WESLEYAN UNIVERSITY 2021-2022 CALENDAR

2021-2022 Academic Calendar (https://events.wesleyan.edu/events/pdf_academic_calendar/?v_year_from=2021&v_year_to=2022)

WESLEYAN UNIVERSITY: A BRIEF HISTORY

Wesleyan University was founded in 1831 by Methodist leaders and Middletown citizens. Instruction began with 48 students of varying ages, the president, three professors, and one tutor; tuition was \$36 per year.

Today Wesleyan offers instruction in 46 departments and 45 major fields of study and awards bachelor of arts and graduate degrees. The master of arts degree and the doctor of philosophy are regularly awarded in 11 fields of study. Students may choose from more than 900 courses each year and may be counted upon to devise, with the faculty, some 900 individual tutorials and lessons.

The student body is made up of approximately 2,900 full-time undergraduates and 140 graduate students, as well as 100 part-time students in Graduate Liberal Studies. A full-time faculty of about 300 is joined each semester by a distinguished group of visiting artists and professors. But despite Wesleyan's growth, today's student/instructor ratio remains at 8 to 1, and about three-quarters of all courses enroll fewer than 20 students.

Named for John Wesley, the founder of Methodism, Wesleyan is among the oldest of the originally Methodist institutions of higher education in the United States. The Methodist movement was particularly important for its early emphasis on social service and education, and from its inception Wesleyan offered a liberal arts program rather than theological training. Wesleyan's first president, Willbur Fisk, a prominent Methodist educator, set out an enduring theme at his inaugural address in September 1831. President Fisk stated that education serves two purposes: "the good of the individual educated and the good of the world." Student and faculty involvement in a wide range of community-service activities reflected President Fisk's goals in the 19th century and continues to do so today.

Wesleyan has been known for curricular innovations since its founding. At a time when classical studies dominated the American college curriculum, emulating the European model, President Fisk sought to put modern languages, literature, and natural sciences on an equal footing with the classics. When Judd Hall, now home to the Psychology Department, was built in 1870, it was one of the first American college buildings designed to be dedicated wholly to scientific study. Since the 1860s, Wesleyan's faculty has focused on original research and publication in addition to teaching.

The earliest Wesleyan students were all male, primarily Methodist, and almost exclusively white. From 1872 to 1912, Wesleyan was a pioneer in the field of coeducation, admitting a limited number of women to study and earn degrees alongside the male students. Coeducation succumbed to the pressure of male alumni, some of whom believed that it diminished Wesleyan's standing in comparison with its academic peers. In 1911, some of Wesleyan's alumnae helped to found the Connecticut College for Women in New London to help fill the void left when Wesleyan closed its doors to women.

Ties to the Methodist church, which were particularly strong in the earliest years and from the 1870s to the 1890s, waned in the 20th century. Wesleyan became fully independent of the Methodist church in 1937. Under the leadership of Victor L. Butterfield, who served as president from 1943 to 1967, interdisciplinary study flourished. The Center for Advanced Studies (now the Center for the Humanities) brought to campus outstanding scholars and public figures who worked closely with both faculty and students. Graduate Liberal Studies, founded in 1953, is the oldest program of its kind and grants the master of arts in liberal studies (MALS) and the master of philosophy in liberal arts (MPhil) degrees. During this same period, the undergraduate interdisciplinary programs, the

College of Letters, the College of Social Studies, and the now-defunct College of Quantitative Studies, were inaugurated. Wesleyan's model program in world music, or ethnomusicology, also dates from this period. Doctoral programs in the sciences and ethnomusicology were instituted in the early 1960s.

During the 1960s, Wesleyan began actively recruiting students of color. A number of Wesleyan faculty, students, and staff were active in the Civil Rights Movement, and the Reverend Martin Luther King Jr. visited campus several times. By 1968, women were again admitted as exchange or transfer students. In 1970, the first female students were admitted to Wesleyan's freshman class since 1909. The return of coeducation heralded a dramatic expansion in the size of the student body, and gender parity was achieved within several years.

Wesleyan's programs and facilities expanded as well, and new interdisciplinary centers were developed. The Center for African American Studies, which grew out of the African American Institute (founded in 1969), was established in 1974. The Center for the Arts, home of the University's visual and performance arts departments and performance series, was designed by prominent architects Kevin Roche and John Dinkeloo and opened in the fall of 1973. The Mansfield Freeman Center for East Asian Studies was established in 1987. The Center for the Americas, which combines American studies and Latin American studies, was inaugurated in 1998. The Center for Film Studies, with state-of-the-art projection and production facilities, opened in 2004.

An addition to the Freeman Athletic Center opened in 2005 with the 1,200-seat Silloway Gymnasium for basketball and volleyball, the 7,500-square-foot Andersen Fitness Center, and the Rosenbaum Squash Center with eight courts.

Fall 2007 marked the opening of the Suzanne Lemberg Usdan University Center and the adjacent renovated Fayerweather building, which retains the towers of the original Fayerweather structure as part of its facade. The Usdan Center overlooks Andrus Field (home of Corwin Stadium and Dresser Diamond), College Row, and Olin Library, and houses dining facilities for students and faculty, seminar and meeting spaces, the Wesleyan Student Assembly, the post office, the box office, and retail space. Fayerweather provides common areas for lectures, recitals, performances, and other events; it contains a large space on the second floor, Beckham Hall, named for the late Edgar Beckham, who was dean of the college from 1973 to 1990. In winter 2012, the historic squash courts building (41 Wyllys Avenue) on College Row was renovated; now renamed Boger Hall, it is the state-of-the-art home for the Gordon Career Center, the Paoletti Art History Wing, and the College of Letters.

Michael S. Roth '78 became Wesleyan's 16th president at the beginning of the 2007–08 academic year. He has undertaken a number of initiatives that have energized the curriculum and helped to make a Wesleyan education more affordable for many. He has emphasized a three-year degree program that can save families as much as \$50,000; eliminated loans for most students with a family income below \$60,000, replacing them with grants; and ensured that other students receiving financial aid are able to graduate without a heavy burden of debt. Allbritton Hall, opened in 2012, has become a hub of civic engagement—encompassing the Patricelli Center for Social Entrepreneurship, the Allbritton Center for the Study of Public Life, and the Jewett Center for Community Partnerships. Four new interdisciplinary colleges also have been launched: the College of the Environment, the College of Film and the Moving Image, the College of East Asian Studies, and the College of Integrative Sciences. Another new initiative, the Shapiro Creative Writing Center, brings together students, faculty, and visiting writers seriously engaged in writing. Since 2011, applications for admission have increased substantially to record levels. During this time Roth oversaw the most successful campaign in Wesleyan's history. The campaign raised a total of \$482 million, including more than \$270 million in support of one of Wesleyan's highest priorities: new endowment and annual funding for financial aid.

WESLEYAN'S CURRICULUM

Wesleyan University is dedicated to providing an education in the liberal arts that is characterized by boldness, rigor, and practical idealism. At Wesleyan, students have the opportunity to work at the highest levels, discover what they love to do, and apply their knowledge in ways the world finds meaningful. While Wesleyan has no core requirements, the University has established General Education Expectations that are designed to encourage breadth within the student educational experience. Students select courses in consultation with advisors, creating customized itineraries of study in three intellectual spheres: the arts and humanities (HA), the social and behavioral sciences (SBS), and the natural sciences and mathematics (NSM).

OPEN CURRICULUM

When students direct their own education in consultation with intensively engaged faculty advisors, they learn to think independently, explore questions from multiple points of view, and develop habits of critical thinking that are hallmarks of a liberal education. Wesleyan upholds the principle that student choice fosters the drive to explore freely and seek connections across courses, generating the intellectual excitement that can fuel liberal education as a lifelong pursuit. With the freedom to sample liberally from across the curriculum, students are able to experience the surprise of unexpected ability in fields new to them and to make fruitful connections across subject areas that do not traditionally intersect. This can generate innovative depth of study and new ways of seeing—with students posing questions from one discipline to the assumptions of another.

MAJORS, MINORS, AND CERTIFICATES AT WESLEYAN — AREAS OF STUDY

With a large variety of majors, minors, and certificates (<http://www.wesleyan.edu/academics/>), Wesleyan students have the opportunity to work at the highest level, discover what they love to do, and apply their knowledge in meaningful ways.

MAJORS

A degree of disciplined mastery in a major field of learning is an important dimension of a liberal arts education. The major may help a student prepare for a specific profession or may be necessary for a more specialized education in graduate school or another postbaccalaureate educational institution. Majors can take several forms—a departmental or interdepartmental major or a college program (College of Letters or College of Social Studies). Generally, students declare a major in the second semester of their sophomore year—when they have sampled widely from different areas of the curriculum, have completed the first stage of their General Education Expectations, and are ready to develop deeper knowledge in a particular area of study.

LINKED MAJORS, MINORS, AND CERTIFICATES

Some majors (College of Integrative Sciences, environmental studies) may only be declared as linked majors in conjunction with another major. In addition to major fields of study, Wesleyan also offers optional minor fields of study and

certificates (similar to interdisciplinary minors). Students may not declare more than a combined total of three majors, certificates, and minors.

GENERAL EDUCATION EXPECTATIONS

Wesleyan's open curriculum challenges students to create their own plan for general education. Academic coherence here does not rely on a core curriculum or a set of required courses; instead, students propose their academic plan to their faculty advisors and recalibrate it with their advisors each semester as their discoveries lead them to pursue new areas or deepen existing strengths. By the end of the first two years, students are expected to have earned at least two course credits in each of the three areas (HA, SBS, NSM), all from different departments or programs. In the last two years, students are expected to take one additional course credit in each of the three areas. A student who does not meet the expectation of a total of nine general education course credits by the time of graduation will not be eligible for University Honors, Phi Beta Kappa, honors in general, and honors in certain departments, and may not declare more than a combined total of two majors, certificates, and minors.

COMPETENCIES

To help students identify and describe the skills they gain on their journey through Wesleyan's open curriculum, we've developed a flexible framework of four competencies to reflect on and consider as students build—and share—their own personal narrative about their Wesleyan experience. The four competencies are: **Mapping:** Navigating Complex Environments; **Expressing:** Writing and Communication; **Mining:** Empirical Analysis and Interpretation; and **Engaging:** Negotiating Cultural Contexts.

Mapping is defined as the ability to examine the relationship of objects, concepts, spaces, and environments in the material and imagined worlds. It involves developing tools to create, manipulate, and navigate constructed and natural environments and charting movement through and interactions with space and its consequences. *Expressing* is defined as the ability to express thoughts, ideas, and emotions to others effectively and concisely through a variety of mediums and modalities. *Mining* is defined as the ability to use logical and empirical reasoning and methods to explicate, analyze, and quantify one's material and social realities. It involves learning about the measurement, analysis, summary, and presentation of information, including about the natural world, as well as answering questions, solving problems, making predictions, and testing and constructing theories by employing mathematical, statistical, logical, and scientific reasoning. *Engaging* is defined as the ability to comprehend, appreciate, and negotiate human and cultural differences as well as the complexity of one's own relation and accountability to wider sociohistorical dynamics. It involves reading, speaking, or understanding a second or third language (contemporary or classical); gaining experience working, studying, or traveling abroad, or in other unfamiliar cultural contexts; and participating in the political and social life of local and global communities.

ACADEMIC ADVISING

An academic advisor is assigned to each first-year student from faculty who teach in a field in which the student has expressed interest. Once a student declares a major, the advisor is assigned from that department or program. Students, with the help of faculty advisors, typically put together an academic itinerary that includes lecture-style courses, smaller seminars, laboratories, and performance courses. Every student is given the opportunity to take a seminar course specially designed for first-year students. These first-year seminars (FYS) vary dramatically—from presenting the work of a specific thinker to introducing

an unfamiliar area of study—but all tend to emphasize the importance of writing at the university level and the methods used to collect, interpret, analyze, and present evidence as part of a scholarly argument. Faculty teaching these classes highlight the type of writing associated with their respective disciplines and help students improve how they develop, compose, organize, and revise their written work.

WESMAPS AND WESPORTAL

WesMaps (<http://www.wesleyan.edu/wesmaps/>) is the indispensable online guide to the curriculum used by students to map their academic schedule each semester. WesPortal contains both personal information added by students and official information that helps track their progress toward fulfilling General Education Expectations, majors, and University requirements. WesPortal is an important advising tool for students and their faculty advisors. WesPortal applications provide students with online access to their course schedule, grades, academic history, Moodle, course registration, student accounts, campus events, and more. Using these applications, students and their advisors are able to make informed decisions leading to a thoughtful academic experience.

STUDENT ACADEMIC RESOURCES

Wesleyan provides a range of academic services to students in support of learning both inside and outside the classroom. The Writing Workshop and Math Workshop are important resources available to all students. Student Academic Resources (SAR) includes programs for intellectual enrichment and academic support. One key element of SAR is the work of Academic Peer Advisors (APAs). APAs are upperclass students who work during new student orientation and throughout the academic year to support Wesleyan's faculty advising program, enhance student access to academic resources, and strengthen students' academic skills. In addition, the Deans' Peer Tutoring program provides content-based tutoring services for most courses and is available to all students.

The goals of SAR are to foster a community culture that recognizes the relationship between intellectual growth and personal development; to ensure that students know about and are encouraged to seek out appropriate services; and to share information among programs and constituents to ensure the provision of high-quality and accessible services that facilitate academic achievement for all students. More information is available on the academic resources (<http://www.wesleyan.edu/sar/>) website.

CAREER ADVISING

Employers and graduate schools look for applicants who can write well, think critically, and solve problems independently. Because of their liberal arts training, Wesleyan students attain these skills in the context of a wider knowledge of human experiences. While students need not prepare narrowly for their careers, Wesleyan encourages them to give careful thought to their lives after graduation.

The Gordon Career Center works with students of all class years to:

- Translate their liberal education, and campus and community experiences, into a lifetime of meaningful work
- Explore their interests, personality, skills, and experiences to identify potential career options that fit their unique profile
- Write professional resumes, CVs, cover letters, and personal statements for job, internship, fellowship, and graduate/professional school applications
- Find meaningful summer opportunities to bolster and build professional skills and experiences related to their career aspirations
- Conduct successful job and internship searches, prepare and practice for interviews, and build strong relationships with employers and Wesleyan alumni
- Research and connect with professional schools, graduate schools, and degree programs; craft competitive applications; and navigate the school decision-making process
- Transition to life after Wesleyan, whether through employment, a fellowship, graduate or professional school, a service program, volunteer opportunity, or personal adventure

The Gordon Career Center uses an intuitive and modern career management platform, Handshake (<http://wesleyan.joinhandshake.com/>). This mobile-ready recruiting application is designed to help students discover and explore jobs, internships, organizations, and events all personalized to their specific career interests.

HEALTH PROFESSIONS AND PREMEDICAL ADVISING

Health professions graduate schools welcome students with a liberal arts background. A liberal arts education does not exclude the scientific and quantitative knowledge required to become an outstanding health professional; rather, it includes courses from these disciplines within a larger intellectual context.

Please note that health professional schools (medical, dental, veterinary medicine, nursing, optometry, etc.) do not require a specific major, readily accepting applicants from diverse academic backgrounds. However, they do require that applicants take specific courses (mostly in the sciences) in order to apply. Therefore, your choice of major should be based on a variety of factors—ideally your preferred area of study, and what you do well in, rather than what you think health professional schools want to see. As a health provider, you may want to work in a Spanish-speaking community; if so, a Hispanic Literature and Cultures or Latin American Studies major would be a great advantage. Perhaps you will want to prepare yourself for some of the tougher ethical questions that physicians face, and therefore choose Philosophy, Religion, or Science in Society as your major. An Economics major can help you when you confront the variety of market forces that affect health care practice and research. You should choose some of your courses with these types of considerations in mind, as well as giving yourself the opportunity to develop as a whole person, thereby taking courses for no other reason than the fact that they intrinsically appeal to you.

Students are encouraged to explore and test their interest in a given health profession through internships, summer employment, volunteer positions in a clinical setting, and shadowing health professionals before applying to graduate school. The Gordon Career Center (<https://wesleyan.edu/careercenter/>) and the Office of Community Service (<http://www.wesleyan.edu/jccp/>) provide information about volunteer opportunities on campus and in the local community for students considering the health professions. Experience in conducting research may also be very useful in learning about a field and developing the skills needed to contribute to the field and to evaluate the work of others. Students with a particular interest in the natural sciences have the opportunity to participate in laboratory research projects under the supervision of Wesleyan faculty who are principal investigators with on-campus research groups that may also include graduate students. In recent years, undergraduates have also participated in public health and clinical research both on and off campus. Some student researchers have been coauthors of papers published in scientific journals or have presented the results of their research at scholarly meetings. Beginning with the first week of the first year and continuing beyond graduation, a specialized health professions advisor is available to assist students and graduates interested in any of the health professions with academic planning, identification of summer opportunities and meaningful post-graduation employment, and preparation for and navigation of the application process to health professions graduate schools. The Wesleyan Health Professions Panel offers current students and those within five years of graduation a letter of institutional sponsorship at the time of application to medical, dental, or veterinary school. The success of Wesleyan's alumni in various health fields attests to the quality of our undergraduate curriculum and our health professions advising. For more information go to our health professions site (<https://www.wesleyan.edu/careercenter/students/health/>).

PREBUSINESS

Wesleyan alumni are sought after in the business world. A significant number of the organizations that recruit Wesleyan students are business concerns. Recent top employers have included Amazon, Bloomberg, BlackRock, Booz Allen Hamilton, Citi, Facebook, Google, IBM, JPMorgan Chase, and Venture for America. Wesleyan has a reputation among employers for producing students who have well-developed organizational and leadership skills. A Wesleyan

student in almost any major who does well and plans his or her courses with an eye toward meeting entrance requirements for professional study will be well prepared for business school. It is rare for undergraduates to go directly to a top-tier business school without work experience. In fact, many of the top-tier business schools require two to four years of work experience for competitive candidates. Students interested in fields such as banking and consulting should plan to take quantitative courses offered by a number of academic departments to seek an internship in their field of interest as early as sophomore year.

PRELAW

Law schools have long recognized that liberal arts institutions provide the best possible preparation for future attorneys. They look for students who possess particular intellectual skills: the ability to think critically, analyze a situation, extract pertinent information, and communicate effectively, both orally and in writing. Any academic major is acceptable to a law school. Wesleyan students who major in the traditionally popular subjects of study for prelaw: History, Government, Economics, English, American Studies, and Philosophy; and now the less traditional, in the sciences and the arts; are admitted each year to the top law schools in the country. Outside the classroom, Wesleyan students participate in a variety of activities that develop the character and leadership skills they will need to succeed in law school, including political and social activism and community service. Over the summer, students intern at such organizations as the Northern Virginia Capital Defender Office, the Bronx Defenders Office, the Center for Court Innovation, Ungvarsky Law LLC (a capital defense firm), and the CT Commission on Human Rights and Opportunities. The Gordon Career Center (<http://www.wesleyan.edu/careercenter/>) has a designated prelaw advisor who provides resources and information for students considering careers in and related to law. Students and graduates are encouraged to meet with the advisor individually, attend informational workshops and guest speaker events (e.g., human rights law, careers in law and policy, careers in “Big Law”), and seek faculty assistance to navigate the law school selection and application process.

ACADEMIC REGULATIONS

- Degree Requirements (p. 11)
- Major (p. 11)
- GenEd Expectations (p. 12)
- Academic Standing (p. 13)
- Honors (p. 13)
- Academic Review and Promotion (p. 14)
- AP, IB, and Other Prematriculation Credit (p. 15)
- Acceleration (p. 16)
- Nondegree (p. 16)
- Transfer Students (p. 16)
- Study Abroad (p. 17)
- Internal Special Study Programs (p. 17)
- External Special Study Programs (p. 19)
- Advanced Degrees (p. 20)
- General Regulations (p. 21)

DEGREE REQUIREMENTS

Degrees are awarded once a year at Commencement. Students who complete the requirements for the degree at other times during the year will be recommended to receive the degree at the next Commencement. Based on a modification voted by the faculty, the requirements for this degree specified below are for students entering Wesleyan in and after the fall of 2000. Students who entered Wesleyan prior to the fall of 2000 must refer to the appropriate section of the degree requirements and academic regulations at wesleyan.edu/registrar/academic_regulations/prior_2000.html (https://wesleyan.edu/registrar/academic_regulations/prior_2000.html).

GRADUATION REQUIREMENTS

The requirements are (1) satisfaction of requirements for a major; (2) satisfactory completion of 32 course credits, no fewer than 16 of which must be earned at Wesleyan or in Wesleyan-sponsored programs; (3) a cumulative average of 74 percent or work of equivalent quality; and (4) for bachelor of arts students, at least six semesters in residence at Wesleyan as full-time students for students entering in their first year (for students entering as sophomore transfers, at least five semesters in residence at Wesleyan as full-time students; for students entering as midyear sophomores or junior transfers, at least four semesters in residence at Wesleyan as full-time students). A semester in residence is defined as any semester in which a student attends classes on the Wesleyan campus*, has attempted at least three credits, and received at least one grade. If a conversion to semester hours is required, each Wesleyan credit may be assigned a value of four semester hours.

*or via online classes offered by Wesleyan as a response to the COVID-19 pandemic.

All courses taken at Wesleyan will be listed on the student's transcript. However, there are limits on the number of credits students can count toward the total of 32 course credits required for the bachelor of arts. No more than 16 credits in any one subject (i.e., course code) can be counted toward the degree requirements. All course credits posted to a student's academic records will

be considered for oversubscription including prematriculant, study-abroad, and/or transfer credits. A course offered in more than one subject designation (i.e., cross-listed) will count in all subjects in which it is offered. A student who exceeds these limits will be considered oversubscribed, and the additional course credits may not count toward the 32 required for the bachelor of arts.

In addition, the student may count toward the 32 credits a maximum of the following credits:

- A maximum of four credits in any combination of the following:
 - maximum of one credit in physical education (PHED)
 - maximum of one credit in self-paced language courses
 - (LANG 104), and no more than one-half credit in any one language
 - maximum of two student forum credits (419, 420)
 - independent study and education-in-the-field credits (467, 468, 469, 470)
 - maximum of one-half internship credit (CSPL 493)
 - maximum of two teaching apprentice credits (491, 492)
- A maximum of four individual and group tutorial credits (401, 402, 403, 404, 411, 412, 421, 422, CSPL480)
- A maximum of four times each of repeatable courses

While a maximum of two credits earned before matriculation by entering first-year students may count toward the Wesleyan degree, all such credits that have been duly approved by Wesleyan departments will be listed on the student's transcript. This applies to Advanced Placement (AP), International Baccalaureate (IB), and Advance-Level exams, as well as any college-level courses taken with college students and taught by a college teacher on a college campus, provided that the course meets Wesleyan's transfer credit criteria. Aside from AP credits and other credits regularly awarded on the basis of centrally administered examinations, no course that is listed for credit on a student's high school transcript may be used for Wesleyan credit.

MAJOR

To satisfy the major requirement, a bachelor of arts student must complete a departmental major, an interdepartmental major, or a collegiate program (College of East Asian Studies (p. 71), College of Letters (p. 89) or College of Social Studies (p. 91)). A bachelor of liberal studies student must complete a standard concentration or approved self-designed concentration. A student will graduate if the requirements of one major are fulfilled in conjunction with the completion of other degree requirements.

Students may apply for a major any time after the drop/add period in the semester in which they have reached second semester sophomore standing. However, application for admission to the College of East Asian Studies, the College of Letters or the College of Social Studies should be submitted by first-year students during their second semester. Eligibility requirements are set by the department, program, or college, which may deny access or the privilege of continuation to any student whose performance is unsatisfactory. Students who have not been accepted into a major by the beginning of their junior year have a hold placed on their enrollment. Students may not declare more than a combined total of three majors, certificates, and minors.

DEPARTMENTAL MAJOR PROGRAMS

The departmental major is an integrated program of advanced study approved by the major department. It consists of a minimum of eight course credits numbered **201** or higher. No more than four course credits in the departmental major may be elected from other than the major department. Please see Graduation Requirements for the number of credits that may be counted toward the bachelor of arts degree and oversubscription.

COMPREHENSIVE EXAMINATION

In those departments in which a comprehensive examination is required, passing the examination is a condition of graduation. The major departments determine the nature and scope of the examinations, the amount of supervision to be given to the student in preparation for them, and the time and place of their administration. Both oral and written examinations may be required.

A student who passes the comprehensive examination with a grade deemed creditable by the major department may be excused by the department from the final examination of the last semester in any course in that department and in any other departmental course included in the major program. The student may substitute the grade attained in the comprehensive examination for the final examination grade in each of the designated courses. In all such cases, permission of the course instructor is required to substitute the final examination grade.

If a student fails to qualify for the degree in the senior year solely through failure to attain a satisfactory grade in the comprehensive examination but has satisfied all other requirements for graduation, the student may be permitted to take a second comprehensive examination.

INTERDEPARTMENTAL MAJOR PROGRAMS

The University offers two kinds of interdepartmental majors:

- **Interdepartmental majors.** These are archaeological studies; environmental studies; feminist, gender, and sexuality studies; Latin American studies; medieval studies; Russian, East European, and Eurasian studies; and science in society. The list may change from time to time.
- **University majors.** A student may propose a university major program involving two or more departments, provided that an ad hoc group of at least three members of the faculty approves and supervises the program. Students contemplating a university major should be accepted for admission to a regular departmental major, since the proposal for a university major must be approved by the Committee on University Majors. Deadlines for application are November 1 for the fall semester and April 1 for the spring semester. Additional information about the application procedure may be obtained from the Office of the Deans.

All interdepartmental major programs, like departmental major programs, must include at least eight course credits numbered **201** or higher. Other conditions, including additional courses, may be imposed.

COLLEGIATE PROGRAMS

In the spring of the first year, an undergraduate may apply for admission to the College of Letters, the College of Social Studies, or the College of East Asian

Studies. All of these programs offer an organized course of study continuing through the sophomore, junior, and senior years that leads to the degree of bachelor of arts.

GENERAL EDUCATION EXPECTATIONS

The inclusion of courses that fulfill Wesleyan's general education expectations is vital to the student's educational experience at Wesleyan. To assist in the experience, the faculty has divided the curriculum into three areas: natural sciences and mathematics (NSM), the social and behavioral sciences (SBS), and the humanities and the arts (HA). The faculty has assigned a general education designation to a course when appropriate, as well as established a distributional expectation for each general education area. In consultation with their advisors, first-year and sophomore students are encouraged to select courses from all three areas to experience the full dimension of intellectual breadth vital to a liberal education.

General education courses in the natural sciences and mathematics introduce students to key methods of thought and language that are indispensable to a liberal education as well as to our scientifically and technologically complex culture. They are intended to provide scientific skills necessary for critically evaluating contemporary problems. These courses apply scientific method, utilize quantitative reasoning, and enhance scientific literacy. They also provide a means of comparison to other modes of inquiry by including historical, epistemological, and ethical perspectives. The natural science and mathematics division has made special efforts to design and present a variety of courses that meet these objectives and are appropriate for future majors in the humanities, arts, and social sciences, as well as those interested in majoring in one of the natural sciences or mathematics.

General education courses in the social and behavioral sciences introduce students to the systematic study of human behavior, both social and individual. They survey the historical processes that have shaped the modern world, examine political institutions and economic practices, scrutinize the principal theories and ideologies that form and interpret these institutions, and present methods for analyzing the workings of the psyche and society.

General education courses in the humanities and the arts introduce students to languages and literature, to the arts and the mass media, and to philosophy and aesthetics—in short, to the works of the creative imagination as well as to systems of thought, belief, and communication. These courses provide both historical perspectives on and critical approaches to a diverse body of literary, artistic, and cultural materials.

The General Education Expectations are divided into Stages 1 and 2. The expectation for Stage 1 is that all students will distribute their course work in the first two years in such a way that by the end of the fourth semester, they will have earned at least two course credits in each of the three areas, all from different departments or programs. To meet the expectation of Stage 2, students must also take one additional course credit in each of the three areas prior to graduation, for a total of nine general education course credits. Credits earned prior to matriculating at Wesleyan as a first-year student cannot be used to fulfill Wesleyan's General Education Expectations. However, courses taken prior to matriculating at Wesleyan may be considered for general education equivalency credit for transfer students. Students may also request in advance that individual courses taken on an approved study-abroad program or a sponsored domestic study-away program be considered for equivalency. Courses taken on Wesleyan-

administered study-abroad programs or through the Twelve-College Exchange are coded for equivalency.

When a course has multiple general educational area assignments (NSM, SBS, HA), a student must select one general education area assignment by the end of the drop/add period. Student forums and individual and group tutorials never carry a general education designation.

A student who does not meet these expectations by the time of graduation will not be eligible for University Honors, Phi Beta Kappa, honors in general scholarship, or for honors in certain departments, and may not declare more than a combined total of two majors, certificates, and minors.

ACADEMIC STANDING

SEMESTER CREDITS AND COURSE LOAD

Bachelor of Arts students are expected to earn four credits in each of eight semesters. Students who plan a course schedule with fewer than four credits must have the approval of their class dean and faculty advisor. Students who enroll in fewer than three credits may have their enrollment in the University revoked. A student who plans a course schedule with five or more credits must have the approval of the faculty advisor. Candidates for the bachelor of arts degree may not enroll as part-time students (fewer than three credits). A three-credit program is the minimum required to be considered a full-time student and for which full tuition will be charged. The exception is for seniors completing the second half of their senior thesis who need only this credit to fulfill all degree requirements. They may enroll for only the one thesis credit in their last semester, which will not count as a semester in residence.

GRADING SYSTEM

A student's academic performance in individual courses taken at Wesleyan will be evaluated either by letter grades (A-F) or by the designations credit (CR) or unsatisfactory (U). At the discretion of the instructor, all the students in a course may be restricted to a single grading mode, or each student may be allowed to choose between the two modes, also referred to as student option (OPT). Instructors announce the grading options in WesMaps. In courses in which students have a choice of grading mode, the final choice must be made no later than 14 days after the drop/add period ends.

Whenever the credit/unsatisfactory mode is used, the faculty member is expected to submit to the Office of the Registrar a written evaluation of the student's work in the course.

A student's work in courses using letter grades is evaluated as follows: A, excellent; B, good; C, fair; D, passing but unsatisfactory; E, failure; and F, bad failure. These letter grades (with the exception of the grade of F) may be modified by the use of plus and minus signs.

The numerical equivalents of the letter grades are

A+	98.3
A	95.0
A-	91.7
B+	88.3
B	85

B-	81.7
C+	78.3
C	75.0
C-	71.7
D+	68.3
D	65.0
D-	61.7
E+	58.3
E	55.0
E-	51.7
F	45.0

SEQUENCE COURSES

The granting of credit in two-semester courses (indicated by the "Required Course Sequence" notation in WesMaps) is contingent upon successful completion of both semesters. A student who has failed the first semester of a required course sequence may not continue in the second semester without the permission of the instructor and the class dean. A student who receives the grade of E (but not F) at midyear in a course running through the year and who is permitted by the instructor to continue the course in the second semester may receive credit for the first semester at the completion of the course upon the recommendation of the instructor to the class dean. At that time, the instructor may also recommend a revision of the first-semester grade. If this is not done, the grade for the first semester will remain recorded as E, but credit will be given for the first semester's work. A student who fails the second semester of a two-semester course loses credit for both semesters.

HONORS

DEAN'S LIST

Wesleyan acknowledges high academic achievement at the end of each semester. Students who earn a semester GPA of 93.350 or better will be named to the Dean's List and will have a permanent transcript notation of this achievement. To be eligible, a student must have earned the GPA on at least three letter-graded credits at Wesleyan during the semester and have no unsatisfactory or failing grades. Students with incomplete grades or outstanding credit will be evaluated after the grade and/or credit is posted to the Wesleyan transcript and, if eligible then, they will be added retroactively to the appropriate semester's list.

HONORS PROGRAM

(See Wesleyan's Online Thesis Guide (http://www.wesleyan.edu/registrar/honors/honors_program.html) for more information)

A degree with honors can be earned two ways: (1) departmental honors will be awarded to the student who has done outstanding work in the major field of study and has met the standards for honors or high honors set by the respective department or program; (2) honors in general scholarship will be awarded to the student who is a university major or whose thesis topic or methodology is outside of the domain appropriate for the award of honors in the student's

major department(s) or program(s). The candidate for honors in general scholarship must have a minimum grade point average of 90.00, fulfill general education expectations, and submit a senior thesis that meets the standard for honors or high honors set by the Committee on Honors.

Honors recognizes a bachelor's degree attained with distinction, either in the major or in general scholarship. Honors recognizes the successful completion of a mentored, independent honors capstone project that has been evaluated by qualified examiners and that meets the standards for excellence in the major or those of the Honors Committee when completed in general scholarship. A student may receive no more than 2.0 credits for any one thesis. Students who major in more than one department, program, or college may submit a thesis in one of their majors or separate theses in more than one major. With the agreement of each of their departments, programs, or colleges, students may submit the same thesis for honors in more than one major.

In the fall semester of the senior year, all candidates for honors must either enroll in a senior thesis tutorial or, if they are pursuing an alternate route to honors, must ask their department to forward their names to the Honors Committee as candidates. Students who wish to pursue Honors in General Scholarship must follow the established guidelines and apply to the Honors Committee, normally in the second semester of the junior year. Thesis registration normally takes place in April. Beginning with the Class of 2018, honors candidates who complete their graduation requirements in December and who are not registering for classes or for a thesis tutorial in the spring are required to submit and register their thesis with the University on the first day of classes of the following spring semester.

University Honors is the highest award Wesleyan bestows. To be eligible, a student must fulfill General Education Expectations, earn high honors (either departmental or in general scholarship), be recommended for University Honors, and qualify in an oral examination administered by the Committee on Honors. See Wesleyan's Online Thesis Guide (http://www.wesleyan.edu/registrar/honors/honors_program.html) or contact the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) for more information.

PHI BETA KAPPA

The oldest national scholastic honor society, Phi Beta Kappa at Wesleyan is limited to 12 percent of the graduating class each year. Election to the society is based on grades and fulfillment of the eligibility requirements described below.

Fall election is based on grades through the end of a student's junior year and fulfillment of the General Education Expectations (stages I and II). Normally, between 10 and 15 students are elected in the fall; Bachelor of Liberal Studies and transfer students are not eligible for consideration in the fall.

Spring election is based on grades through the end of a student's first semester of the senior year and fulfillment of the General Education Expectations (stages I and II). Bachelor of Liberal Studies and Transfer students are eligible for consideration in the spring. It is preferred that students complete their General Education Expectations in their first semester senior year. However, a rationale for second-semester completion is not required, provided that the secretary of the Gamma Chapter continuously monitors those students to guarantee completion of stage II of the General Education Expectations.

In addition to fulfilling the General Education Expectations, students are expected to have a grade point average of 92 or above to be considered for election in the spring. The minimum grade point average for the fall election is 93. Students are nominated by their major departments. Bachelor of Liberal Studies student and University majors can be nominated by their class dean.

ACADEMIC REVIEW AND PROMOTION

The University expects students to make good use of Wesleyan's educational resources. A student is expected to satisfy the requirements for the degree of bachelor of arts within eight semesters. To remain in academic good standing, an undergraduate is expected to maintain a cumulative average of 74 percent and to satisfy the following earned-credit requirements. Pending credit for an incomplete or absent-from-final-examination with a provisional failing grade may not be considered credit earned. Students who are provisionally required to resign over the summer due to a credit deficiency or who are at risk for required resignation due to failing provisional grades on incompletes must submit earned credit or completed work two to three weeks prior to the start of fall semester classes. Upon submission of a grade for an incomplete or absent-from-final grade, a student's academic status will be reviewed. Promotions in class standing are made at the end of each semester.

REQUIREMENTS FOR ACADEMIC GOOD STANDING

Semester Completed	Expected Credits Earned	Minimum Credits Earned
First	4	2
Second	8	6
Third	12	10
Fourth	16	14
Fifth	20	18
Sixth	24	22
Seventh	28	26

REQUIREMENTS FOR PROMOTION

- **To be promoted to sophomore standing**, a student must have satisfactorily completed at least six credits.
- **To be promoted to junior standing**, a student must have satisfactorily completed at least 14 credits and been accepted into a department/program major.
- **To be promoted to senior standing**, a student must have satisfactorily completed at least 22 credits and made acceptable progress toward the completion of the major.

ACADEMIC DISCIPLINES

Students whose academic performance is deficient will be subject to the following forms of academic discipline, according to the seriousness of the deficiencies. For purposes of academic review, one course is the equivalent of .75 to 1.50 credits. Failing grades on partial-credit courses (.25 and .50) are treated as the equivalent of a D.

Warnings. The mildest form of academic discipline, applied to students whose academic work in one course is passing but unsatisfactory (below C-) or bachelor

of arts students who have earned fewer than three but more than two credits in a single semester.

Probation. The category of academic discipline used when the academic deficiency is serious, usually involving failure to achieve the requisite cumulative average of 74 percent, failure in one course, or passing but unsatisfactory work in two. One passing but unsatisfactory grade continues a student on probation. A student on probation is required to meet regularly with the class dean and perform at a satisfactory level in all courses. Failure to do so usually results in more serious discipline. A student who receives more than two incompletes without the class dean's permission may also be placed on probation.

Strict probation. The category of discipline used in very serious cases of academic deficiency, usually involving at least one of the following conditions:

- Failure in one course and passing but unsatisfactory work in another
- Passing but unsatisfactory work in three or four courses
- One failing grade or passing but unsatisfactory work in two courses while on probation
- Credit deficiency for promotion
- Earning two or fewer credits in a single semester for bachelor of arts students

Students on strict probation are required to attend all classes, to complete all work on time, and to meet regularly with their class dean. They may not receive an incomplete without the class dean's approval. One passing but unsatisfactory grade continues a student on strict probation.

Required resignation. The category of discipline used when the student's academic performance is so deficient as to warrant the student's departure from the University for the purpose of correcting the deficiencies. The notation "resigned" will be entered on the student's official transcript. The performance of students who are required to resign will usually involve at least one of the following deficiencies:

- **For all students:**
 - Failure to earn the required number of credits for promotion
- **If a student is in good standing:**
 - Failure in two or more courses, or
 - Failure in one course and passing but unsatisfactory work in two others
- **If a student is on probation:**
 - Failure in one course and passing but unsatisfactory work in one other, or
 - Passing but unsatisfactory work in three or more courses
- **If a student is on strict probation:**
 - Failure in one or more courses
 - Passing but unsatisfactory work in two or more courses

Students who are required to resign may not be on campus or in university housing, nor may they participate in student activities or the life of the university community while on this status. Students who are required to resign may apply for readmission through their class dean after an absence of at least two semesters. The process of application for readmission requires a demonstration of academic preparedness and fulfillment of all the specified requirements for return. Students readmitted after being required to resign will be placed on strict probation.

Separation. The category of discipline used when the student's academic deficiencies are so serious as to warrant the student's departure from the University without eligibility for readmission. The notation "separated" will be

entered on the student's official transcript. Separation is imposed if a student's academic performance warrants required resignation for a second time.

Appeals. Students who are required to resign or are separated from the University may appeal their status to the Academic Review Committee, a subcommittee of the Educational Policy Committee. A student who wishes to appeal must notify his or her class dean two days prior to the scheduled date on which appeals will be reviewed. Information about the appeals procedure will be provided by the student's class dean. Appeals are reviewed by members of the subcommittee of the Educational Policy Committee with attendance by the class deans and the vice president for student affairs. A student may elect to attend his or her review or participate via telephone. The committee's decisions are final.

ADVANCED PLACEMENT CREDIT, INTERNATIONAL BACCALAUREATE CREDIT, AND OTHER PREMATRICATION CREDIT

A student who has completed an Advanced Placement (AP) course or its equivalent while in secondary school and has achieved a score of 4 or 5 in the corresponding AP examination may be granted one or two credits toward the Wesleyan bachelor's degree with the appropriate department approval.

Students who have completed the International Baccalaureate (IB) course of study and have received a score of 5, 6, or 7 on the corresponding IB examinations may be granted one or two credits for the higher level examination and .75 credits for the subsidiary-level examination toward a Wesleyan bachelor's degree with the appropriate department approval.

Students wanting to post any prematriculation credit (e.g., for advanced exams, including but not limited to Advanced Placement, International Baccalaureate, and A-level) must consult their class dean. The awarding of prematriculation credit is determined at the discretion of the relevant department. The department may stipulate additional conditions for the award of such credit, such as successful completion of a specific University course or courses. Detailed information about prematriculation credit may be obtained from the Registrar's website or the Deans' Office.

Other prematriculation credits that the University will post on the Wesleyan transcript are courses taken with college students and taught by a college teacher on a college campus, provided the courses meet Wesleyan's transfer credit criteria. Please see Transfer of Credit (p. 19) for further details.

Any credits earned at Wesleyan prior to matriculation may apply toward Wesleyan degree requirements, but a maximum of two credits earned elsewhere may apply. This includes Advanced Placement credit, International Baccalaureate credit, and college transfer courses posted to the Wesleyan transcript. While a maximum of two credits will be counted toward the Wesleyan degree, all such credits that have been duly approved by Wesleyan departments will be listed on the student's transcript. These credits may contribute to oversubscription in any one department.

Students may use up to two prematriculation credits awarded for the purpose of class promotion. However, students are not permitted to use this credit to reduce the course load, to clear up failures or unsatisfactory work, or to count toward fulfillment of the general education expectations.

ACCELERATION

A student may complete work for the bachelor of arts degree in fewer than the expected eight semesters, but in no less than the required semesters in residence. Requests for acceleration should be made in writing to the student's class dean. This may be accomplished by (1) applying up to two prematriculation credits, such as approved transfer credits, Advanced Placement credits, A-level or Cambridge Pre-U credits, or International Baccalaureate credits; (2) transferring preapproved summer credit at Wesleyan or another institution; (3) completing independent study or education-in-the-field projects during a summer or an authorized leave of absence; (4) transferring preapproved credit taken at another institution while on an approved leave of absence; or (5) completing additional Wesleyan credits (beyond the expected course load per semester) during the academic year.

NONDEGREE UNDERGRADUATE STUDENTS

Wesleyan offers the following opportunities to take undergraduate courses on a nondegree basis. All nondegree students are subject to the following policies:

- An application is required; students must have a high school diploma or the equivalent (with the exception of High School Scholars) and must be approved for admission by one of the programs below.
- Admission to nondegree status does not constitute admission to Wesleyan University. Nondegree students who wish to apply for admission to Bachelor of Arts degree candidacy may do so through the Office of Admission (<http://www.wesleyan.edu/admission/>) and those who wish to apply for admission to Bachelor of Liberal Studies degree candidacy may do so through Continuing Studies. Their applications will be reviewed according to the same rigorous standards as those of other candidates for admission. Nondegree undergraduates who become admitted to degree candidacy will be expected to satisfy normal degree requirements. Please note that candidates admitted as first-year students may only count two non-Wesleyan credits taken prior to matriculation (admission to degree candidacy) toward the degree.

Auditor. Subject to any conditions set by the instructor, permission to audit does not include permission to have tests, examinations, or papers read or graded. Wesleyan alumni and members of the community who are not registered students are permitted to audit undergraduate courses, subject to the following conditions:

- That the auditor register their contact information with the registrar's office;
- That the presence of an auditor not compromise undergraduates' access to the course;
- That the auditor receive permission of the instructor;

- That the terms of the auditor's participation in the work of the course be mutually agreed upon in advance with the instructor;
- That no academic credit be awarded to an auditor and no transcript issued.

Center for Prison Education. Wesleyan offers the Center for Prison Education (<http://www.wesleyan.edu/cpe/>), awarding undergraduate credit to incarcerated students who are admitted to and complete courses in the center. All students in the center are subject to Wesleyan academic and nonacademic policies as well as center policies. Center courses are offered on-site at the correctional institution.

Community Scholars. Admissions will be handled by Continuing Studies (<http://www.wesleyan.edu/nondegree/>); admissions of international students will be reviewed by the director of the Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>). Individuals accepted for this category may enroll in up to four courses per semester with the instructors' approval as long as their enrollment does not displace a degree-seeking student. The tuition is a per-credit charge, based on Wesleyan's full-time tuition. Housing and financial aid are not available. For information about becoming a Community Scholar, please visit [wesleyan.edu/nondegree/](http://www.wesleyan.edu/nondegree/) (<https://wesleyan.edu/nondegree/>).

Residential Scholars. Admission will be handled by Continuing Studies (<http://www.wesleyan.edu/nondegree/>); admission of international students will be reviewed by the director of the Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>). Individuals accepted for this category must enroll full-time, pay full tuition, and live in university housing. Financial aid is not available. For information about becoming a Residential Scholar, please visit [wesleyan.edu/nondegree/](http://www.wesleyan.edu/nondegree/) (<https://wesleyan.edu/nondegree/>).

High School Scholars. Wesleyan permits outstanding juniors and seniors from selected area high schools to take one course in the fall semester and one course in the spring semester at Wesleyan. Application is made through the guidance counselor at each high school. The completed application should be submitted to the Office of Admission (<http://www.wesleyan.edu/admission/>). Permission is granted by the course instructor.

TRANSFER STUDENTS

Students wishing to apply to Wesleyan as transfer students must have been enrolled for at least one full academic year at another postsecondary academic institution and must have obtained the equivalent of at least six Wesleyan credits. Students who do not meet these conditions must apply for admission as a first-year student.

It is expected that transfer students will keep pace with the class to which they are officially assigned by the Office of the Deans; that is, the number of Wesleyan semesters available to transfer students to earn the Wesleyan degree will be determined by their class standing on entry. For certain exceptional cases and upon petition to the class dean, students may be granted an additional semester to complete requirements for the bachelor's degree. Please see Degree Requirements (p. 11) for semester-in-residence requirement.

Transfer students entering as first-semester sophomores are expected to apply for acceptance into a major after the drop/add period of their second semester at Wesleyan. Transfer students entering as second-semester sophomores are expected to apply for acceptance into a major after the drop/add period of their first semester at Wesleyan. Transfer students who enter as juniors must apply for

acceptance into a major program as soon as possible, but no later than the end of their first semester at Wesleyan.

Credits approved for transfer from other institutions may be considered by the student's major department for inclusion in the major. Transfer students are encouraged to comply with Wesleyan's general education expectations. Transfer credits earned prior to matriculation at Wesleyan may be evaluated for general education equivalency. Please note that grades in courses must be a C- or better to be eligible for transfer of credit. No more than two credits may be transferred from one summer.

STUDY ABROAD

Bachelor of arts students may earn Wesleyan credits by enrolling for nonresident study in either of the following types of programs abroad:

- Wesleyan-administered programs
- Wesleyan-approved programs

The only way in which courses taken abroad during the academic year can be credited toward a Wesleyan bachelor of arts degree is by prior approval from the Office of Study Abroad (OSA). Details regarding the application process are available in the OSA, on the OSA website (wesleyan.edu/cgs/osa (<http://wesleyan.edu/cgs/osa/>)), and through a student's electronic portfolio.

WESLEYAN-ADMINISTERED PROGRAMS

The Wesleyan-administered programs are:

- **France:** Vassar-Wesleyan Program in Paris
- **Italy:** Eastern College Consortium (ECCO) Program in Bologna
- **Spain:** Vassar-Wesleyan Program in Madrid

Study on these programs does not count toward the semester-in-residence requirement.

WESLEYAN-APPROVED PROGRAMS

The Office of Study Abroad maintains a list of programs preapproved for Wesleyan credit in a wide range of countries in Africa, Asia, Europe, the Middle East, Oceania, and the Americas. In certain circumstances, the Office of Study Abroad may grant ad hoc approval for a program not included on the preapproved list. See the OSA website for details (wesleyan.edu/cgs/osa (<http://wesleyan.edu/cgs/osa/>)), including the preapproved program list.

STUDY ABROAD REGULATIONS, GUIDELINES, AND FINANCIAL PROCEDURES

Copies of the regulations, guidelines, and financial procedures are available on the OSA website and through a student's electronic portfolio.

Application for study abroad entails gaining the preapproval of a faculty advisor. Up to four course credits are normally allowed for each of two semesters. Permission for up to a fifth course credit in any given semester may be granted by the program director in the case of Wesleyan-administered programs and

by the Associate Director of Study Abroad for Wesleyan-approved programs and must also be approved by the advisor. Grades earned will be reported on the Wesleyan transcript and will be counted in GPA calculations. Students automatically receive credit toward graduation for this preapproved program of instruction. This is the only way in which credit is given for courses taken abroad, except for courses taken abroad during the winter session or summer, which are processed as transfer credit.

Credit toward completion of a major, certificate, or minor is not granted automatically for courses taken abroad. Students must consult with the relevant chair or advisor when applying for study abroad and must have courses for major, certificate, or minor credit preapproved before departure or, in the event that course information is not available before the program begins, at the point of course registration. Such credit is not granted retroactively, and students who need to change course selections on arrival abroad must seek approval at the time of registration through their advisor and the Office of Study Abroad. It is the responsibility of the student to check with the class dean concerning progress toward graduation and the possibility of oversubscription. General education credit may be granted for courses taken on administered and approved programs abroad only if requested through the Office of Study Abroad.

Students placed on strict probation at the end of the semester and students on medical leave are not eligible to study abroad the following semester; exceptions may be made in the latter case. Any grade of incomplete (IN), deferred grade (X), or absent from final exam (AB) must be resolved two weeks prior to the student's departure date, and students with such grades on their transcript should consult with their class dean about the resolution process.

All university academic regulations apply to students studying for Wesleyan credit abroad, and withdrawal from a study-abroad program will be treated in the same way as withdrawal from the University. Wesleyan may withdraw a student from a program abroad or place a student on medical leave, should it be deemed advisable to do so.

Fees. Students are considered to be enrolled at Wesleyan while abroad. They are therefore charged Wesleyan tuition and are eligible for financial aid. Application for financial assistance should be made to the Financial Aid Office. Tuition charges cover the academic and administrative portions of the program expense. Expenses such as room and board, transportation, and cultural activities will be paid by students either through Wesleyan or directly, depending on the program. This financial arrangement applies to all study abroad for credit during the academic year.

- **Wesleyan-administered programs.** For information and application, students should contact the Office of Study Abroad.
- **Wesleyan-approved programs.** Besides applying directly to the sponsoring institution, students must fill out and submit to the Office of Study Abroad a Wesleyan application for permission to study abroad.

INTERNAL SPECIAL STUDY PROGRAMS

WESLEYAN INTERSESSIONS: SUMMER AND WINTER SESSIONS

The University offers two intersessions: Summer Session and Winter Session. Course credit earned through intersessions is eligible to count toward the

graduation requirement. Participation in intersessions does not count as a semester in residence. An intersession does not constitute an academic semester at Wesleyan. All students in intersessions are subject to Wesleyan academic and nonacademic policy and are also subject to intersession policies. Courses taken during intersessions are subject to the same academic regulations as courses taken during the regular academic year. Students should consult their class dean about how intersession performance may affect their academic standing or check the Deans' Office website for clarification. Students are not eligible to do independent study or education in the field and take an intersession course simultaneously. (For summer transfer credit, please see External Special Study Programs - Transfer Credit)

Graduate Liberal Studies (GLS). Wesleyan undergraduates, normally rising juniors and seniors, may take courses in the Graduate Liberal Studies program subject to approval by the instructor of the course, their class dean, faculty advisor or major department chair, and the GLS director. Participation in this program does not count as a semester in residence. Wesleyan undergraduates attending GLS are subject to its academic rules and regulations. All grades and course work attempted by Wesleyan undergraduates in GLS courses will be recorded on the student's undergraduate record and transcript. For more information, visit wesleyan.edu/masters/ (<https://wesleyan.edu/masters/>), e-mail masters@wesleyan.edu, or visit the office at 74 Wyllys Avenue.

Independent Study. A student may obtain academic credit for certain forms of independent study during a summer or an authorized leave of absence. Activities such as independent reading, special work under supervision, and educational tours may earn credit provided that (1) these plans have been approved in advance by the relevant Wesleyan department and the class dean, and (2) all requirements specified by the approving department in the form of an examination, paper, or equivalent assignment have been satisfied. Please note that senior theses or senior projects may be undertaken only as senior thesis tutorials or projects and not as independent study. No more than two credits may be earned in a semester or summer for such special work. See "Fees," below. Forms for independent study, along with other useful resources, are available in the Office of the Deans or online at wesleyan.edu/studentaffairs/forms.html (<https://wesleyan.edu/studentaffairs/forms.html>).

Education in the Field. Approved education-in-the-field programs are listed under the sponsoring departments or colleges. They may be taken during the summer, during an authorized leave of absence, or during an academic term. At the discretion of the department involved, up to two course credits per semester may be granted for education in the field. Students must consult with the department in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation. Credit and a grade for education in the field will be posted to the student's transcript once a grade report has been submitted by the faculty sponsor.

Students pursuing an education in the field during the summer or while on an authorized leave of absence during the academic year are not eligible for financial aid and will be charged a special tuition rate (see below). Students enrolled full time may also pursue an education in the field in conjunction with regular courses (for a combined total of at least three credits) and will be charged the full tuition rate. In no case will financial aid to a student in this category exceed the amount of aid the student would have received as a regular full-time student at the University.

Education-in-the-field programs are under the general supervision of the Educational Policy Committee. Information concerning specific procedures for the supervision and evaluation of education-in-the-field programs may be obtained from the sponsoring department or college. Forms for education in the field are available at the Office of the Deans or on the Office of the Deans' website.

No more than four credits earned through independent study and education in the field combined can be counted toward the graduation requirements.

FEES FOR INDEPENDENT STUDY AND EDUCATION IN THE FIELD AND CREDIT FROM UNACCREDITED INSTITUTIONS

Students should contact the Student Accounts Office (237 High Street; wesleyan.edu/studentaccounts/tuition.html (<https://wesleyan.edu/studentaccounts/tuition.html>)) for information about fees for pursuing an independent study, enrolling only in an education in the field, or taking a course at an unaccredited institution.

TEACHING APPRENTICE PROGRAM

The Teaching Apprentice Program offers undergraduate students the opportunity to participate with a faculty member (who serves as a master teacher) in the teaching of one of the faculty member's courses. The apprentice is enrolled in an apprenticeship tutorial conducted by the master teacher. The tutorials focus in varying degrees on the subject matter of the course and on the teaching activity itself. Apprentices are awarded one course credit for successful completion of the semester tutorial.

The Teaching Apprentice Program has two main objectives:

- To provide an opportunity for advanced students to deepen their understanding of a subject while gaining insight into the teaching process; and
- To improve the learning environment in courses designed primarily for first-year and sophomore students by adding a student teacher who can bridge the intellectual gap between instructors and beginning students. The apprentice is viewed as a member of a teaching team rather than as a teaching assistant. While the interaction between the apprentice and the master teacher can take many forms, faculty are urged to design the role of the apprentice to stimulate greater participation in the learning activity by students in the course. Normally, the apprentice and master teacher have, in some prior activity, established the sort of intellectual rapport that will promote an effective team relationship.

Apprentice proposals should be developed by the master teacher with input, when possible, from the prospective apprentice. Applications should describe the teaching role to be played by the apprentice, the academic course work to be done in the apprenticeship tutorial, and the basis on which the apprentice will be evaluated. Applications must also meet the guidelines for apprenticeships established by the department or program and approved by the Educational Policy Committee. Faculty members must submit applications to the Office of Academic Affairs in October to apply for a spring semester apprentice and in April to apply for a fall semester apprentice. The following policies apply to teaching apprentices and teaching apprenticeships:

- If a student serves as an apprentice in the same course more than once, the student may receive no more than a total of one credit for teaching in that course.
- Teaching apprentices may not teach in group tutorials or student-forum courses.
- A student may not count more than two course credits earned in apprenticeship tutorials toward degree requirements.

TUTORIALS

Individual tutorials, numbered **401-402** and **421-422**, are available only to sophomores, juniors, and seniors. A tutorial may not be given when a comparable course is available in the same academic year. Students may not count more than four course credits combined of individual and group tutorials toward degree requirements. Tutorial forms must be approved by the chair of the department or program in which the tutorial is given.

Tutorial applications should include a concise description of the work to be done, including the number of hours to be devoted to the tutorial, the number of meetings with the tutor, a reading list, and a description of the work on which the student's performance will be evaluated. Tutorials should be submitted through the drop/add system.

Tutorials for one credit should be added during the drop/add period. Partial-credit tutorials beginning after the drop/add period must be added to a student's schedule within five days of the start of the academic exercise. The minimum credit amount for any tutorial is .25 credit.

Group tutorials, numbered **411-412**, are proposed and taught by a faculty member. Tutorials should be submitted through the drop/add system. For information about tutorials during the summer term, please contact the Summer Session office.

STUDENT FORUMS

Student-run group tutorials, numbered **419-420**, must be sponsored by a faculty member and approved by the chair of a department or program and by the relevant academic dean. Proposals for a student forum must be submitted by the department or program chair to the Office of Academic Affairs by the end of exams prior to the semester in which the course will be offered. Application forms and instructions are available at the Office of the Registrar. A student may count two student forum course credits toward degree requirements but is limited to a combined maximum of two credits in physical education and student forum courses.

EXTERNAL SPECIAL STUDY PROGRAMS

TRANSFER OF CREDIT

A student may obtain credit toward the Wesleyan degree for courses taken during the academic year at another accredited U.S. institution or in the summer session of another accredited U.S. or international institution if (1) the courses have been approved in advance by the relevant Wesleyan department, program, or college, and (2) the grades in the courses are C- or better. (Courses taken prior to matriculation do not require preapproval and may include courses taken at an accredited international institution during the academic year.) Departments, programs, or colleges may impose other conditions for the transfer of credit, such as a higher minimum grade, review of coursework, passing a departmentally administered exam, etc. The Wesleyan academic record will not reflect grades earned at another institution; only credits may be transferred. The final amount of credit transferred to the Wesleyan transcript will be determined

in accordance with Wesleyan's policy on transfer credit and the evaluation of the appropriate department. (As a guideline, it should be noted that one Wesleyan unit is equivalent to four semester hours, or six quarter-hours.) A bachelor of arts student may post a maximum of two non-Wesleyan credits (2.5 credits with a course that offers a lab) in any given summer. Study-abroad credits earned by students who currently are withdrawn or required to resign will not be accepted. Forms for permission to transfer credit are available at the Office of the Deans or on the Office of the Deans' website.

A student who wishes to receive Wesleyan credit for work done at an unaccredited institution must secure the sponsorship of a Wesleyan faculty member, the approval of the chair of the corresponding Wesleyan department, and the approval of the class dean prior to undertaking the work. (Courses taken prior to matriculation do not require preapproval.) To apply for credit, a student should write a statement that describes the work to be done and indicates the amount of academic credit sought. The statement should be endorsed by the faculty sponsor and the department chair and submitted to the class dean. The faculty sponsor will be responsible for evaluating the completed work and reporting the amount of credit earned to the class dean. For fees please see wesleyan.edu/studentaccounts/tuition.html (<https://wesleyan.edu/studentaccounts/tuition.html>).

TWELVE-COLLEGE EXCHANGE PROGRAM

The Twelve-College Exchange Program is a cooperative program for residential student exchange between Wesleyan and the following colleges: Amherst, Bowdoin, Connecticut, Dartmouth, Mount Holyoke, Smith, Trinity, Vassar, Wellesley, and Wheaton. Two special programs associated with the Twelve-College Exchange Program are the Williams-Mystic Seaport Program in American Maritime Studies in Mystic, Connecticut, sponsored by Williams College, and the National Theater Institute, in Waterford, Connecticut, sponsored by Connecticut College. Wesleyan sophomores, juniors, and seniors in good standing are eligible to apply to any of the participating institutions for either one semester or the full year. Participation in the Twelve-College Exchange Program by Wesleyan students does not count toward Wesleyan's residence requirement, but courses are coded for general education equivalency. Catalogs of participating colleges and information about the programs are available in the Office of Study Abroad (<http://wesleyan.edu/cgs/osa/>). All courses taken on a Twelve-College Exchange Program will post to the student's Wesleyan transcript with grades and count toward the Wesleyan GPA.

Tuition and fees are paid to the host colleges; no fees are paid to Wesleyan. Financial-aid students may apply their Wesleyan assistance, with the exception of work/study benefits, toward expenses at the host college. It is the student's responsibility to complete any loan negotiations before leaving the Wesleyan campus. A Wesleyan student who participates in the exchange program is expected to abide by the rules and regulations of the host institution.

Students who wish to participate in the Twelve-College Exchange Program must apply through the Office of Study Abroad (<http://wesleyan.edu/cgs/osa/>). Students may apply to only one college at a time. The deadline for submission of completed applications is February 1 for either one or both semesters of the subsequent academic year. However, applications will be considered as long as space is available at the desired institution. Completed and approved applications are sent by Wesleyan to the respective colleges. If rejected by the college of their first choice, students may apply to a second college.

OTHER NONRESIDENT PROGRAMS

A small number of programs considered by the faculty to be of importance in supplementing the Wesleyan curriculum for bachelor of arts students with certain academic interests are treated as approved nonresident study programs. Participants continue to be Wesleyan students, pay regular tuition to the University, and are not placed on leave of absence. Information about these programs can be obtained from the Office of Study Abroad or the faculty member or office listed below. Students planning to participate in these programs should check with their faculty advisor and class dean concerning their progress toward completion of the major and graduation requirements. Participation in these programs does not count as a semester in residence.

The Woods Hole SEA Semester. Through this 12-week program, students spend six weeks at the Woods Hole Center for Oceanographic Research studying the chemistry, biology, physics, and geology of the oceans; marine history and literature; and maritime policy; and designing an independent research project. The second six weeks of the program entail lab research and sailing, navigating, and maintenance aboard a 135-foot vessel. See the chair of the Department of Earth and Environmental Sciences for information about the curriculum and application process.

Semester in Environmental Science (SES) at the Marine Biological Laboratory, Woods Hole. The purpose of this program is to instruct students in the basic methods and principles of ecosystems science in a manner that enhances and supplements existing curricula in natural and environmental sciences at the colleges participating in the SES consortium. The program is interdisciplinary and offers a core curriculum, stressing team research and team study. See the chair of the Department of Earth and Environmental Sciences for information about the curriculum and application process.

The Urban Education Semester. This is a fully accredited academic immersion program combining an interdisciplinary examination of inner-city public education with supervised practical teaching experience in selected New York City public school classrooms. Each semester, students enroll in graduate courses at the Bank Street College of Education and work three days per week under the guidance of distinguished teachers. The Urban Education Semester introduces students to the theory and practice of urban education. Interested students should contact the Gordon Career Center (<http://www.wesleyan.edu/careercenter/>).

Wesleyan-Trinity-Connecticut College Consortium. By special arrangement with Connecticut College and Trinity College, Wesleyan students may enroll, without additional cost, in courses given at these institutions. Normally, students will be permitted to take only courses not offered at Wesleyan. Enrollment is limited to one course per semester. Arrangements for enrollment may be made through the Office of the Registrar (<http://www.wesleyan.edu/registrar/>).

Dual-Degree Programs—Engineering. Wesleyan maintains dual-degree programs with Columbia University, Dartmouth College, and the California Institute of Technology. These programs allow students to earn two degrees in five years combined (three years at Wesleyan, two at the engineering school). While all three partners participate in the sequential 3-2 version, Dartmouth also makes a 2-1-1-1 track available in which students spend the first two years and their senior year at Wesleyan. In addition, Columbia University offers the so-called “4-2 option” in which students complete four years at Wesleyan before pursuing the BS engineering degree at Columbia. Provided that the necessary math and science courses are taken, this option allows students to pursue a wide range majors at Wesleyan before entering the engineering school.

AFROTC. Qualified Wesleyan students may participate in the Air Force Reserve Officer Training Corps (AFROTC) program hosted by Yale University’s AFROTC detachment. Students who wish to transfer credits for courses they successfully complete through this program may do so if (1) the courses have been approved in advance by the relevant Wesleyan department, and (2) the grades in the courses are C- or better. Students who wish to request the transfer of credit to their Wesleyan degree must do so through the same process and under the same guidelines as transfer credit from any other accredited institution. For details on how to transfer credit, please refer to Transfer of Credit from Other Institutions. For general information or assistance with any aspects of Wesleyan AFROTC participation, please contact Dean Wood, coordinator of veteran and AFROTC affairs, at jpwood@wesleyan.edu. For more information about Yale’s AFROTC program, please contact Yale AFROTC Detachment 009, 203-432-9431 or airforce@yale.edu.

ADVANCED DEGREES

BA/MA PROGRAM IN THE NATURAL SCIENCES, MATHEMATICS, AND PSYCHOLOGY

Wesleyan offers a BA/MA program as a formal curricular option for students who are interested in an intensive research experience. The program has a research orientation and includes course work, seminars, and, in some cases, teaching. The program provides a strong professional background for either further advanced study or employment in industry. The expected period for completion of the program is 10 semesters for those students who complete the BA in eight semesters. Students who finish the BA degree in less than eight semesters are eligible to apply. Departments and faculty advisors will pay careful attention to the course work and research backgrounds of students completing the BA in less than eight semesters to be sure they are able to meet all the expectations of the program in less than 10 full semesters of study and research. Further information on the BA/MA program is available at [wesleyan.edu/grad/degree-programs/bama.html](http://www.wesleyan.edu/grad/degree-programs/bama.html) (<http://www.wesleyan.edu/grad/degree-programs/bama.html>).

MA AND PHD PROGRAMS IN PHYSICAL SCIENCES, MATHEMATICS, AND MUSIC

The University offers work leading to the MA degree in astronomy, computer science, earth and environmental sciences, mathematics, and music, and to the PhD in biology, chemistry, ethnomusicology, mathematics, molecular biology and biochemistry, and physics. Theses and dissertations are required for these degrees. An interdepartmental program leading to the PhD is offered jointly by the chemistry and physics departments. An interdepartmental program in molecular biophysics leading to the PhD is offered by the departments of molecular biology and biochemistry and chemistry.

Graduate instruction is scheduled within an academic year consisting of two academic semesters from September to June. Summer work consisting of independent study or research is expected. No evening courses or summer school courses are available. Tuition remission and service as a teaching assistant are parts of the financial aid package offered to MA and PhD students. Information on the graduate programs is available at [wesleyan.edu/grad/](http://www.wesleyan.edu/grad/) (<https://wesleyan.edu/grad/>).

MA IN CURATORIAL PRACTICE

This program is designed to enhance the professional student's skills as a performing arts presenter, manager, producer, and curator, allowing each participant to advance in the field or, if the student is new to the field, enable him/her to pursue a position at a presenting institution or as an independent curator. Students gain an understanding of performance and movement-based artistic and curatorial practice; the social, cultural and historical context of these practices; and the ability to write and speak about this work in a variety of contexts. For more information, visit wesleyan.edu/icpp (<https://wesleyan.edu/icpp/>).

THE MALS AND MPhil IN GRADUATE LIBERAL STUDIES

Graduate Liberal Studies offers courses in the arts, humanities, mathematics, sciences, and social sciences leading to the master of arts in liberal studies (MALS) or the master of philosophy in liberal arts (MPhil). Courses meet on campus or in various combinations of online teaching modes, featuring schedules designed for professionals who are part-time students. Students are expected to complete all graduation requirements within six years. For more information, visit wesleyan.edu/masters (<https://wesleyan.edu/masters/>), e-mail masters@wesleyan.edu, or visit the office at 74 Wyllys Avenue.

GENERAL REGULATIONS

The University expects all students to fulfill faithfully and effectively their responsibilities as members of the Wesleyan community. A student may be suspended or be required to withdraw from the University or from any course at any time when, in the judgment of the class dean or the faculty, respectively, the student fails to meet this obligation satisfactorily.

UNIT OF CREDIT

One unit of Wesleyan credit requires 120 to 160 hours of academic work. This work typically consists of 40 hours of scheduled class time, which is made up of 39 hours of class meeting time,¹ and one scheduled final exam or the equivalent of at least one hour of additional work. In addition, 80 to 120 hours of out-of-class work are expected. A one-credit course that does not conform to a standard meeting pattern of at least 40 hours must still require 120 to 160 hours of academic work. For courses that award more or less than one unit of credit, the required hours of academic work are normally prorated to conform to the above formula.

¹ The established standard meeting times allow up to 10 minutes for transition to and from other classes.

ENROLLMENT

Students must comply with the regulations for matriculation with the University as announced by the registrar. A student who does not enroll in the University by the announced deadline will be considered administratively withdrawn from the

University. Bachelor of Arts students who enroll in fewer than three credits may be subjected to disenrollment.

MEDICAL REPORT

Every student entering the University for the first time must submit health information as requested by the director of University Health Services.

PAYMENT OF BILLS

It is the student's responsibility to see that payment deadlines are met. Failure to do so prevents the student from enrolling, participating in course preregistration, and participating in the housing selection process. Diplomas, grades, and transcripts also will be withheld until university bills have been paid.

SELECTION OF COURSES

Detailed information concerning course offerings is given in the Wesleyan University Course Catalog; WesMaps (<http://www.wesleyan.edu/wesmaps/>), Wesleyan's online curriculum home page; and the Course Supplement, a condensed listing of all course offerings for each semester. These publications should be consulted for information concerning time and place of class meetings, additions or changes, and cancellations.

CHANGES IN AND WITHDRAWAL FROM COURSES

Students may not add courses (including tutorials) to their schedules after the drop/add period. Exceptions will be made for courses that start after the beginning of the semester, provided that the required drop/add or tutorial forms are submitted to the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) within five class days after the start of the course.

A student who withdraws from a course, the only option after the drop/add period, will receive a notation of "W" and the course will remain on the student's transcript. The deadline for withdrawal by choice and without penalty from a full-semester course is one week before the end of classes. A student may withdraw from a first- and third-quarter course one week before the end of the corresponding quarter. For second- and fourth-quarter courses, the deadline for withdrawal corresponds to the withdrawal deadline for full-semester courses. To withdraw the student must submit to the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) by the stated deadline a withdrawal slip signed by the instructor, the faculty advisor, and the class dean.

An instructor may require a student to withdraw from a course if the student fails to meet the announced conditions of enrollment. The student will be required to submit a completed withdrawal slip to the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) to make the withdrawal from the course official.

Students who withdraw from the University before the stated withdrawal deadline will also be withdrawn from their courses. For a student withdrawing after the stated withdrawal deadline, the courses will remain on the transcript and they will be graded accordingly.

AUDITING

Subject to any conditions set by the instructor, a registered Wesleyan student may be permitted to audit a course without charge. At the end of the semester, the instructor may add to the grade roster the name of any student who has attended with sufficient regularity to have the course listed in the academic record as audited, without credit. Permission to audit does not include permission to have tests, examinations, or papers read or graded. Wesleyan alumni and members of the community, please see Nondegree Undergraduate Students (p. 16).

CLASS ATTENDANCE

A student is expected to attend class meetings regularly. Since the faculty intends that class attendance be primarily the student's responsibility, no precise limitation of absences has been prescribed for all students. It is understood, however, that absence from class is regarded as the exception, not the rule. An instructor should notify the class dean of any student who is absent from class for one week or three consecutive classes, whichever comes first. Students on strict probation must attend all classes in which they are enrolled.

Instructors are entitled to establish definite and precise rules governing attendance. Any student who is repeatedly absent without excuse from scheduled academic exercises at which attendance is mandatory may be required to withdraw from the course.

UNSATISFACTORY PROGRESS REPORTS

It is expected that faculty will submit in a timely manner an Unsatisfactory Progress Report (UPR) to the class dean for any student who is doing unsatisfactory work. UPRs help the class deans identify students who are having academic difficulties and allow the deans to work with instructors to reach out and work with these students. Early intervention proves to be the most effective method for helping students experiencing academic difficulties. UPRs should be submitted for:

- Students who are doing unsatisfactory work (lower than C-) or experiencing difficulties that will result in unsatisfactory work;
- Students who are experiencing substantial difficulty with the course even though they may have a satisfactory grade of C or better;
- Students who are on strict probation. The Deans' Office notifies instructors if such a student is in their course.

SUBMISSION OF GRADES

Under normal circumstances, only the instructor of record can submit a course grade. However, in cases where the instructor is no longer employed by the University or has become unavailable, the department chair, or a faculty member designated by the chair, may, upon review of the student's work, submit a grade. Grades can only be given for work assigned and submitted during the academic term, except in the case where a student has requested an incomplete (please see Incompletes/Completion of Work in Courses).

CHANGE OF SUBMITTED GRADE BY THE INSTRUCTOR

A change of a submitted grade may be made by the instructor on the following grounds:

- Administrative error
- Error in calculation of grade
- Lost work submitted during the academic term was found
- Submission of outstanding work from an incomplete whereby the final grade is not lower than the provisional grade

STUDENT GRIEVANCE PROCEDURE INCLUDING APPEAL FOR A GRADE CHANGE

The process for appealing a grade or contesting any aspect of a course (including the scheduling of classes and examinations) is:

- The student discusses the grade or the contested issue with the instructor of the course; if the student is not satisfied that a reasonable explanation has been provided, or if the student wants to address an issue in confidence, then
- The student appeals to the department/program chair; if not satisfied, then
- The student appeals to the academic dean of the department or program's division (Arts and Humanities, Social Sciences, or Natural Science and Mathematics); if not satisfied, then
- The student appeals to the provost.

All appeals of grades received in the fall or winter term must be initiated by the student before the end of the following spring term; all appeals of grades received in the spring or summer term must be initiated by the student before the end of the following fall term.

Under normal circumstances, a grade appeal beyond the instructor will only be granted with the consent of the instructor. In cases where the instructor has become unavailable or an official investigative proceeding has determined that the instructor behaved discriminatorily toward the student, however, the department chair, or a faculty member designated by the chair, may determine the result of a grade appeal.

INCOMPLETES/COMPLETION OF WORK IN COURSES

All the work of a course must be completed and submitted to the instructor by the last day of classes. The only exceptions to this are final examinations and, in courses without a registrar-scheduled final examination, significant assignments such as final take-home exams, semester-long projects, and term papers, which must be due no sooner than the first day, and no later than the last day, of the exam period, and preferably at the time slot reserved for the registrar-scheduled examination. A student who is unable to meet these deadlines, for the reasons listed below, may request the permission of the instructor to meet the requirement no later than 30 days after the last day of exams. If the instructor grants the extension, a grade of Incomplete (IN) must be submitted to the registrar at the time grades are due. Grades of Incomplete must be accompanied by a provisional grade. If the student does not submit the outstanding work in the course by the deadline, the provisional grade will become the final grade.

Any provisional incomplete grades remaining by the end of the drop/add period of the subsequent semester will automatically be converted to the provisional final grade by the Office of the Registrar (<http://www.wesleyan.edu/registrar/>).

A student may receive up to two incompletes per semester by this method. To receive incompletes in more than two courses, the student must petition his or her class dean. The petition can be granted only on grounds of illness, family

crisis, or other extraordinary circumstances. To petition for a brief extension of the Incomplete deadline, based on these same criteria, students must make a request to their class dean. The class dean will make the decision about whether the petition will be granted in consultation with the Vice President for Student Affairs and the course instructor.

Incompletes will not be granted for summer or winter sessions. Rare exceptions to this policy may be made in the case of serious emergencies, by petitioning the class dean. For the impact of incompletes on students' records for the purposes of academic review, students should consult their class dean. Students on strict probation will not be allowed to receive incompletes without the prior approval of their class dean.

Students who started at Wesleyan prior to Fall 2018 can petition for an extension of the incomplete deadline based on the policy that was in place in 2017.

REPEATABLE COURSES

Courses that may be repeated receive a designation in WesMaps and may be taken twice at most for a letter grade (AF). Please see Graduation Requirements (p. 11) for additional regulations governing repeatable courses.

COURSES RETAKEN FOR LOW GRADE

A student who receives a C- or below in a non-repeatable course may repeat the course once. The original grade remains on the transcript and both grades are calculated in the grade point average. The course may count only once toward general education expectations and the 32 graduation credits.

Failed Courses (below D-): Students who fail a course may add this course to their plans during pre-registration or drop/add.

Low Grades (C- to D-): A student who wants to retake a course due to a low grade may submit an enrollment request for the class only during the drop/add period. The registrar will flag the enrollment request to indicate that the course is being repeated due to low grade.

REGULATIONS GOVERNING THE SCHEDULING OF CLASSES

Classes will meet each week for three class periods of 50 minutes each, for two class periods of 80 minutes each, or for one class period that corresponds as closely as possible to the standard time periods described below.

MEETING PATTERNS

Classes that meet three times weekly may meet only on Monday, Wednesday, and Friday. Classes that meet twice weekly may meet within regulated times on Tuesday and Thursday or Monday and Wednesday afternoons, or on any two mornings combining Monday, Wednesday, or Friday (MW, MF, or WF). Courses that meet once weekly may meet in the afternoon or evening on any day. Classes and laboratory sessions should be scheduled between 8 a.m. and 4:10 p.m. and in the evenings after 7:10 p.m.

MORNING CLASSES

On Monday, Wednesday, and Friday, classes are scheduled for three periods of 50 minutes each beginning at 8:50 a.m., 9:50 a.m., or 10:50 a.m. On Tuesday and Thursday, classes are scheduled for two 80-minute periods beginning at 8:50

a.m. and 10:20 a.m.; any combination of two on Monday, Wednesday, or Friday (MW, MF, or WF) may be scheduled at 8:20 a.m. or 10:50 a.m.

AFTERNOON CLASSES

On Monday, Wednesday, and Friday, classes are scheduled for three periods of 50 minutes each. Monday and Wednesday or Tuesday and Thursday classes are scheduled for two periods of 80 minutes each. All afternoon classes should begin at 1:20 p.m. or 2:50 p.m.

Exceptions to these rules require approval by the Educational Policy Committee. Ordinarily, classes should not overlap more than one standard period between 8 a.m. and 3 p.m. Saturday classes may be scheduled as desired by departments.

All additional required components of class schedules beyond the regular meetings should be announced, with dates and times if possible, on the online course catalog listing before the preregistration period begins. All dates and times should be announced no later than the first class meeting. Thereafter, additional components may only be required if alternatives are available for students who have academic or required varsity athletic schedule conflicts.

READING PERIOD

This period is designated for students to prepare for examinations and complete assignments due at the end of the semester. To protect the integrity of that period, the faculty have established the following regulations:

- Final exams, comprehensive examinations covering materials from the course of the entire semester, are to be given only during the formal exam period established by the faculty.
- Classes can be held only during the class period established by the faculty; make-up classes should be held during that established class period.
- In courses without a registrar-scheduled final examination, significant assignments such as final take-home exams, semester-long projects, and term papers must be due no sooner than the first day, and no later than the last day, of the exam period, and preferably at the time slot reserved for the registrar-scheduled examination.
- Student organizations should not schedule retreats, programs, or meetings that require student attendance during Reading Period.
- Departmental, program, and college activities that require student participation should not be held during Reading Period, with the exception of oral and written examinations covered by alternative exam calendars.
- Sessions or information programs that require student attendance should not be held during Reading Period.

SCHEDULED FINAL EXAMINATIONS

The schedule of final examinations will be issued in advance. The time of any examination may be changed by unanimous request of the class and with the approval of the instructor, but it must be set within the period designated by the faculty for examinations, and the change must be reported promptly to the registrar. The faculty has voted to comply with the following guidelines:

- That "hour exams" be limited to 50 minutes so that students who are scheduled to leave for other classes may not be placed at a disadvantage
- That final examinations be limited to three hours unless otherwise announced before the examination

If a student is absent from the final examination with the permission of the instructor, a grade of absent will be assigned. A grade of absent will be

accompanied by a provisional grade that will become the final grade if the final examination is not made up by the end of the first full week of classes of the subsequent semester. The exam should be scheduled at a time mutually agreed upon by student and instructor, where both should be aware of the policy governing on-campus housing availability during times when the University is not in regular session. Grades are due in the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) no later than the last day of drop/add in the subsequent semester.

If a student has three or more final examinations on one day or four in two days, the student may request a rescheduled examination from one instructor.

MAKE-UP EXAMINATIONS FOR SUSPENDED STUDENTS

Students who have been suspended from the privileges of the campus for a limited period are held responsible ultimately for all of the work in their courses. Giving make-up examinations to a suspended student upon the student's return is entirely at the discretion of the instructor. The instructor may waive any examinations or quizzes given to the class during the period of the suspension and may base the student's grade on the rest of the record, or the instructor may require the student to take make-up examinations or submit additional work.

LEAVE, WITHDRAWAL, READMISSION, AND REFUND POLICY

The following categories indicate the conditions under which a student's registration at Wesleyan may be interrupted. These designations are recorded on the student's permanent record.

LEAVE OF ABSENCE

An undergraduate may take an approved leave of absence for a specified period, normally not to exceed two semesters. Students who interrupt their enrollment at Wesleyan by taking a nonacademic leave for more than four consecutive semesters must apply for readmission. Leave-of-absence application forms are available in the Office of the Deans, (<http://www.wesleyan.edu/studentaffairs/forms.html>) the Office of the Registrar, (<http://www.wesleyan.edu/registrar/>) or on their respective websites.

For academic and nonacademic leaves, the deadline for submission of leave-of-absence applications is December 1 for the spring semester and April 1 for the fall semester. Academic and nonacademic leaves will not be granted after the drop/add period at the beginning of each semester.

Students who do not enroll or renew their leave by the end of the drop/add period in the expected semester of return will be administratively withdrawn from the University. Application for readmission is available online and will be considered by the Office of the Deans.

ACADEMIC LEAVE

A student on academic leave must earn a minimum of three course credits per semester (full-time status) at another institution. Academic leave is limited to one year but may be renewed for an additional year upon request to the class dean and the faculty advisor. Students may not go on an academic leave to study abroad. Please see Transfer of Credit (p. 19) for transfer credit criteria. Credits earned while on leave must be processed two weeks prior to the semester in which a student returns for purposes of class-year classification.

NONACADEMIC LEAVE

Wesleyan permits students to interrupt their college careers for a semester or year of nonacademic experience. Students may receive assistance from the Office of the Deans (<http://www.wesleyan.edu/studentaffairs/about/classdeans.html>) and from the Gordon Career Center (<http://www.wesleyan.edu/careercenter/>) in exploring opportunities for the period of the leave. Nonacademic leave is limited to one year but may be extended upon request to the faculty advisor and class dean. Students will be reclassified to the appropriate class year at the end of the semester in which they file their leave. Students who have obtained prior approval may earn academic credit while on leave and will be reclassified, if appropriate, once these credits are posted to their transcript.

MEDICAL LEAVE

A medical leave is authorized by the vice president for student affairs on the basis of a recommendation from the medical director of University Health Services (UHS) or the director of Counseling and Psychological Services (CAPS). Students on a medical leave must leave campus and focus on the evaluation of, treatment for, and management of the illness or condition that necessitates the leave. The appropriate class dean will communicate the terms of the leave as well as the conditions and procedures for returning to Wesleyan. When a medical leave is authorized, students are withdrawn from the courses in which they are enrolled. In exceptional cases, some incomplete grades may be granted, depending on course content and the date of the leave. (Note that any semester in which a student takes a leave and receives at least one grade is counted as a semester in residence for purposes of graduation.)

Full policy and additional information are available at: wesleyan.edu/studentaffairs/wellbeing/medicallleave.html (<https://wesleyan.edu/studentaffairs/wellbeing/medicallleave.html>).

WITHDRAWAL

The five forms of withdrawal fall into three main categories: voluntary, involuntary for academic reasons, and involuntary for nonacademic reasons. Withdrawal from the University does not include withdrawal from courses if it occurs after the course withdrawal deadline.

VOLUNTARY

Withdrew. A student has voluntarily left Wesleyan.

INVOLUNTARY FOR ACADEMIC REASONS

- *Required resignation.* A student has been asked to leave the University for academic reasons, with the privilege of applying for readmission after the recommended period of absence.
- *Separation.* A student has been asked to leave the University for the second time for academic reasons and does not have the privilege of applying for readmission.

INVOLUNTARY FOR NONACADEMIC REASONS

- *Suspension.* A student has been asked to leave the University for other than academic reasons for a specified period.
- *Dismissal.* A student has been asked to leave the University for other than academic reasons without the privilege of applying for readmission.

READMISSION

Students who have withdrawn or have been required to resign may apply to the Office of the Deans (<http://www.wesleyan.edu/studentaffairs/forms.html>) for readmission. The readmission application requires a \$50 fee and other accompanying materials specified at the time of departure. Students wishing

to enter the University for the fall semester must notify the Office of the Deans (<http://www.wesleyan.edu/studentaffairs/about/>) of their intent by May 1 and submit readmission materials by June 1; for the spring semester, notification must be made by November 1 with materials submitted by December 1. Candidates are strongly urged to meet all requirements well in advance of deadlines, since housing assignments and financial aid awards cannot be made until readmission is granted. Credits earned while away are subject to the conditions described in Transfer of Credit (p. 19). Bachelor of arts students who wish to be admitted to the bachelor of liberal studies program upon readmission to the University must have been away from the University for at least three years before they would be allowed to switch degree programs in this manner. Bachelor of liberal studies students who wish to be admitted to the Bachelor of arts program at any point must apply as transfer students to the Admissions Office.

REFUNDS

For guidelines governing refunds to students who terminate enrollment, please visit <https://www.wesleyan.edu/studentaccounts/refunds.html>.

For guidelines governing VA Pending Payment Compliance, please visit https://www.wesleyan.edu/registrar/enrollment/veteran_certification.html.

KEY TO SYMBOLS AND ABBREVIATIONS

The number of the course indicates the general character and level of the course.

101–200	Elective for all classes; not credited in the major program of the department
201–400	Intermediate and advanced courses and seminars that may be credited in the major program of the department
401–402	Individual tutorials. Permission of the tutor and the department chair is required.
403–404	Department/program project or essay
407–408	Senior tutorial (only enroll through Honors Coordinator)
409–410	Senior thesis tutorial. Permission of the tutor and the department chair is required.
411–412	Group tutorials. Permission of the tutor and the department chair is required.
419–420	Student forum
421–422	Undergraduate research in the sciences. Permission of the tutor and the department chair is required.
423–424	Advanced Research Seminar, Undergraduate
431–460	Studio work, by individual or group
461–464	Research projects done off campus
465–466	Education in the field
467–468	Independent study project
469–470	Education in the field/independent study project—summer
471–500	Nonrepeating courses, seminars, group tutorials, and colloquia
491–492	Courses credited to teaching apprentices and undergraduate teaching assistants
495–496	Research apprenticeship. Permission of faculty research mentor and the department chair is required.
501–600	Graduate-level courses, undergraduates by permission

AFRICAN AMERICAN STUDIES

The African American Studies major and minor offer a substantial interdisciplinary, comparative, and cross-cultural approach to the study of the experiences of people of African descent in the black Atlantic world, especially in the United States and the Caribbean. The major and minor, which feature courses in the humanities, social sciences, and the arts, enables students to apply, critique, and reimagine the methodologies and insights of many disciplines to their understanding of the cultural, historical, political, and social development of people of African descent. The curriculum enables students to better understand the social structures and cultural traditions created by Africans in the diaspora and to better understand Western conceptualizations of race, the relationship between issues of race and identity, and the histories and influences of people of African descent.

Students who graduate with a major in African American Studies go on to pursue advanced degrees and careers in fields such as law, medicine, literature, education, business, public policy, African American studies, and the sciences.

The intellectual work of the African American Studies Department is enriched further by the programming of the Center for African American Studies. The center's offerings deepen classroom and campus wide conversations about contemporary and historic matters relating to African American Studies and to the African diaspora.

DEPARTMENTAL ADVISING EXPERTS

Professor Ashraf Rushdy, Chair

AFRICAN AMERICAN STUDIES MAJOR

ADMISSION TO THE MAJOR

Beginning with the class of 2023

Students usually declare their major in African American Studies in the second semester of their sophomore year. Students are admitted to the major if they have earned a grade of B- or better in AFAM 101 (https://owaprod-pub.wesleyan.edu/reg!/wesmaps_page.html?stuid=&facid=NONE&crse=015838&term=1209), or at the discretion of the Chair, if they have taken other courses in the Department.

For the class of 2021 & 2022

Students usually declare their major in African American studies in the second semester of their sophomore year. Students are admitted to the major if they have earned a grade of B- or better in one of the three required African American studies core courses: AFAM202, AFAM203, or AFAM204.

MAJOR REQUIREMENTS

Beginning with the class of 2023

The African American Studies major consists of eleven semester courses. The two required courses are AFAM 101: Intro to Africana Studies and AFAM 301: Junior Colloquium. At least five other courses must be cross-listed with African American Studies: the three different area courses, and the two elective courses (described below). All courses must be letter-graded and must be completed at Wesleyan. One individual tutorial can be counted toward the eleven required courses, as can two courses taken away from Wesleyan and used to fulfill the student's chosen area of concentration. The major program must include the following:

AFAM 101: Introduction to Africana Studies. This course will provide an overview of the field and locate African American Studies in the broader context of the African Diaspora. Students must earn a B- or better in AFAM 101 in order to major.

One 200-level (or above) course in three different areas:

- African American History
- African American Literature

- Relevant Social Science course
- AFAM 301: Junior Colloquium

Two elective courses that originate in or are cross-listed with AFAM. Majors will meet these requirements by selecting from a list of preapproved and cross-listed courses. They may also bring another relevant course to the Chair's attention and request that it count. The Department encourages majors to take at least one course in the Arts.

Field of concentration (4 courses). Each major must take four courses that represent an area of concentration. Concentrations may be conceived either disciplinarily (with the four courses coming from a single department) or thematically (with courses selected from different disciplines but designed around a specific topic). Concentration courses do not necessarily have to be cross-listed with **AFAM**. One **100**-level course can count for the concentration. None of the four courses taken in the field of concentration can count toward the **AFAM** core courses or the **AFAM** elective courses. We strongly recommend that students design their concentrations in consultation with their major advisor.

For the class of 2021 & 2022

The African American studies major consists of eleven semester courses. At least seven of these courses must be cross-listed with African American studies: the three required core courses, the required junior colloquium, and the three elective courses. All courses must be letter-graded and must be completed at Wesleyan. One research tutorial can be counted toward the eleven required courses, as can two courses taken away from Wesleyan and used to fulfill the student's chosen area of concentration. The major program must include the following:

Required core courses (3 courses). Students are required to take and successfully complete all three of the core courses. Students may not substitute or transfer any other course to meet these requirements.

Code	Title	Hours
AFAM202	Introduction to African American Literature	1
AFAM203	African American History, 1444-1877	1
AFAM204	Introduction to Modern African American History	1

Junior colloquium (AFAM301). This course is required of all majors and should be taken in the first semester of the junior year.

Elective courses in African American studies (3 courses). Majors must complete one elective course in each of the following three areas:

- Literature and literary theory
- Social and behavioral sciences (any **AFAM** SBS course except history)
- The arts (art, art history, dance, film, creative writing, music, theater)

The three elective courses must be **200**-level or higher. These courses should be cross-listed with African American studies, although in special circumstances students can petition to use a course that is not formally cross-listed with **AFAM** as one of their electives.

Field of concentration (4 courses). Each major must take four courses that represent an area of concentration. Concentrations may be conceived either disciplinarily (with the four courses coming from a single department) or thematically (with courses selected from different disciplines but designed around a specific topic). Concentration courses do not necessarily have to be cross-listed with **AFAM**. One **100**-level course can count in the concentration. None of the four courses taken in the field of concentration can count toward

the **AFAM** core courses or the **AFAM** elective courses. We strongly recommend that students design their concentrations in consultation with their major advisor.

essay done through a yearlong individual tutorial, or a research paper of at least 15 pages in length that is generated in a **300**-level African American Studies Department seminar. Any work done to fulfill the research requirement must receive a grade of B- or better.

COURSES FOR NON-MAJORS

The African American Studies Department offers FYS courses especially designed for first-year students. First-year students also are admitted to many other courses, and students should review the individual course listings on WesMaps for details about enrollment.

GENERAL EDUCATION

Majors are encouraged to complete Gen Ed requirements.

STUDENT LEARNING GOALS

Our students are trained in cross-cultural, interdisciplinary, and critical approaches to the study of the experience of people of African descent in the Atlantic world, especially in the United States and the Caribbean. The major in African American Studies features an array of courses in the humanities, the social sciences, and the arts.

Students who major in African American Studies

- will develop sophisticated critical reading, writing, and research skills and will apply these in their studies of the histories and influences of people of African descent.
- will demonstrate their familiarity with the foundational ideas, theories, and methodological approaches of African American Studies.
- will develop and apply analytical skills that are rooted in the discipline of African American Studies and that are informed by interdisciplinary approaches to research.
- will use their enhanced analytical skills to demonstrate their understanding, assessments, and critiques of Western conceptualizations of race, issues of race, and identity, African American intellectual traditions, cultural production, and political histories.
- will apply, critique, and reimagine the methodologies and insights of many disciplines to their understanding of the cultural, historical, political, and social development of people of African descent.

HONORS

The honors thesis is produced during a student's senior year and is a yearlong independent research project. Students are eligible to write an honors thesis if they have achieved at least a B+ average in all of their African American Studies courses. Eligible students who wish to write a thesis must apply to the program by the last day of classes in their junior year. A detailed description of the process for earning honors in African American Studies is available on the program website.

CAPSTONE EXPERIENCE

Majors are required to undertake one substantial research or artistic project under faculty supervision. This may take the form of an honors thesis, a senior

ALLBRITTON CENTER FOR THE STUDY OF PUBLIC LIFE

The Allbritton Center for the Study of Public Life continues Wesleyan's commitment to preparing students for lives as active citizens and for leadership. It seeks to support Wesleyan's tradition of the scholar-teacher by encouraging faculty research in a manner that directly benefits and enhances student learning. The center reflects changes that have transpired across the social-scientific disciplines. These include the creation of new multidisciplinary ventures, the growing number of studies employing multiple methodologies, and the rethinking of the idea of the public in a variety of intellectual and social movements. In addition, university-based intellectuals have been rethinking their connection to the greater public and, consequently, are forging knowledge-seeking alliances with innovators and leaders in government and the corporate world. Social scientists are developing innovative and productive relationships with other sectors of the public, including artists, grassroots activists, and independent scholars. Our students are energized and excited by these developments. The center enables Wesleyan to focus resources; encourage curricular innovation, new research, and scholarship; and foster greater public understanding and responsibility.

AMERICAN STUDIES

Wesleyan's Department of American Studies provides a broad grounding in the study of the United States in a hemispheric and global context. American studies majors draw on the intellectual resources of a variety of departments including anthropology, English, history, religion, and sociology, as well as interdisciplinary programs such as Latin American studies, African American studies, and feminist, gender, and sexuality studies. Individually designed concentrations, which are the hallmark of the department, allow students to forge interdisciplinary approaches to the particular issues that interest them, from visual culture and aesthetics to racial politics and gender systems.

Alongside its interdisciplinary emphasis, American studies at Wesleyan stresses a comparative approach to the study of the United States. Such prominent features of U.S. cultural development as settler colonialism, franchise colonialism, slavery, immigration, imperialism, capitalism, mass culture, gender and sexuality, race and ethnicity, political culture, the importance of modern social and political identities, and state development are juxtaposed to similar processes and phenomena in a variety of nations in the Americas. By studying cultural phenomena across national boundaries, American studies majors develop a rich understanding of the complex histories that have resulted from the conflict and confluence of European, Indigenous, African, and Asian cultures throughout the Western Hemisphere and the Pacific.

AMERICAN STUDIES MAJOR

ADMISSION TO THE MAJOR

To major in American studies, students should submit a major declaration request through their WesPortal and present a completed application to the administrative assistant at the Center for the Americas. The major application can be downloaded from the AMST website (<http://www.wesleyan.edu/amst/>). The AMST chair will review applications and approve accepted applications through the WesPortal system. Majors are expected to complete an Introduction to American Studies course (AMST174 to AMST178) before the end of their junior year. Transfer students should meet with the department chair to discuss which courses taken elsewhere can be offered as substitutes for Wesleyan courses.

MAJOR REQUIREMENTS

Majors in American studies must take 11 courses (12 for honor candidates). The department recommends that first-year students and sophomores considering the major enroll in a survey course. These courses offer an introduction and overview of important issues and questions in American studies and provide a solid foundation for advanced work in the major.

JUNIOR CORE COURSES

Junior core courses constitute the foundational base for the major. AMST200 and one junior colloquium are required of every major. The colonialism course situates American studies in a hemispheric frame of reference and introduces a variety of theoretical and methodological approaches to an intercultural analysis of the Americas. Junior colloquia explore in-depth a range of theoretical perspectives utilized in American studies, consider the history and changing shape of the multifaceted American studies enterprise, and engage students in research and analysis. Students may take more than one junior colloquium and count the second one as an elective.

CONCENTRATION AND ELECTIVES

In addition to junior core courses and the senior requirement, the major includes seven upper-level electives that focus on the cultures of the Americas. The heart of each major's course of study consists of a cluster of four courses among those electives that forms an area of concentration (these should be numbered AMST201 and above).

A concentration within American studies is an intellectually coherent plan of study (developed in consultation with an advisor) that explores in detail a specific aspect of the culture(s) and society of the United States. It may be built around a discipline (including history, literary criticism, government, or

sociology), a field (such as cultural studies, ethnic studies, or queer studies), or a "problematic" (such as ecology and culture or politics and culture). As models and inspiration for prospective concentrators, we have developed descriptions of seven standing concentrations—queer studies, race and ethnicity, cultural studies, material culture, visual culture, historical studies, and literary studies—that we encourage majors to select or adapt. Majors may also devise their own concentrations. Among the latter in recent years have been concentrations in urban studies, disability studies, media studies, social justice, education, and environmental studies. In addition, to ensure chronological breadth, majors must include in their major at least one course that has a majority focus on American culture(s) in the period before 1900.

HEMISPHERIC AMERICAS AND TRANSNATIONAL AMERICAN STUDIES

Students are also asked to consolidate a hemispheric/transnational American studies focus by taking two courses that build on the comparative foundation supplied in AMST200. Hemispheric Americas and transnational American studies courses are identified on the AMST website (<http://www.wesleyan.edu/amst/>) (under "for majors"). Courses used to meet this requirement may also, as appropriate, be counted toward concentration, elective, or senior seminar requirements. A senior essay or thesis that utilizes a hemispheric or transnational American studies approach may count toward this requirement.

LANGUAGE REQUIREMENT

There is no language requirement for the Major in American Studies.

PRIZES

The Marni Goldstein White Award recognizes the best Honors Thesis written in American Studies each year.

STUDENT LEARNING GOALS

Ultimately, our goal for our majors is that they develop a critical, theoretically informed understanding of the United States as a political, social, and cultural formation that exists in and had its inception in a transnational context of settler colonialism, imperial expansion, and global capitalism. In addition, we want our majors to develop the skills in research and writing that will allow them to apply that understanding to concrete and particular issues and convey the results of their analysis effectively. Our majors learn about the interdisciplinary field of American studies in its most expansive and robust form, including emphases on indigeneity, race/ethnicity, gender, sexuality, disability, and class.

HONORS

Candidates for honors in American studies must complete and receive honors on a senior thesis. The American Studies Department requires students who want to write an honors thesis submit a completed application to the department. Consult the chair of the department, Professor Indira Karamcheti (<https://catalog.wesleyan.edu/departments/amst/ugrd-amst/ikaramcheti@wesleyan.edu>), for information about the application. See also the link to Honors (<http://www.wesleyan.edu/amst/Honors.html>) on the AMST

website (<http://www.wesleyan.edu/amst/>) for more information about the honors process in American studies.

CAPSTONE EXPERIENCE

Every American studies major must complete a capstone experience to fulfill the major. This capstone experience can be fulfilled in one of three ways. Theses in the American Studies Department include research projects on a range of topics with a variety of methods. A senior can undertake a two-term honors thesis in an honors thesis tutorial (AMST409 and AMST410) with a thesis advisor. This enables the major to stand as a candidate for honors in American studies. Second, a senior can enroll in a one-semester senior essay/project tutorial (AMST403 or AMST404) to undertake an essay or project (for instance, a play or screenplay). Third, a major may take an advanced 300-level seminar originating in or cross-listed with American studies, or, with the permission of the American studies faculty advisor, outside of American studies, for AMST capstone credit. Most majors who enroll in an advanced 300-level seminar are seniors, though some students take a capstone seminar earlier. A major can have more than one capstone experience. For instance, a major could take more than one advanced 300-level seminar and write an honors thesis or a senior essay or project.

ANTHROPOLOGY

Anthropology is the study of the complexity and diversity of human and nonhuman life in an interconnected world. The Anthropology Department at Wesleyan offers courses on anthropological theories and methods, and topics including urban anthropology, globalization, media studies, consumer culture, social movements and activism, development and humanitarianism, and race, gender, and sexuality. Anthropology provides excellent preparation for a variety of careers that require an understanding of cultural difference in a transnational world. Social justice and ethical concerns have always been central to the discipline of anthropology.

DEPARTMENTAL ADVISING EXPERT

Margot Weiss

ANTHROPOLOGY MAJOR

ADMISSION TO THE MAJOR

If you plan to major in anthropology, you should take ANTH101, the department's required gateway course, during your first or second year. A minimum grade of B in ANTH101 is required for acceptance into the major. Students enrolled in ANTH101 during the spring of their sophomore year may declare the major if their midterm grade is a B or higher.

MAJOR REQUIREMENTS

In addition to ANTH101, majors are required to earn a **minimum of nine anthropology credits, eight of which must be numbered 201 or higher**. These must include:

- **two core courses in anthropological theory**, ANTH295A, ANTH295B, ANTH295C, or ANTH295D, offered in fall and spring. Majors must take any 2 of these courses.
- our required **course in anthropological methods**, ANTH208. We recommend that students take ANTH208 in their sophomore or junior year.

- an individually designed **area of concentration** consisting of four elective courses (see below).
- a **capstone experience**, which may consist of a thesis, essay, or a senior seminar paper (see Honors/Capstone tab).

Students should work out their plans to fulfill the major requirements with their advisor by keeping their Major Certification Form up to date.

Concentrations. Concentrations are flexible specializations that reflect your particular specialization within anthropology. Working with your major advisor, you decide on a coherent set of four courses as your concentration. We encourage you to include one course from outside anthropology. There are three standing concentrations:

- **Difference, Inequality, and Social Justice**
- **Local Distinctions, Global Connections**
- **Producing, Consuming, and Performing Culture**

You can also design your own concentration in consultation with your major advisor. Full descriptions of our concentrations are here (<http://www.wesleyan.edu/anthro/concentrations.html>).

STUDENT LEARNING GOALS

Our overarching goal is to provide students with sophisticated ways of understanding both human unity and human difference. We want students to think critically about discourses that divide the world into fully modern western Selves and not-yet-modern non-western Others, but to do so without romanticizing cultural differences. We want them to appreciate how anthropological theory is constructed and used in understanding particular cases. Our approach is premised on complex global interconnectivity that interrogates boundary-making projects and explores the fabrication of national, cultural, and regional differences in a historical perspective. This means zooming in to understand how translocal ideologies and forces are negotiated in local settings, but also zooming out to link up localities and build a contingent picture of the interconnected world we inhabit.

STUDY ABROAD

Majors are encouraged to take advantage of study-abroad programs and, with the approval of their advisor via the Major Certification Form, students may count up to three of their study-abroad courses for concentration or elective credit. Theory and methods courses may not be substituted. A grade of B or higher is required for study-abroad courses to count toward the major. The Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>) has information about specific programs, application procedures, major credit, etc.

ADDITIONAL INFORMATION

Cross-listed courses: Various departments and programs offer cross-listed or other courses that can be counted toward the anthropology major. These include African American studies, American studies, archaeology, biology, classical studies, earth and environmental sciences, history, religion, sociology, and feminist, gender, and sexuality studies. If outside courses are to be counted toward the anthropology major, your advisor must approve them using the Major Certification Form.

Double majors: Anthropology majors have combined anthropology with a range of other majors, including science in society; feminist, gender, and sexuality studies; American studies; environmental studies; English; dance; music; African American studies; film; and both art history and art studio; as well as the certificates in writing and in social, cultural, and critical theory. All the requirements for the two majors must be met, except when faculty representatives of the two departments approve alterations in your program. We generally expect students writing a thesis for honors in both majors to enroll in ANTH400 in their fall semester and enroll in a tutorial in the other department or program in their spring semester. Please consult with the department chair and/or a department advisor.

HONORS

Only theses are eligible for honors or high honors. A minimum grade of B+ in either ANTH295A, ANTH295B, ANTH295C, or ANTH295D is required for the pursuit of honors.

CAPSTONE EXPERIENCE

Senior majors are required to complete a **thesis, essay, or a senior seminar paper** as their capstone experience.

Theses. Only theses are eligible for departmental honors. A thesis is an independent, two-semester (or more) research project. In the fall semester of their senior year, students writing a thesis should enroll in ANTH400, a research and writing seminar in which students pursue individual research projects in a group context. In the spring semester of their senior year, thesis candidates should enroll in an individual thesis tutorial (ANTH410). It is strongly recommended that students contemplating a thesis either enroll in an individual tutorial (ANTH402) in the spring semester of their junior year, in which they would begin library research on their area of interest, or else take a course that is relevant to their research concerns.

Essay. An essay is also a serious research commitment: It is an independent, one-semester (or more) research project. In the fall semester of their senior year, essay writers should enroll in ANTH400. They will complete a draft of their essay in the fall semester and submit a final version by the first day of the spring semester.

Seminar papers. Students who select this option should take a 300-level course (or an advisor-approved 200-level course) that involves a substantial research paper in their senior year. The course will ordinarily (but not necessarily) be one that facilitates advanced work in the student's area of concentration. The course must be designated and approved by the major advisor in the student's Major Certification Form prior to spring break of their senior year.

Students wishing to write a thesis must submit a proposal to the department. Students wishing to write a thesis or essay involving fieldwork with human subjects must complete the Ethics Questionnaire. Both are due the Friday before spring break of their junior year.

ARCHAEOLOGY PROGRAM

Archaeology is the discipline most directly concerned with the understanding and explanation of past societies through the study of their material remains. The reconstruction of these societies through the interpretation of material culture permits archaeology to span both the prehistoric and the historic periods. While certain archaeology courses originate within the program, others are cross-listed from the departments of Anthropology, Art and Art History, and Classical Studies. Majors design their own curriculum in close consultation with their advisor according to the specific area of concentration within the discipline.

ARCHAEOLOGY MAJOR

MAJOR DESCRIPTION

Archaeology is an inherently interdisciplinary field of study dedicated to the understanding and explanation of past societies through the analysis of their material remains. The reconstruction of these societies through the

interpretation of material culture – drawing on analytical approaches and theoretical frameworks that span the humanities and the sciences – permits archaeology to span both the prehistoric and the historic periods. Archaeology Program faculty specialize in different regions of the world, with research projects in East Asia, India, the Middle East and Mediterranean, and North America, and emeritus faculty have ongoing projects in Europe. We also maintain strong connections to the sciences: many of our courses are hands-on, involving lab or experimental components, or the opportunity to engage directly with objects and artifacts, to ensure that students develop skills to carry out original research.

Archaeology majors and minors can pursue either the standard major, or pursue the archaeological science track in which they specialize in an analytical method, such as archaeological residue analysis, environmental archaeology, zooarchaeology, ceramic materials analysis, 3D modeling, or GIS/spatial analysis.

ADMISSION TO THE MAJOR

To apply to become a major in archaeology, a student must have taken or be currently enrolled in a Gateway course and earn a grade of B or better. Students intending to pursue the archaeological science track in the major must identify which scientific method(s) they intend to study and apply to their capstone research. Following electronic application, admission will be determined by a meeting of the ARCP faculty.

GATEWAY COURSES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP204	Introduction to Archaeology	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP223	Survey of Roman Archaeology and Art	1
ARCP260	Art and Archaeology of Ancient India	1

MAJOR REQUIREMENTS

The major in archaeology consists of at least nine different courses numbered 200 and above, in addition to a capstone project (senior essay or thesis):

- One Gateway course—*see list above*
- One course in each of the four areas—*see lists below*
 - Anthropology
 - Art history
 - Classical civilization
 - Methods and theory
- Two 0.5 credits of the Thinking Through Archaeology symposium (recommended junior and senior fall)
- Three electives in archaeology or related disciplines**
- Senior essay/thesis tutorial (1 or 2 credits)
- Recommended fieldwork
 - **One course in science or research methods originating outside the ARCP Program may be applied toward the major by those pursuing the archaeological science track, provided the student can demonstrate its application toward their capstone or other archaeological research projects. This course must be declared upon admission to the major.

The archaeology major and minor was revised in spring of 2021. Majors declaring *prior to Spring 2022* may opt to follow the old pathway in which the Thinking through Archaeology requirement was met by a single course with that designation; those declaring in spring 2022 or later will follow the new major.

ANTHROPOLOGY

Code	Title	Hours
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP204	Introduction to Archaeology	1
ARCP257	Environmental Archaeology	1
ARCP291	East Asian Archaeology	1

ART HISTORY

Code	Title	Hours
ARCP260	Art and Archaeology of Ancient India	1
ARCP380	Relic and Image: The Archaeology and Social History of Indian Buddhism	1
ARCP382	Archaeology of Money: Numismatics and GIS	1

CLASSICAL STUDIES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP223	Survey of Roman Archaeology and Art	1
ARCP234	Art and Society in Ancient Pompeii	1
ARCP244	Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt	1
ARCP285	Off with its Pedestal! The Greek Vase as Art and Artifact	1
ARCP390	Making Rome: Monuments of Life in Ancient Rome	1

METHODS AND THEORY

Code	Title	Hours
ARCP257	Environmental Archaeology	1
ARCP382	Archaeology of Money: Numismatics and GIS	1
ARCP350	Animals in Archaeology	1
ARCP352	Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean	1

FIELDWORK

Archaeological fieldwork, typically carried out over the summer, is an excellent way to acquire hands-on experience and training in archaeological methods and excavation techniques. It also allows students to explore the history and material culture of a region in greater depth and, in some cases, even to conduct research on primary materials from a site that can then serve as the basis for a senior thesis or capstone project.

Fieldwork opportunities are offered both by our Wesleyan faculty as well as through a number of programs worldwide. For more information and a list

of archaeological field programs, visit wesleyan.edu/archprog/fieldwork/ (<https://wesleyan.edu/archprog/fieldwork/>). **Excavation experience is strongly encouraged, and completion of an approved archaeological field school program may be substituted for the methods and theory requirement.**

COURSES FOR NON-MAJORS

Since there are no **ARCP** courses with prerequisites, all of our courses are suitable for non-majors.

STUDENT LEARNING GOALS

Archaeology is the discipline most directly concerned with the understanding and explanation of past societies through the study of their material remains. Archaeology majors are expected to master four of seven themes or topics:

- History and theory of the discipline
- The nature of archaeological evidence
- The construction of archaeological arguments
- Chronology
- The materiality of social, political, and economic organization
- The intersection of archaeological evidence with past and present identities
- Scientific approaches to archaeological analysis

Majors are also required to take at least one course in each of the departments that contribute to the archaeology program (anthropology, art history, classical civilization) in order to expose them to different disciplinary approaches to the study of material culture.

STUDY ABROAD

Study abroad is possible at a number of institutions with well-established archaeology programs, some of which include tours of archaeological sites in addition to coursework. Wesleyan students have recently participated in semesters abroad at these institutions:

- University College London (UK)
- St. Andrews University (Scotland, UK)
- Intercollegiate Center for Classical Studies in Rome (Italy)
- College Year in Athens (Greece)

Interested students should consult the Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>) for details about transferable credit.

ADDITIONAL INFORMATION

- We encourage students to take the Gateway courses first as these provide the best entry points into the discipline. However, as we have no prerequisites for entry to archaeology courses, it is possible for students to complete the requirements in variable order.
- With prior approval from the chair of the archaeology program, the methods and theory requirement may be fulfilled by academic credit from a field school program. We strongly encourage minors to gain fieldwork experience in archaeology.

- Upon the discretion of the archaeology chair, one non-fieldwork archaeology credit may be transferred in to cover a Gateway or area requirement.
- No more than two courses cross-listed with the student's major will be counted toward the archaeology minor.

HONORS

See Capstone Experience below.

CAPSTONE EXPERIENCE

In their senior year, ARCP majors are required to undertake an original research project culminating in either a one-semester essay ARCP403 or two-semester thesis project ARCP409 - ARCP410. These projects should be centered upon the analysis and interpretation of material remains, and may include work on objects in the archaeology and anthropology collections, materials tied to field projects of a Wesleyan faculty member, or experimental approaches to archaeological data. Students should begin planning their research focus together with their faculty Tutor during their junior year, and should plan to have fully defined their data set by the summer prior to their senior year.

Students pursuing honors both in archaeology and in a second major are required to take at least one of their two required thesis tutorials in the archaeology program (i.e., either ARCP409 or ARCP410).

Honors Evaluation

In order to be considered for Honors, each thesis will be evaluated by two ARCP readers, of whom one may be the Tutor. In circumstances where a student is submitting the thesis for multiple majors, or is drawing on techniques or methods which require expertise from outside ARCP faculty, a third reader from outside the department shall be included in addition to the two from within ARCP. Readers will be determined by the Tutor in consultation with the student by the beginning of spring semester of senior year.

Readers shall write a short evaluation of the work, and offer an estimation of its merit in the form No Honors/Honors/High Honors. In cases where there is a disagreement between Readers about whether a work merits Honors, a third ARCP Reader will serve as a tie-breaker.

ARCHAEOLOGY MINOR

ADMISSION TO THE MINOR

To declare the Minor, a student must achieve a grade of B or above in a designated Gateway course.

GATEWAY COURSES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP214	Survey of Greek Archaeology and Art	1

ARCP223	Survey of Roman Archaeology and Art	1
ARCP260	Art and Archaeology of Ancient India	1

MINOR REQUIREMENTS

The Minor in Archaeology requires a minimum of six credits in archaeology.

- 1 Gateway course
- 1 Elective course:
The Elective requirement can also be met with two 0.5 credits of the Thinking Through Archaeology Symposium, offered each fall semester (beginning Fall '22)
- 1 course in each of four areas (Anthropology, Classical Civilization, Art History, Methods and theory). For a listing of the different courses in each of these categories, please see Major Requirements (p. 38).

The Minor in Archaeological Science requires a minimum of six credits in archaeology:

- 1 Gateway course
- 1 Elective course:
The Elective requirement can be met by two 0.5 credits of the Thinking Through Archaeology Symposium Course. With the approval of the Chair, students in the ArchSci Minor can also apply one extra-departmental course in the sciences to their ARCP Minor.
- 1 course in each of three areas (Anthropology, Classical Civilization, Art History)
- 1 300-level lab-based ARCP course (this meets the Method and Theory area requirement)

To apply for the minor, please submit a declaration to add the minor through the Major/Minor/Cert Declaration application in your student portfolio. Students seeking to apply a science courses to meet their Elective requirement must explain the course they intend to apply and its application to archaeological research.

ART AND ART HISTORY

The Department of Art and Art History is the administrative umbrella for two distinct major programs: art history and art studio. Majors within the department can be pursued in both areas. Students majoring in one area are allowed to count toward the 32 courses required for graduation up to 16 courses in the department. (University regulations regarding the maximum number of courses allowed in a department should be applied to the major itself: art history or art studio. Thus, majors in either program may count toward their graduation requirements no more than 16 credits in their major program [of which no more than 3 may be **100**-level courses, and no more than 13 may be **200**-level and above. These 16 would include 2 credits of thesis in the case of students majoring in art studio or writing a senior thesis in art history.]) Students double-majoring in both programs of the department are permitted to take up to 20 credits in the department, providing that 2 of these credits are for senior thesis tutorials. In addition to listed courses, a limited number of tutorials, internships, and teaching apprenticeships are available under special conditions. Prior approval must be obtained to transfer credit from another institution. Review and approval by a faculty member in the area of study must also be made after completion of such course work.

ART HISTORY MAJOR**MAJOR DESCRIPTION**

The Art History program aims to provide student majors with a strong historical and theoretical understanding of the visual and material environment created by humankind. Art history is founded on the premise that artifacts embody, engage, and shape the beliefs and values of the persons, groups, and societies who made, commissioned, and used them. Students will learn to document and interpret changes in human society by taking works of art and other objects of material culture as their primary sources. They will also critically analyze and interpret written texts to help reconstruct and illuminate the contexts—social, economic, political, philosophical, and religious—in which artifacts were produced, used, and understood.

The study of art history around the world requires knowledge of both objects and languages, including foreign languages and traditional and recent theoretical languages pertaining to cultural production. To this end, courses in the program present students with a wide variety of analytical tools that span established methods of formal, stylistic, historical, and iconographical analysis as well as newer post-structuralist approaches and critical theories of race, gender, and socioeconomic relations. Students also have opportunities to cultivate skills in archaeological and spatial approaches to the discipline, including such digital platforms as GIS.

A major in art history prepares students to pursue a variety of professional goals. Our graduates have built successful careers in higher education, museum work, the art market, architectural history and practice, urban planning, landscape architecture, historic preservation, publishing, cultural property law, and other fields.

ADMISSION TO THE MAJOR

By the end of the sophomore year, a prospective major should plan to have taken one **100**-level introductory course and at least two other courses in art history. For admission to the major, the student must have at least a B average in courses taken in art history and a B average overall.

MAJOR REQUIREMENTS

For the graduating classes of 2019, 2020, and 2021, click on the following link for ARHA major requirements [https://www.wesleyan.edu/art/arthist/form/MAJOR_REQUIREMENTS_for_2019-2020-2021.pdf].

For the classes of 2022 onward, please see the requirements below.

A minimum of 10 courses is required for the art history major, all of which must be taken on a graded basis. These include a one-credit introductory course (numbered in the 100 range), and nine intermediate and advanced courses (numbered in the 200 and 300 ranges, distributed as outlined below), two of which may be elective courses. The design of the major's requirements ensures that students gain geographic breadth and historical depth, while having the opportunity to define their own interests and to chart their own path through the major.

Students complete an introductory course (numbered in the 100 range). There are two ways to satisfy this requirement: a survey course that introduces a broad range of artworks over an extended time span, or a writing-intensive course whose topic is more focused. The following link provides a list of introductory course offerings [https://www.wesleyan.edu/art/artist/form/ACTIVE_ARHA_2022.pdf]

Student majors complete seven intermediate and advanced courses (numbered in the 200- and 300 range, respectively) that together fulfill the following geographic and historical requirements:

Students complete courses in **four** of the five geographic areas:

- The Americas
- Europe
- East Asia
- South Asia
- Africa

And they elect courses in **three** of the four following historical periods and categories:

- Ancient
- Medieval
- Early Modern
- Modern

Any single course may be counted toward only one of these area or period requirements. The following link provides a list of courses currently offered and the categories they may fulfill [https://www.wesleyan.edu/art/artist/form/ACTIVE_ARHA_2022.pdf]

As a temporary measure, and until such time as we are able to regularly offer courses in African art, courses in African Studies may count as fulfilling the Africa geographical distributional requirement.

Two of the nine intermediate and advanced courses for the major must be seminars (numbered 300 or above), which foster more advanced skills in reading, writing, and independent research. These seminars, many of which also satisfy geographical and historical distribution requirements, often include some mix of regular presentations, collaborative learning, and/or a substantial research paper.

The introductory course, the seven courses satisfying historical period and geographic area requirements, and the two seminars must be taken at Wesleyan.

For the purposes of planning, students have access to two documents:

1. course projections, which indicate when specific courses will be offered during a three-year period: https://docs.google.com/spreadsheets/d/1o_IW5xLRNDDTyX53J2ZqxLFSmO_sNTem80MwNtBUE4k/edit#gid=0 (https://docs.google.com/spreadsheets/d/1o_IW5xLRNDDTyX53J2ZqxLFSmO_sNTem80MwNtBUE4k/edit/#gid=0)
2. ARHA major planning worksheets, which may be used to help students map out a course of study: https://www.wesleyan.edu/art/artist/course_planning_documents.html

Two of the nine intermediate and advanced courses for the major may be **electives**, which allow students to pursue their own interests within art history. Electives may be drawn from additional art history courses or those cross-listed with art history; art history courses taken abroad or classes in cognate fields, such as anthropology, archaeology, art studio, CEAS, FGSS, film, foreign languages, history, music, religion; social, cultural, or critical theory; sociology; and/or urban studies. Students carefully select these elective courses

in consultation with their major advisor. In order for these electives to count as courses towards the art history major, they must be petitioned—ideally prior to enrollment—and approved by the major advisor.

In order to become conversant in art history as a global practice, **students must demonstrate proficiency in at least one foreign language.** Proficiency is defined as a minimum of two full years of study at the college level, or the equivalent, as measured by a placement test administered by the language department in question. Up to two courses in a foreign language may count as electives towards the art history major. German, French, and Italian are normally considered the most useful for the study of European art. Students concentrating in the history of Asian art are encouraged to study a relevant Asian language. Other languages may be relevant depending on a student's course of study. For those languages not formally taught at Wesleyan, there are alternative ways of studying them, developed through the Center for Global Studies. See [wesleyan.edu/cgs/](https://www.wesleyan.edu/cgs/) (<https://www.wesleyan.edu/cgs/>).

For knowledge of critical theories, students are encouraged to consider ARHA courses as well as those in other disciplines linked to Wesleyan's Social, Cultural, and Critical Theory Certificate. See [wesleyan.edu/theory/](https://www.wesleyan.edu/theory/) (<https://www.wesleyan.edu/theory/>).

Ten courses is the minimum number required for the art history major. To take full advantage of the program, students are encouraged to take more than the 10 required courses and/or to pursue honors projects in art history.

GENERAL EDUCATION

Candidates for honors in art history are required to be compliant with the University's General Education Expectations (through Stage 2).

STUDENT LEARNING GOALS

Art history majors acquire the following skills, which will serve them in their coursework as well as in their careers beyond Wesleyan:

- Visual analysis, including knowledge of a broad range of objects and places, as well as the ability to analyze in-depth the form, materials, and meanings of specific works, buildings, and sites.
- Textual analysis, including close reading of primary and secondary sources in both historical and theoretical genres.
- Historical awareness, or an understanding of how a given object, building, or site relates to the culture(s) that produced them, including their history, religion, politics, philosophies, and social structures.
- Intercultural literacy, including proficiency in at least one foreign language and knowledge of artistic production in several world regions.
- Methodological sophistication, including experience with more than one art historical methodology and knowledge of critical theories.
- Expository writing, or the ability to articulate and substantiate a complex argument in writing.
- Research, including how to formulate a research question and relevant methodology as well as to locate, read, and evaluate appropriate sources.
- Originality, or the ability to think independently and create new knowledge.

STUDY ABROAD

A significant number of art history majors study abroad, most commonly during the fall or spring semester of their junior year. Study abroad can be a very constructive component of an art history major especially, as it enables students to visit collections and museums in other parts of the world and to apply and deepen foreign language skills. When selecting a study abroad location, students should take into consideration their language abilities and the requirements of programs of interest. Many programs that involve language immersion require the completion of a minimum of two years of language study at the college level prior to studying abroad. While abroad, advanced students may want to use their time to identify artworks or collections that could serve as the basis for an honors thesis during their senior year. Beyond semester-long study abroad programs, students may wish to consider going abroad in the summer months, whether on a shorter-length study abroad program or to undertake independent research (juniors may apply for John T. Paoletti Summer Travel Fellowships).

ADVANCED PLACEMENT

A student who has completed an Advanced Placement (AP) art history course or its equivalent while in secondary school and who has achieved a grade of 5 in the art history AP examination will be granted one AP course credit, but only after completing an intermediate-level course in art history at Wesleyan and receiving a grade of B+ or higher. Credit is not awarded for an AP score of less than 5. AP credit may not be counted toward the completion of major requirements.

LANGUAGE REQUIREMENT

In order to become conversant in art history as a global practice, students must demonstrate proficiency in at least one foreign language. Proficiency is defined as a minimum of two full years of study at the college level, or the equivalent, as measured by a placement test administered by the language department in question. Up to two courses in a foreign language may count as electives towards the art history major. German, French, and Italian are normally considered the most useful for the study of European art. Students concentrating in the history of Asian art are encouraged to study a relevant Asian language. Other languages may be relevant depending on a student's course of study. For those languages not formally taught at Wesleyan, there are alternative ways of studying them, developed through the Center for Global Studies. See wesleyan.edu/cgs/ (<https://www.wesleyan.edu/cgs/>).

PRIZES

Alumni Prize in Art History. Awarded to a senior who has demonstrated special aptitude in the history of art and who has made a substantive contribution to the major.

Beulah Friedman Prize. This prize recognizes work of outstanding achievement by a student in the history of art. The prize is awarded to seniors.

John T. Paoletti Travel Research Fellowships in Art History. Funds are available to support student research and travel in the summer following the junior year that will result in a senior thesis project. Paoletti Travel Research Fellowships are intended for advanced students who have demonstrated a commitment to art historical study and a strong aptitude for writing and research.

TRANSFER CREDIT

A minimum of five courses within the major must be taken at Wesleyan. All study abroad must be preapproved by the Office of Study Abroad (to receive Wesleyan credit) and by the student's major advisor (to receive credit toward the major requirements). Courses at other educational institutions in the United States must also be preapproved by the student's major advisor. In both cases, transfer of major credit will be awarded only if the student submits a course description and detailed syllabus in advance of taking the course. Preapproved courses for study abroad or courses taken at other U.S. institutions can be used to satisfy the **200**-level electives for the major but may not count toward the geographical and/or chronological distributional requirements. Transfer students should submit syllabi (including a list of course meetings, readings, and assignments) to the Art History Program Director for courses they wish to petition to count for the art history major or minor.

ADDITIONAL INFORMATION

Students interested in pursuing museum internships may apply for education-in-the-field credit. To be approved, the internship must involve work that is the equivalent in intellectual content and rigor to a Wesleyan art history course, as demonstrated in substantive research and writing. Students are expected to provide a description of the project(s) they will be working on and the name of their supervisor, who will coordinate the project with an on-campus advisor. Students also must provide examples of the work they did when they return to campus before credit is given. Note, too, that the University charges additional tuition for education-in-the-field credits taken in the summer or while on an authorized leave of absence during the academic year.

Individual Majors in Art History or Art Studio:

Students majoring in one area are allowed to count toward the 32 courses required for graduation up to 16 courses in the department. (University regulations regarding the maximum number of courses allowed in a department should be applied to the major itself: art history or art studio. Thus, majors in either program may count toward their graduation requirements no more than 16 credits in their major program [of which no more than 3 may be 100-level courses, and no more than 13 may be 200-level and above. These 16 would include 2 credits of thesis in the case of students majoring in art studio or writing a senior thesis in art history.

Double Majors in Art History and Art Studio:

Students double-majoring in both programs of the department are permitted to take up to 20 credits in the department, providing that 2 of these credits are for senior thesis tutorials. In addition to listed courses, a limited number of tutorials, internships, and teaching apprenticeships are available under specific conditions. Prior approval must be obtained to transfer credit from another institution. Review and approval by a faculty member in the area of study must also be made after completion of such course work.

HONORS

Students seeking honors in art history undertake an independent, two-semester research project under the guidance of a faculty advisor, which results in a senior thesis. This project offers qualified students a unique experience to formulate a research question, master the relevant literature, and make an original contribution to the field, all under the guidance of a faculty tutor who

has expertise in the topic. Students pursuing senior theses enroll in a two-semester tutorial (ARHA 409/410).

A successfully completed honors thesis demonstrates an ability to identify an original question, propose a research methodology, and work independently to achieve a significant outcome. These are skills that are very much in demand across a variety of professions.

Our graduates who have gone on to pursue postgraduate degrees in fields distant from art history (whether in law, medicine, or business) have found an honors thesis to be the most meaningful and significant part of their academic career. An honors thesis is particularly suited to students who are considering graduate studies in the humanities or related fields. The demonstrated ability to successfully complete a yearlong independent research project comprises the single most important component of an application to an MA or PhD program.

Candidates for honors are required to earn a minimum GPA of B+ for their major coursework and to be compliant with the University's General Education Expectations (through Stage 2).

Students wishing to consider an honors project should begin discussing ideas with relevant faculty tutors towards the beginning of the spring semester of their junior year. In order to receive full consideration, students must submit an application (linked below), which is due on the third Friday of February. Applications to write senior theses include the following information:

- A brief description of up to three possible topics (1 paragraph each)
- A list of up to three possible advisors who have indicated a preliminary willingness and availability to serve as tutors. Students are expected to have taken at least one course with any requested faculty tutors. A preliminary agreement to serve as tutor is not a guarantee.
- Relevant coursework related to the research topics

Faculty advisors will be assigned to students based on student interest and faculty availability; submitting an application does not guarantee that a thesis project will be approved. The Art History program director will announce all thesis decisions by mid-March.

After receiving their tutor assignment, thesis writers are expected to carry out preliminary research during the summer after their junior year and are required to submit a detailed proposal and preliminary bibliography for the project by the first Monday after classes start during the fall term of the senior year.

Juniors who have research projects that necessitate travel may apply for a Paoletti Research Travel Grant in March of their junior year to fund thesis research and travel over the summer before their senior year. See [wesleyan.edu/art/arthist/travel_fellowships.html](https://www.wesleyan.edu/art/arthist/travel_fellowships.html) (https://www.wesleyan.edu/art/arthist/travel_fellowships.html).

In addition to conforming to the University's general requirements and deadlines for honors, candidates in art history participate in a senior colloquium that meets in October and February and culminates in April in "senior talks," 20-minute public presentations based on students' completed theses.

For more information and an application form, see the document "Honors in Art History: Regulations and Procedures," available in the department office and via download:

Honors in Art History: Regulations and Procedures (https://www.wesleyan.edu/art/arthist/form/honors_regulations_procedures.pdf)

Honors Evaluation Procedures (https://www.wesleyan.edu/art/arthist/form/honors_evaluation_procedures.pdf)

Honors Application (<https://www.wesleyan.edu/art/arthist/form/honors-app.pdf>)

CAPSTONE EXPERIENCE

The honors program in art history serves as the capstone experience for the major.

ART HISTORY MINOR

INTRODUCTION

The art history minor is intended to reach students who would like to incorporate the study of artworks and architecture into their work in other disciplines and/or who discover art history later in their college career. The art history minor maintains the geographical breadth, historical depth, and academic rigor that is characteristic of the major but comprises fewer art history courses and does not require study of a foreign language. Art history minors may not write honors theses.

ADMISSION TO THE MINOR

For admission to the minor, students must have taken a **minimum of three art history courses** and have a B average in art history, as well as a B average overall.

The art history program director will admit students to the minor and certify them upon its completion. To sign up for the minor, students need to complete a minor declaration form found in their WesPortal.

Upon completing the minor, students must submit a completed minor certification form.

Students will not be required to declare an official minor advisor, but they are encouraged to meet with the art history faculty on an as-needed basis and to take part in program events.

MINOR REQUIREMENTS

For the graduating classes of 2019, 2020, and 2021, click on the following link for ARHA minor requirements. [[wesleyan.edu/art/arthist/form/MINOR_REQUIREMENTS_for_2019-2020-2021.pdf](https://www.wesleyan.edu/art/arthist/form/MINOR_REQUIREMENTS_for_2019-2020-2021.pdf) (https://www.wesleyan.edu/art/arthist/form/MINOR_REQUIREMENTS_for_2019-2020-2021.pdf)] For the classes of 2022 onward, please see the requirements below.

To complete a minor, students need to take **six** credits with the following requirements:

- Completion of a 100-level course. Students may choose from any of the 100-level courses offered in any given semester or year. The following link provides a list of introductory course offerings [https://www.wesleyan.edu/art/arthist/form/ACTIVE_ARHA_2022.pdf]
- Completion of five courses numbered 200 or above. These courses must include study in **three** of the following five **geographical** areas: The Americas, Europe, East Asia, South Asia, and Africa. The five courses must also include study in **two** of the following four **historical** periods: ancient,

medieval, early modern, and modern. One of these five courses must be a seminar (numbered in the 300 range). Any one course may be counted toward only one of these area or period requirements. The following link provides a list of courses currently offered and the categories they may fulfill [https://www.wesleyan.edu/art/artist/form/ACTIVE_ARHA_2022.pdf]

- All of the courses offered by or cross-listed with the Art History program are eligible for the minor.
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments may count toward the minor, except for courses cross-listed with art history.
- One course in art history taken elsewhere may count toward the minor, subject to the program director's preapproval. This course may count as a 200-level course but the 100- and 300-level courses for the minor must be taken at Wesleyan.
- All courses for the minor must be taken on a graded basis. Exceptions will be made for COL and CSS majors.

ADDITIONAL INFORMATION

For the purposes of planning, students have access to two documents:

1. course projections, which indicate when specific courses will be offered during a three-year period: https://docs.google.com/spreadsheets/d/1o_IW5xLRNDDTyX53J2ZqxLFSmO_sNTem80MwNtBUE4k/edit#gid=0 (https://docs.google.com/spreadsheets/d/1o_IW5xLRNDDTyX53J2ZqxLFSmO_sNTem80MwNtBUE4k/edit#gid=0)
2. ARHA minor planning worksheets, which may be used to help students map out a course of study: https://www.wesleyan.edu/art/artist/course_planning_documents.html

As a temporary measure, and until such time as we are able to regularly offer courses in African art, courses in African Studies may count as fulfilling the Africa geographical distributional requirement.

ART STUDIO MAJOR

MAJOR DESCRIPTION

ART STUDIO: ARCHITECTURE, DIGITAL ART, DRAWING, GRAPHIC DESIGN, PAINTING, PHOTOGRAPHY, PRINTMAKING, AND SCULPTURE

The art studio program enables students to become fluent in visual language—its analytical and critical vocabulary and the rigors of its technique and method—as a means to explore intellectual issues and human experience. To this end, students learn technique while searching for a personal vision, beginning with basic studies in drawing and introductory art history, proceeding through study of various media, and working toward the successful completion of the major's comprehensive requirement—the presentation of a one-person exhibition in the spring of their senior year. The program seeks to reflect the diversity of technical and intellectual approaches practiced in the field of visual art and is open to interdisciplinary experimentation as well as traditionally focused studies.

ADMISSION TO THE MAJOR

At the time of application for major status, a student is expected to have completed ARST131 (Drawing I) and one art history course, along with another art studio course. The prospective major must consult with an art studio faculty member (in the proposed area of study) who is willing to serve as advisor. Most faculty expect the student to have completed outstanding work in a second-level course within a particular medium (for example, ARST352 or ARST340) before agreeing to advise a major applicant. Together, student and major advisor devise a program of study for the final two years. Admission to the major requires a review by the art studio faculty and a minimum academic average of B and an average of B+ for at least three courses in the department, two of which must be in the Art Studio Program.

MAJOR REQUIREMENTS

Students majoring in art studio must satisfactorily complete 11 courses in the department:

- ARST131 (Drawing I)
- At least four studio courses numbered **200**, at least one of which must be in either of the three-dimensional areas of sculpture or architecture
 - four art history courses, at least two of which are at the 200-level or above:
 - one Classical through Baroque
 - one Modern (1700 - present)
 - one non-Western
 - one additional ARHA course (ARHA110 or ARHA131 surveys are strongly encouraged)
- two semesters of senior thesis¹

¹ In the rare case a student finishes all of their graduation requirements in December of their senior year, they may complete the major with only one semester of thesis tutorial, still exhibiting in the Spring.

That breaks down to five art studio courses, four art history courses, and two semesters of thesis. Further course study in art studio and art history is recommended. Majors are required to fulfill their general education as described by the University guidelines, since all majors are required to complete a senior thesis for honors. Teaching apprentice tutorials in the department will not be counted toward the major.

In the final year of study, each student will develop a focused body of work and mount a solo exhibition. That exhibition is the culmination of a two-semester thesis tutorial and is developed in close critical dialogue with a faculty advisor. The exhibition is critiqued by the faculty advisor and a second critic and must be passed by a vote of the faculty of the art studio program. The senior thesis exhibition provides a rare opportunity for the student to engage in a rigorous, self-directed, creative investigation and in a public dialogue about his/her work.

All art studio majors are required to complete an honors thesis, the senior thesis exhibition. The studio faculty vote to determine high honors, honors, pass, or fail, on the criteria of originality, mastery of medium, depth and range of investigation, and coherence of the exhibition.

GENERAL EDUCATION

Art studio majors are required to fulfill their general education requirements as described by the University guidelines, since all are required to complete a senior thesis for honors.

STUDENT LEARNING GOALS

The art studio program faculty has set the following goals for student achievement or success in the major:

- Exploration of and proficiency with a wide range of media and technique, at the introductory level and beyond
- Honing observational skill
- Fluency in visual language
- The development of technical facility enabling students to explore their personal visions through making art
- Broad awareness of current and historical art and its theoretical and historical context
- Critique methodologies, and the ability to analyze art from diverse intellectual traditions and technical approaches
- Development of independent studio practice, ideation, and methodology, culminating in a one-person exhibition senior year

ADVANCED PLACEMENT

No Advanced Placement credit is accepted in art studio.

TRANSFER CREDIT

A major is obliged to consult with his/her advisor and receive approval for off-campus study, leaves, or addition of a second major. Off-campus study in the senior year is not encouraged and requires additional approval of the program director. Students should also consult carefully when planning off-campus study before they have been accepted to the major. An art studio faculty member must approve coursework taken outside of Wesleyan in advance, and a portfolio review is required after the course is completed to transfer credit toward the major. Transfer of course credit toward the major is not automatic, even from a Wesleyan-approved program. A student may count no more than three art studio and art history courses taken outside the Wesleyan department toward the major without specific permission of the faculty. Students transferring to Wesleyan who wish to receive credit toward the major for art studio courses taken at another institution should seek approval from the department prior to enrollment; portfolio review is required, transfer of course credit is not automatic.

HONORS

All art studio majors are required to complete and pass an honors thesis, the senior thesis exhibition. The studio faculty vote to determine high honors, honors, pass, or fail, on the criteria of originality, mastery of medium, depth and range of investigation, and coherence of the exhibition.

ASTRONOMY

The Wesleyan Astronomy Department provides outstanding opportunities for undergraduates who wish to major in this fascinating subject, either in preparation for graduate school or as an end in itself. Our unique program blends coursework with research opportunity and provides students access to professional-quality telescopes, instrumentation, and computers. A principal strength is our active research faculty who will work one-on-one with undergraduates employing state-of-the-art instrumentation and computers to investigate areas of current astronomical interest.

Our students go on to graduate programs, including the best in the country, or to a variety of rewarding careers in and out of science. Many of our students are co-authors on research papers based on work performed during their undergraduate careers. In addition, we offer a comprehensive range of coursework that will prepare students for a variety of directions in life, including graduate study.

FACULTY

Meredith Hughes

BS, Yale University; PHD, Harvard University
Associate Professor of Astronomy; Associate Professor, Integrative Sciences

Roy E. Kilgard

BA, Valdosta St University; PHD, University of Leicester
Associate Professor of the Practice in Astronomy; Associate Professor of the Practice, Integrative Sciences

Edward C. Moran

BS, Pennsylvania State University; MA, Columbia University; MPHIL, Columbia University; PHD, Columbia University
John Monroe Van Vleck Professor of Astronomy; Professor of Astronomy; Chair, Astronomy Department; Director, Graduate Studies; Director, Van Vleck Observatory; Professor, Integrative Sciences; Co-Coordinator, Planetary Science

Seth Redfield

BM, New Eng Conserv Music; BS, Tufts University; MS, University of Colorado Boulder; PHD, University of Colorado Boulder
Professor of Astronomy; Professor, Integrative Sciences; Co-Coordinator, Planetary Science

EMERITI

William Herbst

BA, Princeton University; MAA, Wesleyan University; MSC, University of Toronto; PHD, University of Toronto
John Monroe Van Vleck Professor of Astronomy, Emeritus

UNDERGRADUATE PROGRAM DEPARTMENTAL ADVISING EXPERTS

William Herbst, Edward Moran, Seth Redfield

ASTRONOMY MAJOR

ADMISSION TO THE MAJOR

The standard introductory course for potential majors and other science-oriented students is ASTR155. It may be taken in the first or sophomore year. It assumes a good high school preparation in physics and some knowledge of calculus. Potential majors with a good knowledge of astronomy may place out of this course by demonstrating proficiency in the material; anyone wishing to do so should speak with the instructor. ASTR211 is a sophomore-level course appropriate for interested nonmajors as well as a gateway course to the major.

MAJOR REQUIREMENTS

The astronomy major is constructed to accommodate both students who are preparing for graduate school and those who are not.

The basic requirement for the major is successful completion of the required courses as well as four upper-level astronomy courses. The required upper-level courses are taken one each semester in the junior and senior years.

Code	Title	Hours
Required Courses:		
ASTR155	Introduction to Astrophysics	
ASTR211	Observational Astronomy	
MATH121	Calculus I	
MATH122	Calculus II	
MATH221	Vectors and Matrices	
PHYS113	General Physics I	
PHYS116	General Physics II	
PHYS213	Waves and Oscillations	
PHYS214	Quantum Mechanics I	
Four Upper-Level Astronomy Courses*:		
ASTR221	Galactic Astronomy	
ASTR222	Modern Observational Techniques	
ASTR224	Exoplanets: Formation, Detection, and Characterization	
ASTR231	Stellar Structure and Evolution	
ASTR232	Galaxies, Quasars, and Cosmology	
ASTR240	Radio Astronomy	
*Upper-level Astronomy course offerings may vary year-to-year.		

Code	Title	Hours
Strongly Recommended Courses:		
MATH222	Multivariable Calculus	
PHYS324	Electricity and Magnetism	
PHYS215	Special Relativity	
PHYS219	Introduction to Contemporary Physics (if PHYS215 is not offered)	

Additional upper-level physics courses are also recommended but are not required. Ability to program a computer in at least one of the widely used languages in the sciences, such as C, Fortran, or IDL, is also highly recommended. This does not necessarily mean that students should take a computer science course. Potential majors with graduate school aspirations should complete or place out of the basic physics and mathematics courses listed above, preferably by the end of their sophomore year, and should also take ASTR155 and ASTR211 during their first two years.

Since physics GRE scores are an important admission criterion at most astronomy graduate schools, those planning to go on for a PhD are advised to double major in physics. This can be accomplished by taking several of the following additional courses, normally in the junior and senior years: PHYS324, PHYS313, PHYS315, and PHYS316. Check the published requirements for the physics major for more details and speak to your advisor.

Additional mathematics courses, such as MATH229, may also be chosen.

Click here (https://catalog.wesleyan.edu/departments/astr/ugrd-astr/%20https://wesfiles.wesleyan.edu/departments/acaf/AcafWeb/Advising%20Resources%20for%20Faculty/Astronomy_Major.pdf) for more detailed information about the astronomy major, including a sample eight-semester course plan.

STUDENT LEARNING GOALS

In this major, students are expected to acquire or develop:

- a broad understanding at an introductory level of the foundational concepts and recent discoveries that have shaped modern astronomy and astrophysics;
- proficiency at an advanced level with the theoretical concepts and observational tools employed in four or more distinct subfields of astrophysics;
- firsthand experience with the process of science through participation in research;
- the technical and research skills needed to pursue graduate study in astronomy;
- analytical abilities and computing skills useful for careers outside of professional astronomy.

BA/MA PROGRAM

[wesleyan.edu/grad/degree-programs/bama.html (<http://www.wesleyan.edu/grad/degree-programs/bama.html>)]

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience.

ADDITIONAL INFORMATION

All astronomy majors are to enroll each year in the .25-credit courses ASTR430 and ASTR431. These discussion courses provide a broad exposure and introduction to research and education topics of current interest to the astronomical community. Majors are also encouraged to serve as teaching apprentices in a general education course at least once during their junior or

senior year, to take part in the observing program with the department's 24-inch telescope, and to participate in the department's public outreach activities.

HONORS

Students considering graduate school are strongly urged to do a senior thesis project (ASTR409/ASTR410); honors in astronomy requires completion of a senior thesis. Students with an interest in planetary science are advised to look at the course cluster information on that topic.

CAPSTONE EXPERIENCE

Research is an integral part of an undergraduate education in astronomy, and all majors are required to complete a senior research capstone that provides experiences beyond those obtained as part of their academic coursework. The capstone, to be completed during the twelve months prior to graduation, can take several forms:

- completion of a senior thesis project
- non-thesis related astronomy research
- in-depth investigation of a current research topic, including a short written report

In all cases, students must present some aspect of their experience in a public forum, e.g., by speaking in the ASTR 431 research seminar, presenting a poster at the Wesleyan summer research program poster session, or making a presentation at a professional conference.

MASTER OF ARTS IN ASTRONOMY

The Astronomy Department offers graduate work leading to the degree of master of arts. The small size of the department permits individualized instruction and a close working relationship between students and faculty. Students are expected to become involved in the research programs of the department early in their graduate careers. They also are expected to select courses offered in the areas of observational and theoretical astronomy and astrophysics; a graduate student normally takes at least one 500-level astronomy course each semester. Additional courses in physics, mathematics, or planetary science are recommended according to individual student needs. Two years are usually necessary to complete requirements for the MA degree. However, the department also offers a five-year combined BA plus MA program for Wesleyan students. Eligible astronomy majors who complete their undergraduate requirements can obtain a master's degree upon successful completion of an additional year of graduate coursework and a thesis. Primary research activities in the department include mapping the local interstellar medium, probing the atmospheres of extrasolar planets, observations of young stars and protoplanetary disks, investigations of x-ray binary star systems, and studies of the massive black holes that reside at the centers of galaxies.

COURSES

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. Students will normally enroll in at least one 500-level course in astronomy each semester. Depending on the year, the courses are ASTR521, ASTR522, ASTR524, ASTR531, ASTR532, or ASTR555. These courses are similar in content to the 200-level courses of the same name but with some supplementary materials and special assignments. These supplements are designed especially for graduate students. In order to show proficiency in astronomy, physics, and mathematics, a minimum of 6-10 non-seminar credits, with grades of B- or better, is required for the MA degree. These include two credits for research leading to the thesis, which is also required. The student may expect to take two to four courses in physics, mathematics, or other sciences after consultation with the faculty of the department. In each semester of the first year of a 2-year MA program, students typically take three courses: one 500-level astronomy course and two courses in physics or math to match the level of proficiency expected in the Department's BA in astronomy. In each semester of the final year of the MA program, students typically take one 500-level astronomy course and one credit of thesis research. In addition, students are required to participate in the department's seminars on research and pedagogy in astronomy, which are offered each semester.

PROGRESS AND QUALIFYING EXAMS

To be admitted to candidacy, an MA student must take a written and oral qualifying examination demonstrating satisfactory understanding of several areas of astronomy, fundamental physics, and mathematics. This examination should be taken prior to the last year of study. If performance in this examination is not satisfactory, the student will either be asked not to continue or to repeat the examination. BA/MA students do not take a written or oral qualifying examination if ASTR155 has been successfully completed.

TEACHING

The emphasis in the program is on research and scholarly achievement, but graduate students are expected to improve communication skills by classroom teaching, formal interaction with undergraduate students, and presenting talks to the observatory staff and to the community. BA/MA students are not required to be teaching assistants.

RESEARCH

The research interests of the current faculty are:

- Dr. William Herbst—star and planet formation
- Dr. Ed Moran—extragalactic X-ray sources and supermassive black holes
- Dr. Seth Redfield—exoplanets and the interstellar medium
- Dr. Roy Kilgard—high-mass X-ray binary populations and statistical challenges in high energy astrophysics
- Dr. Meredith Hughes—planet formation

The department is well-equipped for instruction and research. Facilities include a network of MacOS X workstations, a CCD attached to a 24-inch reflector, a 20-inch refractor equipped for observational work, and the substantial astronomical library of the Van Vleck Observatory. Members of our faculty are frequently

awarded observing time on world-class telescopes, including the Hubble Space Telescope, Chandra X-ray Observatory, and dozens of ground-based telescopes.

THESIS AND DEFENSE

Each candidate is required to write a thesis on a piece of original and publishable research carried out under the supervision of a faculty member. A thesis plan, stating the purpose and goals of the research, observational and other materials required, and uncertainties and difficulties that may be encountered, must be submitted to the department for approval after admission to candidacy. The thesis, in near-final form, must be submitted to the faculty at least one week prior to the scheduled oral examination. In this examination, the student must defend his or her work and must demonstrate a high level of understanding in the research area. The oral examination may touch on any aspect of the student's preparation. It is expected that the student will submit the results of his or her work to a research journal for publication.

CONCENTRATIONS

Wesleyan offers an MA Concentration in Planetary Science. Planetary science is an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology. The subject matter is planets, including those around other stars (exo-solar systems). The science questions include the most important of our times: How do planets (including Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? The discovery of even microbial life beyond Earth would rank as one of the greatest human achievements of all time, and this quest lies squarely within the purview of planetary science. For more information and course requirements see <https://www.wesleyan.edu/planetary/Graduate.html>.

ADDITIONAL INFORMATION

For additional information about the Master of Arts program at Wesleyan, please visit

<https://www.wesleyan.edu/grad/graduate-programs/masters.html>.

BIOLOGY

These are thrilling times to study biology. Advances in molecular biology, epigenetics, and bioinformatics are leading to extraordinary new insights in every field, from evolution and ecology to development, cell biology, genetics/genomics, and neuroscience. These research areas are providing essential information as we address the urgent challenges of biodiversity conservation, global climate change, epidemiology, and human health and well-being. Biology is also at the heart of new ways of understanding ourselves as human beings in relation to other living things. Connections between biological disciplines are raising key questions in new ways, while biological knowledge has become fundamentally integrated with social and medical ethics, public policy, and journalism.

The Biology Department offers a broad range of courses that emphasize the process of scientific inquiry and current experimental approaches. Our courses also consider real-world implications of biological issues: the ethics of embryonic stem cell research, gender issues and reproductive technologies, the AIDS epidemic, and the impact of human activity on natural communities. Biology courses can be the start of a dedicated career in research, medicine, conservation, public health, bioethics, sustainable resource use, and many other areas. They can also bring the intellectual excitement of these investigations to students whose major focus is in the arts, humanities, or social sciences. We welcome students of all backgrounds and interests to join us.

FACULTY

Gloster B. Aaron

BA, Oberlin College; PHD, University of Pennsylvania
Associate Professor of Biology; Associate Professor, Neuroscience and Behavior;
Associate Professor, Integrative Sciences

Ann Campbell Burke

AB, New York University; MA, Harvard University; PHD, Harvard University
Professor of Biology

Barry Chernoff

BS, SUNY at Stony Brook; MS, Adelphi University; PHD, University of Michigan
Robert Schumann Professor of Environmental Studies; Professor of Earth
and Environmental Sciences; Professor of Biology; Director, College of the
Environment; Professor, Environmental Studies

Frederick M. Cohan

BS, Stanford University; PHD, Harvard University
Huffington Foundation Professor in the College of the Environment; Professor
of Biology; Chair, Environmental Studies Program; Professor, Environmental
Studies; Professor, Integrative Sciences

Joseph David Coolon

BS, Kansas State University; PHD, Kansas State University
Assistant Professor of Biology; Assistant Professor, Integrative Sciences

Stephen H. Devoto

BA, Haverford College; PHD, Rockefeller University
Professor of Biology; Professor, Neuroscience and Behavior

Ruth Ineke Johnson

BS, University of Witwatersrand; PHD, Cambridge University
Associate Professor of Biology; Associate Professor, Integrative Sciences

Laverne Melon

BA, Middlebury College; MS, SUNY at Binghamton University; PHD, Purdue
University W Lafayette

Assistant Professor of Biology; Assistant Professor, Neuroscience and Behavior;
Assistant Professor, Integrative Sciences; Assistant Professor, Feminist, Gender,
and Sexuality Studies

Janice R. Naegele

BA, Mount Holyoke College; PHD, Massachusetts Institute of Technology
Dean of the Natural Sciences and Mathematics; Alan M. Dachs Professor of
Science; Professor of Biology; Professor, Neuroscience and Behavior; Professor,
Integrative Sciences

Joyce Ann Powzyk

BS, Principia College; PHD, Duke University
Associate Professor of the Practice in Biology

Michael Singer

BS, University Southern Calif; PHD, University of Arizona
Professor of Biology; Professor, Environmental Studies

Sonia Sultan

BA, Princeton University; MA, Harvard University; PHD, Harvard University
Professor of Biology; Professor, Environmental Studies

Michael P. Weir

BS, University of Sussex; PHD, University of Pennsylvania
Professor of Biology; Chair, Biology; Professor, Integrative Sciences; Co-
Coordinator, Informatics and Modeling

VISITING FACULTY

Krista Perks

BA, Wesleyan University; MA, Wesleyan University; PHD, University of California
San D
Visiting Assistant Professor, Neuroscience and Behavior; Visiting Assistant
Professor of Biology

EMERITI

Allan Berlind

BA, Swarthmore College; MA, Harvard University; PHD, Harvard University
Professor of Biology, Emeritus

David Bodznick

BS, University of Illinois Urbana; MAA, Wesleyan University; PHD, University of
Washington
Professor of Biology, Emeritus

J. James Donady

BS, SUNY at Stony Brook; PHD, University of Iowa
Professor of Biology, Emeritus

Laura B. Grabel

BA, Brandeis University; MAA, Wesleyan University; PHD, University of California,
San Diego
Professor of Biology, Emerita

UNDERGRADUATE PROGRAM DEPARTMENTAL ADVISING EXPERTS

All departmental faculty

BIOLOGY MAJOR

ADMISSION TO THE MAJOR

Students are encouraged to begin their major in the first year so that they can take maximum advantage of upper-level biology courses and research opportunities in later years. However, the major can certainly be successfully completed if begun during sophomore year, and many students are able to combine the biology major with a semester abroad.

A prospective biology major begins with a series of two core introductory courses. Students should begin the core series with BIOL181 and its associated laboratory course, BIOL191, which are offered in the fall semester. BIOL181 is offered in a number of small sections rather than a single large lecture class. These small sections allow for problem-based learning at a more individualized pace as students master the first semester of university-level biology. Students should enroll separately for the lab course, BIOL191. These courses do not have prerequisites or corequisites, but it is useful to have some chemistry background or to take chemistry concurrently. In the spring semester, the prospective major should take BIOL182 and its laboratory course, BIOL192. An optional spring course, BIOL194, is offered to students of BIOL182 who wish a challenging reading and discussion experience in addition to the lectures.

MAJOR REQUIREMENTS

The biology major's program of study consists of the following:

- The two introductory courses, BIOL181-BIOL182, with their labs, BIOL191-BIOL192.
- At least six elective biology courses at the **200** and **300** levels, including:
 - one mid-level cell/molecular course (either MB&B208, BIOL210, BIOL212, or BIOL218) and
 - one mid-level organismic/population course (either NS&B213/BIOL213, BIOL214, BIOL215, or BIOL216).

NOTE: Among the 6 Biology elective courses, 3 must be used exclusively for the Biology Major

- No more than three of these mid-level courses (listed above) may be counted towards the six advanced elective requirement.
- **IMPORTANT INFORMATION FOR DOUBLE MAJORS:** At least two elective courses (200-level and above) that are counted toward the biology major cannot be simultaneously used to fulfill any other major.
- In addition, if a student is double-majoring in biology and NS&B, NS&B/BIOL213 cannot count toward the six electives required for the biology major; however, NS&B/BIOL213 will fulfill the Column 2 breadth requirement.

- Two semesters of general chemistry (CHEM141-CHEM142 or CHEM143-CHEM144)
- Any three additional semesters of related courses from at least two different departments:
 - organic chemistry (CHEM251 or CHEM252)
 - physics (PHYS111, PHYS112, PHYS113, or PHYS116 and PHYS207)
 - mathematics (MATH117 or higher)
 - statistics (MATH132, BIOL242/BIOL542, ECON300 or PSYC200)
 - QAC (QAC201 or QAC231)
 - computer science (COMP112, COMP114, COMP115, COMP211, or higher)
 - Earth and Environmental Science E&ES270, or E&ES280 or E&ES380)

NOTE: Two Statistics courses, even from different Departments cannot both be counted as cognates. Students cannot use E&ES280 if they use QAC231.

- Biology majors are allowed to apply at most one elective course or one cognate course taken credit/unsatisfactory toward fulfilling the major requirements; however, this is discouraged because good performance in major courses is an important aspect of a student's transcript.
- A strong chemistry background is especially recommended for students planning to enter graduate or medical school. Most medical and other health-related graduate schools require two years of college-level chemistry, including laboratory components, as well as a course in biochemistry.
- Students planning to go on to medical, dental, or other health professions graduate school should note that a year each of introductory biology, physics, and math (such as calculus or statistics) and two years of chemistry (general and organic) are required for admission, including any laboratory components.

Electives may be chosen from among the following courses at the **200**, **300**, or **500** levels. See WesMaps for current course offerings. The courses are grouped thematically for your convenience only.

CAPSTONE EXPERIENCE WILL BE REQUIRED FOR BIOLOGY MAJORS DECLARING IN 2020 STUDENTS MUST COMPLETE AT LEAST ONE OF THE FOLLOWING:

1. **Lab research (preferably starting sophomore year) leading to a senior thesis (BIOL409, BIOL410)**
2. **Participation in journal club junior or senior year (FALL BIOL505, 507 or 509), (SPRING BIOL506, 508 or 510)**
3. **Summer Research Internship**
4. **Additional 300 level seminar**
5. **Upper level lab or field course**
6. **Attendance at weekly Biology and MB&B seminars (FALL BIOL338, SPRING BIOL339)**

CELL AND DEVELOPMENT BIOLOGY

Code	Title	Hours
MB&B/BIOL232	Immunology	1
MB&B/BIOL237	Signal Transduction	1

NS&B/BIOL360	Calderwood Seminar in Public Writing: Neuroplasticity and the Brain	1

FULFILLING THE BIOLOGY MAJOR

Cross-listed courses that are included on the list above are automatically credited to the biology major. At least two elective courses (**200**-level and above) that are counted toward the biology major must be used to fulfill only the biology major and cannot be simultaneously used to fulfill another major.

Depending on the student's specific program, and with prior permission of the chair, up to two biology courses from outside the department may be counted toward the major. Two Wesleyan courses that fall into this category are ANTH202 and ANTH349.

Additional courses that may be credited to the major: BIOL242, E&ES234, MB&B228, CHEM323, CHEM342, CHE383

NOTE: MB&B228 Introduction to Biochemistry may be counted as long as neither MB&B208 nor MB&B383 is counted toward the major.

Biology majors are allowed to apply at most one elective course taken credit/unsatisfactory toward fulfilling the major requirements; however, this is discouraged because good performance in major courses is an important aspect of a student's transcript.

Courses in the **BIOL 400** series (such as research tutorials) contribute toward graduation but do not count toward the major.

COURSES FOR NON-MAJORS

The following courses do not have prerequisites and, as such, are appropriate for non-majors.

Code	Title	Hours
BIOL106	The Biology of Sex	1
BIOL140	Classic Studies in Animal Behavior	1
BIOL145F	Primate Behavior: The Real Monkey Business (FYS)	1
BIOL173	Global Change and Infectious Disease	1
BIOL181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1

BIOL182	Principles of Biology II	1
BIOL197	Introduction to Environmental Studies	1

STUDENT LEARNING GOALS

The Biology Department expects its majors to develop a broad and integrative understanding of the theory and practice of biology across a range of disciplines and levels of biological organization. The curricular requirements of the major are designed to provide enough flexibility for each student to choose a disciplinary emphasis of most interest and fulfill the additional expectation of achieving some depth of knowledge in a particular area through a relatively intensive classroom or laboratory experience. In this context, we want our students to develop skills in critical and quantitative thinking, creative problem-solving, and intuition for the process of scientific reasoning. We also encourage our students to engage in ethical thinking about biological research and the role of biology in society and sustainability. A complete program of study in biology entails the application of these skills to designing or conducting original research (including scholarly research via scientific databases), writing about and orally communicating scientific concepts, as well as the comprehension and critical interpretation of primary scientific literature. Our ultimate goal is, therefore, to train students to use their biological knowledge and skills to become effective, scientifically informed citizens and professionals.

ADVANCED PLACEMENT

Students who have received a grade of 4 or 5 on the AP exam may receive **one** University credit toward graduation.

Students with a score of 4 or 5 may place out of **one** of the two Introductory Biology courses - BIOL181 or BIOL182 but **must first consult** with an instructor teaching these courses.

Students interested in placing out of MB&B181 in the fall semester should contact Professor Michelle Murolo (mmurolo@wesleyan.edu) regarding the placement exam.

No follow-up course is required. These courses are considered essential background for our upper-level courses; **students are highly encouraged to enroll in both semesters.**

However, we recommend against this for almost all students, especially those who may be interested in the biology major. Although some of the MB&B181/BIOL181 material will be familiar from a high school AP course, the depth and rigor of MB&B181/BIOL181 provide a strong foundation as you move forward to more advanced courses. Alternatively, students with AP 4 or 5 may consult individually with the BIOL182 faculty regarding placing out of this second-semester introductory course. However, both courses are considered essential background for our upper-level courses; students are highly encouraged to enroll in both semesters.

PRIZES

Dr. Neil Clendeninn Prize. Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed his or her sophomore year and in that time have exemplified those qualities of character, leadership, and

concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

The Peirce Prize. Awarded in successive years for excellence in biology, chemistry, and geology.

TRANSFER CREDIT

Up to two outside credits for biology courses may also be applied from another institution (during a study abroad program, for example). Prior permission must be obtained from the departmental liaison Professor Michael Singer (msinger@wesleyan.edu) to ensure creditability of specific courses from other institutions. Information and a downloadable form can be found here <https://www.wesleyan.edu/studentaffairs/pdfs/ptcapril2016.pdf>

RELATED PROGRAMS OR CERTIFICATES

Environmental Studies Certificate. The Environmental Studies (ENVS) program is interdisciplinary and offers both a certificate and a linked major. The ENVS linked major is a secondary major and requires a student to also have a primary major in another department, program, or college. ENVS majors write a senior thesis or essay in environmental studies that is mentored by a professor in another department, program, or college (e.g., biology). There is also an opportunity to earn an ENVS certificate, which does not require a senior thesis or essay. See: wesleyan.edu/coe/academics/ (<https://wesleyan.edu/coe/academics/>).

Informatics and Modeling Minor. The Integrative Genomic Science pathway within this minor will be of particular interest for life science majors. See wesleyan.edu/imcp/igs.html (<https://wesleyan.edu/imcp/igs.html>).

Neuroscience and Behavior Program. Several faculty members in the Biology and Psychology Departments also participate in the Neuroscience and Behavior Program that, at the undergraduate level, constitutes a separate major. Information about that program can be found at wesleyan.edu/nsb/ (<https://wesleyan.edu/nsb/>).

The graduate program is an integral part of the Biology Department's offerings. Not only are graduate students active participants in the undergraduate courses, but, also, upper-level undergraduates are encouraged to take graduate-level courses and seminars (**500** series). Research opportunities are also available for undergraduates, and, frequently, these involve close interaction with graduate students.

BA/MA PROGRAM

[[wesleyan.edu/grad/degree-programs/bama.html](http://www.wesleyan.edu/grad/degree-programs/bama.html) (<http://www.wesleyan.edu/grad/degree-programs/bama.html>)]

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are advised to begin research by their junior year if they intend to pursue the BA/MA in biology. Seniors can apply by December 1 and will be notified of their status by the end of January. Admission is competitive and based on GPA, faculty recommendations, and research experience.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

ADDITIONAL INFORMATION

The seminar series features distinguished scientists from other institutions who present lectures on their research findings. One objective of these seminars is to relate material studied in courses, tutorials, and research to current scientific activity. These seminars are usually held on Thursdays at noon and are open to all members of the University community. Undergraduates are especially welcome.

HONORS

To be considered for departmental honors, a student must

- Be a biology major and be recommended to the department by a faculty member. It is expected that the student will have at least a B average (grade point average 85) in courses credited to the major.
- Submit a thesis based on laboratory research, computational research, or mathematical modeling. The thesis is carried out under the supervision of a faculty member of the department.

CAPSTONE EXPERIENCE

CAPSTONE EXPERIENCE WILL BE REQUIRED FOR BIOLOGY MAJORS DECLARING IN 2020 STUDENTS MUST COMPLETE AT LEAST ONE OF THE FOLLOWING:

1. Lab research (preferably starting sophomore year) leading to a senior thesis (BIOL409, BIOL410)
2. Participation in journal club junior or senior year (FALL BIOL505, 507 or 509), (SPRING BIOL506, 508 or 510)
3. Summer Research Internship
4. Additional 300 level seminar
5. Upper level lab or field course
6. Attendance at weekly Biology and MB&B seminars (FALL BIOL338, SPRING BIOL339)

DOCTOR OF PHILOSOPHY IN BIOLOGY

The Biology Department offers graduate work leading to the degree of doctor of philosophy. The primary emphasis is on an intensive research experience culminating in a thesis, though the student will also be expected to acquire a broad knowledge of related biological fields through an individual program of courses, seminars, and readings. The low student-faculty ratio in the department ensures close contact between students and their dissertation advisors. Faculty and invited outside speakers offer regular research seminars, and graduate students present their work as it progresses at a biweekly departmental colloquium. Additional courses and lectures of interest offered by other departments are also available to biology students. All PhD students are required

to teach 3 semesters (2 in the introductory series) with faculty training and supervision. Teaching assistants are involved primarily in preparing materials for, and assisting in, laboratory courses and in evaluating student work. In the later years of the PhD program, some classroom teaching opportunities may be offered. Students are encouraged to spend a summer at the Marine Biological Lab in Woods Hole, Cold Spring Harbor labs, or another institution offering specialized graduate courses. Funds are available to support such coursework and to facilitate student travel to scientific conferences.

COURSES

The PhD is a research degree demanding rigorous scholarly training and creativity; the result is an original contribution to the candidate's field. The student and a faculty committee will work out a program of study for the first two years at the time of matriculation. This program will take into account the student's proposed field of interest and prior background in biology and related sciences. No specific courses are required, but, rather, a subject-matter requirement is used to ensure a broad background. Before taking the qualifying examination, all students must have at least one substantive course above the introductory level (at Wesleyan or elsewhere) in each of five subject areas: genetics/genomics/bioinformatics, evolution/ecology, physiology/neurobiology/behavior, cell biology/developmental biology and biochemistry/molecular biology. The adequacy of courses that have been taken at other institutions will be evaluated by the faculty committee through its meeting with the student. Students whose focus is bioinformatics may substitute two upper-level courses in computer science for one of these five areas.

All PhD students must take a minimum of two 1 credit advanced (**300** or **500**) lecture, lab, or seminar course approved by the First Year Advisory committee. At least one of these should be taken during the student's first year. Departmental and interdepartmental seminars and journal clubs are included in the program, and additional individual reading in particular areas may also be required. First-year students are exposed to research in the department through usually two, occasionally three, one-semester lab rotations or research practica. Toward the end of each semester of the first year, each student will meet with an evaluation committee of the faculty to review progress and to discuss any modification of the proposed program.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

Working with the First-Year Advisory Committee, graduate students design their own program of courses to complement and strengthen their previous background knowledge. All students are required to participate in one of the journal clubs, during which recent journal articles are presented and discussed. Three journal clubs meet weekly over lunch:

- Ecology/Evolution
- Cell/Development/Genetics
- Neuroscience/Behavior

PROGRESS AND QUALIFYING EXAMS

A PhD student's career in the Department of Biology at Wesleyan University is divided into three phases:

1. Preparation, rotations, and Qualifier exam

Students are required to spend a one-semester rotation in two research laboratories during their first year. A third rotation is occasionally appropriate.

After settling into a lab, a qualifying examination will be taken at the end of the second year. The examination is designed to test the student's knowledge of biology and ability to think critically. It includes a written research proposal, followed by an oral examination to discuss the proposal and evaluate the student's breadth in biology. The examination will be administered by four faculty members of the department (or associated departments and including the advisor), chosen by the student and his or her research advisor. The examining committee will include the research advisor and one member whose research field is clearly outside the student's area of special interest.

2. Active PhD thesis research

Within a year of passing the Qualifier exam the student should meet with a thesis committee selected in consultation with his/her advisor to discuss research progress and proposed research. The student should submit to the committee an updated thesis proposal. The thesis committee will include the thesis advisor and three additional members; at least two of the latter three must be a member of the Biology Department Faculty. The 3rd member may be from another Wesleyan Department or another institution if appropriate. The committee will meet with the student twice a year thereafter, or more frequently if it is appropriate.

3. Preparation of the PhD thesis and defense

The thesis committee determines when sufficient experimental work has been completed and must approve the final written document. After the committee's determination, a public thesis defense will be scheduled.

TEACHING

A minimum of three semesters as a teaching assistant is required.

RESEARCH

PhD students start their research experience with two or more semester-long practica in laboratories. These are designed to provide complementing experiences to prepare students for their thesis research. Research projects are available in the following areas:

- **Aaron Lab**—epilepsy, the hippocampus, and the cortex
- **Burke Lab**—development and evolution
- **Chernoff Lab**—conservation, evolution, and genetics of fish
- **Cohan Lab**—evolutionary genetics and speciation of bacteria
- **Coolon Lab**—ecological and evolutionary functional genomics
- **Devoto Lab**—muscle development in zebrafish
- **Johnson Lab**—regulation of cell movement during development
- **Naegele Lab**—development of GABAergic interneurons and neural stem cell therapy
- **Melón Lab**—Neurobiological mechanism that drive sex differences in the development of disorders associated with alcohol exposure
- **Singer Lab**—evolution and ecology of plant-animal interactions
- **Sultan Lab**—evolutionary ecology of phenotypic plasticity in plants
- **Weir Lab**—molecular genetics; bioinformatics

All PhD students present their research in bi-monthly seminars attended by all members of the department, to encourage students to become fluent and comfortable with their presentation skills.

DISSERTATION AND DEFENSE

The most important requirement is a PhD thesis, an original contribution to biology that merits publication. The candidate will receive advice and guidance from the thesis director but must demonstrate both originality and scientific competence. Normally, the candidate will choose a thesis topic during the second year of graduate work in consultation with appropriate faculty. The thesis committee determines when sufficient experimental work has been completed and must approve the final written document. At this point a public defense will be scheduled after which the documents will be signed if the candidate has fulfilled all the requirements.

ADDITIONAL INFORMATION

BA/MA PROGRAM

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are encouraged to begin research by their sophomore year if they intend to pursue the BA/MA in biology. Admission is competitive and based on GPA, faculty recommendations, and research experience. For information about the BA/MA Program: wesleyan.edu/grad/degree-programs/bama.html (<http://www.wesleyan.edu/grad/degree-programs/bama.html>)

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

For additional information, please visit wesleyan.edu/bio/graduate/ (<https://wesleyan.edu/bio/graduate/>).

MASTER OF ARTS IN BIOLOGY

The Biology Department offers graduate work leading to the degree of Master of Arts through the BA/MA program. The program has a strong research orientation. It also includes course work, seminars, and, in some cases, teaching. A student hoping to enter this program will be expected to discuss the intention to do so with a research advisor in the first semester of their junior year to permit the design of an acceptable program. The Biology Department may grant the degree of Master of Arts to students in the PhD program who do not complete the PhD.

COURSES

Students in the BA/MA or terminated Ph.D. programs are required to earn a minimum of 6 credits in addition to the 32 necessary for the Wesleyan BA.

Three credits will be earned through Journal Club I & II:

FALL

- BIOL505, BIOL507, BIOL509, BIOL547

For additional information, please visit wesleyan.edu/bio/graduate (<https://wesleyan.edu/bio/graduate/>).

SPRING

- BIOL506, BIOL508, BIOL510, BIOL548 (0.25 credits x 2 = 0.50)
- Advanced Research (BIOL549 , BIOL550 (1.0 credit x 2 = 2.0)
- Research Seminar (BIOL557 ; 0.50 credits)

The remaining credits will be earned through lecture, lab, or seminar courses (200, 300, or 500-level) determined by the student and mentor; a minimum of two of these must be one-credit courses. MA credit will only be awarded for academic work in which grades of B minus or higher have been earned. A student in the BA/MA program who earns more than 32 credits during the BA may apply any excess credits toward the MA, providing that they are relevant to the research area and they have not been used to fulfill an undergraduate major requirement.

PROGRESS AND QUALIFYING EXAMS

A 3-member committee of the faculty will be established upon acceptance into the BA/MA program. The candidate will be in contact with their committee in early stages of research and meet with them in the second semester of their MA year. This committee determines when sufficient experimental work has been completed and must approve the final written document. Students in this program will be expected to submit a MA thesis describing the research which they have carried out in partial fulfillment of the degree requirements.

TEACHING

There are no requirements for BA/MA candidates to teach although the opportunity may arise.

RESEARCH

All MA students present their research in bi-monthly seminars attended by all members of the department, to encourage students to become fluent and comfortable with their presentation skills.

THESIS AND DEFENSE

Students in this program will submit a MA thesis describing their research and give a public presentation during the BIOL557 seminar describing the research they have carried out as partial fulfillment of the degree requirements.

ADDITIONAL INFORMATION

BA/MA PROGRAM

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are encouraged to begin research by their sophomore year if they intend to pursue the BA/MA in biology. Admission is competitive and based on GPA, faculty recommendations, and research experience. For information about the BA/MA Program: wesleyan.edu/grad/degree-programs/bama.html (<http://www.wesleyan.edu/grad/degree-programs/bama.html>)]

FRIES CENTER FOR GLOBAL STUDIES

MISSION

The Fries Center for Global Studies is committed to helping all members of the Wesleyan community achieve the knowledge, language skills, and sensitivity each person will need in order to exercise effective and responsible citizenship in an increasingly interdependent world.

VISION

Our emphasis on intercultural communication, experience, and knowledge reflects the value we place on adaptability, compassion, and cultural self-awareness with respect to the world beyond our borders. These qualities and practices put Wesleyan's liberal arts program at the forefront of global education and are the hallmark of responsible global citizenship.

GOALS & STRATEGIES

The Fries Center for Global Studies pursues its goals by drawing on resources at hand: the Wesleyan curriculum, faculty, student body, and staff; the Office of Study Abroad; Fellowships; Language and Intercultural Learning; and Language Resources and Technology. Our strategies are designed specifically to:

- Identify and expand opportunities for students and faculty wishing to pursue a global perspective in the field of their choice;
- Offer the support needed for each department, program, center, and college to develop global perspectives in accordance with its own aims and in partnership with other academic units;
- Provide a forum for inquiry and debate concerning the pedagogies and administrative strategies best suited to the cultural demands of the contemporary world;
- Help students transcend disciplines while coordinating their curricular, cocurricular, and extracurricular experiences in accordance with the demands of a global education;
- Increase the mobility of the Wesleyan student body and faculty in support of a more vibrant cross-cultural debate and in accordance with the needs and goals of each academic unit;
- Increase the vibrancy of global discussions on campus through facilitating visits to campus by key scholars, artists, and activists;
- Promote relevant partnerships with peer institutions in the United States and with targeted institutions abroad;
- Promote collaborative teaching and research across disciplinary and cultural boundaries;
- Develop curricular opportunities that will allow students to develop a global education tailored to their needs and aspirations.

FACULTY

Abderrahman Aissa

BA, University of Colorado Boulder; MA, University of Colorado Boulder
Adjunct Assistant Professor in Arabic

H.M FazaleHaq

MA, University Of New Mexico; PHD, University Of New Mexico
Assistant Professor of the Practice in Hindi/Urdu

Natalia Roman Alicea

Assistant Director of Intercultural and Language Learning; Visiting Instructor,
Center for Global Studies

AFFILIATED FACULTY

Naho Maruta

MA, University of Wisconsin at Madison
Associate Professor of the Practice in East Asian Studies; Associate Professor of
the Practice, Fries Center for Global Studies

Camilla Zamboni

MA, Ohio State University
Adjunct Assistant Professor in Italian; Assistant Professor of the Practice in
Italian; Assistant Professor of the Practice, Education Studies; Assistant Professor
of the Practice, Fries Center for Global Studies

CENTER FOR JEWISH STUDIES

The Center for Jewish Studies offers interdisciplinary courses in Jewish and Israel studies. All courses (required and elective) are counted toward the Minor in Jewish and Israel Studies. The Center for Jewish Studies courses and workshops are taught by its core and affiliated faculty, as well as by distinguished visitors and scholars including film directors and internationally acclaimed writers and artists. The Center for Jewish Studies offers an innovative Hebrew program based on a unique model of incorporating language skills with cultural events, and all Hebrew courses are counted toward the Minor. In addition, the Center for Jewish Studies offers Wesleyan and the general community rich and innovative events and series linked to other departments, programs, and colleges at the University. Among them, the annual *Contemporary Israeli Voices* series in the fall, the annual *Ring Family Wesleyan University Israeli Film Festival* in the spring, the annual Samuel and Dorothy Frankel Memorial Lecture, and the annual Jeremy Zwelling Lecture. To be engaged with the larger Wesleyan community, the Center for Jewish Studies sponsors WESeminars, presented by its faculty.

CENTER FOR THE HUMANITIES

The Center for the Humanities at Wesleyan University provides high-level academic programming to energize the campus and promotes innovative research and scholarship through our faculty and visiting fellows program. In addition, faculty offer courses that are either based on current research projects or experimental in nature.

CHEMISTRY

Chemistry is the science of molecules. Scientific, medical, and technological phenomena ultimately are understood in terms of molecular structure and interactions. Understanding chemistry is essential to effective work in all sciences, and some knowledge of chemistry is useful in such fields as law, government, business, and art. Many aspects of our high-technology society can be understood better from the viewpoint of chemistry.

The following are typical important chemical problems: the structure of DNA, the molecular details of the resistance of bacteria to penicillin, the chemistry of biofuel production, the synthesis of new molecules that might be expected to have medical applications, the consequences of putting electrons and photons into molecules, the details of what happens as two molecules collide, the fundamental basis of the energies of molecules, and the synthesis of nanomaterials. These are all areas of research by Wesleyan faculty and their undergraduate and graduate coworkers.

CHEMISTRY MAJOR

MAJOR DESCRIPTION

Chemistry is the science of molecules and their transformations. Scientific, medical, and technological phenomena ultimately are understood in terms of molecular structure and interactions. Understanding chemistry is essential to effective work in all sciences, and some knowledge of chemistry can be useful in such fields as law, government, business, and art. Many aspects of modern technology and medicine can be understood better from the viewpoint of chemistry.

The following are typical important chemical problems: the structures and dynamics of proteins, the chemistry of biofuel production, the synthesis of new molecules with potential medical applications, the consequences of light absorption, the molecular basis of diseases, development of theoretical tools to study complex chemical systems, and the synthesis and applications of

nanomaterials. These are all areas of research by Wesleyan faculty and their undergraduate and graduate coworkers.

ADMISSION TO THE MAJOR

Students who anticipate the possibility of majoring in chemistry are encouraged to take CHEM143/CHEM144 as first-year students. Students who have scores of 4 or 5 in the chemistry Advanced Placement examination or 5, 6, or 7 on IB courses in chemistry should consult with the CHEM251 faculty about the possibility of advanced placement in organic chemistry (or, in exceptional circumstances, in physical chemistry).

To declare the Chemistry major students must have earned a grade of C or better in all 100- and 200-level Chemistry courses completed at the time of declaration.

MAJOR REQUIREMENTS

The chemistry department offers two general pathways to the major. The Standard Chemistry Track (or A-track) is appropriate for most students whose interests lie primarily in synthesis, characterization, and applications of molecules. Students with interests in biochemistry who wish to focus on understanding biological systems at the molecular level may choose to complete the Biological Chemistry Track (or B-track) major.

THE STANDARD CHEMISTRY TRACK (A-TRACK)

To major in chemistry, a student should complete a year of General Chemistry (CHEM141/CHEM142 or, preferably, CHEM143/CHEM144, and the associated lab CHEM152), unless the student has been given Advanced Placement credit. In addition, a year of organic chemistry (CHEM251/CHEM252), the concurrent laboratories (CHEM257/CHEM258), and a year of physical chemistry (CHEM337/CHEM338) are required. One year of advanced laboratory is required (CHEM375/CHEM376). Chemistry majors are also required to register for and attend two semesters of CHEM521/CHEM522. The major is completed by electing a total of at least three credits from **300**-level courses (other than CHEM337/CHEM338). All courses other than seminars that are required for the chemistry major must be taken with an A–F grading mode. One of the three **300**-level electives may be replaced by a total of 2.0 credits in research courses (CHEM409, CHEM410, CHEM423, or CHEM424). Seminars or journal clubs cannot be counted as electives. Chemistry majors are strongly encouraged to participate in research in one of the faculty laboratories, both during the academic year and over at least one summer. Financial support for summer research is generally available through the Research in the Sciences Program.

In addition, students must either (i) complete calculus courses through MATH122, (ii) receive an Advanced Placement score of a 4 or 5 on the BC calculus exam, or (iii) place into a course beyond MATH122 on the Math Placement Exam. Students must complete one year of physics (PHYS111/PHYS112 or PHYS113/PHYS116) or receive an Advanced Placement score of a 4 or 5 on the AP physics exam. Students who do not complete CHEM144, either through exemption or because they have satisfied the general chemistry requirement with CHEM141/CHEM142, must select CHEM361 as one of their **300**-level electives. Seminars or journal clubs cannot be counted as electives.

Students who intend to be multiple majors or to study abroad are strongly urged to seek advice from the chemistry faculty as early as possible for planning their academic programs.

A chemistry major planning graduate work in chemistry usually takes at least one additional **300**-level chemistry course (excluding CHEM337/CHEM338)

and two semesters of undergraduate research tutorials, CHEM409, CHEM410, CHEM423, or CHEM424. When feasible, an intensive continuation of research during at least one summer is encouraged. The preparation of a senior thesis based on this research is an extremely valuable capstone experience and is strongly recommended.

A chemistry major planning to attend medical school, teach in a secondary school, or do graduate work in such fields as biochemistry, geochemistry, environmental science, or chemical physics may request permission from the departmental curriculum committee to replace one of the elective requirements with an appropriate course offered by another science or mathematics department. A similar substitution may be requested when appropriate as part of an interdepartmental major.

THE BIOLOGICAL CHEMISTRY TRACK (B-TRACK)

The Biological Chemistry Track (B-track) is designed for students who are interested in a major program containing a stronger biochemistry or biophysics component within the chemistry major. The B-track provides excellent preparation for medical school or graduate studies in biochemistry.

To begin a major in the biological chemistry track, a student should complete a year of General Chemistry (CHEM141/CHEM142 or, preferably, CHEM143/CHEM144, and the associated laboratory, CHEM152), unless the student has been given Advanced Placement credit. In addition, one year of organic chemistry (CHEM251/CHEM252), the concurrent laboratories (CHEM257/CHEM258), and a semester of biology (BIOL181/MB&B181) are required. One year of advanced laboratory (CHEM375/CHEM376) and two semesters of CHEM521/CHEM522 are also required. MB&B395/CHEM395 may be substituted for one semester of CHEM375/CHEM376 by petition. Also required are CHEM383 and CHEM381. The two-semester physical chemistry sequence, CHEM337/CHEM338, can be substituted for CHEM381 with the second semester of this sequence then counting as one of the three electives. Students who have been exempted from CHEM144 must take CHEM361 to gain familiarity with inorganic chemistry.

The three electives normally required for chemistry majors should be taken from among the following:

Code	Title	Hours
CHEM309	Molecular and Cellular Biophysics	1
CHEM/MB&B321	Biomedical Chemistry	1
CHEM/MB&B325	Introduction to Biomolecular Structure	1
CHEM/MB&B386	Biological Thermodynamics	1
CHEM387	Enzyme Mechanisms	0.5
CHEM390/ MB&B340	Practical Methods in Biochemistry	1
MB&B208	Molecular Biology (or any other chemistry courses, 300-level or higher)	1

One of the 300-level electives may be replaced by a total of 2.0 credits in research courses (CHEM409, CHEM410, CHEM423, or CHEM424). One upper-level MB&B course can be used as an elective upon prior approval by the faculty advisor. (Note, however, that only one MB&B course (including MB&B208) not cross-listed with chemistry, may count as an elective toward the major.)

In addition, students must either (i) complete calculus courses through MATH122, (ii) receive an Advanced Placement score of a 4 or 5 on the BC calculus exam, or (iii) place into a course beyond MATH122 on the Math Placement Exam. Students must complete one year of physics (PHYS111/112 or PHYS113/116) or receive an Advanced Placement score of a 4 or 5 on the AP physics exam. Students who do not complete CHEM144, either through

exemption or because they have satisfied the general chemistry requirement with CHEM141/CHEM142, must select CHEM361 as one of their 300-level electives. Seminars or journal clubs cannot be counted as electives.

Students who intend to be multiple majors or to study abroad are strongly urged to seek advice from the chemistry faculty as early as possible for planning their academic programs.

COURSES FOR NON-MAJORS

The Chemistry Department offers a variety of 100-level general education courses, including CHEM141 and CHEM142, which non-science students should consider in their program to meet general education expectations in NSM. All of these courses are appropriate for students who have little or no previous background in chemistry.

Scientists majoring in areas other than chemistry can prepare themselves better for work in their discipline by having a grounding in chemistry, which will enable them to understand molecular phenomena. The Chemistry Department offers two yearlong tracks of Introductory Chemistry (CHEM141/CHEM142 or CHEM143/CHEM144). The CHEM143/CHEM144 sequence, requiring some prior chemistry and calculus, provides a more sophisticated introduction and represents a better preparation for science majors. The CHEM141/CHEM142 sequence requires no previous exposure to chemistry or calculus. CHEM152 is taken concurrently with CHEM141 and CHEM143 in the fall semester or with CHEM142 or CHEM144 in the spring semester. CHEM251/CHEM252 normally follows General Chemistry. The laboratory courses, CHEM257 and CHEM258, are usually taken concurrently with CHEM251/CHEM252, respectively. The two courses, General Chemistry and Organic Chemistry, plus the laboratory sequence, CHEM152, CHEM257, CHEM258, satisfy requirements for admission to medical, dental, and veterinary schools.

STUDENT LEARNING GOALS

Students graduating with a BA degree in chemistry should be able to:

- **Apply the scientific method.** The student should understand how to develop and test scientific hypotheses.
- **Understand data.** The student should understand how chemical data is produced, interpreted, and applied.
- **Perform laboratory experiments.** The student should have the ability to carry out standard chemical experimental procedures safely and successfully.
- **Apply quantitative tools.** The student should be able to select and apply appropriate quantitative techniques (e.g., calculus, statistics, chemical group theory, or computational modeling) to chemical questions.
- **Use the primary literature.** The student should be able to search for and understand publications from the primary scientific literature.
- **Critically evaluate scientific claims.** The student should be able to critique claims and arguments made in the chemical literature.
- **Communicate.** The student should be able to present chemical data and their interpretation effectively in written, visual, and oral formats.
- **Practice science with integrity.** The student should adhere to established professional ethical standards in the generation, documentation, and presentation of chemical data.
- **Appreciate chemistry as an interdisciplinary science.** The student should understand how to apply chemical perspectives to topics from related fields.

STUDY ABROAD

A semester abroad is possible if adequately planned in advance. Students should discuss plans a chemistry faculty member as early as possible.

ADVANCED PLACEMENT

For freshmen and new students to receive 2 credits:

Score of AP 5. Students can receive 2.00 credits by completing one full year of organic chemistry (CHEM251 (https://iasext.wesleyan.edu/regprod/wesmaps_page.html?crse=003034) and CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, CHEM143, or CHEM144.

For freshmen and new students to receive 1 credit:

Score of AP 5. Students can receive 1.00 credit by completing CHEM144 with a minimum grade of B. No credit will be granted if a student takes either CHEM141, CHEM142, or CHEM143.

Score of AP 4. Students can receive 1.00 credit by either completing CHEM144 with a minimum grade of B or completing a full year of organic chemistry (CHEM251 & CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, or CHEM143.

Special note: AP students who intend to major in chemistry should consult with the department chair as soon as possible.

ADVANCED PLACEMENT CREDIT FOR THE INTERNATIONAL BACCALAUREATE (IB) COURSES IN CHEMISTRY

For freshmen and new students to receive 2 credits:

Score of IB 6 or 7. Students can receive 2.00 credits by completing one full year of organic chemistry (CHEM251 and CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, CHEM143, or CHEM144

For freshmen and new students to receive 1 credit:

Score of IB 6 or 7. Students can receive 1.00 credit by completing CHEM144 with a minimum grade of B. No credit will be granted if a student takes either CHEM141, CHEM142, or CHEM143.

Score of IB 5. Students can receive 1.00 credit by either completing CHEM144 with a minimum grade of B, or completing a full year of organic chemistry (CHEM251 & CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, or CHEM143.

Score of IB 4. Students are not eligible to receive Wesleyan credit.

Note: A chemistry major is required to study inorganic chemistry. The requirement can be met by taking either CHEM144 or CHEM361 or both.

Special note: AP students who intend to major in chemistry should consult with the department chair as soon as possible.

ENGLISH A-LEVELS

For freshmen and new students:

Students with a grade of A on the Chemistry A-Levels can receive 1 credit by completing CHEM144 with a minimum grade of B or completing the yearlong organic chemistry (CHEM251 and CHEM252) with a grade of B or higher. No credit will be granted if the student has completed any of the following courses: CHEM141, CHEM142, or CHEM143.

Special note: Students with Chemistry AP, IB, or A-Levels scores who intend to major in chemistry should consult with the department chair as soon as possible.

TRANSFER CREDIT

Not all general chemistry or organic chemistry courses taken at other institutions will satisfy the criteria for transfer credit to Wesleyan. It is the students' responsibility to find an acceptable course(s) and to have the course(s) preapproved by the Chemistry Department. Below are general guidelines for requests for transfer of credit for general and organic chemistry.

For Transfer of Credit:

- The instructor of the equivalent Wesleyan course (CHEM141 or CHEM142 for General Chemistry and CHEM251/CHEM252 for Organic Chemistry) for the current academic year must approve all transfer of credit requests. Such approvals are solely at his/her discretion.
- Permission should be requested **before** the course is taken. The student should submit:
 - the "Permission to Transfer Credit From Another College or University" form available on the Office of Student Affairs website (https://www.wesleyan.edu/studentaffairs/pdfs/Permission_Transfer_Credit.pdf).
 - the title, author(s), and edition of the textbook used in the course,
 - the syllabus for the course, including which specific chapters of the textbook are actually covered in the course,
 - the length of each lecture meeting,
 - the total number of actual class hours, *excluding* time taken for examinations, and
 - the name and contact information for the course instructor.

These materials must be compiled by the student and sent to the faculty member currently teaching the equivalent Wesleyan course; simply sending a copy of the syllabus or a link to a course website is not sufficient.

- The student must achieve at least a B- to get credit for the course.
- Courses taken elsewhere may not be counted toward a chemistry major at Wesleyan (except by special petition to the Curriculum Committee of the Chemistry Department).
- The Chemistry Department will not normally accept an online chemistry course for Wesleyan credit.

ADDITIONAL INFORMATION

Undergraduate research. Research is an important part of the program for most majors. Wesleyan's small but excellent graduate program makes it possible for majors to work at the cutting edge of discovery in chemistry. Every tenured/tenure-track faculty member is involved in significant research. Undergraduates participating in the departmental research program normally attend a research seminar in their area, and most research groups have weekly meetings to discuss new results. Students involved in significant research have an opportunity to continue in the BA/MA program.

Seminars. Seminars are a vital part of the intellectual life of the Chemistry Department. Weekly departmental colloquia on Friday afternoons (CHEM521/CHEM522) bring accomplished scientists from other universities, research laboratories, and industry to campus and provide opportunities for informal meetings and discussions. In addition, chemistry students and faculty speak at weekly research seminars in chemical physics, organic/inorganic chemistry, and biochemistry. Programs for each semester are available on the chemistry website.

HONORS

Honors are awarded by the faculty on the basis of the evaluation of a senior thesis.

CAPSTONE EXPERIENCE

The recommended capstone experience is a significant research project culminating in a senior thesis. Successful completion of the Integrated Lab sequence CHEM375/CHEM376 is considered an alternative capstone for other students.

CHEMISTRY MINOR

INTRODUCTION

The Chemistry minor provides students with a solid foundation in the fundamentals of chemical science.

ADMISSION TO THE MINOR

To declare the Chemistry minor, students must 1) have earned a grade of C or better in all completed 100- or 200-level chemistry courses and 2) have completed or be currently enrolled in CHEM251.

MINOR REQUIREMENTS

To receive the Chemistry Minor, students must complete all of the following required courses. A grade of C or better in all 100- and 200- is required to count towards the minor:

- General Chemistry I & II (CHEM141 & CHEM142)* **OR** Principles of Chemistry I & II (CHEM143 & CHEM144)*
- Introductory Chemistry Laboratory (CHEM152)*
- Principles of Organic Chemistry I & II (CHEM251 & CHEM252)
- Intermediate Chemistry Laboratory (CHEM257)
- Organic Chemistry Laboratory (CHEM258)
- Chemistry Symposia I **OR** II (CHEM521 **OR** CHEM522)
- One 300 level course taught by the Chemistry Department

* **OR** equivalent pre-matriculation credits.

DOCTOR OF PHILOSOPHY IN CHEMISTRY

The Department of Chemistry offers a graduate program leading to a Ph.D. in Chemistry. The faculty-to-graduate student ratio ensures that each student knows every faculty member and has the opportunity to become well acquainted with several areas of chemistry. A customized program of study is set up for each student, whose progress is monitored by a three-member faculty advisory committee.

Emphasis within the program is on developing skills for chemical research, rather than on conforming to a uniform program of study. Course requirements, progress examinations, preparation and defense of research proposals, seminar presentation, and teaching assignments are all designed with this goal in mind.

Interested students are encouraged to visit the websites of individual faculty (<http://wesleyan.edu/chem/people/>) members to explore research areas and opportunities available in the department.

COURSES

Course requirements are intended to achieve two basic goals.

- **Acquisition of background knowledge.** A central core of material is basic for all well-trained chemists. Therefore, graduate students are initially expected to develop or demonstrate knowledge of an appropriate one-semester course in each of the areas of organic chemistry, inorganic chemistry, biochemistry, physical chemistry, and quantum chemistry.
- **Continued scholarly growth.** Graduate students are required to take one course or its equivalent every semester. This may be a regular advanced course in chemistry or a related discipline, a seminar, or a tutorial designed to meet the special needs of an individual student.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

There is no language requirement associated with this program.

PROGRESS AND QUALIFYING EXAMS

Progress examinations are given multiple times each academic year. These examinations are designed to encourage graduate students to keep up with the latest developments in chemistry and are based on articles in the current literature. In addition, they are a valuable tool for monitoring the expected steady growth of a student's ability to critically read the chemical literature, as well as identifying any areas requiring additional study. Students are required to pass 15 elementary and 7 advanced progress exams, which they usually accomplish by the end of the second or early in the third year of the program.

TEACHING

Completion of at least two semesters as a teaching assistant is generally required for the Ph.D. degree. These assignments are provided as a means of developing communication and teaching skills. Graduate students may be given more advanced teaching responsibilities if appropriate.

RESEARCH

Research proposal writing is one of the most important parts of the graduate program in chemistry. Writing scientific proposals teaches evaluation of the literature, integration of knowledge from several areas, formulation of scientific questions, design of a research project to answer those questions, scientific writing, and the defense of a project proposal. Two proposals are required: one during the second year related to the student's research plans and a second, in the fourth year, on a novel idea not directly related to the student's current work.

DISSERTATION AND DEFENSE

The thesis research and dissertation—an original contribution worthy of publication—is the single most important requirement. Finally, the candidate defends the dissertation before his/her committee and presents a final seminar to the department and broader community.

CONCENTRATIONS

CHEMICAL PHYSICS

Guiding Committee: Lutz Hüwel, *Physics*; Carlos Jimenez-Hoyos, *Chemistry*; Joseph Knee, *Chemistry*; Stewart E. Novick, *Chemistry*; Brian Stewart, *Physics*

Upon admission and while in their first year, students in the chemistry or physics graduate programs may petition their department for admission to the interdisciplinary program in chemical physics. The philosophy underlying the program is that the solution to contemporary problems must increasingly be sought not within a single traditional specialty but from the application of different disciplines to particular problems. Students in the program will pursue a course of study and research that will familiarize them with both the Physics and Chemistry departments and, in particular, with those areas of overlapping interest that we broadly categorize as chemical physics.

Students entering the chemical physics program will choose an interdepartmental committee to oversee their progress toward the PhD degree. Students will still receive a Ph.D. in either chemistry or physics. Chemical physics students will be expected to take courses from both departments. The core of the program of courses consists of quantum chemistry (offered by the Chemistry Department), quantum mechanics (offered by either department), electrodynamics (offered by the Physics Department), statistical mechanics (either department), and mathematical physics (Physics Department). For details of the course offerings, see the course listings under chemistry and physics.

Seminars. Students will participate in the weekly chemical physics seminar series and will be expected to present at least one talk per year.

Examinations. Students will follow the examination policy of their sponsoring department. Those chemical physics students pursuing a Ph.D. in chemistry will take periodic progress exams based on the current literature, and in their

second year they will take an oral qualifying exam that includes a short written proposal of their future Ph.D. research. A second proposal, external to their research, is submitted in the fourth year. In addition, there is a final oral Ph.D. thesis defense. For details, see the requirements for the PhD in chemistry. For those chemical physics students pursuing a Ph.D. in physics, there are three formal examinations: a written examination at an advanced undergraduate level (taken in the third semester), an oral Ph.D. candidacy examination (taken no later than the fifth semester), and a final oral Ph.D. thesis defense. For details, see the requirements for the Ph.D. in physics.

Students in the Chemical Physics program are expected to take all the offered "progress exams" in the general area of physical chemistry and are required to pass ten elementary and five advanced exams.

Research. Students in the chemical physics program will follow the same procedure (three rotations in the first semester) to choose an advisor as other students in the PhD program in chemistry. By participating in the chemical physics seminars students are expected to become familiar with ongoing research in both the chemistry and physics departments.

MOLECULAR BIOPHYSICS

The Chemistry Department participates in an interdisciplinary program of graduate study in molecular biophysics with the departments of Molecular Biology and Biochemistry (MB&B), Biology, and Physics. The program provides a course of study and research that overlaps the disciplinary boundaries of chemistry, physics, biology, and molecular biology and is designed for students with an undergraduate background in any one of these areas. Students in the program are enrolled in one of the participating departments and fulfill canonical requirements of the department. In addition, they take advanced courses in molecular biophysics and pursue dissertation research with one of the faculty in the program. Centerpieces of the program are the weekly interdepartmental journal club in molecular biophysics and an annual off-campus research retreat. Both activities bring together students, research associates, and faculty from all participating departments and foster interdisciplinary collaborative projects.

The program is affiliated with interest groups such as the New York Structural Biology (NYSB) and the New York Bioinformatics and Computational Biology (NYBCB) groups. All students are encouraged to join and attend national meetings of the Biophysical Society.

Students interested in this program may indicate their interest on the application for admission to the Chemistry, MB&B, Physics, or Biology departments. Application forms for these departments are available at: <https://admission.wesleyan.edu/apply/>.

MASTER OF ARTS IN CHEMISTRY

The Master of Arts via the BA/MA program is an attractive option for current Wesleyan science majors to enrich their course and research background. The program has a strong research orientation. It also includes course work, seminars, and, in some cases, teaching. A student hoping to enter this program will be expected to declare the intention to do so early enough in his/her undergraduate career to permit the design of an acceptable program with a research advisor. Students are advised to begin research no later than their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. Students

apply in their senior year and if accepted, can continue for one year beyond the bachelor's degree with the goal of completing the master's degree requirements in one additional year. The MA year is tuition free. [wesleyan.edu/grad/degree-programs/bama.html]

The Chemistry Department may grant the degree of Master of Arts to students in the Ph.D. program who do not complete the Ph.D.

COURSES

Students in the BA/MA or terminated Ph.D. programs are required to earn a minimum of 6.0 credits in order to fulfill the requirements of the master's degree. The minimum 6.0 required credits must include at least 2.0 total credits of Advanced Research, at least two 1.0 credit chemistry elective courses at the 300-level or higher, two semesters of upper-level seminars (CHEM547/548, CHEM557/558, or CHEM587/588), and two semesters of the departmental colloquium (CHEM521/522). Students may petition to have an advanced elective course(s) from another department count toward their two 300-level chemistry elective courses.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

Students in the terminated Ph.D. program are not required to have passed a specified number of progress examinations in order to complete the master's degree. Students in the BA/MA program are not required to take progress examinations.

TEACHING

Teaching is not required as part of the BA/MA program, however many students in the BA/MA program choose to contribute to the department to build their pedagogical skills as teaching assistants (TA's). Students in a terminated Ph.D. program have the same teaching responsibilities as those in the Ph.D. program.

RESEARCH

As outlined above, students in both the BA/MA and terminated Ph.D. programs are required to enroll in 1.0 credits of advanced research each semester.

THESIS AND DEFENSE

An oral defense of the master's thesis before their committee is required for successful completion of the master's degree for both BA/MA and terminal MA students. A final, open seminar to the department and broader community is not required for the master of arts degree.

Under Construction

CLASSICAL STUDIES MAJOR

MAJOR DESCRIPTION

Classical Studies offers a multidisciplinary approach to the civilizations of ancient Greece and Rome and the broader Mediterranean world, studying these both in their original context and as avenues for modern inquiry. Students make use of diverse theoretical approaches, spanning the sciences, social sciences and humanities, and apply them in rigorous coursework and research delving into politics, media, history, identity, religion, literature, material culture and the environment. Classical Studies connects us to a shared past which expands our notions of the present, offering new perspectives with which we can think about and address modern challenges.

There are three areas of concentration within the Major: *Literature and Performance*; *History, Politics and Social Justice*; *Archaeology and Archaeological Science*. Each track foregrounds different facets of antiquity and analytical tools and connect with areas of faculty research and expertise. Students select a concentration upon declaration of the major, and map out a course of study within it together with their advisor. Regardless of concentration students acquire proficiency in Latin or Greek; no experience with either language is required upon entry to the major.

Literature and Performance explores the aesthetics and political force of literature and its private and public expression in Classical and modern contexts and investigates their use as social and often subversive media. Students analyze a wide range of genres including epic, drama, poetry, rhetoric, science fiction, and the novel.

History, Politics, and Social Justice examines the dynamics and strategies of communities and governments in antiquity as they adapted their institutions, legal structures, and media to serve diverse populations and strategies. It places ancient conceptions of democracy, constitutional design, and collective action from a variety of literary genres in conversation with modern notions of the same.

Archaeology and Archaeological Science focuses on material evidence from the ancient Mediterranean. Students learn to apply traditional and scientific tools (experimental archaeology, phytochemistry, geoscience) to interpret archaeological data and to reconstruct phenomena ranging from the smallest experiences of daily life to large scale environmental change.

ADMISSION TO THE MAJOR

Prospective majors will have completed one course in the history, literature, or art and archaeology of the Greek or Roman world prior to declaring in order to familiarize themselves with the interdisciplinary nature of the field, and achieved a minimum grade of B-.

Upon declaring the major students are required to complete the major declaration form and to select which area of concentration they intend to pursue. If they intend to apply a course (previously taken or planned) outside of the department towards their elective credit they should identify the course and explain how they will be in conversation with the major course selections to form a meaningful curricular whole. This initial outline will indicate the student's aimed trajectory.

MAJOR REQUIREMENTS

The Classical Studies Major requires ten credits, *four* of which must be within their selected area of concentration (see Course Lists, below). All Majors must take:

- **4 Language Courses in Latin or Greek numbered 102 or higher.**
1 of the 4 has to be a course at the 300- level. Two half-credit language courses may be counted together as one credit towards the major.
- **1 Introductory Ancient History Survey (CCIV231 Greek History or CCIV232 Roman History).**
This requirement should be completed by the end of the junior year.
- **1 Course in Material Culture at any level.**
- **2 upper level (300-level) seminars**
Seminars can be in CLST, Greek or Latin
- **2 Electives**
With permission from the advisor, students can apply one course from outside the department toward their concentration provided they can demonstrate its specific application towards that concentration.

Area Concentration Requirements:

Upon declaring the Major, students will determine which of the three concentration areas (*Literature and Performance; History, Politics and Social Justice; or Archaeology and Archaeological Science*) they intend to pursue. The courses in which fall under each concentration are listed here.

LITERATURE AND PERFORMANCE

Code	Title	Hours
CLST202	Greek Drama: Theater and Social Justice, Ancient and Modern	1
CLST2020	Greek Drama	1
CLST2050	Myths, Monsters, and Misogyny: An Introduction to Greek and Roman Mythology	1
CLST220	Homer and the Epic	1
CLST228	Classical Allusions in Film	1
CLST327	Dangerous Acts: Theater, Transgression, and Social Justice, Ancient and Modern	1
LAT201	Catullus and Cicero: Love and Life in Republican Rome	1
LAT230	Love and Suffering in Ancient Rome (CLAC.50)	.5
LAT331	Vergil: AENEID 2	1
LAT360	Constructing Masculinity and Identity in Roman Elegy	1
GRK252	Dionysiac Transformations: Gender, Violence, and Justice in Euripides' Hecuba	1
GRK275	Homeric Epic	1
GRK365	Greek Tragedy: Euripides	1
LAT202	Latin Lyric Poetry	1
LAT221	Roman Comedy	1

HISTORY, POLITICS, AND SOCIAL JUSTICE

Code	Title	Hours
CLST190	Beware the Ides, Beware the Hemlock: Roleplaying Crisis in Ancient Greece and Rome	1

CLST202	Greek Drama: Theater and Social Justice, Ancient and Modern	1
CLST212	Course CLST212 Not Found	1
CLST221	Law, Politics, and Order in the Ancient World	1
CLST221Z	Whose Rights? Law, Personhood, and Democracy, Ancient & Modern	1
CLST248	Language Matters: Etymology and the Roots of Social Injustice	1
CLST249	Classics Beyond Whiteness	1
CLST281	Gender and Sexuality in Ancient Greek Culture	1
CLST324	Tales of Hope or States of Delusion? Utopias, Past and Present	1
CLST327	Dangerous Acts: Theater, Transgression, and Social Justice, Ancient and Modern	1
LAT353	Demagogues and Tyrants in the Roman Historians	1
LAT360	Constructing Masculinity and Identity in Roman Elegy	1
GRK201	Reading Greek Prose: Court Room Dramas, Selections from Athenian Oratory	1
GRK291	"Sexuality" in the Making: Gender, Law, and the Use of Pleasure in Ancient Greek Culture (CLAC.50)	.5
GRK365	Greek Tragedy: Euripides	1

ARCHAEOLOGY AND ARCHAEOLOGICAL SCIENCE

Code	Title	Hours
CLST201	Art and Archaeology of the Bronze Age Mediterranean	1
CLST214	Survey of Greek Archaeology and Art	1
CLST223	Survey of Roman Archaeology and Art	1
CLST283	Off with its Pedestal! The Greek Vase as Art and Artifact	1
CLST329	Roman Villa Life	1
CLST341	Visualizing the Classical	1
CLST352	Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean	1
CLST390	Making Rome: Monuments of Life in Ancient Rome	1
LAT375	Set in Stone: Reading Roman Life through Inscriptions	1
GRK355	Homer in Bronze Age Context	1

STUDENT LEARNING GOALS

Under Construction

LANGUAGE REQUIREMENT

Majors in Classical Studies acquire an intermediate level of proficiency with either Latin or Greek. No experience in either language is required upon entry into the major, however students intending to major should plan to begin

the language as soon as possible. Students with previous experience in either language should consult with the Dept. Chair for placement advice.

ADDITIONAL INFORMATION

HONORS

Students wishing to pursue Honors in the Major must complete a senior thesis or essay. These are original research projects that deal directly with primary sources (in the form of archaeological data sets or texts in the original language), show knowledge of and critical engagement with current scholarship on the subject, and present an original argument developed in response to these sources. Both the thesis and the essay should be considered serious academic undertakings and students should plan to begin research in the semester or summer which precedes it.

Students who intend to write a thesis must submit a thesis proposal to the Department by April 15 of the junior year. Students who wish to write a Senior Essay must submit their proposal to the Department by the end of the previous semester (April 15 for an essay to be written in the fall semester, November 15 for the spring).

For details on the evaluation and awarding of Honors, consult the departmental website.

CAPSTONE EXPERIENCE

Upon completion of the major, students will complete a form where they will have the opportunity to explain changes in this initial trajectory and reflect briefly on their choices and development as a whole.

COLLEGE OF EAST ASIAN STUDIES

The College of East Asian Studies (CEAS) challenges students to understand China, Japan, and Korea through the rigors of language study and the analytical tools of various academic disciplines. This process demands both broad exposure to different subjects and a focused perspective on a particular feature of the East Asian landscape. Japan, China, and Korea are related yet distinctive civilizations. Each has its own traditions and patterns of development. These traditions have played an important role in the development of culture around the globe and remain formative influences today.

Students interested in East Asian studies will be guided by the expectations for liberal learning at Wesleyan and by the CEAS's interdisciplinary approach. Language, premodern history and culture, and the sophomore Proseminar provide the common core of our program. The Proseminar exposes students to a wide variety of intellectual approaches to East Asian studies and thereby provides a foundation for students to focus in more depth in particular areas.

DEPARTMENTAL ADVISING EXPERTS

All program faculty

COLLEGE OF EAST ASIAN STUDIES MAJOR

ADMISSION TO THE MAJOR

Prospective majors are urged to start their language and Foundations core courses early in their Wesleyan careers. This will leave more time for study abroad and for more meaningful work in the concentration of the student's

choice. To help students chart their way, the college faculty members have designed the concentrations listed below. Admission to the college is most commonly requested during the spring semester of a student's first year, although students may join the major at any time, so long as they have a viable path towards completing the major's requirements.

In order for us to learn a bit more about you and to help us match you with an advisor, we ask all students to fill out and submit the new major student information form (https://docs.google.com/forms/d/e/1FAIpQLScf6XmieaLGH_-817Yp6HHLs-GobrpJHEsjSnro7L3f9Y5R5Q/viewform/) prior to submitting your major declaration form via WesPortal.

MAJOR REQUIREMENTS

Majoring in the College of East Asian Studies (CEAS) requires seven courses. These include two core courses, four in a concentration, and one elective. Other requirements include language courses and a senior capstone project. In addition, although not required, there is an expectation that students will study abroad, which for most students forms a vital part of their learning experience. Up to one full credit of CLAC courses may be counted toward major credit. All other courses counting toward the major must be taken for a grade. Please note that courses taken C/U during 2020 may also count towards the major in recognition of the difficulties that many students face as a result of the pandemic.

Core courses. Each CEAS major is expected to take an introductory "Foundations of East Asian Culture" course (usually taken in the spring semester of the first year) and our interdisciplinary Proseminar (CEAS201) (usually taken in the fall of the sophomore year). The goal is to ensure that each CEAS major is firmly anchored in the classical texts and key events that shaped the development of East Asian cultures before the 19th century as well as the basic methodologies and main areas of scholarship within East Asian studies. Details on the courses that count for the core courses are available at wesleyan.edu/ceas/majoring/core.html (<https://wesleyan.edu/ceas/majoring/core.html>).

Concentrations. Each CEAS major must choose one of the four concentrations listed below. Our goal is to ensure that each major's course of study has methodological coherence in a specific area of study. Course offerings for each concentration may vary in some years according to faculty on campus. Details on the courses that count for the concentrations are available at wesleyan.edu/ceas/majoring/concentrations.html (<https://wesleyan.edu/ceas/majoring/concentrations.html>).

- Archaeology and History
- Language and Culture
- Philosophy and Religion
- Political Economy

STUDENT LEARNING GOALS

The College of East Asian Studies (CEAS) has two mutually reinforcing core missions: to cultivate an outstanding group of students with strong language abilities, wide-ranging knowledge about East Asia, and an area of particular expertise; and to promote knowledge of and engagement with the histories, cultures, and contemporary significances of East Asia across the campus, curriculum, and broader community.

STUDY ABROAD

Experience living in East Asia and use of language in its appropriate cultural context is viewed as a vital component of East Asian studies. Accordingly, although not required, CEAS majors are expected to study abroad to develop their language competency and acquire a more concrete grasp of a specific East Asian cultural context. This expectation may be fulfilled through a semester or one year in an approved program.

For more information, see wesleyan.edu/ceas/majoring/studyabroad.html (<https://wesleyan.edu/ceas/majoring/studyabroad.html>).

Questions about study abroad should be addressed to Prof. Wei Gong (China), Prof. Naho Maruta (Japan), or Prof. Hyejoo Back (Korea).

LANGUAGE REQUIREMENT

CEAS majors are expected to reach a minimum of advanced-level (completed third year) competency in Chinese, Japanese, or Korean. Majors who are native speakers of Chinese, Japanese, or Korean are expected to study another East Asian language. All students need to maintain a grade of B or above by the time they reach advanced-level competency. All students must take a minimum of four semesters of East Asian language courses; this may mean being required to take language classes beyond the advanced level. Evaluation of an individual student's language competence will be undertaken by the relevant language coordinator, who will also determine how language courses not taken at Wesleyan count toward this requirement.

Questions about Chinese should be addressed to the Chinese language and cocurriculum coordinator, Prof. Wei Gong. Questions about Japanese should be addressed to the Japanese language and cocurriculum coordinator, Prof. Naho Maruta. Questions about Korean should be addressed to the Korean language and cocurriculum coordinator, Prof. Hyejoo Back.

CAPSTONE EXPERIENCE

All majors must complete a written or (with approval) creative project during their senior year. This should involve the use of East Asian language materials to the extent that the student's preparation permits. There are several ways in which this requirement can be fulfilled:

- Write a substantial essay, focusing on East Asia, as assigned in a regular class. The instructor must approve of this project and may suggest revisions as needed. Similarly, faculty approval is required also for a creative project done in the context of a class or as a tutorial. If the class instructor is not a CEAS faculty member, the essay or the creative arts project must be approved by the student's CEAS advisor. Please note that this class can simultaneously fulfill other requirements.
- Write a one-semester senior essay in a tutorial, preferably given by a CEAS faculty member. The tutorial may be for a full credit or for 0.5 credit.
- Write a senior thesis, typically in a two-semester tutorial with a CEAS faculty member.
- Furthermore, each student will be expected to present his or her research at a poster presentation toward the end of the spring semester of the senior year. This presentation is in addition to and apart from the actual research project.

COLLEGE OF EAST ASIAN STUDIES MINOR

ADMISSION TO THE MINOR

Upon completion of any College of East Asian Studies (CEAS) course, students may apply to enter the CEAS minor. Students must fill out an online CEAS new minor student information form (<https://docs.google.com/forms/d/e/1FAIpQLScnBK33CD9ypUTFW9uBS6rOubPLyd69FFpJ4yVxaExlq4Jgdg/viewform/>) and then submit a minor declaration via the Minor Declaration Tool in the electronic portfolio.

MINOR REQUIREMENTS

The minor requires completion of any five CEAS courses and intermediate-level competence completed second year in Chinese, Japanese, or Korean. Starting with the class of 2020, only courses taken for a grade may be counted towards the minor.

No more than two of the five courses may be language courses. No more than two of the five courses can be performance or studio art courses. No more than one of the five courses can be a study abroad course.

The rule that no more than two of the five courses can be language courses means that students beginning their Chinese, Japanese, or Korean language study at Wesleyan may have to take as many as seven courses to fulfill the minor (because four courses would be required to reach intermediate competence, but only two will count toward the minor).

Note that while the CEAS major requires that native speakers of a Chinese, Japanese, or Korean language must study a different Chinese, Japanese, or Korean language, that does not apply to the minor, so a native speaker of Korean, for example, can pass the intermediate competence standard without taking any language classes and can simply take any five CEAS classes. All students, including native speakers, must contact a language instructor and pass a placement exam in order to certify intermediate competence. Please contact the appropriate language coordinator (Chinese--Gong, Japanese--Maruta, Korean--Back) immediately, or no later than one year prior to graduation (i.e. Spring of Junior year), if you intend to exercise this option to allow for sufficient time to take additional language if necessary.

To graduate with a minor in CEAS, seniors must complete their minor certification form in their portfolio.

COLLEGE OF EDUCATION STUDIES

The Education Studies Major is designed to help students acquire a deeper understanding of education and its relationship to society. Through a range of courses across the curriculum, students look critically and analytically at educational institutions, practices, and thinking, from early childhood through adulthood, using local, national, and global lenses. Foundation courses provide a theoretical background on philosophy, history, and psychology of education. Further requirements empower students with the knowledge, tools, and skills for analyzing different aspects of education, on topics such as human development and cognition, pedagogy and curriculum, and sociocultural approaches to the study of education. Students complete a methods course relevant to education studies as well as a practicum experience to gain hands-on experience complementing their academic work.

Education Studies is a linked major. It can only be declared and completed in addition to a primary major. There are no restrictions on the choice of a primary major. Students are encouraged to declare the Education Studies linked Major in spring of the sophomore year. Late declarations of the Major will be accepted through spring of the junior year.

EDUCATION STUDIES MAJOR

MAJOR DESCRIPTION

The Education Studies Major is designed to help students acquire a deeper understanding of education and its relationship to society. Through a range of courses across the curriculum, students look critically and analytically at educational institutions, practices, and thinking, from early childhood through adulthood, using local, national, and global lenses. Foundation courses provide a theoretical background on philosophy, history, and psychology of education. Further requirements empower students with the knowledge, tools, and skills for analyzing different aspects of education, on topics such as human development and cognition, pedagogy and curriculum, and sociocultural approaches to the study of education. Students complete a methods course relevant to education studies as well as a practicum experience to gain hands-on experience complementing their academic work.

ADMISSION TO THE MAJOR

Students intending to major in Education Studies should simultaneously submit a major request through their WesPortal. It is best to do this as early as possible so that you can receive emails and updates about the major that will help you with academic planning. Students who declare at the canonical time (spring of sophomore year) should simultaneously enroll in EDST101, the Sophomore Gateway Course, which will be taught in the second half of spring term (4th quarter) every year.

Education Studies is a linked major. It can only be declared and completed in addition to a primary major. There are no restrictions on the choice of a primary major. Students are encouraged to declare the Education Studies Linked Major in the spring of the sophomore year. Late declarations of the Major will be accepted through the spring of the junior year.

MAJOR REQUIREMENTS

Students must take a minimum of 10 credits plus a practicum experience equivalent to at least .5 credit. Some courses can count toward different requirements, but students need to choose which requirement is being fulfilled by which course: an individual student cannot use the same course to fulfill multiple requirements toward the Major.

Students can use the same course to fulfill requirements in two academic programs (for example, a cross-listed course in ITAL and EDST could count toward both the EDST Minor and the ITST Major) if that is acceptable to the other department.

These are the requirements for the Major in Education Studies:

1. Sophomore Gateway (.5 credit)
2. Foundations of Education (1 credit)

3. Category 1 (1 credit)
4. Category 2 (1 credit)
5. Category 3 (1 credit)
6. Electives (3 credits)
7. Broader Contexts (1 credit)
8. Practicum (.5 credit or equivalent)
9. Pedagogy (.5 credit)
10. Senior Seminar (1 credit)

Students must take a minimum of 10 credits plus a practicum experience equivalent to at least .5 credit. Students may choose to focus within an area or spread their interests widely. There are no pre-designated tracks or concentrations. Some courses can count toward different requirements, but students need to choose which requirement is being fulfilled by which course: an individual student cannot use the same course to fulfill multiple requirements toward the Major.

The courses may be completed in any order consistent with their prerequisites.

Listing of all approved courses that fulfill requirements for the Education Studies Major (https://docs.google.com/document/d/1gtZCuuzvRH8epYls8AF5EhE_RVAuvGu6A-gONyk-D_k/edit/?usp=sharing)

Students can always petition to substitute a different course to meet any Education Studies requirements by completing this petition form (<https://forms.office.com/Pages/ResponsePage.aspx?id=eWz9qXFt80mREQyOWR3D0ZrbqMi0a91AqeglpGtx3ytUNDVQQ0FUU0NNWEEExRzVPS1y>). The petition form asks students to justify the substitution and, for non-Wesleyan courses, to upload a syllabus or other supporting information. Students will be notified if their petition requests are approved. Once approved, they can request the override in their Minor or Major Certification page in WesPortal.

Courses that have specific prerequisites that must first be completed are indicated with an asterisk.

COHORT COURSES

Students must take two courses, one just after declaring the Major and one in the fall of senior year, that will (1) function to build a cohort in the College of Education Studies, (2) help students make sense of the interdisciplinary contributions to Education Studies, and (3) help students understand the faculty, research, and resources in Education Studies at Wesleyan.

Code	Title	Hours
EDST101	Introduction to Education Studies [!]	.5
EDST301	Senior Seminar in Education Studies [#]	1

[!] Gateway course - normally taken in sophomore spring; can be taken junior spring for students who enter the Education Studies Major late.

[#] Taken in the fall of senior year.

FOUNDATIONS COURSE

Students must take one foundational course in Education Studies that broadly covers the field.

Code	Title	Hours

ELECTIVE COURSES

Students round out their Education Studies coursework with electives, in any combination of courses in the Foundation or Breadth categories.

Code	Title	Hours
	Elective: Other courses in Foundations, Cat 1, Cat 2, Cat 3	3

BROADER CONTEXTS COURSE

Students take one course that addresses broad theoretical influences on how systems of knowledge or schooling are understood, constructed, transmitted, and changed. This course should sharpen students' ideas about what is taught, why it is taught, and how it is taught in the current U.S. or other contexts.

Students must take 1 credit in the Broader Context category. There are many courses that will satisfy this requirement.

Code	Title	Hours
Broader Contexts (1 credit)		Minimum of 1
AFAM202/ AMST275/ENGL240	Introduction to African American Literature	1
AMST119	Reading Difference	1

PEDAGOGY & PRACTICUM

Students must complete two aspects of a practicum experience: pedagogy and practice.

- Students must take a minimum .5 credit course focused on pedagogy; there are several .5 and 1 credit courses with this focus offered at Wesleyan. Pedagogy courses are listed below.
- Students must also complete a teaching practicum/in-school experience with a minimum of 20 hours of student contact. The practicum experience does not need to be credit-bearing, as long as the 20 hour requirement is met.
- Students can meet both the pedagogy and practicum portions of the requirement separately, or they can meet them with a single 1-credit course (i.e., a service learning course that provides 20 hours of student contact *and* covers elements of pedagogy). Apart from service-learning courses, many options exist to fulfill the practicum requirement through JCCP programs, summer programs, teaching apprenticeships, and internships while studying abroad. Some ideas are listed below.
- If the practicum experience is something other than one of the approved listed courses listed below, the experience must be fully documented with 20 hours of student contact. Contact Practicum

Coordinator Amy Grillo (agrillo@wesleyan.edu) for more information about fulfilling this category.

Code	Title	Hours

WRCT/EDST202	Pedagogy for Teaching English to Speakers of Other Languages Tutors	.5

WRCT/EDST400 Ford Seminar .5

Examples of a practicum experience include:

Tutoring in a school setting for 10h per week for a semester or 5h per week for two semesters, designing a tutorial on education with a service-learning component in a school, or developing an internship in a school.

Serving as a Teaching Apprentice for an introductory course (e.g., first year foreign language or gateway science or social science course).

Student teaching at the Bank Street School of Education (Urban Education Semester).

Teaching in an intensive summer program (Breakthrough, Summerbridge, CTY) and providing a letter confirming completion from the program.

STUDENT LEARNING GOALS

1. Understanding the foundations of Education Studies including history, theory, and philosophy of key movements and approaches (e.g., formal and informal education; experiential education; privatization movements; canon; relationship between schools and education)
2. Understanding of, and ability to apply, critiques of educational systems, policies, and practices from the lens of equity, opportunity, power, and transformative justice (e.g., civil rights; global education; gender; race; class; and disability)
3. Understanding the science and psychology of learning as a framework for examining education
4. Understanding of the relationship between culture and education, and between different cultures and their education systems (e.g., multiculturalism and multilingualism; globalization; goals of education within a culture or country; comparative studies of education systems, immigrants' experiences in unfamiliar systems)
5. Understanding education as an art as well as a science or system (developing a practical art of teaching, imagining critical generative interventions and experimental approaches to education including embodied arts practices or relationship making)
6. Practice applying one or more methodological approaches to research questions in education (e.g., quantitative and experimental methods; qualitative data collection; archival research; data science and 'big data' approaches; historiography; pedagogical research)
7. Practice working in and connecting theory to real-world educational settings (e.g., educational practice, advocacy, critique).

STUDY ABROAD

Many study abroad programs are appropriate for Education Studies majors and offer courses that could be used in the service of the major.

The Education Studies homepage maintains a list of study abroad programs that are relevant to Education Studies and that offer courses students could use to fulfill major requirements. Students are encouraged to study abroad if that makes sense for their educational goals, but are not required to do so. Education

Studies faculty are supportive of study abroad experience for many reasons, particularly the broad cultural perspective that it affords.

PRIZES

Four Education Studies fellowships will be awarded to students each year for faculty-supervised research.

TRANSFER CREDIT

Foundation, Gateway, and Senior Seminar courses have to be taken at Wesleyan. All other course requirements can be fulfilled with transfer credits. Courses that fit logically into one of the Category 1, 2, or 3 courses will count toward those requirements. Courses that do not fit logically into Category 1, 2, or 3 but cover content relevant to Education Studies will count toward electives. There are no restrictions on how many transfer credits can count toward the major.

The College of Education Studies is pleased to sponsor credit transfer requests for students who have taken Education Studies courses elsewhere. Students who wish to transfer credit in Education Studies courses at other institutions should email the chairs with their request, a completed transfer credit form from the registrar, and a syllabus of the course.

HONORS

Following Wesleyan's guidelines for Departmental Honors, students in Education Studies must meet two requirements to be eligible for Departmental Honors in Education Studies.

1. Either a minimum GPA of 85.0 in Education Studies OR endorsement of two Core faculty in Education Studies; and
2. Completion of a Thesis that is determined by the thesis advisor and the second reader to meet the standards for honors or high honors.

CAPSTONE EXPERIENCE

Students have many opportunities for capstone experiences within the Major: (1) senior Honors Theses; (2) individual and group tutorials supervised by Education Studies faculty; (3) annual fellowships to conduct mentored research in Education Studies; (4) a capstone Senior Seminar to weave together the threads of the interdisciplinary program of study; and (5) internships, fellowships, and practica to try out academic theories in real world settings.

EDUCATION STUDIES MINOR

COLLEGE OF FILM AND THE MOVING IMAGE

The College of Film and the Moving Image explores the motion picture in a unified manner, combining the liberal arts tradition of cultural, historical, and formal analysis with filmmaking at beginning and advanced levels. The department offers a major and a minor.

FACULTY

Stephen Edward Collins

BA, Wesleyan University; MFA, University of Texas Austin
Associate Professor of Film Studies

Scott Higgins

BA, Oakland University; MA, Univ of Wisconsin Madison; PHD, Univ of Wisconsin Madison
Charles W. Fries Professor of Film Studies; Professor of Film Studies; Director, College of Film and the Moving Image; Chair, Film Studies; Curator of the Wesleyan Cinema Archives

Anuja Jain

BA, University of Delhi; MA, University of Delhi; PHD, New York University
Assistant Professor of Film Studies

Marc Robert Longenecker

BA, Wesleyan University; MA, Wesleyan University
Assistant Professor of the Practice in Film Studies

Randall M. MacLowry

BA, Wesleyan University
Assistant Professor of the Practice in Film Studies and Co-Director of the Wesleyan Documentary Project

Richard Parkin

BA, University of California, Berkeley; MFA, University of California, Los Angeles
Assistant Professor of the Practice in Film Studies

Mirko Rucnov

BA, University Nevada Lasvegas; MFA, Columbia University
Assistant Professor of the Practice in Film Studies

Sadia Quraeshi Shepard

BA, Wesleyan University; MA, Stanford University; MFA, Hunter College
Assistant Professor of Film Studies

Michael James Slowik

BA, Wesleyan University; MA, University of Chicago; MA, University of Iowa;
PHD, University of Iowa
Associate Professor of Film Studies

Tracy Heather Strain

AB, Wellesley College; EDM, Harvard University
Corwin-Fuller Professor of Film Studies; Associate Professor of Film Studies and Co-Director of the Wesleyan Documentary Project

AFFILIATED FACULTY

Lisa A. Dombrowski

BA, Wesleyan University; MA, University of Wisconsin at Madison; PHD, University of Wisconsin at Madison
Professor of East Asian Studies; Professor, Film Studies

VISITING FACULTY

Joe Cacaci

BA, Manhattan College; MA, Emerson College
Visiting Associate Professor of Film Studies

Anthony O. Scott

BA, Harvard University; MA, Johns Hopkins University
Distinguished Professor of Film Criticism

Matthew Weise

BS, University of Wisconsin-Milwaukee; MS, Massachusetts Institute of Technology
Visiting Artist-in-Residence in Film Studies

Susan Youssef

MFA, University of Texas Austin
Visiting Assistant Professor of Film Studies

EMERITI

Jeanine D. Basinger

BS, South Dakota St University; MS, South Dakota St University
Corwin-Fuller Professor of Film Studies, Emerita

Leo A. Lensing

BA, University of Notre Dame; MA, Cornell University; MAA, Wesleyan University; PHD, Cornell University
Professor of Film Studies, Emeritus

DEPARTMENTAL ADVISING EXPERTS

Stephen Collins, Scott Higgins, Michael Slowik, Marc Longenecker, Sadia Shepard, Anuja Jain, Tracy Strain

FILM STUDIES MAJOR

MAJOR DESCRIPTION

The College of Film and the Moving Image (CFILM) encompasses the Film Studies Department, the Center for Film Studies, the Wesleyan Documentary Project, the Student Film Series, and the Wesleyan Cinema Archives. CFILM approaches the moving image as an art in all its various forms, whether fiction, documentary, experimental, live-action, or animated, and in all its various venues, whether in cinemas, on television, or on the Internet. The College is designed specifically for liberal arts undergraduates who benefit most from the marriage of image making, history, and studies.

ADMISSION TO THE MAJOR

The requirements for admission include a minimum overall academic average of B (85.0) and the successful completion of two designated entry-level courses with a grade of B+ or better in each. Entry to the major is possible only after completion of these two courses and application to the film major. To apply, students must meet with the CFILM Director (Scott Higgins) or CFILM Associate Director (Tracy Strain) by the end of first semester of their sophomore year and place their names on the list of potential majors. Students on this list will receive an application form. Applications will be evaluated based on performance in film studies classes (including but not limited to grades) and any other factors deemed pertinent.

Because of the prerequisites and major requirements, **students transferring to Wesleyan after their first semester sophomore year are not able to declare the film studies major.**

MAJOR REQUIREMENTS

- All students **must take two designated prerequisite courses** and earn a grade of B+ or better in each to be eligible for the major.
- After entry to the major, students **must take the required production course.**
- Students **must also take a minimum of seven FILM electives.**
- Students may count a maximum of 16 credits in any single department toward the 32 credits required for graduation. Credits that exceed this limit will count as oversubscription.
- The Film Major **does not require a senior thesis.**

ADDITIONAL OPTIONS

Please see our departmental website for further information regarding the specifics of our major (wesleyan.edu/cfilm).

Please be aware that cross-listed courses must be counted in all departments in which they are listed.

Course offerings vary from year to year and not all courses are available every year. With prior approval by the department chair, one history/theory course from another institution may be transferred to the Wesleyan major from study abroad. The department does not offer credit for student forums, but uncredited opportunities to work on senior films are available. Consult the chair of film studies for further details. The Film Studies Department does not offer credit for internships.

Students may become involved in film studies in ways other than class enrollment. The College of Film and the Moving Image houses the Wesleyan Cinema Archives and the Wesleyan Documentary Project. The Film Board (composed of Wesleyan students) runs the Wesleyan Film Series. The College of Film also hosts the Wesleyan Freshman/Sophomore Filmmaking Workshop.

FILM457	Advanced Filmmaking	

Note: The oversubscription rule limits students to a maximum of 16 credits in a single department before oversubscription occurs, at which point further credits earned in the department cannot count toward the 32 credits required for graduation.

STUDENT LEARNING GOALS

MISSION OF THE FILM MAJOR

The mission of the film studies major is to deliver the finest undergraduate film, television, and media education through our distinctive blending of history, analysis, and production. The major explores moving image art and culture by looking at what is on screen using the language of filmmakers. We highlight visual storytelling. No matter the level of the course or the nature of the discussion, we maintain a direct route from our intellectual activity to filmmakers' choices and audience experiences. In contrast to graduate programs, which separate practice from study or teach methods of scholarship, we teach about the films themselves in a jargon-free classroom.

MISSION OF THE FILM MINOR

The film studies minor offers the same fundamental orientation as the major, but with fewer requirements and an emphasis on cross-listed classes. Its mission is to deliver an encompassing curriculum in film and media studies through an interdisciplinary approach.

OUR PEDAGOGICAL GOALS

Our broad goal is to foster the critical understanding of cinema and television as art forms. To all students, both general education and majors, we offer a **unified perspective** that enables students to think critically about form and the choices that visual storytellers face. No other liberal arts film program features such a broad and deep background in analysis, culture, and history coupled with

sensitivity to film and television's immediate and intimate relationship with audiences.

Our majors develop a critical and creative approach to the medium based on a strong visual vocabulary, extensive viewing, and a grasp of film production. **Production and studies are mutually reinforcing in this environment.** Our 16mm and digital production courses facilitate deeper comprehension of film and television's complexities and demand a higher level of critical and analytical thinking. Likewise, students steeped in history and analysis bring a robust visual vocabulary and awareness of form and culture to the tasks of storytelling. Upon graduation, majors know how to make a movie; are experienced in film and television writing; understand film history; can offer original visions; and are capable of extending our knowledge of the moving image.

Our major demands and rewards **critical thinking**. We believe that true learning involves synthesis, discovery, and original thought. Our students must face the challenge of defining and resolving artistic, historical, and analytical problems on their own, while also learning to work in collaboration. We encourage students to develop a personal vision, take risks, solve problems, and learn from failure as well as success.

HONORS

Film Studies majors are not required to complete Gen Ed requirements to be Honors Candidates in Film.

Film Studies majors are not required to complete senior thesis projects to fulfill their major program of study. However, large percentages of majors do opt for a senior thesis, which can take the form of a written history thesis, a screenplay, a 16mm film, a digital video, a virtual filmmaking project, or a film criticism project. Senior theses provide majors with the opportunity to advance what they have learned in their previous coursework through an extended individual project. Film Studies maintains a rigorous approach to evaluating theses, but also provides close, one-on-one advising.

Those students wishing to make a senior thesis film, video, or virtual project must complete their introductory production course (Sight and Sound or Introduction to Digital) during their junior year.

CAPSTONE EXPERIENCE

The College of Film and the Moving Image provides an array of Capstone Experiences, including:

- Advanced senior filmed thesis
- Advanced senior digital thesis
- Advanced senior screenplay thesis
- Advanced television writing thesis
- Advanced film criticism project
- Senior paper
- Senior film board participation
- Senior presentation week participation
- Post-graduate transition program
- Optional Capstone outside major
- No Capstone

FILM STUDIES MINOR

ADMISSION TO THE MINOR

In accordance with the University guidelines, students minoring in film studies must complete six courses for a grade (courses taken as Credit/Unsatisfactory will not count) and achieve a B average. Tutorials, education in the field, and student forums do not count toward the minor.

Before becoming eligible for the minor, you must complete FILM307 with a grade of B or better, which would then count toward fulfillment of the minor and activate a minor course registration chart with the department (see the minor administrator). Transfer courses cannot be used as a prerequisite, nor can they count toward fulfillment. After acceptance into the minor, you may submit courses taken overseas or at other universities to be considered on a case-by-case basis for credit.

MINOR REQUIREMENTS

FILM307 should be taken during the first or sophomore year. Students must meet with the minor administrator, Logan Ludwig (lludwig@wesleyan.edu), to declare the minor. After that, they may choose as convenient to complete the five additional courses before graduation.

Naturally, all course selections are subject to prerequisites from other departments, as well as enrollment restrictions, but with such a wide list of choices (and the list grows each year), there should be no problem in finding five classes.

COURSES

The list of courses currently recognized as part of the film studies minor includes. (Please note that not all courses will be available every semester.)

Code	Title	Hours
FILM288	Global Film Auteurs	1
FILM301	The History of Spanish Cinema	1
FILM304	History of Global Cinema	1
FILM305	Sophomore Colloquium for Declaring Majors	1
FILM307	The Language of Hollywood: Styles, Storytelling, and Technology	1
FILM311	Israel in Therapy: Society Under the Influence of TV Series	1
FILM315	Myth and Ideology in Cinema: Hollywood Sex, Race, Class, and Culture	1
FILM318	Awesome Cinema: Religion, Art, and the Unrepresentable	1
FILM319	Television Storytelling: The Conditions of Narrative Complexity	1
FILM320	The New German Cinema	1
FILM322	Alfred Hitchcock	1
FILM324	Visual Storytelling: The History and Art of Hollywood's Master Storytellers	1

FILM326	At Home in the World: Transnational Women's Cinema	1
FILM328	Moving Images Beyond the West: An introduction to Global Media	1
FILM329	Introduction to Indian Cinema: 'Bollywood' and Beyond	1
FILM331	Video Games as/and the Moving Image: Art, Aesthetics, and Design	1
FILM336	Silent Storytelling	1
FILM346	Contemporary East Asian Cinema	1
FILM347	Melodrama and the Woman's Picture	1
FILM348	Postwar American Independent Cinema	1
FILM349	Television: The Domestic Medium	1
FILM350	Contemporary International Art Cinema	1
FILM352	From Caligari to Hitler: Weimar Cinema in Context	1
FILM355	Newest German (and Austrian) Cinema	1
FILM357	Fassbinder & Sirk: Limitations of Life	1
FILM358	Italian Cinema: 1945-1965	1
FILM360	Philosophy and the Movies: The Past on Film	1
FILM362	Calderwood Seminar in Public Writing: The Dark Turn in Television Storytelling	1
FILM368	Using the Moving Image Archive	1
FILM370	The Art of Film Criticism	1
FILM381	Martin Scorsese	1
FILM384	Documentary Storytelling	1
FILM385	Documentary History	1
FILM386	The Long and the Short: Fritz Lang in Berlin and Hollywood	1
FILM387	Seminar on Television Series and Aesthetics	1
FILM388	Advanced Global Film Auteurs	1
FILM389	Film Genres: The Western	1
FILM391	Sex and Violence: American Film-making Under Censorship	1
FILM392	Cinema Stylists: Sternberg, Ophuls, Sirk, Fellini	1
FILM418	Documentary Filmmaking for Majors and Minors	1
FILM430	Documentary Production	1
FILM451	Introduction to Digital Filmmaking	1
FILM452	Writing About Film	1
FILM454	Writing the Short Film - For Non-Majors	1
FILM455	Writing for Television	1
FILM458	Screenwriting: The Short Film	1
FILM459	Writing for Television II	1
AFAM274	Reel Black: African American Life in Film	1
AMST315	Entertaining Social Change	1
ANTH244	Television: The Domestic Medium	1
ANTH285	Film and Anthropology	1
ANTH361	Calderwood Seminar in Public Writing: The Dark Turn in Television Storytelling	1
CEAS232	Introduction to Chinese Film	1
CEAS234	Modern Korea in Film and Fiction	1
CEAS248	South Korean Cinema: Re/imagining Modern History on Screen	1

CEAS266	Modern Korean Women's Literature and Film	1
CJST234	Israel in Therapy: Society Under the Influence of TV Series	1
CJST248	Designing Reality in Israeli Documentary Film	1
COL249	Narrative and Ideology	1
GOVT298	Terrorism and Film	1
GOVT387	Foreign Policy at the Movies	1
REES233	Introduction to Russian and Soviet Cinema	1
RL&L233	Modern Italy on the Silver Screen: 1960--2015	1
RL&L301	The History of Spanish Cinema	1
SPAN280	Screening Youth in Contemporary Latin American Cinema	1

COLLEGE OF INTEGRATIVE SCIENCES

The College of Integrative Sciences (CIS) aims to equip students with the creative and quantitative skills needed to address current and emerging global challenges in science and technology. These challenges are multifaceted, requiring problem-solving approaches that integrate expertise from multiple perspectives.

The CIS promotes an interdisciplinary and integrative approach to scholarship and learning across mathematics and the life, physical, and behavioral sciences. By encouraging creative synergies among faculty and students of disparate disciplines, the CIS academic structure complements existing departments and has the flexibility to evolve with the needs of an ever-changing world.

Research is key to the CIS. With a faculty mentor, student researchers pursue inquiry-based learning that explores open questions and provides new perspectives. They develop the necessary problem-solving skills and build expertise at the frontiers of science. Through research, students are transformed from consumers into creators of knowledge.

Students interested in the CIS are advised to follow a course of study that emphasizes a core science background, achieved by pursuing a major in one of the departments or programs in natural science and mathematics (NSM). The linked major offered by the CIS combines the intellectual depth in one area (the major) with breadth achieved through courses and research in the linked major.

FACULTY

Christopher James Chenier

BA, Bard College; MA, University of Delaware
Assistant Professor of the Practice in Integrative Sciences and IDEAS; Adjunct Assistant Professor, Integrative Sciences; Adjunct Assistant Professor of Art

Daniel Moller

MS, Louisiana Technical University; PHD, Louisiana Technical University
Assistant Professor of the Practice in Integrative Sciences

Robyn E. Ridley

BS, Columbia University; MS, University of California, San Diego; PHD, University of California, San Diego
Assistant Professor of the Practice in Integrative Sciences

Kelly M. Thayer

BA, Regis College; PHD, Wesleyan University
Assistant Professor of the Practice in Integrative Sciences

AFFILIATED FACULTY

Gloster B. Aaron

BA, Oberlin College; PHD, University of Pennsylvania
Associate Professor of Biology; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences

David L. Beveridge

BA, College of Wooster; MAA, Wesleyan University; PHD, University of Cincinnati
Joshua Boger University Professor of the Sciences and Mathematics, Emeritus; Professor, Integrative Sciences, Emeritus; Co-coordinator, Molecular Biophysics

Michael A. Calter

BS, University of Vermont; PHD, Harvard University
Professor of Chemistry; Professor, Integrative Sciences

Christopher James Chenier

BA, Bard College; MA, University of Delaware
Assistant Professor of the Practice in Integrative Sciences and IDEAS; Adjunct Assistant Professor, Integrative Sciences; Adjunct Assistant Professor of Art

Frederick M. Cohan

BS, Stanford University; PHD, Harvard University
Huffington Foundation Professor in the College of the Environment; Professor of Biology; Chair, Environmental Studies Program; Professor, Environmental Studies; Professor, Integrative Sciences

Karen L. Collins

BA, Smith College; PHD, Massachusetts Institute of Technology
Edward Burr Van Vleck Professor of Mathematics; Professor of Mathematics; Chair, Mathematics and Computer Science; Professor, Integrative Sciences

Joseph David Coolon

BS, Kansas State University; PHD, Kansas State University
Assistant Professor of Biology; Assistant Professor, Integrative Sciences

Candice M Etson

BA, New York University; BFA, New York University; PHD, Harvard University
Assistant Professor of Physics; Assistant Professor, Chemistry; Assistant Professor, Integrative Sciences; Assistant Professor, Molecular Biology and Biochemistry

Cameron Donnay Hill

BA, Yale University; PHD, University of California, Berkeley
Associate Professor of Mathematics; Associate Professor, Integrative Sciences

Scott G. Holmes

BS, College of William and Mary; PHD, University of Virginia
Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Mark A. Hovey

BS, Ohio State University; PHD, Massachusetts Institute of Technology
Associate Provost for Budget and Personnel; Professor of Mathematics; Professor, Integrative Sciences

Meredith Hughes

BS, Yale University; PHD, Harvard University
Associate Professor of Astronomy; Associate Professor, Integrative Sciences

Ruth Ineke Johnson

BS, University of Witwatersrand; PHD, Cambridge University
Associate Professor of Biology; Associate Professor, Integrative Sciences

Barbara Jean Juhasz

BA, Binghamton University; MA, University of Massachusetts Amherst; PHD, University of Massachusetts Amherst
Jeffrey L. Shames Professor of Civic Engagement; Professor of Psychology; Chair, Neuroscience and Behavior; Professor, Education Studies; Professor, Neuroscience and Behavior; Professor, Integrative Sciences; Coordinator, Civic Engagement

Roy E. Kilgard

BA, Valdosta St University; PHD, University of Leicester
Associate Professor of the Practice in Astronomy; Associate Professor of the Practice, Integrative Sciences

Tsampikos Kottos

BA, University of Crete; MS, University of Crete; PHD, University of Crete

Lauren B. Dachs Professor of Science and Society; Professor of Physics; Professor, Integrative Sciences; Professor, Mathematics

Daniel Krizanc

BS, University of Toronto; PHD, Harvard University
Edward Burr Van Vleck Professor of Computer Science; Professor of Computer Science; Professor, Integrative Sciences; Professor, Environmental Studies; Co-Coordinator, Informatics and Modeling

Timothy C.W. Ku

BS, University of Rochester; MS, University of Michigan; PHD, University of Michigan
Associate Professor of Earth and Environmental Sciences; Chair, Earth and Environmental Sciences; Associate Professor, Integrative Sciences

Robert P. Lane

BA, Colgate University; PHD, California Institute Tech
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

James Lipton

BS, U Nebraska Lincoln; MSC, Cornell University; PHD, Cornell University
Professor of Computer Science; Professor, Integrative Sciences

Amy MacQueen

BA, Columbia University; PHD, Stanford University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Alexis May

BA, Wesleyan University; MA, University British Columbia; PHD, University British Columbia
Assistant Professor of Psychology; Assistant Professor, Integrative Sciences

Michael A. McAlear

BS, McGill University; PHD, McGill University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Laverne Melon

BA, Middlebury College; MS, SUNY at Binghamton University; PHD, Purdue University W Lafayette
Assistant Professor of Biology; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences; Assistant Professor, Feminist, Gender, and Sexuality Studies

Edward C. Moran

BS, Pennsylvania State University; MA, Columbia University; MPHIL, Columbia University; PHD, Columbia University
John Monroe Van Vleck Professor of Astronomy; Professor of Astronomy; Chair, Astronomy Department; Director, Graduate Studies; Director, Van Vleck Observatory; Professor, Integrative Sciences; Co-Coordinator, Planetary Science

Ishita Mukerji

AB, Bryn Mawr College; PHD, University of California, Berkeley
Fisk Professor of Natural Science; Professor of Molecular Biology and Biochemistry; Director, College of Integrative Sciences; Professor, Integrative Sciences; Professor, Environmental Studies; Co-Coordinator, Molecular Biophysics; Coordinator, Health Studies

Janice R. Naegele

BA, Mount Holyoke College; PHD, Massachusetts Institute of Technology

Dean of the Natural Sciences and Mathematics; Alan M. Dachs Professor of Science; Professor of Biology; Professor, Neuroscience and Behavior; Professor, Integrative Sciences

Brian Hale Northrop

BA, Middlebury College; PHD, University of California, Los Angeles
Professor of Chemistry; Professor, Integrative Sciences

Stewart E. Novick

BS, SUNY at Stony Brook; MA, Harvard University; MAA, Wesleyan University; PHD, Harvard University

Smith Curator of Paleontology of the Joe Webb Peoples Museum of Natural History; Harold T. Stearns Professor of Integrative Sciences, Emerita

COLLEGE OF INTEGRATIVE SCIENCES MAJOR

ADMISSION TO THE MAJOR

Students must apply for admission to the College of Integrative Sciences (CIS). Students must download and complete application materials (<http://www.wesleyan.edu/cis/application-wesfiles.html>), which include:

- A description of the proposed research activity
- A letter of reference from the proposed faculty mentor, as well as a second letter from another reference

Normally, the deadline for applications is the Friday immediately prior to spring break. Please allow time to prepare your project description prior to the application deadline. If you miss the deadline, contact the director of the CIS to submit your application.

Students are eligible for the CIS linked major if they have chosen a Natural Sciences and Mathematics (NSM) major and are enrolled in at least one semester of the Research Frontiers Seminar (CIS221 or CIS222). Students should have an interest in interdisciplinary scientific research.

MAJOR REQUIREMENTS

In addition to majoring in one department or program in NSM, students in the CIS take the following courses for a minimum of six and a maximum of nine credits.

OUTLINE OF THE LINKED MAJOR

- **CIS221/CIS222 (.5 credits/semester)**. This is a sophomore-level course designed to introduce students to ongoing research projects in the NSM division. All students interested in applying to the college are required to attend the course for at least one semester. The course involves weekly visits from different faculty members and their students from across the division to discuss their research programs. Potential CIS students are encouraged to take the course as early as their first year or possibly during their sophomore year to get exposure to the variety of research conducted in the NSM division.
- **Two upper-level electives (2 credits)**. Upper-level courses should provide core skills from a discipline outside the primary major. Accordingly, these courses are typically hosted by a department other than the student's foundational major. The course catalog contains a list of courses identified as interdisciplinary and appropriate for the college. Courses not on this list may potentially be used to fulfill elective requirements, based on consultation with the CIS academic advisor. In general, the specific electives used to fulfill this requirement must be determined in consultation with a student's CIS linked-major advisor.
- **Two semesters of a journal club or seminar (.5–1 credit)**. The two journal clubs/seminar series must be in different disciplines. CIS221/CIS222 cannot be used to fulfill this requirement.
- **Senior capstone colloquium (.5 credits)**. Two semesters of the capstone colloquium CIS321/CIS322 are required. In this course, students learn about and discuss inherently integrative scientific topics, such as the Drake Equation. The capstone course also focuses on developing writing and presentation skills that will be useful going forward. Senior CIS majors present their research to their peers, junior CIS majors, and potential CIS majors.
- **Research (2–4 credits)**. Research credits normally come by enrolling in Advanced Research Seminar or Senior Thesis Tutorial. Two credits of research is the minimum requirement. Four research credits are achieved by taking research for a full credit each semester in the junior year and the senior year. Students are strongly encouraged to write a thesis based on their research during their senior year. In unusual cases, the two-credit minimum can also be satisfied through (paid) credits for summer research.
- **One summer research experience**. All students are required to spend at least one summer performing research (<https://www.wesleyan.edu/cis/summer-program/>), preferably the summer after their sophomore year,

immediately following acceptance to the college. Students are supported during the summer by a CIS fellowship (unless doing the research for credit).

COLLEGE OF LETTERS

The College of Letters (COL) is a three-year interdisciplinary major for the study of European literature, history, and philosophy, from antiquity to the present. During these three years, students participate as a cohort in a series of five colloquia in which they read and discuss (in English) major literary, philosophical, and historical texts and concepts drawn from the three disciplinary fields, and also from monotheistic religious traditions. Majors are invited to think critically about texts in relation to their contexts and influences—both European and non-European—and in relation to the disciplines that shape and are shaped by those texts. Majors also become proficient in a foreign language and study abroad to deepen their knowledge of another culture. As a unique college within the University, the COL has its own library and workspace where students can study together, attend talks, and meet informally with their professors, whose offices surround the library.

FACULTY

Charles Barber

BA, Harvard University; MFA, Columbia University
Associate Professor of the Practice in Letters

Joseph J. Fitzpatrick

BA, Harvard University; PHD, Duke University
Assistant Professor of the Practice in Letters; Assistant Professor of the Practice, Russian, East European, and Eurasian Studies

Tushar Irani

BA, Colgate University; PHD, Northwestern University
Associate Professor of Philosophy; Associate Professor of Letters; Chair, College of Letters

COLLEGE OF LETTERS MAJOR

ADMISSION TO THE MAJOR

The College of Letters is a three-year major that students typically declare in the spring semester of their first year at Wesleyan. Declaration forms and further information can be found on the COL website under “Declare the Major (<https://www.wesleyan.edu/col/apply.html>).” Submission of these forms provides the department with information needed to advise an incoming major on all aspects of their academic career, including their choice of a foreign language and study abroad planning. Students will be assigned a COL advisor within two weeks of declaring the major. Sophomore transfer students may declare the major before or during orientation.

MAJOR REQUIREMENTS

The program consists of five components and leads to eleven course credits:

- Five colloquia designed to acquaint students with works of predominantly European literature, history, and philosophy in (respectively)
 - The Ancient world (sophomore colloquium 1)
 - The Middle Ages (sophomore colloquium 2)
 - The Early Modern period (junior colloquium)
 - The 19th century (senior colloquium 1)
 - The 20th–21st century (senior colloquium 2)
- Four electives. The minimum required is one in history, one in philosophy, one in literature/representation, and one in the major's target foreign-language literature. These specialized seminars allow students to shape their COL major around a particular interest.
- Study abroad, in the spring semester of the junior year (or in certain situations, in the summer following the sophomore or junior year), usually in Europe or in another country (if approved by the director of the COL) where the major's selected foreign language is spoken.
- One comprehensive examination in November/December of the junior year, covering the texts read in the first three colloquia.
- One senior thesis or essay, on a topic be chosen from a very wide range of disciplines. This work, along with the specialized seminars, allows COL students to further shape their major along their own interests.

In all these contexts, much emphasis is put on the development of skills in writing, speaking, and analytical argument. Students are encouraged to take intellectual risks, and for this reason letter grades are not given in courses taken for COL major credit; also, COL seminars generally require papers rather than final examinations. Instead of giving grades, tutors write detailed evaluations of their students' work at the end of each semester, and these are kept on record (and discussed with each student upon request). Our general goal is cultivation of "the educated imagination."

Courses that students take as first-years before their declaration of the COL major cannot count for major credit or as an elective. The four electives required are designed to be taken in conjunction with the COL colloquium to foster intellectual synergy for all students in the major and their cohort.

STUDENT LEARNING GOALS

The College of Letters (COL) is a three-year, interdisciplinary major for the study of European literature, history, and philosophy, from antiquity to the present. During these three years, students learn how to think and write critically about texts in relation to their contexts and influences—both European and non-European—and in relation to the disciplines that shape and are shaped by them.

Through a required sequence of five colloquia in Antiquity, the Middle Ages, the Early Modern period, the 19th and then the 20th and 21st centuries, students learn about the emergence of the constitutive idea of Europe out of Jerusalem, Athens, and Rome, and the contested history of Europe's diverse and changing social norms and cultural expressions. Over these three years, students also learn about the emergence and change of the disciplines as well as the forms of argumentation associated with each. Collaborative team-teaching in the first three colloquia fosters this pedagogical goal, ensuring that distinct disciplinary perspectives are both represented in conversation and in the classroom. Finally,

majors become proficient in a foreign language through study abroad, where they also deepen their knowledge of another culture.

Assessment of these goals takes place continuously over the three years of the major. In lieu of grades, students receive detailed written evaluations for each of their COL courses, which address both written work and class participation. Study abroad is required in the second semester of the junior year, and in order to be accepted for the study abroad program of their choosing, students must prove that they have acquired the necessary level of language proficiency. When abroad they take courses taught in the foreign language and when they return they must continue to maintain proficiency by taking at least one upper-level seminar in that language. Toward the end of the fall semester of their junior year, majors take comprehensive examinations that are planned, administered, and graded by two external examiners, representing different disciplines and with specializations in different time periods. The written portion of the comprehensive exam tests knowledge of the material covered in the first three colloquia and evaluates the students' ability to analyze and draw from a variety of sources in order to develop and support coherent, integrative, and interdisciplinary arguments about them. The oral portion of the exam tests the students' ability to orally defend and/or expand their arguments in a face-to-face conversation. In keeping with the COL's preference for evaluations over grades, the examiners' grading scale of Credit, Honors, and High Honors accompanies a written evaluation of each student's work on both parts of the exam. During the senior year, students must complete an honors project in their choice of disciplines and media. Senior theses (taking place over two semesters) are evaluated by two professors who are not the student's advisor, in order to assure an objective assessment. One of the two evaluators is always a non-COL professor. Honors essays (over one semester) require one evaluating professor who is not the advisor.

By virtue of the Junior Comprehensive Examinations, the COL also undergoes its own yearly self-evaluation. The evaluations written for each student by the external examiners are also made available to the COL director, who looks to see if there is a trend in the overall strengths and weaknesses among the students. In addition, the examiners are asked to give their assessment of the entire COL program, first in a meeting with us and then in a letter that they may write together or individually. These assessments are shared with the department as a whole and any suggestions for changes to the program or the teaching are taken seriously. Indeed, it is because of these yearly assessments that we have made significant changes in our curriculum and, most notably, in the sequence of the colloquia.

ADDITIONAL INFORMATION

Life in COL. The College of Letters attempts to integrate the social and intellectual lives of its members by inviting guest lecturers and by providing opportunities for students and faculty to meet such guests (and one another) informally. There are also regular informal social gatherings in the College of Letters library. The structure of the College of Letters and the smallness of its classes bring about a close rapport between tutors and students and a lively and continuing dialogue among students of different classes.

After graduation. The academic standards of the College of Letters are reflected in the fact that its graduates have consistently entered the best graduate and professional schools, including schools of law, medicine, and business administration, as well as communications and the liberal arts. They also have won national fellowships and scholarships.

COLLEGE OF SOCIAL STUDIES

The College of Social Studies (CSS) offers a distinctive blend of teaching methods, subject matter, and educational structure. Its collegial organization combines tutorials and courses in social theory within the college with individually selected courses from other departments and programs in the University to achieve an integrated education in the social sciences. Founded in 1959, the CSS has provided an unusual educational opportunity for many Wesleyan students whose careers upon graduation have ranged from medicine to law, forestry to college teaching, international business to screenwriting.

FACULTY

Daniel Steinmetz-Jenkins

BA, Concordia College Or; MA, Reed College; PHD, Columbia University
Assistant Professor in the College of Social Studies; Assistant Professor, History

COLLEGE OF SOCIAL STUDIES MAJOR

ADMISSION TO THE MAJOR

Interested students apply for admission to CSS during the spring of their first year. Each applicant is interviewed by a team consisting of a CSS tutor and usually two current CSS students. All CSS majors must complete the economics prerequisite either by taking ECON101 and achieving a grade of CR or a letter grade of at least C- or by taking ECON110 (for which a full-year of college-level calculus is required) and achieving a grade of CR or a letter grade of at least C-. Students are well-advised to have this required course work behind them before entering the CSS. However, some students who have not completed the economics prerequisite are admitted each year on the condition that they must complete the prerequisite in the fall term of the sophomore year. A student who has taken an introductory economics course in the first year but has not achieved a grade of C- or higher (or CR) must take another economics course, which will normally be a **200**-level elective, and achieve a grade of CR. A score of 4 or 5 on the AP exams in both microeconomics and macroeconomics or a score of 5 or higher on the IB exam in economics is sufficient to satisfy the prerequisite. Failure to complete the economics prerequisite by the end of the fall term in the sophomore year will result in separation from the CSS.

MAJOR REQUIREMENTS

Sophomore year. There are no letter grades in the sophomore year. At the heart of the program in the sophomore year are the weekly tutorial and tutorial essay that are designed to develop conceptual and analytic skills as well as precision in writing and argument. The academic year is composed of three trimesters of eight weeks each, and each student takes a trimester tutorial in history, government, and economics. Due to their intensive nature, tutorials account for more than half of the student's academic work during the year. A semester-length colloquium in social theory in the fall and selected courses within and outside the social sciences complete the sophomore program. Comprehensive examinations, administered by external examiners at the end of the sophomore year, produce the only official grade for sophomores.

Junior year. The second semester of the junior year involves a philosophy colloquium on the modes of inquiry in the social sciences and a sequence of two seven-week tutorials building on the sophomore tutorials, each carrying one course credit. Students will also take several of their elective courses in the three CSS disciplines to enhance their research skills and the ability to accomplish major writing projects in the social sciences. Juniors also have the option of studying abroad in their first semester.

Senior year. In addition to a CSS Senior Colloquium in the first semester, the senior year requires completion of a substantial piece of written work. This requirement can be fulfilled by either an honors thesis (two semesters) or a

senior essay (one semester). In all cases it is a sustained and serious investigation of an intellectual problem.

GENERAL EDUCATION

Completion of the University's General Education Expectations at both stages I and II is also required of CSS majors, although majors have until the end of the junior year to complete stage I expectations.

STUDENT LEARNING GOALS

CSS Learning Goals:

- Critical Thinking
- Creative Thinking
- Markedly improved reading skills
- Ability to write an argumentative, high-quality academic paper
- Expertise in participation, debate, and discussion, in a respectful manner, in the classroom
- Learning how to work with professors in order to improve written work
- Ease in conversation—about academic subjects and current events—in informal settings as well

ADDITIONAL INFORMATION

The CSS Lounge, the CSS Library, the CSS Seminar Rooms, and the CSS Office reinforce the collegial atmosphere of the CSS. Social events such as Monday luncheons, Friday post-tutorial social hours, as well as semester banquets and occasional lectures, are regular features of college life, as are informal talks and discussions.

CAPSTONE EXPERIENCE

CSS students complete one of the following during their senior year:

- Senior honors thesis (two semesters)
- Senior essay (one semester)

COLLEGE OF THE ENVIRONMENT

The College of the Environment at Wesleyan University was created with a belief in the resilience of the human spirit and a desire to develop a long-term vision of human and ecosystem health. There are four parts to the College of the Environment: the environmental studies (ENVS) linked major or a minor, an annual think tank, research opportunities, and community outreach. Our mission, simply stated: to change the world.

The I (p. 94)linked-major program in environmental studies (ENVS) is the secondary major to a primary major (see Undergraduate tab, at top right, for details). Students cannot obtain the BA degree with ENVS as their only major. Students must complete all the requirements for graduation from their primary major in addition to those of ENVS as their linked major. Each student will work closely with an ENVS advisor to develop an individual course of study. ENVS requires an introductory course, the sophomore seminar, six elective courses, the senior colloquium, and a senior capstone project (thesis, essay, performance, etc.) on an environmental topic that is researched, mentored, and credited in the primary major program, although other options are possible. In addition, students must take one course in any subject that fulfills the writing essential capability.

A minor in environmental studies is also offered (see Undergraduate tab, at top right, for details).

More information about the College of Environment can be found here. (<https://www.wesleyan.edu/coe/>)

AFFILIATED FACULTY

Barry Chernoff

BS, SUNY at Stony Brook; MS, Adelphi University; PHD, University of Michigan
Robert Schumann Professor of Environmental Studies; Professor of Earth and Environmental Sciences; Professor of Biology; Director, College of the Environment; Professor, Environmental Studies

ENVIRONMENTAL STUDIES MAJOR

MAJOR DESCRIPTION

Environmental studies is a multidisciplinary, integrative study of a broad range of environmental issues. Environmental science (such as climatology or conservation biology) is one aspect, but environmental studies also brings together the spectrum of foci that are necessary to solve, evaluate, comprehend, and communicate environmental issues. Thus, environmental studies includes sciences, economics, government, policy, history, humanities, art, film, ethics, philosophy, and writing.

For students to engage in contemporary environmental issues, they must obtain expertise in the area of their major and gain broader perspectives in environmental studies through a set of introductory and elective courses that increase the breadth of their understanding to complement their specialty. The aim of the program is to graduate students who have both a specialty and breadth of perspective so that they can interpret environmental information; understand the linkages to social, political, or ethical issues; and formulate well-reasoned opinions.

The linked-major program in environmental studies (ENVS) is the secondary major to a primary major. Students cannot obtain the BA degree with ENVS as their only major. Students must complete all the requirements for graduation from their primary major in addition to those of ENVS as their linked major. Each student will work closely with an ENVS advisor to develop an individual course of study. ENVS requires an introductory course, the sophomore seminar, six elective courses, the senior colloquium, and a senior capstone project (thesis, essay, performance, etc.) on an environmental topic. In addition, students must take one course in any subject that fulfills Wesleyan's essential capability in writing.

Environmental studies is also offered as a minor (p. 98).

ADMISSION TO THE MAJOR

One of the following introductory courses serves as the gateway to the ENVS linked-major program:

- BIOL197/E&ES197/ENVS197
- E&ES199

MAJOR REQUIREMENTS

The following requirements are necessary to complete the ENVS linked major:

- An introductory course (ENVS197 or E&ES199) or a 4 or 5 on the Environmental Science AP Exam
- Sophomore Seminar ENVS201
- Three core electives, one from each of the three areas below
- Three additional electives, whether or not in the core list
- Two semesters of the senior colloquium: ENVS391 and ENVS392
- A senior capstone project course
- With the exception of BIOL197/E&ES197/ENVS197 or E&ES199, all other courses must be at the 200 level or higher
- Courses that may count toward the six electives are ENVS courses at the 200 level or higher, plus other courses listed here (<https://bit.ly/wes-envs/>). Two courses that are either student forums or research tutorials may be substituted for non-core electives
- One course in any subject that fulfills Wesleyan's essential capability in writing

A total of six elective courses are required; two must be at the upper level of academic study (usually 300-level or higher), and one elective must come from each of the three following core areas:

CORE ELECTIVES AREA 1

Code	Title	Hours
ENVS307	The Economy of Nature and Nations	1
PHIL212	Introduction to Ethics	1
PHIL215	Humans, Animals, and Nature	1
PHIL270	Environmental Philosophy	1
PHIL287	Philosophy of Science	1

CORE ELECTIVES AREA 2

Code	Title	Hours
ECON210	Climate Change Economics and Policy	1
ECON212	The Economics of Sustainable Development, Vulnerability, and Resilience	1
ENVS285	Environmental Law and Policy	1
ENVS325	Healthy Places: Practice, Policy, and Population Health	1
GOVT206	Public Policy	1
GOVT221	Environmental Policy	1
GOVT322	Global Environmental Politics	1

CORE ELECTIVES AREA 3

Code	Title	Hours
BIOL216	Ecology	1
BIOL220	Conservation Biology	1
BIOL226	Invasive Species: Biology, Policy, and Management	1
ENVS260	Global Change and Infectious Disease	1

ENVS340	The Forest Ecosystem	1
ENVS344	Renewable Energy and Negative Emission Technologies	1
ENVS361	Living in a Polluted World	1
E&ES234	Geobiology	1
E&ES250	Environmental Geochemistry	1
E&ES260	Oceans and Climate	1

Students will choose an additional three electives with their ENVS advisor. These electives may be selected from the entire list, in addition to those courses listed in core elective areas 1–3 above.

ADDITIONAL INFORMATION ON MAJOR REQUIREMENTS

- With the exception of the introductory courses, 100-level courses do not count toward the major.
- Up to three courses from the primary major may be counted toward the ENVS linked major.
- Students may substitute two reading or research tutorials, or one tutorial and one student forum, for two electives with approval of the ENVS advisor.
- Up to three credits from study abroad programs may be used for non-core elective courses, with prior approval of the ENVS advisor and as long as the credits from abroad are accepted by Wesleyan.
- One course in the student's entire curriculum must satisfy the essential capability for writing.
- With the approval of the advisor and a written petition by the student, certain internships (e.g., Sierra Club, state agency, EPA, NOAA) may be substituted for one non-core elective.

STUDENT LEARNING GOALS

- Competence beyond the major-track introductory level in interpreting environmental information
- Develop a deeper understanding of the complex connections between environmental issues and social or political issues
- Develop the analytical and critical capacities necessary to formulate compelling arguments about environmental issues
- Engage both scholars and the lay public in discourse about environmental issues (mode of expression varied)
- Engage with scholars in the field who are making important environmental contributions
- Undertake a senior capstone encompassing practical and theoretical experiences in environmental issues

METHOD OF EVALUATION

Self-assessment. Upon entering the major, students will write a one-page self-assessment. This assessment will be posted to the student's electronic portfolio and made available to the student's advisor. In the assessment, students will describe their reasons for selecting the major, their current strengths and weaknesses with respect to environmental studies, and their personal goals within the major, including plans for a concentration. They will be encouraged to integrate the program's learning goals in their self-assessment. Students will periodically meet with their environmental studies advisor to reflect on their progress in the major, using their self-assessment as a frame of reference. At minimum, these meetings will occur once per semester during the course scheduling period. Because environmental studies is inherently multidisciplinary and because every student is linked to a primary major,

ENVS student trajectories within the major are highly individualized. The self-assessment will make these plans explicit, and will help both the student and advisor chart the most successful path through the major.

Senior capstone and senior colloquium. Every major completes a capstone project during their senior year. The format of the capstone is typically determined by the student's primary departments (e.g., thesis, essay, performance, exhibit). The purpose of the capstone experience is to challenge students to think creatively, deeply, and originally about an environmental issue and to produce a significant work that uses their expertise from their primary major. All capstone projects are formally evaluated by at least one member of the ENVS faculty. In addition, several times throughout their senior year, students present progress reports of their projects in the senior colloquium; faculty and student-peers attending the colloquia provide feedback for improvement.

Senior reflection. As a bookend to the self-assessment, seniors will be asked to reflect on their experiences in the major. They will analyze their personal development in environmental studies and how the program impacted their development. These reflections will be recorded in the form of a questionnaire. Also, during one of the final colloquia in the spring, students will be encouraged to share their thoughts in a group setting and this will be recorded.

HOW THE DEPARTMENT/PROGRAM USES ASSESSMENT INFORMATION

The self-assessment and the subsequent iterative process between student and advisor of discussing the assessment will help to maximize student success in the program. The capstone projects and, more informally, the oral presentations in the senior colloquium, will help the ENVS faculty evaluate the success of the curriculum in fulfilling the learning goals of the program. Both the iterative process of the self-assessment and the senior reflection will help inform curricular needs. For a multidisciplinary program with its faculty spread across all three divisions, the three common experiences (self-assessment, senior capstone/senior colloquium, and senior reflection) will be critical for the evaluation of both students and the program. Once a year, a committee will use information from these common experiences to discuss the state of the program. A summary of these discussions, including any recommendations for change, will be shared with the full ENVS faculty.

HONORS

SENIOR THESIS IN ENVIRONMENTAL STUDIES

Options for pursuing honors. Environmental Studies majors are required to complete a capstone project in their senior year. A senior thesis is one type of capstone project that will fulfill the ENVS major requirement. The other type of capstone is a Senior Essay (see Capstone Experience, category 3, below). You are strongly encouraged to pursue a capstone project, especially senior theses, in your primary major. You should consult with faculty in your primary major about qualifications and procedures for undertaking a senior thesis in your primary major.

Circumstances may arise that prevent you from pursuing a senior thesis in your primary major. It may be possible for you to undertake a senior thesis in Environmental Studies. A senior thesis in Environmental Studies will be approved only if (1) the student's primary major department/program is unable to provide a suitable advisor, or (2) the subject is deemed to fall outside the strict purview of that department/program.

You must receive approval *prior* to registering for a senior thesis in Environmental Studies in the fall of your senior year, during drop/add. Two signatures of approval will be required for you to proceed with a senior thesis in Environmental Studies: (i) your thesis tutor and (ii) the Chair of Environmental Studies.

Your thesis prospectus must contain the main questions or thesis of the project, a statement of importance of the project and how you intend to carry out the project. Please also indicate who will serve as mentor for the project. That person must also send an email approving the basis for your project at this early date.

Please send your thesis proposal and ask your thesis mentor to send an email of approval for your project to interim Chair of Environmental Studies and Huffington Foundation Professor in the College of the Environment Fred Cohan at fcohan@wesleyan.edu. The interim Chair of ENVS will consider your application for approval. You, your tutor, and your ENVS advisor will be informed of the Chair's decision. For any case that is unclear (e.g., suitability of the topic for ENVS), the Chair may consult with the College of the Environment Governing Board.

HONORS IN ENVIRONMENTAL STUDIES: ELIGIBILITY, CANDIDACY, AND BESTOWAL

Requirements for eligibility. To be *eligible* for honors in environmental studies you must (1) be an environmental studies major on track to complete the major requirements in a timely fashion; (2) achieve a grade point average of 90.00 or higher in courses that count towards the environmental studies linked major, calculated at the end of the spring semester of the junior year; and (3) have completed Stage I of the General Education Expectations.

Process for applying for admission to candidacy. To become a *candidate* for honors in environmental studies, you must meet the three *eligibility* conditions and also obtain official permission to undertake a senior thesis in environmental studies. The optimal time to try to find a faculty tutor and obtain permission is by the end of the spring semester of your junior year.

Once you have secured a thesis tutor and permission to undertake a senior thesis in environmental studies, you must enroll during the add/drop period of the fall semester of your senior year in ENVS409, "Senior Thesis Tutorial." You can't include this tutorial in course planning during pre-registration; you have to add it during the in-semester add/drop period. You add the tutorial electronically, following instructions in the Tutorial Manual on the Tutorial Registration (http://www.wesleyan.edu/registrar/information/tutorial_registration.html) page on the website of the Office of the Registrar. Enrolling in ENVS409 will indicate to the honors coordinator in the Office of the Registrar that you are an honors candidate from the standpoint of the University as well as Environmental Studies. Then, during the add/drop period of the spring semester of your senior year, you must enroll electronically (using the same procedure) in a second tutorial, ENVS410, which is also entitled "Senior Thesis Tutorial." Enrolling in ENVS410 will indicate to the honors coordinator in the Office of the Registrar that, just over halfway into your senior year at Wesleyan, you remain in good standing as an honors candidate from the standpoint of the University as well as the Department.

Finally, to actually *receive* honors in environmental studies, you must (1) complete the environmental studies linked major; (2) complete *both* Stage I and Stage II of the General Education Expectations; (3) write a thesis judged to be of honors quality; and (4) maintain a grade-point average of at least 90.00 in courses that count towards the environmental studies linked major through the first semester of your senior year.

Environmental Studies prohibits double honors for the same thesis.

UNIVERSITY HONORS REGULATIONS

To abide by Wesleyan's university-level honors regulations, which are formulated by a university-wide faculty Honors Committee (<http://www.wesleyan.edu/acad/governance/rosters.html>) and detailed on the Honors webpages (http://www.wesleyan.edu/registrar/honors/honors_program.html) maintained by the Office of the Registrar, is a requirement for receiving honors in environmental studies. Especially useful are the Jellybean Papers (http://www.wesleyan.edu/registrar/honors/jelly_bean_papers/) (so-called because they used to come in many colors), which will tell you how to register your thesis project with the coordinator of the university-wide Honors Program (http://www.wesleyan.edu/registrar/honors/honors_program.html) at the beginning of your senior year. You may apply to the Thorndike Fund (http://www.wesleyan.edu/registrar/honors/jelly_bean_papers/thorndike_fund.html) for help in paying the production costs of creating the bound copy of their thesis/essay you must deposit with Olin Library.

EVALUATION OF HONORS THESES IN ENVIRONMENTAL STUDIES

Soon after theses are submitted, the honors coordinator will deliver an electronic copy of your thesis to the administrative assistant of the College of the Environment.

Your thesis will be evaluated by three faculty members: your thesis tutor and two readers designated by the department chair in consultation with your tutor. One reader will be close to your field and one will be farther afield. Your tutor and readers will read the thesis, will write a commentary on it, will evaluate it independently as worthy of high honors, honors, or credit (no honors); will recommend a grade for the thesis tutorial; and will send the comments and evaluations to the administrative assistant of the College of the Environment, who submits them to the chair of Environmental Studies.

If the tutor and the readers agree that the thesis deserves honors, or if they agree that the thesis deserves credit (no honors), the chair of Environmental Studies in deliberation with the governing board of the College of the Environment, awards the thesis the grade that the tutor and readers agreed upon.

If the tutor and the readers *disagree* with respect to honors or no honors, the following procedure will be used. If there are two evaluations of honors and one of credit (no honors), the chair of Environmental Studies and the governing board of the College of the Environment will consider you for being honors in Environmental Studies. If there is one evaluation of honors and two of credit (no honors), the chair of Environmental Studies will bring the case to the governing board of the College of the Environment with the recommendation of credit (no honors).

The Environmental Studies Department has stringent regulations governing high honors. High honors will be considered by the chair of Environmental Studies and the governing board of the College of the Environment if (and only if) the tutor and the readers *agree* that the thesis deserves high honors. High honors in environmental studies requires unanimity among the three thesis-readers that the thesis deserves high honors. In this respect, it is more difficult to achieve high honors in environmental studies than it is to achieve high honors in many other departments or programs at Wesleyan.

When all comments and evaluations have been received by the Department and when your thesis and achievements have been deliberated by the governing board of the College of the Environment, the chair of environmental studies will submit in writing the evaluations (but not the comments or the tutorial grades) to the coordinator of the university-wide honors program. The administrative

assistant records the honors recommendation electronically and retains a copy of the comments and the recommended tutorial grades.

CAPSTONE EXPERIENCE

The ENVS linked-major program provides a capstone experience that includes a senior project and a full year of senior colloquia. The purpose of the ENVS capstone experience is to challenge students to think creatively, deeply, and originally about an environmental issue and to produce a significant work that uses their expertise from their primary major. The students will then have the opportunity to present and discuss their research in the senior colloquium (ENVS391/ENVS392) with seniors and the faculty.

Senior capstone project. The creative exploration of a critical environmental issue through independent research is an essential part of ENVS. All ENVS majors must complete a senior capstone project in one of the four categories discussed below, though students are encouraged strongly to pursue a project in one of the first two categories. The topic must concern an environmental issue and must be approved in advance by the ENVS advisor. The student must be officially enrolled in one or more courses while they complete the research project. The students must submit to the director of ENVS no later than the last day of classes in the spring semester in their junior year a two-page research prospectus on their planned course of research. This plan must be signed by the potential mentor of the senior research. The mentor does not have to be a member of the ENVS faculty.

- **Category 1.** The capstone project may take any of the forms accepted by the primary department as a senior project (e.g., senior thesis, senior essay, senior performance, senior exhibition, senior film thesis). The senior project is submitted only to the primary department and is not evaluated by ENVS. Students may select an interdisciplinary thesis topic such that they solicit the help of more than one mentor if permitted by the primary department.
- **Category 2.** The capstone project may be a thesis submitted in general scholarship. The student must have a mentor for the thesis, and the topic must be approved by the ENVS advisor.
- **Category 3.** In the event that the student cannot satisfy the conditions for the above categories, the student may register for and complete a senior essay in environmental studies (ENVS403/ENVS404). The mentor can be any Wesleyan faculty member and the topic must be approved by the ENVS advisor. If the student cannot find a mentor, then it will be the responsibility of the chair of environmental studies to find a suitable reader or to evaluate the written work. The due date for the senior essay is set between the student and the mentor.
- **Category 4.** In the event that the student cannot satisfy the conditions for the above categories, the student may register for and complete a senior honors thesis in environmental studies (ENVS409/ENVS410). The mentor can be any Wesleyan faculty member and the topic must be approved by the ENVS advisor. If the student cannot find a mentor, then it will be the responsibility of the chair of environmental studies to find a suitable mentor or to serve as mentor. The due date for the senior honors thesis is set by the Office of the Registrar, usually in mid-April.

Senior colloquium. The ENVS Senior Colloquium provides students and professors the opportunity to discuss, but not evaluate, the senior projects. Students will make 10-minute presentations on their projects followed by five minutes of discussion. Any interested faculty member may attend, but the project mentors and ENVS advisors will be especially invited. Two weeks prior to their presentation, students will distribute a one- to two-page summary of their findings to enhance the level of discussion for their topic. The colloquium may

also invite several presentations by faculty or outside speakers. Students must be formally enrolled in the colloquium each semester of their senior year.

Additionally, all declared ENVS majors will be invited to the colloquium luncheons to enrich their early experience and encourage them to begin thinking about their future projects; their attendance is encouraged only and they do not enroll in the colloquium until their senior year.

ENVIRONMENTAL STUDIES MINOR

MINOR DESCRIPTION

Environmental studies is a multidisciplinary, integrative study of a broad range of environmental issues. Environmental science (such as climatology or conservation biology) is one aspect. But environmental studies also brings together the spectrum of foci that are necessary to solve, evaluate, comprehend, and communicate environmental issues. Thus, environmental studies includes sciences, economics, government, policy, history, humanities, art, film, ethics, philosophy, and writing.

For students to engage contemporary environmental issues, they must obtain expertise in the area of their major and gain broader perspectives in environmental studies through a set of introductory and elective courses that increase the breadth of their understanding to complement their specialty. The aim of the program is to graduate students who have both a specialty and breadth of perspective so that they can interpret environmental information; understand the linkages to social, political, or ethical issues; and formulate well-reasoned opinions.

Environmental studies is also offered as a linked major (p. 94).

ADMISSION TO THE MINOR

No admission requirements.

MINOR REQUIREMENTS

The minor is granted for a minimum of seven credits:

- Either a 4 or 5 on the Environmental Science AP Exam or one of the following introductory courses: BIOL197, E&ES197, ENVS197, OR E&ES199.
- **Plus six elective courses related to the environment as follows:**
 - Three must come from one department
 - The courses must come from three departments or programs
 - The courses must come from two divisions
 - One course must be at the 300 level or higher
 - Courses that may count toward the six electives are ENVS courses at the 200 level or higher, plus other courses listed here (<https://bit.ly/wes-envs/>).

DANCE

Dance deepens one's knowledge and expression of human experience. We believe in the creative and intellectual potential of each person. Dance can change the world.

The Dance Department at Wesleyan is a contemporary program with a global perspective. The curriculum centers on the creative act – imagining, making and doing. Our program is interdisciplinary, embodied, collaborative, physically and intellectually rigorous, and fosters personal and social transformation.

Patricia L. Beaman

BFA, University of Michigan; MA, New York University
Artist-in-Residence, Dance

Pedro Bermudez

MFA, American Film Institute
Assistant Professor of the Practice in Video and Audio Production

Katja P. Kolcio

MA, University of Georgia Athens; MA, Ohio State University; PHD, Ohio State University
Associate Professor of Dance; Director, Allbritton Center for the Study of Public Life; Associate Professor, Environmental Studies; Associate Professor, Education Studies; Associate Professor, Russian, East European, and Eurasian Studies

Hari Krishnan

BA, University of Manitoba; MFA, York University; PHD, Texas Womans University
Professor of Dance; Chair, Dance; Professor, Feminist, Gender, and Sexuality Studies

Marcela Oteiza

BFA, University of Chile; MFA, California Institute of Arts
Associate Professor of Dance; Associate Professor, Theater; Associate Professor, College of the Environment

Iddrisu Saaka

DIPL, University of Ghana; MFA, University of California, Los Angeles
Assistant Professor of Dance

Nicole Lynn Stanton

BA, Antioch College; MFA, Ohio State University
Provost and Senior Vice President for Academic Affairs; Professor of Dance; Professor, African American Studies; Professor, Environmental Studies

VISITING FACULTY

Douglas Elkins

Visiting Associate Professor of Dance

Maho Amy Ishiguro

BA, Colgate University; MA, Wesleyan University; PHD, Wesleyan University

Visiting Assistant Professor of Dance

Chelsie McPhilimy

BA, University of Wisconsin at Madison; MFA, Ohio State University
Technical Director, Dance Department

Eiko Otake

BA, SUNY Empire St College
Visiting Artist-in-Residence, Dance

Nikolas Charles Ferguson Owens

BA, Wesleyan University
Visiting Instructor in Dance

Joya Powell

BA, Columbia University; MA, New York University
Visiting Assistant Professor, African American Studies; Visiting Assistant Professor of Dance

EMERITI

Susan F. Lourie

BA, Temple University; MALS, Wesleyan University
Adjunct Professor of Dance, Emerita

Urip Sri Maeny

DIPL, Indonesian Conservatory of Mus
Retired Artist-in-Residence, Dance

DEPARTMENTAL ADVISING EXPERTS

Pedro Alejandro; Katja Kolcio; Hari Krishnan; Joya Powell and Nicole Stanton

DANCE MAJOR

MAJOR DESCRIPTION

The Dance Department at Wesleyan is a contemporary program with a global perspective. The program embraces classical forms from Bharata Natyam, Ghanaian, ballet, Javanese, and vernacular forms of jazz, hip hop, and Eastern European social dances, to experimental practices that fuse tradition and experimentation into new, contemporary forms.

Our mission is to cultivate artistry. The curriculum centers on the creative act – imagining, making, and doing. Our program is interdisciplinary, embodied, collaborative, and physically and intellectually rigorous; it aims to foster personal and social transformation.

The curriculum, faculty research, and pedagogy all center on the relationships between theory and practice, embodied learning, and the potential dance-making has to be a catalyst for social change. Within that rigorous context, students encounter a diversity of approaches to making, practicing, and analyzing dance in an intimate learning atmosphere.

The emphasis of the major is on creating original scholarship, be it choreographic or written, that views dance within a specific cultural context, interrogates cultural assumptions, and is informed by a critical and reflective perspective.

ADMISSION TO THE MAJOR

- Successful completion of two gateway courses.
- An admissions interview with the Prospective Major Advisor, Katja Kolcio.

MAJOR REQUIREMENTS

revised Spring 2019): Total Credits: 10.5 (Project) or 11.5 (Thesis)

Two Gateway Courses:

One Dance Technique	.5 Credit
One Introductory Survey Course:	1 Credit

Options include:

Code	Title	Hours
DANC103	Dancing Bodies	1
DANC104F	Dance as Cultural Knowledge: Dances from Indonesia (FYS)	1
DANC211	Contemporary Dance Technique I	.5
DANC212	Composition Across the Arts	1

Two Credits in Dance Composition: Choreography Workshop 2 Credits

- Dance Composition: Choreography Workshop DANC250 (to be taken freshman, sophomore, or junior years)

Dance Tech Lab DANC105 .5 Credit

Dance Techniques (four additional classes) 2 Credits

to total 5 courses @ .5 credits each

Two Advanced Dance Performance Practice .5 or .75 Credit

2 classes @ .25 or .5 credits each

Two Credits in Advanced Research in Dance 2 Credits

At least one of these two credits must be a hybrid methodology course with substantial written component.

Code	Title	Hours
DANC249	Making Dances I: Solo Work	1
DANC250	Dance Composition: Choreography Workshop	1
DANC371	Site-Specific Choreography	1
DANC375	Dance History: Why Dance Matters	1
DANC376	The Artist in the Community: Civic Engagement and Collaborative Dancemaking	1
DANC377	Perspectives in Dance: Queering the Dancing Body: Critical Perspectives on LGBTQ Representation *	1
DANC379	Dance as Activism	1

* Perspectives in Dance, including:

- Perspectives in Dance: Queering the Dancing Body: Critical Perspectives on LGBTQ Representation
- Perspectives in Dance: South Indian Cinema: An Ethnography of Dance and Film

One Elective

1 Credit

Code	Title	Hours
DANC103	Dancing Bodies	1
DANC244	Delicious Movement: Time Is Not Even, Space Is Not Empty	1
DANC301	Anatomy and Kinesiology	1
DANC341	Dance Teaching Workshop: The Embodied Practice of Knowing	1
DANC354	Improvisation: Diasporic Modalities	1
DANC359	Space Design for Performance	1
DANC374	Perspectives on Dance of the African Diaspora	1
DANC378	Repertory and Performance	1
DANC381	Japan's Nuclear Disasters	1.5

Any Advanced Research course can be counted as an elective after the 2-credit research requirement is met.

Senior Research: Either Project or Thesis 1 or 2 Credits

Project – One 1-credit tutorial (spring or fall semester)

Thesis – Two 1-credit tutorials (fall and spring semesters)

Total Credits: 10.5 (Project) or 11.5 (Thesis)

STUDENT LEARNING GOALS

The major is designed to provide broad and deep exposure to the discipline of dance as a critical, embodied, reflexive, and socially engaged research method. The department conceives of dance performance broadly, embracing traditionally staged performances and site-based works as well as mediated and interdisciplinary performative modes. Students take courses in choreography, improvisation, pedagogy, research methods, dance ethnography, history, and dance techniques as well as unique interdisciplinary courses that integrate varied modes of learning. The curriculum focuses on providing students with the skills to develop new knowledge and produce original research expressed through performance, writing, and their vital intertwining into new hybrid forms.

1. Majors will develop keen intercultural competence. One of the fundamental tenets of the major is that the analysis of dance through practice and observation is central to the study of cultures and is a vital aspect of exploration in cross-cultural inquiry. Students should develop a proficiency in the understanding of dance in its cultural manifestations, leading them beyond knowledge of a culture or an appreciation of diversity to an understanding and celebration of difference.
2. Majors will develop an awareness of the ways in which dance structures and is structured by culture. This includes a thoughtful understanding of the problematics of spectatorship and the role of the artist in society; as well as issues of embodiment, difference, and performativity.
3. Majors will develop an understanding of the basic principles of dance-making through creative process work including choreography, improvisation, and public enactments. They will acquire the ability to develop an idea or research question through the elements of dance

performance such as: the skillful exploration and application of movement vocabulary; choreographic form; and the consideration of framing devices. They will develop the ability to structure original ideas and to create powerful original work.

4. Majors will develop an intercultural understanding of the elements of physical expression and performance artistry and will attain and/or maintain intermediate (or above) technical proficiency, based on sound kinesiological principles. They will develop these skills in at least two of the following techniques: modern/contemporary, Bharata Natyam, West African, ballet, black vernacular forms/hip hop, and South East Asian dance forms (when available).
5. Majors will develop strong reflective and critical awareness of the research methodologies available in dance studies articulated in written, choreographic, and performative forms.
6. Majors will develop the ability to work collaboratively to complete complex tasks through engagement with all elements of performance production, including technical theater, scenographic design, and publicity.

HONORS

Dance majors who wish to be candidates for departmental honors must complete senior research in the form of a thesis. Projects are not eligible for the award of honors. The student's proposed research design will be revised and finalized in consultation with the student's prospective tutor and should reflect the special interests and talents of the individual student. The award of honors or high honors is based on the scope and excellence of the thesis and on the student's creative work.

To receive the award of honors, a thesis must follow these guidelines:

- The honors thesis typically consists of approximately 20 minutes of group choreography (usually two 10-minute dances) and an 80- to 100-page research paper situating the choreography within an aesthetic and historical context.
- It must involve enough work to warrant two credits.

Each honors candidate is required to make a commitment to candidacy in advance. The student must file a written statement of his or her intention to stand for departmental honors with both the department and the Honors College. The department will nominate candidates for departmental honors to the Honors College. Nominations will occur only if it appears reasonably certain that the candidate's work will be completed on time and in the desired form. The department in cooperation with the Honors College will arrange suitable mid-April deadlines for performances and the submission of theses.

Each honors thesis will have two readers. One of these must be chosen from outside the Dance Department. The department will base its recommendation for departmental honors upon the readers' written evaluations and joint recommendations.

CAPSTONE EXPERIENCE

All majors complete a capstone experience, either a one-semester senior project or a two-semester senior thesis.

DANCE MINOR

MINOR REQUIREMENTS

The Minor in Dance consists of 5.25 credits:

Physical Practice in Dance Techniques 2 credits

Four courses (two credits at .5 credits per course) in a physical practice representing at least two traditions, and achieving level 2 in at least one tradition.

Elective 1 credit

One additional credit (any level) within the Dance Department. This can be in the form of one 1 credit course, or two .5 credit courses.

Performance .25 or .5 credit

One Advanced Dance Practice experience (either DANC435 .25 credit or DANC445 .5 credit)

Project-Based courses 2 credits

Two credits must be in project-based courses within the Dance Department that culminate in making. At least one of these must be an upper-level course. These may be dance-making courses or hybrid courses that require a substantial final practical project in the form of a public performance or event. The culminating project does not need to be a choreographed dance. Projects could be events, workshops, site-specific happenings, social media platforms, etc. that have an embodied component and circulate in a public context. Projects need to be approved by a Dance Department advisor.

Physical Practice Courses include: West African Dance I, West African Dance II, West African Dance III, Bharata Natyam I, Bharata Natyam II, Bharata Natyam III, Contemporary Techniques I, II, III, Afro Brazilian Dance I, Ballet I, Ballet II, Javanese Dance I and II, Dance Forms of the African Diaspora I and II, Hip Hop, Contact Improvisation, and Delicious Movements.

Project Based Courses include:

Dance making courses such as Solo Dance Composition, Group Dance Composition, Site Specific Choreography, Choreography Workshop, and Hybrid courses such as Dancing Bodies, Perspectives in Dance as Culture: Queering the Dancing Body, Research Methods, Auto-Ethnographic Methods, Dances of the African Diaspora, Repertory, Performance Art, and Media for Performance.

Other elective options include, in addition to those listed above: History, Repertory, Dance FYS courses, Introduction to Dance, Space Design for Performance, and Forays into Dance (TBA currently being developed).

Physical Practice Courses include:

Code	Title	Hours
DANC202	Ballet I	0.5
DANC211	Contemporary Dance Technique I	0.5
DANC213	Jazz Technique	0.5
DANC244	Delicious Movement: Time Is Not Even, Space Is Not Empty	1

DANC251	Javanese Dance I	0.5
DANC260	West African Dance I	0.5
DANC261	Bharata Natyam I: Introduction of South Indian Classical Dance	0.5
DANC360	West African Dance II	0.5
DANC362	Bharata Natyam II: Embracing the Traditional and the Modern	0.5
DANC365	West African Dance III	0.5

PROJECT BASED COURSES

Includes dance making courses, such as:

Code	Title	Hours
DANC249	Making Dances I: Solo Work	1
DANC250	Dance Composition: Choreography Workshop	1
DANC371	Site-Specific Choreography	1

and hybrid courses such as:

Code	Title	Hours
DANC103	Dancing Bodies	1
DANC237	Performance Art	1
DANC244	Delicious Movement: Time Is Not Even, Space Is Not Empty	1
DANC364	Media for Performance	1
DANC375	Dance History: Why Dance Matters	1
DANC377	Perspectives in Dance: Queering the Dancing Body: Critical Perspectives on LGBTQ Representation	1
DANC378	Repertory and Performance	1
DANC381	Japan's Nuclear Disasters	1.5

OTHER ELECTIVE OPTIONS

In addition to the courses listed above, elective options include:

Code	Title	Hours
DANC104F	Introduction to Contemporary Dance from Global Perspectives (FYS)	1
DANC107	Writing Is Dancing, Dancing Is Writing	1
DANC111	Introduction to Dance	1
DANC301	Anatomy and Kinesiology	1
DANC447 & DANC378	Dance Teaching Practicum and Repertory and Performance	0.5

EARTH AND ENVIRONMENTAL SCIENCES

The Earth and Environmental Sciences Department (E&ES) at Wesleyan University covers many aspects of the natural world, on Earth and on other planets. Course topics range from active volcanoes to climate change to eco-conservation. The E&ES major is designed to prepare students for graduate school, as well as provide a basis for a variety of careers in the private or public sectors. Courses in geology, environmental science/environmental chemistry, environmental science/ecology, and planetary geology lead to different areas of specialization and career options.

Many E&ES students work with faculty on research projects that range from climate studies to active volcanoes in the Andes, from the structure of the Grand Canyon to the structure of the planet Venus, from nearby coastal areas (Long Island Sound) to faraway lagoons (Vieques Island, Puerto Rico). The culmination of the major is a capstone course where students perform independent research in the field (Puerto Rico, Death Valley, the Connecticut River Valley, or Hawaii).

FACULTY

Barry Chernoff

BS, SUNY at Stony Brook; MS, Adelphi University; PHD, University of Michigan
Robert Schumann Professor of Environmental Studies; Professor of Earth and Environmental Sciences; Professor of Biology; Director, College of the Environment; Professor, Environmental Studies

Kim Diver

BA, Carthage College; MA, Syracuse University; PHD, Syracuse University
Associate Professor of the Practice in Earth and Environmental Sciences

Martha S. Gilmore

BA, Franklin & Marshall College; MSC, Brown University; PHD, Brown University
George I. Seney Professor of Geology; Professor of Earth and Environmental Sciences; Co-Coordinator, Planetary Science

James P. Greenwood

BS, SUNY at Binghamton; MS, Brown University; PHD, Brown University
Associate Professor of Earth and Environmental Sciences

Timothy C.W. Ku

BS, University of Rochester; MS, University of Michigan; PHD, University of Michigan
Associate Professor of Earth and Environmental Sciences; Chair, Earth and Environmental Sciences; Associate Professor, Integrative Sciences

Suzanne B. O'Connell

BA, Oberlin College; MS, SUNY at Albany; PHD, Columbia University
Harold T. Stearns Professor of Earth Science; Professor of Earth and Environmental Sciences; Professor, Integrative Sciences

Phillip G. Resor

AB, Dartmouth College; MS, University of Wyoming; PHD, Stanford University
Professor of Earth and Environmental Sciences; Professor, Education Studies

Dana Royer

BA, University of Pennsylvania; PHD, Yale University
Professor of Earth and Environmental Sciences; Professor, Environmental Studies

AFFILIATED FACULTY

Helen Mills Poulos

BS, Pepperdine University; MPHIL, Yale University; MS, Pennsylvania State University; PHD, Yale University
Adjunct Assistant Professor of Environmental Studies; Adjunct Assistant Professor, Earth and Environmental Sciences

EMERITI

James T. Gutmann

BA, Amherst College; MAA, Wesleyan University; PHD, Stanford University
Professor of Earth and Environmental Sciences, Emeritus

Peter C. Patton

BA, Franklin & Marshall College; MAA, Wesleyan University; MS, Colorado St University; PHD, University of Texas Austin
Alan M. Dachs Professor of Science, Emeritus

Johan C. Varekamp

BS, University of Utrecht; MS, University of Utrecht; PHD, University of Utrecht
Smith Curator of Mineralogy and Petrology of the Joe Webb Peoples Museum of Natural History; Harold T. Stearns Professor of Earth Science, Emeritus

EARTH AND ENVIRONMENTAL SCIENCES MAJOR

MAJOR DESCRIPTION

The Earth and Environmental Sciences Department (E&ES) at Wesleyan University covers many aspects of the natural world, on Earth and on other planets. Course topics range from active volcanoes to climate change to eco-conservation. The E&ES major is designed to prepare students for graduate school, as well as provide a basis for a variety of careers in the private or public sectors. Courses in geology, environmental science/environmental chemistry, environmental science/ecology, and planetary geology lead to different areas of specialization and career options.

Many E&ES students work with faculty on research projects that range from climate studies to active volcanoes in the Andes, from the structure of the Grand Canyon to the structure of the planet Venus, from nearby coastal areas (Long Island Sound) to faraway lagoons (Vieques Island, Puerto Rico). The culmination of the major is a capstone course where students perform independent research in the field (Puerto Rico, Death Valley, the Connecticut River Valley, or Hawaii).

ADMISSION TO THE MAJOR

GATEWAY COURSES FOR THE MAJOR

To declare E&ES as a major, students are required to have completed an E&ES gateway course (E&ES101, E&ES115, E&ES155, E&ES197, or E&ES199), and to have completed (or be currently taking) two gateway courses (or higher) in biology, chemistry, mathematics, or physics.

Code	Title	Hours
E&ES101	Dynamic Earth	1.25
E&ES115	Introduction to Planetary Geology	1
E&ES155	Earth System Science	1.25
E&ES197	Introduction to Environmental Studies	1
E&ES199	Introduction to Environmental Science and Sustainability	1

SOPHOMORE SEMINAR

Code	Title	Hours
E&ES195	Sophomore Field Course	0.5

MAJOR REQUIREMENTS

- E&ES gateway course (E&ES101, E&ES115, E&ES155, E&ES197, or E&ES199).
- Earth and environmental scientists need a broad background in the natural sciences. Therefore, E&ES majors are required to take one year (two semesters) of gateway courses from two of the following disciplines for a total of four courses: biology (BIOL181/BIOL182), chemistry (CHEM141/CHEM142 or CHEM143/CHEM144), mathematics (MATH119/MATH120, or MATH121/MATH122), or physics (PHYS111/PHYS112 or PHYS113/PHYS116). Upper-level courses in these disciplines can be substituted, as can statistics courses for mathematics. Students are urged to complete these introductory courses within their first two years. Students considering professional work in the sciences are encouraged to take gateways in more than two disciplines, including any associated lab courses, as well as upper-level coursework in other natural science and mathematics disciplines.
- The Sophomore Field Course (E&ES195). This course is typically taken during the spring semester of the sophomore year.
- The Senior Seminar (E&ES497). This capstone is typically taken in the senior year.

In addition to the requirements above, students must complete seven upper-level courses. Five of these courses must cover the following thematic areas: two from "Earth and Planets" (numbered 201-233 and 301-333), two from "Hydrosphere, Biosphere, and Atmosphere" (numbered 234-266 and 334-366), and one from "Methods" (numbered 267-299 and 367-399). Lab courses associated with the primary courses are required. The remaining two courses may come from any thematic area. Also, the following can be used: Up to two upper-level natural science or math courses taken in other departments, and up to two pre-approved courses from study-abroad programs. At least four of the upper-level courses must be Wesleyan E&ES courses. Tutorials and the senior thesis do not count towards the requirement.

The Department of E&ES does not require completion of Wesleyan's General Education Requirements to complete the major. Honors students are required to complete Wesleyan's General Education Requirements through stage II.

EARTH AND PLANET COURSES

Code	Title	Hours
E&ES201	Geology of Connecticut	1
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES215 & E&ES216	Earth Materials and Earth Materials Laboratory	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES230 & E&ES231	Sedimentology and Sedimentology/Stratigraphy Techniques	1.5
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	1.5
E&ES317	Volcanology	1
E&ES319 & E&ES320	Meteorites and Cosmochemistry and Meteorites Laboratory	1.5
E&ES321	Planetary Evolution	1
E&ES325	Geologic Field Mapping	1

HYDROSPHERE, BIOSPHERE, AND ATMOSPHERE COURSES

Code	Title	Hours
E&ES234 & E&ES235	Geobiology and Geobiology Laboratory	1.5
E&ES238	The Forest Ecosystem	1
E&ES240	Invasive Species: Biology, Policy, and Management	1
E&ES244 & E&ES245	Soils and Soils Laboratory	1.5
E&ES246	Hydrology	1
E&ES248	Environmental Investigation and Remediation	1
E&ES250 & E&ES251	Environmental Geochemistry and Environmental Geochemistry Laboratory	1.5
E&ES257	Environmental Archaeology	1
E&ES260 & E&ES261	Oceans and Climate and Techniques in Ocean and Climate Investigations	1.5
E&ES342	Ecological Resilience: The Good, the Bad, and the Mindful	1.25
E&ES361	Living in a Polluted World	1
E&ES376	Mass Extinctions in the Oceans: Animal Origins to Anthropocene	1

METHOD COURSES

Code	Title	Hours
E&ES270	Quantitative Methods for the Biological and Environmental Sciences	1

E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES368	Isotope Geochemistry	1
E&ES375	Modeling the Earth and Environment	1
E&ES380	Advanced GIS and Spatial Analyses	1
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	1.5
E&ES399	Calderwood Seminar in Public Writing: Environmental Science Journalism	1

SENIOR SEMINAR

Code	Title	Hours
E&ES497	Senior Seminar	1

CAREER OPTIONS AND THE E&ES MAJOR

Earth and environmental sciences majors go on to pursue a wide range of careers, limited only by their own imaginations. **E&ES** courses can be selected to help prepare for a student's long-term interests. The course listings below are not requirements, but suggested guidelines. Students interested in academic or research careers should consider involvement in research or producing a senior thesis.

Geology. These courses can help prepare students for academic careers or jobs in industry or government in natural resource or geohazard management (e.g., USGS, water resources, mining and energy industries).

Code	Title	Hours
E&ES101	Dynamic Earth	1.25
E&ES115	Introduction to Planetary Geology	1
E&ES155	Earth System Science	1.25
E&ES201	Geology of Connecticut	1
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES230 & E&ES231	Sedimentology and Sedimentology/Stratigraphy Techniques	1.5
E&ES246	Hydrology	1
E&ES260 & E&ES261	Oceans and Climate and Techniques in Ocean and Climate Investigations	1.5
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	1.5
E&ES317	Volcanology	1
E&ES321	Planetary Evolution	1
E&ES380	Advanced GIS and Spatial Analyses	1
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	1.5
E&ES497	Senior Seminar	1

SENIOR SEMINAR

Code	Title	Hours
E&ES497	Senior Seminar	1

Environmental Science/Environmental Chemistry. These courses can help prepare students for jobs in consulting, government, or nonprofit organizations (e.g., EPA, NOAA, USGS, state agencies), or for academic careers in climate science and water resources.

Code	Title	Hours
E&ES155	Earth System Science	1.25
E&ES197	Introduction to Environmental Studies	1
E&ES199	Introduction to Environmental Science and Sustainability	1
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES234 & E&ES235	Geobiology and Geobiology Laboratory	1.5
E&ES244 & E&ES245	Soils and Soils Laboratory	1.5
E&ES248	Environmental Investigation and Remediation	1
E&ES250 & E&ES251	Environmental Geochemistry and Environmental Geochemistry Laboratory	1.5
E&ES260 & E&ES261	Oceans and Climate and Techniques in Ocean and Climate Investigations	1.5
E&ES270	Quantitative Methods for the Biological and Environmental Sciences	1
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES380	Advanced GIS and Spatial Analyses	1
E&ES368	Isotope Geochemistry	1
E&ES497	Senior Seminar	1
BIOL216	Ecology	1

Planetary Geology. These courses can help prepare students for jobs in government and industry (e.g., NASA, remote sensing, and GIS contractors) or for academic careers in space science and remote sensing.

Code	Title	Hours
E&ES101	Dynamic Earth	1.25
E&ES115	Introduction to Planetary Geology	1
E&ES155	Earth System Science	1.25
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5

E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	1.5
E&ES317	Volcanology	1
E&ES321	Planetary Evolution	1
E&ES380	Advanced GIS and Spatial Analyses	1
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	1.5
E&ES497	Senior Seminar	1

GENERAL EDUCATION

Candidates for honors in E&ES are required to complete the University's General Education Expectations through stage II.

STUDENT LEARNING GOALS

Students graduating with a BA degree in earth and environmental sciences should be able to:

- **Decipher the structure, composition, and dynamics of the earth system.** The student should understand the structure and composition of earth's spheres (geosphere, hydrosphere, atmosphere, biosphere), and how these spheres interact with one another and change over time.
- **Apply the scientific method.** The student should be able to develop and test scientific hypotheses.
- **Understand data.** The student should understand how earth and environmental sciences data are produced, interpreted, and applied.
- **Apply quantitative tools.** The student should be able to select and apply appropriate quantitative techniques to earth and environmental sciences questions (e.g., calculus, statistics, spatial analysis).
- **Use the primary literature.** The student should be able to search for and understand publications from the primary scientific literature.
- **Critically evaluate scientific claims.** The student should be able to critique arguments made in the earth and environmental sciences literature.
- **Communicate.** The student should be able to present earth and environmental sciences data and their interpretation in a variety of written, visual, and oral formats.
- **Conduct research.** The student should be able to carry out an original research project, including: the identification of a research problem; the formulation of a hypothesis; the design of the methodology; the collection, processing, and interpretation of data; and the presentation of findings in written, visual, and oral formats.

RELATED PROGRAMS OR CERTIFICATES

- **The College of the Environment**, which includes the environmental studies-linked major and Environmental Studies Certificate, provides a linkage between the sciences, public policy, economics, and the arts and provides a wide variety of career options.
- **The Planetary Science Group and the Planetary Science Course Cluster** seek to understand the origin and evolution of the solar system in which we live and the other solar systems that we have identified in our galaxy.

- **The Service-Learning Center and Service-Learning Course Cluster** seek to broaden students' understanding of course content through activities that are, at the same time, of service to the community.

BA/MA PROGRAM

Wesleyan offers a BA/MA program for exceptional Wesleyan students. The E&ES Department requirements for the BA/MA degree are the same as those of the MA degree outlined above, however please note the expectations for BA/MA students in the timeline.

For details about the BA/MA program see: https://www.wesleyan.edu/grad/graduate-programs/bama_program.html

For additional information, please visit wesleyan.edu/ees/graduate (<https://wesleyan.edu/ees/graduate/>)

HONORS

Candidates for honors in E&ES are required to complete the University's General Education Expectations through stage II.

CAPSTONE EXPERIENCE

Code	Title	Hours
E&ES409	Senior Thesis Tutorial	1
E&ES410	Senior Thesis Tutorial	1
E&ES497	Senior Seminar	1
E&ES498	Senior Field Research Project	.5

MASTER OF ARTS IN EARTH AND ENVIRONMENTAL SCIENCES

The Department of Earth and Environmental Sciences offers a program leading to the degree of Master of Arts in Earth and Environmental Sciences. This program is designed for students who desire further training prior to initiation of a doctoral program at another university or for whom the master's degree will be the terminal degree. Graduate students are offered a unique opportunity for accelerated and personal instruction in a small department setting with strengths in geology, volcanology, ocean sciences, planetary science, and environmental science. All admitted students are offered a full-tuition waiver, stipend, and benefits for this two-year program.

COURSES

Students typically take six upper-level science or math course credits (of which at least four must be in E&ES) and two MA thesis research credits (E&ES499 and E&ES550). Based on a student's background and research interests, the thesis committee will decide on the program of study, which may include increasing or decreasing the number of required courses. Students who enter the MA program

with greater than eight upper-level science or math courses (the minimum necessary for a Wesleyan E&ES BA) may use those courses in place of Wesleyan MA credits. Students must earn a minimum of six credits (including the two MA thesis research credits) at Wesleyan. All students are expected to enroll in a graduate pedagogy course in the first semester of enrollment and E&ES557, Research Discussion in Earth and Environmental Sciences, each semester it is offered.

Full-time graduate students are expected to complete all courses with a grade of B- or better. Failure to achieve these minimal expectations may result in dismissal from the program. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

There is no language requirement for the MA in Earth and Environmental Sciences.

PROGRESS AND QUALIFYING EXAMS

Qualifying Exam. Competence in general knowledge about the Earth and environmental sciences will be assessed by a written examination taken after the end of the second semester. The thesis advisor, in concert with the E&ES faculty, will construct several questions. The student will then have two days to answer these questions. The student can use any written source for guidance ("open book" format), and each answer should not exceed one page (single-spaced). The committee and any interested E&ES faculty will then meet with the student to have a 30-minute conversation about the questions and answers. Based on the outcome of the exam, the committee may suggest coursework or independent study on particular topics.

TEACHING

FUNDING

Upon admission, graduate students are typically offered one 9-month and one 12-month stipend. The terms of the teaching stipend require that the student devote approximately 10 hours per week on departmental responsibilities, such as driving the departmental vans, assisting in laboratory maintenance, or teaching assistantships. Teaching assistants are assigned specific duties by their supervising faculty. Duties may include the supervision of laboratories, assisting the faculty in lecture preparation, providing help sessions, and grading.

Instructional holidays and university breaks apply to academic course meetings, but not necessarily to research. Be aware that the faculty uses much of these breaks to perform research as they have other commitments during the academic year. As a student's research often involves close collaboration with the faculty, graduate students will commonly devote university breaks to research. Students' vacations should be planned with the faculty advisor to ensure continuity of research.

Graduate students are expected to fully participate in the scholarly activities in the department, including teaching opportunities, attending departmental seminars, and presenting their own work to the Wesleyan and scientific communities.

PRACTICAL INFORMATION

Graduate Office. Each student has access to the shared graduate student office (SC 307). A telephone is available there for local calls. Some students may have their desk in one of the laboratories, depending on their research topic.

RESEARCH

Conducting original research is an important component of graduate studies. Upon arrival, students are expected to discuss their research interests with the E&ES faculty. Students should identify a project and advisor in the course of their first semester so that they can start their research as soon as possible. Students must realize that they will spend much of their time on the chosen research project, so they should ensure that the topic indeed represents their interests.

Areas of faculty specialization (also check faculty webpages):

- Barry Chernoff: Systematics and biogeography of freshwater fishes of Latin America; morphological evolution; conservation of aquatic ecosystems
- Kim Diver: Island biogeography, Geographic Information Systems (GIS)
- Martha S. Gilmore: Planetary geomorphology; remote sensing of Mars, Venus, southwest U.S., and Long Island Sound
- James Greenwood: Cosmochemistry, hydrogen, oxygen and sulfur isotopic systematics of lunar rocks, chondrites and martian meteorites, Mars analogue studies in St. Lucia
- Tim Ku: Aqueous geochemistry; isotope geochemistry; the biogeochemistry of marine and terrestrial sediments of the tropics (Panama, St. Lucia) and North America
- Suzanne O'Connell: Sedimentology; marine geology, paleoceanography/ climate change, continental margin sedimentology in the North Atlantic and Southern Oceans
- Phil Resor: Structural geology and crustal deformation, Geographic Information Systems (GIS)
- Dana Royer: Terrestrial paleoclimatology and paleoecology, paleobotany, carbon cycle, plant physiology
- Ellen Thomas: Paleontology; paleoceanography and micropaleontology of deep ocean basins, coastal salt marshes and marginal basins in the northeastern U. S.
- Joop C. Varekamp: Geochemistry; volcanic and geothermal fluids, volcanology, volcanic petrology, pollution geochemistry, Long Island Sound studies

MA or BA/MA students in the natural sciences and mathematics may elect a course of study resulting in the planetary science concentration. Details may be found here: <http://www.wesleyan.edu/planetary/Graduate.html>.

THESIS AND DEFENSE

Thesis Proposal

Upon admission to the program, the student will meet with the E&ES Graduate Program committee to discuss the general requirements and goals of graduate study. Students should select an advisor, thesis topic, and thesis committee by the end of the first semester. After students have made a choice of faculty advisor and thesis committee, they must, in cooperation with the advisor, write a 1-2 page thesis proposal, in which they provide an outline of the proposed research. The thesis committee will read the proposal, and discuss it with the student before acceptance of the research project.

Meetings with the Thesis Committee

At the beginning of each semester, and at the beginning of the summer, each graduate student will be asked to prepare a written summary (2-3 pages) of his or her progress and accomplishments and meet with their thesis committee. This summary will be reviewed by the thesis committee and used to discuss and evaluate the student's progress; failure to make adequate progress can be grounds for dismissal from the program. The discussion of the committee will be summarized by the student's advisor and relayed to the student in writing. Typical topics of discussion by the committee include:

1. Review of objectives and status of research and plans for future work.
2. Review of performance in course work taken. Outline of courses planned for the future, and their relationship to research and career goals.
3. Review of other accomplishments (i.e., department assistance, teaching).
4. General progress and comfort in the program.

In addition to a written statement of progress, the student is required during the 3rd semester to deliver an oral presentation about their research to the department (typically as part of EES 557). The purpose of this exercise is to give the student an opportunity to organize and present their work in a semi-formal setting and receive direct feedback.

An ideal timeline of student responsibilities is:

Beginning of first semester: Orientation meeting with E&ES graduate program committee.

Beginning of second semester (BA/MA last semester of senior year): Identification of and meeting with advisor and thesis committee. Submission of thesis proposal.

End of second semester/Beginning of summer: Written statement of progress/ meeting with thesis committee.

Early Summer: Qualifying exam.

End of Summer/Beginning of third semester: Written statement of progress/ meeting with thesis committee.

Early third semester (BA/MA first semester MA year): Oral presentation of results to date.

Beginning of fourth semester (BA/MA last semester MA year): Written statement of progress/ meeting with thesis committee.

End of program: Thesis and Defense.

Thesis and Defense

Competence in research will be assessed by a written thesis and an oral presentation of research results before the faculty. The format of the written work is to be discussed and agreed upon with the student's advisor and committee.

The advisor and thesis committee in consultation with the student will agree upon the schedule of the defense. All members of the thesis committee must have read and must approve, in writing, a complete thesis before a defense can be scheduled. Practically, this requires that a thesis draft, already vetted by the advisor, be made available to the remainder of the thesis committee at least one month before any proposed defense date. Once the committee has agreed that the thesis is ready to defend, the form for scheduling the defense can be obtained from the E&ES department.

There are three readers on a thesis, including the thesis advisor. The thesis advisor gives the research grade; the two readers determine the quality of work with an emphasis on the thesis as a written document. One reader from outside Wesleyan University or from another department within Wesleyan University is allowed. The defense is attended by the readers plus other members of the E&ES faculty.

The oral defense typically consists of:

- A 30-minute presentation of the research results by the student.
- A 30-minute question and answer period about the thesis.

Directly after the defense the faculty meets to decide whether to award the Master of Arts degree.

Please consult Wesleyan's Office of Graduate Student Services -

Graduation Requirements for the MA <https://www.wesleyan.edu/grad/academics/graduationrequirementsma.html> for information about the format of the thesis, scheduling of the defense, exit appointments and due dates for participating in Commencement. The student is responsible for following all University requirements.

CONCENTRATIONS

Planetary science is an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology. The subject matter is planets, including those around other stars (exosolar systems). The science questions include the most important of our times: How do planets (including Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? Certainly, the discovery of even microbial life beyond Earth would rank as one of the greatest human achievements of all time, and this quest lies squarely within the purview of planetary science.

Program of Study. MA or BA/MA students in the natural sciences and mathematics may elect a course of study resulting in the planetary science concentration. The concentration is designed to engage students in the research results, skills, and methods of planetary science. The planetary science concentration requires:

- **Completion of a minimum of four courses from the list below with a grade of B- or better.** At least one of these courses must be from a department outside the student's home department.
- **Students are also required to attend the Planetary Science Seminar,** ASTR555/E&ES555.
- **All students must complete a written thesis on a topic relevant to planetary science.** A member of the student's thesis committee will be from the planetary science concentration committee. The planetary science concentration will be designated on the student's transcript upon the successful completion of this program of study and MA requirements of the student's home department. For more information, please contact the any of the members of the planetary science concentration committee or the graduate school.

Planetary Science Concentration Committee: Martha Gilmore, *Earth and Environmental Sciences*; James Greenwood, *Earth and Environmental Sciences*; William Herbst, *Astronomy*; Meredith Hughes, *Astronomy*; Seth Redfield, *Astronomy*

PLANETARY SCIENCE COURSES

Code	Title	Hours
Planetary Science Courses		
Select at least 4 of the following (one from outside the home department):		4
ASTR524	Exoplanets: Formation, Detection, and Characterization	
ASTR531	Stellar Structure and Evolution	
ASTR532	Galaxies, Quasars, and Cosmology	
BIOL214	MacroEvolution, Pattern and Process	
BIOL231	Microbiology	
CHEM337 & CHEM338	Physical Chemistry I: Quantum Mechanics and Spectroscopy and Physical Chemistry II: Thermodynamics, Statistical Mechanics, and Kinetics	
CHEM361	Advanced Inorganic Chemistry	
CHEM383	Biochemistry	
E&ES513	Petrogenesis of Igneous and Metamorphic Rocks	
E&ES517	Volcanology	
E&ES519	Meteorites and Cosmochemistry	
E&ES521	Planetary Evolution	
E&ES575	Modeling the Earth and Environment	
E&ES580	Introduction to GIS	
PHYS213	Waves and Oscillations	
MATH AND COMP courses as appropriate in consultation with advisor		
Seminar		
ASTR/E&ES555	Planetary Science Seminar (offered each semester; take a minimum of three semesters)	0.75

Thesis

The MA degree program requires a thesis that demonstrates the student's ability to perform original, independent research in planetary science. The specific guidelines for the thesis are those of the student's home department.

ADDITIONAL INFORMATION

THE BA/MA PROGRAM

Wesleyan offers a BA/MA program for exceptional Wesleyan students. The E&ES Department requirements for the BA/MA degree are the same as those of the MA degree outlined above, however please note the expectations for BA/MA students in the timeline.

For details about the BA/MA program see: https://www.wesleyan.edu/grad/graduate-programs/bama_program.html

For additional information, please visit wesleyan.edu/ees/graduate (<https://wesleyan.edu/ees/graduate/>)

ECONOMICS

Economics involves the study of social relationships pertaining to the production and allocation of the means of life. One branch, macroeconomics, addresses issues relating to the performance of the economy as a whole, such as economic growth, unemployment, and inflation, while the other, microeconomics, studies the relationships that make up an economy, addressing problems of income and wealth inequality, corporate power, industrial performance and global trade, and financial flows. Students majoring in economics find that they acquire an excellent preparation for careers in academics, business, consulting, law, and government.

FACULTY

John P. Bonin

BA, Boston College; MA, University of Rochester; PHD, University of Rochester
Chester D. Hubbard Professor of Economics and Social Science; Professor of Economics; Co-Chair, College of Social Studies; Tutor, College of Social Studies; Professor, Russian, East European, and Eurasian Studies

Huffington Foundation Professor of Economics and Environmental Studies, Emeritus

DEPARTMENTAL ADVISING EXPERT

Gilbert Skillman

ECONOMICS MAJOR

MAJOR DESCRIPTION

Economics is a social science concerned with the production, distribution, and consumption of goods and services. It studies how individuals, businesses, governments, and nations make choices about allocating scarce resources.

Economics can generally be broken down into macroeconomics, which concentrates on the behavior of the aggregate economy, and microeconomics, which focuses on individual consumers, businesses, and markets.

ADMISSION TO THE MAJOR

Completion of ECON110 with a grade of C+ or higher and completion of, or enrollment in, ECON300 are required for entry into the economics major. A student who fails to obtain a grade of C+ or better in ECON110 may be admitted to the major only after obtaining a grade of C+ or better in ECON300.

MAJOR REQUIREMENTS

All students majoring in economics must complete a minimum of eight letter-graded courses numbered **201** or above. Of these eight, three must be the core courses ECON300, ECON301, and ECON302. Of the five electives, three must be upper-tier courses, numbered **303** to **399**, or ECON409. No more than one senior thesis, individual, or group tutorial may be counted toward fulfillment of the major. The teaching apprenticeship tutorials, ECON491 and ECON492, may not be counted toward the major. ECON110, ECON300, ECON301, and ECON302 must be taken at Wesleyan; no more than two elective courses taken elsewhere may be counted toward the economics major. Courses taken elsewhere must be approved by the department chair **prior** to enrollment and will generally be designated as lower-tier electives if approved. If the material warrants counting a course taken elsewhere (or a tutorial numbered **401**, **402**, **411**, or **412**) as an upper-tier elective, the student must submit materials from that course (or tutorial) to the department chair along with a petition requesting that it be treated as an upper-tier elective immediately upon return to campus (or upon completion of the tutorial). University requirements for graduation permit a student to count no more than 16 credits in any one department toward the 32 courses required for graduation. The teaching apprenticeship tutorials, ECON491

and ECON492, are included in these totals for the purpose of determining oversubscription in a department.

STUDENT LEARNING GOALS

ASSESSMENT PLAN

1. Learning Goals

- Knowledge of basic economic principles, important economic issues, and major economic institutions
- The capability to read and understand the scholarly literature
- The capability to engage in theoretical and empirical analysis of economic problems

2. Published: Department web page

3. Method of Assessment

- Performance in sequential curriculum

The curriculum for ECON has three stages, each stage presuming a certain level of economic literacy and competency.

To enter the major, students must pass ECON110 (with a grade of C+ or above), an introductory course that requires completion of one semester of college calculus. This course is a prerequisite for all 200-level electives in the major. ECON101, a non-calculus introductory course, is a prerequisite for many 200-level electives in the major but is not required for entry into the major. Majors must take the “core” method and theory courses, ECON300 (Quantitative Methods in Economics), ECON301 (Microeconomic Analysis), and ECON302 (Macroeconomic Analysis). ECON300 and at least one of the other core courses are prerequisites for all 300-level electives. These upper-level electives require students to undertake term-long research projects using the analytical methods acquired in the core courses. ECON majors must take at least three 300-level electives.

RESPONSES TO ANNUAL SENIOR SURVEY

Several questions on the annual senior survey speak directly to the learning goals listed in part 1 of the assessment plan.

Senior responses can be distinguished by major, providing data on our seniors’ self-assessments of developments in their knowledge and skills.

SENIOR ESSAYS AND HONORS THESES

In addition to the research projects assigned in their 300-level electives, ECON majors may elect to undertake intensive independent research projects in their senior year. Honors theses generally involve a year-long research project; honors essays may be written during a single-semester tutorial, and are generally extensions of term papers written for 300-level electives. Honors theses in ECON are evaluated by two faculty readers in addition to the tutor.

ADVANCED PLACEMENT

No advanced placement credit will be given for ECON110 under any circumstances. Subject to the University’s regulations, students who have received a score of 4 or 5 on either the Microeconomics or Macroeconomics Advanced Placement Exam or a score of 5 to 7 on the International Baccalaureate Exam will be eligible for a prerequisite override for courses requiring ECON101. These students will receive one credit toward graduation, but not toward the major, for their exam score upon completion of ECON301, in the case of the microeconomics exam, or ECON302, in the case of the

macroeconomics exam, with a grade of C+ or better. A student may receive at most one Advanced Placement credit in economics.

ADDITIONAL INFORMATION

The economics curriculum consists of three types of courses:

Introductory courses. The department offers two different one-semester courses at the introductory level. ECON101 presents the basic concepts, methods, and concerns of economic analysis without using calculus. It is not a prerequisite for entering the major. This course covers both micro- and macroeconomic issues and is well suited for students who do not plan to major in the discipline but who want a general introduction to economic analysis and institutions. It also serves as a prerequisite for many of the **200**-level electives in the department. ECON110 develops the mathematical foundations that are essential for the further study of economics and is intended for students who think that they may wish to major in economics. The calculus prerequisite can be fulfilled by receiving a score of 4 or 5 in AP Calculus AB; receiving a 5, 6, or 7 on the IB Higher Math test; completing MATH120 or MATH121 at Wesleyan; or by appropriate math placement test scores. First-year students contemplating an economics major should acquire the requisite mathematical background as soon as possible. Students may take ECON110 after completing ECON101 (although ECON101 is not a prerequisite for ECON110 or the major, and students with the appropriate mathematical background and interest in majoring should consider starting with ECON110); this may be an attractive option for prospective majors who are in the process of acquiring the necessary mathematical background for ECON110 or who are not committed to the ECON major. In any case, all students who wish to major in economics must complete ECON110.

Core courses. Core courses develop the central tools of theoretical and empirical economic analysis and are required for all economics majors. ECON300 is the gateway course to the major. Students cannot be admitted to the major until they are enrolled in this class. ECON301 and ECON302 are designed to provide majors with the basic theoretical concepts and analytical techniques that economists use to study social issues. ECON300 is a prerequisite for both ECON301 and ECON302; students must have completed ECON110 and its mathematical prerequisites before taking ECON300. ECON300 should be taken as early as possible, preferably immediately after ECON110, but no later than the spring term of the sophomore year if a student wishes to be admitted to the economics major by the beginning of the junior year. All prospective economics majors are strongly encouraged to complete ECON300 and one other core course by the end of the sophomore year; majors are expected to complete the entire core sequence by the end of the junior year.

Elective courses. There are four levels of elective courses. First, as staffing allows, the department offers **100**-level First-Year Initiative (FYI) courses that are intended for first-year students and have no economics prerequisites. FYI courses cannot be counted toward completion of the economics major. Higher-level elective courses apply analytical tools acquired from the introductory and core courses to specific areas or fields of economics or develop these analytical tools to a more sophisticated level. The department offers two tiers of regular elective courses that may be counted toward completion of the major. The topics covered in these electives are predetermined and specified in WesMaps.

- **Lower-tier electives**, numbered **201** to **299**, have either ECON101 or ECON110 as a prerequisite. They are intended to introduce both majors and nonmajors to the application of economic theory and methods in a wide variety of topics and to the connections between economics and related fields such as psychology, law, government, history, and area studies. Students who successfully complete CSS220 or CSS320 may count either or

both of these courses for one credit each toward the economics major at the **200** level.

- **Upper-tier electives**, numbered **301** to **399**, require prior completion of ECON300 and at least one other core course. These electives apply economic theory and methodology to the same broad range of topics and areas in economics as the lower-tier electives but at a more sophisticated level. Upper-tier electives enable students to read the professional literature in economics and to begin to produce their own original research. Upper-tier electives require a substantial research paper or other project, and a student may choose to expand this research project into an honors thesis by working with a faculty advisor in a senior thesis tutorial. In some cases, for example ECON270 and ECON371, electives may be taught at both the **200** and **300** levels. In such cases, students may not earn credit toward the major for both courses.

Finally, in addition to regular electives, students may pursue independent research in an individual or group tutorial offered by a faculty member in the department (ECON401, ECON402, ECON411, or ECON412). Any student standing for honors in economics will take at least one senior thesis tutorial (ECON409 or ECON410). Students may also take teaching apprenticeship tutorials (ECON491/ECON492); however, these do not count toward completion of the major.

All courses counted toward the economics major must be taken for a letter grade.

HONORS

Honors and high honors in economics are awarded on the basis of a completed honors thesis representing two semesters of independent research. The department offers two options. The traditional route for an honors candidate is the two-semester senior honors thesis tutorial sequence (ECON409 and ECON410), in which the student begins thesis research with a faculty advisor in the fall, continues in the spring term, and completes the thesis by the deadline set by Honors College (usually mid-April). The second path allows a student to expand a research paper that was completed in an upper-tier elective by taking either ECON409 or ECON410 with a suitable faculty advisor and completing the thesis by the deadline set by Honors College in the spring term. Honors candidates must present their work-in-progress to the faculty at the end of the fall semester. Other details of the honors program in economics are provided on the department's website.

Theses are evaluated by the department based on the recommendations of a committee of readers including the thesis advisor and two other members of the faculty. All work is judged by the same standards, regardless of whether the student has taken both ECON409 and ECON410 or only one of these. All candidates for honors should have at least a B+ average in their economics courses prior to their senior year and a three-year cumulative average of B or better for all courses. A student who does not meet these requirements may petition the department for an exception; the petition must be signed by the student and by the faculty member who has agreed to supervise the project. The petition should speak to the student's capability to undertake independent research and to the feasibility of the proposed project.

CAPSTONE EXPERIENCE

Economics majors will fulfill the department's capstone requirement by completing three upper-level electives, each of which requires the successful completion of a substantial research paper/project.

ECONOMICS MINOR

MINOR DESCRIPTION

Economics is a social science concerned with the production, distribution, and consumption of goods and services. It studies how individuals, businesses, governments, and nations make choices about allocating scarce resources.

Economics can generally be broken down into macroeconomics, which concentrates on the behavior of the aggregate economy, and microeconomics, which focuses on individual consumers, businesses, and markets.

ADMISSION TO THE MINOR

Completion of ECON110 with a grade of C+ or higher and completion of, or current enrollment in, ECON300. A student who fails to obtain a grade of C+ or higher in ECON110 may declare the minor only after obtaining a grade of C+ or higher in ECON300.

MINOR REQUIREMENTS

Students minoring in economics must complete five letter-graded courses (three core courses and two electives) in addition to ECON110,

- The three core courses are: ECON300, ECON301, and ECON302
- One of the two electives must be an upper-tier elective, numbered **301** to **399**.
- One of the two electives may be either an upper- or lower-tier elective (**201** to **299**).
- No courses numbered **401** or higher may count toward the minor.
- No courses in other departments, including **CSS**, may count toward the minor.
- One elective course in economics taken elsewhere may count toward the minor as the lower-tier elective only, subject to the department chair's approval.

All courses counted toward the economics minor must be taken for a letter grade.

ENGLISH

The English Department offers courses that foster critical thinking about the relationships among literature, culture, and history. Students of English become adept critics of poetry, novels, essays, and plays. They develop knowledge of the history of literary culture and about the evolving genres, forms, and ideologies of literary expression. They study the relation of literary texts to their historical contexts, and they learn to read both literary and non-literary texts critically. As they develop their knowledge, students of English hone their skills as critical writers and explore their potential as creative voices.

DEPARTMENTAL ADVISING EXPERTS

Several professors serve as Advising Experts each year. Responsibility for transfer of credit and study-abroad courses for non-majors is assigned to a specific faculty member and can change from year to year. Please refer to the department website: wesleyan.edu/english/contact/ (<https://wesleyan.edu/english/contact/>).

ENGLISH MAJOR

MAJOR DESCRIPTION

The English Department offers courses that foster critical thinking about the relationships among literature, culture, and history. Students of English become adept critics of poetry, novels, essays, and plays. They develop knowledge of the history of literary culture and about the evolving genres, forms, and ideologies of literary expression. They study the relation of literary texts to their historical contexts, and they learn to read both literary and nonliterary texts critically. As they develop their knowledge, students of English hone their skills as critical writers and explore their potential as creative voices.

ADMISSION TO THE MAJOR

Students considering majoring in English should consult the department website (wesleyan.edu/english (<https://wesleyan.edu/english/>)). Potential majors must take **ENGL201: Ways of Reading** in their first or second year. Students who have taken the course and received a grade of B- or better will be admitted as majors during the spring term of their sophomore year. Students who take the course during that term will be admitted provisionally, pending the receipt of a grade of B- or better. In exceptional circumstances, and with the approval of the department chair, students who have not taken **ENGL201** by the end of the sophomore year may be admitted to the major contingent on completion of **ENGL201** in the junior year.

MAJOR REQUIREMENTS

The English major at Wesleyan consists of 10 full-credit courses at the 200-level or higher, or the equivalent of partial credit courses. All but three of these credits, and all courses taken to meet the core requirements, must be taken at Wesleyan or in the department's Sussex Program. With approval of a major advisor, one upper-level course from outside the department that bears on the study of literature may also be counted toward the minimum 10 credits. Appropriate credits transferred from other institutions may also be counted toward the 10-credit requirement.

The Current Major Program: Classes of 2021 and 2022

This program will end with the Class of 2022 and consists of the gateway course, **ENGL201: Ways of Reading**, and three overlapping sets of courses: requirements, concentration, and electives. One course can count for up to two core requirements and a concentration if applicable.

Core Requirements: In addition to **ENGL201: Ways of Reading**, one course of each must be taken in the following areas:

- Literary History I
- Literary History II
- Literatures of Difference
- Theory

Descriptions are available on the department website (<http://www.wesleyan.edu/english/>).

Concentrations: Four courses in any one of these specialized areas of study, one of which must be a 300-level course:

- American Literature
- British Literature
- Creative Writing
- Race and Ethnicity
- Theory and Literary Forms

Descriptions are available on the department website (<http://www.wesleyan.edu/english/>).

Electives. Other courses numbered 200 or higher. One FYS in English may be counted as a major elective.

The Major Program: Class of 2023 and Beyond

As before, the English major requires 10 total credits. The revised program eliminates the concentrations but expands the core requirements needed to complete the major. It also allows a choice of two pathways to completion in either Literature or Creative Writing.

Core Requirements: In addition to the gateway course **ENGL201: Ways of Reading**, eight additional core requirements must be fulfilled for completion of the major. An individual course may fulfill up to two core requirements--thus core requirements may be completed with as few as 4 or as many as 8 courses. These courses must be taken within the English department or through the department's Wesleyan-Sussex Exchange Program.

- **Literary History: 3 courses**
 - Literary History 1: to 1660
 - Literary History 2: 1660-1870
 - Literary History 3: 1870-present
- **Literary Geography: 3 courses**

- World Literature
- British Literature
- American Literature

- **Theory**
- **Creative Writing**

Paths Through The Major (10 total credits required)

- **Literature:** Core Requirements (see above), electives numbered above 201, and at least one 300 level course.
- **Creative Writing:** Core Requirements (see above), electives numbered above 201, and 4 creative writing courses that meet the following criteria:
 - 1.) One Creative Writing course at any level. (Completion of the Creative Writing core requirement noted above fulfills this requirement.)
 - 2.) Two 300-level Creative Writing courses (Workshops and Special Topics) with minimum grade of B+.
 - 3.) One Upper-Level Creative Writing Workshop with minimum grade of B+.

Electives: One FYS in English may be counted as a major elective.

GENERAL EDUCATION

English majors do not need to fulfill the GenEd requirements to complete the major or write an Honors thesis. However, GenEd fulfillment is required to declare more than a combined total of two majors, certificates, and minors and to be eligible for Phi Beta Kappa and University Honors.

COURSES FOR NON-MAJORS

The department offers several FYS courses especially designed for first-year students. First-year students may also be admitted to many other department courses; please check individual listings for details.

STUDENT LEARNING GOALS

- Develop skills in reading, interpreting, discussing, and writing about literature. English majors learn to be adept critics of poetry, novels, essays, and plays.
- Experiment with or develop the ability to produce new works of literature.
- Build knowledge of the history of literature and develop critical thinking about the relationships among literature, culture, and history.
- Become conversant with literary theory.

STUDY ABROAD

The English Department encourages its majors to consider the valuable experience of study abroad. Since 1990 the English Department has sponsored a Spring Semester Study Abroad program at the University of Sussex in Brighton, England. The program is limited to a select group of English majors who study with regular Sussex students for two full British terms, earning five Wesleyan credits. Sussex courses may be counted toward major requirements. Students pay Wesleyan tuition and receive Wesleyan financial aid. Study abroad policies are described in detail on the departmental website. (<http://www.wesleyan.edu/english/students/studyabroad.html>)

ADVANCED PLACEMENT

Students with AP scores of 4 or 5 in either English Literature or English Composition, or with scores of 5–7 on an English A1 or English A2 International Baccalaureate exam, will receive one course credit. No extra credit is given for taking more than one exam. This credit does not count toward the major.

LANGUAGE REQUIREMENT

There is no language requirement for the English major.

PRIZES

The Department of English annually gives out an array of academic awards, fellowships, and prizes. Fellowships and writing prizes may require applications and submission of writing samples. Full explanations are available at the department website (<http://www.wesleyan.edu/english/>).

TRANSFER CREDIT

Students may obtain transfer credit in English for courses taken at other universities in the United States in the summer or during a leave of absence. Courses must be approved by the Department of English faculty member responsible for transfer of credit. Students should expect to provide documentation from a course catalog to receive advance permission. In most cases, on completion of courses taken at other universities, students will need to show additional documentation (e.g., syllabi and assignments) demonstrating their coursework to receive transfer credit. No more than two credits may be earned during a summer. More detailed information can be found on the department website (<http://www.wesleyan.edu/english/students/credit.html>).

HONORS

The bachelor's degree with honors in English is awarded on the basis of an outstanding academic record and an honors thesis written during the senior year. Students are eligible to write a critical thesis if they have an average of 91.7 in the courses counting toward the major (at least six courses by the end of the junior year) and have completed a substantial research paper in a departmental course designated research or research option. Students wishing to write a creative thesis need not fulfill the research requirement, but they must have a 91.7 average in courses counting toward the major and have received an A- or better in at least two creative writing courses that count toward the major, one of which must be an intermediate or advanced workshop taken at Wesleyan. English majors do not need to fulfill the GenEd requirements to write an honors thesis. However, GenEd fulfillment is required to declare more than a combined total of two majors, certificates, and minors and to be eligible for Phi Beta Kappa and University Honors. A detailed description of the process for earning honors can be found on the department website (<http://www.wesleyan.edu/english/students/honors.html>).

CAPSTONE EXPERIENCE

English majors may undertake capstone experiences in several ways. Students who are eligible and who qualify to be candidates for honors may enroll in a two-semester honors tutorial that culminates in the submission of an honors thesis. Students may also propose a one- or two-semester senior essay project. In addition, in each of the major concentrations/paths, students are required to complete a **300**-level seminar. This seminar may be taken before the senior year.

FEMINIST, GENDER, AND SEXUALITY STUDIES

The Feminist, Gender, and Sexuality Studies (FGSS) Program is administered by the chair and other members of the program's core faculty. Core faculty are those who are actively involved in the program, who teach FGSS courses, advise FGSS majors and senior theses, and may serve as program chair. The program sponsors an annual symposium and the Diane Weiss Memorial Lecture.

DEPARTMENT ADVISING EXPERT

Victoria Pitts-Taylor

FEMINIST, GENDER, AND SEXUALITY STUDIES MAJOR

MAJOR DESCRIPTION

The Feminist, Gender, and Sexuality Studies (FGSS) Program is administered by the chair and other members of the program's core faculty. Core faculty are those who are actively involved in the program, who teach FGSS courses, advise FGSS majors and senior theses, and may serve as program chair. The program sponsors an annual symposium and the Diane Weiss Memorial Lecture.

ADMISSION TO THE MAJOR

The prerequisite for becoming a feminist, gender, and sexuality studies (FGSS) major is taking one of the gateway courses. These courses are designated annually. Students ordinarily take a gateway course during either semester of the sophomore year and declare the major in the spring semester. Gateway courses include:

Code	Title	Hours
FGSS200	Sex/Gender in Critical Perspective (FGSS Gateway)	1

FGSS277	Feminist Philosophy and Moral Theory (FGSS Gateway)	1
---------	---	---

MAJOR REQUIREMENTS

Students are assigned to faculty advisors and should familiarize themselves with requirements for writing a senior honors thesis, since these may affect curricular choices for the junior year. In the fall semester of the junior year, the student ordinarily takes FGSS209. During this semester the student, in consultation with the advisor, develops a major proposal that lists the courses that will compose the student's major course of study, including a written rationale for the student's chosen concentration within the major. The Major Proposal Form, approved by the advisor and with the concentration rationale attached, is submitted to the Feminist, Gender, and Sexuality Studies Program office by the end of the fall semester of the junior year.

The concentration rationale is a brief explanation (500 words) of the student's chosen concentration within the major and describes the courses the student has chosen to constitute it. The major as a whole consists of 9 courses as follows: Three core courses (a gateway course, FGSS209 and FGSS405), two distribution courses (FGSS courses from an area outside the concentration), & the four courses comprising the concentration. All FGSS majors complete senior research, either in the form of a senior essay (completed as part of the Senior Seminar) or a senior honors thesis (through a two-semester tutorial with a faculty member, normally in addition to the Senior Seminar). The senior year is devoted to completion of the coursework for the concentration, work on a senior essay or thesis, and participation in the senior seminar. Non-FGSS courses may count toward the concentration if approved by the student's faculty advisor. Only two credits transferred from another institution may be applied to the major.

Every major must take the following courses:

- **One gateway course.** These are designated annually and serve as introductions to the interdisciplinary field of feminist, gender, and sexuality studies. Gateway courses examine gender as a factor in the politics and practices of the production of knowledge and of social and cultural life, with particular attention to the intersection of gender with other identity categories and modes of power—race, class, sexuality, and ethnicity.
- FGSS209. This course traces contemporary developments in feminist theory and considers how feminism has been articulated in relation to theories of representation, subjectivity, history, sexuality, technology, and globalization, among others, paying particular attention to the unstable nexus of gender, sexual, racial, and class differences.
- FGSS405. Set up as a workshop, the goal of this course is to develop an enabling and challenging intellectual environment for majors to work through intensively the theoretical, methodological, and practical concerns connected with their senior research projects.

CORE COURSES GATEWAY AND REQUIRED COURSES

In 2019-2020, these include:

Code	Title	Hours
FGSS200	Sex/Gender in Critical Perspective (FGSS Gateway)	1
FGSS209	Feminist Theories	1
FGSS277	Feminist Philosophy and Moral Theory (FGSS Gateway)	1
FGSS405	Senior Seminar	1

Distribution requirement. A distribution requirement of two **FGSS** courses that must be from two different disciplines and should not overlap in their content with courses that make up the student's concentration in the major.

Concentration. Four courses forming the area of concentration should represent a coherent inquiry into some issue, period, area, discipline, or intellectual approach related to feminist, gender, and/or sexuality studies. Normally, the courses will be drawn from various departmental offerings and will be selected in consultation with an advisor.

STUDENT LEARNING GOALS

The Feminist, Gender, and Sexuality Studies (FGSS) Program is an interdisciplinary program staffed by faculty with wide-ranging research interests from across the university. The FGSS Program major and curriculum enable students to engage in critical analyses of the construction of gender and sexuality as categories of analysis and experience within the broad matrices of race, class, and ethnicity, and the ways in which these categories inform knowledge production. Our curriculum has a broad offering of courses with wide subject, geographic, and thematic coverage. Majors have excellent opportunities for developing their own areas of concentrated study and for individually designed research. Our courses offer students historical and contemporary explorations of women, gender, and sexuality from a variety of disciplinary and interdisciplinary perspectives on Africa, the Caribbean, East Asia, Europe, Latin America, and South Asia, as well as the U.S.

FGSS expects its majors to:

- become skilled at reading and writing critical feminisms;
- have a well-developed understanding of the interdisciplinary, transnational and intersectional concerns of the field; and
- interrogate the historical and contemporary, local and transnational forces underlying social and economic injustice and inequality in order to promote greater possibilities for freedom and social justice.

In other to achieve these goals, students should be able to:

- form an argument using evidence
- critically evaluate the arguments of others
- analyze texts from a variety of disciplines
- situate social and political issues in their historical context
- assess how activism and intellectual inquiry are interrelated

TRANSFER CREDIT

Only two credits transferred from another institution may be applied to the major.

HONORS

Rising seniors wishing to write a Senior Honors Thesis (click here for more information (https://www.wesleyan.edu/fgss/major/senior_research.html)) must have, at the end of their junior year, an average of at least B+ in all of the courses that count for the major. These courses include the following: gateway course, FGSS 209 (Feminist Theories), two distribution courses, and the four courses from the student's area of concentration within the major. Prospective thesis writers must submit to the FGSS Chair by the last Friday in April of their

junior year a transcript reflecting that they have met this requirement (or will have done so by the end of the junior year). Only students who complete the two-semester thesis can stand for honors. Students who have not achieved a B+ average will undertake the one-semester senior essay project.

CAPSTONE EXPERIENCE

Completion of a senior essay (one credit) or an honors thesis (two credits) on a theme or topic related to the student's area of concentration within the major is required. Rising seniors wishing to write a senior honors thesis must have an average of B+ in all courses that count toward the major, including the gateway course, FGSS209, and three of the four courses from the student's area of concentration. Prospective thesis writers must submit to the feminist, gender, and sexuality studies program chair by the last Friday in April in the second semester of the junior year a statement indicating the topic of the thesis and name of the thesis tutor.

GERMAN STUDIES

Interdisciplinary in nature, the academic field known as German studies has undergone rapid development in recent years. At Wesleyan, the German Studies Department takes an active part in internationalizing the curriculum, educating students for a world in which a sophisticated understanding of other cultures and their histories has become increasingly important. A background in German studies can prepare students for careers in many fields. Among them are teaching, translation, publishing, arts administration, journalism, law, international business, and library sciences. German studies also prepares students for graduate study in literature, linguistics, philosophy, art history, history, psychology, the natural sciences, music, and other disciplines. At every level, the department's courses taught in German stress the four basic skills: reading, writing, listening, and speaking. These courses develop students' awareness of how language functions to convey information, express emotions, and communicate thought. The department's courses taught in English focus on the specific historical experiences of German-speaking countries and the contributions of those countries to many realms of human endeavor. These courses often raise the question of translation, asking how successfully cultural phenomena specific to a particular place and time can be expressed in another language.

The topics of courses offered by members of the department and the affiliated faculty include German literature from the 18th century to the present, philosophy, literary theory, art history, German film from its origins to the present, political science, environmental studies, and history. A number of courses, taught in English in other departments, are cross-listed and can be counted toward the major.

For more information about German Studies, please visit our department website. (<http://www.wesleyan.edu/german/>)

GERMAN STUDIES MAJOR

MAJOR DESCRIPTION

THE GERMAN CURRICULUM FOCUSES ON THREE MAJOR PERIODS.

ENLIGHTENMENT, WEIMAR CLASSICISM, ROMANTICISM (1650–1830)

The 18th century laid the foundation for the emergence of modern Germany. Many literary and philosophical works exhibit the immense joy, hope, anxiety, and work that went into reorganizing the relationship between the individual, society, and the world after religious and hierarchical certainties collapsed in the upheaval of the Thirty Years' War and the armed conflicts and revolutions that followed. Unlike other European cultures, the German-speaking area undertook this reorganization without a territorially unified state. The powerful desire for cultural and political unity gave rise to ideas about the function, value, and precarious status of individuality, and to concepts of art, nature, *Bildung*, and progress that continue to inform ways in which we think of the world today.

LIBERALISM, MODERNISM, FASCISM (1830–1945)

With the deaths of Hegel in 1831 and Goethe in 1832, the formative period for a culturally unified Germany came to an end. Contradictions in German liberalism—between universalist values and an increasingly exclusionary construction of national identity—created a widening rift between writers and thinkers who were committed to revolutionary change and those whose work drew on images of a preindustrial way of life. With the establishment of the German nation in 1871, accompanied by a rise in militarism and colonial aspirations, both progressive and reactionary tendencies in German culture became even more pronounced. These tendencies beset the Weimar Republic, during which Jews and other minorities enjoyed unprecedented freedom of expression, yet authoritarian “solutions” to economic convulsions and social conflict increasingly gained adherents. When the Nazis came to power in 1933, they consigned artistic modernism to the category of “degenerate art.” Many leading cultural figures were forced into exile. Those who remained in the country either tolerated or supported the regime.

COLD WAR, POSTMODERNISM, NEOLIBERALISM (POST-1945)

German culture since the end of the genocidal Nazi era has been defined by twin desires for a new beginning and for a retrieval of the humanist and progressive elements of the German tradition. While in socialist East Germany the claim to represent that tradition became official state policy, in West Germany the influence of American and British popular culture gave rise to new forms of cultural expression. Yet many modernist writers collided with a post-traumatic society in which former Nazis still occupied important offices (West Germany) or historical responsibility for fascism was denied outright (East Germany and Austria). Not until the cultural revolution of the 1960s did the conformist postwar culture begin to give way to a new diversity, and in the 1970s and 1980s new feminist, queer, and immigrant voices emerged. With the end of the German Democratic Republic in 1990, Germany entered the current era in which it has found itself playing a challenging new political role as the dominant country in the EU. The current refugee crisis and the accelerating growth of economic inequality have spawned new forms of cultural activism, especially in the visual and performing arts.

ADMISSION TO THE MAJOR

To become a German studies major, a student should have no grade lower than a B in any language course taken in the department. All German language courses below the 300-level counted toward the major must be taken for a letter grade. The department recognizes the diversity of student interests and goals by giving its majors great flexibility in designing their programs of study. Students should work closely with their major advisors to put together coherent courses of study and assure that they will make steady progress toward mastery of the German language. The department strongly recommends that majors fulfill Stages I and II of the General Education Expectations.

MAJOR REQUIREMENTS

The German studies major requires satisfactory completion of nine credits' worth of courses. At least six credits must be earned in courses taught in German above the level of GRST102, with at least three of the six being GRST seminars at the 300-level or courses taken at a university in Germany. The remaining three courses may be in either English or German. All German language courses below the 300-level counted toward the major must be taken for a letter grade. Majors are strongly encouraged to spend a semester or a summer participating in an approved program in Germany. We encourage students to study at our Smith/Wesleyan program in Hamburg during their spring semester of the sophomore or junior year. Courses taken there count toward the major, provided the subject matter is relevant to German studies and the instruction and assignments are in German. A maximum of four courses in one semester or six courses in two semesters taken in Germany, may be counted toward the major. For students who have not taken GRST213, one credit of intensive language instruction in Germany, may count toward the major. Before enrolling in courses in Germany, students must obtain approval from their major advisor. Students must take at least one 300-level German studies course at Wesleyan upon their return. Please note GRST101 and GRST102 do not count towards the German Studies minor.

STUDENT LEARNING GOALS

The German studies major is designed to allow students to explore the rich and diverse cultures of the German-speaking countries through a flexible interdisciplinary program that stimulates the students' creative and critical capacities and can serve as the basis for future academic or professional study or employment.

The specific goals are as follows:

- Knowledge of the German language: Courses are designed to enable students to achieve at least advanced mid-level proficiency in speaking and comprehending spoken German, according to the ACTFL guidelines. Students will have ample opportunity to become fluent and accurate writers of German in a variety of genres and contexts.
- Intercultural literacy: Students can expect to gain insight into unfamiliar cultural attitudes and artifacts, which enables them to be open-minded and competent participants in their own and foreign environments.
- Historical breadth: Students will be able to acquire insight into the development of the German-language cultures from the Enlightenment to the present and those cultures' impact on Western civilization and other cultures.

- **Knowledge of the field of German studies:** Through their courses, majors become acquainted with techniques of textual interpretation, with the scope of the field, and with prevailing research methods and disciplinary tools.
- **Experience in German-speaking countries:** Students will receive strong encouragement and support to experience a German-speaking country firsthand through study abroad during the academic year or the summer, internships, thesis/capstone research, or study or teaching after graduation.

STUDY ABROAD

For more information about studying abroad in Germany, please visit our department website. (<http://www.wesleyan.edu/german/studyabroad.html>)

Please make sure to check the application procedures and deadlines for your program as well as those for Wesleyan's Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>), located in Fisk Hall 201.

Those students for whom study abroad is not possible during the fall or spring semester should consult with the department about the possibility of taking courses during the summer.

ADVANCED PLACEMENT

See Advanced Placement Credit (http://www.wesleyan.edu/registrar/general_information/ap_ib_credit.html) information. Students with prior knowledge of German should take the online placement examination before registering for courses. For information about the placement test, please contact Emmanuel Paris-Bouvret (eparis@wesleyan.edu) in the Fries Center for Global Studies.

PRIZES

Students who demonstrate excellence in the study of German may be candidates for prizes given from the Scott, Prentice, and Blankenagel funds. Students seeking modest funding for special projects can apply for the Helmut and Erika Reihlen Fund (http://www.wesleyan.edu/german/scholarships_prizes.html).

ADDITIONAL INFORMATION

German Haus is a wood-frame house at 65 Lawn Avenue, with six single rooms and one double, that provides a vibrant center for German-themed events and activities on campus. Whether discussing current events over coffee and pastries, interpreting poems, watching classic or contemporary films, or hearing about faculty members' research, the residents and their guests can explore a multitude of interests.

HONORS

- **Eligibility.** To become a candidate for honors in German studies, a student must have earned a B+ or better in all German Studies courses above GRST102 taken for a grade.
- **Candidacy.** A prospectus must be handed in and approved by the prospective tutor or the department chair by the end of the Reading Period in the spring of the junior year. Enrollment in senior thesis tutorials (GRST409 and GRST410) is required. Candidates for honors in German

studies and another department or program may be required to have two thesis tutors. The two departments or programs must agree in advance about the tutoring arrangement and evaluation of the honors project.

- **Honors projects.** Honors can be earned only for two-semester projects.
- **Deadlines.** Deadlines for nomination to candidacy and submission of the honors project are set by the Committee on Honors.
- **Evaluation and award of honors.** Honors projects will be evaluated by the tutor(s) and at least two other readers. A student receiving high honors may, at the department's discretion and subject to the guidelines of the Committee on Honors, be nominated to take the oral examination for University Honors.

CAPSTONE EXPERIENCE

Students who wish to undertake a one-semester capstone project have wide latitude as to the topic, medium, and form they choose. They should discuss their idea with a member of the department and enroll in an individual tutorial (GRST401 or GRST402) supervised by a German studies or affiliated faculty member.

GERMAN STUDIES MINOR

MINOR DESCRIPTION

Interdisciplinary in nature, the academic field known as German studies combines the close study of texts and media with broad humanistic inquiry into the foundations and structures of culture and society. The minor is a good option for students who want to gain a foundation in German language, culture and literature within a context of other interdisciplinary connections.

ADMISSION TO THE MINOR

Any student who intends to earn the minor in German studies should speak with a faculty member of the department by the end of the sophomore year. Satisfactory completion of the minor will be certified by the department.

MINOR REQUIREMENTS

The minor requires six course credits with a minimum GPA of B. Four of the courses must be above the GRST102 level and taught entirely in German; at least three of these must be taken at Wesleyan. The other two courses may be in either English or German. All German language courses below the 300-level counted toward the minor must be taken for a letter grade. Please note GRST101 and GRST102 do not count towards the German Studies minor.

GOVERNMENT

Wesleyan's Department of Government is dedicated to exploring "who gets what, when, and how," as Harold Lasswell defined political science in 1935. The department might well be called a department of political science or a department of politics; it is called the Department of Government for historical reasons. Department faculty today uphold a tradition, more than a century old, of distinction in scholarship and teaching. Each tenured or tenure-track Department of Government faculty member is affiliated with a concentration representing one of the four major subfields of political science: American politics, comparative politics, international politics, or political theory. We offer introductory courses in each of these four concentrations (American is GOVT151; international, GOVT155; comparative, GOVT157; and theory, GOVT159), a range of upper-level courses (**201-368**), and specialized research seminars (**369-399**). In addition, we offer courses in research methodology, individual and group tutorials, and tutoring of senior honors theses. Courses numbered **201-368** are ordered according to field of study, not level of difficulty.

Nancy L. Schwartz

BA, Oberlin College; MAA, Wesleyan University; PHD, Yale University
Professor of Government, Emerita; Professor of Government, Emerita

DEPARTMENTAL ADVISING EXPERT

Don Moon

GOVERNMENT MAJOR

MAJOR DESCRIPTION

A government major will give you the opportunity to acquire broad knowledge of political science and to study in depth a particular concentration, either American politics, comparative politics, international politics, or political theory. Each concentration has its own introductory course, survey courses, and advanced seminars. Concentrators in American politics, comparative politics, and international politics are required to take the introductory course and three upper-level elective courses in the chosen subfield. Concentrators in political theory are required to take four courses in the political theory subfield. In addition to taking four courses within the chosen concentration, majors are required to take at least one course in each of at least two of the three subfields outside the concentration. This requirement assures that majors acquire breadth across the discipline as well as depth in at least one subfield.

ADMISSION TO THE MAJOR

To be admitted as a government major, your academic history must show that you have completed at least one government course with a grade of B- or better.

MAJOR REQUIREMENTS

BASIC REQUIREMENTS

- To complete the major requires nine approved government credits
- You may count toward the major only one introductory course (GOVT151, GOVT155, GOVT157, or GOVT159)
- Five of the eight remaining courses must be upper-level Wesleyan **GOVT** courses in the range **201-399**
- The remaining three courses numbered **201** or higher may be:
 - Tutorials in the Government Department (maximum two; only one thesis tutorial may count)
 - A course in a “cognate” discipline (maximum one; must be approved in advance by your GOVT advisor)
 - Political science courses at other U.S. institutions or abroad (maximum two; or three in a year of study abroad)
 - Additional Wesleyan government courses in the range **201-399**

THE FOLLOWING MAY NOT COUNT TOWARD THE MAJOR:

- Student forum courses
- Teaching apprenticeships
- First-year seminars except FYS versions of GOVT151, GOVT155, GOVT157, or GOVT159, which count the same as the regular versions of each course
- Internships either in the United States or abroad
- The Government Department does not grant credit or waive prerequisites for Advanced Placement, International Baccalaureate, or courses taken on ad-hoc programs (e.g., summer study abroad) prior to matriculation at Wesleyan. The only pre-matriculation credits that the department will accept are the government (political science, politics, etc.) credits that

the University has authorized from a transfer student's previous full-time institution.

MAJORS MUST CHOOSE AND COMPLETE A CONCENTRATION:

- Four courses, at least three of which must be taken at Wesleyan, complete a concentration as follows:
 - American politics: GOVT151 and three upper-level American politics courses
 - International politics: GOVT155 and three upper-level international politics courses
 - Comparative politics: GOVT157 and three upper-division comparative politics courses
 - Political theory: Any four political theory courses

BREADTH ACROSS THE DISCIPLINE:

- In addition to taking four courses within the chosen concentration, majors are required to take at least one course each in at least two of the three subfields outside the concentration. This requirement assures that majors acquire breadth across the discipline as well as depth in at least one subfield.

GENERAL EDUCATION EXPECTATIONS

- **Stage 2** must be complete to receive honors in government.

PACING

- Majors with fewer than four government courses by the end of the junior year must drop the major.

For more information, please visit the department's majoring page (http://www.wesleyan.edu/gov/about_major/majoring.html).

COURSES FOR NON-MAJORS

Many students take government courses without majoring in government. We sometimes offer First-Year Seminars (FYS), but demand for our regular courses is high, so we cannot offer as many FYS courses as we would like. First-year students and sophomores are welcome, however, to take the introductory courses we offer in each of our four concentrations. Another option is QAC201, the social science methodology course that is offered by the Quantitative Analysis Center and that is cross-listed as GOVT201 (it counts toward the government major). Most of our survey courses are open to first-year students and sophomores, although majors usually have preference.

GENERAL EDUCATION

- **Stage 2** must be complete to receive honors in government.
- For more information about Government Department regulations involving the General Education Expectations, please visit the Government Department's majoring page. (http://www.wesleyan.edu/gov/about_major/majoring.html)

STUDENT LEARNING GOALS

Students who complete the government major should be able to explore systematically a range of political issues and modes of argumentation, drawing on the knowledge, analytical abilities, and quantitative or qualitative skills they have acquired through their courses. They should also be better prepared to think critically, write clearly, and speak effectively. By acquiring these capabilities, government majors prepare themselves for lives of contribution in public service, education, law, business, journalism, and other fields.

STUDY ABROAD

For more information about deciding to study abroad, applying to study abroad, and getting faculty preapproval for study-abroad courses, please visit the department's study abroad page (http://www.wesleyan.edu/gov/department_policies/studyabroad.html).

Up to two courses on an approved one-semester study-abroad program may count toward the major. Majors on full-year programs may count a third course with the approval of their major advisor. A student seeking major or university credit for a study abroad course must give the **preapproving** faculty member a course title and a written course description **before** the first meeting of the study-abroad course, either in person before departing (preferable) or by e-mail from abroad (if the title and course description are unavailable before departure).

No credit will be approved toward the major for internships, introductory courses, or certain School for International Training courses.

Students may count toward the major no more than two credits earned in courses taken away from Wesleyan, whether in a study-abroad program or in another U.S. institution, except in the case of a full year of study abroad, in which case the faculty advisor has full discretion on whether to authorize credit for a third course toward the major.

Independent study projects conducted abroad may be included among the two study-abroad courses that may be counted toward the government major (up to three for a student studying abroad for a whole year). A student's major advisor may choose to give tentative approval for an independent study project, subject to a review of the written work after the student's return.

ADVANCED PLACEMENT

The Government Department does not grant credit or waive prerequisites for Advanced Placement, International Baccalaureate, or courses taken on ad-hoc programs (e.g., summer study abroad) prior to matriculation at Wesleyan. The only pre-matriculation credits that the department will accept are the government (political science, politics, etc.) credits that the University has authorized from a transfer student's previous full-time institution.

PRIZES

In addition to honors and Phi Beta Kappa nomination, the department offers six prizes to students who excel in the government major. A list of recent prize winners (http://www.wesleyan.edu/gov/for_majors/studentachievements.html) of these prizes are listed on the Wesleyan Government Department website.

Davenport Prize: To senior majors who show excellence in the study of political science

Parker Prize: To a sophomore or junior who excels in public speaking

Rich Prize: To a senior whose orations are judged best in composition and delivery

Skirm Prize: To the best research or writing project completed by a government major in his or her junior year

Titus Prize: To support the summer studies of a deserving Wesleyan junior majoring in government, the College of East Asian Studies, or the College of Social Studies

White Fellowship: To majors who show excellence in the study of political science

The department is also formally represented in the Public Affairs Center (<http://www.wesleyan.edu/pac/>) on committees that award Davenport Grants and the Hallowell Prize in the study of social science, as well as on the committee that awards the Carol A. Baker '81 Memorial Prize for the development and recognition of the accomplishments of junior faculty.

TRANSFER CREDIT

For information on how to apply for Government Department authorization to transfer credit from U.S. academic institutions, please visit the department's transfer of credit page (http://www.wesleyan.edu/gov/department_policies/transfercredit.html). For information on how to apply for Government Department authorization to transfer credit from approved study-abroad programs, please visit the department's study abroad page (http://www.wesleyan.edu/gov/department_policies/studyabroad.html).

Requests for Government Department-approved transfer of credit from U.S. academic institutions must be made before the first class meeting of the course whose credit you wish to transfer.

Approval will be granted if, and only if, the course for which you wish to transfer credit is

- Upper level. Introductory courses may not be counted.
- In the field of government (political science, politics).
- Equivalent in terms of contact hours, content, and requirements to Wesleyan courses.
- Offered at a four-year, accredited institution.
- Graded. Credit/no credit courses may not be transferred.

RELATED PROGRAMS OR CERTIFICATES

- Civic Engagement Certificate
- Environmental Studies Certificate
- International Relations Certificate

For a full list of all certificates, please visit Wesleyan's course listing (WesMaps (<http://www.wesleyan.edu/wesmaps/>)). Government courses count toward several of them, and Government Department faculty are involved in several certificates in addition to those listed above.

HONORS

For more information on honors at Wesleyan in general, University Honors regulations, evaluation of honors theses, and recipients of honors in government in previous years, please visit the department's honors page (http://www.wesleyan.edu/gov/about_major/honors.html).

To be eligible for honors in government you must (1) be a government major on track to complete the major requirements in a timely fashion; (2) achieve a university grade point average of 90.00 or above, calculated at the end of the fall semester of the junior year; and (3) have completed stage I of the General Education Expectations.

To become a candidate for honors in government, the student must meet the three eligibility conditions and must complete the Thesis Application Form (<http://www.wesleyan.edu/gov/forms/GOVTThesisApplication.pdf>). Before submitting the form, the student should meet with a potential tutor (tenured, tenure-track, or full-time visitor in the Government Department) to discuss the proposed thesis project. After the Government Department faculty reviews the applications, students will be notified whether or not their thesis proposal has been approved and, if so, will be given the name of their thesis advisor. In some years, students who meet the eligibility requirements will not be able to stand for honors in government because there may be no full-time government faculty member to serve as a tutor. Each available government faculty member decides for whom he or she will serve as a thesis tutor.

Students may count either GOVT409 or GOVT410, but not both, toward the eight upper-level courses needed to complete the government major. Only one thesis tutorial credit may count toward the major.

To receive honors in government, students must (1) complete the government major; (2) complete both stage I and stage II of the General Education Expectations; (3) write a thesis judged to be of honors quality; and (4) maintain a university grade-point average of 90.00 or above through the end of the first semester of their senior year.

CAPSTONE EXPERIENCE

A government thesis involves one-on-one tutorials (GOVT409/GOVT410) with a supervising faculty member for a full year, culminating in the submission of an honors thesis, many of which are about 100 pages long.

Seniors seeking a capstone experience lasting a single semester can choose either an individual undergraduate tutorial (GOVT401/GOVT402) or a survey course or seminar that requires a final independent research paper at least 15 pages in length whose topic is chosen by the student. It is not unusual for students to take several such courses during their junior and senior years, sometimes exploring related topics from several different angles. In some advanced survey courses or seminars, students may engage in a capstone experience that culminates in a work of nontraditional scholarship—service learning, public blogs, civic engagement, etc., rather than a standard research paper.

HISTORY

Why history?

History is a way of understanding the whole of the human condition as it has unfolded in time. Without history, nothing makes sense: from the meaning of words to the formation of identities, to institutions, states, and societies. History straddles the boundary between the social sciences and humanities. Like the other social sciences, it has established methods of investigation and proof, but it differs from them in that it encompasses, potentially, every area of human culture from the beginning of recorded time. Like the other humanities, it uses ordinary language and established modes of telling its stories, but it is constrained by evidence left us from the past.

Majoring in history will help you develop valuable skills transferable beyond the classroom: critical thinking, interpretation, and persuasive writing, as well as analytical and research skills for tackling complex questions. These are all essential to doing a job well after you leave Wesleyan. History is inherently complex and requires the ability to acquire knowledge from large amounts of information and assess evidence and conflicting interpretations of the past. As a history major you will learn to make sense of complexity and to tell a good story.

DEPARTMENTAL ADVISING EXPERTS

For Fall 2020, all members of the history department on duty, except Valaria LopezFadul, William Johnston, Laura Ann Twagira, and Cecilia Miller.

For Spring 2021, all members of the history department on duty, except Valaria LopezFadul, William Johnston, Cecilia Miller, and Nathanael Greene.

HISTORY MAJOR

ADMISSION TO THE MAJOR

Go to your portfolio and declare the history major.

Any history faculty member may serve as an advisor by agreement with the student. If you are not certain which faculty member would be an appropriate advisor for your intended course of study, you should meet with the department chair, Ethan Kleinberg.

MAJOR REQUIREMENTS

(Approved by History Department on 7 April 2021)

Nine History Courses Total

N.B. -higher level History courses may be substituted for lower level ones

Courses to Satisfy the Major

- **One 150-199 “Intro to History”** course, normally taken as a first-year or sophomore at Wesleyan, can count toward the nine history courses in the major.
- **Five History courses 200 level or higher**
- **HIST362 (this will be changed to HIST300 in Fall 2022) “Issues in Contemporary Historiography”** (usually taken first semester junior year).
- **Two History courses 301 level or higher**

*One 200 or 300 level History course must devote at least 50% of its attention and content to the period before 1800.

*One semester of essay or thesis coursework can count toward completion of the History major (HIST403, HIST409, or HIST410)

Capstone Project

Every History Major is required to complete a substantial research project at Wesleyan under departmental faculty supervision. This can take the form of:

1. a senior thesis (HIST409-HIST410)
2. a senior essay (HIST403)
3. an approved research paper for a 300 level seminar indicated by enrollment in .25 credit tutorial (HIST401 or HIST402)

STUDENT LEARNING GOALS

Majoring in history develops valuable skills transferable beyond the classroom. Learning goals broadly include: critical thinking, flexible interpretation of diverse source material, and persuasive writing, as well as analytical and research skills for tackling complex questions that will prepare majors for the changing professional world.

Departmental learning goals are met incrementally as students combine diverse courses and course types:

Category 1: 100-level history courses (numbered 150–189) are in lecture and discussion format and provide introduction to history, including key foundational elements of historical work. Students learn to:

1. Develop historical analysis through critical reading of primary and secondary sources
2. Develop historical writing in terms of argument and style
3. Navigate historical research resources, including libraries, internet sources, archives

Category 2: 200-level history courses are in a lecture and discussion format and continue learning goals from category 1 while developing expertise in specific places, times, and themes. Students learn to:

1. Understand change over time in the context of specific regions, periods, and themes
2. Synthesize and analyze historical material in written work and oral presentations
3. Apply historical research methods and resources

Category 3: 300-level history courses are in a seminar format and focus on specific areas of knowledge to develop subject expertise and research acuity. Students learn to:

1. refine their expository skills in writing and oral presentations
2. identify research questions and master historiography by critically assessing previous historical work
3. develop and execute original, independent research projects

Assessment occurs within each individual course and assignment but also through the History major’s relationship with their advisor who monitors the student’s overall progress.

LANGUAGE REQUIREMENT

There is no foreign language requirement for history majors, but the department strongly advises all history majors to learn at least one foreign language.

TRANSFER CREDIT

History majors wishing to count transfer credit toward the History Major must consult with their history advisor in advance, and upon their return to Wesleyan provide their advisor with syllabi and other materials, such as exams and papers, from the course(s) that they wish to apply toward the history major. Once approved by the advisor, the course may count for major credit.

CAPSTONE EXPERIENCE

The senior research project gives all history majors the opportunity to apply their skills in historical research toward a topic about which they are passionate. The Capstone Project can be a senior thesis (HIST 409-410) or a senior essay written in a tutorial (HIST 403) or as an approved research paper in a 300-level seminar indicated by enrollment in a .25 credit tutorial (HIST 401 or 402).

HISTORY MINOR

ADMISSION TO THE MINOR

Go to your portfolio and declare the history major.

MINOR REQUIREMENTS

(Approved by History Department on 7 April 2021)

Six History Courses Total

N.B. -**higher level** History courses may be substituted for **lower level** ones

-courses must be taken at Wesleyan.

Courses to Satisfy the History Minor

--**Three History courses 150 or higher**

--**Two History courses 300 level or higher.**

*One History course must devote at least 50% of its attention and content to the period before 1800.

*Only courses taught by faculty appointed in or affiliated with the History Department may count toward the minor.

*Tutorials, education in the field, and student forums cannot be counted toward the minor.

*AP or IB credit cannot count toward the minor.

LATIN AMERICAN STUDIES PROGRAM

Latin American Studies (LAST) is an interdisciplinary program designed to provide an integrated view of Mesoamerica, South America, and the Caribbean. The program does not hire or tenure its own faculty. Instead, it draws on faculty with expertise in Latin America whose home departments in 2020-21 are Earth and Environmental Sciences, Economics, History, Hispanic Literatures and Cultures, and Government. Courses taught by faculty who are not formally affiliated with the Program but that are centrally concerned with Latin America are often cross-listed with Latin American Studies.

AFFILIATED FACULTY

Michael Armstrong Roche

BA, Harvard University; MA, Harvard University; PHD, Harvard University
Associate Professor of Spanish; Associate Professor, Medieval Studies; Associate Professor, Latin American Studies

Robert T. Conn

BA, Dartmouth College; PHD, Princeton University
Professor of Spanish; Chair, Romance Languages and Literatures; Professor, Latin American Studies

Melanie Khamis

BS, London School of Economics and Political Science; MS, University of Warwick; PHD, London School of Economics and Political Science
Associate Professor of Economics; Associate Professor, Latin American Studies

Valeria López Fadul

BA, Yale University; MA, Princeton University; PHD, Princeton University
Assistant Professor of History; Assistant Professor, Latin American Studies

James W. McGuire

BA, Swarthmore College; MA, University of California, Berkeley; PHD, University of California, Berkeley
Professor of Government; Professor, Latin American Studies

María Ospina

BA, Brown University; MA, Harvard University; PHD, Harvard University
Associate Professor of Spanish; Chair, Latin American Studies; Associate Professor, Latin American Studies

Paula C. Park

BA, Rutgers, the State University; MA, University of Texas Austin; PHD, University of Texas Austin
Assistant Professor of Spanish; Assistant Professor, Latin American Studies

DEPARTMENTAL ADVISING EXPERT

The Latin American Studies Advising Expert is the LAST Program Chair, which in 2020-21 is Melanie Khamis.

LATIN AMERICAN STUDIES MAJOR

MAJOR DESCRIPTION

Latin American Studies majors take courses related to Latin America (at least six), courses in a department of concentration (at least four), complete a research requirement (a 20+ page paper on a Latin American topic), and complete Stage II of the General Education Expectations. At least seven of the ten courses required to complete the major must be taken at Wesleyan.

ADMISSION TO THE MAJOR

Admission to the Latin American Studies major requires (a) competence in Spanish; (b) an academic record that shows ability both in Latin American Studies and in the intended department of concentration; and (c) a judgment by the core Latin American Studies faculty that a prospective major is likely to be able to maintain a grade point average of B- or better in all courses taken at Wesleyan that are cross-listed with Latin American Studies.

MAJOR REQUIREMENTS

Ten semester courses are required to complete the Latin American Studies major, at least six in Latin American Studies and at least four in a department of concentration. The four concentration courses need not be cross-listed with Latin American Studies. Concentration options include only departments with a Latin American Studies faculty member: in 2020-2021, Earth and Environmental Sciences, Economics, History, Hispanic Literatures and Cultures, and Government.

The purpose of the concentration is to assure that the student majoring in Latin American Studies, which is an interdisciplinary program, has mastered the substance and methods of at least one established academic discipline. Accordingly, Latin American Studies majors may not *concentrate* in another program (e.g., Science in Society), or in an interdisciplinary department (e.g., American Studies), or in a college (e.g., College of Social Studies). Of course, the Program does not preclude its majors from *minoring* or *double-majoring* in any program, department, or college they choose.

Mandatory Latin American Studies courses at Wesleyan. Of the ten courses required to complete the Latin American Studies major, at least seven must be taken at Wesleyan. On petition to the chair, an exception may be made for (1) students who transferred to Wesleyan and who seek Latin American Studies major credit for courses taken at their previous institution(s) or (2) students participating in the Twelve-College Exchange Program who seek Latin American Studies major credit for courses taken at one of the other participating colleges.

Of the six Latin American Studies courses counted toward the major, at least four must be taken at Wesleyan. At least two of the six LAST courses must be cross-listed with Wesleyan Social and Behavioral Science department courses (SBS designation) and at least two must be cross-listed with Wesleyan Humanities and Arts department courses (HA designation). Of the two courses

cross-listed with Humanities and Arts department courses, one must be LAST 226 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=007142&term=1209), Survey of Latin American Literature, Cultures, and Ideas.

To graduate as a Latin American Studies major, students must maintain an average of B- or better in all courses taken at Wesleyan that are cross-listed in the Latin American Studies major (regardless of whether a student elects to include each such course on the major certification form), complete a research requirement paper (see below under "Capstone Experience"), and complete Stage II of the General Education Expectations.

Non-Latin American Studies courses at Wesleyan that may count toward the Latin American Studies major. In exceptional circumstances, Wesleyan courses that have significant Latin American content but are not cross-listed with Latin American Studies may count toward the major. Students must petition the Latin American Studies chair to obtain Latin American Studies major credit for such courses.

Courses at Wesleyan that may NOT count toward the Latin American Studies major.

No Spanish *language* courses (100-level or SPAN 203 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=012580&term=1211), Spanish for Heritage Speakers) may count toward the Latin American Studies major. The only SPAN courses that may count toward the Latin American Studies major are SPAN 221 and SPAN courses numbered higher than SPAN 221 that focus on Latin America. Such courses are normally numbered SPAN 270 to SPAN 299. If the Latin American Studies major's concentration is HISP, however, courses numbered SPAN 230 to SPAN 269 may be counted toward the four *concentration* courses required to complete the LAST major, provided that no such course has also been counted toward the six LAST courses required to complete the major.

No student forum courses may count toward the Latin American Studies major. Also, Latin American Studies does not sponsor student forum courses.

Restrictions on counting particular types of courses toward the Latin American Studies major

No more than one introductory (100-level) course in a student's department of concentration.

No more than one music course involving primarily or exclusively performance.

No more than one thesis tutorial credit.

COURSES FOR NON-MAJORS

Non-majors are welcome in any course with a Latin American Studies crosslisting, unless the course's host department imposes a limitation or restriction. For example, ECON 101 or ECON 110 is a prerequisite for ECON/LAST 219 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=003644&term=1211), Latin American Economic Development.

GENERAL EDUCATION

Latin American Studies majors must complete Stage II of the General Education Expectations.

STUDENT LEARNING GOALS

The Latin American Studies major is designed to give students an integrated view of Mesoamerica, South America, and the Caribbean and to encourage students to develop expertise in the substance and methods of at least one established academic discipline. Students who complete the Latin American Studies major should be able to explore systematically a range of social-scientific and humanistic issues and modes of argumentation, drawing on the knowledge, analytical abilities, and quantitative, qualitative, and linguistic skills they have acquired through their coursework. Latin American Studies majors should also be better prepared to think critically, write clearly, and speak effectively. By acquiring these capabilities, Latin American Studies majors prepare themselves for lives of diverse contribution.

STUDY ABROAD

Latin American Studies majors are encouraged to spend a semester or a year on a program in Latin America approved by the University's International Studies Committee. Latin American Studies faculty members regard study abroad as a serious part of the major, so students should discuss their plans with their Latin American Studies advisors or with the program chair as soon as possible. Credit is regularly granted toward the Latin American Studies major through the University's pre-approved programs (https://www.wesleyan.edu/cgs/osa/programs/americas_c.html) in Argentina, Brazil, Chile, Colombia, Costa Rica, the Dominican Republic, Ecuador, Mexico, Peru, and the Turks and Caicos Islands. Please recall that at least seven of the ten courses required to complete the Latin American Studies major must be taken at Wesleyan, which means that no more than three of the ten courses that count toward the major may come from a study abroad program, including a year-long study abroad program.

ADVANCED PLACEMENT

The Latin American Studies Program does not grant credit or waive prerequisites for Advanced Placement, International Baccalaureate, or ad-hoc program (e.g., summer study abroad) courses taken prior to matriculation at Wesleyan. The only pre-matriculation credits that the Program will accept are from Latin American Studies courses that the University has authorized from a transfer student's previous full-time college-level institution.

LANGUAGE REQUIREMENT

Admission to the major requires competence in Spanish. LAST 226 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=007142&term=1209), a required course, is taught in Spanish.

PRIZES

The Latin American Studies Program awards the Levy-Spira Prize for Distinction in Latin American Studies.

TRANSFER CREDIT

No course taken at another institution in United States may count toward the Latin American Studies major, whether taken during the summer or during the academic year. On petition to the chair, an exception may be made (1) for students who transferred to Wesleyan and who seek Latin American Studies major credit for courses taken at their previous institution(s) or (2) for students participating in the Twelve-College Exchange Program who seek Latin American Studies major credit for courses taken at one of the other participating colleges.

ADDITIONAL INFORMATION

The Latin American Studies Majors Committee, chosen by the student majors, works with the program's faculty to plan events. The Majors Committee is primarily responsible for organizing the informal brown-bag lunch series, where majors and professors meet to discuss student and faculty research projects, to explore possible changes in the curriculum and study-abroad options, and to plan additional program activities.

HONORS

Majors who complete a senior thesis of exceptional quality and who have a distinguished record of coursework in the program receive Honors in Latin American Studies.

To become a candidate for Honors, a major by the end of the sixth semester must have achieved a university grade point average greater than or equal to 90.00 and must have completed Stage I of the General Education Expectations (all Latin American Studies majors, including thesis-writers, must also complete Stage II by the end of the senior year).

The thesis tutor must be affiliated with the Latin American Studies Program.

As noted above, although honors theses normally earn two credits toward graduation (one each semester), no more than one thesis tutorial credit may count toward the Latin American Studies major.

For additional details concerning the honors program, please visit wesleyan.edu/last/formajors/theses.html (<http://wesleyan.edu/last/formajors/theses.html>).

CAPSTONE EXPERIENCE

Majors must complete the Latin American Studies research requirement by writing a paper that is centrally concerned with Latin America, that is on a topic of the major's own choosing (i.e., the student must originate the topic), that is at least 20 standard double-spaced pages in length, and that has received a grade of B- or better. The paper must be (1) written in a course or tutorial where the instructor is formally affiliated with the Latin American Studies Program, or (2) read and approved by a faculty member who is affiliated with the Program. The paper may be written in either English or Spanish, and may be completed in the context of a study-abroad program as long as it is read and approved by a faculty member who is formally affiliated with the Latin American Studies Program. A thesis or a senior essay conforming to the conditions just stipulated will satisfy the Latin American Studies Research Requirement.

The deadline for completing the Latin American Studies research requirement is the close of business on the first day of classes of the spring semester of the Latin

American Studies major's senior year. On or before this date, Latin American Studies majors must submit to their Latin American Studies academic advisor a paper meeting the research requirement stipulations listed above. An exception to this deadline will be made only for Latin American Studies majors taking LAST 402 (Individual Tutorial, Undergraduate) in the spring semester of the senior year or LAST 410 (Senior Thesis Tutorial, Spring). For students enrolled in either of these tutorials, the deadline for submitting the research requirement paper to the major's Latin American Studies advisor is the date on which senior theses are due.

Completion of the research requirement is certified by the major's Latin American Studies academic advisor, who communicates this certification to the Latin American Studies program chair. The Latin American Studies program chair is in charge of certifying that seniors have completed all requirements of the major program, including coursework, completion of the research requirement, and completion of Stage II of the General Education Expectations.

LESS COMMONLY TAUGHT LANGUAGES

Instruction in Less Commonly Taught Languages is offered through the Alternative Language Study Options Program. Located in the Fries Center for Global Studies, this program is designed to extend Wesleyan's already rich language offerings by expanding the range of opportunities for students wishing to learn a language not offered at Wesleyan through traditional language departments.

This program is well suited to prepare for study abroad experiences or to continue learning a language picked up while studying abroad. Students have also taken advantage of these opportunities to enhance their qualifications when applying for international fellowship, to pursue more personal goals like learning more about the heritage language of their family - or simply because they like learning new languages.

Students can register for regularly scheduled courses listed on Wesmaps such as American Sign Language, which includes a three semester study sequence, Modern Greek or Swahili. They can also petition to study a language via individual or group tutorials or more independently through the Mango Languages online platform. Full, partial, not for credit, graded or CR/U options are available, depending on the type of modality offered for each language.

For more information about the various options available, please visit the Alternative Language Study Options website. (<https://www.wesleyan.edu/cgs/also/>)

FACULTY

Hrissi Haldezos

Associate Director of Student Accounts; Adjunct Instructor in Modern Greek

MATHEMATICS AND COMPUTER SCIENCE

The Department of Mathematics and Computer Science offers undergraduate majors in mathematics and in computer science. We also participate in the College of Integrative Sciences, the Data Analysis minor, the IDEAS minor, and the Informatics and Modeling minor. The department's graduate programs include a PhD in mathematics and MA programs in mathematics and in computer science.

Each student's course of study is designed to provide an introduction to the basic areas of mathematics or computer science and to provide the technical tools that will be useful later in the student's career. The course of study is planned in consultation with the student's faculty advisor and the department's advisory committees, DADCOM for mathematics and CADCOM for computer science.

The department's graduate programs include a PhD program in mathematics and MA programs in mathematics and in computer science. The research emphasis at Wesleyan at the doctoral level is in pure mathematics and theoretical computer science. One of the distinctive features of our department is the close interaction between the computer science faculty and the mathematics faculty, particularly those in logic and discrete mathematics.

Graduate students at Wesleyan enjoy small classes and close interactions with faculty and fellow graduate students. Graduate students normally register for three classes a semester and are expected to attend departmental colloquia and at least one regular seminar. The number of graduate students ranges from 17 to 21, with an entering class of three to six each year. There have always been both male and female students, graduates of small colleges and large universities, and U.S. and international students, including, in recent years, students from Australia, Chile, Ecuador, Iran, Nepal and Turkey. All of the department's recent PhD recipients have obtained faculty positions. Some have subsequently moved to mathematical careers in industry and government.

For additional information, please visit wesleyan.edu/mathcs/graduate/ (<http://www.wesleyan.edu/mathcs/graduate/>).

FACULTY

Ilesanmi Adeboye

PHD, University of Michigan

DEPARTMENTAL UNDERGRADUATE ADVISING EXPERTS

DADCOM provides advice and transfer credit approval for students in mathematics. CADCOM provides advice and transfer credit approval for students in computer science.

COMPUTER SCIENCE MAJOR

ADMISSION TO THE MAJOR

To declare the computer science major, a student must have

- earned a C- or higher in COMP211;
- either earned a C- or higher in COMP212 or be enrolled in COMP212 and be earning a grade of C or higher based on completed work; and
- either earned a C- or higher in MATH228 or MATH261 or be enrolled in MATH228 or MATH261 and be earning a grade of C or higher based on completed work.
- Courses taken in Spring 2020, Fall 2020, or Spring 2021 may be taken Cr/U to satisfy the major declaration requirements, in which case a student must have earned Cr.

MAJOR REQUIREMENTS

To complete the computer science major, a student must complete the following courses:

- **Gateway courses:**
 - COMP211 and COMP212 (Computer Science I and II).
- **Core courses (one course from each of the following four areas):**
 - Models of computation: any **COMP** course numbered **300-305**.
 - Algorithms: any **COMP** course numbered **310-315**.

- Programming languages: any **COMP** course numbered **320-325**.
- Systems: any **COMP** course numbered **330-335**.
- **Two additional electives.** Any COMP course at the 300+ level except **COMP409-COMP410** can be used as an elective for the major.
- **Mathematical foundations:**
 - MATH228 (Discrete Mathematics) or MATH261 (Abstract Algebra).
 - Any other 200+ level MATH course.

Notes:

- No course may be used to satisfy more than one requirement.
- At most one individual or group tutorial may be used to satisfy major requirements unless prior approval is given.
- An individual or group tutorial may be used to satisfy a core area requirement only if prior approval is given.
- Only 1.0-credit courses taken A–F may be used to satisfy major requirements.
- Courses taken in Spring 2020, Fall 2020, or Spring 2021 may be taken Cr/U to satisfy major requirements, in which case a student must have earned Cr.

STUDENT LEARNING GOALS

- **Understanding abstraction:** At its heart, computer science is the study of abstractions for the purpose of understanding computation, and as such, students must learn appropriate levels of abstraction for solving computational problems. All courses in the curriculum contribute to this goal.
- **Programming:** Students must learn how to program in a high-level language, as such programming is the primary tool in computer science. This is typically how students are first exposed to the field, and our majors achieve this goal in their first or sophomore years by taking the gateway sequence COMP211–212.
- **Analysis:** Students must learn how to reason about computation; this includes analyzing algorithms and proving properties such as correctness and complexity, and requires an understanding of appropriate mathematical tools. The courses that focus primarily on this goal are COMP312 (Design and Analysis of Algorithms) and COMP321 (Design of Programming Languages).
- **Creation:** Students must learn how to create original computational structures; this requires an understanding of fundamental techniques in algorithm and data structure design and an ability to combine established techniques in novel ways. All courses in the curriculum contribute to this goal.
- **Limits:** Students must understand not only how to analyze and create computational structures, but also the limits of computation itself; this requires an understanding of the mathematical foundations and formalisms of computer science. This goal is primarily addressed in COMP301 (Automata Theory and Formal Languages).

TRANSFER CREDIT

The transfer credit policy for the COMP major is:

- You can transfer at most 2 courses per semester (or summer, or winter session) away towards the COMP major.
- You can transfer at most 4 courses in total towards the COMP major.

- You must take at least 2 of COMP211, COMP212, and MATH228 at Wesleyan.
- You must take at least three 300-level COMP courses used to satisfy the major requirements at Wesleyan.

RELATED PROGRAMS OR CERTIFICATES

Informatics and Modeling Certificate. The department is an active participant in the Informatics and Modeling Certificate (wesleyan.edu/imcp (<http://wesleyan.edu/imcp/>)). The certificate provides a framework to guide students in developing analytical skills based on the following two pathways:

- **Computational Science and Quantitative World Modeling (CSM):** wesleyan.edu/imcp/csm.html (<http://wesleyan.edu/imcp/>)
- **Integrative Genomic Sciences (IGS):** wesleyan.edu/imcp/igs.html (<http://wesleyan.edu/imcp/>)

The CSM pathway introduces students to modeling techniques and provides students with a foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena. The IGS pathway introduces students to the interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics. The department offers courses that support both pathways, such as COMP211 and COMP212, and also offers special interdisciplinary courses for the IGS pathway, such as COMP327 and COMP350. The certificate requirements are described in the links for the two pathways.

BA/MA PROGRAM

This program provides an attractive option for mathematics and computer science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit wesleyan.edu/grad/degree-programs/ba-ma.html (<http://wesleyan.edu/grad/degree-programs/ba-ma.html>). Advanced undergraduates may enroll in graduate (**500-level**) courses.

ADDITIONAL INFORMATION

COLLOQUIA AND SEMINARS

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in the computer science seminar.

HONORS

An undergraduate may achieve the BA with honors in computer science via the following route:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.

CAPSTONE EXPERIENCE

We encourage all students to participate in faculty research via individual tutorials and/or a Senior thesis. There is no mandatory capstone experience.

MATHEMATICS MAJOR

ADMISSION TO THE MAJOR

Every student is welcome to major in mathematics. Students are advised to finish calculus up to MATH222 and linear algebra (either MATH221 or MATH223), and MATH228 before making the decision.

MAJOR REQUIREMENTS

- A year of differential and integral calculus (typically MATH121 and MATH122)
- MATH221 or MATH223
- MATH222
- An elementary knowledge of algorithms and computer programming. (Successful completion of either COMP112 or COMP211 satisfies this requirement.)
- MATH261 and MATH225 (recommended for juniors or seniors)
- A coherent selection of four additional electives, chosen in consultation with an advisor from the department. Any 1.0 credit **MATH** course at the **200+** level can be used as an elective for the major.

Notes:

- Students who have completed a year of calculus in high school may place out of one or both of MATH121 and MATH122.
- An AP score of 4 or 5 on the AB calculus exam indicates the student should begin in MATH122.
- An AP score of 4 or 5 on the BC calculus exam indicates the student should consider beginning in any of MATH221, MATH222, or MATH223.
- Students may not earn credit for both MATH221 and MATH223.
- Students must complete either MATH228 or MATH261 by the end of their junior year.
- With advance approval from the departmental advisory committee, mild adjustments are allowed. For example, a Wesleyan course with substantial mathematical content but that is not listed in **MATH** may be used toward the four-electives requirement. Please note, however, that both MATH225 and MATH261 must be taken at Wesleyan to complete the major, and substitutions for these courses will not be approved.

STUDENT LEARNING GOALS

The department has the following learning goals for mathematics majors:

- Develop a basic understanding of, and computational facility with, major objects of mathematical and applied interest, such as differentiable functions, graphs, groups, manifolds, rings or vector spaces.
- Understand abstract mathematical reasoning, e.g., understand an abstract system of rules, find examples of objects that satisfy those rules, conjecture theorems from those examples, and prove those theorems.
- Understand some mathematical applications and ways to use mathematics in practice, and be able to make connections to topics outside of the strict course content.
- Students should be able to write about and speak about mathematics, clearly and elegantly.

LANGUAGE REQUIREMENT

Undergraduate majors in mathematics are encouraged to study languages while at Wesleyan; majors who are considering graduate study in mathematics should note that graduate programs often require a reading knowledge of French, German, and/or Russian.

BA/MA PROGRAM

This program provides an attractive option for mathematics majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit [wesleyan.edu/grad/degree-programs/bama.html](http://www.wesleyan.edu/grad/degree-programs/bama.html) (<http://www.wesleyan.edu/grad/degree-programs/bama.html>). Advanced undergraduates may enroll in graduate (**500-level**) courses.

ADDITIONAL INFORMATION

COLLOQUIA, SEMINARS, AND MATH CLUB

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in graduate seminars. All students interested in mathematics are invited to attend the annual Coven-Wood Lecture Series in Mathematics. The first talk in the series is accessible to students at all levels. The undergraduate Math Club hosts informal talks in mathematics and other mathematical activities.

HONORS

An undergraduate may achieve the BA with honors in mathematics via one of two routes:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.
- A strong performance in a suitable sequence of courses, normally including some graduate courses, selected in consultation with a member of the department's advisory committee. The candidate also is expected to prepare a public lecture on a topic chosen together with a faculty advisor.

CAPSTONE

- * SENIOR THESIS-two semesters
- * HONORS PRESENTATION
- * APPROVED GRADUATE COURSEWORK IN MATH
- * TUTORIAL WITH FACULTY

Students pursuing the Mathematics major are not required to complete a capstone experience. However, there are several options available if they wish to pursue one. These include:

- * **Graduate Coursework***: completing one or more approved graduate mathematics courses with a performance deemed satisfactory by the instructor(s). Students should consult with their major advisor or the department advisory committee to select appropriate coursework.
- * **Honors Presentation***: satisfactorily completing the public presentation related to departmental Honors
- * **Senior Thesis***: satisfactorily completing a Senior thesis under conditions monitored by the University Committee on Honors
- * **Tutorial with Mathematics Faculty***: Students may register for a tutorial with a faculty member to pursue study or research on a topic that will deepen or broaden the student's knowledge. Tutorials may involve independent research by the student, but this is not a requirement for the tutorial. To qualify as a capstone experience, the tutorial should culminate in a project or presentation by the student at the end of the semester.

In practice, students often complete more than one of the above experiences. Sophomores and juniors who are considering adding a capstone experience during their senior year may enjoy participating in the department's directed reading program and attending events and talks in the departmental Math Club.

MASTER OF ARTS IN MATHEMATICS OR COMPUTER SCIENCE

The requirements for the master of arts degree are designed to ensure a basic knowledge and the capacity for sustained, independent scholarly study.

COURSES

Six one-semester courses are required for the M.A. degree in Mathematics in addition to research units MATH549 and MATH550. These courses must be at the 500-level and chosen with permission of the M.A. advisor and the department's Graduate Education Committee (GRECO).

A total of six one-semester courses are required for the M.A. degree in Computer Science. The six courses must include COMP549 and COMP550. These courses are expected to be 500-level and chosen with permission of the M.A. advisor and the department's Graduate Education Committee (GRECO). Any alternative choices must be approved by the M.A. advisor and GRECO.

PROGRESS AND QUALIFYING EXAMS

Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree. For students completing the BA/MA program, relevant coursework usually begins in the final year of undergraduate student. Any program leading to the MA degree must be planned in consultation with the departmental Graduate Education Committee.

TEACHING

MA students receiving a stipend are obliged to serve as teaching assistants for 10 hours per week during the fall and spring academic semesters. Those who do not receive a stipend are also eligible to work as teaching assistants.

THESIS AND DEFENSE

The thesis is a written report of a topic requiring an independent search and study of the literature under the supervision of the advisor. Performance is judged largely on scholarly organization of existing knowledge and on expository skill, but some indications of original insight are expected.

In the final examination, an oral presentation of the MA thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill. The defense may include an oral examination on coursework, including material associated with the general preliminary exam. A faculty committee evaluates the candidate's performance.

ADDITIONAL INFORMATION

For additional information, please visit wesleyan.edu/mathcs/graduate/ (<http://wesleyan.edu/mathcs/graduate/>).

DOCTOR OF PHILOSOPHY IN MATHEMATICS

The doctor of philosophy degree demands breadth of knowledge, an intense specialization in one field, a substantial original contribution to the field of specialization, and a high degree of expository skill.

Five years are usually needed to complete all requirements for the PhD degree, and two years of residence are required. It is not necessary to obtain the MA degree en route to the PhD degree. Students may choose to obtain the MA in computer science and the PhD in mathematics. Any program leading to the PhD degree must be planned in consultation with and approved by the departmental Graduate Education Committee.

Possible fields of specialization for PhD candidates include algebraic geometry, analysis of algorithms, arithmetic geometry, arithmetic theory of quadratic forms, combinatorics, complex analysis, computational logic, dynamical systems, enumerative combinatorics, ergodic theory, geometric group theory, graph theory, higher order languages, homogeneous dynamics, homotopy type theory, hyperbolic geometry, information security, knot theory, logic programming,

mathematical logic, metric geometry, model theory, network and data science, non-Euclidean geometry, number theory, probability theory, proof theory, and topological dynamics.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. Course loads below three credits must be approved by the Graduate Education Committee.

COURSES

At least 16 one-semester courses are required for the PhD degree. Several of the courses are to be in the student's field of specialization, but at least three one-semester courses are to be taken in each of the three areas: algebra, analysis, and topology. First-year students are expected to take the three two-semester sequences in these areas. However, students interested in computer science may replace coursework in one of these areas with coursework in computer science, with the permission of the departmental Graduate Education Committee.

LANGUAGE REQUIREMENT

Students must pass reading examinations in either French, German, or Russian. It is strongly recommended that PhD candidates have or acquire a knowledge sufficient for reading the mathematical literature in all three of these languages. Knowledge of one of these three languages is required.

PROGRESS AND QUALIFYING EXAMS

General preliminary examinations. The general preliminary examinations occur in the summer after the student's first year of graduate study and cover algebra, analysis, and topology (or computer science, in the case of students including this option among their three first-year subjects).

Special preliminary examination. For a graduate student to become an official PhD candidate as recognized by the department, the student has to pass the Special Preliminary Examination, an oral examination that must be passed by the end of the student's third year of graduate work. The student's Examination Committee determines the subject matter content of the Special Preliminary Examination. This committee is chaired by the student's dissertation advisor and must include at least two additional faculty members of the department. The Special Preliminary Examination will be based primarily, but perhaps not exclusively, on the student's field or specialization. Specific details of the form and content of the examination shall be determined by the Examination Committee at the time the subject matter content is discussed.

TEACHING

Most students work as teaching assistants beginning in the first year of study.

After passing the general preliminary examinations, most PhD candidates teach one course per year (typically of 20 students, supervised by senior faculty) working as teaching assistants in the remaining semester.

DISSERTATION AND DEFENSE

- **Dissertation.** The dissertation, to be written by the PhD candidate under the counsel and encouragement of the thesis advisor, must contain a substantial original contribution to the field of specialization of the candidate and must

meet standards of quality as exemplified by the current research journals in mathematics.

- **Selection of dissertation advisor.** A graduate student should select a dissertation advisor by the end of the student's second year of graduate work.
- **Defense of dissertation.** The final examination is an oral presentation of the dissertation in which the candidate is to exhibit an expert command of the thesis and related topics and a high degree of expository skill.

MEDIEVAL STUDIES PROGRAM

The medieval studies program provides an interdisciplinary context for students who wish to study the European Middle Ages. Students normally concentrate on one of three fields: art history and archaeology, history and culture, or language and literature. They are also expected to do coursework in the other fields. In certain cases the program may also provide a framework for students wishing to cross the temporal, topical, and geographical boundaries of medieval studies to consider such problems as the relationship between classical and medieval literature or art, or the broader history of the preindustrial European societies.

Students have a number of opportunities to experience medieval materials firsthand, including working with rare manuscripts in Special Collections, singing in the Collegium Musicum, or participating on an archaeological dig. The Medieval Studies Department brings distinguished visitors to campus each year to give public talks and to work one-on-one with students. Field trips to places such as the Cloisters Museum in New York City and to concerts in the nearby area foster a sense of community in addition to providing access to materials.

The skills typically acquired by medieval studies students—knowledge of European culture, ability to analyze “foreign” texts, experience handling artifacts and manuscripts, and familiarity with Latin—provide good preparation for advanced degrees, whether in the humanities, law, or other professional schools.

MEDIEVAL STUDIES MAJOR

ADMISSION TO THE MAJOR

No specific courses are required for admission to the Medieval Studies major.

MAJOR REQUIREMENTS

Medieval Studies majors take classes in a broad range of fields, including art history, archaeology, history, languages and literature, music history, manuscript studies, and religious studies. They are required to take 10 upper-level courses that will normally conform to the following:

- Four courses in the student’s chosen field of specialization
- Two courses in a second field of Medieval Studies
- One course in a third field of Medieval Studies
- Three additional courses in any area of Medieval Studies, or in another field deemed, in consultation with the advisor, to be closely related to the student’s work in subject matter or method. For example, a student specializing in medieval history may count toward the major a course in ancient history or historical method, while a student specializing in medieval literature may include a course in classical literature or in the theory of literary criticism.

A student may take more than four courses in his/her primary area of specialization, but only four will be counted toward the major.

At least one of the courses in the primary area of specialization should be a seminar, as should at least one of the courses in either the second or third fields.

STUDENT LEARNING GOALS

Medieval Studies majors will be expected to master the following skills:

- An ability to interpret intersections among the many cultures, religions, ethnicities, and identities of the European Middle Ages.
- The critical use of historical evidence across a range of disciplines.
- A comparative approach to medieval sources of various kinds (material and textual).
- The ability to construct arguments informed by ideas of temporalities and geographies that are currently debated by scholars in Medieval Studies.

STUDY ABROAD

Students majoring in the program are encouraged to spend at least one semester studying abroad. Programs of study must be approved in advance by the student's advising committee.

LANGUAGE REQUIREMENT

All medieval studies majors are expected to have reading knowledge (usually four semesters or the equivalent) of at least one modern European foreign language by the beginning of their senior year. Latin is also strongly recommended.

HONORS

Honors and high honors are awarded by vote of the Medieval Studies faculty to students whose coursework is judged to be of sufficiently high quality and who have done outstanding work on one or more of the following writing projects: a senior thesis, a senior essay, or a seminar paper nominated for honors or high honors by the instructor in the seminar. All writing projects will be evaluated by at least two faculty members before a recommendation for program honors is made. By vote of the medieval studies faculty, those who have been recommended for high honors in the program may be nominated for University Honors.

CAPSTONE EXPERIENCE

Students in the program are normally expected to complete at least one long paper that may be a senior thesis, a senior essay, or a seminar paper.

MEDIEVAL STUDIES MINOR

MINOR REQUIREMENTS

The medieval studies minor provides students with a basic knowledge of the European Middle Ages in the valuable context of an interdisciplinary framework.

Students minoring in medieval studies complete six courses cross-listed with **MDST** or approved by the chair of the Medieval Studies program. No more than three of these courses may be taken in any one department and at least two must be taken in arts and humanities and two in social sciences. At least four of these courses must be taken at Wesleyan; one or two may be taken while studying abroad or during the summer.

Minors are strongly encouraged to take at least two years of a modern foreign language. Minors who anticipate going on to graduate work in the medieval or early modern period are strongly encouraged to take at least two years of Latin as well.

MOLECULAR BIOLOGY AND BIOCHEMISTRY

Molecular Biology and Biochemistry (MB&B) focuses on the molecular basis of life — on mechanisms by which cells process, integrate, and act on information to create and propagate living organisms. In keeping with the culture of liberal education at Wesleyan University, the MB&B major is designed to accommodate a broad range of academic interests *and* allow students to concentrate in particular disciplines such as molecular biology, biochemistry, biophysics, structural biology, cell biology, genetics, epigenetics, genomics, and computational modeling. The interdisciplinary nature and flexibility of the MB&B major also enables students to couple their affinity for biological sciences with other majors, including chemistry, mathematics and computer science, science in society, psychology, government, economics, etc. MB&B provides foundational training for a range of professional careers in medicine, public health, pharmaceutical/biotechnology industry, public policy, science journalism, and teaching, among others. We welcome students of all interests and backgrounds to join us.

MOLECULAR BIOLOGY AND BIOCHEMISTRY MAJOR

MAJOR DESCRIPTION

The major in Molecular Biology and Biochemistry (MB&B) emphasizes the application of modern molecular science to study the mechanisms of biological processes. In keeping with the culture of liberal education at Wesleyan university, the MB&B major is designed to accommodate a variety of interests and allow students to concentrate in particular areas such as Molecular Biology, Molecular Biophysics, Biochemistry, Cell Biology, Genetics, Integrative Genomic Sciences, and Computational Sciences and Modeling. The interdisciplinary nature and flexibility of the MB&B major also enables students to couple their affinity for biological sciences with other disciplines including mathematics, computer science, psychology, economics, government, anthropology, science in society, chemistry, biology etc. The MB&B major provides excellent preparation for a range of professional careers in medicine, public health, pharmaceutical/biotechnology industry, public policy, science journalism, and teaching, among others.

ADMISSION TO THE MAJOR

Students are encouraged to begin coursework toward the MB&B major in the first year so that they can take maximum advantage of upper-level **MB&B** courses, research, and study-abroad opportunities in later years. However, the major can certainly be completed successfully if initiated during sophomore year.

A prospective MB&B major can begin with the core introductory biology series (MB&B181 and MB&B182; associated laboratory MB&B191 and MB&B192) and/or the core general chemistry series (CHEM141/CHEM143 and CHEM142/CHEM144 ; associated laboratory, CHEM152). MB&B181 is offered in small sections rather than a single, large lecture class. These small sections allow for problem-based learning at a more individualized pace as students master the first semester of university-level biology.

MAJOR REQUIREMENTS

The molecular biology and biochemistry major requires the following coursework:

Code	Title	Hours
Introductory Courses		
MB&B181 & MB&B191	Principles of Biology I: Cell Biology and Molecular Basis of Heredity and Principles of Biology I--Laboratory	1.5
MB&B182 & MB&B192	Principles of Biology II and Principles of Biology II--Laboratory	1.5
General Chemistry		
CHEM141/143	General Chemistry I	1
CHEM142/144	General Chemistry II	1
CHEM152	Introductory Chemistry Laboratory	0.5
Gateway Molecular Biology		
MB&B208	Molecular Biology	1
Organic Chemistry		
CHEM251	Principles of Organic Chemistry I	1
CHEM252	Principles of Organic Chemistry II	1
Mathematics		
Select one Mathematics course (calculus or statistics recommended)		1
Physical Chemistry		
MB&B381	Physical Chemistry for the Life Sciences	1
Biochemistry		
MB&B383	Biochemistry	1
Advanced Laboratory		
MB&B394 or MB&B395	Advanced Laboratory in Molecular Biology and Genetics Structural Biology Laboratory	1
Electives		
Select two elective courses, at least one of which must be a 300-level MB&B course		2

We require one semester of a Chemistry lab course, which would typically be satisfied by Introductory CHEM 152 (but could be satisfied instead by the Intermediate Chemistry Lab, CHEM 257). The Chemistry lab may be taken in fall or spring.

One semester of college mathematics is required (AP credit is not accepted). Students with deep theoretical knowledge in areas of mathematics, as evidenced by advanced coursework (e.g., in physics) or quantitative forms of research, may petition for the use of a less theoretical mathematics course (e.g., QAC courses) to satisfy the MB&B math major requirement.

One advanced laboratory class is required. Majors interested in a concentration in molecular biology should take MB&B394, which is offered every spring semester and generally taken in the junior or senior year. Students interested in the molecular biophysics minor should take MB&B395, which is offered every other year in fall semester. The Chemistry Integrated Laboratory courses (CHEM375 and CHEM376) do not satisfy this requirement. Students taking both of the advanced lab courses (MB&B394 and MB&B395) may count one of the two courses as their 300-level elective.

MB&B381 may be replaced by two semesters of Introductory Physics PHYS111 and PHYS112, or PHYS113 and PHYS116) or by Physical Chemistry

(CHEM337 and CHEM338). In this case MB&B381 may count as one of the required **300**-level electives.

One of the two required electives must be a **300**-level MB&B course. This may be fulfilled by taking a 1.0-credit **300**-level course, or by taking two 0.5-credit **300**-level courses.

The second elective may be a **200**-level or **300**-level MB&B course.

Two consecutive semesters of research (in the same laboratory) for credit (MB&B423 and MB&B424, Advanced Research Seminar) with an MB&B faculty member (or a pre-approved faculty member in another department conducting research in molecular biology/biochemistry/biophysics) can be substituted for the **200**-level elective, provided that it is taken for 1.0 credit each semester and a grade of B or higher is achieved. Honors Thesis (MB&B409 and MB&B410) may not be used to satisfy an elective requirement.

For potential elective courses outside of MB&B, including study abroad courses, students must consult with their faculty advisor and the MB&B chair in a timely manner. Prior approved courses outside MB&B that can be taken to satisfy the lower-level elective requirement include BIOL218 Developmental Biology, BIOL334 Shaping the Organism, and CHEM396 Molecular Modeling and Design. These courses offered by other (non-MB&B) departments may only be used to satisfy the 200-level elective requirement for completion of the MB&B major (even if the course has a 300-level designation).

Pre-meds and pre-grads: Organic chemistry laboratory courses (CHEM257 and CHEM258) are requirements for virtually all graduate and medical schools. Most medical schools also require one year of physics with related labs and two semesters of mathematics. Many MB&B majors take **200**- and **300**-level courses over the curriculum requirement to better prepare for graduate or medical school.

All of the life science community is enriched by the weekly departmental seminar series (<https://cascade1.wesleyan.edu/entity/open.act?type=page&id=129642b18185062c70413ea600c4caf8&confid=23c7cbcf8185062c01b56848b4fd8669>) held on Wednesdays at 12:10pm during the Academic Year, in which speakers are invited from different institutions to speak about their work. All are welcome to come learn about the latest cutting-edge research in the life sciences. You may receive a quarter credit for your attendance by enrolling in MB&B338 and/or MB&B339.

COURSES FOR NON-MAJORS

Non-life-science majors are encouraged to consider MB&B103, MB&B107, MB&B119, MB&B181, or MB&B182 as part of their program to meet NSM requirements. See WesMaps (<https://www.wesleyan.edu/wesmaps/>) for current course offerings.

MB&B228 is an introductory biochemistry course for nonmajors intending to pursue a medical degree.

STUDENT LEARNING GOALS

- Acquire mastery of core foundational knowledge of molecular biology and biochemistry
- Acquire selective familiarity with our primary literature and bioinformatic databases
- Achieve familiarity with major questions at the forefront of our field

- Acquire mastery of analytical, quantitative, and creative approaches to analyze problems in our field and to synthesize them in order to create logical hypotheses and experimental plans
- Acquire ability to use multidisciplinary approaches to synthesize a cogent experimental plan
- Acquire mastery of important methodologies in our field
- Acquire mastery of a subset of hands-on methodologies in our field
- Acquire proficiency in oral, written, and visual modes of effective scientific communication

STUDY ABROAD

Like all Wesleyan students, MB&B majors often choose to study abroad for a semester or more. In the past few years, MB&B majors have visited Australia, Chile, Denmark, South Africa, England, France, Tanzania, and Germany, among other countries. During their semester abroad, MB&B majors may choose to take courses that satisfy their major or general education requirements, and may also arrange to do research at the host institution. Decisions about whether courses taken abroad can count for credit towards the MB&B major are made the department on a case-by-case basis. Students must have the appropriate "course approval" form signed before departure by the Chair of the MB&B department, and be sure to inform the Chair if they make changes to their schedule on arrival at their host institution.

ADVANCED PLACEMENT

Students with AP Biology scores of 4 or 5 may be eligible to take a test for placing out of MB&B181 after consulting with the MB&B department. However, even students with an AP Biology score of 4 or 5 are strongly encouraged to enroll in MB&B181, since the AP Biology course does not include the full range of topics discussed in MB&B181, and since very few students have been able to pass the place-out test when requested.

Students interested in placing out of MB&B181 in the fall semester should contact Professor Michelle Murolo (mmurolo@wesleyan.edu (<http://mailto:mmurolo@wesleyan.edu/>)) regarding the placement exam.

Both MB&B181 and MB&B182 are considered essential preparation for our upper level courses; **students are highly encouraged to enroll in both semesters.**

Prospective MB&B majors with a score of 4 or 5 in AP Chemistry must meet the Chemistry Department requirements for advanced placement credit.

AP credit is not accepted for the math requirement.

PRIZES

Hawk Prize: The gift of Philip B. Hawk, Class of 1898, as a memorial to his wife, Gladys, to the students who have done the most effective work in biochemistry.

Scott Biomedical Prize: Awarded to a member or members of the molecular biology and biochemistry senior class who have demonstrated excellence and interest in commencing a career in academic or applied medicine.

William Firshein Prize: In honor of founding faculty member William Firshein, awarded to the graduating MB&B student who has contributed the most to the interests and character of the molecular biology and biochemistry department.

American Society for Biochemistry and Molecular Biochemistry Honor

Society: The ASBMB Honor Society recognizes exceptional undergraduate juniors and seniors pursuing a degree in the molecular life sciences. Students are recognized for their scholarly achievement, research accomplishments, and outreach activities in the molecular life sciences.

American Society for Biochemistry and Molecular Biochemistry Research

Award: The ASBMB rewards exceptional rising seniors pursuing a degree in the molecular life sciences who have developed an exciting research project. More information is available on the ASBMB web page (<http://www.asbmb.org/education/studentchapters/awards/ugresearch/>).

Dr. Neil Clendeninn Prize: Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed his or her sophomore year and in that time have exemplified those qualities of character, leadership, and concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

RELATED PROGRAMS OR CERTIFICATES

Molecular Biophysics Minor. Molecular biophysics is an interdisciplinary area of research situated at the intersection of molecular biology, chemistry, chemical biology, physical chemistry, and molecular physics. Wesleyan's program includes faculty in the MB&B, chemistry, physics, and biology departments. Students are strongly encouraged to conduct independent research in the laboratory of a molecular biophysics program faculty member.

Informatics and Modeling Minor. The Integrative Genomic Sciences (IGS) pathway is an integrative program of coursework and research in the areas of bioinformatics, genomics, computational biology, and bioethics. IGS involves faculty and students in the life sciences, physical sciences, information sciences, and philosophy.

BA/MA PROGRAM

This program provides an attractive option for life science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience.

ADDITIONAL INFORMATION

UNDERGRADUATE RESEARCH OPPORTUNITIES

Undergraduate research is an important part of the program for many MB&B majors. Wesleyan's small but excellent graduate program makes it possible for majors to work alongside PhD and MA students at the cutting edge of discovery in molecular biology and biochemistry. To complement laboratory experiences, MB&B majors are also encouraged to gain exposure to current research through journal clubs and seminars. Undergraduate research encompassing multiple semesters or summers may be used towards completion of a senior honors thesis, as well as the basis for pursuing a Master of Arts in MB&B through the BA/MA program.

For initial entry into the world of research, most students sign up for a semester of research for 0.5 or 1.0 credit (MB&B423 or MB&B424). This option allows students to test the waters with respect to research topics, environment, faculty, and graduate students in the department, without an overly long or

binding commitment. Students are expected to dedicate at least 10 hours per week on their research project, which includes attendance in weekly group meetings and reading and discussion of current literature with group members, in addition to planning and performing experiments. In order to register for this individual tutorial, students must choose a faculty research mentor and submit an electronic tutorial form using the drop/add system in their Portal. This course may be taken more than once.

MB&B majors not interested in laboratory work are encouraged to gain exposure to current research through journal clubs and seminars.

HONORS

To be considered for departmental honors, a student must:

- be an MB&B major and be recommended to the department by a faculty member. The student is expected to have a B average (grade point average 85) in courses credited to the major.
- submit a thesis based on laboratory research or library research, performed under the supervision of an MB&B faculty member or pre-approved faculty member in another department conducting research in the fields of molecular biology, biochemistry, or biophysics.

Two readers (in addition to the research mentor) must be selected for review of honors theses in MB&B. It is expected that these readers will be MB&B research faculty; any exception requires approval of the MB&B department chair.

CAPSTONE EXPERIENCE

Independent laboratory research is strongly encouraged as it provides students with an exceptionally valuable learning experience. As research students, MB&B majors interact with faculty and graduate students in an environment that fosters strong intellectual and social connections. Moreover, many graduate and professional schools specifically recruit candidates with research experience. MB&B majors not interested in laboratory research can get a measure of this experience through participation in departmental and inter-departmental seminar series and journal clubs.

Faculty research interests cover an exciting range of current topics in molecular and cellular biology and biochemistry. Research areas include DNA replication and repair mechanisms, membrane transport processes, DNA-protein interactions, gene regulation, genome organization and structure, and membrane protein structure-function and dynamics. Students are encouraged to learn more about ongoing research (https://www.wesleyan.edu/mbb/grad_studies/research_areas.html) in the MB&B department.

All MB&B majors participate in independent research projects as part of our experimental-based advanced laboratory courses MB&B394 and MB&B395, at least one of which is required. Students interested in additional research can pursue the following options:

- Independent Research for Course Credit
- Summer Research Program
- Honors Thesis Research
- BA/MA Fifth Year Master's Program

DOCTOR OF PHILOSOPHY IN BIOLOGY AND BIOCHEMISTRY

The Molecular Biology and Biochemistry (MB&B) Department supports a graduate program with emphasis in molecular genetics, molecular biology, biochemistry, and molecular biophysics. The MB&B graduate program is designed to lead to the degree of doctor of philosophy. The graduate program is an integral part of the departmental course offerings. Graduate students serve as teaching assistants in undergraduate courses, generally during their first two years. The emphasis of the program is on an intensive research experience culminating in a dissertation. The program of study also includes a series of courses covering the major areas of molecular biology, biochemistry, and biophysics; journal clubs in which current research is discussed in an informal setting; practica designed to introduce first-year students to the research interests of the faculty; and several seminar series in which either graduate students or distinguished outside speakers participate. The low student-faculty ratio (2.5:1) allows programs to be individually designed and ensures close contact between the student and the faculty.

COURSES

Ideally, incoming students will have completed courses in general biology, cell and molecular biology, genetics, biochemistry, general chemistry, organic chemistry, physical chemistry, and calculus. Deficiencies in any of these areas would normally be made up in the first year on a case by case basis. A core curriculum of graduate courses in the following areas is given on a two-year cycle:

- nucleic acid structure,
- biosynthesis and its regulation,
- regulation of gene expression,
- regulation of chromosome dynamics,
- structural mechanisms and energetics of protein-nucleic-acid interactions,
- protein structure and folding,
- protein trafficking in cells,
- physical techniques,
- molecular genetics,
- the cell cycle,
- biological spectroscopy,
- bioinformatics and functional genomics, and
- molecular, biochemical, and cellular bases of cancer and other human diseases.

Additional graduate course electives are also available in some years. Within this general framework, an individual program of study tailored to fit the student's background and interests is designed in consultation with the graduate committee and the student's advisor. Graduate students must take at least 3.0 credits of 'lecture-style' courses in order to be eligible to take the Stage I Qualifying examination, which is generally taken in January of the second year of study.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

The criteria for admission to candidacy for the PhD will be performance in courses, aptitude for research, and two qualifying examinations taken in the second year. The Stage I Qualifying Examination is a written examination taken in January, and the Stage II Qualifying Examination is an oral defense of an original research proposal presented by the middle of the fourth semester.

TEACHING

PhD candidates in the MB&B department are expected to participate as teaching assistants (TAs) in undergraduate courses for at least their first 3 semesters. If available, some students may then receive research assistant stipends (RAs) from extramural grants for the remainder of their PhD studies; otherwise, students may continue to receive TA stipends with associated teaching responsibility for the remainder of their PhD studies.

RESEARCH

PhD students will normally complete two lab rotations during their initial two semesters, with the goal of being exposed to a broad range of research techniques and topics in molecular biology. Students generally select one of these rotation labs to pursue their PhD thesis work by the end of the first year, and will begin working on their thesis project during the first summer. The overarching goals of the research experience are to: (i) develop expertise in research methodologies; (ii) develop expertise at the cutting edge of a scientific field, including mastery of relevant literature; (iii) to contribute to the advancement of the field, typically culminating in two published papers in international peer-reviewed scientific journals; (iv) to become effective presenters of scientific data, in the context of their own published manuscripts, seminar presentations, written reports and thesis documents, evaluating published data in journal clubs and coursework, and by presenting at a professional scientific meeting. The MB&B department offers research opportunities across a broad range of topics, including but not limited to:

- control of DNA replication
- mechanism of protein secretion
- global regulations of ribosomal biogenesis in the yeast *S. cerevisiae*
- mechanisms of DNA replication and repair
- protein-protein and protein-nucleic-acid interactions
- the structural dynamics of nucleic acids and proteins
- chromosome structure and gene expression
- UV resonance Raman spectroscopy of biological macromolecules
- biological assembly mechanisms
- protein fiber formation in disease
- enzyme mechanisms
- the olfactory system and new frontiers in genome research
- elucidation of membrane protein function by x-ray crystallography

CONCENTRATIONS

PhD students can pursue interdisciplinary specializations within the context of their PhD studies. Molecular Biology and Biochemistry offers two interdisciplinary paths in the areas of Molecular Biophysics (<http://www.wesleyan.edu/molbiophys/>) and Informatics and Modeling. Specialization in these areas is achieved through course work, seminars, journal clubs, and dissertation work performed under the guidance of program faculty.

DISSERTATION AND DEFENSE

The most important requirement is a PhD thesis, an original contribution to the field that merits publication. The candidate will receive advice and guidance from their advising committee but must demonstrate both originality and scientific competence. Normally, the candidate will choose a thesis topic during the second year of graduate work in consultation with faculty mentors. Students will select a thesis committee consisting of three additional faculty members, chosen by the student and thesis advisor, with at least two of these members being from the MB&B department. Thesis committee meetings must be scheduled at least once per year in order to provide committee members with updates on progress towards the degree. This committee determines when sufficient experimental work has been completed to begin writing the thesis towards a defense of the body of work. This committee serves as the final examination committee that must approve the final written document and its defense.

ADDITIONAL INFORMATION

For additional information, please visit the department website (https://www.wesleyan.edu/mbb/grad_studies/handbook.html).

MASTER OF ARTS IN MOLECULAR BIOLOGY AND BIOCHEMISTRY

The MB&B Department offers graduate work leading to the degree of Master of Arts through the BA/MA program. The program has a strong research orientation, but also includes course work, seminars, and, in some cases, teaching. Students interested in the BA/MA program should declare their intention to do so no later than early in their senior year to permit the design of an acceptable program with a research advisor. The MB&B Department may also grant the degree of Master of Arts to students in the PhD program who do not complete the PhD.

COURSES

Masters students are required to complete six credits. A typical schedule for five of the six credits can be found in the chart below. With permission from the department, students who received credit in 300-level MB&B electives that were not used to fulfill major requirements for their BA degree (in MB&B or

another major) may apply them towards the MA degree requirements. BA/MA students are expected to give an oral presentation on their research as part of our graduate seminar series.

First Year		
Fall		Hours
MB&B 500-LEVEL ELECTIVE	Course MB&B 500-LEVEL ELECTIVE Not Found	1.0
MB&B549	Advanced Research Seminar, Graduate	1.0
MB&B585 or MB&B507	Seminar in Molecular Biology or Molecular Biophysics Journal Club I	.5
MB&B557	Research Seminars in Molecular Biology	0.25
MB&B338	Biology and MB&B Symposium I	.25
Hours		3
Spring		
MB&B 500-LEVEL ELECTIVE	Course MB&B 500-LEVEL ELECTIVE Not Found	1.0
MB&B550	Advanced Research Seminar, Graduate	1.0
MB&B586 or MB&B508	Seminar in Molecular Biology or Molecular Biophysics Journal Club II	.5
MB&B558	Research Seminars in Molecular Biology	0.25
MB&B539	Biology and MB&B Symposium II	.25
Hours		3
Total Hours		6

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

Progress and Qualifying Examinations are not required for the MB&B MA degree.

TEACHING

There are no requirements to TA for the BA/MA program.

RESEARCH

MA students will continue research they began as undergraduate students. This includes at least one summer of full-time research. MA students will pursue a thesis topic that addresses important scientific questions in the field. MA students will develop expertise in cutting edge methodologies in molecular biology and biochemistry, extensively read the literature relevant to their thesis project, and present their results at a departmental seminar. MA students often contribute their data towards publication of a co-authored, peer-reviewed journal article, but this is not a formal requirement for the degree.

CONCENTRATIONS

Students in the BAMA program in MB&B may petition the department to pursue a concentration in Molecular Biophysics. To complete their certification in Molecular Biophysics, the student must engage in research under the mentorship of one of the program faculty, choose elective courses within the field (<https://>

www.wesleyan.edu/molbiophys/courses/electives.html) and participate in the Molecular Biophysics Journal Club.

THESIS AND DEFENSE

MB&B's BA/MA and terminal MA students are expected to submit and orally defend a formal thesis document that describes the research they have carried out in partial fulfillment of the Master's degree requirements. BA/MA students will select a thesis committee in the first semester of the MA year. The thesis committee will consist of their research advisor and two additional faculty members where at least one is from the MB&B department. Upon completing the research goals for the thesis, and in consultation with their thesis committee, students will complete their MA thesis document and schedule an oral defense. The thesis committee serves as the final examination committee that must approve the final written document and its defense.

ADDITIONAL INFORMATION

Students may declare their interest in the program as early as their sophomore year. They should discuss it with their faculty mentor/Principal Investigator and their major advisor in order to prepare for the graduate program while an undergraduate. Students are admitted to the BA/MA program in the home department of their faculty mentor/PI regardless of their undergraduate major. Admission is based on faculty sponsorship and a comprehensive evaluation of academic performance.

Application requirements include a Research Proposal, proposed Program of Study, Personal Statement, Academic Transcript, and two letters of recommendation. The application is online. More information is available on the Graduate Studies webpage (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html).

There are two application deadlines, one in the Fall semester (December 1) and one in the Spring semester (March 1). Students should apply to the BA/MA program in the semester prior to the semester in which the BA degree is completed. For example, a student completing the BA in May should apply the previous fall, and a student completing the BA in December should apply the previous spring.

MUSIC

The Music Department is based on the belief that all of the world's musics warrant close study and that all musicians should cultivate the ability to engage with unfamiliar musical traditions. The department provides performance opportunities for the entire Wesleyan community through orchestra, Chinese orchestra, concert choir, the Collegium Musicum, organ, South Indian voice and percussion instruction, wind ensemble, jazz orchestra, Korean drumming and creative music ensemble, laptop ensemble, Javanese gamelan, West African drumming, South Indian music, steel band, and taiko. These offerings are supplemented by an extensive private lessons program. Courses in music history, music as a cultural practice, music theory, and composition are offered at both undergraduate and graduate levels. Music majors design their own programs of study in consultation with an advisor. Program proposals must demonstrate a balance between performance, historical/cultural study, and music theoretic/compositional investigation. Each proposal is reviewed by the director of undergraduate study and ratified by the entire department.

FACULTY

Jane Alden

BMU, Manchester University; MMU, King's College; PHD, University of North Carolina at Chapel Hill
Professor of Music; Professor, Medieval Studies

B. Balasubrahmaniyan

BA, University of Madras; MA, University of Madras; MPHIL, University of Madras; PHD, University of Madras
Adjunct Associate Professor of Music

Neely Bruce

BMU, University of Alabama; DMU, University of Illinois Urbana; MAA, Wesleyan University; MMU, University of Illinois Urbana
John Spencer Camp Professor of Music; Professor of Music

Eric Charry

BMU, New England Conservatory of Music; MFA, Princeton University; MMU, New England Conservatory of Music; PHD, Princeton University
Professor of Music

Alcee Chriss

BM, Oberlin College; MM, Oberlin College
Artist-in-Residence, Music; University Organist

John Wesley Dankwa

BA, University of Cape Coast; MA, University of Cape Coast; PHD, Wesleyan University
Assistant Professor of Music

Saida Daukeyeva

BMU, Moscow State Tchaikovsky Conservatory; PHD, Moscow State Tchaikovsky Conservatory; PHD, School of Oriental and African Studies, University of London
Assistant Professor of Music; Assistant Professor, Russian, East European, and Eurasian Studies

Roger Mathew Grant

BM, Ithaca College; PHD, University of Pennsylvania
Dean of the Arts and Humanities; Associate Professor of Music

I. Harjito

MA, Akademi Seni Karavitan

University Professor of Music

Jay Clinton Hoggard

BA, Wesleyan University; MA, Wesleyan University
Professor of Music; Chair, Music; Professor, African American Studies

Ronald J. Kuivila

BA, Wesleyan University; MFA, Mills College
Professor of Music; Director, Electronic Music and Recording Studios

Paula Matthusen

BM, University of Wisconsin at Madison; MA, New York University; PHD, New York University
Professor of Music

David Paul Nelson

BA, Kalamazoo College; MFA, California Institute of Arts; PHD, Wesleyan University
Adjunct Associate Professor of Music

Nadya Potemkina

DMA, The University of Memphis; MM, University Nthrn Iowa; MM, Ball State University
Adjunct Associate Professor of Music; Adjunct Associate Professor, Russian, East European, and Eurasian Studies

Prof. Sumarsam

BA, Akademi Seni Karavitan; MA, Wesleyan University; PHD, Cornell University
Winslow-Kaplan Professor of Music; Professor of Music

Su Zheng

BA, Central Conservatory of Music; MA, New York University; PHD, Wesleyan University
Associate Professor of Music; Associate Professor, Feminist, Gender, and Sexuality Studies; Associate Professor, East Asian Studies

VISITING FACULTY

Noah Baerman

BM, Rutgers U School Arts; MM, Rutgers U School Arts
Director, Jazz Ensemble; Vis Adj Prof in Lib Studies

John E Biatowas

BA, Colgate University; MA, University of Connecticut
Director, Chamber Music Ensemble

Salvatore LaRusso

BMU, Eastman School Of Music; MS, Fairfield University
Director, Wesleyan Wind Ensemble

Ken Lipenga

Visiting Scholar in Music

Chia-Yu Joy Lu

BFA, National Taiwan Normal Unvers; MA, University of Sheffield
Director, Chinese Music Ensemble

Marvin Nizer McNeill

Graduate Student, ETHN-PHD; Visiting Instructor in Music

Marichal B Monts

BA, Wesleyan University
Conductor, Ebony Singers

Briele Scott

MM, University of Delaware
Graduate Student, ETHN-PHD; Visiting Instructor in Music

Fumi Tanakadate

BA, Wesleyan University; MA, Manhattan School Music
Visiting Instructor in Music

Michael Weinstein-Reiman

PHD, Columbia University
Visiting Assistant Professor of Music

Matt Wellins

BA, Bard College; MA, Wesleyan University

PRIVATE MUSIC LESSON INSTRUCTORS

Stan Scott - Banjo

Roy Wiseman - Bass

Garrett Bennett - Bassoon

Julie Ribchinsky - Cello

Pheeroan Aklaiff - Drums

Peter Craig Edwards - Traditional Fiddle Styles

Meera Gudipati - Flute

Robert Hoyle - French Horn

Cem Duruoz - Guitar

Tony Lombardozi - Guitar, Jazz and Blues

Megan Sesma - Harp, Classical and Folk

Garrett Groesbeck - Koto

Stan Scott - Mandolin/Guitar/North Indian Vocal

Libby Van Cleve - Oboe

Eugene Bozzi - Percussion and Drums

Carolyn Halsted - Piano

Yvonne Troxler - Piano

Fred Simmons - Piano, Jazz

John Bergeron - Recording Studio Production

Garrett Bennett - Saxophone

Matthew Russo - Trombone

Nancy Brown - Trumpet, Classical

Allison Lazur - Tuba

Marvin Warshaw - Viola

Perry Elliot - Violin Performance

Priscilla Gale - Voice

Chai-lun Yueh - Voice

Giacomo Gates - Voice, Jazz

**UNDERGRADUATE DEPARTMENTAL
ADVISING EXPERTS**

Jay Hoggard

MUSIC MAJOR**MAJOR DESCRIPTION**

Major programs are put together by the students in consultation with their advisors. The programs reflect the individual interests and needs of the students. The department requires that a program proposal, including all music courses previously taken and those planned for the future, be submitted at the time of application to be a major. A major program should have a healthy balance between courses in music history and culture; courses in music analysis, theory and composition; and courses in performance. It is a fundamental principle of the Wesleyan music program that the study of music and the experience of music should reinforce and inspire each other. A major program must show evidence of work in at least one musical tradition outside the area of the student's prime concentration. The understanding that comes with new experiences is an essential part of the music opportunity at Wesleyan.

A music major's possible foci of study include Western classical music; new and experimental music; African American, Indonesian, Indian, and African musics; and European and American music outside the art tradition. These and other possibilities are not mutually exclusive but can be studied in combinations that

reflect the interests of individual students. The music profession is international. In many areas of music study, at least one foreign language is essential.

ADMISSION TO THE MAJOR

PREREQUISITES TO THE MUSIC MAJOR:

Code	Title	Hours
One Course in the Music Theory Gateway Category		1
MUSC103	Materials and Design	
MUSC201	Tonal Harmony	
MUSC202	Theory and Analysis	
MUSC210	Theory of Jazz Improvisation	

Note: MUSC103, a prerequisite for all other theory classes, may be waived on the basis of a placement test. For AP Music Theory credit questions, see "Additional Information."

Code	Title	Hours
One Course in the History/Culture Gateway Category		1
MUSC102	World Music	
MUSC106	A Thousand Years of Music History	
MUSC109	Introduction to Experimental Music	
MUSC110	Introduction to South Indian Music	
MUSC111	Music and Theater of Indonesia	
MUSC115	Introduction to North Indian Music	
MUSC117	Musicking Body	

Note: For the Class of 2019, the history/culture capability prerequisite can be met with any course in that category.

Code	Title	Hours
One Course in the Performance Category		1
MUSC 405, MUSC 413 through MUSC 464		

Note: MUSC405 satisfies the prerequisite but will not count toward the requirements for the major.

MAJOR REQUIREMENTS

Music majors take four courses in each of three capabilities: theory/composition, history/culture, and performance. Two additional courses from the **MUSC300**-level Seminars for Music Majors bring the number of music credits to 14. The required senior project or senior honors thesis brings the total number of music credits to 15 or 16, respectively. Diversity of musical experience is a core value of the Music Department and is expected of all music majors. To move toward this goal, at least two of the 14 music credits must be outside the student's main area of interest.

The Music Department expects its majors to continue to refine and extend their performance skills throughout their undergraduate careers, which may mean accumulating more than 15 or 16 credits in music. No more than 16 credits in music may be counted toward the 32 credits required for graduation, however, and students must therefore complete 16 or 17 credits outside of music.

COURSES FOR NON-MAJORS

With the exception of MUSC300, all classes offered by the Music Department are open to non-majors.

GENERAL EDUCATION

Music majors are advised to complete their General Education Expectations (three each of HA, NSM, and SBS courses). Prospective majors who have not taken enough courses outside of the Music Department may be refused entry into the major. Students who fail to fulfill the General Education Expectations are generally not considered for department prizes and honors.

STUDENT LEARNING GOALS

AT GRADUATION, MUSIC MAJORS WILL BE ABLE TO:

- Think analytically and critically about musical languages, histories, and cultures
- Write effectively about music
- Perform and/or create music with proficiency and creativity
- Engage unfamiliar traditions and paradigms of humanly organized sound with sensitivity and insight
- Apply their musical knowledge and skills within broader investigations of the human experience

ADVANCED PLACEMENT

AP THEORY CREDIT IS CONSIDERED AS FOLLOWS: AP THEORY CREDIT ON THE STUDENT'S WESLEYAN TRANSCRIPT

- Counts as one of the 4 theory/composition requirements for the music major
- Student needs to complete 3 additional theory/composition credits for the major

PASSED THE AP TEST WITH 4 OR 5 BUT THE AP CREDIT WILL NOT APPEAR ON THE STUDENT'S WESLEYAN TRANSCRIPT

- Student may begin theory coursework at a higher level
- Student will still be required to take 4 theory/composition courses for the major

STUDENTS WITH QUESTIONS REGARDING AP THEORY

- Should meet with the theory faculty of the Music Department teaching MUSC103 to discuss options

PRIZES

MERIT-BASED AWARDS THAT MAY BE AWARDED ANNUALLY ELIZABETH VERVEER TISHLER PRIZE

Established in 1981 by a gift from Mrs. Tishler. Expanded in 1989 for excellence in piano performance.

GWEN LIVINGSTON POKORA PRIZE

Established in 1993, awarded annually to the outstanding undergraduate student in music composition.

LEAVELL MEMORIAL PRIZE

Awarded annually to a senior who has done outstanding work in music and whose work manifests the ideals of the World Music Program in the Music Department.

LIPSKY PRIZE

The gift of the Reverend and Mrs. Bailey G. Lipsky in memory of their son, Francis Jules Lipsky, Class of 1931, to the member of the choir possessing in the highest degree unflinching kindness, quiet dignity, and brilliant scholarship.

SAMUEL C. SILIPO PRIZE

Awarded annually for the most valuable player(s) of the Wesleyan orchestra.

ADDITIONAL INFORMATION

SPECIAL ACTIVITIES

The department supports a number of unusual activities, many of which are available to the student body in general as well as to music majors. Among them are ensembles in various Asian, African, American, and European traditions, as well as a variety of chamber ensembles.

PRIVATE LESSONS PROGRAM

Private lessons are available for many instruments and voice in Western art music, African American music, and a variety of other musics from around the world. Lessons are considered one-credit-per-semester courses. An additional fee, \$780 per semester, is charged for these private lessons (financial aid may be available to students eligible for university financial aid). Approved music majors in their junior and senior years are eligible for partial subsidy when taking one (1) private lesson, per semester, for academic credit with a private lessons teacher.

DEPARTMENTAL COLLOQUIUM

An ongoing departmental colloquium is intended for the entire music community. It includes presentations by Wesleyan faculty, students, and outside speakers and encourages general discussion of broad issues in the world of music.

FACILITIES

The study facilities include a working collection of musical instruments from many different cultures; a music-instrument manufacturing workshop; a 45-piece Javanese *Gamelan* Orchestra; a large formal concert hall and a small multipurpose concert hall; an electronic music studio coupled to a professional recording studio; a computer-arts studio capable of producing electronic music, video art, and environmental simulations; a music and record library; an electronic keyboard lab; and an archive of world music.

COURSES

The following is a listing according to capabilities of courses offered by the department:

Code	Title	Hours
Theory Gateways		
MUSC103	Materials and Design	1
MUSC201	Tonal Harmony	1

MUSC202	Theory and Analysis	1
MUSC210	Theory of Jazz Improvisation	1
History/Culture Gateways		
MUSC102	World Music	1
MUSC106	A Thousand Years of Music History	1
MUSC109	Introduction to Experimental Music	1
MUSC110	Introduction to South Indian Music	1
MUSC111	Music and Theater of Indonesia	1
MUSC115	Introduction to North Indian Music	1
MUSC117	Musicking Body	1
FYS Courses		
MUSC116F	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation (FYS)	1
MUSC117F	Musicking Body (FYS)	1
MUSC118F	Bob Dylan and His World: Sources and Legacies (FYS)	1
MUSC119F	Jazz in the 1960s (FYS)	1
MUSC120F	Music, Place, and Culture: An Exploration of African American Soundscapes and Traditions (FYS)	1
MUSC124F	Mapping Culture (FYS)	1
MUSC125F	Music and Downtown New York, 1950-1970 (FYS)	1
MUSC126F	Poetry and Song (FYS)	1
Theory/Composition		
MUSC203	Chromatic Harmony	1
MUSC204	20th Century Compositional Techniques	1
MUSC205	Song: Music and Text	1
MUSC206	18th-Century Counterpoint	1
MUSC207	Orchestration	1
MUSC208	Post-Tonal Music Theory	1
MUSC212	South Indian Music: Solkattu	1
MUSC220	Composing, Performing, and Listening to Experimental Music	1
MUSC221	Live-Electronics for Composition, Improvisation, and Sound Art	1
MUSC223	Music, Recording, and Sound Design	1
MUSC230	Music Theater Workshop (cross list)	1
MUSC308	Composition in the Arts	1
History/Culture		
MUSC108	History of Rock and R&B	1
MUSC127	Popular Music in Reform China	1
MUSC241	Allegory and Devotion in Medieval and Renaissance Music (cross list)	1
MUSC242	Baroque and Classical Music	1
MUSC243	Music of the 19th Century	1
MUSC244	Music of the 20th Century	1
MUSC246	The Symphony: Evolution of Genre	1
MUSC248	Music in Outer Space	1
MUSC250	Film and Folk Music of India	1
MUSC261	Music and Modernity in China, Japan, and Korea	1
MUSC265	African Presences I: Music in Africa	1
MUSC269	Sacred and Secular African American Musics	1

MUSC272	History of Jazz in American Culture	1
MUSC274	Hymnody in the United States Before the Civil War	1
MUSC275	Music and Downtown New York	1
MUSC277	Jazz Avant-Gardes	1
MUSC290	Research Skills in Ethnomusicology--IRL & Digital	1
MUSC291	The Gendering of Music in Cross-Cultural Perspective	1
MUSC293	Mapping Culture	1
MUSC294	Queer Opera	1
MUSC295	Global Hip-Hop	1
MUSC296	Soundscapes of Islam	1
MUSC297	Music of Central Asia	1
Major Seminars		
MUSC300	Seminar for Music Majors	1
MUSC304	Arranging and Composing for Jazz Orchestra	1
Performance/Study Groups		
MUSC405	Private Music Lessons for Nonmusic Majors	1
MUSC406	Private Music Lessons for Declared Music Majors	1
MUSC413	Korean Drumming and Creative Music	1
MUSC414	Korean Drumming and Creative Music Advanced	1
MUSC416	Beginning Taiko--Japanese Drumming Ensemble	1
MUSC418	Advanced Taiko--Japanese Drumming Ensemble	1
MUSC428	Chinese Music Ensemble	1
MUSC430	South Indian Voice--Beginning	1
MUSC431	South Indian Voice--Intermediate	1
MUSC432	South Indian Voice--Advanced	1
MUSC433	South Indian Music--Percussion	1
MUSC434	Improvisational Techniques in South Indian Music	1
MUSC436	Wesleyan Concert Choir	1
MUSC438	Wesleyan University Collegium Musicum (cross list)	1
MUSC439	Wesleyan University Orchestra	1
MUSC440	Instrumental Conducting	1
MUSC441	Piping Performance: An Exploration of Artistic Expression through the Pipe Organ	1
MUSC442	Chamber Music Ensemble	1
MUSC443	Wesleyan Wind Ensemble (WesWinds)	1
MUSC444	African Popular Music Performance	1
MUSC445	West African Music and Culture--Beginners	1
MUSC446	West African Music and Culture--Intermediate	1
MUSC447	West African Music and Culture--Advanced	1
MUSC448	Ebony Singers: Gospel Music	0.5
MUSC450	Steelband	1
MUSC451	Javanese Gamelan--Beginners	1
MUSC452	Javanese Gamelan--Advanced	1
MUSC455	Jazz Ensemble	1
MUSC456	Jazz Improvisation Performance	1
MUSC457	Jazz Orchestra I	1
MUSC458	Jazz Orchestra II	1
MUSC461	Sound Systems: The How of Hearing	1
MUSC463	Teaching Music Lessons to Children in Local Schools	1
MUSC464	Laptop Ensemble	1
Graduate Courses		
MUSC500	Graduate Pedagogy	0.5
MUSC505	Topics in Applied Ethnomusicology/Public Musicology	1
MUSC506	Reading Ethnomusicology	1
MUSC507	Practicing Ethnomusicology	1
MUSC508	Graduate Seminar in Composition	1
MUSC509	Special Topics in Contemporary Music	1
MUSC510	Graduate Proseminar in World Music Studies	1
MUSC513	Improvisation in Cross-Cultural Perspective	1
MUSC517	Sex/Gender/Queerness in Music and Music Scholarship	1
MUSC519	Current Issues in Ethnomusicology	1
MUSC520	Explorations in Musicology	1
MUSC521	Seminar in Interdisciplinary Studies	1
MUSC522	Seminar in Comparative Music Theory	1
MUSC530	Department of Music Colloquium	0.25

HONORS

The senior project requirement may be satisfied by the completion of an honors project, a project that may encompass a composition, a concert, etc., but the honors project always contains a substantial written component; for this reason it is called the honors thesis. An honors thesis satisfies the departmental requirement for a senior project, even if it is not awarded honors. The honors thesis tutorial is always a two-semester undertaking.

CAPSTONE EXPERIENCE

All music majors are required to complete a senior project by the end of their final year. The purpose of the project is to give focus to the major by means of independent, creative work and to encourage independent study with the close advice and support of a faculty member. Students who choose to undertake an honors thesis may count this as their senior project.

DOCTOR OF PHILOSOPHY IN MUSIC

The World Music Program offers degrees at both the master's and doctoral levels. The MA in music has concentrations in scholarship (ethnomusicology/musicology), experimental music/composition, and performance. The PhD is in ethnomusicology. Many traditions are represented by faculty members through teaching and performing African American, Caribbean, East Asian, Euro-American, Indonesian, South Indian (*Karnatak*), West African, and experimental

musics, and there are many opportunities for individual and ensemble study/performance.

Director of Graduate Studies in Music: Sumarsam

COURSES

Satisfactory completion of courses totaling at least 12 credits. Students are required to take three core seminars (MUSC519, MUSC521, MUSC520/MUSC522), three elective graduate-level seminars other than the core seminars (two of which may be satisfied with appropriate courses already taken at the master's level), two credits of performance (in different musics), one course outside the department, two credits of thesis tutorial (MUSC591/MUSC592), and four semesters of MUSC530. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

Two foreign languages are required for the PhD: one field language and one research language. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

PROGRESS AND QUALIFYING EXAMS

At the conclusion of the second year in residence, students take a qualifying examination consisting of a set of essays and a follow-up oral examination.

RESEARCH

PhD candidates in ethnomusicology are required to complete a dissertation and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/music/graduate. (<http://wesleyan.edu/music/graduate/>)

MASTER OF ARTS IN MUSIC

The World Music Program offers degrees at both the master's and doctoral levels. The MA in music has concentrations in scholarship (ethnomusicology/musicology), experimental music/composition, and performance. The PhD is in ethnomusicology. Many traditions are represented by faculty members through teaching and performing African American, Caribbean, East Asian, Euro-American, Indonesian, South Indian (*Karnatak*), West African, and experimental musics, and there are many opportunities for individual and ensemble study/performance.

Director of Graduate Studies in Music: Sumarsam

COURSES

A total of 11 credits of coursework. Students are required to take MUSC510, four graduate seminars other than MUSC510 (two in the area of concentration), two performance courses, a course outside the department, a two-semester thesis tutorial (MUSC591/MUSC592), and four semesters of MUSC530. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

One foreign language is required for the MA. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

PROGRESS AND QUALIFYING EXAMS

Students in ethnomusicology submit a written thesis of original research and, if relevant, a public presentation of original work to a thesis committee. The final review or original works culminates in a thesis defense.

For students in composition, the essay may discuss the nature and form of their creative work, but it must also include a researched discussion of the broader context of that work, such as the musical discourse or social context within which it was conceived. Alternatively, the thesis may also forgo any discussion of the student's creative work and focus fully on a research topic.

RESEARCH

Masters students in ethnomusicology are required to complete a unique thesis and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices.

The creative work of MA students in composition can range through many forms of auditory culture, including musical compositions, sound installations, and the design of musical instruments and systems. The composition thesis includes the presentation of this work in a performance, installation or other public forum and a written essay. The research expectations of the thesis essay are developed in consultation with a thesis advisor and other music faculty.

THESIS AND DEFENSE

An ethnomusicology thesis must constitute an archivable product displaying mastery of and an original contribution to the understanding of an aspect of world music. The MA thesis may follow various formats and modes of musical investigation, but performance per se does not constitute a thesis without substantial written ancillary materials. Work such as bibliographies, translations, and journals do not normally constitute theses. After completing all department requirements and acceptance of the thesis by the committee, the candidate is scheduled for an oral thesis defense administered by the committee.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/music/graduate. (<http://wesleyan.edu/music/graduate/>)

NEUROSCIENCE AND BEHAVIOR

Neuroscience is a discipline that probes one of the last biological frontiers in understanding ourselves. It asks fundamental questions about how the brain and nervous system work in the expression of behavior. As such, the field takes on a clear interdisciplinary character: All scientific levels of organization (behavioral, developmental, molecular, cellular, and systems) contribute to our understanding of the nervous system. Neuroscience has been a field of particularly active growth and progress for the past two decades, and it is certain to be an area where important and exciting developments will continue to occur. At Wesleyan, the neurosciences are represented by the teaching and research activities of faculty members in the departments of biology, psychology, and chemistry. The neuroscience and behavior (NS&B) curriculum is both comprehensive and provides diverse approaches to learning. Through lecture/seminars, lab-based methods courses, and hands-on research experience, students are afforded a rich educational experience. Unique among schools of comparative size, Wesleyan has small but active graduate programs leading to BA/MA and PhD degrees. This attribute, together with the high success rate of faculty in obtaining research grant support, further enhances the education of undergraduates by providing additional mentoring, more research opportunities, and access to state-of-the-art laboratories. The mission of the NS&B program is to provide the foundation for a variety of career options in science, medicine, and private industry. For more information, see wesleyan.edu/nsb/ (<http://wesleyan.edu/nsb/>).

DEPARTMENTAL ADVISING EXPERT

Barbara Juhasz

NEUROSCIENCE AND BEHAVIOR MAJOR

ADMISSION TO THE MAJOR

One or more of the foundation courses in biology (BIOL181, BIOL182) are prerequisites for the advanced **NS&B** courses offered by the Biology Department. Although not legislated as prerequisites, NS&B213 and **NS&B** laboratory courses provide important conceptual and practical background for independent research in the junior and senior years.

A recommended course sequence for students with a strong background in science would include BIOL181 and BIOL182 (and associated labs) along with introductory chemistry in the first year. Other students may wish to take the Introductory Chemistry Sequence in the first year prior to the Introductory Biology sequence. In the sophomore year, one would take NS&B213. The other required courses and research tutorials would be spread out over the

last two years. For information on the pathway through the major, please visit wesleyan.edu/nsb/pathways.html (<http://www.wesleyan.edu/nsb/pathways.html>) for further information.

To be admitted to the major during March of the sophomore year, a student must have completed, with grades of C- or better, at least two of the full-credit courses listed in foundation and core courses that follow. At least one of these credits must be either NS&B213 or BIOL181.

MAJOR REQUIREMENTS

FOUNDATION COURSES

- BIOL181 Principles of Biology I
- BIOL191 Principles of Biology I-Laboratory
- BIOL182 Principles of Biology II
- BIOL192 Principles of Biology II-Laboratory
- CHEM141/CHEM142 Introductory Chemistry I/II or CHEM143/CHEM144 Principles of Chemistry I/II
- CHEM251/CHEM252 Principles of Organic Chemistry I/II
- Two additional courses from the following (beginning with the graduating class of 2016):
 - Physics (PHYS111 or PHYS112 or PHYS113 or PHYS116)
 - Psychology (PSYC105)
 - Mathematics (MATH117 or higher); and/or
 - Computer science (COMP112 or higher)

CORE COURSE

- NS&B213 Behavioral Neurobiology

ADVANCED COURSES

Five advanced courses from the following list are required for students; two must be cross-listed with biology; two cross-listed with psychology; and one, a research tutorial or methodological course. Some courses appear in both Biology and Psychology lists but may be counted only once, in either category.

Cross-listed with biology

- NS&B224 Hormones, Brain, and Behavior
- NS&B239 Functional Anatomy of the Human Brain*
- NS&B244 Neuropharmacology
- NS&B245 Cellular Neurophysiology
- NS&B252 Cell Biology of the Neuron
- NS&B254 Comparative Animal Behavior
- NS&B299 Waves, Brains, and Music
- NS&B303 Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function
- NS&B317 Neuroethics
- NS&B325 Stem Cells: Basic Biology to Clinical Application
- NS&B328 Chemical Senses
- NS&B343 Muscle and Nerve Development
- NS&B345 Developmental Neurobiology
- NS&B347 Mammalian Cortical Circuits
- NS&B351 Neurobiology of Learning and Memory

- NS&B357 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=015539&term=1199) Sex and Gender: From Synapse to Society
- NS&B353 Neurobiology of Neurological Disorders*
- NS&B356 Neurodevelopmental Disorders*
- NS&B360 Calderwood Seminar in Public Writing: Neuroplasticity and the Brain

Cross-listed with psychology

- NS&B220 Cognitive Psychology
- NS&B221 Human Memory
- NS&B222 Sensation and Perception
- NS&B225 Cognitive Neuroscience
- NS&B227 Motivation and Reward
- NS&B228 Clinical Neuropsychology
- NS&B239 Functional Anatomy of the Human Brain*
- NS&B316 Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives
- NS&B317 Neuroethics
- NS&B329 Neural Costs of War
- PSYC332 Seminar in Cognitive Neuroscience
- NS&B341 Psychology of Learning and Memory
- NS&B342 Music Perception and Cognition
- NS&B348 Origins of Knowledge
- NS&B353 Neurobiology of Neurological Disorders*
- NS&B356 Neurodevelopmental Disorders*

Research methods and practica

- BIOL242 Quantitative Methods for the Biological and Environmental Sciences
- MATH132 Elementary Statistics
- NS&B210 Research Methods in Cognition
- NS&B215 Research Methods: Behavioral Methods in Animal Research
- NS&B243 Neurohistology
- NS&B250 Laboratory in Cellular and Behavioral Neurobiology
- NS&B280 Applied Data Analysis
- NS&B383 Advanced Research in Learning and Memory
- NS&B390 Experimental Investigations into Reading
- NS&B392 Behavioral Methods in Affective Neuroscience
- NS&B398 Advanced Research in Auditory Cognitive Neuroscience
- NS&B399 Lab in Gambling, Drugs, and Junk Food
- NS&B409/NS&B410 Senior Thesis Tutorial or NS&B423/NS&B424 Advanced Research Seminar for two semesters, both in the lab of the same faculty member
- PSYC200 Statistics: An Activity-Based Approach

Note: MATH132 can be taken to meet requirements for either the methodological or foundation major requirements, but not both. Methodological courses cannot be credited toward the requirements of advanced courses cross-listed with biology or psychology. *Courses listed in both categories A. or B. can be counted only in A. or B. but not both.

Courses of relevance outside the program. Though not requirements of the major, students should be aware that courses in organic chemistry and molecular biology, as well as courses in non-neuroscience areas of biology and psychology,

complement the **NS&B** major and should be considered, in consultation with your advisor, when planning your program of study.

SUBSTITUTING OUTSIDE COURSES FOR CREDIT TO THE MAJOR

Foundation courses: A student who has taken foundation courses outside of Wesleyan may be able to apply them to the major. As a general rule, courses acceptable to the biology, chemistry, and physics departments for university credit are acceptable to the NS&B program for substitution for foundation courses.

Advanced courses: Advanced courses, inside or outside of the University, might be acceptable as substitutes for the advanced courses of the NS&B major. In general, only one such course can be substituted, and approval must be obtained in advance from the program director.

UNDERGRADUATE RESEARCH

NS&B majors are encouraged to become involved in the research of the faculty. Research tutorials and senior thesis tutorials are taken with mode of grading and amount of credit to be arranged with the research supervisor. Research tutorials are numbered NS&B411/NS&B412, NS&B409/NS&B410, and NS&B423/NS&B424. These courses can fulfill the research methods requirement or can receive graduation credit. For the most up-to-date information on NS&B faculty research, please visit our department website (<http://www.wesleyan.edu/nsb/>).

STUDENT LEARNING GOALS

Our program offers a curriculum that encourages fluency across multiple disciplines in the field of neuroscience and behavior. Immersion in this field requires thinking across multiple levels of analysis and an appreciation for how complex and broad questions can be made amenable to scientific inquiry. In terms of goals, we have three areas of knowledge that we expect all students to acquire by the time they have completed the NS&B major:

- **Structure:** The parts and how they connect. Structural knowledge includes neural development, neuroanatomy, neurotransmitters, and the cell and molecular biology of the neuron.
- **Function:** How the parts come together to produce systems. Such systems include various sensory, motor, and neuroendocrine systems. Knowledge concerning function is gained by studies of structures and studies of perception, learning and memory, behavior, and cognition.
- **Theory:** Governing principles that can be proposed from all the above. Examples of theories include those that address the relationships between brain and behavior, articulate how brain structure and function changes over time, and explain cognitive and perceptual processes.

In addition, it is our goal that all students can skillfully apply and analyze knowledge gained from their studies. Statistics courses, lab-based methods courses, and/or direct experience in research projects serve this goal.

ADVANCED PLACEMENT

AP credit may be used to place out of any of the foundation courses, subject to the guidelines of the department hosting these courses.

PRIZES

George H. Acheson and Grass Foundation Prize in Neuroscience: Established in 1992 by a gift from the Grass Foundation, this prize is awarded to an outstanding undergraduate in the Neuroscience and Behavior Program who demonstrates excellence in the program and who also shows promise for future contributions in the field of neuroscience.

BA/MA PROGRAM

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, please visit <https://catalog.wesleyan.edu/departments/nsb/grad-nsb/> as well as the Graduate Studies page: <http://wesleyan.edu/grad/degree-programs/bama.html> (<http://www.wesleyan.edu/grad/degree-programs/bama.html>).

ADDITIONAL INFORMATION

- **Teaching apprenticeships.** Students may be appointed teaching apprentices with the approval of the participating faculty member and the Office of Academic Affairs. The apprenticeship position involves assisting a faculty member in the teaching of a course. Concurrently, the apprentice enrolls in an apprenticeship tutorial (NS&B491/NS&B492) that is usually a one-credit course and operates in either the graded or credit/no credit mode.
- **Petitioning for exemptions.** A student may request a variance from the requirements of the major or for honors by submitting a written petition to the chair of the program. The petition should indicate why the requirement cannot be met and the educational justification for the alternative. The petition will be considered by the NS&B faculty, and the student will receive a statement of the decision by letter.
- **Seminars.** The program periodically invites neuroscientists from outside Wesleyan to come here and describe their research. These seminars frequently complement course material and give students the opportunity to interact with noted researchers. The talks are usually scheduled for noon on Wednesdays. Students are encouraged to attend.

HONORS

To be considered for honors, a student must be an NS&B major and have a B average (grade average 85) in the courses credited to the major. The student must submit a laboratory research thesis that was supervised by a member of the NS&B faculty and be recommended for honors by the NS&B faculty.

MASTER OF ARTS IN NEUROSCIENCE AND BEHAVIOR

BA/MA PROGRAM

The Neuroscience & Behavior Program offers graduate work leading to the degree of Master of Arts through the BA/MA program. The program has a strong research orientation. It also includes course work, seminars, and, in some cases, teaching. A student hoping to enter this program will be expected to declare the intention to do so in the first semester of their junior year to permit the design of an acceptable program with both the major department and a research advisor within that department.

COURSES

BA/MA PROGRAM

The MA will require a minimum of 6 credits in addition to the 32 necessary for the Wesleyan BA. Three credits will be earned through Journal Club I & II (0.25 credits x 2 = 0.50), Advanced Research NS&B549/NS&B550 (1.0 credits x 2 = 2.0) and Research Seminar (.50 credits). The remaining credits will be earned through lecture, lab, or seminar courses (200, 300, or 500-level) determined by the student and mentor; a minimum of two of these must be one-credit courses. MA credit will only be awarded for academic work in which grades of B minus or higher have been earned. A student in the BA/MA program who earns more than 32 credits during the BA may apply any excess credits toward the MA, providing that they are relevant to the research area and they have not been used to fulfill an undergraduate major requirement. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

There are no language requirements for the BA/MA Program in NS&B.

PROGRESS AND QUALIFYING EXAMS

A 3-member committee of the faculty will be established upon acceptance in the BA/MA program. The candidate will meet with their committee in early stages of research and meet with them in the second semester of their MA year. This committee determines when sufficient experimental work has been completed and must approve the final written document. Students in this program are required to submit a MA thesis describing the research which they have carried out in partial fulfillment of the degree requirements.

TEACHING

There are no requirements for BA/MA candidates to teach although the opportunity may arise.

RESEARCH

Students conduct research and complete a written thesis in partial fulfillment of their MA degree. For the most recent information regarding the research carried out by faculty in the NS&B program, please visit the NS&B website: <https://www.wesleyan.edu/nsb/faculty.html>

THESIS AND DEFENSE

Students in this program will submit an MA thesis describing the research and will present this to their committee in a closed-door oral defense of the thesis. Following the oral defense with the thesis committee, the students will receive two grades for their thesis work: one for the oral component and one for the written component of the thesis. Additionally, students are required to give a public presentation during the research seminar (BIOL557 or CHEM587/CHEM588) describing their research as partial fulfillment of the degree requirements.

PHILOSOPHY

Doing philosophy means reasoning about questions that are of basic importance to the human experience—questions like, What is a good life? What is reality? How are knowledge and understanding possible? What should we believe? What norms should govern our societies, our relationships, and our activities? Philosophers critically analyze ideas and practices that often are assumed without reflection. Wesleyan’s philosophy faculty draws on multiple traditions of inquiry, offering a wide variety of perspectives and methods for addressing these questions.

PHILOSOPHY MAJOR

MAJOR DESCRIPTION

Doing philosophy means reasoning about questions that are of basic importance to the human experience—questions like, What is a good life? What is reality? How are knowledge and understanding possible? What should we believe? What norms should govern our societies, our relationships, and our activities? Philosophers critically analyze ideas and practices that often are assumed without reflection. Wesleyan’s philosophy faculty draws on multiple traditions of inquiry, offering a wide variety of perspectives and methods for addressing these questions.

Three broad categories organize our curriculum: history, value, and mind and reality. Historical courses focus primarily on classical philosophical texts, tracing the path of a particular philosopher’s work, a conversation within a historical period, or a series of related conversations. Courses in the value area engage critically with ethical, political, aesthetic, cultural, or religious practices and norms. Mind and reality courses consider philosophical questions about language, mind, reasoning, knowledge, and the nature of reality. Though each course is associated with one thematic area for organizational purposes, these three kinds of inquiry overlap significantly in practice.

Code	Title	Hours
Introductory		
	History: PHIL 201-210	
	Values: PHIL 211-229	
	Mind & Reality: PHIL 230-249	
Intermediate		

History: PHIL 250-265

Values: PHIL 266-285

Mind & Reality: PHIL 286-299

Advanced

History: PHIL 301-330

Values: PHIL 331-360

Mind & Reality: PHIL 361-399

Our introductory courses (200-249) are intended for both prospective majors and non-majors. (General-Education-only courses, with course numbers below 200, do not count toward the major.)

Intermediate courses (250-300) are generally not appropriate for first-year students, and some have explicit prerequisites. Intermediate-level classes tend to introduce students to a particular area of philosophy or to the discipline's historical development at a higher level and in more depth than introductory classes.

Advanced courses (301-399) are typically organized as seminars for majors and other students with significant related preparation. In many cases, students participate with a professor in exploring an area of particular relevance to that professor's research program. Advanced classes may focus on a particular figure in the history of philosophy or on a topic of contemporary importance.

ADMISSION TO THE MAJOR

All students planning to major will submit a major request form.

Prospective majors should pay particular attention to the prerequisites for intermediate and advanced courses when planning their schedules. Among other courses, PHIL201, PHIL202, PHIL205, PHIL212 and PHIL231 are required or recommended for a variety of subsequent courses.

Because philosophy ranges over subjects in other disciplines, such as economics, government, mathematics, physics, psychology, and religion, students considering philosophy as a major field are strongly advised to choose a balanced combination of solid liberal arts courses conforming to Wesleyan expectations for generalization.

Students who intend to apply for the social justice track will work with an advisor to submit a concentration proposal by the end of drop/add during their fifth semester.

MAJOR REQUIREMENTS

The philosophy major at Wesleyan offers two tracks: a general philosophy track and a social justice track. Both tracks require at least ten courses, including eight PHIL courses.

- **The general philosophy track** encourages students to explore a range of issues and approaches from various historical periods and cultural traditions.
- **The social justice track** emphasizes philosophers' roles not only as theorists but also as agents of social and political change. Philosophical methods of conceptual and contextual analyses and careful argumentation provide important tools for grappling with real-world injustices. The social justice track supports students in tailoring their philosophical understanding and skills around a particular concern in an area of social justice, such as human rights, equality, social responsibility, environmental justice, etc.

GENERAL TRACK

Code	Title	Hours
Distribution		
1	History	
1	Value	
1	Mind & Reality	
Concentration		
None required		
Advanced		
2 seminars taken as juniors/seniors		
Electives		
5 electives, including up to 2 non-PHIL		
Thesis Project		
Optional		

Of the ten courses counted toward the general-track major, at least eight must be offered by the Philosophy Department; as many as two may be given in other departments or programs (e.g., College of Letters, Religion) that are relevant to the student's program of studies in philosophy and are approved as such by the philosophy faculty.

In addition, students must satisfy the following:

- **Distribution requirement.** Students must count at least one course from each of the thematic areas (history, values, mind and reality).
- **Advanced course requirement.** All students must complete at least two advanced philosophy courses, in any philosophical area, during their junior or senior years.

SOCIAL JUSTICE TRACK

Code	Title	Hours
Distribution		
1	History -or- 1 Mind & Reality	
Concentration		
5 - course concentration, including 2 beyond PHIL		
Advanced		
2 seminars taken as juniors/seniors		
Electives		
2 electives from PHIL		
Thesis project		
Optional		

At the core of the social justice major track is a social justice concentration that brings together a student's specific interests in social justice. Majors will submit proposals for acceptance to the track that will include three philosophy courses and two non-philosophy courses that fit together in a coherent concentration.

BELOW ARE TWO SAMPLE CONCENTRATIONS:

Code	Title	Hours
Sample Concentration 1: Human Rights in China		
PHIL272	Human Rights Across Cultures	
PHIL278	Political Philosophy	
CEAS271	Political Economy of Developing Countries	

CEAS297	Chinese Politics	
PHIL263	Modern Chinese Philosophy	
Code	Title	Hours
Sample Concentration 2: Challenging The Carceral State		
PHIL214	Reasoning About Justice	
PHIL268	Course PHIL268 Not Found	
ANTH302	Critical Perspectives on the State	
PHIL211	Critical Philosophy of Race	
GOVT159	The Moral Basis of Politics	

In addition to the five-course concentration, students must satisfy the following:

- **One core course in either history or mind and reality.**
- **Advanced course requirement.** All students must complete at least two advanced philosophy courses, in any area, during both their junior or senior years.
- **Two other philosophy electives.**

COURSES FOR NON-MAJORS

Courses numbered below **250** are designed to be appropriate as first courses in philosophy. In addition, many of our courses numbered **250** and above are of interest to majors in related departments. (For example, students majoring in neuroscience or psychology often take PHIL286.)

STUDENT LEARNING GOALS

A course of study in philosophy is successful if only three interconnected things can happen:

- First, students are encouraged to practice and refine essential skills. These include close reading, following and evaluating paths of reasoning, participating charitably in dialogue, articulating values and priorities, recognizing alternative ways of framing and addressing a problem, and extending all of these skills into clear written work.
- Second, students become familiar with multiple philosophical approaches, thinkers, traditions, and themes. Good philosophical education does not require any particular canonical content, but students should become adept at recognizing connections across the philosophy curriculum and beyond. In addition to comparing different approaches to the same theme, students should come to appreciate connections among inquiries in broad thematic areas (inquiry into values, inquiry into reality, inquiry into knowledge).
- Third, students come to understand how philosophical inquiry relates to their own perspectives and priorities, including background concerns and academic interests beyond philosophy. No course of study in philosophy is wisely chosen unless it is substantially responsive to the knowledge, experiences, and problems that matter for each student. Working closely with an advisor, each student should find a balance between venturing into multiple philosophical areas and weaving a web of interconnected courses around personally salient priorities.

Graduates will be well prepared not only for graduate work in philosophy, but also for law, medicine, and a range of other academic and professional endeavors.

LANGUAGE REQUIREMENT

Knowledge of foreign languages is particularly useful for the study of philosophy and indispensable for serious study of the history of philosophy. It is therefore strongly recommended that students achieve reading fluency in at least one foreign language.

PRIZES

The Philosophy Department annually awards the Wise Prize for the best paper written in philosophy in the current year. This prize is usually awarded to a senior thesis written in philosophy, but it is not restricted to philosophy theses.

TRANSFER CREDIT

Students who entered Wesleyan as first-year students may count up to two courses taken outside Wesleyan toward the 10 required to fulfill the major. These should be preapproved by the student's advisor. Under special circumstances, such as a full year spent studying philosophy at a British university, it is possible to count more external credits toward the major. Students transferring into Wesleyan should review their academic histories with their departmental advisor as soon as possible after arriving to determine which philosophy courses taken at previously attended schools will be counted toward the major.

ADDITIONAL INFORMATION

- **Philosophy colloquia.** Every year the department arranges a series of public presentations of papers by visiting philosophers and, occasionally, Wesleyan faculty or students.
- **Majors Committee and Philosophy Club.** The department encourages its majors and other interested students to participate actively in the life of the department by attending departmental talks and social events for majors. Students are also encouraged to organize student-led events and discussions organized by the Majors Committee and Philosophy Club.

HONORS

To qualify for departmental honors in philosophy, a student must achieve an honors level of performance in courses in the department, must declare the intention to work for departmental honors at the beginning of the senior year, must register for senior thesis tutorials in each semester of the senior year, and must write a thesis at an honors level. Theses must be submitted in accordance with Honors College procedures and will be judged by a committee made up of members of the department.

PHYSICAL EDUCATION

Wesleyan does not offer a major program in physical education. A for-credit program emphasizes courses in fitness, aquatics, lifetime sport, and outdoor education activities.

No more than one credit in physical education may be used toward the graduation requirement. Physical education (.25 credit) courses may be repeated once only.

Limited-enrollment courses. Students taking a class for the first time are given preference over students wishing to take a class a second time, and upper-class students have preference over lower-class students. Performance tests may be required to qualify for intermediate and advanced classes.

ATHLETICS AND PHYSICAL EDUCATION AT WESLEYAN—A STATEMENT OF PHILOSOPHY

"I have always thought that sports are an integral part of liberal education...The reason has to do with the difference between being active and remaining passive. Sports provide the occasion for being intensely active at the height of one's powers. The feeling of concentrated and coordinated exertion against opposing force is one of the primary ways in which we know what it is like to take charge of our own actions."—Louis Mink

Professor Mink, in *Thinking About Liberal Education*, said that liberal education is an intensive quest for fulfillment of human potential. It challenges the whole person—mind, body, emotions, and spirit—to pursue mastery of skills, broad and focused knowledge, coherent understanding of human experience, and a passionate desire to exploit one's capacity in the service of human freedom and dignity. As Mink suggests, structured physical activity is a key part of that pursuit. When it is in harmony with the broader educational purposes of an institution, it contributes to them, draws significance from them, and enhances the educational result.

The Department of Physical Education and Athletics provides the Wesleyan University community with a spectrum of activities that will be of benefit in developing healthy, energetic, and well-balanced lives. The objective is to meet the needs of students and to engage other campus constituencies in physical activity. Physical education and athletics at Wesleyan also reflect a commitment to equal opportunity for men and women at all levels of achievement.

Intercollegiate athletics provides the student with the advantage and privilege to achieve a more sophisticated mastery of skills through practice and contests. The pursuit of excellence can be realized through elite NCAA Division III competition with a focus on regular season and New England Small College Athletic Conference (NESCAC) conference play. In the pursuit of excellence, the Athletic Department strives to be the most innovative and successful athletic program in the prestigious NESCAC and a leader at the national level.

Wesleyan University pursues excellence in all of its programs. Athletics, as an integral part of the overall educational process, is uniquely positioned to enhance a liberal arts education. Wesleyan coaches share the same goal as the entire Wesleyan community: to transform the lives of our students. To achieve this goal, the University is committed to support our highly trained and dedicated faculty-coaches who practice their craft in state-of-the-art facilities.

Programmatic balance is a key criterion of physical education. The program is internally balanced to ensure equal opportunity for the pursuit of its several objectives. Moreover, physical education at Wesleyan is designed within the controlling context of liberal education.

PHYSICS

"Physics is the liberal arts education for a technological society."—Joseph Pimbley

Participation in research and proficiency in the main subject areas of physics are the twin goals of the physics program. The major program is designed to develop competency in quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed-matter physics. Preparation in mathematical and computational methods is an integral part of the program.

Interested and qualified students may pursue several opportunities for advanced work, including graduate courses and participation with graduate students and faculty in research. The department encourages its students to "do physics" at the earliest opportunity by making arrangements to work with one of the research groups or by arranging an independent research tutorial. Research may be experimental or theoretical and may, but need not, result in a senior honors thesis. Most majors who intend to write a thesis begin research no later than the junior year and continue it through the summer into the senior year. Current research interests include quantum computing, single molecule biophysics, soft condensed-matter physics, charge transport in photovoltaic devices, fluid dynamics, laser plasmas, spectroscopy, collision studies involving excited atoms and molecules, and wave transport in complex media.

Many students also take advantage of Wesleyan's computing facilities in their research or coursework. The University has a large computer cluster available to all who are doing research.

Each semester, opportunities exist to serve as a teaching apprentice, course assistant, or department assistant in one of the introductory or intermediate-level courses. Many physics majors have found that this is a stimulating way to learn more about the fundamentals of the discipline and how to teach them. The Cady Lounge in the department serves as a focus for the major by providing a place where students can study and discuss physics. There is also a study room where students in the introductory courses can come to get help and to work together. Students are encouraged to attend the weekly colloquium series and to participate in the weekly research seminars in atomic and molecular physics, chemical physics, condensed-matter physics, and theory. The Society of Physics Students is also a great resource for sharing ideas and questions with like-minded students.

PHYSICS MAJOR

MAJOR DESCRIPTION

“Physics is the liberal arts education for a technological society.”—Joseph Pimbley

Participation in research and proficiency in the main subject areas of physics are the twin goals of the physics program. The major program is designed to develop competency in quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed-matter physics. Preparation in mathematical and computational methods is an integral part of the program.

Interested and qualified students may pursue several opportunities for advanced work, including graduate courses and participation with graduate students and faculty in research. The department encourages its students to “do physics” at the earliest opportunity by making arrangements to work with one of the research groups or by arranging an independent research tutorial. Research may be experimental or theoretical and may, but need not, result in a senior honors thesis. Most majors who intend to write a thesis begin research no later than the junior year and continue it through the summer into the senior year. Current research interests include quantum computing, single molecule biophysics, soft condensed-matter physics, charge transport in photovoltaic devices, fluid dynamics, laser plasmas, spectroscopy, collision studies involving excited atoms and molecules, and wave transport in complex media.

Many students also take advantage of Wesleyan’s computing facilities in their research or coursework. The University has a large computer cluster available to all who are doing research.

Each semester, opportunities exist to serve as a teaching apprentice, course assistant, or department assistant in one of the introductory or intermediate-level courses. Many physics majors have found that this is a stimulating way to learn more about the fundamentals of the discipline and how to teach them. The Cady Lounge in the department serves as a focus for the major by providing a place where students can study and discuss physics. There is also a study room where students in the introductory courses can come to get help and to work together. Students are encouraged to attend the weekly colloquium series and to participate in the weekly research seminars in atomic and molecular physics, chemical physics, condensed-matter physics, and theory. The Society of Physics

Students is also a great resource for sharing ideas and questions with like-minded students.

ADMISSION TO THE MAJOR

The appropriate course for students considering a physics major depends primarily on their preparation. There are four common gateways into the major beginning in the fall semester.

- PHYS113 is a calculus-based introductory mechanics course requiring one semester of calculus, taken in either secondary school or in college, at about the level of MATH121. A student who has had no calculus should discuss with a member of the physics faculty whether to take calculus during the first year, then PHYS113 in the first semester of the sophomore year, or whether to try PHYS113 simultaneously with the first calculus course.
- Students who have had a strong preparation in physics and calculus may take PHYS215/PHYS219. These courses are intended for majors but are available to first-year or other students who have had both integral and differential calculus at about the level of MATH121/MATH122 and a solid course in mechanics with calculus at the level of PHYS113.
- Students from both of the above gateways merge into the electricity and magnetism course, PHYS116, in the spring. Students intending to major in physics should complete either track no later than the end of their sophomore year and preferably by the end of their first year.
- Exceptionally well-prepared students may begin with PHYS213. Students who feel that they fall into this category should consult with a member of the physics faculty.

Laboratory courses. The PHYS113/PHYS116 sequence has associated laboratory courses, PHYS123 in the fall and PHYS124 in the spring. These laboratory sections are half-credit courses associated with the lecture courses. PHYS124 is part of the required gateway to the major. We encourage students to take the laboratory courses for a firsthand opportunity to observe, both qualitatively and quantitatively, some of the physical phenomena discussed in the lectures.

MAJOR REQUIREMENTS

To major in physics, you must complete the requirements shown in the table below. The sequence of gateway courses described above provides the foundation for the core major courses. Students should complete PHYS116 no later than the end of your sophomore year; if you can complete it by the end of your first year, it will give you more flexibility to construct your major. You should also have completed MATH121, MATH122, MATH221, and MATH222 by the end of your sophomore year. It is desirable for those students who are considering graduate work in physics or those who wish to pursue an intensive major to also complete PHYS213 and PHYS214 by the end of the sophomore year. You should note that a few of the advanced courses may not be offered every year, and you should plan your program of study accordingly.

To fulfill the major in physics, a student must complete eight lecture courses and two laboratory courses. The lecture course requirement includes (a) four core physics courses which must be taken graded (A-F): PHYS213, PHYS214, PHYS316, and PHYS324; and (b) an additional four elective lecture credits at the **200**, **300**, or **500** level. At least one of the elective courses must be a PHYS lecture course at the 300 level, usually PHYS313 or PHYS315. The two laboratory courses can be chosen from PHYS342, PHYS345, PHYS340, or a 1-credit research tutorial with a physics faculty member. One of the two laboratory courses must be an advanced experimental laboratory class, currently PHYS342 or PHYS345.

Students planning graduate study in physics should take a minimum of 14 credits at the **200** level or higher in physics, mathematics, and computer science. PHYS313, PHYS315, and PHYS358 are essential. In addition, the department strongly recommends PHYS565, MATH226, and MATH229. Graduate physics courses may be elected with permission, and experience in computer programming is also extremely valuable.

Students not planning graduate study in physics and who are interested in applying their knowledge of physics to other areas of the curriculum may substitute upper-level lecture courses from other departments to satisfy requirement (b) above. This must be done in consultation with the physics major advisor, and the selections must constitute a coherent, coordinated program of study. Substitution of more than two courses requires approval from the department. Preapproved tracks that satisfy requirement (b) are available here.

PHYSICS MAJOR REQUIREMENTS

COURSE CODE

COURSE TITLE

Gateway courses: The necessary foundation for the physics major.

PHYS113	General Physics I
PHYS116 and PHYS124	General Physics II and General Physics Laboratory II
MATH221 or MATH223	Vectors and Matrices or Linear Algebra
MATH222	Multivariable Calculus

Core Courses: Four required courses which must be taken graded (A-F)

PHYS213	Waves and Oscillations
PHYS214 (prerequisite MATH221 or MATH223. Math requirement can be taken concurrently)	Quantum Mechanics I
PHYS324 (prerequisite PHYS124 and MATH222)	Electricity and Magnetism
PHYS316	Thermal and Statistical Physics

Electives: Four credits from the following list of lecture courses. * **One of the four needs to be a 300-level physics course.**

PHYS207	Introduction to Biophysics
PHYS215 (half credit)	Special Relativity
PHYS217	Nonlinear Dynamics and Chaos
PHYS219 (half credit)	Introduction to Contemporary Physics
PHYS313	Classical Dynamics
PHYS315	Quantum Mechanics II
PHYS358 (Pre-requisite PHYS315)	Condensed Matter Physics

Laboratory Courses:** Two laboratory courses

PHYS342 (half credit)	Experimental Optics
PHYS345 (half credit)	Electronics Lab
PHYS340 (half credit)	Computational Physics
PHYS423/PHYS424 (1 credit)	Research Seminar, Undergraduate

* It is possible for elective credits to be substituted by upper-level lecture courses in other departments. This must be done in consultation with the physics major advisor, and the selections must constitute a coherent, coordinated program of study. Preapproved tracks that satisfy the elective lecture course requirement are available.

** One of the laboratory courses must be an advanced experimental lab, currently either PHYS342 or PHYS345.

COURSES FOR NON-MAJORS

The Physics Department offers two two-semester survey courses covering many of the main subject areas of physics (mechanics, electromagnetism and optics, thermodynamics, and kinetic theory). PHYS111/PHYS112 uses less calculus and is often the choice for students studying physics for life science applications. PHYS113/PHYS116 uses more calculus and is the foundation for future work in physics, engineering, and related fields. Associated laboratory courses, PHYS121/PHYS122/PHYS123/PHYS124, are also offered. Either of these two-semester course sequences (with the lab) should satisfy the physics requirement for admission to most schools of medicine, dentistry, or architecture, but occasionally schools require the calculus-based series, so attention to these details is necessary.

GENERAL EDUCATION

There are no General Education requirements imposed by the Physics Department for either the physics major or honors in physics; the Department strongly encourages students to fulfill the Wesleyan expectation.

STUDENT LEARNING GOALS

The course of study leading to the BA in physics is designed to provide students the skills to extend the description of natural phenomena to include the precision and predictive qualities of mathematics. Proficiency with these skills in the main subject areas of physics, along with the appreciation of experimental observation through research, are the twin goals of the physics program. The major program is designed to develop competency in quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed-matter physics. Preparation in mathematical and computational methods is an integral part of the program.

STUDY ABROAD

The Physics Department encourages study abroad as an opportunity to provide our majors an appreciation of their potential as citizens of the world scientific community. Careful planning in consultation with a physics advisor is recommended to determine the optimum semester for a study abroad experience to ensure that requirements for the major can be fulfilled.

ADVANCED PLACEMENT

Students may receive a maximum of two physics AP credits; one with a score of 5 on the AP Physics C, Mechanics exam, and one with a score of 5 on the AP Physics C, Electricity and Magnetism exam, though special regulations apply with regard to other physics credits. Please check with the registrar or a departmental advisor.

PRIZES

Bertman Prize - Awarded to a senior majoring in physics who emulates the qualities that made Bud Bertman a valuable friend and respected colleague, e.g.,

physical insight and intuition, enthusiasm, resourcefulness, perseverance, and eagerness to help others.

Van Dyke Prize - Awarded to students majoring in physical science who show outstanding academic achievement and a promise of productivity in a professional career.

Outstanding Contribution to Science Education Award - Awarded to a senior who has demonstrated exceptional skills as an undergraduate course assistant.

Johnston Prize - In recognition of those first-year students or sophomores whose performance in their first two semesters of physics shows exceptional promise.

TRANSFER CREDIT

Up to two outside credits for physics courses may be applied toward the physics major from another institution. Prior permission must be obtained from both your physics advisor and the departmental liaison Professor Fred Ellis (fellis@wesleyan.edu) to ensure creditability of the specific courses.

RELATED PROGRAMS OR CERTIFICATES

Dual-degree programs in science and engineering. Wesleyan maintains dual-degree programs with Columbia University, the California Institute of Technology, and Dartmouth College for students wishing to combine the study of engineering with a broad background in the liberal arts. For all options, participating students receive two degrees: a BA from Wesleyan and a BS or BE in engineering from our partner school. In the most popular option, the so-called 3-2 program, students spend their first three years at Wesleyan, followed by two years at the engineering school. Only at the end of the fifth year and after completing all degree requirements from both schools do students receive the two bachelor degrees. During the first three years, prospective 3-2 students complete the minimal requirements of their elected Wesleyan major and, in addition, fulfill science and mathematics requirements for the first two years of the engineering school and engineering major of their choice. During the two years at the engineering school, students follow the regular third- and fourth-year curriculum in whatever field of engineering they selected. During that time, other courses may also have to be taken to satisfy the degree requirements of Wesleyan and/or the engineering school.

Two other options exist to pursue an engineering degree. For Columbia University, the so-called 4-2 option allows students to complete four years at Wesleyan before pursuing the engineering degree. Otherwise, requirements are the same as those for the 3-2 program. Dartmouth offers a so-called 2-1-1-1 option in which students spend their junior year at Dartmouth, return to Wesleyan for their senior year and graduation, and then spend the fifth year to finish the engineering degree. Contact the dual-degree advisor for further information. Please also consult with your class dean to ensure that you can meet all Wesleyan University requirements for graduation.

Certificate Program in Informatics and Modeling. The Certificate Program in Informatics and Modeling enhances student choices and options and is an ideal supplement for interested physics majors. The certificate program provides students with a coherent set of courses and practical instruction in two pathways: (1) integrative genomics science and (2) computational science and quantitative world modeling.

ADDITIONAL INFORMATION

Colloquia - This series of seminars features distinguished scientists from other institutions and/or the workplace who present lectures on their research findings. One objective of these seminars is to relate material studied in courses, tutorials, and research to current scientific activity. These seminars are usually held on Thursdays at noon in Exley 058 and are open to all members of the University community. Undergraduates are especially welcome.

Society of Physics Students (SPS) - Wesleyan's SPS is a chapter of a national association of undergraduates who are interested in sharing their physics experience with others. They meet to support each other in the scientific community, plan events each semester to bring the department members together, and plan community outreach activities. Chapter Mentor: Professor Candice Etson (cetson@wesleyan.edu)

BA/MA PROGRAM

This is a curricular option for those students who, along with their research mentor, desire an intensive research experience that an additional year of study can afford. During the additional year, the student will complete additional coursework and write an MA thesis based on original research. Students interested in this possibility should consult their research mentor as early as possible.

HONORS

To be a candidate for departmental honors in physics, a major must submit a thesis describing the investigation of a special problem carried out by the candidate under the direction of a member of the Physics Department. In addition, the candidate must have attained a minimum average in the eight lecture courses applied to the major, except those taken in the final semester of the senior year, of B (85.0) for honors and B+ (88.3) for high honors. Honors status is voted by the faculty on the basis of the student's thesis work.

CAPSTONE EXPERIENCE

The Physics Department offers the following capstone experiences:

- Two-semester senior thesis
- Seminar in atomic and molecular physics (PHYS507/PHYS508)
- Seminar in condensed matter physics (PHYS505/PHYS506)
- Seminar in theoretical physics (PHYS509/PHYS510)

DOCTOR OF PHILOSOPHY IN PHYSICS

The Physics Department offers graduate work leading to the PhD degree. The small size of the program (12 full-time faculty and about 15 graduate students) permits the design of individual programs of study and allows the development of a close working collegueship among students and faculty. The

department wants its students to do physics right from the start, rather than spend one or two years solely on coursework before getting into research. To this end, graduate students are expected to join in the research activities of the department upon arrival.

COURSES

PhD students must take (or place out of) five PhD-level graduate core courses and five advanced topics courses. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. Students must have demonstrated proficiency in the main subject areas of physics by the time they have completed the program. Incoming students plan a course of study in consultation with the graduate advisor to prepare for the qualifying examination. Each student, after passing the first examination (see below), selects an advisory committee of three faculty members. The committee assists the student to design a program of study, monitors progress, and makes annual recommendations to the department regarding the student's continuation in the program. The advisory committee also administers subsequent examinations.

LANGUAGE REQUIREMENT

There is no foreign language requirement.

PROGRESS AND QUALIFYING EXAMS

Three formal examinations serve to define the various stages of the student's progress to the degree. The qualifying examination, usually taken at the end of the first year, is a written examination on material at an advanced undergraduate level. Advancement to the second stage of candidacy depends on passing this examination as well as on coursework and demonstrated research potential. After passing the qualifying examination, each student should form an advisory committee in consultation with their research advisor. Usually by the end of the second year, each student takes the PhD candidacy examination, which consists of an oral presentation before the student's advisory committee, describing and defending a specific research proposal. (The proposal might, but need not, grow out of previous research or be adopted by the student as a thesis topic.) The committee then recommends to the department whether to admit the student to the final stage of PhD candidacy or whether to advise the student to seek an MA degree.

Each student who has passed the candidacy examination is required to present an annual informal talk on his or her thesis work in a departmental seminar.

TEACHING

Although the emphasis in the program is on independent research and scholarly achievement, graduate students are expected to improve their skills in teaching and other forms of oral communication. Each student is given the opportunity for some undergraduate teaching under direct faculty supervision. While this usually consists of participation in teaching undergraduate laboratories, direct classroom teaching experience is also possible for more advanced and qualified students.

RESEARCH

Current experimental research areas are concentrated in atomic/molecular physics and condensed matter physics. Current interests include Rydberg states in strong fields, molecular collisions, photo-ionization, laser-produced plasmas, wave transport, granular and turbulent fluid flows, single-molecule biophysics, and optoelectronics of renewable energy materials.

Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, and wave transport in complex media.

DISSERTATION AND DEFENSE

Each candidate for the PhD degree is required to write a dissertation on original and significant research supervised by a member of the faculty. The work must be defended in a final oral examination administered by the advisory committee. This oral examination covers the dissertation and related topics and is open to all members of the Wesleyan community. It is expected that the candidate will submit the results of his or her work to a scholarly journal for publication.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/physics/graduate (<http://wesleyan.edu/physics/graduate/>).

MASTER OF ARTS IN PHYSICS

The BA/MA program is a curricular option for those students who feel the need for the intensive research experience that an additional year of study can afford. During the additional year, the student will do additional coursework and write an MA thesis based on original research. Students interested in this possibility should consult their physics major advisors as early as possible, since it takes some planning to complete the requirements for both the BA and MA degrees. For more information, please visit Wesleyan.edu/grad/degree-programs/ba-ma.html.

The Physics Department also offers graduate work leading to the MA degree either through the BA/MA program or through termination of pursuit of a PhD.

COURSES

All degree seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. A minimum of six credits are required for the MA. Of these, three must be in advanced coursework at the 300 level and above. The remaining credits may be earned through research and seminar courses. The student must complete at least two semesters of thesis research culminating in an MA thesis. MA credit will only be awarded for courses in which grades of B minus or higher are earned.

LANGUAGE REQUIREMENT

There is no foreign language requirement.

PROGRESS AND QUALIFYING EXAMS

Students pursuing an MA through the BA/MA program or through termination of pursuit of a PhD should form an advisory committee early in their program in consultation with their research mentor.

Each MA student is required to present an annual informal talk on his or her thesis work in a departmental seminar.

TEACHING

Although the emphasis in the program is on independent research and scholarly achievement, graduate students are expected to improve their skills in teaching and other forms of oral communication. Masters' students have the opportunity for some undergraduate teaching under direct faculty supervision.

RESEARCH

Current experimental research areas are concentrated in atomic/molecular physics and condensed matter physics. Current interests include Rydberg states in strong fields, molecular collisions, photo-ionization, laser-produced plasmas, wave transport, granular and turbulent fluid flows, single-molecule biophysics, and optoelectronics of renewable energy materials.

Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, and wave transport in complex media.

THESIS AND DEFENSE

Each candidate for the MA degree is required to write a thesis on original and significant research supervised by a member of the faculty. The work must be defended in a final oral examination administered by the advisory committee. This oral examination covers the thesis research and is open to all members of the Wesleyan community. It is expected that the candidate will submit the results of his or her work to a scholarly journal for publication.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/physics/graduate (<http://wesleyan.edu/physics/graduate/>).

PSYCHOLOGY

Psychology is the scientific study of mind, brain, and behavior. Areas of psychology represented in the department include human development, social psychology, cognitive psychology, cultural psychology, neuroscience, and psychopathology. Psychology majors receive broad training across these areas, have opportunities to pursue topics of particular interest in greater detail, and develop skills in research methods and statistics. Many majors also take advantage of opportunities to work in research laboratories, to serve as teaching assistants, and to participate in service learning courses. Students interested in this major are strongly encouraged to visit the Psychology Department (<http://www.wesleyan.edu/psyc/>) and to download and read the Department Majors Manual for more detailed information, as early planning is important for preparing to declare and complete the major.

PSYCHOLOGY MAJOR

MAJOR DESCRIPTION

Psychology is the scientific study of behavior, mind, and brain. We seek to understand how people think and act, both as individuals and in groups. The department has 18 faculty providing expertise in six subareas of study: cognitive, cultural, developmental, social, psychopathology, and neuroscience. Features of the major include foundational courses, training in statistics and research methods, a cultural immersion experience, small advanced seminars, and opportunities to conduct original research.

ADMISSION TO THE MAJOR

Students wishing to declare a major in psychology should prepare as early as possible because declaration must be done during sophomore year. *Psychology does not admit students to the major after the end of the sophomore year.* Junior transfer students have until the end of the first week of the junior year and must meet all admission requirements, as listed below, at their previous institution.

At the time of application, a student must demonstrate that he or she (1) has taken two full-credit courses in the field of psychology at Wesleyan and received a B or higher in each course; (2) has completed the introductory psychology (or a replacement breadth course that allows an AP or IB credit in place of introductory psychology), research methods, and statistics requirements for the major (these same courses may be used to fulfill the first requirement as well); and (3) has fulfilled the University's stage I General Education Expectations. If a student is enrolled in courses needed to complete these requirements during the second term of the sophomore year, the student should still declare the major; we will just not formally admit the student until the end of the term upon successful completion of these courses. Students with outstanding requirements to complete are required by the Dean's Office to either declare a second major or submit a major deferral form to their class dean in the event they are unable to successfully complete the admission requirements for psychology. Transfer students must receive a B or higher in each of two psychology courses from their previous institution.

MAJOR REQUIREMENTS

Ten psychology credits and General Education Expectations stages I and II are required for completion of the major. Nine of the 10 credits required for the major must be taken for a grade. (This has been temporarily waived for Spring 2020 and AY2021). Courses in introductory psychology and psychological statistics must be taken for a grade. Required elements of the major are introductory psychology (one credit), psychological statistics (one credit), research methods (one credit), one breadth course from each of three areas of psychology (three credits), a specialized course (one credit), and three additional elective credits that can come from any courses and tutorials associated with the major. (This description includes the already-completed requirements for admission to the major.) All courses must be completed by the end of the senior year.

INTRODUCTORY PSYCHOLOGY

PSYC105, a lecture class that provides a broad overview of the field, is required for the major and should typically be the first course taken in the major. The course must be taken graded if used for the major. (This had been temporarily waived for Spring 2020 and AY2021). The course should be taken in the first or second year. One can alternatively transfer a psychology AP or IB credit in place of this course (see the Advanced Placement section). Only one can be counted toward the major.

PSYCHOLOGICAL STATISTICS

A psychological statistics course provides an introduction to data analysis in psychology. PSYC200, PSYC 201, or PSYC280 is typically used to fulfill this requirement, but ECON300 and MATH132 are acceptable as well. The course must be taken graded if used for the major. (This had been temporarily waived for Spring 2020 and AY2021). A course in statistics should be taken in the first or second year (some research methods courses require statistics as a prerequisite). Only one may be counted toward the major.

RESEARCH METHODS

A research methods course trains specific skills for evaluating and performing research. Research methods courses are numbered **PSYC202-219**. Some of these courses are more general, while others are focused on particular applications as indicated by their titles. A **200**-level course in research methods should be taken in the first or second year (some research methods require statistics as a prerequisite).

BREADTH REQUIREMENT

Students are expected to develop knowledge across the entire field of psychology. Toward this goal, students must choose a minimum of one course from each of the three columns below. These breadth courses (numbered **PSYC220-279**) can be taken throughout one's four years. When possible, a student should start with breadth courses of particular interest so that he or she can later do more advanced work in these areas.

Code	Title	Hours
Column 1		
Select a minimum of one of the following:		1
PSYC220	Cognitive Psychology	
PSYC222	Sensation and Perception	
PSYC225	Cognitive Neuroscience	
PSYC226	Psychological Theories of Learning and Motivation	
PSYC227	Motivation and Reward	
PSYC228	Clinical Neuropsychology	
PSYC239	Functional Anatomy of the Human Brain	
PSYC240	Behavioral Neurobiology	
Column 2		
Select a minimum of one of the following:		1
PSYC230	Developmental Psychology	
PSYC245	Psychological Measurement	
PSYC246	Behavior Change, Clinical Interventions and Health Promotion	
PSYC248	Adolescence and Emerging Adulthood	
PSYC249	Psychology of Sexual and Gender Diversity	
PSYC250	Personality	
PSYC251	Psychopathology	
PSYC253	Educational Psychology	
PSYC259	Discovering the Person	
PSYC271	Life-Span Development	
Column 3		
Select a minimum of one of the following:		1
PSYC260	Social Psychology	
PSYC261	Cultural Psychology	
PSYC265	Culture in Psychology: An Introduction to Theory and Research	
PSYC266	Psychology of Communities: Identity, Activism, and Social Engagement	
PSYC267	Global Mental Health	
PSYC277	Psychology and the Law	

SPECIALIZED

These courses (**PSYC300-399**) aim to ensure that students study at least one subfield of psychology in depth. These courses have a variety of formats, including seminars (**PSYC300-369**) and advanced research labs (**PSYC370-399**), and admission is typically by permission of instructor. A student must take at least one specialized course that deepens the knowledge she or he gained in a breadth course.

ELECTIVES

To reach the 10 course credits necessary for the major, one may count any three other courses, tutorials, or teaching apprenticeships offered by the department or creditable to the major with the exception that only one introductory psychology and one statistics course may be counted towards the major, and no more than two teaching assistantships and four tutorials (or six including senior thesis tutorials) may be counted towards the major. For electives, two half-credit courses may be used in place of one full-credit course. Some courses (cross-listed with psychology or hosted in other departments) can be used as electives for the major but fulfill no other requirements and cannot be used for admission to the major. See Department Majors Manual (http://www.wesleyan.edu/psyc/about/major_guides.html) for details.

COURSES FOR NON-MAJORS

PSYC105 is appropriate for non-majors.

GENERAL EDUCATION

Stage I General Education Expectations must be satisfied at the time of admission to the major (six different departments, please refer to WesMaps for GenEd area and department). Students enrolled in courses needed to complete admission requirements during the second term of their sophomore year should still declare the major but will not be formally admitted until the end of the term upon successful completion of these courses. Students with outstanding requirements to complete should either declare a second major or submit a major deferral form to their class dean in the event they are unable to successfully complete the admission requirements for psychology. Fulfilling stage II General Education Expectations is required for completion of the major.

STUDENT LEARNING GOALS

The psychology department learning goals are organized by four objectives:

Objective 1: Knowledge Base in Psychology

- To understand and interpret basic theoretical perspectives, scientific principles, and empirical findings in three major content areas of psychology: (1) neuroscience and/or cognition, (2) psychopathology and/or developmental psychology, and (3) social and/or cultural psychology.
- To learn how to formulate research questions and conduct psychological studies.
- To obtain skills in statistical and data analysis techniques, quantitative and qualitative, and apply these techniques to psychological studies.

Objective 2: Scientific Inquiry and Critical Thinking

- To critically assess scientific methodologies in psychology and human behavior, including:
 - understanding hypothesis formation;
 - applying standardized, reliable, and valid outcome measures; and
 - applying sound data-analytic techniques.
- Integrate knowledge and methodologies across different kinds of observation in the study of human behavior and mental processes, including social, cognitive, perceptual, and biological processes, as well as influences of culture and gender.

Objective 3: Ethical and Social Responsibility

- Recognize the necessity for ethical behavior in all aspects of the science and practice of psychology
- Critically evaluate relations of psychological and behavioral knowledge with social policy, public health, and clinical practice.
- Use psychological knowledge to clarify social disparities, and to promote human well-being and change in a multicultural and global context.

Objective 4: Communication

- Acquire effective communication skills by disseminating research findings through skill-building in oral expression and expository writing.

STUDY ABROAD

Any courses taken abroad must be pre-approved by the department chair. Submit a completed Permission to Transfer Credit form from the Office of Study Abroad to the department chair. Include the course description from the university's catalog and a syllabus if available. Note in the email the purpose of the course, the credit amount transferable to Wesleyan, and your major.

ADVANCED PLACEMENT

Students who receive a Psychology AP score of 4 or 5 or an IB (International Baccalaureate) score of 6 or 7 and complete a full-credit breadth requirement course (PSYC220-279) with a grade of B or better, can receive one credit for the AP/IB score. This credit will replace the introductory course requirement only if it appears on the Wesleyan transcript. After completing the necessary breadth course, the student must request the credit through their WesPortal for the AP credit or contact the Deans' Office for the IB credit to have it transferred. AP/IB credits count as transfer credits. AP/IB credits apply toward oversubscription. The AP/IB credit counts as the one nongraded course allowed toward the major. AP/IB credits may not be used toward major admission. The preregistration system grants an electronic prerequisite override for courses in which PSYC105 would satisfy the requirement for students with an AP score greater than 3.

LANGUAGE REQUIREMENT

No language requirement.

TRANSFER CREDIT

Students may transfer up to three psychology credits from other departments or institutions (including AP/IB psychology). These courses must be preapproved by the department chair. Even though a transfer credit may have been approved toward a University credit, it must also be specifically approved toward the

psychology major. Transfer credits cannot be counted toward admission to the program except for transfer students. (Please request the Registrar's Office or your class dean to send a copy of your transcript from your previous institution to the psychology department, so that all your psychology courses can be reviewed for acceptance to the major.) With the chair's preapproval, transferred courses can be used to fulfill specific department requirements (e.g., a breadth course, a statistics course). Some transfer courses are not given a full (1.00) transfer credit and therefore the 10 credit requirement needs to be completed with other psychology courses. Submit a completed Permission to Transfer Credit form from the Office of Student Affairs to the department chair. Include the course description from the university's catalog and a syllabus if available. Note in the email the purpose of the course, the credit amount transferable to Wesleyan, and your major.

RELATED PROGRAMS OR CERTIFICATES

Concentrations: Students are not obligated to do a concentration within psychology, and the vast majority of students do not specialize in a particular area. However, we do have two concentrations within the major—in cognitive science and in cultural psychology. These are essentially ways of traversing the major (with a few additional courses) for students who would like to organize their coursework around either of those two themes. Concentrations are not declared at major declaration. Rather, a requirements worksheet for each concentration is to be turned in by early February in the second semester of the senior year. Students who successfully complete the requirements will receive a departmental certificate indicating completion.

- **Cognitive Science Concentration.** Cognitive science is the interdisciplinary study of mental processes. Many areas of psychology contribute to the study of cognitive science, including cognitive psychology, developmental psychology, and cognitive neuroscience, fields that most typically use scientific research methods to study human mental processes. Beyond psychology, scholars use diverse methods to study mental processes in humans and nonhumans, including fields such as philosophy of mind, neuroscience and behavior, artificial intelligence, linguistics, education, and others. The focus of coursework within our department involves understanding the mental and underlying neural processes involved in areas such as human perception, attention, memory, language, and reasoning; as well as the development of these processes over the life span; and participation in laboratory research is expected. See the Cognitive Science Concentration Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.
- **Cultural Psychology Concentration.** Cultural psychology considers how the vast domain of culture and society is studied by psychologists, how cultural dynamics influence individuals, and how cultural practices define the various psychologies we practice. Many areas within psychology contribute to the study of cultures, including psychological measurement; social psychology, both experimental and qualitative; clinical psychology; developmental psychology; historical psychology; and cultural psychology. Beyond psychology, scholars in allied human sciences contribute to better understanding the dynamic relation of culture and psychology. Methods and theories abound in culture and psychology. Some focus on comparative research, others on ways of bringing the presence of underrepresented populations into scholarly projects, and some examine socio-political differences both between and within societies. While investigating social structures such as race, ethnicity, religion, gender, sexuality, and class is often central to works in this area, also of importance is understanding how such forces come to manifest themselves within the field of psychology and in our collective psychologies. See the Cultural Psychology Concentration

Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.

BA/MA PROGRAM

The psychology department offers the BA/MA degree program. Wesleyan non-psychology students can apply to the program to work under the mentorship of a psychology faculty. For more information, please visit the Office of Graduate Student Service (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html)s (<http://www.wesleyan.edu/grad/>).

HONORS

By the beginning of their spring semester junior year, psychology majors who have earned at least a B+ average in all psychology courses and at least a B average in all non-psychology courses are eligible to pursue honors in psychology by writing a thesis. A student must have a faculty advisor to write a thesis. An advisor should be secured by spring of the junior year through discussion with appropriate faculty. Honors will be awarded only if both the advisor and a second faculty reader evaluate the thesis worthy of honors.

CAPSTONE EXPERIENCE

Students interested in research opportunities are encouraged to develop statistics and research methods skills as early as possible, to develop broad knowledge in the research area of interest, and to then apply for permission of the instructor to enroll in an advanced research seminar. Speaking with individual faculty members about research opportunities that might be available in their labs is also appropriate.

MASTER OF ARTS IN PSYCHOLOGY

Psychology offers the Master of Arts degree via the BA/MA program. Upon successful completion of the BA degree requirements, students become graduate students for two semesters and complete the MA. This is a combined degree program. At the time of application to the program, the student will submit a carefully devised and integrated plan of study for the two degrees designed in consultation with their faculty research advisor.

The BA/MA program involves a close working relationship between a student and a faculty advisor. Research begins during the undergraduate years, therefore a student must identify a faculty advisor in the Psychology department who will supervise the research through the conclusion of the MA degree. Students have to be accepted by a faculty mentor before applying to the program. Non-psychology students can apply to the program to work under the mentorship of a psychology faculty.

Courses

The MA in Psychology requires a minimum of 6 credits above the 32 credits needed for the BA. These courses include:

Two credits for Advanced Research Seminar (PSYC 549 & 550).

Two or more approved credits for relevant non-tutorial courses (200, 300, or 500 level).

Up to two credits from tutorials (PSYC 501/502, 503/504, 511/512; 401/402, 411/412, or 421/422).

Teaching assistantships may not be used for graduate credit.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

No language requirement.

PROGRESS AND QUALIFYING EXAMS

Not available.

TEACHING

No teaching required.

RESEARCH

Students are expected to spend at least 20 hours per week engaged in research. The research experience culminates with an MA thesis demonstrating a student's original contribution to knowledge in the field. Many students in the BA/MA program choose not to write an undergraduate honors thesis because they will be writing a more substantial MA thesis.

Ethics approval is required prior to initiating data collection for your research. If your proposed research poses minimal or no risk to participants, does not involve vulnerable populations, or does not include the collection of sensitive data, then you may submit a protocol for your proposed research to the Psychology Ethics Committee (<https://www.wesleyan.edu/psyc/resources/>) (via Catherine Race, administrative assistant). If you plan to conduct higher risk research, study vulnerable populations, collect sensitive data, or if your research involves other complications, then you are required to submit your protocol to the University IRB (<https://www.wesleyan.edu/acaf/support/reviewboard.html>).

THESIS AND DEFENSE

Work on the MA thesis should progress as follows under the guidance of the faculty advisor.

BA Year. After acceptance into the BA/MA program, the student must establish an MA thesis committee that consists of the faculty advisor and two or more additional faculty. The advisor and at least one of the additional faculty members must be in Psychology. The student must submit the Establishment of Thesis Committee Form (https://www.wesleyan.edu/psyc/about/bama_guides.html) to the faculty advisor. By the first week of May, the student must set the date for the committee meeting to discuss and approve the proposed Scheduling of Thesis Proposal Meeting Form (https://www.wesleyan.edu/psyc/about/bama_guides.html). The thesis proposal should be given to the committee at least two weeks before the scheduled meeting. While the date must be agreed

upon by the first week of May, the actual meeting may be held any time before the end of June as long as the thesis proposal is approved by the committee by the end of June. The student should take the Thesis Proposal Approval Form (https://www.wesleyan.edu/psyc/about/bama_guides.html) to the thesis proposal meeting, and must return it and a copy of the proposal to the faculty advisor by the end of June.

MA Year. During the MA portion of the program, the student must complete the thesis. The final copy of the written thesis should be given to committee members by the student at least two weeks before the oral defense date; specific timing is up to the student's committee.

Forms required by the Office of Graduate Student Services (OGSS) related to completion of the thesis are available online – see Graduation Requirements-MA: at <https://www.wesleyan.edu/grad/academics/graduationrequirementsma.html>

Oral Defense. The oral defense/examination must be held during the oral exam period designated by the Office of Graduate Student Services (OGSS). This period is usually 3.5 weeks long and begins in mid-April and ends the first week of May. The specific dates for the beginning and end of the oral exam period are posted on the University's Academic Calendar as well as in the MA exit information. The student should bring to the oral defense two forms required by the OGSS: the Oral Examination Form and an Approval of Thesis Form to be filled out by committee members. Corrections/edits from committee members must be completed before the scheduled exit interview.

All forms are included in the MA exit information that can be found at the OGSS website.

The MA candidate and research advisor will agree upon the defense format. In general, the MA candidate gives a research talk, where:

- The length (somewhere between 15 and 45 minutes) is negotiable.
- Open (to friends, faculty, public) or closed (just the thesis committee) is also negotiable.
- Open question period after the talk.
 - The student leaves the room while the thesis committee discusses.
 - The student returns to the room to receive grades, feedback, and a decision regarding the defense.
 - The thesis committee will indicate what revisions or corrections **MUST BE MADE** in order for the thesis to be complete and ready for final submission to the OGSS.

ADDITIONAL INFORMATION

To apply to the program, please go to the Office of Graduate Student Services (OGSS) website. (<https://admission.wesleyan.edu/apply/>)

For additional information and all department forms, please visit Psychology Department BA/MA Guide https://www.wesleyan.edu/psyc/about/bama_guides.html

QUANTITATIVE ANALYSIS CENTER

The Quantitative Analysis Center (QAC) coordinates support for quantitative analysis across the curriculum and provides an institutional framework for collaboration across departments and disciplines in the area of data analysis. Through its programs, it facilitates the integration of quantitative teaching and research activities and provides experiential learning opportunities in statistical computing across academic fields and disciplines. The Center contributes to the development of digital and computational studies initiatives, sponsors data analysis labs, and oversees the Data Analysis Minor (p. 180) and the Applied Data Science Certificate (p. 233) programs.

DATA ANALYSIS MINOR

MINOR REQUIREMENTS

Code	Title	Hours
Basic Knowledge Courses		
Select one of the following:		1
MATH132	Elementary Statistics	
PHYS/QAC221	Modeling and Data Analysis: From Molecules to Markets	
PSYC200	Statistics: An Activity-Based Approach	
QAC201	Applied Data Analysis	
QAC211	Digging the Digital Era: A Data Science Primer	
QAC250	An Introduction to Data Journalism	
Mathematical, Statistical, and Computing Foundation Courses		
Select two courses from the following, each from a different group:		2
Mathematical Foundations		
MATH221	Vectors and Matrices	
MATH223	Linear Algebra	
MATH228	Discrete Mathematics	
MATH274	Graph Theory	
Statistical Foundations		
ECON300	Quantitative Methods in Economics	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
Computing Foundations		
BIOL265	Bioinformatics Programming	
COMP112	Introduction to Programming	
COMP115	How to Design Programs	
COMP211	Computer Science I	
COMP212	Computer Science II	
Applied Electives		
Select two credits from the following:		2
E&ES280	Introduction to GIS	
E&ES380/ QAC344	Advanced GIS and Spatial Analyses	
ECON282	Economics of Big Data	
ECON385	Econometrics	

ECON386	Introduction to Forecasting in Economics and Finance
GOVT366	Empirical Methods for Political Science
GOVT378	Advanced Topics in Media Analysis
PHYS340	Computational Physics
QAC231	Introduction to (Geo)Spatial Data Analysis and Visualization
QAC239	Proseminar: Machine Learning Methods for Audio and Video Analysis
QAC241	Introduction to Network Analysis
QAC251	Data Visualization: An Introduction
QAC305	Exploratory Data Analysis and Pattern Discovery
QAC307	Experimental Design and Causal Inference
QAC311	Longitudinal Data Analysis (0.5 credit)
QAC312	Hierarchical Linear Models (0.5 credit)
QAC313	Latent Variable Analysis (0.5 credit)
QAC314	Survival Analysis (0.5 credit)
QAC323	Bayesian Data Analysis: A Primer (0.5 credit)
QAC356	Advanced R: Building Open-Source Tools for Data Science
can count QAC 380 or 381, not both	
QAC380	Introduction to Statistical Consulting
QAC381	QAC Praxis Service Learning Lab
QAC385	Applications of Machine Learning in Data Analysis
QAC386	Quantitative Textual Analysis: Introduction to Text Mining

NOTE: at least one of the electives should be a 300 level course

- A more advanced course can substitute for the basic knowledge course, subject to approval. Students with good quantitative skills are strongly encouraged to do this.
- Students cannot receive both the data analysis minor and the Applied Data Science Certificate (p. 233).
- Only graded courses can satisfy the requirements for the data analysis minor and the applied data science certificate. Courses completed with a CR/U grading mode will not satisfy the requirements of the two programs.

ADDITIONAL INFORMATION

- There may be prerequisite courses required for some of the courses that count toward the minor, such as calculus. These prerequisites do not count toward the minor, and students attempting to complete the minor are not recused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- Economics majors and minors cannot count ECON300 toward the minor and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course toward this minor that is also counted toward completion of any other of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the minor, subject to the QAC Advisory Committee's approval (where routine approval may be delegated to the QAC Director).

RELIGION

The Religion Department offers a cross-cultural, interdisciplinary, and critical program that explores the variety of religious experiences and expressions. In addition to courses that demonstrate the power and limits of various critical approaches to the study of religion, the department provides opportunities to analyze practices of interpretation, systems of belief, and patterns of religious behavior; the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection. Religion classes cultivate the ability to interpret and analyze social and cultural systems, to critically analyze texts, and to craft arguments in a variety of genres.

Most courses are open to all students without prerequisites, although those with no background in the academic study of religion should consider starting with a 100 or 200-level course. A minor is available for those who wish to develop a modest program in religion in support of another major. The major is open to all students seeking an interdisciplinary home in the humanities and social sciences.

RELIGION MAJOR

MAJOR DESCRIPTION

The department offers four categories of courses through which students organize their curriculum of studies. Please note that some courses fit more than one category; check the “additional requirements and/or comments” section of the WesMaps listing for a course’s official designation(s). None of our courses have prerequisites.

- **RELI151.** The purpose of this course is to introduce students to the academic study of religion. It is not designed to survey the religions of the world or present an overview of global religious diversity. Rather, it uses a series of empirical case studies to explore methodological and theoretical issues in the study of religion by examining (1) the various intellectual tools used in religious studies; (2) the social, political, economic, and cultural context of those tools; and (3) the debates arising from their use.
- **Historical Traditions courses.** Many courses in the department deal with the historical content of major religious traditions such as Buddhism, Christianity, Hinduism, Islam, and Judaism, as well as shamanic, Afro-Caribbean, and classical and modern Chinese traditions. These courses examine the texts, histories, institutions, and rituals of these religions. In this category there are both survey courses (generally numbered at the **200-level**) and seminars (generally numbered at the **300-level**). In general, courses that are not thematic approach or method and theory courses are considered historical traditions courses.

- **Thematic Approach courses.** Thematic approach courses examine specific problems, questions, or themes that intersect with the study of religion. These include gender, race, politics, sex, law, science, and colonialism. Thematic approach courses may focus on one religious tradition or draw comparatively between traditions, but all are intended to provide tools for exploring and analyzing historical and contemporary phenomena.
- **Method and Theory courses.** These courses review and critically analyze methods, theories, and strategies employed by scholars of religion. Method and theory courses include the department's RELI398, which is required of all majors and to be taken in the junior year. The task of this course is to reflect upon the theoretical and methodological pluralism in the field of religious studies with the opportunity to apply these theories and methods to specific texts, concrete issues, or other cultural formations.

ADMISSION TO THE MAJOR

All majors are required to take RELI151. This introductory course is taught every semester. Majors are required to take it before the end of their junior year. It is strongly encouraged that students take RELI151 in their first two years at Wesleyan.

MAJOR REQUIREMENTS

To complete a major in religion, students are required to take a minimum of 11 courses (10.25 credits) (with a maximum of 15.25, including thesis credits), 8 of which must be numbered 201 or higher. Students may count no more than two courses originating outside the department (i.e. cross-listed from another department or from Study Abroad) towards the major.

The minimum of 11 courses (10.25 credits) will be distributed as follows:

- RELI151
- Four courses in three areas of historical traditions
- Two courses in thematic approaches
- Two courses in method and theory, one of which must be RELI398
- A tenth course, which may be taken in any of these areas. Alternatively, the student can include one Hebrew course (HEBR202 or higher) or a different fourth-semester language course with substantial religion content (see the Language section, under Additional Information).
- RELI404 (.25 credit), a capstone exploration of your work in the major to be taken during the spring of senior year.

Note: Although some courses may fit more than one category, they cannot be included more than once in the overall count of courses taken.

STUDENT LEARNING GOALS

Our students are trained in cross-cultural, interdisciplinary, and critical approaches to the study of religion. They are expected to understand the power and limits of these approaches to the study of religion, and to demonstrate the ability to analyze practices of interpretation, systems of belief, and patterns of religious behavior. Each student will develop critical reading, writing, and research skills, and apply these to topics in the history, philosophy, and ethnography of religious traditions, including the effects of religion in society; the imbrication of religion with science and secularism; and the ways religions can form collective identity through race, nationalism, gender and sexuality, class,

caste, language, and migration. They will demonstrate these skills relative to various forms of religious phenomena such as myths, rituals, and texts.

STUDY ABROAD

The department enthusiastically encourages students to study abroad and will count up to two courses taken outside Wesleyan toward the major.

LANGUAGE REQUIREMENT

Religion majors are strongly encouraged to develop knowledge in an ancient and/or modern foreign language. One upper-level Hebrew course (**202** or higher) can count toward the major as a tenth course. Language courses besides Hebrew (such as Arabic, Sanskrit, etc.) can count toward the major once approved by the department chair. Such a course should be the equivalent of a fourth-semester language course, whose syllabus includes at least one-third religion content. For example, the course might look at religious writings, it might address some aspect of the role of religion or religious groups in society, or it might explore debates about religion, secularism, or modernity.

HONORS

Religion majors with a B+ (88.3) average in the department may choose to write a senior honors thesis. Candidates for honors must submit to the department chair a two- to three-page proposal abstract and bibliography by the last Friday of April of their junior year. The proposal should be a description of the intellectual problem of the thesis and the method to be used (whether it will be historical, ethnographic, etc.). Students should list three faculty members who would make good thesis tutors, in order of preference. The department will determine which theses will move forward with which faculty and may reject some proposals. Students will be notified of the department's decision before classes end in May. A student must be general education stage 1-compliant by graduation to be awarded honors or high honors. A passing grade, honors, or high honors will be awarded after a student's work has been presented to a departmental colloquium.

CAPSTONE EXPERIENCE

Assessment Portfolio and Capstone Symposium. During their time in the major, students will assemble a portfolio of three papers (at least four pages in length each) that they have written in the department: one from the introductory course (RELI151), one from the Major's Colloquium (RELI398), and a third of their choice that was written in their junior or senior year. Taken together, these papers should give evidence of the development of the students' learning, as well as their command of critical, analytical, and interpretative skills.

In the drop/add period of the spring term, all senior majors enroll in a .25 -credit pass/fail tutorial (RELI404), for which they will write a three- to four-page paper reflecting on the portfolio of papers they have assembled and perhaps on other work in the department. This paper allows students an opportunity to assess the arc of their intellectual development as a religion major. Papers will be submitted to the department chair and distributed to faculty members for evaluation. In the spring semester, faculty and senior majors will meet for a symposium discussion of these self-assessments, to be followed by a festive meal.

RELIGION MINOR

MINOR DESCRIPTION

The Religion Department offers a cross-cultural, interdisciplinary, and critical program that explores the variety of religious experiences and expressions. In addition to courses that demonstrate the power and limits of various critical approaches to the study of religion, the department provides opportunities to analyze practices of interpretation, systems of belief, and patterns of religious behavior; the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection.

Most courses are open to all students without prerequisites, although those with no background in the academic study of religion should consider starting with a 100 or 200-level course. A minor is available for those who wish to develop a modest program in religion in support of another major. The major is open to all students seeking an interdisciplinary home in the humanities and social sciences.

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio and e-mail the chair (jqijada@wesleyan.edu) of their interest.

MINOR REQUIREMENTS

Students wishing to complete the minor must take five courses, arranged as follows:

- REL151
- Two courses in at least two areas of "Historical Traditions," as listed in our Description of Programs in Religion (<https://www.wesleyan.edu/religion/about.html>). In this category there are both survey courses (generally numbered at the 200-level) and seminars (generally numbered at the 300-level).
- Two additional courses of the student's choice. One of these courses may include REL398, though this is not required. Student's must take REL151 prior to REL398.
- The department will accept, as one of the courses for the minor, either one course taken abroad or one course that is cross listed but not taught by members of the department.

Generally, tutorials and student forums do not count, though the chair (mrubenstein@wesleyan.edu) may count one after hearing compelling reasons from the student.

Religion courses must be taken for credit with standard letter grading, though special cases may be considered by the chair. (jqijada@wesleyan.edu)

ROMANCE LANGUAGES AND LITERATURES

The Department of Romance Languages and Literatures (RL&L) is a cornerstone of the humanities at Wesleyan and the University's gateway to the French-, Italian-, and Spanish-speaking worlds. We represent literary and cultural traditions that extend from the Middle Ages to the present. We teach languages, literatures, and cultures that span Europe, Asia, Africa, and the Americas. Our students develop and apply their knowledge and skills through the extracurricular activities and study-abroad opportunities that we promote. Through a network of collaborations across departments and divisions, we support a wide array of majors, academic programs, and initiatives.

ADDITIONAL INFORMATION

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered **101–112**) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as **101–102**), he or she will have priority for the second course, just like first-year and sophomore students.

FACULTY

Francesco Marco Aresu

MA, Indiana University Bloomington; MA, Stanford University; PHD, Harvard University
Assistant Professor of Italian; Italian Section Head; Assistant Professor, Medieval Studies

Michael Armstrong Roche

BA, Harvard University; MA, Harvard University; PHD, Harvard University
Associate Professor of Spanish; Associate Professor, Medieval Studies; Associate Professor, Latin American Studies

Robert T. Conn

BA, Dartmouth College; PHD, Princeton University
Professor of Spanish; Chair, Romance Languages and Literatures; Professor, Latin American Studies

Andrew S. Curran

BA, Hamilton College; MA, New York University; PHD, New York University
William Armstrong Professor of the Humanities; Professor of French

Octavio Flores-Cuadra

BA, Universidad Americas; MA, Universidad Americas; PHD, University of Pittsburgh
Adjunct Professor of Spanish; Spanish Section Head

Bernardo Antonio Gonzalez

BA, University of California, Berkeley; MA, University of California, Berkeley; MAA, Wesleyan University; PHD, University of California, Berkeley
Professor of Spanish

Typhaine Leservot

BA, University of Caen; MA, University of North Carolina at Chapel Hill; PHD, University of North Carolina at Chapel Hill
Associate Professor of French; Associate Professor of Letters; Coordinator, Muslim Studies

Michael Meere

Michael Meere, *French Studies*; Octavio Flores-Cuadra, *Hispanic Literatures and Cultures*; Francesco Marco Aresu, *Italian Studies*; Robert Conn, *Romance Studies*

FRENCH STUDIES MAJOR

MAJOR DESCRIPTION

The French studies major provides students with a command of the French language sufficient to live and work successfully in a French-speaking

environment. It enables them to develop an in-depth knowledge of French-language literatures and critical approaches and, through them, an awareness of Francophone modes of thought and expression. It also offers them the opportunity to develop simultaneously a broad knowledge of Francophone cultures, through a flexible, interdisciplinary program combining coursework in a number of fields that may serve as the basis for future work or further academic or professional studies.

ADMISSION TO THE MAJOR

Students must have completed FREN215 or a higher-level course with a grade of at least a B to be admitted to the major.

MAJOR REQUIREMENTS

FREN215 or the equivalent is the prerequisite for all FREN courses numbered 220 or higher.

The major consists of a minimum of eight courses beyond FREN215:

- **Four FREN courses numbered 220-399.**
 - These courses must be taken on campus in French.
 - Courses numbered **220-299** are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
 - **300-level** courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- **Four other courses** whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. These courses may be taken on campus or abroad, may be in French or English, and may be chosen from among the following courses:
 - Courses from the French section's normal offering of FREN courses numbered 220-399.
 - Courses listed Romance Lang & Lit In Eng (RL&L).
 - Courses taken through approved study abroad programs.
 - Courses offered by other departments and programs on campus that include a study of French or Francophone culture, politics, or history. These courses must be approved by the student's major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST major or the Romance studies (RMST) major where the student is combining French with another Romance culture.

Students majoring in FRST who receive two grades of B- or lower in FREN courses will be dropped from the major.

STUDENT LEARNING GOALS

The French studies major provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment.

LANGUAGE REQUIREMENT

There is no language requirement for the French Studies Major.

ADDITIONAL INFORMATION

Students who receive a C- or lower in FREN course may repeat the course once.

Students who receive less than a B in FREN102, FREN112, or FREN215 will not normally be permitted to enroll in another FREN course or, in the case of students who receive less than a B in FREN215, to study abroad on the Vassar-Wesleyan Program in Paris.

Students who receive a B-, C+, or C in FREN102, FREN112, or FREN215 may petition the head of the French Section to be permitted to take the following course in the French sequence or study abroad on the Vassar-Wesleyan Program in Paris. In their petition, they must explain in detail what supplemental work they will undertake in order to prepare themselves for the following course in the sequence or for study abroad on the Paris program (for example: they will take a summer course). If their petition is approved, they must complete the proposed supplemental work, take the placement exam at the Fries Center for Global Studies, and place into the course they wish to take (or place above FREN215 if they wish to study abroad on the Paris program) before they will be admitted to it.

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

HONORS

See departmental honors program.

CAPSTONE EXPERIENCE

See departmental description of capstone experiences.

FRENCH STUDIES MINOR

MINOR DESCRIPTION

The French Studies minor provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment. It enables them to develop an in-depth knowledge of French-

language literatures and critical approaches and, through them, an awareness of Francophone modes of thought and expression. It also offers them the opportunity to develop simultaneously a broad knowledge of Francophone cultures, through a flexible, interdisciplinary program combining coursework in a number of fields that may serve as the basis for future work or further academic or professional studies.

ADMISSION TO THE MINOR

Students must have completed FREN215 or a higher level course with a grade of at least a B to be admitted to the minor.

MINOR REQUIREMENTS

The minor consists of a minimum of five courses beyond FREN215:

- **Four FREN courses numbered 220-399.**
 - These courses must be taken on campus in French.
 - Courses numbered **220-299** are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
 - **300-level** courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- **One other course** whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. This course may be taken on campus or abroad, may be in French or English, and may be chosen from among the following courses:
 - Courses from the French section's normal offering of FREN courses numbered 220-399.
 - Courses listed Romance Lang & Lit In Eng (RL&L).
 - Courses taken through approved study abroad programs.
 - Courses offered by other departments and programs on campus that include a study of French or Francophone culture, politics, or history. These courses must be approved by the student's major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST minor.

Students minoring in FRST who receive two grades of B- or lower in FREN courses will be dropped from the minor.

ADDITIONAL INFORMATION

Students who receive a C- or lower in FREN course may repeat the course once.

Students who receive less than a B in FREN102, FREN112, or FREN215 will not normally be permitted to enroll in another FREN course or, in the case of students who receive less than a B in FREN215, to study abroad on the Vassar-Wesleyan Program in Paris.

Students who receive a B-, C+, or C in FREN102, FREN112, or FREN215 may petition the head of the French Section to be permitted to take the following course in the French sequence or study abroad on the Vassar-Wesleyan Program in Paris. In their petition, they must explain in detail what supplemental work they will undertake in order to prepare themselves for the following course in

the sequence or for study abroad on the Paris program (for example: they will take a summer course). If their petition is approved, they must complete the proposed supplemental work, take the placement exam at the Fries Center for Global Studies, and place into the course they wish to take (or above FREN215 if they wish to study abroad on the Paris program) before they will be admitted to it.

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

HISPANIC LITERATURES AND CULTURES MAJOR

MAJOR DESCRIPTION

The major in Hispanic literatures and cultures is designed for students committed to achieving fluency in Spanish and knowledge of the literatures and cultures of Latin America, Spain, and other Hispanophone communities in the US and around the world. The major emphasizes the history and cultural diversity of a world whose geographic reach is vast and whose heritages extend from the pre-colonial period in Latin America and European classical antiquity to the present. The major focuses primarily on literary and related modes of representation (such as performance, film, and the visual arts) yet recognizes course work outside the department in related fields, as described below. Students majoring in Hispanic literatures and cultures have the flexibility to tailor the major to their intellectual interests as long as they meet our expectations for coherence.

ADMISSION TO THE MAJOR

Students qualify for this major with a grade of B or better in SPAN 221 or the equivalent. Exceptions require a formal petition to the Spanish section.

MAJOR REQUIREMENTS

Nine (9) courses minimum numbered 203 and above.

- Five (5) courses minimum in SPAN numbered 221 or above taken from the Wesleyan Spanish section. To ensure majors work with at least three Spanish-section faculty members, explore the historical and geographic diversity of the Hispanophone world, and make an informed choice about their electives, these courses must be distributed as follows:
 - one course SPAN230-249 (pre-1700)
 - one course SPAN250-269 (post-1700 Spain)

- two courses SPAN270-299 (post-1800 Latin America)
- one elective
- At least one (1) course in SPAN at Wesleyan during the senior year

OTHER REQUIREMENTS

- A grade of B or better is required for courses taken for the major.
- Students who count SPAN 203 must also take SPAN 221.
- The following courses **do not** count toward the major:
 - Tutorials (for theses, essays, independent study, and course assistants)
 - Language courses taken abroad
 - Service learning courses
- It is possible to count a credit earned elsewhere (e.g., over the summer) toward the major, but petitions must be pre-approved by the section. The student must establish the course meets our standards for equivalence. Criteria and conditions (along with the petition) are explained here: <https://www.wesleyan.edu/romance/spanish/aptransferofcredit.html> (<https://www.wesleyan.edu/romance/spanish/aptransferofcredit.html>)
- Exceptions require a formal petition to the Spanish section. On the petition process (including timelines), see below.

COURSES TAKEN ABROAD AND IN RELATED FIELDS

We strongly encourage students to pick courses abroad on topics not available in the Spanish section at Wesleyan. Courses taken in Spanish on selected programs abroad may count toward the major if they have a strong interpretive dimension, with a focus on reading, writing, discussion, representation, or form (e.g., how genre, rhetoric, and/or style shape meaning). Such courses may also treat the subject's history or the debates within it. Courses that meet these criteria are ordinarily found in anthropology, art history, history, music, philosophy, and sociology. They can also be found in economics, government, and psychology when the course focuses primarily not on quantitative analysis or method but on the field's history or its use in public debates or contexts.

With the advisor's approval, majors may count courses in related fields as follows:

- Students who study abroad may count up to four (4) courses taken in Spanish on selected programs. Students who count courses taken abroad should aim for as much chronological and geographic diversity as possible.
- Students who do not study abroad may count up to two (2) related-field courses taken in English at Wesleyan on Latin America, Spain, or Latinx US. However, bear in mind you can create your own immersion experience at Wesleyan by taking more than one course in Spanish per semester as you would abroad. While you cannot replicate the full experience here, we offer such a wide range of seminars you can replicate the academic one.

PETITIONING FOR EXCEPTIONS TO MAJOR REQUIREMENTS

To ensure students are on-track to fulfill the requirements for the major, the Spanish section collectively reviews the academic histories of all juniors in February of each year, that is, before course selection for the senior year. Students may petition the Spanish section for exemption from a requirement by writing to the head of the section. Such requests should only be made in exceptional circumstances, taking into account the learning goals and rationales for the major requirements explained above. Students and their advisors should plan course selection accordingly, to ensure completion of the major regardless of the petition's outcome. Petitions should be submitted by March 30.

STUDENT LEARNING GOALS

Students who complete the major in Hispanic literatures and cultures have the knowledge and skills needed to successfully pursue their academic and professional interests:

- the language proficiency to live, study, and work in a Spanish-speaking environment, in the United States or abroad;
- strong communicative skills, in both Spanish and their native language;
- the capacity to understand diverse points of view;
- the ability to draw on a wide range of sources to stimulate their own creative and critical capacities; and
- a sense of the rich diversity and creative power of Hispanophone literary texts and films spanning ten centuries (five of them in Latin America) and five continents.

STUDY ABROAD

The following programs abroad are recommended for majors in Hispanic literatures and cultures:

- Vassar-Wesleyan Program in Madrid (Spain)
- Universidad de los Andes in Bogotá (Colombia)
- CIEE in Buenos Aires (Argentina)
- Middlebury in Chile (Various cities)
- CIEE in Santo Domingo (Dominican Republic)
- IFSA Butler at the Universidad Autónoma (Mérida, Mexico)

Students may petition for ad hoc approval of other programs abroad. For more information concerning study-abroad opportunities, visit the Office of Study Abroad, 201 Fisk Hall.

ADVANCED PLACEMENT

See wesleyan.edu/romance/spanish/aptransferofcredit (<http://wesleyan.edu/romance/spanish/aptransferofcredit.html>) for more information.

TRANSFER OF CREDIT

See wesleyan.edu/romance/spanish/aptransferofcredit (<http://wesleyan.edu/romance/spanish/aptransferofcredit.html>) for more information.

HONORS

See wesleyan.edu/romance/spanish/honors (<http://wesleyan.edu/romance/spanish/honors.html>) for more information.

CAPSTONE EXPERIENCE

Students are encouraged to present a substantial piece of work during their senior year that is comparative and transnational in nature, either within the

framework of a single course (a term paper, for instance) or as their senior essay or thesis.

ITALIAN STUDIES MAJOR

MAJOR DESCRIPTION

The study of Italian language, literature, and culture brings into proximity humanistic tradition and global concerns. The excellent language training Wesleyan students receive serves as the base from which to explore Italian history, culture, and society from the Middle Ages to the present. The rich and renewing curriculum enables students to develop and refine capabilities Wesleyan has defined as essential. Those capabilities that Italian studies fosters and increases include writing, speaking, interpretation, intercultural literacy, and effective citizenship—skills that are in service to a variety of professions and courses of study. The small classes, typically conducted through the medium of Italian, a characteristic of Wesleyan's Italian curriculum, allow professors and students to work closely on a variety of critical topics. The cross-disciplinary composition of the major allows students to explore their interests in an array of different departments (history, the College of Letters, art history, classics).

ADMISSION TO THE MAJOR

Students qualify for this major with a grade of B or better in ITAL111 or the equivalent.

MAJOR REQUIREMENTS

- Nine courses above the level of ITAL102 (i.e., ITAL111 and higher) are required. Sophomores who are satisfactorily completing ITAL102 and intend to pursue Italian will be admitted to the major even though that course does not itself count for the major;
- All courses that count toward the major must be taken for a grade. Normally, only courses passed with a B or better will count for the major. Students are expected to request permission from the Italian section to count courses with a lower grade toward the major;
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged;
- One of the nine required courses may be taken in English;
- For students placing into ITAL221 or higher, three of the nine required courses may be taken in English;
- One course in Italian at Wesleyan following study abroad is required;
- All students are required to take at least one course for the major in their senior year.

ADDITIONAL INFORMATION

- The Italian major is designed to allow students to start Italian at Wesleyan in their first or second year and complete the major. Completion is further helped by spending one semester abroad in Italy through the ECCO program or another program.

- Students are highly encouraged to satisfy the post study-abroad course requirement in the semester they return to campus.
- Four credits from the ECCO program in Bologna are accepted: Only one of these may be on a topic that is not Italian in nature (i.e., economy of Russia taken at the UniBo).
- Lecce credit is accepted only for students who have completed ITAL102 only before study abroad.
- If a student attends a study-abroad program other than ECCO, a review of the number of credits that will be accepted into the major is required.

STUDENT LEARNING GOALS

The Italian studies major combines the study of Italian language, literature, film, and culture, bringing humanistic tradition together with current global concerns. The major is designed to provide students with a comparative, international, and interdisciplinary education. Language training at Wesleyan serves as the base from which to explore Italian history, culture, and society from the Middle Ages to the present. Likewise, the in-depth study of a variety of texts (literary, filmic, and cultural) enhances the study of the language. The study of a foreign language and culture complements students' understanding of their own native cultures, enriching their critical understanding of it. Small classes taught through the medium of Italian, along with the extracurricular activities and study-abroad opportunities, allow students to study in detail and collaborate on a variety of critical topics and foster abilities considered essential in an ever-globalizing world, such as critical thinking, intercultural interpretation and literacy, and effective citizenship. These skills, in turn, prepare students for a variety of professions and lifelong inquiries.

STUDY ABROAD

ECCO program in Bologna, Italy. Wesleyan University cosponsors with Vassar College and Wellesley College a program in Italy for up to 15 students from each of the three colleges without regard to their choice of major. ITAL102 or the equivalent of one year of college-level Italian is the prerequisite for participation. Students may choose to participate in either the fall or spring semesters, or (optimally) both. For fall or full-year participants, the program begins with a seven-week (two-credit) intensive language and culture course that consists of three weeks in Lecce in the month of August, followed by a short break, and then four more weeks in Bologna before the beginning of the academic year. Spring-only participants will have a similar three-week (one-credit) course in Bologna in January. A full complement of courses taught in Italian dealing with Italian literature, history, government, art history, and other areas is offered at the program's center, taught by faculty from the Università di Bologna and by the program director.

Qualified students are strongly encouraged to enroll in courses at the Università di Bologna, and, thus, students with good language skills will have a wide range of fields from which to choose, including economics, government, and the natural sciences. All courses carry one Wesleyan credit. Since the Italian studies major emphasizes linguistic and cultural competency, most courses taken at the Università di Bologna in Italian will normally count for the major. Only one course that is not Italian in nature, yet taught in Italian (i.e., The Economy of Russia) taken at the Università di Bologna will be accepted.

The cost of the program is approximately equivalent to that of staying on the home campus for the same period, and it includes round-trip air transportation between New York and Italy. Applications for the fall semester are due by

March 1, for the spring semester, by October 1, and must be submitted to the Office of Study Abroad (<http://wesleyan.edu/ois/>).

Students participating in Wesleyan's Program in Bologna for any duration may receive credit for four courses. Students attending study-abroad programs other than ECCO are required to have those credits reviewed by their advisor before they will be accepted for the major. Learn more at: wesleyan.edu/romance/italian/studyabroad.html (<http://wesleyan.edu/romance/italian/studyabroad.html>).

ADVANCED PLACEMENT

See wesleyan.edu/romance/italian/aptransferofcredit (<http://wesleyan.edu/romance/italian/aptransferofcredit.html>) for more information.

TRANSFER OF CREDIT

See wesleyan.edu/romance/italian/aptransferofcredit (<http://wesleyan.edu/romance/italian/aptransferofcredit.html>) for more information.

ADDITIONAL INFORMATION

Course assistantships in Italian. Majors and other accomplished students returning from overseas may apply to serve as a course assistant for elementary Italian. Students may not receive academic credit for this exercise; rather, they will receive a stipend for their work. Students should express their interest to the faculty advisor in the spring for the following fall semester and in the early fall for consideration for the spring semester. Please note that students may serve as course assistant for only one course at the University per semester.

HONORS

See wesleyan.edu/romance/italian/honors (<http://wesleyan.edu/romance/italian/honors.html>) for more information about honors.

CAPSTONE EXPERIENCE

See wesleyan.edu/romance/italian/honors (<http://wesleyan.edu/romance/italian/honors.html>) for more information about capstone experience options.

ROMANCE STUDIES MAJOR

MAJOR DESCRIPTION

The Romance studies (RMST) major provides students the opportunity to develop a broad knowledge of two or more of the Romance cultures taught at Wesleyan (French, Italian, Spanish) through a flexible, interdisciplinary program combining course work in a number of fields that may serve as the basis for

future work or further academic or professional studies. Students who are interested in this major should contact the chair of the department.

ADMISSION TO THE MAJOR

Students qualify for this major with a grade of B or better in any combination of two of the following courses or the equivalent: FREN215, ITAL111, or SPAN221.

MAJOR REQUIREMENTS

- Determination of a major (five courses in your primary language) and minor (four courses in your secondary language) focus.
- A minimum of two comparative projects. The idea is to suspend, for a moment, the nationalist assumption that languages and cultures exist in isolation from each other. Writers, artists, scientists, and businesspersons routinely cross borders and languages. We ask you to do the same in two short or long papers, to be completed at Wesleyan or during study abroad. A comparative project means simply that, in consultation with a course instructor, you will draw substantially on both your Romance Studies languages and cultures to explore a problem that interests you. We ask for two papers to encourage you to think comparatively from the primary viewpoint of each of your Romance Studies languages. We suggest you pursue this within courses you are taking anyway (including a senior thesis) because it need not require extra work--just a different way of thinking about work you must do regardless. The length is less important than the substance of your thinking. The project could be about border-crossing movements, reception, influence or adaptation, intertextuality, or dialogue between languages, literatures, and/or cultures. Or it could be an exploration of an issue that interests you (the environment, health care, urban planning, food, science, queer identities, fashion, etc.) in cross-cultural perspective, drawing on both languages and cultures. The projects may also be more informal or essayistic reflections (the equivalent of two short papers in length) on something significant you have learned or a perspective gained through study of two languages and cultures that you are unlikely to have learned through English only, a single foreign language, or another major. These essays may draw on work or study abroad or on the multiple courses you have taken at Wesleyan in your Romance Studies languages. They may be written in English or in one of your two languages. If you write in English you are expected to draw on sources in both languages.
- Nine courses at or above determined levels (FREN223, ITAL111, SPAN221) in two Romance languages.
- At least one course taken in both the student's primary and secondary languages in the student's senior year.
- Students are expected to earn a B or better in courses that count for the major. Students wishing to count a course with a lower grade toward the major are expected to consult with the chair of Romance Languages and Literatures (who will consult with the department) about it as soon as the grade is recorded.
- Courses must be taken for a letter grade, unless the student is also majoring in COL.

ADDITIONAL INFORMATION

- Study abroad is expected to take place on a Wesleyan-sponsored study-abroad program. Alternatively, students may, with the advisor's prior statement of support, study on another approved program. This practice is intended to promote the intellectual coherence of a major in which students acquire one language more recently than another.

- Students may petition their advisor for special permission to count take one course in English centered on the culture of their primary language towards the major.
- With the advisor's approval, students may satisfy the comparative requirement by way of coursework and/or written work conducted on a study-abroad program.
- Students whose primary language placement is higher than FREN215, ITAL112, SPAN221 are required to complete nine courses, two of which may be in English in the primary language's culture only.
- You may count up to three courses taken during one study abroad toward the major, and up to four courses if going abroad twice (once in each of your language of study). These courses may be taken in one or both of the major languages.
- Except in rare circumstances, students may not double major in any of the majors sponsored by the Romance Languages and Literatures Department: RMST, SPAN, FRST, ITST.
- Senior essays or theses must be comparative and involve the literatures and/or cultures of the student's major languages.
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged.

STUDENT LEARNING GOALS

The Romance studies major provides students with the proficiency in two Romance languages (among French, Italian, and Spanish) to live, study, and work successfully in the corresponding French-, Italian-, and/or Spanish-speaking environments. They learn about their literatures and other cultural forms such as film and, through them, about their modes of thought, expression, and creative achievement. As a result, they improve their ability to communicate in French, Italian, and/or Spanish as well as their native language; become more adept at understanding other points of view; and learn to draw on a wide range of sources to stimulate their own creative and critical capacities. Students are encouraged to bring the resources of their two Romance cultures to bear together on problems that interest them, providing a depth of perspective unavailable in English only or a single foreign language. Finally, students explore the enormous cultural diversity of the French-, Italian-, and/or Spanish-speaking worlds through a flexible interdisciplinary program (often including study abroad) that can serve as the basis for future work or further academic or professional studies.

STUDY ABROAD

All majors are strongly encouraged to spend at least one semester studying abroad in a Romance-language-speaking country. In addition to Wesleyan's own programs in Bologna, Madrid, and Paris, there are currently Wesleyan-approved study-abroad programs in Argentina, Brazil, Cameroon, Chile, Costa Rica, Ecuador, Italy (Florence, Rome), Madagascar, Mexico, and Senegal. Wesleyan also sends one exchange student each year to the Institut d'Etudes Politiques in Paris. Students who have strong academic reasons for wishing to participate in other programs may also petition the Fries Center for Global Studies for permission to do so. For information on the approved programs and the petition process, contact the Fries Center for Global Studies (<http://www.wesleyan.edu/cgs/osa/>).

ADVANCED PLACEMENT

See wesleyan.edu/romance/romancestudies/aptransferofcredit (<http://wesleyan.edu/romance/romancestudies/aptransferofcredit.html>) for more information.

LANGUAGE REQUIREMENT

Yes

TRANSFER CREDIT

See wesleyan.edu/romance/romancestudies/aptransferofcredit (<http://wesleyan.edu/romance/romancestudies/aptransferofcredit.html>) for more information.

ADDITIONAL INFORMATION

Students are responsible for ensuring that major communications with the primary language advisor about the essay or thesis work also go to the secondary language advisor at the same time (and vice-versa: communications with the secondary language advisor should go to the primary language advisor).

HONORS

See wesleyan.edu/romance/romancestudies/honors (<http://wesleyan.edu/romance/romancestudies/honors.html>) for more information about honors.

CAPSTONE EXPERIENCE

See wesleyan.edu/romance/romancestudies/honors (<http://wesleyan.edu/romance/romancestudies/honors.html>) for more information about capstone experience options.

RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

The Russian, East European, and Eurasian studies (REES) program offers an interdisciplinary range of courses in Russian language, history, politics, literature, culture, and film, as well as in the culture and society of Eastern Europe and Eurasia. We encourage students to study abroad; our students have done research in Russia, Ukraine, Georgia, and other countries in the area. Russia continues to play a major role in global affairs, and the study of Russia occupies an important place in the Wesleyan curriculum, for both majors and nonmajors.

The major in Russian, East European, and Eurasian studies is designed to provide students with a thorough understanding of contemporary Russian culture and society, its history, its political and economic institutions, and its place in the world. Students are strongly encouraged to spend a semester or a summer in Russia (or another country in the area, if appropriate). At the end of their studies students should have achieved an advanced level of fluency in the language and should be able to work with Russian sources to conduct original research in their chosen area of specialization. They should be able to read or watch Russian media and understand the historical and cultural references that frame Russians' understanding of their world. Students should also have a basic familiarity with the historical, cultural, social, and political developments of the other post-Soviet states beyond Russia and have the opportunity to explore these countries in more detail if they so desire. The major prepares students for careers in research and cultural analysis, education, law, artistic production, diplomacy and public service, business, and communication.

FACULTY

Susanne Grace Fusso

BA, Lawrence University; MA, Yale University; PHD, Yale University
Marcus L. Taft Professor of Modern Languages; Professor of Russian, East European, and Eurasian Studies; Chair, Russian, East European, and Eurasian Studies

Natasha Karageorgos

MA, Tomsk State University; PHD, CUNY The Graduate Center
Assistant Professor of the Practice in Russian, East European, and Eurasian Studies

Roman Utkin

MA, Kazan State University; MPHIL, Yale University; PHD, Yale University
Assistant Professor of Russian, East European, and Eurasian Studies; Assistant Professor, Feminist, Gender, and Sexuality Studies

AFFILIATED FACULTY

John P. Bonin

BA, Boston College; MA, University of Rochester; PHD, University of Rochester
Chester D. Hubbard Professor of Economics and Social Science; Professor of Economics; Co-Chair, College of Social Studies; Tutor, College of Social Studies; Professor, Russian, East European, and Eurasian Studies

Saida Daukeyeva

BMU, Moscow State Tchaikovsky Conservatory; PHD, Moscow State Tchaikovsky Conservatory; PHD, School of Oriental and African Studies, University of London

Assistant Professor of Music; Assistant Professor, Russian, East European, and Eurasian Studies

Joseph J. Fitzpatrick

BA, Harvard University; PHD, Duke University
Assistant Professor of the Practice in Letters; Assistant Professor of the Practice, Russian, East European, and Eurasian Studies

Katja P. Kolcio

MA, University of Georgia Athens; MA, Ohio State University; PHD, Ohio State University
Associate Professor of Dance; Director, Allbritton Center for the Study of Public Life; Associate Professor, Environmental Studies; Associate Professor, Education Studies; Associate Professor, Russian, East European, and Eurasian Studies

Nadya Potemkina

DMA, The University of Memphis; MM, University Nthrn Iowa; MM, Ball State University
Adjunct Associate Professor of Music; Adjunct Associate Professor, Russian, East European, and Eurasian Studies

Justine Quijada

BA, University of Chicago; MA, Columbia University; PHD, University of Chicago
Associate Professor of Religion; Chair, Religion; Associate Professor, College of the Environment; Associate Professor, Russian, East European, and Eurasian Studies

Sasha Rudensky

BA, Wesleyan University; MFA, Yale University
Associate Professor of Art; Associate Professor, Russian, East European, and Eurasian Studies

Peter Rutland

BA, Oxford University; DPHIL, York University
Colin and Nancy Campbell Professor in Global Issues and Democratic Thought; Professor of Government; Tutor, College of Social Studies; Professor, Russian, East European, and Eurasian Studies

Victoria Smolkin

BA, Sarah Lawrence College; PHD, University of California, Berkeley
Associate Professor of History; Tutor, College of Social Studies; Associate Professor, Russian, Eastern European, and Eurasian Studies

EMERITI

Irina Aleshkovsky

MA, Vilnius State University
Adjunct Professor of Russian Language Literature, Emerita

Priscilla Meyer

BA, University of California, Berkeley; MA, Princeton University; MAA, Wesleyan University; PHD, Princeton University
Professor of Russian Language and Literature, Emerita

Duffield White

BA, Wesleyan University; PHD, University of Michigan
Associate Professor of Russian Language and Literature, Emeritus

DEPARTMENTAL ADVISING EXPERTS

Susanne Fusso, Peter Rutland, Victoria Smolkin-Rothrock, Roman Utkin

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MAJOR

ADMISSION TO THE MAJOR

Students normally declare a major in Russian, East European, and Eurasian Studies in the spring of sophomore year. Interested students should begin their study of Russian language as early as possible and should consult a REES faculty member before declaring the major. To be accepted into the program, students must have a minimum overall average of B in courses related to the major.

MAJOR REQUIREMENTS

There are two possible concentrations in the REES major.

- **Language, literature, and culture.** Majors must complete three years of college-level Russian or the equivalent, as well as five more courses, three of which must be in literature or culture, one of which must be in either politics and economics or history and religion, and one of which must be either a course or a full-credit tutorial conducted in Russian. If a student places out of one or more semesters of language, he or she must take enough courses in REES to add up to a total of 11. For example, a student who places out of two semesters of first-year Russian would take four more semesters of language plus seven more courses.
- **Social sciences.** Majors must complete two years of college-level Russian or the equivalent, as well as seven more courses chosen in consultation with an advisor. These courses must include at least one in the category of politics and economics, one in the category of history and religion, and one in the category of literature and culture. If a student places out of one or more semesters of language, he or she must take enough courses in REES to add up to a total of 11. For example, a student who places out of two semesters of first-year Russian would take two semesters of language plus nine more courses.

REES COURSES

Code	Title	Hours
Politics and Economics		
GOVT274	Russian Politics	1
History and Religion		
HIST219	Russian and Soviet History, 1881 to the Present	1
RELI271	Secularism: Godlessness from Luther to Lenin	1
RELI239	Modern Shamanism: Ecstasy and Ancestors in the New Age	1
RELI289	Indigenous Religions: Politics, Land, Healing	1

RELI393	If there is no God, then everything is permitted?" Moral Life in a Secular World	1
HIST353	The Communist Experience in the 20th Century	1

REES267	Parody: Humor, Artistic Evolution, and Restoration of the Sacred	1
REES277	Gogol and His Legacy: Witches, Con Men, and Runaway Noses	1
REES321	Moscow/Berlin: Socialist Modernity and the Transnational Avant-Garde	1
Literature in Russian		
REES260	Dostoevsky's BRAT'IA KARAMAZOVY	1
REES284	Pushkin	1
Language		
RUSS101 & RUSS102	Elementary Russian I and Elementary Russian II	3
RUSS201 & RUSS202	Intermediate Russian I and Intermediate Russian II	2
RUSS301 & RUSS302	Third-Year Russian I and Third-Year Russian II	2

STUDY ABROAD

Majors are strongly encouraged to participate in either a summer or a semester program of study in Russia, for which academic credit will be given. Students may study in Eastern Europe or Central Asia as long as the program includes a language component. For a semester of study abroad on an approved program, four credits will count toward graduation, of which two will count toward the REES major. For a summer of study abroad on an approved program, two credits will count toward graduation, of which one will count toward the REES major.

HONORS

To qualify to receive honors or high honors in Russian, East European, and Eurasian studies (REES), a student must write a senior thesis that will be evaluated by a committee consisting of the tutor, a second reader from the REES faculty, and one additional reader either from REES or from the faculty at large. This committee makes the final decision on departmental honors. Only a two-semester senior thesis may be submitted for honors in REES.

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MINOR

ADMISSION TO THE MINOR

Any student who intends to earn the minor in REES should speak with the program chair by the end of the junior year at the latest.

MINOR REQUIREMENTS

The minor in REES consists of six courses, in which the student must achieve a GPA of B. These courses must include RUSS101 and RUSS102 or two semesters of Russian language study at the appropriate level and four more **REES** courses, of which one must be taken in each of the three areas of politics and economics, history and religion, and literature and culture (see course list). The fourth course may be in any of the three areas or may be a semester of intermediate or advanced Russian. Two of the courses may be taken during study abroad (with prior approval). All courses except RUSS101 and RUSS102 must be taken for a grade. Students should plan the minor in consultation with REES faculty.

Satisfactory completion of the minor will be certified by the program.

RUSS302	Third-Year Russian II	1

SCIENCE IN SOCIETY PROGRAM

The sciences and scientifically sophisticated medicine and technology are among the most important and far-reaching human achievements. Scientific work has affected people's intellectual standards, cultural meanings, political possibilities, economic capacities, and physical surroundings. Scientific research has also acquired significance, direction, authority, and application within various cultural contexts. To understand the sciences as human achievements is, in significant part, to understand the world in which we live.

The Science in Society Program (SISP) is an interdisciplinary major that encourages the study of the sciences and medicine as institutions, practices, intellectual achievements, and constituents of culture. Students in the program should gain a better understanding of the richness and complexity of scientific practice and of the cultural and political significance of science, technology, and medicine. The major is well suited for students interested in a variety of professional and academic pursuits after graduation, since it encourages students to integrate technical scientific knowledge with a grasp of the historical and cultural setting within which it is understood and used.

FACULTY

Anthony Ryan Hatch

AB, Dartmouth College; MA, University of Maryland College Park; PHD, University of Maryland College Park

SCIENCE IN SOCIETY MAJOR

MAJOR DESCRIPTION

The major consists of three components: courses offered within the Science in Society Program (SISP) in the history, philosophy, and social studies of the sciences, medicine, and technology; at least two years of coursework in a single scientific discipline; and an area of concentration to provide depth in a related discipline. Students can either complete their area of concentration in anthropology, FGSS, history, philosophy, religion, or sociology, or they can concentrate in a scientific discipline by completing a major in that science as part of their SISP major (the first two years of the science major satisfy the SISP science requirement).

First- and second-year students interested in the Science in Society Program should begin their science courses as soon as possible. Most students take their first course in the program as a sophomore. The core courses in the history of science or sociocultural studies of science are especially recommended as first courses in the program.

ADMISSION TO THE MAJOR

Students who declare their major in SISP must specify the fields in which they plan to complete their science requirement and their area of concentration. Students who seek to add the major after their sophomore year will only be admitted after review to ensure that they are in a good position to complete the major. All students who declare the major must submit a statement of their goals in the major, for advising purposes, and for later evaluation of how well those goals were met. There are no other requirements for admission to the major.

MAJOR REQUIREMENTS

Students may enroll in the program either as a stand-alone major or as a joint major with one of the science departments (astronomy, biology, chemistry, earth and environmental sciences, molecular biology and biochemistry, neuroscience and behavior, physics, or psychology). All students must take one course each in history of science, philosophy of science, and sociocultural studies of science, along with three additional courses in the program (including at least one

300-level seminar). Students for whom the program is a stand-alone major must also take a minimum of four major-track courses in one of the science departments and a structured three-course area of concentration in either anthropology, FGSS, history, philosophy, religion, or sociology. Students who undertake the joint major with a science must complete all requirements for a science major in place of the area of concentration. Further information about program requirements, policies, and its learning goals can be found at wesleyan.edu/sisp (<http://wesleyan.edu/sisp/>).

Neither thesis tutorials nor independent tutorials can count toward the six courses in the program that are part of the major requirements. The required courses provide indispensable background for undertaking independent projects. Students considering writing a thesis are encouraged to be well along with the core major requirements before beginning the thesis as first-semester seniors.

STUDENT LEARNING GOALS

The faculty of the Science in Society Program have approved the following list of learning goals for all students undertaking the major in science in society:

- **Scientific competence:** Competence beyond the major-track introductory level in a scientific discipline, indicated by students' performance in appropriate courses in that science;
- **Core competence in science studies:** Improved understanding of the sciences and/or medicine as historically developing, socially and culturally situated practices of inquiry and conceptual understanding; that understanding should have both multidisciplinary breadth and greater depth within a particular disciplinary area of concentration.
- **Disciplinary depth:** Those students whose area of concentration is in a discipline that incorporates the sciences and medicine as objects of inquiry should improve their understanding of how that discipline conceives and approaches the sciences and/or medicine and how its approach connects to other ways of understanding the sciences and medicine; those students whose area of concentration is fulfilled by a second major in a scientific discipline should improve their understanding of how practices and achievements of that science are historically, culturally, and philosophically situated and how their scientific understanding and their core competence in science studies can be mutually informative.
- **Scientific contextualization:** Improved skills for engaging their scientific understanding in relevant ways with specific issues or concerns of broader social, cultural, political, and/or philosophical significance and for acquiring and assessing relevant technical background for such issues that go beyond their prior scientific training.

STUDY ABROAD

Many SISP students go abroad for a semester as a junior. Students can normally count only one course from study abroad toward the six required courses in SISP, although some students also get credit for science courses or toward their area of concentration.

TRANSFER CREDIT

Courses may be transferred from other institutions to replace one of the science in society requirements, but we review these requests very stringently, and we only accept courses clearly equivalent in level and field to courses we would accept at Wesleyan.

HONORS

To be eligible for departmental honors, a student must meet two criteria. First, all work done in the core courses of the Science in Society Program, including electives, must be considered, on average, to be very good (equivalent to a B+ or better). Second, a senior thesis deemed excellent by its readers is necessary for honors, and a genuinely distinguished thesis is needed for high honors.

CAPSTONE EXPERIENCE

The Science in Society Program offers three options for students seeking a senior capstone experience for their work in the major:

- All students are required to take one or more **300**-level seminars in the program. These courses, on a wide range of topics, each with a term paper or other independent research component, provide many opportunities for what can become capstone projects, and students are encouraged to choose their seminar courses and their research topics in those courses with this possibility in mind.
- Students with a suitable topic and faculty sponsor have an option of writing a senior thesis, which can lead to departmental honors for those eligible. Students interested in undertaking a thesis will be expected to submit a thesis prospectus in the spring semester of their junior year. For further information on this option, see wesleyan.edu/sisp/for_majors/honors_thesis.html (http://wesleyan.edu/sisp/for_majors/honors_thesis.html).

SOCIOLOGY

The program is designed to help students develop new frameworks for analyzing a broad array of social relations—from everyday life interactions to large-scale historical and structural transformations—and to cultivate a critical appreciation for the academic discipline of sociology.

DEPARTMENTAL ADVISING EXPERTS

Greg Goldberg; Kerwin Kaye

SOCIOLOGY MAJOR

ADMISSION TO THE MAJOR

Students who wish to declare the major must have successfully completed SOC151 and have completed or be currently enrolled in one additional sociology department course including:

- SOC202 or SOC212, or
- a course approved by petition to the department

MAJOR REQUIREMENTS

Majors must complete a total of 10 courses in fulfillment of the major requirements; this includes the capstone requirement.

- Three sociology department foundations courses
 - SOC151
 - SOC202
 - SOC212
- Three sociology department topical courses (**SOC220-SOC412**)
- Three additional topical courses from any combination of:
 - **SOC220-SOC325**
 - SOC401 or SOC402 (sociology department individual tutorials, including education in the field)
 - SOC411 or SOC412 (sociology department group tutorials)
 - Advisor-approved courses taken outside the Wesleyan Department of Sociology, including study-abroad credit, sociology-relevant courses at Wesleyan, and sociology courses taken at other institutions.
- Senior capstone course (SOC399 or SOC405/6)

All sociology majors must enter their senior year having taken a minimum of three courses within the Wesleyan Department of Sociology. This includes at least one of the two required courses (SOC202 or SOC212).

Non-Department Major Credit

Three of the six topical courses needed to complete the major can be completed outside the Sociology Department. These courses include study abroad courses, transfer credit, and courses taken with other departments at Wesleyan. The courses must be sociology-related and require pre-approval from your major advisor. Majors can request a **maximum of three courses (or three credits)** from outside the department.

STUDY ABROAD

Study abroad is fully compatible with completing the major, but students who plan to go abroad for a semester are expected to discuss with their major advisors how such studies will fit into their overall academic program before finalizing their plans. Pre-approved study abroad courses can be transferred to the major as non-departmental major credit (up to 3 credits; see details in Major Requirements and Transfer Credit).

TRANSFER CREDIT

The Sociology Department will consider requests to transfer credit for graded sociology courses taken at other U.S. academic institutions. For currently enrolled Wesleyan students, these requests must be made during the first two weeks of the course the student is requesting a transfer credit. In the event that a course is no longer available or some other circumstance bars a student from enrolling in the pre-approved course, students must contact their major advisor to get permission to have credit for a different course transferred instead.

Along with the transfer credit form (available at <https://www.wesleyan.edu/studentaffairs/forms.html>), a course syllabus must be provided showing that the proposed course is equivalent to Wesleyan courses.

Students who began their studies at other U.S. academic institutions can have their credits transferred upon admission to Wesleyan, and these credits can apply to the major. Already enrolled students who began their studies at Wesleyan can only request to have topical or upper division transfer credit applied to the major, which can count toward the maximum of three sociology-related credits taken outside the Department to fulfill the major requirements.

ADDITIONAL INFORMATION

- **Major advising.** Each major is assigned a faculty advisor with whom the student works out a program of study
- **Education-in-the-field credit.** Students, whether majors or non-majors, seeking education-in-the-field credit must provide the department, in advance, with an acceptable prospectus of their work and assurance of professional guidance during the field experience. Students must submit research papers based on this experience. These papers should refer substantially to sociological literature pertinent to their field experience.

In planning their programs, students should examine the full list of WesMaps (<http://www.wesleyan.edu/wesmaps/>) course offerings. Other information about the sociology major is available in the department office, Public Affairs Center 122.

HONORS

The Department of Sociology offers a two-semester Honors Thesis Seminar (SOC 405-406) supervised by a member of the sociology department faculty who serves as thesis advisor for students enrolled in the seminar. Students selected for participation in the seminar work individually with the seminar advisor and meet weekly with other thesis writers in a process directed toward the formulation and production of an original piece of imaginative and sophisticated scholarship. Consideration focuses on the potential for successful completion of a project that is both creative and well-formulated.

The Sociology Department's yearlong Thesis Seminar proceeds in three stages:

Stage 1. Students will submit a writing sample that will be used to evaluate a candidate's potential for successful completion of an Honors project. Please note that this writing sample is *not a prospective Thesis proposal*. Rather it is a completed work, selected by the student and chosen to reflect the student's best work, i.e., the work of which the student is most proud. The central considerations for evaluation of the sample are formal, not substantive and, as a result, the student writing can be drawn from any creative context, including but not limited to, coursework completed in Sociology of elsewhere. There is no prescribed number of pages required for the submission.

Students who wish to be considered for the enrollment in the Honors Thesis Seminar will submit a PDF file of the writing sample by the end of the first week of April.

Writing Samples should be emailed to **Professor Courtney Patterson-Faye**, cpatterson@wesleyan.edu. Please include THESIS SEMINAR WRITING SAMPLE—all caps—in the subject line of the email.

Stage 2. In most instances, the petition process includes an interview, either on-campus or virtual, with the professor leading the seminar in order to explore tentative ideas for thesis topics and discuss the nature of the commitment required for completion of an independent Honors Thesis. Candidates will be contacted directly in order to schedule an interview.

Stage 3. Enrollment in the two-semester Thesis Seminar is managed as a POI course. Successful candidates will be formally enrolled in the seminar (and, thus, in the university-managed Honors College administrative system) during add/drop at the start of senior year.

Department faculty may also elect to work with a senior major toward completion of an honors thesis outside of the context of the Thesis Seminar. Independent thesis tutorials are established at the discretion of members of the sociology department faculty.

Double-filing theses

Double-majors who are completing honors theses/projects for another department on campus can request to have their thesis considered for honors in Sociology. In this case, the student must fulfill the senior capstone requirement by completing an Advanced Research Seminar (ARS) *and* must complete a thesis tutorial with a member of the Sociology Department for at least one semester their senior year.

CAPSTONE EXPERIENCE

Capstone Course Requirement. Advanced majors are required to craft a substantial capstone research project. There are two routes toward completion of this project:

- **Advanced Research Seminar.** Students enroll in an Advanced Research Seminar during the sixth, seventh, or eighth semester. Enrollment in these special-topic seminars, numbered **SOC399**, is limited to 15 student majors per course. These seminars feature in-depth engagement with advanced course materials and culminate in a significant research paper.
- **Honors Thesis.** Students who qualify for the honors program write an honors thesis in the **Thesis Seminar** (SOC405-SOC406) during the seventh and eighth semesters. See section entitled "Qualifying for Honors" for full information on the honors program.

THEATER

The Theater Department considers the critical and creative study of each theatrical area to be an essential component of a liberal arts education. Offerings include courses in acting; civic engagement and outreach; criticism, ethnography, history, and literature; costume, lighting, scenic, and media-based design; directing; performance studies; theory; performance art; playwriting; puppetry; and solo performance.

Many theater courses are cross-listed with academic departments in all divisions, as well as Wesleyan's colleges. Theater faculty and majors are committed to collaboration within and across departments. The Theater Department strongly encourages students to attend performances and lectures sponsored by all performing and visual arts departments.

Each year the department sponsors productions and other events in a variety of theatrical forms; some are directed by faculty members or guest artists, while others are directed by undergraduates. Theater courses and productions reflect the interdisciplinary and multiple interests of the faculty and majors. Theater Department productions take place in the Center for the Arts Theater, the Patricelli '92 Theater, and other spaces on campus. The Center for the Arts (CFA) is a state-of-the-art facility with 400 seats. The Patricelli '92 Theater is a historic brownstone building with a traditional proscenium. Both theaters are highly flexible and can be used as black boxes. Site-specific performances take place across campus: in the Davison Art Center, the Center for African American Studies, and the Russell House, to name a few. All theaters and alternative spaces are available to faculty and senior thesis productions. The theater department is part of the Center for the Arts, a complex of studios, classrooms, galleries, performance spaces, departments, and programs that provide a rich, interdisciplinary environment for study and performance.

FACULTY

Katherine Brewer Ball

Leslie A. Weinberg

BA, Case Western Reserve Univ; MFA, University of Connecticut
Retired Artist-in-Residence, Theater

DEPARTMENTAL ADVISING EXPERTS

Ron Jenkins, Marcela Oteiza (Dance Dept)

THEATER MAJOR

MAJOR DESCRIPTION

The theater major is an integrated program of study, one that provides a solid knowledge of the different areas of expertise that are involved in stage production and criticism. Gateway courses provide an introduction to theater techniques, principles, literatures, and discourses. Advanced courses prepare students to articulate their visions of theater both on stage and in writing. Honors theses, essays, and creative endeavors present majors with the opportunity to engage in in-depth scholarly and/or artistic research.

Students with strong interest in both theater and other fields of study may wish to pursue a double major. The option offers attractive possibilities for maximizing the benefits of Wesleyan's broad curriculum. Such an option is not uncommon but requires careful and early planning.

Declaration to become a major is usually made in the second semester of the sophomore year. The department embraces a broad definition of theater and believes in embodied learning: process, performance, and critical perspectives are equally stressed. Our majors focus on two or more aspects of theater and learn to articulate their artistic vision both on stage and in writing. The department welcomes analysis, criticism, artistic innovation, and theater inquiry of all sorts.

Beginning fall 2018, the Theater Department has adopted revisions to the major requirements, implemented as an option for the classes of 2019, 2020, 2021, and 2022. Students in the class of 2023 that declare the theater major will be required to fulfill the revised requirements.

ADMISSION TO THE MAJOR

One of the areas revised within the theater major includes expansion of the Gateway Course options. By creating category requirements, rather than specific courses, the Theater Department has opened up options for students to begin their path through the study of theater in areas other than acting, such as playwriting, design, or performance practice.

Gateway courses for students electing to follow the non-revised major plan (only applicable for the classes of 2020, 2021, and 2022):

Code	Title	Hours
Gateway Courses (optional for classes of 2019, 2020, 2021 and 2022)		

Please note that these courses must be completed in the theater department by the second semester of sophomore year

THEA105	Production Laboratory (One 0.5 credit in the technical aspects of scenic/lighting or costumes)	0.5
THEA203	Playing in the Theater Archive: An Introduction to Performance Studies	1
THEA245	Acting I	1

Gateway to the theater major for students electing to follow the revised major plan (applicable for the classes of 2020, 2021, and 2022, and mandatory beginning with the class of 2023):

Degree type	Area of Study
Gateway Courses	*(mandatory beginning class of 2023)*
Technical Theater (0.5 CR)	THEA105 (One 0.5 credit in the technical aspects of scenic/lighting or costumes)
Theater Arts (1.0 CR)	This includes courses in the areas of design, acting, playwriting, advanced technical theater, and performance practice
Theater Methods (1.0 CR)	This includes courses in the areas of dramatic literature, theater history, criticism, applied theater and service learning.

Course Category Designations: https://drive.google.com/file/d/1pb6q_PnBs8RjsZD5-izLBRawAK4yysaA/view?usp=sharing (https://drive.google.com/file/d/1pb6q_PnBs8RjsZD5-izLBRawAK4yysaA/view/?usp=sharing)

MAJOR REQUIREMENTS

Note: These requirements are in addition to the Gateway courses

Students will be required to select a major plan upon declaration.

Students in the classes of 2020, 2021, and 2022 will be able to choose which set of requirements they will fulfill to graduate as a theater major.

Requirements for students electing to follow the non-revised major plan (only applicable for the classes of 2020, 2021, and 2022):

- One course in scenic, costume, or lighting design.
- THEA302. Please note that certain courses in departments may fulfill one of two theater history prerequisites (the gateway THEA203 or THEA302) only if approved by the theater faculty. Please consult the section "Courses cross-listed with other Wesleyan departments, colleges, and programs" in the Theater Handbook.
- Two courses in dramatic literature, visual literacy, theory, criticism, and/or service learning. One of them may be an FYS course. Specialty courses in other departments may fulfill one of the two requirements only if approved by the theater faculty. Please consult the section "Courses cross-listed with other Wesleyan departments, colleges, and programs" in the Theater Handbook.
- One credit of THEA329/THEA331 (earned in .25- and .5-credit increments).
- One credit of THEA427/THEA431/THEA433/THEA435/THEA437.

Total major program requirements: 2.5 credits (Gateways) + 6 credits = 8.5 credits

Requirements for students electing to follow the revised major plan (applicable for the classes of 2020, 2021, and 2022, and mandatory beginning with the class of 2023):

- Three (3) credits in **Theater Arts** courses, which must include one design course (THEA359 - set design, THEA383 - costume design, THEA360 - media design or THEA305 - lighting design). One credit (and only one credit) of Performance Practice ([THEA427](#)/[THEA431](#)/[THEA433](#)/[THEA435](#)/[THEA437](#)) is also required for this category. One instance of the .5CR course THEA183 (The Actor's Experience, formerly known as Directed Experiences in Acting) may be counted towards the Performance Practice requirement.
- Two (2) credits in **Theater Methods** courses. Only one course may be 100-level.
- One (1) credit of **Technical Theater** ([THEA329](#)/[THEA331](#)) earned in .25- and .5-credit increments through participation in department production related positions.
- One (1) credit in the **Expanded Field of Theater**, which includes courses cross-listed with the department in related fields, excluding courses in dramatic/theater literature. Students can petition for a non-crosslisted course that would directly serve their focus in theatermaking to count in this category; this petition should be initially reviewed with their major advisor, and then will be considered by the theater department faculty.

Total major program requirements: 2.5 credits (Gateways) + 7 credits = 9.5 credits

For course category designations, please consult the categorization list on the Theater Department website (here) (https://drive.google.com/file/d/1pb6q_PnBs8RjsZD5-izLBRawAK4yysaA/view/?usp=sharing) and posted in the lobby of the Theater building.

GENERAL EDUCATION

Completion of Stage 1 and 2 of General Education Expectations is a prerequisite for honors or high honors in theater.

STUDY ABROAD

Students are encouraged to spend a semester at Wesleyan-approved programs abroad or to petition for approval of other programs in countries of their choice. For information, contact the Office of Study Abroad (<http://wesleyan.edu/studyabroad/>).

Wesleyan preapproved programs with focus on theater:

- British American Drama Academy, London
- Moscow Art Theatre Semester
- CIEE, Buenos Aires
- C.V. STARR, Chile
- For Wesleyan policy on the programs not on the approved list, contact the Office of Study Abroad (<http://wesleyan.edu/studyabroad/>).

PRIZES

Rachel Henderson Theater Prize: Awarded annually to the student who, in the estimation of the theater faculty, has contributed most to theater at Wesleyan over the course of their undergraduate career.

Outreach and Community Service Prize: Awarded to the senior theater major who, through their work in the Theater Department, has done a significant service in the community.

J.Peter Adler '90 Memorial Fund: Established in 1997 with gifts from family and friends in memory of J.Peter Adler '90, the J.Peter Adler Memorial Fund provides two awards per year to support a student theater production: one in the fall and one in the spring semester. An avid theater lover, J.P. participated in Second Stage while at Wesleyan as a non-theater major. He died suddenly in 1995. The Adler Fund is awarded with preference to first-time directors of Second Stage productions and, whenever possible, to non-theater majors. The fund may also support student theater productions associated with the Theater Department or other entities, such as senior thesis productions.

HONORS

Preliminary honors proposals are due during spring of junior year. Students can submit proposals for either critical or creative honors theses.

Preliminary proposals will be judged based on clearly expressed objectives and evidence of research and preparation. Judgments will be based equally on preliminary research, clarity of the objectives of the process, and rationale for staging a given production. Please consult the section "Application Guidelines for Honors in Theater" in the handbook.

The Honors Committee will award honors on the basis of the readers' evaluations. All departmental readers must recommend honors for a candidate to be successful. Students are entitled to copies of the readers' comments. The honors tutor is responsible for assigning a grade for the courses THEA409 and THEA410; this grade need not reflect the decision of the Honors Committee to award or deny departmental honors.

The Honors Committee will evaluate eligible theses according to the following criteria: consideration of the readers' evaluations, originality of research and thesis topic, the student's performance in courses as reflected in his or her transcript, compliance with the General Education Expectations, and the extent to which the student's educational experience reflects the philosophy, goals, and diversity of the department.

Please see wesleyan.edu/theater/ for details on prerequisites for applying for honors theses.

CAPSTONE EXPERIENCE

Theater Capstone Optional
 SENIOR THESIS - two semesters
 SENIOR PROJECT - one semester

WRITING PROGRAM

Wesleyan offers students a vibrant writing community and a multitude of ways to pursue their interest in writing. Writers, editors, and publishers visit campus throughout the year, and students support more than 20 magazines, journals, and literary groups. The curriculum emphasizes academic writing in many subject areas and also offers courses in fiction writing, creative nonfiction, poetry, screenwriting, playwriting, and mixed forms. The establishment of the Shapiro Creative Writing Center at 167 High Street signals the importance the University attaches to writing. The Shapiro Center serves as a hub for writing activities and provides a venue for readings, workshops, colloquia, informal discussions, student-generated events, and receptions. Its lounge is open to all students enrolled in creative-writing courses. The Shapiro Center also houses writing faculty, including fiction writer Amy Bloom, the Distinguished University Writer-in-Residence.

The creative writing concentration in the English major. This concentration allows students to pursue creative writing at a high level in the context of advanced literary study. The concentration fosters the study of the history and practice of individual genres and of new hybrid forms and offers students the opportunity to work closely with the University's full-time writing faculty: the Shapiro-Silverberg Professor of Creative Writing, the internationally renowned poet Elizabeth Willis; Lisa Cohen, a writer of creative nonfiction, fiction, and poetry; and editor Anne Greene. Recent visiting faculty includes such distinguished writers as Hilton Als, Andre Aciman, Paul La Farge, Douglas A. Martin, and Clifford Chase. Enrollment in creative-writing courses in the English Department is not limited to English majors.

Creative writing in the College of Letters. Creative writing has long been an important component of the College of Letters curriculum, with an entry-level and an advanced course offered every year and open to students in all majors. COL majors are encouraged to write creative honors theses.

The Writing Certificate. The University's Writing Certificate (p. 234), essentially a minor, is open to students working in any major who wish to make writing an area of concentration. Courses that may count toward the certificate are drawn from many departments. They range from fiction writing, poetry, and creative nonfiction to journalism, biography, arts and film criticism, translation, and writing about science. In addition to fulfilling the coursework requirements for the certificate, students create a portfolio of their work and present their writing in public. The certificate sponsors a number of courses that carry the **WRCT** designation.

The Writer's Block. This small residential community provides an opportunity for first-year students and upper-class students with a particular interest in writing to live together and collaborate on formal and informal programs.

FACULTY

Rachael Barlow

MA, Indiana University Bloomington; PHD, Indiana University Bloomington
Adjunct Assistant Professor of Academic Writing; Associate Director for Assessment

Amy B. Bloom

BA, St. John's College; MFA, University of Iowa
Visiting Scholar in the Shapiro Center for Writing at Wesleyan University

Sofia Raquel Warren

BA, Wesleyan University
Visiting Writer in the Shapiro Writing Center

UNIVERSITY MAJOR

The University Major affords first and second-semester sophomores the opportunity to design a program that responds to their individual interests and aptitudes, that provides the excitement and the challenge of using the methodologies of two or more disciplines, and that gives sophomores the chance to work independently on an entire program, developing the necessary background and integrating the courses chosen in order to achieve the objectives that are set.

A student who wishes to arrange a University Major should discuss their intended program with members of the faculty in the student's fields of interest. The purpose of the discussions is to help the student clarify preliminary plans and select the three faculty members who will serve as sponsors.

UNDERGRADUATE MINORS

- African American Studies Minor (p. 207)
- African Studies Minor (p. 207)
- Archaeology Minor (p. 40)
- Art History Minor (p. 45)

AFRICAN AMERICAN STUDIES MINOR

INTRODUCTION

ADMISSION TO THE MINOR

MINOR REQUIREMENTS

Students wishing to minor in African American Studies must complete a minimum of 5 semester courses, all of which are housed or cross-listed with African American Studies. (Other courses may be counted with the approval of the chair.) Of these 5 courses, at least 3 courses must be 200 level or higher.

Students must take the Gateway course (AFAM101), one course in African American History, and one course in African American Literature. Generally, tutorials and student forms do not count, although the chair may count one after hearing compelling reasons from the student.

AFRICAN STUDIES MINOR

Students interested in studying Africa at Wesleyan choose from an exciting variety of courses from across the Wesleyan curriculum: art history, dance, economics, English, feminist gender & sexuality studies (FGSS), history, government, music, and Romance languages & literatures.

MINOR REQUIREMENTS

The African studies minor allows students to create a coherent course of study by taking at least 5 courses that offer breadth and depth in the study of the continent. It enables them to develop an understanding of African history, contemporary issues facing the continent, and the creative and intellectual contribution of Africans. The minor consists of a minimum of 5 courses.

Although there is no overall GPA requirement to stay in the minor, a grade of B or higher is required to receive minor credit for a course.

Code	Title	Hours
At least one African History survey course:		1
HIST212	Modern Africa	
HIST217	Empires, Slavery, and Revolution: Africa to 1800	
Four additional African Studies courses from History, the Social Sciences, Humanities, or African Diaspora, with the following conditions:		4
-No more than 3 total History courses may count.		
-No more than 2 MUSC and/or DANC may count.		
-No more than 1 African Diaspora class may count		
-No more than 1 100-level course may count.		
African History (See WesMaps for a complete list)		
HIST212	Modern Africa	
HIST217	Empires, Slavery, and Revolution: Africa to 1800	
HIST226	Queen Mothers, Unruly Women: Histories of Gender and Sexuality in Africa	
HIST267	Development in Question: Conservation in Africa	
HIST302	Reproductive Politics and the Family in Africa	
HIST334	Social History of Islam in Africa	
HIST341	Body Histories in Africa	
Social Studies (See WesMaps for a complete list)		
ECON366	The Economics of Developing Countries	
GOVT324	Africa in World Politics	
GOVT355	Political Theory and Transitional Justice	
Humanities (See WesMaps for a complete list)		
DANC260	West African Dance I (and subsequent sections of West African Dance II and III; Two dance courses must be taken to fulfill the one credit requirement)	

ENGL131B	Writing About Places: Africa
ENGL221	The African Novel I: Nervous Conditions
ENGL223	The African Novel II: After Achebe
FREN281	French and Francophone Theater in Performance
FREN382	Jungle and Desert in Francophone African Literature
MUSC295	Global Hip-Hop
MUSC445	West African Music and Culture--Beginners
SPAN264	Orientalism: Spain and Africa
African Diaspora	
AFAM203	African American History, 1444-1877
AFAM223	20th-Century Franco-Caribbean Literature and the Search for Identity
AFAM233	All Ah We: Contemporary Afro-Caribbean Drama & Performance
ENGL286	Literature of the Harlem Renaissance
ENGL375	Black Global Cities
FREN324	Interpreting the "New World": France and the Early Modern Americas

Students are encouraged, but not required to study Arabic, French, Portuguese, or to pursue study of an African language through the Self-Instructional Program (SILP). Students who complete 1 credit of coursework through SILP may count their language instruction as 1 credit out of the total 5 credits.

Students are encouraged to study abroad in Africa, and they may count 1 course taken abroad to fulfill one of the additional history, social sciences, or humanities course requirements. The study abroad course must focus on the study of Africa, or an African region.

ADDITIONAL INFORMATION

Students may also create their own University Major (<http://www.wesleyan.edu/studentaffairs/resources/majordeclaration/umajor.html>) centered on the study of Africa:

FURTHER RESEARCH, LANGUAGE, AND STUDY ABROAD OPPORTUNITIES RESEARCH

Besides participating in a variety of study abroad programs throughout the year, Wesleyan students often undertake their own original research in Africa as part of completing senior honors theses for their respective departments.

Theses are available here. (<http://wesscholar.wesleyan.edu/etds/>)

LANGUAGE

Students who wish to study an African language are encouraged to submit a petition through the Language Resource Center and the Self-Instructional Language Program (<http://www.wesleyan.edu/ictls/silp.html>) (SIPL).

STUDY ABROAD

Information on current programs may be obtained from the Office of Study Abroad (<http://www.wesleyan.edu/studyabroad/>), and should be discussed with a member of the African studies faculty cluster.

ARCHAEOLOGY MINOR

ADMISSION TO THE MINOR

To declare the Minor, a student must achieve a grade of B or above in a designated Gateway course.

GATEWAY COURSES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP223	Survey of Roman Archaeology and Art	1
ARCP260	Art and Archaeology of Ancient India	1

MINOR REQUIREMENTS

The Minor in Archaeology requires a minimum of six credits in archaeology.

- 1 Gateway course
- 1 Elective course:
The Elective requirement can also be met with two 0.5 credits of the Thinking Through Archaeology Symposium, offered each fall semester (beginning Fall '22)
- 1 course in each of four areas (Anthropology, Classical Civilization, Art History, Methods and theory). For a listing of the different courses in each of these categories, please see Major Requirements (p. 38).

The Minor in Archaeological Science requires a minimum of six credits in archaeology:

- 1 Gateway course
- 1 Elective course:
The Elective requirement can be met by two 0.5 credits of the Thinking Through Archaeology Symposium Course. With the approval of the Chair, students in the ArchSci Minor can also apply one extra-departmental course in the sciences to their ARCP Minor.
- 1 course in each of three areas (Anthropology, Classical Civilization, Art History)
- 1 300-level lab-based ARCP course (this meets the Method and Theory area requirement)

To apply for the minor, please submit a declaration to add the minor through the Major/Minor/Cert Declaration application in your student portfolio. Students seeking to apply a science courses to meet their Elective requirement must explain the course they intend to apply and its application to archaeological research.

ART HISTORY MINOR

INTRODUCTION

The art history minor is intended to reach students who would like to incorporate the study of artworks and architecture into their work in other disciplines and/or who discover art history later in their college career. The art history minor maintains the geographical breadth, historical depth, and academic rigor that is characteristic of the major but comprises fewer art history courses and does not require study of a foreign language. Art history minors may not write honors theses.

ADMISSION TO THE MINOR

For admission to the minor, students must have taken a **minimum of three art history courses** and have a B average in art history, as well as a B average overall.

The art history program director will admit students to the minor and certify them upon its completion. To sign up for the minor, students need to complete a minor declaration form found in their WesPortal.

Upon completing the minor, students must submit a completed minor certification form.

Students will not be required to declare an official minor advisor, but they are encouraged to meet with the art history faculty on an as-needed basis and to take part in program events.

MINOR REQUIREMENTS

For the graduating classes of 2019, 2020, and 2021, click on the following link for ARHA minor requirements. [wesleyan.edu/art/artist/form/MINOR_REQUIREMENTS_for_2019-2020-2021.pdf (https://www.wesleyan.edu/art/artist/form/MINOR_REQUIREMENTS_for_2019-2020-2021.pdf)] For the classes of 2022 onward, please see the requirements below.

To complete a minor, students need to take **six** credits with the following requirements:

- Completion of a 100-level course. Students may choose from any of the 100-level courses offered in any given semester or year. The following link provides a list of introductory course offerings [https://www.wesleyan.edu/art/artist/form/ACTIVE_ARHA_2022.pdf]
- Completion of five courses numbered 200 or above. These courses must include study in **three** of the following five **geographical** areas: The Americas, Europe, East Asia, South Asia, and Africa. The five courses must also include study in **two** of the following four **historical** periods: ancient, medieval, early modern, and modern. One of these five courses must be a seminar (numbered in the 300 range). Any one course may be counted toward only one of these area or period requirements. The following link provides a list of courses currently offered and the categories they may fulfill [https://www.wesleyan.edu/art/artist/form/ACTIVE_ARHA_2022.pdf]
- All of the courses offered by or cross-listed with the Art History program are eligible for the minor.
- No courses numbered 401 or higher may count toward the minor.

- No courses in other departments may count toward the minor, except for courses cross-listed with art history.
- One course in art history taken elsewhere may count toward the minor, subject to the program director's preapproval. This course may count as a 200-level course but the 100- and 300-level courses for the minor must be taken at Wesleyan.
- All courses for the minor must be taken on a graded basis. Exceptions will be made for COL and CSS majors.

ADDITIONAL INFORMATION

For the purposes of planning, students have access to two documents:

1. course projections, which indicate when specific courses will be offered during a three-year period: https://docs.google.com/spreadsheets/d/1o_IW5xLRNDDTyX53J2ZqxLF5mO_sNTem80MwNtBUE4k/edit#gid=0 (https://docs.google.com/spreadsheets/d/1o_IW5xLRNDDTyX53J2ZqxLF5mO_sNTem80MwNtBUE4k/edit#gid=0)
2. ARHA minor planning worksheets, which may be used to help students map out a course of study: https://www.wesleyan.edu/art/artist/course_planning_documents.html

As a temporary measure, and until such time as we are able to regularly offer courses in African art, courses in African Studies may count as fulfilling the Africa geographical distributional requirement.

CARIBBEAN STUDIES MINOR

INTRODUCTION

The Caribbean Studies Minor is an interdisciplinary minor, administered by the Coordinator.

The site of Columbus's first landing and the hemisphere's first Iberian settlement, what we now call the Caribbean is temporally, geographically, and historically at the center of the Americas. Colonized by Spain, France, England, the Netherlands, Denmark, and the United States, populated by streams of labor from Africa and Asia, as well as by peoples from Europe and the Middle East, the Caribbean has extraordinary diversity in its people, languages, and cultures. It is a microcosm of contemporary global problematics: immigrant, indigenous, settler, and diasporic communities negotiating their current status as polities while preserving individual pasts and identities.

The Caribbean Studies Minor at Wesleyan focuses upon aspects of this region. It draws upon faculty and curricula from many departments and programs: American studies, Latin American Studies, African American Studies, the College of Letters, Anthropology, English, Religious Studies, and Music, among others. It is by its diverse nature constituted as always multidisciplinary.

MINOR REQUIREMENTS

- AMST200, Colonialism and Its Consequences, is required as a foundation course for the Minor.
- The four additional courses may be drawn from courses that fall within the category of Caribbean Studies. While a specific distribution of the four

electives across disciplinary and interdisciplinary fields is not required, no more than three courses in a single disciplinary field may be counted for the Minor.

- All courses counted for the Minor should be 200-level and above.
- While there is no general GPA requirement to declare or remain in the Minor, a grade of B or better is required for courses counted for the Minor.
- Students who study abroad in the Caribbean (or elsewhere) would be allowed to count two courses for the Minor so long as the courses are focused within Caribbean Studies. To be counted for the Minor, study-abroad courses have to be approved by the Coordinator for the Caribbean Studies Minor.
- The Caribbean Studies courses in Wesleyan's curriculum from 2018-2019 to 2021-2022 are listed below. Courses not listed may be approved by the Coordinator after discussion.

2021-2022 Courses

Code	Title	Hours
AFAM203	African American History, 1444-1877	
AMST200	Colonialism and Its Consequences in the Americas	
AMST225	Latinidad: Introduction to Latina/o Studies	
ENGL304	Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice	
GOVT302	Latin American Politics	
HIST245	Modern Latin America Since 1810	
HIST296	Colonial Latin America	
RELI268	Black Religions in the Americas	
RELI391	Religion and the Social Construction of Race	
SPAN270	Survey of Latin American Literatures, Cultures, and Ideas	
SPAN285	Asian Latino Encounters	

2020-2021 Courses

Code	Title	Hours
AMST200	Colonialism and Its Consequences in the Americas	
AMST225	Latinidad: Introduction to Latina/o Studies	
AMST273	Diasporic South Asian Writing and American Studies	
AMST329	Issues in Latina/o Politics and Culture	
ENGL279	Introduction to Latina/o/x Literature and Art	
ENGL328	Black, White, and Queer Forms and Feelings	
GOVT302	Latin American Politics	
SPAN270	Survey of Latin American Literatures, Cultures, and Ideas	
SPAN275	Multilingual Aesthetics in Latin America	
SPAN281	"Islas sonantes": Music and Sound Technologies in Hispanic Caribbean Literature

LAST226	Survey of Latin American Literatures, Cultures, and Ideas	
LAST245	Modern Latin America Since 1810	
LAST296	Colonial Latin America	

CIVIC ENGAGEMENT MINOR

MINOR DESCRIPTION

Civic engagement encompasses a wide range of activities in which individuals work to strengthen their communities, to realize common goods, to enhance the capacities and dispositions necessary for democratic self-rule, and, in general, to deliberately shape their common life. Wesleyan University prides itself on enrolling and nurturing students with a strong social consciousness. Students participate in a wide variety of formal and informal "civic" activities in Middletown and around the world. These activities include volunteer work,

practica, and service-learning courses. This minor is designed for students interested in reflecting upon these activities and integrating their civic and academic efforts.

ADMISSION TO THE MINOR

Students will be admitted to the CEM by self-declaration. They will be considered part of the minor after they have formally applied to participate and discussed their plans with the faculty coordinator. The application will consist, in part, of a reflection paper explaining the place of civic engagement in the applicant's own life and plans to fulfill the CEM requirements.

MINOR REQUIREMENTS

During their sophomore through senior years, Civic Engagement Minor (CEM) students will complete a series of structured academic and cocurricular activities, including courses, volunteering, practica, and opportunities for reflection that will enable them to develop a broad understanding of the varied components of civic engagement.

We can think of civic engagement as applied democratic theory. As "theory," mastery requires the development of a theoretical understanding of both the principles of democracy and the institutional and social requisites of a democratic society (see Requirements 1 and 5 below). As "applied," mastery of civic engagement requires the practical understanding of social processes that results from actual engagement in the community (Requirements 3 and 4). Thus, the minor requires students to take a set of courses to acquire an understanding of how democratic processes (including the practices and institutions of civil society) work; to acquire the firsthand experience of civic engagement and civic life by participating in approved civic activities; and, finally, through both coursework and other means, to reflect on the connections among these and to integrate them effectively (Requirements 1, 2, and 5).

- **Requirement 1:** Six courses dealing with civic engagement are required. Courses are grouped into the following categories (listed on WesMaps (<http://www.wesleyan.edu/wesmaps/>))
 - **The Individual in Society**
 - **The Practice of Democracy**
 - **Ethical Reasoning**
 - **Volunteerism and Activism**
 - **Education and Public Scholarship**
 - **Civic Engagement in Cross-Cultural Perspective**
- **Requirement 2:** Three reflection papers are required, one per year of the minor. These papers, along with one document from each relevant course, will be archived during the process of completing the minor.
- **Requirement 3:** A minimum of 40 hours of service work coordinated through the Office of Community Service and Volunteerism (OCS)
- **Requirement 4:** A practicum
- **Requirement 5:** The senior seminar, a .25 credit capstone course (CSPL302)

Note: CEM requirements fulfilled before a student is admitted may be counted toward the minor at the discretion of the CEM Advisory Panel.

Admission. Students will be admitted to the CEM by self-declaration. They will be considered part of the minor group after they have formally applied to participate and discussed their plans with the faculty coordinator. The

application will consist, in part, of a reflection paper explaining the place of civic engagement in the applicant's own life and plans to fulfill the CEM requirements.

ADDITIONAL INFORMATION

CONTACT

Contact the faculty coordinator, Barbara Juhasz, at bjuhasz@wesleyan.edu.

COLLEGE OF EAST ASIAN STUDIES MINOR

ADMISSION TO THE MINOR

Upon completion of any College of East Asian Studies (CEAS) course, students may apply to enter the CEAS minor. Students must fill out an online CEAS new minor student information form (<https://docs.google.com/forms/d/e/1FAIpQLScnBK33CD9ypUTFW9uBS6rOubPLyD69FFpJ4yVxaExlq4Jgdg/viewform/>) and then submit a minor declaration via the Minor Declaration Tool in the electronic portfolio.

MINOR REQUIREMENTS

The minor requires completion of any five CEAS courses and intermediate-level competence completed second year in Chinese, Japanese, or Korean. Starting with the class of 2020, only courses taken for a grade may be counted towards the minor.

No more than two of the five courses may be language courses. No more than two of the five courses can be performance or studio art courses. No more than one of the five courses can be a study abroad course.

The rule that no more than two of the five courses can be language courses means that students beginning their Chinese, Japanese, or Korean language study at Wesleyan may have to take as many as seven courses to fulfill the minor (because four courses would be required to reach intermediate competence, but only two will count toward the minor).

Note that while the CEAS major requires that native speakers of a Chinese, Japanese, or Korean language must study a different Chinese, Japanese, or Korean language, that does not apply to the minor, so a native speaker of Korean, for example, can pass the intermediate competence standard without taking any language classes and can simply take any five CEAS classes. All students, including native speakers, must contact a language instructor and pass a placement exam in order to certify intermediate competence. Please contact the appropriate language coordinator (Chinese--Gong, Japanese--Maruta, Korean--Back) immediately, or no later than one year prior to graduation (i.e. Spring of Junior year), if you intend to exercise this option to allow for sufficient time to take additional language if necessary.

To graduate with a minor in CEAS, seniors must complete their minor certification form in their portfolio.

DATA ANALYSIS MINOR

MINOR REQUIREMENTS

Code	Title	Hours
Basic Knowledge Courses		
Select one of the following:		1
MATH132	Elementary Statistics	
PHYS/QAC221	Modeling and Data Analysis: From Molecules to Markets	
PSYC200	Statistics: An Activity-Based Approach	
QAC201	Applied Data Analysis	
QAC211	Digging the Digital Era: A Data Science Primer	
QAC250	An Introduction to Data Journalism	
Mathematical, Statistical, and Computing Foundation Courses		
Select two courses from the following, each from a different group:		2
Mathematical Foundations		
MATH221	Vectors and Matrices	
MATH223	Linear Algebra	
MATH228	Discrete Mathematics	
MATH274	Graph Theory	
Statistical Foundations		
ECON300	Quantitative Methods in Economics	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
Computing Foundations		
BIOL265	Bioinformatics Programming	
COMP112	Introduction to Programming	
COMP115	How to Design Programs	
COMP211	Computer Science I	
COMP212	Computer Science II	
Applied Electives		
Select two credits from the following:		2
E&ES280	Introduction to GIS	
E&ES380/ QAC344	Advanced GIS and Spatial Analyses	
ECON282	Economics of Big Data	
ECON385	Econometrics	
ECON386	Introduction to Forecasting in Economics and Finance	
GOVT366	Empirical Methods for Political Science	
GOVT378	Advanced Topics in Media Analysis	
PHYS340	Computational Physics	
QAC231	Introduction to (Geo)Spatial Data Analysis and Visualization	
QAC239	Proseminar: Machine Learning Methods for Audio and Video Analysis	
QAC241	Introduction to Network Analysis	
QAC251	Data Visualization: An Introduction	

QAC305	Exploratory Data Analysis and Pattern Discovery
QAC307	Experimental Design and Causal Inference
QAC311	Longitudinal Data Analysis (0.5 credit)
QAC312	Hierarchical Linear Models (0.5 credit)
QAC313	Latent Variable Analysis (0.5 credit)
QAC314	Survival Analysis (0.5 credit)
QAC323	Bayesian Data Analysis: A Primer (0.5 credit)
QAC356	Advanced R: Building Open-Source Tools for Data Science
can count QAC 380 or 381, not both	
QAC380	Introduction to Statistical Consulting
QAC381	QAC Praxis Service Learning Lab
QAC385	Applications of Machine Learning in Data Analysis
QAC386	Quantitative Textual Analysis: Introduction to Text Mining

NOTE: at least one of the electives should be a 300 level course

ADDITIONAL INFORMATION

- There may be prerequisite courses required for some of the courses that count toward the minor, such as calculus. These prerequisites do not count toward the minor, and students attempting to complete the minor are not recused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- Economics majors and minors cannot count ECON300 toward the minor and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course toward this minor that is also counted toward completion of any other of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the minor, subject to the QAC Advisory Committee's approval (where routine approval may be delegated to the QAC Director).
- A more advanced course can substitute for the basic knowledge course, subject to approval. Students with good quantitative skills are strongly encouraged to do this.
- Students cannot receive both the data analysis minor and the Applied Data Science Certificate (p. 233).
- Only graded courses can satisfy the requirements for the data analysis minor and the applied data science certificate. Courses completed with a CR/U grading mode will not satisfy the requirements of the two programs.

ECONOMICS MINOR

MINOR DESCRIPTION

Economics is a social science concerned with the production, distribution, and consumption of goods and services. It studies how individuals, businesses, governments, and nations make choices about allocating scarce resources.

Economics can generally be broken down into macroeconomics, which concentrates on the behavior of the aggregate economy, and microeconomics, which focuses on individual consumers, businesses, and markets.

ADMISSION TO THE MINOR

Completion of ECON110 with a grade of C+ or higher and completion of, or current enrollment in, ECON300. A student who fails to obtain a grade of C+ or higher in ECON110 may declare the minor only after obtaining a grade of C+ or higher in ECON300.

MINOR REQUIREMENTS

Students minoring in economics must complete five letter-graded courses (three core courses and two electives) in addition to ECON110,

- The three core courses are: ECON300, ECON301, and ECON302
- One of the two electives must be an upper-tier elective, numbered **301 to 399**.
- One of the two electives may be either an upper- or lower-tier elective (**201 to 299**).
- No courses numbered **401** or higher may count toward the minor.
- No courses in other departments, including **CSS**, may count toward the minor.
- One elective course in economics taken elsewhere may count toward the minor as the lower-tier elective only, subject to the department chair's approval.

All courses counted toward the economics minor must be taken for a letter grade.

EDUCATION STUDIES MINOR

INTRODUCTION

The Education Studies Minor is designed to help students acquire a deeper understanding of education and its relationship to society. Through a range of courses across the curriculum, students look critically and analytically at educational institutions, practices, and thinking, from early childhood through adulthood, using local, national, and global lenses. Foundation courses provide a theoretical background on philosophy, history, and psychology of education. Further requirements empower students with the knowledge, tools, and skills for analyzing different aspects of education, on topics such as human development

and cognition, pedagogy and curriculum, and sociocultural approaches to the study of education. Students complete a methods course relevant to education studies as well as a practicum experience to gain hands-on experience complementing their academic work.

ADMISSION TO THE MINOR

Students intending to minor in Education Studies should submit a minor request through their WesPortal. It is best to do this as early as possible so that you can receive e-mails and updates about the minor that will help you with academic planning. Students who declare at the canonical time (spring of sophomore year) should simultaneously enroll in EDST101, the Sophomore Gateway Course, which will be taught in the second half of spring term (4th quarter) every year.

MINOR REQUIREMENTS

Students must take a minimum of 5 credits plus a practicum experience equivalent to at least .5 credit. Some courses can count toward different requirements, but students need to choose which requirement is being fulfilled by which course: an individual student cannot use the same course to fulfill multiple requirements toward the Minor.

Students can use the same course to fulfill requirements in two academic programs (for example, a cross-listed course in ITAL and EDST could count toward both the EDST Minor and the ITST Major), if that is acceptable to the other department.

These are the requirements for the Minor in Education Studies:

1. Sophomore Gateway (.5 credit)
2. Foundations of Education: schools in society/ed psych/social reproductions (1 credit)
3. Category 1: Cognition, Development, & Science of Learning (1 credit)
4. Category 2: Social and Structural Analyses of Education (1 credit)
5. Category 3: Research Methods & Data Analysis (1 credit)
6. Practicum (.5 credit or equivalent)
7. Pedagogy (.5 credit)

The courses may be completed in any order consistent with their prerequisites.

Listing of all approved courses that fulfill requirements for the Education Studies Minor (https://docs.google.com/document/d/1gtZCuuzvRH8epYls8AF5EhE_RVAuvGu6A-gONyk-D_k/edit/?usp=sharing)

Students can always petition to substitute a different course to meet any Education Studies requirements by completing this petition form (<https://forms.office.com/Pages/ResponsePage.aspx?id=eWz9qXFt80mREQyOWR3D0ZrbqMi0a91AqeglpTx3ytUNDVQQ0FUU0NNWEEExRzVPS1y>). The petition form asks students to justify the substitution and to upload a syllabus or other supporting information. Students will be notified if their petition requests are approved. Once approved, students can request the override in their Minor or Major Certification page in WesPortal.

Courses that have specific prerequisites that must first be completed are indicated with an asterisk.

FOUNDATIONS COURSE

Students must take one foundational course in Education Studies that broadly covers the field.

Code	Title	Hours
Foundations (1 credit)		
EDST230	Schools in Society (Foundations)	1
PSYC/EDST253	Educational Psychology	1
SOC/FGSS244	Feminist and Queer Theories of Social Reproduction	1

Breadth Courses

Students must take one course in each of three core areas of Education Studies. There are multiple options across the curriculum for each category.

PEDAGOGY & PRACTICUM

Students must complete two aspects of a practicum experience: pedagogy and practice.

- Students must take a minimum .5 credit course focused on pedagogy; there are several .5 and 1 credit courses with this focus offered at Wesleyan. Pedagogy courses are listed below.
- Students must also complete a teaching practicum/in-school experience with a minimum of 20 hours of student contact. The practicum experience does not need to be credit-bearing, as long as the 20 hour requirement is met.
- Students can meet both the pedagogy and practicum portions of the requirement separately, or they can meet them with a single 1-credit course (i.e., a service learning course that provides 20 hours of student contact *and* covers elements of pedagogy). Apart from service-learning courses, many options exist to fulfill the practicum requirement through JCCP programs, summer programs, teaching apprenticeships, and internships while studying abroad. Some ideas are listed below.
- If the practicum experience is something other than one of the approved courses listed below, the experience must be fully documented with 20 hours of student contact. Contact Practicum Coordinator Amy Grillo (agrillo@wesleyan.edu) for more information about fulfilling this category.

Code	Title	Hours
Pedagogy (.5 credit)

Examples of a practicum experience include:

Tutoring in a school setting for 10h per week for a semester or 5h per week for two semesters, designing a tutorial on education with a service-learning component in a school, or developing an internship in a school.

Serving as a Teaching Apprentice for an introductory course (e.g., first year foreign language or gateway science or social science course).

Student teaching at the Bank Street School of Education (Urban Education Semester).

Teaching in an intensive summer program (Breakthrough, Summerbridge, CTY) and providing a letter confirming completion from the program.

FILM STUDIES MINOR

ADMISSION TO THE MINOR

In accordance with the University guidelines, students minoring in film studies must complete six courses for a grade (courses taken as Credit/Unsatisfactory will not count) and achieve a B average. Tutorials, education in the field, and student forums do not count toward the minor.

Before becoming eligible for the minor, you must complete FILM307 with a grade of B or better, which would then count toward fulfillment of the minor and activate a minor course registration chart with the department (see the minor administrator). Transfer courses cannot be used as a prerequisite, nor can they count toward fulfillment. After acceptance into the minor, you may submit courses taken overseas or at other universities to be considered on a case-by-case basis for credit.

MINOR REQUIREMENTS

FILM307 should be taken during the first or sophomore year. Students must meet with the minor administrator, Logan Ludwig (lludwig@wesleyan.edu), to declare the minor. After that, they may choose as convenient to complete the five additional courses before graduation.

Naturally, all course selections are subject to prerequisites from other departments, as well as enrollment restrictions, but with such a wide list of choices (and the list grows each year), there should be no problem in finding five classes.

COURSES

The list of courses currently recognized as part of the film studies minor includes. (Please note that not all courses will be available every semester.)

Code	Title	Hours
FILM288	Global Film Auteurs	1
FILM301	The History of Spanish Cinema	1
FILM304	History of Global Cinema	1
FILM305	Sophomore Colloquium for Declaring Majors	1

RL&L301	The History of Spanish Cinema	1
SPAN280	Screening Youth in Contemporary Latin American Cinema	1

FRENCH STUDIES MINOR

MINOR DESCRIPTION

The French Studies minor provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment. It enables them to develop an in-depth knowledge of French-language literatures and critical approaches and, through them, an awareness of Francophone modes of thought and expression. It also offers them the opportunity to develop simultaneously a broad knowledge of Francophone cultures, through a flexible, interdisciplinary program combining coursework in a

number of fields that may serve as the basis for future work or further academic or professional studies.

ADMISSION TO THE MINOR

Students must have completed FREN215 or a higher level course with a grade of at least a B to be admitted to the minor.

MINOR REQUIREMENTS

The minor consists of a minimum of five courses beyond FREN215:

- **Four FREN courses numbered 220-399.**
 - These courses must be taken on campus in French.
 - Courses numbered **220-299** are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
 - **300-level** courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- **One other course** whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. This course may be taken on campus or abroad, may be in French or English, and may be chosen from among the following courses:
 - Courses from the French section's normal offering of FREN courses numbered 220-399.
 - Courses listed Romance Lang & Lit In Eng (RL&L).
 - Courses taken through approved study abroad programs.
 - Courses offered by other departments and programs on campus that include a study of French or Francophone culture, politics, or history. These courses must be approved by the student's major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST minor.

Students minoring in FRST who receive two grades of B- or lower in FREN courses will be dropped from the minor.

ADDITIONAL INFORMATION

Students who receive a C- or lower in FREN course may repeat the course once.

Students who receive less than a B in FREN102, FREN112, or FREN215 will not normally be permitted to enroll in another FREN course or, in the case of students who receive less than a B in FREN215, to study abroad on the Vassar-Wesleyan Program in Paris.

Students who receive a B-, C+, or C in FREN102, FREN112, or FREN215 may petition the head of the French Section to be permitted to take the following course in the French sequence or study abroad on the Vassar-Wesleyan Program in Paris. In their petition, they must explain in detail what supplemental work they will undertake in order to prepare themselves for the following course in the sequence or for study abroad on the Paris program (for example: they will take a summer course). If their petition is approved, they must complete the proposed supplemental work, take the placement exam at the Fries Center for Global Studies, and place into the course they wish to take (or above FREN215 if

they wish to study abroad on the Paris program) before they will be admitted to it.

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

GERMAN STUDIES MINOR

MINOR DESCRIPTION

Interdisciplinary in nature, the academic field known as German studies combines the close study of texts and media with broad humanistic inquiry into the foundations and structures of culture and society. The minor is a good option for students who want to gain a foundation in German language, culture and literature within a context of other interdisciplinary connections.

ADMISSION TO THE MINOR

Any student who intends to earn the minor in German studies should speak with a faculty member of the department by the end of the sophomore year. Satisfactory completion of the minor will be certified by the department.

MINOR REQUIREMENTS

The minor requires six course credits with a minimum GPA of B. Four of the courses must be above the GRST102 level and taught entirely in German; at least three of these must be taken at Wesleyan. The other two courses may be in either English or German. All German language courses below the 300-level counted toward the minor must be taken for a letter grade. Please note GRST101 and GRST102 do not count towards the German Studies minor.

GLOBAL ENGAGEMENT MINOR

INTRODUCTION

Wesleyan's strengths in language studies, study abroad, civic engagement, and social justice are brought together in the Global Engagement Minor (GEM). The Global Engagement Minor integrates a student's academic studies, co-curricular activities, and experiential learning in order to help each participant reflect on and further cultivate their intercultural development and global

engagement. (Please see the GEM Model (<https://www.wesleyan.edu/cgs/GEM/GEM%20Model.html>)).

In order to provide GEM with theoretical and pedagogical coherence, we use the idea of “intercultural competence.” Intercultural competence is not a state that one achieves, once-and-for-all; it is a process and an attitude. There are several definitions of intercultural competence in the existing literature, such as Bennett’s (2008) “a set of cognitive, affective, and behavioral skills and characteristics that support effective and appropriate interaction in a variety of cultural contexts.” We seek to build on such ideas while also explicitly integrating a critically informed approach to globalization into our framework. This results in a multi-faceted “competence” that consists of the mutually reinforcing knowledge, skills, and attitudes needed to understand, relate to, and engage constructively with the experiences of others. (See GEM Learning Goals.)

We understand “cultures” to be porous, fluid, internally contested, and often overlapping — and yet still to be vital realities shaping the lived experiences of all people. Building intercultural competence requires not just acquiring new knowledge but also practicing the skills and honing the attitudes that are needed to interact effectively and appropriately on a basis of informed, mutual respect. Such respect requires, and the GEM reinforces, a reflection on one’s own position in the world and one’s conceptualization of self.

By acquiring new knowledge, developing new skills and honing existing ones, and cultivating an attitude of responsibility and openness, GEM students not only gain a complex understanding of global problems but also learn to work toward positive solutions. In addition, building intercultural competence in a cohort setting helps advance mutual understanding between culturally different individuals and groups.

ADMISSION TO THE MINOR

Students may apply to the GEM during Spring of their first year. The application consists of a short statement of interest describing how and why the Global Engagement Minor fits into the student’s academic plans, a breakdown of the students’ academic history, and a brief recommendation from a professor at Wesleyan.

Interested students can apply here (https://docs.google.com/forms/d/e/1FAIpQLSdc-w7v6RN6ejvOvDZCxyzVudHCAeyslaaJjnoCQthnkbfgwA/viewform?usp=sf_link). Students will need to ask a faculty member for a recommendation and inform them that Natalia Román Alicea, Assistant Director of Intercultural and Language Learning, will provide them with a short recommendation form to complete.

Students will be considered part of the GEM group after they have been accepted to participate and they have enrolled in the GEM Introductory Seminar offered in the Fall of their sophomore year. Admission of students to the program in the Fall of their sophomore year or later may be possible via petition.

MINOR REQUIREMENTS

During their sophomore through senior years, GEM students will complete a series of structured academic and co-curricular activities including an introductory seminar, global perspective coursework, language studies, off-campus cultural immersion, and a capstone seminar that will enable them to synthesize and reflect on the varied components of intercultural competence.

A key feature of GEM is that all these activities are interrelated, building on one another to support GEM students’ reflecting on and cultivating intercultural competence. The global perspective coursework, language proficiency, and

cultural immersion off campus are all subject to reflection and discussion in the two dedicated seminars and via the students’ individual e-portfolios. In addition, we will encourage students to engage in suitable on-campus activities that would enable them to deepen their intercultural learning and global engagement.

REQUIREMENT 1: INTRODUCTORY SEMINAR

Complete the 0.5-credit “Introduction to Global Engagement” seminar (CGST205).

This introductory GEM seminar provides a set of frameworks and activities to help students process their intercultural experiences, and an initial opportunity to collectively reflect on, critically analyze, and brainstorm about how to act on what they have learned. In particular, Introduction to Global Engagement will provide students with the tools to gain insight into their own cultural rules and biases; analyze how their own experiences have shaped these rules, and learn how to recognize and respond to cultural biases. It will also provide students with a framework to articulate a complex understanding of cultural differences and how they are inflected through power, privilege, and oppression. Students will set up and learn to use the e-portfolio software in the introductory seminar and will be able to add to it over their three years in the GEM.

The Assistant Director of Intercultural and Language Learning will work with faculty and staff colleagues to develop the syllabi for this seminars, building around the learning goals and objectives articulated above (see table, Intercultural Competence Learning Goals).

REQUIREMENT 2: GLOBAL PERSPECTIVE COURSEWORK

Complete 4 full-credit courses dealing with at least 3 world regions, defined as:

- Global
- East Asia / Pacific
- Europe and Eurasia
- Latin America
- Middle East and North Africa
- South and Central Asia
- Sub-Saharan Africa
- United States and Canada

A wide range of courses from across the curriculum can satisfy the GEM Global Perspective Coursework requirement. One’s “home” region(s) can count; a single region can count for two of the three regions if two courses engage with significantly different aspects of the region (e.g., the experiences of Indigenous peoples and of colonizers); and pan-global courses can also count toward one of the three regions.

Coursework will be tracked within each student’s GEM Certification Form; students will consult with their GEM advisor to ensure that a course will count, which will be tracked by selecting the course through the form’s “override” function.

REQUIREMENT 3: CAPSTONE SEMINAR

Complete the 0.5-credit GEM Capstone Seminar hosted by the Fries Center for Global Studies.

As part of this seminar, GEM students are expected to complete an e-portfolio that will synthesize their experiences from all requirements. The e-portfolio requires students to reflect on their intercultural development, knowledge, and skills gained throughout the GEM program and to interpret intercultural

experience from the perspectives of their own and others' worldviews. GEM seniors will present their e-portfolio to other participants and to the advisors of the program.

REQUIREMENT 4: LANGUAGE PROFICIENCY

Intermediate proficiency in two or more languages, including one's native language(s). This requirement can be met in several ways:

- Taking language courses through the intermediate level (as defined by the relevant department; often four semesters of college-level coursework)
- Demonstrating intermediate (or greater) proficiency gained outside of Wesleyan; native speakers of languages other than English can simply inform their GEM adviser of their proficiency.
- For multilingual students, taking any subject course taught in English shows sufficient proficiency in English.

REQUIREMENT 5: CULTURAL IMMERSION OFF-CAMPUS

GEM students need to choose an off-campus experience as a focus for reflection with their cohort members and via their e-portfolio. Options for satisfying this requirement include:

- Study abroad for at least one semester
- Internationally focused internship or fellowship abroad or in the U.S.
- Internationally focused service-learning abroad or in the U.S.
- Internationally located research experience

ADDITIONAL INFORMATION

Routine administration of the GEM will be handled by the FCGS Assistant Director of Intercultural and Language Learning Natalia Román Alicea, supported by the FCGS Administrative Assistant and overseen both by the FCGS Director and by the GEM Advisory Committee, composed of interested faculty and staff. This advisory committee will meet once per semester to review the status of the program. The core of the initial committee will be the members of the current taskforce.

Each year, one member (faculty or staff) of the GEM Advisory Committee will serve as GEM advisor for each group of up to 10 students in the entering cohort, and will remain as these students' advisor throughout their three years in the program. The Assistant Director of Intercultural and Language Learning will also provide advising support for all GEM students, as well as take primary responsibility for organizing the Introductory and Capstone Seminars, although these courses will be team-taught with support from both faculty and staff. Please contact Natalia Román Alicea, Assistant Director of Intercultural and Language Learning, at nromanalicea@wesleyan.edu for any questions, comments, or concerns.

HISTORY MINOR

ADMISSION TO THE MINOR

Go to your portfolio and declare the history major.

MINOR REQUIREMENTS

(Approved by History Department on 7 April 2021)

Six History Courses Total

N.B. -**higher level** History courses may be substituted for **lower level** ones

-courses must be taken at Wesleyan.

Courses to Satisfy the History Minor

--**Three History courses 150 or higher**

--**Two History courses 300 level or higher.**

*One History course must devote at least 50% of its attention and content to the period before 1800.

*Only courses taught by faculty appointed in or affiliated with the History Department may count toward the minor.

*Tutorials, education in the field, and student forums cannot be counted toward the minor.

*AP or IB credit cannot count toward the minor.

INFORMATICS AND MODELING MINOR

MINOR DESCRIPTION

Analytical approaches using informatics and modeling are becoming increasingly important in many fields of study, and much of the curriculum increasingly emphasizes these approaches. The Informatics and Modeling minor provides a framework to guide students in developing these analytical skills based on the following two pathways:

- Computational Science and Quantitative World Modeling (CSM)
- Integrative Genomic Sciences (IGS)

These pathways share several common themes but have components that make them distinct. Both pathways emphasize informatics and quantitative reasoning and share certain courses.

The **CSM pathway** introduces students to modeling techniques and provides students with a solid foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena such as the collision of galaxies, protein folding, and the behavior of markets. Its principal pedagogical and intellectual goal is to make students aware of the power of the quantitative, algorithmic method for understanding the world. The idea is to provide a course of undergraduate studies that imparts sufficient general knowledge, intellectual depth, and experience with quantitative reasoning and modeling techniques for students to be comfortable and proficient in incorporating this intellectual experience for a better understanding and more control of the natural and social worlds. Students can use this experience as an enrichment of their major and liberal arts education or as a stepping-stone to pursue, if desired, a more

intensive specialization in any of Wesleyan's quantitative reasoning departments. All courses should be taken for a grade (A-F).

The IGS pathway introduces students to the emerging interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics. The sequencing of genomes of humans and several other model organisms has led to a new challenge in the life sciences—to successfully integrate large amounts of information to build and evaluate models of how organisms work. This is inherently an interdisciplinary problem that involves bridging conceptual frameworks and ways of thinking among the life sciences, information sciences, and philosophy. Faculty in complementing fields such as biology and computer science are working together to explore and develop new courses in this emerging field. As the disciplines advance, tomorrow's students in the life sciences and in information sciences will benefit from strong conceptual frameworks in informatics, biology, and bioethics, and in the links between them. All courses should be taken for a grade (A-F).

ADMISSION TO THE MINOR

There are no admission requirements for this program.

MINOR REQUIREMENTS

The CSM pathway requires the following:

Code	Title	Hours
PHYS113	General Physics I	1
or PHYS116	General Physics II	
COMP112	Introduction to Programming	1
or COMP211	Computer Science I	
Select one of the following advanced computer science courses:		1
COMP212	Computer Science II	
COMP331	Computer Structure and Organization	
COMP312	Algorithms and Complexity	
PHYS221	Modeling and Data Analysis: From Molecules to Markets	1
or PHYS340	Computational Physics	
Select one course from the list of applied modeling courses in chemistry, computer science, economics, or science.		1

The IGS pathway requires the following:

Code	Title	Hours
BIOL/MB&B181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
Select one of the following introductory computer science courses		1
COMP112	Introduction to Programming	
COMP211	Computer Science I	
COMP113	Bioinformatics Programming	
an approved alternative		
Select one of the following advanced computer science courses or three 0.5 credit QAC courses:		1 or 1.5
COMP212	Computer Science II	
COMP331	Computer Structure and Organization	
COMP312	Algorithms and Complexity	
QAC150	Working with SQL and Databases	

QAC151	Working with Excel and VBA	
QAC156	Working with R	
QAC157	Working with SAS	
QAC158	Working with Stata	
an approved alternative		
Select one upper-level bioinformatics course (from a list of approved courses)		1
Select one course in each of two of the following categories (from a list of approved courses):		2
Molecular Genetics and Cell Biology		
Evolutionary Biology		
Structural Biology		
Bioethics and Philosophy of Biology		
Applied Quantitative Reasoning		

ADDITIONAL INFORMATION

CONTACT

- Students interested in the CSM pathway should contact Reinhold Blumel (rblumel@wesleyan.edu).
- Students interested in the IGS pathway should contact Michael Weir (mweir@wesleyan.edu) or Danny Krizanc (dkrizanc@wesleyan.edu).

INTEGRATED DESIGN, ENGINEERING & APPLIED SCIENCE MINOR

MINOR DESCRIPTION

The challenges of our society demand nimble students that utilize an integrated skill set. The Integrated Design, Engineering & Applied Science (IDEAS) program prepares students to succeed at the intersection of design, the arts, and engineering in a liberal arts context. Students develop foundational knowledge in these areas by working in collaborative groups and individually on project-based assignments which emphasize making and doing as critical forms of knowledge. Core courses within the minor provide a foundation in the technical, aesthetic, and human dimensions of design and engineering. These courses are followed by a focus in one of many modules that span design and engineering disciplines.

ADMISSION TO THE MINOR

Students should complete at least one course from the required project-based courses to be admitted to the IDEAS minor. The project-based courses are in two categories: Design & Engineering (IDEA170 or IDEA175), and Design & Arts (IDEA190, IDEA233, or IDEA285). Declare the IDEAS minor through your WesPortal.

MINOR REQUIREMENTS

A minor in IDEAS requires six credits for students in the class of 2022 or 2023. Students must complete two project-based design courses, one focusing on engineering, and one on the arts (options are listed below). Students are strongly encouraged to complete a third course that examines the social and cultural aspects of design and/or engineering (options are listed below); this course is a requirement for students in the class of 2024 and beyond, (and hence seven credits total for the minor are required for these students). The remaining four elective courses come from course “modules.” Some courses offered on an irregular basis are not listed in modules, but may be used for electives, subject to approval from the minor advisor. In addition, students will assemble a digital or physical portfolio of their work from project-based courses to complete the minor.

Student Portfolio

All IDEAS minors will assemble a portfolio encompassing work developed within IDEAS courses. Students participating in the minor will begin the development of a digital and/or physical portfolio in the required project-based minor courses. In consultation with an advisor, projects will be added to this portfolio and reviewed before completion of the minor.

REQUIRED PROJECT-BASED DESIGN COURSES

Students must complete one course from each group below.

Code	Title	Hours
One Project-Based Design & Engineering Course		1
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
IDEA175	Introduction to Electrical Design & Engineering	
One Project-Based Design & Arts Courses		1
IDEA190	Digital Foundations	
IDEA233	Studies in Computer-based Modelling and Digital Fabrication	
IDEA285	Form And Code	

REQUIRED COURSE ON THE SOCIAL AND CULTURAL ASPECTS OF DESIGN & ENGINEERING

Students must complete one course from the list below. This requirement does not apply to the class of 2022.

Code	Title	Hours
One Course on Social and Cultural Aspects of Design & Engineering		1
IDEA180	Design in Context: Case Studies in Design, Engineering, and Technology	
AMST260	Bioethics and the Animal/Human Boundary	
ARHA338	Bauhaus: Art, Craft, Design	
ARHA352	Energy and Modern Architecture, 1850-2020	
CSPL115F	Diffusion of Innovation (FYS)	
CSPL235	Activism and Theories of Change	
CSPL239	Startup Incubator: The Art and Science of Launching Your Idea	

CSPL262	Patricelli Center for Social Entrepreneurship Fellowship
CSPL316	Human Rights Advocacy: Critical Assessment and Practical Engagement in Global Social Justice
ENVS210	Evolution in Human-Altered Environments
ENVS214	Climate Change Economics and Policy
ENVS282	Sustainable Agriculture and Food Systems
ENVS308	Comparative Urban Policy
EDST230	Schools in Society
FGSS321	BioFeminisms: Science, Matter, and Agency
HIST221	History of Ecology
HIST261	Enlightenment and Science
HIST267	Development in Question: Conservation in Africa
HIST385	Science and the State
PHIL287	Philosophy of Science
PHIL288	Sciences as Social and Cultural Practices
RELI317	Colonizing Space: Exploration, Extraction, and Inhabitation
SISP240	Research Methods in Science Studies
SOC212	Sociology and Social Theory
SOC315	The Health of Communities

ELECTIVE COURSES FROM MODULES:

The course modules provide topical focus in the wide array of areas in Design, Engineering, and Applied Sciences. The IDEAS modules consist of four courses above the two required courses, to make the total of six courses in the minor.

Some of the proposed modules include courses listed among those that will satisfy the two-course distribution requirement listed above. Students will most efficiently complete such a module by selecting a required course that also contributes to the module. Students will work with an advisor to help them achieve the appropriate depth of study in the module area. Related courses that are not offered on a regular basis may be approved for minor credit, subject to review by the minor advisor. Students may propose substitutions or alternate modules, which must have approval from the advisor of the minor. Typically, introductory (100-level) courses may not be counted toward the elective requirement.

3D DESIGN

The study of objects, their design, and technologies of production. This module consolidates project-based learning in architecture, product design and furniture design.

Code	Title	Hours
If not completed in the general requirements, two of the following design courses:		3
ARST233	Studies in Computer-based Modelling and Digital Fabrication	
ARST235	Architecture I	
ARST336	Architecture II	
IDEA210	How Things Fail: Mechanics and Materials	
THEA359	Space Design for Performance	
THEA185	Text & Visual Imagination: Introduction to Eco Design for Performance	
One course in the History of Architecture:		1

ARHA151	European Architecture to 1750
ARHA210	Romanesque and Gothic Art and Architecture
ARHA224	Italian Art and Architecture of the 16th Century
ARHA244	European Architecture and Urbanism, 1750-1910
ARHA246	American Architecture and Urbanism, 1770--1914
ARHA254	Architecture of the 20th Century
ARHA258	Contemporary World Architecture
ARHA284	Buddhist Art and Architecture in East Asia
ARHA352	Energy and Modern Architecture, 1850-2020
One additional course from the following list, for a total of six courses:	
ARST131	Drawing I
ARST190	Digital Foundations

APPLIED MATH

Mathematical methods applied in science, engineering, computer science, and social science.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
IDEA175	Introduction to Electrical Design & Engineering	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
MATH229	Differential Equations	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
PHYS213	Waves and Oscillations	
PHYS217	Nonlinear Dynamics and Chaos	
PHYS565	Mathematical Physics	

BIOLOGICAL OR BIOCHEMICAL

Applications of biology and biochemistry to solve challenges in life and health sciences.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
IDEA175	Introduction to Electrical Design & Engineering	

One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
BIOL212	Principles and Mechanisms of Cell Biology	
BIOL265	Bioinformatics Programming	
BIOL310	Genomics Analysis	
CHEM396	Molecular Modeling and Design	
IDEA261	Science Materials For a Malagasy Classroom	
MB&B228	Introductory Medical Biochemistry	
MB&B325	Introduction to Biomolecular Structure	
MB&B377	Advanced Genetics	
MB&B381	Physical Chemistry for the Life Sciences	

CHEMICAL

Applications of chemistry to the design of new chemicals, materials, and energy production.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
IDEA175	Introduction to Electrical Design & Engineering	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
CHEM251	Principles of Organic Chemistry I	
CHEM252	Principles of Organic Chemistry II	
CHEM337	Physical Chemistry I: Quantum Mechanics and Spectroscopy	
CHEM338	Physical Chemistry II: Thermodynamics, Statistical Mechanics, and Kinetics	
CHEM377	Chemistry of Materials and Nanomaterials	
CHEM381	Physical Chemistry for the Life Sciences	
CHEM396	Molecular Modeling and Design	

COMPUTER

Applications of computer science to the design of new computer hardware and software.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
IDEA175	Introduction to Electrical Design & Engineering	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
IDEA285	Form And Code	
COMP212	Computer Science II	
COMP301	Automata Theory and Formal Languages	
COMP312	Algorithms and Complexity	
COMP321	Design of Programming Languages	
COMP331	Computer Structure and Organization	
IDEA350	Computational Media: Videogame Development	

DIGITAL AND GRAPHIC DESIGN

Design in 2D and 3D, ranging from letterpress printing to the creation of virtual spaces, always referencing production and its technology.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA190	Digital Foundations	
ARST131	Drawing I	
ARST243	Graphic Design	
THEA185	Text & Visual Imagination: Introduction to Eco Design for Performance	
One course in Art History at the 200-level or higher: 1		1
ARHA203	Survey of Greek Archaeology and Art	
ARHA205	Visualizing the Classical	
ARHA207	Survey of Roman Archaeology and Art	
ARHA210	Romanesque and Gothic Art and Architecture	
ARHA213	Cross, Book, Bone: Early Medieval Art, c. 300-1100	
ARHA219	Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt	
ARHA220	Northern Renaissance Art	
ARHA221	Early Renaissance Art and Architecture in Italy	
ARHA224	Italian Art and Architecture of the 16th Century	
ARHA225	Art and Society in Ancient Pompeii	
ARHA233	Art and Culture of the Italian Baroque	
ARHA240	Revolutionary France and the Birth of Modern Art, 1789-1900	

ARHA244	European Architecture and Urbanism, 1750-1910	
ARHA246	American Architecture and Urbanism, 1770--1914	
ARHA252	Contemporary Art Since 1980	
ARHA253	Art After 1945	
ARHA254	Architecture of the 20th Century	
ARHA257	Just Cities: Architectures of Public Encounter	
ARHA258	Contemporary World Architecture	
ARHA280O	Islamic Art and Architecture	
ARHA284	Buddhist Art and Architecture in East Asia	
Two additional courses from the following list, for a total of six courses:		2
ARST233	Studies in Computer-based Modelling and Digital Fabrication	
IDEA285	Form And Code	
IDEA350	Computational Media: Videogame Development	

ELECTRICAL

Applications of electrical and magnetic systems to the design of new devices and communications.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
IDEA175	Introduction to Electrical Design & Engineering	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
ASTR240	Radio Astronomy	
PHYS213	Waves and Oscillations	
PHYS214	Quantum Mechanics I	
PHYS324	Electricity and Magnetism	
PHYS342	Experimental Optics	
PHYS345	Electronics Lab	

ENVIRONMENTAL

Application of environmental and ecological knowledge to the protection of ecosystems and human population.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		2
IDEA170	Introduction to Mechanical Design and Engineering	

IDEA175	Introduction to Electrical Design & Engineering	
IDEA210	How Things Fail: Mechanics and Materials	
IDEA215	Introduction to Sensors, Measurement, and Data Analysis	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
BIOL216	Ecology	
E&ES244	Soils	
E&ES246	Hydrology	
E&ES250	Environmental Geochemistry	
E&ES253	Energy Sustainability: An examination of US, New England and Connecticut Energy	
E&ES280	Introduction to GIS	
E&ES361	Living in a Polluted World	
E&ES375	Modeling the Earth and Environment	

GEOMECHANICS/GEOSYSTEMS

Applications of geology and earth science to the development and preservation of subterranean resources.

Code	Title	Hours
If not completed in the general requirements, the following engineering design courses:		
CIS170	Introduction to Mechanical Design and Engineering	2
CIS175	Introduction to Electrical Design & Engineering	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
Two additional courses from the following list, for a total of six courses:		2
E&ES213	Mineralogy	
E&ES215	Earth Materials	
E&ES223	Structural Geology	
E&ES280	Introduction to GIS	
E&ES375	Modeling the Earth and Environment	

MATERIALS SCIENCE

Discovery, design, and properties of new materials.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		
CIS170	Introduction to Mechanical Design and Engineering	2

CIS175	Introduction to Electrical Design & Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
One course in statics and dynamics:		1
IDEA210	How Things Fail: Mechanics and Materials	
One additional course from the following list, for a total of six courses:		1
CHEM377	Chemistry of Materials and Nanomaterials	
CHEM379	Nanomaterials Lab	
PHYS316	Thermal and Statistical Physics	
PHYS358	Condensed Matter	

MECHANICAL

Application of mechanics, kinematics, and thermodynamics to design and develop new mechanical systems.

Code	Title	Hours
If not completed in the general requirements, two of the following engineering design courses:		
CIS170	Introduction to Mechanical Design and Engineering	2
CIS175	Introduction to Electrical Design & Engineering	
IDEA173	Introduction to Sensors, Measurement, and Data Analysis	
One course in computing and programming foundations:		1
COMP112	Introduction to Programming	
COMP113	Bioinformatics Programming	
COMP114	How to Talk to Machines	
COMP115	How to Design Programs	
COMP211	Computer Science I	
PHYS340	Computational Physics	
One course in statics and dynamics:		1
IDEA210	How Things Fail: Mechanics and Materials	
One additional course from the following list, for a total of six courses:		1
CHEM338	Physical Chemistry II: Thermodynamics, Statistical Mechanics, and Kinetics	
PHYS213	Waves and Oscillations	
PHYS217	Nonlinear Dynamics and Chaos	
PHYS313	Classical Dynamics	
PHYS316	Thermal and Statistical Physics	
PHYS358	Condensed Matter	

PERFORMANCE DESIGN

Stage design for theater or dance, sets, costumes, and lighting.

Code	Title	Hours
One course in the History of Design:		
ARHA151	European Architecture to 1750	1

ARHA244	European Architecture and Urbanism, 1750-1910	
ARHA246	American Architecture and Urbanism, 1770--1914	
ARHA254	Architecture of the 20th Century	
Two additional courses from the following list:		2
THEA185	Text & Visual Imagination: Introduction to Eco Design for Performance	
ARST233	Studies in Computer-based Modelling and Digital Fabrication	
THEA305	Lighting Design for the Theater	
THEA360/ DANC364	Media for Performance	
THEA359	Space Design for Performance	
THEA383	Introduction to Costume Design for Performance	
One additional credit from the following list, for a total of six credits:		1
THEA434	Applied Scenography: From Idea to the Stage and	
THEA435	Performance Practice in Design A	
or		
THEA437	Performance Practice in Design B	

ADDITIONAL MINOR INFORMATION

- There may be prerequisite courses required for some of the courses listed above. These prerequisites do not count towards the minor.
- Some of the courses may be cross-listed with other departments; students can enroll in any listing for the specified course.
- Students may propose an alternate course module or a different combination of elective courses, in consultation with the IDEAS advisor.
- Some courses may overlap with existing major requirements. A student may only count two course credits toward the IDEAS minor that are also counted towards a major, linked major, certificate, or other minor, unless receiving explicit approval from the IDEAS minor administrator to waive this requirement.

INTERNATIONAL RELATIONS MINOR

MINOR DESCRIPTION

The International Relations (IR) Minor is comprised of relevant courses from many different departments and programs in the Social and Behavioral Sciences (Division II). So long as all requirements are fulfilled, students in any Wesleyan major (including the University Major) can earn the IR Minor. Please note: International Relations Minor (IRM) is being replaced by the new Global Engagement Minor (<https://www.wesleyan.edu/cgs/GEM/>)(GEM) as of Summer 2020. Students in the classes of 2022 and 2021, some of whom have already declared the IRM, are still allowed to declare and complete the IRM. The GEM and IRM will exist side-by-side for the next two years.

ADMISSION TO THE MINOR

Students seeking the International Relations Minor are required to take a foreign language to the intermediate level, introductory government, history, and economics courses, and five advanced global systems and area studies courses, some of which must focus on developing countries. The foreign language requirement is met by coursework through the intermediate college level in any foreign language or demonstration of proficiency gained elsewhere (four semesters or the equivalent). Introductory courses should ideally be taken during the student's first two years at Wesleyan. Advanced courses should be identified from the international relations course list in WesMaps. At least one advanced course must be taken from each of three different disciplines, at least two must be taken from the global systems section of the list, and at least two more must be taken from the area studies section of the list. Two of the area studies courses must focus on developing countries.

Students are urged to study abroad, preferably in a non-English-speaking country, to improve language skills. Internships in foreign-policy fields (with international organizations, government agencies, multinational corporations, or nonprofit organizations) are encouraged.

A maximum of two courses taken at other institutions, either in the United States or abroad, may be counted toward the IR Minor after they have been approved by the appropriate Wesleyan department chair for Wesleyan major credit. Once this approval has been given, the IR Minor Committee will determine which of the requirements the course might fulfill.

Wesleyan courses that count toward the minor are listed under IR Minor courses on the Fries (<http://www.wesleyan.edu/cgs/>)Center for Global Studies website (<http://www.wesleyan.edu/cgs/>). To receive the minor upon graduation, students will be required to have an overall GPA of B+ or higher in the advanced courses submitted for certification (if only five courses are listed). The GPA requirement is waived if qualifying students take a sixth advanced course. Certification will appear on the student's transcript after graduation.

MINOR REQUIREMENTS

Students seeking the International Relations Minor are required to take a foreign language to the intermediate level, introductory government, history, and economics courses, and five advanced global systems and area studies courses, some of which must focus on developing countries. The foreign language requirement is met by coursework through the intermediate college level in any foreign language or demonstration of proficiency gained elsewhere (four semesters or the equivalent). Introductory courses should ideally be taken during the student's first two years at Wesleyan. Advanced courses should be identified from the international relations course list in WesMaps. At least one advanced course must be taken from each of three different disciplines, at least two must be taken from the global systems section of the list, and at least two more must be taken from the area studies section of the list. Two of the area studies courses must focus on developing countries.

Students are urged to study abroad, preferably in a non-English-speaking country, to improve language skills. Internships in foreign-policy fields (with international organizations, government agencies, multinational corporations, or nonprofit organizations) are encouraged.

A maximum of two courses taken at other institutions, either in the United States or abroad, may be counted toward the IR Minor after they have been approved by the appropriate Wesleyan department chair for Wesleyan major credit. Once

this approval has been given, the IR Minor Committee will determine which of the requirements the course might fulfill.

Wesleyan courses that count toward the minor are listed under IR Minor courses on the Fries (<http://www.wesleyan.edu/cgs/>)Center for Global Studies website (<http://www.wesleyan.edu/cgs/>). To receive the minor upon graduation, students will be required to have an overall GPA of B+ or higher in the advanced courses submitted for certification (if only five courses are listed). The GPA requirement is waived if qualifying students take a sixth advanced course. Certification will appear on the student's transcript after graduation.

JEWISH AND ISRAEL STUDIES MINOR

MINOR DESCRIPTION

The Education Policy Committee has approved a new Minor in Jewish and Israel Studies. This multidisciplinary and interdisciplinary minor explores various academic areas such as Jewish religion, Jewish culture, Jewish letters and Israel Studies. Courses are offered by Jewish and Israel core and affiliated faculty, Jewish and Israel distinguished visitors and other Wesleyan faculty.

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio and e-mail the director, Dalit Katz at dkatz01@wesleyan.edu of their interest.

MINOR REQUIREMENTS

One course as a language requirement (HEBR102 and up). The completion of the language requirement in the case of students with pre-existing knowledge of Hebrew will be determined through consultation with the Hebrew instructor.

Three courses in Jewish and Israel Studies offered by current faculty in Jewish Studies and/or other Wesleyan faculty and visitors who teach courses with Jewish Studies and Israel content.

One additional elective course of the student's choice offered by visiting faculty, a CLAC course, an advanced tutorial course (CJST402, CJST412, CJST412), an Israeli film course, a study abroad course, thesis and or an essay in Jewish Studies from across the curriculum.

All courses must be taken for a letter grade (and not Cr/U), though special cases may be considered by the Director.

MEDIEVAL STUDIES MINOR

MINOR REQUIREMENTS

The medieval studies minor provides students with a basic knowledge of the European Middle Ages in the valuable context of an interdisciplinary framework.

Students minoring in medieval studies complete six courses cross-listed with MDST or approved by the chair of the Medieval Studies program. No more than three of these courses may be taken in any one department and at least two must be taken in arts and humanities and two in social sciences. At least four of these courses must be taken at Wesleyan; one or two may be taken while studying abroad or during the summer.

Minors are strongly encouraged to take at least two years of a modern foreign language. Minors who anticipate going on to graduate work in the medieval or early modern period are strongly encouraged to take at least two years of Latin as well.

MIDDLE EASTERN STUDIES MINOR

MINOR DESCRIPTION

Developments in the Middle East over the course of the past decade have broadly and profoundly affected the world in which we live. They have revealed stark gaps in our understanding of the region's economies, governments, religions, histories, and languages, on both an individual and collective basis. Established in 2010, the Middle Eastern Studies Minor is an interdisciplinary curriculum that expands and builds upon Wesleyan's course offerings in Middle Eastern studies.

Although individual courses are open to any major (departmental prerequisites may apply), the minor offers students interested in a Middle East concentration with a formal curriculum that integrates government, history, religion, art history, and either Arabic or Hebrew.

ADMISSION TO THE MINOR

Students may declare the minor at any point in their undergraduate career at Wesleyan by submitting the minor declaration form in Wesportal. For tracking, advising, and co-curricular purposes, they are encouraged to sign on early.

MINOR REQUIREMENTS

The Middle Eastern Studies Minor requires eight courses, of which at least one course must be from the courses listed under the Jewish and Israel Studies minor and one must be on the Muslim Middle East. Additionally, the eight required courses include

- Two courses (one full year) or equivalent at the intermediate level (second year) of Hebrew or Modern Standard Arabic (waived if the student demonstrates proficiency). Elementary language courses do not count toward the eight required courses for this minor.
- One gateway course
- One course on historical texts and traditions
- One course on contemporary society and politics
- Three electives

Students who are granted a waiver of the language course requirement by the director of the minor will take additional electives to complete eight courses toward the minor. With the approval of the director of the minor, one relevant tutorial and two relevant study-abroad courses may count toward the minor. Normally, no more than two courses from any one department or program may count toward the minor (this does not apply to language courses or to the gateway course).

MOLECULAR BIOPHYSICS MINOR

MINOR DESCRIPTION

Molecular biophysics is an interdisciplinary area of research situated at the intersection of molecular biology, chemistry, chemical biology, physical chemistry, and molecular physics. Molecular biophysics, as a field of endeavor, is distinguished by analytical and quantitative research inquiry of biomolecular and macromolecular systems, using diverse molecular spectroscopic methods, structure determination, functional bioenergetics, statistical thermodynamics, and molecular dynamics. Topics of active research interest at Wesleyan include protein structure and folding, molecular models of enzyme mechanisms, protein-DNA and protein-RNA interactions, biofilm formation, molecular pores and other membrane proteins. As a consequence of recent advances stemming from the human genome project, the field of structural bioinformatics finds an increasingly important emphasis in our program. A parent organization for this field of research is the U.S.-based Biophysical Society, with some 7,000 members, and sister societies worldwide.

ADMISSION TO THE MINOR

As Molecular Biophysics is an interdisciplinary minor, it is strongly recommended that undergraduate students gain foundational knowledge by majoring in one of these three areas: Molecular Biology and Biochemistry, Chemistry, or Physics.

MINOR REQUIREMENTS

The Molecular Biophysics Minor requires a total of seven credits:

Code	Title	Hours
Introductory Course		
PHYS207	Introduction to Biophysics (Introductory Course)	1
or CHEM309	Molecular and Cellular Biophysics	

or CHEM325	Introduction to Biomolecular Structure	
Advanced Laboratory Course		
MB&B/CHEM395	Structural Biology Laboratory	1
Journal Club		
MB&B307 & MB&B308	Molecular Biophysics Journal Club I and Molecular Biophysics Journal Club II	1
Independent Research		
CHEM423 & CHEM424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	1
or MB&B423 & MB&B424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	
or PHYS423 & PHYS424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	
Physical Chemistry Course(s)		
MB&B381	Physical Chemistry for the Life Sciences	1,2
or CHEM337 & CHEM338	Physical Chemistry I: Quantum Mechanics and Spectroscopy and Physical Chemistry II: Thermodynamics, Statistical Mechanics, and Kinetics	
or PHYS316 & PHYS213	Thermal and Statistical Physics and Waves and Oscillations	
Advanced Elective Course(s)		
Select one or two elective courses from the list below.		1,2

Advanced Elective courses can be chosen from: BIOL265, BIOL266, BIOL310, CHEM321, CHEM342, CHEM382, CHEM383, CHEM386, CHEM387, CHEM396, CHEM519, MB&B340, MB&B505, MB&B520, MB&B523, MB&B535, PHYS214, and PHYS524.

Independent research must be conducted with or in collaboration with a Molecular Biophysics faculty member (<https://www.wesleyan.edu/molbiophys/people/>). Senior thesis research may be used to complete this requirement.

ADDITIONAL INFORMATION

At Wesleyan, students participating in the molecular biophysics program have the opportunity to select research projects with varying degrees of emphasis on biophysics, biochemistry, biological chemistry, bioinformatics, and/or molecular biology. The common element among participants is an emphasis on a quantitative, molecular-based mode of inquiry in research.

All Molecular Biophysics minors complete independent research projects with affiliated faculty and participate regularly in weekly meetings of the Molecular Biophysics Journal Club (MB&B507 and MB&B508), in which research papers from the current literature are presented and discussed. Journal club students also meet regularly with seminar visitors in the area of molecular biophysics. The program hosts an annual retreat where undergraduate and graduate students are expected to present their research either orally or in poster format. (<https://www.wesleyan.edu/molbiophys/activities/retreat.html>) Students are also encouraged to present their work at an international scientific meeting, and the program typically provides some financial support for their expenses.

MUSLIM STUDIES MINOR

MINOR DESCRIPTION

More than one-fifth of the world's population currently self-identifies as Muslim. A 2015 Pew Research Center report projects this will rise to nearly 30% by 2050. For many individuals and groups, "Muslim" is more than a marker of religion, it represents a set of contested communities; ethnicities; histories; regions and neighborhoods; politics; and artistic, literary, and musical traditions that may or may not have a recognizable connection to Islam. Despite this diversity, many hold notions of Muslim identity that act as a shared horizon of belonging or association.

ADMISSION TO THE MINOR

There are no admission requirements for the minor.

MINOR REQUIREMENTS

Students must complete six appropriately designated courses. Each course offered will carry two designations—topic and region—in order to ensure that students engage an appropriately diverse distribution of courses.

All courses will be listed according to one (or more) of the following topical categories:

- Contemporary society and practice: Courses primarily concerned with the study of contemporary Muslim communities (cont)
- Literary, artistic, and musical studies (la&m)
- Historical inquiry (hist)

All courses will be listed according to one (or more) of the following regional categories:

- Middle East and North Africa (MENA)
- South, East, and Southeast Asia (SESA)
- Sub-Saharan Africa (SSA)
- North America and Europe (NAE)

The six courses designated as appropriate for the minor must include:

- One gateway course (i.e., a course entirely about Muslims that serves as a way to offer an introduction to Muslim studies).
- At least one course in each of the topical categories.
- At least one course in three of the regional categories.
- No more than three courses can come from one of the above categories.

These requirements endeavor to diversify the student's exposure to disciplinary and divisional offerings in Muslim studies while allowing her to focus on specific topics of particular interest.

Courses are considered appropriate for the minor if they include at least 25% material on Muslims. Internships in appropriate organizations will be considered

for credit so long as they are accompanied by a 10-page assessment of learning outcomes to be assessed by the director.

PLANETARY SCIENCE MINOR

MINOR DESCRIPTION

Planetary science is an emerging interdisciplinary field that seeks to understand the origin and evolution of the solar system in which we live and the other solar systems that we have identified in our galaxy. The science questions include the most important of our times: How do planets (including the Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? This field has grown

significantly over the last decade with major advances in our understanding of Mars and the outer solar system and the discovery of hundreds of exoplanetary systems. Planetary research is a primary focus of NASA's current and future missions.

The planetary science minor will give students exposure to fundamental themes, tools, and topics that are relevant to future careers in the planetary science, general sciences, and for the educated citizen.

MINOR REQUIREMENTS

The planetary science minor consists of 5 graded courses plus at least 3 offerings of the 0.25 credit Planetary Science Seminar.

Code	Title	Hours
Introductory Courses		2
Students are expected to take Introductory Courses to both of the major areas important to our field, Astronomy and E&ES:		
ASTR155	Introduction to Astrophysics	
E&ES101	Dynamic Earth (or an upper level (200+) E&ES course)	
or E&ES115	Introduction to Planetary Geology	
Intermediate Courses		3
The minor requires three upper-level courses chosen from a list of relevant offerings in Astronomy and E&ES. At least one of the intermediate courses would need to be from each of the departments, in order to preserve the interdisciplinary nature of the minor. These courses fluctuate from year to year but would currently be drawn from the following set:		
ASTR231	Stellar Structure and Evolution	
ASTR224	Exoplanets: Formation, Detection, and Characterization	
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	
E&ES215 & E&ES216	Earth Materials and Earth Materials Laboratory	
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	
E&ES223 & E&ES224	Structural Geology and Field Geology	
E&ES234 & E&ES235	Geobiology and Geobiology Laboratory	
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	
or E&ES380	Advanced GIS and Spatial Analyses	
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	
E&ES319	Meteorites and Cosmochemistry	
E&ES321	Planetary Evolution	
E&ES375	Modeling the Earth and Environment	
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	
Advanced Courses		0.75

To qualify for the minor a student must complete AST/E&ES 555 Planetary Science Seminar during at least three of the four semesters available in their junior and senior years. We encourage students to complete all four semesters if possible in order to obtain complete coverage of our cycle of topics.

E&ES/ASTR555 Planetary Science Seminar

Research (Optional)

While research in the area of planetary science is not required, we hope that most students seeking this minor will elect to do research with a member of the Planetary Science Group. Research can be done during the semester or over the summer.

RELIGION MINOR

MINOR DESCRIPTION

The Religion Department offers a cross-cultural, interdisciplinary, and critical program that explores the variety of religious experiences and expressions. In addition to courses that demonstrate the power and limits of various critical approaches to the study of religion, the department provides opportunities to analyze practices of interpretation, systems of belief, and patterns of religious behavior; the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection.

Most courses are open to all students without prerequisites, although those with no background in the academic study of religion should consider starting with a 100 or 200-level course. A minor is available for those who wish to develop a modest program in religion in support of another major. The major is open to all students seeking an interdisciplinary home in the humanities and social sciences.

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio and e-mail the chair (jqijada@wesleyan.edu) of their interest.

MINOR REQUIREMENTS

Students wishing to complete the minor must take five courses, arranged as

follows:

- REL151
- Two courses in at least two areas of "Historical Traditions," as listed in our Description of Programs in Religion (<https://www.wesleyan.edu/religion/about.html>). In this category there are both survey courses (generally numbered at the 200-level) and seminars (generally numbered at the 300-level).
- Two additional courses of the student's choice. One of these courses may include REL398, though this is not required. Student's must take REL151 prior to REL398.

- The department will accept, as one of the courses for the minor, either one course taken abroad or one course that is cross listed but not taught by members of the department.

Generally, tutorials and student forums do not count, though the chair (mrubenstein@wesleyan.edu) may count one after hearing compelling reasons from the student.

Religion courses must be taken for credit with standard letter grading, though special cases may be considered by the chair. (jqujada@wesleyan.edu)

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MINOR

ADMISSION TO THE MINOR

Any student who intends to earn the minor in REES should speak with the program chair by the end of the junior year at the latest.

MINOR REQUIREMENTS

The minor in REES consists of six courses, in which the student must achieve a GPA of B. These courses must include RUSS101 and RUSS102 or two semesters of Russian language study at the appropriate level and four more **REES** courses, of which one must be taken in each of the three areas of politics and economics, history and religion, and literature and culture (see course list). The fourth course may be in any of the three areas or may be a semester of intermediate or advanced Russian. Two of the courses may be taken during study abroad (with prior approval). All courses except RUSS101 and RUSS102 must be taken for a grade. Students should plan the minor in consultation with REES faculty.

Satisfactory completion of the minor will be certified by the program.

Code	Title	Hours
GOVT274	Russian Politics	1

SOUTH ASIA STUDIES MINOR

MINOR DESCRIPTION

Wesleyan has a remarkable collection of faculty, courses, and resources for all students interested in studying the cultures of South Asia (with primary focus on India, Pakistan, and Bangladesh). The University not only enjoys the distinction of having an Indian music studies program but also a diverse group of scholars devoted to the wider region and its diaspora in fields as diverse as anthropology, art history, cultural studies, dance, history, literature, language, film studies and religion. Faculty contributing to the minor will help Wesleyan students better pursue the wide range of opportunities in South Asian studies—both scholarly and artistic—as the subcontinent gains increasing global prominence.

ADMISSION TO THE MINOR

Students are required to take seven courses designated as appropriate for the minor. Up to three of these may be taken away from Wesleyan (e.g., on a study abroad program). Of the seven required courses:

- One must be a gateway course (i.e., a course entirely about South Asia that combines two or more of the below-listed distribution categories in such a way as to offer an introduction to South Asian studies).
- At least one course in three of the distribution categories.

- No more than three courses can come from any one of these categories.
- The distribution categories are as follows:
 - **Contemporary Society and Practice (CSP):** Courses primarily concerned with the study of contemporary South Asian communities, their practices, and their productions
 - **Historical Inquiry (HI):** Courses primarily concerned with the historical study of South Asia
 - **Language (L):** Courses in which students gain comprehension in South Asia's languages
 - **Performance Traditions (PT):** Courses in which students obtain training in the performance of a specific form of art

MINOR REQUIREMENTS

CONTACT

Interested students should contact Hirsh Sawhney at hsawhney@wesleyan.edu.

CERTIFICATES

Certificates provide curricular options that complement current departmental and interdisciplinary majors. They are designed to bring coherence to programs of study that include courses from many departments and programs. For each program, model curricula are provided to guide students in their choice of courses. Wesleyan currently has twelve certificate programs in place.

- Certificate in Applied Data Science (p. 233)
- Certificate in Social, Cultural, and Critical Theory (p. 234)
- Certificate in Writing (p. 234)

CERTIFICATE IN APPLIED DATA SCIENCE

CERTIFICATE REQUIREMENTS

To earn the Applied Data Science Certificate, students must complete seven graded courses and the capstone Data Analysis Practicum. Before admitted to the program students are asked to submit a tentative plan of study.

Code	Title	Hours
Select one of the following basic knowledge courses:		1
MATH132	Elementary Statistics	
PHYS/QAC221	Modeling and Data Analysis: From Molecules to Markets	
PSYC200	Statistics: An Activity-Based Approach	
QAC201	Applied Data Analysis	
QAC211	Digging the Digital Era: A Data Science Primer	
QAC250	An Introduction to Data Journalism	
Select two courses from the following mathematical, statistical and computing foundation courses, each from a different group:		2
Mathematical Foundations		
MATH221	Vectors and Matrices	
MATH223	Linear Algebra	
MATH228	Discrete Mathematics	
MATH274	Graph Theory	
Statistical Foundations		
ECON300	Quantitative Methods in Economics	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
Computing Foundations		
BIOL265	Bioinformatics Programming	
COMP112	Introduction to Programming	
COMP115	How to Design Programs	
COMP211	Computer Science I	
COMP212	Computer Science II	
Select two of the following applied data science courses:		2
QAC305	Exploratory Data Analysis and Pattern Discovery	

QAC385	Applications of Machine Learning in Data Analysis	
QAC386	Quantitative Textual Analysis: Introduction to Text Mining	
Select two credits from the following applied electives:		2
E&ES280	Introduction to GIS	
E&ES380/ QAC344	Advanced GIS and Spatial Analyses	
ECON282	Economics of Big Data	
ECON385	Econometrics	
ECON386	Introduction to Forecasting in Economics and Finance	
GOVT366	Empirical Methods for Political Science	
GOVT378	Advanced Topics in Media Analysis	
PHYS340	Computational Physics (0.5 credits)	
QAC231	Introduction to (Geo)Spatial Data Analysis and Visualization	
QAC239	Proseminar: Machine Learning Methods for Audio and Video Analysis	
QAC241	Introduction to Network Analysis	
QAC251	Data Visualization: An Introduction	
QAC307	Experimental Design and Causal Inference	
QAC311	Longitudinal Data Analysis (0.5 credits)	
QAC312	Hierarchical Linear Models (0.5 credits)	
QAC313	Latent Variable Analysis (0.5 credits)	
QAC314	Survival Analysis (0.5 credits)	
QAC320	Applied Time Series Analysis	
QAC323	Bayesian Data Analysis: A Primer (0.5 credits)	
QAC356	Advanced R: Building Open-Source Tools for Data Science	

can count QAC 380 or 381, not both

QAC380	Introduction to Statistical Consulting
QAC381	QAC Praxis Service Learning Lab
NOTE: at least one of the electives should be a 300 level course	

The capstone Data Analysis Practicum that includes an ethics and epistemology seminar discussion as well as completing an independent data science project. **1**

ADDITIONAL INFORMATION

- Some of the courses that count toward the certificate may have a prerequisite, such as calculus. These prerequisites do not count toward the certificate, and students attempting to complete the certificate are not recused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the certificate. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the certificate. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.

- It is strongly recommended that students who are not mathematics or computer science majors take courses in the computing foundations group to satisfy the certificate requirements. They can also substitute either MATH232 or COMP212 for one of their applied elective courses.
- Economics majors and minors cannot count ECON300 toward the certificate and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course towards this certificate that also counts toward completion of any of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the certificate, subject to the QAC Advisory Committee's approval (where routine approval may be delegated to the QAC director).
- Students can substitute a course from among the applied data science and applied elective courses for the basic knowledge course, subject to approval.
- Only graded courses can satisfy the requirements for the data analysis minor and the applied data science certificate. Courses completed with a CR/U grading mode will not satisfy the requirements of the two programs.
- Students cannot receive both the data analysis minor and the applied data science certificate.

Director of the QAC

CERTIFICATE IN SOCIAL, CULTURAL, AND CRITICAL THEORY

CERTIFICATE REQUIREMENTS

To help students develop proficiency in the study of social, cultural, and critical theory, this certificate encourages students to seek out theory-intensive courses in a wide range of disciplines and departments at Wesleyan.

To qualify for the Social, Cultural and Critical Theory (SCCT) Certificate, a student must successfully complete six authorized courses, hosted by at least three different departments or programs. All classes must be taken on a graded (A-F) scale. The minimum grade required in each course is a B-. Courses taken on a CR/U scale count only in the case of COL majors and CSS majors; for the latter, only CR/U courses taken during their sophomore year count. Of the six courses that count for the certificate, no more than two may be lecture courses.

Courses that are not listed as SCCT courses on WesMaps or included on the certificate's website (wesleyan.edu/theory (<http://wesleyan.edu/theory/>)) may be used to fulfill certificate requirements if deemed suitable by the certificate director.

Up to two of the six courses may be taken during a semester abroad, and up to three may be taken during a year abroad. With authorization from the certificate director, students may also count up to two courses transferred from another U.S. institution.

ADDITIONAL INFORMATION

Students who wish to earn the certificate should declare it in their WesPortal and then meet with the certificate's director, Professor Ren Ellis Neyra (rellisneyra@wesleyan.edu), preferably in the fall of their junior year.

CERTIFICATE IN WRITING

CERTIFICATE DESCRIPTION

The Writing Certificate is designed to provide a flexible framework within which students from all majors can develop proficiency in creative writing (poetry, fiction, creative nonfiction, screenwriting, playwriting) and forms of nonfiction such as criticism, (auto)biography, science writing, political and literary journalism, and writing about academic subjects for nonspecialists.

Goals. This certificate provides opportunities for students to acquire the critical and technical vocabulary for analyzing their own and others' writing; become skilled editors; learn to write and analyze writing in a variety of genres and styles; learn to present specialized subject matter to nonspecialist audiences; explore, through practice, the many ways in which the written language can function; and participate in a community of students and faculty who share a passion for writing.

Community. Wesleyan supports a thriving community of writers who regularly come together for formal and informal readings of their work, discussions, workshops, meetings, and gatherings with writers, editors, and publishers visiting campus, and with the full-time and part-time writing faculty. Students working toward the certificate will be integrated into these activities and will contribute to the public presence of writing on campus. Some activities will be organized specifically for certificate candidates.

Advising. The instructors of writing courses and the members of the Writing Certificate Committee are available to students seeking guidance on possibilities for graduate study and careers involving writing.

CERTIFICATE REQUIREMENTS

To earn the certificate, students must take at least five full-credit courses. These include

- At least one course designated as an entry-level craft or technique course, but no more than two such courses;
- Three electives, one of which may be a second entry-level craft or technique course, at least one of which must employ a workshop format, and one of which must be a Permission-of-the-Instructor course. One one-credit senior thesis or senior essay tutorial may be counted as an elective if the thesis entails creative writing.
- WRCT350, a one-credit credit/unsatisfactory course, in which the participants work on compiling and revising portfolios of their work and present their work in class and to the public in events organized for this purpose.
- Students must achieve a GPA of at least 3.5 in the courses counted toward the certificate.

ADDITIONAL INFORMATION

ADMISSION TO THE CERTIFICATE

Students may apply for candidacy in their sophomore or junior year. They must have taken—for a letter grade—one of the courses listed as eligible for the certificate and received a grade of B+ or better. (COL and CSS students concerned about the grade requirements should see Frequently Asked Questions (<http://www.wesleyan.edu/writing/certificate/frequently.html>).

CONTACT

Interested students should contact Anne Greene, certificate coordinator, at agreene@wesleyan.edu.

Animal Studies is an emerging field that builds on scholarship in the humanities, social sciences, and sciences to investigate past and present relations between human and non-human animals, the representation of those relations, their ethical implications and their social, political, and ecological effects in and on the world. It is a field of critical importance today as the complex, but fragile interdependence of all life becomes increasingly apparent, and as scholars, artists, and activists seek ways to understand and enhance the lives of all animals. Wesleyan Animal Studies fosters scholarship on human-animal relations from a range of disciplinary and interdisciplinary perspectives.

ASIAN AMERICAN STUDIES CLUSTER

Asian American Studies focuses on exploring the historical and current presence of Asians in the Americas. The field aims to understand both how people from East Asia, Southeast Asia, and South Asia have been racialized in the context of the United States, as well as how Asian Americans have constructed their identity and stories. This cluster also explores ideas of diasporic identity and transnational migrations and how they shape Asian America. Understanding the social and historical presence of Asians in America is crucial to an understanding of racial formation, immigration, citizenship, and nationality in the United States. Asian American Studies examines the experience of Asians in the United States, and how the unique history of marginalization and exclusion informs today's issues within the Asian American community.

The Asian American Studies course cluster introduces students to the central concepts of racialization, migration, and intersectionality as they relate to Asians in the United States. The cluster is interdisciplinary, incorporating perspectives from the humanities and social sciences.

Christianity has been a defining force in European and Euro-American history and culture, and has profoundly influenced the visual arts, theater, music, poetry, and philosophy. It has also spread throughout the world. The Christianity Studies cluster offers a way to study it without the constraints of a conventional major. As befits its place within a university curriculum, Christianity Studies courses are taught by people who come from a variety of faith commitments, including secular ones.

PATHWAYS

The Christianity Studies cluster offers a set of courses, changing from year to year, which can be grouped under the following headings, as pathways to assist in gaining a coherent understanding of Christianity. These are:

Christian Thought

Christianity's Role in the Development of Modern Institutions

Christianity and Contemporary Social Debates

World Christianity

Christian Origins

Christian Writers

Christianity in Music

Christianity in the Visual Arts*

Although these pathways should provide assistance in devising a more coherent educational experience, those marked with an asterisk also suggest links to various information available through the internet, such as bibliographies, important texts, and musical and video clips.

DISABILITY STUDIES CLUSTER

CO-COORDINATORS

- Margot Weiss (<http://www.wesleyan.edu/academics/faculty/mdweiss/profile.html>)
- Megan Glick (<http://www.wesleyan.edu/academics/faculty/mglick/profile.html>)

Disability Studies is an interdisciplinary field that studies the systems of classification—medical, legal, social, cultural, historical—that organize bodily and psychological difference. Scholars in Disability Studies begin from the perspective that definitions of dis/ability vary historically and cross-culturally, and that bodily norms derived from these definitions have political, social, and economic ramifications for both disabled and nondisabled people. The field explores disability as a social and historical construction, a political identity, and a lived experience.

The Disability Studies course cluster at Wesleyan highlights courses across all divisions that explore disability from a wide range of perspectives. Courses in the cluster give students an introduction to the historical origins of disability, social and scientific classifications of embodied difference, artistic and literary representations of disability, and ongoing political struggles around access, power, and normalization. New directions in Disability Studies include questions of ethics and interdependence, global and local disparities in health and illness, human-animal boundaries, and intersections of disability justice with race, gender, sexuality, age, and other embodied forms of power.

HISTORY

Wesleyan's Course Cluster in Disability Studies was a student-led initiative. In 2010, two students active in Wesleyan Students for Disability Rights (WSDR), Ariel Schwartz and Allegra Stout, approached Professor Margot Weiss to discuss strategies for increasing Disability Studies offerings at Wesleyan (see the WSDR 2010 statement of needs and goals here (<https://sites.google.com/a/wesleyan.edu/wesleyan-students-for-disability-rights/statement-of-needs-and-goals/>)). Working with faculty in American Studies, Anthropology, English, FGSS, History, and SISP, Prof. Weiss proposed a Course Cluster in Disability Studies to the Wesleyan faculty in late 2010. The Cluster became part of Wesleyan's curriculum in April 2011 (see Argus coverage here (<http://wesleyanargus.com/2011/04/15/disability-studies-course-cluster-added/>)).

In 2014, Schwartz and Stout published a research article, "'It'll Grow Organically and Naturally': The Reciprocal Relationship between Student Groups and Disability Studies on College Campuses" (<http://dsq-sds.org/article/view/4253/3593/>), in *Disability Studies Quarterly*. The article explores the role student activism can play in developing disability studies on campus.

EVENTS ([HTTP://WWW.WESLEYAN.EDU/DISABILITYSTUDIES/EVENTS.HTML](http://www.wesleyan.edu/disabilitystudies/events.html))

HEALTH STUDIES CLUSTER

CO-COORDINATORS

- **PEGGY CAREY BEST ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/PCBEST/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/pcbest/profile.html))**
- **ISHITA MUKERJI ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/IMUKERJI/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/imukerji/profile.html))**

Training for the health professions requires knowledge of a broad array of subjects, both science and non-science. For those seeking careers in a wide variety of health professions such broad-based training begins at the undergraduate level. Increasingly, emphasis is placed on the quantitative, medical knowledge required for patient care, the interpersonal and communication skills required for working in health care teams, and the cultural competencies needed for working with a rapidly changing patient demographic.

The health studies course cluster offers students information about the types of courses at Wesleyan that provide appropriate background for those seeking careers in the health professions.

The goal of current health professions graduate programs is to create health professionals who have the knowledge, skills and flexibility to succeed in today's rapidly evolving health care environment. In addition to the commonly required science courses in biology, chemistry, and physics, studying anthropology, sociology, ethics, psychology, and statistics is an important aspect of preparation

for any of the health professions, along with the ability to integrate and apply the knowledge obtained to improve health outcomes for all populations. Having appropriate courses listed in the cluster encourages students to sample the breadth of the curriculum while still achieving proficiency in the recommended areas. There are multiple courses in any one disciplinary area that can provide the needed information and conceptual foundation, so the cluster highlights many different courses offering appropriate content. We want to encourage students to pursue an integrative, interdisciplinary approach to their education in this area.

Students and advisors are encouraged to make use of the cluster listing when selecting courses to fulfill major, minor and certificate requirements, as well as general education expectations. By choosing from cluster courses students will gain proficiency in the health studies area while also mastering the in-depth disciplinary perspective that comes with their chosen major.

QUEER STUDIES CLUSTER

COORDINATOR

- **MARGOT WEISS** ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/MDWEISS/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/mdweiss/profile.html))

Queer Studies focuses on the social production and regulation of sexuality, asking: How does sexual normativity structure and shape diverse social and political institutions? What are the intersections of sexual marginality and other axes of difference (gender, race, ethnicity, disability, class, indigeneity, nation)? How does the social organization of desire produce forms of oppression and of resistance in varied places and times?

The Course Cluster in Queer Studies at Wesleyan includes courses across the humanities, the humanistic social sciences, and the interdisciplinary programs. Particular research and teaching strengths at Wesleyan include queer theory, theories of difference and embodiment (including disability and trans studies), queer of color critique, and transnational sexuality studies. Wesleyan Queer Studies courses are listed on WesMaps (https://owaprod-pub.wesleyan.edu/reg/!wesmaps_page.html?stuid=&facid=NONE&subj_page=XQST&term=1199).

If you have questions regarding Queer Studies at Wesleyan, please contact the cluster's coordinator, Professor Margot Weiss (mdweiss-at-wesleyan.edu) (mdweiss@wesleyan.edu).

SERVICE-LEARNING CLUSTER

COORDINATOR

- **PEGGY CAREY BEST** ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/PCBEST/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/pcbest/profile.html))

Service Learning (SL) integrates experiences outside the classroom with an academic curriculum taught within the classroom. As one form of experiential education, service learning seeks to broaden students' understanding of course content through activities which are, at the same time, of service to the campus and/or surrounding community. Through structured reflection on their service, students are able to test and deepen their understanding of theoretical approaches in virtually any discipline.

The Allbritton Center (<http://www.wesleyan.edu/allbritton/>) for the Study of Public Life provides support and resources for faculty interested in incorporating service learning into their courses. Service-Learning Initiative Grants (http://www.wesleyan.edu/slc/facultyresources/obligations_support.html) (SLIGs) provide faculty with funds to develop their new service-learning courses. Faculty who teach service-learning courses often work closely with the Jewett Center for Community Partnerships (<http://www.wesleyan.edu/jccp/>).

COURSES & PROJECTS ([HTTP://WWW.WESLEYAN.EDU/S LC/PROJECTS-COURSES.HTML](http://www.wesleyan.edu/slc/projects-courses.html))

GETTING INVOLVED

Wesleyan students have a long history of getting involved in the greater Middletown community. Much of this is done through volunteer and community service through the Jewett Center for Community Partnerships (<http://www.wesleyan.edu/jccp/>). But some academic courses—service-learning courses—also have a service component to them. In the past, students enrolled in service-learning courses at Wesleyan have:

- Conducted the homeless count required by the United States Department of Housing and Urban Development for the Middlesex Supportive Housing Coalition;
- Examined the effect of local preschools on preparing kindergarteners to be school-ready, for the Middletown School Readiness Council;
- Studied the North End landfill to determine whether the methane it produced could be harvested economically;
- Taught 20th century music compositional techniques to Middletown High School students;
- Taught dance classes at the Green Street Arts Center;
- Aided medical research at the Community Health Clinic.

If you think Wesleyan students might be of help in a project your organization or agency is doing, planning, or just imagining, the first step is an informal discussion with the Director of the Allbritton Center.

FACULTY RESOURCES

Getting Started with Service Learning

When integrated into an academic course, community service provides a pedagogical tool that allows students to develop a deeper understanding of course material. The service can take many forms such as volunteer work, research for local organizations, teaching opportunities, policy-related work, community organizing activities, as well as other forms of service activities.

Students may work directly with local community members through direct engagement activities or work on campus in the service of the members of the university community.

Faculty who want to explore developing a service-learning course should feel free to contact the Director for Service Learning, Peggy Carey Best (pcb@wesleyan.edu), or the Director of the Allbritton Center to discuss their ideas. Information about service-learning courses, including syllabi, from almost all disciplines is available at the Jewett Center for Community Partnerships (<http://www.wesleyan.edu/ccp/>) (JCCP) in Allbritton, 3rd floor. The Director for Service Learning and other Allbritton Center staff members can assist faculty members in identifying potential community partners.

Service-Learning Initiative Grants (http://cascadewww-staging.wesleyan.edu/slc/facultyresources/obligations_support.html) (SLIGs) provide faculty with funds to support the development of a new service-learning course (transportation costs, materials, training, and stipend).

Transportation (<http://www.wesleyan.edu/jccp/about/vaninfo.html>) for students in service-learning courses to their community placements may be arranged through the Jewett Center for Community Partnerships.

SUSTAINABILITY AND ENVIRONMENTAL JUSTICE

In 2019, Wesleyan launched a new course cluster in sustainability & environmental justice (https://iasext.wesleyan.edu/regprod/!wesmaps_page.html?stuid=&facid=NONE&subj_page=XSEJ&term=1189). Encompassing climate change, ecological sustainability, and environmental justice, this course cluster recognizes that sustainability and environmental justice are (or should be) central to public policy debates, scientific and intellectual inquiry, and the foundations of social and economic life. By framing sustainability and environmental justice together, we draw attention to equitable access to protection to all species without unfairly distributing risk of harm to some individuals and groups that live within them.

This course cluster is intended to cut across Wesleyan's academic divisions and within all disciplines, whether natural, social, or humanistic modes of thought and practice. A course cluster also makes these courses easier to find for both students and faculty advisors (especially important as they cross both disciplinary and divisional lines), attract prospective students to Wesleyan, and raise awareness of this field among students and faculty.

CONTACT

To submit a course to the cluster, please contact Tony Hatch at ahatch@wesleyan.edu.

DESCRIPTION

Topics that fall within sustainability and environmental justice may include but are not limited to the following eight themes and questions:

1. The relationship between power, social inequities and the development of just and sustainable communities.
2. How diversity, including biodiversity and cultural diversity, contributes to sustainable systems.

3. Dynamics of industrial production and mass consumption as they relate to environmental health and human well-being and explore strategies for developing sustainable life practices.
4. How social systems promote, or fail to promote, cultures of sustainability, especially in terms of tolerance, non-violence and peace.
5. How human well-being depends on ecosystem processes and non-toxic materials.
6. The politics and economics of sustainable development including its social benefits and environmental costs raise critical questions about what development and progress mean for different communities.
7. How science and technology shape the environmental realities and public health policies at both the local and global levels.
8. Multiple ways of representing and understanding humans' relationships to the environment, and how taken-for-granted metaphors and stories can promote or damage environmental and public health.

Wesleyan currently has several academic units that house faculty whose interests may fall under the domain of sustainability and environmental justice (e.g., the College of the Environment, Earth & Environmental Sciences), but not entirely nor comprehensively so.

Through the Wesleyan Sustainability Office and with funding from the College of the Environment, we anticipate offering pedagogical support to faculty on an ongoing basis, both increasing and sharpening course offerings in sustainability and environmental justice going forward. This will expand the number of faculty and students focused on this vitally important area of scholarly and policy concern.

COURSES ASSOCIATED WITH THE CLUSTER

For a current list of courses offered, visit WesMaps (https://iasext.wesleyan.edu/regprod/lwesmaps_page.html?stuid=&facid=NONE&subj_page=XSEJ&term=1189).

The course list includes*:

(All courses listed by originating department/program, and with the approval of the instructors)

Code	Title	Hours
AMST174	Popular Culture and Social Justice: An Introduction to American Studies	1

SOC315	The Health of Communities	1.25

*This list represents interdisciplinary and interdivisional regularly-taught courses on Sustainability and Environmental Justice. Some courses on this list have emerged through the Sustainability Across the Curriculum initiative while others already fell within the scope of faculty research and teaching interests. Some courses position questions of sustainability and/or environmental justice at the center of inquiry, whereas others may devote only one or two course modules to such inquiry.

URBAN STUDIES CLUSTER

CO-COORDINATORS

- **JOE SIRY** ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/JSIRY/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/jsiry/profile.html))
- **DANIELLE GANDOLFO** ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/DGANDOLFO/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/dgandolfo/profile.html))

Urban Studies is an area in which Wesleyan students can have both curricular and professional interests. Several University Major proposals in the last few years have been in the area of Urban Studies, and a number of Wesleyan students go on to graduate school and/or careers in areas such as Architecture, Geography, Public Policy, Urban Policy, and Urban Planning.

AFRICAN AMERICAN STUDIES (AFAM)

AFAM101 Introduction to Africana Studies: Black Radical Thought and Praxis

This course will introduce students to the intellectual history and political economy of Africa and the African diaspora. It will take up important historical issues and questions that continue to animate, even haunt the modern world: race, race relations, and anti-black racism; the universality of whiteness and white supremacy; the fungibility of the black body; the vulnerability and precarity of black life; and the complex and "unthinkable" histories and afterlives of chattel slavery, racial capitalism, settler colonialism, and the Middle Passage.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-AFAM**

Prereq: **None**

AFAM111 Introduction to Critical Philosophy of Race

This first-year seminar (FYS) course will examine contemporary figures in the emerging field of critical philosophy of race. We will attempt to examine what contributions (if any) the critical philosophy of race has provided not only to philosophy as a discipline but also to more traditional and established modes of thinking race and racism. We will do so by exploring issues such as the differences between critical philosophy of race and critical race theory, as well as the historical role of race and racism in philosophical thinking, and by attending to the major debates currently held in this emerging tradition.

AFAM115F Freedom School (FYS)

From the point of view of the U.S. nation-state, education has always been a hegemonic means to control knowledge, to calibrate unequal forms of citizenship, and to promote the social reproduction of power. Yet as W.E.B. Du Bois wrote in 1903, "education among all kinds of men [sic] always has had, and always will have, an element of danger and revolution, of dissatisfaction and discontent. Nevertheless, men [sic] strive to know." Drawing inspiration from the 1964 Freedom School Curriculum and spanning from enslavement to emancipation to the long civil rights movement, this course explores how people of African descent in the United States, and black women in particular, have used education to empower themselves, produce social change, and redefine the terms under which change may occur.

AFAM116F The Black Radical Tradition (or Black Radicalism) (FYS)

In a nation that was founded on the liberty of white men and women, and the enslavement of people of African descent, black radical action and movements have steered the history of struggles for freedom, citizenship, equal treatment, social and economic justice, and protection from the state. Figures such as Maria Stewart, Frederick Douglass, W. E. B. Du Bois, Marcus Garvey, Paul Robeson, and Angela Davis constitute part of a long tradition of black radicals. Even as

the meaning of "radical" has shifted historically, black radicals are joined by their visions of dismantling existing systems and institutions for a freer and more equitable society. Spanning the periods of black radical abolitionism, black nationalism, Black Power, and the Black Lives Matter movement, this course explores key radical thinkers, activists, and texts in historical perspective.

AFAM122F Race and Identity in 21st Century Literature (FYS)

This course will center on race and identity in contemporary American literature by focusing on novels written by Jhumpa Lahiri, Colson Whitehead, Junot Diaz, Tommy Orange and Ocean Vuong as well as plays by Lynn Nottage, Quiara Alegria Hudes, Ayad Akhtar and Jackie Sibbles Drury. Extra readings will include poems and short stories. We will consider the portrayals of race, identity, class, ethnicity, religion, trauma, citizenship, migration and sexuality in these works, as well as the ways in which these authors conceptualize and problematize American identity.

AFAM152F Staging America: Modern American Drama (FYS)

Can modern American drama—as cultural analysis—teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

AFAM171F The Prison State: Race, Law, and Mass Incarceration in U.S. History (FYS)

This first-year seminar course explores the history and effects of the United States' mass incarceration crisis. The U.S. incarcerates more people than any other country in the world. And people of color make up a highly disproportionate number of the over 2 million individuals incarcerated in the U.S. today. Beginning with slavery and continuing through the rise of prisons, debt peonage, Jim Crow, and the Black Lives Matter movement, the course will explore how efforts to police, detain, and control black bodies have been at the center of U.S. law and legal practice since the nation's founding. At the same time, we will compare and contrast how race, gender, and sexual orientation have been policed, controlled, and shaped through incarceration practices throughout U.S. history.

AFAM202 Introduction to African American Literature

This course will introduce students to African American literature. It will be divided into two parts. The first will pay particular attention to the experience of enslavement by focusing on several unique primary and secondary textual couplings, including (but not limited to): Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) and Saidiya Hartman's "Scenes of Subjection: Terror, Slavery, and Self-Making in Nineteenth-Century America" (1997); and Harriet Jacobs's "Incidents in the Life of a Slave Girl" (1861) together with Hortense Spillers's "Mama's Baby, Papa's Maybe: An American Grammar Book" (1987). In addition to these classic 19th-century slave narratives and contemporary sources, then, the first part will also include supplementary readings by Kenneth Warren, David Blight, Angela Davis, Alexander Weheliye, Spillers, Hartman, Farah Jasmine Griffin, Shelly Eversley, Jennifer Morgan, and Frank Wilderson. The second part will focus on 20th- and 21st-century African American literature and literary criticism. It will bring together a wide range of readings from across genres and disciplines, attempting to sketch out the major aesthetic and political features of the black literary project. Authors here will include W. E. B. Du Bois, Booker T. Washington, Michael Rudolph West, Hazel Carby, Cheryl Townsend Gilkes, Alain Locke, Shane Vogel, Alice Walker, Zora Neale Hurston, Richard Wright, Ralph Ellison, Asia Leeds, Roderick Ferguson, Claude McKay, Amiri Baraka, James Baldwin, Toni Morrison, Samuel Delany, Octavia Butler, Teju Cole, Ta-Nehisi Coates, Cornel West, Claudia Rankine, Warren, and Fred Moten.

AFAM203 African American History, 1444-1877

This course examines the historical interactions between peoples on three continents—Africa, Europe, and the Americas—and the consequences of European colonization, trans-Atlantic slavery, and racial capitalism. Focusing on a period from the Antiquity to the late 19th centuries, we will explore how European notions concerning Africa its peoples evolved over millennia in response to shifting political, economic, and demographic circumstances. We will chart how Africans and their descendants in the Americas experienced and responded to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.

AFAM204 Introduction to Modern African American History

This course explores the African American struggle for equality, liberation, and justice from Reconstruction through to the present. We will examine how gender, class, sexuality, and ideology, among other factors, have shaped the history of black protest and community. We will visit key periods and themes including Jim Crow/segregation, The Great Migration, World War II, Civil Rights, Black Power, and Black Lives Matter, to understand the intersection of the African American lives and American history. Central to this course are the ways that African Americans have exposed American hypocrisy; have shown their historical patriotism; and have challenged American institutions to live up to their professed ideals.

AFAM208 History of African American Art

This course will introduce students to a history of African American artistic production from the late 18th century to the present, in a range of media and styles. While we will focus primarily on the visual arts--looking at sculpture, painting, photography, collage, film, performance, and installation--we will also consider the deeply interdisciplinary nature of Black cultural production, highlighting the important role of music, poetry, dance, and theater.

We will explore how African American artists, both individually and collectively, have negotiated the terms made available to them by cultural institutions, whether by struggling for inclusion, acknowledgement, and validation; actively protesting racist and exclusionary policies; or by forming alternative institutions, communities, and spaces in which to work and share support. From the Harlem Renaissance to the Black Arts Movement and "post-Black" exhibitions, art works will serve as a primary source to ask, is there such a thing as a "Black aesthetic" and if so, how would one define it? Why might an African American artist reject such an idea? Other key questions will include: What is the role of visual representation in political struggle? How have artists mobilized portraiture as a tool of liberation? What does it mean to turn away from figuration, toward abstraction or opacity? How have artists grappled with questions of nationhood, belonging, and diaspora?

Together, we will trace how artistic forms, techniques, and motifs have served both as sites of collective history and as speculative propositions to envision new futures, articulating what Robin D.G. Kelley calls "freedom dreams."

AFAM212 Modern Africa

What is African Modernity? We will examine this question as we survey the major historical transformations in Africa since approximately 1800. Important themes include: African political innovations, the abolition of the slave trade and its effects, European colonialism, African adaptation and resistance, nationalism and decolonization, and Africa's role in shaping major global events. We will also study the impacts of religious and social transformations amid rapid economic and political change. Finally, we will examine African visions for post-colonial development and how to shape the future of the continent.

During the semester we will also cover some of the issues surrounding African history as a discipline. No single course can cover more than a sliver of the complexity and variety in the continent. For this reason, we approach the study of Modern Africa as comparative history. However, students satisfactorily completing this course will be able to write knowledgeably about African history and will have the foundation necessary to undertake further study about Africa with sensitivity to the complexity of its recent past.

AFAM217 Empires, Slavery, and Revolution: Africa to 1800

In this course we will examine the dynamic political and social histories of precolonial Africa. We will study the rise of kingdoms and empires such as Mali and Kongo, as well as revolutions in society from the technological development of iron production, to the emergence of trade networks, the development of ancient cities, the spread of religious healing and reform movements such as Cwazi spirit possession, and the role of gender in early African societies. Over the course of the semester we will also consider the impact of slavery and the first African encounters with Europeans. The methods for studying the early African past are interdisciplinary. You will have the opportunity to explore how ancient Africa has been imagined in the past by Africans and early Arabic and European observers, and how contemporary scholars write these histories. As we trace a history of early Africa in the world, we will consider several methods: the study of myths and oral traditions, linguistic and archaeological data, as well as ecological and archival records.

AFAM224F Afrofuturism (FYS)

Mainstream readings of the African American literary and cultural canon have tended to emphasize texts with a social realist bent, those that present

their audience with a supposedly "authentic" version of the African American experience. However, as cultural critic Greg Tate observes, 20th-century African American literary history includes "huge dollops of fantasy, horror, and science fiction" because, in his view, "Black people live the estrangement that science fiction writers imagine." While Tate's statement perhaps overly generalizes the black experience, there seems to be something to his notion that, in part because of the fact that they were forced to live an often "alienated" experience in America, there has always been a strong element of the speculative in black literary and cultural expression. This course traces this under-examined speculative strain in 20th and 21st-century African American literature, music, film, and visual art, as black artists explore, or speculate, on the possibilities that imagining alternative realities and modes of living open up. The course will focus especially on speculative and Afrofuturist aesthetics as they manifest in hip hop music and culture. We will examine the ways that black artists have employed elements of the speculative genres in order to re-envision the African American past, present, and future--rendering versions of historical African American experience and subjectivity that exceed traditional notions of "authenticity," complicating contemporary regimes of identification, and presenting alternative visions of the futures of blackness.

AFAM225 The African Novel II: After Achebe

Chimamanda Ngozi Adichie's 2003 novel, *PURPLE HIBISCUS*, summons Chinua Achebe, the "grandfather of African literature," in its opening line: "Things started to fall apart at home when my brother, Jaja, did not go to communion." While Achebe is a formative influence on Adichie and on many other contemporary African writers, the central preoccupations of African literature have shifted considerably in recent years. This class will consider recent topics animating the field. These include debates about Afropolitanism, the role of publication houses and prize committees in the canonization and circulation of texts, queer African literature, African-language literature, and the position of African literature vis-à-vis world literature. Readings will be chosen from among the newest novels and short stories in publication.

AFAM226 Afro-Surrealism

Amiri Baraka coined the term "Afro-Surreal" to describe the writer Henry Dumas's "skill at creating an entirely different world organically connected to this one." In his 2009 "Afro-Surrealist Manifesto," D. Scot Miller builds on Baraka's observations and distinguishes Afro-Surrealism from Afrofuturism in the former's concern with the "RIGHT NOW." Indeed, in the "right now" of 2018, Afro-Surrealism seems to be having a moment, with the success of films like "Sorry to Bother You" and "Get Out," the musical and filmic work of Donald Glover/Childish Gambino, the visual art of Kara Walker and Kehinde Wiley, and the literature of Paul Beatty and Colson Whitehead, among others. This course will examine this contemporary resurgence of the Afro-Surreal, and trace its echoes in black popular music, in the work of African American literary figures like Dumas, Toni Morrison, Bob Kaufman, Ralph Ellison, Jean Toomer, and Zora Neale Hurston, and through its African and Afrodiasporic foundations in the work of artists inspired by Léopold Senghor's Négritude movement. All of these artists "distort reality for emotional impact," as Miller puts it, and we will aim to connect these distortions of the "right now" to the material reality of life under regimes of anti-blackness and racial oppression that these Afro-Surreal works lays bare.

AFAM228Z Thinking with Octavia Butler's "Wild Seed"

Blend: Monday and Thursday class time synchronous; additional class hours asynchronous.

Black speculative fiction writer Octavia Butler's novel "Wild Seed" (1980) begins on the African continent in the 17th century amid the rise of transatlantic slavery and concludes on a plantation in Louisiana on the eve of the 19th-century American Civil War. "Wild Seed" was the last published book in Butler's Patternist series, but it relates the earliest segment of that epic story, which follows a shape-shifter named Anyanwu and a body-jumper named Doro across geographies, centuries, classes, corporealities, genders, races, and even, in Anyanwu's case, across species. To quote one student: "It's the weirdest novel I've ever read." This seminar takes up the myriad and interwoven provocations Butler offers in "Wild Seed" by reading her novel alongside a wide range of scholarly literature in the fields of African and African diaspora studies, Indigenous studies, gender & sexuality studies, animal studies, history, disability studies, religious studies, and cultural studies, as well as visual arts. Rather than "apply" the syllabus texts directly to Butler's novel, we will attend to how her novel not only reflects--indeed, anticipates--such scholarly and artistic production, but also produces its own aesthetics and epistemologies.

The seminar unfolds part-synchronously (via Zoom) and part-asynchronously (via writing assignments, screenings, and research project check-ins). Twice-weekly virtual meetings will be centered on presentations of research projects that students will develop over the course of the month, engaging a particular theme or question that they will identify in Butler's work. As such, the syllabus texts are subject to change. Students will be expected to read "Wild Seed" in its entirety in advance of the first class and to have begun thinking about topics they might explore for their presentation and research project (the former being preparation for the latter). The seminar's asynchronous component will consist primarily of weekly writing exercises asking students to reflect on how the assigned texts converse with Butler's novel and vice versa and to comment on one another's analyses. Shared annotatable pdfs will be used to generate conversations about the readings outside of class and to identify questions and topics for discussion. The professor will consider proposals for a creative final project, but it, too, will require substantive research.

AFAM230F Marxism and Abolitionism (FYS)

This course explores the historical encounter of Marxist revolutionary theory, with its roots in German idealism (Kant, Schiller, Fichte, Hegel), and abolitionist causes. How have abolitionist movements historically informed, expanded, and challenged Marxist theory and its tactical playbook? What made Marx a touchstone for so many black revolutionary thinkers, including W.E.B. du Bois, Franz Fanon, C.L.R. James, and Angela Davis? How have anticommunist, racist, security-statist ideologies been mobilized to undermine and defeat transformative social movements? We will begin with the Haitian Revolution and work our way through the abolition of slavery in the US and the anticolonial and civil rights struggles of the mid-20th century to the prison abolition movement today. In addition to the above mentioned authors, readings will include Toussaint L'Ouverture, Frederick Douglass, Otilie Assing, V.I. Lenin, Rosa Luxemburg, Georg Lukács, Max Weber, Martin Luther King, Jr., Herbert Marcuse, and the Combahee River Collective.

AFAM233 All Ah We: Contemporary Afro-Caribbean Drama & Performance

What are the dramatic utterances of Afro-Caribbean artists? How do Afro-Caribbean playwrights and other narrative-based performance artists present "Caribbean" and/or "West Indian" subjectivities in ways that are shared, yet critically different? In what ways are Afro-Caribbean dramas and performance pieces repositories for the practical, the theoretical, the sociological, the political, the imagined, and the lost? In answering these questions and more, we examine these textual and embodied expressions from the complicated crossroads of class, creolization, diaspora, ethnicity, folklore, gender, history, indentured servitude, isolation, language, race, religion, and slavery. At all times, this course revels in the polyphony that is Afro-Caribbean drama and performance.

AFAM235 Activism and Theories of Change

In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education. What strategic, ethical or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an

activist for women's rights, queer rights, and economic justice. In addition, we will discuss the recent and ongoing social activism in the U.S. focusing on police violence, Black Lives Matter, voting rights, and the aftermath of the U.S. elections. We will allow time to discuss events that may occur in real time over the course of the semester. This course will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

AFAM237 Technologies of the Self

Where does the idea of an authentic self come from? The desire to represent the authentic self informs the narrative genres of the confession and memoir and visual ones of the selfie and self-portrait alike. Yet both the memoir and the selfie "self" are mediated, first, via the technologies of print and screen, and second, via the conventions of particular genres that make these legible as a memoir and selfie, as opposed to, for example, an interview or a portrait. In this course, we will examine how different technologies not only represent but produce the self. These technologies include "writing" technologies: print and digital; genre and medium (autobiography, the slave narrative, memoir, self-portraits, and selfies); and technologies of the state, which produce citizens, subjects, and humans.

AFAM240 From the Banjo to Dembow: Afro-Caribbean Music in Motion

This course analyzes the global circulation of Afro-Caribbean musicians, dancers, audiences, musical styles, and even musical instruments from the beginning of European colonialism to the present day. We will seek to understand the political interconnections between the Caribbean and the wider world by focusing our attention on specific "musical itineraries." These will include, among others, the creation of the banjo by enslaved people in the Caribbean and the instrument's role in black resistance in North and South America, the musical aftershocks of the Haitian Revolution in Cuba and Louisiana, the production of black internationalist politics at weekly "reggae" dances led by Jamaicans in early 20th-century Costa Rica, and the rise of reggaetón between Panama, Puerto Rico, Cuba, the Dominican Republic, and the United States.

We will question how these musical itineraries propelled black political movements and shaped larger ideas about race, nation, diaspora, and the meaning of "the Caribbean" itself. No prior musical knowledge is required for this course.

AFAM242 Intimate Histories: Black Women's Sexuality

Black feminist theory teaches us that African American women have historically confronted racism and sexism in addition to other forms of oppression. How has this experience shaped the sexual lives of everyday black women and famous figures? This course places the sexual at the center of African American women's history. It will examine how regimes of violence have intervened in black women's sexual freedom, from intimate bonds to reproduction to same-sex desire. It will cover black women's resistance to these regimes; to their sexual agency in diverse spaces from the plantation to the porn industry. This course will also tackle the enduring impact of the Jezebel stereotype in the history of black women's sexuality. Using primary and secondary sources, this class will fundamentally investigate the significance of African American women's sexual history in the histories of American sexual, racial, gender, and class politics.

AFAM248 Race, Ethnicity, and Popular Music

This course explores race and ethnicity in the United States through sound and song. By studying diverse topics—from the Boston Tea Party, blackface minstrelsy, and the rise of Jim Crow, to Native Hawaiian influences on the Mississippi Delta blues, to the unexpected connection between elevator music

and the Spanish American War—we will learn about the history of settler colonialism, anti-black racism, U.S. imperialism, global capitalism, and hetero-patriarchy. We will also remain attentive to music as a transgressive and revolutionary force, one that facilitates hybrid identities and movements that celebrate difference, offering alternate visions for what it means to be and sound free. Investigating primary sources will demonstrate how musical genres may act as reservoirs of shared history and collective identity. As Ronald Radano has argued, discussions about music can have tangible influences because debates about music are a proxy for larger social issues with real-life consequences. Can music make (or unmake) race? Can a song change the world?

AFAM250 Integrative Learning Project 1: Reflecting About the Liberal Arts

The Integrative Learning Project is a .50 credit course that allows students to learn to describe in a coherent and engaging narrative the various academic and non-academic activities, projects, and experiences that have been important for them while in college and to practice doing so for a variety of audiences (e.g. employers, graduate schools, etc.). Participants should be students who are interested in crafting a narrative about their personal and intellectual development, and who want to be able to talk about what skills they have cultivated during their time at Wesleyan and what they still want to learn.

All sophomores, juniors and seniors are welcome in this course. This course requires a willingness to discuss one's strengths, achievements, weaknesses, and failures. Students will not only engage in reflection about their skills and experiences, but will also have the opportunity to design an online portfolio in WordPress, the world's most popular content management software, and test the portfolio with different audiences by employing user experience design (UX) principles and research methodologies. Students can take this course more than once, but only once per academic year.

AFAM251 Communicating Racial Justice

This course is focused on racial justice and how it relates to society. It is designed to and will facilitate conversations about racial justice work that foster authentic engagement with learners. In our time together we will discuss how diversity, race, and racism impact the work we do and explore the benefits and challenges associated with diversity in society. We will discuss biases and discriminatory practices' effects on families and talk about the factors that cause a disproportionate representation of minorities. Other areas that will be discussed and explored are cultural competency, cultural humility, disproportionality, disparity, and how they relate to the impact of culture and perceptions that can communicate multiple messages.

This course will allow students to use and communicate what they know about racial justice and equity to build understanding and agreement. Students will learn how to have conversations about race with presence, grace, and authority.

AFAM254 The History of Race and Sex in America

Everything in our contemporary moment has a historical precedent. This course explores the ways that race, class, gender, ethnicity, and sexual orientation have intersected to shape American lives and group identities. Focusing on the concept of intersectionality, this course looks at the relationship between power, rights, and citizenship; namely who is included and who is excluded at a given time and why. Thinking about how sex has factored into these dynamics, we'll be covering topics such as sexual coercion and consent, interracial marriage, and civil rights in historical perspective. Spanning the early American period through to the present, we will focus specifically on how the understanding of blackness and whiteness, manhood and womanhood, and heterosexuality and homosexuality changed over time.

AFAM257 System Mapping for Social and Environmental Impact

In recent years, growing interest in social entrepreneurship has pushed students to "solve" complex social and environmental problems with new ventures of their own design. Unfortunately, this approach often overlooks a critical foundation of social change: understanding the root causes of problems and the contexts that surround them before seeking solutions.

In this six-week, half-credit class, students will study a problem and the systems that surround it. By the end of the course, students will create a "systems map" that documents the economic, political, and cultural factors behind their problem, as well as the current "solutions landscape."

AFAM261 Beyond the Talking Book: Reading African American Literature in the Newspapers

The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some

lesser known ones) in their original publication context, the magazine archives of The Christian Recorder; The Anglo-African Magazine; The Colored American Magazine; The Crisis; The Crusader; Opportunity; and Fire!! The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context--as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students' literary close-readings skills, this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnut, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins' *Of One Blood*) in its original installment-format, week-by-week. Reading these works serially will also enable them to pay closer attention to each installment's relationship to its surrounding texts and images.

AFAM263 Critical Race and Art History: Theories and Methods

How does the study of art shift if we begin with questions of race, power, and colonialism, rather than treating them as secondary? Concepts such as mastery, familiarity, strangeness, taste, and beauty are formed by conditions of domination and subjugation. Moreover, the histories of material production and cultural expression are fundamentally entwined with the circuits of enslavement, forced migration, and the extraction of resources, people, goods, and "styles."

For the bulk of the semester, we will focus on a series of case studies drawn from the 15th to 20th centuries, a period of intense European contact and conquest in Africa, Asia, the Caribbean, and the Americas. Topics will include: representations of Africans in Renaissance Germany; African depictions of the Portuguese circa 1492; the appearance of parrots, kraak (Chinese) porcelain, and other goods from "exotic" locales in 17th-century Dutch still lifes; the taxonomies of racial difference in Spanish casta paintings; debates about sculptural polychromy and the "whiteness" of marble; the relationship between expansionism, empire, and the genre of landscape; "primitivism" and European artists' "discovery" of African artistic forms; the critical interest in "racial art" in the interwar U.S.; and contemporary conversations about museums and restitution, among others.

Throughout, works of art are primary sources with which to study the specificities of periods, places, and their social arrangements. While we will emphasize difference and historical contingency, our *longue durée* approach will enable us to draw connections about art's role in processes of primitive accumulation, dispossession, and racial capitalism.

AFAM264 "Before the 'Body,' there is the 'Flesh'": Reading Hortense Spillers

This course will introduce students to the major works of the black feminist theorist and literary critic Hortense J. Spillers (b. April 24, 1942), one of the greatest essayists and most gifted intellectuals of our times. While her published writings are legion, Spillers is perhaps best known for her scholarly article titled "Mama's Baby, Papa's Maybe: An American Grammar Book" (originally published by *Diacritics* in 1987). In addition to "Mama's Baby," then, together we will read and engage at close range with the essays collected in "Black, White, and in Color" (published by the University of Chicago Press in 2003) in order to reveal the extraordinary complexity and clarity of her thought.

AFAM265 Music and Downtown New York

This course will explore the history and simultaneous flourishing of four distinct music communities that inhabited and shaped downtown New York City during two especially rich decades (the 1950s and 60s): urban blues and folk revivalists; an African American jazz-based avant-garde; Euro-American experimentalists; and Lower East Side rock groups. These four vanguard musical movements--at the heart of dramatic cultural shifts at the time, with reverberations and legacies that remain relevant up to the present day--are an essential part of American history. Much of the course will be devoted to discovering their points of convergence and divergence, especially in conversation with broader contemporaneous currents, including the Civil Rights Movement and related notions of freedom, shifting youth cultures, music and politics, and avant-garde aesthetics.

Drawing from primary sources, we will read about and listen to recordings of a wide variety of musicians, view a broad cross-section of film from the era, identify aesthetic and cultural trends, and study the local industry that supported them, including record labels, coffee houses, clubs, and concert spaces. Projects throughout the semester include written papers, individual and group presentations, and adding content to an interactive collaborative Google map of the neighborhood.

AFAM266 Black Performance Theory

What does it mean to perform identity, to perform race, to perform blackness? How is blackness defined as both a radical aesthetic and an identity? In this course, we will focus on theater and performance as a resource for thinking about black history, identity, and radical politics in excess of the written word. Following recent work in Black Studies and Performance Studies, this class will pay particular attention to the doing of blackness, the visible, sonic, and haptic performances that give over to a radical way of seeing, feeling, and being in an anti-black world. Plays, films, and texts might include works by Fred Moten, Alexander Weheliye, Brandon Jacobs-Jenkins, Suzan Lori-Parks, Danaï Gurira, Shane Vogel, Adrienne Kennedy, Sarah Jane Cervenak, Dee Rees, Celiné Sciamma, Saidiya Hartman, Huey P. Copeland, Darby English, Lorraine Hansberry,

Hilton Als, Spike Lee, Isaac Julien, Martine Syms, Tavia Nyong'o, and Daphne Brooks.

AFAM271 The Prison State: Race, Law, and Mass Incarceration in U.S. History

This course explores the history and effects of the United States' mass incarceration crisis. The U.S. incarcerates more people than any other country in the world. And people of color make up a highly disproportionate number of the over 2 million individuals incarcerated in the U.S. today. Beginning with slavery and continuing through the rise of prisons, debt peonage, Jim Crow, and the Black Lives Matter movement, the course will explore how efforts to police, detain, and control black bodies have been at the center of U.S. law and legal practice since the nation's founding. At the same time, we will compare and contrast how race, gender, and sexual orientation have been policed, controlled, and shaped through incarceration practices throughout U.S. history.

AFAM272 History of Jazz in American Culture

This course will provide students with a broad-based literacy in the history of jazz while examining its significance and impact within American culture. As a musical style, jazz has been a staging ground for working out some of the most defining issues and aspects of American culture, including the dynamics of race relations, the articulation of gender roles and class distinctions, artistic expressions of freedom and democracy, the creative possibilities of the encounter of European- and African-based cultures on American soil, assimilation versus appropriation, and an extraordinarily influential aesthetic of cool. Jazz was the dance and listening music of choice for most Americans from the 1920s through the '50s, until it was displaced and pushed to the margins by rock and soul in the 1960s. But it has remained an inspiration for diverse artists in rock and rap up to the present day, including Kendrick Lamar's jazz-drenched "To Pimp A Butterfly" and Janelle Monae's 21st-century Afrofuturism deeply indebted to Sun Ra.

We will explore the early 20th-century origins of jazz in New Orleans, its rise as America's popular dance music in the 1920s and '30s, a shift to a more concert art-oriented form in the 1940s and '50s (representing the epitome of cool and hipness), avant-garde expressions of the 1960s (representing a new kind of universal spirituality), its move into rock and the growth of artist-based collectives of the 1970s, and its emergence in hip-hop samples in the 1990s. We will learn about major artists and their classic recordings, including Billie Holiday, Thelonious Monk, John Coltrane, and Miles Davis, among many others, as well as new directions from recent generations (bringing in guest music department faculty). We will immerse ourselves in a combination of listening to recordings, viewing videos, reading, discussion, and in-class performances. Throughout the semester we will pursue the parallel goals of using jazz history to understand American history and vice versa. This is a jazz history course with a difference, able to accommodate curious newcomers as well as aficionados and those interested in social and cultural dynamics as well as the musical materials.

AFAM273 BlaQueer Sounds: Queer Negotiations in African American Music

The term "BlaQueer," first coined by Tabais Wilson, is an invention of the intersectionality era; an acknowledgment of the unique and multifaceted experiences/identities formed at the nexus of racial, gendered, and sexual marginalization. In creating the portmanteau BlaQueer, Wilson underscores that, for people who are both Black and queer, these identities are inseparable, immutable, and irreducible. While the term BlaQueer, and by extension the concept it represents, is fairly new, there are long histories of Black queer people navigating and negotiating identity, revolutionizing and contributing to discourses on race, class, and gender. This course offers an exploration of the BlaQueer expressions, movements, and (most importantly) people that transformed American culture through music. While this course follows a historical arc, the primary aim of this course is to engage BlaQueer musical lineages through a critical interdisciplinary academic lens; accordingly, this course incorporates gender/women's studies, African American studies, performance studies, queer studies, and musicology.

AFAM275 Race and Place in Early American Writing

This semester, we will examine early American texts that are preoccupied with the intersection between the unsettled (and often unsettling) categories of race and place. In the wake of colonial contact and in the midst of chattel slavery, people in varying positions of power and subjection took to the pen in order to reify or resist white supremacy and its attendant discursive and physical violence and violation. With an eye toward the strategic uses of memory and witnessing by those who were displaced and/or enslaved, we will read primary texts from the 17th to the mid-19th century that were written by people of color. To conceptualize race and nation is to think relationally, so we will also take up texts about people of color, which are often animated by the seductive effects of nostalgia and sentimentality.

AFAM276 Intertextual Aesthetics in African American Culture: From Signifyin(g) to Sampling

Intertextuality, the integration of references to multiple texts into a single artistic work, has long been considered a hallmark of postmodern aesthetics. This course will begin from the premise that this intertextual approach was a foundational aesthetic technique for African American cultural producers long before any discourse around postmodernism entered the lexicon. From David Walker's "sampling" of the Declaration of Independence in making his 1830 anti-slavery Appeal, to Kara Walker's incorporations of imageries and artistic techniques of the antebellum South to comment on contemporary realities of blackness, African American artists have long made use of intertextual aesthetics not merely in the service of postmodern indirection, but in order to represent the realities of black lived experience in America. This course will investigate the transmedial history of this intertextual black aesthetic, examining African American literature, music, film, and visual art, and will consider various ways in which black intertextual aesthetics have been theorized, from Henry Louis Gates' notion of "signifyin(g)," to discussions of hip hop sampling and Black Twitter. As mass-mediated technologies have proliferated in the 20th and 21st centuries and representations of "Blackness" writ large have exponentially multiplied in the popular imagery, contemporary artists increasingly sample and signify on these representations themselves. So a significant piece of our work in the course

will be in analyzing the ways that the intertextual aesthetic is mobilized in the contemporary moment to speak to material realities of postmodern blackness, and to articulate nuanced black subjectivities in the face of subjection.

AFAM277 Defining Black Repair

Black Reparations is a concept that refers to claims for reparations made by African descendants in the United States as defined in Boris Bittker's (1973) "The Case for Black Reparations." However, the term is not exclusive to the experiences of slavery and other forms of racial violence in the U.S. As demonstrated by reparation activists of the African diaspora, the concept unifies the experiences of all African descendants.

In this seminar students will explore both national and regional movements for reparations, primarily in the context of the Caribbean and the U.S. Students will compare the formation of reparatory struggles in both geographies, from post-emancipation to the present, which is instrumental to understanding the concept of Black Reparations. What constitutes Black Reparations? What are the frictions and connections between reparative struggles in the Caribbean and the U.S.? These are the questions that students will be asked to consider throughout the course. Building on scholarship on Black Reparations and reparation policies, students will be asked to design their own proposals for how Middlesex County could implement practices of Black repair.

AFAM278 Race & Slavery in New England

This course examines struggles over black and Native American slavery, freedom, and community formation in New England. We will explore the lived experiences and freedom struggles of people of color from the beginning of European colonization through the national abolition of slavery in 1865. The course, which satisfies the Early AFAM History requirement for the major, will particularly grapple with Wesleyan's and Middletown's complex relationships to slavery and emancipation. As we will learn, slavery and the slave trade played central roles in New England's culture and economy, especially here in Middletown. Like in other New England ports, Middletown merchants made a fortune from the trans-Atlantic slave trade and the plantation economy that supported it, even selling enslaved people of African and Native American descent on Middletown's Main Street. And southern slaveholders were among the first Wesleyan students in the 1830s. At the same time, free African Americans and their allies made Middletown a stop on the Underground Railroad and a center of the antislavery movement, laying the groundwork for Connecticut's eventual abolition of slavery and for high-profile court cases like the Amistad trial. Complicating popular images of the "free North," this course will examine the central roles of slavery and settler colonialism in New England history, while also exploring how the Connecticut River tied Connecticut to regional and even global currents of slavery and antislavery movements.

AFAM279 Award-Winning Playwrights

With textual analysis and intellectual criticism at its core, this course examines the dramatic work of award-winning playwrights through theoretical, performative, and aesthetic frames. The first half of our investigation explores companion texts written by premier playwrights. In the latter end of the course, we examine singular texts written by acclaimed newcomers. A select range of reviews and popular press publications help to supplement our discussions. In all cases, we are interested in surveying the ways in which these playwrights work within varying modes of dramatic expression and focus their plays on such topics as class, ethnicity, era, disability, gender, locale, nationality, race, and/or sexuality.

AFAM280 Religion and the Social Construction of Race

In this course we examine aspects of the intersections between race and religion in a number of historical and social contexts. We place at the center of our discussions the question of how race and religion are co-constructed categories that function as a prism through which people come to understand and experience their own identities and those of others. We will privilege interpretations that emphasize (a) the intersections of race and religion as a process in which power plays a pivotal role; and (b) the means through which communities form collective identities.

We will read a range of historical analysis and primary source materials from the U.S. and the Caribbean. After a theory module, we will examine a colonial-era captivity narrative, antebellum pro-slavery document, missionary works, analyses of anti-Semitism, works on Father Divine, the Nation of Islam, Rastafari, Haitian Vodou, Jonestown, the Christian White Supremacy movement, as well as the contemporary U.S. relationship to the Middle East.

AFAM284 African American Philosophy

This course will examine the philosophical questions that have been of particular interest to African American philosophers. We will explore the domains of knowledge in which African American philosophers and thinkers have felt compelled to intervene. We will approach these questions by engaging with canonical historical figures such as DuBois, Douglass, and Cooper, and then we will assess the extent to which contemporary African American philosophers have remained (and continue to be) concerned with the same questions, albeit with different discursive methodologies. The purpose of this course is to trace the philosophical articulation of race, racism, identity, politics of freedom, and subject formation in the history of African American philosophical thought.

AFAM285 Gender and Slavery in the Atlantic World

For most of the 20th century, historians of slavery in the Atlantic world overlooked the critical role of gender in shaping the marketplace, culture, and experience of the institution. Slaveholding and its attendant violence were presumed to be the domain of men. With a tragically limited archive, the popularity of slave narratives such as Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) reveal how the voices and perspectives of men have dominated our understanding of the enslaved experience. Since the 1980s, the work of black feminist historians such as Deborah Gray White's, "Ar'n't I a Woman?: Female Slaves in the Plantation

South" (1985) have unpacked the profoundly gendered nature of slavery in colonial America, the United States, and the Caribbean. This course embarks on an exploration of this important intervention. We will engage primary sources to illuminate the voices of enslaved women and debunk some of the historical myths of slavery and slaveholding. We will also visit classic and fresh secondary literature to understand the evolution of the field. Major themes include but are not limited to the Middle Passage experience, gendered violence, fertility, reproduction and motherhood, the Southern Belle archetype and slaveholding mistresses, notions of beauty and purity in black and white, and fugitivity.

AFAM286 Literature of the Harlem Renaissance

During this course, students will read canonical and popular literary works by early-20th-century African American authors in tandem with the vibrant body of literary criticism that emerged from this cultural moment in order to arrive at a richer understanding of how the early 20th-century African American canon was curated and proliferated. To this end, we will pay special attention to the role of anthologies and literary magazines (such as "The Crisis," "Opportunity," and "Fire!!") in collating an emergent modern African American literary tradition. At the end of this course, students will be familiar with not only the key authors and works of the Harlem Renaissance, but also with the central debates about the direction and uses of African American literature in the early 20th century. These discussions of the uses and selection criteria of the book-form anthology on the one hand, and the serial literary magazine on the other will prepare students for one of the main assignments: curating a new syllabus entry for future versions of this course. The aim of this assignment is to alert students to the politics of knowledge production that determine which texts get taught, anthologized, and studied. Finally, the differing lengths and types of course assignments will require students to learn how to present their ideas across a variety of genres (syllabus proposal, annotated bibliography, research paper, short close-reading paper).

AFAM287 Psychology and the Law

This course will offer an introduction to the range of topics that are of concern both to psychologists and to members of the legal profession. We will investigate how psychologists may enter the legal arena as social scientists, consultants, and expert witnesses, as well as how the theory, data, and methods of the social sciences can enhance and contribute to our understanding of the judicial system. We will focus on what social psychology can offer the legal system in terms of its research and expertise with an examination of the state of the social science research on topics such as juries and decision making, eyewitness testimony, mental illness, the nature of voluntary confession, competency/insanity, child testimony, repressed memory, and sentencing guidelines. In addition, this course will look at the new and exciting ways legal scholars and psychologists/social scientists are now collaborating on research that looks at topics such as the role of education in prison, cultural definitions of responsibility, media accounts and social representations of crime and criminals, death penalty mitigation, and gender/race discrimination within the criminal justice system. This course will introduce students to this field, especially to the growing body of applied and theoretical work and resources available for study and review. Students will be encouraged to explore the connections between issues of social science and the law, translating legal issues into social scientific research questions that can then be examined more closely in the literature.

AFAM288Z "Writing Should Do Something": The Essays of James Baldwin

Baldwin's essays, both deeply personal and political, speak of a divided self in a divided country. As a Black man, he saw himself as a problem for America; as a gay man, he was a problem for many; and as a self-described "maverick," he resisted any identification other than "writer." He wrote frankly of hating, and being hated, while insisting that without love and compassion, even for those who hated him, a decent life was unattainable. In this course, we will consider Baldwin as one of the greatest essayists of his century, a social critic who believed that "writing should do something," in the words of a letter he wrote to his brother.

Baldwin began publishing to acclaim in the 1950s; he was a celebrated public figure in the fight for racial equality in the 1960s. By the mid-1970s, however, his complicated relationship both with white liberals and leaders of the Black Power movement diminished his political stature. With the Obama presidency and the emergence of the Black Lives Matter movement, his work experienced a renaissance: almost 30 years after Baldwin's death, Ta-Nehisi Coates acknowledged "The Fire Next Time," published in 1962, as the inspiration for "Between the World and Me."

This is not a theory course, either social or literary. While our supplementary material will place Baldwin's essays within their historical and social context, our focus will be on the narrative nonfiction techniques Baldwin used to such startling and timeless effect. We will read Baldwin's most famous essays, and some that are less well known. Our supplementary readings and viewings will explore his continuing influence, and the influence of Black music on Baldwin.

AFAM291 Afro-Asian Intersections in the Americas

This course explores a range of historical, cultural, and political intersections between African and Asian diasporic people in the Americas from the late 19th century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the United States and abroad, and the 1992 Los Angeles uprising. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to interracial buddy films like *Rush Hour* (1998), to the contemporary fiction of writers such as Patricia Powell and Charles Johnson.

AFAM292 Doing Blackness: Performance Studies and Theorizing Black Identity

The idea of blackness is one that is ever shifting, sometimes in conflict with itself, and constantly accommodating new contexts. This course addresses the concept of blackness through performance, through the various methods of doing, being, and feeling that mark bodies, gestures, and places as black. It should be noted that performance, in this context, not only encompasses the framed/staged productions that have come to evoke blackness symbolically in the public imagination, but also performative approaches to evoking blackness in scholarship and the mundane negotiations of black identity in everyday life. This course centers on performance studies, but also pulls from African American studies, gender/women's studies, musicology, and literary theory in order to address both performance and blackness from an interdisciplinary perspective. Ultimately, this is a course that revels in the gray areas that exist between various competing constructions of authentic blackness and offers performance as a useful frame for understanding the simultaneous fixity and fluidity of blackness as a concept.

AFAM298 Richard Wright and Company

This course offers an in-depth consideration of the work and career of Richard Wright, a defining figure in 20th-century African American literature, and seeks to understand Wright's interactions with a wide array of mentors, proteges, and enemies. By placing Wright amid the network of supporters, admirers, and detractors who surrounded him, we will gain a deepened understanding of Wright's development and a useful map of 20th-century African American literary expression and American literary history more broadly. Writers to be covered in the course may include, along with Wright, Hannah Arendt, James Baldwin, Gwendolyn Brooks, Horace Cayton, Ralph Ellison, James T. Farrell, Dorothy Canfield Fisher, Chester Himes, Langston Hughes, Zora Neale Hurston, Alain Locke, Gertrude Stein, Margaret Walker, John Williams, and Frank Yerby.

AFAM300 Black Phoenix Rising: Death and Resurrection of Black Lives

The Black Lives Matter Movement has renewed our collective need to theorize the value of black lives within a deluge of death and disappearance in black communities. This movement is part of a deep transnational tradition in black radical praxis that aims to transform scholarly, activist, and public discourse and public policies concerning the systemic and epistemic effects of institutional racism and the prospects for antiracist futures. How might we envision a black radical praxis that simultaneously recognizes the vitality of black lives and challenges the cultural ideas and social practices that generate and justify black people's death and suffering? This seminar traces a genealogy of black radical praxis that interrogates the necropolitics of race and positions this system of

power against the prospect of thriving black people. In doing so, the course erects an interdisciplinary theoretical framework that features scholarship in critical race science studies, intersectionality, and transnational cultural studies as they inform how a black radical praxis can contribute to the uprising and raising up of black communities.

AFAM301 Junior Colloquium: The Possibilities of Diaspora

In this course, we will explore the concept of "diaspora" as a way of conceptualizing and understanding the contours of African American cultural and political history. We will read a series of studies of diaspora as a concept for apprehending the historical experience of people of African descent dispersed from an original homeland. We will see in what ways these books are in dialogue with each other, what prior conceptualizations they are contesting, and what creative possibilities they offer for those of us engaged in African American studies. We will also read autobiographies, memoirs, travelogues, and novels that deal with the issues of diaspora. It is our hope, then, to understand how "diaspora" as a concept, metaphor, or condition can be applied to the historical knowledge we need to bring to contemporary political issues.

AFAM305 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice

Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover's voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet's effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric's history and practice. In this course, we will read from African American, African diasporic, Caribbean, Latina/o/x, and Indigenous poetics, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

AFAM307 Black Middletown Lives: The Future of Middletown's African American Past

In this service learning course, students will do hands-on history by uncovering, preserving, and sharing Middletown's rich African American past. We will focus on the history of the Beman Triangle. This African American neighborhood, now part of Wesleyan's campus, served as a regional and national antislavery and Underground Railroad center and home to one of the nation's first handful of independent Black churches. Students will partner with local archives, libraries, and museums to help preserve and share this neighborhood's remarkable

history. Our projects will include building a website and an exhibit to share this history with the Wesleyan and Middletown communities.

AFAM312 Black Speculative Fictions and the Anthropocene

The genre of black speculative fiction--in the form of literature, art, music, and theory--provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the "future," black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term "Anthropocene" first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which "humans" had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a "species"? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene's attendant catastrophes, which include earthquakes, altered ocean waters, and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human? Further, how does artificial intelligence complicate definitions of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

AFAM315 Black Literary Theory

This course will bring together readings both literary and critical/theoretical, beginning with Frantz Fanon's "Black Skin, White Masks" (1952). Taking Fanon as its point of departure, then, this course will necessarily turn to a discussion of the recent discourse on Afro-pessimism and Black optimism, attempting to introduce students to important issues and questions of race, race relations, anti-Black racism, Black sociality, the universality of whiteness and white supremacy, the fungibility of the Black body, and the vulnerability and precarity of Black life; and together we will think more closely about how the complex and "unthinkable" histories and afterlives of chattel slavery, racial capitalism, settler colonialism, and the Middle Passage, for examples, continue to challenge the representational limits and potentialities of traditional literary genres and modes of employment. In addition to Fanon, authors will include Orlando Patterson, Toni Morrison, Hortense Spillers, Saidiya Hartman, Achille Mbembe, Frank Wilderson, Jared Sexton, Fred Moten, and others.

AFAM320 Integrative Learning Project 2: Senior Capstone

The Integrative Learning Project is a .50 credit course that allows students to learn to describe in a coherent and engaging narrative the various academic and

non-academic activities, projects, and experiences that have been important for them while in college and to practice doing so for a variety of audiences (e.g. employers, graduate schools, etc.). Participants should be students who are interested in crafting a narrative about their personal and intellectual development, and who want to be able to talk about what skills they have cultivated during their time at Wesleyan and what they still want to learn.

This course is intended for seniors who wish to document and reflect about their work in a single "capstone" experience. This course requires a willingness to discuss one's strengths, achievements, weaknesses, and failures. Students will not only engage in reflection about their skills and experiences, but will also have the opportunity to design an online portfolio in WordPress, the world's most popular content management software, and test the portfolio with different audiences by employing user experience design (UX) principles and research methodologies. Students can only take this course once.

AFAM324 Black Power and the Modern Narrative of Slavery

The historical moment immediately after the civil rights and Black Power movements saw an explosion of African American writing about slavery. In the past half-century, Black writers wrote award-winning novels that gave unprecedented attention to the intricacies of the life of people who are enslaved, and to slavery as a system that they suggested could help us better understand late-twentieth century American culture. We will read some of the most important works written by contemporary African American writers in order to see how and why they transformed the first autobiographical form for Black writers--the slave narrative--into a fictional form that has served them as they dissect their own cultural moment.

AFAM326 Litanies for Survival, Plots for Revolution

This seminar centers black-feminist and queer-of-color theory, literature, and art from the 1970s to the present in order to interrogate and reimagine revolution and revolutionary praxes. We will examine the interrelatedness of art and activism, hope and despair, collaboration and erotics. Key questions include: How does "survival" put pressure on "revolution," and vice versa, particularly in light of contemporary and imminent catastrophes, local and planetary? How does a joint consideration of survival and revolution affect interpretations of the past, understandings of the present, and imaginings of the future? What political

work might intellectual and creative labor perform? Is revolution an event, a practice, or both? A useful term or a ruse?

This seminar is offered in conjunction with the Center for the Humanities' Fall 2018-Spring 2019 theme, "Revolutions: Material Forms, Mobile Futures." Assigned readings will include the work of scholars participating in the Center's Monday night lecture series, and students will be required to attend several lectures over the course of the semester.

AFAM331 Queer and Trans Aesthetics

This seminar will consider contemporary trans and queer theory foregrounding race, class, disability, migration, diaspora, indigeneity, and colonization alongside the work of BIPOC queer and trans artists in particular. The course's animating (and unfixable!) questions include: How do artists produce and intervene in understandings of gender and/or sexuality through their work? What does it mean for an artist or viewer to describe an image, object, or performance as "queer" or "trans"? What constitutes a "queer" or "trans" reading of visual culture? How might various formulations of "queer" and "trans" relate to, put pressure on, and/or resist "aesthetics"? What is the relationship between an artist's self-identification and/or their resistance to categorization (e.g., in terms of race, gender, sexuality, disability, class, nationality) on the one hand, and audiences' efforts to engage and interpret their art on the other? Put another way: What, if anything, does an artist's "identity" (asserted and/or imposed) have to do with their art? And what does a viewer's "identity" (asserted and/or imposed) have to do with how they approach and interpret visual culture? Several artist talks and/or class visits (all virtual) are being organized in conjunction with the seminar.

AFAM334 Special Topic: Something in the Air: Mining the Oral/Aural Tradition in African American Poetry

In his book-length manifesto, *Poetry as an Insurgent Act*, Lawrence Ferlinghetti claims that "the printing press killed poetry." What he seems to be lamenting—at least, in part—is the privileging of the written word to the detriment of poetry's musical, or aural, qualities. In this advanced-level workshop, we will focus on the poem as something intended to be read aloud and listened to. This course will also examine the roots and evolution of the African American oral poetic tradition with special attention paid to the rhetorical strategies derived from

the black church, adopted by civil rights leaders and speech writers, and used to varying degrees by poets ranging from those of the Black Arts Movement of the 1960s and '70s to practitioners of contemporary hip-hop and spoken word. Some of the poets under consideration include Amiri Baraka, Oscar Brown Jr., Jayne Cortez, Gil-Scott Heron, June Jordan, The Last Poets, Carl Hancock Rux, Sonia Sanchez, Patricia Smith, Jessica Care Moore, Laini Mataka, and Saul Williams.

AFAM336 Black Texts, Lost and Found

This course examines histories of loss and recovery of black texts in the US and the Atlantic world more broadly. We will bring a three-pronged approach to our subject matter. We will analyze first the constitutive silences of the archive: epistemic and material neglect, or what Michel Trouillot has termed the "silencing of the past"; second, the preservation efforts of black newspaper editors, librarians, and bibliophiles; and third, the "counter-archiving" work of Afro-diasporic historical and speculative fiction. As we traverse different periods and empires we will consider what the concepts of the "black archive" and "black ephemera" mean to different disciplines. We will study the repressions of black Arabic writing practices in the US South and our fragmentary recovery of them in the late 20th century, unfinished novels about Black Atlantic revolutions such as Martin Delany's "Blake," incomplete runs of historic black newspapers, debates about the illusions and desires of "recovery," and the criteria that determine what counts as ephemeral and when.

We will move across different media, from print—"I, Tituba," "M Archive," "Blake," "(Dis)forming the American Canon: African-Arabic Slave Narratives and the Vernacular"—to films—"The Watermelon Woman," "Looking for Langston," "The Last Angel of History"—and from digitized databases of photographs at the ongoing archiving project *The Missing Chapter: Black Chronicles* to digitized newspaper archives.

AFAM343 Empires of Captivity: The Resurgence of Atlantic Slavery in the Age of Emancipations

The dawn of the 19th century was marked by a series of challenges to Atlantic slavery, epitomized first by the unprecedented victories of the Haitian Revolution and then by the implementation of municipal bans and bilateral treaties that sought to limit the international trade in African captives. Yet seemingly paradoxically, this same period saw the rapid expansion of new zones of

enslavement stretching from the U.S. South to Cuba, Brazil, and beyond. Proslavery forces mobilized across these jurisdictions in order to reverse the tide of abolition and to participate in (or simply to profit from) a burgeoning illegal trade in captives. Meanwhile, people of African descent who were enslaved or re-enslaved during this period built upon the precedent of emancipation in Haiti and other antislavery jurisdictions as they mounted claims to freedom for themselves, their families, and their communities. They continuously pushed forward the halting pace of general emancipation, laying the foundations for struggles for recognition and restitution that continue to the present day.

AFAM344 The Haitian Revolution Beyond Borders

In 1791, enslaved people rose up against their masters in the French colony of Saint-Domingue, at the time the most profitable plantation society in the world. Thirteen years later, their efforts would culminate in the declaration of independence of Haiti, a nation founded on the pillars of antislavery, anticolonialism, and racial equality. This course investigates the regional and global significance of this revolution through its interconnections with Haiti's neighbors in the Caribbean and across Latin America. First, we will look at the immediate implications of Haiti's founding for the fate of New World slavery during the Age of Revolutions. Next, we will consider Haiti's long-term impact on national identities, racial formations, and future revolutionary struggles in the Americas over the course of the 19th and 20th centuries.

Prereq: **None**

AFAM350 The Law, the Citizen, and the Literary and Cinematic Imaginations

In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimagined in literature and cinema. Among the topics discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporalities. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they

reveal the rifts and conjunctions among the categories citizen, "savage," "gente sin razón," slave, illegal, pervert, and deviant.

AFAM351 Queer of Color Critique

This course will examine and interrogate the field of queer studies with particular focus on the ways in which queer scholarship and queer political movements function alongside critical race theory, ethnic studies, and sociopolitical antiracist efforts. Students will be asked to consider the history of queer studies and queer politics, the contemporary state of queer movements, and future visions of queer life. We will take an interdisciplinary approach, and we will rely upon a diverse range of theoretical, historical, and cultural studies texts. We will explore the normative parameters of both sexual and racial identities, probing the terms of identification to consider their meaning in the contemporary moment and in relationship to various cultural, social, legal, and political milieus. Throughout the course we will consider, What does it mean to study queerness and to study race? How do institutions--religious, legal, and scientific--shape our understandings of both queer and racial identities? In what ways do sexuality and race interact, and how does this interaction inform the meanings of each of these identity categories? Furthermore, how have queer movement and scholarship both supported antiracist efforts and, also, how have they been complicit in cultural and institutional forms of racial oppression? How do other social categories of identification such as gender, ethnicity, and class, shape the ways in which we understand expressions of race and queerness?

AFAM352 Black Thought and Critical Theory

This course follows Stuart Hall's insistence in "What is this 'Black' in Black Popular Culture?" that the theoretical articulations of "blackness" are always "conjunctural." We will investigate how black thought has been conjoined with critical theory through phenomenology, pragmatism, Marxism, semiotics, and psychoanalysis. In our readings of a variety of 20th- and 21st-century thinkers, we will elaborate the philosophical richness and contradictory tensions embedded in the notion of "blackness" at specific historical and theoretical conjunctions. How is "blackness" useful for social theory? Must we assume there is a transhistorical identity to "blackness"? In what ways does "blackness" conjoin with the conceptualizations of gender, sexuality, class, and religion? Black thought and critical theory is the provocation that we attend to the tensions these questions raise. In this course, we will read the works of James H. Cone, Cornel West, Hortense Spillers, Saidiya Hartman, Sylvia Wynter, Denise Ferreira da Silva, Frank Wilderson, Calvin Warren, Tommy J. Curry, Stuart Hall, and Frantz Fanon.

AFAM353 Blackness in the Anthropocene

To deny the "unprecedented" geological impact of humans' force on nature is now practically untenable. Theorists in the humanities, nonetheless, remain unimpressed with what this "new era" has afforded us in terms of critical potential. From accusations that what we now call the "Anthropocene" has

merely established a hegemony of brute facts at the expense of critique, to concerns about the multiple ways in which the term continues to obscure catastrophic socio-ecological relations, it is fair to say that the scenes of the "Anthropocene" are still contested terrains. The aim of this course is to investigate the Anthropocene's many forms of socio-political erasures and theoretical "blind-sights." We will examine the ways in which Anthropocene discourses have been powerful at disavowing racial antagonism in our current ecological crisis. More specifically, in this course, will study the ecological negative effects on black communities around the globe with the aim to questions the shortcomings of ethics in Anthropocene times. We will explore questions like "who are 'recognizable/legitimate' victims in environmental disasters," "do events like hurricane Katrina or the migration crisis teach us anything about our human condition," and "what is the 'post' in post-humanism." We will read philosophical works ranging from Immanuel Kant and Baruch Spinoza to Rosi Braidotti and Karen Barad.

AFAM363 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of repatriation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and repatriation?

Identical With: **CHUM362, ANTH362, ENGL363, FGSS362, THEA362**

Prereq: **None**

AFAM364 Friendship and Collaboration: In Theory, In Practice

How do we conceive of friendship, collaboration, love, and collectivity? In an interview, Michel Foucault stated that the relational task of the homosexual was to "invent, from A to Z, a relationship that is still formless, which is friendship: that is to say, the sum of everything through which they can give each other pleasure." This course considers theories and performances of relationality, queer belonging, and friendship with an emphasis on forms of belonging and recognition that exceed normative protocols. We will ask how queer practices, Black thought, and Indigenous epistemologies inform our own imaginings of collaborative projects. Beginning with philosophical determinations of friendship, we will branch out to imagine ways in which artists, lovers, friends, and/or co-habitators enact togetherness. This class will focus on theoretical readings and creative exercises and will culminate in a collaborative project.

This counts as an Expanded Field of Theater course for the Theater Major.

AFAM370 Afro-pessimism, Gender, and Performance

This class engages African and African diaspora critical thought and aesthetic production (dance, visual art, performance art, installation, film) to think about colonial dispossession, objectification, and reparation. We will address topics such as the repatriation of artifacts and other ephemera taken from Europe's colonies that are housed in the archives of European cultural institutions. The objects in question have been described as either artwork, artifacts, or anthropological fetish objects (depending on which field one engages with). How can we rethink our understanding of objecthood as irreducible to "inanimate" things but as also signaling a regime of imperial domination and enslavement that violently turned African personality into a status of objecthood? What does it mean to think about the object (broadly defined) in relation to loss and the (im)possibilities of repatriation and reparation? How does the Black performer's body's disappearance/remains endow the Western art institution? The course will encourage students to think about repatriation as well as certain losses that can neither be repaired/repatriated nor evidenced in conventional ways. In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, as well as the promises and ends of reparation? The assigned readings offer ways to think about colonial archives not merely as neutral repositories of past events, but also as performances; as enactments of power, aesthetic value judgment, and hierarchical arrangements of knowledge production. The theoretical, art historical, psychoanalytic, philosophical, and creative reading materials engage contemporary scholars', artists', and activists' response to both the recorded and ephemeral archives of Black dispossession. Students are encouraged to engage in events and workshops outside of the classroom, such as visiting library archives, attending performances, gallery exhibits, and film screenings.

AFAM371 Sister Acts: Black Feminist/Womanist Theater of the African Diaspora

This course surveys the dynamism and scope of contemporary feminist/womanist drama written by black women playwrights of the African Diaspora. Reading select plays from Africa, Canada, the Caribbean, England, and the United States, alongside theory and criticism, we examine the impact of race, gender, identity, and sexuality politics on black feminist/womanist theater. Throughout our study of these dramatic texts, their performances, and their subsequent critiques, we are equally invested in the bridges and the gaps, the audibles and the silences, and the overlaps and the divides, as they are formed. Significantly, this analytic undertaking involves a simultaneous critique of the role of the playwright, the spectator, and the critic of black feminist/womanist theater. At all times, consideration is given to the ways in which these playwrights collectively use theater as a platform to explore black and female and diasporic subjectivities across regional, national, and, at times, linguistic differences.

AFAM372 Race, Violence, and Resistance: Pauline Hopkins and Charles Chesnutt

This course undertakes to look at the careers of two African American writers who flourished at the end of the 19th and the beginning of the 20th centuries. Through an exploration of a range of their published writings--novels, short stories, political and historical essays, biographical sketches, and journalism--we will attempt to understand some of the key cultural, social, and political issues of the era in which they wrote. We will also see the ways these two different writers conceived of and entered the literary marketplace, and how the independent venues and established publishing houses with which they were associated affected their artistry. In the end, an examination of two writers of different temperaments, different literary sensibilities, and different political affiliations will help us more profoundly understand the remarkable challenges African American writers faced during the decades from 1890 to 1910.

AFAM375 Black Global Cities

In this course, we will analyze representations of cities and Black urban modernity in Afro- diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial sites Black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week's readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discreet, bounded places. To this end, we will trace how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabeba Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as *Girlhood* (2014), *Black Panther* (2018), *The Harder They Come* (1972), *Bad Friday: Rastafari After Coral Gardens* (2011), *Welcome to Nollywood* (2007).

AFAM379 The Fire Next Time: The Modern Black Freedom Struggle

The Fire Next Time explores the spectrum of African American politics in the mid-20th century United States. It will examine not only the nonviolent social movement against the Jim Crow South but will scrutinize expanding notions of black militancy against racial oppression in modern America. We will complete and discuss readings on the "short" and "long" civil rights movements; the position of women in movements for black equality; the leadership of Martin Luther King, Jr. and Malcolm X; the work of civil rights activists in the urban North; and the movement for Black Power. This course seeks to provide students with an understanding of the major themes and contexts of the most important social movement of the 20th-century United States.

AFAM385 Race, Capital, and Sexual Consent

Race, Capital, and Sexual Consent will focus on the early 19th century through to the Progressive Era. It will explore racialized sexual markets, from what Black feminist historian Adrienne Davis has called "The Sexual Economy of American Slavery," to the Victorian-era marriage market, to continuing and emerging sex work and pleasure economies. This course will focus on areas of overlap, tension, and reinforcement within and between these racialized sexual markets. Fundamental to this class will be the question of if/how sexual consent is configured within these markets, and what this means in the broader evolution of American liberalism in the 19th- and early 20th-century U.S.

AFAM387 Black Religions in the Americas

This course will focus on the African-based religious systems that cultivated traditional ways to survive slavery, white supremacy, and state violence. We will focus on Vodou in Haiti, Regla de Ocha (Santeria) and Palo Mayombe in Cuba, Obeah in Jamaica, and aspects of Black religions in the US. We will discuss questions of method and themes of political resistance, orality, secrecy, magic, "authenticity," commodification, and the ethics of representation. We will also look at the Black church and especially the rise of the Pentecostal movement in African and Afro-Caribbean spaces, as well as visionary Black religious thought.

AFAM388 Wesleyan New Music Ensemble I

This ensemble class offers a unique opportunity for graduate and undergraduate performers and composers to explore and perform various acoustic and electroacoustic works composed by composers of avant-garde and experimental music in America after 1950. Additionally, composers who are enrolled in the course may be asked to create pieces that are specifically designed for any number of the ensemble participants. Through extensive large ensemble rehearsals and small group rehearsal labs that will culminate in a performance (or a series of performances), students will develop a deep understanding and appreciation of contemporary music performance techniques and collaborative processes. Students will gain skills that pertain to the reading of scores, the execution of complex rhythmic and melodic passages, music composed using graphic and/or textual notation, event scores, and extended instrumental performance techniques. Advanced Western musical literacy is required in order to succeed in this course. All instrumentalists (including those specializing in the human voice) are encouraged to participate.

AFAM391 Unsovereign Elements, Caribbean Poetics

This course offers portals and obstacles of anticolonial imagination through studies of Caribbean literary and conceptual forms and life ways, imperial cartographies of Caribbean lands and waterways, as well as that which has historically eluded those cartographic schema of space, property, and labor. We will focus on historical marronage, foodways, maritime law, naval and commercial cartography, theories of sovereignty, and the "unsovereign elements" (i.e., especially water and wind) in the ecosystems of unruly Caribbean places. By "Caribbean places," the professor means the archipelago (of many smaller archipelagos), and a both rhizomic and guarded site of imaginaries, knowledges, expressive forms, wars, massacres, invasions, and epistemes partly produced by and lodged in particular ecological formations. Conceptually, the course thinks from Caribbean studies, Black critical theory, Black studies, as well as some recent conversations between the latter and North American Indigenous Studies. The historical frame of the course begins circa 1492 and will hover into the 19th century era not only of emancipation, but also of abduction, re-enslavement, and anti-emancipation, partly through "contemporary" Caribbean literature, in addition to primary, historical texts and maps.

We will study digitized versions of maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal meditations), including the writings of Christopher Columbus, Moreau de Saint Mery, and Baudry des Lozieres.

The guiding, inter- and un-disciplinary sources for this course's anticolonial imagination come from Colin Dayan, Sara Johnson, Evelynne Trouillot, Sylvia Wynter, Robin Derby, Joiri Minaya, Maryse Conde, Alejo Carpentier, Edouard Glissant, Jacques Derrida, Beatriz Santiago Munoz, Demetrius Eudell, Anne Eller, Dixia Ramirez D'Oleo, and others.

AFAM395 African American Cinema

This course surveys the history of African American film and African Americans in film, exploring the textual, industrial, and cultural production of Blackness in American cinema from the silent era to the digital present. The course considers the dominant, often stereotyped and devalued constructions of Blackness in mainstream Hollywood film, in relation to the self-defining representations and active responses of African American filmmakers and audiences. In surveying a range of historical and contemporary texts, we will track key movements, films, figures, and themes in the history of mediated Blackness and of "Black Film," paying particular attention to how Blackness has been intersectionally constructed in relation to gender, sexuality, class, and place, and how those representations shift over time.

AMERICAN STUDIES (AMST)

AMST110F Hawaii: Myths and Realities FYS

This course explores the symbolic myths of Hawai'i and Kanaka Maoli (Native Hawaiians) in contrast to material realities relating to colonialism, land, nation, gender, race, rank, class, self-determination, and contests over indigenous and Western sovereignty. The course covers the pre-colonial period, examines Captain Cook's ventures in the Hawaiian Islands, the founding of the Hawaiian Kingdom, constitutional development of the Hawaiian Nation, the Kamehameha Dynasty, Calvinist missionization, the history of written literacy, the privatization of Hawaiian land use, gender transformations, the colonial regulation of sexuality, plantation labor, Kalakaua's governance, the reign of Queen Lili'uokalani, and the US-backed overthrow of the monarchy. From the US takeover, the class examines the unilateral annexation and 20th-century colonial policy to 1959 statehood with an emphasis on indigenous self-determination, decolonization, and indigenous nationalism through the contemporary period

in relation to both US federal policy and international law with a focus on land struggles.

AMST115F Reproductive Politics (FYS)

This course explores the history and current status of reproductive politics in the United States. By prioritizing issues of difference, including race, gender, sexuality, disability, and class, the course will consider how scientific and bioethical concerns intersect with matters of cultural ideology and social control. Issues covered will include: the history and legacy of the birth control movement; the ideological construction of "infancy"; changing attitudes towards pregnancy and childbirth; gendered and racialized conceptions of parenthood; abortion rights; the fetal personhood debates; the regulation of pregnancy within incarcerated and institutionalized settings; genetic engineering; reproductive justice; and so on.

AMST117F Social Norms / Social Power: Queer Readings of "Difference" in America (FYS)

This American Studies FYS is an interdisciplinary exploration of the privileges and penalties associated with "the normal" in the United States. We'll be centrally concerned with the ways bodily difference and social identity interarticulate with "normalness," locating individuals within hierarchical power structures. What is "normativity," if not a statistical norm? How are regimes of normativity produced, reproduced, and challenged?

Our focus is on queer studies, which we will approach through an intersectional lens, paying careful attention to the ways race, ethnicity, indigeneity, class, disability, gender, and sexuality intersect in social terrains of power. We will unpack and explore key concepts in American studies, including settler colonialism, compulsory ablebodiedness, heteronormativity, biopolitics, neoliberalism, and ideology, drawing on a range of genres and disciplines, including memoir, ethnography, film, and theory in disability studies, queer theory, critical race studies, Marxist feminism, Native American studies, and trans studies. Along the way, we will encounter problematics ranging from disability and the "normal" to the American Dream, the "wedding-industrial complex," sexual "deviance" and desire, racialized state violence, the privatization of the public space, and the politics of queer/LGBT activism.

As a First Year Seminar, this course is writing-intensive and is structured to give you ample practice in core writing, reading, and presentation skills needed at Wesleyan. This course is part of the Queer Studies and the Disability Studies Course Cluster, and it is cross-listed in FGSS.

AMST125F Staging America: Modern American Drama (FYS)

Can modern American drama--as cultural analysis--teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

AMST132F Marxism and Abolitionism (FYS)

This course explores the historical encounter of Marxist revolutionary theory, with its roots in German idealism (Kant, Schiller, Fichte, Hegel), and abolitionist causes. How have abolitionist movements historically informed, expanded, and challenged Marxist theory and its tactical playbook? What made Marx a touchstone for so many black revolutionary thinkers, including W.E.B. du Bois, Franz Fanon, C.L.R. James, and Angela Davis? How have anticommunist, racist, security-statist ideologies been mobilized to undermine and defeat transformative social movements? We will begin with the Haitian Revolution and work our way through the abolition of slavery in the US and the anticolonial and civil rights struggles of the mid-20th century to the prison abolition movement today. In addition to the above mentioned authors, readings will include Toussaint L'Ouverture, Frederick Douglass, Otilie Assing, V.I. Lenin, Rosa Luxemburg, Georg Lukács, Max Weber, Martin Luther King, Jr., Herbert Marcuse, and the Combahee River Collective.

AMST150 Indigenous Middletown: Native Histories of the Wangunk Indian People

Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern New England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call "Middletown," also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although

regarded as "extinct" by settlers in the aftermath of King Philip's War, 1675-1678, the Wangunk continue to live into the 21st century.

AMST174 Popular Culture and Social Justice: An Introduction to American Studies

This course explores the interlocking histories of popular culture and social justice in the 20th- and 21st-century United States, with particular focus from mid-century to the current moment. By focusing on the ways in which social justice movements and ideologies have utilized and been informed by trends in art, film, television, music, and commercialism, we will interrogate critical concepts in the field of American studies, such as citizenship, belonging, difference, and equality. Topics covered will include feminism(s), antilynching, civil rights, labor and poverty, pro-choice, disability rights, queer liberation, leftism and countercultures, environmentalism, and animal rights.

Questions addressed will include, How has popular culture both advanced and hindered the progress of social justice movements? How has the idea of "social justice" changed over time? Which groups are included? What aims are articulated? How has the media portrayed and influenced social and political problems, and how has the rise of new media (from radio to television to the Internet and beyond) created new spaces for debating power and inequality?

AMST176 Race, Indigeneity, and Citizenship: Introduction to American Studies

This course is intended as an introduction to the interdisciplinary field American studies. Turning to the entangled histories of settler colonialism, slavery, imperialism, immigration, racism, and disenfranchisement, the class will examine how different peoples become American and how differently situated people(s) negotiate state-structured systems of racial exclusion and assimilation in relation to democracy, equality, and self-determination. How has the field of American Studies taken up questions of indigeneity and race? How has the field of ethnic studies challenged American Studies? What are the current linkages between American Studies, Critical Indigenous Studies, and Critical Race Studies? How have nationality and citizenship in the United States been structured by white supremacy? What are the differences between indigeneity, race and ethnicity? What is "color-blind" ideology? What can we make of pervasive assertions that we are living in a "postracial" America? How can American Studies provide the necessary frameworks for understanding the Trump era with regard to race, indigeneity, and citizenship?

AMST177 American Movies as American Studies: An Introduction to American Studies

Our aim is to see how movies from the 1930s to the present can help us grow as critical (and self-critical) American studies thinkers (and have fun--even as we question the effects and implications of this fun--doing it). Talkies appeared as a complex mass-cultural form of American studies, exported all over the world, precisely when the academic field of American studies emerged in the early 1930s. From the get-go, movies involved in mass-disseminating America's inventions of power have made available, in very entertaining ways, critical

insight that can blow the whistle on how the reproduction of Americans and American ideologies are pulled off. Together we will explore the modern Americanization of power (hard power, soft power) and focus our exchanges on four intersecting concerns that movies can be particularly good at illuminating: (1) how culture industries (including movies) shape consciousness, needs, desires, incentives, values, and sense of belonging, and frame--limit--our vision of what constitutes problems and solutions; (2) how social critique (even movie critiques of movies) can be mass-popularized; (3) how America makes Americans, especially, into workers (even if they hate what they do and wonder about what and who they are working for) and weapons of various sorts (even if they are frightened and wonder about what and who they are fighting for and against); and (4) how and why America constructs difference (e.g., class, gender, race, individuality, national identity). This lecture/discussion course is a thinking-intensive and imagination-intensive critical project designed to engage compelling big-picture concerns--systemic matters--vital to American studies critiques.

AMST178 Sites of the Self: Maps, Gardens, Houses: An Introduction to American Studies

We are where we are. We make ourselves out of the places we create and inhabit. This course examines three of the artifacts/sites central to culture: maps, gardens, and houses. Each attempts to reveal an immaterial ideal in a material form. Maps give a "god's eye" view of the world's totality; gardens recreate lost paradises; and houses embody their inhabitants. Using literature, images, and film, we will discuss global maps--from medieval mappamundi to satellite imagery; visions of paradise, celestial and earthly; private and public gardens, emphasizing the central role of Frederick Law Olmstead; and ideas about houses, ranging from the 19th century designer and horticulturalist Andrew Jackson Downing to the 20th century Buckminster Fuller, often credited as the originator of the geodesic dome, one example of which is Spaceship Earth at Epcot Center, in Walt Disney World. We will end with an examination of the recent proliferation of design shows on Home and Garden TV.

AMST200 Colonialism and Its Consequences in the Americas

Why does colonialism matter to the fields of American studies, Latin American studies, and Caribbean studies? What have been the consequences of colonialism for the nations that make up the Western Hemisphere? This course offers a transnational, hemispheric approach to the study of the Americas through a comparative analysis of colonial ventures and their consequences. With a focus on the interactions of Indigenous, European, and African peoples, the course introduces diverse theoretical and methodological approaches to a

range of issues and topics, such as franchise colonialism and settler colonialism; the organization of production, including state labor systems, chattel slavery, and indenture; governance and colonial bureaucracies; the formation of colonial cultures and syncretic belief systems; independence movements and the emergence of nation-states, as well as decolonization struggles.

AMST201 Critical Queer Studies: Junior Colloquium

This junior colloquium will give you a solid theoretical foundation in the field of queer studies.

Although "queer" is a contested term, it describes--at least potentially--sexualities and genders that fall outside normative constellations. Yet, as queer studies has been institutionalized in the academy, in popular culture, and in contemporary political movements, has "queer" lost its political charge?

This course, a reading-intensive seminar, will give you the opportunity to explore the history and debates within the field of queer studies. We will start with some of the foundations, and then move to tensions and correspondences between queer theory and critical race theory, trans studies, anthropology, Marxism, feminist theory, and disability studies. Rather than understanding queer studies as a singular school of thought, we will continuously problematize queer studies as a field and a mode of analysis, asking: What kinds of bodies or desires does queer describe? What are the politics of queer? What are the promises of queer theory, and what are its failures? What is the future of queer?

This course is excellent preparation for a queer studies concentration in American studies. Students should expect to end the semester confident of their ability to read queer theory, critique it, and imagine the uses to which queer theory might be put.

AMST202 Representing Race in American Culture: Junior Colloquium

This junior colloquium offers an introduction to several key critical issues and debates concerning the representation of race in American culture. In addition to reading several accounts and critiques of how racial minorities have been represented by the dominant culture, we will also consider how racial subjects have theorized ways of representing themselves in response to the burden of such stereotyping and objectification. The course is organized around two case studies. The first of these will focus on one of American culture's "primal scenes" of racial representation: blackface minstrelsy. Considering a variety of critical, literary, and visual texts, we will examine how African American images and culture became a way for working-class and other whites to negotiate their own identities and how African American artists and intellectuals have responded to this troubling legacy. In the second half of the course, we will turn our attention to questions of cultural representation that originate from the racial context often deemed to be the opposite of the African American experience: that of Asian Americans. If African Americans have long been the target of overtly negative stereotypes, Asian Americans have been subjected to what one critic has called "racist love"--that is, a tradition of putatively positive stereotypes that have produced a different set of representational problems for Asian Americans. Together, these case studies will allow us to explore a wide range of models for thinking and writing about race in American culture.

AMST203 Biopolitics, Animality, and Posthumanism: Junior Colloquium

This course asks what it would mean for the field of cultural studies to begin to include the category of the "human" within investigations of more traditional categories of social difference (including race, gender, sexuality, and so on). Historically, the category of the human has been taken for granted, as a biological marker imbued with particular intellectual and physical capabilities. Relatedly, the discourse of the human is often invoked in movements for political equality, inclusion, and enfranchisement (i.e., the call to "human rights"). Yet recent literature within the field of American studies broadly, and, more specifically, within the area of critical animal studies, has called these assumptions into question. In this junior colloquium, we will explore these critical turns in the field by considering the boundaries between the animal, human, and technological realms.

Important concepts addressed will include the utilization of animals as research subjects, food, and labor; the "nonhuman personhood" movement; intersectionalities between ideas of social difference and the posthuman; concepts of disability, debility, and capacity; technological enhancements of the human body; and cybercultural identities. Students will have the opportunity to engage with a wide variety of materials, including writing from the areas of critical race studies, feminist theory, and postcolonial theory. (Note: Students need not have familiarity with biopolitical theory; rather, the course will provide a primer in this area during the beginning weeks of the semester.)

AMST204 Saving America from Itself? Movie Interventions (Moore, Lee, DuVernay, Kopple): Junior Colloquium

We will place four interventionist filmmakers--Michael Moore, Spike Lee, Ava DuVernay, Barbara Kopple--in a strategic dialogue to consider the American studies anti-hoodwinking potential of movies. Their movies have tried to sway elections, empower social movements, inspire protest, popularize national self-critique, study the tactics of top-down power (including scapegoating) and bottom-up resistance, and, perhaps, save America from itself. The many cultural-theoretical payoffs of their movies include moving us beyond any checklist tendency simply to observe representations of gender, race, and class. They help us question why these categories were produced in particular ways and help us interrogate (intersectionally and dialectically) how they interact with, rely on, and sometimes mask one another. Our four independent filmmakers--in trying to be changemakers--dare us not only to take a hard look at what kind of an America we have had and now have, but prod us, at times seduce us, to imagine more expansively what kind of America we might want to create. We will also put their movies in dialogue with related movies by D. W. Griffith, Boots Riley, Robert Reich, and others. And to establish a *longue durée* historical perspective we will read Howard Zinn's epic *A PEOPLE'S HISTORY OF THE UNITED STATES*. In terms of fields, our colloquium integrates movie studies, cultural studies, premises studies, resistance studies, and social transformation studies.

AMST206 New England and Empire: Junior Colloquium

Using history and literature, this Junior Colloquium focuses on the role of New England in the transformation of the United States from colony to world power. Major forces effecting this metamorphosis have their roots in this area. Mercantile entrepreneurship and the drive of commerce and trade, such as the slave trade, the ivory trade, and the West and East Indies (China and India) trades, opened the larger world to merchants and consumers in New England. Discourses of race, religion, civilization, and science created universities, produced missionaries and merchants, explorers and colonizers, writers and artists who went to the far corners of the world--the Caribbean, Hawaii, China, and Japan--and brought the world back home. The vaunted mechanical and technological ingenuity of the Yankee peddler, seen in a grandiose version in the eponymous inventor of the famous Colt revolver, backed territorial expansion and insinuated New England culture in to those newly acquired territories. A developing sense of racial entitlement and racial confidence legitimated expansion--into Cuba, Puerto Rico, Guam, and the Philippines--and produced military and cultural imperialism. The domestic, woman-centered "parlor" culture of New England both displayed the wealth of empire and hid its existence.

AMST208 Visual Culture Studies and Violence: Junior Colloquium

In this course, students will gain important foundational knowledge of the field of visual cultural studies. We will cover theories of the gaze, photographic sight, film and media, spectatorship and witnessing, museums and exhibitions, and trauma and memory, among others. Particular attention will be paid to issues of power, complicity, and resistance as we consider what it means to be "visual subjects" in historical and contemporary contexts. We will address how different media--from photography, to television, to film, to the Internet--transform our understanding of images and what it means to both "look" and "be seen."

As a primary case study, this course will interrogate the politics of violence, focusing on the relationship between the production of visual culture(s) and acts of individual, collective, and state aggression. We will ask, How have images served to propagate climates of violence against marginalized persons? What are the ethics of looking at pain, torture, and exploitation? Do such images help us to work toward social change or create attitudes of indifference? How do images of war, prisons, pornography, death, crimes, famine, and disease shape our understandings of citizenship, nationality, and identity? Finally, how does the representation of difference--race, gender, sexuality, class, and disability--inform and/or transform conceptions of violence and its place in the visual field?

AMST212 Edgar Allan Poe and Literary Culture

Edgar Allan Poe is best known for his grotesque characters and macabre plot-twists. But though Poe seems capable of offering readers only a very specific form of literary experience - dark, brooding, atmospheric - what's striking about his work when taken as a whole is its variety. Poe was a writer of short stories, a poet, a novelist, an essayist, and an editor. He invented the detective story, wrote science fiction, and published tales of romance, family discord, and horror. This course sets out to appreciate Poe's eclectic literary output in the context of the emergent nineteenth-century publishing industry, seeing Poe - whether playing the role of novelist, poet, or critic - most of all as a writer struggling to earn a living in the 1830's and 1840's.

AMST213 African American History, 1444-1877

This course examines the historical interactions between peoples on three continents--Africa, Europe, and the Americas--and the consequences of European colonization, trans-Atlantic slavery, and racial capitalism. Focusing on a period from the Antiquity to the late 19th centuries, we will explore how European notions concerning Africa its peoples evolved over millennia in response to shifting political, economic, and demographic circumstances. We will chart how Africans and their descendants in the Americas experienced and responded to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.

AMST218 Introduction to Queer Studies

This course will examine major ideas in the field of queer studies. Relying upon theoretical, historical, and cultural studies texts, we will consider the representation and constructions of sexuality-based identities as they have been formed within the contemporary United States. We will explore the idea of sexuality as a category of social identity, probing the identities of lesbian, gay, bisexual, and transgender to try to understand what they really mean in various cultural, social, legal, and political milieus. In doing so, we will ask, What does it mean to study queerness? What do we mean by "queer studies"? How do institutions--religious, legal, and scientific--shape our understandings of queer identities? In what ways do sexuality and gender interact, and how does this interaction inform the meanings of each of these identity categories? How do other social categories of identification--race, ethnicity, and class--affect the ways in which we understand expressions of queerness? Moreover, what does studying queerness tell us about the workings of contemporary political, cultural, and social life?

AMST219 Introduction to Native American Studies: Paradoxes of Indigenous Life

What does it mean to be Native American today? The term Native American collapses many tribal nations into one category and describes Indigenous peoples within the United States as Native to a continent that existed long before it was called America. This course will look at various paradoxes of Indigenous life under settler colonialism through the approaches of Native American studies, an inherently multidisciplinary field drawing from history, anthropology, and critical and ethnic studies. Reading across classics of Native studies as well as contemporary research, we will unpack the various movements and moments when Indigenous peoples arose to the challenges of continuing their life ways in the United States, Canada, and beyond. How have Indigenous people navigated colonial judicial systems to defend their land? What is the relationship between Native and Black peoples under settler colonialism? In what ways are ancient Indigenous traditions also future-oriented? In addition to scholarly texts, we will also delve into various forms of Indigenous-produced media from film, music, and literature to explore the dynamic ways Indigenous peoples continue to assert claims to life and land.

AMST221 Nationalism and National Identity in the United States: Jr. Colloquium

After decades of (seemingly) hegemonic globalization, recent events brought the issues of nationalism and national identity to the fore again. In this course, we will explore classic and new approaches to the nation state and the cultural phenomena associated with it. We will study the institutions, symbols, rituals, myths, and other elements that make up nationalism and national identity in the United States. We will investigate how different groups and communities in North America reinvent national culture, often creating clashing ideas of what the nation should be. From sports to literature, from holiday celebrations to federal legislation, from culinary to military operations, we will use a wide array of case studies to survey national culture. Our goal is to develop intellectual tools

that will allow us to understand nationalism and national identity as contested, ever-shifting, and highly consequential parts of reality.

This course will take transnational and comparative approaches. We will investigate American national culture from the perspective of outsiders such as immigrants and colonized populations. We will also compare American nationalism with other nationalisms, including those of Western empires, non-Western nations, and even peoples without a nation state. These perspectives will help us better understand how global forces such as capitalism and imperialism shape national culture in the United States.

AMST222 Deconstructing Democracy

What role does democracy play in the narratives that political philosophers tell themselves about the moment human beings pass from the state of nature into civil society? Why is it that almost all political philosophies have almost nothing good to say about democracy? And how did it happen that democracy has come to be one of the most debated concepts straddling the borderline of the literary and the political, the real and the ideal? Seeking to answer these and other questions, this course will follow the concept of democracy through some canonical and non-canonical texts in or relating to political philosophy. We shall attempt to understand why democracy gives rise to the complications and paradoxes that are definitive of the conceptual space of political society.

AMST223 Technologies of the Self

Where does the idea of an authentic self come from? The desire to represent the authentic self informs the narrative genres of the confession and memoir and visual ones of the selfie and self-portrait alike. Yet both the memoir and the selfie "self" are mediated, first, via the technologies of print and screen, and second, via the conventions of particular genres that make these legible as a memoir and selfie, as opposed to, for example, an interview or a portrait. In this course, we will examine how different technologies not only represent but produce the self. These technologies include "writing" technologies: print and digital; genre and medium (autobiography, the slave narrative, memoir, self-portraits, and selfies); and technologies of the state, which produce citizens, subjects, and humans.

AMST224 History of American English

What is American English and how did it get to be what it is? This course will begin with the general history and development of the English language, looking at central issues such as sound (e.g., the Great Vowel Shift, Grimm's Sound Change laws), sense (e.g., grammar, vocabulary, usage), and standardization (e.g., orthography, dictionaries). What makes our particular kind of English "American"? We will learn about the role of different groups in its development: Native Americans, African Americans, and immigrant languages of various kinds, including Yiddish and Spanish. In addition, we will analyze the workings of class, youth culture, and gender. Throughout, the class will examine questions at the heart of our language debates: a "national language," "Ebonics," and bilingual

education. If English is today the international "lingua franca," is American English particularly the language of power? What are the different kinds of power exerted by, for instance, business English and slang?

Offering: **Host**

AMST225 Latinidad: Introduction to Latina/o Studies

This course will introduce major themes within the field of Latinx studies, using an interdisciplinary approach to analyze the experiences of Latinx people within the United States and throughout the Americas. Employing a range of historical, theoretical, political, and cultural texts, this class will ask students to think about a number of issues central to the field of Latinx studies, including migration, language, nationalism, indigeneity, education, labor, assimilation, and cultural imperialism. This course will also look at the ways in which intersectional identifications, including race, sexuality, and gender, operate within frameworks of Latinidad.

Methodologically, this course will draw from such diverse fields as ethnic studies, history, political science, border studies, gender theory, sexuality studies, critical race theory, and urban studies. As we utilize a broad range of texts and synthesize diverse perspectives and ideas, students will be asked to interrogate formative concepts, such as the border, America(s), and the nation. Central class queries will probe the boundaries of Latina/o identity, the working of intersectional identities, patterns of migration, and the ways in which institutional power shapes the contemporary Latinx experience.

AMST232 American Architecture and Urbanism, 1770--1914

This course considers the development of architecture and urbanism in the United States from the late 18th through the early 20th century. Major themes include the relationship of American to European architectures; the varied symbolic functions of architecture in American political, social, and cultural history; and the emergence of American traditions in the design of landscapes and planning for modern cities, especially Boston, New York, Philadelphia, Washington, D.C., Chicago, Los Angeles, and San Francisco. The course considers houses for different sites and social classes, government buildings, churches and synagogues, colleges, and commercial architecture of different kinds includes the origins of the skyscraper. Urban environments include cemeteries, public parks, streets, and civic centers. Movements include neoclassicism, the Gothic and Romanesque revivals, the Chicago School, the Arts and Crafts movement, and the City Beautiful movement. Major figures studied include Thomas Jefferson, Benjamin Latrobe, Frederick Law Olmsted, Frank Furness, Henry Hobson Richardson, Louis Sullivan, the early work of Frank Lloyd Wright, Greene and Greene, Bernard Maybeck, Julia Morgan, and McKim, Mead and White.

AMST233 Global Queer Studies

This course explores global experiences of LGBT/Q life, bringing an explicitly transnational lens to a field too often dominated by U.S.-centered perspectives.

Drawing on queer ethnography and film, we will explore the contours of queer and trans life around the globe, from the lives of gay men in Indonesia to Muslim yan daudu in Nigeria, gay tourism in post-Revolutionary Cuba, queer mati work

among working-class Afro-Surinamese women, lesbian activism in India, LGBT asylum claims in Canada, the queer art of Carnival in Trinidad and Tobago, the everyday lives of lalas (lesbians) in China, and the transnational lives of Filipino gay men in New York. Our aim is to challenge and expand Western categories and concepts of sexuality, gender, identity, and desire (both hetero- and homo-normative) and to center the ways sexual/gendered identities, cultures, and politics are shaped by colonialism, imperialism, racialization, migration, transnational media, and global capitalism.

AMST234 What Was the Public Sphere?

The democratic revolutions of the 18th century are often thought to have originated with the emergence of modern reading publics--groups of strangers who, through the alchemy of print, came to understand themselves as coherent entities capable of exercising political power against the state. The "public sphere" is central to American identity in particular, from the debates that raged in newspapers before the ratification of the Constitution to the calls for civility that have appeared more recently on Twitter and in New York Times op-eds. This course will explore the relationship between print culture and political action by reading 18th- and early-19th-century American literature. We will consider the material and social conditions that gave rise to the public sphere. We will examine the role of rational discourse in adjudicating political claims. We will ask whether the public sphere ever actually existed, and whether it does--or can--exist in our current historical moment.

AMST235 American Literature, 1865-1945: The Americanization of Power

Together we'll explore not only the complexities of American literature from the 1860s to 1940s, but also how this literature is usable today and excels as critical equipment that can advance our understanding of the modern Americanization of power (put narrowly, we'll develop insights into a "democratic" capitalism, what some called a "Robber Baron" plutocracy, that pulled off and contrived to maintain systemic class, gender, and ethnoracial hierarchies to reproduce its power). As we unpack the relationship of literary form and social form, we'll trace connections between historical developments such as the gothic genre and gender ideologies, domestic romance and the social reproduction of labor, realism and mass-urbanism, naturalism and immigration, modernism and imperialism, and narrative experimentation and anti-racism. The creative works of Emily Dickinson, Mark Twain, Stephen Crane, Henry James, Charlotte Perkins Gilman, Charles Chesnut, F. Scott Fitzgerald, Langston Hughes, Ernest Hemingway, Eugene O'Neill, Nathanael West, William Faulkner, Richard Wright, and Zora Neale Hurston will help teach us to be more imaginative readers of literature, ourselves, and what America was, is, and might be. While pooling ideas about this, we'll savor the pleasures of reading inspiring and transformative writing. This is very much a thinking-intensive course.

AMST236 Ethnography of the American Rural

The rural stands as a fraught American symbol, positioned in stark contrast to its corollary: the urban and its cosmopolitan subjects. The American rural is variously represented as vulnerable, disappearing, backwards, regressive, slow. In this course, we elucidate the texture of the American Rural by engaging with ethnographic writing from the early 20th century into the contemporary. In exploring the rural as a meeting place of working-class expressive cultures, an atmosphere of slow or strange time, a dramatic history of industry and agriculture, a notoriously tense racial zone, an icon of severity, and a place of exuberant stories and poetics, we uncover the vital ideological function of the rural as the urban's dark twin in American myth throughout history and today.

AMST237 Histories of Modern U.S. Gender and Sexuality

This course will explore constructions of U.S. gender and sexuality from the late 19th century to the present. We will consider ideologies of gender and sexuality as social, political, economic, and biomedical systems, as well as lived, material realities. Particular attention will be paid to intersectional politics, by interrogating how categories such as race, class, disability, and national identity operate in relation to gender and sexual politics. Topics covered will include: the scientific "invention" of hetero- and homosexuality; anti-miscegenation law; gender-based immigration regulations; ideas of normative domesticity and kinship; labor patterns and gender-based disparities; gender- and sexuality-based rights' movements, including first, second, and third wave feminisms and LGBTQIA liberation; and reproductive technologies and rights.

AMST238 Place, Belonging, and Sound in the 20th c. Latina/o/x, Black, & Caribbean Imaginations--NYC

Throughout the latter 20th century, various aesthetic renderings of New York City have positioned it as a site of voyeuristic allure and racialized excess and pleasure--simultaneously posh, unfriendly, tourist-trapped, "seedy," "gritty," and segregated. Through select literary, cinematic, and performance optics of Latina/o/x, black, and Caribbean writers and artists, especially queer and bisexual writers and artists, this course will focus on memory, representation, form, sound, and the imagination in the layered and shifting site of mid-20th- to 21st-century New York City--and even more specifically, of Harlem, the Bronx, the Lower East Side, Brooklyn, and Elizabeth, N.J. Fictionalizations, poetizations, and performances of first-person memories and reimaginings of overheard stories from older generations about life in the U.S. South and life in the Caribbean will feature in the works that we will study in this course.

AMST239 Critical Race and Art History: Theories and Methods

How does the study of art shift if we begin with questions of race, power, and colonialism, rather than treating them as secondary? Concepts such as mastery, familiarity, strangeness, taste, and beauty are formed by conditions of domination and subjugation. Moreover, the histories of material production and

cultural expression are fundamentally entwined with the circuits of enslavement, forced migration, and the extraction of resources, people, goods, and "styles."

For the bulk of the semester, we will focus on a series of case studies drawn from the 15th to 20th centuries, a period of intense European contact and conquest in Africa, Asia, the Caribbean, and the Americas. Topics will include: representations of Africans in Renaissance Germany; African depictions of the Portuguese circa 1492; the appearance of parrots, kraak (Chinese) porcelain, and other goods from "exotic" locales in 17th-century Dutch still lifes; the taxonomies of racial difference in Spanish casta paintings; debates about sculptural polychromy and the "whiteness" of marble; the relationship between expansionism, empire, and the genre of landscape; "primitivism" and European artists' "discovery" of African artistic forms; the critical interest in "racial art" in the interwar U.S.; and contemporary conversations about museums and restitution, among others.

Throughout, works of art are primary sources with which to study the specificities of periods, places, and their social arrangements. While we will emphasize difference and historical contingency, our *longue durée* approach will enable us to draw connections about art's role in processes of primitive accumulation, dispossession, and racial capitalism.

AMST240 Hipsters

This course will focus on the contemporary hipster subculture after examining a critical genealogy and racial history of the origins of the concept. From black jazz artists and zoot-suitors in the 1940s who defined "hip" and "cool," to the post-World War II burgeoning literary scene of the Beat Generation that codified the figure of the hipster as an American bohemian strangled by social conformity, there has been a cultural politics of being "in the know." Derived from the term used to describe these earlier movements, the term "hipster" reappeared in the 1990s and became especially conspicuous in the 2000s to the present. Today's hipsters are generally associated with whiteness, indie music, a vintage fashion sensibility, liberal political views, organic and artisanal foods, as well as racial gentrification in urban neighborhoods in Brooklyn and select cities such as Portland, OR and San Francisco. Perhaps curiously, members of this subculture typically disassociate themselves from this cultural category, as outsiders often use the term hipster as a pejorative. In an attempt to understand why hipsters differentiate their actions from the hipster stigma, students will study the contemporary discourse about hipsters, along with a historical analysis of the term and its use in popular culture to get a better understanding of race, class, gender, and the commodification of style. Other topics for exploration include stereotypes, authenticity debates, hipster racism, so-called "blipsters," the death of irony, hipster chic, "hipster run-off," the resentment of hipsters, and forecasts of "the end of the hipster."

AMST241 Childhood in America

Probably the first literature we fall in love with, children's literature shapes individuals and cultures in profound ways, investing us with important mythologies and guiding our identities and behaviors. This course will examine fairy tales, some works from the "golden age" of children's stories, and some contemporary works. We will enrich our reading of the fiction with some of the central theorists of this genre, including Bruno Bettelheim, Jack Zipes, and Maria Tatar.

AMST242 Mixed in America: Race, Religion, and Memoir

This course examines the history of mixed-race and interfaith identities in America. Using the genre of the memoir as a focusing lens, we will look at the various ways that Americans of mixed heritage have found a place, crafted an identity, and made meaning out of being considered "mixed." How has being multiracial or bi-religious changed in the course of history in this country?

What has occasioned these changes, and what patterns can we observe? We will explore questions of racial construction; religious boundary-making; rites of passage; gender, sexuality, and marriage; and some literary and media representations of mixed-heritage people.

AMST243 American Literature from the Colonial Period to the Civil War

This is a lecture course that introduces American literature and culture through the middle of the 19th century while also attending closely to a small number of significant texts. We will concern ourselves with the major (and some minor) political questions, with the reconstruction of historical ideologies, and with the relationship between textual nuance and large-scale social transformation. We will proceed as both close readers and historical synthesizers, one eye focused on the minute details of our readings and the other trained on the slowly emerging outline of a history of "American Literature."

AMST243A American Literature on Fire: Conquest, Capitalism, Resistance: 1492-1865

We begin with a 1938 Langston Hughes poem, a north star shining light on American unexceptionalism and then move back in time: from Columbus's dismemberment and enslavement of the Arawaks when demanding gold; to Cabeza de Vaca's feel-good handbook for the conquest of indigenous peoples; to Puritan inventions of a "God" that pulls the trigger; to Franklin's blowing the whistle on a mercantile capitalism he supercharged with a secular work ethic; to a Declaration of "Independence" in 1776 that provoked alternative declarations written by workers, women, and ex-slaves in the 19th century; to Poe's readings of a Divided States of America (race, gender, domesticity) as gothic; to Douglass's representations of the tactical artfulness of slave culture; to Hawthorne's deconstruction of the Americanization of power; to Thoreau's entwining of collective protest and what he hoped would be an individualized escape route; to Melville's attacks on imperialism, racism, and class domination; to Elizabeth Stuart Phelps's critique of domestic slavery; to Stowe's socially transformative antislavery novel (whose sentimentalization recirculated stereotypes). During our literary-intellectual time travel, we will engage some of America's most "on fire" writers who make possible insights into the ideological foundations of American cultures, identities, and hegemonies that provocatively illuminate America's situation today (and offer some lessons for how to change it).

AMST244 The Invention of America: Remapping 19th-Century US Cultural History

The 19th century was a period of great transformation, and the United States experienced it in a dramatic way. Nineteenth-century Americans witnessed the birth of the nation-state, the emergence of a global market, the multiplication of industrial enterprises, the apex and the downfall of slavery, the consolidation of wage labor, the intensification of imperial expansion, the upsurge in mass migration, the organization of revolutionary movements, the eruption of civil wars, the creation of brutal color lines, and other seismic processes. This course examines how the inhabitants of the United States reinvented their cultures within this most turbulent context. But American culture did not exist in isolation then. In this course, we will go beyond national borders, reexamining the history of the 19th-century United States from a hemispheric perspective and placing American culture in conversation with other cultures of the Americas.

AMST245 Personalizing History

How much are we shaped by our historical times and places? How much power do we have to make our historical conditions respond to our needs and desires? These questions and others are at the foundation of this course, which includes both memoir writing and memoir reading. We will construct narratives about our times and selves in a series of writing workshops. There will be some exercises where you will be asked to research specific aspects of your times and places. For example, you might be asked to research and write about such questions as when and where were you born, what were the major cultural or political currents of that time, and how was your early childhood influenced by them? Or you may be asked to bring in a photograph of someone important in your personal history and write about that person.

The memoir is a distinct genre, with topics/themes particular to it. Some of the most important are memory itself, childhood, place and displacement, language, loss/trauma/melancholia/nostalgia, self-invention or transformation, family, and generational differences. The class will engage with these topics in the analysis of the readings and also in the writing of memoirs. Specific techniques will be highlighted for writing practice: the catalog, diction, dialogue, metaphor, description, point of view, and narrative structure, including temporal organization, the doubled narrative, and the narrative frame.

AMST246 Trump-Evangelicals: the History of Fundamentalism and Evangelicalism in America

This course examines the history of American evangelicalism, seeking to understand the nature of its support for the presidency of Donald Trump. Beginning with a brief overview of religion in the colonial and revolutionary eras, the course examines revivalism, slavery, and the emergence of fundamentalism during the 19th century. Special attention is paid to the re-emergence of evangelicalism after World War II, the establishment of the religious right, global evangelicalism, and the core evangelical support for the candidacy and presidency of Donald Trump. Students will be challenged to consider the ways issues of gender, race, and economics have shaped 21st-century evangelicalism,

and reflect on how the movement's view of American history contributes to its own sense of identity and purpose.

AMST248 History of African American Art

This course will introduce students to a history of African American artistic production from the late 18th century to the present, in a range of media and styles. While we will focus primarily on the visual arts—looking at sculpture, painting, photography, collage, film, performance, and installation—we will also consider the deeply interdisciplinary nature of Black cultural production, highlighting the important role of music, poetry, dance, and theater.

We will explore how African American artists, both individually and collectively, have negotiated the terms made available to them by cultural institutions, whether by struggling for inclusion, acknowledgement, and validation; actively protesting racist and exclusionary policies; or by forming alternative institutions, communities, and spaces in which to work and share support. From the Harlem Renaissance to the Black Arts Movement and "post-Black" exhibitions, art works will serve as a primary source to ask, is there such a thing as a "Black aesthetic" and if so, how would one define it? Why might an African American artist reject such an idea? Other key questions will include: What is the role of visual representation in political struggle? How have artists mobilized portraiture as a tool of liberation? What does it mean to turn away from figuration, toward abstraction or opacity? How have artists grappled with questions of nationhood, belonging, and diaspora?

Together, we will trace how artistic forms, techniques, and motifs have served both as sites of collective history and as speculative propositions to envision new futures, articulating what Robin D.G. Kelley calls "freedom dreams."

AMST249 Art After 1945

This course examines artistic production in the United States between 1945 and 1980, with a primary focus on the United States. The historical conflicts of that tumultuous period presented new challenges for artists as they attempted, in their work, to respond to the "caesura of civilization" brought about by the Holocaust and World War II, to contend with the consolidation of postwar consumer capitalism and mass culture, and to situate their work in relation to the far-reaching social upheavals of the 1960s and '70s. Practices linked to the historical avant-gardes (such as abstraction, the ready-made, Dada, and

surrealism) echoed in these years as attention shifted from the canvas and studio to greatly expanded contexts of reception and public experience. The boundaries of the art object transformed in turn as artists developed new models of spectatorship to confront a world that had placed enormous pressure on traditional concepts of humanist subjectivity. Topics include New York School painting, pop art, minimalism, process art, conceptual art, performance, institutional critique, and site-specificity.

AMST252 Histories of the Caribbean: New Questions, Methods, and Vantage Points

This course explores some of the most exciting new trends in historical scholarship on the Caribbean. We will consider how recent scholars of the Caribbean have turned a critical eye to existing methods and reimagined "archives" as they have crafted new stories about gender, sexuality, race, the environment, and the rise of modern capitalism. In this way, we will question how these new directions in Caribbean studies have reshaped the study of history more generally. We will use a wide geographic lens in order to gain an expansive vision of the circuits of the Greater Caribbean, stretching from Antigua, Guadeloupe, Barbados, Martinique, Jamaica, Trinidad, Guyana, Cuba, Puerto Rico, and Haiti into the wider Atlantic world.

AMST253 American Modernisms, 1900-1945

Focusing on three case studies, New York Dada, the Harlem Renaissance, and Mexican Muralism, this course examines the specifically pluralistic and diverse contributions of American artists to the development of modernism, from 1900 through the Second World War. During this period, the United States began to be a terrain on which artists with roots in Europe, Africa, and the Americas developed the basis of an advanced language in the visual arts and experimented with new mediums and formats for art. Topics we will explore include the relationship between art and industry in painting, sculpture, film, and photography; relationships between cosmopolitan and indigenous cultures; primitivism and its appropriation; interrelationships between the visual arts, music, and poetry; constructions of gender and the emergence of the female artist; racial pluralism; and the articulation of hybrid American (and Pan-American) modernisms.

AMST255 Anarchy in America: From Haymarket to Black Lives Matter

In the summer of 2020, Trump effectively declared war on anarchists, casting them as "outside agitators" who had taken over widespread protests of police violence. Anarchism as a political philosophy and practice is an important but little-known aspect of American culture and society. This lecture/discussion course will introduce students to select aspects of anarchist political thought and praxis in the United States and the ways that anarchism has been represented positively, vilified, or dismissed. The class will have three parts: histories; philosophies and theories; and activism. In the history section, we will examine key events and periods from the late 19th century to the early 20th century. In the philosophy and theory segment, we will examine anarchist theory as radical critique and review various political traditions including individualist anarchism, socialist anarchism, anarcho-feminism, Black anarchism, queer anarchism, Indigenous influences and critiques, and other schools of thought. In the activism section, we will examine the diverse ways, including black bloc tactics and the overlap between antifa actions, by which people mobilize and organize for political change.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

AMST256 Race and Medicine in America

This course will trace ideas of race in American medical science and its cultural contexts, from the late 19th century to the present. We will explore how configurations of racial difference have changed over time and how medical knowledge about the body has both influenced and helped to shape social, political, and popular cultural forces. We will interrogate the idea of medical knowledge as a "naturalizing" discourse that produces racial classifications as essential, and biologically based.

We will treat medical sources as primary documents, imagining them as but one interpretation of the meaning of racial difference, alongside alternate sources that will include political tracts, advertisements, photographs, and newspaper articles. Key concepts explored will include slavery's medical legacy, theories of racial hierarchy and evolution, the eugenics movement, "race-specific" medications and diseases, public health politics and movements, genetics and modern "roots" projects, immigration and new technologies of identification, and intersections of race and disability.

Offering: **Host**

Grading: **OPT**

Identical With: **SISP256**

Prereq: **None**

AMST257 Darwinian Fictions

This class tracks the discourse surrounding evolutionary science as it circulated through various spheres of American intellectual life in the decades after the Civil War. If the ideas proposed by Charles Darwin and Herbert Spencer fundamentally changed the way scientists and politicians understood the natural world and human beings' relation to it, these ideas would also influence the way writers understood the function of literature. Best summed up by Emile Zola's suggestion that, through literature, we are capable of "possess[ing] knowledge of man, scientific knowledge of him, in both his individual and social relations," authors during this period began to explore the literary possibilities of evolutionary science. By reading works of literature alongside influential

scientific treatises, this course encourages students to think about the kinds of knowledge literary experience gives us access to, and the relationship between literary knowledge and other disciplinary forms that emerged at the turn of the twentieth century.

AMST259 Discovering the Person

This course surveys major developments in psychology and psychiatry from 1860 to 1980. Through readings and lectures, the course introduces the major schools, theories, and systems in the American "psy" sciences. We examine the kinds of persons who were "discovered," the techniques of discovery, the extensions of psychological ideas to institutions and policy formulations, and the consequences of these discoveries for public as well as private life. We examine psychological phenomena that were located, catalogued, and explained by these sciences, including irrationality, sexuality, cognitive powers, personality, emotional processes, neurotic behaviors, intelligence, addictive tendencies, and the will. Attention is also given to the scientific grounds for investigating persons, the empirical evidence sought in the century-long process of discovering and naming psychological kinds, and the modes of producing this knowledge (aggregate methods, case study, and theories). Readings include primary source documents, histories of the disciplines, and philosophical analyses.

Credits: **1.00**

Gen Ed Area: **SBS-PSYC**

Identical With: **PSYC259, SISP259**

Prereq: **PSYC105**

AMST260 Bioethics and the Animal/Human Boundary

In this course, we will explore the construction of the animal/human boundary through the lens of bioethics. We will define bioethics as the study of the ethical consideration of medical, scientific, and technological advances and their effects on living beings. At the same time, we will pay close attention to the cultural contexts in which these advances emerge, imagining the realms of scientific progress and popular culture as mutually constitutive. We will consider topics such as cloning, organ transplantation, pharmaceutical testing, and gestational surrogacy, with a focus on the late 20th and early 21st centuries.

We will begin by interrogating how ideas of the "animal" and the "human" are constructed through biomedical and cultural discourses. We will ask, How is the human defined? By intelligence or consciousness levels? By physical capabilities or esoteric qualities? Similarly, how has the human been defined against ideas of the animal? Or, what ethical justifications have been cited in the use of animals

in biomedicine? What makes certain species "proper" research subjects and others not? What do these formulations tell us about our valuation of animal and human life, and what kinds of relationships exist between the two? To answer these questions, we will consult a wide range of interdisciplinary scholarship, from authors in the fields of animal/ity studies, bioethics and medicine/science history, sociology, anthropology, and philosophy. Students will also be exposed to the basics of biopolitical theory.

AMST262 Beyond the Talking Book: Reading African American Literature in the Newspapers

The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some lesser known ones) in their original publication context, the magazine archives of *The Christian Recorder*; *The Anglo-African Magazine*; *The Colored American Magazine*; *The Crisis*; *The Crusader*; *Opportunity*; and *Fire!!* The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context--as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students' literary close-readings skills, this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnutt, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins' *Of One Blood*) in its original installment-format, week-by-week. Reading these works serially will also enable them to pay closer attention to each installment's relationship to its surrounding texts and images.

AMST264 Introduction to Asian American Literature

This course introduces students to Asian American literature, literary criticism, and culture by surveying how meanings of "America" have long depended

on "Asian America." Conventional understandings of this relationship in US literature and history tend to emphasize Chinese Americans in California, Asian exclusion laws, model minority myths, changing patterns in Asian immigration following relaxed restrictions between 1965-68, and the institutionalization of Asian American studies in higher education in the 1970s. We will pay attention to these contexts, but we will also focus on emergent trajectories, including representations of Asian Americans in the South, critical refugee studies, and how global cultures such as breakdancing stage Asian American self-representation. By examining a range of genres and the critical apparatuses that these works have generated, we will explore how representing Asian America has shaped the making of American culture.

AMST264A Introduction to Asian American Literature

This course surveys how Asia and Asian Americans have figured in the US cultural imaginary from the middle of the 19th century to the present, from Herman Melville's American epic "Moby-Dick" to Ruth Ozeki's comic novel about transnational television, trade, and activism "My Year of Meats." As the choice of these framing texts suggests, we will be exploring two kinds of representations. On the one hand, we will examine the narratives, tropes, and images through which dominant American culture has envisioned its incursions into Asia and the reciprocal movement of Asians into the United States; on the other, we will also explore the ways in which Asian Americans have sought to represent their own varied and uneven encounters with US culture. The course is organized chronologically in order to emphasize the ways in which these cultural artifacts reflect and influence their social and historical contexts. In the latter half of the course, as we enter the period beginning with the 1970s in which Asian American literature becomes an institutional category in its own right, we will add to this historical framework a number of other analytical frames that have emerged from within Asian American studies itself: cultural nationalism; gender and sexuality; postcoloniality; cultural assimilation; and globalization.

AMST266 New York City: Architecture and Urbanism

This course considers the history of architecture and urban development in New York City from colonial times to the present. Emphasis is on major landmarks of each historic period, with attention to related planning, parks, land and water transportation, housing trends, and urban infrastructure. Conditions of settlement, growth, decline, and renewal will be examined from a political, economic, and social perspective in varied neighborhoods. Contemporary

topics include neo-liberal policies for urban development, green buildings, gentrification, and planning for the city's future in the era of impending climate change. While the focus will be on architecture, every effort will be made to see built environs as points of intersection between competing ideals and interests that shape the city we see.

AMST267 Music and Downtown New York

This course will explore the history and simultaneous flourishing of four distinct music communities that inhabited and shaped downtown New York City during two especially rich decades (the 1950s and 60s): urban blues and folk revivalists; an African American jazz-based avant-garde; Euro-American experimentalists; and Lower East Side rock groups. These four vanguard musical movements--at the heart of dramatic cultural shifts at the time, with reverberations and legacies that remain relevant up to the present day--are an essential part of American history. Much of the course will be devoted to discovering their points of convergence and divergence, especially in conversation with broader contemporaneous currents, including the Civil Rights Movement and related notions of freedom, shifting youth cultures, music and politics, and avant-garde aesthetics.

Drawing from primary sources, we will read about and listen to recordings of a wide variety of musicians, view a broad cross-section of film from the era, identify aesthetic and cultural trends, and study the local industry that supported them, including record labels, coffee houses, clubs, and concert spaces. Projects throughout the semester include written papers, individual and group presentations, and adding content to an interactive collaborative Google map of the neighborhood.

AMST268 The Art and Science of Social Engagement

This course will focus on methods and approaches to engaging traditionally underrepresented groups in the social and political process. The instructor will draw on his work conducting federally funded studies on social and political engagement with historically marginalized populations--individuals living in poverty, those diagnosed with mental illness, and those with histories of incarceration--which have shown increased well-being and enhanced civic participation. A particular focus will be on the transformation of the narrative identities of individuals from "outsiders" to participants, in the genres of memoir, biography, and poetry, as well as sociological studies. The course will contrast formal "evidence-based" approaches of social engagement with stories of individual inspiration and transformation.

AMST269 New World Poetics

God and money, love and beauty, slavery and freedom, war and death, nation and empire: The themes of early American poetry will carry us from London coffeehouses to Quaker meetinghouses, from Philadelphia drawing rooms to Caribbean plantation fields. Our texts will range from pristine salon couplets to

mud-bespattered street ballads, from sweetest love poems to bitterest satire. Digging deeply into the English-language poetry written, read, and circulated after the first English settlement in North America, we will trace the sometimes secret connections between history and poetic form, and we will listen to what these links can tell us about poetry and politics, life and literature in our own time. Our poets ignored false divisions between art and society, and so will we.

AMST270 Memory Image: Introduction to Art (as) History

One premise of art history is that works of art necessarily register or encode the time and place of their making. Some art practices, though, operate historically in more than an artifactual sense, whether by revisiting the art historical past through citation, or by actively responding to the socioeconomic, technological, or cultural conditions of their present. Works that comprise the focus of this class engage directly in the project of historical representation and research, recasting these activities through painting, photography, installation, and performance (from experiments in abstraction to queered archives and restaged mass protests). Spanning a series of case studies from post-Holocaust New York School painting to post-Katrina site-specificity, this course provides an introduction to the practice of art history by way of recent works of art that have made the resources (and limitations) of historical methodologies a subject of investigation. What is the role of art as historical memory in an increasingly image-soaked world?

AMST272 Unsettling American Art, 1600-1900

This course examines developments in American art from roughly 1600 to 1900. Core objects in this class will range widely: quilts; maps; baskets; paintings across genres of portraiture, landscape, and still life; engravings; public monuments; daguerreotypes; and more. We will seek to understand the particular concerns and traditions animating objects across this heterogeneous span of materials, forms, and techniques. In so doing, we will also ask how artists and makers—including those whose names were never recorded—variously internalized, articulated, or examined the historical contradictions of their time, including the consolidation of settler colonialism and racial capitalism; rebellion, revolution, abolition, and civil war; industrialization and its ever-expanding and often violently lopsided acceleration of communication networks, labor relations, travel, and exchange; and the contested aim of defining a distinctively American aesthetic tradition in a land born of migration, encounter, forcible displacement, and polyphonic hybridization.

AMST273 Diasporic South Asian Writing and American Studies

The South Asian diaspora spans the world; communities are located in Africa, the Middle East, England, North and South America, and the Caribbean, as well as Southeast Asia. Using novels, poems, short stories, and film, as well as scholarship on history, this course will focus upon the literary and cultural production of the South Asian diaspora in the Americas, focusing especially on the United States. We will examine the conditions of historical arrival and

identity-making under shifting regimes of politics, economics, and culture.

What does being in the United States mean for the claiming of "Indian" and "American" identities, and how is this inflected by relationships with other ethnic or racial communities? The relationship with an often romanticized "India" is a central question, expressed through the concepts of diaspora, exile, and transnationalism. Consequently, what are the conditions of "authenticity," and of cultural authority? What aesthetic forms, questions, and issues express or preoccupy the artists of the South Asian American community?

AMST274 Economics of Wealth and Poverty

Who are the very wealthy and how do they acquire their wealth? Why is poverty still with us after almost 50 years of antipoverty programs? What explains rising inequality in the distribution of income and wealth? These are just a few of the questions that we address in this course. The problem of scarcity and the question of production for whom are basic to the study of economics. Virtually all courses in economics give some attention to this topic, yet few study the distribution of income in depth. This course takes a close look at evidence on the existing distribution of income and examines the market and nonmarket forces behind the allocation process. Our investigation makes use of U.S. economic history, cross-country comparisons, and fundamental tools of economic analysis. Topics include normative debates surrounding the notions of equality and inequality, analytic tools for measuring and explaining income inequality, determinants of wage income and property income, the importance of inheritance, the feminization of poverty, and the economic analysis of racial discrimination. A central subject throughout the course is the role of policy in altering the level of poverty and inequality.

AMST275 Introduction to African American Literature

This course will introduce students to African American literature. It will be divided into two parts. The first will pay particular attention to the experience of enslavement by focusing on several unique primary and secondary textual couplings, including (but not limited to): Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) and Saidiya Hartman's "Scenes of Subjection: Terror, Slavery, and Self-Making in Nineteenth-Century America" (1997); and Harriet Jacobs's "Incidents in the Life of a Slave Girl" (1861) together with Hortense Spillers's "Mama's Baby, Papa's Maybe: An American Grammar Book" (1987). In addition to these classic 19th-century slave narratives and contemporary sources, then, the first part will also include supplementary readings by Kenneth Warren, David Blight, Angela Davis, Alexander Weheliye, Spillers, Hartman, Farah Jasmine Griffin, Shelly Eversley, Jennifer Morgan, and Frank Wilderson. The second part will focus on 20th- and 21st-century African American literature and literary criticism. It will bring together a wide range of readings from across genres and disciplines, attempting to sketch out the major aesthetic and political features of the black literary project. Authors here will include W. E. B. Du Bois, Booker T. Washington, Michael Rudolph West, Hazel Carby, Cheryl Townsend Gilkes, Alain Locke, Shane Vogel, Alice Walker, Zora Neale Hurston, Richard Wright, Ralph Ellison, Asia Leeds, Roderick Ferguson, Claude McKay, Amiri Baraka, James Baldwin, Toni Morrison, Samuel Delany, Octavia Butler, Teju Cole, Ta-Nehisi Coates, Cornel West, Claudia Rankine, Warren, and Fred Moten.

AMST277Z Thinking with Octavia Butler's "Wild Seed"

Blend: Monday and Thursday class time synchronous; additional class hours asynchronous.

Black speculative fiction writer Octavia Butler's novel "Wild Seed" (1980) begins on the African continent in the 17th century amid the rise of transatlantic slavery and concludes on a plantation in Louisiana on the eve of the 19th-century American Civil War. "Wild Seed" was the last published book in Butler's Patternist series, but it relates the earliest segment of that epic story, which follows a shape-shifter named Anyanwu and a body-jumper named Doro across geographies, centuries, classes, corporealities, genders, races, and even, in Anyanwu's case, across species. To quote one student: "It's the weirdest novel I've ever read." This seminar takes up the myriad and interwoven provocations Butler offers in "Wild Seed" by reading her novel alongside a wide range of scholarly literature in the fields of African and African diaspora studies, Indigenous studies, gender & sexuality studies, animal studies, history, disability studies, religious studies, and cultural studies, as well as visual arts. Rather than "apply" the syllabus texts directly to Butler's novel, we will attend to how her novel not only reflects--indeed, anticipates--such scholarly and artistic production, but also produces its own aesthetics and epistemologies.

The seminar unfolds part-synchronously (via Zoom) and part-asynchronously (via writing assignments, screenings, and research project check-ins). Twice-weekly virtual meetings will be centered on presentations of research projects that students will develop over the course of the month, engaging a particular theme or question that they will identify in Butler's work. As such, the syllabus texts are subject to change. Students will be expected to read "Wild Seed" in its entirety in advance of the first class and to have begun thinking about topics they might explore for their presentation and research project (the former being preparation for the latter). The seminar's asynchronous component will consist primarily of weekly writing exercises asking students to reflect on how the assigned texts converse with Butler's novel and vice versa and to comment on one another's analyses. Shared annotatable pdfs will be used to generate conversations about the readings outside of class and to identify questions and topics for discussion. The professor will consider proposals for a creative final project, but it, too, will require substantive research.

AMST278 Literature of the Gilded Age

The decades after the Civil War witnessed a dramatic upheaval in American social experience. This was the period of big business and class conflict; mass urbanization and transportation; race-based segregation and non-Anglo immigration; globalization, imperialism, and the closing of the West; the increased agitation for women's rights; the growth of tourism both at home and abroad; and the rise of professional institutions and institutionalized social reform. This course will examine writers who creatively responded to these massive social changes.

AMST280 Frank Lloyd Wright: Myth and Fact

This course considers the architecture of Frank Lloyd Wright in the context of his own life and development as an artist and in the context of the broader history of modern architecture, of which Wright's work was a part and to which it contributed. The seminar also considers the relationship of Wright's achievements to the social, economic, technical, and ideological history of the United States from the mid-19th through the mid-20th centuries. A major theme will be critical reading of Wright's own statements about his life and work in relation to other sources, later accounts, and his buildings and projects themselves. Both Wright's residential and public architecture will be considered in conjunction with his designs for landscapes and urbanism. Architectural drawings will also be examined as a medium in themselves, along with textual and physical evidence, as a means of generating maximal insight into Wright's built and unbuilt works.

AMST281 Ethics of Embodiment (FGSS Gateway)

Why is the human body such a contested site of ethical concern? Why are bodies thought to be so in need of description and regulation? Sexual practices, gendered presentations, bodily sizes, physical aptitudes, colors of skin, styles of hair--all are both intimately felt and socially inscribed. Bodies exist at the intersection of the most private and the most public and are lived in relation to powerful social norms. In this course, we turn to the critical work of feminist and queer scholars committed to analyzing how bodies matter.

AMST283 History of Jazz in American Culture

This course will provide students with a broad-based literacy in the history of jazz while examining its significance and impact within American culture. As a musical style, jazz has been a staging ground for working out some of the most defining issues and aspects of American culture, including the dynamics of race relations, the articulation of gender roles and class distinctions, artistic expressions of freedom and democracy, the creative possibilities of the encounter of European- and African-based cultures on American soil, assimilation versus appropriation, and an extraordinarily influential aesthetic of cool. Jazz was the dance and listening music of choice for most Americans from the 1920s through the '50s, until it was displaced and pushed to the margins by rock and soul in the 1960s. But it has remained an inspiration for diverse artists in rock and rap up to the present day, including Kendrick Lamar's jazz-drenched "To Pimp A Butterfly" and Janelle Monae's 21st-century Afrofuturism deeply indebted to Sun Ra.

We will explore the early 20th-century origins of jazz in New Orleans, its rise as America's popular dance music in the 1920s and '30s, a shift to a more concert art-oriented form in the 1940s and '50s (representing the epitome of cool and hipness), avant-garde expressions of the 1960s (representing a new kind of universal spirituality), its move into rock and the growth of artist-based collectives of the 1970s, and its emergence in hip-hop samples in the 1990s. We will learn about major artists and their classic recordings, including Billie Holiday, Thelonious Monk, John Coltrane, and Miles Davis, among many others, as well as new directions from recent generations (bringing in guest music department faculty). We will immerse ourselves in a combination of listening to recordings, viewing videos, reading, discussion, and in-class performances. Throughout the semester we will pursue the parallel goals of using jazz history to understand

American history and vice versa. This is a jazz history course with a difference, able to accommodate curious newcomers as well as aficionados and those interested in social and cultural dynamics as well as the musical materials.

AMST284 Making New Worlds: Encounters in Early North America

From the arrival of the earliest fishing ships off the coast of Newfoundland to the fall of New France at the close of the Seven Years' War, North America was the site of entangled encounters. Overlapping imperial claims and the construction of new societies took place on a continent long inhabited by powerful Indigenous groups. This course will examine North America as a contested and negotiated territory in which imperial plans were subjected to local contexts and contingencies. Using primary and secondary sources, we will examine major events (explorations, encounters, and wars), the rise and fall of imperial powers (French, British, Dutch, and Spanish), and the daily realities that shaped experiences in North America (trade, religion, sex, forced migrations, and disease).

AMST286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice

This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism--queer left, black radical, trans, immigration, prison abolition, and sex work--in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called "ivory tower," explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activism, the work of a radical imagination, art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization--past or present--of their choice.

AMST287 Contemporary Art Since 1980

This historically-rooted introduction to contemporary art sets an anchor around 1980 and moves through the major debates of the last 35 years. This period gave rise to a bracing range of historical transformations: a post-communist Europe; an economically prominent China; queer and antiracist activism; increasingly molecular degrees of technological mediation in everyday life; asymmetrical consolidations of a globalized network of travel, communication, and capital; climate and refugee crises; and a state of seemingly perpetual war, to name only a few. This course attends to the changing vocabulary of approaches by which artists intervened in these conditions and positioned their work in relation to a longer view of the history of art. Far from a comprehensive survey, the course acknowledges the inherently recursive and unstable condition of contemporary art history, a field of research and inquiry defined as a work in progress. The course is nonetheless structured in a loosely chronological fashion, sequenced according to formal techniques that emerged as timely responses to specific historical moments (photographic appropriation, moving image projection, social practice, painting, institutional critique, web-based art, etc.). Our work throughout will attend to theoretical frameworks that have remained influential in recent practice (postcolonial, feminist, poststructural, etc.).

AMST288 War and Religion in Early America

This course examines the intersection of war and religion in early America. Beginning with the first European settlements in North America and continuing through the Early Republic (1790s), this course asks students to explore how the religious identities of early Americans influenced their concepts of war and violence. Students will be challenged to rethink the ways in which religious imperatives created and shaped violent conflict, and to investigate the varied ways in which religious women and men relied upon moral dogma to interpret war and violence. Finally, this course will also require students to reflect on how the early American experience informs our understanding of the relationship between war, violence, and religion in 21st-century America.

AMST289 Insular Borders of Latin(x) America

Before and at the same time the United States established itself throughout the 19th century as a major power in the Americas and the world, various Latin American republics inherited and acted upon a similar imperialist agenda to expand their borders not only to neighboring territories but also across oceans. In this class, we will study and compare these imperialist gestures, among them the Spanish Empire's control of its remaining insular colonies in the 19th century (e.g., Cuba, Puerto Rico, the Philippines, and Guam) and the United States' successive claim to these very same islands. We will analyze literary works and films that interrogate these imperialist claims as well as the trajectories of islanders: for instance, the forced migration of the Rapanui (Easter Island people) in the second half of the 19th century (first as slaves to Peru and then to the town of Hanga Roa in Easter Island) and the island-to-island "intra-colonial" (Joanna Poblete) recruitment of Filipino and Puerto Rican laborers in sugar plantations in Hawai'i at the beginning of the 20th century. Some of the questions we will explore are: Why are islands so coveted by old and new empires? How have Rapanui, Filipino, and Puerto Rican migrants and

their descendants resisted authorities on the insular borders of empire? How do writers and artists tell these silenced histories? Can we speak of Latinidad and Edouard Glissant's concept of Poetics of Relation in a Pacific Ocean context? Readings will be in Spanish and English. All discussions and assignments will be in Spanish.

AMST290 Color Lines: The U.S. South and the Colonial World

The American South has always been a unique society. But it has never been exceptional or isolated from the world. Although located north of the equator, it shares many features with the Global South. Its history of conquest, slavery, patriarchy, rebellion, and white supremacy makes it similar to many tropical and semitropical countries that have been colonized by Western powers in modern times. In this course we will study the American South from the times of European colonization through the Civil Rights era. We will establish comparisons between the history of the American South and the histories of the Global South. How did the displacement of Native Americans in Georgia compare to the treatment of Indigenous populations in Australia? How did slavery in Virginia compare to slavery in Brazil? How did the emergence of the oil industry in Texas compare to that of Iran? How did Jim Crow in Mississippi compare to apartheid in South Africa? How did the struggle for civil rights in Alabama compare to struggles for decolonization in Vietnam?

In addition to a comparative approach, we will look into how Southerners engaged with people from the Global South. We will study primary and secondary sources that illuminate encounters between Southerners and foreigners. International trade, religious missions, infrastructural enterprises, political activism, and military operations, among many other events, put the American South in touch with the Global South. These encounters remade modernity, placing questions of racism, regionalism, and colonialism at the forefront of political and intellectual debates.

AMST292 New Worlds, Indigenous Futures

Indigenous Futurism describes a cultural turn to emphasizing not only the presence of Native peoples in contemporary settler colonial societies but to declaring their resurgence in a transformed future. Since the 2010s, Native American and First Nations writers, artists, and online communities have increasingly used "futurism" to invoke de-colonial horizons and also to describe long-standing tendencies to use science fiction vocabulary and imagery to explore themes of displacement, alienation, and survival. This course will explore these themes in 20th- and 21st-century Indigenous culture in the United States and Canada and consider why the future is a temporal terrain of struggle for Indigenous peoples. In the progress-obsessed orientation of colonial time, Indigenous peoples are often assigned to the past, yet Indigenous political and cultural movements continue to insist on their role in shaping our planetary futures. We will begin from an understanding of Indigenous Futurism's influence from and conversation with Afrofuturism and then pursue topics such as: Indigenous uses of digital technology, the ethics of land stewardship in outer space, and the political implications of nonlinear time.

The course will have an emphasis on speculative literature and theoretical texts by Indigenous authors, including two anthologies of Indigenous speculative fiction, and we will also delve into films (ex. "Black Panther"), music (ex. A Tribe Called Red), and visual cultures by contemporary artists (ex. Jeffrey Gibson).

AMST295 Kill Anything That Moves: The Vietnam War in Literature and Film

This course examines various forms of literature and film to understand the legacies of one of the most transformative events in American culture and history: the Vietnam War. "Kill anything that moves" was the order that American soldiers reportedly received while on the ground in Vietnam, yet, to a large extent, the historical focus on the American experience of the conflict has overshadowed other perspectives. Thus, this class will take a comparative approach, exploring works by canonical and noncanonical American, Southeast Asian, and Southeast Asian American authors and directors. Among the diverse

genres we will study are prose, poetry, graphic narrative, and narrative and documentary film. To think about the Vietnam War's broader relevance, we will situate the works under study within current debates concerning refugees, genocide, human rights, and the complex politics and aesthetics of war representation. Students will have the opportunity to investigate an understudied aspect of the Vietnam War toward the end of the semester.

AMST298 From Seduction to Civil War: The Early U.S. Novel

This course examines the relationship between nation and narrative: the collective fantasies that incited reading and writing into the 19th century.

We will study the novel as a field of literary production both in dialogue with European models and expressive of changes in national culture, a form that both undermined and reinforced dominant ideologies of racial, gender, and class inequality during this turbulent period of national formation and imperial expansion. We will consider the ways the pleasure of novel-reading depends upon, even as it often disavows, the world outside the story. Throughout our reading, we will trace the ways these novels both reflect and participate in the historical development of the United States during a period that spans national founding, the consolidation of northern capitalism and an exacerbated North/South division, expansion into Mexico and the Pacific, and civil war. Through close attention to literary form, we will continually pose the question, What is the relationship between literary culture and historical change? We will examine who was writing, for whom they wrote, and the situation--political, commercial--in which the American novel was produced and consumed. We will begin with the novel of sentiment and seduction and conclude with reflections on slavery and racial revolution on the eve of the Civil War, all the time asking about the ways the novel might seduce us into either tolerating or resisting the way of the world.

AMST299 Labor and Religion in American History

Although American workers historically have been more likely to hold religious beliefs and to be tied to religious institutions than have workers in France, Germany, England, and Italy, studies of American religion and studies of American labor alike generally have discounted this salient factor. Fortunately, the situation has begun to change.

In this seminar we will discuss the religious beliefs of American slaves, the social gospel movement, Christian socialism, Martin Luther King's and Cesar Chavez's work with unions, secular Jewish union militants, American workers' outlooks, Catholic labor priests, and the policies of conservative Christian employers. Readings highlight path-breaking scholarship in these areas.

AMST300 The American West in the Age of Capitalist Transformation

This course examines the transregional and transnational forces that converged into the locations that, throughout history, American society has called "the West." It also explores how the occupation and development of the American

West inspired similar expansionist projects in other parts of world. We will investigate the transformation of vast territories previously inhabited by Native groups into a booming agro-industrial empire controlled by white men. Within this context, we will study the cultures that developed and clashed in the West. We will use academic texts and primary-source material such as travel narratives, letters, ethnographies, novels, drawings, photographs, and film. We will delve into the lived experience in the West and the images, myths, and visions that different groups produced about it. During the semester, students will write a research paper on a topic of their choice related to the American West in global perspective.

AMST302 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice

Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover's voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet's effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric's history and practice. In this course, we will read from African American, African diasporic, Caribbean, Latina/o/x, and Indigenous poetics, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

AMST304 The Senses and the Subject in Cinema and Poetry

In this course, we will study a mixture of emotionally stimulating and structurally difficult cinema and lyric poetry to intensify our capacity to articulate a notion of the senses. Do the senses presume the subject? How do poetry and cinema imagine, racialize, gender, and play with the relation of the senses to the subject? While these two art forms might seem like strange neighbors, this course specifically imagines cinema and lyric poetry as "repositor[ies] of synesthesia" wherein feelings move fugitively, where one sense dubs into and disturbs the imagined discrete domain of the other in measured intervals of time that are generative of sounds, images, and of that which overflows the visual.

The films and poetry selected may carry students into cuts of the Caribbean, the black Atlantic, France, Sweden, Mexico, the U.S., Senegal, Mali, and Spain at distinctly urgent moments in the mid-20th to early 21st century. The threads that will sew the course's images together and bind them to the human subject and senses are the celestial and terrestrial, creation, decomposition, displacement, migration, fascism, colonialism, globalization, and love.

AMST305 On Monsters: Race, Sex, Gender and the Other

The class will consider the category of the monster as a cultural site of meaning. We will explore narratives of the monstrous both literally and metaphorically, working from Jeffery Jerome Cohen's understanding of a monster as "as an embodiment of a certain cultural moment--of a time, a feeling, and a place." In situating the monstrous, we will consider Derrida's reminder that monstrosity is, at its heart, concerned with hybridity, border crossing, and miscegenation. In resisting clear categorization, the monstrous becomes terrifying, improper, and disorienting. As such, we will look at contested sites of American life, such as migration and the US/Mexican border, forms of racial hierarchy and social control, manifestations of postcolonial despair, the violence surrounding gender and sexual difference, as well as biopolitical and technological fears regarding the almost-human. The course will ask students to consider monstrosity as always already interwoven with cultural notions of racial and sexual deviance, which then contend with otherness through the guise of the supernatural. The course will also explore more literal manifestations of the monstrous, including the zombie, the doppelganger, the vampire, and the witch. In doing so, the monstrous takes shape as a way of facing what Cedric Robinson calls the "recovery of human life from the spoilage of degradation," or the idea that monstrosity centers on a politics of purity, a mode of analysis that thinks through the vulnerability of the corporeal self, the ravages of contamination, and the horror of existence despite, and in defiance of, necropolitical state praxis. This course requires students to watch weekly films in the horror/monster genre.

AMST307 Indigenous Politics

This seminar will feature select historical moments, geographical sites, and case studies to explore the complexities of life for indigenous peoples in the Pacific Islands and North America subject to the authority of the United States, Canada, and Mexico. The course will examine indigenous peoples' varied political status in relation to questions of sovereignty and self-determination, structures of domination and resistance, and myriad forms of indigenous agency. Readings will focus on the recognition and assertion of collective rights, treaty rights and land claims, and self-governance under independent states' and international law. Films and guest lectures will complement the required texts.

AMST309 Theories of Capitalism

Capitalism has profoundly shaped world history, acting as one of the primary drivers of social change, and working to shape a tremendous variety of social institutions ranging from colonialism to our sense of time. This course takes a critical approach to the study of capitalism, looking at the ways capitalism has intersected with and transformed the nature of social oppression (particularly in relation to nation, race, gender, and sexuality), as well as the ways it works to shape everyday consciousness. Historical changes within capitalism will be explored, considering particularly the rise of corporate capitalism and of contemporary neoliberalism. We will examine a wide variety of theoretical approaches to capitalism, taking Marx's thought as a jumping-off point for elaboration and critique. We will conclude by considering alternatives to capitalism that have been proposed in both historical and contemporary contexts, together with an examination of practical efforts to implement these possibilities.

AMST312 Americans Abroad: Mapping Nineteenth-Century Travel Narratives

In this course, we will explore international travel in the long 19th century. We will focus on narratives published by Americans who had the opportunity to travel beyond the United States. Through individual and collective activities, we will survey the trajectories of activists, diplomats, doctors, entertainers, entrepreneurs, journalists, missionaries, sailors, scientists, soldiers, students, teachers, tourists, and many others who engaged with foreign societies. By analyzing travel narratives, we will delve into a globalizing new order of expanding empires and integrating capitalist economies.

The main product of this course will be a digital humanities project. Throughout the semester, we will conceptualize, design, build, and improve a website together. Each student will develop their own individual project focusing on a set of travel narratives. These individual projects will be the component parts of our website. Classes will alternate between historical and conceptual discussions about travel in the 19th century and technical matters related to digital humanities. Our goal is to reflect on the broad history of American foreign relations and the use of new technology to produce and communicate knowledge about the past.

AMST313 After Orientalism: Asian American Literature and Theory After 2000

From early articulations of cultural nationalist pride to today's transnational, intersectional, deconstructive, feminist, and queer critiques, Asian American studies is a field that has radically expanded and transformed since its original emergence out of the Third World and student strikes of the late 1960s. This course seeks to take the temperature of Asian America today by exploring a range of contemporary works published after the millennium, more than 30 years after the field's inception. Alongside a selection of novels, poetry, short stories, and graphic novels by some of the most acclaimed contemporary writers in America, we will also consider critical and theoretical texts that offer different perspectives on our contemporary historical moment, exploring frameworks of modernity, postmodernity, neoliberalism, and the university as ways of situating contemporary Asian America's aesthetic innovations.

Though not required, it is strongly recommended that students have taken ENGL230 Introduction to Asian American Literature or a comparable substitute prior to enrolling.

AMST315 Entertaining Social Change

"Our problem," Tom Frank writes, "is that we have a fixed idea of what power is, of how power works, and of how power is to be resisted." This is especially true of "entertainment" as a transformative power. Our aim will be to advance critical entertainment studies. A thread that connects all of our texts will be: How has the systemic critique of social contradictions been popularized as fascinating in modern times? A related concern: What are the seductions and violence built into "enjoyment" -- "enjoyment" that reproduces "Americans"? We will "entertain" the diverse strategies that progressive songwriters/performers,

radical historians (working with cartoonists), and mainly moviemakers have developed to entertain Americans—to teach, persuade, provoke, seduce, and move them through laughter, tears, and not least of all ideas—so that Americans will be more inclined to "entertain" social critique that inspires social change. We will consider the popularizing (and sometimes the selling) of social critique in several genres: graphic history (Howard Zinn, Paul Buhle); songs/song lyrics of folk-protest singers (such as Woody Guthrie, Pete Seeger, and Phil Ochs), of folk-rock stars (such as Jackson Browne, Ani DiFranco, and Father John Misty), and of the developers of hip-hop (such as Gil Scott-Heron, Public Enemy, and NWA); and politically-edgy comedy (Jon Stewart, Stephen Colbert). We will devote most of our attention to movies ("Straight Outta Compton," "The People Speak," "Malcolm X," "Medium Cool," "Network," "El Norte," "Smoke Signals," "Before the Flood," "The Black Panthers: Vanguard of the Revolution," "Salt of the Earth," "Matewan," "99 Homes," "The Wolf of Wall Street," "The Big Short"). And we will place special emphasis on self-reflexive movies about "entertainment" and about labor/social movement organizing.

AMST316 Television Storytelling: The Conditions of Narrative Complexity

This course examines the industrial and cultural conditions for the development of relatively complex forms of storytelling in commercial U.S. television. Narrative complexity is a cross-generic phenomenon that emerged over the 1980s and has proliferated within an increasingly fragmented media environment. In class discussions and individual research projects, students will analyze particular programs in-depth, with attention to their industrial and social conditions of production, their aesthetic and ideological appeals, and the cultural tastes and viewing practices they reflect and promote. We will also consider how television studies has responded and contributed to the increased prestige of certain types of programs.

AMST320 Asian American Posthumanisms: Biopolitics, Ecopoetics, and Literature

From 19th-century anxieties concerning subhuman coolies to 21st-century celebrations of suprahuman cyborgs, U.S. discourses have always figured people of Asian descent as peripheral to the category of the human. While Asian Americanist scholarship has often responded by asserting the humanity of Asian Americans, a number of scholars and writers have begun to explore and even embrace the inhuman character of the Asian American. Drawing from recent scholarship in science studies, political ecology, anthropology, and literary studies, this course will consider what it looks like to shift the scale of analysis from the individual, organismal human to the social logics, biopolitical infrastructures, and ecological entanglements that supersede the human, or conversely, to the body parts, molecular processes, and fragments that subvert the scale of the human. We will pay particular attention to the question of what consequences decentering the human has for the ethnic novel, a genre often valued for its ability to affirm the humanity of racialized subjects. For instance, what kinds of aesthetics and politics emerge from an imaginary centered not on the human individual but on systems, landscapes, entanglements, and other imaginative forms and social practices? What does a novel centered not on a human protagonist but on an object, a clone, or an ecosystem look like? To explore these nonhuman centered logics and forms, we will read a selection of theoretical texts by Asian American and other authors, alongside a selection of

contemporary (and capaciously defined) Asian/American novels by writers such as Kazuo Ishiguro, Larissa Lai, Ruth Ozeki, and others.

AMST325 The Work of Art Against Work: Art, Labor, Politics

Understandings of late 19th- and early 20th-century avant-gardes are tied inextricably to leftist theory, particularly that of the Frankfurt School. This advanced seminar will consider the legacies of that entwinement, while focusing more specifically on its transformations from the late 20th century to the present: We will examine how artists have engaged the "work" of art in relation to the rise of post-Fordism, a globalized economy, and new theories of work and anti-capitalism. We will pay special attention to gendered notions of work and the division of labor (including "craft," affective labor, domestic work, care work, sex work, and more), to debt and racial capitalism, and to the rise of speculative finance and its links to the art market and the patron class.

AMST326 Queer and Trans Aesthetics

This seminar will consider contemporary trans and queer theory foregrounding race, class, disability, migration, diaspora, indigeneity, and colonization alongside the work of BIPOC queer and trans artists in particular. The course's animating (and unfixable!) questions include: How do artists produce and intervene in understandings of gender and/or sexuality through their work? What does it mean for an artist or viewer to describe an image, object, or performance as "queer" or "trans"? What constitutes a "queer" or "trans" reading of visual culture? How might various formulations of "queer" and "trans" relate to, put pressure on, and/or resist "aesthetics"? What is the relationship between an artist's self-identification and/or their resistance to categorization (e.g., in terms of race, gender, sexuality, disability, class, nationality) on the one hand, and audiences' efforts to engage and interpret their art on the other? Put another way: What, if anything, does an artist's "identity" (asserted and/or imposed) have to do with their art? And what does a viewer's "identity" (asserted and/or imposed) have to do with how they approach and interpret visual culture? Several artist talks and/or class visits (all virtual) are being organized in conjunction with the seminar.

AMST329 Issues in Latina/o Politics and Culture

This course explores the ways in which Latinas/os become legible as subjects in contemporary U.S. political thought and cultural life. We will consider struggles for Latina/o legal rights, the relationships between the Latina/o workforce and issues of global labor patterns, the workings of transnational economies and power, and popular cultural narratives depicting Latinas/os and U.S.-Latin America relations. This course offers the opportunity to explore, analyze, and decipher the ways in which Latinas/os inhabit a global world, built from a legacy of a colonial past and heading toward a neoliberal, globalized future. We will use an interdisciplinary approach, addressing a range of texts from various scholarly disciplines, including history, cultural studies, postcolonial theory, American studies, and political science, as well as popular cultural texts.

AMST334 Black Power and the Modern Narrative of Slavery

The historical moment immediately after the civil rights and Black Power movements saw an explosion of African American writing about slavery. In the past half-century, Black writers wrote award-winning novels that gave unprecedented attention to the intricacies of the life of people who are enslaved, and to slavery as a system that they suggested could help us better understand late-twentieth century American culture. We will read some of the most important works written by contemporary African American writers in order see how and why they transformed the first autobiographical form for Black writers--the slave narrative--into a fictional form that has served them as they dissect their own cultural moment.

AMST350 The Law, the Citizen, and the Literary and Cinematic Imaginations

In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimagined in literature and cinema. Among the topics discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporalities. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they reveal the rifts and conjunctions among the categories citizen, "savage," "gente sin razón," slave, illegal, pervert, and deviant.

AMST351 Queer of Color Critique

This course will examine and interrogate the field of queer studies with particular focus on the ways in which queer scholarship and queer political movements function alongside critical race theory, ethnic studies, and sociopolitical antiracist efforts. Students will be asked to consider the history of queer studies and queer politics, the contemporary state of queer movements, and future visions of queer life. We will take an interdisciplinary approach, and we will rely upon a diverse range of theoretical, historical, and cultural studies texts. We will explore the normative parameters of both sexual and racial identities, probing the terms of identification to consider their meaning in the contemporary moment and in relationship to various cultural, social, legal, and political milieus. Throughout the course we will consider, What does it mean to study queerness and to study race? How do institutions--religious, legal, and scientific--shape our understandings of both queer and racial identities? In what ways do sexuality and race interact, and how does this interaction inform the meanings of each of these identity categories? Furthermore, how have queer movement and scholarship both supported antiracist efforts and, also, how have they been complicit in cultural and institutional forms of racial oppression? How do other

social categories of identification such as gender, ethnicity, and class, shape the ways in which we understand expressions of race and queerness?

AMST353 Health, Illness, and Power in America

In this class, we will explore the interlocking histories of health, illness, and power in America. Special attention will be paid to the ways in which discourses of the healthy body have undergirded notions of citizenship and belonging in the nation. We will consider how processes of disease, disability, and contagion have been imagined through the lenses of social difference, including race, gender, sexuality, and class. We will address civil institutions designed to manage individual and population health, and we will consider theories of political power in the making of the "modern" body.

Sample topics covered will include immigration policies and contagious disease scares; STDs and the politics of public health campaigns; physical fitness and the value of bodily labor under capitalism; the management of diseases that are symptomatic and those that are not; race- and gender-based approaches to medicine and medical difference; clinical trials and the ethics of human experimentation; regulations surrounding blood and organ donation; changing rituals of bodily hygiene; preventative medicine and the call to personal responsibility; mental health policies and institutions; and pride movements surrounding the "unhealthy" body.

AMST357 Social Movements Lab

What can we learn from social justice activists about the economic, political, and environmental struggles facing us today, including mass incarceration, immigration, economic precarity, and the violence of the state? Where are the critical sites of queer, trans, left, feminist, black, indigenous, disability, and environmental struggle? How do these movements converge, and where do they diverge?

This participatory, interdisciplinary research seminar enables you to embark on an independent, semester-long research project on the social movement or activism of your choice. We'll start with some foundational reading on multidisciplinary social movement research; archival, ethnographic, and participatory methodologies; and histories of social justice struggles in the U.S. The remainder and majority of the seminar is laboratory style, taking shape

around your particular projects. Each week, we will collaboratively analyze one or two projects, mapping out and comparing methods, goals, visions, struggles, and contexts of the movements under study. Our goal is to understand a range of social justice activism in their economic, political, and historical context, with an eye toward integrating activist scholarship and social change.

The activism you research can be contemporary or historical; local, national, or global; and can take any shape: direct action, community organizing, activist philanthropy, art as activism, etc. You do not need previous experience or activist contacts for this course—just passion and the desire to learn collaboratively!

AMST358 Fugitive Perspectives on Education and Civil Society

In 1946, the African American novelist Ann Petry imagined what a white schoolteacher might think about working with black students in Harlem, New York: "Working in this school was like being in a jungle. It was filled with the smell of the jungle, she thought: tainted food, rank, unwashed bodies." Petry had herself worked in Harlem schools. She also held credentials from well-heeled white schools in Connecticut. Despite her own academic success, she questioned the inherent value of schools that regarded black children as if they were untamed savages.

Challenging prevailing narratives of excellence and achievement, this course examines fugitive perspectives of black, Indigenous, LBGTQ, and poor folks who resisted compulsory schooling and avoided conscription into so-called civilized society. If, as historian Michael B. Katz has argued, US schools "are imperial institutions designed to civilize the natives; they exist to do something to poor children, especially, now, children who are black or brown," then why should any self-respecting black or brown child endure such schooling? What might so-called truants, illiterates, failures, burnouts, dropouts, and delinquents teach us about education and civil society?

The history of education, however, has largely been interpreted from a biased perspective—namely, those who have been successfully schooled. We will therefore search for contrary voices in fragments of oral culture, ranging from slave narratives to folktales and recorded music. Contemporary scholarship will inform our analysis. Interdisciplinary scholars such as James Scott, Eric Hobsbawm, Tera Hunter, Saidiya Hartman, Lisa Brooks, and Audra Simpson will illustrate how to read against the grain and unearth hidden transcripts from classic authors such as W.E.B. Du Bois, Carter G. Woodson, Anna Julia Cooper, and Gertrude Simmons Bonin.

AMST361 Thresholds of Art and Activism Since the 1960s

Since the 1960s, a period marked by war and social upheaval, artists have navigated the contested boundaries of art and activism by turning to the street and inventing new strategies of performance, distribution, and collaboration. Exploding the familiar protocols of agitprop, they advanced a politics of representation as much as a representation of politics. Philosophical texts (e.g., Adorno, Benjamin, Debord, Habermas, Ranciere, etc.) support our engagement with recent debates in art historical scholarship (e.g., Bishop, Bryan-Wilson, Lambert-Beatty, McKee, etc.) as we consider contexts as diverse as the social movements of the 1960s, queer liberation, eco-critical activism, and Occupy Wall Street. Extending the 20th-century avant-garde's project to break down

the division between art and life, our case studies (focused primarily but not exclusively on the United States: Emory Douglas, the Art Workers Coalition, Gran Fury, Women on Waves, etc.) provoke this seminar's central questions: Where is the line between art and activism? What value might that boundary continue to hold, and why? How must we assess the efficacy, ethics, and aesthetics of such practices? And what historical conditions have made them timely for artists?

AMST362 Calderwood Seminar in Public Writing: The Dark Turn in Television Storytelling

This course, offered in association with the Calderwood Seminars in Public Writing, examines a certain tendency in contemporary television storytelling. Taking the debut of "The Sopranos" in 1999 as a benchmark, we will explore the emergence in dramas and comedies of a dark, uncertain, pessimistic, or disillusioned address within a medium long known for its reassuring tone. We will consider the industrial and social conditions for this tonal shift, as well as the role it has played in elevating public perceptions of television's cultural value. The course will use the "beat model" developed in certain Calderwood Seminars, where students become "experts" in specific bodies of material. In this case, students will select a particular series on which they will focus over much of the course.

AMST374 Abolition and Social Praxis

This course will examine some of the analyses of society, social power, and societal reform advanced and practiced by diverse activists who organize their work around the theme of abolition. Inspired by activist efforts to eliminate prisons and policing, abolition is here understood as an attempt to link a worldview that advocates for the disassembly of existing, oppressive social structures combined with efforts to generate new, more liberatory forms of social relationship in the here and now. As a form of activism, abolition thus brings utopian dreams to bear upon concrete practice, seeking to generate new structures of agency and pointing toward ways in which liberal notions of consent occlude deep forms of structural power and implicit constraint. Students will be asked to take on an activist project as part of the course.

AMST375 Black Global Cities

In this course, we will analyze representations of cities and Black urban modernity in Afro-diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa, Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial sites Black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week's readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discreet, bounded places. To this end, we will trace

how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabeba Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as *Girlhood* (2014), *Black Panther* (2018), *The Harder They Come* (1972), *Bad Friday: Rastafari After Coral Gardens* (2011), *Welcome to Nollywood* (2007).

AMST378 Decolonizing Indigenous Gender and Sexuality

This seminar focuses on the politics of decolonization in Indigenous contexts with regard to gender and sexuality. The seminar examines a variety of settler colonial contexts in North America and Oceania. Beginning with an historical exploration of gender and colonialism, students will examine how colonial processes, along with other forms of domination that include racializing technologies, have transformed gender and sexuality through the imposition of definitions and models of normative (often binary) gender subjectivity and relations, "proper" sexual behavior, preoccupations with "sexual deviance," sexual expression as a territory to be conquered, legacies of control, legal codification, and commodification. We will then assess how diverse modes of self-determination struggles negotiate gender and sexual decolonization, including feminist interventions in nationalist productions that sustain masculinist and homophobic agendas. In relation to these dynamics, we will study the growing body of work on Native feminisms and decolonial feminisms, as well as Two-Spirit and queer Indigenous studies.

AMST381 Unsovereign Elements, Caribbean Poetics

This course offers portals and obstacles of anticolonial imagination through studies of Caribbean literary and conceptual forms and life ways, imperial cartographies of Caribbean lands and waterways, as well as that which has historically eluded those cartographic schema of space, property, and labor. We will focus on historical marronage, foodways, maritime law, naval and commercial cartography, theories of sovereignty, and the "unsovereign elements" (i.e., especially water and wind) in the ecosystems of unruly Caribbean places. By "Caribbean places," the professor means the archipelago (of many smaller archipelagos), and a both rhizomic and guarded site of imaginaries, knowledges, expressive forms, wars, massacres, invasions, and epistemes partly produced by and lodged in particular ecological formations. Conceptually, the course thinks from Caribbean studies, Black critical theory, Black studies, as well as some recent conversations between the latter and North American Indigenous Studies. The historical frame of the course begins circa 1492 and will hover into the 19th century era not only of emancipation, but also of abduction, re-enslavement, and anti-emancipation, partly through "contemporary" Caribbean literature, in addition to primary, historical texts and maps.

We will study digitized versions of maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal meditations), including the writings of Christopher Columbus, Moreau de Saint Mery, and Baudry des Lozieres. The guiding, inter- and un-disciplinary sources for this course's anticolonial imagination come from Colin Dayan, Sara Johnson, Evelynne Trouillot, Sylvia Wynter, Robin Derby, Joiri Minaya, Maryse Conde, Alejo Carpentier, Edouard

Glissant, Jacques Derrida, Beatriz Santiago Munoz, Demetrius Eudell, Anne Eller, Dixá Ramirez D'Oleo, and others.

AMST391 Religion and the Social Construction of Race

In this course we examine aspects of the intersections between race and religion in a number of historical and social contexts. We place at the center of our discussions the question of how race and religion are co-constructed categories that function as a prism through which people come to understand and experience their own identities and those of others. We will privilege interpretations that emphasize (a) the intersections of race and religion as a process in which power plays a pivotal role; and (b) the means through which communities form collective identities.

We will read a range of historical analysis and primary source materials from the U.S. and the Caribbean. After a theory module, we will examine a colonial-era captivity narrative, antebellum pro-slavery document, missionary works, analyses of anti-Semitism, works on Father Divine, the Nation of Islam, Rastafari, Haitian Vodou, Jonestown, the Christian White Supremacy movement, as well as the contemporary U.S. relationship to the Middle East.

ANTHROPOLOGY (ANTH)

ANTH101 Introduction to Cultural Anthropology

This course introduces students to concepts, theories, and methods of cultural anthropology. Lectures, readings, and audiovisual materials invite critical analysis of broader themes in contemporary anthropology, such as the nature of culture, the problematic notions of social evolution and progress, and the negotiation of power within and among diverse peoples.

Offering: **Host**

Grading: **A-F**

ANTH111F Anthropology of Conspiracy (FYS)

This first year seminar explores the relationship between conspiracy theory and contemporary life through the discipline of anthropology. We learn how to read, discuss, and write about anthropological texts using conspiracy as a starting point. We trace the history of conspiracy theory, read ethnographies of conspiracy, and extend the concept of what counts as conspiracy to anthropological topics such as culture, class, ideology, myth, virtuality, race, affect, gender, and sexuality. We ask what the utility of conspiracy is in world-building, ritual, and belief structure inherent in both cultural cohesion and conflict.

ANTH150 Indigenous Middletown: Native Histories of the Wangunk Indian People

Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern New England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call "Middletown," also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although regarded as "extinct" by settlers in the aftermath of King Philip's War, 1675-1678, the Wangunk continue to live into the 21st century.

ANTH201 Key Issues in Black Feminism (FGSS Gateway)

This course surveys key issues in the historical development of black feminist thoughts and practices through readings of canonical works especially from the 1980s and '90s that contribute to this extensive body of knowledge. Our aim

is to engage black feminist and womanist theorists, activists and artists from the diaspora who are exploring intersections of race, class, sexuality, religion, and other indices of identity affecting their daily lives. To that end, we will take an interdisciplinary approach to unpacking the historical tensions and politics and poetics in theory/practice, representation/self-making and expression/performance. We will also examine more recent turns in #BlackLivesMatter, #SayHerName and #BlackGirlMagic and conclude with Post-Zora Interventions--feminist interrogations on the borders anthropology, art, and activism.

ANTH202 Paleoanthropology: The Study of Human Evolution

Paleoanthropology is the study of human origins, of how we evolved from our apelike ancestors into our modern form with our modern capabilities. Drawing on both biological anthropology (the study of fossils, living primates, anatomy, genetics, and human variation) and archaeology (the study of material culture, such as tools, art, food remains), this course will examine what we know about our own evolutionary past and how we know it. The history of paleoanthropology--how our views of our past have changed--will also be explored. The course will include hands-on laboratory sessions utilizing fossil casts, stone tools, and other materials from the archaeology and anthropology collections.

Gen Ed Area: **SBS-ANTH**

Identical With: **ARCP202**

Prereq: **None**

ANTH203 Sex, Money, and Power: Anthropology of Intimacy and Exchange

Sex and money--intimacy and economy--are often imagined to occupy distinct and separate spheres. Sex and intimacy are located in the private or domestic realm, in spaces of leisure, feelings, care, and personal connections. Money and economy, on the other hand, are purportedly public, located in the market and tied to labor, rationality, and impersonal (non)-relations. This course brings these spheres together, focusing on the links, exchanges, and circuits between the intimate and the economic in diverse cultural contexts.

Drawing on anthropological, feminist, Marxist, queer, and critical race theory, we will build

working definitions of key concepts: intimacy, division of labor, domestic labor, sexual labor, exchange, commodity, value, neoliberalism, consumer culture, and more. We'll test, apply, critique, and expand these concepts as we work through ethnographic case studies on contemporary sex work and tourism, marketing and pornography, reproduction and domestic labor, marriage, class and sexual lifestyle, labor and care work, and sex stores and commodities. We will connect economic, cultural, and political formations with race, ethnicity, nation, sexuality, class, and gender, scaling up to consider global and transnational exchanges and down to consider how these circuits impact families and communities. Throughout, we will ask: Whose labor is valued and recognized, and why? How do bodies accrue value, and in what kinds of marketplaces? When are intimacies--sexual and social--commoditized? How is race, gender, and sexuality central to these exchanges? How do new transnational circuits constrain and/or empower people? And finally, who benefits from these relations, and who does not?

ANTH204 Extreme Landscapes of the Anthropocene

The "Anthropocene," a term coined to categorize the current geological epoch, has become a way in which social scientists can critically and creatively engage with the impact of humanity on the ecological well-being of the Earth. The interdisciplinary and uncertain nature of this subject matter provides space for experimental writing styles, innovative approaches to storytelling, and critical discussion and debate. This course is designed to explore and challenge the term "Anthropocene," questioning how narrative and drama are entangled in the dissemination of complex truths, for better or worse.

In this course, we will consider texts, short films, and other mixed media that investigate the everydayness of extreme landscapes, from "capitalist ruins" to the depleting seas. We will dive into the social, political, economic, and scientific power-scapes that influence narratives about the environment, from late liberal ideology to corporate influence on science and the news. Through the course materials and activities, we will question how to communicate complex information with a broad range of people, particularly surrounding issues of climate change, sustainability, and environmental justice. Each student will build their own writing portfolio of short essays for specific audiences. The class will collectively build and design a storytelling website where they can share their work. Students are encouraged to apply an ethics of care and the art of "non-judgmental attention" to their critical engagement with the Anthropocene.

ANTH205 Borderlands in the African Mediterranean and Beyond

The past decade has seen one of the largest mobilizations of human migration in recent history. This migratory flow is usually discussed within spatial frames such as movement across borders, between countries, and across the sea. This course departs from those narratives by bringing into focus the routes, social worlds, and systems of exchange that emerge during time spent between borders, a time often eclipsed as "just waiting." The beginning of the course sets the theoretical tone for our readings and discussions by revisiting how anthropology has questioned the stability of the linkage between culture and space, and placing this into the context of scholarship on liminality and borderlands. Subsequently, we will examine ethnographic studies, as well as some literary texts, that focus on migration and immigration primarily across the African Mediterranean, with comparative examples drawn from South and North America and Western Asia. The course's goal is to trace the communal sentiments enmeshed in these routes and worlds and to inquire what they may imply for political and subjective belonging, beyond narratives centered on the anxieties that emerge once "migrants" enter into European and North American territories.

ANTH206 Ethnography of the American Rural

The rural stands as a fraught American symbol, positioned in stark contrast to its corollary: the urban and its cosmopolitan subjects. The American rural is variously represented as vulnerable, disappearing, backwards, regressive, slow. In this course, we elucidate the texture of the American Rural by engaging with ethnographic writing from the early 20th century into the contemporary. In exploring the rural as a meeting place of working-class expressive cultures, an atmosphere of slow or strange time, a dramatic history of industry and agriculture, a notoriously tense racial zone, an icon of severity, and a place of

exuberant stories and poetics, we uncover the vital ideological function of the rural as the urban's dark twin in American myth throughout history and today.

ANTH207 Anthropology of Time

In this course, we will examine time as a cultural phenomenon. At once absolute and highly malleable, one of the objective dimensions of our existence and experienced with such subjective variation, time is a central concern for many different cultural worlds, even as those different worlds render time entirely differently from each other. Time is also a particular pre-occupation of anthropology, both as a concept and a significant methodological and ethical concern (as it is embedded in ideas like progress, evolution, development, the "backward"). Accordingly, this course will track between ethnographic explorations of different cultural accounts of time - what time is, what it does, and what it should be - and methodological and theoretical conceptualizations of temporality, futurity, and the dangers of "freezing" cultural systems and actors in static time-frames.

ANTH208 Crafting Ethnography

This course is an introduction to the craft of ethnographic research and writing. In the first half, we will explore some of the research methodologies anthropologists use to understand, interpret, and analyze culture. Each student will choose an ethnographic field project for the semester and practice ethnographic methods (participant observation, interviewing, virtual ethnography, auto-ethnography, visual representation, and more). In the second half of the course, students will begin to write their ethnography, practicing writing in a variety of styles and genres (including realist, reflexive, dialogic, engaged, and experimental). Guided, weekly peer workshops throughout the semester will give students a chance to hash out and talk through questions of ethics, positionality, representational politics, and the improvisational felicities and challenges that arise during fieldwork and writing. This course will give students a solid grasp of ethnographic methods and how anthropologists construct ethnographies. It is ideal preparation for ethnographic theses and essays during senior year.

Spring 2021 changes: research methodologies explored will be determined in the context of our capacity to do in-person research during this time.

ANTH212 The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology

New analyses of ancient DNA preserved for millennia in bones and soils have revolutionized the field of archaeology. Suddenly, archaeologists have gained new insight into human origins, past population migrations, ancient diseases, plant and animal domestication, and even the factors that contributed to the extinctions of megafauna such as woolly mammoths. Recent genetic case studies will provide a lens for learning about the archaeology of diverse world regions and time periods, from Oceania to Mesoamerica and from the Paleolithic through recent history. Topics will include: human evolution and genetic relationships between humans, Neanderthals, and Denisovans; the peopling of the globe; extinction and de-extinction; domestication and the origins of agriculture; paleodiseases and paleodiets; and ethics in genetic research.

ANTH213 Indigenous Anthropology

In this course, we will explore what anthropology looks like from an indigenous perspective. Focusing on four significant texts by indigenous anthropologists, we will explore concepts of indigeneity, mobility, gender, DNA, and indigenous rights and sovereignty as they are articulated between anthropology and indigenous studies. At the same time, we will examine how anthropological research and writing can be conducted from the perspective of the historically colonized as opposed to the colonizers, navigating the ambiguities of anthropology's own legacy as it is rearticulated by scholars from diverse positionalities and perspectives.

ANTH214 Introduction to Archaeology

What can fragments of pottery, stones, and bones reveal about the lives of people who lived thousands or even millions of years ago? What does the archaeological record reveal about human evolution, past human diets and health, ancient socioeconomic systems, and the emergence of early cities? And how can we preserve archaeological sites and artifacts for future generations? This course will introduce students to the interdisciplinary field of archaeology. We will discuss key methods and principles that archaeologists use to study the human past while covering a survey of world prehistory from the earliest stone tools to the archaeology of contemporary material culture. Students will have the opportunity to examine real archaeological artifacts--including artifacts excavated from historic Middletown--and will be encouraged to think critically about the ways that archaeology informs our understanding of both the past and the present.

ANTH217 Anthropology of Science

What are scientific facts? How do we know what we know? In this course, students will gain an introduction to thinking about science and technology as cultural practices shaped by power, politics, race, indigeneity, gender, and sexuality. Students will explore how anthropologists, long interested in how "culture" works, have recently turned their gaze toward critically examining the cultures of people in positions of technoscientific power, including nuclear scientists, Wall Street analysts, drone weapon designers, climate scientists, molecular biologists, and more. Students will also be trained in conducting ethnographic fieldwork on a group of experts in their own communities in order to ask questions about scientific rituals, truth-making, and distributions of power and privilege.

Students who received credit for SISP 265---Introduction to Science as Culture may NOT enroll in this course for credit

ANTH227 Ethnographies in Medicine

Biomedicine looks different in different places. Biotechnologies change under new moral frameworks. The same pharmaceutical pill can offer freedom to some and evoke colonialism in others. And in some contexts hunger is more pressing than curing a specific disease. How do we go about challenging our biomedical assumptions and understanding medicine in context? Medical anthropologists have relied on the art and science of ethnography to provide cross-cultural accounts of health and healing that are accessible, provocative, and timely. In this writing-intensive course, we will read exemplary ethnographies in medical anthropology to explore the intersection of medicine, culture, and narrative text. We will explore four themes that cover provocative discourses in the field: the challenges of participant observation during vulnerable encounters with sickness and disease; regimes of power; local-global encounters; and food, eating, and the gendered body.

ANTH230 Anthropology of Cities

This course is an introduction to the practice of urban anthropology. Attention is placed on the intellectual challenges recent local and global urbanization trends present to us in our attempts to think and write about cities today. We

will reflect upon the production of space and place, the creation of "other spaces" through borders and limits, and the making of meaning through everyday practices and experiences in the city. We will consider how cities become foremost spaces for the exercise and contestation of power, for social cohabitation and conflict, and for cultural creation and repression. Class discussions will also focus on fieldwork methods and problems of ethnographic representation and writing in preparation for a research project that will culminate in an urban mini-ethnography.

Prereq: **None**

ANTH233 Global Queer Studies

This course explores global experiences of LGBT/Q life, bringing an explicitly transnational lens to a field too often dominated by U.S.-centered perspectives.

Drawing on queer ethnography and film, we will explore the contours of queer and trans life around the globe, from the lives of gay men in Indonesia to Muslim *yan daudu* in Nigeria, gay tourism in post-Revolutionary Cuba, queer *mati work* among working-class Afro-Surinamese women, lesbian activism in India, LGBT asylum claims in Canada, the queer art of Carnival in Trinidad and Tobago, the everyday lives of *lalas* (lesbians) in China, and the transnational lives of Filipino gay men in New York. Our aim is to challenge and expand Western categories and concepts of sexuality, gender, identity, and desire (both hetero- and homo-normative) and to center the ways sexual/gendered identities, cultures, and politics are shaped by colonialism, imperialism, racialization, migration, transnational media, and global capitalism.

ANTH240 Hipsters

This course will focus on the contemporary hipster subculture after examining a critical genealogy and racial history of the origins of the concept. From black jazz artists and zoot-suitors in the 1940s who defined "hip" and "cool," to the post-World War II burgeoning literary scene of the Beat Generation that codified the figure of the hipster as an American bohemian strangled by social conformity, there has been a cultural politics of being "in the know." Derived from the term used to describe these earlier movements, the term "hipster" reappeared in the 1990s and became especially conspicuous in the 2000s to the present. Today's hipsters are generally associated with whiteness, indie music, a vintage fashion sensibility, liberal political views, organic and artisanal foods, as well as racial gentrification in urban neighborhoods in Brooklyn and select cities such as Portland, OR and San Francisco. Perhaps curiously, members of this subculture typically disassociate themselves from this cultural category, as outsiders often use the term hipster as a pejorative. In an attempt to understand why hipsters differentiate their actions from the hipster stigma, students will study the contemporary discourse about hipsters, along with a historical analysis of the term and its use in popular culture to get a better understanding of race, class, gender, and the commodification of style. Other topics for exploration include stereotypes, authenticity debates, hipster racism, so-called "blipsters," the death of irony, hipster chic, "hipster run-off," the resentment of hipsters, and forecasts of "the end of the hipster."

ANTH241 Critical Interculturality and the Pedagogy of Unlearning

This course is offered by our study abroad partner, Pachaysana, online from their site in Ecuador, with local educators.

An ever-growing number of students, scholars, and activists criticize our educational institutions for upholding colonial structures, and via numerous movements are calling for "decolonization." Any effort to decolonize our education must go well beyond the content of what we teach in the classroom. In addition to what we are learning, we must explore how we learn, where we learn, and with whom we learn. We also must think about what "decolonization" means, taking into consideration the lands on which our campuses and communities are located. This course addresses decolonization through the lens of critical interculturality, referring to Catherine Walsh's critique of multiculturalism as functional or relational interculturality. Bringing in readings from Indigenous and Latin American scholars and taking part in workshops facilitated by local Ecuadorian community members, we will use interactive methods to explore some of the most challenging concepts related to decolonization, including "decolonization is not a metaphor," epistemic justice, border thinking, and embodied methodologies. Those concepts will then be examined with regards to the realities on our college campuses and our communities, and we will begin to dream about moving from the "functional" to the "critical." By the end of the course, informed by the readings and interactions with community-based educators in Ecuador, students will formulate clear questions and identify potential strategies for applying critical interculturality at their college campuses.

ANTH242 Other Worlds Are Possible: Life Against and Beyond Neoliberal Logics

This four-week intensive course examines radical challenges, in theory and on the ground, to mainstream neoliberal capitalism and development strategies promoted by international organizations such as World Bank and the IMF. After the 1980s, considered by many as "the lost decade" of development, some scholars and practitioners declared the development enterprise as fundamentally wrong: It was a misguided and violent neocolonial project that could never provide the answer to inequality and poverty. These radical critics argued for building a "post-development" era. In this course, we look at the conceptual history of the term "post-development" and also examine what post-development life looks like on the ground, among dispossessed communities. We will focus on lived and imagined challenges to neoliberal capitalism. We spend the first week at Wesleyan, brushing up on the critical ideas and movements that have emerged out of Mexico (and Latin America, broadly) over the past four decades in reaction to mainstream development discourse. We will then explore these ideas and lived alternatives in Oaxaca, Mexico. We will spend three weeks learning about and working with marginalized communities that are rejecting capitalist development and building and experimenting with living a "good life" (*buen vivir*) on their own terms.

ANTH243 Medical Anthropology

Situated at the intersection of the clinical and social sciences, medical anthropology seeks to understand bodies, afflictions, healing, and care in cross-cultural contexts. This course serves as an introduction to the exciting field of medical anthropology. Students will begin by mastering dominant approaches

within medical anthropology for studying the body as a site of meaning, a moral battleground, a biosocial entity, an object of regulation and control, and a tool of resistance and change. We will then turn our attention to different kinds of bodies in distress and to the therapeutic responses they invoke (or fail to invoke) from healers, doctors, kin groups, aid workers, and state actors. Of particular concern will be those aspects of healing that challenge commonsense notions of how therapies work and where they may fall short. Specific concepts and topics to be covered include illness narratives, idioms of distress, structural and symbolic violence, culture-bound syndromes, nature/nurture debates, ritual healing, high-tech medicine, and humanitarianism.

ANTH244 Television: The Domestic Medium

Of all the mass media, television is the most intimately associated with domestic and familial life. Its installation in American homes over the postwar decade coincided with a revival of family life that encouraged an emphasis on private over public leisure. Most television is still watched at home, where viewing practices are interwoven with domestic routines and provide a site for negotiating family and gender relations. Television production is shaped at several levels by the images broadcasters and advertisers have of viewers' domestic lives: Broadcast schedules reflect socially conditioned assumptions about the gendered division of family roles; a common televisual mode of address uses a conversational style in which performers present themselves to viewers as friends or members of the family; and families or surrogate families figure prominently in the content of programming across a wide range of genres, including sitcoms, primetime dramas, daytime soaps, and talk shows. Sitcoms, in particular, have responded to and mediated historical shifts in family forms and gender relations over the past 50 years, and they will be a focus in this course. We will explore how television has both shaped and responded to larger cultural discourses about family and gender from the postwar era into the 21st century.

ANTH249 From Metropolis to Megalopolis

What is the urban experience today? Are the old European metropolises, the global cities of New York or Tokyo, and the new megalopolises of the Global South commensurate entities? What are the theoretical and methodological challenges we face in thinking about "the urban" today, given the vastly different histories, trajectories, and physical and social realities of cities around the world? This course is an introductory and interdisciplinary survey of urban theory. We will critically examine "the city" as a transhistorical category of analysis and focus on issues of anthropological concern regarding the experience and epistemology of urbanization and urban life. No prior background in urban studies is expected, but an interest in theory is a must.

ANTH250 Identity and "Pacha" (Land-Based Knowledge and Re-imagining Community) - Taught from Ecuador

This course is taught from Ecuador by our study abroad partner, Pachaysana.

According to indigenous Andean scholars, Pacha refers to the time-space continuum, or as the "everything around and inside us." This course asks

students to challenge their identities by broadening their epistemological and ontological lenses to see their individual and collective lives as they relate to Pacha. To synthesize this complicated process, we ask participants to examine who they are as related to the ever-changing ecology in which they live. For this course, ecology is approached broadly, referring to the Greek origin on the word oikos, meaning home. We take advantage of our virtual exchange and examine home as an interconnection of how we relate to "place and space," exploring our ecology as the triad of our immediate territory (Ilakta in Kichwa), our surrounding natural environment (allpa in Kichwa), and our global and pluriversal space (pacha). Throughout the course, we use an interdisciplinary lens to examine "who we are" as related to this diverse understanding of ecology, taking into consideration that our ever-changing environment includes an ever-changing human story. Readings are transdisciplinary, coming from the fields of anthropology, sociology, human geography, gender studies, ethnic studies, history, the arts, and development studies. Toward the end of the course, after examining certain theories and case studies, we will imagine the reconstruction of our identities contextualized to pacha, space, place, ecology, oikos, and home.

ANTH256 Anthropology of the Senses

How do we know what we know? Is seeing really believing? And what about hearing, smelling, tasting, and feeling? This course explores Anna Tsing's provocation to "look around instead of ahead," asking: what kinds of participatory observation of the senses help us identify what we know about the world? Through readings, lectures, short form writing, and field trips, we examine the role of the senses in forming what we know about ourselves and others. Writing and research assignments develop tools for documenting, analyzing, and communicating our senses and work towards a critical acknowledgment of sensory hierarchies. Our course readings consist of selections from theories of affect, sound studies, and food studies, as well as key texts in cultural anthropology in order to build an appreciation of the range of sensory information available to us and the strategies we use to communicate our sensory worlds. Our goal is to probe how ethnographic work sensitive to the multidimensionality of the human sensorium can discover and propose real strategies for human vitality.

ANTH257 Environmental Archaeology

Archaeological materials provide long-term records of how humans have modified past environments and how human societies respond to environmental change. In this course, students will learn how data from ancient plants, animals, and soils can be analyzed in order to draw interpretations about past human-environmental interactions. We will also discuss key topics in environmental archaeology, including the long-term environmental impacts of plant and animal domestication and debates over environmental causes for the "collapse" of civilizations such as the ancient Maya. The course will involve hands-on preparation and cataloging of plant and animal specimens to add to the Wesleyan Environmental Archaeology Laboratory comparative collections. Students must be available for one weekend class meeting to complete the first stage of animal skeleton preparation.

ANTH259 Development, Disasters, and Beyond

Development is one of the most important ideas of our time—it is a powerful way of organizing the world (Third and First Worlds, or North and South) and intervening in it to bring about certain kinds of cultural, political, and economic transformations. Our purpose in this course is to critically examine the ideas, practices, institutions, and effects of development through an anthropological lens. While development is certainly a potent way to exert power over and regulate Third World Others, it is also a fiercely contested space of struggle and a discourse of entitlement. Rather than position development as all bad or all good, this course aims to keep this messiness of development in focus and approaches it both as a project of rule and a project of rights. We will take up specific topics such as neoliberalism and structural adjustment, humanitarianism, dams, environment, and empowerment.

ANTH267 Black Religions in the Americas

This course will focus on the African-based religious systems that cultivated traditional ways to survive slavery, white supremacy, and state violence. We will focus on Vodou in Haiti, Regla de Ocha (Santería) and Palo Mayombe in Cuba, Obeah in Jamaica, and aspects of Black religions in the US. We will discuss questions of method and themes of political resistance, orality, secrecy, magic, "authenticity," commodification, and the ethics of representation. We will also look at the Black church and especially the rise of the Pentecostal movement in African and Afro-Caribbean spaces, as well as visionary Black religious thought.

ANTH279 Eating Others: Histories and Cultures of Animal Edibility

For many people, animals form a significant and cherished part of their diet. Indeed, humans have used other animals as sources of nutrients for hundreds of thousands of years. What can these animal-based dietary practices tell us about humans and their relationships with other animals? Of course, these inter-species relationships have varied as radically across time and cultures as the dietary practices that have shaped them. To better understand some of these practices and the relationships they generate, this course will explore the following questions: How did animal-based food practices develop from pre-domestication to the contemporary era of industrialized animal agriculture? How have cultural categories of "edibility" developed in different cultural contexts? What is meat, and how does it differ from inedible flesh? How has gender, class, race, sexuality, and other categories of difference intersected with and shaped animal consumption practices in different times and contexts? How has animal consumption shaped and been shaped by animal ethics, philosophy, and scientific knowledge production? How has large-scale animal consumption contributed to the ecological crises of the Anthropocene, and how have these in turn affected animal consumption practices? What is the future of animal-based food?

This course will use ethnographies, historical and legal analyses, and philosophical inquiries to examine the histories and cultures of animal edibility. Specifically, it will focus on topics including human evolution, animal domestication, slaughter practices, industrialized animal agriculture, indigenous ecological ontologies, hunting, dairy and egg consumption, cannibalism,

cultural conflicts over the edibility of specific species, and recent technological innovations that can produce animal products without animals.

ANTH285 Film and Anthropology

Film & Anthropology is an exploration of the cross-pollinating relationship between ethnographic and filmmaking methods and styles. This is, in part, an effort to understand the contributions of both to the observed and documented experience of cultural life. We will watch films weekly and discuss them, as well as respond to them individually in weekly critical précis. We will, in the course of these viewings, come to some consensus as to what we mean by ethnographic and cinematic elements. The films themselves will cross genre boundaries, running the gamut from "traditional" ethnographic films to various forms of documentary and experimental film that in some way address or explore what I consider ethnographic elements. We will cover canonical early ethnographic work (Gardner, Asch, Marshall), feminist experimental interventions in ethnographic film (Minh-Ha, Varda, Deren), and contemporary work that experiments with ethnographic elements, and we will synthesize various genres into new forms of long-form documentary, ethnofiction, and trance film (Marker, Oppenheimer, Sensory Ethnography Lab, Gonzalez, Rosi, Minervini, Kuchar). We will observe the progression of style through the 20th century into the 21st, with the various intellectual threads of post-structuralism, creating modifications of centering the experience and voice of the oppressed, narrative reflexivity/abstraction/unreliability, formal experimental editing styles, the decolonial method as filmmaking practice, and the historicization and interrogation of anthropology as a fraught discipline.

ANTH286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice

This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism--queer left, black radical, trans, immigration, prison abolition, and sex work--in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called "ivory tower," explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activism, the work of a radical imagination, art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization--past or present--of their choice.

ANTH290 Style and Identity in Youth Cultures

This course focuses on young people's engagements with commercially provided culture and their implications for identity formation. We begin in the postwar United States, when producers of symbolic goods, such as movies, music, and clothes, began aggressively tailoring products for young people; over the rest of

the 20th century and into the 21st, new youth-oriented cultural commodities and sites of consumption have been used by young people in diverse ways to define themselves in relationships to adult society and to other young people. We will examine young people's intensifying involvement with the cultural market, with attention to both the diversity of youth-cultural formations that have emerged within the United States and to the global circulation of Euro-American youth culture. Using case studies, we will consider the ways in which young people's consumption practices have both reinforced and transgressed intersecting boundaries of class, race, gender, and nationality. An overarching concern in the course will be to assess whether or to what extent particular cultural practices may help prepare young people for positions of privilege, reconcile them to structural disadvantages, or provide them with resources to challenge the dominant society.

ANTH295A Theory in Anthropology: Anthropology and the Experience of Limits

Theory in Anthropology courses are core courses for the major, designed to elucidate historical influences on contemporary anthropological theory. While precise topics may vary from year to year, the overall goal of the courses remains the same: to familiarize students with the main traditions from which the discipline of anthropology emerged and to explore the diverse ways in which contemporary anthropological practice defines itself both with and against them.

This course considers the possibilities of an anthropology of transgression, excess, and unreason. This is an anthropology of all things cultural that work outside the logic of function and utility--that is, of actions and events that, while being eminently social, exceed reason and rational explanation. We will take as our point of departure an understanding of political economy that no longer has production and rationality as its core principles but rather consumption and waste. For this "general economy," as Georges Bataille called it in opposition to a "restricted economy" focused on utility, he drew from the anthropology of his time and its study of societies organized around complex systems of gift-giving, collective ritual, and periods of wasteful consumption (through festivals, for example). Ultimately, Bataille sought to formulate a critique of the early-20th-century European political and economic order, which emphasized individualism, rationality, and profit and which, he believed, fostered disenchantment with liberal democracy, totalitarian impulses, and war and calamity.

Class readings and discussions will be organized around topics such as profitless expenditure and the festival; gift-giving and sacrifice; taboo and transgression; formlessness and abjection; sex and erotism; and subjectivity, excess, and the experience of limits. Students will develop research projects on these and other topics of their interest, which could include theoretical and ethnographic explorations of, for example, particular festivals, games of chance, religious experience, the writing of poetry, nonreciprocal giving (organ donation, surrogate motherhood), and the experience of extreme sports and high-risk tourism.

ANTH295B Theory in Anthropology: Anthropology of Affect

Theory in Anthropology courses are core courses for the major, designed to elucidate historical influences on contemporary anthropological theory. While precise topics may vary from year to year, the overall goal of the courses remains the same: to familiarize students with the main traditions from which the discipline of anthropology emerged and to explore the diverse ways in which contemporary anthropological practice defines itself both with and against them.

This semester, our topic is the anthropology of affect. Affect: to affect and be affected. Anthropologists and other social theorists from Durkheim onward have considered questions of bodies, sensation, emotion, and social change. In recent years, the "affective turn" in the humanities and humanistic social sciences has brought renewed attention to these dynamics. For some, affect is contrasted with emotion; it is potential or capacity, not set cultural meaning. For others, affect is contrasted with structure or form; it is bodily sensation or intensity--dynamic, energetic, mobile. And for others still, affect might enable us to grasp how it feels to inhabit a life world, a particular atmosphere, texture, sensuality, the feel of things.

This course explores the genealogy and range of theories of affect, foregrounding anthropology's distinctive contributions to and critiques of the study of affect. We'll discuss ways that centralizing affect might disrupt dichotomies of structure/agency, opening up modes of analysis that are not centered on cultural meaning-making, and enabling us to explore forms of life that exceed human subjects and socialities. Readings will tack between more theoretical essays

and ethnographic representations of affect, sensuality, mobility, and emotion. Weekly experimental sensoriums, designed to attune us to the world, are a central component of the course.

ANTH302 Critical Perspectives on the State

This course builds on Marxist, poststructuralist, feminist, anarchist, and cultural analyses to take a critical approach to the state--what it is and what it does. We will examine how the state is imagined by those who write about it and struggle against it. Where does the state begin? How do states act, and what are the consequences of these acts? How is rule consolidated and how are individuals and communities annexed to the project of rule? How do people engage with state acts and ideologies? We will read texts drawn from a variety of disciplines, including anthropology, feminist theory, political theory, philosophy, sociology, and geography, that examine the nature, everyday workings, and effects of state power. Drawing upon ethnographic examples from around the world, we will analyze how states are cultural artifacts that produce and regulate people's identities and bodies, reproduce social inequalities, and engender resistances of all sorts. Some of the topics we will discuss include bureaucracy, governmentality, the security state, the prison industrial complex, terror and militarism, law and justice, citizenship, democracy, refugees, anti-state movements, the "man" in the state, and welfare and post-welfare politics.

ANTH303 Ritual

Religion can be defined through beliefs or traditions or texts, but it always takes physical form through ritual. Ritual is the one universal in religion, but the question of how to understand ritual is possibly the most contested question in the study of religion. Can a ritual be read like a text? How do symbols produce effects, and how should we understand these effects? What is performative speech and how does it work? How does ritual behavior reflect and shape social relationships? This course introduces students to the major approaches to the study of ritual. The readings draw heavily, but not exclusively, on anthropological approaches to ritual, both classic texts and recent innovative approaches focusing on language and embodiment. Students will pick a ritual that they are interested in and will attend that ritual several times over the semester, conducting practical fieldwork exercises and applying the theories we read in class. The assignments culminate in a paper in which students will be required to analyze "their" ritual using the theory we read together in class. For these assignments, students are encouraged to define ritual broadly and creatively. The goal of the class is to gain an understanding of theoretical approaches to ritual by applying these theories to the social world around them.

ANTH304 Race, Ethnicity and Indigeneity in the Middle East and North Africa

Who holds power in the Middle East and North Africa (MENA)? How is it wielded? Over whom? This course interrogates the social and cultural lives of empire in the colonial and postcolonial MENA. We explore the afterlives of the Arab, Persian, and Ottoman Empires on minority communities; the affects and effects of US and European colonial intervention; and the discriminatory

practices of new regimes of neoliberal capital in the region. Course readings ask students to examine and to learn about Orientalism and Islamophobia; neo-imperialism; settler colonialism and occupation; underdevelopment and de-development; dependency; the kafala system; colorism and fairness; anti-blackness; and the historical marginalization of indigenous groups like Berbers and Kurds. Drawing on historical texts, ethnographic works, and analyses of race, indigeneity, labor, and migration alongside contemporary activist efforts around housing, the environment, and education, we will seek to understand and deconstruct the flows of power in and outside the MENA region.

ANTH306 Mobilizing Dance: Cinema, the Body, and Culture in South Asia

This course focuses on questions of "mobility"--cultural, social, and political--as embodied in two major cultural forms of South Asia, namely "classical" dance and cinema. Using Tamil cinema and Bharatanatyam dance as case studies, the course focuses on issues of colonialism and history, class, sexuality and morality, and globalization. The course places the notion of "flows of culture" at its center and examines historical, social, and aesthetic shifts in these art forms over the past 150 years.

The course is both studio- and lecture-based. It includes learning rudimentary Bharatanatyam technique, watching and analyzing film dance sequences, and participating in guest master classes in ancillary forms such as Bollywood dance and Kathak (North Indian classical dance). The studio portion of this course is for beginners, and no previous dance experience is necessary.

ANTH310 Ethnographic Encounters: The Americas between Darkness and the Good

Ethnography is both a primary research method and a genre of text within anthropology. As a research practice, it involves "deep hanging out" among a group of people in order to understand how they organize, make sense of, and live in the world. As a form of writing, it seeks to convey ethnographic insights to wider academic and non-academic audiences. Ethnographic texts are not mere descriptions of people's lives, however; they are deeply informed by theory, disciplinary trends, and the historical contexts within which they are produced.

This course will take a critical, hands-on approach to understanding ethnographic theory and practice. Beginning with canonical texts from the early 20th century, we will track how ethnographic standards have been defined, contested, modified, and reworked over the course of a century. As such, students will gain an appreciation for the range of ethnographic modalities, from salvage and interpretive ethnography to more recent approaches that privilege critical, morally engaged, postmodern, and postcolonial perspectives. While the temporal lens of the course will be broad, spanning almost a century, the geographical focus will be limited to the continents of North and South America. Thematically, we will explore three intersecting topics that are highly relevant--but by no means exclusive--to "the Americas." They include (1) colonialism, health, and subjectivity; (2) the workings of neoliberalism; and (3) ethnography between "darkness" and "the good." The hands-on portion of the course will allow students to apply what they learn during the semester toward designing and implementing their own ethnographic research project.

ANTH313 Producing and Performing Anthropology

This course examines the various modes through which anthropology can and has been performed and produced. Partially exploring the historical relationship between film, museum curation, and ethnography, while also looking toward how anthropology has verged into other media such as the audiovisual and digital, this class pairs reading ethnographies with practical projects, which could take performance, written, audiovisual, or even web forms. What does it mean to make an ethnographic website, for instance, or write a performative ethnographic text? How does this differ from a museum, and how are the history and practices of curation related to anthropology? This course draws from theoretical positions in the discipline as well as performance and artistic production, and includes in-class/virtual visits from figures in this field across the U.S., Europe, North Africa, and the Middle East, aimed at fostering opportunities for more long-term mentorship and collaborations.

ANTH316 Critical Global Health

What does it mean to approach global health as not an applied science but an ethnographic object? This course will explore this question by bringing critical, social science perspectives to bear on global health issues and interventions. This course covers three areas of scholarship. First, we will examine the processes by which social inequalities produce patterns of health and disease in globalizing contexts. This will be followed by an interrogation of the term "global health," in which we will trace its emergence as a discourse and enterprise and unpack its contested meanings. While some view global health as a clinical practice, others conceptualize it as a business, security concern, charitable duty, or human right; yet another camp probes the term's ideological construction. We will consider how such vantage points are underpinned by cultural assumptions and ethical agendas that, in turn, can determine how, and to whom, care is delivered. As a third area of inquiry, we will investigate the implications and unintended effects of doing global health by probing such questions as, When are good intentions not good enough? How useful is biomedicine for alleviating locally defined problems? Under what conditions does global health exacerbate the social inequalities it seeks to overcome?

ANTH317 Culture and Consumption

This seminar examines the formation, development, and contemporary forms of cultures of consumption in EuroAmerican societies and their global exportation and adaptation to diverse local situations. The course is premised on the idea that the spectacular and continuous rise of commodity consumption that began in the late 17th century is as much a cultural as an economic process, one that both shaped and was shaped by shifts in ideas about personal and social development. Once associated with negative meanings of waste, excess, and depletion, consuming, especially of clothes, domestic goods, new foods and beverages, and artistic forms, came to be seen as a critical dimension of self-fashioning and sociability. While the course situates these developments in the context of expanding markets and new modes of distribution, it will emphasize the post-purchase moments of consumption, that is, the ways in which consumers incorporate goods into their everyday lives. Among the themes we will consider are the gendering of consumption, the social dynamics of taste, commodity consumption and ideologies of authenticity, consumption and social inequality, the consequences of consumption, and the emergence of the ethical consumer.

ANTH318 Global Indigenities

This course focuses on theories of indigeneity in examining indigenous peoples' lives, cultural practices, resistance and activism. The term "indigenous" has had varied and contested genealogies across time, geography, political contexts, and fields of study. Although dominant societies tend to claim that indigenous peoples are either entirely extinct due to genocide or diluted due to racial and cultural mixing, indigenous refers to the wide range of relations to region and nation of the more than 370 million indigenous people who are spread across 70 countries worldwide. Some indigenous peoples define themselves by their historical continuity with precolonial and presettler societies; others by ties to territories and surrounding natural resources; others in relation to distinct social, economic, or political systems; and still others by their distinct languages, cultures, and beliefs. Attempts at the historical erasure and subsequent memorialization of indigenous peoples serve the colonial goals of refuting indigenous claims to land and rights and have been the primary means by which dominant populations asserted their own modernity while denying it to putatively "primitive" indigenous peoples. Today, nation-states continue to impose this notion of the "pre-modern" savage as a mechanism of control in their negotiations with indigenous peoples' legal status and land rights. This course will focus on a range of cases studies including indigenous peoples in North America contending with the states of Canada, the United States, and Mexico; Indigenas encompassed by select countries in South America; Aboriginal peoples in Australia, the Sami (across various countries in Scandinavia), the Ainu (Japan), the Maori (New Zealand), and Palestinians (Israel-Palestine). Topics will include indigenous peoples' struggles for autonomy and survival; self-determination and political status under international law; the UN Declaration on the Rights of Indigenous Peoples; the UN Permanent Forum on Indigenous Issues; land struggles and the protection of natural resources; cultural resurgence and revival of select traditions; and varied forms of political resistance and decolonization.

ANTH319 Toxic Sovereignities: Life after Environmental Collapse

What politics emerge at the borders of life and nonlife? Representations of the human species as being on the brink of environmental collapse have become increasingly common, as the specters of climate change and cataclysmic environmental disaster seem to bear down ever more heavily upon us. At the same time, the increasing entanglement of human bodies with various forms of chemical and otherwise man-made pollutants presage a slightly different future, one in which, if the human species does not outright disappear, it will be fundamentally transformed. This course explores different forms of political and social action that have emerged in response to these seemingly epochal shifts with a particular emphasis on the ever-mutating concept of sovereignty. Our goal is to explore the ways in which the shifting borders between human life and its artificially produced absence can serve as productive sites of new political forms and transformations of older ones, even as they also generate tremendous social and cultural anxiety.

ANTH355 Social Movements Lab

What can we learn from social justice activists about the economic, political, and environmental struggles facing us today, including mass incarceration, immigration, economic precarity, and the violence of the state? Where are the critical sites of queer, trans, left, feminist, black, indigenous, disability, and environmental struggle? How do these movements converge, and where do they diverge?

This participatory, interdisciplinary research seminar enables you to embark on an independent, semester-long research project on the social movement or activism of your choice. We'll start with some foundational reading on multidisciplinary social movement research; archival, ethnographic, and participatory methodologies; and histories of social justice struggles in the U.S. The remainder and majority of the seminar is laboratory style, taking shape around your particular projects. Each week, we will collaboratively analyze one or two projects, mapping out and comparing methods, goals, visions, struggles, and contexts of the movements under study. Our goal is to understand a range of social justice activisms in their economic, political, and historical context, with an eye toward integrating activist scholarship and social change.

The activism you research can be contemporary or historical; local, national, or global; and can take any shape: direct action, community organizing, activist philanthropy, art as activism, etc. You do not need previous experience or activist contacts for this course—just passion and the desire to learn collaboratively!

ANTH361 Calderwood Seminar in Public Writing: The Dark Turn in Television Storytelling

This course, offered in association with the Calderwood Seminars in Public Writing, examines a certain tendency in contemporary television storytelling. Taking the debut of "The Sopranos" in 1999 as a benchmark, we will explore the emergence in dramas and comedies of a dark, uncertain, pessimistic, or disillusioned address within a medium long known for its reassuring tone. We will consider the industrial and social conditions for this tonal shift, as well as the role it has played in elevating public perceptions of television's cultural value. The course will use the "beat model" developed in certain Calderwood Seminars, where students become "experts" in specific bodies of material. In this case,

students will select a particular series on which they will focus over much of the course.

ANTH362 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence?

The class will also encourage students to think about the ethics of reparation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and reparation?

ANTH392 Sacrifice

Sacrifice entails the surrender, destruction, or self-denial of something precious or desired in exchange for peace, power, prosperity, freedom, or edification. Destruction by sacrifice, says anthropologist E. E. Evans-Pritchard, is an act of giving of the self that must be costly and "necessarily reciprocated." In sacrifice, humans come face-to-face with death without dying. Through a collection of interdisciplinary readings, this seminar examines the implications of this ruse through the themes of war, animal and human sacrifice, asceticism, acts of political immolation, big-game hunting, high-altitude mountaineering and extreme sports, and the experience of excess in festivals such as Burning Man.

ANTH395 The Anthropology of Religion

What do we study when we study religion? We can observe practices, record speech, examine objects and actions—but what do these things tell us? If religion is about belief, what can we say about belief from documenting actions? Perhaps we must conclude that religion is not about belief, but if so, are in danger of "explaining away" the very phenomena we seek to understand? This course will introduce students to a cross-cultural, comparative perspective on religious practice and belief in order to critically reflect on the role of methodology and research design in the study of religion and the social sciences more broadly. How do we know what we know? How do we plan research in order to find out what we want to know? The course has a significant methods component, which, during the Spring semester 2020 will focus on online ethnographic methods. Students will be expected to do (partially) online field research exercises and prepare a methodology research proposal for a fictional or real project as a final assignment. Methodological exercises will be interspersed with ethnographic texts that allow us to reflect on how religion is studied, experienced, and explained. Students planning theses or other research projects with an ethnographic component, in any social science field, may use the class and the final assignment to conceptualize and plan their projects.

ANTH398 Queer/Anthropology: Ethnographic Approaches to Queer Studies

What are the many ways in which queerness obtains meaning across cultures? What does it mean to have a queer relationship to one's world? Queer/Anthropology traces the history and present state of ethnographic studies of queerness, defined here as non-heteronormative sexualities and gender embodiments. We examine the way in which heteronormativity is established as integral to hegemonic order and the manner in which it functions within Western armchair ethnographic studies and sexology of the early 20th century. We look at the binary system as a mode of organization and the way in which anthropological studies of sexuality and gender have nearly always challenged the presumed universality of these modes. We read contemporary ethnographic work in order to compare and contrast different cultures' usage of sexuality and gendered categories in relation to various contexts, such as colonialism, race/racism, capitalist and non-capitalist economic and political systems, cosmology/religion, and regionality/place.

ANTH400 Cultural Analysis: Senior Capstone Seminar

This seminar is required for all senior sociocultural anthropology majors who intend to write honors theses and is very strongly recommended for those writing senior essays. It is designed to enable students to pursue individual research projects in a group context and with attention to debates on the nature of anthropological interpretation. Each student gives a series of presentations on her or his own research project to the group; equally important is engaging with and offering constructive criticism of the projects presented by others.

ARABIC (ARAB)

ARAB101 Elementary Arabic I

This course is a first-year elementary I course in modern standard Arabic (MSA) that will introduce students to the basic skills of reading, writing, speaking, and listening. In this level, the class will focus on speaking as an effective way of learning (speak it to learn it). Students will learn Arabic letters and their sounds, write and create basic words and sentences, and be able to converse basic dialogues comfortably in the target language. Oral drills and speaking activities will be done in the classroom, and the class will be conducted primarily in Arabic.

Offering: **Host**

Grading: **Amp Graded**

Credits: **1.50**

Gen Ed Area: **HA-LANG**

Prereq: **None**

ARAB102 Elementary Arabic II

This course is a second-semester course in modern standard Arabic (MSA) that will continue to stress the basic skills of reading, writing, speaking, and listening. The course will focus on speaking as an effective way of learning (speak it to learn it). Students will continue to learn MSA grammar, write and create paragraphs, and begin to converse comfortably in the target language. Students are expected to develop better listening, speaking, reading, and writing skills in Arabic and to become familiar with Arabic culture. Oral drills and speaking activities will be done in the classroom, and the class will be conducted primarily in Arabic.

Offering: **Host**

Grading: **A-F**

ARAB201 Intermediate Arabic I

This course is a second-year, lower intermediate course in modern standard Arabic (MSA) that will continue to focus on the four basic skills of reading, writing, speaking, and listening. In this level, students will be able to speak enough Arabic to communicate at a basic level with a native speaker on a variety of topics. Students should be able to write simple texts on everyday themes and read uncomplicated authentic texts, such as a newspaper article on a familiar topic and storybooks. Students will continue to be familiarized with aspects of contemporary life and culture in the Arab world. Oral drills and speaking activities will be done in the classroom, and the class will be conducted primarily in Arabic.

Offering: **Host**

Grading: **Amp Graded**

Prereq: **ARAB101 AND (ARAB102 OR ARAB201)**

ARAB301 Advanced Arabic I

This first semester of third-year Arabic will continue to emphasize the four skills in language learning: reading, writing, speaking, and listening. In addition to the Kalila Wa Dimna fables, students will also read children's stories, literature, and media articles from the Arab world.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-LANG**

Prereq: **None**

ARAB311 Introduction to Colloquial Levantine Arabic I

This course offers students an introduction to the spoken Arabic of the Levant (Syria, Lebanon, Jordan, Israel, and the Palestinian territories). One of the difficulties facing nonnative speakers trying to master Arabic is that very few Arabs can carry on a conversation in modern standard Arabic, so students must be familiar with a colloquial dialect as well as the standard literary language to communicate effectively in Arabic. Although Levantine Arabic is not as widely spoken as is the Egyptian dialect, it provides a useful entry for English speakers into colloquial Arabic, as it is about halfway between the Egyptian dialect and that spoken in Iraq and offers a useful bridge to mastering either dialect. The text for this course uses the Arabic alphabet. Students need to have a thorough knowledge of the Arabic alphabet and writing conventions to take this course. As much of the vocabulary used by the speakers of the Levantine dialect is derived from standard Arabic, this course will help build students' knowledge of basic Arabic vocabulary.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-LANG**

Prereq: **ARAB201**

ARAB380 Arabic in Translation: Arabic-English & vice versa (CLAC.50)

This course is aimed at introducing students of Arabic, who are already advanced in the Arabic language and have a decent command of it, to the art of translation--namely, translation between Arabic and English. After an overview of translation concepts and techniques, we will study and tackle samples from news media, literature, publicity announcements, novels, and a wide range of actual translation assignments. The course will be conducted in Arabic, except for the parts where English has to be used as part of the translation processes.

ARCHAEOLOGY (ARCP)

ARCP153F Single Combat in the Ancient World (FYS)

This course celebrates the clash of warriors in warfare, sport, and spectacle in the classical world. Using primary sources and archaeological evidence, the class will survey traditions of combat in ancient art, literature, and society, beginning with Greek and Near Eastern epic; the modes of warfare in Greek society; ancient Olympic combat sports; and, finally, Roman gladiator spectacle. We will examine the role of violent sport in Greek and Roman society, the reception of the competitors, and the use of these events for political or nationalistic ends. Throughout the course we will explore the flexibility of concepts such as military ethics, "western" warfare, violence, honor, and excellence, both in the classical world and in our modern lives.

ARCP201 Art and Archaeology of the Bronze Age Mediterranean

This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Identical With: **CLST201, ARHA202**

Prereq: **None**

ARCP202 Paleoanthropology: The Study of Human Evolution

Paleoanthropology is the study of human origins, of how we evolved from our apelike ancestors into our modern form with our modern capabilities. Drawing on both biological anthropology (the study of fossils, living primates, anatomy, genetics, and human variation) and archaeology (the study of material culture, such as tools, art, food remains), this course will examine what we know about our own evolutionary past and how we know it. The history of paleoanthropology--how our views of our past have changed--will also be explored. The course will include hands-on laboratory sessions utilizing fossil casts, stone tools, and other materials from the archaeology and anthropology collections.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ANTH**

Prereq: **None**

ARCP203 The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology

New analyses of ancient DNA preserved for millennia in bones and soils have revolutionized the field of archaeology. Suddenly, archaeologists have gained new insight into human origins, past population migrations, ancient diseases, plant and animal domestication, and even the factors that contributed to the extinctions of megafauna such as woolly mammoths. Recent genetic case studies will provide a lens for learning about the archaeology of diverse world regions and time periods, from Oceania to Mesoamerica and from the Paleolithic through recent history. Topics will include: human evolution and genetic relationships between humans, Neanderthals, and Denisovans; the peopling of the globe; extinction and de-extinction; domestication and the origins of agriculture; paleodiseases and paleodiets; and ethics in genetic research.

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ARCP**

Identical With: **ENVS203, ANTH212**

Prereq: **None**

ARCP204 Introduction to Archaeology

What can fragments of pottery, stones, and bones reveal about the lives of people who lived thousands or even millions of years ago? What does the archaeological record reveal about human evolution, past human diets and health, ancient socioeconomic systems, and the emergence of early cities? And how can we preserve archaeological sites and artifacts for future generations? This course will introduce students to the interdisciplinary field of archaeology. We will discuss key methods and principles that archaeologists use to study the human past while covering a survey of world prehistory from the earliest stone tools to the archaeology of contemporary material culture. Students will have the opportunity to examine real archaeological artifacts--including artifacts excavated from historic Middletown--and will be encouraged to think critically about the ways that archaeology informs our understanding of both the past and the present.

ARCP214 Survey of Greek Archaeology and Art

This course introduces the art and archaeology of Greek civilization from Mycenaean palaces of the Bronze Age, to tombs of warriors and battlefields of

Marathon, through the theatrical and political centers of democratic Athens. Throughout the semester we will survey the major archaeological sites (civic and cultic) for each period and study development of sculpture, painting, ceramics, and architectural trends in light of political (propaganda!) and social changes. More than a tour of monuments and mosaics, however, this course will show students how to interpret and apply literature, material science, anthropology, and art history to address archaeological questions, and to consider the relationship (ancient and modern) between social trends and material evidence.

This course counts toward the archaeology/archaeology science track.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-CLAS**

Identical With: **CLST214, ARHA203**

Credits: **1.00**

Gen Ed Area: **HA-CLAS**

Identical With: **CLST234, ARHA225**

Prereq: **None**

ARCP242 Tablets, Temples, and Cities: Near Eastern Art and Archaeology

History starts in the Near East with many firsts in human culture: domestication, writing, cities... Throughout its long history, the ancient Near East has produced a unique corpus of material culture, architecture, and textual records. In this course, we will survey the art and archaeology of the ancient Near Eastern civilizations with contextual information about the cultures that created them.

Every week we will progress chronologically and will explore broader socioeconomic, political, and cultural changes by discussing art historical, archaeological, and textual evidence. We will look at examples from Anatolia, Mesopotamia, and the Levant, and compare these to one another. Students will gain a larger understanding of commonalities and differences in the cultural expressions of these cultures. The last section of this course will be dedicated to current issues concerning the archaeology and cultural heritage of the Middle East.

This course will also have various hands-on components: We will learn about textile production by using spindle whorls, learn about cuneiform writing by

making clay tablets, and create our own seals based on ancient Near Eastern imagery and mythology.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ARCP**

Prereq: **None**

ARCP244 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt

This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

ARCP245 Climate, Change, and the Ancient World

Climate change has recently become shorthand for Global Warming, the clearcutting of rainforests, and the burning of fossil fuels. Yet while anthropogenic climate change on the global scale is indeed a modern phenomenon, climate change itself is nothing new, and human societies have been negotiating their natural world for millennia: adapting to changing conditions by inventing new technologies, adopting new social structures, and even modifying the landscapes around them.

Examples from around the world, including Africa, the Mediterranean, Australia, the Americas, Asia, and the British Isles, will be used to examine how past societies perceived and interacted with their environments. Aspects of collecting, analyzing and interpreting various climate proxies, and the theoretical foundations for interpreting their relevance to archaeological questions, will constitute major components of this course.

ARCP248 Who Owns the Past? Cultural Heritage, Archaeology, and Politics

"Who controls the past controls the future; who controls the present controls the past." - George Orwell, 1984

When Orwell wrote these words, there was no ISIS destroying non-Islamic monuments, no Saddam Hussein claiming to be a Babylonian king, and no cultural heritage news appearing on our Facebook feeds every day. Yet this statement is still as relevant as it was in Orwell's dystopia. Cultural heritage is an important part of state ideologies, national identities, and politics in the Middle East. The idea of controlling or owning the past is not new however; even ancient Near Eastern kings and rulers used their heritage or their conquests over older temples and monuments as a tool to claim political power.

In this course students will become familiar with the concept of cultural heritage, both tangible and intangible; learn about cultural heritage institutions and laws;

and understand how these institutions protect heritage in different situations. By looking at past and modern case studies from Egypt, Turkey, Iraq, Iran, Afghanistan, Palestine, Israel, Syria, the U.S., and examples from other parts of the world, students will learn about the role of archaeology, colonialism, international politics, and indigenous cultures in creating, identifying, and protecting (or destroying) cultural heritage.

ARCP257 Environmental Archaeology

Archaeological materials provide long-term records of how humans have modified past environments and how human societies respond to environmental change. In this course, students will learn how data from ancient plants, animals, and soils can be analyzed in order to draw interpretations about past human-environmental interactions. We will also discuss key topics in environmental archaeology, including the long-term environmental impacts of plant and animal domestication and debates over environmental causes for the "collapse" of civilizations such as the ancient Maya. The course will involve hands-on preparation and cataloging of plant and animal specimens to add to the Wesleyan Environmental Archaeology Laboratory comparative collections. Students must be available for one weekend class meeting to complete the first stage of animal skeleton preparation.

ARCP258 Archaeometry: How to Science the Heck out of Archaeology

What does it mean to have meteoric elements in "Trojan War era" weapons? How should we understand "Barbarian Ware" of supposed invaders when we now identify local clay fabrics? This seminar is an introduction to the various classes of material culture and the scientific methods utilized today to answer such elusive archaeological questions. We will get hands-on experience with chromatography to identify organic commodities such as perfumes and wine, microscopy to characterize ceramic fabrics and technology, and XRF spectrometry to analyze various inorganics such as colored pigments, bronze implements, and lithic monuments. Based on this knowledge, class sessions will present and assess well-known case studies. We will discuss the conservation of material culture in order to better understand and preserve our past. What should a curator do with deteriorating Roman glass? Should a Preclassic Maya vessel with chocolate be cleaned for display? Is an Egyptian ushabti authentic? As a final project, students in close consultation with the instructor will conduct background research on a cultural artifact of their choice and design a program of archaeometric analyses to produce a poster that addresses intriguing archaeological questions of their own.

ARCP260 Art and Archaeology of Ancient India

This course is an introduction to the art and material culture of ancient India, from prehistory through the formation of the classical tradition in the fourth century CE. The broad swath of human experience covered necessitates a thematic approach, focusing on key moments, cultures, object types, and methodological approaches, arranged in a roughly chronological fashion. Thematic units may vary somewhat from year to year, but are likely to include: the meaning and use of the carved stone seals of the Indus Valley civilization;

the impact of the Vedic Aryas on the development of Indian ritual and imagery; how to read the iconographic language of the "plant and animal style" in decorative sculpture; the meaning and significance of the Asokan pillars; and the architecture and ritual of Buddhist monastic life in the cave monasteries of western India.

ARCP267 Museum Collections: Ethical Considerations and Practical Applications

Serving as a broad overview to the practice of museology, this course introduces students to theories supporting the foundation of museums and the stewardship efforts found within collections. Topics covered will include the origins of museums and collecting, and philosophies behind historic and current museum policies. Ethical considerations surrounding highly publicized issues such as looted artifacts, repatriation, and cultural patrimony will also be covered. Finally, students will explore the practical aspects of creating and sustaining collections, preservation of objects, and interpretation and exhibition development. Although topics covered in this course will apply to a variety of museums, the general focus will be on anthropology and archaeology collections. Readings and class discussions will be supplemented with hands-on activities using the Wesleyan University archaeology and anthropology collections.

ARCP285 Off with its Pedestal! The Greek Vase as Art and Artifact

This course explores the dual role of the Greek vase--as objet d'art and as material culture. The first half of the course will trace the origins and development of Greek vase painting from Mycenaean pictorial vases to the masters of Attic Red Figure, examining the painters, the themes, and (often titillating!) subject matter in its social and historical context. The second half will focus on the vase as an artifact and tool for reconstructing social values and economic trends throughout the Mediterranean. We will look at rip-offs, knock-offs, and how much Attic pottery was really worth, and evaluate the use of pottery as an indicator of immigration or cultural imitation. The course will include work with 3D scanning and digital optimization, as well as the construction of a virtual museum exhibit.

The course falls under the Archaeology/Archaeological Science track of the Classics/CCIV Major requirements.

ARCP290 Unearthing Early China: Art and Archaeology

This course introduces early China by examining major archaeological discoveries from prehistory through the second century CE. We will analyze the formal and material features of early Chinese artifacts from important archaeological excavations at sites such as Liangzhu, Anyang, Zhouyuan, and Mancheng. We will discuss the ways in which these artifacts and archaeological sites demonstrate early Chinese cosmological beliefs and ritual practices, especially notions related to heaven, afterlife, and the transition from ancestor worship to the pursuit of personal welfare in immortality. In addition, we will study the iconography and symbolism of objects found in these archaeological discoveries, which would

serve as a foundation for the inception of visual arts in the later periods of Chinese history.

ARCP291 East Asian Archaeology

This course will introduce students to remarkable archaeological discoveries from East Asia, focusing on the archaeology of ancient China, but also including finds from Japan, Korea, and Mongolia. Beginning with "Peking Man" and Asia's earliest hominin inhabitants, we will explore the lives of Paleolithic hunter gatherers, the origins of domestic rice and pigs, the emergence of early villages and cities, the origins of writing, ancient ritual systems, long-distance interactions through land and maritime Silk Roads, and the archaeology of Chinese diaspora populations living in the 19th Century United States. We will also consider the current state of archaeological research in East Asia, focusing on site preservation, cultural heritage management, and the political roles of archaeology.

ARCP329 Roman Villa Life

This seminar will explore life in the Roman countryside, from the luxurious suburban villas near major urban centers to working estates in Italy and the Roman provinces. The course will begin with a general survey of Roman villa life and then move to a more focused inquiry into specific topics including art and architecture, production, slave life, and transportation. Readings will be drawn from ancient literary sources, inscriptions, and modern social and archaeological studies. The course is intended for students from a variety of disciplines and backgrounds, but some knowledge of the Roman world is recommended.

ARCP341 Visualizing the Classical

This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen--through landscape, sound, light, functionality/monumentality, and spatial relationships--shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction

of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

ARCP350 Animals in Archaeology

Food, foe, friend: Animals play all these roles, and more in their relationship to humans, in the past as well as the present. This course will explore how zooarchaeology--the study of animal remains (bones, teeth, and shells)--allows us to reconstruct ancient human-animal-environmental interactions. We will cover a range of topics and analytical techniques, including hands-on sessions for the identification and quantification of faunal remains. By the end of the course, students will be able to identify every bone in the mammalian skeleton and distinguish between the bones of common non-mammalian taxa. Additional topics will include ancient DNA in zooarchaeology, bone stable isotope analyses, human-caused extinctions, animal domestication, bone artifact production, and animal sacrifice.

ARCP352 Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean

This course brings a blend of ethnographic, environmental, philological, and scientific frameworks to the study of ancient medicine. For the first half of the class, students will explore the theories and concepts of medicine and the body in classical antiquity from Hippocrates to Galen. Students will tackle case studies (e.g., treatment of war wounds, epilepsy, gynecological ailments) and suggest appropriate treatments. The second half of the course will focus on medicinal plants as discussed in Dioscorides, considering their ecology, archaeology, and phytochemistry, with hands-on lab modules in which students will learn how to extract and analyze bioactive compounds of medicinal plant species. In final group-based projects, students will present a "plant biography," tracking the arc of the medicinal and cultural uses of a particular species from the ancient Mediterranean to the present day.

ARCP380 Relic and Image: The Archaeology and Social History of Indian Buddhism

This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (1st--3rd century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts and then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic

populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha's relics, pilgrimage to the sites of the Eight Great Events in the Buddha's life, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodhi Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

ARCP382 Archaeology of Money: Numismatics and GIS

In many parts of the world, lost coins numbering in the millions lie buried in the ground. Periodically, some of these coins come to light in the course of plowing, digging to repair a water main, or prospecting with metal detectors. These "treasure-trove" finds--also known as coin hoards--provide the archaeologist of money with rich evidence of how money was actually used in pre-modern times. Which coins occur together in a hoard; the numbers in which they occur, and the spatial patterning of their findspots all speak volumes about pre-modern economies, circulation patterns, and beliefs about money and value. In this seminar, we explore the evidence of coins and coin hoards, studying them from numismatic perspectives (the images and legends on a given coin type, metals used, weights, fabric), metrological and denominational perspectives (what coins reveal about systems of weights and denominational structures), and statistical approaches (for example, studying patterns of weight loss as indicators of the velocity of circulation and degree of monetization in a given society). In the first half of the course, we focus primarily on a series of case studies and hands-on, in-class lab sessions based on actual numismatic materials, primarily drawn from ancient and medieval South Asia, and classical Greece and Rome. In the second half, students will learn how to use ArcGIS and will complete a collaborative group project in which they design and construct a geodatabase for the analysis of ancient or medieval Indian coin hoards. No prior knowledge of either numismatics or GIS is required.

ARCP390 Making Rome: Monuments of Life in Ancient Rome

The Colosseum, the Circus Maximus, and the Forum are just the most famous monuments to adorn the ancient city of Rome: its streets and temples were cluttered with honorific statues, dedications, and inscriptions; monumental fountains marked the terminus of the great aqueducts supplying the city and its public baths; shops and markets jostled with shrines and workshops in the public plazas; and public works like harbors and warehouses ensured a steady flow of food, wine, and materials into the city. Through in-depth research into the literary and archaeological record of Rome students will examine these monuments in the context of their original urban spaces and reconstruct them digitally or through other visual and written media.

ARCP421 Undergraduate Research, Science

Advanced students in archaeology have an opportunity to work intensively with departmental faculty to contribute to a variety of ongoing faculty research projects. These collaborations offer the chance for students to refine their research skills, gain exposure to conservation and research methods outside the basic curriculum, and work towards tangible research outcomes. Such outcomes may include research posters, creation of online databases, contributions to published works, contributions to or solo exhibit designs, or senior essay/thesis projects. Faculty projects vary from year to year but currently include studies in Mediterranean palaeoclimate, lab-based scientific study and digital modeling of archaeological artifacts, organic residue or ceramic studies (Dr. Birney, the OpenARCHEM project), or museum research projects in the Wesleyan Collections (which comprise approximately 35,000 objects), cataloging and researching artifacts (Dr. Murray, Wesleyan Collections). Participation is POI only. Contact the Archaeology Program Chair for more information.

ART HISTORY (ARHA)

ARHA109 Introduction to Western Art I: Ancient to Medieval

This course introduces the art and architecture of the Western world during the ancient and medieval periods. The artistic traditions of the Near East, Europe, and the wider Mediterranean will be surveyed from the prehistoric era to c. 1400 CE. Questions of style, content, function, and cultural and historical context will be examined, in addition to issues of religion, rulership, class, luxury, and the definition of art within its ancient and medieval milieus.

Offering: **Host**

Grading: **OPT**

Identical With: **MDST131**

Prereq: **None**

ARHA110 Introduction to Western Art II: Renaissance to Modern

This course surveys the development of Western art from the Renaissance through the modern period. We will examine art's changing status within specific

social and artistic contexts: from the Church and court of the Renaissance, through the formation of art academies in the late 16th century, to the development of an increasingly individualized artistic practice that led to the formation of an avant-garde. Classes will be organized chronologically and touch upon the following themes and ideas: politics, religion, and patronage; perception and experience; artistic identity and originality; relationships between artistic media; and the rise of a public sphere for art.

ARHA127 Venice and the Renaissance

Venice -- a city built almost impossibly on a forest of stilts sunk into the mud of the lagoon and buttressed by powerful myths of divine origins, permanence, and prosperity - produced some of the most spectacular works of Renaissance art and architecture. This introductory-level course on the art and culture of Venice's "golden age" considers the works of artists such as Carpaccio, Bellini, Giorgione, Titian, Veronese, and Tintoretto and architects such as Codussi, Sansovino, and Palladio in the context of the city's unique setting, social and governmental structure, cultural and political milieu, and larger geopolitical significance. It also positions Venice's artistic production within the broader framework of early modern Europe, exploring its connections with Byzantium and the Islamic world. The course also introduces students to key issues and methods of art history.

ARHA140F Van Gogh and the Myth of Genius (FYS)

This seminar will investigate in depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth-making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. We will both investigate the formation of this myth and view it critically, balancing it against the artist's own account of his career in his paintings and prodigious correspondence. Van Gogh's extensive, insightful, and fascinating writing begs the question of how one should treat an artist's statements when interpreting his works. We will also examine the role of biography in art. Finally, rather than viewing the artist as an isolated creator, we will situate his work within the artistic landscape of late 19th-century Europe, and especially France, where he spent his most productive years as an artist, 1886--1890.

ARHA151 European Architecture to 1750

This course is an introduction to architecture and related visual art as an expression of premodern Western European civilizations, from ancient Greece through the early 18th century, including Roman, Early Christian, Byzantine, early medieval, Romanesque, Gothic, Renaissance, and Baroque architecture, landscapes, and cities. The focus is on analysis of form in architecture and the allied arts. Emphasis is on relationships between style and patronage. In each era, how does architecture help to constitute its society's identity? What is the relationship between style and ideology? How do architects respond to the works of earlier architects, either innovatively or imitatively? How do patrons respond to the works of their predecessors, either locally or distantly? How are works of architecture positioned within those structures of power that the works, in turn, help to define? How do monuments celebrate selected aspects of

history and suppress others? How were the major buildings configured, spatially and materially? Emphasis will be on continuities and distinctions between works across time, seeing Western traditions as a totality over centuries. Lectures and readings convey different historiographic approaches to these issues.

ARHA172 Memory Image: Introduction to Art (as) History

One premise of art history is that works of art necessarily register or encode the time and place of their making. Some art practices, though, operate historically in more than an artifactual sense, whether by revisiting the art historical past through citation, or by actively responding to the socioeconomic, technological, or cultural conditions of their present. Works that comprise the focus of this class engage directly in the project of historical representation and research, recasting these activities through painting, photography, installation, and performance (from experiments in abstraction to queered archives and restaged mass protests). Spanning a series of case studies from post-Holocaust New York School painting to post-Katrina site-specificity, this course provides an introduction to the practice of art history by way of recent works of art that have made the resources (and limitations) of historical methodologies a subject of investigation. What is the role of art as historical memory in an increasingly image-soaked world?

ARHA181F Mughal India: Introduction to the Practice of Art History (FYS)

Founded in northern India in the early 1500s, the Mughal empire was one of the largest centralized states in the history of the early modern world. During the two centuries of their effective rule over most of the Indian subcontinent, the Mughal emperors and their subordinates were prolific patrons of the arts, overseeing the production of lavishly illustrated books and picture albums and commissioning such architectural masterpieces as the Taj Mahal. This course offers an introduction not only to the art and culture of Mughal India but also to the practice of art history itself, through a sequence of six thematic units exploring and applying different methods that are central to the discipline. Each

unit begins with critical reading and discussion of one or two key theoretical or methodological statements, then continues through application to case studies drawn from Mughal India. The units include (1) techniques of visual description and formal analysis, (2) the concept of style and stylistic analysis, (3) the analysis of meaning in visual images (iconography and iconology), (4) models of time and the historical explanation of change, (5) architectural and historical analysis of buildings and their sites, and (6) historiographic assessment of debates and changing interpretations within art history. Each unit culminates in a writing exercise designed to provide students with structured experience in some of the various modes of art historical writing. The course is appropriate as an introduction both to art history and to Mughal art.

ARHA202 Art and Archaeology of the Bronze Age Mediterranean

This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.

ARHA205 Visualizing the Classical

This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen--through landscape, sound, light, functionality/monumentality, and spatial relationships--shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

ARHA207 Survey of Roman Archaeology and Art

This course begins with the art, archaeology, and culture of the Etruscans and their important contributions to the early history of Rome. After a brief examination of the influences of Hellenistic culture on Rome, the course surveys the archaeological evidence illustrating the principal architectural and artistic achievements of the Romans down to the reign of Constantine the Great.

ARHA208 ¿Convivencia o conflicto?: Las tres culturas de la España medieval a través del arte (CLAC.50)

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual wellbeing. This Spanish-language section complements the ARHA 310 curriculum, by exploring the resonance between medieval experiences of identity, pluralism, appropriation, and exchange and our own uneasy attempts at building a multiethnic, multicultural society. This class will be conducted in Spanish. ARHA 208 is open to intermediate and advanced Spanish learners (SPAN 113 and above), bilingual students, and heritage speakers. Enrollment in ARHA 310 is optional but encouraged.

ARHA209 Mosque and Cathedral: Islam and the West, c. 600-1500

This course examines the interaction between the Islamic world and medieval Europe from the perspective of art and architecture, from late antiquity and the rise of Islam through the end of the Middle Ages. Our approach will seek out both intersections and comparisons: while attending to the borders, crossings, and overlaps that existed between medieval Christendom and the Islamic world, this course will also stage comparisons of key themes specific to these traditions, chief among them the picturing of divinity, the status of a sacred text, the organization of sacred space, and the practice of luxury. We will survey a series of historical encounters, including Byzantine Iconoclasm, the Crusades, and trade and diplomacy in general, before culminating in Renaissance Italy. Special emphasis will be reserved for key geographies of exchange, including Spain, Sicily, North Africa, and the Holy Land. Consideration will be given to the media of architecture, mosaic, painting, relief sculpture, decorated books, ivory, metalwork, and textiles. Questions of geography, ethnicity, the other, the idol, cultural translation, and the status of text vs. image will be threaded throughout.

ARHA210 Romanesque and Gothic Art and Architecture

This course introduces the art and architecture of Romanesque and Gothic Europe, that is, later medieval Europe c. 1100-1400, focusing especially on Germany, France, Italy, England, and Spain, as well as the wider Mediterranean. Architecture, painting, sculpture, and the luxury arts (e.g., metalwork, ivory, and textiles) will be our focus, supplemented by primary-source texts and secondary literature. Key themes will include sacred spaces, such as cathedrals and monasteries; sacred images and devotion; gender; pilgrimage and the relic; geography; the Other; the monstrous and the miraculous; courtly love and chivalry; the relationship between Christianity, Judaism, and Islam; and premodern definitions of art, the artist, the donor, craftsmanship, and value.

ARHA213 Cross, Book, Bone: Early Medieval Art, c. 300-1100

This class surveys the art and architecture of early medieval Europe, beginning with the multicultural world of Late Antiquity, the decline of the Roman Empire, and the spread of Christianity, and continuing through the glory of Byzantium, the rise of Islam, and the development of Germanic kingdoms in Northern Europe. Style, content, function, and historical context shall be examined across monuments of architecture, sculpture, mosaic, manuscripts, painting, and the luxury arts. Questions of religious practice, political messaging, and cross-cultural translation shall be threaded throughout, for example: Could one picture God? How might divinity be conceptualized and accessed? What was the best way to picture a ruler? How was the sacred made manifest here on earth? How might we see dialogue, overlap, and/or competition between the art and architecture of Islam and Christianity, among other religious traditions? The periods considered will include Late Antique, Byzantine, Umayyad, Abbasid, Migration, Insular, Carolingian, Mozarabic, Ottonian, and Viking art.

ARHA219 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt

This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

ARHA220 Northern Renaissance Art

The Northern Renaissance, roughly c. 1400-1600, was a period of thrilling transition in Europe and profound change for the Western tradition of art and architecture. For art history, the period's many paradigm shifts include the rise of oil painting, the spread of the printing press and print media, the growth of middle-class patronage, the Protestant Reformation, radical developments in the practice of portraiture, an increasingly global worldview and mentality, the foundations of what might be referred to as an art market, and a fundamental revision of the purpose and definition of both art and the artist. This course explores these and other histories as they played out within panel painting, book painting, the sumptuous arts (e.g., tapestries and metalwork), printing, sculpture, and architecture, focusing mainly on France, the Low Countries, Germany, and England. We will begin within the late medieval world of Burgundy, Prague, and Germany before progressing through such key artistic personalities as Sluter, Broederlam, the Limbours, Campin, van Eyck, van der Weyden, Memling, Fouquet, Riemenschneider, Dürer, Grünewald, Altdorfer, Cranach, Bosch, Holbein, and Bruegel - such a narrative will be equally enriched with less familiar and less canonical works. Threaded throughout are questions of mimesis, realism, skill, medium, and the growing cult of genius, as well as the relationship with the Italian Renaissance, the Mediterranean, and the expanding globe.

ARHA221 Early Renaissance Art and Architecture in Italy

This course surveys key monuments of Italian art and architecture produced between ca. 1300 and 1500. Focusing on major centers such as Florence, Milan, Rome, and Venice, as well as smaller courts such as Urbino and Mantua, it considers the works and careers of the most important artists and architects of the period, among them Giotto, Brunelleschi, Donatello, Giovanni Bellini, Botticelli, and Leonardo da Vinci. Monuments are studied in their broader intellectual, political, and religious context, with particular attention paid to issues of patronage, devotion, gender, and spectatorship. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics. Museum trip(s) will expose students to original works of art.

ARHA224 Italian Art and Architecture of the 16th Century

In addition to key monuments of 16th-century Italian art and architecture, this course seeks to introduce students to some of the most important figures of the period: artists and architects--such as Leonardo, Michelangelo, Raphael, Bronzino, Titian, and Palladio; their princely and ecclesiastical patrons--such as Cosimo I de' Medici and Julius II; and their critics and biographers--such as Dolce and Vasari. Our aim will be to understand the complex artistic and architectural landscape of the period against the backdrop of shifting intellectual and religious trends, such as the Counter-Reformation. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

ARHA233 Art and Culture of the Italian Baroque

This introduction to the arts and architecture of 17th-century Italy addresses one of the core paradoxes of the period: that startling innovation and creativity were not inconsistent with serving the purposes of patrons and ideologies that at first appear rigid and authoritarian. Supported by popes, cardinals, new religious orders, and private collectors, artists and architects such as Caravaggio, Artemisia Gentileschi, Pietro da Cortona, Gianlorenzo Bernini, and Francesco Borromini depicted saintly bodies in moments of divine rapture, opened up painted ceilings to elaborate illusionistic visions, and subjected the classical language

of architecture to unprecedented levels of movement. Through lectures and discussions of key primary and secondary sources, we will explore the emotive and ideological power of Baroque art, considering the multitude of ways in which it shaped the visual, political, and religious worlds of its day.

ARHA239 Van Gogh: Modernity, Utopia, and Nineteenth-Century Art

This course will investigate in-depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. This class goes beyond the media image of the artist and looks hard at his paintings, drawings, and letters, placing them in their respective artistic, literary, and historical contexts. Van Gogh engaged with social issues, above all the plight of peasants, artisans, the poor, and the marginalized--the most vulnerable members of society. He sought to give form to their experience in ways that were mediated by Dutch and French landscape painting and French naturalist literature. Upon moving to Paris, van Gogh absorbed the lessons of impressionist, neo-impressionist, and symbolist painters before moving to the South of France, where he created his most memorable works of sun-drenched fields, bar and café interiors, and common workers. Toward the end of his life, he increasingly conceived of art as a site for utopian projections and emotional solace. We shall study the work of this immensely productive artist and along the way develop art historical skills, including visual and textual analysis, historical and contextual interpretation, how to evaluate an artist's personal correspondence in relationship to his painted oeuvre, and independent research.

ARHA240 Revolutionary France and the Birth of Modern Art, 1789-1900

This course examines the birth of modern art in the wake of the French Revolution and traces the evolution of modern art throughout what would prove to be an extraordinary century of social transformation and formal experimentation, ending in the Dreyfus Affair and Post-Impressionism. The story of modern art is one in which timeless ideals and triumphal narratives were continually put under pressure by the imperative to model the contingency of experience, and in which collective ideals gave way to expanded individual freedoms. Themes we will explore in this class include the advent of a public sphere for art-making and the relationship between artistic advance and appeals to an ever-widening public; painting and revolution; history painting; the persistence of classical ideals and their relationship to modern subjects and experience; the new focus on sensation and the rise of landscape painting; the decline of narrative in painting in favor of form and surface; the relationship between modern art and academic practice; the rise of feminism and attempts on the part of women artists to find their own voice in a masculine practice; the conflict between the unabashed pursuit of artistic individualism and the need to define collective values and experience; the fragmentation of the visual arts into fine and applied arts and attempts at the end of the century to reunify them.

ARHA241 Introduction to European Avant-Garde, 1880--1940

This course will introduce students to the major avant-garde art movements from the first half of the 20th century as they took root in France, Germany, Italy, Holland, and Russia. Our focus will be on painting, but we will also look at attempts to go beyond painting in an attempt to gain greater immediacy or social relevance for art. Topics that will receive special emphasis include the relationship between abstraction and figuration, the impact of primitivism and contact with non-Western arts, modernism's relationship to mass culture, war and revolution, gender and representation, art and dictatorship, and the utopian impulse to have the arts redesign society as a whole.

ARHA243 American Modernisms, 1900-1945

Focusing on three case studies, New York Dada, the Harlem Renaissance, and Mexican Muralism, this course examines the specifically pluralistic and diverse contributions of American artists to the development of modernism, from 1900 through the Second World War. During this period, the United States began to be a terrain on which artists with roots in Europe, Africa, and the Americas developed the basis of an advanced language in the visual arts and experimented with new mediums and formats for art. Topics we will explore include the relationship between art and industry in painting, sculpture, film, and photography; relationships between cosmopolitan and indigenous cultures; primitivism and its appropriation; interrelationships between the visual arts, music, and poetry; constructions of gender and the emergence of the female artist; racial pluralism; and the articulation of hybrid American (and Pan-American) modernisms.

ARHA244 European Architecture and Urbanism, 1750-1910

This course considers the history and theory of architecture and urbanism in Western Europe from the mid-18th to the early 20th century. A central theme is the relationship between historicism and modernity through the period. Topics include neoclassicism, the picturesque landscape, the Gothic Revival, the Arts and Crafts Movement, the École des Beaux-Arts, the German Rundbogenstil, international expositions, and Art Nouveau. We will focus on specific sites in major cities, including Paris, London, Berlin, Munich, Vienna, Milan, Rome, Brussels, and Barcelona, among others. New or transformed building types include museums, railway stations, apartment blocks, department stores, and theaters. Urban forms include residential squares, boulevards, arcades, and public parks. Architectural culture will be discussed as a response to changing political, economic, technical, and ideological conditions in newly modernizing societies. Urbanism includes the transformation of early modern cities due to industrialization, housing for different social classes, new towns, suburbs, utopian communities, the Garden City, and colonial centers such as Bombay (Mumbai), Algiers, and Hanoi.

ARHA246 American Architecture and Urbanism, 1770--1914

This course considers the development of architecture and urbanism in the United States from the late 18th through the early 20th century. Major themes include the relationship of American to European architectures; the varied symbolic functions of architecture in American political, social, and cultural history; and the emergence of American traditions in the design of landscapes and planning for modern cities, especially Boston, New York, Philadelphia, Washington, D.C., Chicago, Los Angeles, and San Francisco. The course considers houses for different sites and social classes, government buildings, churches and synagogues, colleges, and commercial architecture of different kinds includes the origins of the skyscraper. Urban environments include cemeteries, public parks, streets, and civic centers. Movements include neoclassicism, the Gothic and Romanesque revivals, the Chicago School, the Arts and Crafts movement, and the City Beautiful movement. Major figures studied include Thomas Jefferson, Benjamin Latrobe, Frederick Law Olmsted, Frank Furness, Henry Hobson Richardson, Louis Sullivan, the early work of Frank Lloyd Wright, Greene and Greene, Bernard Maybeck, Julia Morgan, and McKim, Mead and White.

ARHA249 "Public Freehold": Collective Strategies and the Commons in Art Since 1960

Art since 1960 has forged a contradictory alliance between the legal field of intellectual property and the expanded tradition of poststructural thought. Taking its title from conceptual artist Lawrence Weiner, this course navigates that contradiction via four units, each corresponding to a specific artistic strategy: appropriation, scoring, collaboration, and participation. Testing the limits of the signable, saleable, and stealable, such techniques have thrown traditional concepts of originality and possessive individualism into arrears while giving rise, quite paradoxically, to some of the most celebrated careers and widely reported lawsuits involving allegations of creative property theft. Do such maneuvers amount to specious self-aggrandizement? Or do they indicate a renewed search to locate, foment, and protect sources of creative invention? The ever-expanding horizon of collaborative media access and increased pressures to enclose this new electronic commons have made such questions all the more urgent today.

ARHA250 Unsettling American Art, 1600-1900

This course examines developments in American art from roughly 1600 to 1900. Core objects in this class will range widely: quilts; maps; baskets; paintings across genres of portraiture, landscape, and still life; engravings; public monuments; daguerreotypes; and more. We will seek to understand the particular concerns and traditions animating objects across this heterogeneous span of materials, forms, and techniques. In so doing, we will also ask how artists and makers--including those whose names were never recorded--variously internalized, articulated, or examined the historical contradictions of their time, including the consolidation of settler colonialism and racial capitalism; rebellion, revolution, abolition, and civil war; industrialization and its ever-expanding and often violently lopsided acceleration of communication networks, labor relations, travel, and exchange; and the contested aim of defining a distinctively American aesthetic tradition in a land born of migration, encounter, forcible displacement, and polyphonic hybridization.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**Gen Ed Area: **HA-ART**Identical With: **AMST272**Prereq: **None****ARHA251 Artists Design Exhibitions**

This course explores the history and theory of exhibition-making as an artistic form. We examine key episodes in the history of artist-designed exhibitions, focusing on major works since the 1960s with an eye to foundational case studies in the early- to mid-20th century. Our discussions will generate a working typology of the form's various modes and functions, tracking how artist-designed exhibitions have variously served as spaces of public debate and agitation, propaganda spectacles, didactic displays, activist interventions, and sites of aesthetic experimentation. Exhibition design's material supports and conditions have been just as disparate: room-scale interiors, polyform spatial sequences, distributed multiples, and outdoor installations on city streets. Across each of these divergent formats, exhibitions are distinguished by their shared potential to create what Walter Benjamin once described as "simultaneous collective reception." As Benjamin's phrase suggests, exhibitions constitute publics, and in this course special attention will be paid to the types of publics--and the types of subjects--that specific exhibitions and exhibition strategies presuppose.

What can the history of exhibition design show us about the new "curatorial condition" of everyday life, in which data specialists now curate information, an artisan cheese shop curates its merchandise, and anyone with a social media account curates a presentation of self? Artists central to this history, and to which this course attends, include: El Lissitzky, Marcel Duchamp, Charles and Ray Eames, the Rosario Group, the Independent Group, Hélio Oiticica, Marcel Broodthaers, Louise Lawler, Group Material, Fred Wilson, Philippe Parreno, Mark Leckey, and Camille Henrot.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-ART**Prereq: **None****ARHA252 Contemporary Art Since 1980**

This historically-rooted introduction to contemporary art sets an anchor around 1980 and moves through the major debates of the last 35 years. This period gave rise to a bracing range of historical transformations: a post-communist Europe; an economically prominent China; queer and antiracist activism; increasingly molecular degrees of technological mediation in everyday life; asymmetrical consolidations of a globalized network of travel, communication, and capital; climate and refugee crises; and a state of seemingly perpetual war, to name only a few. This course attends to the changing vocabulary of approaches by which artists intervened in these conditions and positioned their work in relation to a longer view of the history of art. Far from a comprehensive survey, the course acknowledges the inherently recursive and unstable condition of contemporary art history, a field of research and inquiry defined as a work in progress. The course is nonetheless structured in a loosely chronological fashion, sequenced according to formal techniques that emerged as timely responses to specific historical moments (photographic appropriation, moving image projection, social practice, painting, institutional critique, web-based art, etc.). Our work throughout will attend to theoretical frameworks that have remained influential in recent practice (postcolonial, feminist, poststructural, etc.).

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-ART**Identical With: **AMST287**Prereq: **None****ARHA253 Art After 1945**

This course examines artistic production in the United States between 1945 and 1980, with a primary focus on the United States. The historical conflicts of that tumultuous period presented new challenges for artists as they attempted, in their work, to respond to the "caesura of civilization" brought about by the Holocaust and World War II, to contend with the consolidation of postwar consumer capitalism and mass culture, and to situate their work in relation to the far-reaching social upheavals of the 1960s and '70s. Practices linked to the historical avant-gardes (such as abstraction, the readymade, Dada, and surrealism) echoed in these years as attention shifted from the canvas and studio to greatly expanded contexts of reception and public experience. The boundaries of the art object transformed in turn as artists developed new models of spectatorship to confront a world that had placed enormous pressure on traditional concepts of humanist subjectivity. Topics include New York School painting, pop art, minimalism, process art, conceptual art, performance, institutional critique, and site-specificity.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-ART**Identical With: **AMST249**Prereq: **None****ARHA254 Architecture of the 20th Century**

The course considers influential works in architecture, its theory and criticism, and ideas for urbanism, mostly in Europe and the United States, from about 1900 to the present. Early parts of the semester focus on the origin and development of the modern movement in Europe to 1940, with attention given to selected American developments before World War II. Later parts of the course deal with Western architecture from 1945 to the present, including later modernist, postmodernist, and deconstructivist work, urbanism and housing, computer-aided design, green buildings, and postwar architecture in Latin America and Japan and in postcolonial India and Africa. Major movements and architects considered include the Viennese Secession, the Bauhaus, Le Corbusier, Mies van der Rohe, Frank Lloyd Wright, Alvar Aalto, and Louis Kahn, among many others.

This course considers the history of architecture and urban development in New York City from colonial times to the present. Emphasis is on major landmarks of each historic period, with attention to related planning, parks, land and water transportation, housing trends, and urban infrastructure. Conditions of settlement, growth, decline, and renewal will be examined from a political, economic, and social perspective in varied neighborhoods. Contemporary topics include neo-liberal policies for urban development, green buildings, gentrification, and planning for the city's future in the era of impending climate change. While the focus will be on architecture, every effort will be made to see built environs as points of intersection between competing ideals and interests that shape the city we see.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-ART**Identical With: **AMST266**Prereq: **None****ARHA257 Just Cities: Architectures of Public Encounter**

What is "the public," and how has it been conceived, relative to notions of the urban--to the web of ideas, forms, and fantasies constituting "the city"?

Can art and architecture play a role in defining the public, or does the public's political and social construction place it outside the scope of specifically aesthetic concerns? This course addresses these and other related questions, positioning art and architecture in their broader cultural and historical contexts. It explores a range of socially charged, experiential, and participatory aesthetic and political practices, characterized by their distinctly public character and decidedly architectural and urban settings. At its core, it is concerned with issues of social justice as they relate to the material spaces of the modern city, and the manner in which those spaces are identified, codified, and made operative in the service of aesthetic, social, and political experience.

This course will be taught by M. Surry Schlabs, Yale School of Architecture.

ARHA258 Contemporary World Architecture

This course is a study of architecture and urban design throughout the world from the 1990s to the present. American topics include public and private development in the "neo-liberal" city in New York, Chicago, Los Angeles, and post-Katrina New Orleans; contemporary museum architecture; sprawl and New Urbanism; and affordable housing, both urban and rural. Major American architects considered include Frank Gehry, Richard Meier, Daniel Libeskind, and Diller Scofidio + Renfro. In Europe, the focus is on contemporary public architecture in Berlin, London, Paris, Valencia, Lisbon, Rome, and Athens, with attention to major works of Sir Norman Foster, Zaha Hadid, Jean Nouvel, Santiago Calatrava, Rem Koolhaas, and Renzo Piano. In China we will study state monuments of the Communist Party in Beijing and issues of preservation and urban development there and in Shanghai. In Japan the recent work of Tadao Ando and Shigeru Ban is a focus, as are selected projects by other architects in Tokyo and Yokohama. Additional lectures will treat airport architecture and sites in India, Jerusalem, Cairo, Guinea, South Africa, Rio de Janeiro, and Quito, Ecuador. The last quarter of the course focuses on green or sustainable architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling and ventilation, timber and rammed-earth techniques, LEEDs certification, wind and geo-exchange energy, green skyscrapers, vertical farming, and zero-carbon cities.

ARHA263 Curatorial Workshop: Images of the Floating World

This course will provide students with practical training in the design and development of a gallery installation in the Davison Art Center (DAC). The theme for this semester is Japanese woodblock prints. We will carry out the many and diverse components involved in creating a gallery installation, from conception to execution, including concept development, catalog and label entries, accessibility, layout, and design. The course will culminate with an installation at the DAC, which will include an accompanying publication as well as permanent online catalog entries for individual prints on the DAC's website.

Images of the floating world, or ukiyo-e, refers to a genre of Japanese art that emerged in the 17th century to depict the pleasures of life of that period--beautiful women, famous kabuki actors, views of famous places, and erotic pictures, among other subject matter. In most cases, these are woodblock prints, images produced by craftsmen from woodcuts based on originals painted by artists. Because they could be produced quickly, cheaply, and in large numbers, woodblock prints were exceptionally well-suited for the representation of the latest fashions or politics. Ukiyo-e prints made their way to Europe in the 19th

century and remain the most popular form of East Asian art in the West. The Davison Art Center has around 600 Japanese woodblock prints in its collection, ranging in date from the 17th to 20th centuries and including works from all the major artists of the Edo period (1615-1868).

Images of the floating world, or ukiyo-e, refers to a genre of Japanese art that emerged in the 17th century to depict the pleasures of life of that period--beautiful women, famous kabuki actors, views of famous places, and erotic pictures, among other subject matter. In most cases, these are woodblock prints, images produced by craftsmen from woodcuts based on originals painted by artists. Because they could be produced quickly, cheaply, and in large numbers, woodblock prints were exceptionally well-suited for the representation of the latest fashions or politics. Ukiyo-e prints made their way to Europe in the 19th century and remain the most popular form of East Asian art in the West. The Davison Art Center has around 600 Japanese woodblock prints in its collection, ranging in date from the 17th to 20th centuries and including works from all the major artists of the Edo period (1615-1868).

ARHA263B Curatorial Workshop: Art and the Ecological Imagination, 1840-1870

This course examines the emergence of an "ecological consciousness" in art during the mid-19th century through readings, discussion, and firsthand study of works in the Davison Art Center print collection. Although the term "ecology" was first coined in 1866, 19th-century thinkers had long been concerned with the interrelationship of organisms, including humans' place and impact on nature. This class examines how visual artists before Impressionism contributed to the 19th century's "ecological imagination" through their representations of landscapes. Known as the "Barbizon School," this group of artists left the metropolis of Paris to immerse themselves in the wild and rugged terrain of the Fontainebleau Forest while also embarking on journeys to remote regions of France. These members of the first artists' colony seceded from the French Academy of Fine Arts and pursued strategies of independence that were allied at the time with radical politics. In their works they experimented with new materials and approaches to composition that included but no longer prioritized humans, in order to foreground processes of transformation internal to nature itself. The consciousness that artists forged through painting and printmaking led them to become among the world's first conservationists; they successfully petitioned the French government to protect parts of the Forest of Fontainebleau some 20 years before the creation of the first National Park in the United States.

The first half of the course will be devoted to reading and discussion; the second half will center on the study of works in the Davison Art Collection, which includes a superb collection of original and experimental prints by Barbizon

School artists. The final project will be the curation of a temporary exhibition of works from the collection, including a selection and arrangement of works, explanatory texts, and a public gallery talk.

ARHA264 Photography and Law: Mugshots, Privacy and Publicity, Obscenity, Copyright, and Evidence

This seminar is designed as an introduction to the major developments in the legal history of photography in transatlantic (US-UK especially) society from the first law cases involving photography in 1840 through to contemporary legal debates about such topics as cameras in the courtroom, sexting, surveillance, photographing police, dash cam and body cam videos, admissibility of photographs as evidence, obscenity and moral boundaries of subject matter, and copyright. A range of secondary historical and theoretical writings will anchor the discussions, but the course will focus primarily on student analysis and interpretation of primary and archival sources (texts of legal cases, law reviews and dissertation, news articles, and documentary and video footage). Students will gain knowledge of how legal history has shaped the history of photography, and new perspectives on the historical origins of contemporary issues in photography and digital imaging. This course should be of interest especially to history majors and non-majors who are interested in law, photography, and culture and will also contribute to the "Visual and Material Studies" module in History.

ARHA269 History of African American Art

This course will introduce students to a history of African American artistic production from the late 18th century to the present, in a range of media and styles. While we will focus primarily on the visual arts--looking at sculpture, painting, photography, collage, film, performance, and installation--we will also consider the deeply interdisciplinary nature of Black cultural production, highlighting the important role of music, poetry, dance, and theater.

We will explore how African American artists, both individually and collectively, have negotiated the terms made available to them by cultural institutions, whether by struggling for inclusion, acknowledgement, and validation; actively protesting racist and exclusionary policies; or by forming alternative institutions, communities, and spaces in which to work and share support. From the Harlem Renaissance to the Black Arts Movement and "post-Black" exhibitions, art works will serve as a primary source to ask, is there such a thing as a "Black aesthetic" and if so, how would one define it? Why might an African American artist reject such an idea? Other key questions will include: What is the role of visual representation in political struggle? How have artists mobilized portraiture as a tool of liberation? What does it mean to turn away from figuration, toward abstraction or opacity? How have artists grappled with questions of nationhood, belonging, and diaspora?

Together, we will trace how artistic forms, techniques, and motifs have served both as sites of collective history and as speculative propositions to envision new futures, articulating what Robin D.G. Kelley calls "freedom dreams."

ARHA276 Eccentricity, Gender, and Occidentalism in Edo-Period Art (1615-1868)

This course will explore painting, textiles, prints, and ceramics of Edo-period Japan (1615-1868), with a focus on those produced in Kyoto and Edo (Tokyo). In addition to formal examination of the material and expressive qualities of the works of art under investigation, we will consider how other factors such as location, social background, religious faith, and degree of literacy of Edo-period artists found expression in their work.

ARHA284 Buddhist Art and Architecture in East Asia

Visual imagery plays a central role in the Buddhist faith. As the religion developed and spread throughout Asia it took many forms. This class will first examine the appearance of the earliest aniconic traditions in ancient India, the development of the Buddha image, and early monastic centers. It will then trace the dissemination and transformation of Buddhist art as the religion reached Central Asia and eventually East Asia. In each region indigenous cultural practices and artistic traditions influenced Buddhist art. Among the topics the class will address are the nature of the Buddha image, the political uses of Buddhist art, the development of illustrated hagiographies, and the importance of pilgrimage, both in the past and the present.

ARHA285 Art and Archaeology of Ancient India

This course is an introduction to the art and material culture of ancient India, from prehistory through the formation of the classical tradition in the fourth century CE. The broad swath of human experience covered necessitates a thematic approach, focusing on key moments, cultures, object types, and methodological approaches, arranged in a roughly chronological fashion. Thematic units may vary somewhat from year to year, but are likely to include: the meaning and use of the carved stone seals of the Indus Valley civilization; the impact of the Vedic Aryas on the development of Indian ritual and imagery; how to read the iconographic language of the "plant and animal style" in decorative sculpture; the meaning and significance of the Asokan pillars; and the architecture and ritual of Buddhist monastic life in the cave monasteries of western India.

ARHA286 Empire and Erotica: Twenty-three Masterworks of Indian Painting

The history of later Indian painting (16th--19th centuries) is dominated by two distinct stylistic traditions, one flourishing at the court of the Mughal empire, the other at the courts of the various Rajput dynasties that held sway in regions along the periphery of the Mughal domain. The course introduces these two traditions through in-depth consideration of twenty-three representative masterworks, paintings that demand sustained close examination to fully unpack their content, their aesthetic dimensions, and the historical milieu in which they were produced and received. The first half of each session is devoted to a collective "close looking" at one of the key paintings (in the form of a high-resolution digital image), which then leads into broader discussion of related works and larger interpretive themes. Topics to be considered include the historical connections between the Mughal and Rajput schools; the relationships between painting, poetry, and music; the concerns of natural history painting; and the manner in which both Mughal and Rajput artists appropriated formal conventions from 16th century European prints and paintings. No previous knowledge of Indian art or the methods of art history is assumed or needed to succeed in this course.

ARHA290 Mahabharata and Ramayana: The Sanskrit Epics and Indian Visual Culture

This course explores the complex interface between literary texts and visual performance traditions in South Asia, taking as our primary focus the two great Sanskrit epics, Mahabharata and Ramayana. Both epics will be read in abridged translation to provide familiarity with the overall narrative structure and thematic concerns of the two texts, and a number of excerpts from unabridged translations will be studied in detail to arrive at a fuller understanding of the contents of key episodes and of the style and texture of the two works. The first part of the course addresses a series of questions pertaining to the literary versions of the two epics: What is epic as a genre, and what are its social roles? Do the Mahabharata and Ramayana manifest similarities that permit us to identify a distinctive Indian epic type? What are the connections between these epics and the early history of India? Why, and how, did the written texts we have today come to be redacted from bodies of oral tradition? What further transformations did the Sanskrit epics undergo as they were recast in the form of lyric poetry and translated into various vernacular languages such as Hindi, Tamil, and Telugu? In the second part of the course, we will consider the visual manifestations of the Sanskrit epics in the form of classical Sanskrit plays (known literally as "visual poetry"), later dance-drama forms such as Kutiyattam, Yakshagana and Kathakali, contemporary religious pageantry such as the Ram Lila, and, finally, the films of the Hindi- and regional-language cinemas. This course requires no prior knowledge of Indian literature, history, or art and may serve as an effective introduction to the culture and civilization of South Asia.

ARHA295 Critical Race and Art History: Theories and Methods

How does the study of art shift if we begin with questions of race, power, and colonialism, rather than treating them as secondary? Concepts such as mastery, familiarity, strangeness, taste, and beauty are formed by conditions of

domination and subjugation. Moreover, the histories of material production and cultural expression are fundamentally entwined with the circuits of enslavement, forced migration, and the extraction of resources, people, goods, and "styles."

For the bulk of the semester, we will focus on a series of case studies drawn from the 15th to 20th centuries, a period of intense European contact and conquest in Africa, Asia, the Caribbean, and the Americas. Topics will include: representations of Africans in Renaissance Germany; African depictions of the Portuguese circa 1492; the appearance of parrots, kraak (Chinese) porcelain, and other goods from "exotic" locales in 17th-century Dutch still lifes; the taxonomies of racial difference in Spanish casta paintings; debates about sculptural polychromy and the "whiteness" of marble; the relationship between expansionism, empire, and the genre of landscape; "primitivism" and European artists' "discovery" of African artistic forms; the critical interest in "racial art" in the interwar U.S.; and contemporary conversations about museums and restitution, among others.

Throughout, works of art are primary sources with which to study the specificities of periods, places, and their social arrangements. While we will emphasize difference and historical contingency, our *longue durée* approach will enable us to draw connections about art's role in processes of primitive accumulation, dispossession, and racial capitalism.

ARHA310 Muslims, Jews, and Christians: Convivencia in Medieval Iberia

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual well-being.

This seminar will explore the works produced by the pluralistic societies of medieval Iberia from the perspectives of art, architecture, history, archaeology, literature, and music. As we study renowned monuments such as the synagogues of Toledo, the Alhambra, and the Way of St. James, we will learn to decode elements such as dress and home decor, food and hygiene, and gardening and agriculture, to expand our picture of culture and lived experience. Finally, we will ask why "convivencia" ultimately failed, and how the medieval Iberian experience can enlighten our own uneasy attempts at building a multicultural, multi-confessional society.

ARHA311 The Body in Medieval Art

Medieval thinkers theorized the body in ways vastly different from how human bodies are conceptualized and defined today in the twenty-first-century West. Indeed, the "medieval body" was not at all a stable or monolithic entity, but rather a shifting constellation of ideas and practices that waxed, waned, and coexisted throughout the European Middle Ages, c. 400-1400. The diversity of medieval attitudes toward the body helped inform its representation in art, which, simultaneously, was also dependent upon conventions of craft, medium, artistry, preciousness, and style. "Body" signals not only earthly bodies--sexed, fleshly, corruptible, and soon to decay--but also the soul (equally fragile), as well as heavenly, angelic, and divine bodies, including that of Christ. This course analyzes medieval strategies of representing these bodies while situating them in

their respective intellectual and cultural environments. Primary-source materials will be contextualized by secondary literature, and our inquiries will remain cognizant of gender-, sexuality-, race-, and performance-critical methods. The bodies examined will include, and are not limited to, saintly, gendered, racialized, clerical, monstrous, virginal, heretical, sickly, healthy, courtly, resurrected, and uncircumscribable bodies.

ARHA312 Medieval Manuscripts

Medieval manuscripts were dense, considered gatherings of text and image, and they are among the richest of artifacts bequeathed to us by the Middle Ages. Manuscripts both crystallized and intervened in many of the key intellectual, religious, and aesthetic foundations of medieval Europe. To step into a luxurious medieval manuscript--into its script, its miniatures, its marginal decoration, its scribbles, its little monsters and unexpected grotesques, its tears and signs of use--is to probe definitions of painted image and written word that differ markedly from our own today. Throughout, basic questions of the relationship between text and image, and the linguistic and the pictorial, repeatedly beg attention. How were these books made, who used them (if they were used at all), how did the reading process unfold in the medieval period, and how did pictorial decoration assist in revealing--or, perhaps, obscuring--truth? These questions, and more, will inform this seminar's systematic inquiry of the making, function, and layout of the medieval book, from its Late Antique origins to the 15th-century advent of printing.

ARHA338 Bauhaus: Art, Craft, Design

This seminar examines the theory and practice of the Bauhaus, the most influential art school of the 20th century. The Bauhaus proposed a radical concept: to reconstruct the material world of war-torn Europe to reflect principles of unity in the arts and within all world cultures. In the 15 years of its existence, from 1919 until 1933, the Bauhaus underwent many changes, including moves from Weimar to Dessau and Dessau to Berlin, as well as the reorientation of its curriculum from craft to industrial production. Nevertheless, its core principles persisted: the coordination of fine with applied arts and form with function; a commitment to de-hierarchized, experimental learning in workshops; and the desire to unite art with life and to make art accessible to the broader population. Attracting men and women from Western and Eastern Europe, the Americas, and East Asia, the Bauhaus adopted an international and gender-inclusive orientation from the beginning. After the school's forced closure in 1933 by the National Socialists, many of its teachers and students left Germany to found art schools throughout the globe, and its core principles continue to shape art pedagogy and practice today. This course will examine the origins, core products and theories, and afterlife of the Bauhaus in Germany, America, and East Asia.

ARHA339 Modernism and the Total Work of Art

The term "total work of art" refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner's ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner's works and writings provided the dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

ARHA352 Energy and Modern Architecture, 1850-2020

This seminar explores the evolution of mechanical systems for heating, ventilating, and cooling in modern architecture from the mid-19th century to the present. The aim is to show how architects, engineers, fabricators, and urban governments worked to develop modern systems of environmental controls, including lighting, as means of improving both the habitability of buildings and health of their occupants. The course will trace the adaptation of technical innovations in these fields to the built environment and how those responsible for it sought to manage energy and other resources, such as funds and labor, to create optimal solutions for different building types, such as factories, theaters, assembly halls, office buildings, laboratories, art museums, libraries, and housing of various kinds, including apartment buildings for higher- and lower-income residents. An important theme will be the relationship of energy systems for individual buildings and urban infrastructure, including water systems, electrical, and other utilities. The last part of the course focuses on contemporary green, or sustainable, architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling, LEED certification, wind and geo-exchange energy, green skyscrapers, net-zero energy buildings, vertical farming, and zero-carbon cities in the United States, Europe, and Asia.

ARHA355 Concepts in Contemporary Art

In this interdisciplinary seminar and studio course, we explore key concepts in contemporary discourse across a range of forms, genres, and disciplines. How do works of art respond to and reframe central debates in the wider culture? In what ways do the theory and practice of art supplement or contradict each other? How does research function within the context of art historical study and contemporary artistic practice?

To contend with these questions, students develop a series of projects over the course of the term in response to specific conceptual prompts. These investigations may take the form of studio-based work or written scholarship depending on student interest and will culminate either in a final research paper (for those registering for Art History credit) or a final project in any medium (for those registering for Art Studio credit). Along the way, we study artworks, literary texts, works of social theory, art historical scholarship, films, popular culture, and other objects to ground our research. Parallel activities may include conversations with artists and art historians, methodological workshops, site-visits, trips to museums, and archival research.

Since the course's aim is to cultivate unexpected collaborations, cross-disciplinary encounters, and new ways of conjugating the history, theory, and practice of art, the final portion of the semester will focus on the organization of a collective exhibition, event series, symposium, publication, or other expanded curatorial endeavor. The course meets Fridays 12:30 pm-5:30 pm, with a break during that interval. Class time may on occasion include individual meetings and independent work.

ARHA361 Thresholds of Art and Activism Since the 1960s

Since the 1960s, a period marked by war and social upheaval, artists have navigated the contested boundaries of art and activism by turning to the street and inventing new strategies of performance, distribution, and collaboration. Exploding the familiar protocols of agitprop, they advanced a politics of representation as much as a representation of politics. Philosophical texts (e.g., Adorno, Benjamin, Debord, Habermas, Ranciere, etc.) support our engagement with recent debates in art historical scholarship (e.g., Bishop, Bryan-Wilson, Lambert-Beatty, McKee, etc.) as we consider contexts as diverse as the social movements of the 1960s, queer liberation, eco-critical activism, and Occupy Wall Street. Extending the 20th-century avant-garde's project to break down the division between art and life, our case studies (focused primarily but not exclusively on the United States: Emory Douglas, the Art Workers Coalition, Gran Fury, Women on Waves, etc.) provoke this seminar's central questions: Where is the line between art and activism? What value might that boundary continue to hold, and why? How must we assess the efficacy, ethics, and aesthetics of such practices? And what historical conditions have made them timely for artists?

ARHA379 Visionary Journeys through Sacred Landscapes: Japanese Art of Pilgrimage

This course examines the ways in which religious paintings were used and viewed in medieval Japan. Emphasis will be laid on images of sacred landscapes and the visionary journeys they inspired. Though primarily conceived as fundraising tools and advertisements aimed at inspiring viewers to undertake a physical journey to the illustrated site, these images became sacred in their own right and were approached by worshipers as one would approach the enshrined deity of the represented site. They also allowed spiritual travel through the images, providing virtual pilgrims with the karmic benefits of actual pilgrimage without the hardships of travel.

Each week we will immerse ourselves in a sacred site, reading about its history, deities, religious practices, and unique benefits. We will then look at how these

were given visual form and the artistic language developed to endow these visual representations with the power to inspire and move contemporary audiences.

ARHA381 Relic and Image: The Archaeology and Social History of Indian Buddhism

This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (1st--3rd century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts and then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha's relics, pilgrimage to the sites of the Eight Great Events in the Buddha's life, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodh Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

ARHA382 Archaeology of Money: Numismatics and GIS

In many parts of the world, lost coins numbering in the millions lie buried in the ground. Periodically, some of these coins come to light in the course of plowing, digging to repair a water main, or prospecting with metal detectors. These "treasure-trove" finds—also known as coin hoards—provide the archaeologist of money with rich evidence of how money was actually used in pre-modern times. Which coins occur together in a hoard; the numbers in which they occur, and the spatial patterning of their findspots all speak volumes about pre-modern economies, circulation patterns, and beliefs about money and value. In this seminar, we explore the evidence of coins and coin hoards, studying them from numismatic perspectives (the images and legends on a given coin type, metals used, weights, fabric), metrological and denominational perspectives (what coins reveal about systems of weights and denominational structures), and statistical approaches (for example, studying patterns of weight loss as indicators of the velocity of circulation and degree of monetization in a given society). In the first half of the course, we focus primarily on a series of case studies and hands-on, in-class lab sessions based on actual numismatic materials, primarily drawn from ancient and medieval South Asia, and classical Greece and Rome. In the second half, students will learn how to use ArcGIS and will complete a collaborative group project in which they design and construct a geodatabase for the analysis of ancient or medieval Indian coin hoards. No prior knowledge of either numismatics or GIS is required.

ARST190 Digital Foundations

This course explores the relationship between digital fabrication tools and contemporary artistic practice. Students will be guided through the process of using 3D printers, laser cutters, and power tools in a studio environment. The class has a theoretical focus on machine use within the process of design. Lectures and hands-on activities are supplemented by 2D vector-based programs, digital photography software, and 3D modeling programs. Students will learn how to use the computer as both a design tool and as a tool for fabrication. This course will also discuss the ethical dilemmas involved with 3D printing.

 Prereq: **None**

ARST190Z Digital Foundations

This introduction to the digital studio engages software and electronic media as an expanded field of creative production in contemporary art and design. Through a sequence of workshops, exercises, and hands-on digital projects, students will develop their critical and creative toolkits and learn to conceive, refine, and present original work. Open to all skill levels, this course prioritizes sustained and rigorous engagement with digital practice as well as conceptual and formal problem-solving.

Workshops in image manipulation, compositing, motion graphics, and visual communication will be led synchronously online by the instructor. This will be complemented with weekly online studio sessions, discussions, screenings, and reviews. Students will be provided access to all course materials using Google Drive and other digital platforms. Access to Adobe Creative Cloud software will be provided by Wesleyan, but individual licensing is also encouraged. Course assistants will offer peer mentoring and technical support in person through the DDS and online through Zoom.

ARST233 Studies in Computer-based Modelling and Digital Fabrication

This course operates at the intersection of design and production, introducing students to digital tools critical to contemporary architecture and design. Throughout the semester, students will develop a series of projects that fluidly transition between design, representation, and fabrication with an emphasis on understanding how conceptual design interfaces with material properties. The course will offer a platform for students to research, experiment, and, ultimately, leverage the potential of digital tools toward a wide array of fields and disciplines. Students will be expected to utilize the Digital Design Studio's resources, including 3D printers, laser cutter, and 4-Axis CNC mill, as well as a selection of fabrication equipment housed in the school's metal and wood shops to represent, model, and realize a series of design projects.

 Credits: **1.00**

Gen Ed Area: **HA-ART**
 Identical With: **IDEA233**
 Prereq: **None**

ARST235 Architecture I

This course is a synthesis of fundamentals of design principles and introduction to design vocabulary, process methodologies, and craft. Emphasis is placed on developing students' ability to examine the relationship between production (the process of creating things) and expression (the conveying of ideas and meaning) involved in the making of architecture. The intent of the course is to develop students' awareness and understanding of the built environment as a result of the investigations, observations, and inquiries generated in the studio.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**

Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST237 Printmaking I

This course is an introduction to the practice and art of printmaking. Through technical instruction and personal exploration, students learn the rudiments of relief and intaglio printmaking media. Students learn to develop a print

through a series of proofs with critical consideration as an important input in this progression from idea sketch to final edition. Extensive use is made of the Davison Art Center print collection.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **ARST131**

ARST238 Print Culture 101

Print Culture 101 is an introductory course about the vast medium of printmaking: its techniques, its traditions, and its possibilities. Throughout the semester, students will learn how to use each area of the printshop, and the fundamentals of relief, recessed, planographic, stencil, and photographic processes of printmaking. Additionally, students will gain some elemental skills in working with paper, ink, and adhesives. These skills will also equip students with useful knowledge to experiment with unconventional materials.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **ARST131**

ARST239 Painting I

This introductory-level course in painting (oils) emphasizes work from observation and stresses the fundamentals of formal structure: color, paint manipulation, composition, and scale. Students will address conceptual problems that will allow them to begin to develop an understanding of the power of visual images to convey ideas and expressions. The course will include individual and group critiques and museum trips.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **ARST131**

ARST242 Typography

The fundamentals of fonts, letter forms, typographic design, elements of the book, and an introduction to contemporary graphic design are considered through a progression of theoretical exercises. Once working knowledge of the typeshop and InDesign (software for book design) is acquired, each student conceives, designs, and prints: first, a broadside, then a book. Use is made of the collection in the Davison Rare Book Room at Olin Library. While NOT a required sequence, this course is strongly recommended before taking ARST243.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST243 Graphic Design

This course is an introduction to graphic design with an emphasis on typography. Typography is the practice of giving written language a visual form, material, and method of distribution. Starting with type, we'll investigate how graphic design organizes, mediates, and transmits context across a range of media.

In class, we will talk about and practice fundamentals of type including typefaces, leading, kerning, grids, hierarchy, and color. This will serve as an entry into broader discussions of composition, sequencing, and text-image relationships and design systems, as applied to conceptual projects. We'll cover design software and print production. A sequence of readings and lectures will situate our work among historical and contemporary examples.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**

Gen Ed Area: **HA-ART**
 Identical With: **IDEA243**
 Prereq: **None**

ARST244 Letterpress and Book Arts

This course focuses on the editioned self-published artists' book and the role of printed matter within that form. Students are introduced to various methods available to artists for self-publishing. Skills covered range from the use of the printing press, moveable type, and hands-on bookbinding, to digital design and the contracting of press-ready work to professional printing outfits. Through the production of ephemera, broadsides, small editions, and bound volumes, students will learn the rudiments of letterpress and book arts. Class prompts and assignments will call on students to use these media to express, transmit, and archive their personal artistic vision.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST245 Sculpture I

An introduction to seeing, thinking, and working in three dimensions, the class will examine three-dimensional space, form, materials, and the associations they elicit. Through the sculptural processes of casting, carving, and construction in a variety of media, students will develop and communicate a personal vision in response to class assignments.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST251 Photography I

This is a comprehensive introductory course to the methods and aesthetics of film-based and digital photography. The topics of study will include evaluating negatives and darkroom prints, developing film, Lightroom and Photoshop software, inkjet printing, reading light, visualization, photographic design, and history of photography.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST252 Photography I

This class is only intended for first year students. This is an introductory course to the methods and aesthetics of film-based and digital photography. The class is designed for students with no prior formal experience in photography, though it will still challenge those that are already versed in film and digital. The first few weeks of class will be devoted to comprehensive technical instruction including exposure, film processing, and darkroom enlargement. Subsequently, class time will be split between weekly critiques and lectures covering topics including visualization, reading and evaluating light, and photographic history. The shooting assignments are open ended and conceived to push each student to define their own visual interests as they continue to immerse themselves in the language of the medium. After fall break, we will switch to working digitally. Software instruction will include Lightroom and Photoshop, with significant time devoted to inkjet printing. The course will culminate in a final portfolio that will reflect the formal, technical, and conceptual experimentation that the students will engage in throughout the course.

***Please note that this is an intensive course with a significant work load. Students should expect to spend at least 15 hours outside of class on weekly shooting and production. Please feel free to reach out to the instructor at arudensky@wesleyan.edu if you have any questions.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST253 Digital Photography I

This course is an extensive examination into the methods and aesthetics of digital photography. The topics of study will include DSLR camera operation, Adobe Photoshop, Adobe Bridge, and printing as well as, most importantly, a focus on photography as a fine art through both a historical and contemporary viewpoint.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Prereq: **None**

ARST260 Introduction to Sumi-e Painting

We will learn basic technique and composition of traditional Japanese sumi-e painting. Sumi-e is a style of black-and-white calligraphic ink painting that originated in China and was introduced into Japan by Zen monks around 1333. We will concentrate on the four basic compositions of sumi-e: bamboo, chrysanthemum, orchid, and plum blossom. We will also study the works of the more famous schools, such as Kano. Students will create a portfolio of class exercises and their own creative pieces.

Offering: **Host**
 Grading: **OPT**
 Credits: **1.00**
 Gen Ed Area: **HA-ART**
 Identical With: **CEAS460**
 Prereq: **None**

ARST261 Alternative Printmaking: Beginning Japanese Woodblock Technique

Students are taught traditional Japanese techniques for conceptualizing a design in terms of woodcut, carving the blocks, and printing them, first in trial proofs and editions. After understanding how both of these methods were originally used and then seeing how contemporary artists have adapted them to their own purposes, both for themselves and in collaboration with printers, students will use them to fulfill their own artistic vision. Considerable use is made of the Davison Art Center collection of traditional and contemporary Japanese prints as well as many European and American woodcuts.

 Identical With: **CEAS461**
 Prereq: **None**

ARST265 Action: Art, Politics, Counterpublics

In this interdisciplinary studio course, we explore action as a category of art practice. What does it mean to take action, either individually or collectively? What does it mean to refuse to take action? Through a series of projects, assignments, and discussions, we work through various possibilities, drawing on methods from public interventions, performance, institutional critique, social practice, experimental film, and work by non-art practitioners. The course is organized around the production of student projects and research, culminating in a self-directed capstone work. In the initial stages, students will be asked to work through three distinct modalities (performance, site-specific intervention, and collaborative practice) while developing their ideas. Time will be devoted to discussion of historic and contemporary examples, including European avant-gardes (Dada, Productivism), feminist film and performance, Happenings, Indigenous performance art, and work connected to political organizing, such as the Black Panther Party, United Farm Workers, Young Lords, ACT-UP, Art

Workers' Coalition, and EZLN, among others. Students will be exposed to a variety of techniques and will gain access a range of facilities, including the woodshop, digital technologies through the Digital Design Studio, etc. Depending on Covid restrictions, trips to contemporary exhibitions will provide a theoretical framework. Work in this class can be created individually or collaboratively. Depending on interest, we may also organize an end-of-semester exhibit.

ARST283 Physical Computing in Art and Design

This course aims to extend students' notions of the potential for the use of computers in the artist's studio by exploring opportunities in technology and art beyond familiar mouse, keyboard, and screen interactions. Moving away from these restrictions, students will learn basic electronics and programming using a microcontroller. The size of a postage stamp, these single-chip computers will provide students a window into the creative uses of computers in interactive, kinetic, and installation art. Combining microcontrollers with sensors placed on bodies, in physical objects, or in the environment, weekly projects will provide students with basic skills cumulatively leading to application in individual or collaborative projects. Through readings, discussions, and design of individual and collaborative work, students are expected to develop and articulate a theoretical basis for conceptualizing and discussing works presented in class, as well as their own creative projects. Students will maintain rigorous documentation of their process and progress in this course using blogs. No previous skills or software experience is required.

Identical With: **IDEA283**

Prereq: **ARST131**

ARST286 Introduction to Time-Based Media

This course will serve as a comprehensive introduction to time-based media in the expanded field. We will explore the ways video can transform our relationship with ourselves, others, and the material world. Through regular technical exercises, readings, and group discussions, students will gain technical facility and a critical eye for time-based art and culture.

What sorts of videos do we consider "art"? In an era of selfies, live-streaming, and state-sanctioned violence (and its digital record), how might we use video as a tool of empathy and accountability? We will pursue answers to these questions through the act of making.

Students will be introduced to camera operation, sound recording, and lighting, as well as video and sound editing. Screenings of historical and contemporary video art will contextualize each assignment. We will also investigate vernacular applications of video, and the medium's role beyond the studio.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **None**

ARST308 Composition in the Arts

Composition, the manner in which elements are combined or related to form a whole in space and time, is a basic practice in all the arts. This course brings together practitioners from diverse art forms and traditions to address the basic issue of composition.

In this seminar, we will explore the compositional process through assignments that address the interacting concepts of site and information. By "site," we mean a semantic field extending through corporeal, environmental, and social dimensions. By "information," we mean representations abstracted from sites, "meaningless" when independent of any specific semantic interpretation. Participants will compose individual and collaborative interventions in a wide range of sites--public, private, physical, and electronic--in response to the problems posed.

This course is permission-of-instructor, and is intended for upper-level majors in Art, Dance, Film, Music, and Theatre, and others with sustained compositional practices suitable to the course.

ARST323 Topics in Studio Art: Narrative, Sequence, and Seriality

Artists in all media have historically responded to common, formal, and ideological motivations. These motivations encompass the very fabric of a liberal arts education. This course is intended to develop such a conversation among the various studio art disciplines as the foundation for making art. The course centers on a topic determined by the instructor. The class will function as a study group (of painters, sculptors, photographers, drawers, printmakers, architects, and so on) that tackles the topic through the act of art-making. The topic will be introduced through readings and visual precedents, and through discussion we will determine means to respond as artists, each student in his or her own medium. These individual responses will then be analyzed in group critiques. Later in the semester, students will expand their investigations to include studio disciplines other than their own.

Topic for 2020: Narrative, Sequence, and Seriality

This course is an exploration of narrative in a range of visual art practices. We'll examine how different mediums allow time and "stories" to unfold, and how progression, series, and sequence operate to create meaning. One of the aims of this course is to challenge traditional notions and expectations of narrative. How does the role and function of the "narrator" shift in a visual arts context? What minimally constitutes a narrative?

At the beginning of the course, students respond to open-ended prompts using drawing and mapping ideation exercises that lead to the creation of intensive projects in the medium of their choice. In addition to studio activities, readings, and screenings, we will look at and discuss the work of other artists working within a broad range of media and artistic traditions.

This course is offered as an elective for studio arts majors but can, at the discretion of the instructor, be offered to majors from other departments with adequate experience in visual arts. For admission to the class, students are expected to be capable of self-expression in at least one visual art medium.

ARST332 Drawing II

This class builds upon the course content covered in Drawing I (ARST131). As we continue to draw from observation, topics will include an in-depth exploration of the human figure and an introduction to color. This course also introduces a

concept-based approach to drawing that explores narrative and content. While using brainstorming and ideation techniques, we will experiment with various marking systems, found imagery, processes, and spatial solutions. Further, the development of individual style and studio methodology is an aim in this course.

Offering: **Host**

Prereq: **ARST235**

ARST337 Codex Unbound

Codex Unbound is a course that investigates the art of the book. It asks: What is a book? And what are the expansive possibilities of this form? Students will explore these large questions through the process of making books in a variety of binding and printing techniques that range in cultural and historical origin. In learning such techniques, students will also be tasked with intervening with forms and creating their own innovations, which can incorporate their own intellectual interests.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST131**

ARST338 Printmaking II

This upper-level printmaking course focuses on the application of various printmaking methods in response to conceptual prompts. There will be instructional units on lithography, the Vandercook letterpress, and digital technologies. In addition to learning these new techniques, students are expected to build on previous printmaking experience to hone their skills and sharpen their creative vision. Routine print assignments and a final substantial project will task students with the development and presentation of professional, finished work.

Gen Ed Area: **HA-ART**

Prereq: **ARST237 OR ARST261 OR ARST361**

ARST340 Painting II: The Shifting Landscapes of the Mind, Nature, and History

Since the beginning of time, people have created art to document events in nature and society and to convey ideas and emotions as they responded to shifting conditions in the world—be they man-made or natural. Before written language, visual expressions of morality, concepts of the future, and abstract thought in the sciences and religion were represented in painting. Whenever dramatic shifts were experienced in society, painting documented them and commented on them. In this class, the skills and knowledge gained in ARST239 will serve as the foundation upon which students will be challenged to become technically proficient while they explore the topic of shifting landscapes or the shifting viewpoints of the mind, history, and nature. The themes, prompts, and concerns addressed in this course will allow for any formal, conceptual,

or stylistic form of expression to resolve them—each student will be working differently. The goal of this class is for students to become fluent with the medium and make aesthetic choices that can best convey their ideas about and responses to each prompt. Lectures and meaningful class discussions will provide information and feedback about historical and contemporary issues and the plans for work. Individual and group critiques as well as museum and gallery trips will complement class work.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Identical With: **ENVS440**

Prereq: **(ARST131 AND ARST239)**

ARST344 Graphic Design (Web)

Graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. This studio course will address graphic design considerations for the screen and web, including hierarchy, typography, iconography, color, and image. Through exercises and projects, students will learn fundamental graphic design principles and engage with their adaptability to the screen. Coursework will explore methods for achieving design that considers the user, as well as ways that a message, design, or product function across multiple formats.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **None**

ARST346 Sculpture II

This is an intermediate-level course. Projects focus on the associative nature of three-dimensional form—how issues intrinsic to sculpture reflect concerns extrinsic to the art form. The class will emphasize the development of personal expressions of students' visions in response to class assignments.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Prereq: **ARST245 OR ARST235**

ARST350 Senior Studio

This is an interdisciplinary critique-based course designed for advanced Art Studio majors. Our primary aim is to provide a structure for the development of each student's thesis work, research, and thinking as it evolves over the course of the semester. Through extensive in-class discussions and reviews, we devote a substantial portion of time to the presentation and discussion of student work. As a major component of the course, each student will install their work in one of the exhibition venues in the Center for the Arts in preparation for thesis exhibitions. We devote time to the discussion of critique methodologies, installation strategies, readings in critical theory, visiting artist lectures and presentations, and, if possible, visits to contemporary exhibitions in the area. The course will additionally assist students in the elaboration of their artist statements, portfolio, and documentation. Finally, we will develop a collaborative project, such as publication or a portable exhibition. The course is designed as a complement to the Art Studio Senior Thesis process and is an elective for Art Studio majors.

ARST352 Photography II

This is an intensive course intended for students with a solid foundation in photography. Students can choose to work in either film-based or digital media while developing their own unique voice. Topics will include medium-format film cameras, fiber paper, virtual drum scanning, large-format digital printing, and editing and sequencing images. The second part of the course will be devoted to developing a body of work that will result in a photo book project. Lectures and class discussions will provide a historical context, while presentations by visiting artists will introduce students to contemporary work in the medium. Emphasis will be placed on the weekly discussion of students' work.

Offering: **Host**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **None**

ARST353 Photography III - Documentary Practices

This is an intensive course that will provide students with a historical, theoretical, and ethical overview associated with documentary photographic practice. It is intended for advanced students that have taken Photography I (ARST 251) or Photography II (ARST 352). Assignments, readings, and discussions will be geared toward the development of a cohesive body of work with focus on research and development of a concept, editing and sequencing of photographs, and fine printing. This course will serve as preparation for thesis work undertaken during the senior year and is recommended for prospective or current majors.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST251 OR ARST352**

ARST355 Concepts in Contemporary Art

In this interdisciplinary seminar and studio course, we explore key concepts in contemporary discourse across a range of forms, genres, and disciplines. How do works of art respond to and reframe central debates in the wider culture? In what ways do the theory and practice of art supplement or contradict each other? How does research function within the context of art historical study and contemporary artistic practice?

To contend with these questions, students develop a series of projects over the course of the term in response to specific conceptual prompts. These investigations may take the form of studio-based work or written scholarship depending on student interest and will culminate either in a final research paper (for those registering for Art History credit) or a final project in any medium (for those registering for Art Studio credit). Along the way, we study artworks, literary texts, works of social theory, art historical scholarship, films, popular culture, and other objects to ground our research. Parallel activities may include conversations with artists and art historians, methodological workshops, site-visits, trips to museums, and archival research.

Since the course's aim is to cultivate unexpected collaborations, cross-disciplinary encounters, and new ways of conjugating the history, theory, and practice of art, the final portion of the semester will focus on the organization of a collective exhibition, event series, symposium, publication, or other expanded curatorial endeavor. The course meets Fridays 12:30 pm-5:30 pm, with a break during that interval. Class time may on occasion include individual meetings and independent work.

ARST361 Monotype Printmaking

The monotype print is a free form of printmaking more akin to painting or drawing than to traditional printmaking. It is also a process in which the artist encounters fewer technical difficulties than in other traditional printmaking methods. Students in this course will create images using various mediums and methods. We are going to use different material like wood, plexiglass, paper, and textiles. Also, we may use laser cutting or digital printing, to combine with drawing or painting.

The goal of this course is not perfection of technique, but rather students experimenting with material and technique, to produce their own visual images.

Prereq: **ARST260**

ARST380 Interdisciplinary Studio: Politics of Land and Place

Notions of "place" are particularly fraught in North America, where legacies of development and dispossession have etched enduring power relationships onto the land. Contemporary spatial experience is marked by what Mindy Fullilove has called root shock: the reverberating effects of losing one's place and the collective struggle to reclaim it. In this interdisciplinary studio course, we develop artistic responses to the ways in which power shapes the natural and built environment. We look at a range of sites--the home, the city, the border, the wilderness, the commons--as spaces of memory and belonging, sociality and resistance. We explore the ways in which people have engaged with place through a range of forms, including roadside monuments, site-specific sculptures, landscape films, community-based performances, situationist dérives, plein air painting, collective rituals, and political protests. Over the course of the term, students will identify a site in the Lower Connecticut River Valley and develop their own aesthetic language in response to it. These works may take the shape of installations, performances, digital media, or texts, and will draw on our discussions of land art, institutional critique, social practice, and experimental film. While the course is geared primarily toward the development of student projects, our work will be informed by a series of site visits, readings, screenings, and discussions of contemporary land struggles, anticolonial movements, and feminist and indigenous geographies.

ARST384 Special Topic: Between Forms: Intermedia Arts Workshop

This advanced project-based workshop is for poets and artists interested in interdisciplinary practices crossing over between poetry, visual art, and

performance. It is taught in conversation with the Fall 2021 exhibition in Zilkha Gallery including the work of Cecilia Vicuña.

Facilitated by Professors Benjamin Chaffee and Danielle Vogel, with modules taught by visiting artists from across the arts, this workshop is designed for students interested in working outside of--or between--their primary mediums. Professors will guide students as they choose "companion mediums" to work in for the semester while employing interdisciplinary approaches to writing and art-making in order to discover their own unique and hybrid forms.

We will divide our time between intensive laboratory-like spaces for composing work, conversations with visiting artists, student presentations and workshops, and studying the works of artists working between forms, all in an attempt to root ourselves more dynamically in our individual practices. The course will culminate in a reflective essay or artist statement, as well as an exhibit of poems, objects, installations, and performances created during our time together.

ARST386 Intermediate Time-Based Media

This intensive studio course will provide students with the comprehensive formal and conceptual training to create ambitious time-based media works, including experimental films, multi-channel video installations, public projections, and sound installations. Through a series of projects, students will develop their understanding of camera operation, sound recording, video and sound editing, projection mapping, and installation strategies. Through screenings of historical and contemporary works, students will refine their critical vocabulary and gain a broad understanding of key issues in the field. We will explore the relationship between image and sound, moving images and physical objects, and the projected image and architectural space, along with a range of conceptual and theoretical considerations. The primary aim of this course is the formulation and acceleration of each student's unique artistic language. No prerequisites, but course is most suitable for students who either have a background in video (i.e., ARST 286 or related course) or who have taken another studio course in the department. Students meeting either of these criteria will receive priority in enrollment.

ARST484 Data, Art, and Visual Communication

This course looks at the ways the digital arts--broadly defined--can be used to explore the intersections of research, data, design, and art. Following a creative software "bootcamp," students will execute projects intended to help them generate, manipulate, and remix data for the purposes of visual communication and art. Students will use Adobe Creative Suite and Processing, an open source programming language, and integrated development environment (IDE) built for electronic arts, new media, and visual design. In addition to working in the studio, seminars, readings, and student presentations will explore the role of data visualization, "big data," and the web in culture and society today. No prior software knowledge or coding skills are required. Students working in STEM, humanities, and social sciences are encouraged to enroll.

ASTRONOMY (ASTR)

ASTR103 The Planets

More than 100 planets are now known in the universe, eight of which circle the sun. NASA missions and improved telescopes and techniques have greatly increased our knowledge of them and our understanding of their structure and evolution. In this course, we study those eight planets, beginning with the pivotal role that they played in the Copernican revolution, during which the true nature of the Earth as a planet was first recognized. We will study the geology of the Earth in some detail and apply this knowledge to our closest planetary neighbors--the moon, Venus, and Mars. This is followed by a discussion of the giant planets and their moons and rings. We will finish the discussion of the solar system with an examination of planetary building blocks--the meteorites, comets, and asteroids. Additional topics covered in the course include spacecraft exploration, extrasolar planetary systems, the formation of planets, life in the universe, and the search for extraterrestrial intelligence.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.25**

Gen Ed Area: **NSM-EES**

Identical With: **E&ES151**

Prereq: **None**

ASTR105 Exploring the Cosmos

This introductory course for non-science majors unveils the universe and how we have come to understand our place in it. We will touch on a full range of astronomical topics, including the mechanics of our solar system, the discovery of planets around other stars, the stellar life cycle, the formation and evolution of galaxies, the big bang, and the ultimate fate of the universe. Occasional evening sessions will provide the opportunity to observe celestial objects through Wesleyan's telescopes.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR107 The Universe

This course focuses on the modern scientific conception of the universe, including its composition, size, age, and evolution. We begin with the history of astronomy, tracing the development of thought that led ultimately to the big bang theory. This is followed by a closer look at the primary constituent of the universe--galaxies. We end with consideration of the origin and ultimate fate of the universe.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR108 Conceptual Astronomy: Science Fact vs. Science Fiction

Our conceptual understanding of the world around us is shaped by our experiences, often in subtle ways. In this media-dominated world, the public's predominant exposure to science comes from science fiction in popular culture, especially TV and movies. In this course, we will examine the ways in which popular culture has influenced our collective knowledge about astronomy: the good, the bad, and the really bad. Wide-ranging topics will include asteroids and comets threatening the earth, travel through space and time, and life in the universe. Through lecture, discussion, and laboratory exercises, we will examine these topics through the lens of science to expose the reality of the universe that is our home.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR109 Worlds Beyond: The Search for Life in the Universe

We are living through a unique time with the recent discovery of other worlds, planets orbiting nearby stars, and the capability to obtain detailed observations of those planets in the coming decades. This makes tangible the age-old question of whether we are alone in the universe, as the only known life-bearing planet. This introductory course for non-science majors will explore the fundamental concepts that are needed to place life into a cosmic context. We will discuss planetary systems near and far, stars as the integral hosts of planets, and prospects for finding and identifying life elsewhere in the universe. Occasional evening sessions will provide the opportunity to observe celestial objects through Wesleyan's telescopes.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR111 The Dark Side of the Universe

The physical world we experience is one of normal matter, energy, and--if one looks up at night--stars. But on larger scales, the universe has an exotic and much-less-well-understood side dominated by things we call dark matter, dark energy, and black holes. What are these mysterious components, and what is the relationship between them and the world that is familiar to us? The answers lie at the frontier of modern astrophysics. In this course, we explore the evidence for the existence of these dark components and the current debates regarding their nature and origin. In different ways, each of them has a vital role in the evolution of the universe and its ultimate fate.

Offering: **Host**

Prereq: **None**

ASTR155 Introduction to Astrophysics

The fundamentals of astronomy will be covered. This course serves as an introduction to the subject for potential majors and as a survey for nonmajors who have a good high school preparation in math and science. We will cover selected topics within the solar system, galaxy, local universe, and cosmology, including the big bang theory of the origin of the universe and the discovery of planets around other stars.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR211 Observational Astronomy

This course introduces the techniques of observational astronomy. Students will acquire a basic knowledge of the sky and become familiar with the use of Van Vleck Observatory's telescopes and instruments. Acquisition and analysis of astronomical data via modern techniques are stressed. Topics include celestial coordinates, time, telescopes and optics, astronomical imaging, and photometry. Some basic computer and statistical analysis skills are developed as well. The concepts discussed in lecture are illustrated through observing projects and computer exercises.

Offering: **Host**

ASTR155

ASTR221 Galactic Astronomy

The fundamentals of astrophysics are applied to the galaxy and objects therein. Topics include the interstellar medium, stellar populations, galactic structure, formation, and evolution.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Identical With: **ASTR521**

Prereq: **(ASTR155 AND ASTR211)**

ASTR222 Modern Observational Techniques

This course reviews the practices of modern observational astronomy, focusing primarily on techniques employed in the optical and x-ray bands. Topics will include a description of the use of digital detectors for imaging, photometry, and spectroscopy in a wide variety of applications. Data acquisition, image processing, and data analysis methods will be discussed. In particular, students will gain hands-on experience with the analysis of data obtained from both ground- and satellite-based observatories. An introduction to relevant error analysis methods is included. Students will also become familiar with the fundamental techniques that will be necessary when "big data" projects like LSST come online in the near future: database querying, metadata handling, and modern programming techniques.

Offering: **Host**

ASTR224 Exoplanets: Formation, Detection, and Characterization

Our ability to place the earth into a cosmic context dramatically improved in the past decades with the discovery of planets around other stars (exoplanets). The study of exoplanets has quickly become a dominant field in astronomy. This course will focus on the fundamentals of exoplanet formation, detection, and characterization (interiors and atmospheres) based on astronomical observables. We will also discuss the assessment of habitability for Earth-like exoplanets and the prospects for the detection of biosignatures.

Offering: **Host**

ASTR232 Galaxies, Quasars, and Cosmology

This course introduces modern extragalactic astronomy, blending established practices in the field and important recent discoveries. Three major themes will be developed. First, the basics of Newtonian and relativistic cosmologies will be discussed, including modern determinations of the Hubble Law and the observations that have led to the currently favored cosmological model. Next, the universe of galaxies will be investigated: their constituents, structure and kinematics, and multiwavelength properties. Finally, the nature of galactic nuclei will be explored, including the observational consequences of black-hole accretion and the coordinated growth of galaxies and their central black holes. Outstanding research questions related to the topics covered will be highlighted throughout the course.

BIOLOGY (BIOL)

BIOL106 The Biology of Sex

This course is featured as a general education course within the Department of Biology. Serving to complement courses currently offered within biology that only touch upon the subject of sex, this course will dive into specifics regarding sexual behavior and will serve to highlight new discoveries that have been facilitated by novel scientific techniques and approaches. As we study the biology of sex in the animal world, it becomes apparent that sex is achieved in a multitude of ways, many appearing rather bizarre and flamboyant. Yet under these guises, animals are still able to mate and reproduce. Sex is often defined according to sexual reproduction, whereby two individuals that are male and female mate and have offspring. However, many organisms engage in asexual reproduction and/or a combination of the two reproductive strategies. Reproductive anatomy and behavior will be addressed as we explore a variety of organisms, ranging from marine clown fish and their "sex changes" to the (female) marmoset monkey that can give birth to twin male chimeras. As an organism pursues sex, what are the mating strategies? What are the chemicals of sex (pheromones and hormones)? By examining the biology of sex in detail, we will also debate age-old topics such as whether sexual reproduction is sexist, the competing strategies of males and females, and whether human cultural displays are yet another way to decipher quality in a potential mate.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **None**

BIOL118 Reproduction in the 21st Century

This course will cover basic human reproductive biology, new and future reproductive and contraceptive technologies, and the ethics raised by reproductive issues.

Offering: **Host**

Grading: **A-F**

BIOL137 Writing About Evolution

This class will explore various interesting problems in natural history, using short writing assignments to build familiarity with concepts of organismic evolution.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **None**

BIOL140 Classic Studies in Animal Behavior

This course will focus on the major concepts in the field of animal behavior. We will discuss the selection pressures that shape animal behavior and whether the study of primate social and mating systems can provide insight into human behavior. Other questions include, Why do certain animal species exhibit altruistic behavior and others do not? What are the limiting resources for male and female animals, and why do they behave so differently? This is but a sampling of the subjects to be covered in a course that is specifically designed for students to gain a clearer understanding of the mechanisms that drive the natural world around them. We will commence with the early pioneers in ethology who were the first to describe the behavioral repertoire of a single

species and progress onto the more current, comparative approach, in which two animals are compared for a more fine-tuned analysis. Biological jargon will be defined as original research is discussed.

Offering: **Host**

BIOL145F Primate Behavior: The Real Monkey Business (FYS)

This course will examine the full spectrum of the primate order. How has evolution shaped these different primate species, and what underlying mechanisms have fueled their development? We will discuss primate ancestry, primate environments, and primate competition, all factors that mediate primate behavior. In addition, we will take the lessons learned from primate studies to determine how humans might use this knowledge toward the preservation and conservation of their nonhuman relatives.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **None**

BIOL149 Neuroethology: Sensory Basis of Animal Orientation and Navigation

This course is about the sensory and neuronal processes underlying the ability of animals to orient in and move through their environments. We will consider the basic functions of sensory and nervous systems that underlie the remarkable abilities of animals to orient themselves in personal space, move through their home range, and move through the world in long-distance migrations and in homing. Animals from invertebrates through fish, birds, and mammals will be considered. The format of the course will be seminar/discussion and some lectures with heavy student participation. The course is intended for first-year students with high school-level courses in at least two of the following: biology, chemistry, or physics.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B149**

Prereq: **None**

BIOL155 Tiny Organisms with a Big Effect: The Microbiome

With the advent of advanced sequencing technology, we are able to characterize the microflora that lives on and inside of multicellular organisms, including

humans. It follows that there are still many unknowns with respect to the function and dynamics of relationships between bacterial communities and their hosts. These bacterial communities, colonizing humans and other organisms with millions of microbes, have captured the interest of the public. Popular news outlets have made the disparate claims that the right human microbiome can act as a panacea and the wrong microbiome is such a calamity that it can destroy an individual's health. This course will look at the true nature of the microbiome, to the extent that current research has revealed. We will discuss both normal and abnormal bacterial community compositions and any related disease states. Similarly, we will cover changes in microbiome composition over time and with respect to host development. In class, we will also consider the microbiomes of other organisms and how the presence and composition of the microbiome relates to disease states and/or life history.

Prereq: **None**

BIOL160 Life in the Oceans in the Anthropocene and Beyond

Little is known about life in the deep sea, the largest habitat on Earth, even about the largest animals living there, such as the giant squid. Humans, however, are severely affecting even these most remote areas of our planet, and wildlife populations in the oceans have been badly damaged by human activity. We will look at the amazing diversity of ocean life and the disparate building plans of its animals, and see how oceanic ecosystems are fundamentally different from land ecosystems. Then we will explore how human actions are affecting oceanic ecosystems directly, for instance by overfishing (especially of large predators and filter feeders), addition of nutrients (eutrophication) and pollutants, and the spread of invasive species, as well as indirectly, through emission of carbon compounds into the atmosphere. Rising atmospheric CO₂ levels lead to ocean acidification and global warming, affecting the all-important metabolic rates of ocean life, as well as oceanic oxygen levels and stratification, thus productivity. We will try to predict the composition of future ecosystems by looking at ecosystem changes during periods of rapid warming in the geological past and see whether future ecosystems will become dominated by jellyfish, as they were 600 million years ago.

BIOL161 Science Materials For a Malagasy Classroom

Students will design and produce a variety of educational science materials to be used in a fifth grade classroom in Madagascar. These items include a science logo, bookmarks, educational science games, posters, and a comic book with conservation themes for children. Students who are interested in design and natural history as a means through which to communicate science themes on wildlife endemism, evolution, and climate change would be appropriate for this course. All students will need to conduct independent research into science topics, distill down the salient features, and use that information to design elementary school materials. Working both individually and in teams, students will conceive, design, critique, and move into product production (MakerSpace). In addition, prototypes of the materials will be reviewed and rated by fifth graders in a Middletown elementary school for feedback.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Identical With: **ENVS261, IDEA261**

Prereq: **None**

BIOL173 Global Change and Infectious Disease

This course will cover how human demands upon the environment have come back to bite us through infectious diseases. The most devastating infections, now and in the past, have spilled into humanity from other animals through our quest for food, either through hunting and trade of wild animals (COVID-19 and HIV) or through agriculture (smallpox and measles). Additionally, taking over huge swaths of land has fragmented natural habitats, with the result that some pathogens have increased in abundance (Lyme disease) and some pathogens have moved closer to humanity when humans have encroached on natural lands (Ebola). Living at high density in interconnected cities has sustained the severe infections that became humanity's childhood diseases (mumps, measles, smallpox); high densities have also brought us diseases brought by fecally-contaminated water, as well as those diseases brought by the animals that cohabit our cities and suburbs (rats, robins). Our demand on energy has brought us global warming, which is transporting tropical diseases, such as malaria, poleward from the tropics; the extreme weather events of a changed world are leading to outbreaks of zoonotic diseases (hantaviruses). Moreover, our penchant for transporting wild animals and ourselves has had the potential to spread any local flare-up of any novel disease to the whole world (plague, COVID-19). We will discuss how, even if we mitigate every existing human infection, we should expect an unending stream of new pathogens. We will discuss technological solutions to infectious diseases, as well as how changes in our ethics might help contain existing pathogens and avoid future spillovers.

Lectures will cover these and other topics. There will be two 65-minute lectures each week, with frequent opportunities for students to break out into smaller sections to figure out interesting biological challenges. There will also be a 30-minute discussion each week for each of 12 discussion sections (probably about 15 students each). These discussions will focus mostly on how policy changes might best mitigate the environmental disturbances that are bringing us infections.

The course has no formal prerequisites and will introduce material from ecology and microbiology, as needed, to allow students to read and interpret the recent literature on global change and infectious disease.

BIOL181 Principles of Biology I: Cell Biology and Molecular Basis of Heredity

This course presents an exploration of the contemporary view of the cell and an introduction to the molecules and mechanisms of genetics and gene function. The course will have two major themes. First, we will focus on the central dogma of molecular biology, describing the process of information transfer from genetic code in DNA through protein synthesis and function. Topics include DNA replication and repair, chromosome dynamics, RNA transcription, protein translation, gene regulation, and genomics. Second, we will focus on cell theory and the underlying molecular mechanisms of cellular activity, including cell signaling, energetics, cell motility, and cell cycling. Lectures will stress the experimental basis of conclusions presented and highlight important details and major themes. The course will also emphasize problem solving approaches in cell and molecular biology. The course will use software to ensure academic integrity. This course will require about 10 hours per week of engagement. Students should enroll separately in MB&B/BIOL191 Principles of Biology 1 - Laboratory.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MBB**

Identical With: **MB&B181**

BIOL182 Principles of Biology II

This course covers biological principles at tissue, organ, organismic, and population levels of organization. We will review how animals regulate their internal environment to control or adapt to changes in temperature, salt levels, nutrients, levels of oxygen and carbon dioxide, and the presence of infectious agents. We will examine the molecular, cellular, and tissue mechanisms that underlie the hormonal, neuronal, and behavioral processes that underlie these responses. We will learn how these systems develop in the embryo. At the population level, we will review evidence for evolution, including the tenets of Darwin's theory of evolution by natural selection. We will also discuss the nature and importance of variation among organisms, stochastic processes in evolution, and modern theories of speciation and macroevolution. Finally, the course addresses ecological aspects of population biology, including patterns and processes that inform the distribution and abundance of biodiversity, population growth, organisms' responses to environmental variation, and interactions among species. Each of the topics of the course is explored from a comparative viewpoint to recognize common principles as well as variations among organisms that indicate evolutionary adaptation to different environments and niches.

BIOL186 Introduction to the Biology of Nutrition and Impact on Human Health

This course will introduce students to the concepts of nutrition. It will cover the biology of the different food groups that make a balanced diet (carbohydrates, fats, proteins) and how our bodies obtain energy and important molecules, such as vitamins, from our food. The course will also cover the relevant anatomy involved in digestion and excretion. Other topics such as the effects of food production on the environment, fad diets, and disease states will also be studied, along with the latest hot topics in the news.

Offering: **Host**

Grading: **A-F**

BIOL194 Principles of Biology II: Advanced Topics

This course provides an optional supplement to the introductory course in physiology, development, evolution, and ecology (BIOL182, which should be

taken concurrently). It is designed for highly motivated biology students who seek to enrich their understanding by engaging with current research in an intensive seminar setting. Students in BIOL194 will read and discuss recent journal articles that probe in greater depth some of the subjects covered in BIOL182. Weekly meetings will consist of a short lecture by the professor followed by group discussion of the readings.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.25**

Gen Ed Area: **NSM-BIOL**

Identical With: **MB&B194**

Prereq: **BIOL181 or MB&B181**

BIOL197 Introduction to Environmental Studies

This interdisciplinary study of human interactions with the environment and the implications for the quality of life examines the technical and social causes of environmental degradation at local and global scales, along with the potential for developing policies and philosophies that are the basis of a sustainable society. This will include an introduction to ecosystems, climatic and geochemical cycles, and the use of biotic and abiotic resources over time. It includes the relationship of societies and the environment from prehistoric times to the present. Interrelationships, feedback loops, cycles, and linkages within and among social, economic, governmental, cultural, and scientific components of environmental issues will be emphasized.

Offering: **Crosslisting**

Prereq: **BIOL192**

BIOL208 Molecular Biology

This course is a comprehensive survey of the molecules and molecular mechanisms underlying biological processes. It will focus on the cornerstone biological processes of genome replication, gene expression, and protein function. The major biomacromolecules--DNA, RNA, and proteins--will be analyzed to emphasize the principles that define their structure and function. We will also consider how these components interact in larger networks within cells to permit processing of external and internal information during development and how these processes become perturbed in disease states.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MBB**

Identical With: **MB&B208**

Prereq: **CHEM142 OR CHEM144**

BIOL210 Genomics: Modern Genetics, Bioinformatics, and the Human Genome Project

Genetics has provided a foundation for modern biology. We will explore the classical genetics and go on to consider how genomics has transformed this field. This course is intended to introduce students to the fields of genetics and genomics, which encompass modern molecular genetics, bioinformatics, and the structure, function, and evolution of genomes. We will discuss important new areas of research that have emerged from the genome projects, such as epigenetics, polymorphisms, transgenics, systems biology, stem cell research, and disease mapping. Students will also discuss bioethical issues we face in this new postgenome era.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **MB&B210**

Prereq: **[MB&B181 or BIOL181]**

BIOL212 Principles and Mechanisms of Cell Biology

The cell is the smallest structural and functional unit of an organism. Understanding the molecular basis for its behavior and function is critical to understand biological function at all levels, from molecular to organismic. The primary goal of this course is to understand how cells function within the context of the multicellular organism or tissue—an environment that cells regulate as well as respond to. We also focus on the process of scientific discovery in the field of cell biology—how do we know what we know? Hence whilst the textbook will provide background reading, we will also discuss original research in class. We will cover cell and organelle structure and function, trafficking, cell adhesion and motility, proliferation, signal transduction, and cell differentiation, and consider how these processes are integrated to generate coherent cell behaviors, or go awry in disease.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-MBB**

Identical With: **MB&B212**

Prereq: **[MB&B181 or BIOL181]**

BIOL213 Behavioral Neurobiology

This course will introduce the concepts and contemporary research in the field of neuroscience and behavior. The course is intended for prospective neuroscience and behavior majors (for whom it is required) and for biology and psychology majors who wish a broad introduction to neuroscience. The initial few weeks will be devoted to fundamental concepts of neuroanatomy and neurophysiology. Subsequent classes will deal in-depth with fundamental problems of nervous system function and the neural basis of behavior, including neurotransmitter systems; organization of the visual system and visual perception; the control of movement; neurological and neuropsychiatric disorders; the neuroendocrine system; control of autonomic behaviors such as feeding, sleep, and temperature regulation; the stress response; and language, learning, and memory. Experimental results from a variety of species, including humans, will be considered.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B213, PSYC240**

Prereq: **None**

BIOL214 MacroEvolution, Pattern and Process

This course covers current areas of research in evolutionary biology. Topics include the evidence for evolution, the nature of variation, adaptive and random evolutionary processes in natural populations, mechanisms of speciation, origin of major groups, reconstruction of the history of life through comparative

analysis of morphological and DNA sequence data, evolutionary developmental biology, coevolution of plant-animal interactions, and the application of evolutionary principles to conservation biology.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **[BIOL182 or MB&B182]**

BIOL215 Evolution in Human-Altered Environments

Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL515, ENVS210**

Prereq: **[BIOL182 or MB&B182]**

BIOL216 Ecology

Ecology is the scientific study of interactions between organisms and their environment, both biotic and abiotic. We will look at how these interactions shape fundamental characteristics of populations, communities, and ecosystems. Topics will include predation, competition, symbioses, and effects of stress and resource limitation in diverse environments. We will cover important consequences of interactions such as coevolution, population outbreaks, ecological coexistence, patterns of biodiversity, ecological succession, species invasions, food web dynamics, nutrient and energy cycling, variation in ecosystem goods and services, and global change.

This course emphasizes several learning goals in biology, including skill in formulating original ideas and experiments, using quantitative and graphical tools and interpreting quantitative information, and scientific writing.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **ENVS216**

Prereq: **[BIOL182 or MB&B182]**

BIOL218 Developmental Biology

This course covers the mechanisms of development at the molecular, cellular, and organismal levels. Special attention will be paid to the process of scientific discovery: the experiments. Students will read and discuss both original research articles and the secondary review literature. We will discuss ethical and medical considerations for some of the topics covered.

It's an extraordinary time to learn Developmental Biology! Topics can include aging, the environmental effects on development, genetic approaches, cancer, reproduction, growth, and much more, all tied to Development. We will take advantage of Zoom to bring in prominent outside scientists to give their perspective on research topics that they work on. Some of the lectures will be pre-recorded for you to watch at your convenience, scheduled class time will be reduced and focused on discussion and student presentations.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **[BIOL182 or MB&B182]**

BIOL220 Conservation Biology

This course will focus on the biology of conservation rather than cultural aspects of conservation. However, conservation issues will be placed in the context of ethics, economics, and politics. We will cover the fundamental processes that threaten wild populations, structure ecological communities, and determine the functioning of ecosystems. From this basis, we will explore important conservation issues such as habitat loss and alteration, overharvesting, food web alteration, invasive species, and climate change. We will use readings from the primary literature and field projects to learn about current research methods used in conservation biology.

Offering: **Host**

Grading: **A-F**

BIOL223 The Molecular Basis of Cancer

Cancer is a group of diseases characterized by unregulated cell growth and tissue invasion. This course will focus on the molecular events that lead to cancer. We will cover topics in both molecular and cellular biology and genetics that are relevant to understanding the differences between normal and cancer cells. Particular focus will be placed on oncogenes and tumor suppressor genes, DNA damage responses, the p53 signaling pathway, cell cycle regulation, and the molecular basis of cancer therapies. This course will utilize both the textbook and primary scientific literature in the study of cancer.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **None**

Identical With: **MB&B223**

Prereq: **MB&B181**

BIOL224 Hormones, Brain, and Behavior

Hormones coordinate the anatomical, physiological, and behavioral changes necessary for developmental, seasonal, and diurnal transition in animals. These molecules have profound effects on the development of the brain and on adult brain function. How do hormones orchestrate brain assembly and the expression of specific behaviors? How do behavior, social context, and the environment influence hormone secretion? This course will provide a critical survey of our understanding of the relationship between endocrinology, the brain, and behavior in a variety of animal systems. Select topics include insect metamorphosis; sexual differentiation of the vertebrate brain and behavior; reproductive and aggressive behavior in birds, lizards, and rodents; song learning and song production in birds; and the effects of hormones on sexual behavior and cognitive function in primates, including humans. The exploration of a variety of systems will provide students with an appreciation of the ways in which the relationships between hormones and behavior vary across species, as well as the extent to which these relationships are conserved.

Identical With: **NS&B224**

Prereq: **[NS&B213 or BIOL213 or PSYC240] OR [BIOL182 or MB&B182]**

BIOL226 Invasive Species: Biology, Policy, and Management

Invasive species account for 39 percent of the known species extinctions on Earth, and they are responsible for environmental damages totaling greater than \$138 billion per year. However, the general population has little knowledge of what invasive species are or what threats they pose to society. In this course,

we will explore the biological, economic, political, and social impacts of invasive species. We will begin by exploring a definition of an invasive species and looking at the life history characteristics that make them likely to become pests. Then we will consider the effects of invasive species expansion on the conservation of biodiversity and ecosystem function, as well as their global environmental and political impacts. Finally, we will explore the potential future changes in invasive species distributions under a changing climate.

BIOL239 Functional Anatomy of the Human Brain

A mass of tissue the consistency of firm jello and weighing about 2.5 pounds in the adult human, the brain is an organ that controls nearly every function of the body. It also enables the highest cognitive functions of humans such as learning and memory, thinking, consciousness, and aesthetic appreciation. Its malfunction results in a variety of diseases, including senility, mood disorders, and motor dysfunctions. This course will examine in some detail the complex organization of the brain and how it performs some of its basic functions. The course will be of special interest to premed students; NS&B, biology, and psychology majors; and anyone simply interested in how the brain works.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **NS&B239, PSYC239**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL241 Cell-Cell Interactions in Development

This course is about the exploration of the cellular interactions during development. Students will examine interactions between cells in the specification of the overall body plan, tissues and organs; the role of adhesions and migration; and the intracellular and extracellular cues that regulate these processes.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **None**

Prereq: **(BIOL182 AND BIOL212) OR BIOL218**

BIOL242 Quantitative Methods for the Biological and Environmental Sciences

This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulae. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL542, E&ES270, E&ES570, ENV5242**

Prereq: **None**

BIOL243 Neurohistology

The aim of this course is to study the microscopic structure of the nervous system. Structural and functional relationships between neurons and glia, as well as the organization of major brain regions (cortex, hippocampus, and cerebellum) will be examined. In addition to traditional histological preparations, modern techniques including confocal microscopy and immunohistochemistry will be studied and performed. Laboratory exercises will include the preparation and visualization of microscopic slides using a variety of techniques. While this course will focus on mammalian nervous system, skills learned in this course will be applicable in a variety of research models.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B243**

Prereq: **[NS&B213 or BIOL213 or PSYC240] OR [MB&B181 or BIOL181]**

BIOL244 Neuropharmacology

This course will introduce students to the physiological and molecular effects of drugs on neuronal activity and behavior. We will cover key concepts in neuropharmacology, including pharmacokinetics and pharmacodynamics, alongside techniques used in modern pharmacotherapeutic discovery as it relates to the treatment of neurological and neuropsychiatric disease. Student assessment will include in-class quizzes and exams.

Offering: **Host**

Grading: **OPT**

Gen Ed Area: **NSM-BIOL**

Identical With: **NS&B244, BIOL544**

Prereq: **BIOL182 AND NS&B213**

BIOL245 Cellular Neurophysiology

This neurophysiology course is mostly a study of how neurons send, receive, and integrate the signals that produce nervous system activity. Using the tools of electrophysiology (the electrical recording and manipulation of neurons), we can

better understand synaptic plasticity, neuronal oscillations, and network activity. In the last module of the course, students will use their knowledge of a diversity of voltage-gated channels, neurotransmitter systems, and neuron categories to better understand the neurophysiology of epileptic seizures and sensorimotor systems and locomotion. We will also examine articles about human-machine interfaces that are being developed in the diagnosis and treatment of epilepsy as well for the restoration of motor activity and somatosensation.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **NS&B245, BIOL599**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL247 Laboratory in Neurophysiology

The course is designed to teach techniques and offer independent research experience. Students study living nervous systems and measure the electrical signals at the heart of nervous system function. In the first part, experiments include intracellular recordings of rest and action potentials, synaptic transmission, sensory coding and integration in simple nervous systems. Students learn surgical and electrophysiological recording techniques working with invertebrate and cold-blooded vertebrate animals including crayfish, mollusks (*Aplysia*), leeches, fish, and amphibians. In the second part of the course, students will use these techniques in novel, independent research projects.

Offering: **Host**

Identical With: **NS&B247**

Prereq: **[(NS&B213 or BIOL213 or PSYC240) AND (BIOL182 or MB&B182)]**

BIOL250 Laboratory in Cellular and Behavioral Neurobiology

The goals of the course are to introduce students to a number of contemporary laboratory techniques in neuroscience and behavior. The laboratory introduces students to experimental method and techniques including neuroanatomy, immunohistochemistry, primary neuronal and astrocyte cell culture methods, analyses of electrical activity in the brain, and behavioral analyses of learning, memory, social behavior, and social dominance in inbred strains of mice.

Students will learn to analyze experimental data and write a series of laboratory reports on the experiments done during class. In addition, students will write a term paper related to one of the experimental approaches.

Offering: **Host**

Identical With: **NS&B250, NS&B555**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL252 Cell Biology of the Neuron

Neuronal cell biology is an important and fast-moving field. The brain cannot be understood without first elucidating the properties and functions of its component neurons. This course will focus on cell biological studies of the nervous system. We will explore the structure and function of neurons, synapses, and circuits. Using both text books and primary literature, we will examine the basic cell biological mechanisms that underlie the formation, function, and plasticity of neurons and circuits. Areas studied will include polarity, synapse formation, synaptic transmission, inter- and intra-cellular transport, plasticity, and regeneration.

Offering: **Crosslisting**

Identical With: **NS&B252**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL254 Comparative Animal Behavior

An introduction to the study of animal behavior, this course will examine the factors that control the behavior of vertebrates and invertebrates within evolutionary, social, and physiological contexts. All animals face similar challenges, and we will examine the common and sometimes unique behavioral strategies used to meet these challenges.

Topics will include feeding and foraging, communication, agonistic interactions, parental care, hormonal modulation, and more. As this course explores the scientific study of animal behavior, students will also get introduced to some basic data analysis tools using computational notebooks to explore data from a small subset of the assigned primary articles.

BIOL256 Quantifying Evolution: The Genetics of Populations

How can we forecast the survival of an endangered species? How quickly can antibiotic resistance arise? Who is Lucy? Population genetics studies the genetic variation within and between populations that arise from several factors, including natural selection. Migration, mate choice, and habitat all influence the evolution of life. In this course, we will use mathematical modeling to describe how these fundamental forces change populations over time, and we will learn how these principles are used to breed our food supply, build our medicines, and manage our ecosystems. Class sessions will combine lectures with discussion and in-class problem-solving. Using these ideas, students will learn how evolutionary biologists reconstruct history using the principles of inheritance and variation.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **MB&B181**

BIOL257 Neurogenetics

Genes are the basic functional units of heredity. This course is an introduction to the study of genes and their role in shaping neuronal structure, neuronal function, and behavior. We will learn about classic and modern approaches used to probe the relationship between genes and behavior, with a focus on studies using model organisms (e.g., flies, mice, worms). We will discuss the molecular genetics of neurological disorders with high heritability and the use of genetic tools to treat these conditions, and we will consider the ethics surrounding treatment and diagnosis of these disorders. Student assessment will include short written responses, in-class quizzes, and exams.

Offering: **Host**

Grading: **A-F**

Prereq: **BIOL181 AND BIOL182**

BIOL259 Genes to Greens: The Biology of Food Production

Climate change and rapid advances in biological technology are shifting the ways humans grow food. We can now produce food more efficiently than ever, but are losing arable land to harsh and unforgiving climates. We also must grapple with ethical questions about which natural resources we should sacrifice for the good of the global food supply. In this course, students will gain an understanding of plant physiology, traditional agricultural techniques, and traditional and

modern crop breeding strategies. Students will engage in the current debates surrounding food production.

Prereq: **(MB&B181 or BIOL181) AND (MB&B182 or BIOL182) AND (BIOL212 or BIOL218)**

BIOL299 Waves, Brains, and Music

Pressure waves bounce against the ear, and we create perceptions called sounds from them. We organize sounds to make music, making more waves, and the cycle goes forward. This course will provide an introduction to the fraction of these phenomena that can be measured and analyzed, focusing on the mathematics of signal analysis, auditory physiology, and the physiology of musical perception and production. Periodic waveforms include musical tones and the voltage fluctuations that can be measured from brains. The first third of this course (waves) is an introduction to the quantitative analysis of periodic waveforms, with the goal that the student will have a better understanding of how to interpret the analysis of both musical sounds and neuronal recordings. The second part of the course (brains) examines the known mechanical processes (physiology) by which the mammalian brain analyzes the periodic waveforms that we interpret as sound. The third part of the course uses these lessons to examine original research articles about the neuroscience of music, that is, how neuronal networks produce musical perception.

Offering: **Host**

Identical With: **NS&B299**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL306 Ecology and Natural History of Freshwater Fishes of South America

South America has the highest diversity of freshwater fishes anywhere in the world. In fact, there are more than twice the number of mammals and about the same number of birds in the world. Why has this remarkable radiation occurred in a relatively short period of time? How can so many fishes coexist in the same rivers, utilizing the same resources? In this intensive course, we will travel to Colombia during spring break (March 7-21) in order to gain firsthand knowledge about the ecology and natural history of freshwater fishes in South America. We will learn about the ecological and environmental factors that contribute to perhaps the largest biological radiation on the planet.

Students will obtain firsthand experience with the South American tropics, freshwater fishes, and with doing experiments in the field. Each day there will be a combination of lectures and field or laboratory exercises. We will travel to and explore fish ecology in different types of rivers at different elevations. Students will gather and analyze data about biological, physical, and environmental issues that are covered in the lectures. The habitats that we explore will be both terrestrial and freshwater rivers. Our base will be at the Instituto Humboldt in Villa de Leyva, Colombia. We will interact with Colombian students who are studying ecology and biodiversity at the Institute in order to exchange ideas about current environmental issues.

All the costs of travel, lodging, and meals will be covered by the course.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.50**

Prereq: **None**

BIOL310 Genomics Analysis

This course is an introduction to genomics and analysis for students with interest in life sciences. It introduces current applications of genomics techniques, covers how to build a genomics workflow, and introduces statistical analyses in R programming language. This course assumes little or no prior programming experience and will provide hands-on experience in taking raw next-generation sequencing data through a custom workflow and ending with analyses in R statistical software. This course emphasizes hands-on computational

methodology, bioinformatics data analysis, and interpretation of quantitative information. The primary method of evaluation is through written work and the course will increase students skill in scientific writing and scholarship. Due to the ongoing pandemic, in the Fall of 2020 the course will be all online with both synchronous and asynchronous instruction, discussion groups and cloud based computational projects designed to train transferable skills in big data analysis.

Identical With: **NS&B325**

Prereq: **([MB&B181 or BIOL181] AND [BIOL182 or MB&B182])**

BIOL327 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through

analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

Offering: **Host**

BIOL328 Chemical Senses

The least well understood of the senses, chemical sensation, is key to survival and behavior of many species. This course covers the structure and function of sensory neurons in both the gustatory and olfactory systems, as well as in chemosensory irritation. We will examine coding of sensory information to understand how higher cortical areas interpret stimuli. We will look at a variety of animal models and discover common organizing principles across phyla. Emphasis will be placed on the cell biology of these systems. Students will participate in reading, analyzing, and presenting recent studies from different areas within chemical sense to highlight recent findings and where the emphasis in chemosensory research is focused.

Offering: **Crosslisting**

Grading: **A-F**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B328**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL332 Genomics Era Cell and Development

Each decade, technological advances shape the kinds of research questions that can be asked and solved. This past decade, sequencing technologies have delivered rich data sets analyzing genomes and transcriptomes. In this functional genomics course, we'll discuss several cases where the starting point for research was a genetic change (or several genetic changes) found in a tissue, disease, or population. We'll look at the cell and molecular research that was then done and what was learned. For case studies that relate to disease we will also consider how research discoveries shaped treatment options.

This course will greatly expand students' foundational knowledge of cell and developmental biology. Students will also develop their data interpretation and communication skills. Since we all harbor genetic changes that modify our susceptibility to a disease or condition, we will also think critically about moral and ethical issues that arise from the case studies we discuss in class.

Offering: **Host**

Grading: **A-F**

Gen Ed Area: **NSM-BIOL**

Prereq: **BIOL208 OR BIOL210 OR BIOL212 OR BIOL218**

BIOL333 Gene Regulation

This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course

will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. An overarching theme is how genomes encode and execute regulatory programs as revealed by a global systems biology approach in modern genomics research.

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Identical With: **MB&B533, MB&B333, BIOL533**

Prereq: **[BIOL182 or MB&B182]**

BIOL334 Shaping the Organism

We are composed of tissues and organs of distinct shapes, but how are these shapes formed? To answer this question, biologists turn to the embryos and developing tissues of model organisms to study the mechanisms that build tissues with distinctive shapes and patterns. These mechanisms include changes in the cytoskeleton and cell adhesion, changes in cell shape, changes in the forces within a cell and across a tissue, and signals that determine whether cells live or die. It turns out that most of the processes required to correctly shape embryos and tissues have also been found to function incorrectly in a variety of human diseases!

This is a part-seminar, part-laboratory course that examines tissue and pattern generation in *Drosophila* (the fruit fly), an accessible model organism that has been extensively used to study the conserved processes and proteins that shape tissues. First, we will examine how the *Drosophila* embryo is shaped and patterned. Second, we examine how the *Drosophila* eye is assembled and patterned. Students will set up *Drosophila* crosses, use popular techniques to manipulate protein expression, and dissect and image fly tissues.

BIOL337 The Origins of Bacterial Diversity

Wherever there is life, there are bacteria. Free-living bacteria are found in every environment that supports eukaryotes, and no animal or plant is known to be free of bacteria. There are most likely a billion or more species of bacteria, each living in its unique ecological niche. This course will explore the origins of bacterial biodiversity: how bacteria evolve to form new species that inhabit new ecological niches. We will focus on how the peculiarities of bacterial sex and genetics facilitate bacterial speciation. Topics will include the characteristics of bacterial sex, why barriers to genetic exchange are not necessary for speciation in bacteria, the great potential for formation of new bacterial species, the evolutionary role of genetic gifts from other species, and the use of genomics to identify ecologically distinct populations of bacteria.

BIOL342 Molecules to Medicine

This course will explore the process of drug development, including target selection, lead discovery using computer-based methods and combinatorial chemistry/high-throughput screening, organic synthesis, bioavailability, clinical trials, and other factors (some economics and politics) involved in bringing a drug to the marketplace. Critical consideration of the variables to contend with at each step will be described and discussed, including aspects of research ethics and patent law. The basic science of molecular recognition, computer-aided drug design, and the role of factors from synthetic chemistry to toxicology will be presented. Case studies of the development of drugs recently successful in making the journey from molecule to medicine will be discussed, as well as the story of some that did not, and why. Emerging new design strategies such as fusion-protein therapies, crisper technology, and enhanced use of rational design and combinatorial methods will be emphasized, and how pharmaceutical research is evolving in the postgenomic era, particularly with biologics. Job opportunities in the pharmaceutical industry will be discussed.

Offering: **Crosslisting**

BIOL345 Developmental Neurobiology

Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.

BIOL347 Mammalian Cortical Circuits

The mammalian cortex is where conscious perception and thought is generated, but the mechanistic details governing those processes are not well known. Studies of those circuits have revealed a heterogeneity of neuronal classes in the cortex and their proposed roles in these processes. Detailed wiring diagrams of local and long-distance cortical circuits are emerging, colored with dynamic connections that are helping us understand the cortex with these reverse-engineering strategies. Most of the readings for this course will be taken from the recent primary literature; areas of the cortex that will be studied include sensory cortex as well as studies of hippocampal cortical circuits.

BIOL351 Neurobiology of Learning and Memory

Animals as varied as sea slugs and humans display a number of types of learning, ranging from the capacity to acquire species-specific behavior to the ability

to form arbitrary associations. Just as varied are the philosophies governing the choice of how to best study the neurobiology of learning and memory.

Through lectures, class discussion, student presentations, and a critical reading of the primary literature, the advantages and disadvantages of these various approaches will be investigated. While the specific focus of this class will be on learning and memory, other ways in which the brain learns will also be explored. Normal brain ontogeny relies to some extent on invariant cues in the animal's environment, making this process somewhat analogous to learning. In fact, the neural substrates for learning are likely to be a subset of the basic steps used during brain development. Moreover, the developmental rules guiding brain assembly place constraints on the what, how, and when of brain function and learning. Therefore, this course will also cover select topics in basic developmental neurobiology.

BIOL353 Neurobiology of Neurological Disorders

This course aims to provide a foundation in the underlying mechanisms of neurological and psychiatric disorders. We will explore through lectures and readings of primary literature a number of important neurological and psychiatric diseases, including including schizophrenia, Alzheimer's disease, sleep disorders, anxiety disorders, and Parkinson's disease. This course focuses on the fundamental molecular and cellular mechanisms that underlie neurological disorders and is designed to engage students who wish to study basic aspects of brain function.

BIOL354 Agricultural Food Webs

Ecological communities are structured by feeding interactions, and agricultural systems are no exception to this rule. This class will focus on attributes of food webs that impact agriculture, including topics such as natural biological control of insect pests, to soil microbes and nutrient cycling, to causes of honeybee colony collapse disorder. This course includes a rigorous survey of both ecological theory and applied environmental problems. Students will read primary literature from the fields of food web ecology and agroecology and discuss the implications through group work.

BIOL357 Sex and Gender: From Synapse to Society

From movies like "Think Like a Man" to songs like "God Made Girls," from federal policies to gender reveal parties, much of our experience is defined by an ideology of gender dichotomy and an endorsement of fundamental sex differences in behavior. But does science agree? The field of neuroscience is bursting with research that both supports and questions inherent differences in the brains and behavior of men and women. In this course we will be taking an open and critical look at this scientific literature. We will begin by clarifying what it means, biologically, to be male/female, determine the limits to these definitions and evaluate how these biological elements (genes/hormones/anatomy) interact with our environment and society to influence our behavior and gender identity. Additionally, we will evaluate nonhuman animal and human data regarding sex differences in behaviors (e.g., aggression, verbal communication) and neuropathological states (e.g., addiction, autism spectrum disorder). Student assessment will include effortful and active participation, short written responses, one long response paper, and a poster presentation during our online symposium.

BIOL358 Motor Systems Beyond Movement

This course is designed to take a comparative approach to understanding the major motor systems of the brain and will cover the basic elements of motor "control." However, the motor system does much more than contract muscles. Even the most basic movements such as walking require whole-body coordination that must be learned and adapted to our environment. During active sensation, motor systems even modulate our sensory perceptions. Much of what we have learned about motor systems comes from animals as diverse as crickets, electric fish, and birds. This course uses a comparative approach to understand the functions various brain regions contribute to our active lives.

BIOL360 Calderwood Seminar in Public Writing: Neuroplasticity and the Brain

This course will examine structural and functional neuroplasticity. Structural plasticity refers to the brain's ability to change its physical structure as a result of learning and experience. The ability to reorganize itself by forming new connections, strengthening existing connections, or pruning away old synaptic connections is regulated by our environment, both within the body and the external world. We'll examine critical periods in development when sensory experiences change and sculpt the wiring of the brain, learn how the birth of new neurons changes across the lifespan, and how adult neurogenesis is altered by the microbes within us, physical exercise, stress, and neuropsychiatric disorders. We'll also learn about the promise of stem cell therapies for enhancing brain repair and plasticity after brain injuries. Several guest lecturers who are prominent neuroscientists working in the field of adult neurogenesis will be invited to speak to the class about their research in the field of neuroplasticity. This course will follow a model developed in Calderwood seminars taught at Wellesley College and is writing-intensive. After the basic material is

introduced, class sessions will be workshop-based. Students will prepare for class by reading scientific papers and reviews on the topic and will submit short writing assignments on the topic. In class, we will discuss the topic and analyze the experimental approaches and findings. Students will have extensive opportunities for feedback and writing revisions through discussions with the professor, a course writing tutor, and in-class writing workshops.

BIOL365 Calderwoods Seminar in Public Writing: 21st-Century Biology

Twenty years ago, the landscape of biology looked very different. As the century began, the "rough draft" of the human genome was nearing release, a year ahead of schedule. Biologists envisioned an era of unparalleled progress leading in a straight line from DNA sequence data to the precise causes of human health and behavior, and to the development of genetically modified crops that would end global hunger. As to populations in natural habitats, any evolutionary impacts of climate change were thought to be far in the future. Instead, 21st-century biologists are scrambling to understand the human-caused evolutionary changes taking place in our lifetimes. Genetically modified crops have led to unforeseen threats to the survival of their wild relatives, while constructed ecosystems provide alternative farming approaches. Molecular insights have uncovered the unexpected roles of epigenetics and the microbiome in development and disease. Tools are available to not just decode genes but to edit them, at once raising new possibilities and urgent ethical questions.

How can we approach this changed biological prospect? The course invites students to engage with these broadly resonant issues by framing them for general audiences rather than in specialized scientific terms. Drawing on common content from recent journal articles, guest research lectures/Q&A sessions, and a field trip to a local kelp-shellfish farm, students will unpack these contemporary themes by explaining the basic science in their own voices while considering them in larger contexts and exploring connections to their own knowledge and experience. The course will build strengths in communication and collaboration through individual writing and revising (in a variety of formats), active peer editing, and in-class workshopping of each piece, in a collective student-led format.

BIOL515 Evolution in Human-Altered Environments

Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.

BIOL527 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For

example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

BIOL533 Gene Regulation

This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. An overarching theme is how genomes encode and execute regulatory programs as revealed by a global systems biology approach in modern genomics research.

BIOL537 The Origins of Bacterial Diversity

Wherever there is life, there are bacteria. Free-living bacteria are found in every environment that supports eukaryotes, and no animal or plant is known to be free of bacteria. There are most likely a billion or more species of bacteria, each living in its unique ecological niche. This course will explore the origins of bacterial biodiversity: how bacteria evolve to form new species that inhabit new ecological niches. We will focus on how the peculiarities of bacterial sex and genetics facilitate bacterial speciation. Topics will include the characteristics of bacterial sex, why barriers to genetic exchange are not necessary for speciation in bacteria, the great potential for formation of new bacterial species, the evolutionary role of genetic gifts from other species, and the use of genomics to identify ecologically distinct populations of bacteria.

BIOL545 Developmental Neurobiology

Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.

BIOL554 Comparative Animal Behavior

An introduction to the study of animal behavior, this course will examine the factors that control the behavior of vertebrates and invertebrates within evolutionary, social, and physiological contexts. All animals face similar challenges, and we will examine the common and sometimes unique behavioral strategies used to meet these challenges.

Topics will include feeding and foraging, communication, agonistic interactions, parental care, hormonal modulation, and more. As this course explores the scientific study of animal behavior, students will also get introduced to some basic data analysis tools using computational notebooks to explore data from a small subset of the assigned primary articles.

BIOL571 Teaching: Techniques and Theory

This course will help teaching assistants working with the Principles of Biology labs prepare to teach weekly lab sessions. Students will obtain hands-on experience with various techniques in the areas of molecular and cell biology. In addition, best teaching practices will be discussed and students will share their teaching experiences with each other.

This course may be repeated up to two times for credit.

Offering: **Crosslisting**

Grading: **Cr/U**

BIOL590 Plant Form and Diversity

The course begins with an overview of plant evolutionary history, then covers the basic structure and function of the plant body, the plant life cycle in nature, including interactions with animals, and ecological diversity of plants in contrasting habitats. Special events include a field trip to the Smith College Botanic Garden, two hands-on days for working with living specimens, and a special guest lecture by a local plant biologist.

Identical With: **BIOL290, ENV5286**

Prereq: **[BIOL182 or MB&B182]**

BIOL599 Cellular Neurophysiology

This neurophysiology course is mostly a study of how neurons send, receive, and integrate the signals that produce nervous system activity. Using the tools of electrophysiology (the electrical recording and manipulation of neurons), we can better understand synaptic plasticity, neuronal oscillations, and network activity. In the last module of the course, students will use their knowledge of a diversity of voltage-gated channels, neurotransmitter systems, and neuron categories to better understand the neurophysiology of epileptic seizures and sensorimotor systems and locomotion. We will also examine articles about human-machine interfaces that are being developed in the diagnosis and treatment of epilepsy as well for the restoration of motor activity and somatosensation.

CENTER FOR GLOBAL STUDIES (CGST)

CGST131B Writing About Places: Africa

This course is one in a series called "writing about places" that explore the long tradition of writing about travel and places and changing attitudes toward crossing cultural borders. We will examine historical and cultural interactions/confrontations as portrayed by both insiders and outsiders, residents and

visitors, colonizers and colonized—and from a variety of perspectives: fiction, literary journalism, travel accounts, and histories. Writing assignments will include critical and analytical essays as well as encouraging students to examine their own experiences with places and cultural encounters.

Offering: **Crosslisting**

Grading: **A-F**

CGST136 Writing for Fellowships

National fellowships are prestigious, competitive awards that enable the recipient to pursue graduate study, a research project, or travel abroad. While fellowship winners experience great personal growth and gain credentials that aid future success, preparing the application itself helps students clarify their goals and learn how to present themselves to an unfamiliar audience, such as future employers. In this course students will learn about various fellowship opportunities, identify steps toward building a strong candidacy, and create a portfolio of compelling application materials. To inspire creative thinking, we will read short writings in various genres; authors may include Octavia Butler, Jose Antonio Vargas, Ruth Bader Ginsburg, N.K. Jemisin, Ursula Le Guin, and Ocean Vuong. We will then craft personal statements and other fellowship materials, taking them through a rigorous writing process with multiple revisions. By completing the course students will grow as writers and gain skills that can also be used in writing grants and seeking a job.

CGST202 Preparing to Study Abroad: Culture and Language

This course is designed to facilitate students' preparations to study abroad during the following term. Through exploration of intercultural and language learning theories, intercultural communication strategies, and theories about culture, students will build a foundation for their learning and achieving their individual goals during the semester abroad. The course is open to those who are studying abroad in English as well as those who are studying a language. The course is graded at the end of the term, but ungraded check-ins during the study abroad experience are required for the credit to be awarded.

CGST205 Introduction to Global Engagement

This team-taught seminar introduces students to the ideas and practices central to strengthening one's intercultural competence, in part through a critically informed approach to globalization. The course views "cultures" as porous, fluid, internally contested, and often overlapping--and yet still as vital realities shaping the lived experiences of all people. Building intercultural competence requires not just acquiring new knowledge but also practicing the skills and honing the attitudes that are needed to interact effectively and appropriately on a basis of informed, mutual respect. This course is a core requirement of the Global Engagement Minor (GEM); students will begin to work with the eportfolio that they will use over their time in GEM to track, reflect on, and synthesize the various experiences making up the minor.

CGST208 ¿Convivencia o conflicto?: Las tres culturas de la España medieval a través del arte (CLAC.05)

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual wellbeing. This Spanish-language section complements the ARHA 310 curriculum, by exploring the resonance between medieval experiences of identity, pluralism, appropriation, and exchange and our own uneasy attempts at building a multiethnic, multicultural society. This class will be conducted in Spanish. ARHA 208 is open to intermediate and advanced Spanish learners (SPAN 113 and above), bilingual students, and heritage speakers. Enrollment in ARHA 310 is optional but encouraged.

CGST210 Language and Thought: Introduction to Linguistics

What makes human language unique? This course is an introduction to the study of human language and its underlying properties. Much of our linguistic competence lies below the level of conscious awareness, and linguists seek to uncover the subconscious principles and parameters that govern our knowledge of language. This course first explores the core theoretical areas of linguistics: phonology (sound structure), morphology (word structure), syntax (sentence structure), and semantics (meaning). Then, we will explore such topics as the workings of language use, language variation, and first- and second-language acquisition.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-CGST**

Prereq: **None**

CGST212 Language and Politics: Making and Unmaking of Nations

This course explores the key topics at the intersection of language and politics, including language choice, linguistic correctness, (self-)censorship and hate speech, the performance of ethnic and national identity in language, gender politics and "powerful" language, rhetoric and propaganda, and changing conceptions of written language, driven in part by technological advances. One of the examples of such topics is "Tweet Politics" or "Incivility on the Web" around the globe. This course consists of three modules. In the first two modules the above-mentioned topics will be discussed in general, while in the last module we will see how preferences in language policies and politics played a significant role in "making and unmaking of nations" in different parts of the world, from South Asia to East Asia to North America.

CGST213F How Language Works: The Beliefs and Bias that Affect our Social World (FYS)

This first-year seminar takes an in-depth look at how we communicate. What do we believe about language? How does that affect our interactions on personal and societal levels? Drawing on readings from the fields of linguistics and anthropology, we will challenge common language myths and beliefs related to multilingualism, language and dialectal stereotypes, gendered language, and language learning. To synthesize those ideas, students will write reflectively and discuss their own oral and written language, conduct short research projects, and synthesize their ideas into a final paper related to a topic in the course.

CGST214 Language Shift, Change, and Loss

South Asians (India and Pakistan) are multilinguals or at least bilinguals. Most of the world's population is at least bilingual, if not trilingual or more; nevertheless, fluent bilingualism in the United States is relatively uncommon, and biliteracy is even more rare. However, much of the research on language development and bilingualism has been conducted in the United States, even though we (USA) are a "minority world population" in these matters and we interpret the research findings in ways that most of the world's multilingual speakers would find unusual. In this course, we will study both first language and multiple language development. We will look carefully at both simultaneous bilingualism (early bilingualism, bilingualism as a first language, or "bilingualism from the crib") and sequential bilingualism (learning a second language, or more, after the first language is established). We will explore language shift (from mother tongues to majority language), and change and loss from South Asians' perspectives and how these perspectives are different from and similar to the rest of the world, and consider what should be done for language maintenance.

CGST215 What is (a) Language?

Scholarly inquiries into language have always faced the distinctive (though not unique) problem of how to define their object of study. What is language? Language in general, human language, a particular language, language as opposed to dialect or idiolect, etc.

This course will not answer these questions. It will, however, examine the most important and influential ways that they have been formulated and answered throughout the Western tradition of linguistic inquiry. Our survey will be organized around two main tendencies that are sometimes distinct but often complementary. First, the question of origins: Where does (a) language come from, and what does this tell us about its nature? We'll look at etymology and theories of language change alongside thought experiments and evolutionary theories that try to narrate the emergence of language from nonhuman forms of animal communication. Second, the questions of structure and function: How does (a) language work; what do we use it to do? We'll look at the medieval trivium of grammar, logic, and rhetoric, alongside the (approximate!) modern analogues of morphosyntax, semantics, and pragmatics. Our goal will be to get a sense of the major theoretical issues that have run through scholarly inquiries into language(s) across disciplines ranging from linguistics and philosophy through anthropology, sociology, and literary theory, to cognitive studies and evolutionary biology.

While our scope is large, our method will be narrow, focusing on close readings of important primary texts in the history of Western linguistic thought. Since our emphasis will be on the coherence of theoretical positions rather the coherence of historical narratives, we'll focus especially on works that have exerted the strongest influence on contemporary understandings of language, particularly those from the 20th and 21st centuries.

CGST220 Italian Gaming Lab: Project-Based, Gameful Pedagogy for Language Learning (CLAC.50)

In the past two decades, crowdfunding and renewed interest in games (board games, role-playing games, digital games, and instructional games) have created an increased and diverse gaming production, which has become the subject of several studies, articles, and projects related to all areas of education, including second-language acquisition. In an effort to explore how a game-informed pedagogy can work in Italian language and culture classrooms and to highlight analog gaming approaches that have worked inside and outside the language classroom, this course will explore the basics of Game-Based Learning (GBL) applied to second-language acquisition, as well as present a selection of classroom projects informed by its principles.

"Italian Gaming Lab" is designed as a project-based Italian language laboratory that will focus on why and how analog games can be effective tools for language learning; examples will include board games and role-playing games. Participants will discuss the application of gaming principles to second-language/L2 acquisition and either adapt existing games for language learning or create brand new educational games. The course offers students the opportunity to use language creatively and to develop critical knowledge within the rising and innovative field of Game-Based Learning.

The course will be conducted in Italian, and games will be created in Italian. Both intermediate/advanced learners of Italian (second-year level or above) and native speakers are welcome. If you are unsure about whether your language background is sufficient for the course, please contact the instructor.

CGST227 Writing Short Fiction in Spanish

This course will introduce students to the fundamentals of writing short fiction in Spanish. It will enhance their command of Spanish and their skills as effective writers through the examination and discussion of many aspects of the craft of fiction writing, which will inform students' own writing and development of their personal style. We will examine essential features of fiction (methods of constructing narrative tension, climax, ambiguity, character, dialogues, and structure), as well as various fictional styles through our discussion of the writing of our peers and a study of the texts of a number of contemporary Latin American and Latinx writers working in a genre that has been crucial to the region's intellectual production.

CGST230 Between Marx and Coca-Cola: European Cinema of the 1960s and 1970s

In the 1960s and early 1970s, a growing sense of alienation and social unrest spread across Europe, making their marks in both society and cinema. Borrowing the words of New Wave director Jean-Luc Godard, these years led to the emergence of "the children of Marx and Coca-Cola." This course, taught in English, will introduce students to a multi-faceted portrait of Europe in the 1960s and 70s through avant-garde and popular cinema from France, Italy, Spain, Germany, and Eastern Europe. We will focus on films that depict global capitalism, gender relations, and government control. Some of the themes we will discuss include the critique of consumerism and materialism, the changing role of women in society, life under socialism and dictatorship, and youth counterculture. Last but not least, students will learn how New Wave directors challenged traditional approaches to narrative cinema.

CGST231 Love and Suffering in Ancient Rome (CLAC.50)

In this CLAC course students with some background in ancient Latin will read selections of the extant sources on love and suffering in Roman myth, history, and thought. The sources that we will cover will be drawn from diverse genres and periods: historiography, epic poetry, lyric poetry, and comedy. This diversity will offer a unique opportunity to students to identify and analyze the intersections of age, class, status, gender, and ethnicity and the way they shaped Roman ideology on "love." We will be looking at how cultural practice shapes language, how ideology shapes law, and how literature challenged cultural norms of love and marriage, all the while unpacking and interrogating the Roman belief that love had no place in the citizen life dedicated to serving the state: love produces suffering. In turn, we will reflect on the ideological shift in the last 150 years that has come to dominate "western" beliefs on love and marriage, that is, "all you need is love," over family, friends, and society, despite the obstacles: suffering produces love.

The selections of readings will be drawn primarily from what the students read in translation in the parent course. The final selection will be based on the level of the students. This CLAC is conceived as appropriate for students on the intermediate and advanced level of ancient Latin.

CGST240 Introduction to Tamazight: The Native Language of North Africa and Beyond (CLAC.50)

This course will introduce students to the language (sounds and script) and culture of the Amazigh people, an ethnic group (commonly known as Berbers) native to North Africa and West Africa, specifically Morocco, Algeria, Tunisia, Libya, Mauritania, northern Mali, and Niger, with some oases in Egypt and the Canary Islands.

The Tamazight language--the alphabet of which is called Tifinagh--has been a written language for almost 3000 years, although it was disrupted throughout history due to various invasions and conquests of the area. The Tuareg people of the Sahara desert in Northern Africa, and as of late Morocco and Algeria, have

been using the Tifinagh alphabet (oldest dated inscription from about 200 BC) and the Tamazight language as a secondary national language.

The objectives of this course are: 1. To introduce students to the sounds and script of Tifinagh; 2. To teach students basic conversation and essential elements of the Tamazight language; and 3. To familiarize students with the culture of the different Amazigh peoples.

CGST245 Not Just Neorealism: Italian Cinema, its History and Politics (CLAC.50)

This 0.5-credit course is conducted in Italian and designed to supplement the English-language Italian cinema course "Not Just Neorealism: Italian Cinema, its History, and Politics" (RL&L 245). The presentations that are part of the requirements for the parent course (RL&L 245) will serve as our basis in this discussion-based section: Students will be responsible for screening films in addition to those required for 245, for presenting them, and, during the discussion sections in Italian, responsible also for linking them to the course material. Further, students enrolled in the CLAC will also make mini-presentations to the broader body of the students enrolled in the parent course only, linking the extra screenings to those that are part of the course syllabus, and enriching the discourse and knowledge base.

Students are required to be simultaneously enrolled in the parent course in order to enroll in the CLAC section. For this reason, enrollment is granted on a POI basis.

Students must have advanced competency in Italian: completed ITAL 221 or a course with a higher number, spent a semester (or more) in Wesleyan's Program in Bologna, or be linguistically proficient. For any questions about linguistic preparation, please contact the instructor.

Please note that at present this section is not acceptable as one of the nine required courses for the ITST major.

CGST250 Body, Soul, and Afterlife Journeys in Ancient Greece (CLAC.50)

The connection between body and soul and their journey in the afterlife were at the center of how the ancient Greeks thought not only of mortality but also of the good life itself. This CLAC course is connected to the Classical Civilization course titled "Death and Afterlife in Egypt and Greece" that will be taught in the fall by Kate Birney. The parent course explores the archaeology of death and burial in Egypt and Greece. It examines how the funerary practices and the very notions of death, the soul, the body, and the afterlife operated in these societies by drawing upon diverse evidence--archaeological, art historical, and mythological.

In this CLAC course students with some background in ancient Greek will read selections of the surviving evidence on death and the afterlife. Sources will be drawn from diverse genres and periods: historiography, Homeric poetry, Platonic philosophy, and religious tablets. This diversity will offer a unique opportunity to identify different registers and to explore how language itself reflects and in turn shapes the ideas and practices for which it is used. We will thus be looking at: how different media and performances are used to express loss, hope, and heroism in the face of death; how social class, gender, and political ideology

are reflected in these media and how they influence ideas about death and the afterlife; and, last, how we are to create adequate methodologies as "readers" of such diverse evidence.

The selections of readings will be drawn primarily from what the students read in translation in the parent course. The final selection will be based on the level of the students. This CLAC is conceived as appropriate for students on the intermediate and advanced level of ancient Greek.

CGST251 Classical Chinese Philosophy: Chinese Lab (CLAC.50)

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Classical Chinese Philosophy (PHIL205) course. Students must have taken PHIL205 in the past or be enrolled in it simultaneously. The course will have two main foci: introducing students to modern and contemporary Chinese-language debates about Chinese philosophy and exploring in greater depth the meaning of key passages from the classical works students are reading in translation in PHIL205.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Familiarity with classical Chinese is desirable but not required. Assignments will include presentations in Chinese and some written work in English; evaluation will be tailored to each student's language background. If you are unsure whether your language background is sufficient for the course, please contact the instructor.

CGST255 Modern History and Culture of Korea: From Imperialism to Two Koreas (CLAC.50)

This course will serve as an introduction to the more recent history and culture of Korea; South Korea's rebirth from the remnants of a devastating war into a globalized country whose cultural influence has grown drastically since the 2000s. We will be discussing politics and diplomacy, economic development and industrialization, the growth of mass culture, and social changes concerning Korean women and family. Key topics will include the colonial period, the Korean War and national division, the struggle for democracy, and Korean pop culture. Course material will include films, dramas, and literature on these topics.

This course will be conducted in Korean. Students who have either completed three years of Korean or meet the language fluency equivalent are encouraged to take this course. Native speakers of Korean are also welcome.

CGST262 Korean Music from Shamanism to Television (CLAC.50)

This course is open to intermediate learners, advanced learners, and native speakers. The discussion topics will be broadly approached, utilizing various music video examples as vehicles to deeper social, religious, and cultural understanding. These various music examples are from ancient to current Korean music practices. Historically, Korean music was integrated with dance, literature, art, song, and ceremony. Therefore, music (sound) was not separated from other elements but was essential to daily life, community activities, religious practice, artistic collaboration, costumes, food, and the very soul of the Korean people. Traditional Korean music is imbued with the history of court ritual, folk village stories, and myths, in addition to religious rituals of Confucianism, shamanism, and Buddhism. The music is central to a broad range of cultural, social, and humanitarian aspects of Korean life.

Korean traditional music has been evolving for over 2,000 years, and it is now rapidly

moving in many directions with contemporary life and influence from Western culture.

Historically, music was created as a group activity by village people oftentimes working with a spiritual leader shaman. Currently, the most acceptable music is created and performed by individual performers as a repertoire for TV programs. In the 21st century, as society changes, Korean music is changing also, with differing values of popular culture brought in through recordings, film, and of course the internet. Young musicians go beyond traditional music and are developing a new repertoire that mixes Western instruments or electronics with various traditional instruments. This is a new Korean identity. Newly created Korean ensembles and bands such as K-pop are successfully beginning to dominate the international music scene. In contrast to the formerly inner-looking "Hermit Kingdom," Korea has now entered into instant global communications with the production of more individual music in various styles.

CGST265 History of Spanish Cinema for Spanish Speakers (CLAC.50)

Spanish 265 is designed as a discussion section for students who are enrolled simultaneously in SPAN 301 and who have advanced proficiency in Spanish. This half-credit course offers students the opportunity to master the critical vocabulary and tools of film analysis in Spanish.

Weekly student-led discussions will provide students with the unique opportunity to exercise these tools regularly and gain greater fluency in the language. Students will be responsible for the same material included on the SPAN 301 website at: <https://span301.site.wesleyan.edu/>. Students will submit their assignments in Spanish and contribute weekly posts to a blog set up for SPAN 265.

CGST266 Neotropical Aquatic Ecosystems: Their Importance, Sustainable Use and Conservation (CLAC 1.0)

This course will examine why the Orinoco and Amazon basins in South America harbor a biological richness much larger than other river basins around the world. About 50% of all higher plant species of the world are included in these basins. Data on vertebrates showed that about 3,000 freshwater fish species, thousands of birds (migratory and local), and hundreds of amphibians, reptiles, and mammals have been found so far in those basins geographically included in six countries: Bolivia, Brazil, Colombia, Ecuador, Peru, and Venezuela. We will examine the key factors that have affected their historical-geological development, the actual richness, and the threats to sustainable development and conservation. We will ask questions about the nature and interactions of the key factors and agents that harbor and transformed the high ichthyological and other aquatic biota diversity, reflected by the wide range of landscapes and aquatic ecosystems included in those basins. We will try to identify fragile aquatic ecosystems depending upon the biological richness, endemism, importance for local communities, and potential threats. We will examine the current trends in the fisheries, forest exploitation, and agriculture for human consumption, noting that stocks of many species of fish are in steep decline, and that current fishing practices are not sustainable. Finally, the major impacts and threats faced by the fishes and aquatic ecosystems of the Orinoco River Basin are discussed with the purpose of studying potential plans for sustainable development. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST267 Current Environmental Issues in Latin America (CLAC 1.0)

This course will provide historical and current information on the development of environmental issues in Latin America. The information will be divided into assessing the use of the environment during (a) pre-Columbian and colonial periods and (b) the modern period. The organization, structure, and governance of the environment will be discussed, as will the development of public policies, management plans, factors that deteriorate, and the potential sustainable uses of the environment and its resources. We will be reading interdisciplinary literature including academic, reports, official governmental documents, and NGOs' projects dedicated to the diagnostic, development, and use of resources in Latin America. Finally, particular cases of Latin American countries such as Argentina, Brazil, Mexico, Costa Rica, Peru, and Venezuela will be studied. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST268 Food Security and Environmental Conservation (CLAC 1.0)

In this course students will research and discuss food security and the use of the environment in a selection of Latin American countries. We will ask questions about the basis of food production and availability. We will also examine the available information from public and private agencies about programs established by countries to ensure the food security of their inhabitants and the sustainable use and conservation of the environment. We will discuss concepts such as: food sovereignty and security as a food system in which the people who produce, distribute, and consume food also control the mechanisms and policies of food production and distribution; nutrition as a global and particular standard of food consumption; social justice related to the accessibility of food; and the human right to adequate food and freedom from hunger as one of the United Nations' objectives of the millennium. Students will look at particular cases in Latin America. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST273 Tatort - Window into Germany (CLAC.50)

Few television shows have become anchored in German cultural discourse as firmly as "Tatort," a weekly crime show produced and broadcast by public television since 1970. Watched by up to 40% of all potential viewers, new episodes are prominently reviewed in major daily newspapers and serve as a focus for discussions about German politics, culture, and society. Episodes have tackled questions of police brutality, immigration, gentrification, and the surveillance state, while also shining a light on Germany's changing conception of itself. Over the years, the show has attracted some of the major directors and actors from German-speaking regions, such as Wolfgang Petersen, Margarethe von Trotta, Dominik Graf, Sibel Kekili, and Götz George. In this course, we will watch current and canonical episodes of the show, using it as a way into discussions about Germany's past, present, and future.

CGST281 Global Economy: Germany and the World in an Age of Extremes, 1870-1957 (CLAC.50)

This Center for Global Studies discussion course explores the experience of globalization in the German-speaking world from the war of German unification in 1870 to the emergence of the European Community in 1957. It will analyze German imperialism and overseas investment before 1914; the deglobalization of the German economy in the First World War; the problem of reparations and other economic challenges faced by the Weimar Republic; and the impact of global protectionism and the Great Depression, the economic forces allowing the rise of Hitler, the economics of war, and the Nazi "New Order." We will explore the reasons for the ultimate failure of the German war effort and the country's catastrophic destruction and defeat in 1945, as well as Germany's postwar division and occupation as well as the gradual reconstruction and reintegration of the West German economy into a European and global division of labor beginning with the Bizone Agreement and GATT (1947), the Marshall Plan (1948), and the London German External Debt Agreement (1953), culminating in the Treaty of Rome (1957) creating the European Economic Community. The course will be using select German-language historical primary sources to explore this topic, supported by short secondary source narratives in both German and English pitched to intermediate to advanced German speakers/readers. Unlike the parent History lecture class (HIST 280: The Origins of Global Capitalism, 1800-present), this is a discussion course aimed at expanding vocabulary and practicing fluent discussions in the fields of history, politics, and economics.

CGST290 Nietzsche als Versucher (CLAC.50)

The term "Versucher" combines three meanings: (i) a writer of essays, (ii) a maker of experiments and hypotheses, and (iii) a tempter who seductively tests convictions and provokes latent desires. Friedrich Nietzsche draws on all these senses when he proposes "Versucher" as "the not-undangerous name [he] dares to bestow" on the "philosophers of the future"--a coming generation of free spirits who will (finally) be capable of appreciating and continuing his intellectual legacy (Beyond Good and Evil, §42).

This course will interrogate Nietzsche's conception of a philosophical Versucher and examine how this concept might apply to Nietzsche himself: as an experimenter with literary style and genre (including the essay form) and as a polarizing cult figure who has attracted the fascination of generations of teenagers and the most diverse (often diametrically opposed) ideological movements. How is it that Nietzsche inspires such passionate attachment in such radically different readers? What is it about his philosophical style and literary form that cultivates a feeling of intimacy and fierce allegiance while also admitting such aggressively divergent interpretations? To explore these questions, we will read and discuss excerpts from Nietzsche's writings and correspondence alongside texts by his friends and interlocutors--such as Richard Wagner, Paul Rée, and Nietzsche's unrequited paramour, Lou Andreas-Salomé. We will also look at prominent cases of his cultural reception--notably by the Nazi party (due to the influence of Nietzsche's sister, who was a party member) and simultaneously by opponents of totalitarianism such as Robert Musil, Karl Löwith, and Walter Kaufmann.

This course is part of the Fries Center for Global Studies' Cultures and Languages Across the Curriculum (CLAC) initiative. It is taught in German and associated with COL290/PHIL252 "Nietzsche - Science, Psychology, Genealogy," though

students can take either course independent of the other. No background in philosophy or literature is required for this course, but advanced-intermediate (B2+) reading and spoken German is a must.

CGST291 "Sexuality" in the Making: Gender, Law, and the Use of Pleasure in Ancient Greek Culture (CLAC.50)

The parent course (CCIV 281/FGSS 281) examines the construction of gender roles in ancient Greece and approaches gender as an organizing principle of private and public life in ancient Greek society by using literary, scientific, historical, and philosophical sources as well as material evidence. Issues addressed include: the creation of woman, conceptions of the male and female body, the legal status of men and women; what constitutes acceptable sexual practices and for whom (e.g., heterosexual relationships, homoeroticism, prostitution etc.); ideas regarding desire, masculinity and femininity, and their cultivation in social, political, and ritual contexts such as rituals of initiation, marriage, drinking parties (symposia), the law court, and the theater.

The textual sources used in the course cover a spectrum of genres: medical texts, Homer, lyric poetry, tragedy, comedy, law-court speeches, and philosophy among others. In the CLAC connected to this course students with some background in ancient Greek will read selections from these genres and will be able to compare different discourses and registers in the original. In the past, even through brief lexical examples--e.g., pointing at the use of *ta Aphrodisia* (the things/matters related to Aphrodite) in a culture that has no one term/concept for our notion of "sexuality"--students were intrigued by how different terms and discursive media in the original may offer access to perspectives, visions, and values that differ from and can, in turn, inform our own. The CLAC will create an opportunity precisely for this kind of access and a better informed and nuanced conversation.

CGST302 Narrating China: Chinese Lab (CLAC.50)

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Narrating China: Introduction to Modern Chinese Literature (CEAS 202) course. It allows students to encounter a selection of modern and contemporary Chinese literary texts in their original Chinese. As the parent course guides students through major literary movements and themes from 20th-century China, students in the CLAC tutorial will read poems, short stories, or excerpts of longer texts from the same periods in the original Chinese. In weekly meetings, students will discuss the readings in Chinese, to delve deeper into their stylistic and linguistic characteristics unobservable in translations.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Evaluation is based on students' preparedness, participation, and formal oral presentations, and will be tailored to students' language background. If you are unsure about whether your language background is sufficient for the course, please contact the instructor.

CGST303 Ukraine and Its Environment

International perspectives on environmental issues are critical in order to address the challenges facing the world. Developing an international perspective requires more than learning from printed literature—it requires in-country experience and the desire to be able to view issues through different cultural lenses. This course will provide such experience by learning about the diversity of Ukrainian environments, people, and cultures both in the classroom at Wesleyan and by traveling to Ukraine during Spring Break. During our time in Ukraine we will receive lectures in English from noted scholars, politicians, professors and scientists on topics such as environmental law, global environmental security, urban environment, environmental policy in developing states, and sustainable development for the developing world. We will travel and learn from scientists at Chernobyl about the regeneration of forest ecosystems, learn from agronomists about agriculture on the steppes, and learn from politicians and scholars about Ukrainian environmental policy and their views of U.S. policies. We will also enter into round table discussions with university students to exchange ideas about potential international solutions and approaches to environmental problems. These are just some of the experiences that are planned for our visit. Ukraine, as a pivotal democracy of the former Soviet Bloc, is an amazing place to witness how a nation wrestles with dramatic changes in policy. At the same time Ukraine is culturally diverse, which presents interesting challenges to formulating fair and cohesive policies.

CGST320 La cultura y la historia de la España islamica (CLAC.50)

This course will be taught in Spanish, and spans a timeline between 711 and 1492, i.e., from the date of the conquest/invasion of Iberia by Muslim troops to the fall of Granada and the expulsion of Muslims and Jews from Spain. Before starting discussion of the course material, students will be introduced to Arabic sound and script, as well as some common vocabulary and lexical concepts shared between Spanish and Arabic. This makes sense because Muslim culture and the Arabic language were present in Iberia for the better part of 800 years.

We will discuss not only the main events that took place during the Muslim occupation of parts of Iberia but also the cultural legacy Muslims and Jews left behind in the peninsula after they were expelled in 1492, especially in the realms of art, science, language, architecture, and le savoir-vivre. We will look at the different theories put forth by scholars about the conquest/invasion of the peninsula, in regard to the ease and speed with which the peninsula was overrun by Muslims. We will examine the hereafter and the consequences of the expulsion of Muslims and Jews on the Iberian peninsula as well as the neighboring territories. Finally, we will make a jump to the 21st century and try to connect some dots by looking at the current situation in and around the Strait

of Gibraltar, particularly the influx of illegal immigrants from North Africa and sub-Saharan countries, and the ensuing issues.

CGST321 Theatre for Social Change - Taught from Ecuador with Local Participants

This course is taught in Spanish. Students should have Spanish proficiency equivalent to SPAN 112 or higher. This course is designed to lead Wesleyan students and Ecuadorian community counterparts through the process of creating social change by practicing social change. Using exercises and activities that pull from the areas of Theatre of the Oppressed and Performance Activism, as well as traditional theatre tools such as movement and mask-making, we engage challenging concepts and conflicts by dialoguing via our performative work. Our exploration stretches from the theoretical foundations of structural and symbolic oppression to ongoing real-life events related to themes that are selected by the course participants (examples include cultural identity, systemic racism, privilege, power, environmental justice, and gender equality/equity). Each course participant chooses a thematic area and joins a small group with which they will apply learned methods to exploring their theme. Together, Wesleyan students with local counterparts create short virtual theatrical projects to be presented to the whole cohort. Readings cover theory and methods in Applied Theatre, community-based case studies, and articles related to the chosen themes. The readings are contextualized to the diverse lived realities of the course's participants as well as to our globalized society.

CGST322 Storying and Re-Storying (Storytelling for Social Change) - Taught from Ecuador w Local Participants

This course is taught in Spanish. Students must have proficiency in Spanish equivalent to SPAN 112. When we consciously appropriate the power of stories to collectively reimagine our world, we turn the word story into a verb. We "story" our world. When our "storying" seeks to transform a system founded on unjust stories, we are "restorying" our world. This course begins with our human ability, and need, to tell stories, examining how we use them for communication, as well as how we become empowered or disenfranchised by them. Based on the realities present in our communities (our local community of place, college campuses, cities, neighborhoods, spiritual communities, etc.), students work with their counterparts, combining theory with practice, to create and tell stories with the goal of identifying shared conflicts and inspiring change. Since stories are told in many ways, the course engages the "telling" through various methods: writing stories and poems, Spoken Word, coloring/drawing, mapmaking, and moving our bodies. In each project, we implement the elements of storytelling, balancing distinct narrative traditions, such as myth and legend, with influences of the modern world. Readings look at a wide array of narrative theory and methods, focusing on storytelling as a form of creating and expressing knowledge. The course concludes with the interweaving of local and international stories into "our stories."

CGST340 Identity and "Pacha" (Land-Based Knowledge and Re-imagining Community) - Taught from Ecuador

This course is taught from Ecuador by our study abroad partner, Pachaysana.

According to indigenous Andean scholars, Pacha refers to the time-space continuum, or as the "everything around and inside us." This course asks students to challenge their identities by broadening their epistemological and ontological lenses to see their individual and collective lives as they relate to Pacha. To synthesize this complicated process, we ask participants to examine who they are as related to the ever-changing ecology in which they live. For this course, ecology is approached broadly, referring to the Greek origin on the word oikos, meaning home. We take advantage of our virtual exchange and examine home as an interconnection of how we relate to "place and space," exploring our ecology as the triad of our immediate territory (llakta in Kichwa), our surrounding natural environment (allpa in Kichwa), and our global and pluriversal space (pacha). Throughout the course, we use an interdisciplinary lens to examine "who we are" as related to this diverse understanding of ecology, taking into consideration that our ever-changing environment includes an ever-changing human story. Readings are transdisciplinary, coming from the fields of anthropology, sociology, human geography, gender studies, ethnic studies, history, the arts, and development studies. Toward the end of the course, after examining certain theories and case studies, we will imagine the reconstruction of our identities contextualized to pacha, space, place, ecology, oikos, and home.

CGST341 Critical Interculturality and the Pedagogy of Unlearning

This course is offered by our study abroad partner, Pachaysana, online from their site in Ecuador, with local educators.

An ever-growing number of students, scholars, and activists criticize our educational institutions for upholding colonial structures, and via numerous movements are calling for "decolonization." Any effort to decolonize our education must go well beyond the content of what we teach in the classroom. In addition to what we are learning, we must explore how we learn, where we learn, and with whom we learn. We also must think about what "decolonization" means, taking into consideration the lands on which our campuses and communities are located. This course addresses decolonization through the lens of critical interculturality, referring to Catherine Walsh's critique of multiculturalism as functional or relational interculturality. Bringing in readings from Indigenous and Latin American scholars and taking part in workshops facilitated by local Ecuadorian community members, we will use interactive methods to explore some of the most challenging concepts related to decolonization, including "decolonization is not a metaphor," epistemic justice, border thinking, and embodied methodologies. Those concepts will then be examined with regards to the realities on our college campuses and our communities, and we will begin to dream about moving from the "functional" to the "critical." By the end of the course, informed by the readings and interactions

with community-based educators in Ecuador, students will formulate clear questions and identify potential strategies for applying critical interculturality at their college campuses.

CGST480 Engaged Projects

Engaged Projects (EPs) are rigorous, self-designed endeavors in which a student studies a topic of their choice and completes a final project intended for a non-academic audience. Students are encouraged but not required to select a topic that is connected to another class or their major. Final projects can take the form of blogs, videos, a website, or other media; a work of art, an event, a workshop, a presentation, or panel; a policy proposal or analysis; a white paper or op-ed series; a business plan; and/or any other piece(s) thoughtfully designed for the public.

EP students will develop a self-directed research and project plan. They must enlist an EP Sponsor who will serve in an advisory/mentor role; Sponsors can be Wesleyan faculty, staff, alumni, or community partners; family members or friends; or other experts or professionals willing to play this role. Seeking and enlisting an appropriate Sponsor is a component of the EP learning experience.

In addition to conducting their own extensive research and producing a summative project by the end of the semester, students will write a series of reflections to document their progress and their learning.

For more information, visit <https://www.wesleyan.edu/patricelli/engaged-projects.html>.

CENTER FOR JEWISH STUDIES (CJST)

CJST150F Four Bar Mitzvahs and a Funeral: Being Young and Jewish in America (FYS)

How is the American Jewish experience viewed from the perspective of Jewish children and young adults? This course will discuss depictions of Jewish coming-of-age in American popular culture. We will examine various age groups--from elementary school to college; and through various art forms--literature, film, and television ("Are You There God? It's Me Margaret," "The Plot Against America," "An American Tail," "Wet Hot American Summer," "A Serious Man," "Superbad," "Booksmart," "Glee," "The O.C.," "Big Mouth," "Never Have I Ever," among others). Analyzing these works together will illuminate different facets of Jewish American life including immigration, assimilation, education, tradition, family, anti-Semitism, and more. They will also allow us to broach more universal questions surrounding representation, identity, and the complex relationship between popular culture and society.

CJST203 Jews & Judaism: Race, Religion, Culture

What is a Jew? Are Jews white? Must a Jew believe in God? What is at stake when defining someone as a Jew? Using sources ranging from the Hebrew Bible to contemporary films, this course examines various facets of Jewish life, paying special attention to contesting definitions of Jewishness as race, religion, and culture. Building on a chronological discussion of Jewish history, we will ask theoretical questions such as the relation between gender and biblical interpretation, the relevance of religious law in contemporary society, and the challenges of diasporic thinking to national sovereignty.

CJST214 Refugees & Exiles: Religion in the Diaspora

Recent years have seen the on-going tragic refugee crisis, with millions of people being displaced because of war and ecological disasters. That this crisis also has religious overtones is evident by the so-called travel ban in the United States or the rhetoric used by right wing leaders across Europe. This course deals with the meaning of refuge, exile, and diaspora through three perspectives: philosophical, historical, and literary. A variety of case studies—including the contemporary refugee crises in the Middle East, the black transatlantic, and the destruction of the temple in the Hebrew Bible—will raise for us various questions: What does it mean to be violently forced to leave one's home? How is it possible to make sense of such a tragedy? What creative power can diaspora muster to the rescue of culture? This course is a Service Learning course in cooperation with WESU 88.1 FM Middletown. Each student's final project will be a radio show based on an analysis of a selected refugee crisis. To learn more and listen to last year's shows visit <https://reli213.site.wesleyan.edu>.

CJST216 Jesus Through Jewish Eyes

In this course, we explore the visual and textual representations of the vexed relation between Jews and Christians throughout history. Looking at the various ways in which Christianity and Judaism define themselves vis-à-vis the other allows us to understand what mechanisms of cultural appropriation, subversion, and hidden polemics are at work. Special attention will be given to the figure of Jesus as a point of artistic and theological contention. How do artistic representations change our understanding of religious themes? What is at stake for each religion in the encounter with the other? What are the political implications of theological debates? Is this dialogue needed, or even possible, in our post-secular age?

CJST222 Identity and Jewish Literature: Sexuality, Race, and Gender

What, if anything, is Jewish literature? What, if anything, does it tell us about the history of the people called Jews? This course explores those questions through a variety of sources from Jewish writers, including Sholem Aleichem, Cynthia Ozick, Franz Kafka, I.B. Singer, and others (flexible based on student interest). Through these readings, we will explore how Jewish literature relates to broader questions of sexuality, race, gender, colonialism, etc., as well as specific questions of Jewish history, like the Holocaust and the state of Israel. All works will be read in translation and no previous knowledge of Jewish studies or Judaism is required.

CJST233F Holocaust Remembrance in Germany: The Third Generation (FYS)

Remembering the Nazi past is a fundamental aspect of postwar German culture. In this course, we will trace the Holocaust's aftermath in contemporary German literature and thought. We will pay close attention to the socio-cultural and historical-political changes in attempts to glean new meanings from a past that is both omnipresent and highly evanescent. It will be our particular concern to encounter versions of Jewish identity and attempts to prescribe different narratives. We will focus especially on contrasting the creative works of the immediate postwar period and "the third generation." These contemporary writers explore a historical trauma that has become an integral part of specific Jewish-German identity. At the same time, their temporal and personal distance to the actual events necessitates new imaginative approaches to the past. Careful readings of literary, theoretical, journalistic, and historical texts, as well as personal discussions will enable us to critically think about the challenges and limits of how to write about the Holocaust 70 years after it occurred, and how the difficulties in doing so might inform other kinds of writing about historical and personal trauma. Students need to read Olga Grjasnowa's "All Russians Love Birch Trees" prior to the start of the course. Students will have Zoom class discussions and intensive peer-feedback-driven writing practice.

CJST234 Israel in Therapy: Society Under the Influence of TV Series

The course deals with the prototypes of the Israeli character as they appear in the original Israeli TV series *In Treatment*, and other Israeli TV series, such as *Florentine* and *A Touch Away*. We will compare the structure and the characters of the series to other dramatic Israeli series, examine the appearance of the characters, and discuss the similarities and differences between the roles they perform. In addition, we will examine the role of television drama series as a tool to define and characterize our societies, and also look over the five characters that appear in the first season of *In Treatment*, define them, and examine the five prototypes of the Israeli character they represent.

The instructor is the co-creator and head screenwriter of the original version of the TV series *In Treatment* as well as the Center for Jewish Studies distinguished Visiting Professor.

CJST234F Instances of Collective Memory (FYS)

Both history and fiction tell stories. They evaluate facts, construct contexts, and foreground patterns and associations--all using language as their primary tool. In this course, we will analyze key moments in the formation of collective and cultural memories in 20th-century history, philosophy, and literature. We will think about how individual memory and collective remembrance connect, how larger stories are built up from archives and personal stories, and how these narratives are shaped by changes in the world around them. We'll pay special attention to how the World Wars and the Cold War are memorialized and to the importance of these narratives to contemporary Jewish identity and remembrance in Germany, Israel, and the United States.

CJST244 Introduction to the Hebrew Bible (Old Testament)

This course approaches the Hebrew Bible within its historical context while considering its literary, philosophical, and artistic legacy. Students will be exposed to the main historical strands of biblical criticism, while also engaging with the challenges of interpreting the Bible as modern readers: How and when did the Hebrew Bible come to be, and what relevance might it hold for us today? By beginning at the beginning and proceeding systematically through the Hebrew Bible, students will hone their skills as readers and interpreters of the Bible as a canon. Students will consider questions of the texts' function, universality, and authority, and will be encouraged to explore the wide range of biblical interpretations in literature, music, and the fine arts from antiquity to the present day.

CJST248 Designing Reality in Israeli Documentary Film

In the last decade, Israeli documentary films have crossed borders not just geographically but also by their form and style. They are bold, courageous and provocative. They have been participating in prestigious international film festivals, receiving important awards and mostly bringing the Israeli audience back to the cinema, having a crowd power like fiction films. So what makes Israeli documentary films a "hot property"? In this class we will look for the answers by watching and discussing 14 Israeli documentary films (among them "Paper Doll," "In Satmar Custody," "Presenting Princess Shaw," "No.17"). The course will raise questions about reality and the construction of reality in Israeli documentary films.

CJST249 From Black and White to Colors: Israeli Cinema, a Melting Pot Fragmented

The course will focus on Israeli cinema as a reflection of a society that was founded as a melting pot for all Jews and became sectorial. Israeli cinema originated as a tool for establishing a unified national identity evolved over the years into a means of expression for ethnically defined subcultures within society. During the course, the students will explore past and contemporary films and will follow the shift they represent in the current Israeli experience turning

away from the original Zionist core into several isolated groups distinguished by ethnicity, traditions, and language. We will examine Moroccan, Persian, Georgian, Russian, Yiddish, Ethiopian, Arab, etc. films produced in Israel by local filmmakers digging deep into the experience of immigration, seclusion, rediscovering their roots, and even expressing yearnings to the countries of origin.

CJST250 Eyes Wide Shut: The Eternal Presence of the Absent Arab in Israeli Cinema

The course will focus on contemporary Israeli cinema and how it reflects shifts in local society; mainly the ways in which a new national identity and culture are being forged at the expense of the Israeli-Palestinian conflict--which is marginalized, repressed, sublimated, or left out altogether. As this concerns mainly the Hebrew-speaking cinema, we will also discuss the emergence of an unprecedented wave of Arab-speaking Israeli-Palestinian cinema, which is thematically groundbreaking. This introduction to the new generation of Israeli filmmakers, who differ dramatically from their predecessors, will help us better understand the ever-changing Israeli society. Watching closely, we will discover that the conflict is always present in the Israeli experience, even when it is seemingly absent. An optional CLAC course, which is conducted in Hebrew and carries a full credit, is offered to students with advanced Hebrew skills. The course will include visits from scholars in the field, watching movies in Hebrew and/or with Hebrew subtitles and students' presentations.

CJST252 The Five Rachels: Jewish Women in Contemporary American Culture

The course will focus on five iconic contemporary female TV characters, actors, and creators; American, Jewish, and incidentally--or not--sharing the same name: Rachel. Rachel Green ("Friends"), Rachel Berry ("Glee"), Rachel Menken ("Mad Men"), and Rebecca Bunch ("Crazy Ex-Girlfriend"), played by Rachel Bloom, and Midge Maisel ("The Marvelous Mrs. Maisel"), played by Rachel Brosnahan. These five complement each other and offer us a panoramic view of the American Jewish female experience: discrimination, inclusion, the generational gap, and their relationship with Israel. In addition, they allow us to explore the three most common stereotypes associated with the Jewish woman: the Jewish nose, the Jewish mother, and the Jewish American princess. We will discuss the conflicts and the societal shifts these characters embody, and how they define themselves, their Jewishness, their femininity, their unique surroundings, and place in history.

CJST272 Ethics After the Holocaust

The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human after Auschwitz. In this course, we will investigate how the Holocaust orients contemporary discussions on questions of guilt, forgiveness, and evil. What does it mean to remember, to forgive, and to forget? Can one ethically represent the Holocaust in art? We will explore these questions using various sources, including works by Hannah Arendt, Adorno,

and Emmanuel Levinas, as well as museums, memorial sites, and cinematic representations.

CJST281 Political Fantasies of Zion

Palestine, Zion, Judah, the Promised Land. A small piece of land in the Middle East has a very long and contested history full of religious meaning for Judaism, Christianity, and Islam. Some imagine the State of Israel as an island—"the only democracy in the Middle East" or the only Western state in the region--surrounded by a hostile environment. The geographical area, by contrast, has often been portrayed as a crossroad, a place where cultures clashed, merged, and exchanged ideas.

In this class, we will examine this tension between a physical and imagined space, between political reality and idea, by recovering alternative Zionist, non-Zionist, and anti-Zionist visions of the Zion. Jewish statehood is a very recent phenomenon. Throughout the modern period, the vast majority of Jews lived under empires, whether Habsburg, French, Romanov, British, or Ottoman. How did the imperial experience shape Jewish religious and political views? What role does the imagination of Zion play in today's political context? Reading political pamphlets, poetry, maps, artworks, and utopian fiction, we will pay attention to the construction of the Zionist idea not just in political Zionism but also in contrasting visions including Canaanism, cultural Zionism, diaspora nationalism, a Jewish-Arab federation, a binational state, and the rejection of statehood as heresy. In the last part of the class, we will look at recent contemporary issues from the news, e.g., the agreements between the State of Israel and the United Arab Emirates, or government corruption in Israel, in order to see how these ideas of Zion are still present in today's discourse.

CJST319 Crisis, Creativity, and Modernity in the Weimar Republic, 1918--1933

Born in defeat and national bankruptcy; beset by disastrous inflation, unemployment, and frequent changes of government; and nearly toppled by coup attempts, the Weimar Republic (1918--1933) produced some of the most influential and enduring examples of modernism. Whether in music, theater, film, painting, photography, design, or architecture, the Weimar years marked an extraordinary explosion of artistic creativity. New approaches were likewise taken in the humanities, social sciences, psychology, medicine, science, and technology, and new ideas about sexuality, the body, and the role of women were introduced. Nevertheless, Weimar modernism was controversial and generated a backlash that caused forces on the political right to mobilize to ultimately bring down the republic. This advanced seminar explores these developments and seeks to understand them within their political, social, and economic contexts to allow for a deeper understanding of Weimar culture and its place within the longer-term historical trajectory of Germany and Europe. This perspective allows for an appreciation of the important links between Weimar modernism and Imperial Germany, as well as an awareness of some of the important continuities between the Weimar and Nazi years.

CJST413 Israeli Cinema (CLAC 1.0)

This Hebrew course will be linked to the film course, taught in English, entitled CJST 250: Eyes Wide Shut: The Eternal Presence of the Absent Arab in Israeli Cinema. This course is targeted toward students with very advanced knowledge of the Hebrew language. Students will mostly view the same films as the parent class, with special attention to the Hebrew language. We will analyze, discuss, and write on each of the films. The focus of the course will be to map the cultural and social changes in Israeli society reflected in the transformation in format and themes of Israeli films. Scholar visits will be part of the course, and students will attend a few cultural enrichment activities. This course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative; for more information, see <https://www.wesleyan.edu/cgs/eventsprograms/clac/index.html>.

CENTER FOR THE HUMANITIES (CHUM)

CHUM202 Deconstructing Democracy

What role does democracy play in the narratives that political philosophers tell themselves about the moment human beings pass from the state of nature into civil society? Why is it that almost all political philosophies have almost nothing good to say about democracy? And how did it happen that democracy has come to be one of the most debated concepts straddling the borderline of the literary and the political, the real and the ideal? Seeking to answer these and other questions, this course will follow the concept of democracy through some canonical and non-canonical texts in or relating to political philosophy. We shall attempt to understand why democracy gives rise to the complications and paradoxes that are definitive of the conceptual space of political society.

CHUM204F Performance and Authenticity between Race and Gender (FYS)

This seminar is a cultural and intellectual history of fraudulence, fiction, and faking it. To deride a person or phenomenon as "all a performance" is to make an accusation of artificiality or inauthenticity. How do colloquial uses of language reflect long-standing cultural suppositions, and how do connotations of performance as fakery or fabrication intersect with the actual work of performers themselves? In this interdisciplinary seminar, we will explore questions of performance, affective labor, subjectivity and self-making (and re-making), both onstage and off. We study performances found equally in everyday life, popular entertainment, and avant-garde art, and center the contributions of Black, feminist, and queer studies.

Topics include illusion, ventriloquism, and sleight of hand, as well as mimetic acting and the manufacture of "emotion," dance technique and the concealment of effort, and musical improvisation and the politics of invention. We consider the potent complexities of drag, camp, and minstrelsy--and historicize their surrounding discourses of fraudulence and authenticity. Looking at a range of (predominantly U.S.-based) practices from the mid-nineteenth century to the late twentieth, this course is not a comprehensive survey, but rather, examines key episodes in the history of modern "performers."

Together, we will grapple with the ways that artifice and theatricality have been historically reviled as qualities inherent to femininity and queerness, respectively; the historically complex entwinement between ideas of race and authenticity; and how hiding, fabulation, exaggeration, and duplicity have been mobilized as strategies of freedom and resistance--from the spectacular escape act of Henry "Box" Brown to the sensational camp and hyperbolic glamour of the East Los Angeles art collective Asco.

Prereq: **None**

CHUM206F Art and the Global Contemporary (FYS)

This course introduces students to a range of artistic practices from the mid-20th-century to the present. We will consider the work of artists from Argentina, Brazil, Chile, Japan, Yugoslavia, Serbia, Germany, Poland, Ghana, Senegal, Mali, Nigeria, China, Iran, Iraq, Egypt, Lebanon, Morocco, Haiti, Cuba, Mexico, Vietnam, Thailand, South Korea, India, the Indigenous U.S. and the African Diaspora, among others.

We will not take our central terms for granted. Rather, we will ask: When, precisely, is the contemporary? How do different nations and cultures have varying notions of the present and the past? How do questions of tradition and futurity resonate in artworks, particularly in non-Western and postcolonial contexts?

Together, we will consider the status of the global and the role of the local. In the context of late modernity, can the "global," only ever name the circuits of capitalist exchange? We will consider how artists are both deeply attentive to local contexts, as well as engaged in a practice of diaspora; and how artists engage the politics of land, borders, the nation-state, and the violence that upholds them. That is, we will orient ourselves via a notion of cultural identity that, in Stuart Hall's terms, is "not an essence but a positioning."

CHUM214 The Modern and the Postmodern

In this course we will examine how the idea of "the modern" develops at the end of the 18th century and how being modern (or progressive, or hip) became one of the crucial criteria for understanding and evaluating cultural change during the last 200 years. Our readings will be drawn from a variety of areas--philosophy, novels, music, painting, and photography--and we will be concerned with the relations between culture and historical change. Finally, we shall try to determine what it means to be modern today and whether it makes sense to go beyond the modern to the postmodern.

CHUM229 Between Worlds: Change and Continuity in Early Latin America

The conquest and colonization of the Americas challenged long-held assumptions about geography, time, history, nature, theology, and humanity for both indigenous societies and Europeans. Modern scholars have described the encounter either as an earth-shattering moment of revolutionary intellectual reverberations or, alternatively, as one of limited and slower impact.

This course examines the ways in which diverse actors in the Iberian colonial world confronted change and continuity in their societies. In particular, it seeks to understand how they approached the conquest and its environmental, political, religious, legal, and social repercussions. Through the study of chronicles, graphic materials, poetry, omens, grammars, and maps, we will look at how missionaries, indigenous scholars, scientists, and nuns interpreted the forces transforming their communities. We will pay particular attention to the traditions and practices that they mobilized to explain the past and convey its present and future significance. Major themes include religious conversion and its consequences, the emergence of new social and ethnic identities under colonial institutions, linguistic change, and the writing of history.

CHUM233 All Ah We: Contemporary Afro-Caribbean Drama & Performance

What are the dramatic utterances of Afro-Caribbean artists? How do Afro-Caribbean playwrights and other narrative-based performance artists present "Caribbean" and/or "West Indian" subjectivities in ways that are shared, yet critically different? In what ways are Afro-Caribbean dramas and performance pieces repositories for the practical, the theoretical, the sociological, the political, the imagined, and the lost? In answering these questions and more, we examine these textual and embodied expressions from the complicated crossroads of class, creolization, diaspora, ethnicity, folklore, gender, history, indentured servitude, isolation, language, race, religion, and slavery. At all times, this course revels in the polyphony that is Afro-Caribbean drama and performance.

CHUM248 Shakespearean Revolutions

Shakespeare's works emerged during a period of revolutionary social, political, religious, economic, and cultural change, including the Protestant Reformation, the rise of print culture, the transition from feudalism to mercantile capitalism, early colonialism, global trade, and the emergence of the first, purpose-built, commercial playhouses. Innovations in dramatic form and genre, which Shakespeare helped craft, sought in varying ways to make sense of these momentous shifts for diverse theater publics. Revivals and adaptations of his works on stage and screen during times of revolutionary change have rendered the Shakespearean canon a site of subsequent social and cultural contestation. This class considers the "revolutionary" dimension of four Shakespeare plays both in their own time and place, and in later theatrical and filmic productions and adaptations. We will trace first-, second-, and third-wave feminist reimaginings of "The Taming of the Shrew"; Second World War- and Vietnam War-era renderings of "Henry V"; civil rights and anti-apartheid era restagings of "Othello"; and attempts to decolonize "The Tempest."

CHUM274 Insular Borders of Latin(x) America

Before and at the same time the United States established itself throughout the 19th century as a major power in the Americas and the world, various Latin American republics inherited and acted upon a similar imperialist agenda to expand their borders not only to neighboring territories but also across oceans. In this class, we will study and compare these imperialist gestures, among them the Spanish Empire's control of its remaining insular colonies in the 19th century (e.g., Cuba, Puerto Rico, the Philippines, and Guam) and the United States' successive claim to these very same islands. We will analyze literary works and films that interrogate these imperialist claims as well as the trajectories of islanders: for instance, the forced migration of the Rapanui (Easter Island people) in the second half of the 19th century (first as slaves to Peru and then to the town of Hanga Roa in Easter Island) and the island-to-island "intra-colonial" (Joanna Poblete) recruitment of Filipino and Puerto Rican laborers in sugar plantations in Hawai'i at the beginning of the 20th century. Some of the questions we will explore are: Why are islands so coveted by old and new empires? How have Rapanui, Filipino, and Puerto Rican migrants and their descendants resisted authorities on the insular borders of empire? How do writers and artists tell these silenced histories? Can we speak of Latinidad and Edouard Glissant's concept of Poetics of Relation in a Pacific Ocean context? Readings will be in Spanish and English. All discussions and assignments will be in Spanish.

CHUM276 Moving Through the Revolutionary Age: British Colonies and Early America, 1774--1815

Thomas Jefferson argued in his 1805 inaugural address that boundaries were less important than principles. Regardless of where they lived, Americans were Americans. British colonists were equally mobile and equally sure that their British liberties followed them wherever they went, which in no small part led to the Revolution. In the period during and after the American Revolution, with the creation of states and colonies in northern North America, people and ideas moved with regularity from one region to the next, thus testing Jefferson's ideals and extant imperial bonds. This course will examine the movement of peoples and ideas within and across these new boundaries to explore the idea of mobility as a revolutionary, Native, and loyalist ideal. American settlers wanted to push west, and some later moved north; Natives desired to maintain their migratory patterns and traditional lands; and British Loyalists moved to remain members of--and demand changes within--the British Empire, while also relocating to American states when necessary. The borders that divided colonies and separated states were challenged and ignored as soon as they were created. By exploring the political ideals, territorial claims, and movement of people during and after the American Revolution, students will be encouraged to study the Revolution not as an American event, but rather as a North American process shaped by those who moved through it.

CHUM281 Political Fantasies of Zion

Palestine, Zion, Judah, the Promised Land. A small piece of land in the Middle East has a very long and contested history full of religious meaning for Judaism, Christianity, and Islam. Some imagine the State of Israel as an island--"the only democracy in the Middle East" or the only Western state in the region--surrounded by a hostile environment. The geographical area, by contrast, has often been portrayed as a crossroad, a place where cultures clashed, merged, and exchanged ideas.

In this class, we will examine this tension between a physical and imagined space, between political reality and idea, by recovering alternative Zionist, non-Zionist, and anti-Zionist visions of the Zion. Jewish statehood is a very recent phenomenon. Throughout the modern period, the vast majority of Jews lived under empires, whether Habsburg, French, Romanov, British, or Ottoman. How did the imperial experience shape Jewish religious and political views? What role does the imagination of Zion play in today's political context? Reading political pamphlets, poetry, maps, artworks, and utopian fiction, we will pay attention to the construction of the Zionist idea not just in political Zionism but also in contrasting visions including Canaanism, cultural Zionism, diaspora nationalism, a Jewish-Arab federation, a binational state, and the rejection of statehood as heresy. In the last part of the class, we will look at recent contemporary issues from the news, e.g., the agreements between the State of Israel and the United Arab Emirates, or government corruption in Israel, in order to see how these ideas of Zion are still present in today's discourse.

CHUM288 Literary Perversions: Revolution, Democracy, Identity

The Federalist Papers wrote under the strong impression that the American Revolution was imperiled by an overwhelming debt and the lack of a national authority and identity to bind the States together. Public fear of moral degeneration via the replacement of the "Old World" symbolic order with a "New World" order under the aegis of "representative democracy" loomed over the republic.

Taking these concerns and the dissemination of The Federalist Papers as our point of departure, this course will examine how representations of "non-normative" identities in several major 19th-century works relate to the problems of representing democracy in the aftermath of the American Revolution. Many of the most famous canonical literary texts in the United States during the 19th century write about "non-normative" topics such as maternity, slavery, bestiality, and gender inequality in the context of narratives that attempt to rewrite the legacy of the American Revolution. By focusing on the literary treatment of these "perverse" topics, we shall attempt to understand whether the authors we will undertake close readings of in this course were successful in their endeavors to not only amend the shortcomings of the Revolution, but also to think more rigorously about the history of slavery and gender inequality.

CHUM289 Staging Race in Early Modern England

This course analyzes the dramatic representation of race in the plays of Shakespeare and his contemporaries. We will examine the historical emergence of race as a cultural construct in relation to related conceptions of complexion, the humoral body, gender, sexuality, and religious, ethnic, and national identity. Readings focus on three racialized groups: Moors, Jews, and Native American

"Indians." After reading the play-texts in relation to the historical moment in which they were first produced (using both primary and secondary sources) we will then consider their post-Renaissance performance histories, including literary, theatrical, and film adaptations.

CHUM302 Black Speculative Fictions and the Anthropocene

The genre of black speculative fiction--in the form of literature, art, music, and theory--provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the "future," black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term "Anthropocene" first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which "humans" had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a "species"? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene's attendant catastrophes, which include earthquakes, altered ocean waters, and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human? Further, how does artificial intelligence complicate definitions of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

CHUM306 Techniques of the Liar: Performance, Artifice, Fraud

This seminar is a cultural and intellectual history of fraudulence, fiction, and faking it. We will explore both specific performance practices as well as theorizations of artifice, fraud, and authenticity. Topics will include illusion, ventriloquism, and sleight of hand; mimetic acting and the manufacture of "emotion"; dance technique and the concealment of effort; and musical improvisation and the politics of invention. We will also consider the complexities of drag, camp, and minstrelsy and historicize their surrounding

discourses, centering the contributions of feminist, queer, and critical race studies. Looking at a range of (predominantly U.S.-based) practices from the mid-19th century to the present, we will consider how artifice and theatricality have been historically reviled as qualities inherent to femininity and queerness, respectively; how "authenticity" is both gendered and racialized; and how hiding, fabulation, exaggeration, and duplicity have also offered means of freedom or resistance.

CHUM308 Asian American Posthumanisms: Biopolitics, Eco-poetics, and Literature

From 19th-century anxieties concerning subhuman coolies to 21st-century celebrations of suprahuman cyborgs, US discourses have always figured people of Asian descent as peripheral to the category of the human. While Asian Americanist scholarship has often responded by asserting the humanity of Asian Americans, a number of scholars and writers have begun to explore and even embrace the inhuman character of the Asian American. Drawing from recent scholarship in science studies, political ecology, anthropology, and literary studies, this course will consider what it looks like to shift the scale of analysis from the individual, organismal human to the social logics, biopolitical infrastructures, and ecological entanglements that supersede the human, or conversely, to the bodily fragments, molecular processes, and fragments that subtend the scale of the human. We will pay particular attention to the question of what consequences decentering the human has for the ethnic novel, a genre often valued for its ability to affirm the humanity of racialized subjects. For instance, what kinds of aesthetics and politics emerge from an imaginary centered not on the human individual but on systems, landscapes, entanglements, and other imaginative forms and social practices? What does a novel centered not on a human protagonist but on an object, a clone, or an ecosystem look like?

To explore these non-human centered logics and forms, we will read theoretical texts by Anne Cheng, Rey Chow, Donna Haraway, Aihwa Ong, Rachel Lee, Nikolas Rose, Anna Tsing, and others, alongside a selection of contemporary (and capaciously defined) Asian/American novels by writers such as Kazuo Ishiguro, Larissa Lai, Chang-rae Lee, Ruth Ozeki, and others.

CHUM315 Emperor, Caliph, King: Comparing the Byzantines, Abbasids, and Carolingians

This seminar investigates a unique "age of empires" in the wider Mediterranean world--the ninth century--during which imperializing political revolutions inspired intense cultural production among the Byzantines in Constantinople, the Abbasids in Baghdad, and the Carolingians across Europe. Using the cultural artifacts surviving from these "renaissances," we will investigate how political cultures accounted for their own contested identities through myths of rebirth and return, specifically of Greek, Roman, and Persian imperial traditions. The course uses a workshop environment that relies on both collaboration and independent research; students will apply skills of analysis, creative thinking, and persuasive communication to presentations and a (in-translation) source-based research project.

CHUM325 The Work of Art Against Work: Art, Labor, Politics

Understandings of late 19th- and early 20th-century avant-gardes are tied inextricably to leftist theory, particularly that of the Frankfurt School. This advanced seminar will consider the legacies of that entwinement, while focusing more specifically on its transformations from the late 20th century to the present: We will examine how artists have engaged the "work" of art in relation to the rise of post-Fordism, a globalized economy, and new theories of work and anti-capitalism. We will pay special attention to gendered notions of work and the division of labor (including "craft," affective labor, domestic work, care work, sex work, and more), to debt and racial capitalism, and to the rise of speculative finance and its links to the art market and the patron class.

CHUM328 Disgusting? Revolting!

Who or what do we find utterly repugnant? Are we the nasty, vile ones? Is it possible that we are unconsciously attracted to that which disgusts us? What might it take to turn disgust into desire, and vice versa? In what ways might disgust indicate not only disruption or transgression, but some kind of threat and alternative to the status quo? What might be lost or gained when the disgusting clean up their acts, or are shown to have been respectable all along? In this course we will explore the politics of filth, particularly in terms of the desires, attitudes, identities, and behaviors that elicit disgust. We will consider how disgust infuses political ideology--i.e., how people understand and approach the social groups that disgust them (for example, racialized immigrants, queers, fat people, and drug addicts), but also the wealthy, the privileged, the "basket of deplorables." We will also explore the psychoanalytic relation of disgust to desire.

CHUM331 Sophist, Statesman, Philosopher: Plato's Later Metaphysics and Politics

How is it possible to speak falsely? Plato connects this question with a puzzle he inherits from the great pre-Socratic philosopher Parmenides: to speak falsely is to speak about what is not; but in speaking about what is not, we ascribe being somehow to not-being, which sounds like a contradiction. This seminar will focus on the metaphysical, epistemological, and political issues generated by Parmenides's puzzle and explore Plato's solution to them in two of his later-period works: the Sophist and the Statesman. In the process, we will see how Plato rethinks his theory of forms in these dialogues, how he learns to let go of Socrates, how a sophist should be distinguished from a philosopher, and how all of this is relevant to politics and the art of ruling.

CHUM333 About Clothes: Styles, Histories, Activisms, Poetics

This course is a chance to think together about living in, and in relation with, clothes. We will examine some of the histories, meanings, and monies that circulate around sartorial style, focusing on several interconnected sites around the world, from the eighteenth century to the present, and drawing on literature, performance, visual arts, historical and scientific scholarship, journalism, and activism. As we investigate forms of work, representation, and resistance that have produced some of the clothes of this time and of the past, we will study the transatlantic and global circuits (among Europe, Africa, Asia, and the U.S.) that have informed various fashion systems. We will consider how particular textiles and textures, cuts of cloth, and racialized and gendered ideas of style emerged in conjunction with enslaved and other forms of labor. We will look at some examples of how the work, products, and pleasures of this multi-billion-dollar business have been considered trivial and fleeting. We will learn about various efforts to archive and preserve clothes. Thinking always about connections between style and sexuality, we will look also at ritual, political, and medical uses of clothing. Throughout, you will conduct your own experiments at the intersections among language, identities, and the materiality of clothes. This seminar will welcome guest speakers who are experts on aspects of African, European, British, African-American, and Middle Eastern clothing and fashion. We will also be in conversation with the work of scholars and artists visiting the Center for the Humanities for the semester's theme of Ephemerality.

CHUM334 Native Matters: Materiality in Indigenous Literatures Across the Pacific

This seminar contemplates the function and representation of materiality in contemporary indigenous literatures. It highlights the centrality of embodied practices in indigenous cultural lives. The primary texts for the course will be literary texts (novels, short stories, essays, and poems) from different indigenous communities, including from North America, East Asia, Austrasia, and Oceania. We may also deal with non-textual materials such as artifacts, maps, clothes, video games, etc. Readings will also include theoretical or philosophical works from indigenous and non-indigenous thinkers on the subject of materials and materiality.

The course will thematize materiality in two ways: the first is to understand materiality as a way for indigenous authors to represent or construct various understandings of indigeneity, either in traditional lifeways, modern indigenous realities, or indigenous futurisms, both within and between specific indigenous communities. The second is to engage with thing theory and materiality as a method of literary analysis.

CHUM336 Black Texts, Lost and Found

This course examines histories of loss and recovery of black texts in the US and the Atlantic world more broadly. We will bring a three-pronged approach to our subject matter. We will analyze first the constitutive silences of the archive: epistemic and material neglect, or what Michel Trouillot has termed the "silencing of the past"; second, the preservation efforts of black newspaper editors, librarians, and bibliophiles; and third, the "counter-archiving" work of Afro-diasporic historical and speculative fiction. As we traverse different periods and empires we will consider what the concepts of the "black archive" and "black

ephemera" mean to different disciplines. We will study the repressions of black Arabic writing practices in the US South and our fragmentary recovery of them in the late 20th century, unfinished novels about Black Atlantic revolutions such as Martin Delany's "Blake," incomplete runs of historic black newspapers, debates about the illusions and desires of "recovery," and the criteria that determine what counts as ephemeral and when.

We will move across different media, from print--"I, Tituba," "M Archive," "Blake," "(Dis)forming the American Canon: African-Arabic Slave Narratives and the Vernacular"--to films--"The Watermelon Woman," "Looking for Langston," "The Last Angel of History"--and from digitized databases of photographs at the ongoing archiving project The Missing Chapter: Black Chronicles to digitized newspaper archives.

CHUM337 Insubstantial Pageants: Late Shakespeare

This seminar examines the Center for the Humanities' Spring 2020 theme of "Ephemera" through the lens of four late plays by Shakespeare ("Hamlet," "King Lear," "The Winter's Tale," "The Tempest") and their preoccupation with the time, temporality, belatedness, and the ephemerality of theater (and the world-as-stage).

In addition to considering the mutability of the play-texts themselves (several of which exist in multiple versions), we will consider how they refashion their sources, and how they are themselves refashioned in later productions and adaptations.

CHUM339 Catching Glimpses: Perceiving Infinitesimals in the Scientific Revolution

The rise of mathematical natural science in the early modern period marked the dissolution of objective reality as it had previously been known. Since Aristotle, perceptible objects had been understood to be enduring substances whose identities were inscribed in their very being and which retained these identities through change. The mechanistic worldview of the 17th and 18th centuries exploded this stable order into a telescoping multiplicity of material systems, from the infinitesimally small to the infinitely large. Rather than encountering a world of enduring and identifiable substances--animals, vegetables, and minerals; people and artifacts--the perceiver was instead confronted with fleeting constellations of homogeneous matter in a perpetual flux, no sooner glimpsed than gone. This metaphysical picture of infinitary flux was complemented by a new branch of mathematics, the infinitesimal calculus, which proved immensely successful both in uncovering new theorems and in modeling empirical phenomena.

Both the metaphysics and the mathematics of the new science were, however, rife with paradox. If material objects not only harbor a microscopic substructure but are, in fact, divisible without end, then we are faced with pluralities of pluralities without any underlying unities--parts of parts of parts...and not a whole among them. Conceptual instability afflicted the infinitesimals used in calculus, as well. In some contexts they were treated as very small but non-zero quantities, in others as strictly zero--provoking one critic to call them "ghosts of departed quantities."

In conjunction with the CHUM theme "Ephemera," this class will study the philosophical turbulence induced by the new science—in particular, by the mechanical philosophy and infinitesimal calculus. We will pay special attention to its consequences for the philosophy of perception. Aristotle compared perceptible objects to signet rings impressing their distinctive forms on the receptive wax of the human sensorium. But if there are no enduring substances or determinate forms, how are we to understand our perceptual relation to the world? How must perceptual experience be reconceived so as to accommodate the fleetingness and flux of material phenomena? And how is it that, though we are awash in ephemera, we nevertheless enjoy an (illusory?) impression of endurance and stability?

CHUM343 Imitations of Life: Experimental Bodies at the Interface of Science and Culture

This seminar will examine scientific and cultural practices of corporeal simulation, or, practices of bodily substitution, imitation, and re/modeling. Topics examined will include: reproductive surrogacy; gender reassignment surgeries; experimental subject protocols; prosthetic enhancements; xenotransplantation; biometrics and alternative forms of bodily imaging; the use of nonhuman animals as human proxies; the rise of personalized medicine, and more. Students will engage with a wide range of case studies and theoretical materials from interdisciplinary perspectives. Special attention will be paid to the relationship between scientific discourses of "universality" and "particularity," where socio-cultural forms of difference (e.g., race, gender, disability, etc.) are at once ignored and exacerbated. While most of the material addressed in the class will relate to recent phenomena, we will also be attentive to relevant histories of corporeal differentiation and reimagining.

CHUM347 Sound Systems: The How of Hearing

Since the late 19th century artists, corporations and composers have all proposed, developed, presented, and occasionally commercialized physical systems that reconfigure how sound can be experienced. The early impact of the entertainment industry ranged from the introduction of stereo to movie theaters in Walt Disney's Fantasia to McCune sound service's introduction of stage monitors for the benefit of Judy Garland. Artists and composers used related methods to propose entirely new understandings of how music can be. Futurist Luigi Russolo's Intonarumori of 1913 proposed an Art of Noise, while Pauline Oliveros' concept of deep listening developed listening as a foundational form of music making. R. Murray Schafer's concepts of soundscape and acoustic ecology project a music of environmental relations mediated through sound, while Maryanne Amacher's sound characters create individual sounds understood as capable development and change beyond the expanse of any one performance or composition.

This class will be a performing ensemble focused on "sound systems" as musical instruments and musical practices performing live and fixed media sound pieces through sound systems we will configure for different sites on campus. Together with developing the technical skills required to mount these pieces, we will also investigate and discuss the varied musical, social, acoustical, and psycho-acoustical understandings of music and sound that influenced their shaping.

CHUM349 Body Histories in Africa

African bodies have long generated intrigue and misunderstanding. Outside observers, such as missionaries, travelers, colonial administrators, and anthropologists, have documented practices such as scarification and spirit possession as they simultaneously rendered their African practitioners "other." All too often the body as an instrument for creative expression, ritual healing, or social action was lost in translation. More recently Western feminists have focused their attentions on female circumcision. The persistence of circumcision

(for both girls and boys) and other bodily practices speaks to their enduring social value and symbolic meaning. What can we learned from these and other body histories in Africa? In this course we will examine embodied rituals such as spirit possession, which marks the body as a site for human engagement with the supernatural. The widespread practice is also a gendered technique of healing documenting shifting understandings of health and illness. In addition, we will study the practice of "sitting on a man" by which women addressed the body politic through dance and collective nudity. The revealed body in motion shamed men into action and has been employed in the 21st century to shame oil companies for their greed and environmental destruction. In this and other examples, we will approach the body as an archive: it is an archive in motion and subject to social renewal. Our embodied evidence will allow us to explore shifting histories of religion, art, sexuality, the economy, and politics from the precolonial era to the contemporary moment. By taking the body as our lens we will also learn new ways to examine the African past through histories of aesthetics, value, labor, hierarchy, and knowledge production.

CHUM351 Melodrama Since 1700

Although today melodrama calls up ideas related to film, the term has musical origins: it originally indicated a work in which melos (music) and spoken drama were united in one multimedia format. Eighteenth-century melodrama admitted of many manifestations, encompassing everything from comic operas (like Mozart's *Magic Flute*, which alternated singing with spoken dialogue) to experimental symphonic works (in which a narrator's declaimed monologue was emotionally painted by the accompanying orchestra). Melodrama in this musical sense persisted through to the twentieth century, and included notable works such as Schoenberg's *Pierrot Lunaire*. But slowly melodrama as a term began to take on connotations relating to one of comic opera's central conceits: hyperbole and exaggeration. Melodrama became synonymous with comic excesses of emotional portrayal. Eventually, during the twentieth century, this meaning fastened onto a constellation of generic implications within the domain of film (think, for example, of Joan Crawford in *Mildred Pierce*). In its afterlife during the twenty-first century, melodrama has sometimes been used pejoratively: it can be employed as an epithet to disqualify the performance of emotion as inappropriately intense, or to designate emotion connected to an ostensibly inappropriate subject. But even in this new sense, melodrama retains an element of its early history insofar as it can be appropriated within subcultures in order to comically mock the traditions of mass culture. This course examines the long history of melodramatic art forms from the eighteenth century through to the present day. Together we will perform close readings of the objects within this rich tradition, supplemented by readings in queer theory, critical theory, and performance studies.

CHUM352 Following Fornés: Creativity, Intimacy, and Imagination

This course undertakes an investigation and application of the creative process of visionary iconoclast Maria Irene Fornés: a queer, Latinx playwright whose wildly idiosyncratic plays defied both convention and categorization. Fornés' legendary workshops shaped a generation of playwrights, including Nilo Cruz, Caridad Svich, and Sarah Ruhl.

Students will engage with Fornés' own creative process via her ephemera: in this case, the spoken fragments, outtakes, and audio marginalia left behind from the filming of her documentary collaboration with director Michelle Memran, "The Rest I Make Up." As I work to compile and cohere this material into a book, the class will be applying it, directly, to the conception and creation of their own performance works.

Students who are interested in writing/directing/devising live works of performance are best suited to this class. No former experience necessary, but a willingness to create and share live work and writing on a weekly basis is required. Our work will be contextualized by assigned research and writing into Fornés as a key figure of the American theater, and will culminate in the presentation of our creative projects.

CHUM353 Media Revolutions: Color Television and the Humanities in the 1960s and 1970s

This course visits some of the groundbreaking TV series that presented humanities and sciences to global mass audiences in the 1960s and 1970s. Television emerged as a powerful cultural presence and with remarkable speed. From the late 1960s, the British Broadcasting Company, in partnership with PBS in America, created a series of television programs (partly to widen the audience market for new color television programming). This course focuses on the role of television as a still new, and potentially disruptive, medium. We will look at and discuss a range of British TV series from Kenneth Clark's "Civilisation" and "Monty Python's Flying Circus" (both 1969) to Jacob Bronowski's "The Ascent of Man" (1973) and Alistair Cooke's "America" (1972), John Kenneth Galbraith's "The Age of Uncertainty" (1977), and David Attenborough's "Life on Earth" (first aired in 1979). We will read and discuss works of art and media criticism around this time that laid the groundwork for major conceptual and theoretical remappings of the fields of cultural and visual studies. We also will explore the impact of television on art worlds and museums, looking at how 1960s' color television documentaries influenced the way that humanities are presented televisually up to today. This course satisfies requirements for the "Visual and Material Culture" module in history and major requirements for the Science in Society Program.

CHUM355 Social Movements Lab

What can we learn from social justice activists about the economic, political, and environmental struggles facing us today, including mass incarceration, immigration, economic precarity, and the violence of the state? Where are the critical sites of queer, trans, left, feminist, black, indigenous, disability, and environmental struggle? How do these movements converge, and where do they diverge?

This participatory, interdisciplinary research seminar enables you to embark on an independent, semester-long research project on the social movement or activism of your choice. We'll start with some foundational reading on multidisciplinary social movement research; archival, ethnographic, and participatory methodologies; and histories of social justice struggles in the U.S. The remainder and majority of the seminar is laboratory style, taking shape around your particular projects. Each week, we will collaboratively analyze one or two projects, mapping out and comparing methods, goals, visions, struggles,

and contexts of the movements under study. Our goal is to understand a range of social justice activisms in their economic, political, and historical context, with an eye toward integrating activist scholarship and social change.

The activism you research can be contemporary or historical; local, national, or global; and can take any shape: direct action, community organizing, activist philanthropy, art as activism, etc. You do not need previous experience or activist contacts for this course—just passion and the desire to learn collaboratively!

CHUM358 Fugitive Perspectives on Education and Civil Society

In 1946, the African American novelist Ann Petry imagined what a white schoolteacher might think about working with black students in Harlem, New York: "Working in this school was like being in a jungle. It was filled with the smell of the jungle, she thought: tainted food, rank, unwashed bodies." Petry had herself worked in Harlem schools. She also held credentials from well-heeled white schools in Connecticut. Despite her own academic success, she questioned the inherent value of schools that regarded black children as if they were untamed savages.

Challenging prevailing narratives of excellence and achievement, this course examines fugitive perspectives of black, Indigenous, LBGTQ, and poor folks who resisted compulsory schooling and avoided conscription into so-called civilized society. If, as historian Michael B. Katz has argued, US schools "are imperial institutions designed to civilize the natives; they exist to do something to poor children, especially, now, children who are black or brown," then why should any self-respecting black or brown child endure such schooling? What might so-called truants, illiterates, failures, burnouts, dropouts, and delinquents teach us about education and civil society?

The history of education, however, has largely been interpreted from a biased perspective—namely, those who have been successfully schooled. We will therefore search for contrary voices in fragments of oral culture, ranging from slave narratives to folktales and recorded music. Contemporary scholarship will inform our analysis. Interdisciplinary scholars such as James Scott, Eric Hobsbawm, Tera Hunter, Saidiya Hartman, Lisa Brooks, and Audra Simpson will illustrate how to read against the grain and unearth hidden transcripts from classic authors such as W.E.B. Du Bois, Carter G. Woodson, Anna Julia Cooper, and Gertrude Simmons Bonin.

CHUM359 Making the Psychological: Discovering, Manufacturing, Circulating

Psychology aims to explain human experiences and thoughts, including unconscious ones. Using scientific methods, psychology produces valid representations of human nature, names them, and circulates that knowledge for both its truth value and usefulness to society and individuals. Despite much success in these aims, the validity of much of psychology's knowledge is in being challenged - as evidenced in recent concerns about the reproducibility of experiments. We will examine the epistemic grounds of psychology's truth claims and consider alternative models that understand the truth claims to be enactments, constructions, or ideologies that rehearse cultural beliefs. Case studies of science-based knowledge eventually found to be inaccurate or exaggerated (priming research; the power pose) are used to examine how some truth claims are generated and challenged, and cases of robust research are

used to explore how some truth claims acquire credibility inside and outside the laboratory. We ask, too, how these claims travel to be taken up as new ways for individuals to experience the self and social world, and examine the public's and our own aspirations to expand consciousness and act otherwise. Students will develop case studies of psychological knowledge, its validation, circulation, and effects in the world.

CHUM361 Queer & Trans Erotic Archives

Is it possible to capture and archive ephemeral, flickering pleasures? This course addresses this question by problematizing the relationship between embodied pleasures and affective memories on the one hand and historical analyses on the other. Based on Derrida's critique of archives' selective preservation mechanisms and reification of normative narratives, queer studies scholars have tried to create their own "counter-archives," often by means of an alternative reading of conventional archives. First, participants will discuss the ethics of reenactments and appropriations of archived desires, analyzing specific case studies that will be an entry point into broader issues related to the scholar's involvement in the voyeurism of the archive. Second, participants will discuss how a focus on queer cultures leads to a rethinking of what constitutes archival material, expanding this definition to include erotica and porn, feelings, ephemera, performances, and mass media. Course readings will also reveal the artificiality of the established boundaries between high and low culture, between authoritative knowledge and experiments with bodily pleasures. The course interrogates pornography's potential as a historical source that reveals non-normative fantasies. Participants will discuss the relationship between sexual fantasy and social reality, between representations of idealized boundless pleasure, and historical contexts of stigmatization, pathologization, and institutional violence. This will lead to debates on archival sexual activism and minoritized bodies in the archive, in order to fully grasp the contraposition between over-determination and queer utopianism.

CHUM362 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of repatriation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and repatriation?

CHUM363 (Un)Popular Performances/Performances (Im)Populaires

In 1607, a young Scotsman named William Drummond was studying law in Bourges, France, a popular "study abroad destination" for Scottish students as well as an important stopover city on the routes of itinerant professional and

amateur actors. While in Bourges, these actors performed a variety of different kinds of plays, including tragedies, comedies, tragicomedies, pastorals, and farces. Although these performances were often met with hostility from the city's religious authorities, Drummond attended several plays during his stay and, lucky for us, took rather detailed notes about them. His observations from the 1607 "season" are preserved in his personal papers in the National Library of Scotland.

This course will use Drummond's notes as a guide to discover and examine other forms of evidence—both traditional and nontraditional—that help us understand what was at stake in theater, performance, and (un)popular culture in late 16th- and early 17th-century France. We will study the ways the past has been organized and cataloged, how traditional sources and research have shaped our view of the past, and how unconventional methodologies can help us locate new sites of knowledge and culture. Written assignments, class discussions, and (most) readings will be in French.

CHUM364 Shakespeare's Islands

How did England's insularity and expansionist ambitions on the world's stage shape Shakespearean dramaturgy in his many plays with island settings? This course, taught in conjunction with the Center for the Humanities' spring 2022 theme of "Islands as Metaphor and Method" considers how Shakespeare's island locales (e.g., in ancient and medieval Britain, the Mediterranean, and the Americas) transformed the Globe theater into a physical and conceptual site for imagining the utopian and dystopian potential of early English nation-building and colonial expansion, and for exploring the poetics of relation and alterity, peripherality and centrality, archaism and futurity. In addition to studying the play-texts themselves, we will consider how their island settings are explored in subsequent theatrical and film productions and adaptations.

CHUM368 Comparative Philosophy

This seminar will explore the substantive and methodological issues that arise when one takes seriously the idea that philosophy has been, and continues to be, practiced within multiple traditions of inquiry, in many different ways, and in many different languages. We will examine and critique some of the ways in which "comparison" has been used, as well as examine arguments that comparison across traditions is, in fact, impossible. Although most of our attention will be focused on written academic research, we will also attend to the challenges and benefits of interacting directly with philosophers in other countries and cultures.

CHUM371 Afro-pessimism, Gender, and Performance

This class engages African and African diaspora critical thought and aesthetic production (dance, visual art, performance art, installation, film) to think about colonial dispossession, objectification, and reparation. We will address topics such as the repatriation of artifacts and other ephemera taken from Europe's colonies that are housed in the archives of European cultural institutions.

The objects in question have been described as either artwork, artifacts, or anthropological fetish objects (depending on which field one engages with). How can we rethink our understanding of objecthood as irreducible to "inanimate" things but as also signaling a regime of imperial domination and enslavement that violently turned African personality into a status of objecthood? What does it mean to think about the object (broadly defined) in relation to loss and the (im)possibilities of repatriation and reparation? How does the Black performer's body's disappearance/remains endow the Western art institution? The course will encourage students to think about repatriation as well as certain losses that can neither be repaired/repatriated nor evidenced in conventional ways. In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, as well as the promises and ends of reparation? The assigned readings offer ways to think about colonial archives not merely as neutral repositories of past events, but also as performances; as enactments of power, aesthetic value judgment, and hierarchical arrangements of knowledge production. The theoretical, art historical, psychoanalytic, philosophical, and creative reading materials engage contemporary scholars', artists', and activists' response to both the recorded and ephemeral archives of Black dispossession. Students are encouraged to engage in events and workshops outside of the classroom, such as visiting library archives, attending performances, gallery exhibits, and film screenings.

CHUM374 Abolition and Social Praxis

This course will examine some of the analyses of society, social power, and societal reform advanced and practiced by diverse activists who organize their work around the theme of abolition. Inspired by activist efforts to eliminate prisons and policing, abolition is here understood as an attempt to link a worldview that advocates for the disassembly of existing, oppressive social structures combined with efforts to generate new, more liberatory forms of social relationship in the here and now. As a form of activism, abolition thus brings utopian dreams to bear upon concrete practice, seeking to generate new structures of agency and pointing toward ways in which liberal notions of consent occlude deep forms of structural power and implicit constraint. Students will be asked to take on an activist project as part of the course.

CHUM376 Theorizing Subjection Beyond Contract and Consent

What modes of subjection does political life elicit from us, and how do they underpin and challenge our ideas of consent? Can we give genuine consent when we have already been subjected to parental authority? When we have unconscious desires we cannot avow? When we lack meaningful control over the norms that constitute our political, social, psychic lives? This class examines the centrality of the notion of consent to the liberal democratic order, and how it requires a prior mode of subjection that the liberal subject cannot knowingly or willingly consent to. In Unit 1, we read classic formulations of the liberal individual who consents to political rule (Locke, Hobbes, Rousseau). We look for the ways these theorists presuppose and disavow practices of subject formation that are beyond consent—parental authority, the informal authority of mores and norms, deception, precarity, ideology. We then read critiques of the social contract tradition that highlight the constitutive exclusions of liberalism, and ask how consent bears upon subjects that are constituted by the state as included others (Pateman, MacKinnon, West, Mills, Simplican). In Unit 2, we

read critiques of the liberal subject that interrogate the possibility of genuine consent, examining issues of false consciousness (Marx, Marcuse), self-opacity and the unconscious (Freud, Benjamin), discursive constitution (Foucault), and performativity (Butler). We use these thinkers to interrogate the distinctions underpinning liberal notions of consent, such as autonomous and heteronomous, authentic and inauthentic, public and private. In Unit 3, we examine how the notion of consent is changing in our current political moment, in which the liberal democratic state is waning, but the notion of consent persists, such as under neoliberalism (Brown, Feher, Berlant), sexual assault (Kessel, Halley, Murray), and right-wing movements (Grattan, Anker). We close by considering what might be alternatives to and reconfigurations of this model of consent (late Foucault, Maxwell).

CHUM377 Worlding the World: Creation Myths from Ancient Greece to the Multiverse

This course will focus on two questions that have thwarted and enthralled scientists, philosophers, and theologians for millennia: Where have we come from? and Where are we going? By reading ancient Greek and early Christian sources alongside contemporary astrophysicists, we will witness the reconfigured resurrection of some very old debates about the creation and unmaking of the world. Is the universe eternal, or was it created? Is it finite or infinite? Destructible or indestructible? Linear or cyclical? And is ours the only universe, or are there others?

The semester will be divided into four sections. The first will explore the dominant, or "inflationary," version of the big bang hypothesis in relation to the Christian doctrine of creation. The second will consider the possibility that the whole universe might be a negligible part of a vast "multiverse" in conversation with the early Greek atomists, who posited an extra-cosmic space teeming with other worlds. The third will explore contemporary cyclical cosmologies--that is, theories that posit a rebirth of the cosmos out of its fiery destruction--in relation to early Stoic philosophy and cross-cultural cyclic mythologies. The fourth will explore quantum cosmologies, in which the universe fragments into parallel branches each time a particle "decides" upon a position. We will examine these varied cosmologies of multiplicity, not with a view toward adjudicating among them, but toward pointing out their mythic and ontological genealogies and consequences.

CHUM378 Decolonizing Indigenous Gender and Sexuality

This seminar focuses on the politics of decolonization in Indigenous contexts with regard to gender and sexuality. The seminar examines a variety of settler colonial contexts in North America and Oceania. Beginning with an historical exploration of gender and colonialism, students will examine how colonial processes, along with other forms of domination that include racializing technologies, have transformed gender and sexuality through the imposition of definitions and models of normative (often binary) gender subjectivity and relations, "proper" sexual behavior, preoccupations with "sexual deviance," sexual expression as a territory to be conquered, legacies of control, legal codification, and commodification. We will then assess how diverse modes of self-determination struggles negotiate gender and sexual decolonization, including feminist interventions in nationalist productions that sustain masculinist and homophobic

agendas. In relation to these dynamics, we will study the growing body of work on Native feminisms and decolonial feminisms, as well as Two-Spirit and queer Indigenous studies.

CHUM383 Reading Between Freedom and Necessity

Mostly the culture of literacy has taken shape within a realm of freedom, seemingly distant from the needs of the body and the demands of sustenance. At the same time, the world represented within so much of the world's narratives, both truth and fiction, has been saturated in struggle and deprivation. In this seminar we will try to make some sense of this juxtaposition, freedom on one side and necessity on the other, to explore the flip side of the drama of revolution in modern times. For us, revolutions, those great upheavals that unite hope with practical action, will be the background against which we will try to understand the gravity and persistence of dispossession itself: the pull of past or residual forms of unfreedom in the sphere of cultural representation, within and against new or emerging expressions of emancipation, themselves accompanied or countered in modern times by ever-novel styles of exploitation.

CHUM385 Race, Capital, and Sexual Consent

Race, Capital, and Sexual Consent will focus on the early 19th century through to the Progressive Era. It will explore racialized sexual markets, from what Black feminist historian Adrienne Davis has called "The Sexual Economy of American Slavery," to the Victorian-era marriage market, to continuing and emerging sex work and pleasure economies. This course will focus on areas of overlap, tension, and reinforcement within and between these racialized sexual markets. Fundamental to this class will be the question of if/how sexual consent is configured within these markets, and what this means in the broader evolution of American liberalism in the 19th- and early 20th-century U.S.

CHUM389 The Mediterranean Archipelago: Literary and Cultural Representations

"Islands which have / never existed / have made their ways / onto maps nonetheless" (Nicholas Hasluck). In this course, we study Mediterranean islands as geographical, textual, and metaphorical spaces. We focus on specific islands--both fictional and real--as case studies for the aesthetic, political,

and metaphysical implications of insularity, while also aiming to present the Mediterranean as a spatial, historical, and cultural network of relationality and conflict. Elaborating upon Predrag Matvejevitc's statement that "the Mediterranean is not only geography," we approach Mediterranean insularity not only in cartographical representations (from Greek geographers to Arab cartographers), but also as poetic topos (from Ariosto's Island of Alcina to Goethe's Capri), narrative stratagem (from Homer's Phaeacia to Boccaccio's Rhodes), literary protagonist (from Deledda's Sardinia to Murgia's Sardinia), political concept (from Plato's Atlantis to Campanella's Taprobane), and existential condition (from Cervantes's Cyprus to Cavafy's Ithaca). We engage in a diachronic and synchronic exploration of Mediterranean islands' inherent dialectic between resistance and occupation, identity and assimilation, marginality and integration, zoological extinction and speciation, inbreeding and metissage, autochthony and allogey, linguistic conservatism and creoleness, territorial boundedness and internal division. Our approach will also be archipelagic and include methods and concepts from historical linguistics and dialectology to diplomatic history and postcolonial poetics.

CHUM391 Unsovereign Elements, Caribbean Poetics

This course offers portals and obstacles of anticolonial imagination through studies of Caribbean literary and conceptual forms and life ways, imperial cartographies of Caribbean lands and waterways, as well as that which has historically eluded those cartographic schema of space, property, and labor. We will focus on historical marronage, foodways, maritime law, naval and commercial cartography, theories of sovereignty, and the "unsovereign elements" (i.e., especially water and wind) in the ecosystems of unruly Caribbean places. By "Caribbean places," the professor means the archipelago (of many smaller archipelagos), and a both rhizomic and guarded site of imaginaries, knowledges, expressive forms, wars, massacres, invasions, and epistemes partly produced by and lodged in particular ecological formations. Conceptually, the course thinks from Caribbean studies, Black critical theory, Black studies, as well as some recent conversations between the latter and North American Indigenous Studies. The historical frame of the course begins circa 1492 and will hover into the 19th century era not only of emancipation, but also of abduction, re-enslavement, and anti-emancipation, partly through "contemporary" Caribbean literature, in addition to primary, historical texts and maps.

We will study digitized versions of maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal meditations), including the writings of Christopher Columbus, Moreau de Saint Mery, and Baudry des Lozieres. The guiding, inter- and un-disciplinary sources for this course's anticolonial imagination come from Colin Dayan, Sara Johnson, Evelynne Trouillot, Sylvia Wynter, Robin Derby, Joiri Minaya, Maryse Conde, Alejo Carpentier, Edouard Glissant, Jacques Derrida, Beatriz Santiago Munoz, Demetrius Eudell, Anne Eller, Dixá Ramírez D'Oleo, and others.

CENTER FOR THE STUDY OF PUBLIC LIFE (CSPL)

CSPL115 Community Gardening (FYS)

This course will provide students with skills and hands-on training so they can garden and grow food for themselves and their community.

Students will participate in UConn's Master Gardener Program, which has been offered to members of the community for 40 years and is well-respected in the gardening and farming community. Course topics will include: "botany, plant pathology, soils, entomology, pesticide safety, integrated pest management (IPM), woody ornamentals, herbaceous ornamentals, vegetables, trees and small fruits, turf grass, invasive plants, weeds, water quality, environmental factors affecting plant growth, and diagnostic techniques for the home gardener."

Hands-on training and application of the skills learned from the UConn Master Gardner Program will take place at Long Lane Farm on Wesleyan University's campus or at home for students learning remotely.

Students who complete this course will receive a certificate and name badge designating them as a University of Connecticut Certified Master Gardener.

This course is offered in partnership by the College of the Environment, Allbritton Center for the Study of Public Life, and UConn Extension Master Gardener Program.

CSPL115F Diffusion of Innovation (FYS)

Most inventions never make it out of the laboratory. Few reach the public. Why? Innovations and great ideas are not self-evident. Rather, inventors must persuade their fellow citizens that their ideas have merit and are worth adopting. This course will survey the broad field of "Diffusion of Innovations." Through case studies from around the globe and discussions of diffusion theory, students will learn how innovations ranging from vaccines to the world's largest particle accelerator gained acceptance through analog and digital communication. Students will also learn about diffusion failures ranging from water boiling to the DVORAK keyboard. They will then design a strategy for disseminating an existing but underappreciated scientific or technological innovation to United States adopters. The strategy will demonstrate a keen appreciation of scientific merit, diffusion of innovation theory, and the nuances of U.S. culture. This first year seminar course will also familiarize students with the methods used to collect, interpret, analyze, and present evidence in the social sciences, particularly in the field of communication.

CSPL116F Good Books on Bad Wars (FYS)

This course explores war through some of the best books of theory, fiction, and nonfiction. The purpose of war is to achieve a policy that leads to a better peace after the war's end than the peace that existed before the war began. But the nature of war is to serve itself if policy does not guide and constrain war. This course begins with discussion of the best foundational works of theory to build an understanding of the epistemology of war. The students will subsequently read, analyze, and discuss some of the best works of nonfiction and fiction on bad wars when judged by quality of strategy, magnitude of losses, or duration of fighting. The book subjects range from the American Civil War to the post-9/11 wars. The readings and seminar discussions vary from the reasons why the wars began to the conduct and outcomes of the wars. This course lies at the intersection of international relations, history, and conflict studies. It will increase the students' understanding of how policy, strategy, and war interact. A central aim of this seminar is to improve critical thinking and writing.

CSPL130 Frontiers of Leadership

Frontiers of Leadership will focus on the basic principles of personal and interpersonal leadership that can be used in any life arena. The course will explore variables that affect productivity, effectiveness, and efficiency, and a variety of interpersonal skill sets. Emphasis will be placed on vision, decision-making, time management, career development, team building, conflict, ethics, identity, communication skills, and diversity issues. In addition, we will explore a variety of other topics including developing students' personal leadership styles. Classroom teaching methods will include class discussion, group exercises, videos, oral presentations, written assignments, and a group project. By the end of the course, students will have increased their personal and interpersonal awareness, sharpened their analytical skills, and gained a greater understanding of the complex issues facing today's leaders. This quarter-credit course will take place over eight weeks and will meet on a weekly basis.

CSPL140F Thinking with Things (FYS)

This course explores the ways in which we think and act in relation to things. At times provocations for thought, at times emotional companions or functional collaborators, things are not only symbolic carriers of the values and meanings that we assign, but are also actors with agency and subjectivity. We critically consider the implications of this and the role of things in a variety of contexts from the historical to the emotional to the sociocultural to the sacred. The course considers how we make, use, and consume things and how, in turn, things make, use, and consume us. Transdisciplinary in its orientation, this course draws insight from anthropology, cultural studies, philosophy, material studies, art, and design. We will examine a number of projects dealing with objects and these will serve as inspirational, theoretical, and methodological models for the projects students will develop over the course of the semester.

CSPL200 Integrative Learning Project 1: Reflecting About the Liberal Arts

The Integrative Learning Project is a .50 credit course that allows students to learn to describe in a coherent and engaging narrative the various academic and non-academic activities, projects, and experiences that have been important for them while in college and to practice doing so for a variety of audiences (e.g. employers, graduate schools, etc.). Participants should be students who are interested in crafting a narrative about their personal and intellectual development, and who want to be able to talk about what skills they have cultivated during their time at Wesleyan and what they still want to learn.

All sophomores, juniors and seniors are welcome in this course. This course requires a willingness to discuss one's strengths, achievements, weaknesses, and failures. Students will not only engage in reflection about their skills and experiences, but will also have the opportunity to design an online portfolio in WordPress, the world's most popular content management software, and test the portfolio with different audiences by employing user experience design (UX) principles and research methodologies. Students can take this course more than once, but only once per academic year.

CSPL201 Foundations of Civic Engagement

The promise of democracy is that citizens can act together to shape the conditions of their collective lives. This class examines that promise, focusing on the ways in which civic engagement can contribute to its realization. We examine

civic engagement both as a theoretical perspective on citizen participation and an active practice. What does it mean to have a truly democratic society? What is the role of citizen participation, both within formal political activity and in civil society generally? What role should experts play in democratic politics, and how can expertise be squared with democratic equality? What, if any, responsibility does the University have to promote civic engagement?

CSPL202 Introduction to Design Thinking: Liberal Arts to Epic Challenges

Human-centered design or design thinking taps the creativity and diversity of a team to develop solutions to complex problems, following careful observation to gain the human perspective of a problem. Increasingly, this methodology is at the center of innovative practices in business, nonprofits, and governments. It can be particularly effective in addressing the human needs that are the focus of social enterprise and policy. Many of the disciplines that comprise the liberal arts education are valued sources of perspective and ideas contributing to solutions.

The most progressive and effective solutions to many problems are those that emerge from closely observing human patterns and then encouraging diverse imaginations to create rapid prototypes of solutions that can be tested and refined. The result is human-centered, rather than high-level policy influences for social change. Although the methodology is called "design thinking," the approach is used in designing experiences, services, and organizations, as well as objects. No design background is required.

The class sessions will consist of (1) the presentation of methods and theories, (2) case studies to be worked on in teams either in the session or between sessions, and (3) discussions with faculty members from other disciplines and designers who have worked on significant engagements for social change. Design thinking can be a purposeful link to the application of other disciplines to real-world problems, including anthropology, and behavioral economics.

An optional field trip is planned to work through a problem in the IBM Design Studio in New York City.

CSPL206 Group Psychology in Politics: Local, State, and National Perspectives

This course is an introduction to the use of group dynamics to understand the deep personal and systems-level issues at play in the body politic. This framework is applicable at the local, state, national, and international levels. Often, if not most of the time, these issues play an outsized role in any public policy initiative, debate, vote, action, deliberation, and discourse--though they are rarely acknowledged. This class will examine group dynamics as it is practiced in the field of organizational development (OD), a branch of organizational psychology used to implement cultural changes across social systems. The application of OD to politics is not widespread, but its tools are useful in understanding the dynamics in political situations and in the understanding of how power is exercised. The course will introduce concepts in open systems theory and will introduce three models to "hold the data" in our case studies: the Burke-Litwin Model, BART, and GRPI.

CSPL208 War and Religion in Early America

This course examines the intersection of war and religion in early America. Beginning with the first European settlements in North America and continuing through the Early Republic (1790s), this course asks students to explore how the religious identities of early Americans influenced their concepts of war and violence. Students will be challenged to rethink the ways in which religious imperatives created and shaped violent conflict, and to investigate the varied ways in which religious women and men relied upon moral dogma to interpret war and violence. Finally, this course will also require students to reflect on how the early American experience informs our understanding of the relationship between war, violence, and religion in 21st-century America.

CSPL210 Money and Social Change: Innovative Paradigms and Strategies

How do people make decisions about using their money for social change? Where will it have the most impact? When do shifts in the rules or the use of capital create systemic change and address structural inequities? This course will explore the role of capital in social change. If we rethink how social change happens--analyzing the nonprofit and public sectors, but also new sector-blending approaches and concepts like collective impact--how does our perspective on capital shift? As a part of this unique course, students will work through an active process of selecting a set of nonprofits in and around Middletown to which, as a class, they will actually grant a total of \$10,000.

CSPL211 Calderwood Seminar in Public Writing: Legal Advocacy for Disabled Veterans

The public rarely understands what it takes to fight for one's legal rights or benefits. Good writers can translate those battles in ways that teach, empower, and (re)build community support for struggling individuals. This course is a study in the translation of legal challenges into civic advocacy.

In this course, students will write about real plaintiffs and legal cases for public audiences. As part of their journey, students will delve into the military and medical files of a disabled veteran applying for a discharge upgrade from the military. Most discharge upgrade applicants suffer from addiction and/or mental health issues, the same issues that cut short the veterans' military careers. Using academic legal writing, news sources, and confidential personnel and medical files, students will describe issues facing veterans in general, and our veteran client specifically. Students will write for a disability blog, a legal services organization (LSO) website, a middle school social studies magazine, a podcast, and a newspaper. Students' writings will inform the instructor's writing--as the veteran's pro bono legal counsel--of a discharge upgrade brief.

CSPL215 Human-Centered Design for Social Change

Design thinking is the way the creative mind approaches complex problem solving. Increasingly, it is at the center of innovative practices in business. Yet it can be particularly effective in addressing the human needs that are the focus

of social enterprise and policy. This course will introduce a number of ways to understand how to use this method and will apply it to a number of real-world examples as team work in class. Invited designers who have worked in the field in the United States and in other countries will lead several sessions. An individual project will require fieldwork and will constitute the demonstration of mastery.

This course explores the techniques of human-centered design and design thinking for approaching social challenges ranging from election processes to subsistence challenges in impoverished rural populations. The most progressive and effective solutions to many problems are those that emerge from closely observing human patterns and then using creativity to make rapid prototypes of solutions that can be tested and refined. The result is human-centered, rather than high-level policy influences for social change. The class session will consist of (1) the presentation of methods and theories, (2) case studies to be worked on in teams either in the session or between sessions, and (3) discussions with designers who have worked on significant engagements for social change.

CSPL220 Participatory Design: From Helping to Solidarity

As artists and designers increasingly turn their efforts to altering conditions for the vulnerable and oppressed, stubborn questions arise around the ethics of engagement. Socially engaged projects seek meaningful change, yet often discourage dissent, reify privilege, remain agnostic about outcomes, and do little to alter larger, structural inequalities. Artists and designers can easily exit projects deemed failures and write these off as learning experiences. Moving from one social injustice to the next, crises and suffering become "sites" from which to develop serialized projects. Armed with empathy and expertise, but with little local knowledge, these practitioners struggle to form equitable relationships with partners and collaborators. This course will examine a range of projects initiated by artists and designers and will challenge the idea that helping is beyond reproach. The course asks how artists and designers might better situate themselves as allies through developing practices that foster solidarity, exercise humility, and distribute agency.

CSPL222 Disability Advocacy: Communicating the Legal Challenges of Disabled Plaintiffs to the Public

The public rarely understands what it takes to fight for one's legal rights or benefits. Good writers can translate those battles in ways that teach, empower, and (re)build community support for struggling individuals. This course is a study in the translation of legal challenges into civic advocacy.

In this course, students will write about real plaintiffs and legal cases for public audiences. In the first half of the course, students will read the military and

medical files of a disabled veteran applying for a discharge upgrade from the military. Most discharge upgrade applicants suffer from addiction and/or mental health issues, the same issues that cut short the veterans' military careers. Using academic legal writing, news sources, and confidential personnel and medical files, students will describe issues facing veterans in general, and our veteran client, specifically. Students will write for a nonprofit website, a print newspaper, and a podcast, which the class will produce. These writings will inform the instructor's writing--as the veteran's pro bono legal counsel--of our client's discharge upgrade brief.

In the second half of the course, students will digest and synthesize legal pleadings from transgender disability suits (e.g., employment/Title VII, prison abuse). From these case files, students will write short pieces that educate the public about the lives and legal issues of transgender plaintiffs. Students will write for a nonprofit website, the six o'clock news, and a local online news or social media outlet.

CSPL225 Critical Design Fictions

Design fiction involves the deliberate use of diegetic prototypes to suspend disbelief about change. Through practices of estrangement and defamiliarization, and through the use of carefully chosen design methods, this course experiments with the creation of provocative scenarios and imaginative artifacts that can help us envision different ways of inhabiting the world. The choices made by designers are ultimately choices about the kind of world in which we want to live--expressions of our dreams, fantasies, desires, and fears. As an integrated mode of thought and action, design is intrinsically social and deeply political. In conversation with science fiction, queer and feminist theories, indigenous discourses, drag and other performative interventions, this course explores speculative and critical approaches to design as catalysts for imagining alternate presents and possible futures. We examine a number of environmental and social issues related to climate change, incarceration, gender and reproductive rights, surveillance, emerging technologies, and labor.

CSPL235 Activism and Theories of Change

In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education.

What strategic, ethical or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an activist for women's rights, queer rights, and economic justice. In addition, we will discuss the recent and ongoing social activism in the U.S. focusing on police violence, Black Lives Matter, voting rights, and the aftermath of the U.S. elections. We will allow time to discuss events that may occur in real time over the course of the semester. This course will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

CSPL237 Communicate for Good: Public Speaking and Persuasion for Social Mobilization and Change

The world needs more...democracy, justice, equality, civility, love. Diagnosing that need is only the first step in changing society. To achieve social good, you must persuade your fellow citizens that the change is worthwhile and the path to change is worth it. In this public speaking and persuasion seminar, you will learn how to communicate for good. In the first half of the seminar, you will adopt the persona of a public organizer and develop mass media messages and public speeches to promote your public good. In the second half of the seminar, you will assume the mantle of leadership and produce a short speech and video storyboard for the leader of a nonprofit organization closely associated with your public good. In both halves of the course, you will be graded on your speech preparation and implementation (i.e., writing and speech).

CSPL239 Startup Incubator: The Art and Science of Launching Your Idea

The Startup Incubator is a one-semester, experiential learning program designed to teach and enable student entrepreneurs to develop sustainable business models from their ideas.

The program will bring together an ambitious, committed, and diverse group of individuals from all classes and majors who are passionate about developing successful solutions to challenges; identify as entrepreneurs, disruptors, and thought leaders; and have the tenacity, work ethic, and ability to succeed. All participating students should have a promising business idea and take the course with the intention of launching or running their own venture.

Student Incubator students actively participate in one cohort meeting a week: most are "classes" that take the form of lectures or workshops, and some are "practice days" that provide time to practice theories and methods necessary for success. Students also dedicate at least 10 additional hours per week to assignments, self-directed work, customer discovery, networking, and mentoring sessions.

This course will feel like a combination of a college class and a rigorous startup incubator program. Success is a student using theories learned in class to validate their ideas by developing and accurately testing business assumptions, identifying and researching their target market, and pivoting to develop a sustainable business model.

By enrolling, students make a commitment to themselves, the instructor, and the other members of the class.

Note: This course is offered by the Patricelli Center for Social Entrepreneurship (wesleyan.edu/patricelli/) and reSET (resetco.org/about/), a Hartford-based nonprofit whose mission is to advance the social enterprise sector, with support from CTNext (ctnext.com/higher-education/). Classes will be taught by reSET staff, and additional advising and coaching will be available through the Patricelli Center.

CSPL244 From Litigation to Restorative Justice: Conflict Resolution in Practice

Litigation, mediation, reconciliation, and consciousness-raising. These and other techniques can help us solve seemingly intractable conflicts. But how does a litigator, mediator, reconciler, or consciousness-raiser select an appropriate strategy for a given conflict? And once a strategy is selected, how does a conflict resolution specialist lead the parties to resolution? This course will show you the way...

In the first part of this course, we will study and practice traditional dispute resolution techniques. Each student will participate in two-person and multi-party quasi-judicial role-playing exercises and arbitrations. In the second part of the course, we will study and practice mediation, reconciliation, feminist consciousness-raising, and community-building.

We will then draw upon theory and practice readings, and our experiences, to answer questions such as: Should we match dispute resolution strategies to parties' personalities or desired outcomes? Whose conception of fairness and social good should guide our negotiation practices? Are dispute resolution techniques gendered, raced, aged, abled, etc.? We will answer some of these questions with the help of other Wesleyan students at a conflict resolution teach-in led by members of the class.

CSPL245 Ethnography and Design

Exercising humility and developing methods of meaningful engagement are essential to becoming an effective ethnographer and designer. Collaboration with users provides knowledge that allows designers to imagine artifacts, places, and systems that are thoughtfully enhanced or radically new. This course rethinks power dynamics to better understand how to design both for and with other people. With successful completion of this course students will be able to demonstrate competence in developing, refining, and communicating research interests in a committed, reflexive manner. They will gain an understanding of

the strategic and tactical value of design and a sense of the practical problems involved in realizing design solutions and responses that are attuned to the needs of both an institution and individual users. Students will gain experience not only in theoretically framing social and political issues as these are expressed through design, but also in understanding the methodological tools needed to translate problems into creative interventions that are user-centered and compassionate.

CSPL250 An Introduction to Data Journalism

This course is designed to familiarize students with the basic principles and tools of data journalism and to provide a wider understanding of the role of basic data analysis in society. To that end, the course will focus on developing a solid familiarity with basic data analysis and visualization software. It will also focus on developing the tools of journalism: retrieving public data, interviewing people and databases, and the basic principles of journalistic writing. By the end of the course, students will be able to analyze data, identify stories within the data, and create a news story complete with data visualizations of publishable quality--a skill transferable to many fields and disciplines. Both online and traditional print platforms will be covered.

CSPL250P "It's a Mess": An Academic and Practical Look at Digital Media in the Late 2010s

Hot mess. Dumpster fire. Steaming turd pile. Commentators, journalists, and the public have all used these terms to describe the state of American digital media in 2018. While the profession of journalism is more noble in this era than in previous decades, the world of media creation and consumption is far more complicated than ever before. For young people hoping to get their start in the world of digital media in the late 2010s, catching a break is even harder.

The purpose of this class is twofold: It will introduce students to the larger issues spanning digital media--from a lack of diversity and inclusion to problems with monetization and "Fake News"--while also giving them the chance to walk through what it's actually like to pitch, write, and edit for an internet publication. Students will have the opportunity to write for a class blog using strategies that the digital media world uses today, and they'll spend time giving and receiving feedback on writing.

CSPL250R First Person Singular

This course will examine the techniques and skills of first person reportage, where the writer is present and part of the story. We will find and hone your own voices and points of view. We will examine the myth of objectivity; issues of fairness, accuracy, and moral relativity; the perils of cultural appropriation; the savior complex; and exoticism.

The course will include several short essays and one longer final project. It will draw on readings from The London Review of Books, The New York Times magazine, National Geographic magazine, Granta, Paris Review, The New Yorker, and the following authors: Lyn Freed, Rian Malan, Jonny Steinberg, Doris Lessing, Ryszard Kapuscinski, W.G. Sebald, Bruce Chatwin, VS Naipaul, Justice Malala, George Orwell, Zawe Ashton, Julian Sayararer, Cathy Renzenbrink, Sisonke Msimang, Thomas Paige McBee, Ahmet Altan, and Peter Godwin.

This course is offered by 2019 Koeppl Journalism Fellow, Peter Godwin. He is the author of five nonfiction books and is an award-winning journalist, war correspondent, and documentary filmmaker. Godwin's bio can be found here: <https://petergodwin.com/about/>

CSPL250W Topics in Journalism: The Art and Craft of Journalistic Nonfiction

Journalistic nonfiction uses the tools of the newsroom to create long-form stories that read like novels. Students will learn the skills to ensnare readers in any medium of narrative nonfiction writing, from articles and books to screenplays and teleplays. Journalists excel in conducting interviews and marshaling facts. But few journo's ever master the art of narrative storytelling. Nonfiction book writers can wield a narrative arc to tell a story. But many book writers are weak on basic reporting. We will read the work of newspaper reporters who learned to write long-form narratives, and magazine writers who learned the skills of the newsroom. By semester's end, students will know tools of both trades. We will hear from some of the writers about their work. To keep the focus on journalism, we will mostly skirt the genres of history and memoir. Students will write mostly in the third person, and primarily about events in living memory.

CSPL257 System Mapping for Social and Environmental Impact

In recent years, growing interest in social entrepreneurship has pushed students to "solve" complex social and environmental problems with new ventures of their own design. Unfortunately, this approach often overlooks a critical foundation of social change: understanding the root causes of problems and the contexts that surround them before seeking solutions.

In this six-week, half-credit class, students will study a problem and the systems that surround it. By the end of the course, students will create a "systems map" that documents the economic, political, and cultural factors behind their problem, as well as the current "solutions landscape."

CSPL264 Patricelli Center Fellowship I

The Patricelli Center Fellowship is a one-year, project-based, cohort-style learning experience. Fellows are a self-selected, committed, and diverse cohort of individuals or teams from all classes and majors who are passionate about innovation, creativity, and problem-solving; identify as entrepreneurs, intrapreneurs, changemakers, activists, disruptors, designers, inventors, and/or thought leaders; and have tenacity, empathy, interdisciplinary thinking, strong

work ethic, and the ability to work independently. Some Fellows will launch or run their own project or venture, while others will not.

Patricelli Center Fellows actively participate in two cohort meetings per week: some are "classes" that take the form of lectures or workshops, and some are "labs" that serve as working or discussion sessions. Fellows also dedicate 10+ additional hours per week to assignments, self-directed work, portfolio-building, and engaging other members of the Wesleyan community.

This course will feel like a combination of a Wesleyan class, a C-level position on a startup team, and an extra-curricular leadership activity. By enrolling, Fellows make a commitment to themselves, the instructor, and the other members of their cohort.

CSPL266 Youth, Power, and Social Change

While young people have been at the helm of movements for social and racial justice throughout history, the 1990s saw the rise of youth organizing as an intentional strategy for transforming youth, communities, and the broader social and political structures and institutions that shape their lives. This course will examine the evolution of youth organizing and the ways in which it has disrupted the dominant narratives and traditional methods of youth learning and engagement at play in schools and youth service organizations. The course will explore the politics of power and identity in youth work, and the role and impact of current youth-led social change movements - from #blacklivesmatter to the work of Dreamers - in today's political climate. Please note that this course will require students to reflect on and contextualize readings and class discussion with their own lived experience and is therefore especially relevant for students that are engaged in community service, organizing and/or youth work.

CSPL267 Project-Based Learning Lab

In this course, students will bring ideas to life through project-based learning, translating theory to practice and developing a more sophisticated understanding of subjects they are studying in their other courses.

Students will enroll in the Project-Based Learning Lab with a problem they want to address or an idea they want to build. Throughout the semester, we will build a toolbox for studying problems and designing solutions. Themes will include systems thinking, root cause analysis, ethical community research, human-centered design, lean prototyping, and data-driven evaluation. There will be an emphasis on humility, teamwork, oral communication, responsible partnership, and lean experimentation. Most students will complete the semester having launched a basic MVP (minimum viable product) and a road map for continuing to pursue their idea after the conclusion of the semester.

CSPL275 Action: Art, Politics, Counterpublics

In this interdisciplinary studio course, we explore action as a category of art practice. What does it mean to take action, either individually or collectively? What does it mean to refuse to take action? Through a series of projects, assignments, and discussions, we work through various possibilities, drawing on methods from public interventions, performance, institutional critique, social practice, experimental film, and work by non-art practitioners. The course is organized around the production of student projects and research, culminating in a self-directed capstone work. In the initial stages, students will be asked to work through three distinct modalities (performance, site-specific intervention, and collaborative practice) while developing their ideas. Time will be devoted to discussion of historic and contemporary examples, including European avant-gardes (Dada, Productivism), feminist film and performance, Happenings, Indigenous performance art, and work connected to political organizing, such as the Black Panther Party, United Farm Workers, Young Lords, ACT-UP, Art Workers' Coalition, and EZLN, among others. Students will be exposed to a variety of techniques and will gain access a range of facilities, including the woodshop, digital technologies through the Digital Design Studio, etc. Depending on Covid restrictions, trips to contemporary exhibitions will provide a theoretical framework. Work in this class can be created individually or collaboratively. Depending on interest, we may also organize an end-of-semester exhibit.

CSPL277 Community Impact: Building Capacity to Support Educational Enrichment and Socioemotional Development

In this half-credit course, students will build an intellectual and practical framework to guide their work in volunteer settings in the local community. What does it mean to "help?" How do we assess the needs of community partners and build the knowledge and skills that will allow us to address those needs? What do we need to know and understand about the people with whom we work? What does research have to say about effective tutoring techniques and practices? How can we design meaningful learning experiences? How can we maximize not only our impact in the community, but our own growth and learning?

Note: students taking this course must be engaged in at least 80 minutes per week of community service in an educational setting throughout the semester and must complete this questionnaire (<https://forms.gle/ay9xaXGn1wbxriHJ7>) before enrolling

CSPL300 Integrative Learning Project 2: Senior Capstone

The Integrative Learning Project is a .50 credit course that allows students to learn to describe in a coherent and engaging narrative the various academic and non-academic activities, projects, and experiences that have been important for them while in college and to practice doing so for a variety of audiences (e.g. employers, graduate schools, etc.). Participants should be students who are interested in crafting a narrative about their personal and intellectual development, and who want to be able to talk about what skills they have cultivated during their time at Wesleyan and what they still want to learn.

This course is intended for seniors who wish to document and reflect about their work in a single "capstone" experience. This course requires a willingness to discuss one's strengths, achievements, weaknesses, and failures. Students will not only engage in reflection about their skills and experiences, but will also have the opportunity to design an online portfolio in WordPress, the world's most popular content management software, and test the portfolio with different audiences by employing user experience design (UX) principles and research methodologies. Students can only take this course once.

CSPL302 Senior Seminar for Civic Engagement Minor

In this partial-credit seminar, the candidates for the Civic Engagement Minor will acquaint each other with their particular interests in and commitments to civic engagement. Under close faculty supervision, the participants will organize the course as a collaborative undertaking. Meeting biweekly, they will revisit the readings from their Practice of Democracy course, discussing them in light of their subsequent course work and practical experiences in engagement. At the end of the semester, each student will make a capstone presentation to the group.

CSPL307 Religious Subjects to Ethnic Minorities: Armenians in Turkey Between Empire and Republic

After World War I, Woodrow Wilson's Fourteen Points articulated a new vision for an international order based not on imperial ambition but on the self-determination of nations. Though empire persisted as a viable political form through the Second World War, the interwar years saw the breakup of some of the world's oldest dynastic empires into the much newer nation-state: the Austro-Hungarian Hapsburg Empire, the Ottoman Empire, and Imperial Russia all gave way to new political entities. At the same time, a transformation in the idea of political belonging occurred: citizenship now dominated the older concept of imperial subjects, and an idea of a national minority protected by an international regime of minority rights emerged. These ideas profoundly reshaped national and international politics.

This course focuses on the Armenians of Turkey across the transition from the Ottoman Empire to the Republic of Turkey, established in 1923. It uses the Armenians of Turkey as a case study in the emergence of secular nationalism as the dominant political ideal of the 20th century. Students will not only learn the history of the late Ottoman Empire, the Republic of Turkey, and the history of the Armenian minority in the Middle East, but will explore the transition from empire to republic at the end of the 19th century through the twin lenses of secularism and nationalism. Drawing on Ottoman and Turkish history, Armenian history, political science, and anthropology, the course introduces debates about nationalism, secularism, minority rights, and political belonging through the emphasis on Armenians in Turkey.

CSPL308 Trump-Evangelicals: the History of Fundamentalism and Evangelicalism in America

This course examines the history of American evangelicalism, seeking to understand the nature of its support for the presidency of Donald Trump. Beginning with a brief overview of religion in the colonial and revolutionary eras, the course examines revivalism, slavery, and the emergence of fundamentalism during the 19th century. Special attention is paid to the re-emergence of evangelicalism after World War II, the establishment of the religious right, global evangelicalism, and the core evangelical support for the candidacy and presidency of Donald Trump. Students will be challenged to consider the ways issues of gender, race, and economics have shaped 21st-century evangelicalism, and reflect on how the movement's view of American history contributes to its own sense of identity and purpose.

CSPL311 Community Impact Practicum: Building Capacity to Support Educational Enrichment

In this practicum course, students will build an intellectual and practical framework to guide their volunteer work in educational settings in the local community. What does it mean to "help"? How do we assess the needs of community partners and build the knowledge and skills that will allow us to address those needs? What do we need to know and understand about the people with whom we work? What does research have to say about effective

tutoring techniques and practices? How can we design meaningful learning experiences? How can we maximize not only our impact in the community, but also our own growth and learning? Through reflection on experiential learning and the study of scholarship addressing these questions, students will develop knowledge and skills to improve their effectiveness in supporting educational enrichment. Students taking this course must be engaged in at least 90 minutes per week of community service in an educational setting throughout the semester.

Please note: If you are looking for a practicum that is more focused on the K-12 classroom experience, please see EDST310: Practicum in Education Studies. In that practicum seminar, students carry out their own independent study related to their classroom placement.

CSPL315 Policy and War through Film

This course explores how America's policies and wars interact with culture and identity. It combines films and readings to gain a deeper understanding of film as an artifact of culture, war, and identity. The course begins with a discussion of key foundational works to frame a common understanding about strategy, war, and American strategic culture. It then combines film viewings and critical scholarship to discover how the interpretations of America's wars through film shape American citizens' perceptions of war and their military. The films, readings, and seminar discussions will help students develop a better understanding of the differences between the realities and the perceptions of policy and war. This course lies at the intersection of international relations, history, and conflict studies. Participation in this course will increase the students' understanding of how U.S. policy, war, culture, and identity interact. It will also sharpen critical thinking and writing.

CSPL316 Human Rights Advocacy: Critical Assessment and Practical Engagement in Global Social Justice

The core animating principles and practices of human rights are under threat. Will the global human rights movement be able to respond effectively? How could or should the movement advance the cause of global social justice most effectively? This seminar seeks to answer these questions by assessing global rights defense and social justice practice and by engaging in structured, self-critical human rights advocacy.

Among the issues considered in this seminar will be the following: What are the origins of the human rights movement? Has the movement been dominated by ideas from the West and elite organizations from the Global North? What does it mean to be a human rights activist? What is the role of documentation, legal advocacy, and social media in human rights advocacy? What are the main challenges and dilemmas facing those engaged in rights promotion and defense?

Students will be required to write several short reflection papers. The final project will be an exercise in developing a human rights advocacy project or supervised engagement in actual human rights advocacy in conjunction with the University Network for Human Rights (humanrightsnetwork.org).

CSPL317 Social and Political Perspectives on Digital Media

This course examines the intersection between social media, politics, and society, analyzing platforms like Facebook, Twitter, YouTube, and Instagram to understand their role in our lives, in our political discourse and in shaping our culture. We examine the positives of social media including social activism, the democratization of news, and heightened capacities for community, communication, and connectivity. We also delve into the darker side of these platforms, exploring the proliferation of fake news, hate speech, terrorist networks, and gendered issues including trolling and cyber harassment. This is an interdisciplinary course and in it we will draw upon a broad range of social theories including science and technology studies, communication theory, linguistics, cultural studies, and media studies to understand the complex role of digital media in contemporary society.

CSPL318 Global Populism and the US Election. Are we witnessing a populism uprising?

In this course, we will unpack the factors pushing communities worldwide toward these political ideologies as well as the impact it has on global politics and international relations. We'll take a deep dive into the 2020 campaign cycle in the age of digital campaigning and online voting and analyze how Donald Trump and Senator Bernie Sanders are shaping our political discourse and how they fit into the global trend of populism. We'll study the defeat of democratic movements like the Arab Spring and the rise of authoritarian regimes in the region. Additionally, we'll break down how the failure of democratic movements in the MENA region led to the refugee crisis, which in turn inspired right-wing radicalization within Europe and the United States. This course provides an overview of the political landscape of the populism movements in the U.S. and around the world, focusing on the collapse of democratic movements and the rise of populist leaders like Donald Trump, Boris Johnson, Narendra Modi, Jair Bolsonaro, and Marine Le Pen, among others. We'll begin with a brief overview of the history of populism and the theory behind it, before breaking down modern applications.

CSPL319 The Voice(s) of Expertise: How Podcasting Is Changing the Way We Listen and Learn

In this course, students will examine the changing nature of audio news and storytelling, and the extent to which traditional understanding of the voice of expertise is being disrupted by the rise of podcasting and other on-demand audio forms. The evolving digital media landscape has brought about an historic shift in the delivery of news and information. The shift has been celebrated--"the media has been democratized"--and reviled--"the media is too fractured and people are living in information bubbles." The shift is, at the very least, unsettling, in particular for journalists who find themselves working in an environment where the old rules and training seem outdated. But it also presents significant opportunities, especially in audio and broadcast journalism. The rise of podcasting, in particular, may challenge norms on how journalists explore and explain complex issues, and on who we hear as voices of expertise. This course will be a combination of media criticism, a study of best practices in journalism, and design thinking. As students examine the impact of new media on news and journalism, they will also develop their own ideas for on-demand audio (including podcast design) throughout the semester, working on an individual project, and in collaboration with other students.

CSPL322 Methods and Frameworks for Understanding and Overcoming Health Disparities

In recent years especially, the need for both interdisciplinary and mixed approaches to inquiries in public health research has become apparent in health promotion, policy formation and evaluation, service needs assessment, the social determinants of health, and program evaluation and outcomes measurement more generally. This course is intended to provide an overview of methodologies and frameworks used to examine and overcome disparities in health through research. A range of quantitative and qualitative research designs and methods will be introduced, and strategies to address challenges in real world program settings will be emphasized. This course will discuss approaches commonly used in public health and health services research, such as mixed methods, implementation science, community-based participatory research, and their strengths and limitations. Additionally, this course will examine how critical race theory and intersectionality, and additional theories and frameworks from ethnic studies, psychology, and sociology, can further advance public health's capacity and effectiveness in promoting health equity. The course will incorporate examples of applied research and opportunities to learn from the direct experiences of the instructor. There will be a mixture of discussion and lecture depending on the topic, with student participation and questions strongly encouraged.

CSPL330 Policy and Strategy in War and Peace

This course explores how the relations, relationships, and discourse between senior national civilian and military leaders influence the development and execution of policy and strategy in war and peace. In theory, the purpose of war is to achieve a political end that sees a better peace. In practice, the nature of war is to serve itself if it is not influenced and constrained by continuous discourse and analysis associated with good civil-military relations between senior leaders. This course begins with discussion of the key foundational works to build a common understanding. It then explores how civil-military interaction influenced strategy in war and peace for each decade from the Vietnam War to the present. The readings and seminar discussions also examine how the outcomes of wars influenced civil-military relations and the subsequent peace or wars. This course lies at the intersection of international relations, history, and conflict studies. Students will gain greater understanding of how U.S. policy makers, strategy, and war interact, while honing their critical thinking and writing skills.

CSPL332 Just Cities: Architectures of Public Encounter

What is "the public," and how has it been conceived, relative to notions of the urban--to the web of ideas, forms, and fantasies constituting "the city"? Can art and architecture play a role in defining the public, or does the public's political and social construction place it outside the scope of specifically aesthetic concerns? This course addresses these and other related questions, positioning art and architecture in their broader cultural and historical contexts. It explores a range of socially charged, experiential, and participatory aesthetic and political practices, characterized by their distinctly public character and decidedly architectural and urban settings. At its core, it is concerned with issues of social justice as they relate to the material spaces of the modern city, and the manner in which those spaces are identified, codified, and made operative in the service of aesthetic, social, and political experience.

This course will be taught by M. Surry Schlabs, Yale School of Architecture.

CSPL333 Music Movements in a Capitalist Democracy

This course will focus on music movements that have used the presentation, expression, and production of music and music events to facilitate sociopolitical transitions. The vital context of these movements is the United States in particular, where the speed and power of commerce, as well as the concentration of capital, present unique opportunities for progressive values and goals in music.

We will look at huge events such as the Newport festivals, Woodstock, Michigan Womyn's Music Festival, Lillith Fair, and Bonaroo, and examine how these movements have both evolved and spread their tendrils into the world (if they have). We will also spend some time on smaller, grassroots venues and music series in Chicago, Boston, San Francisco, and New York and see how blues, folk, punk, and "Americana" venues have affected and interacted with

their communities. We will look at how music scenes evolved and grew and sometimes became institutions, like the Chicago Old Town School of Music.

CSPL337 Practicing Democracy

Organizing can make a difference in addressing major public challenges that require civic action, especially by those whose voices will lead, by identifying, recruiting, and developing more leadership; building community around that leadership; and building power from the resources of that community. In this course, each student accepts responsibility for organizing constituents to achieve an outcome by the end of the semester. As reflective practitioners, students learn from critical analysis of their leadership of this campaign. We focus on five key practices: turning values into motivated action through narrative; building relationships committed to common purpose; structuring leadership collaboratively; strategizing to turn resources into the power to achieve outcomes; and turning commitments into measurable action enabling learning, accountability, and adaption.

CSPL341B Topics in Education, Innovation, and Entrepreneurship: Social Entrepreneurship in Education

This seminar focuses upon educational innovation and entrepreneurship as a form of social entrepreneurship, some of society's greatest challenges in education. Students will survey critical issues in contemporary education and explore innovative and entrepreneurial efforts to address these issues. Learners will explore how diverse education startups, non-profit organizations, and non-governmental organizations, individuals and grassroots groups, K-12 schools, universities, foundations, professional associations and others are responding to these issues in innovative ways. As the course progresses, students will explore the roles of foundations, corporations, and government policies and regulations upon educational innovation and entrepreneurship. As part of this course, learners will work individually or in groups to research solutions to a pressing contemporary educational challenge and propose or pitch a means of addressing that challenge through social entrepreneurship.

CSPL341C Entrepreneurship in Education: Past, Present, and Future

Entrepreneurship plays an increasingly important role in the American public education system. This course examines the historic roots of entrepreneurship in education, looking at both the business side of entrepreneurship and the more recent emergence of social entrepreneurship. Furthermore, the course examines the current debates in the United States about the engagement of business with education, addressing such concerns as the proper role of risk, profit motives, privatization, and neoliberalism. The New Orleans public school system will serve as a case study for investigation in this discussion. Students will better understand the entrepreneurial personality, the sources of innovation, and the promise and pitfalls of entrepreneurship in public K-12 schooling.

CSPL341D Topics in Education, Innovation, and Entrepreneurship: A Law and Policy Perspective

Entrepreneurial ideas in education invariably raise rich questions of policy and law. Innovations in the public schools, such as charter schools, the use of student test scores (e.g., value added modeling) to evaluate teachers, and alternative pathways to the profession (e.g., Teach for America) engender deep debate and discussion in policy and legal circles. This course will explore (from both a law and policy lens) the various education reform ideas that have been instituted or debated and characterized as innovative or entrepreneurial. The course material will be framed in a way to be accessible to those with a general interest in the area of education but without a background in law and policy per se. The course will draw heavily from guest lecturers and entrepreneurs working in the field.

CSPL357 Saving the Republic: Lessons from Plato for our Time

More than two thousand years ago, Plato addressed the pressing issues of the day: the rise of the oligarchy, dwindling of public deliberation, increasing political factionalism, and erosion of credible information. Some argue that the lessons of his Socratic exchanges, captured in *The Republic*, are valuable to this day. In this course, students will immerse themselves in 403 B.C.E., a crucial moment in Athenian democracy. Following a close reading of *The Republic*, the classroom will become the Athenian state. Each member of the class will assume a particular place in Athenian society and in the factions of the day using highly-developed roles from the *Reacting to the Past* curriculum. As members of the gathered assembly, students will debate divisive issues such as citizenship, elections, re-militarization, and the political process. Then, students will develop, rehearse, and publicly perform a one-act play at the Russell Library in Middletown. The play will be set in ancient Athens and will demonstrate factionalism, information asymmetry, political brokering, and other political issues of that era. Following the performance, the students will engage the

audience in a Q&A about the relevance of the play's themes for today. Students will be assessed in five ways: 1. Content quizzes on *The Republic*, 2. Written preparation for debates/assemblies, 3. Oral presentations in debates/assemblies, 4. Contribution to the class public performance, and 5. A short paper analyzing *The Republic's* relevance for contemporary United States.

CSPL366 A History of Incarceration in the United States

This course examines the history of incarceration in the United States from the 18th century to the late 20th century. It begins with history of indentured servitude in the colonial era and then considers the intensification of the enslavement of blacks in the 19th century as well as the expansion of prisons in the 20th century. The course seeks to engage how systems of confinement accompanied the development of a political system based on the languages of liberty.

CSPL375 Posse Veterans Introduction to Student Life and Community

Purpose of this seminar is to develop presentation and group discussion skills: to integrate students into Wesleyan student life; and to familiarize students with the range of study programs and community programs at Wesleyan. It will introduce a host of topics and staff to stimulate discourse and improve veteran student knowledge of the full gamut of opportunities, service, and resources available at Wesleyan. It meets one/week for an hour.

The aim of this course is to give students a better understanding of the historical industrial merits and legacy of Connecticut while considering the value and challenges of its physical and interpretive remains. While focusing on New Haven, students will be challenged to discover and synthesize Middletown's historically chief industries, industrialists, inventions, workforce, and remaining factory sites. Professor Caplan brings his experience as a Historical Architect, historian, genealogist, author, National Register consultant, and tour operator to provide students with a well-rounded understanding of how history, preservation, architecture, social science, and environmental justice come together in actual projects.

This seminar will examine the principal candidates for the presidency (and selected candidates for other major electoral positions) from the perspective of human rights. To begin, we will spend the first several weeks studying basic human rights standards, as well as the challenges to the promotion of international human rights standards in the United States. We will then turn to particular rights and clusters of rights, considering the policies proposed by various candidates and their implications for human rights. After review of the particular right or cluster of rights, students will work in small groups to research and present the proposals of the various candidates to the class. In addition, representatives of the candidates will be invited to engage with the class (as well as in broader fora on campus).

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ALLB**Prereq: **None****CSPL399 Understanding the 2020 Presidential Election**

In understanding the 2020 Presidential Election, students will learn how to read skeptically the political press and how to write critically about presidential campaign politics. Along the way, the course will touch on electoral history, political and social thought, public policy, media criticism, and much more. Students will read past examples of thought-provoking and influential commentary. They will read current coverage in the legacy press of the 2020

presidential election and come to class prepared to discuss the most important stories and issues of the week. Students will have the opportunity to learn about electoral politics and political writing alongside a veteran journalist. Students who have experience working for political campaigns will have a chance to share their knowledge and help the class incorporate their experience in a larger historical framework. They will have a chance to see their work published in the Editorial Board, the lecturer's daily politics newsletter. Students will attempt to do what political writers do in real-time: explain what's happening from a unique, particular, and informed point of view for the benefit of like-minded citizens seeking to achieve the ideal of self-government. In the end, the hope is that students see that campaign politics is simpler and more complex than it appears, but that neither is obvious without study, focus, and understanding.

Offering: **Host**Grading: **OPT****CSPL405 Ideals into Practice**

Through this course, students can earn one quarter-credit per year for participating in Ideals into Practice, a program that allows students to make connections between their academic curriculum and the practical experience they gain through campus employment, off-campus internships, community service, and extracurricular activities. By engaging in deep reflection about the skills they are gaining throughout their time at Wesleyan, students will be able to understand and explain to others how their liberal education prepares them for life after college.

Ideals into Practice involves: 1) successful completion of online assignments via Career Decisions: From Insight to Impact on Coursera; 2) participation in a

daylong seminar at the start of the spring semester introducing students to an online portfolio platform; 3) completion of reflection pieces uploaded into the student's online portfolio before the end of the spring semester; 4) meetings with assigned advisors. While a student's online portfolio need not be publicly accessible, students are encouraged to give access to and discuss the contents with their faculty and career advisors.

Permission of the instructor is required. For the 2021-22 academic year, course registration is limited to students 1) in the Class of 2025; 2) who completed the course in 2020-21. If approved, students must also register for the Ideals into Practice program through the Gordon Career Center. This course may be repeated for credit.

CSPL480 Engaged Projects

Engaged Projects (EPs) are rigorous, self-designed endeavors in which a student studies a topic of their choice and completes a final project intended for a non-academic audience. Students are encouraged but not required to select a topic that is connected to another class or their major. Final projects can take the form of blogs, videos, a website, or other media; a work of art, an event, a workshop, a presentation, or panel; a policy proposal or analysis; a white paper or op-ed series; a business plan; and/or any other piece(s) thoughtfully designed for the public.

EP students will develop a self-directed research and project plan. They must enlist an EP Sponsor who will serve in an advisory/mentor role; Sponsors can be Wesleyan faculty, staff, alumni, or community partners; family members or friends; or other experts or professionals willing to play this role. Seeking and enlisting an appropriate Sponsor is a component of the EP learning experience.

In addition to conducting their own extensive research and producing a summative project by the end of the semester, students will write a series of reflections to document their progress and their learning.

CSPL494 Internship: Elections

This course may be repeated for credit.

Through this course, students can earn academic credit for an internship, whether paid or unpaid, that involves learning about or participating in the electoral process. This course is part of Wesleyan's E2020 initiative. Students must apply through the instructor; if approved, they will need to register the internship through the Gordon Career Center. The internship must include at least 40 hours of work. In addition to completing the internship satisfactorily,

students must comply with the learning requirements and deadlines laid out by the instructor.
