to unpack the ways in which women have engaged with state and international discourses on the economy and politics.

CHUM331 Sophist, Statesman, Philosopher: Plato’s Later Metaphysics and Politics
How is it possible to speak falsely? Plato connects this question with a puzzle he inherits from the great pre-Socratic philosopher Parmenides: to speak falsely is to speak about what is not; but in speaking about what is not, we ascribe being somehow to not-being, which sounds like a contradiction. This seminar will focus on the metaphysical, epistemological, and political issues generated by Parmenides’s puzzle and explore Plato’s solution to them in two of his later-period works: the Sophist and the Statesman. In the process, we will see how Plato rethinks his theory of forms in these dialogues, how he learns to let go of Socrates, how a sophist should be distinguished from a philosopher, and how all of this is relevant to politics and the art of ruling.

CHUM343 Imitations of Life: Experimental Bodies at the Interface of Science and Culture
This seminar will examine scientific and cultural practices of corporeal simulation, or, practices of bodily substitution, imitation, and remodeling. Topics examined will include: reproductive surrogacy; gender reassignment surgeries; experimental subject protocols; prosthetic enhancements; xenotransplantation; biometrics and alternative forms of bodily imaging; the use of nonhuman animals as human proxies; the rise of personalized medicine, and more. Students will engage with a wide range of case studies and theoretical materials from interdisciplinary perspectives. Special attention will be paid to the relationship between scientific discourses of “universality” and “particularity,” where socio-cultural forms of difference (e.g., race, gender, disability, etc.) are at once ignored and exacerbated. While most of the material addressed in the class will relate to recent phenomena, we will also be attentive to relevant histories of corporeal differentiation and reimagining.

CHUM347 Sound Systems: The How of Hearing
Since the late 19th century artists, corporations and composers have all proposed, developed, presented, and occasionally commercialized physical systems that reconfigure how sound can be experienced. The early impact of the entertainment industry ranged from the introduction of stereo to movie theaters in Walt Disney’s Fantasia to the development of close miking for the crooning of Bing Crosby to McCune sound service’s introduction of stage monitors for the benefit of Judy Garland. Artists and composers used related methods to propose entirely new understandings of how music can be. Futurist Luigi Russolo’s Intonarumori of 1913 proposed an Art of Noise, while Pauline Oliveros’ concept of deep listening developed listening as a foundational form of music making. R. Murray Schafer’s concepts of soundscape and acoustic ecology project a music of environmental relations mediated through sound, while Maryanne Amacher’s sound characters create individual sounds understood as capable development and change beyond the expanse of any one performance or composition.
This class will be a performing ensemble focused on “sound systems” as musical instruments and musical practices performing live and fixed media sound pieces through sound systems we will configure for different sites on campus. Together with developing the technical skills required to mount these pieces, we will also investigate and discuss the varied musical, social, acoustical, and psycho-acoustical understandings of music and sound that influenced their shaping.

CHUM349 Body Histories in Africa
African bodies have long generated intrigue and misunderstanding. Outside observers, such as missionaries, travelers, colonial administrators, and anthropologists, have documented practices such as scarification and spirit possession as they simultaneously rendered their African practitioners “other.” All too often the body as an instrument for creative expression, ritual healing, or social action was lost in translation. More recently Western feminists have focused their attentions on female circumcision. The persistence of circumcision (for both girls and boys) and other bodily practices speaks to their enduring social value and symbolic meaning. What can we learned from these and other body histories in Africa? In this course we will examine embodied rituals such as spirit possession, which marks the body as a site for human engagement with the supernatural. The widespread practice is also a gendered technique of healing documenting shifting understandings of health and illness. In addition, we will study the practice of “sitting on a man” by which women addressed the body politic through dance and collective nudity. The revealed body in motion shamed men into action and has been employed in the 21st century to shame oil companies for their greed and environmental destruction. In this and other examples, we will approach the body as an archive: it is an archive in motion and subject to social renewal. Our embodied evidence will allow us to explore shifting histories of religion, art, sexuality, the economy, and politics from the precolonial era to the contemporary moment. By taking the body as our lens
we will also learn new ways to examine the African past through histories of aesthetics, value, labor, hierarchy, and knowledge production.

**CHUM350 The Affective Power of Music**

"Hope," Johann Mattheson tells us, "is a raising of the spirits. Despair, however, is a depression of the same. These can be very naturally represented with tones, especially when other factors such as tempo contribute their part." When Mattheson penned these words in the early 18th century, he was contributing to a growing body of theory known as the Affektenlehre, or the doctrine of affections in music. The aim of this hopeful Enlightenment project was to specify how, exactly, musical tones were able to evoke basic emotions in listeners. For Mattheson, the project was straightforward: use tones in a way that is directly homologous to the operation of the "animal spirits" within the body. Although Mattheson’s ideas—and the Affektenlehre in general—faded into obscurity by the early 19th century, the notion that music has a power to touch our emotions has persisted from antiquity to the present day. This course will explore the sound world of various moments in intellectual history in an effort to understand how theory and aesthetics have added music as a chief progenitor of basic affects such as hope, fear, despair, and joy. In addition to the Affektenlehre, we will explore clinical warnings about the power of music, medieval accounts of music’s ability to afford religious transport, the use of music in the theoretical work of the Frankfort School (including its important role in Ernst Bloch’s Spirit of Utopia), and selected writings from the recent "affective turn." Together we will discover how the non-discursive medium of musical tones has been used to speak so eloquently on the basic forms of human feeling.

**CHUM351 Melodrama Since 1700**

Although today melodrama calls up ideas related to film, the term has musical origins: it originally indicated a work in which melos (music) and spoken drama were united in one multimedia format. Eighteenth-century melodrama admitted of many manifestations, encompassing everything from comic operas (like Mozart’s Magic Flute, which alternated singing with spoken dialogue) to experimental symphonic works (in which a narrator’s declaimed monologue was emotionally painted by the accompanying orchestra). Melodrama in this musical sense persisted through to the twentieth century, and included notable works such as Schoenberg’s Pierrot Lunaire. But slowly melodrama as a term began to take on connotations relating to one of comic opera’s central conceits: hyperbole and exaggeration. Melodrama became synonymous with comic excesses of emotional portrayal. Eventually, during the twentieth century, this meaning fastened onto a constellation of generic implications within the domain of film (think, for example, of Joan Crawford in Mildred Pierce). In its afterlife during the twenty-first century, melodrama has sometimes been used pejoratively: it can be employed as an epithet to disqualify the performance of emotion as inappropriately intense, or to designate emotion connected to an ostensibly inappropriate subject. But even in this new sense, melodrama retains an element of its early history insofar as it can be appropriated within subcultures in order to comically mock the traditions of mass culture. This course examines the long history of melodramatic art forms from the eighteenth century through to the present day. Together we will perform close readings of the objects within this rich tradition, supplemented by readings in queer theory, critical theory, and performance studies.

**CHUM352 Making the Psychological: Discovering, Manufacturing, Circulating**

Psychology aims to explain human experiences and thoughts, including unconscious ones. Using scientific methods, psychology produces valid representations of human nature, names them, and circulates that knowledge for both its truth value and usefulness to society and individuals. Despite much success in these aims, the validity of much of psychology’s knowledge is in
being challenged - as evidenced in recent concerns about the reproducibility of experiments. We will examine the epistemic grounds of psychology's truth claims and consider alternative models that understand the truth claims to be enactments, constructions, or ideologies that rehearse cultural beliefs. Case studies of science-based knowledge eventually found to be inaccurate or exaggerated (priming research; the power pose) are used to examine how some truth claims are generated and challenged, and cases of robust research are used to explore how some truth claims acquire credibility inside and outside the laboratory. We ask, too, how these claims travel to be taken up as new ways for individuals to experience the self and social world, and examine the public's and our own aspirations to expand consciousness and act otherwise. Students will develop case studies of psychological knowledge, its validation, circulation, and effects in the world.

CHUM362 Television Storytelling: Consuming Darkness
This course investigates how and why a "dark sensibility" has emerged in television serials, with attention to its implications for television storytelling, on the one hand, and for viewer practices and subjectivities, on the other hand. While most evident on premium and basic cable channels, where it crosses dramatic and comedic genres, the downbeat tone has also been selectively incorporated into broadcast television and processed for wider distribution. What industrial and sociocultural conditions have enabled such an affective shift in an industry that, since its early days, has been known for telling reassuring stories and promoting an ethic of consumption? Does the shift constitute a break, or can it be interpreted as an intensification of features long present in televisual formats? Is the contemporary taste for darkness among demographically valued viewers merely a marker of distinction, or does it reflect and reinforce a significant shift in mood among segments of the professional middle class? Can narratives about flawed protagonists, failed institutions, and limited possibilities nourish new forms of hope and provide resources for remaking subjectivities and reimagining futures?

CHUM366 The Sounds of Black and Brown Performance
This course organizes itself as a scene of listening with care to black and brown sounds, where listening is conceived as a mode of audience engagement of performances informed by avant-garde, queer, and critical race theories. Listening, then, is part of the artistic-theoretical practices that students will both read about and act out in this course. Here, we will engage theater, dance, and performance with the demand of listening in brown for the distinct sounds made in different performances, whether by identifiably racialized artist-subjects or not, and how they compel us to think of embodiment. If to say black is to say abjection, prison, AIDS, as well as the generative, the contra-rationally beautiful (Moten), and if to say "gender-y" is to say threatening, off-kilter, violatable, as well playful, and transformative (Sedgwick, Doyle), then what happens when we listen in brown, that is, with the headphones of melancholia, depression, as well as wildness, the excessive, the "hot and spicy" as critiques of the violence of the whitened norm (Muñoz)?

CHUM383 Reading Between Freedom and Necessity
Mostly the culture of literacy has taken shape within a realm of freedom, seemingly distant from the needs of the body and the demands of sustenance. At the same time, the world represented within so much of the world's narratives, both truth and fiction, has been saturated in struggle and deprivation. In this seminar we will try to make some sense of this juxtaposition, freedom on one side and necessity on the other, to explore the flip side of the drama of revolution in modern times. For us, revolutions, those great upheavals that unite hope with practical action, will be the background against which we will try to understand the gravity and persistence of dispossession itself: the pull of past or residual forms of unfreedom in the sphere of cultural representation, within and against new or emerging expressions of emancipation, themselves accompanied or countered in modern times by ever-novel styles of exploitation.

CENTER FOR THE STUDY OF PUBLIC LIFE (CSPL)

CSPL127 Introduction to Financial Accounting
In this course, no prior accounting knowledge is required or assumed. Students learn how accountants define assets, liabilities, revenues, and expenses and where those items appear in firms' balance sheets and income statements. The purposes and limitations of these two financial statements as well as the statement of cash flows are considered. Students gain an understanding of the accounting choices allowed to firms for reporting to stockholders and creditors and learn how the use of different accounting methods for similar economic events creates challenges for analysts. Instances of questionable financial reporting and strategies that can aid in their discovery are addressed. Later assignments focus on ratio analysis of actual firms' financial statements, including techniques to identify firms in financial trouble. 
Offering: Crosslisting

CSPL140F Thinking with Things (FYS)
This course explores the ways in which we think and act in relation to things. At times provocations for thought, at times emotional companions or functional collaborators, things are not only symbolic carriers of the values and meanings that we assign, but are also actors with agency and subjectivity. We critically consider the implications of this and the role of things in a variety of contexts from the historical to the emotional to the sociocultural to the sacred. The course considers how we make, use, and consume things and how, in turn, things make, use, and consume us. Transdisciplinary in its orientation, this course draws insight from anthropology, cultural studies, philosophy, material studies, art, and design. We will examine a number of projects dealing with objects and these will serve as inspirational, theoretical, and methodological models for the projects students will develop over the course of the semester.

CSPL202 Introduction to Design Thinking: Liberal Arts to Epic Challenges
Human-centered design or design thinking taps the creativity and diversity of a
team to develop solutions to complex problems, following careful observation
to gain the human perspective of a problem. Increasingly, this methodology is at
the center of innovative practices in business, nonprofits, and governments. It
is particularly effective in addressing the human needs that are the focus of
social enterprise and policy. Many of the disciplines that comprise the liberal arts
education are valued sources of perspective and ideas contributing to solutions.

The most progressive and effective solutions to many problems are those that
emerge from closely observing human patterns and then encouraging diverse
imagination to create rapid prototypes of solutions that can be tested and
redefined. The result is human-centered, rather than high-level policy influences
for social change. Although the methodology is called “design thinking,” the
approach is used in designing experiences, services, and organizations, as well as
objects. No design background is required.

The class sessions will consist of (1) the presentation of methods and theories,
(2) case studies to be worked on in teams either in the session or between
sessions, and (3) discussions with faculty members from other disciplines and
designers who have worked on significant engagements for social change. Design
thinking can be a purposeful link to the application of other disciplines to real-
world problems, including anthropology, and behavioral economics.

An optional field trip is planned to work through a problem in the IBM Design
Studio in New York City.

CSPL206 Group Psychology in Politics: Local, State, and National Perspectives
This course is an introduction to the use of group dynamics to understand
the deep personal and systems-level issues at play in the body politic. This
framework is applicable at the local, state, national, and international levels.
Often, if not most of the time, these issues play an outsized role in any public
policy initiative, debate, vote, action, deliberation, and discourse—though they
are rarely acknowledged. This class will examine group dynamics as it is practiced
in the field of organizational development (OD), a branch of organizational
psychology used to implement cultural changes across social systems. The
application of OD to politics is not widespread, but its tools are useful in
understanding the dynamics in political situations and in the understanding of
how power is exercised. The course will introduce concepts in open systems
theory and will introduce three models to “hold the data” in our case studies: the
Burke-Litwin Model, BART, and GRPI.

CSPL210 Money and Social Change: Innovative Paradigms and Strategies
How do people make decisions about using their money for social change?
Where will it have the most impact? When do shifts in the rules or the use
of capital create systemic change and address structural inequities? This
course will explore the role of capital in social change. If we rethink how social
change happens—analyzing the nonprofit and public sectors, but also new
sector-blending approaches and concepts like collective impact—how does
our perspective on capital shift? As a part of this unique course, students will
work through an active process of selecting a set of nonprofits in and around
Middletown to which, as a class, they will actually grant a total of $10,000.

CSPL215 Human-Centered Design for Social Change
Design thinking is the way the creative mind approaches complex problem
solving. Increasingly, it is at the center of innovative practices in business. Yet it
can be particularly effective in addressing the human needs that are the focus of
social enterprise and policy. This course will introduce a number of ways to
understand how to use this method and will apply it to a number of real-world
examples as team work in class. Invited designers who have worked in the field in
the United States and in other countries will lead several sessions. An individual
project will require fieldwork and will constitute the demonstration of mastery.

This course explores the techniques of human-centered design and design
thinking for approaching social challenges ranging from election processes to
subsidize challenges in impoverished rural populations. The most progressive
and effective solutions to many problems are those that emerge from closely
observing human patterns and then using creativity to make rapid prototypes of
solutions that can be tested and refined. The result is human-centered, rather
than high-level policy influences for social change. The class session will consist
of (1) the presentation of methods and theories, (2) case studies to be worked on
in teams either in the session or between sessions, and (3) discussions with
designers who have worked on significant engagements for social change.

CSPL220 Participatory Design: From Helping to Solidarity
As artists and designers increasingly turn their efforts to altering conditions
for the vulnerable and oppressed, stubborn questions arise around the ethics
of engagement. Socially engaged projects seek meaningful change, yet often
discourage dissent, reify privilege, remain agnostic about outcomes, and do
little to alter larger, structural inequalities. Artists and designers can easily exit
projects deemed failures and write these off as learning experiences. Moving
from one social injustice to the next, crises and suffering become “sites” from
which to develop serialized projects. Armed with empathy and expertise, but
with little local knowledge, these practitioners struggle to form equitable
relationships with partners and collaborators. This course will examine a range of
projects initiated by artists and designers and will challenge the idea that helping
is beyond reproach. The course asks how artists and designers might better
situate themselves as allies through developing practices that foster solidarity,
exercise humility, and distribute agency.

CSPL225 Critical Design Fictions
Design fiction involves the deliberate use of diegetic prototypes to suspend
disbelief about change. Through practices of estrangement and defamiliarization,
and through the use of carefully chosen design methods, this course experiments
with the creation of provocative scenarios and imaginative artifacts that can
help us envision different ways of inhabiting the world. The choices made by
designers are ultimately choices about the kind of world in which we want to
live—expressions of our dreams, fantasies, desires, and fears. As an integrated
mode of thought and action, design is intrinsically social and deeply political.
In conversation with science fiction, queer and feminist theories, indigenous
discourses, drag and other performatives interventions, this course explores
speculative and critical approaches to design as catalysts for imagining alternate
presents and possible futures. We examine a number of environmental and
social issues related to climate change, incarceration, gender and reproductive rights, surveillance, emerging technologies, and labor.

CSPL235 Activism and Theories of Change
In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education. When do they strengthen one another, and when do they collide? What ethical or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an activist for women's rights, queer rights, and economic justice. We will also consider the strategies of other recent movements such as Occupy, Black Lives Matter and gun safety activism, and we will allow time to discuss events that may occur in real time over the course of the semester. This course will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

CSPL239 Startup Incubator: The Art and Science of Launching Your Idea
The Startup Incubator is a one-semester, experiential learning program designed to teach and enable student entrepreneurs to develop sustainable business models from their ideas.

The program will bring together an ambitious, committed, and diverse group of individuals from all classes and majors who are passionate about developing successful solutions to challenges; identify as entrepreneurs, disruptors, and thought leaders; and have the tenacity, work ethic, and ability to succeed. All participating students should have a promising business idea and take the course with the intention of launching or running their own venture.

Student Incubator students actively participate in one cohort meeting a week: most are "classes" that take the form of lectures or workshops, and some are "practice days" that provide time to practice theories and methods necessary for success. Students also dedicate at least 10 additional hours per week to assignments, self-directed work, customer discovery, networking, and mentoring sessions.

This course will feel like a combination of a college class and a rigorous startup incubator program. Success is a student using theories learned in class to validate their ideas by developing and accurately testing business assumptions, identifying and researching their target market, and pivoting to develop a sustainable business model.

By enrolling, students make a commitment to themselves, the instructor, and the other members of the class.

Note: This course is offered by the Patricelli Center for Social Entrepreneurship (wesleyan.edu/patricelli/) and reSET (resetco.org/about/), a Hartford-based nonprofit whose mission is to advance the social enterprise sector, with support from CTNext (ctnext.com/higher-education/). Classes will be taught by reSET staff, and additional advising and coaching will be available through the Patricelli Center.

CSPL240 Nonprofits and Social Change
This course explores the world of nonprofits and how they help (or don't help) the process of social change. As nonprofits increasingly address issues and concerns that governments have previously addressed, a critical analysis of how and why they carry out their work is central to the Allbritton Center's concern with public life. Each class session will include (1) background on a particular social issue (including global health, inner-city education, clean water, hunger, refugees, and national borders); (2) a case study of a nonprofit addressing that issue; and (3) discussion with leaders of that nonprofit.

CSPL245 Ethnography and Design
Exercising humility and developing methods of meaningful engagement are essential to becoming an effective ethnographer and designer. Collaboration with users provides knowledge that allows designers to imagine artifacts, places, and systems that are thoughtfully enhanced or radically new. This course rethinks power dynamics to better understand how to design both for and with other people. With successful completion of this course students will be able to demonstrate competence in developing, refining, and communicating research interests in a committed, reflexive manner. They will gain an understanding of the strategic and tactical value of design and a sense of the practical problems involved in realizing design solutions and responses that are attuned to the needs of both an institution and individual users. Students will gain experience not only in theoretically framing social and political issues as these are expressed through design, but also in understanding the methodological tools needed to translate problems into creative interventions that are user-centered and compassionate.

CSPL250 An Introduction to Data Journalism
This course is designed to familiarize students with the basic principles and tools of data journalism and to provide a wider understanding of the role of basic data analysis in society. To that end, the course will focus on developing a solid
familiarity with basic data analysis and visualization software. It will also focus on developing the tools of journalism: retrieving public data, interviewing people and databases, and the basic principles of journalistic writing. By the end of the course, students will be able to analyze data, identify stories within the data, and create a news story complete with data visualizations of publishable quality—a skill transferable to many fields and disciplines. Both online and traditional print platforms will be covered.

CSP250D Topics in Journalism: Writing (and Arguing) About Inequality: How to Make Your Case
In this nonfiction seminar, students will explore how to write about social issues by identifying inequity, understanding the logic and rhetoric used to both defend and criticize it, and developing their own skills to effectively communicate their opinion. Modeled after journalistic work, the course will also develop students' abilities to conduct first-person research and observation and then translate them into written form for use in nonfiction. We will also explore questions of authenticity, voice, and dominant narrative, allowing students to examine what it means to write about communities other than their own—and the issues implicit in doing that work. Work from across the political spectrum will be addressed.

CSP250G Topics in Journalism: Literary Journalism
In this course, we will explore the art and craft of magazine-length journalism that strives to do something different than reporting the news—it aspires to achieve the goals of literature. While this kind of writing tends to be timely, as almost all journalism must be when it’s first published, at its best, it ought to be worth reading for decades to come. Truman Capote, for example, conceived of IN COLD BLOOD, which he first published as a series of articles in THE NEW YORKER in 1965, as a "non-fiction novel": a work of journalism that employed the techniques and artistry of fiction. We will study the writing of new journalists such as Joan Didion, Tom Wolfe, Nora Ephron, and Gay Talese, who pioneered the idea that there is no such thing as unbiased reporting: The writer can’t help but bring a point of view to his or her storytelling, so why not admit it? These writers broke with journalistic convention and admitted that there was an "I" behind the typewriter, a mediator between the "true" story and the reader. We will focus on reading and writing two forms in particular, the profile and the essay. While an excellent profile can be a straightforward examination of another person and his or her place in the world, in the hands of a master like Janet Malcolm or George Trow, it can become an eruption of invention. Essays ask a question or argue a point—but how? There are as many ways as there are writers who explore the form, and in this course we will seek to join them.

CSP250H Topics in Journalism: Writing Op-Ed Pieces and Political Essays
This course offers practice in writing op-eds and political essays in short and long forms. This class may be of interest not only to writers but also to students studying political science, history, economics, ethics, sociology, or an interdisciplinary field, such as American studies. The main goal of this class is teaching students how to engage in debate in the public sphere over the major themes and issues of our time. Other than an intense reading schedule and a writing workshop, the other major component will be guest speakers. They include journalist, essayists, and scholars working in their fields but with an authoritative presence in the public sphere.

**CSPL264 Patricelli Center Fellowship I**

The Patricelli Center Fellowship is a one-year, project-based, cohort-style learning experience. Fellows are self-selected, committed, and diverse cohort of individuals or teams from all classes and majors who are passionate about innovation, creativity, and problem-solving; identify as entrepreneurs, intrapreneurs, changemakers, activists, disruptors, designers, inventors, and/or thought leaders; and have tenacity, empathy, interdisciplinary thinking, strong work ethic, and the ability to work independently. Some Fellows will launch or run their own project or venture, while others will not.

Patricelli Center Fellows actively participate in two cohort meetings per week: some are "classes" that take the form of lectures or workshops, and some are "labs" that serve as working or discussion sessions. Fellows also dedicate 10+ additional hours per week to assignments, self-directed work, portfolio-building, and engaging other members of the Wesleyan community.

This course will feel like a combination of a Wesleyan class, a C-level position on a startup team, and an extra-curricular leadership activity. By enrolling, Fellows make a commitment to themselves, the instructor, and the other members of their cohort.

**CSPL266 Youth, Power, and Social Change**

While young people have been at the helm of movements for social and racial justice throughout history, the 1990s saw the rise of youth organizing as an intentional strategy for transforming youth, communities, and the broader social and political structures and institutions that shape their lives. This course will examine the evolution of youth organizing and the ways in which it has disrupted the dominant narratives and traditional methods of youth learning and
engagement at play in schools and youth service organizations. The course will explore the politics of power and identity in youth work, and the role and impact of current youth-led social change movements - from #Blacklivesmatter to the work of Dreamers - in today's political climate. Please note that this course will require students to reflect on and contextualize readings and class discussion with their own lived experience and is therefore especially relevant for students that are engaged in community service, organizing and/or youth work.

CSPL315 Policy and War through Film
This course explores how America's policies and wars interact with culture and identity. It combines films and readings to gain a deeper understanding of film as an artifact of culture, war, and identity. The course begins with a discussion of key foundational works to frame a common understanding about strategy, war, and American strategic culture. It then combines film viewings and critical scholarship to discover how the interpretations of America's wars through film shape American citizens' perceptions of war and their military. The films, readings, and seminar discussions will help students develop a better understanding of the differences between the realities and the perceptions of policy and war. This course lies at the intersection of international relations, history, and conflict studies. Participation in this course will increase the students' understanding of how U.S. policy, war, culture, and identity interact. It will also sharpen critical thinking and writing.

CSPL330 Policy and Strategy in War and Peace
This course explores how the relations, relationships, and discourse between senior national civilian and military leaders influence the development and execution of policy and strategy in war and peace. In theory, the purpose of war is to achieve a political end that sees a better peace. In practice, the nature of war is to serve itself if it is not influenced and constrained by continuous discourse and analysis associated with good civil-military relations between senior leaders. This course begins with discussion of the key foundational works to build a common understanding. It then explores how civil-military interaction
influenced strategy in war and peace for each decade from the Vietnam War to the present. The readings and seminar discussions also examine how the outcomes of wars influenced civil-military relations and the subsequent peace or wars. This course lies at the intersection of international relations, history, and conflict studies. Students will gain greater understanding of how U.S. policy makers, strategy, and war interact, while honing their critical thinking and writing skills.

CSPL332 Just Cities: Architectures of Public Encounter

What is "the public," and how has it been conceived, relative to notions of the urban—to the web of ideas, forms, and fantasies constituting "the city"? Can art and architecture play a role in defining the public, or does the public's political and social construction place it outside the scope of specifically aesthetic concerns? This course addresses these and other related questions, positioning art and architecture in their broader cultural and historical contexts. It explores a range of socially charged, experiential, and participatory aesthetic and political practices, characterized by their distinctly public character and decidedly architectural and urban settings. At its core, it is concerned with issues of social justice as they relate to the material spaces of the modern city, and the manner in which those spaces are identified, codified, and made operative in the service of aesthetic, social, and political experience.

This course will be taught by M. Sury Schlabs, Yale School of Architecture.

CSPL333 Music Movements in a Capitalist Democracy

This course will focus on music movements that have used the presentation, expression, and production of music and music events to facilitate sociopolitico transitions. The vital context of these movements is the United States in particular, where the speed and power of commerce, as well as the concentration of capital, present unique opportunities for progressive values and goals in music.

We will look at huge events such as the Newport festivals, Woodstock, Michigan Womyn's Music Festival, Lilith Fair, and Bonaroo, and examine how these movements have both evolved and spread their tendrils into the world (if they have). We will also spend some time on smaller, grassroots venues and music series in Chicago, Boston, San Francisco, and New York and see how blues, folk, punk, and "Americana" venues have affected and interacted with their communities. We will look at how music scenes evolved and grew and sometimes became institutions, like the Chicago Old Town School of Music.

CSPL337 Practicing Democracy

Organizing can make a difference in addressing major public challenges that require civic action, especially by those whose voices will lead, by identifying, recruiting, and developing more leadership; building community around that leadership; and building power from the resources of that community. In this course, each student accepts responsibility for organizing constituents to achieve an outcome by the end of the semester. As reflective practitioners, students learn from critical analysis of their leadership of this campaign. We focus on five key practices: turning values into motivated action through narrative; building relationships committed to common purpose; structuring leadership collaboratively; strategizing to turn resources into the power to achieve outcomes; and turning commitments into measurable action enabling learning, accountability, and adaption.

CSPL341B Topics in Education, Innovation, and Entrepreneurship: Social Entrepreneurship in Education

This seminar focuses upon educational innovation and entrepreneurship as a form of social entrepreneurship, some of society's greatest challenges in education. Students will survey critical issues in contemporary education and explore innovative and entrepreneurial efforts to address these issues. Learners will explore how diverse education startups, non-profit organizations, and non-governmental organizations, individuals and grassroot groups, K-12 schools, universities, foundations, professional associations and others are responding to these issues in innovative ways. As the course progresses, students will explore the roles of foundations, corporations, and government policies and regulations upon educational innovation and entrepreneurship. As part of this course, learners will work individually or in groups to research solutions to a pressing contemporary educational challenge and propose or pitch a means of addressing that challenge through social entrepreneurship.

Offering: Host
Grading: A-F
Credits: 1.00

CSPL341C Entrepreneurship in Education: Past, Present, and Future

Entrepreneurship plays an increasingly important role in the American public education system. This course examines the historic roots of entrepreneurship in education, looking at both the business side of entrepreneurship and the more recent emergence of social entrepreneurship. Furthermore, the course examines the current debates in the United States about the engagement of business with education, addressing such concerns as the proper role of risk, profit motives, privatization, and neoliberalism. The New Orleans public school system will serve as a case study for investigation in this discussion. Students will better understand the entrepreneurial personality, the sources of innovation, and the promise and pitfalls of entrepreneurship in public K-12 schooling.

Offering: Host

Prereq: None

CSPL341D Topics in Education, Innovation, and Entrepreneurship: A Law and Policy Perspective
Entrepreneurial ideas in education invariably raise rich questions of policy and law. Innovations in the public schools, such as charter schools, the use of student test scores (e.g., value added modeling) to evaluate teachers, and alternative pathways to the profession (e.g., Teach for America) engender deep debate and discussion in policy and legal circles. This course will explore (from both a law and policy lens) the various education reform ideas that have been instituted or debated and characterized as innovative or entrepreneurial. The course material will be framed in a way to be accessible to those with a general interest in the area of education but without a background in law and policy per se. The course will draw heavily from guest lecturers and entrepreneurs working in the field.

CHEMISTRY (CHEM)

CHEM118 DNA
This course provides an interdisciplinary view of the DNA molecule and its impact upon medicine, law, philosophy, agriculture, ethics, politics, and society at large. The course has two parts. In the first part, we will learn the chemistry and physics of DNA and the processes by which the information stored in DNA is expressed. In the second part of the course, we will discuss what DNA has done and still can do for us—for example, treat and prevent genetic diseases, improve our food through genetic engineering, achieve criminal justice through genetic fingerprinting, understand the evolutionary origin of humans, and enrich our idea of what it is to be human. The course assumes basic knowledge of chemistry and biology at the general high school level. Independent exploration and inquiry are encouraged.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: None
CHEM119 Biology and Chemistry in the Modern World: A Survey of Drugs and Disease
This course will cover a wide range of topics of current interest that are at the intersection of biology and chemistry. In particular, the molecular basis of issues related to drugs and disease will form a focus of the course. Topics to be discussed will include psychoactive and performance-enhancing drugs, mad cow, cancer, viral and bacterial diseases, and the chemistry of foods.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Identical With: MB&B119
Prereq: None

CHEM120 Science and Humanity
This course will provide an introduction to the important concepts of writing in science. We will discuss the major components of scientific writing while viewing scientific issues from an analytical and interdisciplinary perspective. We will discuss contemporary problems influenced by technological advantages and the effects they have on science and humanity. This course assumes basic knowledge in chemistry and biology at the high school level.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: None

CHEM134 Quantum Weirdness?
Chem 134 is a general education course open to first-year students, sophomores, juniors, and seniors. There is an enrollment limit of 19 students. There are no formal prerequisites for this course except for a keen intellect and an interest in modern science. In a lecture and discussion format, we will be exploring the "weirdness" and "paradoxes" inherent in the science of quantum mechanics.
Full disclosure: the instructor is a scientific realist and is skeptical of fantasy physics. We will be reading articles from the archives of Scientific American, and from books such as "What is Real?" by Adam Becker, "Beyond Weird," by Philip Ball, and "Through Two Doors at Once: The Elegant Experiment That Captures the Enigma of Our Quantum Reality," by Anil Ananthaswamy. At the end of the course, students will be expected to present 15-minute talks on a topic of their choosing loosely adhering to the theme of the course.
Offering: Host
Grading: Cr/U
Credits: 1.00
Gen Ed Area: None
Prereq: None

CHEM141 Introductory Chemistry I
CHEM 141 is the first half of an introductory course in general chemistry intended for science majors and for premedical studies. The topics covered will include measurement and dimensional analysis; atomic theory; chemical nomenclature; mass relationships and the mole concept; stoichiometry; aqueous reactions; gases; thermochemistry; the quantum mechanical model of the atom; periodic trends; bonding theory; and molecular geometry. The full-year course can be completed by continuing on to CHEM 142.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: None

CHEM142 Introductory Chemistry II
CHEM 142 is the second half of Introductory Chemistry and is intended for science majors and for premedical studies. This course will introduce theory as well as applications that involve significant amount of calculation.
A strong familiarity with algebra is required. The topics covered will include intermolecular forces, acids and bases, solutions, their properties and equilibria, thermodynamics, free energy, electrochemistry and radioactivity. CHEM152, the associated laboratory course, may be taken concurrently. The lab should be taken by those who plan to take more than one year of chemistry.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM

CHEM143 Principles of Chemistry I
An introduction to chemistry intended for motivated students with a solid high school chemistry background and some exposure to basic calculus, this course will emphasize the fundamental principles of chemistry and is recommended for students interested in pursuing majors in science or mathematics. The topical focus will be on the concepts of electronic structure, molecular geometry, and equilibrium thermodynamics, with applications to current research on, for example, the carbon cycle and nanomaterials. CHEM143 and CHEM144 provide the best basic foundation for further study of chemistry and is strongly recommended for Chemistry, MB&B, and NS&B majors. Completion of CHEM143 and CHEM144 also satisfies premedical general chemistry requirements.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: None

CHEM144 Principles of Chemistry II
This second semester general chemistry course is a continuation of the Principles of Chemistry sequence that is recommended for science students. The focus of the course is the fundamentals of structure and bonding, with an emphasis on predicting reactivity. Major topical coverage includes the reactivity of ions in aqueous solution, kinetics, modern electronic structure, and the chemistry of transition metal complexes, with applications to current research on, for example, food chemistry, functional materials, and artificial photosynthesis.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM143

CHEM152 Introductory Chemistry Laboratory
This course provides an introduction to the application of chemical concepts in the laboratory. It is required for Chemistry or MB&B majors and satisfies the general chemistry laboratory requirements for pre-medical studies. Chem 152 is usually taken concurrently with CHEM 141, 142, 143, or 144.
Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: NSM-CHEM
Prereq: None

CHEM241 Informal Science Education for Elementary School Students I
This service-learning course will focus on designing and implementing original, effective, and engaging science-based lesson plans for elementary age children in an afterschool program setting at five local elementary schools. The classroom component includes writing, testing, and critiquing lesson plans and organizing a once-a-semester event, Science Saturday. Members of the class are required to volunteer weekly, co-lead Science Saturday, complete individual work, and organize meetings for projects outside of class.
Offering: Host
Grading: BMS
Credits: 1.00
CHEM242 Informal Science Education for Elementary School Students II
This service-learning course will focus on designing and implementing original, effective, and engaging science-based lesson plans for elementary age children in an afterschool program setting at five local elementary schools. The classroom component includes writing, testing, and critiquing lesson plans and organizing a once-a-semester event, Science Saturday. Members of the class are required to volunteer weekly, co-lead Science Saturday, complete individual work, and organize meetings for projects outside of class. This course is a continuation of CHEM241.
Offering: Host
Grading: Cr/U
Credits: 1.00
Gen Ed Area: NSM-CHEM

CHEM250 Pre-Organic Chemistry: Key Concepts and Fundamental Principles
This course is designed to assist students in the transition from CHEM 142 & CHEM 144 to CHEM 251. This course will review key General Chemistry concepts and apply them to organic molecules. Thematic presentation of material will use visual lecture and demonstration methods, small-group problem solving, peer-group workshops and lecture format. A broad understanding of Organic Chemistry terminology, structures, nomenclature, applications and basic concepts will provide students with a firm foundation for success in CHEM 251.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM142 OR CHEM144

CHEM251 Principles of Organic Chemistry I
This course offers an introduction to the chemistry of carbon compounds with emphasis on the relationship between structure and reactivity. The laboratory course CHEM257 is normally elected concurrently but is not required.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM142 OR CHEM144

CHEM252 Principles of Organic Chemistry II
This course is a continuation of the chemistry of carbon compounds with emphasis on the chemistry of important functional groups. The laboratory course CHEM258 is normally elected concurrently but is not required.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM251

CHEM257 General Chemistry Laboratory
Normally taken along with CHEM251, this course provides laboratory work in quantitative chemical procedures and introductory chemical laboratory practices. This course is required by most medical, dental, and veterinary schools and is a prerequisite for CHEM258.
Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: NSM-CHEM
Prereq: (CHEM141 AND CHEM142 AND CHEM152) OR (CHEM143 AND CHEM144 AND CHEM152)

CHEM258 Organic Chemistry Laboratory
This course presents laboratory techniques of organic chemistry.
Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: NSM-CHEM
Prereq: (CHEM251 AND CHEM257)

CHEM307 Molecular Biophysics Journal Club I
This course includes presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from journals including but not limited to the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: Host
Grading: Cr/U
Credits: 0.50
Gen Ed Area: NSM-CHEM
Prereq: CHEM257, PHY5517, PHY5317, MB&B507, MB&B307
Identical With: CHEM507, PHY5517, PHY5317, MB&B507, MB&B307

CHEM308 Molecular Biophysics Journal Club II
Offering: Host
Grading: Cr/U
Credits: 0.50
Gen Ed Area: NSM-CHEM
Prereq: CHEM257, PHY5517, PHY5317, MB&B507, MB&B307
Identical With: CHEM507, PHY5517, PHY5317, MB&B507, MB&B307

CHEM309 Molecular and Cellular Biophysics
This course is an integrated consideration of the biophysics and biophysical chemistry of biological systems from molecules to cells. The objective is to develop a critical sense of the quantitative data currently being obtained from microscopy to spectroscopy, considering both ensemble and single-molecule experiments, and to gain familiarity and facility with interpretation using mathematical and computational models. Biological systems are inherently complex, and some form of modeling is always involved in developing an explanation of how they work. However, these models typically involve only a few basic constructs (simple harmonic motion, ideal fluids, two-state Ising models, random walks, electrostatic interactions, classical dynamics, rate equations, QM energy levels, distribution functions, and network analysis) and only elementary aspects of linear algebra, calculus, differential equations, and statistics. This course deals with how these constructs are integrated in the framework of Boltzmann statistical mechanics to formulate mathematical models of biological phenomena, how these models are validated and refined, and how they are used to form explanations and make testable predictions. Model systems to be considered include the nucleosome, the ribosome, membrane dynamics and ion channels, molecular devices and motors, prototype signal transduction systems, and regulatory processes. This course is suitable for physics and chemistry students who wish to learn about biological applications and for molecular and cellular biology students to develop skills with quantitative physicochemical modes of inquiry applied to the life sciences.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM258, CHEM509, MB&B509, PHY5339, PHY5539
Identical With: MB&B309, CHEM509, MB&B509, PHY5339, PHY5539
The focus of the course will be on understanding the complex interplay of small molecules and proteins that keep neurons healthy and functional. In this course, we will use current primary literature and lecture to understand the varied topics. This course aims to improve skills in reading and analysis of primary literature as well as the written and oral presentation of scientific findings.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: None
Identical With: NS&B323
Prereq: BIO181 AND CHEM252

CHEM325 Introduction to Biomolecular Structure

This course aims to provide a framework for understanding three-dimensional structures of proteins, nucleic acids, and their complexes. The first half of the course emphasizes structural modules and topological patterns in major classes of proteins and nucleic acids. The second part of the course covers novel structural motifs, such as helix-turn-helix, zinc-finger, and leucine zipper, that are responsible for recognition of specific nucleotide sequences in nucleic acids by proteins. Analysis of structures using tools available on the Web and independent exploration of protein and nucleic acid databases are strongly encouraged.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: OPT

CHEM335 Protein Folding: From Misfolding to Disease

Amyloidogenesis, the process by which proteins and peptides misfold to form amyloid fibers, is at the root of several different diseases, including Parkinson's disease, Alzheimer's disease, mad cow disease, and type II diabetes to name a few. This course will focus on current research in the field that seeks to understand why a functional, well-folded protein adopts the misfolded amyloid form. In the course of discussing the misfolded nature of these proteins, we will review central elements of protein structure and stability to better understand the protein-folding landscape and the process of misfolding. We will also discuss how the process of misfolding leads to the different diseases and disease pathologies. We will read current literature that studies the molecular nature of these diseases and discuss the strategies used to detect, identify and study these misfolded proteins in the body and in the test-tube.

Offering: Crosslisting
Grading: A-F
Credits: 1.00

CHEM337 Physical Chemistry I: Quantum Mechanics and Spectroscopy

A rigorous introduction to quantum mechanics, this course covers wave mechanics, operator methods, matrix mechanics, perturbation theory, angular momentum, molecular vibrations, atomic and molecular structure, symmetry, and spectroscopy.

Offering: Host
Grading: A-F
Credits: 1.00

CHEM323 Biochemistry of Neurodegenerative Disease

Broadly defined, neurodegenerative disease occurs when a specific class of neuron dies and thus fails in its biological action. In this course, we will delve into the many different, intricate ways neuron death can occur and cause disease. From the chemistry of neurotransmitters, aggregation of proteins, and the collapse of neuromuscular junctions, many areas of the neurobiology can go awry.
CHEM338 Physical Chemistry II: Thermodynamics, Statistical Mechanics, and Kinetics
This course investigates chemical aspects of statistical mechanics and the laws of thermodynamics including free energy, chemical potential and chemical equilibria, and rates of chemical reactions.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: (MATH121 AND MATH122 AND CHEM141 AND CHEM142) OR (MATH121 AND MATH122 AND CHEM143 AND CHEM144)

CHEM340 Physical Chemistry IV: Introduction to Quantum Chemistry
This course is an introduction to modern concepts of atomic and molecular quantum mechanics, molecular orbital theory, and qualitative and quantitative concepts of molecular electronic structure. The second half of the course will emphasize numerical calculations with commonly used approximations in many electron calculations on atomic and molecular systems using currently popular computer programs.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM337 OR PHYS214

CHEM342 Molecules to Medicine
This course will explore the process of drug development, including target selection, lead discovery using computer-based methods and combinatorial chemistry/high-throughput screening, organic synthesis, bioavailability, clinical trials, and other factors (some economics and politics) involved in bringing a drug to the marketplace. Critical consideration of the variables to contend with at each step will be described and discussed, including aspects of research ethics and patent law. The basic science of molecular recognition, computer-aided drug design, and the role of factors from synthetic chemistry to toxicology will be presented. Case studies of the development of drugs recently successful in making the journey from molecule to medicine will be discussed, as well as the story of some that did not, and why. Emerging new design strategies such as fusion-protein therapies, crisper technology, and enhanced use of rational design and combinatorial methods will be emphasized, and how pharmaceutical research is evolving in the postgenomic era, particularly with biologics. Job opportunities in the pharmaceutical industry will be discussed.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Identical With: BIOL342, MB&B342, CIS342
Prereq: CHEM252 OR MB&B208

CHEM353 Applications of Spectroscopic Methods in Organic Chemistry
The use of NMR infrared and mass spectroscopy in structure determinations will be discussed.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: (CHEM251 AND CHEM252)

CHEM358 Structure and Mechanism
This course will cover several important aspects of traditional and contemporary physical organic and mechanistic chemistry, including frontier molecular orbital theory and pericyclic reactions, organic photochemistry reactive intermediates (carbocations, carbanions, radicals, and carbenes), the thermodynamics and kinetics of organic reactions, and polymer chemistry.
Offering: Host

CHEM359 Advanced Organic Synthesis
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: (CHEM251 AND CHEM252)

CHEM361 Advanced Inorganic Chemistry
This course is a survey of the chemistry of the inorganic elements, focusing on the relationship between electronic structure, physical properties, and reactivity across the periodic table.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM252

CHEM375 Integrated Chemistry Laboratory I
This advanced laboratory course in chemistry involves work from the major subdisciplines: organic, inorganic, biochemistry, physical, and instrumental. Emphasis will be placed on integrating aspects of chemical synthesis, spectroscopic characterization, and determination of physical properties in each exercise.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: (CHEM251 AND CHEM252 AND CHEM257 AND CHEM258)

CHEM376 Integrated Chemistry Laboratory II
This advanced laboratory course in chemistry involves work from the major subdisciplines: organic, inorganic, biochemistry, physical, and instrumental. Emphasis will be placed on integrating aspects of chemical synthesis, spectroscopic characterization, and determination of physical properties in each exercise.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM375

CHEM377 Chemistry of Materials and Nanomaterials
This course will provide an introduction to materials chemistry, with a special emphasis on nanomaterials. Topics covered will include colloidal metal nanomaterials; semiconductors and quantum dots; carbon nanotubes, fullerenes, and graphene; metal-organic frameworks; self-assembly and metamaterials; electron and scanning probe microscopies; and lithography. The course will also discuss applications of these materials and techniques in areas such as plasmonics and sensing, catalysis, energy generation, and medicine.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
CHEM379 Nanomaterials Lab
This course will be a combination of weekly lecture and laboratory exercises designed to introduce students to new developments in the chemistry of materials and nanomaterials. Concepts and theoretical background will be discussed during weekly lectures. Students will then apply these concepts to the preparation of materials/nanomaterials in weekly lab sections. Students will synthesize quantum dots, build solar cells, pattern surfaces using both photolithography and soft lithography, make conductive carbon nanofiber films, prepare high-temperature superconductors, and learn scanning probe microscopy techniques.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM251

CHEM381 Physical Chemistry for the Life Sciences
The course is concerned with the basic physicochemical principles and model systems essential to understanding, explaining, and predicting the behavior of biological systems in terms of molecular forces. The course integrates fundamental concepts in thermodynamics, kinetics, and molecular spectroscopy with the structures, functions, and molecular mechanisms of biological processes. The objectives of the course are to (1) familiarize life science students at the advanced undergraduate and beginning graduate level with basic physicochemical laws, theories, and concepts important to the life sciences; (2) provide a working knowledge of mathematical methods useful in life science research; (3) develop a critical perspective on explanation of biological processes and understanding biological systems; and (4) survey the main applications of physical chemistry in the life sciences. Theory, methodology, and biophysical concepts are distributed throughout the course.
Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-MBB
Prereq: (CHEM251 AND MATH117) OR (CHEM251 AND MATH120) OR (CHEM251 AND MATH121)

CHEM382 Practical NMR
This course will cover how a spectrometer works as well as the theory and application of NMR experiments. The topics will include one-dimensional proton and heteronuclear experiments as well as decoupling. The course will begin with how the spectrometer works and how data processing is carried out, as well as how to calibrate the spectrometer and shim the magnet. The one-dimensional TOCSY and NOESY experiments will then be covered. The course will also cover heteronuclear and homonuclear two-dimensional NMR experiments. The experiments will include two-dimensional DQF COSY, TOCSY, NOESY, and ROESY proton experiments as well as heteronuclear experiments to correlate the chemical shifts of protons and heteronuclei, as well as how to select heteronuclear resonances on the basis of the number of directly attached protons.
The course will consist of lectures as well as a laboratory component in which the Mercury 300 will be used to obtain data that will be analyzed using the methods developed in the lecture part of the course. This course is specifically aimed at general users of the Mercury spectrometer who wish to learn how to carry out and analyze advanced one-dimensional and two-dimensional NMR experiments.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM

CHEM383 Biochemistry
This introductory course to the principles and concepts of contemporary biochemistry presents both the biological and chemical perspectives. The major themes will be the structure of proteins and the basis of enzymatic activity, cellular metabolism and the generation and storage of metabolic energy, and general principles of the biosynthesis of cellular components.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM251 AND CHEM252

CHEM386 Biological Thermodynamics
This course is addressed to undergraduate and graduate students interested in biological chemistry and structural biology. The course presents thermodynamic methods currently used to relate structure to function in biological molecules. Topics include binding curves, chemical ligand linkages, binding polynomial, cooperativity, site-specific binding processes, and allostERIC effects. Several models for allosteric systems, such as the Monod-Wyman-Changeux model, the induced-fit model, and the Pauling model, are analyzed in detail. Applications of these models are illustrated for functional regulation of respiratory proteins and for protein-nucleic-acid complexes involved in control of gene expression.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: (MATH121 AND MATH122)

CHEM387 Enzyme Mechanisms
The chemical mechanisms involved in the action of a series of typical enzymes will be considered.
Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: NSM-CHEM
Prereq: CHEM251 OR CHEM252

CHEM390 Practical Methods in Biochemistry
This course centers on currently used techniques for protein separation, characterization, and purification, such as ultra-centrifugation, gel electrophoresis, and chromatography. These techniques will be introduced within the general context of the behavior of macromolecules in solution. The relative stability of proteins in different media, the forces stabilizing protein structure, and the interaction of proteins will be discussed. We will explicitly consider different techniques used to study proteins. Relatively novel techniques to be discussed include surface plasmon resonance, microarray methods and mass spectrometry, and single molecule microscopy. In the course, we will go through three or four different protein purification protocols and discuss the methods used in each one. We will also touch upon the commonly used spectroscopic techniques used to characterize proteins, including absorption, fluorescence, and circular dichroism. The course will focus on biochemical techniques and understanding the physical principles underlying these techniques and will also discuss tactics for optimizing established isolation and purification procedures and for isolating and characterizing an unknown protein.
The course content is appropriate for advanced undergraduates (juniors/seniors) and beginning graduate students from chemistry, biology, molecular biophysics or MB&B.
Offering: Crosslisting

CHEM393 Organic Synthesis
This course introduces students to the process of organic synthesis. Chemical mechanisms used to synthesize organic compounds will be covered, including common reactions and their applications. Students will be introduced to the design and execution of organic syntheses, and will learn how to use the chemistry of the course to solve problems in molecular design and chemical synthesis.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM251 AND CHEM252

CHEM394 Advanced Physical Chemistry
This course delves into advanced topics in physical chemistry, including quantum mechanics, statistical mechanics, and thermodynamics. Students will learn how to apply these concepts to solve problems in molecular and biological systems.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CHEM
Prereq: CHEM386 OR CHEM387

CHEM 409 Senior Thesis Tutorial
Topic to be arranged in consultation with the tutor.

Offering: Host
Grading: Cr/U

CHEM500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop BEFORE the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.

CHEM519 Structural Mechanisms of Protein-Nucleic Acid Interactions
This course focuses on recent advances in the understanding of the structural basis of the recognition of nucleic acids by proteins. Macromolecular systems to be discussed include site-specific DNA endonucleases, topoisomerases, the histone fold, helicases, site-specific recombinases, nuclear RNA-protein complexes, tRNA-binding proteins, and the ribosome.

CHEM520 Scientific Research Ethics
This course involves critical consideration of the ethical issues that arise in the conduct of scientific research. The course will begin with an overview of the ethical issues commonly encountered in research, including what is and is not an ethical issue and how ethical issues are dealt with in principle and in practice.
Initial topics include record keeping, conflict of interest, responsible authorship, ownership of projects, policies for handling misconduct, policies regarding the use of human and animal subjects, and data management and distribution. The course proceeds to consider a series of case studies based on instances in the recent scientific literature in which ethical problems were encountered.

CHEM535 Protein Folding: From Misfolding to Disease
Amyloidogenesis, the process by which proteins and peptides misfold to form amyloid fibers, is at the root of several different diseases, including Parkinson’s disease, Alzheimer’s disease, mad cow disease, and type II diabetes to name a few. This course will focus on current research in the field that seeks to understand why a functional, well-folded protein adopts the misfolded amyloid form. In the course of discussing the misfolded nature of these proteins, we will review central elements of protein structure and stability to better understand the protein-folding landscape and the process of misfolding. We will also discuss how the process of misfolding leads to the different diseases and disease pathologies. We will read current literature that studies the molecular nature of these diseases and discuss the strategies used to detect, identify and study these misfolded proteins in the body and in the test-tube.

CHINESE (CHIN)

CHIN101 Chinese Character Writing  
This course supplements Elementary Chinese I (CHIN103) and focuses on the writing of Chinese characters. It is not a course in Chinese calligraphy but in basic writing. Strict stroke order will be introduced. About 600 Chinese characters will be covered. This is required for students who will be taking CH 103  
Offering: Host  
Grading: A-F  
Credits: 0.50  
Gen Ed Area: HA-CEAS  
Prereq: None

CHIN102 Chinese Character Writing  
This course supplements Elementary Chinese I (CHIN103) and focuses on the writing of Chinese characters. It is not a course in Chinese calligraphy but in basic writing. Strict stroke order will be introduced. About 600 Chinese characters will be covered.  
Offering: Host  
Grading: Cr/U  
Credits: 0.50  
Gen Ed Area: HA-CEAS  
Prereq: None

CHIN103 Elementary Chinese I  
This course is an introduction to modern Chinese (Mandarin), both spoken and written. Class meets daily, five hours a week. Regular work in the language laboratory is required. Students with significant experience speaking Chinese (any dialect) at home should enroll in CHIN105, not CHIN103. All students in CHIN103 are required to additionally enroll in CHIN101, Chinese Character Writing, as a writing lab course. Credits will be received for CHIN103 when you successfully complete CHIN104.  
Offering: Host  
Grading: Amp Graded  
Credits: 1.50  
Gen Ed Area: HA-CEAS  
Prereq: None

CHIN104 Elementary Chinese II  
Continuation of CHIN103, an introduction to modern Chinese, both spoken and written.  
Offering: Host  
Grading: A-F  
Credits: 1.50  
Gen Ed Area: HA-CEAS  
Prereq: CHIN103

CHIN105 Elementary Chinese for Heritage Learners  
This course is for students who have family backgrounds in Chinese language. It is appropriate for students who are already familiar with basic speaking and have excellent listening comprehension of any dialect of Chinese but cannot read or write. The course focuses on teaching students how to read and write Chinese characters. After this course, most students should be able to continue in second-semester Intermediate Chinese II (CHIN206) or Third-Year Chinese (CHIN218).  
Offering: Host
The course will be conducted entirely in Chinese.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-CEAS
Prereq: CHIN217

CHIN223 Creative Writing in Chinese

The class will offer students a chance to use the Chinese language both communicatively and creatively in various literary genres including poetry, song lyrics, short stories, travelogues, memoir, plays, film scripts, and so on. The class is divided into three main sections. First, we will engage in close readings of some of the most interesting writings of contemporary Chinese literature that are both well-crafted and culturally significant. Second, using the class readings as reference points, the students will write their own pieces about their daily lives and dreams, overseas experiences as cultural observers, science fiction that portrays a future utopia, adaptations of Chinese ghost stories, and their imaginary lives as nonhuman animals. Third, the students will engage in dynamic class discussions and workshop each other’s writings.

The class is not a standard advanced Chinese class. Bearing in mind that some of the most memorable Chinese poems and stories are written in simple language, participants in the class will focus on how to use the words and expressions they already know in fresh and innovative ways while expanding the horizon of their understanding of Chinese and global cultures. Native Chinese speakers, heritage speakers, and students who have taken Third Year Chinese and above can take the class and learn from each other in groups. No previous experience of creative writing is required.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-CEAS

CHIN301 A Glance at Chinese Literature and Culture

This is an advanced language course in which students learn by reading and discussing the articles online on various current topics. Topics include culture, academic subjects, and controversial issues. Students will learn specific vocabulary of these topics to further understand the culture and social development of China. By the end of the course, students will have improved their oral and writing proficiency in professional use of the Chinese language.

Offering: Host
Grading: A-F

Prereq: None

CHIN351 Classical Chinese Philosophy: Chinese Lab

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Classical Chinese Philosophy (PHIL205) course. Students must have taken PHIL205 in the past or be enrolled in it simultaneously. The course will have two main foci: introducing students to modern and contemporary Chinese-language debates about Chinese philosophy and
exploring in greater depth the meaning of key passages from the classical works
students are reading in translation in PHIL205.

Both advanced learners of Chinese (fourth-year level or above) and native
speakers are welcome. Familiarity with classical Chinese is desirable but
not required. Assignments will include presentations in Chinese and some
written work in English; evaluation will be tailored to each student's language
background. If you are unsure whether your language background is sufficient for
the course, please contact the instructor.

CLASSICAL CIVILIZATION
( CCIV )

CCIV112F Three Great Myths: Prometheus, Persephone, and Dionysus (FYS)
This course is a detailed analysis of three important myths from classical
antiquity: the stories of Prometheus, Persephone, and Dionysus. Students will
examine literary and visual representations from antiquity and also consider how
these myths live on in the Western tradition.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-CLAS

Prereq: None

CCIV118 The Fall of Rome and Other Stories
The fifth-century fall of Rome to barbarian invaders is an idea that slowly
crystallized over time. This course will examine the birth and development of this
"fall"—one of the most persistent stories in history—using the very texts in which
it was first articulated. We will work with a range of authors—Suetonius, Eusebius
of Caesarea, Ammianus Marcellinus, Augustine of Hippo, Jordanes, Procopius of
Caesarea—to connect the fall of Rome with other attempts to explain catastrophe
and change. The course will conclude by surveying the persistence of the fall of
Rome as an idea, through the medieval, early modern, and modern periods, right
into contemporary discourse.

Gen Ed Area: HA-COL
Identical With: HIST247, COL247
Prereq: None
CCIV153 Single Combat in the Ancient World
This course celebrates the clash of warriors in warfare, sport, and spectacle in the classical world. Using primary sources and archaeological evidence, the class will survey traditions of combat in ancient art, literature, and society, beginning with Greek and Near Eastern epic; the modes of warfare in Greek society; ancient Olympic combat sports; and, finally, Roman gladiator spectacle. We will examine the role of violent sport in Greek and Roman society, the reception of the competitors, and the use of these events for political or nationalistic ends. Throughout the course we will explore the flexibility of concepts such as military ethics, "western" warfare, violence, honor, and excellence, both in the classical world and in our modern lives.

Identical With: ARCP153
Prereq: None

CCIV170 Rome and the Caesars
The Roman world changed irrevocably with the establishment of the Augustan principe (i.e., when Augustus became first emperor, 27BCE--14CE). But it was only after Augustus' death that the consequences of his reforms became apparent. Rome suffered a turbulent century under a succession of emperors, variously represented as mad, bad, and dangerous to know. In this course we will study the period through contemporary or near-contemporary texts and in an attempt to analyze the demoralization of the traditional Roman ruling classes and the slide into autocracy. We will examine the characters and policies of emperors in the period and will discuss the rise of a celebrity culture and the increased importance of public spectacles and entertainments. We will also look at modern portrayals of the period in visual media (e.g., art, TV, movies).
Offering: Host
Grading: A-F

CCIV190 Beware the Ides, Beware the Hemlock: Roleplaying Crisis in Ancient Greece and Rome
The Thirty Tyrants have at long last been expelled from Athens, and now it is up to you and your closest friends and enemies to determine the future of the greatest city-state in the Mediterranean. The conspiracy of Catiline has been uncovered, and the fate of the conspirators and of Rome rests in your hands. Two decades later, the dictator Julius Caesar has been assassinated, and it falls upon you to negotiate the Senate to decide what the People of Rome should do. Students will play in a number of "Reacting to the Past" scenarios set in ancient Greece and Rome—becoming stakeholders in these world-changing crises as they fight, speak, study, sweet-talk, and coerce their way to power over their classmates, be they allies or adversaries. This course is suitable for students of all interests and backgrounds and will offer opportunities to develop writing public-speaking, critical thinking, and persuasion skills.
Offering: Host
Grading: A-F

Gen Ed Area: HA-CLAS
Prereq: None

CCIV201 Art and Archaeology of the Bronze Age Mediterranean
This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.

Identical With: ARHA202, ARCP201
Prereq: None

CCIV202 Greek Drama: Theater and Social Justice, Ancient and Modern
This course introduces students to Greek drama as produced in its original setting in ancient Athens and then adapted in modern times. The majority of our readings will be drawn from classical material: tragedies by Aeschylus, Sophocles, and Euripides, comedies by Aristophanes, and selections from Aristotle's Poetics and Plato's Republic. We will look at production practices, acting and audience experience, and the role of theater in shaping cultural values. Questions will include: How does theater as art reflect the personal, social, and political life of the Athenians? What is the connection between the development of Greek drama and the growth of the first democracy? What are the emotions of tragedy for its mythic characters and for its real audience? And why have we been talking about catharsis for centuries? What is the relationship between emotions, drama, and social justice? For the last part of the semester, we will turn to adaptations of Greek tragedy in the 20th and 21st centuries by Jean-Paul Sartre, Bertolt Brecht, Sarah Kane, and Yael Farber. We will discuss how the dilemmas and emotions of tragedy are replayed in response to World War II, the South African Truth and Reconciliation Commission, PTSD, and consumer culture, among others.

CCIV204 Approaches to Archaeology
Archaeology is the study of the past through its material remains. This course will introduce students to a range of approaches that archaeologists use to interpret material culture (artifacts and other physical remains) and, in some cases, written records, to present interpretive reconstructions of past human history, societies, cultures, and practices. The course includes archaeological approaches to prehistoric cultures through to ancient, medieval, and early modern societies.
Offering: Crosslisting
Grading: A-F

Gen Ed Area: SBS-ARCP
Identical With: ARCP204, ANTH204, ARHA201
Prereq: None

CCIV205 Myths, Monsters, and Misogyny: An Introduction to Greek and Roman Mythology
In this class we will read literary versions of myths from Greece and Rome and look at representations in ancient and later art. Starting with myths of the creation, we will move on to look at the individual gods and goddesses, their powers, and their place in ancient religion, then to the often perilous interactions of humans and gods. In the second half of the semester, we will concentrate on the heroes and heroines of mythology, ending with the Trojan War and its aftermath. The course aims to give a basic grounding in the stories and the images—creating mythologically literate students. As that analogy implies, we will also analyze myth as a system of communication and consider how these myths portray the world, the divine, and the place of men and women in relation to the gods, to nature, and to society.
CCIV212 Politics and Piety in Early Christianities
The first four centuries of the Christian era will illustrate the lively twists and
turns of social experimentation that set the stage for the emergence of the
Christian religion. This course will be concerned with fundamental arenas
of intellectual and social conflict, including constructions of Christian myths
of apostolic origins and authority; the appropriation of the Jewish epic; the
challenge of gnosticism; the domestication of Greek philosophy; interpretations
of sexuality and gender; experiences of martyrdom and prosecution; theological
reflections on human nature and society; and the ways Christians were seen by
Romans. The objective will be to grasp the beginnings of the Christian religion as
a human achievement of cultural consequence.
Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: HA-CLAS
Prereq: None

CCIV214 Survey of Greek Archaeology
This course introduces the art and archaeology of Greek civilization from
Mycenaean palaces of the Bronze Age, to tombs of warriors and battlefields of
Marathon, through the theatrical and political centers of democratic Athens.
Throughout the semester we will survey the major archaeological sites (civic and
cultic) for each period and study development of sculpture, painting, ceramics,
and architectural trends in light of political (propaganda!) and social changes.
More than a tour of monuments and mosaics, however, this course will show
students how to interpret and apply literature, material science, anthropology,
and art history to address archaeological questions, and to consider the
relationship (ancient and modern) between social trends and material evidence.

CCIV217 Philosophical Classics I: Ancient Western Philosophy
This course provides an overview of the development of Ancient Greek and
Roman philosophy, from its inception in the 6th century BCE through to Socrates,
Plato, Aristotle, the Epicureans, and the Stoics. In exploring this material, we will
touch on all or nearly all of the central concerns of the Western philosophical
tradition: metaphysics, epistemology, ethics, politics, aesthetics, religion, and
logic. Our focus in class will be on the close analysis of primary texts. Students
must be willing to engage with readings that are fascinating but at the same
time dense, difficult, and perplexing. The course requires no prior experience
in philosophy and should be of equal interest to students who are pursing or
intend to pursue other majors.

CCIV220 Homer and the Epic
In this course we will read both the Iliad and the Odyssey (in English translation).
These two great epics are recognized as the first major texts of the Western
literary tradition, and they have had an incalculable influence on everything from
literature, to history, to the visual arts. Through a close reading of both epics, we
will consider issues such as Homeric composition and poetic practice, heroes and
the heroic code, the relation between humans and gods, the role of fate, and the
structure of Homeric society (e.g., the status of women; clan and community).
We will also read a number of contemporary critical essays to help us frame our
discussions.

CCIV228 Classical Allusions in Film
This course surveys the influence of classical antiquity on Western filmmaking
from the late 1970s to the present day, with an emphasis on exploring the
ways in which filmmakers allude to and encounter classical themes, settings,
characters, history, and literature in their works. Classical mythology and
history have been a source of fascination for filmmakers since the beginning
of filmmaking itself. Ben Hur (1907), Quo Vadis (1913) and Cabiria (1914) were
all silent but ambitious films depicting aspects of classical antiquity on an
epic scale that would have a profound impact on the classical blockbusters of
the 1950s and 1960s. Cecil B. DeMille reintroduced the classical model with
Ten Commandments (1956), and the epic(ally expensive) Ben-Hur (1959),
Spartacus (1960), and Cleopatra (1963) would follow under other directors.
These films can be analyzed for their interpretation of ancient material; their

CCIV227 Ancient Laughter
Are we hard-wired to laugh? Could we have told a joke to an ancient Roman?
Did the ancient Greeks think the same things were funny? Would they scoff at
a “dirty” joke? Are puns universal, and universally terrible? This course will seek
to examine the basis for Greek and Roman humor through a close examination
of its humorous texts and the contextualizing voice of scholars on the Greco-
Roman world. What we will discover in this course is that many of the modes,
topics, techniques, and aims of comedy most familiar to us were employed
by the ancient Greeks and Romans; often our own version owes a substantial
debt to theirs. Comic literature will also offer us a unique look at Greek and
Roman culture, set as it is—much like our own comedy and satire—in a skewed
version of everyday “reality.” This course will be organized into three main
units, structured around three main modes of ancient comic literature: dramatic
comedy (the precursor to modern situation comedy), satire (a forerunner of
stand-up comedy), and comic narrative (the wellspring of the comic novel).
By the end of the course, we will return to three masterpieces in each mode—
Aristophanes, THE FROGS; Juvenals, SATIRES; and Petronius, SATYRICON—and
apply the critical tools we have developed to a richer analysis of the interaction
between these texts and the society of readers and authors that produced them.

the 1950s and 1960s. Cecil B. DeMille reintroduced the classical model with
Ten Commandments (1956), and the epic(ally expensive) Ben-Hur (1959),
Spartacus (1960), and Cleopatra (1963) would follow under other directors.
These films can be analyzed for their interpretation of ancient material; their
contemporary political subtexts and attitudes towards race, ethnicity, and gender; and their influence on the way 20th century Western cultures viewed Greco-Roman antiquity. Other film classics depicted an ancient world that ranged from dreamlike (Fellini’s Satyricon [1969]) to pornographic (Caligula [1979]), to fantastical (Clash of the Titans [1981]). We will briefly examine these films as a springboard for looking at late-20th and early-21st century adaptations of classical material.

Classical material in film regained popularity in the 2000s: Gladiator (2000), Troy (2004), Alexander (2004), 300 (2006), Clash of the Titans (2010), and Pompeii (2014), and the 2016 remake of Ben Hur. But beyond these obviously classically-inspired films, situated as they are in a version of classical antiquity, there are other modern films that draw less obviously on classical material. O Brother Where Art Thou? (2001) takes the Odyssey from Homer’s Mediterranean world and drops it into Depression-era Southern America. Chi-raq resituates Aristophanes’ Lysistrata in gang-ravaged Chicago. The Star Wars (1977-83) and Hunger Games (2012-15) trilogies use a reimagined Roman Empire to comment on spectacle and society in contemporary America.

We will study these films and others to analyze the trajectory of classical allusion in modern film: why do directors continue to revisit classical antiquity? What themes are pervasive? How do ancient archetypes like the seductive queen, evil sorceress, noble enslaved man, old philosopher, and debauched aristocrat help characterize modern film characters? What is the difference between adaptation and inspiration? How closely must modern interpretations cleave to the ancient material to be deemed “acceptable” by scholars and enthusiasts? How do these interpretations reshape our understanding of the ancient material? And why is classical antiquity still so compelling today?

CCIV229 Ancient Monuments: Landscape, History, and Memory
In this course, we will examine some of the most renowned sites from Greek and Roman antiquity, such as the Parthenon and the other monuments on and near the Athenian Acropolis, the Colosseum and Forum in Rome, and Pompeii. The aim is to get a broad understanding of their significance, and so the sources will include ancient texts, modern scholarship and travel narrative, and visual representations such as drawings and photographs. Because the course is connected to a theme of “shifting landscapes,” we will pay particular attention to the ways in which the ancient sites interact with their surroundings.

CCIV232 Roman History
This course traces the history of Rome from its foundation, through its rise as an Italic and Mediterranean power, up to the transfer of the empire to Constantinople. It focuses on the political, military, and social achievements of the Roman people and the contributions of its principal historical figures, from the legendary kings of the regal period, to Republican leaders such as Marius, Sulla, Pompey, and Caesar, through Augustus and the establishment of the principate and subsequent emperors such as Vespasian, Hadrian, and Diocletian.

CCIV234 Art and Society in Ancient Pompeii
This seminar explores the art, architecture, and material remains of the cities buried by the eruption of Mt. Vesuvius in 79 CE. Through readings, class discussions, and student research presentations, we will explore the ways in which this material can be used to study the social and political life of a small Roman city and examine the unique evidence for reconstructing the private life of Roman citizens, from their participation in local politics and government, to their religious beliefs and lives, to the interior decoration of their homes and their burial customs.

CCIV244 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt
This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

CCIV257 Plato’s REPUBLIC
"The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato." This declaration, famously made by Alfred North Whitehead in the early 20th century, seems especially true of Plato’s Republic. No other work in the Western tradition can lay claim to setting the tone so influentially for the development of philosophy as a discipline. Almost every branch of philosophical thought we are familiar with today—on matters of ethics, politics, moral psychology, epistemology, metaphysics, and aesthetics—receives a major formulation in this text. This seminar will be devoted to a close reading of each of the 10 books of The Republic alongside various perspectives that have been taken on this magisterial work in contemporary philosophy, journalism, and literature. We will focus on The Republic primarily as a work of moral psychology by investigating the topical question of the dialogue: Why is it better to live justly rather than unjustly? For Plato, a just life is one
governed by the pursuit of wisdom or learning, and this he believes will also be a psychologically healthy one. By contrast, a life governed by the indiscriminate pursuit of power—the ravaging of a tyrant—is psychologically corrupted. These are bold claims. What is Plato’s argument for them? In raising this question, we will consider the political project Plato embarks upon in the Republic in constructing a just society, as well as connected issues he raises in the dialogue concerning the nature of human motivation, the distinction between belief and knowledge, the distinction between appearance and reality, the importance of a proper education to the human good, and the role of art and beauty in furthering the common good. Alongside Plato, we will read various works of secondary literature, journalistic pieces, and works of fiction this semester, all inspired by The Republic.

CCIV271 Roman Self-Fashioning: Poets and Philosophers, Lovers and Friends
With the descent into chaos of the Roman Republic and the emergence of the emperor as autocratic ruler at the head of the state, Roman social order and its system of personal relationships experienced a crisis. These circumstances are reflected in the literature of the period, which shows a fascination with unconventional styles of life and codes of behavior and a constant recourse to those situations in public and private life where the individual’s relationship to the social order was negotiated and exhibited. Among the topics we will examine in the writings of some of the major authors of the period will be the literature of love and the role of the lover; parasites, patronage, and friendship; banquets and dining; the good life and personal contentment (and discontent); and the struggle for individual integrity.

CCIV281 Gender and Sexuality in Ancient Greek Culture
In this course we will examine the construction of gender roles in ancient Greece and approach gender as an organizing principle of private and public life in ancient Greek society. Using literary, scientific, historical, and philosophical sources as well as material evidence, we will address issues including the creation of woman, conceptions of the male and female body, the legal status of men and women; what constitutes acceptable sexual practices and for whom (e.g., heterosexual relationships, homoeroticism, prostitution, adultery); and ideas regarding desire, masculinity and femininity, and their cultivation in social, political, and ritual contexts such as rituals of initiation, marriage, drinking parties, the law court, and the theater. How ancient approaches to gender and sexuality are in dialogue or have informed recent debates will be a question throughout the course. We will end by looking at how ideas about sexuality in classical antiquity were used in ROMER V. EVANS, otherwise known as the 1993 Colorado Gay Rights Case.

CCIV283 Off with its Pedestal! The Greek Vase as Art and Artifact
This course explores the dual role of the Greek vase—as objet d’art and as material culture. The first half of the course will trace the origins and development of Greek vase painting from Mycenaean pictorial vases to the masters of Attic Red Figure, examining the painters, the themes, and (often titillating!) subject matter in its social and historical context. The second half will focus on the vase as an artifact and tool for reconstructing social values and economic trends throughout the Mediterranean. We will look at rip-offs, knock-offs, and how much Attic pottery was really worth, and evaluate the use of pottery as an indicator of immigration or cultural imitation. The course will include work with 3D scanning and digital optimization, as well as the construction of a virtual museum exhibit.

CCIV324 Tales of Hope or States of Delusion? Utopias, Past and Present
Utopias are imaginary places that promise freedom, equality, and happiness. In this course, we will look at different visions of utopian living: What kinds of longing and impulses do these utopias fulfill? What kind of social critique do they imply? How can they offer freedom and happiness, while built on strict programs of biological, psychological, and social engineering? When does one’s utopia become another’s dystopia?

We will start with ancient Greek poetry and philosophy—Homer, tragedy, Aristophanic comedy, and Plato—to trace the beginnings of utopian thinking and the promises that it makes. In the last part of the semester, we will look at how these early seeds of utopia are recast and developed in later and contemporary literature, theory, and film including Thomas More’s UTOPIA, Yevgeny Zamyatin’s WE, and Emily St. John Mandel STATION ELEVEN; selections from T. Adorno, E. Bloch, and F. Jameson; films such as Gattaca, and Her, and select episodes from Black Mirror.

CCIV330 Classical Studies Today: Writing for a General Audience
This will be a seminar for junior and senior departmental majors, offered in association with the Calderwood Seminars in Public Writing. The purpose of the class is to have students write about scholarly issues in a way that makes them accessible to broad non-specialist audiences. This practice is what one scholar has called "responsible popularization." The course will concentrate on writing and public presentations, and each week the students will take alternating roles as writers and editors. The work load consists of reading scholarly articles or book chapters, on academic topics from Classical Studies, and re-work them in compact genres like personal essays, op-eds, blog posts, and reviews. For the final project, the students will form teams of two, each of which will interview an eminent Classical scholar of their choice and produce a brief profile.

CCIV341 Visualizing the Classical
This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen—through landscape, sound, light, functionality/monumentality, and spatial relationships—shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

College of East Asian Studies (CEAS)

CEAS155 Fictional Japan: Introduction to Japanese Literature and Culture
This course will explore the evolution of Japanese fictional narrative, from Japan's first encounter with "modern" literary forms in the late 19th century to postmodern digital discourses advanced through anime and gaming. In so doing, we will discuss the ways in which Japanese theories of literature intersect with notions of national identity, modernity, and Westernization. How does the Japanese novel participate in the modern process of nation building, and how is it used to situate Japan's position in East Asia and the world? We will also consider fictional works from marginalized groups in Japan to address how notions of gender and ethnicity serve as an intervention into traditional discourses on Japanese literature. Finally, we will explore new iterations of Japanese fiction in the form of digital media and database narratives. Does advanced technology fundamentally change how we produce and consume narratives and, therefore, view the world around us? How do these new forms impact constructions of national history and identity? Is this phenomenon somehow unique to Japan, or a simple product of globalization?

CEAS157F Legacies of WWII in Postwar Japan (FYS)
In 1956, The Japanese Economic Planning Agency famously declared that "the 'post-war' is over." Indeed, by that time, the national economy had made a remarkable recovery since the end of WWII. Others place the end of the "post-war" with Emperor Hirohito's death in 1989. Still, was the "post-war" truly over for Japan? This seminar aims to tackle this dilemma of the "post-war" with notions of national identity, modernity, and Westernization. How does the Japanese novel participate in the modern process of nation building, and how is it used to situate Japan's position in East Asia and the world? We will also consider fictional works from marginalized groups in Japan to address how notions of gender and ethnicity serve as an intervention into traditional discourses on Japanese literature. CEAS166 Understanding the Arts of Imperial China: Content and Methods
With its long history and diverse culture, Imperial China was known for its rich and complex traditions in art. From the magnificent terracotta warriors and splendid court paintings to delicate blue-and-white porcelain, these artworks not only testify to the complexity of the society that produced them, they also suggest visual principles and ideological premises by which they can be understood. This course offers an introduction to the important roles that art played in the society of Imperial China and discusses their visual principles and ideological premises so we can comprehend the artworks themselves. By examining three large groups of artworks from Imperial China—ritual objects and monuments from the early periods, courtly paintings and calligraphy from the middle periods, and commercial goods of factory art from the late imperial periods—we will look at the relationship of form and content, the materiality of artworks, questions of the artist's agency, and the context in which artworks were produced, transmitted, and consumed. The goal of this course is to encourage interest in the arts and culture of Imperial China as well as basic issues in the field of art history.

CEAS167 Goddesses and Heroines: Images of Women in the Art of China and Taiwan
This course examines the history of visual representations of women in China and Taiwan from the 12th to the early 20th century. During this period, images of women increasingly appeared in the art of China and Taiwan as guardians and advocates for the weak and the suffering, as well as political or moral allegories. These mythical and legendary figures, such as Guanyin, Mazu, and Nie Xiaoqian, empowered both women and men who were in poverty, peril, or despair. Their heroic and divine images combine traits of feminine qualities highlighted in a male-chauvinistic tradition and symbols of a mega-being beyond any gender-specific definition. By tracing the formation and transformation of images of women in the art of China and Taiwan, this course will explore three themes: (1) the development of female cult in the visual cultures of China and Taiwan; (2) the relationship of feminine representation, human morality, and divine power in Chinese and Taiwanese societies; and (3) the negotiation of political and cultural identities in these societies through the appropriation of female images. The goal of this course is to offer students contextualized knowledge about women's roles in the arts and visual cultures of China and Taiwan.

CEAS168 Art of No-Return: Modern and Contemporary Chinese Art

With record-breaking auction prices, often in the millions for a single work, modern and contemporary Chinese art has captured international attention over the past two decades. These works, often flamboyant and contentious, reflect the political, social, and cultural changes that China has experienced since the conclusion of its dynastic past in 1911. In this course, we will examine the development of modern and contemporary Chinese art in the context of these changes, from the influx of Western social theories in the 1920s and ’30s, through the Japanese invasion and the political upheavals during the Mao (1893–1976) and post-Mao eras, to the socio-economic reforms of the 1980s to the present times. We will study leading artists, such as Xu Beihong, Ai Weiwei and Zhang Huan, whose works in painting, sculpture, architecture, installation, and performance art helped to define the new Chinese art. While examining the artworks, we will explore issues related to the tension between Chinese nationalism and Westernization, the adaptation of modern aesthetics and visual technologies, the conflict between state sponsorship and censorship, the changing perception of gender and self-image, the emergence of urban space and consumer culture, and the connection between art and the global economy.

The goal of this course is to provide an advanced understanding of Chinese art in the present times.

CEAS181 Chinese Pop Culture

Popular culture is closely associated with our daily life and ways of thinking, seeing, and connecting with the world. This course will introduce select aspects of modern and contemporary Chinese-language popular culture and its circulation among Chinese-speaking sites, including China, Taiwan, and Hong Kong. We will mainly focus on forms that have circulated and continue to circulate from the modern to the contemporary period, including movie musicals, martial arts, Internet culture, and singing contests. We will also study how Chinese pop culture has influenced audiences and (re-)construct their identities, as well as explore how cultural producers in Chinese language have engaged with issues of fandom, gender and sexuality, ethnicity, and material life through a variety of pop cultural forms. Throughout the course, we will discuss theories of pop culture and analyze primary materials to understand the production and circulation of Chinese pop culture. This course is taught in English.

CEAS185 Introduction to Japanese History: A Manga Artist’s Life in 20th-Century Japan

This course uses the four-volume autobiographical manga of Mizuki Shigeru (1922-2015) entitled “Showa: A History of Japan” both to survey most of 20th-century Japanese history and to introduce some basic concepts and methods of historical inquiry. Mizuki is most famous for manga that depict supernatural figures—yokai—based on Japanese folk tales. One, “GeGeGe no Kitaro,” became a wildly popular animated series (check it out on YouTube). We will use that four-volume series, together with various primary sources and other materials, to track the trajectory of 20th-century Japan from democracy to militarism back to democracy again in the lives of ordinary Japanese people.

CEAS202 Narrating China: Introduction to Modern and Contemporary Chinese Literature

This course is a selective reading of important themes and texts in modern and contemporary Chinese literature by authors hailing from mainland China, Taiwan, Hong Kong, Southeast Asia, and Chinese borderlands like Tibet and Xinjiang. We examine how literary authors narrate China through its changes and heterogeneity throughout a tumultuous century, and we interrogate how China emerges in literature as a fluid concept with porous borders and heterogeneous elements. The course has a focus on narrative fiction, and topics explored in the course include modernization, gender relation, revolutions, diasporic culture, economic reform, and ethnic relations. This course assumes no prior knowledge of China or Chinese Language, and all texts will be taught using English translations.

CEAS204 Chinese Media in Chinese: Star, Fandom, and Identity
This course is conducted in Mandarin Chinese and designed to supplement the standard English-language Chinese Pop Culture (CEAS 181) course. The course will have two main foci: (1) introducing students to Chinese-language scholarship on Chinese media, particularly pop culture and its flow within East Asia, and (2) analyzing and discussing Chinese media in-depth in Mandarin Chinese.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. All the reading materials will be in Mandarin Chinese, and we will have oral presentations in Chinese and some written work in English. Evaluation will be tailored to each student's language background. If you are unsure whether your language background is sufficient for the course, please contact the instructor.

CEAS205 Democracy and Social Movements in East Asia
Despite East Asia's reputation for acquiescent populations and weak civil society, the region has been replete with social movements. This course assesses the state of civil society in East Asia by surveying contemporary social movements in the region. We will examine the rise of civil society and its role in political and social changes in both authoritarian and democratic societies in East Asia.

CEAS207 Foundations of East Asian Cultures
This course introduces some of the cultural foundations of East Asia and how they have continued to resonate through history. We will be examining translated primary texts in history, literature, philosophy, and religion, mainly from China, Korea, and Japan. We will also be working with other media such as film and art. The course attempts to equip students with a basic fluency in interpreting ancient and modern materials from East Asia and identifying its cultural contexts. Some potential themes are: dilemmas of love, the role of government, the methods and aims of education, social inequality, and notions of illness and healing. This course does not aim to be exhaustive, but seeks to enlarge narrow conceptions of Asian cultures and to offer tools for future exploration.

CEAS208 Modern Chinese Literature
This course introduces the history of modern Chinese literature from the republican era (early 20th-century) to the contemporary era. By discussing selected literary works, it serves an overview of the styles and features of modern Chinese literature in each time period and also introduces students to major themes from China's tumultuous 20th century. Topics will include the cultural transformations of the May Fourth movement, modernity, war, revolution, root-searching, and body writing. All readings will be in English translation.

CEAS213 The Chinese Canon and Its Afterlife
This course is an exploration of canonical works in Chinese literature, religious texts, historical narratives, art, and movies, with an emphasis on their aesthetic and cultural implications. Topics include Confucianism, Daoism, and Buddhism; folk religions and shamanism; cultural identity and self-cultivation; sexuality, cross-dressing, and gender politics; nature and utopias; emperors, scholars, and musicians; hermits and knights-errant; learned women poets and courtesans; drunken poets and Zen masters; fox spirits and ghosts; portraiture and representations of bodies; and secret societies and avant-garde artists. All readings are in translation. Although some Chinese characters will be introduced in calligraphy, no knowledge of Chinese is required.

In 1956, the Japanese Economic Planning Agency famously declared, "The 'postwar' is over." Indeed, by that time, the national economy had made a
CEAS222 History of Science and Technology in Modern China
Science, technology, and medicine played an integral role in the China's transition to modernity and inspired dramatic economic, social, and political transformations. As scholars of modern China developed a keen interest in transnational histories and comparative methodologies, they have paid closer attention to the histories of science, technology, and medicine. This course introduces students to this emerging field of study. It examines broad philosophical questions that motivate the research in history of those areas. We will learn to explore science, technology, and medicine in China on "its own terms" by understanding how the unique political and social challenges of modern China shaped Chinese science.

CEAS224 Modern China: States, Transnations, Individuals, and Worlds
This course examines China's turbulent transition to modernity. It covers the Ming-Qing transition, Manchu conquest of central Eurasia, China's conflict and engagement with the West, birth of China's first republic, and the People's Republic of China under Mao Zedong, Deng Xiaoping, and his successors.

The dramatic transformation of China spanning the late 19th century to the present day is the focus of this course. The Chinese people today continue to deal with the legacy of these reforms, wars, and revolutions, as China's leaders and people dealt with unprecedented challenges. The three central themes of this course are (1) the reconstitution of (a somewhat) unified China after decades of political upheaval, (2) China's vulnerabilities in the face of domestic troubles and threats from abroad, and (3) the challenges of maintaining a high-growth economy with scarce resources.

CEAS225 Introduction to Chinese Poetry
This course explores various styles of traditional and modern Chinese poetry from the archaic period to the 21st century, with an emphasis on the range of ways in which poetry has been implicated, to a degree unknown in the West, in the political, spiritual, and aesthetic movements in China over the last three millennia. Topics include "The Book of Songs," "Nineteen Ancient Poems," the "Music Bureau" ballads, Six Dynasties poetry, the great Tang masters, the Song lyrics, women poets, and religious poets. Although some Chinese characters will be introduced in the unit on calligraphy, no knowledge of Chinese is required; all readings will be in English translation.

CEAS217F Who is the Dalai Lama? (FYS)
This First Year Seminar introduces the institution of the Dalai Lama of Tibet and the individuals who have filled that role from a wide range of sources and perspectives. Topics include regional histories of Buddhism; the unique Tibetan tradition of recognized reincarnations (tulkus) and the Buddhist philosophical principles that support it; and a survey of prominent Dalai Lamas from the 15th century to the present day. The seminar examines the activities of the current Dalai Lama in his role as traditional Buddhist teacher, political leader, and international superstar, through the lenses of the PRC government media, Indian exile communities, and the modern West. Later classes will also address issues of Western and Chinese forms of Orientalism and myth-making about Tibet. Readings include the writings of past and current Dalai Lamas as well as supporting secondary literature.

CEAS221 Introduction to Premodern Chinese Literature
This course is an introduction to premodern Chinese literature that focuses on the role Chinese literary texts have played in defining selfhood, creating self-image, and articulating the place of the individual in relation to community and state. The arrangement of the course is primarily chronological, from the first millennium BC to the end of the Qing Dynasty in 1911, though texts that cut across history are also juxtaposed to show differences and continuities from a larger perspective. The course contains canonical pieces of the Chinese literary tradition that address similar issues or respond to each other. Besides literary texts, painting, music, and material culture are also incorporated to help students visualize the tradition. Students are encouraged to think about the close relationship between Chinese literati’s creation of self-image and political trauma they experienced during dynastic changes.

CEAS226 Japan and the Atomic Bomb: History, Myths, and Mysteries  
Even today, when discussing the atomic bombings of Hiroshima and Nagasaki, newspaper and other media sources often refer to "Truman's decision" to drop the bomb, the idea that these bombings conclusively brought an end to World War Two, arguments that they saved more lives than they killed, and assertions that the United States would not have dropped the bomb on Germany since its citizens were white. But what do the historical sources actually say on these and other related points? This course emphasizes the use of archival sources to address these and many other issues. It establishes the historical context for the atomic bombings of Japan by tracing events that led to the War in the first place, how civilians became the targets of mass bombings, and the scientific discoveries that made nuclear weapons possible. It also examines how after the War the American press and government strove to establish a particular perspective on the atomic bombings of Japan. By the end of this course students will have a much better idea about the historical facts, the popular myths, and remaining mysteries related to the bombings of Hiroshima and Nagasaki.

CEAS229 Performing Indonesia  
This course will examine the theater, dance, and puppetry of Indonesia in the context of its cultural significance in Indonesia and in the West. Students will read a variety of texts related to Indonesian history, myth, and religion. Students will also read books and essays by anthropologists Hildred Geertz, Clifford Geertz, and Margaret Mead to understand how the arts are integrated into the overall life of the island archipelago. Artifacts of physical culture will also be examined, including the palm-leaf manuscripts that are quoted in many performances; the paintings that depict the relationship between humans, nature, and the spirit world that are the subject of many plays; and the masks and puppets that often serve as a medium for contacting the invisible world of the gods and ancestors. Translations of Indonesian texts will be analyzed and adapted for performance. The direct and indirect influence of Indonesian performance and history on the West will be discussed by examining the work of theater artists such as Robert Wilson, Arianne Mnouchkine, Lee Breur, and Julie Taymour, who have all collaborated with Balinese performers.

CEAS232 Introduction to Asian American Literature  
This course surveys how Asia and Asian Americans have figured in the U.S. cultural imaginary from the middle of the 19th century to the present, from Herman Melville's American epic Moby-Dick to Ruth Ozeki's comic novel about transnational television, trade, and activism My Year of Meats. As the choice of these framing texts suggests, we will be exploring two kinds of representations. On the one hand, we will examine the narratives, tropes, and images through which dominant American culture has envisioned its incursions into Asia and the reciprocal movement of Asians into the United States; on the other, we will also explore the ways in which Asian Americans have sought to represent their own varied and uneven encounters with U.S. culture. The course is organized chronologically in order to emphasize the ways in which these cultural artifacts reflect and influence their social and historical contexts. In the latter half of the course, as we enter the period beginning with the 1970s in which Asian American literature becomes an institutional category in its own right, we will add to this historical framework a number of other analytical frames that have emerged from within Asian American Studies itself: cultural nationalism; gender and sexuality; postcoloniality; cultural assimilation; and globalization.

CEAS233 Transnational China: Writing and Screening Chinese Immigration  
Migration is a crucial issue for centuries, and people move around the world involuntarily or voluntarily due to political force, economy, technology, and globalization. Chinese immigration to the world has its long history, and the dispersion of Chinese populations has contributed to the formation of Chinese-speaking sites globally and brought about the construction of Sinophone culture in various geographical locales.  
This course will introduce the discourse of the Sinophone, a linguistic-oriented term that defines cultural productions with Sinitic languages in Chinese-speaking sites around the world and its relation to Chinese immigration, transnationalism, and heterogeneity. The critical questions we will explore in this course include (1) What is the relationship between the Sinophone (roughly, Chinese language users) and China, Chineseness, Chinese diaspora, and overseas Chinese studies? (2) What is China in the lens of Chinese immigrants? (3) How do cultural producers represent Chinese immigrants’ lived experiences? We will read novels/ novellas and watch films from writers and filmmakers who have experienced diverse migratory trajectories to get a picture of how they represent Chinese immigrants’ identity formation and negotiation with local societies, as well as their roots of origin/homeland. Through reading scholarship on Sinophone and primary texts, students will understand the relationship between physical migration and cultural production and become acquainted with various forms of place-based cultural productions in three Sinophone spheres, including the United States, Taiwan, and Malaysia.

CEAS236 Curatorial Workshop: Images of the Floating World  
This course will provide students with practical training in the design and development of a gallery installation in the Davison Art Center (DAC). The theme for this semester is Japanese woodblock prints. We will carry out the many and diverse components involved in creating a gallery installation, from conception to execution, including concept development, catalog and label
entries, accessibility, layout, and design. The course will culminate with an installation at the DAC, which will include an accompanying publication as well as permanent online catalog entries for individual prints on the DAC’s website.

Images of the floating world, or ukiyo-e, refers to a genre of Japanese art that emerged in the 18th century to depict the pleasures of life of that period—beautiful women, famous kabuki actors, views of famous places, and erotic pictures, among other subject matter. In most cases, these are woodblock prints, images produced by craftsmen from woodcuts based on originals painted by artists. Because they could be produced quickly, cheaply, and in large numbers, woodblock prints were exceptionally well-suited for the representation of the latest fashions or politics. Ukiyo-e prints made their way to Europe in the 19th century and remain the most popular form of East Asian art in the West. The Davison Art Center has around 600 Japanese woodblock prints in its collection, ranging in date from the 17th to 20th centuries and including works from all the major artists of the Edo period (1615-1686).

CEAS241 Visualizing Japanese-ness: Transnational Cinema in Modern Japan
This course is designed to interrogate evolving notions of transnationalism in Japanese cinema, from the prewar avant-garde to the postcolonial present. We will use the assigned films and supplementary readings as a means to explore conceptions of Japanese nationalism and uniqueness (nihonjinron), colonial memory, hybridity, multiculturalism, and creolization, among others. We will then use this theoretical foundation to analyze representations of Japanese minority groups (such as zainichi Koreans) to inquire into the possibility of obtaining a transnational or hybrid identity in the global era. How do these films “visualize” Japanese and/or transnational identity, and are these visions seen as compatible? In what ways and to what extent are these films engaged in a dialogue with theoretical concepts of postcoloniality and ethnicity?

CEAS255 Irreducible Distance: Japan-Korea Relations through Literature and Visual Media

Despite physical proximity and shared cultural origins, the specter of imperialism and constant influence of economic competition has seemingly resigned Japan and South Korea as two nations that remain forever "close and yet so far." Beginning with the colonial period (1910–1945) and ending with the current day, this course examines works of literature and visual media from both the Japan and Korea sides that address issues of intercultural relations and communication. What position does Japan for Korea and Korea for Japan occupy in the cultural imagination and how has this image shifted since the end of the colonial period? What role does Japan have in the formation of the North Korean state and articulation of ideology? How do political developments and ongoing issues of war responsibility (e.g., comfort women) continue to dictate the state of Korea-Japan relations? This course will also examine the influence of peripheral spaces (such as Jeju Island) and marginalized groups (such as the Korean minority in Japan) have in mediating discourse between these nations. Finally, recent cinematic works such as Assassination (2015) and Spirits’ Homecoming (2016) have witnessed a rekindled interest in the colonial period. We will thus discuss how these films constitute an effort to reexamine and reconstruct these historical events and how they view them as relevant to an understanding of the present day.

CEAS263 China's Economic Transformation

China is a country that is both transitioning to a market-oriented economy and developing rapidly into a global economic power. As such, it has characteristics
of both an emerging market economy and a developing country. China is large enough to create its own institutional infrastructure to support a third way between capitalism and socialism. This course examines in detail China's great economic transformation beginning in 1978 in what is often described as a "gradualist" transition to market economy. In the past three decades, the speed of China's development and its growth rates of GDP are without precedent in history. The course concludes by addressing the incompleteness of China's transition to a mature, developed market economy and by probing the issue of what is left to be done to create a harmonious society.

CEAS265 Japan Since 1868: Society and Culture in Modern Japanese History
This course examines the history of Japan from roughly 1800 to the present. With a broad-ranging observation covering politics, economy, society, culture, and foreign relations, we will look at a variety of historical events that the Japanese people experienced. Our goal is not only to understand what happened when, but also to be concerned with how people at different historical stages saw the world around them. Major historical events, trends, ideas, and people will constitute the vital part of the course; however, we will also inquire into everyday life of ordinary people, whose names do not remain in historical records. We will use a wide range of materials including written sources available in the English language, films, literature, and comics.

CEAS269 Chinese Cities
More than half of China's population now resides in cities. Within the next few years, China plans to accelerate the rate of urbanization by building sprawling cities and relocating more people into urban areas.

This course explores the history of Chinese cities from the imperial to modern age. Cities were centers of commerce, intellectual activity, and, in the words of historian and political scientist David Strand, "storehouses of political technique, strategy, and sentiment open to anyone with the understanding and the will to inventory to exploit them." We will study how cities supported massive populations with limited resources, inspired new forms of social organization, and transformed the political and social order of China.

CEAS272 Disease and Health in Modern Asia
While this course might seem highly focused and specialized at first glance, it is intended for students of all majors and backgrounds. It has two main goals. The first is to explore the influence of epidemics and diseases more broadly over the course of East Asian history while keeping a global context in mind. The focus is on China and Japan, but Korea will be included when possible. The second is to consider how historically, diseases and epidemics are best understood through multiple disciplinary approaches, including biology, epidemiology, anthropology, sociology, and iconology. Colonialism and empire--both Western and Japanese--are, of course, underlying themes throughout. We will examine several important historiographical and methodological approaches as well as some basic issues in the history of science and some important examples of specific diseases such as cholera, tuberculosis, and plague from different approaches using both secondary and primary sources.

CEAS274 Modern East Asia's Maritime Borderlands
This course offers a perspective of East Asian history from the sea. Between the 17th and mid-20th centuries, port cities of Batavia, Canton, and Nagasaki, as well as the islands of Taiwan, Tsushima, and the Ryukyus, were situated at the crossroads of global trade networks and became sites of political contestation.
Mariners, traders, and adventurers from different parts of the world converged on East Asia to profit from trade and military conflict. As a Chinese saying goes, "The mountain is high, and the emperor is far away." As the land-based empires on the Eurasian continent fade into the background, we begin to see the integral role of islands and port cities in shaping the economic and political order of the modern world.

CEAS277 Art of Dissidents and Recluses: Chinese Literati Painting and Calligraphy
During the mid-11th century, a group of Chinese dissidents and recluses, known for their independent views on political and social issues, began to explore new forms of artistic expression. The results of their effort challenged the status quo in Chinese art and eventually developed into a unique tradition, known as literati art. The tradition left a strong imprint in Chinese culture today and its impact can also be felt throughout East Asia, especially Korea and Japan. This course examines this artistic tradition and its legacy in today's China and East Asia.

CEAS278 Gender and Sexuality in Chinese Narrative
This course pays particular attention to gender relations and representations of sexuality in Chinese narrative. This course will require close readings of translated Chinese novels, short stories and movies. We will explore themes and motifs such as gender roles in Confucianism, female chastity, same sex desire, cross-dressing, masculinity and femininity, manhood and misogyny, eroticism, the cult of qing (passion), the New Woman, socialist and post-socialist desires, and writing bodies in the era of globalization. In addition to providing a platform for appreciation of the aesthetic beauty of Chinese narrative, the course encourages students to think about how representations of gender and sexuality incorporate or confront the mainstream moral values and social principles in China.

All readings are in English, no prior knowledge of Chinese language or culture is required. No textbook requirement.

CEAS279 The Making of Modern Japan, 1500 to Present
In a global context, Japan emerged as a major player on the world stage after 1500. While in the midst of what later was called the Warring States Period (sometimes dated 1468–1600), Japanese traders and others maintained a broad network of commerce that included not only Korea and China but spread to Southeast Asia. Europeans first reached Japan in 1543, and it was soon obvious that no European state had the military might to colonize Japan. These are the roots from which a modern Japan appeared that in the 19th and early 20th centuries militarized and set upon an imperial project until defeated at war in 1945. Since then, Japan has emerged as a postmodern, highly technological, pop culture-oriented, and aging country. One theme that will be examined across the semester is environmental change over the long term.

CEAS280 Losers of World War II
This course explores the experiences of Germany and Japan in the postwar era. These countries faced the dual challenge of making political transitions to democratic government and recovering from the economic ruin of World War II. Japan and Germany both were occupied and rebuilt by the United States, and both were blamed for the devastation of the war. How did Japan and Germany respond to being cast as worldwide villains? How strong were the democracies that developed? This course explores these questions by comparing the culture, history, and institutions of these two countries.

CEAS283 Beyond the Great Wave: Japanese Art and Visual Culture
Japanese art has been successfully taking, transforming, and incorporating diverse cultural elements from various traditions into its own visual vocabulary. At the same time, the traditional arts of Japan continue to inspire contemporary artists and designers around the world. This course will take an interdisciplinary approach to Japanese art from the ancient period to the present day. We will consider a range of visual media in the context of Japanese literature, history, and religion. We will examine how Japanese art has developed and changed through the ages, and how it has interacted with other artistic traditions. The course will consider both 3D (sculpture and architecture) and 2D (narrative scrolls and screens) media, and will take advantage of the DAC print collection, where we will work with original woodcut prints by artists such as Hokusai.

CEAS284 Buddhist Art and Architecture in East Asia
This course surveys the art and architecture of East Asia, emphasizing the unifying Buddhist tradition. As Buddhism spread through East Asia, it was influenced and shaped by native creeds—Confucianism and Daoism in China, Shamanism in Korea, and kami-worship (Shinto) in Japan. These interactions will be explored through works of art and architecture, as we examine issues of continuity and diversity.

CEAS285 Pop Music Revolutionaries in Modern Japan
This course addresses topics in popular music expression in modern and contemporary Japan, and considers trends and topics in modern Japanese society through the lens of different forms of popular music. It pays particular attention to instances of musical expression that can be understood as critical in nature, and addresses musical responses to moments of crisis, upheaval, and precarity in modern Japan. It also emphasizes the work of artists who have been at the forefront of various developments in Japan’s popular music world. Our aim, in short, is to understand not only the songs and artists themselves, but also
CEAS288 Arts of Zen in East Asia
Zen, a school of Buddhism that originated in China and later spread to Japan and Korea, is considered a gateway to East Asian thought and a force that challenges modern materialism. The nature of abstraction, spirituality, and enlightenment can best be approached through the arts associated with this religious school, which include ink painting, calligraphy, ceramics, architecture, and garden design. In this course, we will discuss how the ideas of Zen were elucidated in the visual arts by looking at major works from the 13th through the 20th centuries. We will also examine the ways in which artworks were incorporated in the practice of Zen rituals, especially those related to meditation and the tea ceremony. In addition, we will explore the meanings of pictorial and literary ko' an and how they form visual and textual riddles based on allusion and wordplay. Through a comparative approach, we will analyze the development in the form, style, and iconography of Zen art in East Asia, while tracing the history of Zen Buddhism and its underpinning philosophical concepts related to enlightenment, emptiness, and beauty. The goal of this course is to form an in-depth appreciation for the arts of Zen in their historical, philosophical, and cultural context.

CEAS290 Unearthing Early China: Art and Archaeology
This course introduces early China by examining major archaeological discoveries from prehistory through the second century CE. We will analyze the formal and material features of early Chinese artifacts from important archaeological excavations at sites such as Liangzhu, Anyang, Zhouyuan, and Mancheng. We will discuss the ways in which these artifacts and archaeological sites demonstrate early Chinese cosmological beliefs and ritual practices, especially notions related to heaven, afterlife, and the transition from ancestor worship to the pursuit of personal welfare in immortality. In addition, we will study the iconography and symbolism of objects found in these archaeological discoveries, which would serve as a foundation for the inception of visual arts in the later periods of Chinese history.

CEAS295 In Search of the Good Life in Premodern Japan
This course presents works of literature from premodern Japan to consider how people conceptualized and struggled to attain the good life. How did people's evocations of their ideals and desires reflect and engage with the historical reality? How did their social status (such as a Buddhist monk, samurai, or a lady-in-waiting), occupation, and gender contribute to their aspirations as well as struggles? What were their strategies for not just survival but for fulfillment in periods of warfare or disasters? Works will encompass diary literature, essays, fiction, and poems from a variety of authors across most of Japanese premodern history. Practices such as the tea ceremony and works of art will also be discussed to fill out the cultural context.

CEAS296 Politics in Japan
This introductory course in politics in Japan begins with an overview of the Japanese political system: its historical origins, institutional structures, and main actors. The course then moves on to explore specific policy areas: industrial and financial policy, labor and social policy, and foreign policy. The course culminates in student research projects presented in an academic conference format of themed panels.

CEAS297 Politics and Political Development in the People's Republic of China
Despite the collapse of the U.S.S.R. and Eastern European Communist regimes since 1989, the People’s Republic of China (P.R.C.) has retained a one-party regime while it continues its economic reforms begun in 1978, before reforms in other communist counties got under way. In contrast with former communist regimes, the P.R.C. is attempting socialist market reforms while retaining the people's democratic dictatorship under the leadership of the Chinese Communist Party. We will examine the politics of this anomaly, study several public policy areas, and evaluate the potential for China's democratization.

CEAS300 Literatures of the Japanese Empire
This course will survey select works of literature that were produced during Japan's Imperial period, in disparate locations across the Empire (including Korea, Taiwan, and the 'home islands' of Japan itself). It will also grapple with literary reflections on the experience of Empire, penned in the wake of Japan's defeat in 1945. We will conceive of 'literature' broadly, including under this heading not only texts in the traditional sense, but other forms of media, as well. By considering a selection of texts from this period, we will strive to attend to some of the contested and competing desires of individuals and entities seeking to navigate conditions of empire, colonialism, and war.

CEAS301 Modern China and the World Since 1945
This class will tackle key international problems in modern China's history over the past 70 years, beginning with the civil war; the Korean war; the Great Leap Forward; the Cultural Revolution; Deng Xiaoping's economic reform; Tiananmen 1989; Hong Kong’s reversion to the PRC; democratization movements in China, Hong Kong, and Taiwan; and cross-strait relations over the years. We will explore China's recent assertiveness on territorial issues, as well as the reaction over time to Chinese foreign policy by the United States, Russia, Japan, India, and other key players.
In addition to lectures and discussion, we will engage in some role-playing, with students taking various national and bureaucratic positions in mock negotiations and international exchanges. The goal will be to gain a better understanding both of Chinese options and the role of international players during key moments in modern China's history.

CEAS311 Representing China
This course will introduce perspectives that anthropologists, ethnographers, writers, filmmakers, artists, and photographers have taken to understand contemporary social life in China. Students will learn to differentiate the strengths and weaknesses of each perspective and, at the same time, will develop their own nuanced appreciation for Chinese culture and recent Chinese history. Beginning with basic concepts of family and family relationships, we will survey gift giving and banqueting, changes in the role and status of women, education, organization of the workplace, rituals, festivals, and changes since the beginning of the reform and opening up in the early 1980s. Anthropological essays and ethnographies will be supplemented by short stories, first-person narratives, and class presentations of films, photographs, and art-works to illuminate the different ways that natives and foreigners represent Chinese culture. Lectures will provide cultural and historical context for these materials. No previous knowledge of China or Chinese is required for this class.

CEAS338 Comparative Political Philosophy
Undertaking "comparative philosophy" means to do philosophy by drawing on multiple philosophical traditions. In this course, we will study key topics in political philosophy, such as the justification of political authority, the legitimacy of public critique of social rituals, and the scope of liberty and rights-from both modern Western and contemporary East Asian perspectives. We will examine potential obstacles to comparative theorizing, as well as benefits that can arise both for currently dominant traditions (e.g., Western liberalism) and for alternatives to liberalism such as Chinese and Korean Confucianism.

CEAS343 Tibetan Buddhism
This course serves as an introduction to major themes of Buddhist thought and practice within the cultural and historical framework of Tibet and the wider Himalayan world. In doing so, it examines various approaches to the study of religion and questions traditional definitions of categories such as "religion" and "Buddhism" themselves. Beginning with a close study of Patrul Rinpoche's classic 19th-century guide to Tibetan Buddhism, the early part of the course focuses on the doctrinal foundations of the tradition. This is followed by a historical and more critical examination of Tibetan religious history, proceeding from Buddhism's Indian antecedents and its initial arrival in Tibet during the seventh century throughout the present day. The course will explore a wide range of Tibetan religious cultures and practices including Buddhist ethics, systems of monastic and ascetic life, ritual activities, sacred geography and pilgrimage, lay religion, as well as the status of Tibetan Buddhism under Chinese occupation and in the West. The majority of readings will consist of primary texts in translation, and will concentrate on Tibet's rich narrative literary tradition. These will be supplemented by secondary literature on the study of religion and Tibetan Buddhism.

CEAS344 Religions of China: The Ways and Their Power
In this course, we examine the religious worlds of China from antiquity to the present. Not only will we read key works of Chinese philosophy from the Confucian, Daoist, and Buddhist traditions, we will also investigate how these traditions find expression in art and architecture, poetry and prose, and in the lived realities of Chinese history.

In this exploration of Chinese religions, we will pay special attention to the question of what "counts" as religion, to the role of the state in defining and establishing Chinese religions, and to the power of new religious movements to intervene dramatically (and sometimes violently) in Chinese history.

CEAS345 Ethics and Action in the Buddhist Cosmos
We often think about nirvana, or "enlightenment," as the ultimate goal of Buddhist practice. But the reality is much more complex. Buddhist traditions imagine a huge range of positive outcomes for moral behavior: immediate material benefits, rebirth in a better body or in a wealthier family, and enjoyment of gold-paved heavens or eternally blissful Pure Lands.

In this seminar we will read Buddhist scriptures, commentaries, biographies, narrative anthologies, and scholarly works that trace the many ways of thinking about ethics, action, and rebirth in the vast Buddhist cosmos. We will tour
CEAS346 Contemporary East Asian Cinema
This is a seminar on comparative narrative and stylistic analysis that focuses on contemporary films from Hong Kong, Taiwan, China, South Korea, and Japan, regions that have produced some of the most exciting commercial and art cinema in the past 30 years. We will begin by examining the basic narrative and stylistic principles at work in the films, then broaden the scope of our inquiry to compare the aesthetics of individual directors. The films of Wong Kar-wai, Tsai Ming-liang, Hou Hsiao-hsien, Kitano Takeshi, Kore-eda Hirokazu, Wang Xiaoshuai, Tian Zhuangzhuang, Johnnie To, Stephen Chiau, Hong Sang-soo, Tsui Hark, Lu Chuan, and others will be featured.

Prereq: ARST260

CEAS379 Sacred Landscapes of Japan
This course examines the religious and visual traditions of Japan through the investigation of sacred sites and their pictorial representation. Such representations of sacred sites were used and viewed in different ways – as fundraising tools, as advertisements aimed at inspiring viewers to undertake a physical journey to the illustrated site, and also as vehicles for virtual pilgrimage through the representation itself. Often these representations were regarded and treated as sacred in their own right and worshiped as such.
Each week we will immerse ourselves in a sacred site, reading about its history, deities, religious practices, and unique benefits. We will then look at how these were given visual form and the artistic language developed to endow these visual representations with the power to inspire and move contemporary audiences.

CEAS381 Relic and Image: The Archaeology and Social History of Indian Buddhism
This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (1st–3rd century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts and then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeological and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha’s relics, pilgrimage to the sites of the Eight Great Events in the Buddha's life, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodh Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

CEAS384 Japan’s Nuclear Disasters
The atomic bombings of Hiroshima and Nagasaki in 1945 are central to the history of the 20th century. This course examines the scientific, cultural, and political origins of the bombs; their use in the context of aerial bombings and related issues in military history; the decisions to use them; the human cost to those on whom they were dropped; and their place in history,
culture, and identity politics to the present. Sources will include works on the history of science; military, political, and cultural history; literary and other artistic interpretations; and a large number of primary source documents, mostly regarding U.S. policy questions. In addition, we will be examining the development of the civilian nuclear industry in Japan with a focus on the nuclear meltdowns in Fukushima and other accidents. This is an extremely demanding course.

This interdisciplinary, experiential, and experimental course combines studio learning (movement studies and interdisciplinary, creative exploration) and seminars (presentations and discussions). No previous dance or movement study is required, and the course is not particularly geared toward dancers or performers. However, your willingness to experiment on and share movement is important. We encourage you to think about movement as a method of accessing human experiences and making distance malleable, a way to explore your own sensations, thoughts, and reactions in learning history.

CEAS395 From Fascism to Fukushima: Navigating the Everyday in Modern Japan
What do we mean when we talk about "the everyday"? Thinkers like Tosaka Jun and Henri Lefebvre teach us that the everyday is above all a realm of practice, a space of conflict within which life itself unfolds and the social is produced. What might be gained, then, by shifting the emphasis in studies of 'Japan' away from static, abstract notions like nation-state or national culture, and toward interrogations of the tactics deployed by social actors to survive the conditions of their own lives? How might we enhance our understandings of phenomena ranging from fascism to Fukushima - and, crucially, responses thereto - by attending to the ways in which these unfold in lived geographic, historical, or economic circumstances?

This course will aim to open up new ways of thinking about modern and contemporary Japan by approaching it in terms of 'the everyday,' and the disparate and ambiguous ways in which social actors may conceive of and critique their own place in the world. By attending to literature, music, film, and scholarly texts, we will consider some of the different ways in which 'Japan' has been understood by different actors in different moments, and think about the ways in which the contingent experience of living the everyday can engender specific - and often ambiguous - political stances upon the world.

CEAS413 Korean Drumming and Creative Music
This course is an experiential, hands-on percussion ensemble with the predominant instrument in Korean music, the two-headed janggo drum.
Students will learn to play a range of percussion instruments including janggo, barrel drum (buk), hand gong (kwenggari), and suspended gong (jing).

Through the janggo, drumming students gain first-hand experience with the role music plays in meditation and the benefits it offers to develop a calm, focused group experience. In the end they integrate their focused mind, physical body energy, and breathing through a stream of repetitive rhythmic cycles.

If there is an opportunity during the semester, the students will be introduced to traditional folk and court styles as well as creative collaborations with a dancer(s) or musicians from other cultures. The ensemble plays pieces derived from tradition and new ideas, and creates new works exploring imaginative sounds on their instruments. The ensemble will experience a deep respect for the diverse cultural backgrounds of the students developed from the efforts of teamwork and creating music together through Korean drumming. The semester will end with a live performance for the public.

CEAS460 Introduction to Sumi-e Painting
We will learn basic technique and composition of traditional Japanese sumi-e painting. Sumi-e is a style of black-and-white calligraphic ink painting that originated in China and was introduced into Japan by Zen monks around 1333. We will concentrate on the four basic compositions of sumi-e: bamboo, chrysanthemum, orchid, and plum blossom. We will also study the works of the more famous schools, such as Kano. Students will create a portfolio of class exercises and their own creative pieces.

CEAS491 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
COLLEGE OF INTEGRATIVE SCIENCES (CIS)

CIS115 Experiential Design and Application
This course, co-taught with Director of Physical Plant Operations Mike Conte, will allow students to work directly with Facilities employees to design and execute modifications and repairs to existing Wesleyan spaces. The specific projects will change from semester to semester, but could include designing and building informal learning spaces, and planning and carrying out repairs and modifications to mechanical and plumbing systems. Students will learn design and engineering by carrying out projects to improve Wesleyan’s facilities. Students must be willing to work with tools and machinery with supervision. The grading in this quarter-credit repeatable course will be based primarily on active participation, and the class meetings will be held on location and at times built around participants’ schedules.
Offering: Host
Grading: Cr/U
Credits: 0.25
Gen Ed Area: NSM-CIS
Prereq: None

CIS116 Designing Books
This intensive course will help students to understand how books are physically designed and created. Students will learn to use the book format in their work as a means of expanding, preserving, and restructuring ideas. After a visit to Special Collections and Archives to look at examples of artists’ books and a review of 1200 years of Eastern and Western book binding types, students will make at least eight books, including an accordion book, a long-stitch book, a Coptic stitch book, side-sewn bindings including a Japanese four-hole stitch books, variations on pamphlet binding and a map fold book, as well as a simple box. The properties of bookbinding materials will be discussed in detail. No prior experience is necessary.

Grading: Cr/U
Credits: 0.50
Gen Ed Area: NSM-CIS
Prereq: None

CIS121 Wesleyan Mathematics and Science Scholars Colloquium I
This weekly colloquium of participants in the Wesleyan Mathematics and Science Scholars (WesMaSS) Program will provide participants with a framework for taking full advantage of the educational opportunities in the natural sciences and mathematics available at Wesleyan. Class sessions and assignments are designed to help students to develop effective individual and group study skills, to promote cohort-building, and to navigate the “hidden curriculum” in higher education.
Offering: Host
Grading: Cr/U
Credits: 0.25
Gen Ed Area: NSM-CIS
Prereq: None

CIS122 Wesleyan Mathematics and Science Scholars Colloquium II
This weekly colloquium of participants in the Wesleyan Mathematics and Science Scholars (WesMaSS) Program will be focused on strategies for success in science and math higher education.
Offering: Host
Grading: Cr/U
Credits: 0.25
Gen Ed Area: NSM-CIS
Prereq: None

CIS135 Mindfulness
During this course, students will be introduced to various techniques of mindfulness practice and awareness, including sitting meditation and yoga. These modalities are designed to aid in stress and anxiety reduction and, when practiced diligently, may also offer opportunities for greater self-awareness and personal development. The goal is to give students not only a peer community but also a contemplative toolbox that is portable, replicable, and sustainable. Students will gain an understanding of the roles these practices can play in leading a happier, healthier, and more fulfilling life.
Offering: Host
Grading: Cr/U
Credits: 0.25
Gen Ed Area: SBS-CIS
Prereq: None

CIS150 The Science Behind Popular Scientific Literature
The Science Behind Popular Scientific Literature. This course focuses on academic STEM writing and is an exploration of the scientific literature in the reference list of Elizabeth Kolbert’s “The Sixth Extinction.” Assignments will consist of numerous low-stakes writing prompts with extensive peer and instructor feedback, and a term project paper constructed along the lines of a STEM review paper. This course fulfills a key need in developing science literacy and teaching students how to find and use reliable sources to critically evaluate popular science writing.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-CIS
Identical With: WRCT150
Prereq: None

CIS150F The Science Behind Popular Scientific Literature (FYS)
The Science Behind Popular Scientific Literature. This course focuses on how to present material to a scientific audience and is an exploration of the scientific literature in the reference lists of Rachel Carson’s “Silent Spring.” Assignments will consist of numerous low-stakes writing assignments with extensive peer and instructor feedback, and a term project paper constructed along the lines of a STEM review paper. This course fulfills a key need in developing science literacy and teaching students how to find and use reliable sources to critically evaluate popular science writing.

Prereq: None

CIS160 Life in the Oceans in the Anthropocene and Beyond
Little is known about life in the deep sea, the largest habitat on Earth, even about the largest animals living there, such as the giant squid. Humans, however, are severely affecting even these most remote areas of our planet, and wildlife populations in the oceans have been badly damaged by human activity. We will look at the amazing diversity of ocean life and the disparate building plans of
its animals, and see how oceanic ecosystems are fundamentally different from land ecosystems. Then we will explore how human actions are affecting oceanic ecosystems directly, for instance by overfishing (especially of large predators and filter feeders), addition of nutrients (eutrophication) and pollutants, and the spread of invasive species, as well as indirectly, through emission of carbon compounds into the atmosphere. Rising atmospheric CO2 levels lead to ocean acidification and global warming, affecting the all-important metabolic rates of ocean life, as well as oceanic oxygen levels and stratification, thus productivity. We will try to predict the composition of future ecosystems by looking at ecosystem changes during periods of rapid warming in the geological past and see whether future ecosystems will become dominated by jellyfish, as they were 600 million years ago.

Offering: Crosslisting

Gen Ed Area: NSM-CIS
Identical With: E&E160
Prereq: None

CIS170 Introduction to Design and Engineering
This course will provide a hands-on introduction to design and engineering. Students will engage in individual and team projects in a studio environment where we seek to develop a shared practice and understanding of the engineering design process. We will study biological organisms to find inspiration for design of hoppers, swimmers, and climbers. Students will build skills using computer-aided design (CAD) software and using tools for fabrication and prototyping including laser cutting and 3D printing. We will also hone skills in identifying which scientific and engineering principles need to be understood to achieve design goals.

Offering: Crosslisting
Grading: Cr/U

Identical With: IDEA170, PHYS170
Prereq: None

CIS173 Introduction to Sensors, Measurement, and Data Analysis
This course is an engineering fundamentals course supporting the Integrated Design, Engineering, and Applied Science (IDEAS) minor. It will involve a sequence of hands-on projects that introduce students to basic measurement devices and data analysis techniques using inexpensive modern sensors, a microprocessing platform (Arduino), and a computational software package (Matlab). The course will provide foundational knowledge of available resources and techniques that allow students to more confidently implement measurement systems in subsequent courses of the IDEAS minor and better understand experimental devices used in scientific research activities.

Offering: Crosslisting
Grading: A-F

Gen Ed Area: NSM-CIS
Identical With: IDEA173
Prereq: None

CIS175 Principles of Engineering
Students will learn about engineering mechanics, electronic control systems, and physical actuators (e.g., for movement) using a microprocessor platform, sensors and motors. The final project will require a student team to ideate, design, analyze, and optimize a mechatronic system. This course will allow students to better understand components, methods, and challenges in mechatronics systems commonly found in automation and robotics. This course fulfills the project-based Design & Engineering course requirement for the Integrated Design, Engineering and Applied Science (IDEAS) minor degree program.

CIS221 Research Frontiers in the Sciences I
This seminar is designed to introduce students to the exciting and cutting-edge research activity at Wesleyan across all the sciences and mathematics, and to introduce faculty with active research labs to students interested in working in a lab. The course showcases what research at the college level actually entails, and which projects Wesleyan faculty are actively researching. CIS 221 is scheduled in the fall, CIS 222 in the spring. Both are gateway classes to admission into the CIS, but also recommended to students broadly interested in the sciences who have not yet decided on a major. There is no overlap in speakers between CIS 221 and CIS 222, and students may take both.

CIS231 Modeling and Data Analysis: From Molecules to Markets
The development of models to describe physical or social phenomena has a long history in several disciplines, including physics, chemistry, economics, and sociology. With the emergence of ubiquitous computing resources, model building is becoming increasingly important across all disciplines. This course will examine how to apply modeling and computational thinking skills to a range of problems. Using examples drawn from physics, biology, economics, and social networks, we will discuss how to create models for complex systems that are both descriptive and predictive. The course will include significant computational work. No previous programming experience is required, but a willingness to learn simple programming methods is essential.

Identical With: PHYS221, QAC221
Prereq: None

CIS239 Proseminar: Machine Learning Methods for Text, Audio and Video Analysis
In this course, students will learn machine learning techniques to analyze text, audio, and video data. The course consists of three parts: text analysis, audio analysis and video analysis. Each part will first introduce how these non-traditional data can be converted into mathematical objects suitable for computer processing and, particularly, for the application of machine learning techniques. Then students will learn a selection of supervised and unsupervised learning algorithms that are effective for text, audio, image/video analysis.
Finally, students will explore major applications of these techniques such as sentiment analysis, speech emotion recognition, face recognition, pedestrian detection, keyframe extraction.

CIS241 Introduction to Network Analysis
This is an interdisciplinary hands-on course examining the application of network analysis in various fields. It will introduce students to the formalism of networks, software for network analysis, and applications from a range of disciplines (history, sociology, public health, business, political science). We will review the main concepts in network analysis and learn how to use the software (e.g., network analysis and GIS libraries in R) and will work through practice problems involving data from several sources (Twitter, Facebook, airlines, medical innovation, historical data). Upon completion of the course, students will be able to conduct independent research in their fields using network analysis tools.

Offering: Crosslisting

Prereq: None

CIS251 Data Visualization: An Introduction
This course will introduce students to the principles and tools necessary to present quantitative information in a visual way. While tables and graphs are widely used in our daily lives, it takes skill to deconstruct what story is being told. It also takes a perceptive eye to know when information is being misrepresented with particular graphics. The main goals of the course are for students to learn how to present information efficiently and accurately so that we enhance our understanding of complex quantitative information and to become proficient with data visualization tools. Beginning with basic graphing tools, we will work our way up to constructing maps visualizations and interactive graphics. This course will require a substantial amount of computation in R. No prior programming experience is necessary, but learning does require willingness and time.

CIS265 Bioinformatics Programming
This course is an introduction to bioinformatics for students with interest in the life sciences. The course is similar to BIOL265 but only meets in the second half of the semester (with BIOL265) and is designed for students with programming background, ideally in Python. The course introduces problem areas and conceptual frameworks in bioinformatics and discusses programming approaches used in bioinformatics such as sequence matching and manipulation algorithms using dynamic programming, clustering analysis of gene expression data, analysis of genetic nets using Object Oriented Programming, and sequence analysis using Hidden Markov Models, Regular Expressions, and information theory.

Offering: Crosslisting

CIS284 Data, Art, and Visual Communication
This course looks at the ways the digital arts--broadly defined--can be used to explore the intersections of research, data, design, and art. Following a creative software "bootcamp," students will execute projects intended to help them generate, manipulate, and remix data for the purposes of visual communication and art. Students will use Adobe Creative Suite and Processing, an open source programming language, and integrated development environment (IDE) built for electronic arts, new media, and visual design. In addition to working in the studio, seminars, readings, and student presentations will explore the role of data visualization, "big data," and the web in culture and society today. No prior software knowledge or coding skills are required. Students working in STEM, humanities, and social sciences are encouraged to enroll.

Offering: Crosslisting
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-ART
Identical With: ARST484
Prereq: None

CIS285 Generative Art, Computational Media, and Creative Coding
In this course, students will learn to use computers and software as platforms for creative expression. Following a series of intensive coding workshops, students will learn to execute projects involving chance operations, rule-based systems, simulated autonomy, and interactivity. These projects will emerge as animations, drawings, prints, and screen-based artworks. Students will work primarily with the creative coding applications Processing and Grasshopper. These are coding environments designed by artists to facilitate the use of data, mathematics, and computation in visual practice. In addition to learning to program, students will translate their code into physical artifacts using computer-driven hardware such as a CNC router, a laser cutter, and Arduinos. Additionally, students will be exposed to the history and practice of generative and computational art through lectures and student presentations. This conceptual work will emphasize the formal and critical paradigms of computational media and design beginning in the 1960s.

Prereq: ARST131

CIS307 Experimental Design and Causal Inference
The course provides the foundations and statistical thinking to design, collect, and analyze experimental data and introduces appropriate techniques for observational data when causal inference is the objective of the analysis. Throughout the course, we introduce and compare various experimental designs.
We will discuss sample size and power calculations as well as the advantages and disadvantages of each of these designs. With observational data, we will explore difference-in-difference models, propensity score matching techniques, regression discontinuity designs. This course gives students the opportunity to develop further their computational skills as we learn how to describe, interpret, control, and draw inferences from experimental and observational data.

Gen Ed Area: NSM-CIS
Prereq: None

CIS323 Bayesian Data Analysis: A Primer
This course introduces the applied principles of Bayesian statistical analysis. The Bayesian paradigm is particularly appealing in research where prior research and historical data are available on parameters of interest. This course will teach students appropriate techniques for analyzing data of this nature as well as broaden computational skills in R. The course will lay the foundation for Bayesian data analysis that students can use to further develop skills in decision making.

Offering: Crosslisting
Grading: A-F
Credits: 0.50
Gen Ed Area: SBS-QAC, NSM-QAC
Identical With: QAC323
Prereq: MATH132 OR ECON300 OR [GOVT367 or QAC302]

CIS327 Evolutionary and Ecological Bioinformatics
Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene’s descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

CIS331 Video Games as/and the Moving Image: Art, Aesthetics, and Design
Video games are a mess. As a relatively new medium available on a range of platforms and in contexts ranging from the living room to the line for the bathroom, video games make new but confusing contributions to the meaning and possibilities of the moving image. We will work to understand what games are, what they can do, and how successful games do what they do best. Students will complete game design exercises, create rapid prototypes, playtest their games, and iteratively improve their games with play and their players in mind. They will complete analyses of games and game design projects both alone and in groups and participate in studio-style critiques of one another’s work. Experience with computer programming is helpful but not essential.

Prereq: None

CIS342 Molecules to Medicine
This course will explore the process of drug development, including target selection, lead discovery using computer-based methods and combinatorial chemistry/high-throughput screening, organic synthesis, bioavailability, clinical trials, and other factors (some economics and politics) involved in bringing a drug to the marketplace. Critical consideration of the variables to contend with at each step will be described and discussed, including aspects of research ethics and patent law. The basic science of molecular recognition, computer-aided drug design, and the role of factors from synthetic chemistry to toxicology will be presented. Case studies of the development of drugs recently successful in making the journey from molecule to medicine will be discussed, as well as the story of some that did not, and why. Emerging new design strategies such as fusion-protein therapies, crisper technology, and enhanced use of rational design and combinatorial methods will be emphasized, and how pharmaceutical research is evolving in the postgenomic era, particularly with biologics. Job opportunities in the pharmaceutical industry will be discussed.
Offering: Crosslisting

CIS375 Mass Extinctions in the Oceans: Animal Origins to Anthropocene
Geoscientists are debating whether we are living in the Anthropocene, defined as a period during which humans are having a significant effect on atmospheric, geologic, hydrologic, and biospheric earth system processes. There is considerable discussion whether we are indeed affecting the biosphere to such an extent that life on Earth will suffer an extinction similar in magnitude to these that have occurred during earth history. Studies of the fossil record provide unique evidence that is used to evaluate the large extinctions of the past and compare them to ongoing extinction processes, extinctions rates and patterns, and magnitude. Organisms with hard skeletons are most easily and most abundantly preserved in the rock record. Many of these are invertebrates that lived in the oceans (e.g., clams, sea urchins, corals). In the first part of this course, students will become familiar with the nature of the fossil record, the most common marine animals in the fossil record, and their evolution and diversification. Lectures will be combined with studying fossils. In the second part of the course, possible causes for mass extinction will be considered, together with their specific effects on environments and biota, and these predicted effects will be compared to what has been observed. Potential causes include asteroid and comet impacts, large volcanic eruptions, “hypercanes,” and “methane ocean eruptions,” and more exotic processes. Students will present in class on these topics, and we will compare rates and magnitude of environmental change with severity and patterns of extinction.

COLLEGE OF LETTERS (COL)

COL108F Language (FYS)
This course, beyond providing an introduction to the science of linguistics, is designed to give students in their first year an awareness of the importance of language in everyday life and of the range of its uses and abuses as a cultural and class marker, vehicle of knowledge, and instrument of power. It is an objective of this course that students who complete it should be better prepared than they were before for the sensitive and exacting study not only of literature but of whatever specialized studies they subsequently undertake. Topics to be considered include whether language is a cultural artifact that is learned or is instinctual; the varieties of languages; language as expression of culture; linguistic imperialism; problems of translation; the distinction between speech and writing; stenolanguage, metalanguage, and poetic language; metaphor and symbol; and semiotics.

COL110 What Does Art Mean? Studies in Aesthetics and Cultural Relevance
Humans have felt compelled to make what we now call “art” for millennia; clearly, the drive to create and express is a pressing one in our species. Can we define that drive? The title of this course encompasses multiple questions. What do we mean when we say “art,” and is there a way to legitimately wield or deny that designation? Does that designation have universal meaning? Is there an inherent exclusion, or exclusivity, within it? Also, what is art communicating? Is there a common thread or purpose to what we call art? Several thinkers in several disciplines, from art history and practice to philosophy to sociology to religion to feminist thought, have weighed in on this question; we will read and analyze some of their arguments and, because this is a writing course, students will have the chance to formulate their own. We will also visit the Davison Art Center, the Yale Art Gallery, and other locations where art can be viewed, experienced, and discussed firsthand.

COL112F The European Novel from Cervantes to Calvino (FYS)
This course provides an introductory survey that tracks the development of the European novel through its major periods—from its origins in DON QUIXOTE through the rise of the novel in 18th-century Britain to romanticism, realism, and modernism.

We will focus on texts that had tremendous impact (and long afterlives) throughout Europe, that inspired responses and imitations in many different languages, and that provided European intellectual culture with archetypal characters and plots through which problems of history, politics, and philosophy were articulated—Voltaire’s naïf and Dostoevsky’s nihilist; Defoe’s heroic bourgeois individualist and Kafka’s victim of modern bureaucratic rationality. The readings will also introduce students to some of the European novel’s important subgenres (e.g., romance, gothic, grotesque, the philosophical novel) and important narrative forms (e.g., epistolary novel, unreliable narration, free indirect discourse).

Prereq: None

COL115 How to Read a Literary Text
This course will introduce students to the practice of close reading and to the formal study of literary texts. Working with selections of poetry and prose (including texts that have been translated from languages other than English), students will learn to analyze and make arguments according to the disciplinary methods of literary studies.

Primary readings will include texts from a wide range of historical periods, national literatures, and cultural contexts. Secondary readings will include exemplary works of literary criticism and theoretical writings on critical method. In addition to performing close readings of the primary texts, we will discuss theoretical problems of genre, author, closure, and ambiguity, along with the limitations of formal analysis and the text/context binary.

The governing purpose of this course is to teach students to perform in the written genre of literary close reading as it is practiced in a college essay. The writing assignments, which will include revisions and workshop, will be treated as an integral part of our course of study.

COL117 Writing Love: Myth-Making and Experience in the Literature of Amour
What does it mean to experience love? How do we write about it? What beliefs about love do we hold most dear? What stories or myths do we use to inscribe the indescribable? This course investigates several myths, literary works, and philosophical treatises that attempt to represent, understand, explain, and immortalize the experience of love. From contemporary pop lyrics to Renaissance love poetry and Romanticism, we will look at the ways in which social, personal, and metaphysical experiences of love are illustrated and
reimagined in the art of verbal language and literary representation. Beginning with 21st-century pop records like those of Adele, we will rediscover the tradition of love that has come down to us. This course is taught in translation and focused on close readings and discussions of the assigned texts. Students will be given the opportunity to write analytically and creatively in response to the assigned readings.

COL120 Muslims, Jews, and Christians: Getting Along in Medieval Spain
For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is often full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual well-being.

This seminar will explore the works produced by the pluralistic societies of medieval Iberia from the perspectives of art, architecture, history, archaeology, literature, and music. As we study renowned monuments such as the synagogues of Toledo, the Alhambra, and the Way of St. James, we will learn to decode elements such as dress and home décor, food and hygiene, gardening and agriculture, to expand our picture of culture and lived experience. Finally, we will ask why convivencia ultimately failed, and how the medieval Iberian experience can enlighten our own uneasy attempts at building a multicultural, multiconfessional society.

COL123 Love, Sex, and Marriage in Renaissance Europe
This writing-intensive seminar will compare literary and artistic depictions of love, sex, and marriage during the Renaissance by authors and artists from England, Spain, France, Flanders, Germany, and Italy. We will read both male and female writers in genres ranging from poetry, the short story, and theater to the essay, the travel narrative, and the sermon. We will also examine other arts such as painting, sculpture, and the decorative arts (e.g., wedding chests). Questions we will explore include, but are not limited to, How were love and marriage related during the Renaissance? What role did sex, gender, and violence play in relationships between couples and within society? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about same-sex unions? Other topics will include virginity and celibacy, erotic literature, family and class structures, and divorce.

COL125F Staging America: Modern American Drama (FYS)
Can modern American drama—as cultural analysis—teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonical plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

COL128 Constantinople: From Rome to Istanbul
Constantinople was founded by a Roman Emperor Constantine the Great in 330. From there the story gets complicated. Should we account for Constantinople from a Western point of view and call it Roman? Or, should we label it by its Eastern religion and call it Christian? Or, should we see Constantinople's true nature in a transnational Hellenic culture and call it Byzantine? Then, once we have chosen a story to explain the city's nature, how should it end? With the pillaging fourth crusade in 1204, or the Ottoman sack in 1453, or is Constantinople yet alive in modern Istanbul? This course diverges from such narrative frameworks by accounting for Constantinople as, first and foremost, a city. Together we will explore the rich, unevenly distributed, textual and material relics of this medieval metropolis and contribute our finds to a collaborative digital database. Students will draw from this database to craft their own histories, applying both imagination and analysis into a believable and reliable story conveying the diversities and paradoxes of life in The City.

COL129 Writing the French Revolution
"Liberty, equality, and fraternity" was the slogan of the French Revolution and features three concepts of enduring interest. In this seminar we will explore the French Revolution and its antecedents—and what these can mean for us today. In the process we will delve into a number of ways of thinking and modes of representation: historical thinking, of course, but we will also get a sense of the origins of sociology and political science, the power of scientific thinking, and differences between literary and visual representation (especially films). This course will also serve as a writing workshop emphasizing the nuts and bolts of good writing and experimenting with such rhetorical modes as argument, personal narrative, persuasion, and fiction-writing.

COL130F Thinking Animals: An Introduction to Animal Studies (FYS)
The question of "the animal" has become a recent focus across the disciplines, extending debates over identity and difference to our so-called nonspeaking others. This course will examine a range of theories and representations of the animal to examine how human identity and its various gendered, classed, and racial manifestations have been conceived of through and against notions of animality, as well as how such conceptions have affected human-animal relations and practices such as pet-keeping and zoos. We will seek to understand the desire to tame or objectify animals as well as evidence of a contrasting desire
that they remain guardians of inaccessible experience and knowledge. Readings may include Darwin, Poe, Kafka, Mann, Woolf, Coetzee, and Hearne.

COL150 Great Books Unbound
This course will introduce students to great works of Western Culture—both textual and performative—and the different ways that a professor of literature, a historian, and a philosopher might read them. The theme of the course is METAMORPHOSIS. Through repeated encounters with Apuleius’ GOLDEN ASS, Shakespeare’s A WINTER’S TALE, Kafka’s METAMORPHOSIS, and Puccini’s MADAME BUTTERFLY, we will track the transformation of our theme through questions of translation, reception, language, method, genre, and our own choice to read, think and write through these works. Three College of Letters faculty will alternately lecture and lead small seminars, where students will learn how to transpose their own analysis of these texts into effective writing. We will celebrate the apotheosis of this course with an expedition to the MET’s performance of Madame Butterfly.

COL210 Great Books Unbound: How to Live Forever (FYS)
How do classic works in literature manage to break the bounds of humanity and live forever? This multidisciplinary humanities course explores in-depth four compelling works, which each run up against the very limits of being human through their explorations of love, reason, fame, and evil itself. Interwoven weekly lectures by three professors from different disciplines will bring out complementary and/or conflicting dimensions of meaning. These dynamic interpretative tensions flow into the twice-weekly small discussion seminars and periodic writing workshops to bring students’ critical reading to the next level.

We will ground our ambitious inquiry into the immortal and the infinite in three texts representative of the College of Letters’ three core methodologies: history (the ALEXANDER ROMANCE), philosophy (Descartes’ MEDITATIONS), and literary studies (Shakespeare’s ROMEO AND JULIET). Then, with our heightened skills in critical reading, analytical interpretation, and persuasive writing, we will conclude by developing our own interdisciplinary approach to Boito’s MEFISTOFELE (an opera based on Goethe’s FAUST). The course will travel to the Metropolitan Opera in New York to experience the opera live.

This course is not a prerequisite but is strongly recommended for students considering the College of Letters major; it can also serve as a gateway course to any of the core humanities disciplines.

This course will discuss eleven novels, exploring changes in the styles, concerns, and attitudes of fiction from World War II to the present. The first half of the course addresses the hegemony of certain forms and issues in novels written primarily by white male authors between 1945 and 1965. The second half is devoted to diverse novels that represent some of the literary, social and political forces that have led to the heterogeneity of the contemporary American novel. The course will explicitly address ways of reading and interpreting.

COL202 Poetry and Politics: Pound, Arendt, Lowell
By focusing on the connections between two poets and a political philosopher, this seminar will explore the problematic relationship between art and political life. Robert Lowell sought Ezra Pound as a poetical mentor; Lowell and Hannah Arendt were friends; and all three became embroiled in controversies over the relationship between morality and aesthetics after World War II. The course will ask to what extent poetry can be politically destructive and morally culpable and, conversely, consider whether the writing of poetry can be a redemptive act. Writing assignments will encourage students to focus their discussions of political and aesthetic theory through case studies and to relate ideas to poetry through close readings.

The class will read selections from Pound’s CANTOS, including the PISAN CANTOS (1948), giving careful consideration both to his poetic theory and to his attraction to fascism. Our discussion of Pound will conclude with a sustained study of the debates that erupted when the fascist Pound was awarded the 1949 Bollingen Prize for poetry. We will then focus on Arendt’s critique of fascism and totalitarianism and her belief that writing, or storytelling, can be morally and politically redemptive. Readings from Arendt will range from THE ORIGINS OF TOTALITARIANISM (1950) to “Thinking and Moral Considerations” (1984; posthumously published). We will read EICHMANN IN JERUSALEM (1963) in its entirety and consider it as both a treatise in political theory and as a historical narrative. By revisiting the controversy that greeted its publication, we will again take a public debate as a case study that allows us to consider the relation of art and morality. Finally, we will discuss Lowell’s poetry as a possible example of the kind of storytelling Arendt endorses, reading LIFE STUDIES (1959) and much of NOTEBOOK (1970). At the same time, we will explore Lowell’s admiration for Pound (he was on the committee that awarded Pound the Bollingen prize) and ask to what extent his poetry adequately responds to the dilemmas posed by Pound’s example.

COL204 British Literature in the Enlightenment: Individualism, Consumer Culture, and the Public Sphere

England was changing rapidly in the 17th and 18th centuries. Indeed, it is often said that this period was crucial for the emergence of individualism, consumer culture, and the public sphere—for the modern world itself. The period is sometimes described as the Age of Reason, but it was also an age of bawdy laughter, intense emotion, brazen self-promotion, serious faith, and gossip in coffeehouses and magazines. It was an age, too, of flourishing marketplaces, imperial expansion, slavery and abolition. This course will track how literary writers celebrated, condemned, participated in, or simply tried to make sense of their changing moment (and the changing understandings of literature available in it).

COL214 The Modern and the Postmodern

In this course we will examine how the idea of "the modern" develops at the end of the 18th century and how being modern (or progressive, or hip) became one of the crucial criteria for understanding and evaluating cultural change during the last 200 years. Our readings will be drawn from a variety of areas—philosophy, novels, music, painting, and photography—and we will be concerned with the relations between culture and historical change. Finally, we shall try to determine what it means to be modern today and whether it makes sense to go beyond the modern to the postmodern.

COL216 "Multikulti Germany": Expressions of Germany’s Cultural Diversity

That Germany is an ethnically and culturally homogenous country is a myth cultivated by the Nazis. Germany's position in the center of Europe has made its geographical and cultural identity fluid and the make-up of its population diverse at least since the Migration of Peoples (ca. 200-800 CE). Adding to the ethnic and cultural mix were influxes of Jews during the Middle Ages and later; the incursions of armies from all over Europe during the Thirty Years' War; the 18th-century immigration of French Hugenots to Prussia; the redrawing of borders after both world wars; marriages between black GIs and German women after World War II; and, during the labor shortage that followed World War II, the arrival of guest workers from southern and eastern Europe and Turkey, many of whom ended up staying. Refugees also came from Eastern Europe during the Soviet era and during the Bosnian War, and for some people not motivated by political or economic oppression, Germany has proved an attractive destination. In this course we will focus primarily on fiction and nonfiction works by recent immigrants or descendants of immigrants, all of whom write in German and have been translated into English. Among the topics we explore will be homesickness; interactions with the bureaucracy; use of and perspectives on language; questions of citizenship, assimilation, and integration; clashes of cultures; and encounters with xenophobia. We will also look at the particular experience of Afro-Germans.

COL217 Love and Loss in Medieval and Early Modern French Literature and Culture

The interconnected themes of love and loss encompass others such as desire, passion, friendship, death, separation, and grief. This course introduces students to the uses of these themes in French literature of the medieval and early modern periods by reading a range of texts, from the courtly romance and lyric poetry, to the essay, the novella, and theater. We will examine how men and women treat these themes, and we will be especially sensitive to the ways in which women write in genres traditionally dominated by men. Topics of study will include the body, virtues and vices, marriage, sexuality, seduction, chastity, and violence. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.

COL219 Modern Spain: Literature, Painting, and the Arts in Their Historical Context

In this course, we study the so-called "masterpieces" of modern and contemporary Spanish literature, painting, and film (18th century to the present). The works chosen represent the major literary and cultural movements of the past three centuries: the Enlightenment, Romanticism, realism, and naturalism, the generations of 98 and 27, the avant-garde, neorealism, and postmodernism. As masterpieces, they have achieved canonical status through either the influence they have come to exercise over successive generations or their popular reception at the time of their production. In our close analysis of these works, we will interrogate the processes and conditions of canonicity. We will emphasize the relationship between cultural production and historical context, seeking to draw analogies at all times between the short stories, novels, poems, plays, paintings, and movies under consideration and the social, political, and economic milieu from which they emerged.

COL223 The Picaresque Hero: Rogue (Picaro), Anti-Hero, Citizen

A new type of character, the rogue or picaro, emerges in early modern fiction, in a new genre (we now call the picaresque) built around an anti-hero. This course explores how and why the anti-hero displaced the virtuous ideal of the hero prevailing in classical and medieval literature. Through Spanish picaresque novels written between 1554 and 1647, we will trace the picaro as a character who evokes, parodies, and subverts the attributes associated with the ideal citizen. To understand how the picaresque accomplishes this, we will look at its
interplay with competing, often idealizing, genres (e.g., autobiography, lives of saints and soldiers, inquisitorial confessions, the arts of letter writing), together with political theory and natural-law theories of the period. Finally, we will look ahead to 20th-century examples of picaresque narrative such as Louis-Ferdinand Céline's JOURNEY TO THE END OF THE NIGHT or E. L. Doctorow's BILLY BATHGATE, considering what picaresque characters mean for us now.

COL224 The Good, the Bad, and the Ugly: Rethinking the Italian Renaissance
In this course we explore the intellectual achievements of the Italian Renaissance. We study the development of new secular values and the quest for the fulfillment of body and soul, glory, and exuberant pleasures. We question notions of beauty, symmetry, proportion, and order. We also unveil often-neglected aspects of Renaissance counter-cultures, such as the aesthetics of ugliness and obscenity and practices of marginalization (e.g., misogyny, homophobia). We inquire into the rediscovery of classical civilizations. We consider how the study of antiquity fundamentally changed the politics, literatures, arts, and philosophies of Italy at the dawn of the modern era. Through a close reading of texts by authors such as Francesco Petrarca, Niccolo Machiavelli, and Michelangelo, we investigate continuities and ruptures between their quest for human identity and ours. This course is conducted in English, and all primary and secondary sources are in English.

COL226 Dialogue of Poets: Classical and 20th-Century Poetry in Spain and Latin America
This course samples the rich tradition of Spanish-language verse from its beginnings to the present. It is organized around four primary dialogues: (1) the creative reception by leading 20th-century poets from Spain and Latin America (e.g., Neruda, Lorca, Machado, Borges, Paz, Rossetti) of classical poets (Saint John of the Cross, Góngora, Quevedo, and Sor Juana Inés de la Cruz); (2) the interplay of poetry and essays by those same poets; (3) the round-trip fertilization of popular and elite, oral and written forms of poetry; and (4) the crossing of linguistic, ethnic, religious, and gender boundaries that has shaped Spanish-language verse from its beginnings as love lyrics embedded in Hebrew and Arabic poems (jarchas) to the creative stimulus of other Romance languages (especially Galician and Catalan) in Spain, through Latin American poets open to Amerindian and African influences, and Hispanic-American poets exploring bilingualism in the U.S. We will read lyric, epic, and burlesque verse on a wide variety of themes (mysticism, sex, history, reason, travel, love, politics, sensory perception, death, and poetry itself); reflect on how poetry can best be enjoyed and understood; and consider how poetry has been produced, heard, read, and used (ritual and spontaneous song; minstrel performance of epic and ballads; courtly patronage, literary academies, and manuscript circulation; private reading of printed texts and commodification; and 20th-century singer-songwriter musical settings and politics). Although no prior expertise in poetry is expected, a willingness to engage it closely (textually and historically) is essential.

COL229 Heroes, Lovers, and Swindlers: Medieval and Renaissance Spanish Literature and History
This course is designed to develop students' ability to make informed and creative sense of four fascinating, complex, and influential medieval and Renaissance Spanish texts in their multiple (literary, historical) contexts: the "national" epic EL CID (12th--13th century); the bawdy and highly theatrical prose dialogue known as LA CELESTINA (1499); the anonymous LAZARILLO (1554), the first picaresque novel; and María de Zayas's proto-feminist novella THE WAGES OF VICE (1647). Through these and selected historical readings, the course is also intended to provide students with a basic knowledge of Spanish culture (in its plurality) from the 11th through the 17th centuries, the texture of everyday life, and the larger movements of long-term historical change. We will draw on literature and history to imagine the world of chivalry and crusade in the medieval Spain of "the three religions of the book" (Judaism, Christianity, and Islam); of mercantile values, courtly love, and prostitution in the Renaissance city; of social injustice and religious hypocrisy in imperial Spain; and of the exacerbated gender and caste tensions that followed from the political crises of the 1640s. We will reflect on the interplay of literature and history in our efforts to come to grips with a past both familiar and strange; address the crossing of linguistic, artistic, ethnic, religious, caste, and gender boundaries that has long been a conspicuous feature of Spanish society; and consider what texts and lives of the past might still have to say to us today. No prior historical or
literary preparation is required, only a willingness to engage the readings closely (textually and historically).

COL230 Introduction to European Avant-Garde, 1880–1940
This course will introduce students to the major avant-garde art movements from the first half of the 20th century as they took root in France, Germany, Italy, Holland, and Russia. Our focus will be on painting, but we will also look at attempts to go beyond painting in an attempt to gain greater immediacy or social relevance for art. Topics that will receive special emphasis include the relationship between abstraction and figuration, the impact of primitivism and contact with non-Western arts, modernism’s relationship to mass culture, war and revolution, gender and representation, art and dictatorship, and the utopian impulse to have the arts redesign society as a whole.

COL231 Orientalism: Spain and Africa
Over the past several decades, North African and Middle Eastern cultures have become conspicuously important within the Spanish cultural arena. Translations of writers from Lebanon to Morocco abound in Spanish bookstores. Spanish writers have begun addressing North African and Middle Eastern issues with greater frequency, especially in their novels. The dramatic rise in the African immigrant population in Spain during the 1980s and 1990s, meanwhile, has been matched by a rise in press coverage of issues pertaining to Africa and the Middle East. These factors constitute the point of departure for our historical overview of the treatment of Islamic cultures in modern Spain, from early 19th century to the present. Guided by Edward Said’s seminal essay, ORIENTALISM, we will assess the extent to which (and the process by which) Spain passes from an Orientalized subject of European Romanticism (painting, literature, music) to an Orientalizing European power in the late 20th century. In doing so, we will seek to relate the representation of Islamic cultures in Spanish literature and painting to social, political, and economic factors, most important of which was Spain’s military invasion into Morocco in the late 19th and early 20th centuries. We will also survey changing attitudes among Spanish intellectuals with regard to the Islamic world and toward Spain’s Islamic heritage, the result, perhaps, of 20th-century modernization and, most recently, of Spain’s full integration, after Franco’s death, into Europe’s military and political structures. The tools for this study include works of literature primarily, but we will also focus on painting, historical essays, newspaper articles, and film.

COL233 Tales of Transcendental Homelessness: Journey, Adventure, and the Foreigner Before the Novel
"Happy are those ages when the starry sky is the map of all possible paths. The world is wide and yet it is like a home," wrote Georg Lukács in his 1916 Theory of the Novel. How do the conditions of linguistic, cultural, metaphysical, and material homelessness occasion the ways in which identity is lexically structured and recast? This course examines the role that travel, new encounters, playing the foreigner, greeting the visitor, and sojourning through multicultural landscapes played in the growth of imaginative literature during the European Renaissance. In addition to a focus on early modern rise of novelistic storytelling in Boccaccio, de Navarre, Colonna, Montalvo, Montemayor, Cervantes, Basho, Voltaire, Sterne, and anonymous authors, readings will include selections from Ancient Greek, Latin, and Medieval forms of novelistic prose. We will conclude with a contemporary piece of journalistic storytelling—Fractured Lands (August 14, 2016)—a full-length narrative account of life in the Middle East following the Arab Spring. Through a discussion of the ways in which previously observed narrative forms are employed to recast international news within the context of a national newspaper we will engage our study of narrative structure with several contemporary problematics involved in the representation of life outside the United States. Throughout this course we will engage with Lukács’s sense of our own modern transcendental homelessness and examine how the historical conditions of various cultures gave rise to the invention and transmutation of aesthetic forms. Special attention will be paid to the ways in which characters and authors navigate literary (and self-) representation in the absence of a set linguistic home.

COL234 The Cosmos of Dante’s Comedy
This course provides an in-depth introduction to Dante Alighieri’s 14th-century masterpiece as a point of entry to the history of Western literature, philosophy, and science. The core of the course consists of an intensive study of Dante’s encyclopedic poem in relation to the culture and history of Medieval Europe. Major topics include: representations of the afterlife; the soul’s relation to the divine; concepts of modernity and antiquity in the Middle Ages; notions of authorship and authority during the 13th and 14th centuries; vernacular poetics and the medieval genre system; the culture and materiality of manuscripts in the Middle Ages; gender and genre in Dante and the 12th- to 14th-century lyric; intertextuality and imitation; classical and medieval language theory; the role of the classics in the Middle Ages; Dante’s concepts of governance; myth and theology in Dante’s Christian poetics; and the reception to Dante’s work from the 14th-century to present. The course combines a close analysis of Dante’s literary strategies with exercises in critical writing and in multimedia translation and adaptation, aimed at prompting critical reflection on the ways in which present cultural practices are built upon the practices of the past. This course is conducted in English; no previous knowledge of Italian is required.

COL235 The Spanish Inquisition
Few institutions are as notorious as the Spanish Inquisition. Reviled in literature (most famously by Dostoyevsky in his Brothers Karamazov) and lampooned in popular culture (by Monty Python, among others), the Spanish Inquisition remains a potent symbol of both religious fanaticism and ecclesiastical power run amok. In this seminar, we will consider the history and legacy of the Spanish Inquisition, which existed for 356 years (1478–1834) and operated in both Spain and Spain’s colonies overseas. We will examine not only the historical record itself (e.g., transcripts of actual trials, individual case studies) but also various depictions of the Inquisition found in imaginative media (art, literature, and film). Our subject, then, will be the Spanish Inquisition both real and imagined. Why did this institution arise? How did it survive for as long as it did? And does the legend of the Spanish Inquisition match its history?

COL247 The Fall of Rome and Other Stories
The fifth-century fall of Rome to barbarian invaders is an idea that slowly crystallized over time. This course will examine the birth and development of this "fall"–one of the most persistent stories in history–using the very texts in which it was first articulated. We will work with a range of authors–Suetonius, Eusebius of Caesarea, Ammianus Marcellinus, Augustine of Hippo, Jordanes, Procopius of Caesarea–to connect the fall of Rome with other attempts to explain catastrophe and change. The course will conclude by surveying the persistence of the fall of Rome as an idea, through the medieval, early modern, and modern periods, right into contemporary discourse.

make the laws of a nation.” Nowadays, stories take various forms, among them cinematic, and they circulate and are consumed in vast quantities. People make stories, and the consumption of those stories, in turn, “makes” people, helping to construct individual subjectivity and collective discourse. How do narratives function as the vehicles for both overt and covert ideologies? How do stories change as they become such vehicles, and how do ideologies change when they are embedded in stories? This course pursues these questions through the analysis of the narrative structure of post-1980 American films, supplemental by reading some film theory. It combines short lectures (mainly in the first few weeks) with much discussion.

COL250 The Renaissance Woman
This course takes seriously the socio-economic, cultural, religious and aesthetic restrictions placed on early modern women, and the ways in which early modern women exercised considerable authorial agency in the aesthetic-fashioning of literary tropes and forms of thought. Often reforming, revising, revising and re-imagining literary, scientific, and philosophical outlooks, these women fostered and created forms of resistance, subversion and cultural influence from within and without their historically specific cultural norms. This course recovers works that were frequently written out of the study of the Renaissance during the eighteenth, nineteenth and twentieth centuries in order to grapple with the imaginative, scientific and philosophical voices of women writing under the constraints of their time.

COL251 Kafka: Literature, Law, and Power
Elias Canetti claimed that among all writers, Kafka was “the greatest expert on power.” In this course we will focus on Kafka’s narratives of power relations. We will read and discuss Kafka’s sometimes painfully precise descriptions of how power is exerted in the family and in personal relationships and how scrutiny and discipline are exercised over the body. We will also consider Kafka’s depictions of physical violence and of apparatuses and institutions of power and the ethical and political implications of these depictions. The working hypothesis of this course is that Kafka not only tells stories about power, but that his stories also contain an implicit theory of how power works in modern society.

COL252 Writing Love: Articulations of Passion, Genres of Intimacy
What is love? How do we understand the amorous? How do we write the erotic? Is the passionate necessarily opposed to the intimate? Can the prosaic be poetic? This course investigates literary works that depict, problematize, immortalize, and give expression to the varied and nuanced forms of erotic love in human relationships. We will examine and employ the art of verbal language in articulations of passion and genres of intimacy found in philosophical discourse, lyric verse, epistolary exchanges, prose fiction, and dramaturgical and cinematic representations. By working through a liminal space between the sensible and the intelligible, desire and devotion, ineffability and fidelity, absence and presence, mortality and immortality, we will posit and discuss the perennial question: What is love?

Students will be given the opportunity to write analytically and creatively in response to the assigned readings.

COL253 Existentialism
This course is an introduction to 20th-century French existentialism. "Existentialism" is both a philosophical tradition and a term that is central to the intellectual history of Western thought. The term was explicitly adopted as a self-description by Jean-Paul Sartre and was widely disseminated both by his own literary and philosophical contributions and those of his associates—notably Simone de Beauvoir, Maurice Merleau-Ponty, and Albert Camus. Existentialism became identified with a cultural movement that flourished in Europe in the 1940s and '50s. It also resonated widely with anti-colonial thinkers across the globe. Thus, through the work of Frantz Fanon, Richard Wright, and Sartre's own intellectual engagement with colonialism and oppression, we will also explore the ways in which existentialism gradually became an intellectual and political tool for contestation against racism and European imperialism.

COL254 Folly & Enlightenment: Madness Before and After the Mind/Body Split
This course examines a variety of ways in which madness has been conceptualized in the history of literature, philosophy, and medicine. Through close readings of classical, early modern, and modern works we will consider forms of human disquiet which have been framed as amorous rapture, poetic furor, the wisdom of folly, visionary experience, satiric subversion, apotheosis, and enlightenment. We will reconsider Foucault’s observation that madness is contingent on society by exploring the ways in which perceivably mad characters interact with the limits of their social restrictions and the boundaries of consciousness in order to reveal truths and manifest new outcomes. Special attention will be paid to relationship between insanity and intellect. What is madness? What does it reveal to us about ourselves and our worlds? How does the history of madness inform our understanding of contemporary discourse in mental health and psychic well-being? In addition to the primary texts listed below, readings will be supplemented with brief excerpts from Hippocrates, Galen, Cicero, Ficino, Huarte de San Juan, Bruno, Freud, Jung, Laing, Foucault and Deleuze.

COL255 The Invention of Fiction: Giovanni Boccaccio’s Decameron
In this course we read and discuss Giovanni Boccaccio’s Decameron (ca. 1353), a collection of 100 short stories traded by an “honest brigade” of 10 Florentine men and women. They tell each other these stories while sheltered in a secluded villa as the plague of 1348 rages in Florence. We study the Decameron as both a product and an interpretation of the world Boccaccio inhabited. We examine the Decameron’s tales and narrative frame as a point of entry into the cultural and social environment of medieval Italy. We look at its scurrilous, amusing, and provocative innuendos as traces of erotic, religious, ethnic, and cultural questions. We investigate the sexual exuberance of many of Boccaccio’s tales and the tension between “high” and “low” culture. We consider the development of mercantilism and literacy in early-modern Europe
and its emerging virtues of wit and self-reliance. We review the dynamics of composition and reception in manuscript culture and the book's adaptation into different media, from illuminations to film. And by impersonating the 10 Florentines, we will reenact their pastime of telling stories and appreciate Boccaccio's remarkably modern sensibility and unsurpassed art of writing fiction. This course is conducted in Italian.

COL256 The Emergence of World Literature(s)
In the past four decades, the traditional study of national territories, their cultures, and literatures has been supplemented and challenged by concepts and phenomena such as the transnational, the diasporic, the global, and the cosmopolitan, as well as by new curricular categories such as world history, world politics, and world literature. This course will focus on world literature and will examine literary, historical, and theoretical texts to ask what is at stake in this new area. Topics will include, but are not limited to, the networks along which narratives circulate; the aesthetic and other standards that regulate the selection of plots and themes that appeal to the cultural gatekeepers; the politics of continued domination, subordination, and cultural imperialism; inclusion and exclusion; and margins, peripheries, and centers. There is as yet no single accepted theory, no consensus history, and no established canon or geography of world literature—all are evolving as literary scholars attempt to weave together elements of comparative and postcolonial literatures with the above-mentioned concepts into a new object of readerly experience and critical knowledge. We will use literary and theoretical texts to explore how world literature is being created.

COL257 Remembering Selves: Forces and Forms of Autobiography
The Delphic Oracle commands "know thyself," and perhaps in response, authors have felt compelled to confess, condemn, forget, and remember past selves in an effort to narrate and so envision who they are in the present. This course will look at a range of autobiographical works from The Confessions of Saint Augustine to contemporary graphic memoirs. We will ask how memory works which narratives circulate; the aesthetic and other standards that regulate the selection of plots and themes that appeal to the cultural gatekeepers; the politics of continued domination, subordination, and cultural imperialism; inclusion and exclusion; and margins, peripheries, and centers. There is as yet no single accepted theory, no consensus history, and no established canon or geography of world literature—all are evolving as literary scholars attempt to weave together elements of comparative and postcolonial literatures with the above-mentioned concepts into a new object of readerly experience and critical knowledge. We will use literary and theoretical texts to explore how world literature is being created.

COL258 The Word for World is Information: Ideologies of Language in Science Fiction & Film
By the middle of the 20th century, it had begun to seem possible to produce a grand theory of communication that would use language as a basis for understanding all of human thought, behavior, and culture. As competing versions of such a theory circulated through academic disciplines as disparate as anthropology, neurophysiology, and the emerging field of computer science, they also filtered out—sometimes in strangely warped or oversimplified forms—into popular culture.

This course will examine the most interesting and influential of these theories, both in their scholarly origins and in their most puzzling and promising elaborations in works of literary and filmic science fiction. We will be particularly attentive to the ways that the narrative logic of science fiction texts can gloss over certain logical and philosophical inconsistencies in these theories while revealing others.

COL262 Tolstoy
During the 19th century when Tolstoy wrote his novels and stories, literature was viewed in Russia as the intelligentsia's primary medium for debating its big questions (such as how to resolve the inequalities that had been institutionalized under serfdom, or how to choose between new and old values as Russia experienced modernization). Writers like Tolstoy and Dostoevsky willingly assumed the responsibility to address a broad range of political, historical, and philosophical-religious questions in their fiction, and they wrote novels with radical formulations as well as solutions to these questions. However, they also viewed literature, particularly the novel, as a medium with rich potential for innovative formal experimentation, and so they resisted the call for conventional ideological novels. Each of Tolstoy's best works is an innovative formal experiment that creates an unprecedented, new type of novel. This course will study how Tolstoy's writings both responded to and transcended their times by creating new novelistic forms and new truths within those forms.

COL264 Critical Theory: From Karl Marx to Angela Davis
According to the Frankfurt School philosopher Max Horkheimer's 1937 essay "Traditional and Critical Theory," Critical Theory aims at dislodging traditional theory's reliance on the assumption that to theorize means to categorize and explain facts from a trans-historically fixed position. Instead, Critical Theory wants to uncover the formative socio-economic processes of exploitation, struggle, and domination that underpin both the objective appearance of reality and our subjective ability to become conscious of them. In doing so, it not only wants to critique the very foundations of society and subjectivity but also wants to ignite a utopian imagination. Although Critical Theory draws on the concepts of the Western philosophical tradition (in particular on Kant and Hegel), it views them as being tainted by the "irrational totality" of bourgeois society that structurally blocks the realization of genuine freedom, equality, and liberation from fear. Hence, Critical Theory is concerned not only with the critique of specific social ills but also with the abolition of their systemic causal conditions. For this reason, it is by design a practical and activist mode of theory, as exemplified by an insight Herbert Marcuse attributes to Angela Davis: "the philosophical idea, unless it was a lie, must be translated into reality."

In this seminar, we will do three things: 1) Retrace the genesis of Critical Theory from Marx's appropriation of Hegel's dialectical method to Lukács's theory of reification; 2) Explore the Frankfurt School's ambition to establish Critical Theory as an encompassing, multi-disciplinary research program addressing the pathologies of capitalism from the interlocking perspectives of social and economic theory, psychoanalysis, empirical social research, aesthetics, and ethics; 3) Examine how contemporary heirs to the tradition of Critical Theory such as Angela Davis, Sianne Ngai, or Rei Terada have challenged and
advanced the concerns of the earlier theory in light of our current neoliberal and authoritarian predicament.

COL266 History and Limits of Aesthetic Theory
This class will engage significant contributions to Aesthetic Theory in the West from antiquity to the modern period along three dimensions: theoretical, critical, and historical. From a theoretical standpoint, we will address perennial questions in aesthetics, such as what makes something a work of art in the first place, what it means for art to be "beautiful" or otherwise "successful," how differences in media condition and contribute to artistic meaning, what genera are and how they evolve, whether and how art can be ethically or politically significant, why we care about fiction, why and how we "enjoy" tragic plays or horror films, and how aesthetic tradition can (and should) inform individual works. From a critical standpoint, we will consider how works of art contemporaneous with each theoretical account either reinforce or challenge its specific proposals. And from a historical standpoint, we will seek to understand how aesthetic theories both respond to the specificities of their own epoch and situate themselves relative to the artistic and aesthetic traditions of their predecessors. Readings will include texts by Aristotle, Hume, Kant, Lessing, and Hegel.

COL269 Modern Aesthetic Theory
As a philosophical discipline, aesthetic theory initially coalesced around a cluster of related issues concerning the nature of beauty and the norms governing its production, appreciation, and authoritative assessment. Beginning in the nineteenth century, however, both art and aesthetics undergo a conspicuous yet enigmatic shift, signaled by (among other things) Hegel's declaration that "art, in its highest vocation, is and remains for us a thing of the past." Rather suddenly, classical accounts of beauty, genius, aesthetic experience, and critical taste are beset by anxieties about the autonomy and significance of aesthetic praxis in human life and, subsequently, by a series of challenges to the tenability of traditional aesthetic categories—author, text, tradition, meaning and interpretation, disinterested pleasure, originality, etc. Our aim in this course is to track these conceptual shifts and to interrogate the rationale behind them. (This course complements, but does not presuppose COL 266: History and Limits of Aesthetic Theory.)

COL270 Modernist City-Texts
Since the 19th century, the city has been both a privileged and a problematic object of representation for narrative realism: privileged because urban spaces have increasingly been seen as shaping or producing the very social relations and individual experiences that realism wants to describe; problematic because the city itself, as a coherent totality that might explain those relations and experiences, is too vast, heterogeneous, and complex to be represented through the traditional techniques of realism.

This course will approach the problems and possibilities of the city for realism through a close reading of two large, ambitious texts that attempt to represent the city as a totality: James Joyce's novel ULYSSES (1922) and David Simon's television series THE WIRE (2002-2008). We will be particularly concerned with two techniques, pioneered by Joyce, for representing the city: stream of consciousness, which creates a tour of the city from the perspective of a single, mobile flâneur; and montage, which creates a map of the city by juxtaposing various cross-sections of social life or various institutions central to the city's functioning.

COL271 Performing Ethnicity: Gypsies and the Culture of Flamenco in Spain
In this course, we will analyze how Gypsies and flamenco are associated, in fact and in fiction, and how and why they have emerged into the limelight of Spanish national cultural discourses. Although they represent discrete realities—not all Gypsies identify with flamenco and not all flamenco artists are Gypsies—correlations between the two have nonetheless been exploited by the media and by artists as an often unwanted emblem of Spanishness. The tensions surrounding this practice seem related to an undisputed fact of Spanish cultural history: Flamenco is unique within European culture; with a population of nearly one million, Gypsies are Spain’s dominant minority; yet recognition of the artistic value of the former and acceptance and assimilation of the latter have been slow to congeal within Spanish society. Our practical aim will be to analyze these important aspects of Spanish culture in their historical context. We will study how the connection between Gypsies and flamenco has emerged; we will evaluate the extent to which it is valid; and we will attempt to assess what seems to be at stake in the struggles between those who promote and those who resist this connection as distinctive of Spanish national culture. In doing so, we seek to foster a deeper understanding of the importance of the Roma community within the framework of European and Spanish culture and a deeper appreciation for flamenco as a unique form of cultural expression. On the theoretical plane, we seek to understand how music, dance, literature, cinema, performance, and art can give expression to ethnicity; how cultural hegemonies emerge; and what role artists play in supporting or contesting those hegemonies. In general, this course is designed to help students develop critical skills of cultural analysis while increasing their proficiency in Spanish.

COL273 The Agony and the Ecstasy: The German Novel and Novella
Starting with Goethe in the 18th century, German, Austrian, and Swiss authors have made major contributions to the literary genre of the novel and the sub-genre of the novella, typically shorter than a novel and restricted to one plot line. German prose works often grapple with profound philosophical questions, particularly those that bear on the meaning of life, the relation of the individual to society and to other individuals, the character of justice, definitions of ethics and morality, the nature and calling of the artist, and the tension between thought and emotion. In this course we will read, in English translation, longer or shorter works by some of the most significant and enduring authors writing in German between the 18th and 21st centuries. Particular attention will be paid to the portrayal of social and political issues, to narrative strategies and style, and to thematic continuities in the cultures of the German-speaking regions. We will also consider the challenges of translating fiction from one language and culture to another. Several films based on works read in the course will be viewed and analyzed. Ample opportunities will be provided for writing, in both expository and creative veins, and receiving detailed feedback.

COL276 Creativity and Crisis: Germany 1918-1933
This course investigates the fascinating culture of the Weimar Republic, Germany's first, heady, and ultimately unsuccessful experience with democracy between the end of the First World War and the Nazis' rise to power. We will focus particularly on Berlin, coming into its own as Germany's first true metropolis, but will also look at Munich, another hub of cultural activity and the site of Hitler's early organizing activities. Among the topics to be studied may be the increasing influence of film, radio, and the press; modernism in literature; new impulses in art; the economic and social impact of hyperinflation and the Great Depression; changes in the roles of women; assertion of previously taboo gender identities; competing political ideologies; reactions to the immigration of Jews from Eastern Europe; the emergence of proletarian mass culture; and the observations of cultural critics such as Walter Benjamin and Siegfried Kracauer on the world taking shape before their eyes. We will also read works set in Berlin but written by outsiders (Isherwood and Porter).

COL278 European Realist Novels
The realist novel has a strangely ambivalent legacy. On the one hand, like other literary forms, it is repeatedly consigned, dismissively, to an earlier moment in literary history: surpassed by modernism, reimagined by postmodernism, and replaced by film, television, and whatever forms of new media might presently emerge. Yet it has also clearly endured—in the popular imagination as well as in the academy—as a pervasive norm, continually setting the standard against which popular narratives may be judged to be successful and (more importantly) serious. Reading these novels, then, does not just teach about an important period in literary history (though it does that, too); it gives us a better understanding of what we continue to expect from the fictional stories that claim to represent the world around us.

We will spend the first six weeks on an overview of the influential tradition of French realism, reading representative texts by Stendhal, Balzac, and Zola. In the second half of the semester, we will delve into two longer novels that have often been regarded as exemplary (even paradigmatic) works of realist fiction: Eliot's Middlemarch and Tolstoy's Anna Karenina. While the emphasis will be on the novels themselves—what they do and how they work—we will also read a small selection of secondary texts (variously critical, historical, and theoretical) on realism, narrative, and the novel as genre.

COL279 Good, Evil, Human: German Fairy Tales and Their Cultural Impact
The collected folk tales of Wilhelm and Jacob Grimm have had a substantial impact on the cultural history of Germany and beyond. Deceptively simple, these little texts communicate and negotiate extraordinarily important and complicated messages about what it means to be human, to behave in acceptable ways, to have and control unwelcome desires, and to (be able to) imagine a better world. We will read selected fairy tales from the Grimm collection and other texts, investigate the historical context in which the Grimms undertook their ambitious project, learn about ways in which scholarship has framed fairy tales, and discuss adaptations of the fairy-tale tradition in films and texts of the 20th century.

COL280 Work: Its History and Future
In this course, we will explore one of the fundamental concerns of human existence: "the creation of man through human labor," as Karl Marx once put it. Marx's interest in self-creation through work and the possibility of overcoming all forms of alienated work is arguably at the heart of what we imagine living well means today. For many of us, an idle life without work has become unthinkable. We live to work and we work to live. Yet while we have become ever more immersed in intimate forms of immaterial labor (keeping in touch with clients at all times, collaborating via digital platforms no matter where we are, tackling our jobs with ceaseless enthusiasm and creativity), waged labor has diminished and might now be thought of as a rare good. Soon the work of truck drivers will be replaced by self-driving vehicles, and the bulk of industrial production will be designated to robots. Automation and artificial intelligence will increasingly restructure intellectual labor, like that of lawyers, accountants, and data analysts, as well. What may once have been the dream of a liberated life is now motivating a feeling of dystopian dread: Fear of losing one's job, of being replaceable, is an all too common feeling. The jobs that remain are demanding but often monotonous. Moreover, deindustrialization in Western countries has created real misery in what used to be the core zones of global wealth accumulation—a development that right-wing populists in the United States and in Europe have been eagerly exploiting to advance protectionist and racist politics.

Against the social backdrop of precarious employment, stagnant wages, deindustrialization, the rapid expansion of vast unemployed and underemployed surplus populations, looming ecological disaster, and, crucially, the financialization of a structurally unstable global economy that seems to have exhausted its capacity for substantial growth in productivity, the future of work must be interrogated with renewed urgency. In addition to reading past and present theories of work, including some essential selections from Karl Marx and critical theory (e.g., Lukács, Adorno, Benjamin, Kracauer), Hannah Arendt’s response to Marx in her distinction between labor and work, as well as recent academic work by feminists, affect theorists, and crisis theorists (e.g., Federici, Berlant, La Berge, Weeks, Clover), we will examine narratives and representations of work in films by Fritz Lang, Charlie Chaplin, Laurent Cantet, and Alexander Kluge, and literary texts by Brecht, Kafka, Dickens, Twain, Melville, Steinbeck, and Vonnegut. These thinkers and artists will give us a foundation for understanding the radical historical changes in the meaning of work in the past 200 years as well as its uncertain status in our immediate future.

COL283 The Rationalist Tradition in Early Modern European Philosophy
This course offers an intermediate-level survey of the Rationalist tradition in Early Modern European Philosophy. Broadly speaking, Rationalism (with a capital ‘R’) is the view that human reason can deliver insight into significant philosophical truths, without relying on sense experience. We will explore varieties of this methodological commitment in connection with several core topics - including the existence of God, the nature of the human mind (or soul), its relation to the body, and the possibility of empirical knowledge. We will read texts by René Descartes, Princess Elisabeth of Bohemia, Margaret Cavendish, Baruch Spinoza, G.W. Leibniz, and Emilie Du Châtelet.

COL292 Reason and Its Limits
This course offers a close study of Immanuel Kant’s magnum opus, the Critique of Pure Reason, supplemented by related writings by Kant and some secondary literature. Kant observes that the history of philosophy is rife with disagreements, even though philosophers purport to traffic in necessary truths disclosed by reason alone. This scandalous fractiousness calls into question reason’s ability to offer substantive insights into necessary truths. Kant’s “critique” aims to vindicate reason by distinguishing, in a principled manner, the sorts of things we can know with certainty from those that lie beyond the limits of human understanding. His central thesis, “transcendental idealism,” holds that “reason has insight only into what it produces after its own plan” (Bxii). In other words, we can indeed be certain of key structural features of reality such as its spatiotemporality and causal interconnectedness—but only because those features are, in some crucial sense, mind-dependent. This class will explore in detail the arguments for these claims as well as prominent interpretations of their philosophical upshot.

COL297 Reading Nietzsche
Friedrich Nietzsche, trained philologist and self-proclaimed “free spirit,” remains one of the most controversial figures in modern thought, a source of fascination and outrage alike. Best known as the philosopher of the “Dionysian,” the “will to power,” the “eternal return of the same,” the “transvaluation of all values,” and the “over-man,” Nietzsche also proudly considered himself the most accomplished prose stylist in the German language. In this course, we will examine two closely interrelated issues: (1) the genesis of Nietzsche’s major philosophical thoughts in the areas of epistemology, aesthetics, ethics, and the critique of religion, from his earliest to his latest writings; (2) the cultivation of a philosophical style that, in its mobilization of highly artistic modes of aphoristic reduction, metaphorization, personification, and storytelling, aspires to turn critical thinking into a life-affirming art form.

The course will combine philosophical interpretation with textual analysis. No prior knowledge of Nietzsche’s works is expected; however, a willingness to set aside significant chunks of time to dwell in Nietzsche’s texts is required. Students with reading knowledge in German are encouraged to read at least some of the assignments in the original. Guidance in doing so will be provided based on individual need.

COL303 Matter, Community, Environment
In recent years, it has become increasingly difficult to consider human communities without also considering questions of “nature” or “environment.” Actor-network theory condemns nature/society dualisms; ecological theory argues that there is indeed no “nature” or “society”—only the anthropocene; and, drawing from the former two positions, object-oriented ontology conceives of ideas (such as “community” or “society”) as objects and ecological actors. In this seminar, we will consider various approaches taken in recent years to thinking about our relations to the worlds we inhabit. We will attempt to think not only outside a focus on “us” as humans in the first place but even outside a focus on sentient life or life in general. Examining theories of matter, community, and environment, we will discuss and analyze work by philosophers, evolutionary biologists, literary scholars, and sociologists, among others. We will pay special attention to how theorists and critics are blurring the boundaries between nature and society, environment and community, life and matter. In addition to class participation and a series of brief reading responses, students will be required to produce a final paper dealing with any topic related to the course.

COL306 Spectacles of Violence in Early Modern French Tragedy
The French Kingdom endured decades of socio-political unrest and religious wars during the sixteenth and early seventeenth centuries. The tragedies that emerged from these bloody conflicts—many of which staged physical violence—not only reflected but also actively participated in the debates surrounding the ‘troubles civils.’ In this advanced seminar, we will study such tragedies in order to examine the uses, functions, and ethics of spectacular violence, in plays that adapt mythical stories (e.g., Medea), religious narratives (e.g. David and Goliath, Saint Cecilia), and current events (e.g., executions, assassinations, and regicides) for the stage. We will read the plays alongside and against the competing theoretical frameworks of violence found in various poetic treatises of the time period, yet we will also keep in mind the practical constraints and conditions of performance in early modern France. Finally, we will reflect on why we should read these plays today and how they inform our contemporary moment. Readings, written assignments, and discussion will be in French.

COL307 Negotiating French Identity: Migration and Identity in Contemporary France
With the largest minority in France being of Maghrebi origin, Islam has become the second largest religion in France today. What are the repercussions of this phenomenon for French identity? How did French society understand its identity and regard foreigners in the past? What do members of the growing Franco-Maghrebi community add to the ongoing dialogue surrounding France’s republican and secular identity? This course will analyze the recent attempts at redefining French identity through a study of literary texts, films, and media coverage of important societal debates (e.g., the Scarf Affair, French immigration laws, the Algerian war). Readings, discussions, and papers will be in French.

COL308 Medievals on the Move: Pilgrimage, Jihad, Crusade, and Apocalypse
Medieval people moved: They traded and sent emissaries; they invaded and migrated; they wandered, begged, and ascended the heavens; they went on crusade, jihad, and pilgrimage. This course will first analyze the most consistently preserved sources on medieval movement: accounts of pious travel “for God’s sake and not for pleasure.” We will then contextualize such accounts with two other types of movement: the physical journeys of traders, diplomats, and warriors, as well as the interiorized journeys of the prophet, the mystic, and the storyteller. By encompassing this variety we will be able to pursue a larger question: Can patterns of exchange across the physical and cultural barriers of geography, language, religion, and governance reveal a more global medieval world than we usually envision?
Offering: Host
COL309 Truth & the Poet: Lyric Subjectivity and Phenomenology
Who is the poet? What is subjectivity? How is the "Lyric I" located and articulated? How do lyrics reify their own claims to truth? Is there a role for the poet in society? What is the relationship between critique and creation? This course examines the poet in relation to various formulations of subjectivity in the history of phenomenology. We will explore how lyric subjectivity may speak truth without deferring to or differing from empirical and objective truth claims. We will consider whether the history of the lyric can be read as a series of observations that contribute to understandings of subjectivity, agency, and intersubjectivity before and after the theological turn in French phenomenology. Readings in lyric poetry will be paired with readings in phenomenology as a way of putting poetry and philosophy into conversation. Assignments will be both analytic and creative.

COL313 Classic Spanish Plays: Love, Violence, and (Poetic) Justice on the Early Modern Stage
From 1580 to 1680, Spanish playwrights created one of the great dramatic repertoires of world literature, as inventive, varied, and influential as the classical Greek and Elizabethan-Jacobean English traditions. This profit-driven popular entertainment of its day appealed to the learned and illiterate, to women and men, and to rich and poor alike. And the plays correspondingly mixed high and low characters, language, genres, and sources, with results regularly attacked by moralists. Vital, surprising, and ingenious, they exposed the creative tension between art and profit on a new scale, a tension that remains alive for us. We will examine five of the greatest of these plays by Cervantes, Lope de Vega, Calderón de la Barca, and Tirso de Molina in a variety of genres and modes (history, epic, romantic comedy, tragedy, Islamic borderland, parody, siege play, philosophical and theatrical drama), with their deft character portraits (the original Don Juan by Tirso; Calderón’s "Spanish Hamlet" Segismundo; Lope’s spitfire diva Diana, the Countess of Belfior; and Cervantes’ border-crossing Catalina, the Ottoman sultan’s queen) and their virtuoso dialogue, inventive plots, and dazzling metrical variety. We will look at the social conditions that enabled the Spanish stage to serve as a kind of civic forum, where conflicts between freedom and authority or desire and conformism could be acted out and the fears, hopes, dangers, and pleasures generated by conquest, urbanization, trade, shifting gender roles, social mobility, religious reform, regulation of matrimony and violence, and clashing intellectual and political ideals could be aired. We pay particular attention to the shaping influence of women on the professional stage (in contrast to England) and to performance spaces and traditions. Organized around the careful reading of five key plays in Spanish, together with historical, critical, and theoretical readings, this course assumes no familiarity with the texts, with Spanish history, or with literary analysis. However, an interest in engaging these wonderful plays closely, imaginatively, and historically is essential. There will be opportunities to pursue performance, adaptation, and translation.

COL324 Interpreting the "New World": France and the Early Modern Americas
The impact and long-lasting effects of the "discovery" of the "New World" on Europeans cannot be overestimated. This advanced seminar will compare and contrast styles of expedition and conquest among the European nations, though the course will focus on the French context and the various events and encounters that occurred in the early modern Americas, particularly between 1492 and 1610, a period that laid the groundwork for the subsequent colonial project. Throughout the course, we will pay special attention to the Amerindians’ points of view. In turn, students will examine the insights and blind spots in 16th-century French navigators’, cosmographers’, cartographers’, and intellectuals’ interpretations, representations, and negotiations of difference by critically engaging with concepts such as nature, culture, alterity, gender, sexuality, marriage, religion, exchange, possession, conquest, and war. Reading, writing, and class discussions will be in French.

COL327 Cervantes
Cervantes is known chiefly for DON QUIXOTE, often described as the first modern novel and fountainhead of one of the great modern myths of individualism. DON QUIXOTE also reimagines virtually every fashionable, popular, and disreputable literary genre of its time: chivalric, pastoral, picarresque, sentimental, adventure, and Moorish novels; the novella; verse forms; drama; and even the ways these kinds of literary entertainment were circulated and consumed, debated, celebrated, and reviled. It is a book about the life-enhancing (and endangering) power of books and reading and the interplay of fiction and history and truths and lies. Cervantes’ art remains fresh and unsettling, sparing no one and nothing, including the author and his work. Distinguished by its commitment to the serious business of humor, make-believe, and play, the novel is at once a literary tour de force and a fascinating lens through which to examine the political, social, religious, and intellectual debates of its moment. Characteristic themes include social reality as artifact or fiction, the paradoxical character of truths, the irreducible diversity of taste and perception, the call for consent in politics and love, and personal identity (including gender) as a heroic quest. In this course, we will read, discuss, and write about DON QUIXOTE, along with a sampling of critical, philosophical, literary, and artistic responses it has inspired.

COL335 Sophist, Statesman, Philosopher: Plato’s Later Metaphysics and Politics
How is it possible to speak falsely? Plato connects this question with a puzzle he inherits from the great pre-Socratic philosopher Parmenides: to speak falsely is to speak about what is not; but in speaking about what is not, we ascribe being somehow to not-being, which sounds like a contradiction. This seminar will focus on the metaphysical, epistemological, and political issues generated by Parmenides's puzzle and explore Plato's solution to them in two of his later-period works: the Sophist and the Statesman. In the process, we will see how Plato rethinks his theory of forms in these dialogues, how he learns to let go of Socrates, how a sophist should be distinguished from a philosopher, and how all of this is relevant to politics and the art of ruling.

COL336 Theories of Translation
This course will examine a range of predominately 20th-century theoretical approaches to literary translation in the fields of philosophy, linguistics, literary criticism, and translation studies. In an effort to derive a definition of literary translation, we will focus on two questions. First: What is literal (or word-for-word) translation? How does it differ from other kinds of translation; how does it conceptualize meaning; what are its purposes; and what oppositions (e.g., literal vs. figurative) can we use to make sense of it? Second: What is the relationship between language and culture? Can translation give us access to an unfamiliar culture; can literary translation affect the culture in which it is produced; or does translation simply colonize foreign texts by transforming them into something legible to a domestic culture?

COL338 Utter Nonsense: Making Sense of Literature and Theory
One of the central concerns of 20th-century literary theory was to figure out how we make sense of texts and, especially, how this making sense of something comes to seem so intuitive and self-evident that we regularly talk about texts themselves as, intrinsically, making sense or not making sense.

This course examines this question by looking closely at a collection of literary texts that seem, in some obvious way, not to make sense on their own. These texts present themselves as utter nonsense, yet they also ask us to make sense of them. Starting from dada and surrealism and working our way through a variety of avant-garde formal experiments, we will look the different ways these texts have been constructed, read, interpreted, and used. At the same time, we will read a series of literary theorists who developed sophisticated psychoanalytic and semiotic accounts of the ways that we make sense of texts and of language more generally. Our goal throughout will be to see how these seemingly marginal works of nonsense literature might illuminate the ways that we make sense of all texts and utterances, even the most common everyday variety.

COL341 Plato’s REPUBLIC
"The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato." This declaration, famously made by Alfred North Whitehead in the early 20th century, seems especially true of Plato's Republic. No other work in the Western tradition can lay claim to setting the tone so influentially for the development of philosophy as a discipline. Almost every branch of philosophical thought we are familiar with today—on matters of ethics, politics, moral psychology, epistemology, metaphysics, and aesthetics—receives a major formulation in this text. This seminar will be devoted to a close reading of each of the 10 books of The Republic alongside various perspectives that have been taken on this magisterial work in contemporary philosophy, journalism, and literature. We will focus on The Republic primarily as
a work of moral psychology by investigating the topical question of the dialogue: Why is it better to live justly rather than unjustly? For Plato, a just life is one governed by the pursuit of wisdom or learning, and this he believes will also be a psychologically healthy one. By contrast, a life governed by the indiscriminate pursuit of power—the life of a tyrant—is psychologically corrupted. These are bold claims. What is Plato’s argument for them? In raising this question, we will consider the political project Plato embarks upon in the Republic in constructing a just society, as well as connected issues he raises in the dialogue concerning the nature of human motivation, the distinction between belief and knowledge, the distinction between appearance and reality, the importance of a proper education to the human good, and the role of art and beauty in furthering the common good. Alongside Plato, we will read various works of secondary literature, journalistic pieces, and works of fiction this semester, all inspired by The Republic.

COL342 The Word for World is Information: Ideologies of Language in Science Fiction & Film
By the middle of the 20th century, it had begun to seem possible to produce a grand theory of communication that would use language as a basis for understanding all of human thought, behavior, and culture. As competing versions of such a theory circulated through academic disciplines as disparate as anthropology, neurophysiology, and the emerging field of computer science, they also filtered out—sometimes in strangely warped or oversimplified forms—into popular culture.

This course will examine the most interesting and influential of these theories, both in their scholarly origins and in their most puzzling and promising elaborations in works of literary and filmm science fiction. We will be particularly attentive to the ways that the narrative logics of science fiction texts can gloss over certain logical and philosophical inconsistencies in these theories while revealing others.

Readings will likely include scholarly works by Norbert Wiener, Benjamin Lee Whorf, Roman Jakobson, Noam Chomsky, Warren Weaver, and others alongside science fiction texts by George Orwell, Damon Knight, Samuel Delaney, Ursula K. Le Guin, Suzette Haden Elgin, Neal Stephenson, Koji Suzuki, and Ted Chiang (with special attention to television and film adaptations).

COL347 Emperor, Caliph, King: Comparing the Byzantines, Abbasids, and Carolingians
This seminar investigates a unique "age of empires" in the wider Mediterranean world—the ninth century—during which imperializing political revolutions inspired intense cultural production among the Byzantines in Constantinople, the Abbasids in Baghdad, and the Carolingians across Europe. Using the cultural artifacts surviving from these "renaissances," we will investigate how political cultures accounted for their own contested identities through myths of rebirth and return, specifically of Greek, Roman, and Persian imperial traditions. The course uses a workshop environment that relies on both collaboration and independent research; students will apply skills of analysis, creative thinking, and persuasive communication to presentations and a (in-translation) source-based research project.

COL348 Cybernetics and Ghosts: Narrative Machines and Posthumanist Fiction
Within certain texts that have been canonized under the various rubrics of postmodernist, posthumanist, and cyber fiction, there is a yearning to either discover or banish what in the mid-20th century was quaintly referred to as the "ghost in the machine." On the one hand, these texts offer a model of literature and of narrative as machine: produced algorithmically (e.g. via combinatorial recursion) or through the application of some experimental constraint, conceit, or gimmick, they seem to be functioning according to a program or plan rather than relating the events of a human life. Against or within this formal framing, these novels find themselves having to account for their human characters (and readers) in one of two ways: either by mechanizing them (in their motivations, their behaviors, and even their narrative desires) or by appealing ultimately to some sort of spirit, inspiration, or even ghost.

This course will examine the ways that several of these texts attempt to make sense—simultaneously—of mechanist models of the human (particularly derived from cybernetics) and of their own seemingly inorganic—and even alienating—narrative forms.

Primary texts will include novels and stories by Georges Perec, Jorge Luis Borges, Alain Robbe-Grillet, Italo Calvino, Vladimir Nabokov, John Barth, Julio Cortázar, Gabriel García Márquez, Mark Danielewski.

COL349 Modernism and the Total Work of Art
The term "total work of art" refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner’s ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner’s works and writings provided the dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

COL360 Philosophical Classics II: Early Modern Philosophy from Descartes Through Kant

Can we ever hope to attain certain knowledge of the external world? Can we know ourselves? How is our mind related to our body? Are our senses more reliable than our intellect? Or is it the other way round? Can we have science without a belief in God? These are some of the questions that excited the philosophical imagination of the major intellectual figures of the early modern period, an era of unparalleled collaboration between science and philosophy. In this course we will examine how the Scientific Revolution encouraged philosophers toward radical innovation in epistemology and philosophy of mind, laying the foundations for our own modern conceptions of natural law, scientific explanation, consciousness and self-consciousness, knowledge and belief. We will be reading, analyzing, and arguing with some of the most influential works in the history of Western philosophy, including Descartes’ MEDITATIONS, Locke’s ESSAY CONCERNING HUMAN UNDERSTANDING, Berkeley’s TREATISE ON HUMAN KNOWLEDGE, Hume’s ENQUIRY CONCERNING HUMAN UNDERSTANDING, and Kant’s CRITIQUE OF PURE REASON.

COL370 Digital History

This course offers an introduction to the emerging field of digital history, part of the broader digital humanities (DH), the application of computing techniques and new media to humanities disciplines. DH has important implications for teaching, research, and the presentation of cultural artifacts to the scholarly and general public. Digital humanists employ a wide-ranging set of techniques, from text- and data-mining to network analysis, topic modeling, GIS, and visualizations. DH also offers opportunities for cross-disciplinary collaborations among humanists, computer scientists, media specialists, and others. As a result, this course seeks to bring together students with a variety of skills and backgrounds (e.g., history, writing, programming, web and graphic design, sound and video) who share an interest in historical communication and making things.

Through readings, conversations, and hands-on work with DH tools and historical resources, we will examine questions pertinent to historical scholarship and consider how they may be reconfigured by new media and new applications of computing power. How does DH allow us to ask new questions as historians, and what perils do digital techniques pose for the discipline of history? Together, we will cultivate our skills as practitioners of history in the digital age.

A central component of the course will be collaborative DH projects of our own devising. Much of the course will have the character of a digital history research lab as we take real problems and relevant sources to advance historical knowledge as well as our skills. This might involve projects in which we conceive, design, build, publicize, and launch a tool, website, or other contribution to digital history. Students should be prepared to collaborate in and out of class, to teach and learn from each other, and to cope with a dynamic and flexible syllabus and group of tasks.

This course is part of Wesleyan’s Digital and Computational Knowledge Initiative.

COL390 Romanticism-Realism-Modernism

In the study of German literature (and art), the terms romanticism, realism, and modernism designate a span of time extending from the “Age of Goethe” to the mid-20th century literary cultures of West Germany, East Germany, Austria, and Switzerland. In this seminar, we want to take a closer look at representative examples for each of the three categories: What kind of subject matters are prevalent in each respective period, what narrative, dramatic, and poetic devices and forms are typically employed? What distinguishes these periods from one another, how useful are these distinctions? What, finally, is the purpose of such periodizing of literature?

The purpose of this seminar is twofold: 1. It is intended to provide a historical overview of German literature by engaging with representative romanticist, realist, and modernist works of prose, drama, and lyric; 2. It is designed to critically probe the concepts of romanticism, realism, and modernism: How useful are these categories in making us understand the evolution of fiction, authorship and readership, literary subjectivity, or narrative form? What are some pitfalls of using these categories?

All readings, papers, and discussions will be in German.

COLLEGE OF SOCIAL STUDIES (CSS)

CSS220 Sophomore Economics Tutorial: Topics in the History of Economic Thought
This tutorial will consider alternative visions of capitalism as they have unfolded in the economic literature since Adam Smith published The Wealth of Nations in 1776. By "capitalism" is meant, loosely, an economic system based on market exchange and the private ownership of productive assets; that is, the system which arose in Western Europe roughly five hundred years ago and which now increasingly pervades human society. Necessarily this survey is somewhat selective. In particular, rudimentary knowledge of the neoclassical paradigm (the basis of modern mainstream economics) is taken for granted, and fans of such stalwarts as Thorstein Veblen and Joan Robinson are likely to be disappointed. Our strategy for dealing with severe strictures of time will be to focus our studies primarily on the work of three thinkers who have defined much of the ground for subsequent analysis and debate in political economy, i.e. Adam Smith, Karl Marx, and John Maynard Keynes. We will also study some of the contributions of Jean-Baptiste Say, Thomas Malthus, and David Ricardo to the classical school of thought, as well as the contributions of American economist John Bates Clark to the neoclassical "marginalist" framework. You are encouraged to make regular, though not exclusive, use of the analytical tools acquired in introductory microeconomics; these may serve to provide a common ground for assessing arguments emerging from vastly different conceptual and analytical frameworks.

Grading: OPT
CSS20 Sophomore Government Tutorial: State and Society in the Modern Age
This Tutorial analyzes the emergence and functioning of the modern nation state, primarily in the West. We are interested in how the nation state came into being and what forms of government have evolved over the past 200 years or so. We will also examine a variety of challenges to the nation state, including modernization, the deepening of democracy and the development of the European Union. Throughout the class, our focus will be on the question of what is required for the emergence and maintenance of a democratic political system.

When political scientists approach these issues, we are looking for generalities and systemic explanations. We seek to draw out common theoretical principles from a variety of diverse empirical cases. Political scientists may ask questions such as: What forces in a society tend to produce democratic outcomes? Under what conditions is a revolution more or less likely? Where does sovereignty rest? There isn’t general agreement among political scientists about how to attempt to answer these questions. In this course, we read both classic texts and newer works on these topics and consider which approaches are most enlightening.

CSS240 Sophomore History Tutorial: The Emergence of Modern Europe
This tutorial sequence analyzes the formation of modern European society from the late 18th to the last quarter of the 20th century. Most attention will be placed on Britain, France, Germany and Russia as these countries were shaped by, and responded to, demographic, economic, social, political, and intellectual forces that led to revolutions, political and social reforms, new modes of production, changes in social hierarchies, and new forms of warfare. Much attention will be placed on the social and political consequences of the French Revolution and industrialization, but empire, the origins and consequences of the two world wars (including the Russian revolution and the rise and defeat of Nazism) will also come under extensive discussion, as will the creation of a more stable and prosperous postwar European order. Europe’s links to Africa, Asia and the Americas will be discussed in the context of imperialism and the two world wars. In addition to developing knowledge of the most important processes that have shaped the modern world, this tutorial seeks to foster a critical awareness of the varieties of historical narrative, the skills needed to interpret historical primary sources, and the possibilities and limits of history as a tool of social investigation.

CSS320 Junior Economics Tutorial: Wealth in a Global Context
The past 50 years of global income statistics reveal a dramatically altered landscape of economic winners and losers in both rich and poor nations. Incomes soared for factory workers in China. Yet the urban-rural divide in that country widened. At the same time, working-class incomes in post-industrial economies stagnated, and rich nations reported a hollowing-out of the middle class. While within-country inequality rose for wealthier nations, global inequality, by some reports, has declined.

This tutorial will explore competing economic views on why these changes occurred, whether they will persist, and what they portend for democratic institutions and economic prosperity. We ask whether mechanical economic forces are driving these trends in a manner that defies policy intervention or whether policy can make a difference.

Throughout the course, we consider a variety of proposals for addressing dislocation linked to high and rising inequality within and between nations. Our exploration will require us to address economic issues of refugees, migration and citizenship along with economic factors behind trends toward plutocracy and nativism.

CSS330 Junior Government Tutorial: Political Treatises that Changed the World
This course will give students a solid understanding of World History from the River Valley Civilizations, the Classical Period, and the Post-Classical Period, to the Early-Modern Period, the Long 19th Century, and the Contemporary Period. Emphasis will be placed on the development of major cultures around the world--and there will also be discussion of how the major cultures fail to explain much of World History.

In practical terms, students will learn how to assess a broad range of historical sources from varied places and times; how to debate these works in class discussion; how to produce concise and precise short papers; how to write longer papers based on an argument/counter-argument format; and how to work collaboratively on the group project.

CSS371 Junior Colloquium: Liberalism and Its Discontents
This course presents an overview of social and political theories developed in the post-World War II period. It focuses particular attention upon developments within Liberal political theory during this time, examining this scholarship both for the insights it offers and for the ways in which these ideas have been used to obscure oppressive social relations. Considering the general contours of the Liberal tradition—particularly its relationship to forms of social domination such as colonialism, racism, class inequality, and gender and sexual oppression—the course moves through an examination of canonical thinkers who have both challenged and contributed to Liberal social thought. Taking the ruminations of Nazi jurist Carl Schmidt as a problematic yet demanding provocation, the course asks in part how successfully Liberal theorists have resolved the dilemmas Schmidt identifies within Liberalism (or if, indeed, fascist tendencies pervade Liberal social thought, as Schmidt contends). Theorists within the Liberal tradition such as Friedrich Hayek, Hannah Arendt, and Jürgen Habermas are joined by critics such as Franz Fanon, Carole Pateman, and Michel Foucault in this critical overview of contemporary Liberal social theory. Through this examination of recent interventions in Liberal thinking regarding the social, this class is meant to provide students with an opportunity to think through ways in which various contemporary approaches to social issues both invoke and reformulate political debates of long standing.

CSS391 Senior Colloquium: Crime and Punishment
This course considers the American criminal law, the procedures through which it is enforced and the nature of criminal punishment from a variety of perspectives. It begins with the criminal law itself, its moral foundations and assumptions, the essential elements of criminal liability and several of the law's more important doctrines and rules. It then turns to the institutions of enforcement and punishment, the police, the public prosecutor, the criminal courts and the system of punishment, to see how they work "on the ground" and compare this to the ideals of the law. Finally, it puts the American system in international perspective by comparing it to European institutions of criminal justice.

COMP112 Introduction to Programming
The course will provide an introduction to a modern, high-level programming language including a discussion of input/output, basic control structures, types, functions, and classes. The lectures will also discuss a variety of algorithms as well as program design issues.

The second meeting time for each section is a computer lab.
Offering: Host

Credits: 1.00
Gen Ed Area: NSM-MATH
Prereq: None

COMP113 Bioinformatics Programming
This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics.

Prereq: [MB&B181 or BIOL181]

COMP114 How to Talk to Machines
How do we tell robots and computers how to do what they do? Getting a handle on this question is the goal of this course. Since telling a device how to do something depends a lot on what that device can do, along the way we will learn a bit about what is "in the box." We will start with the kind of programming one might use to instruct a robot how to interact with the world around it. That will lead us to the Turing machine, a beautiful mathematical model of a computer. We will adapt that model to something that is closer to how most computer systems today are designed. We will end with an introduction to high-level programming, learning the fundamentals of programming in a language such as Python or Java.

The goal of the course is to understand not just programming, but how computers are designed, and how those designs are reflected in the way we program them. After passing this course, students will have a basic knowledge of programming and how a computer works. COMP 114 can be used to satisfy the COMP 211 prerequisite and also the mathematics major "elementary knowledge of algorithms and computer programming" requirement.

Offering: Host
Grading: OPT
Credits: 1.00
Gen Ed Area: NSM-MATH
Prereq: None

COMP115 How to Design Programs
In this course, students will learn to systematically design programs, going from a problem statement to a well-organized solution in a step-by-step fashion. We will apply these program design skills to many applications within computer science and in other disciplines. Students will develop their mathematical skills, because we will use a symbolic view of computation that explains the process of running a program as simple manipulations of its text. Students will also develop their technical reading and writing skills, such as understanding complex problem descriptions and precisely articulating the design of solutions. No prior experience with programming or computer science is expected.

COMP211 Computer Science I
This is the first course in a two-course sequence (COMP211-212) that is the gateway to the computer science major. It is intended for prospective computer science majors and others who want an in-depth understanding of programming and computer science. Topics to be covered in COMP211-212 include an introduction to the fundamental ideas of programming in imperative and functional languages, correctness and cost specifications, and proof techniques for verifying specifications.

Specifics such as choice of programming language, which topics are covered in which semesters, etc., will vary according to the tastes of the faculty offering the courses.

Gen Ed Area: NSM-MATH
Identical With: COMP523

Prereq: COMP212 AND MATH228

COMP327 Evolutionary and Ecological Bioinformatics
Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analyzing the ecology and biodiversity of microbial communities, since overwhelming percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, when we cannot culture one of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

Prereq: COMP212

COMP332 Computer Networks
This course will provide an introduction to the fundamentals of computer networks. Computer networks have become embedded in our everyday lives, from the Internet to cellular phones to cloud networking, enabling applications such as email, texting, web browsing, on-demand video, video conferencing, peer-to-peer file sharing, social networking, cloud computing, and more. This course will delve into the infrastructure and protocols that have allowed computer networks to achieve their current ubiquity. While the primary focus of the course will be on the Internet's architecture, protocols, and applications, we will also touch on other types of computer networks. Programming assignments will be done using Python; prior knowledge of Python is not required.

Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-MATH
Prereq: COMP212 and MATH228
COMP342 Software Engineering
This course provides an introduction to the processes and tools of software engineering: the design, development, testing, and maintenance of large software systems. The course is based on the Berkeley MOOC "Software Engineering as a Service" and uses on-line material from the MOOC to provide some of the course content.

The first part of the course will cover developing software in teams as well as learning the languages and tools used in the course, including Ruby, Rails, Cucumber, RSpec, Pivotal Tracker, and github.

The second part of the course will continue to present software engineering concepts but will also focus on developing a team service-learning software development project for an external customer.

DANCE (DANC)

DANC103 Dancing Bodies
This course introduces students to basic dance literacy by viewing dances on film and video, making movement studies, and practicing writing in different modes about bodies in motion. The utopian ideal of “the natural” dancing body will guide our investigation of dance as art and culture, from Isadora Duncan to the postmoderns. We seek answers to such questions as, What do performance codes about the natural body feel and look like? How do dance traditions preserve, transmit, and reconfigure eco-utopian desires? No dance experience is necessary. The desire and confidence to create and move collaboratively with others is expected.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: HA-DANC
Prereq: None

DANC104F Introduction to Contemporary Dance from Global Perspectives (FYS)
This interdisciplinary course aims to understand contemporary dance and the moving body from global perspectives. It draws from a range of approaches to aesthetics and choreography, politics, and understandings of culture-at-large. It examines an eclectic array of movement and choreographic styles from North America to Europe to Asia.
The course is divided into 6 units:

1. Old and New Definitions of Contemporary Dance
2. "East Meets West" -- Global-Cultural Flows in Contemporary Dance
3. Social Justice and Contemporary Dance
4. Queering Contemporary Dance
5. Special Topics -- Stillness and Silence
6. Traditional Dance/Contemporary Dance -- Deconstruction and Reconstruction

Offering: Host

Prereq: None

DANC220 Performing Indonesia
This course will examine the theater, dance, and puppetry of Indonesia in the context of its cultural significance in Indonesia and in the West. Students will read a variety of texts related to Indonesian history, myth, and religion. Students will also read books and essays by anthropologists Hildred Geertz, Clifford Geertz, and Margaret Mead to understand how the arts are integrated into the overall life of the island archipelago. Artifacts of physical culture will also be examined, including the palm-leaf manuscripts that are quoted in many performances; the paintings that depict the relationship between humans, nature, and the spirit world that are the subject of many plays; and the masks and puppets that often serve as a medium for contacting the invisible world of the gods and ancestors. Translations of Indonesian texts will be analyzed and adapted for performance. The direct and indirect influence of Indonesian performance and history on the West will be discussed by examining the work of

DANC205 Dance Production Techniques
Areas to be covered in this course include lighting design and execution, stage management, costume and scene design, and set construction. Practical experience in the department's production season is an important part of the course.

DANC207 Writing Is Dancing, Dancing Is Writing
We watch dance and then we write about it. Dance needs writing to be understood and to endure. Or maybe not. Maybe dance needs no help. Then, what do we write? Writing as dance, in dance, of, from, alongside... As readers, writers, and performers, we will explore established and experimental modes of writing and choreography and look for ways that each form can stretch and challenge the other.

Prereq: None

DANC211 Introduction to Dance
This is an introduction to dance as an educational, technical, and creative discipline for students with no previous formal dance training. Classes will introduce the basic components of dance technique--stretching, strengthening, aligning the body, and developing coordination in the execution of rhythmic movement patterns. Through improvisation, composition, and performing, students will develop a solid framework applicable to all forms of dance.

DANC231 Performing Arts Videography
This course provides an introduction to shooting and editing video and sound with a particular focus on the documentation of dance, music, and theater performance. Additional consideration will be given to the integration of videographic elements into such performances. Students will work in teams to document on-campus performances occurring concurrently. Related issues in ethnographic and documentary film will be explored through viewing and discussion of works such as Wim Wenders's Pina, Elliot Caplan's Cage/Cunningham, John Cohen's The High Lonesome Sound, and Peter Greenaway's Four American Composers.

Prereq: None

DANC237 Performance Art
This course can be understood as an ephemeral, time-based art, typically centered on an action or artistic gesture that has a beginning and an end, carried out or created by an artist. It also contains the elements of space, time, and body. This hands-on course explores the history and aesthetics of performance art and how it relates to the performing arts (dance and theater). In a project-based format, students conduct performance assignments and conceptual research within the gaps that exist between performative art forms. The course focuses on analyzing and studying artists who used the concepts of chance, failure, or appropriation in their work.

DANC244 Delicious Movement: Time Is Not Even, Space Is Not Empty
This course contemplates metaphorical nakedness and human and bodily experiences of time and space through interdisciplinary discourse. Taught by NYC-based artist Eiko Otake of Eiko & Koma, students will examine how being or becoming a mover reflects and alters each person's relationships with the environment, with history, and with other beings. Topics of study and discussion include Eiko & Koma's body of works, atomic bomb literature, postwar Japan, and environmental violence such as Fukushima nuclear explosions. Aeky concept of study will be metaphorical nakedness and how distance is malleable.

Identical With: CEAS244
Prereq: None

DANC249 Making Dances I: Solo Work
This course is a practical lab in body-based performance making with a focus on the solo form. Students will work towards developing and honing their personal artistic interests and goals, and supporting those of their peers. We will experiment with various modes of composition, viewing and researching a broad range of artistic work and ideas, expanding our notions of what constitutes a dance. Students will explore performance in public space, collaboration, and work across artistic disciplines, engagement with technology, awareness of cultural context and appropriation, and social practice/participatory/community engaged art. Finally, we will develop methods for peer critique, working towards finding a challenging and supportive approach that pushes each artist forward.

NOTE: This is a laboratory course for students interested in diving deeply into body-based artistic practice. It is appropriate to students with a background in any artistic discipline. An interest in rigorous (and playful) experimentation and research is key.

Prereq: None

DANC260 West African Dance I
West African dance is a gateway to the cultures and ways of life of its people. It is the medium on which the very existence of the people is reinforced and celebrated. In this introductory course, students will learn the fundamental principles and aesthetics of West African dance through learning to embody basic movement vocabulary and selected traditional dances from Ghana. The physical embodiment of these cultures will be complemented with videos, lectures, readings, and discussions to give students an in-depth perspective on the people and cultures of Ghana. Students will also learn dances from other West Africa countries periodically.

DANC261 Bharata Natyam I: Introduction of South Indian Classical Dance
This course is designed to introduce students to the fundamental aesthetic, social, and technical principles underscoring the culture of Bharata Natyam dance in its both indigenous and modern contexts. The course introduces students to Bharata Natyam largely through classroom practice (in the form of rhythmic and interpretive exercises), supplemented by brief lectures outlining the sociohistorical and cultural contexts of the form. Class lectures will also
include video presentations. Occasionally, the class could include a guest lecture given by either a visiting scholar, dancer, or choreographer respected in the field of South Asian dance internationally.

Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: HA-DANC
Prereq: None

DANC 300 Contemporary Dance Technique II/III
Drawing on multiple approaches to dance techniques and the moving body, this course will build on capacities developed in Contemporary Dance 1. Students will be encouraged to cultivate greater awareness of space, time, rhythm, corporal navigation and energy, as well as a wider range of dynamic variation and more sophisticated understanding of kinetic alignment.

Offering: Host
Grading: A-F

Gen Ed Area: HA-DANC
Prereq: DANC 215

DANC 307 Mobilizing Dance: Cinema, the Body, and Culture in South Asia
This course focuses on questions of "mobility"—cultural, social, and political—as embodied in two major cultural forms of South Asia, namely "classical" dance and cinema. Using Tamil cinema and Bharatanatyam dance as case studies, the course focuses on issues of colonialism and history, class, sexuality and morality, and globalization. The course places the notion of "flows of culture" at its center and examines historical, social, and aesthetic shifts in these art forms over the past 150 years.

The course is both studio- and lecture-based. It includes learning rudimentary Bharatanatyam technique, watching and analyzing film dance sequences, and participating in guest master classes in ancillary forms such as Bollywood dance and Kathak (North Indian classical dance). The studio portion of this course is for beginners, and no previous dance experience is necessary.

DANC 308 Introduction to Viewpoints
In this studio class, students learn and are immersed in the Viewpoints—a vocabulary which breaks down the two dominant issues any performance-based artist deals with: Time and Space. Students practice the Viewpoints and learn a language for talking about what happens on stage. Through practice, students develop tools not only for their own individual work, but for collaboration, offering ensembles a way to quickly generate original work. While a form of movement improvisation, students will also apply the Viewpoints as a means to staging to text as well as generate composition pieces. This class is open to directors, actors, designers, dancers, choreographers, musicians, composers, and writers.

DANC 311 Immersive Theater: Experimental Design, Material Culture and Audience-Centered Performance
This course offers a comprehensive exploration of Third Rail Projects' approach to crafting and performing in immersive performance formats. Students will work closely alongside Co-Artistic Director Tom Pearson to explore Third Rail's toolbox of techniques, including:

- Developing presence and clarity around audience engagement
- Remaining spontaneous and responsive to the changing landscape of an active audience
- Generating game play for crafting immersive scenes
- Understanding game play for crafting immersive scenes
- Understanding ritual, narrative, and audience initiation through the study of a scene from one of our immersive productions

DANC 354 Improvisational Forms: Contact Improvisation
This class is designed to explore dance improvisation, specifically through contact with the environment and with other people. Students will expand movement vocabulary, increase compositional awareness, and develop their creative thinking and observation skills, as well as explore personal boundaries, consent, and listening through touch. Material covered will include improvisation exercises, structured improvisational forms, developmental movement patterns and efficient use of self, and an inquiry into relationships and choice.
DANC359 Space Design for Performance

In this course, students will study, construct, and deconstruct the performative space, whether theatrical or site-based, by analyzing the space as a context to be activated by the body of the performer and witnessed by an audience. Through practical assignments, the class will learn the aesthetic history of the theatrical event (considering plays, rituals, street parades, and digital performances, among others), while developing and discovering the student's own creative process (visual, kinetic, textual, etc.). Students will be guided through each step of the design process, including concept development, visual research, renderings or drawings, model making and drafting.

In this course, special emphasis is given to contemporary performance as a mode of understanding cultural processes as a relational system of engagement within our ecosystem, while looking at environmental and sustainable design, materials, and the environmental impacts of processing. Students will create and design performance spaces, while realizing scale models and drawings and integrating the notions of design and environmental principles and elements.

Students will have the opportunity to develop skills using 3D-drafting and 3D-modeling software, utilizing design-technology tools, such as laser cutters and 3D printing, to develop and enhance their work.

DANC362 Bharata Natyam II: Embracing the Traditional and the Modern

This advanced course is designed to further students’ understanding of the technique, history, and changing nature of Bharata Natyam dance and of Indian classical dance in general. The primary aim of the course is to foster an understanding of the role, function, and imaging of Bharata Natyam dance vis-à-vis ideas about tradition and modernity. Although the course assumes no prior knowledge of Bharata Natyam, we will move rapidly through the material. We will focus mainly on more complex studio work, extensive readings, and video presentations. In preparation for this course, students should have movement experience in other dance tradition(s). Occasionally, the class could include a guest lecture given by either a visiting scholar, dancer, or choreographer respected in the field of South Asian dance internationally.

DANC365 West African Dance III

Building on the knowledge gained in West African Dance I and II (DANC260 and DANC360), this course is intended for the very advanced student who has a lot of experience in West African dance. Students will learn rhythmically and physically complex traditional dances from selected ethnic groups in Ghana and will continue to hone in on the general movement vocabulary and discourse of West African dance in general. Students will also learn original contemporary West African dance phrases choreographed by the instructor and be guided through a creative process through improvisation to create their own phrases.

Offering: Host
Grading: A-F
Credits: 0.50
Gen Ed Area: HA-DANC

DANC371 Site-Specific Choreography

This course addresses the construction of contemporary performance in alternative, nontheatrical spaces. Students will create, design, and structure movement and image metaphors; design and realize scenic objects; and integrate technologies that enhance performance at large. Daily practice will focus on developing compositional tools to trigger events, to set off the performance space, and to create optimal conditions for audience and performer participation. Skills in movement observation, critical reading, and video analysis will inform the course’s practical and historical frameworks.

Prereq: None

DANC376 The Artist in the City: Civic Engagement and Community-Based Art-Making in the Urban Landscape

Through both theoretical analysis and practical application, students will explore how, in a collaborative community setting, art-making can be used to address environmental issues and spark community dialogue. Lectures, readings, and research will provide an overview of the work of contemporary artists who engage directly in the life of the city, incorporate public employees and public land, and explore new means of civic participation. Students will study various models of community engagement and apply theoretical work to their field-based research. For final projects, students will direct short, creative-based projects in collaboration with Middletown community members to be presented as part of the Riverfront Encounter.

Offering: Crosslisting
Grading: A-F
Credits: 1.25
Gen Ed Area: HA-ENV5
Identical With: ENV5376
DANC377 Perspectives in Dance: Queering the Dancing Body: Critical Perspectives on LGBTQ Representation

This course focuses on questions of “queering” dance as a historical, cultural, social, and political enterprise. Focusing on both historical and postmodern dance contexts, the course explores key issues around gender and identity, with special reference to the concepts of performativity, impersonation, sexuality, and transformation. The course places the notion of “flows of gender and transformation” at its center, and examines historical, social, and aesthetic shifts in these ideas over the past 50 years. It draws on case studies ranging from female/male dance traditions of impersonation in India, China, Japan, and Indonesia, to postmodern shifts of “classical” dance (such as the all-male cast of Matthew Bourne’s “Swan Lake”) and more popular forms such as voguing and “RuPaul’s Drag Race.”

DANC378A Repertory and Performance: Storied Places

Grounded in the experiences of the multiple African American migrations of the late-19th and early-20th centuries, this course will explore the ideas of migration, displacement, home, and place writ large. As a community, we will collaboratively develop a performance that will utilize movement, text, and objects as research tools and creative processes as our methodology to engage these themes.

Our process in creating this work will include improvisation, development of set materials, readings, discussion, and writing. Students will have the opportunity to work alongside professional dancers as well as Wesleyan faculty and their peers in preparation for an interdisciplinary performance in the spring.

Offering: Host

Prereq: None

DANC381 Japan’s Nuclear Disasters

The atomic bombings of Hiroshima and Nagasaki in 1945 are central to the history of the 20th century. This course examines the scientific, cultural, and political origins of the bombs; their use in the context of aerial bombings and related issues in military history; the decisions to use them; the human cost to those on whom they were dropped; and their place in history, culture, and identity politics to the present. Sources will include works on the history of science; military, political, and cultural history; literary and other artistic interpretations; and a large number of primary source documents, mostly regarding U.S. policy questions. In addition, we will be examining the development of the civilian nuclear industry in Japan with a focus on the nuclear meltdowns in Fukushima and other accidents. This is an extremely demanding course.

This interdisciplinary, experiential, and experimental course combines studio learning (movement studies and interdisciplinary, creative exploration) and seminars (presentations and discussions). No previous dance or movement study is required, and the course is not particularly geared toward dancers or performers. However, your willingness to experiment on and share movement is important. We encourage you to think about movement as a method of accessing human experiences and making distance malleable, a way to explore your own sensations, thoughts, and reactions in learning history.

DANC398 Senior Colloquium in Dance Research

This course focuses on workshopping senior capstone research projects/theses, critically analyzing and situating their work within the larger fields of dance and dance research. In addition to sharing senior capstone research in progress, the course incorporates opportunities to interact and study with successful dance artists/scholars, including but not limited to, CFA visiting artists and current faculty, and to thereby encounter the most current shifts happening in the field of dance and dance research. Issues concerning dance/research that will be addressed include the following: relevance, validity, rigor, diversity and globalization, interdisciplinarity, citizenship, and social justice as they pertain to dance and dance research and to the senior capstone projects/theses specifically. This is an opportunity for our students to delve deeper into their own research while expanding their focus to better understand and frame their work in a larger context.

EARTH AND ENVIRONMENTAL SCIENCES (E&ES)

E&ES101 Dynamic Earth
The earth is a dynamic planet, as tsunamis, hurricanes, earthquakes, and volcanic eruptions make tragically clear. The very processes that lead to these natural disasters, however, also make life itself possible and create things of beauty and wonder. In this course we will study the forces and processes that shape our natural environment. Topics range in scale from the global pattern of mountain ranges to the atomic structure of minerals and in time from billions of years of Earth history to the few seconds it takes for a fault to slip during an earthquake. Hands-on activities and short field trips complement lectures to bring the material to life--so put on your hiking boots and get ready to explore our planet.
Offering: Host
Grading: A-F
Credits: 1.00
Gen Ed Area: NSM-EES
Prereq: None

E&ES115 Introduction to Planetary Geology
This course will examine the workings of Earth and what we can learn from examining Earth in the context of the solar system. Comparative planetology will be used to explore such topics as the origin and fate of Earth, the importance of water in the solar system, the formation and maintenance of planetary lithospheres and atmospheres, and the evolution of life. Exercises will utilize data from past and present planetary missions.
