HIST135 American Food
This course investigates topics in the history of food production from the colonial period to the present, with emphasis on the American contribution to the development of world food systems and cultures of consumption. Topics to be addressed include the production of agricultural commodities, development of national markets, mass production of food, industrialization of agriculture, and the recent emergence of organics, slow food, and local movements.

HIST140 Virtue and Vice in History, Literature, and Philosophy
Examines the long, complex and sometimes contradictory associations of virtue with piety, salvation, righteousness, intensity, strength, and, more recently with vulnerability and suffering. Beginning with Confucius and Aristotle, and winding our way through Christianity, humanism, postmodernism until the present, we will explore the ethics, power, and politics of the ideas of virtue and vice.

HIST141 Theories and Models
This class will focus on how theories and models are designed and regarded across the university curriculum--in the humanities, the social sciences, and the sciences. This topic is particularly pertinent to intellectual history, a subject that

regularly uses texts from across the modern university curriculum as its primary readings. Given the range of intellectual history, both in terms of chronology and subject matter, intellectual history could be argued to be the subject best positioned to consider the process of making theory.

Questions to be addressed include: What are some of the unexpected results of the increased use of mathematics and computers even in the humanities and social sciences, not just in the sciences, and how has this changed the relationship of theory and models for each of these disciplines? To what extent does the debate about the refutability, the falsifiability--or truth status--of models indicate an ongoing need for theory? The specific modern academic subjects to be examined will be philosophy, economics, and physics. Thomas Kuhn's THE STRUCTURE OF SCIENTIFIC REVOLUTIONS (1962) will serve as a starting point for this study; however, most of the readings during the semester will be much more recent.

HIST143F Jesus Chicken: Business and Religion in America (FYS)
Summary: Although many Americans are aware of the religious identity of the fast-food chain Chick-fil-A (earning it the moniker of "Jesus Chicken" in some communities), there is nothing new about businesses that project a religious ethos. This First Year Seminar explores the blurry boundary between business and religion in America, examining the ways in which businesses use religion and the ways in which religious entities often function as businesses. Although this course primarily focuses on the Christian tradition, it will also examine the ways in which other religious communities (such as Jewish and Buddhist) approach the marketplace. Chronologically, the course spans the 17th to 21st centuries, paying special attention to the emergence of the market economy in the U. S. from 1800-1850 and the growth of consumer culture in the second half of the 20th century. This course will provide students with an introduction to historical methods and the critical study of religion, while focusing on developing collegiate-level reading, writing, and critical thinking skills that will form a foundation for any major at Wesleyan.

HIST151 Introduction to History: The "Russian World" Past and Present
The "Russian World" has become a central--though deeply ambiguous and contested--theme in contemporary political discourse both within and beyond Russia. This course will offer a survey of how different conceptions of the "Russian World" have been articulated and deployed over time by following the history of Russian lands and peoples from the eighth century to the present day. This course is one of the gateways to the history major and is intended especially for first- and second-year students. As an introduction to history, the course will introduce students to the discipline of history by examining the historical sources, concepts, theories, and methods necessary for reading and writing history.

HIST154 Introduction to History: Twelve Medieval People
This course is one of the gateways to the history major. It is also an introduction to the Middle Ages through a study of 12 exemplary medieval lives and minds, spanning a thousand years of history. We focus on people--bodies, minds, and souls--coping with history and creating sense for their world. The course will typically feature one person or pair per week, and by examining their writings or stories and the contexts in which these were produced, the nature of medieval life, the pressure on the self, the articulation of gender and ethics for the entire period will come into view. Among the figures studied are likely to be St. Augustine, Queen Brunhild, St. Anselm, Abelard, Heloise, William Marshal, King Louis IX, Dante, Catherine of Siena, Christine de Pisan, Joan of Arc, Margery Kempe, and Pope Pius II.

As an introduction to history course, we will also offer an examination of the basic concepts, techniques, and skills for reading, understanding, and writing history: documents and archives, text and context, sceptical inquiry, argument construction, and an interest in good and expressive writing.

HIST155 Cold War Environmental History
War remakes the natural world to support organized violence. Pervasive militarism renders its transformations permanent. In the context of the Cold War, the United States and the Soviet Union pursued competitive testing of nuclear weapons; engaged in proxy wars with devastating local effects; and embarked on extensive modernization projects in agriculture and public works. In many such projects, political antagonism masked commonality and collaboration in science and technology. In this course, we reckon with the persistent environmental effects of militarism by pursuing a global history removed from the ideological projections of its actors.

HIST156 Intro to History: Protest and Revolution in the Middle East: A Middle Eastern History
This seminar explores protests, rebellions, insurgencies, and revolutions that have shaped the history of the Middle East from the birth of the three monotheistic religions to this day. Why do people rebel? We will seek answers in the context of religion, ethnicity, language, and race in the long and political history of this wide-ranging human geography. The main focus will be the agency of those who strived for change and modes of resistance, finishing with the 21st-century activisms in labor, LGBTQ+, student, journalist, academic, and political Islamic mobilizations.

HIST156F Introduction to History: The Ottoman World (FYS)
This course treats some of the major themes of Ottoman state and society, one of the major empires of the world out of which many new polities in the Balkans, Anatolia, the Middle East, and North Africa emerged during the 20th century. At the center of the course is the transformation of the so-called classical Ottoman state to the early modern and modern through the many shapes and forms it

has taken. We will be starting from the 15th century and end with the analysis of the making of the modern Ottoman society by the beginning of the 20th century before its imminent collapse. The late 16th-century transformations and the question of Ottoman "decline," on the one hand, and transformation to a modern state on the other, comprise the historiographical context to be addressed alongside basic historical patterns and events. A primary concern is to have students engage with critical issues not only in the study of Ottoman history, but also situating this history in the discussions on world history in general, and the history of the Middle East in particular.

HIST157 Wayward Warriors: Samurai in History and Media
The most indelible image of Japan is that of the samurai, a class of warriors who presumably ruled the enduring island nation for over a millennium. While lengthy and prosperous military regimes are not unique to Japan, the rule by the samurai has been a captivating source of national pride and international intrigue due to their supposedly strict adherence to the code of Bushido. Bushido's unique blend of devoting one's life to swordsmanship, honor, and loyally serving one's lord has sparked countless interpretations and exaggerations in all forms of media. This course will explore the factual history of the samurai while also critically analyzing the many fictitious narratives surrounding these wayward warriors throughout the centuries. By the end of this course, you will be able to separate the fact from the many fictitious yet entertaining samurai stories we will explore in literature, film, tv, anime, and video games.

No knowledge of Japan or the Japanese language is required for this course. All texts and subtitles will be in English.

HIST160 Intro to History: U.S. in the World Since 1776
Transcending the nation-state framework, this course foregrounds transnational and international frameworks to explore the United States' role in the world since 1776. We will explore the rise of the United States' vast settler colonial empire in North America, its vast overseas empire in the Pacific and Atlantic Oceans, and the role of the United States in international and global affairs in the 19th and 20th centuries. We will look both at the policies created by U.S. presidents, diplomats, and military leaders, as well as the experiences of Black, Indigenous, People of Color, and colonized peoples of the Global South who have been affected by the U.S. presence in the world. We will also underscore the importance of international organizations, non-state actors, and non-governmental organizations, such as the United Nations and the American Red Cross, that have shaped international society over the 20th century. Throughout the course, we will explore the themes of race and ethnicity, imperialism and colonialism, migration and immigration, nationalism and internationalism, self-determination and decolonization, militarism and development, and diplomacy and foreign policy.

HIST161 Energy Legacies and Ecological Futures
Manresa Island, on the coast of South Norwalk, Connecticut, was the site of an NRG coal-fired power plant (and later oil). The plant, slated for decommission, was shuttered overnight after heavy flooding during Hurricane Sandy. Its planned transformation, funded by a 501(c)3 non-profit corporation, includes the remaking of its massive turbine hall as a community space and the remediation of the entire peninsula for use as a public park. The 125-acre site includes a birch forest on a coal ash dump, salt marsh, and other coastal wetland habitats that currently harbor populations turkey, osprey, and deer. Casual observers liken Manresa's abandoned spaces to those of Chernobyl, with the detritus of human settlement engulfed by resurgent vegetation and wildlife. This flawed analogy obscures as much as it reveals, conjuring ethically compromised aesthetics of post-industrial ruin photography and associated practices of dark tourism. But there is a parallel history of energy, hazard, and aftermath with which we have yet to reckon locally or globally. The objective of this course is to produce histories of energy transition calling on (1) records of Manresa Island recently acquired by the 501(c)3, and (2) the testimonies of NRG workers present during Hurricane Sandy. The course will train students in modalities of archival and oral history with reference to these untapped resources. This course will require 2-4 field site visits to Manresa Island, to be scheduled 12-5 p.m. Thursday or Friday. Multiple scheduling options will be available, and students should be able to commit to at least two field trips per semester. Transportation will be provided.

HIST163 An Introduction to the Middle Ages: People, Ideas, and Places
This course will explore the Middle Ages, focusing on individuals, ideas, and notable places and the sorts of places characteristic of this very dynamic and innovative period from around 1050 till 1450. The precinct of the king's court and castle, the peasant's village, and the cathedral city will get especially close attention, as will certain famous sorts of writing and thinking as we'll explore the forebearers of the modern novel -- romance and sagas from France and

the Norse -- as well as the philosophy of figures like St Anselm and Catherine of Siena. Attention to chronicle writing and its politics and the wide ranging scientific reflection of Hildegard of Bingen and Roger Bacon, who supposedly learned from a magical brass head, will also figure large next to the wide-ranging writings Geoffrey Chaucer including his Canterbury Tales and of moralist and feminist defender of Joan of Arc, Christine de Pisan. The course will focus on texts individually and in concert and sometimes on the physical remains of buildings, art, and manuscripts that illuminate crucial elements of European culture, ethics, and power in this period. An important aspect of the course will be reading primary sources closely and critically to learn how to see the wider world of which they are part, a main technique of creating the past through interpretation and integration. We shall also learn about libraries, archives, good internet research techniques and how to assemble primary and secondary sources for historical writing. This course does not provide a chronological overview of the Middle Ages, but will give all necessary context for understanding.

HIST164 Bushido and Bullets: Samurai Flicks and Western Films
Bushido and bullets; shoguns and sheriffs; katanas and .45 Colt Revolvers. Alliterations aside, the connections between samurai films and westerns are as deep as they are numerous. Many cinephiles know that Japanese director Kurosawa Akira influenced multiple directors in the west, such as George Lucas, Sergio Leone, and Stephen Spielberg. What is perhaps less known is that Kurosawa was greatly influenced by a man who directed some of the greatest westerns from the 1930s to the 1960s -- John Ford. Diving into those influences is one of the goals of this class as we watch some of the greatest samurai films and their western counterparts. The other goal of this class is to categorize and analyze the many aspects of these films, from the protagonist's psyche to the evolution of civilized society, to see why these two seemingly disparate movie genres resonate so deeply. Finally, we will critique these films and discuss their merit in the twenty-first century. All Japanese movies will have subtitles. No knowledge of Japan or the Japanese language is required for this course.

HIST165 Introduction to History: Slavery and Abolition in the Atlantic World
Racial slavery was inextricably tied to the rise of both colonialism in the "New World" and global capitalism. It fueled a complete reorientation of world economic and political systems with consequences still evident today. Yet people on both sides of the Atlantic--Black and white--challenged the idea of racial slavery and its entrenched interests. The abolitionists succeeded in emancipating millions, but did not fully achieve their goals for human rights. In this course, we will examine the rise and fall of slavery in the Western Hemisphere, with particular attention paid to the North American mainland and Caribbean.

HIST167 Introduction to History: Yoga: A Global History
Yoga as a philosophical, religious, and ascetic discipline has shaped the lives of major world-historical figures, including the Buddha, the Mughal emperor Akbar, Mahatma Gandhi, and Steve Jobs. Though yoga is usually understood today as a timeless set of disciplines that inculcate spiritual and physical well-being, it has experienced dramatic change over the millennia--not least with the rise of "postural" yoga in India from about 1000 CE, its systematization as "hatha yoga" by about the sixteenth century, and its growing popularity in the West since the early twentieth century. The aim of this course is to introduce students to the rich global history of yoga, to foster an understanding of and appreciation for the philosophical and psycho-somatic dimensions of yoga, as well as the political and cultural transformations that shaped and were shaped by yoga (and prominent yogis and yoginis) as it spread from India to both the East and West.

HIST170 Introduction to History: American Material Culture
This course introduces students to the study of history through an investigation of American material culture and the built environment from the pre-colonial period to the present. The course is structured around Friday site visits in the New England and mid-Atlantic regions, including the Pequot Museum, Mystic Seaport, Central Park, New York City waterfront, Fresh Kills, and local suburbs. Students will consider theories and methods of studying history through objects, landscapes, and architecture. We will consider how changing patterns of settlement and land use shaped human and natural ecology, and how people fashioned cultures and communities through the fabrication, circulation, and use of a wide range of natural and human-made objects.

HIST171 Introduction to History: History of U.S. Social Movements
This Introduction to History course examines the long history of movements for social change in the United States from the 1830s to the 1970s. Movements we will explore will include abolitionism, women's rights, the black freedom struggle, modern feminism, and gay liberation. We will focus on the tactics used by social movements to achieve their goals, how social movements related to each other, how social movements changed over time, and how social movements interacted with the broader forces of American society, including politics, race, law, and religion. A major focus of this course will be how historians conduct research, use evidence, and write history. Students will be exposed to primary sources as well as selected secondary sources in the field.

HIST171Z Introduction to History: History of U.S. Social Movements
Online course: Monday through Friday 2-4pm with additional asynchronous lectures. This Introduction to History course examines the long history of movements for social change in the United States from the 1830s to the 1970s. Movements we explore will include abolitionism, women's rights, the black freedom struggle, modern feminism, and gay liberation. We will focus on the tactics used by social movements to achieve their goals, how social movements related to each other, how social movements changed over time, and how social movements interacted with the broader forces of American society, including politics, race, law, and religion. Students will be exposed to primary sources as well as selected secondary sources in the field. Given the winter sessions focus we will focus on 10 different U.S. social movements, with the first half of class devoted to the outline and history of each movement in a lecture format, and the second half based on a discussion of how the movement builds on and relates to other social movements and broader U.S. history.

HIST172 Introduction to History: Germany from Napoleon to the Berlin Republic
Germany witnessed more dramatic and radical changes in forms of government within the span of just 31 years (1918-1949) than any other modern society in history, yet today it is a model democracy and an anchor of peace and prosperity in the heart of Europe. Germans are credited for extraordinary achievements in the arts, sciences, and industry, yet they also produced some of history's darkest chapters. This introductory course surveys the fascinating and turbulent history of modern Germany to analyze the sources of these contradictions. We will begin by locating the birth of modern Germany in the massive social and political upheavals of the Napoleonic era that set the stage for the rise of German nationalism and rapid industrialization. We will study the unlikely processes that resulted in German unification in 1871 and how Germany's nationalism, growing industrial power, and its deep internal divisions led to a policy of aggressive imperialism that contributed to the outbreak of the World War I. The course will analyze the profound impact of that war and defeat on German society, situating both the Weimar Republic and the rise of Hitler in that context. We will subsequently study Nazism, the World War II, and the Holocaust, as well as the ultimate destruction of Germany as sovereign state with its surrender and military occupation in 1945. The remainder of the course explores the phoenixlike rebirth of two competing German states in the Cold War and the subsequent parallel development and divergence of two German societies. We will conclude the course by analyzing the process that led to German reunification in 1990 and the lines of development of the "Berlin Republic" since that time. The aims of the course are to introduce students to historical primary sources, the skills of historical analysis, and the questions of historiography through a coherent introductory survey of modern German history.

HIST173 Intro to History: Heretics on Trial: The Holy Inquisition and Its Enemies
The Inquisition was among the most feared institutions of the early modern West. In its efforts to impose religious orthodoxy, it persecuted minorities, prohibited behaviors it deemed heretical--like magic and unbelief--and censored intellectual inquiry. Yet despite its resoluteness, the ability of the Catholic Church to impose control varied widely across time and place and was often met with equally firm resistance. This introductory course examines how the Catholic Inquisition functioned, from its origins in the medieval period to its final demise in the nineteenth century, paying particular attention to geographic and temporal specificities. From Cartagena de Indias to Lima, Goa, Rome, and Toledo, inquisitorial tribunals spanned a significant portion of the Atlantic world. The records produced by its scribes are some of the richest sources of the social, cultural, religious, and economic history of the era, yet they are also some of the most challenging to deal with, both epistemologically and morally. Historians have relied on Inquisition archives to reconstruct the lives of individuals and communities who left no other written records, all the while seeking to acknowledge that the records were produced under duress by officials who suspected the accused of the terrible crime of heresy. Through a wide range of primary sources like trial transcriptions, Inquisition "autobiographies," written confessions, censored books, and literary sources, students will both survey the lives of people who faced the Inquisition's scrutiny, while considering the role of violence, persecution, and resistance in the creation of the very records that allow for historical reconstruction.

HIST174 Introduction to History: European Reformations
An introduction to history course, European Reformations will provide an introduction to the concepts and tools for reading, writing, and enjoying history by examining the ideas and people who developed the Protestant Reformation, one of the most explosive changes in world history that continues to reverberate and affect lives and politics today. Centering on the ideas and politics of the European Reformation age, we will examine thinkers and problems within Catholic Europe that led to the crisis of the Reformation from around 1500. A focus on the ideas and actions of figures such as Luther and Calvin and the religious martyrs of the 16th century will be central, but we will also examine Catholic responses and the changing political and legal ideas that the Reformation produced.

HIST179 Intro to History: Biodiversity and its Histories
Biodiversity loss may portend the next mass extinction, but what is biodiversity? Euro-American concepts of biodiversity have become a category of policy and politics at local, regional, national, and international levels. This course will track the development of these concepts from the 18th century to the present, paying special attention to the growth of natural history collections to document taxonomy, evolution, biogeography and ecology of species. How does the idea of living variation in genes, traits, species, and ecosystems relate to human and non-human beings?

HIST185 Introduction to History: The United States Empire
The United States has had an overseas empire longer than it has not. This "introduction to history" course will examine the long history of the United States empire across the North American continent, the Pacific Ocean, and the Caribbean Sea from the establishment of the US Constitution and the Northwest Ordinance of 1787 to the twenty-first century global military empire. We will explore how the US amassed and governed its empire as well as how Native, Indigenous, Black, Asian, and Latine peoples have navigated, negotiated, and resisted different forms US colonialism. Studying US history from the perspective of empire not only augments our framework of an US national history, but questions fundamental assumptions we take for granted in narrating US history, including the geography and temporality of the US, notions of citizenship and inclusion, the power of US militarism, and the seemingly incommensurable divide between liberal and conservative politics. As esteemed historian William Appleman Williams wrote, this course examines "empire as a way of life."

HIST186 The Raj: India and Britain (Introduction to History)
This course examines the linked history of India and Britain from 1600 to 1947. The focus will be on the rise and demise of the British Empire in South Asia, commonly referred to as "the Raj," and how the experience shaped what it meant to be both Indian and British. Along the way we will learn how merchants from a remote island nation in western Europe managed to take control of the wealth and manpower of the Indian subcontinent; how Indians helped to build the Raj but gradually turned against it; and how in rebelling against the Raj, and reshaping it, Indians crafted new forms of protest, new understandings of violence, and new modes of political belonging. This is an Introduction to History course intended mainly for first- and second-year students who are interested in the past, and perhaps (though not necessarily) are contemplating the history major. As such, it will introduce students to the discipline by reflecting on the nature of historical evidence, how to find sources, develop an archive, and craft a historical argument.

HIST188 Introduction to History: Revolutionary Women
"I do not think the war would have been won without the women.... Now women have to liberate themselves." The fighter Maudy Muzenda's reflection on the role of women in Zimbabwe's liberation war speaks to a broader pattern in global history. Women have been central to the radical transformation of societies in Africa, Asia, Europe, and the Americas from the early modern era to the present. In this course we will examine revolutionary women who took up arms and others who protested for improved working conditions, voting rights, sexual liberty, and human rights. Our cases will include the history of political revolutions in France, Cuba, Russia, and China, as well as in Zimbabwe. We will also explore the critical role of women in the global Industrial Revolution, the Suffrage Movement, the rise of international feminisms, and the everyday struggles of women in multiple sexual revolutions.

HIST189 Introduction to History: History of the Present
In this course we explore history as a critical endeavor. The aim is twofold: to reflect on the role history plays in making categories of contemporary debate appear inevitable, natural, or culturally necessary; to question underlying

assumptions about the relationship between past and present that are so often taken for granted. We will examine both history's influence on politics and the politics of history as a discipline.

HIST190 Introduction to History: Environment
Humans have profoundly altered the character of Earth's environment since the advent of agriculture and settled societies some 10,000 years ago. This course is a study of the historical relationship between human beings and their habitats, with additional attention to arid lands as places of settlement, cultivation, and development. We explore how global problems such as climate change, biodiversity attenuation, and depletion of fossil soils, fuels, and water are linked to social problems such as economic inequality, food insecurity, conflict, and declining public health. The course reviews evidence of major environmental problems; considers how varied academic disciplines address them; and models a historical approach to understanding environmental change.

The course is divided into two parts: "Environmental Concepts," and "Case Studies." In Spring 2022, the case studies will be devoted to biodiversity.

HIST191 Introduction to History: Pacific Worlds
This introductory course explores the Pacific Ocean as a region of historical inquiry. With a strong viewpoint from the Pacific Islands, this course interrogates long held notions of the Pacific as a vast empty space, emphasizes the Indigenous Pacific, charts the rise of imperial powers, and follows the paths of Indigenous peoples, labor migrants, merchants, scientists, militaries, and tourists, among other historical actors. This course will cover the topics of race and indigeneity, gender and sexuality, militarism and tourism, and the environment, as well as colonialism, imperialism, and decolonization. Taking an expansive definition of historical text to account for the ways Indigenous peoples and migrants understand history, this course will include poetry, song, fiction, film, art, objects, and oral and living histories, and will explore varied methods and frameworks in the discipline of history.

HIST192 Introduction to History: U.S. Political History, 1789-Present
The election of Donald Trump to the presidency in 2016 has sparked a widespread reckoning--both inside and outside of universities--with the dismal state of American understandings of our political past. Despite handwringing to the contrary, polarized partisanship, voter suppression, and policy stagnation are not new phenomena. This course examines the elections and elected officials, policy and policy making, and parties and party politics that shaped American history from the founding to the present. The course will chart the ways that elites have structured the relationship of American citizens to the state and explore what might come next. This course is the "top-down" companion of the "bottom-up" political history covered in HIST171: Introduction to History: History of U.S. Social Movements.

HIST195 How to Read and Write History: Models from the Past and Present
This an introduction to history course meant as both a major gateway and a general pre-major introduction to the practice of making history. It will introduce students to some of the different ways that people have represented the past and history around the world in both amateur, artistic, and professional historical modes. Ancient, medieval, modern, and postmodern examples will be discussed and we'll reach beyond non-fictional writing to fictional models, artistic renditions, and visual histories on buildings, sculpture, art, and in film and television. Central to the course's aims will be helping students to practice styles of history writing themselves in a writing-intensive way that includes both analysing history texts and practicing writing in different styles and with different aims in order to develop each student's own latent powers as a historian, working to make past and present worlds.

HIST197 Introduction to History: Foundations of East Asian Cultures
This course introduces some of the cultural foundations of East Asia and how they have continued to resonate through history. We will be examining translated primary texts in history, literature, philosophy, and religion, mainly from China, Korea, and Japan. We will also be working with other media such as film and art. The course attempts to equip students with a basic fluency in interpreting ancient and modern materials from East Asia and identifying its cultural contexts.

HIST200 The Historian as Detective
Whodunnit? In many ways, the craft of history is much like the art of detection. Historians arrive on the scene after the "crime" was committed. We look for traces, or clues, left behind. We try not to contaminate the crime scene. We pore over the evidence. We consider both motive and opportunity. We take note of silences. We keep an open mind. We seek the truth. And, as it happens, the professional historian and the professional detective--in fact as well as fiction--emerged roughly around the same time. We are like twins separated at birth. Perhaps if we are reunited, we might learn something new about each other, and ourselves. This course will draw upon classic (and not-so-classic) works of history, criminal detection, and detective fiction to better understand the importance of forensics and method in the discipline of history, as well as the importance of history in the art of detection. Each week will pair a work of literature with a work of history, supplemented by key essays in historical methodology.

HIST201 Medieval Europe
This introductory lecture course is a history of European politics, culture, and institutions from the end of the Roman Imperial era through 1520. Within a chronological framework we will focus on the creation of kingdoms and government; the growth and crises of papal-dominated Christianity, its crusades and its philosophy; the rise and role of the knight, lady, and aristocratic culture; masculinity and gender relations; the crises of the later Middle Ages, including the Black Death, heresy, mysticism, and war. These all contributed to the beginnings of the modern world, including the Renaissance and the Reformation, events that ended the medieval period. We will also at least glance at the borderlands of Europe, the edges of Islamic and Orthodox worlds.

HIST202 History of the Multiracial U.S. West, 1846-Present
What is the U.S. West--a geographic or spatial designation? A cultural creation? A set of sociopolitical relations? A period of history? Who are the communities that have called the U.S. West home from the nineteenth century to the present day? How do different communities, migrations, and peoples in the U.S. West shape race and racial categorizations? And, how are they shaped by race and racial categorizations? How does class, labour, and capitalism affect these histories? What does it mean to tell a multiracial history of the U.S. West? As Silicon Valley oligarchs continue to hold sway in politics across the United States while everyday immigrant communities are under renewed nativist assault, we take these opening questions to figure out how, exactly, we got here. The "we" and the "here" of how "we got here" are, of course, just as hotly contested as any of these questions. We will spend this course attempting to untangle the multiracial histories of the U.S. West from the mid-nineteenth century until the present. Beginning with the Mexican-American War (1846-1848) and the Treaty of Guadalupe Hidalgo (1848) and ending in our contemporary moment, the class will introduce students to key histories of the region through a combination of lectures and student discussion. An emphasis will be placed on interdisciplinary historical approaches to the histories of the U.S. West, and students will be exposed to the approaches of cultural, social, political, gender, oral, labour, and legal historians alongside various interdisciplinary scholars.

HIST203 Modern Europe
This course surveys the history of Europe since 1815 and is intended primarily as an introduction to decisive events and interpretation of central themes. Attention will be devoted to major political, social, economic, and cultural developments, beginning with the many dimensions of the political and industrial revolutions of the 19th century; continuing with the emergence of nation-states and nationalism, working-class movements, the consequences of imperialism and the World War I, and communism and fascism; and concluding with study of the World War II, the reassertion of Europe, the collapse of the Soviet system, and contemporary issues.

HIST204 Greek History
This course explores the development of Greek civilization from the Bronze Age Mycenaeans to the death of Alexander the Great. We will ask big questions: What did democracy mean in the ancient world? How did war shape political life and cultural values? Why did Greek city-states rise, flourish, and sometimes go to war with one another? These questions will be explored through close engagement with primary literature as well as evidence from art and archaeology. Readings in translation include works by Homer, Herodotus, Thucydides, Aeschylus, Sophocles, and Euripides. No previous knowledge of ancient Greece or classical antiquity is required.

This course fulfills the requirement for an Ancient History Survey course.

HIST207 Japan Since 1868: Society and Culture in Modern Japanese History
This course examines the history of Japan from roughly 1800 to the present. With a broad-ranging observation covering politics, economy, society, culture, and foreign relations, we will look at a variety of historical events that the Japanese people experienced. Our goal is not only to understand what happened when, but also to be concerned with how people at different historical stages saw the world around them. Major historical events, trends, ideas, and people will constitute the vital part of the course; however, we will also inquire into everyday life of ordinary people, whose names do not remain in historical records. We will use a wide range of materials including written sources available in the English language, films, literature, and comics.

HIST208 Digital and Visual Storytelling
During this seminar, we will develop a digital group project that addresses the question of remembering and denying pasts through the historical and critical relationship between carcerality, race, and storytelling in Connecticut. By engaging with contemporary forms of digital and visual storytelling (ArcGIS StoryMaps), this group project will work with the modalities of archival studies and digital humanities, accompanied by readings in critical race studies, visual and literary theory, and decolonial theory. We will first explore "remembering the past" through two post-Civil War Connecticut landmarks: The Church of the Good Shepherd (1867-69), dedicated to Samuel Colt, and the Mark Twain House (1874), now a museum. Both architectures exist as pivotal markers for a new modern American narrative intertwined with legacies of slavery, manufacturing, firearms, and storytelling. We will then consider how to make visible denied "pasts" by conducting archival research on the formative period of the 1860s and 1870s and in respect of the Connecticut context. Centrally, valuable insights for the project development will be provided by the in-class meetings with scholars, artists, and archivists, whose work rethinks and challenges the bond between carcerality, race, and storytelling.

HIST209 Reenacting Justice: Guns in America
This seminar, developed in collaboration with visiting guest instructor Glenn LaVertu (Parsons), combines readings, discussion, archival research, storyboarding, project-based learning, legal analysis, and filmmaking in presenting new takes on an old genre: Westerns. We will read and watch Westerns alongside study of the development of the American legal system, considering the aesthetics of justice, narrative, and guns. Students will work on film and theater projects related to the manufacturing, use, and mythologization of "Old West" in popular culture, television, and film. Film projects will be screened and discussed at the Center for the Study of Guns and Society's annual undergraduate conference on Thursday, April 25, and Friday April 26, 2024, and at the presentation of "Stories of Carceral Connecticut," a celebration of student projects for the Mellon Foundation project, "Carceral Connecticut," on Friday, May 3, 2024. (Both events are required). The course will consider the aesthetics of storytelling, guns, and justice, as well as be a lab for creating and narrating new stories. Engaging with contemporary debates about Westerns as manifestations of American gun culture, the purpose of the project is to draw parallels between the way in which gun violence is portrayed in film, particularly period, Western movies, and the realities of gun violence today. The final project is an opportunity to expose multiple points of view regarding gun violence and justice and their socio-political effects, and to write and develop new scripts, storyboards, and film scenes, as well as study old ones.

Assignments and Grading System:

Grading is based on weekly assignments and participation, an in-class midterm on the readings, and a final project.

Requirements:

- Class Participation (20%): Regular attendance, submission of weekly 1-2 pg written critical reflections on assigned topics (e.g. a primary source, an advertisement or magazine article, a report about a field trip or movie, etc.) Participation in the April 25 evening student mini-film festival and April 26 all-day undergraduate research conference is required.

- Midterm (40%): In-class midterm on the readings and discussions (in class; Thursday before break).

- Final project (40%): (20% for the project; 10% on the written artist's statement; 10% for the presentation at the April 25 mini-film festival night and April 26 panel).

Required Texts

(Available for purchase at the bookstore, and available for free reading on Olin e-reserve through the Course Moodle).

- *Joyce, Justin A. Gunslinging Justice: The American Culture of Gun Violence in Westerns and the Law (Manchester Univ. Press 2018).

- Densley, James ed. The Conversation on Guns (JHU Press, 2023).

- Light, Caroline E. Stand Your Ground: A History of America's Love Affair with Lethal Self-Defense (Beacon Press 2017).

- McKevitt, Andrew C. Gun Country: Gun Capitalism, Culture & Control in Cold War America (Univ of North Carolina, Chapel Hill, 2023).

Additional writings (e-reserve at Olin Library and on Moodle) are by Kelly I. Aliano, The Performance of Video Games: Enacting Identity, History and Culture through Play (2022); Vanessa Agnew et al, Handbook of Reenactment Studies: Key Terms (2023); and Priya Satia; Roxanne Dunbar-Ortiz; Richard Slotkin; Gillian Rose; Carol Anderson, Jennifer Carlson, Terrence H. Witkowski, Lindsay Livingston, Peter Boag, Joan Burbick, Jelani Cobb, and more.

HIST210 The Medieval Middle East: From the Advent of Islam to the Mongol Conquests (620-1258)
This course explores key themes in Islamic history from the emergence of Islam in 7th-century Western Arabia to the Mongol conquests and the fall of Baghdad in 1258. Focusing on the early and medieval periods, with particular attention to the Near Eastern context, we will engage with both secondary scholarship and primary sources to deepen our understanding of the cultural, intellectual, and social history of what constitutes "Islamic" civilization. Topics include the Late Antique context in which the Prophet Muhammad lived, the tenets of the faith, the development of religious and political authority through the caliphate, the translation movement from classical Greek science and philosophy via Syriac into Arabic and the subsequent rise in "rational theology," encounters with the Eastern Roman Empire, the Mongol conquests that ended the caliphate, and other topics.

HIST211 U.S. Labor History
How does the history of labor in the United States of America compare to that of other highly industrialized nations? For example, how did the system of slavery shape industrialization in the United States? Why were the socialist and communist movements much weaker in the U.S. than in Germany, France, and Italy, and why was there no major labor party in the U.S. as there was in England and Australia? Why have American workers been extraordinarily militant in job actions compared to their counterparts elsewhere? How have the religious convictions of the American people affected industrial relations? And why do Americans flinch at the word "class?" It is not a problem for the English, French, or Germans--what explains the difference?

HIST212 Modern Africa
What is African Modernity? We will examine this question as we survey the major historical transformations in Africa since approximately 1800. Important themes include: African political innovations, the abolition of the slave trade and its effects, European colonialism, African adaptation and resistance, nationalism and decolonization, and Africa's role in shaping major global events. We will also study the impacts of religious and social transformations amid rapid economic and political change. Finally, we will examine African visions for post-colonial development and how to shape the future of the continent. During the semester we will also cover some of the issues surrounding African history as a discipline. No single course can cover more than a sliver of the complexity and variety in the continent. For this reason, we approach the study of Modern Africa as comparative history. However, students satisfactorily completing this course will be able to write knowledgeably about African history and will have the foundation necessary to undertake further study about Africa with sensitivity to the complexity of its recent past.

HIST214 The Modern and the Postmodern
In this course we will examine how the idea of "the modern" develops at the end of the 18th century and how being modern (or progressive, or hip) became one of the crucial criteria for understanding and evaluating cultural change during the last 200 years. Our readings will be drawn from a variety of areas--philosophy, novels, music, painting, and photography--and we will be concerned with the relations between culture and historical change. Finally, we shall try to determine what it means to be modern today and whether it makes sense to go beyond the modern to the postmodern.

HIST217 Empires, Slavery, and Revolution: Africa to 1800
In this course we will examine the dynamic political and social histories of precolonial Africa. We will study the rise of kingdoms and empires such as Mali and Kongo, as well as revolutions in society from the technological development of iron production, to the emergence of trade networks, the development of ancient cities, the spread of religious healing and reform movements such as Cwezi spirit possession, and the role of gender in early African societies. Over the course of the semester we will also consider the impact of slavery and the first African encounters with Europeans. The methods for studying the early African past are interdisciplinary. You will have the opportunity to explore how ancient Africa has been imagined in the past by Africans and early Arabic and European observers, and how contemporary scholars write these histories. As we trace a history of early Africa in the world, we will consider several methods: the study of myths and oral traditions, linguistic and archaeological data, as well as ecological and archival records.

HIST219 Russian and Soviet History, 1881 to the Present
Reversals of fortune have defined Russian history perhaps more so than for any other nation. Though the Russian Empire began the 19th century as an emerging European superpower that defeated Napoleon, it ended that same century as a backward state plagued by political, economic, and social strife that ultimately brought the Romanov dynasty to a revolutionary collapse. A similar trajectory describes the "short" Soviet 20th century that began with the promise of a qualitatively new political order that sought to transform social relations and human nature and concluded with a spectacular implosion that some heralded as the end of history itself.

This course will follow the story of how the Soviet Union emerged from the ruins of the Russian imperial order to become the world's first socialist society, the most serious challenge to imperialism, liberalism, and capitalism, and, arguably, modernity's greatest political experiment. We will cover the following topics: the emergence and fate of Russian national identity; the origins and dynamics of Russia's revolutions; the political, economic, and cultural challenges of the Soviet project; the role of the party and ideology in politics and everyday life; the nationalities question and the challenges of governing a socialist empire; Soviet victory in the Great Patriotic War and the rebirth of the nation (and nationalism); the emergence of the Soviet Union as a Cold War superpower; the country's historic attempts to reform (and the frequent failure of these attempts); and the dynamics of the system's collapse.

HIST220 Authority and Resistance: France Since 1870
Historians suggest it may be normal for France to be always on the verge of crisis owing to the persistence of irreconcilable conflicts and a celebration and practice of resistance. They conclude that France may be ungovernable, noting that five presidents since 1981, frustrated and resisted, have accomplished very little. This course studies France under three republics and a dictatorship, beginning with defeat in war and revolutionary upheaval in 1870-1871 and concluding with current, sustained challenges to state authority and liberal democracy. We will survey this 150-year history, emphasizing political forms, ideologies and movements, social change, the economy, and cultural developments. Particular consideration will be given to revolutionary ideas and activities, working-class organizations, socialism and communism, conservative thought and action, extreme rightist movements, the degradation of rural life, the experiences of three wars against Germany, imperialism and decolonization, key personalities, and styles of authority and resistance. Times of emergency and crisis will command attention, specifically the Paris Commune of 1871; the Dreyfus Affair of the 1890s; the Great War of 1914-1918; the Popular Front of the 1930s; the military defeat of 1940; the drama of collaboration or resistance, 1940-1944; the early years of the Fifth Republic, 1958-1969; the extraordinary career of General de Gaulle; and the "yellow vests" in 2018-2019.

HIST221 History of Ecology
The word "ecology" has come to have many meanings and connotations: a scientific field dealing with the relation of organisms and the environment, a way of thinking about the world emphasizing holism and interconnection, a handmaiden of the environmental movement, to name a few. This course covers the history of ecology as a scientific discipline from the 18th-century natural history tradition to the development of population, ecosystem, and evolutionary ecology in the 20th century, situating the science in its cultural, political, and social contexts. Along the way, it traces the connections between ecology and economic development, political theory, ideas about society, the management of natural resources, the preservation of wilderness, and environmental politics. How have scientists, citizens, and activists made use of ecological ideas, and to what ends? How have they understood and envisioned the human place in nature? How have the landscapes and places in which ecologists have done their work shaped their ideas? Other major themes include the relationship between theories of nature and theories of society, ecology and empire, the relationship between place and knowledge about nature, the development of ecology as a professional discipline, the role of ecologists as environmental experts, the relationship between the state and the development of ecological knowledge, and the relationships among ecology, conservation, agriculture, and environmentalism.

HIST223 Chinese Eco-Civilization: History, Experience, and Myths
The course traces the historical roots of the ideas of eco-civilization, a policy platform that appeared in the twenty-first century by examining how Chinese agrarian civilizations and their nomadic neighbors transformed the bio-physical environment over the course of 3,000 years of history. We will draw on translations of Chinese literary texts including poetry, classical prose, and novels to explore the relationship between power and social inequities as we explore the everyday politics of agrarian civilizations through China's transformation from feudal ages to the modern period. How did Confucian, Legalist, Buddhist, and Daoist teachings alter the dynamics of production and consumption? To what extent did traditional Chinese philosophies promote the ethos of ecojustice? Did competing regimes/dynasties create a sustainable political and economic system? Did bureaucrats improve the well-being of the population and maintain the balance of the ecosystem? Or did they deplete natural resources to meet their short-term needs?

HIST224 Modern China: States, Transnations, Individuals, and Worlds
This course examines China's turbulent transition to modernity. It covers the Ming-Qing transition, Manchu conquest of central Eurasia, China's conflict and engagement with the West, birth of China's first republic, and the People's Republic of China under Mao Zedong, Deng Xiaoping, and his successors. The dramatic transformation of China spanning the late 19th century to the present day is the focus of this course. The Chinese people today continue to deal with the legacy of these reforms, wars, and revolutions, as China's leaders and people dealt with unprecedented challenges. The three central themes of this course are (1) the reconstitution of (a somewhat) unified China after decades of political upheaval, (2) China's vulnerabilities in the face of domestic troubles and threats from abroad, and (3) the challenges of maintaining a high-growth economy with scarce resources.

HIST225 Pirates, Traders, and Colonial Settlers in Maritime East Asia
Why is Maritime East Asia so contentious? Why is it emerging as the next global flashpoint? This course examines the historical roots of political tensions in Maritime East Asia by exploring the history of Taiwan. As early as the sixteenth century, merchant-pirates who dominated coastal China and Japan recognized Taiwan's strategic importance. For centuries, Dutch, British, American, and imperial powers used Taiwan as a springboard to gain a foothold in the Asia-Pacific region. Migrants from coastal China, who settled in Taiwan and Southeast Asia, worked with these imperial powers to colonize new frontiers and displace the indigenous population. The territorial disputes, economic rivalry, and business empires that shape our global economic order arise from the centuries-long struggle for dominance over Maritime East Asia. These historical legacies served as the driving force for political change. Maritime East Asia and particularly Taiwan not only transformed into an economic powerhouse but also stand at the forefront in the struggle against authoritarianism.

HIST226 Queen Mothers, Unruly Women: Histories of Gender and Sexuality in Africa
The 1929 Women's War is a touchstone for women's history in Africa. By 'sitting on a man' women in Nigeria shocked colonial authorities and demanded economic rights and a public voice. These unruly women danced in protest and rioted (sometimes nude), but their actions were not uncommon sights for their African audience. African women across the continent had long wielded power as queen mothers, prophets, and traders. Others challenged the constraints of ordinary domestic life through their labor, dress, or spirit possession. Gender and contested authority are central to everyday life and politics in Africa. In this course, we will study the history of political and domestic authority on the continent with special consideration for the ways in which gender, sexuality, and power intersect. These histories are diverse both in time and place. For this reason, this course will not present a single narrative of gender in African history. However, students who satisfactorily complete the course will be able to write knowledgeably about the major debates surrounding gender and sexuality in Africa. Major themes include: spiritual authority; domestic and sexual life; the division of labor; and the impact of colonial rule and post-colonial politics. We will examine how women (and also men) have grappled with these intricate social and political relations from the pre-colonial period into the post-colonial era.

HIST227 Finance, the Stock Market, and the History of Economic Thought
This class has two main purposes: first, to introduce students to the subject of finance--especially the stock market--and, second, to explore the connections between finance and the humanities, especially literature, as a means of understanding the crucial role of finance in society. Readings, class discussions set up as structured debates, news articles, video clips, guest speakers, and a

group project will together reinforce the students' growing knowledge of this subject.

HIST228 The Memory of Slavery in Monuments, Museums, and Media
This course will examine how Americans have remembered and forgotten their nation's troublesome history of racial chattel slavery. Monuments, museums, historic sites, archives, burial grounds, genealogical societies, and films have all contributed to the contested legacy of slavery in America. We will consider how and why representations of slavery have changed over time and what those changes suggest about the larger society. We will ask how did representations of slavery and racism inform larger narratives of American identity? How did Black Americans respond to popular depictions of slavery, and create their own forms of public history? How did the memory of slavery inform the twentieth century Black freedom struggle? How does slavery continue to shape the contemporary United States, and how should we approach that legacy today? Students will also work with local museums and historic sites to produce projects focusing on the history of slavery in Connecticut.

HIST229 A Fair Country? Canadian Protests and Progress After 1900
From hockey to healthcare, Canadians define themselves by debates over what makes a fair country. This class will explore Canada's 20th century as episodes of resistance in the service of greater equality. From labor movements to protests against (and participation in) global conflict; from women's rights and the welfare state to social justice and environmentalism; from French nationalism and Quebec separatism to the Quiet Revolution and domestic terrorism; from racism to Indigenous resilience. Looming in the background is the American leviathan, a constant threat to Canadian social and political culture but also a foil against which the country can measure itself.

HIST230 Rome After Rome: Culture and Empire of Constantinople
Rome did not fall. Rome was swallowed by a new idea of what it means to be Roman when, in the fourth century, the empire left its own founding city behind and moved the capitol to the newly-minted city of Constantine, Constantinople. This course gives students a hands-on introduction to one of the most astounding sociopolitical transformations in human history, tracing out the cultural, political, and economic trajectories of the Roman empire of the Middle Ages.

In exploring the textual and material relics of this medieval metropolis on their own terms, students apply and publish their research interests on the collaborative place-based interactive teaching encyclopedia Constantinople as Palimpsest (https://arcg.is/0e4Lb4). For their final project students will design a unit for a high school history course, using Constantinople as Palimpsest to introduce the diversities and paradoxes of life in the city of New Rome.

HIST231 Guns and Society
Students will discuss some of the key questions that animate the emerging interdisciplinary field of gun studies, considering guns as objects and symbols and as sites of both shared and contested meanings in everyday life. Readings will include recent scholarship about the evolution of gun technologies and the changing place of guns in U.S. society, from the colonial era through to the present day, exploring how the history of guns in U.S. history is relevant to other histories, including studies of race, gender, class, labor and capital, social movements, and military and civilian life. Special focus will be put on visual studies, museum studies and public history, science and technology studies, public health, and legal history. Assignments include four shorter (2-page) papers and a 15-page final research paper. Each student, working in small groups, will also deliver a 10-minute presentation and have opportunities for site visits to local museums and gun violence memorials such as the Coltsville National Historic Park (Hartford), Springfield Armory National Historic Site (Springfield, Massachusetts), and the Connecticut Gun Violence Memorial (New Haven).

(This course is a prerequisite for individualized humanities "labs" designed for students to delve into a particular aspect of the topic of guns and society in a more applied way in the spring semester, through special projects that can include an individually designed research paper, a museum/archives project, a theater sketch, a podcast, a high school teaching module, an art project, an exhibit in a local museum, an oral history project, or a syllabus, among other possibilities to be discussed with the instructor.)

HIST232 Your Revolutionary Life: Biography as Political Power from Antiquity to Modernity
Death is not enough to turn a life into a political movement. That translation requires a story. This course asks why, since Gandhi, few leaders have

successfully drawn upon the power of adopting a revolutionary approach to living as a means of effecting political, social, and cultural change. A student-centered collaborative pedagogy equips students with the tools and concepts to collectively workshop principles drawn from a wide range of examples of revolutionary living from the period known as the middle ages; from well-known and widely imitated examples such as the Buddha, the Prophet, and the Christ, to lesser-known examples including cross-dressing nuns, hermits on pillars, desert mothers, begging collectives, and much more. Students will then apply the ways these past lives were remembered and transmitted to contemporary movements such as Occupy Wall Street or the Black Lives Matter CHOP in Seattle. Course assignments consist of short essays, presentations, and a self-designed final project that can be analytical, creative, or demonstrative.

HIST233 History and Archaeology of Industrial Connecticut
Despite the fact that Middletown is a UNESCO Site of Memory and is home to many preserved historical sites, there has been little archaeological excavation, documentation, and storytelling specifically focused on extant industrialization, weaponry, and carceral artifacts dating to the Revolutionary War and early industrial eras. This course will explore the rich history of industrial sites in Middletown and surrounding regions of Connecticut. Students will learn about historical and archaeological methods for the study of past material culture, landscapes, and environments, focusing on how objects and sites can reveal hidden traces of Middletown's ties to agricultural, textile, munitions, and other forms of industrial production over the last few hundred years. Students in the course will have opportunities to work with archaeologists and museum professionals as they research local historic and archaeological objects. Students will also take part in archaeological investigations of local sites near Wesleyan's campus. As a final project, students will produce a public-facing online exhibit, physical exhibit, or public outreach activity based on their research. Students enrolling in the course must be available for a weekend fieldwork activity in April involving survey and/or excavation of a local archaeological site. This course is supported by a Mellon Foundation grant.

HIST234 Crossroads of Knowledge: Eurasia in the Post-Mongol Era (1258--1526)
In 1258, the Mongols sacked Baghdad -- the capital of the Abbasid Caliphate and symbolic center of Islamic civilization at the time. Paradoxically, this destructive act ushered in the period when Islam saw its greatest expansion. This course explores the period of relative stability that characterized Eurasia in the aftermath of the otherwise incredibly violent Mongol conquests, a period referred to as the 'Pax Mongolica' or 'Mongol Peace.' This peace fostered the unprecedented exchange of ideas, goods, and scholars across Eurasia -- not to mention conversions to Islam -- while laying the groundwork for the emergence of great empires like the Ottomans, Safavids, and Mughals. In addition to these chronological developments, we will examine the flow of knowledge, technology, and cultural practices through major trade routes and scholarly networks -- focusing on the enduring legacy of this period -- and learn how the Mongol legacy impacted Islam's spread beyond its origins in Arabia.

HIST235 Magic, Witchcraft, and Miracle, from Saints to Salem
Until the "disenchantment of the world" in the 18th and 19th centuries, Europeans lived in a universe shot through with hidden and awesome power. God's action in the world was possible, but puzzlingly he often operated through other agents, through the saints and by miracle. On the other hand, humans were often tempted to appeal to other powers to get what they wanted, and the use of magic--some pagan in origin, some not--was a pervasive influence. The world was full of demons and even devils, who used illusion and magic to entrap people by possessing them or turning them toward witchcraft in exchange for wealth and health. Surprisingly, the occult was not all bad, and Catholics and later Protestants too wrestled with the question of what to accept and what to suppress. Magical forces did not fade with the Renaissance but actually grew alongside the first developments toward modern natural science in the 16th and 17th centuries. The necromancer joined the saint, the priest, and the witch as the faces of occult power. This course will take a broad look at the people and powers that filled the place where science and a lot of religion sit today. The course will survey medieval developments and will end in New England in the 17th century. The instructor will provide background and narrative history in order to place the readings into their appropriate context. In surveying the long history of magic and miracle in Europe, we shall ask such questions as: What exactly do these terms mean and how have the meanings changed? How far away from such a worldview are we today and did magic really end in the 17th century? And, if so, why? Who controlled the use of magic and how was its misuse identified and punished? Were the processes of law, inquisition, and prosecution fair or effective? Were there really witches or just witch hunts? Why did people believe in miracles and magic? Who were the practitioners? Why did it all decline?

HIST236 Dante in His World: Politics, Poetry, Religion
Dante Alighieri is one of the great figures of European history and culture. He has been famous since his life, especially for his poem "The Divine Comedy," including its depictions of the Inferno, Purgatory, and Heaven. It reveals his massive intellectual knowledge and his deep and complex commitments. It might be less well known that he was also an active politician and a political theorist, as well as a student of literature and style.

This course will examine the body of his work and use it to outline some of the great political, moral, and religious crises of Europe around the year 1300, a moment closely connected to the very idea of the Middle Ages. Important course themes will include the question of the political balance of church and state, the role of mysticism and philosophy in expressing ethics, and the uses of history, theory, and poetry in seeking the good life. Readings will focus on Dante's own writings, including "The Divine Comedy," "The New Life" (La Vita Nuova), and "On Monarchy."

HIST237 Making New Worlds: Encounters on Turtle Island
From before the arrival of the earliest fishing ships off the coast of Newfoundland to the fall of New France at the close of the Seven Years' War, Turtle Island (North America) was the site of entangled encounters. Overlapping imperial claims and the construction of new societies took place on Indigenous homelands with deep histories. This course will examine North America as a contested and negotiated territory in which imperial plans were subjected to local contexts and contingencies. Using primary and secondary sources, we will examine major events (explorations, encounters, and wars), the rise and fall of imperial powers (French, British, Dutch, and Spanish), and the daily realities that shaped experiences in North America (trade, religion, sex, forced migrations, and disease). Throughout, we will focus on the persistence and resistance of Indigenous nations who protected (and still protect) their homelands and lifeways.

HIST238 America 250: The Promises and Tragedies of Independence, 1763-1815
Independence was a process, not an event. The Declaration built on relationships and identities that formed before 1776 and its impact reverberated across the globe in the decades (and centuries) after. But what kind of world did the drafters of the Declaration imagine? What did their document actually create? What other conceivable futures were sacrificed so that Independence could succeed? Exploring the era that made Independence possible helps illuminate the paradoxes, complexities, promises, and tragedies of the North American experiences at the end of the eighteenth century. The Declaration of Independence opened one future and foreclosed on others. The Revolution required to make Independence a reality was a brutal conflict that divided families, destroyed economies, shattered kinship networks, and created not one but (eventually) two countries. Revolution and Independence looked different to women, labourers, the enslaved, loyalists, and Indigenous nations who were swept up in the American project and had to navigate the new realities it brought about. That the United States would become a super power was far from the minds of those fighting for or against American independence.

HIST239 The United States in the Long 19th Century
This survey course will introduce important themes in the history of the United States during The Long 19th century (the early Republic to WWI), a period of rapid displacement, settlement, and migration. With a commitment to teaching and learning "history from below," we will examine topics such as territorial expansion; development of capitalist enterprises; African, African American, and Indigenous enslavement and freedoms; overlapping migrant diasporas; and contestations over the meanings of democracy, by uplifting the perspectives of historically marginalized peoples. In doing so, we will come to recognize how formations of race, class, gender, and sexuality are inextricable from the formation of the nation.

HIST239Z The Long 19th Century
Please note: Some readings and assignments will be due during winter break, prior to arriving on campus for Winter Session. Please visit the Winter Session website for the full syllabus -- http://www.wesleyan.edu/wintersession.

In 1787, the ratification of the Constitution established the United States of America as a republic in which power rested with the people. But the slim document left many fundamental questions unanswered. Would the overwhelmingly agricultural country be one of small yeoman farmers or large-scale plantations? Would the new nation limit western expansion to honor treaties with American Indian nations? Would the growing ranks of wage laborers in the nation's burgeoning cities have the same political rights as property owners? Would a nation founded on the shores of the Atlantic World pursue closer integration into global trade or protect its craftsmen and nascent industrial manufacturers? Could women make a claim to civic participation in a nation whose liberty they had helped win? Would a nation dedicated to freedom be able to reconcile the bondage of one-fifth of its population?

The Long 19th Century explores the history of the United States from the Early Republic to the Progressive Era (1787 to 1913), as an array of different groups and competing interests attempted answers to those questions. The period witnessed an incredible expansion of the United States from one of several imperial claimants in North America to the dominant power on the continent. Simultaneous to this expansion in geographic scope, the 19th century saw a shift in the scale of governance from a limited government to a powerful federal state that abolished property rights in slavery and intervened in struggles between labor and capital. In following that expansion and shift, this course explains the evolution of the modern United States.

HIST240 The United States, 1898-2001
This survey course examines United States history in the twentieth century in its geographic expanse from the North American continent into the U.S. island empire in the Atlantic and Pacific Oceans. While this course will survey a traditional U.S. political history, it places an emphasis on the diversity of experiences of those living within the United States. We will explore how the U.S. amassed its island empire, how immigration law emerged, how U.S. international affairs such as wars impacted domestic policies, as well as how domestic social movements such as labor, Civil Rights, feminist, Indigenous sovereignty, and social justice movements shaped the course of United States history into the present. In doing so, we will pay critical attention to the historical and analytical themes including, but not limited to, race, indigeneity, gender, and sexuality.

HIST242 World History
Using material culture, visual sources, primary texts, and articles, this course will give students a solid understanding of World History from the River Valley Civilizations, the Classical Period, and the Post-Classical Period, to the Early-Modern Period, the Long 19th Century, and the Contemporary Period. Emphasis will be placed on the development of major cultures around the world -- and

there will also be discussion of how the major cultures fail to explain much of World History.

In practical terms, students will learn how to assess a broad range of historical sources from varied places and times; how to debate these works in class discussion; how to produce concise and precise reading notes based on an argument/counter-argument format; and how to work collaboratively on the group project.

HIST243 How to Make History, or the Art of History: Past, Present, & Future
History is one of the oldest of intellectual endeavors and through its many transitions and versions around the world it is unified generally by its literary and artistic character as much as by its research intensity. It is a study of finding out but also always about the telling. With the development of professional historiography in the 19th century, the imaginative and creative aspects of making history have been spoken about less, but they have remained crucial parts of history's success. Today especially, it is important to understand the versions of history-making that have existed and the possibilities for students and other historians to make well-shaped, moving, decisive history. The course will examine the history of history-making, looking through its long history around the world to understand historiographical developments but also to give ourselves examples now for ways of writing history more effectively. The course will pay unusual attention to the possibilities of making history today, not only in the academy, but in fiction, in film, on television--everywhere that history is, in fact, made.

HIST244 The Ottoman World
This course treats some of the major themes of Ottoman state and society, one of the major empires of the world out of which many new polities in the Balkans, Anatolia, the Middle East, and North Africa emerged during the 20th century. At the center of the course is the transformation of the so-called classical Ottoman state to the early modern and modern through the many shapes and forms it has taken. We will be starting from the 15th century and end with the analysis of the making of the modern Ottoman society by the beginning of the 20th century before its imminent collapse. The late 16th-century transformations and the question of Ottoman "decline," on the one hand, and transformation to a modern state on the other, comprise the historiographical context to be addressed alongside basic historical patterns and events. A primary concern is to have students engage with critical issues not only in the study of Ottoman history, but also situating this history in the discussions on world history in general, and the history of the Middle East in particular.

HIST244Z Imagining the End: Neoliberalism and the Arts
Many of us now like to paraphrase the philosopher Frederic Jameson when he argued that it has become "easier to imagine the end of the world than the end of capitalism." As the recent deluge of post-apocalyptic movies and documentaries about melting glaciers makes clear, this is an accurate statement. Yet while most of us imagine how neoliberal capitalism will bring about the end of the world, others try to imagine the end of the status quo. Since neoliberalism became the global hegemonic system, artists of all kinds have been imagining ways we can survive and (perhaps) overcome it: think about the songs of Tracy Chapman or Residente, the street art of Keith Haring or Lady Pink, the movies of Chloe Zhao or Alejandro González Iñárritu, or the writings of Ursula Le Guin or Roberto Bolaño. This course explores how engaged art from the 1970s to the present has responded to -- and fought against -- neoliberal hegemony in the United States, Latin America, and beyond. Through the arts, we will explore the nightmares of global collapse and the dreams of a new egalitarian and sustainable society. In addition to analyzing movies, poems, short stories, songs, and street art, we will read theoretical and historical studies that help us understand how neoliberalism shapes contemporary culture and makes art into one of the few areas in which dissent can be expressed.

HIST245 Modern Latin America Since 1810
This lecture course explores some of the main themes of Latin America's modern history from the beginning of the independence movements in the 19th century until the present day. In particular, it traces the contentious processes of state-formation and the creation of national and regional identities. Governments, elites, and popular movements fought over questions of race, economic development, and inequality in their attempts to formulate a particular vision of the nation. We will contextualize these struggles in global economic transformations and pay particular attention to the rise of the United States as force in the region.

HIST246 France at War, 1934-1944
Beginning with a Parisian riot widely understood to be a fascist insurrection in 1934, followed immediately by massive popular protests from the Left, France entered a decade in which it was at war with itself, often characterized as a Franco-French civil war. These were years of uncommon political engagement, disappointments, struggle, and multiple disasters. A divided France encountered the menace of another European war, concluding with its astonishing defeat in 1940 by Nazi Germany. This seminar explores the ideological antagonisms that shaped French life during the Popular Front, a broad alliance of the Left, 1934-1938, and during the German occupation, 1940-1944, when French authorities collaborated with the occupier. We will consider interpretation and memory of these dark years and draw upon documents, films, memoirs, and journalistic accounts.

HIST247 The Fall of Rome and Other Stories
The fifth-century fall of Rome to barbarian invaders is an idea that slowly crystallized over time. This course will examine the birth and development of this "fall"--one of the most persistent stories in history--using the very texts in which it was first articulated. We will work with selections from a range of

authors--Suetonius, Eusebius of Caesarea, Ammianus Marcellinus, Augustine of Hippo, Jordanes, Procopius of Caesarea, and many others--to connect the fall of Rome with other attempts to explain catastrophe and change. The course will conclude by surveying the persistence of the fall of Rome as an idea, through the medieval, early modern, and modern periods, right into contemporary discourse.

HIST248 Time: A History
History unfolds across time, but time itself has a history. This course explores how people have understood, measured, and lived with time, and how those understandings have shaped social life. We will approach the history of time through three interpretive arcs drawing on the history of science, intellectual and cultural history, and social history. First, we examine efforts to quantify and measure time, from ancient sundials to modern atomic clocks. Second, we consider the multiple "temporalities" through which societies have viewed and experienced time, shaped in part by technological change. Finally, we explore how time has structured human life, including topics such as artificial lighting and the history of night, the invention of interest on debt, high-speed communication, and the concept of the Anthropocene. Through discussion of secondary texts and primary sources, supplemented with lectures, this course will explore the history of time and its role in the human experience from antiquity to present.

HIST249 History of the End
How will it end? Scientific/political hubris, a nuclear event, an asteroid, environmental disaster, overpopulation, resource scarcity, commodity price spikes, riots, social chaos, social control? This course investigates how people have imagined apocalypse and post-apocalypse over time, on the premise that fantasies of the end provide a window into the anxieties of the societies that produce them. In spite of its orientation toward fictional scenarios, this is primarily a course about postwar American environmental and political thought, and the ways these inflect or are inflected by fantasy.

HIST252 Botanizing Worlds
What can plants tell us about the human condition, and more broadly about the rapidly changing conditions on Earth? In recent years, scholars, writers, and artists have been calling for new ways to address "plant blindness"; finally, it appears that plants are having a moment. Plants are crucial to the survival of human life. From the food we eat to the air we breathe to the clothes we wear, plant bodies are used to build homes, cure our ailments, and feed our addictions. Putting plants to use is tantamount to survival, but this course aims for a less extractive relationship with plants. This course explores what we might gain by learning from plants -- to know them, think with them, and attune our senses to their liveliness -- raising fundamental questions about human-plant relations to reconsider what it means to be human. This course aims to gather the lively energies surrounding plants today and the expertise of scholars and regional collaborators, and direct them toward the development of a cutting-edge, interdisciplinary curriculum by bringing together researchers, artists, and curators from multiple institutions to read and discuss key works in the botanical humanities and connect with related sites (botanic gardens, greenhouses, laboratories, archives, special collections, etc.) at our campuses. This course will showcase exercises, assignments, and reading lists that can promote humanistic research and thinking with and about plants.

HIST253 Latinx History and U.S. Empire
How has Latinx history in the United States been shaped by U.S. imperialism across the Americas? What is the relationship between different Latinx communities in the United States and U.S. empire? What role has U.S. empire played in Latinx im/migration, both historically and in our contemporary moment? Does "Latinx" refer to a race, an ethnicity, a culture, or something else entirely? How do we understand Latinidad in relation to other racial formations in the United States and the broader hemisphere? Taking these opening questions as our guides, this survey course will introduce students to Latinx history through a transnational framework by emphasizing the centrality of U.S. imperialism in understanding who Latinx people are and how they have ended up in the United States. The course will trace the histories of U.S. imperialism and Latinx communities beginning in the nineteenth century and extending into the present day. An emphasis will be placed on interdisciplinary historical approaches to the study of Latinidad and Latinxs in the United States as related to U.S. imperialism and colonialism, racial capitalism, transnational racial and ethnic formations, and im/migration. Students will be exposed to the approaches of cultural, social, gender, political, oral, labour, and legal historians, alongside the work of Ethnic Studies, Latinx Studies, and American Studies scholars.

HIST254 Science in Western Culture
This course offers an introduction to the history of the sciences between the late 17th and early 20th centuries, with the aim of understanding the varied ways of knowing that have come to be called "science" and how they have attained such an important status in shaping modern Western culture. To do so, we will both investigate key intellectual developments--such as Newtonianism, theories of energy and matter, and the rise of evolutionary thought--and consider these ideas in the cultural contexts in which they developed to better understand how people have "done science" in different times and places. Throughout, we will pay attention to the relationships between science and other knowledge systems, between scientists and nonscientists, and between science and state power by exploring the changing nature of scientific authority, the cultural status of the scientist, and the connections among science, commerce, technology, and empire.

HIST255 The Vikings and the Viking Age, 700-1243
The Vikings erupted from their isolated northern homelands throughout Europe from the eighth century, and arguably reoriented European history both in the West, where they were instrumental in the history of the British Isles and France, as well as the East, where they were founders of the Russian kingdom. By 1100, they and their descendants had also established themselves in the Mediterranean, Italy, Sicily, and the Holy Land. This course will examine the reasons the Vikings emerged, and will explain their role not only as warriors, but as important merchants, administrators, and contributors to a robust European literary culture. They provide the perfect avenue by which to understand the creation of European culture and politics. The course will also act as an introduction to the dark age history of England, France, and Northern Europe.

HIST257 From Chocolate to Coca: Commodities and the Making of Latin America
Bananas, silver, and coffee connect Latin America to consumers across the globe. From the discovery of massive silver deposits in Potosí in the 16th century to the growth of the illegal drug industry in the 20th century, these commodities have shaped how people work and eat, not only in Latin America but worldwide. Everyday goods like sugar or rubber have also given rise to political revolutions, environmental destruction, scientific discovery, and new literary and artistic movements across the region. How do commodities shape the societies that produce or consume them? What commodities are shaping today's global economy? Is it possible to extract these goods in a sustainable way?

This course combines approaches from anthropology, history of science, and environmental history to study key commodities in the history of Latin America from the colonial period until the present day. It will examine the ways in which various material goods linked local actors to broad networks of production and consumption of an increasingly interconnected global economy. The course will pay particular attention to how these relationships irretrievably changed local communities and to the ways in which historical actors contested, adapted to, or transformed production and consumption regimes.

HIST258 Intimate Histories: Black Women's Sexuality
Black feminist theory teaches us that African American women have historically confronted racism and sexism in addition to other forms of oppression. How has this experience shaped the sexual lives of everyday black women and famous figures? This course places the sexual at the center of African American women's history. It will examine how regimes of violence have intervened in black women's sexual freedom, from intimate bonds to reproduction to same-sex desire. It will cover black women's resistance to these regimes; to their sexual agency in diverse spaces from the plantation to the porn industry. This course will also tackle the enduring impact of the Jezebel stereotype in the history of black women's sexuality. Using primary and secondary sources, this class will fundamentally investigate the significance of African American women's sexual history in the histories of American sexual, racial, gender, and class politics.

HIST259 Asians and Pacific Islanders in U.S. Empire
This course forefronts the diversity of experiences between and within the Asian and Pacific Islander communities in the U.S. empire both on the North American continent and in the Pacific. While political and social categories place Asians and Pacific Islanders within the same group, the groups' vastly varied experiences under U.S. empire makes it necessary to challenge the historical narratives that gloss over key contexts that continue to influence Asian American and Pacific Islander American experiences today. Thus, we will engage in an integrated, not conflated, history of Asians and Pacific islanders, paying attention to the specificities of imperial experiences and their effects on race, class, gender, migration, and diasporic patterns. We will explore topics of immigration and migration, labor and trade, citizenship and belonging, race and indigeneity, gender and sexuality, war and militarism, religion and culture in various contexts, including cities such as San Francisco and New York, regions such as the Pacific Northwest and the American South, countries of the Pacific Rim including the Philippines and Vietnam, and the Pacific islands such as Guam, Hawai'i, and American Samoa.

HIST260 Seeking the Land of the Rising Sun: Introduction to Premodern Japanese History and Culture
This class spans the course of human history on the Japanese archipelago from long before the adaption of the Chinese writing and legal system to the climactic Battle of Sekigahara in 1600, which ushered in the Tokugawa Shogunate. Throughout the course, we will explore many narratives of Japanese history, delving into topics such as politics, religion, war, economics, literature, and the day-to-day lives of the Japanese people across time. By the end of this course, you will have a firm grasp on topics such as the extravagant court culture of Kyoto during the Heian period, the unique relationship between Shinto and Buddhism, the rise of warriors in the provinces, and the eventual breakdown of a centralized state that led to more than one hundred years of civil strife. Further, you will be able to qualify the national and international "image" of traditional Japanese culture that has been crafted through an emphasis on the many connections, however tenuous, that exist between premodern and

modern Japan, such as samurai, Bushido, Shinto, sumo wrestlers, ninja, etc. No former knowledge of Japan or Asia is required for this course. All lectures, weekly readings, and books included on the list for the comparative book review will be in English. All readings will be provided save for the required textbook, Japan Emerging: Premodern History to 1850, and the books for the comparative book review. The ebook of Japan Emerging is available for free through the library.

HIST261 Enlightenment and Science
This course will examine the positive and negative ways that 21st-century science and technology have been impacted by the Enlightenment. In this earlier time, without government or private sources of funding for science, the emphasis on immediate outcomes became common. Practitioners of science often had to be showmen to attract attention in order to get funding. Through the study of contemporary news articles, this class will also consider such ethical choices, many of them to do with resource allocation, that we are facing in science, medicine, and technology today. It has been assumed that the modern age was drawn from the scientific method and the scientific advances of the Enlightenment. It was Émilie du Châtelet and Voltaire, both strong supporters of Isaac Newton, who, in the mid-18th century, chose the rational, scientific method as the marker of their intellectual age, the Enlightenment. This choice was adopted by their intellectual cohort, and in turn it was slowly accepted as the standard by European society overall. Thus Enlightenment science did not only lead to modern, 21st-century science, it also directly shaped modern attitudes toward the proper running of society and this continues until today. Yet, little work has been done on what it means to organize a society along scientific principles, especially given that this represented a sharp shift away from traditional decision-making on the state level, and a move towards secularization. How did this new, rational approach shift the priorities of European societies, particularly in terms of the distribution of resources? In the 18th century, there was also a desire by educated readers who were not themselves practicing science to learn more about both the history of science and contemporary scientific discoveries. In this century, emerging modern science was relatively open to new types of people, not just new ideas. During the Enlightenment, science and technology were being advanced by artisans as well as privileged practitioners of science. Talented young men from less privileged backgrounds were, for the first time, slowly able to gain access to the major scientific circles during the Enlightenment. A surprising number of women (in a time when women had virtually no legal rights apart from their male relatives) were also active in scientific circles, perhaps most notably Margaret Cavendish, Émilie du Châtelet, and Caroline Herschel. Women were also the organizers of the intellectual salons in Paris and the political salons in London. In both cases, science was discussed as a normal topic of discussion, not just a subject for specialists. However, the professionalization and specialization of the sciences in the 19th century led to mixed results--it certainly allowed for a substantial increase in the scale of modern scientific work. Nevertheless, it also led to a less open attitude toward those not trained as scientists in the newly established manner. It also resulted in the end of educated people outside of the sciences considering science to be an area that they should know in order to be proper citizens, not just intellectuals. For centuries it was assumed that the modern age was drawn from the scientific advances of the European Enlightenment in the 18th century. Then, in the last few decades, many scholars started to attack what has been called the Enlightenment Project with its wholesale emphasis on science and rationality. Others have found that there were also valuable nonscientific achievements in Europe during the Enlightenment. However, there is a need to bring the scientific method and the technological advances of the 18th century back into the conversation about the science of that time and then of our own time. Given that we now live in an age both bettered and dominated by science and technology, it is of paramount importance to understand the origins of modern science and technology.

HIST261Z Enlightenment and Science
This course will be a study of how we, as a society, have obtained our views on science. The class will concentrate on the positive and negative ways that twenty-first-century science and technology have been impacted by the Enlightenment. In general terms, the long-eighteenth-century European Enlightenment is taken to be the marker of the modern age--when modern science emerged. The time has now come for a reconsideration of the complexity of science and the scientific method during the Enlightenment as a means of comprehending its direct impact on the modern age in which we are living today. This class will focus overall on the strengths and weaknesses that modern science, technology, and thus society have inherited from the Enlightenment.

This is not wholly a story of science and technology in the West, but a World History story. This class will highlight test cases and ethical choices--to give two modern examples, decisions about resource allocation, that of fossil fuels and vaccines--that we are facing today. These choices are not made simply on scientific, logical lines but also according to the preferences of society. In order to understand our current situation, we must inform ourselves about how we arrived at this situation. Two centuries ago, without government or private sources of funding for science, the emphasis on immediate outcomes in science became common. Practitioners of science (the term "scientist" was not used until the nineteenth century) often had to be showmen to attract attention in order to get funding. Likewise, by the twenty-first century, it is now almost impossible for scientists to get grants for pure research; winning applications have to stress immediate public outcomes in order to get funded. This effectively puts a stopper into the very source of new scientific ideas--pure science--and of virtually all new scientific break throughs, and this is a world-wide trend in the sciences.

In this class, we will examine crucial examples of the key scientific subjects that emerged during the Enlightenment, and social and political responses to these same scientific discoveries, from both the Enlightenment and Counter-Enlightenment, which stressed religion over science. We will read responses from non-practitioners of science at the time--educated people trying to make sense of emerging modern science in the midst of politically and economic troubled times. There was, in the eighteenth century, no safety net--such as unemployment benefits--for those who wanted to practice science in a time that there were no jobs in science. There was certainly no safety net for rest of society either. The parallels to our own time are self-evident: political polarization, closely linked to radically different views toward science, in the midst of epidemics and widespread financial distress.

Emerging modern science in the long eighteenth century was relatively open to new types of people, not just new ideas. During the Enlightenment, science and technology were being advanced by artisans in addition to well-connected practitioners of science. Talented young men from less privileged backgrounds

were, for the first time, slowly able to gain access to the major scientific circles during the Enlightenment. A surprising number of women (in a time when women had virtually no legal rights apart from their male relatives) were also active in scientific circles. Such accomplished women were rare during the Enlightenment but they should not be ignored. Margaret Cavendish, Emilie du Chatelet, and Caroline Herschel are prime examples of women practitioners of mathematics, physics, and astronomy respectively. Women were also the organizers of the intellectual salons in Paris and the political salons in London. In all these cases, even the political salons, science was discussed as a general topic of discussion, not just a subject for specialists. And those knowledgeable in the sciences were expected to make their work accessible to non-specialists. Later, however, the nineteenth-century professionalization of, and specialization in the sciences led to mixed results. It certainly allowed for a substantial increase in the scale of modern scientific work. Nevertheless, it also led to a less open attitude toward those not trained as scientists in the newly-established manner. Alas, it also resulted in the end of the belief that educated people outside of the sciences should know about it in order to be proper citizens. Overall, this class will address areas of commonality and difference between Enlightenment science and technology and modern science and technology, including lingering problems, as well as possible solutions suggested from past writings and experiences.

There will be many distinctive aspects of this class. One will be the intensive textual analysis of primary documents in class. Another will be the active participation of several guest speakers. There will also be a virtual visit to Special Collections, Olin Library, Wesleyan University.

HIST262 Atomic Africa: A Technological History of the Cold War
"Atomic Power Programme Moves Ahead: NUCLEAR REACTOR FOR GHANA" In 1962 the Ghanaian Times proclaimed Ghana's atomic ambitions. Strikingly, it was only two years after the West African nation raised the international alarm against France's nuclear testing in the Sahara. In the midst of the global Cold War, African activists, politicians and scientists called for an end to nuclear imperialism and struggled for political and scientific sovereignty. It was an era marked by the struggle for decolonization but also by the promise of a new technological age. As African politicians planned for an Africa of the future, they faced intense political pressures from both the U.S. and the Soviet Union. They also formed partnerships with China and Cuba, reshaping the international lines of Cold War cooperation and the nature of "development." Over the course of the semester, we will examine Cold War stories across the continent including the mining of uranium, the international Congo Crisis, the development of African radiation experts, the use of radio by liberation forces in Angola, the emergence of an African Jet Age, and the building of the Freedom Railway in Tanzania. In addition, we will examine how students, workers, and scientists negotiated the currents of the Cold War and responded in creative ways to produce their own Atomic Africa.

HIST263 Inside Nazi Germany, 1933--1945
This survey course seeks to give a firm historical grounding in the processes that led to Hitler's rise to power, the nature of the National Socialist regime, and the origins and implementation of policies of aggression and genocide. The basic premise of this course is that National Socialism was from the outset driven by a belligerent and genocidal logic. The course will therefore critically analyze the racial, eugenic, and geopolitical ideology of National Socialism and the policies of discrimination, conquest, economic exploitation, and extermination that followed from it. At the same time, the role of structural factors in explaining these outcomes will also be explored in great depth. We will analyze how German society was shaped by Nazism, considering conformity and opposition in the lives of ordinary people in both peacetime and war. The course seeks to impart an awareness of the complex of factors that produced a regime of unprecedented destructiveness and horror, and it aims to develop a critical understanding of the ongoing problems of interpretation that accompany its history. Just as importantly, we will consider the continued relevance of the legacy of National Socialism and the Holocaust to our evaluation of national and international affairs in the 21st century.

HIST264 Waterways: Maritime World History
Human history has been shaped by the sea. Whether as a source of food, a frontier, a boundary, or a bridge, the sea has represented a site of both opportunity and danger. This course will examine the way humans have responded to their marine and maritime environments, both in terms of the technologies they have developed to navigate and exploit them but also insofar as the sea has shaped the way humans think about themselves. While our inquiry will extend into the deep past and the early development of human culture and civilization, we will focus on maritime history over the past millennium, the development of oceanic worlds, the rise of the "age of sail" between the 16th and 19th centuries, and the transformation of global navigation and politics with the rise of steam, diesel, and nuclear power.

HIST265 From Modern Empire to Economic and Cultural Powerhouse: Introduction to Modern Japanese History and
A survey of Japanese civilization from prehistory to the beginning of the 21st century. This course examines Japanese history and culture in chronological order, introducing important events and individuals, prominent literary and artistic works, and recurring themes across the ages. We will explore the definition and boundaries of Japan itself, delving into how the needs of modernization and industrialization propelled colonial and imperialist expansion, which violently reshaped peoples and cultures both inside and outside the country's current borders. across the Japanese archipelago interacted and coalesced into the foundation of what we recognize today as the nation of Japan. The course also also devotes a significant portion of time to Japan post-World War II, examining the political, economic, social, and cultural changes that transformed Japan's international image into a land of peace and tradition today. In addition to the main textbook, the reading assignments incorporate a significant number of primary sources, ranging from government edicts, laws, and ideological tracts to literature and private correspondence.

HIST265Z The History of Surveillance and Information in the United States
This course considers the history of surveillance and information in the United States during the 19th and 20th centuries. We will explore technologies and systems that evolved during this period to track, codify, and control people in the US and abroad, as well the many efforts to resist these processes. Readings and lectures will pay particular attention to how surveillance and control over information empowered both the state and private entities in novel ways. The course is built around supporting students as they undertake a research project that interrogates how information and surveillance have shaped contemporary life.

HIST266 Visions of World Order: From the French Revolution to the Present
This course offers a survey of how social scientists, philosophers, and statesmen have understood and imagined global order from the late 18th century until the present. The course first examines interpretations of global order that emerged during the late 18th and 19th centuries: Cosmopolitanism (Immanuel Kant), Positivism (August Comte, Saint Simon), Nationalism (Giuseppe Mazzini), and Marxism. The course then turns to the first half of the 20th century by examining the international thought of W.E.B. Dubois, Marcus Garvey, Rosa Luxemburg, and Gandhi, while also discussing fascist and liberal internationalist views of world order that emerged after World War I. The third part of the course discusses visions of Cold War order connected to American modernization theory (W.W. Rostow), neoliberalism (Friedrich Hayek), post-colonialism (Franz Fanon), Third Worldism, Neoconservatism (Jeane Kirkpatrick), and Systems Theory. The course concludes with the Post-Cold War period and how it has been imagined by such thinkers as Francis Fukuyama and Samuel Huntington along with a discussion of such topics as the global turn to nationalism, the Green New Deal, and the "New Cold War with China."

HIST267 Development in Question: Conservation in Africa
"Why not plant trees?" In 1977 Wangari Maathai started the Green Belt Movement, a popular environmental revolution, in Kenya. Then in the 1990s Nigeria Ken Saro-Wiwa fought for the rights of local communities against the multi-national oil industry. Like many African activists, scientists, and farmers, they placed African experiences at the center of environmental policy and conservation. Yet, popular images of the continent's environment in perpetual crisis blame African practices or disregard African efforts. Such depictions of "desertification" or "over grazing" have impacted international and governmental policy. Recent scholarship suggests that such common perceptions of the environment in Africa and conservation policy are misleading. This course will allow students to critically study the history of environmental management on the continent and the development of the idea of conservation. We will examine game park politics, the history of resource extraction, climate change, and other pressing environmental concerns. We will also study diverse African environmental perspectives from the guardians of sacred forests to activists such as Wangari Maathai and Ken Saro-Wiwa.

HIST268 The Origins of Global Capitalism: Economic History, 1400--1800
This course explores how the modern market economy came into being in Europe and why this system expanded outward to bring the rest of the world into its orbit by 1800. Among other things, it seeks to provide answers for why China's economy--perhaps the most sophisticated in the world before 1500--fell into relative stagnation and why Europe was the first region to develop mechanized industry and break out of a poverty trap that had restricted prosperity for millennia. The course begins by exploring late medieval European agriculture, market systems, institutions, and technology to reveal how the paths of economic development taken in Europe began to diverge fundamentally from those taken by societies in Africa, Asia, and the Americas. It will explore the role of the spice trade in the expansion of European influence abroad, the significance of new food and cash crops in the development of plantation systems and long-haul trade, the impact of organized coercion in the development of monopolies and monopoly companies, and the role of proto-industrial methods of production and colonial economies in the birth of the Industrial Revolution. The course aims to be accessible, broad, and comparative, drawing insights from many fields to consider the environmental, geographical, cultural, institutional, and political factors shaping the economic changes that have created modern capitalism.

HIST270 On Evidence: Archives, Museums, and Prisons
This course introduces an interdisciplinary study of the idea of evidence in connection to the modern development of archives, museums, and prisons, by setting this in a contemporary dialog with the discourses on state violence, incarceration, and refugeetude. This course will firstly establish historical and theoretical connections between carcerality, Western archival record-keeping practices (e.g., scientific grids, mugshots, taxonomies, and forms of surveillance), and museological frameworks developed during the transition from the 19th to the 20th century.

Furthermore, it considers how records, artifacts, digital data, bones, sites of "memories," oral traditions, embodied knowledge, or intergenerational trauma can become evidentiary material. Such inquiries are central to decolonial archival studies as they are critical for historically marginalized, racialized, and gendered subjects, whose claims to social justice, human rights, and cultural heritage are tied to the aftermaths of slavery, genocides, and colonialism. Our readings and discussions will specifically draw upon decolonial archival studies, digital

humanities, visual studies, human rights discourse, Asian American studies, Black studies, and Indigenous studies, which have continuously challenged what constitutes evidence.

HIST271 Free the Land: Histories of Environmental Racism
This course will introduce students to the study and discussion of environmental racism and environmental justice in the United States that centers the histories and experiences of communities of color. Environmental racism is defined by Dr. Robert Bullard ("the Father of Environmental Justice'') as "any policy, practice or directive that differentially affects or disadvantages (where intended or unintended) individuals, groups or communities based on race." This course expands and illuminates this definition through examinations of watershed moments--from the Transatlantic Slave Trade to struggles in the greater Connecticut River Valley today--in which communities of color in the United States bear the deadly brunt of toxic fumes, poisoned groundwater, nuclear waste, perilous disaster work, land theft, and the slow violence of biological extermination. Throughout the semester, we will read scholarly texts, engage primary sources, analyze popular and independent media, and study testimony and self-published materials from activists and eyewitnesses.

HIST272 Law, Court, and Crime in England, 600--1660
This course will discuss the nature and development of law, dispute resolution, custom, and rule in England from the arrival of the English on the island in the age of Arthur when feud and compensatory justice dominated. It will then examine the rise of royal power, local custom, and the common law in the 12th and 13th centuries, including the Magna Carta crisis. We will focus on the growing politicization of law and the development of courts and lawyers alongside new sorts of lawmaking in parliament and through the power of the king. The growth and challenge of royal and parliamentary power will frame the last parts of the course that anticipate the revolutionary crisis of the 17th century. Along the way, the course will ask, Who gets to make law, what is the role of writing in the development of custom and law, how did the English decide who was right and who wrong: calculation, testimony, jury, or ordeal? What were the forms of punishment and compensation employed, and what did this tell us of conceptions of the person: mutilation, execution, or incarceration? How did social status and gender shape expectations and outcomes in the legal process: Who could be a legal actor, a responsible malefactor, a property owner, or a slave; who could be judge and legislator? The course will be based on the examination both of recent scholarship and a wide array of primary sources such as law codes, court record books, advice manuals, literature, treatises on law, and the practical documents from lawyers in courts and judges that are plentiful in medieval, Tudor, and Stuart England. The course provides a background to the sources of law in early America as well as other common law countries around the world.

HIST273 Well-Behaved Women Seldom Make History: Gender, Sex, and Power in Colonial America
When Laurel Thatcher Ulrich wrote that "well-behaved women seldom make history," she meant that colonial women who conformed to gendered and sexual expectations rarely emerged in the historical record. As such, the women who feature most prominently as individuals in the historical record of the colonial period are those who acted outside proscribed social norms. We will, therefore, look at the ways that colonial Americans attempted to police those prescribed social boundaries from the persecution of Anne Hutchinson, to their fascination with witchcraft, to their reification of white womanhood. As we will see, many used intimacy to shape the world they lived in even as they were left out of the formal aspects of governing. Finally, this course seeks to understand how early Americans both constructed those gendered expectations and how they served to reinforce the patriarchal, racial, and colonial hierarchies of early America.

HIST274 Crisis, Constitution, and War: the U.S.'s Early Decades
It is common today for Americans to fight over how to interpret the U.S.'s early decades. Specifically, recent decisions by the U.S. Supreme Court (some guided by originalist jurisprudence) have sparked vigorous debate over the meaning of the U.S. Constitution. This course not only examines the Constitutional Convention of 1787, but also the preceding years of unrest and crises such as Shay's Rebellion. Military history is another important focus of the course, and students will discuss the technological, operational, and social dynamics of the Quasi-War, Barbary Wars, and the War of 1812. Finally, this course also investigates how the U.S. struggled to exercise power in North America, as free and enslaved peoples resisted its authority during the Whiskey Rebellion, Wars of the Northwest Territory, and Gabriel's Rebellion. One unique aspect of this course is its four-week long embodied learning exercise, as students "gather" in 1780s Philadelphia as constitutional convention delegates. What exactly they are gathering to accomplish is a matter of controversy, but ultimately the student-delegates will work through "sectional interests, backroom deal-making, personal rivalries, and foreign intrigue" as they attempt to approve a new constitution within the constraints of the era's historical context.

HIST275 Empires on Fire: Revolutions in the Atlantic World
This class will explore what historians have called the "Age of Revolutions." The ideas, ideologies, and actions that set empires aflame during the long 18th century formed an entangled revolutionary experience that spread from one part of the Atlantic world to the next. From England's "Glorious Revolution" in 1688 to the American, French, and Haitian revolutions at the end of the 18th century, and then on to the South American and Canadian uprisings in the early 19th century, this course will examine revolutions not as discrete events but as interrelated processes. By studying the perspectives of leading politicians, regular subjects and citizens, and marginalized groups, students will investigate the wide variety of revolutionary experiences.

HIST275Z Building a Relational Database: Introduction to Historical Research Data

This course empowers students to become not only readers of history but creators of historical data, new scholars actively seizing the current digital history moment as an occasion to break down history's myths through the activities of research, datafication, and analysis. The digital age -- even the advent of GenAI -- has changed nothing fundamental about the practice of historical research. But it could: the digital age is an opportunity for scholars to act as agents of change. This winter course focuses on the role of data in existing historical practices. Our series of focused workshops and targeted research investigations will enact and enable new methods and practices of history. Targeted readings address current theories and methods for working with the range of historical source materials: moth-eaten archives, curated library collections, digitizations, and digital-born objects. We will then get right to work on practices and your own research projects. Students will set up an archival relational database through the web-based tool Nodegoat. They will finish the session by curating their own historical archive, which they will codify as a relational database, and then explore development through further research or publication.

HIST276 Sultans, Saints, and Scholars: The Rise of the Ottoman World

How did a small band of Turkish nomads at the frontiers of the Byzantine Empire transform into a world power spanning three continents? In this class, we will explore the dynamic history of the Ottoman Empire from its emergence in the early fourteenth century until the early seventeenth century. This course traces the political, cultural, and social developments that shaped the Ottoman Empire's rise and left a lasting impact on the Middle East, Europe, and beyond. Key topics include the significance of Istanbul as a cultural and political hub, the interplay of religion and governance, the role of the sultan, the palace, and the harem, the dynamics of urban life, coffeehouse culture, and the ways the Ottomans saw themselves in relation to their neighbors and the world. We will analyze primary sources like travelers' accounts, dream diaries, poetry, and court records -- alongside modern scholarship -- to understand how the Ottomans governed their diverse populations, navigated religious pluralism, and adapted to changing political landscapes and environmental pressures. We will also examine the role of saints, mystics, and scholars who influenced spiritual life and shaped ideas of law and community. No prior background in Ottoman or Middle Eastern history is required -- just a curiosity about the past and a willingness to engage with complex histories.

HIST278 Visualizing Firearms History: An Applied Quantitative and Archival Approach for a Project-Based Expl

This project-based course provides a unique cross-disciplinary opportunity to study important historical questions surrounding firearms. Combining quantitative methodology in data science with qualitative research methods in history, students will answer questions they are passionate about based on existing datasets. Students will read, discuss, and write responses to the latest historical scholarship on the technological development of guns, firearms in media, gun violence statistics, and advertisements. Students will choose one of four datasets to research and analyze. These include data sets related to firearms patents since the 1820s, firearms in media (film, television, anime, games), firearms-related deaths, and advertisements of firearms. Students will develop skills in hypothesis testing and inferential statistical analysis alongside qualitative research methods used in history. The course offers one-on-one support and training in the skills required to complete a team-based final project. The final project will be hybrid between a research paper and also an exhibit (e.g., film, website, media, art installation). Students will present their work at the center's third annual undergraduate research conference (Spring 2025). Select students can apply to continue on as QAC summer apprentices and Baker Collabria Fellows in Data Analysis, and as CSGS NEH-funded summer history research fellows and as History thesis researchers.

HIST279 The Making of Modern Japan

This class spans the course of modern Japanese history from the dawn of the Tokugawa Shogunate in 1600 to Japan's current struggles with economic recession and declining birth rate. Throughout the course, we will delve into topics such as politics, religion, war, economics, media, and the daily lives of the Japanese people to shed light on how Japan has adapted to the onslaught of new domestic and global challenges that have occurred over the past four centuries. By the end of this course, you will have a firm grasp on topics such as the complex nature of Bushido, the first "miraculous" industrialization of a non-european nation, the rise of Japanese imperialism, the postwar path to pacifism, and Japan's global position as a leader in technology, tourism, public transportation, and soft power. No former knowledge of Japan or Asia is required for this course. All lectures, weekly readings, and books included on the list for the comparative book review will be in English. All readings will be provided save for the books for the comparative book review.

HIST280 The Industrial Revolution in Global Context: Economic History Since 1800

With the development of mechanized industry in the late 18th century, a productivity revolution was unleashed that would soon spread from Britain to continental Europe, North America, and Japan. By the early 21st century, three successive industrial revolutions had profoundly transformed these societies as well as the rapidly developing economies of East and South Asia. This course analyzes the historical forces driving this process. It begins by studying the transformation of Europe's overwhelmingly rural and agricultural economy into a predominantly urban and industrial one, looking closely at entrepreneurs, technology, and changing trading patterns during various phases of this process. The focus will be on Britain, Germany, the United States, and Japan, considering not only industrial development but also its broader implications, including colonial empire, great power rivalry, protectionism, economic depressions, and warfare, to highlight the complex relationship between economic and political power. The course will also analyze how industrial capitalism survived the disasters of the 20th century to drive a process of regional and global economic integration in the late 20th century. It will conclude by considering the opportunities and challenges posed to the mature industrial economies by the newly emerging industrial powers China and India.

HIST281 Global Economy: Germany and the World in an Age of Extremes, 1870-1957 (CLAC.50)
This Center for Global Studies discussion course explores the experience of globalization in the German-speaking world from the war of German unification in 1870 to the emergence of the European Community in 1957. It will analyze German imperialism and overseas investment before 1914; the deglobalization of the German economy in the First World War; the problem of reparations and other economic challenges faced by the Weimar Republic; and the impact of global protectionism and the Great Depression, the economic forces allowing the rise of Hitler, the economics of war, and the Nazi "New Order." We will explore the reasons for the ultimate failure of the German war effort and the country's catastrophic destruction and defeat in 1945, as well as Germany's postwar division and occupation as well as the gradual reconstruction and reintegration of the West German economy into a European and global division of labor beginning with the Bizone Agreement and GATT (1947), the Marshall Plan (1948), and the London German External Debt Agreement (1953), culminating in the Treaty of Rome (1957) creating the European Economic Community. The course will be using select German-language historical primary sources to explore this topic, supported by short secondary source narratives in both German and English pitched to intermediate to advanced German speakers/readers. Unlike the parent History lecture class (HIST 280: The Origins of Global Capitalism, 1800-present), this is a discussion course aimed at expanding vocabulary and practicing fluent discussions in the fields of history, politics, and economics.

HIST282 Histories of Ukraine
Over the course of its history, Ukraine has been a site of multiple political projects and diverse historical experiences. As a concept that encompasses a specific territory, it has also been a space where multiple communities--Ukrainians, Russians, Jews, and Poles--have histories. This course will look at how these histories have been shaped by and alongside one another, and the kind of political programs, obstacles, and possibilities that have emerged through these encounters. It will ask why Ukraine and its history have been the subject of so much confusion and controversy, and examine the concepts (nation, state, people, culture) that transform a space into a place, a land into a home.

HIST283 The History of Emotions & Religion: Feeling One's Way to the Past
When examining the lives of communities, societies, and religions, scholars tend to focus on ideas and practices such as "justice" and "salvation" or fair elections and religious discipline. But what about emotions? For reasons we will examine, Western scholars -- and, thus, students -- have often overlooked the centrality of emotions in the social interactions of and between various cultures. This seminar will consider various historical (and a few contemporary) references to emotion in written texts. It will take into account the variability of the language about emotions (indeed, does the category of "emotion" even translate into all languages?). Emotions examined in American, European, South Asian, and Middle Eastern contexts include those that might be translated into current American English as fear, love, awe, submission, dispassion, pride, and loyalty. Each will be considered in their historical context with reference to the contemporary terms used and their linguistic register. Papers will involve the use of historical dictionaries and encyclopedias in order to understand period uses of terms we might now described as "emotive." Seminar members will visit with Wesleyan's Rare Books staff in preparation for a final project that will require use of the archives of either Wesleyan or the Middlesex Historical Society.

HIST284 Death and the Limits of Representation
The disciplines of history, philosophy, and literature all hinge on the issue of representation. The ability to communicate ideas, visions, or arguments all depend on the ability to represent these abstract notions in a concrete and recognizable form. In this course we will problematize the basis of all three disciplines by exploring Death as the limit of representation: as that which is ultimately unknowable (or knowable only second-hand) and thus beyond representation. Indeed, what is the concept of the "ghost" but an attempt to represent someone who is dead in the recognizable form of the body that once lived. Yet, the ghost appears and disappears, is not bound by the laws of time or space, and is largely present in its absence. By exploring texts by such authors as Plato, Shakespeare, Poe, Derrida, Levinas, Mbembe, and Hartman, and studying historical events such as the "black death," the Middle Passage, and the Shoah, we will attempt to understand the project of representation and its limits.

HIST285 Modern South Asia
This course examines the history of South Asia since the 1940s. Using a combination of memoir, history, and film, we examine the forces that have shaped South Asia (India, Pakistan, Bangladesh, Nepal, Bhutan, and Sri Lanka) in the twentieth and twenty-first centuries. We begin with the trauma of Partition in 1947 and then work backwards and forwards in time to explore key themes like religious nationalism, popular media, caste, language politics, war, separatism, policing, the logistics of democracy, and economic development.

HIST286 Photography and Law: Mugshots, Privacy and Publicity, Obscenity, Copyright, and Evidence
This seminar is designed as an introduction to the major developments in the legal history of photography in transatlantic (US-UK especially) society from the first law cases involving photography in 1840 through to contemporary legal debates about such topics as cameras in the courtroom, sexting, surveillance, photographing police, dash cam and body cam videos, admissibility of photographs as evidence, obscenity and moral boundaries of subject matter, and copyright. A range of secondary historical and theoretical writings will anchor the discussions, but the course will focus primarily on student analysis and interpretation of primary and archival sources (texts of legal cases, law reviews and dissertation, news articles, and documentary and video footage). Students will gain knowledge of how legal history has shaped the history of photography, and new perspectives on the historical origins of contemporary issues in photography and digital imaging. This course should be of interest especially to history majors and non-majors who are interested in law, photography, and culture and will also contribute to the "Visual and Material Studies" module in History.

HIST287 Science in Modernity and After: 20th-Century Science and Technology
The 20th century was a time of dramatic achievements in science, from nuclear physics to space exploration to gene sequencing. It also saw the emergence of many of the technologies that underpin our world today: atomic weapons, electronic digital computers, synthetic fertilizers, and high-yield crop varieties, to name a few examples. This course surveys these developments, focusing not only on the histories of specific ideas and techniques, but more broadly exploring the complex relationship between science and technology; the relationship between science, the military, and state power; the changing cultural and political influence of scientists and engineers; the institutions and places where science and innovation gets done; the globalization of science and technology; and the emergence of critiques of science and technology.

HIST289 God & Guns: The History of Faith and Firearms in America
This course examines the history of firearms and religion in the United States, ultimately seeking to understand the significance of gun culture within American Christianity and the powerful "God & Guns" story at the core of many Americans' identity. Beginning with an overview of colonial and revolutionary-era views of firearms and violence, the course examines the influence of slavery, gender, and the wars of the 20th century, paying special attention to the emergence of a masculine, warrior Jesus within evangelical and fundamentalist communities during the Cold War. Students will be challenged to consider the ways in which this story helps explain one facet of popular support for Donald Trump and to reflect on how firearms are central to the identity of many conservative American Christians.

HIST290 Environmental and Industrial History of the Long Island Sound
This course is a history of the Long Island Sound, the body of water which stretches from the East River in New York City to Block Island in Rhode Island and connects the eastern seaboard states of New York and Connecticut to the Atlantic Ocean. After a brief account of the sound's glacial history and riverine geography, we will focus on the environmental, social, and economic history of the region from the 18th to 21st centuries, with a focus on exploitation for textiles, metal production, fishing, and oystering. We will dedicate special attention to industrial pollution and federal, state, and local efforts to assess environmental impacts and restrict dumping in the sound. Field trips will include a visit to Manresa Island, the site of a coal-fired power plant (and later, oil), shuttered amid heavy flooding during Hurricane Sandy (2012). Topics discussed include the regulation and remediation of dumped sediment in Norwalk Harbor and Manresa Island containing heavy metals and coal ash.

HIST291 Gender and History: Global Feminist Theories and Narratives of the Past (FGSS Gateway)
What is a female husband? In the 1980s an increasing number of feminist scholars posed questions about the relationship between biological sex and gender roles. The African scholar Ifi Amadiume, who studied the history of female husbands in West Africa, asserted that such relationships between sex and gender needed to be studied in a global context. More than two decades after Amadiume's influential book "Male Daughters, Female Husbands: Gender and Sex in an African Society" (1987) was published, the scholarship on global gender and sexuality is vibrant and dynamic. These works have shown gender to be central to understanding society at different periods and geographical locations, but it is far from a universally understood category.

This seminar will introduce first- and second-year students to the history of gender, sex, labor, and feminist activism from a global and comparative perspective with readings from the history of Africa, the Americas, Asia, and Europe. We will also cover the development of influential theories in the field and how they apply to the writing of history. This course is especially appropriate for prospective history and feminist, gender and sexuality majors, though all students interested in using gender as category of historical analysis for their scholarly work in other fields are welcome.

HIST291Z Gender and History: Global Feminist Theories and Narratives of the Past
What is a female husband? In the 1980s an increasing number of feminist scholars posed questions about the relationship between biological sex and gender roles. Ifi Amadiume, who studied the history of female husbands in West Africa, asserted that such relationships between sex and gender needed to be studied in a global context. More than two decades after Amadiume's influential book Male Daughters, Female Husbands: Gender and Sex in an African Society (1987) was published, the scholarship on global gender and sexuality is vibrant and dynamic. These works have shown gender to be central to understanding society at different periods and geographical locations, but it is far from a universally understood category. This seminar will introduce students to the history of gender, sex, and the body from a global and comparative perspective with readings from the history of Africa, the Americas, Asia, and Europe. We will also cover the development of influential theories in the field and how they apply to the writing of history. For the first three weeks of the summer session we will focus on 1) Producing a Gendered Discipline 2) Feminist Theories and Sexualities and 3) Gender in the Archive. In the final week, students will produce a final research paper relating to one of four possible themes: International Feminisms, Women's Rights, Queering Histories, or Gender and Labor. Our readings for the

week will guide an in-depth discussion of each topic. The course is especially appropriate for prospective history and feminist, gender and sexuality majors (this is a gateway course for FGSS), though all students interested in using gender as a category of historical analysis for their scholarly work in other fields are welcome.

HIST292 Remaking Empire: The Ottomans in an Age of Transformation (1622-1839)
This course examines the Ottoman Empire from the upheavals surrounding the regicide of Osman II in 1622 to the start of the Tanzimat reforms of 1839. Traditionally labeled a period of decline, these two centuries now appear as an era of profound transformation. We will explore shifting patterns of political authority, the rise of provincial households, reconfigurations of military and fiscal institutions, and the dynamism of religious, intellectual, and urban life. The course also situates the empire within broader currents of early modern change, including global trade, diplomacy, and technological adaptation. Through analysis of primary sources and recent scholarship, students will analyze how the Ottomans confronted crisis, negotiated reform, and reimagined imperial order, laying crucial foundations for the nineteenth-century restructuring that foregrounds the modern Middle East. No prior knowledge of Ottoman history is required.

HIST293 Advanced Research in Digital History
The digital age has changed everything and nothing about the practice of historical research. After being equipped with core concepts, terminology, and practices of historical research, students will engage and explore various applications: across moth-eaten archives, curated library collections, optical scans, and digital-born objects. We will then immediately apply this work to collectively setting up an archival relational database through the digital tool Nodegoat. Students will finish the semester by curating their own historical archive and codifying it as a relational database. Depending on the specific project and student abilities, students will also connect this work to utilizing and/or learning skills in translation, GIS, database creation, database management, and digital visualization. Successful students will be connected to the Travelers' Lab international network: an opportunity to connect, receive feedback from, and collaborate with professors at higher education institutions in the United States and around the world. Depending on the year students may also be offered conference presentation and publication opportunities.

HIST293Z The U.S. Civil War, 1861--1865
This course surveys United States history from the early national period to the Gilded Age and the Progressive Era at the end of the 19th century. Central themes to be addressed will include the struggle over the meanings of democracy and constitutionalism, the transformations resulting from industrialization, as well as continental expansion and expropriation of Indigenous lands. We will also examine the series of reform crusades dedicated to religion, abolition and the changing roles of women. Particular attention will be paid to the formation and consolidation of the United States as both a nation state and as an emergent global imperial power.

HIST295 Trouble in Mind: The History of Psychiatry in the United States
This is a class in the history of psychiatry (and to a lesser degree, the disciplines that comprise clinical psychology). Many of us experience disturbances of mood, thought, and behavior over the course of our lives. When we do, we sometimes seek help from those with training in medicine or psychology. This has not always been the case, however. The question we explore in this seminar is how this came to be. In so doing, we will consider how theories seeking to explain the mind and therapies seeking to treat its invisible wounds have evolved over the past two-plus centuries, and how that evolution has shaped and been shaped by the shifting ways we see, hear, imagine, react to, and -- ultimately -- attempt to relieve mental anguish.

HIST296 Colonial Latin America
This course studies the history of Latin America and the Caribbean from pre-conquest times to the emergence of independence movements in the early 19th century. Lectures will explore the key environmental, cultural, economic, political, and religious transformations that shaped colonial societies throughout the region. Beginning with the formation of indigenous and Iberian polities before 1492, we will consider how early modern colonial governance functioned and evolved throughout the period of Spanish and Portuguese rule in the Americas. Through an array of primary and secondary sources we will reconstruct the lived experiences of a diversity of actors across the colonial world. We will pay particular attention to the methods and approaches that scholars have used to understand the history of the region.

HIST297 Environmental Art: Research through Art/Art through Research
How can communities understand the conditions wrought by fossil fuel infrastructure and anthropogenic climate change? How should they confront environmental crisis and imagine ecological futures? What can we know about our environment, and what eludes us? Co-taught with visiting artist-composer Ari Benjamin Meyers, this class is a practical experiment in "Research through Art," and "Art through Research" (Dombois, 2009) focusing on the site of coal and oil-fired power plant shuttered amid heavy flooding during Hurricane Sandy. The landscapes of Manresa Island (South Norwalk, CT) include an abandoned

turbine hall, a birch forest on a coal ash dump, and an array of wetland and coastal habitats. Participants will use practice-based research methods to develop works of art engaging with the site in its past, present, and future conditions. The course models artistic research methods with reference to a specific site and set of environmental conditions, bringing together students from arts/performance, sciences, humanities, and social sciences to produce site-specific works in a coastal ecosystem transformed by fossil fuel infrastructure.

At the heart of this course is a concern with what it means to be uncertain. The sciences provide tools to address problems of uncertainty. Practices of research, within and beyond the sciences, gather varied approaches to not knowing. Artists employ methods drawn from multiple academic disciplines (ethnography, sociology, history, the sciences), media (technoscience, video, audio, installation, multimedia), and sites of research (archive, laboratory, biome, habitat). While artists may engage many of the same practices as academic researchers, their works break the analytic frame. Art may be prescriptive or descriptive, didactic or agnostic, pointed or indeterminate; it may delight, frustrate, provoke, agitate, or inspire. Art may be curious or inquire; it may also make space for the experience of uncertainty. How does uncertainty make us feel? How should we respond?

Students across disciplines -- performance, visual arts, music, ecology, biology, geochemistry, history, religion, sociology, psychology, anthropology, economics, government, etc. -- are encouraged to submit a statement of interest for permission of instructor (POI). The purpose of the POI is to secure a collaborative balance of students across disciplines, toward the production of environmental art that engages a broad public.

This course will require 4-6 scheduled site visits to Manresa Island in South Norwalk, CT, requiring students to leave campus by 12 p.m. Friday and return by 5 p.m. Transportation will be provided.

HIST299 Mapping The Borderlands: The U.S./Mexico Border and Digital Storytelling
The U.S./Mexico border is not only a geographical boundary, but a complex mapping project, where governments and corporations project their visions of the landscape into policies and boundaries, only to run afoul of people, terrain, and climate. Therefore, this course will serve two interrelated functions: 1) to explore borderlands as a concept and spatial relations, particularly at the U.S./Mexico border 2) to use digital tools to tell spatial stories about the border. While the current location of the border is often naturalized as an ahistorical and timeless dividing line between the United States and Mexico, this course acquaints students with a long historical approach and competing perspectives on issues arising from the presence of the U.S./Mexico border/lands. Using monographs, first-hand accounts, film, and music, we will trace the recent history, politics, and culture of the borderlands, exploring topics like racialization, immigration, gender, place-making, and cultural exchange. At the same time, we will examine and apply digital methods that complement our understanding of the U.S./Mexico border.

HIST301 The Spanish Civil War, 1936--1939
The Spanish Civil War erupted during a decade in Europe marked by ideological tensions, economic and social crises, the weakness of democracies contrasted to the dynamism of dictatorial regimes, and an international climate that culminated in the outbreak of World War II. The ideological character of the civil war in Spain, which appeared to pit left vs. right, or democracy vs. fascism, or nation and religious faith vs. communism and revolution, captured the imagination of Europeans and spurred their involvement in the war. All of Europe's dangers seemed to have exploded in Spain, whatever the specifically Spanish factors that unleashed and defined the struggle. This seminar will examine the events in Spain and Europe's response to them through contemporary writings, such as journalistic and participants' accounts, diplomatic documents, memoirs, films, biographies, and general and specific studies from the 1930s to the present.

HIST302 Reproductive Politics and the Family in Africa
This course will introduce students to broad discourses and issues related to reproduction and the family in modern Africa. We will study maternal and sexual health and technologies of reproduction, but for us reproduction will be an object of historical inquiry. One of the driving questions for this course will be how reproduction has been given meaning socially. How have African societies understood abortion, infanticide, or other medical means of controlling fertility and childbirth? What has been the relationship between the family and the state? We will also examine ideas about sexuality and love, changing notions of parenthood, childhood health, and what constitutes an ideal family. Finally, we will interrogate how these ideas influenced health policy and political ideologies which, in turn, changed conceptions of motherhood, fatherhood, and the family.

HIST303 Policing and Power
This course examines the history of American policing by considering the contexts and conflicts that birthed and shaped the modern carceral state, focused primarily on the late nineteenth century to the 1980s. Moving through five modules, it considers the origins of policing and imprisonment in Europe and the United States, policing as social control or social order, the role of police in constructing the state, policing in a transnational context, and the modern era of mass incarceration. These modules ask what police power is, what histories have shaped the limits or excesses of that power, and how law enforcement shaped American society, culture, and politics.

HIST304 Middle East Intellectuals and Modernity
How have Middle Eastern intellectuals conceived and discussed modernity? We will use this question to analyze the variety in the history of thought in Middle Eastern societies in the 19th and early 20th centuries. Modernization, formation of the modern state and issues of nationalism, imperialism and colonialism, main intellectual questions of the time, will form the framework as we analyze their political, social, and cultural impact on the production of knowledge in the Ottoman and post-Ottoman lands. As such it is NOT a history of the Middle East but rather a history of mentalities, organized around four thematic/chronological modules (Reform, Modern State and Constitutionalism/ Panislamism, Nationalisms and Colonialisms) each representing a set of concepts, ideas, and movements as well as facts and problems, all of which will be compared to the larger world of modern state formation both in thought and practice. The principal aim is to familiarize students with the processes of modernization in the making of the modern Middle East.

HIST305 Coexistence and Violence in Europe: Jews, Muslims, Roma and their Neighbors
From the end of the 18th to the beginning of the 21st century, the territories of Central and Eastern Europe were transformed from imperial borderlands with religiously and ethnically diverse populations into homogenous nation-states. This course will examine the processes that remade these borderlands, along with the changing relations between the various ethnic and religious communities that dwelled within them. Students will consider examples of both peaceful coexistence and violent conflict among these populations, as well as the impact of the modern state, its institutions, and ideologies such as nationalism, liberalism, socialism, and fascism on these regions. Throughout the course, students will consider especially the history of Jewish, Muslim, and Romani minorities in light of major themes.

HIST306 We Were Eight Years in Power: Reconstruction and the Politics of Black Inequality
We Were Eight Years in Power examines the crucible of American democracy by looking at the struggle of African American rights following the Civil War. Debates in the period on the rights of African Americans continue to structure American ideas of race and citizenship to the present day. The foundations of American racial animus and systemic racism date to Reconstruction. We will explore both the periods of Reconstruction (1863-1877) and Redemption (1877-1910), its dark successor that saw the establishment of Jim Crow. We will discuss readings on the promise of interracial rule, Reconstruction in the north, the violent overthrow of racial equality, and the establishment of the color line in American law.

HIST307 The Economy of Nature and Nations
On many of the key environmental problems of the 21st century, from climate change to biodiversity conservation, the perspectives of ecology and economics often seem poles apart. Ecology is typically associated with a skeptical stance toward economic growth and human intervention in the environment, while economics focuses on understanding (and often, celebrating) human activities of production, consumption, and growth. At the same time, ecology and economics share a common etymology: both words spring from the Greek oikos, or household. They also share much common history. This course thus explores the parallel histories of economics and ecology from the 18th century to the present, focusing on changing conceptions of the oikos over this period, from cameralism's vision of the household as a princely estate or kingdom, continuing through the emergence of ideas about national or imperial economic development, and culminating in the dominant 20th-century recasting of economics as being centrally concerned with problems of resource allocation. Simultaneously, the course explores connections between changes in economics and the emergence of ecological science over this period, from Enlightenment natural history and early musings on the "economy of nature," to the design of markets for carbon credits today.

HIST308 Trump-Evangelicals: the History of Fundamentalism and Evangelicalism in America
This course examines the history of American evangelicalism and fundamentalism, beginning with a brief overview of Protestantism in the colonial and revolutionary eras. Then, the course examines revivalism, slavery, and the emergence of fundamentalism during the 19th century. Special attention is paid to the re-emergence of evangelicalism after World War II, the establishment of the religious right, global evangelicalism, and subcultures (such as Christian music). The course concludes by investigating the core evangelical support for the candidacy and presidency of Donald Trump. Students will be challenged to consider the ways issues of gender, race, and economics have shaped fundamentalism and evangelicalism, and reflect on how these movements' views of American history contribute to their own sense of identity and purpose.

HIST309 The Idea of Nature: Theory and Practice
What is nature, that our minds are so full of it? Aristotle, the first naturalist in European intellectual history, called it an inner principle of change, and wove his observations of the natural world into the fabric of his philosophy; Darwin

inherited a millennia-old tradition of thinking about change in nature and produced the theory of evolution we live with today. This seminar charts the long history of the idea of nature in European thought, moving between the histories of philosophy and what was once called "natural philosophy" and is now called "science." Along the way, we will meet the constituent parts of living "nature": animals (what are they, anyway? And are we them?), plants, and then, with the advent of microscopy, the cell itself. This course also explores the cultural life of the idea of nature, by devoting substantial time to a specific case study: the natural history museum, a creation of the Victorian period that has, for more than a hundred years, offered many people their first glimpse of the idea that nature is the kind of thing that has a meaningful past, and possibly a future as well. How did natural history museums explore evolutionary theory for the general public? How did they expand people's sense of time, and of the variety of species in nature? How did they court, and deal with, political and religious controversy? And how were they sometimes the beneficiaries of, and complicit in, the political and intellectual project of colonialism? We explore all these questions. Readings include Aristotle, Hans Blumenberg, Georges Canguilhem, Charles Darwin, Sigmund Freud, Pierre Hadot, Donna Haraway, Ursula LeGuin, Harriet Ritvo, Sophia Roosth, and Steven Shapin.

HIST310 Treaty People: Indigenous Diplomacy and Settler Duplicity, 1600-1921
Indigenous nations have engaged in diplomatic relationships with settler states from the time of contact. Many of the earliest treaties retain cultural and legal force today. The Two Row Wampum in the 17th century, the Peace and Friendship Treaties (1726-1779), and the Canadian Numbered Treaties (1871-1921) are only a few examples of the hundreds of nation-to-nation agreements that defined and still define Indigenous and settler relations in the places we now call the United States and Canada. In this class students will read treaty texts and the diplomatic negotiations that led to the agreements to understand how treaties led to colonial oppression rather than peaceful co-existence. A deep reading of the most recent scholarship on Indigenous treaty making will then illuminate the contemporary relevance of historical treaties as tools of Indigenous resurgence as the foundation for legal claims to sovereignty and LandBack.

HIST311 The History of the Samurai
This course examines the history of Japanese warriors, known among other things as samurai and bushi, from their origins in ancient Japan to the dismantling of the samurai class after the Meiji Restoration in 1868. Through a combination of primary and secondary sources, we will trace the development of warrior power and identity, the rise of warrior power in medieval Japan, the domestication and bureaucratization of warriors during the Edo Period (1600--1868), and warrior discontent with socioeconomic change as one of the driving forces behind the Meiji Restoration. Other themes include the relationship between warrior government and adjudication, the use of Buddhism for legitimation, and male-male intimacy and sexual relations.

HIST312 Diggers and Discontents: Doing History from Below
History looks different when told from the perspective of those without power. This course will introduce students to the practice of "doing history from below," which includes finding the voices of the marginalized and illuminating the actions of those who fought against established power structures. Each week, we'll read about the discontented from the 17th to 19th centuries, including the poor, criminals, women, the enslaved, pirates, Indigenous nations, and workers. We will discuss how the very institutions of historical practice reify the status quo and elide the experiences of those who fought for alternate (and better) futures.

HIST313 Schemers and Redeemers: Capitalism and Christianity in the Early Republic
This course examines the intersection of two of the most significant themes in U.S. history: Capitalism and Christianity. Beginning with the Early Republic (1790s) and continuing through the mid-19th century, this course asks students to explore how Americans used their religious identities to negotiate and shape market activity and institutions (and in turn, how the marketplace shaped their religion). Students will investigate the varied ways in which religious women and men resolved tensions between gender, class, slavery, moral dogma, and market imperatives. Finally, this course will require students to reflect on how the early 19th-century U.S. experience informs our understanding of the relationship between capitalism and Christianity in 21st-century America.

HIST314 The Political Ascetic
Ascetics have long played a decisive role in Indian politics. Gandhi is the best known exemplar of this fact. But the figure of the "political ascetic" long predates Gandhi. This seminar examines the philosophical, religious, and historical underpinnings of the political ascetic in the long sweep of Indian history, which thereby affords a revised understanding of the recent Indian past -- including agrarian (or kisan) asceticism, Gandhian post-modern asceticism, Ambedkar's Buddhist-dalit asceticism, and Savarkar's Hindu nationalist asceticism.

HIST317 The Great Game
The term "Great Game" was first popularized by Rudyard Kipling in his classic novel Kim (1901), where it referred to spycraft in the service of empire. The term gradually came to refer to the struggle for "mastery" of Asia during the 19th century, mainly between the British and Russian Empires. Nowhere were the effects of this imperial rivalry more pronounced than in what is now Afghanistan, Pakistan, Punjab, Kashmir, and Tibet. More recently the term (and the mental architecture and attitudes that have evolved to sustain it) has been applied to grand strategy, global geopolitics, and espionage more broadly, in scenarios as wide-ranging as Cold War "Containment" and the "War on Terror," as well as the more recent US "pivot to Asia," China's "Belt and Road Initiative," and "Global Biopolitics." This seminar will examine the history of the Great Game--as both spycraft and great power rivalry -- and its wider geopolitical reverberations. We will also examine an array of Great Game manifestations in popular culture. Readings will combine historical narrative and analysis with film and literature.

HIST318 The Politics of Death: The Living, the Dead, and the State
This course will explore the intersections between the living, the dead, and the state, focusing on the ways that death and the dead body raise particular questions and problems for different kinds of political regimes. The course will examine the collisions between the state and the dead, both symbolic and material, by investigating spaces where the state and death intersect in revealing ways: cemeteries, cremation, monuments, rituals, and religious institutions and cultures. The course will also follow, borrowing anthropologist Katherine Verdery's term, "the political lives of dead bodies," the ways in which states mobilize dead bodies to reconfigure the political order.

HIST319 Crisis, Creativity, and Modernity in the Weimar Republic, 1918--1933
Born in defeat and national bankruptcy; beset by disastrous inflation, unemployment, and frequent changes of government; and nearly toppled by coup attempts, the Weimar Republic (1918--1933) produced some of the most influential and enduring examples of modernism. Whether in music, theater, film, painting, photography, design, or architecture, the Weimar years marked an extraordinary explosion of artistic creativity. New approaches were likewise taken in the humanities, social sciences, psychology, medicine, science, and technology, and new ideas about sexuality, the body, and the role of women were introduced. Nevertheless, Weimar modernism was controversial and generated a backlash that caused forces on the political right to mobilize to ultimately bring down the republic. This advanced seminar explores these developments and seeks to understand them within their political, social, and economic contexts to allow for a deeper understanding of Weimar culture and its place within the longer-term historical trajectory of Germany and Europe. This perspective allows for an appreciation of the important links between Weimar modernism and Imperial Germany, as well as an awareness of some of the important continuities between the Weimar and Nazi years.

HIST320 Visions of World Order: From the French Revolution to the Present
This course offers a survey of how social scientists, philosophers and statesmen have understood and imagined global order from the late 18th century until the present. The course first examines interpretations of global order that emerged during the late 18th and 19th centuries: Cosmopolitanism (Immanuel Kant), Positivism (August Comte, Saint Simon), Nationalism, (Giuseppe Mazzini) and Marxism. The course then turns to the first half of the twentieth century by examining the international thought of W.E.B. Dubois, Marcus Garvey, Rosa Luxemburg and Gandhi, while also discussing fascist and liberal internationalist views of world order that emerged after World War I. The third part of the course discusses visions of Cold War order connected to American modernization theory (W.W. Rostow), neoliberalism (Friedrich Hayek), post-colonialism (Franz Fanon), Third Worldism, Neoconservatism (Jeane Kirkpatrick) and Systems Theory. The course concludes with the Post-Cold War period and how it has been imagined by such thinkers as Francis Fukuyama and Samuel Huntington along with a discussion of such topics as the global turn to nationalism, the Green New Deal and the "New Cold War with China."

HIST321 Media and Power in Latin America: From Quipus to Twitter
This interdisciplinary seminar explores how media technologies have shaped Latin American societies and politics from the colonial encounter to the dawn of the digital age. Investigating the local histories of indigenous forms such as the Andean knotted quipu and scribal texts, along with newspapers, radio, photography and social media, we examine how Latin Americans made and used these technologies to assert power, claim status, and launch protests. Through brief theoretical readings and historical case studies, we explore such themes as the relationship between colonialism and the written word, the enduring legacy of alternative indigenous literacies, the importance of rumor and oral communication in societies with low literacy rates, and the role of mass media in identity formation and contemporary social movements.

Structured in part as a lab, the class will be organized around producing a physical and digital exhibition of Latin American media materials available in Wesleyan's collections, to be displayed for the broader university community and beyond. We will produce this exhibition over the course of the semester, integrating individual research projects into our broader collective project that will be conducted as a collaborative/team effort. Along the way we will experiment with hands-on activities that might include making quill pens, setting type, and operating a printing press, take field trips to examine rare media materials first hand, and learn from on-campus experts as we develop our public exhibition.

HIST322 Exploration, Conquest, and Insurrection: The History of the Amazon 1542 to Present
Dark, wild, primitive, Edenic and infinitely wealthy: the Amazon has been many things in many times and places. From the disgruntled Spanish conquistadors who first traversed the jungle's rivers in search of cinnamon, to the 19th-century scientific expeditions of enlightened explorers, to contemporary environmentalists, the Amazon remains a mysterious object of inquiry. It still incites the imagination of travelers, filmmakers, and politicians alike. This seminar investigates the multiple ways in which the Amazon and its peoples have been portrayed in chronicles, scientific writings, and film. We will confront the historical circumstances, motives and ideologies that prompted each of these depictions and how, in turn, they shaped the colonization of the region. We will pay close attention to genre, and to themes such as cross-cultural encounter, imperialism, and the representation of indigenous societies. We begin in 1542 with the chronicle of Francisco de Orellana. As the first Spaniard to navigate the entire length of the Amazon River, Orellana influenced how Europeans imagined the jungle well into the 19th century. Subsequently, we apply readings in history of science and anthropological theory to Claude Lévi-Strauss account of Amazonian tribes in Tristes Tropiques (1955). Students will then conduct independent research into a representation of their interest. Possible topics include scientific expeditions in the region, the jungle and modernization, global warming, or human rights. Finally, we will reflect on the Amazon as a metaphor for the human condition with Werner Herzog's film Fitzcarraldo (1982).

HIST324 Homelands: Indigenous Worlds in North America
This class will investigate the story of Indigenous peoples discovering Europeans. It is a difficult story to tell, because few Indigenous inhabitants left written records describing what it was like when ships arrived on the shores and the men and women disembarked, established settlements, and began the process of expanding across the continent. Some encounters were peaceful, while others were violent. Every encounter, however, can be understood by studying Indigenous societies and their worldviews. Far from static and unchanging groups, Indigenous nations were constantly adapting to their physical and spiritual world. This class will use primary and secondary sources to explore North America from the Indigenous perspective, including the rise and fall of great societies before the arrival of Europeans, strategies of contact and exchange after 1500, and the quest to maintain authority and independence during the 18th and 19th centuries.

HIST326 Radical Mapping: History, Praxis, and Grounded Theory
From Indigenous trade routes in precolonial Louisiana to 21st-century digital commemorations of lynching sites, this advanced seminar will examine at the craft of mapping as a site of historiographical study and an opportunity to propose new ways of understanding time and space that center communities of color. We situate the rise of the professionalized fields of Western geography and cartography as a colonial practice, engage critical and resistant readings of historical maps, and convene in a collaborative studio model. Some questions we will explore include: What is a map, and what kind of power does the object and practice wield? How have communities of color been both enclosed and liberated by spatial arrangements of earth, sea, and sky? What would it mean, in the words of David Harvey, to develop a "People's Geography?" What interventions are cutting-edge scholars making, and what methods are they using to articulate original historical research?

HIST327 Gender and Sexuality in Japanese History Across the Premodern/ Modern Divide
This seminar explores both changes and continuities in Japanese conceptualizations of gender and sexuality between premodern and modern times. Structured around the notion that modernization produced a paradigmatic shift in Japanese life and thought, the course will examine gender and sexuality as both discourse and practice, considering how Japanese people described, experienced, and shaped gender roles and sexual life in their daily existences. We will investigate the dominant gender system and understandings of gender and sexuality operating in Japan before and during the Edo period (1600-1868), then consider the influence of Western views and concepts like the male/female and heterosexual/homosexual binaries on Japanese society and culture from the Meiji period (1868-1912) through postwar times. Other topics include gendered differences in education, gender performance in kabuki, female and male prostitution, the "gender crisis" of the Japanese modern girl, the salaryman and professional housewife archetypes, and postwar gay masculinities.

HIST330 Introduction to Public History: Working with Museums, Archives, and Historic Sites
This course will introduce students to the history, ideas, and best practices that shape the world of "public history." How do institutions like museums, archives, and historic sites balance the standards of formal academic scholarship with the demands of interpreting history for a larger public audience? What role do these cultural organizations play in the construction of larger historical narratives? What responsibilities do they have to their audience, stakeholders, and society? The course will turn on six key concepts that shape the world of public history: History and Memory, Inclusivity and Accessibility, Shared Authority/Inquiry, Agendas and Audiences, Legal and Ethical Frameworks, and Economics and Entrepreneurship. Through class readings, discussions, and field work, students will develop an understanding of not only the theories and ideas behind public history, but also the practical daily concerns public historians encounter on the ground. The course will help prepare students who are considering a career in museums, archives, historic sites, historic preservation, and the nonprofit sector. Students will also work with the Wesleyan University Special Collections staff to complete exhibits to be displayed in the Olin Library

HIST331 Pacific Ecologies
From the Whanganui River of the Whanganui Maori in Aotearoa (New Zealand) to Litekyan of the CHamoru people in Guåhan (Guam), Pacific Indigenous peoples' conception of the environment challenges the Western dichotomy that separates humans from nature. Grounded in islands and flowing with oceanic currents, this upper-level seminar will engage with Indigenous and migrant histories of what constitutes the "natural world," including attention to more-than-human relations. We will also examine the effects of militarism, imperialism, and climate change in shaping human-to-environment relations; and engage with how Pacific Indigenous peoples have led environmental movements rooted in Pacific genealogies, motivations, and worldviews. In doing so, we will examine how different perspectives of the environment and ecologies can influence notions of time and temporality in historical narration and writing.

HIST333 Appeasement and the Origins of the Second World War
In this study of Europe's crisis, 1933-1939, from Hitler's appointment as chancellor of Germany to the outbreak of the Second World War, attention will focus upon the reassertion of German power and its effects upon the diplomacy and politics of Great Britain and France. Specific topics will include Hitler's aims and actions; critical events concerning the Rhineland, Spain, Czechoslovakia, and Poland; pacifism and the French Left; Neville Chamberlain and British conservatism; and the debate over the immediate origins of the war in 1939. Readings will include memoirs and contemporary diplomatic documents, newspapers, and journals.

HIST334 Social History of Islam in Africa
The history of Islam in Africa spans 14 centuries, and Islam continues to play a central role in shaping contemporary African societies. In this course, we will examine the long social history of Islam on the continent. Islamic expression in Africa is diverse. We will explore the dynamic ways in which Islam has influenced local cultures and politics as well as the various ways in which individual Africans and African communities have made Islam their own. Topics of discussion include early trade and state formation; Islamic education, literacy, and conversion; the role of women in Muslim societies; Islamic cultural productions; Muslim responses to colonialism; and the contemporary development of political Islam. We will end the course by reflecting on the responses of Africans to contemporary changes in the wider Muslim world.

HIST335 Nature, Science, and Empire in Early Latin America
This seminar will introduce students to a diversity of scientific practices that flourished in the Hispanic World between 1400 and 1800. We will begin by analyzing how a debate known as the "polemic of Spanish Science," together with the Black Legend conditioned the ways in which colonial Latin American science was traditionally approached. From available studies we will then survey some of the significant contributions to botany, astronomy, medicine, and metallurgy of Mesoamerican and Andean civilizations. From there we will read an array of primary and secondary sources in order to reconstruct the varied, and often eclectic knowledge gathering and knowledge making practices that missionaries, humanists, and crown-officials devised to understand the natural world. We will pay close attention to their particular goals and methods and the manner in which they were influenced by the encounter with foreign peoples, the dynamics of conquest and colonization, the movement of books and commodities, and institutions of censorship and patronage.

HIST336 Development
This course is a history of economic development, understood as a series of ideas about how countries progress toward greater prosperity, higher standards of living, and greater quality of life. We will question the origins of these ideas during the colonial period and after World War II; discuss liberal, socialist, and imperial variations on a theme; and pay special attention to modernization, technical assistance, the Green Revolution, and the role of international organizations in shaping the world order. The course draws on recent histories of human rights, empire, and liberalism, and surveys feminist and environmentalist critiques to development approaches.

HIST337 Missionary Mysteries: the Objects and Archives of Wesleyan's Missionary Past
This course examines the history of Wesleyan University's connections to missionary work in the nineteenth and early twentieth centuries, as seen through the university's archival and object collections. Students will spend the bulk of classroom time in hands-on learning as they engage with the archives of the Wesleyan Missionary Lyceum and cultural heritage collections obtained by missionaries and brought back to the University. Beginning with an overview of historical, archival, and museum methods, the course then will examine objects and written records from the Americas, West Africa, East Asia and the South Pacific. Students will be challenged to consider the ways in which Wesleyan has been engaged in colonialism, imperialism, and global evangelism. Topics of investigation will include: gender, linguistics, museum ethics and repatriation, the use of objects as educational tools.

HIST338 Constructing the Past: Theories of Historical Knowledge
This seminar will explore how we "make history" by exploring issues and debates in contemporary theory of history. Wesleyan is known as the epicenter for theory of history because of the academic journal "History and Theory," owned and edited by Wesleyan University faculty for the past 60 years. We will discuss such topics as the nature of historical truth; time and temporality; fiction and fact; history as a science with laws vs history as an art, with style; gender history; agency and causation; history of the emotions; of animals, and history's moral imperatives. We will give special attention to recent arguments about the theory of history, and how we construct the past. Key figures are likely to include Walter Benjamin, R. G. Collingwood, Michel Foucault, Hayden White, Frank Ankersmit, Nancy Partner, Joan Scott, and Reinhart Koselleck as well as publications by Wesleyan faculty past and present.

HIST339 Chronos Through the Ages: A History of Time and Temporality
Why do we start the new year in the dead of winter? Why is September the ninth month when its name means "seventh" in Latin? The same could be asked of October, November, and December. How can time zones be so variable, and why do we change the clocks by an hour twice a year? Contrary to our modern view of time as a scientific constant that runs the same everywhere in the world, the answers to these questions reveal that how we think about time has been socially constructed and contingent on historical circumstances. This course will introduce students to the history of time as it has been understood through human culture, from antiquity to the modern era, as well as critical engagements with how historians and anthropologists engage with time. We will analyze primary sources from different eras that all grappled with the concept of time, and learn about the history of clocks, calendars, and more. Students will come away with critical reflections on our modern assumptions about time.

HIST340 Policing and Power
This course examines the history of policing in the United States by considering the contexts and conflicts that birthed and shaped the modern carceral state, focused primarily on the late nineteenth century through the 1980s. Moving through five modules, it considers the origins of policing and imprisonment in Europe and the United States, policing as social control or social order, the role of police in constructing state power, policing in a transnational context, and the modern era of mass incarceration. These modules ask what police power is, what histories have shaped the limits or excesses of that power, and how law enforcement shaped American society, culture, and politics. We will pay considerable attention to how these histories can help us navigate contemporary debates around law enforcement and crime.

HIST341 Body Histories in Africa
African bodies have long generated intrigue and misunderstanding. Outside observers, such as missionaries, travelers, colonial administrators, and anthropologists, have documented practices such as scarification and spirit possession as they simultaneously rendered their African practitioners "other." All too often the body as an instrument for creative expression, ritual healing,

or social action was lost in translation. More recently Western feminists have focused their attentions on female circumcision. The persistence of circumcision (for both girls and boys) and other bodily practices speaks to their enduring social value and symbolic meaning. What can we learned from these and other body histories in Africa? In this course we will examine embodied rituals such as spirit possession, which marks the body as a site for human engagement with the supernatural. The widespread practice is also a gendered technique of healing documenting shifting understandings of health and illness. In addition, we will study the practice of "sitting on a man" by which women addressed the body politic through dance and collective nudity. The revealed body in motion shamed men into action and has been employed in the 21st century to shame oil companies for their greed and environmental destruction. In this and other examples, we will approach the body as an archive: it is an archive in motion and subject to social renewal. Our embodied evidence will allow us to explore shifting histories of religion, art, sexuality, the economy, and politics from the precolonial era to the contemporary moment. By taking the body as our lens we will also learn new ways to examine the African past through histories of aesthetics, value, labor, hierarchy, and knowledge production.

HIST342 The Rise of the Conservative Movement in the United States Since 1945
"So inevitable, yet so unexpected," Alexis de Tocqueville declared, referring to the French Revolution of 1789. The same is true of the conservative movement that developed in the United States during the second half of the 20th century. What is the nature of modern American conservatism? How and why did it emerge? What are its social bases? How has conservatism evolved in America since the 1930s? What sort of varieties and conflicts exist within the movement? How did mid- and late-20th-century American conservatives compare to earlier sorts of conservatism in America in the early Republic, the antebellum South, modern American liberalism, and political conservative parties in Europe and Britain? What is the historical significance of the movement?

HIST343 America's First Civil Rights Movement: Black Activism in the U.S. from the Founding to Reconstructio
Historians long described free African Americans in the early United States as occupying an "in-between" legal status, neither enslaved property nor entirely legal persons. This class would explore how free Black people rejected that status, seeking liberation, protection, and equality in the early United States. In so doing, they participated in, and meaningfully shaped, debates over the contours and privileges of American citizenship. Through this subject lens, students will be introduced to the methods of political, social, and legal history, and will have the chance to use contemporary social theories on activism, inclusion, and liberation as a critical lens.

HIST344 From World Economy to World Wars: The Age of Deglobalization, 1914-1945
Why was an unprecedented era of global trade, investment, and prosperity suddenly shattered by world war in 1914? And why did such catastrophic global conflicts break out twice in the twentieth century? This seminar analyzes the intersections of trade, investment, great power rivalry, and international security to assess the role that economic interdependence played in the heightened tensions foreshadowing the two most destructive conflicts in history. Looking closely at prewar global entanglements and inter-imperial rivalries, it will analyze why war broke out in 1914 and why it spread beyond Europe. It will consider the attempts at peacemaking in 1919 and how the failure to create a durable world economic order encouraged protectionism, protected imperial blocs, and aggression by Italy, Germany, and Japan in the 1930s. The course will discuss the Second World War as an outgrowth of the unresolved problems of the interwar period. We will study this war and its aftermath, as well as the more durable economic order created during the Cold War. The seminar concludes with student presentations on a topic of their choosing that will culminate in research papers submitted at the end of the semester.

HIST345 Media Revolutions: Color Television and the Humanities in the 1960s and 1970s
This course visits some of the groundbreaking TV series that presented humanities and sciences to global mass audiences in the 1960s and 1970s. Television emerged as a powerful cultural presence and with remarkable speed. From the late 1960s, the British Broadcasting Company, in partnership with PBS in America, created a series of television programs (partly to widen the audience market for new color television programming). This course focuses on the role of television as a still new, and potentially disruptive, medium. We will look at and discuss a range of British TV series from Kenneth Clark's "Civilisation" and "Monty Python's Flying Circus" (both 1969) to Jacob Bronowski's "The Ascent of Man" (1973) and Alistair Cooke's "America" (1972), John Kenneth Galbraith's "The Age of Uncertainty" (1977), and David Attenborough's "Life on Earth" (first aired in 1979). We will read and discuss works of art and media criticism around this time that laid the groundwork for major conceptual and theoretical remappings of the fields of cultural and visual studies. We also will explore the impact of television on art worlds and museums, looking at how 1960s' color television documentaries influenced the way that humanities are presented televisually up to today. This course satisfies requirements for the "Visual and Material Culture" module in history and major requirements for the Science in Society Program.

HIST346 Wesleyan and War: The University's Collections & Connections from the Seven Years' War to Vietnam
This course examines the theme of warfare in the context of Wesleyan University, as seen through the university's archival, rare book, and other collections. Students will spend the bulk of classroom time in discussion and hands-on learning examining the Library's rich collections beginning with the Seven Years' War (1750s), the American Revolution, Barbary Wars, and the War of 1812. As we move into the Civil War, students will also analyze the Wesleyan community's participation in the nation's wars, including the different responses of campus and alumni from World War I to World War II through the Vietnam War and its transformative impact on the University. Students will engage with Wesleyan's collections, developing intermediate and advanced research skills by considering the ways in which Wesleyan and its alumni have engaged with warfare, collecting, and American history. Topics of investigation will include:

espionage, naval warfare, Indigeneity, gender, slavery, education, technology, and tactics/strategy.

HIST348 Urban Histories of Latin America
Cities have occupied Latin American writers, artists, and scholars since the early decades of the sixteenth century. Mapped on to preexisting settlements of indigenous importance, colonial cities became the center of Iberian administration in the New World. They imparted justice, granted citizenship rights, set the standard of civility and religious orthodoxy, and held the promise of economic improvement. The preeminence of cities in Latin America continued into the modern period. Mexico, Buenos Aires, and Rio de Janeiro became opulent and unequal metropolitan centers in the nineteenth century. Unconstrained growth brought about the megalopolises of our current day.

This seminar will explore Latin America's major urban centers in significant moments from the pre-Hispanic period until the present day. Through chronicles, travel narratives, photography, legal writings, newspaper archives, maps, and film we will reconstruct the many dimensions of urban culture in the region. The course will be organized thematically and geographically. We will begin by studying the ways in which Latin American writers have understood the role of the city, and its dwellers, in shaping the trajectory of their various nations. We will pay particular attention to themes like the city and modernity, the every-day experiences of urban residents, racial, gender, and social inequality, the city as a site of historical memory and violent contestation, the environmental challenges of urban growth, and the rise and fall of counter-cultural and protest movements.

HIST349 Is History True?: The Genealogies and Genres of Facts
History, as both genre and discipline, has a complicated relationship with truth. As a genre, it is popularly understood to be factual -- a reflection of what really happened; as a discipline, it constructs the very reality that it claims to represent. History, in short, is based on the "facts" that it constitutes as real. This is not to say that our world is "post-truth" or unreal or that all "facts" are equally true. Rather, it is to suggest that to access historical reality we need to investigate the genealogies and genres of "facts," since facts (even "alternative facts") are the building blocks that make reality politically, socially, and culturally meaningful. So how does a "fact" become real? What genres of proof are used to constitute historical truth, and by whom? In this class, we will use historical approaches to understand how "facts" gain meaning and agency and analyze the (often porous) boundaries between history, memory, myth, rumor, and conspiracy. To do this, we will consider case studies -- political tropes like "Godless Communism" or "Judeo-Bolshevism"; legal categories such as "genocide" and "crimes against humanity"; and historical frameworks like "the Holocaust" and the "end of history" -- to consider how they structure our worldviews. The format of the course will combine discussion seminar with independent research projects.

HIST350 Black New Orleans
New Orleans is a location on a map, a collective memory, and a metaphor. But most of all, New Orleans is and has been a site of Black cultural production for centuries. While the name often conjures images of Mardi Gras beads and Bourbon Street revelers, this intermediate level seminar unpacks the complex histories of Black communities beyond stereotypes popularized by mass media and tourism marketing. We will discuss topics such as airboat tours, so-called post-Katrina "resilience," voodoo priestess Marie Laveau, and more. Drawing inspiration from historian Jessica Marie Johnson's statement that "Black New Orleans Is The Center of The World," we will come to understand the Crescent City as a crucible and incubator of Black culture. The materials used in this course are as multifaceted as the city itself and include scholarly texts, primary sources, fiction, spoken word, music, and documentary film.

HIST351 Beyond 1619: Enslavement in the United States, 1619-1860
The recent publication of the New York Times' "1619 Project" has refocused attention on the history and lasting effects of enslavement in the United States. Discussion of slavery as America's "original sin," however, oversimplifies the complex, multifaceted, and adaptable nature of enslavement in American history. This seminar will provide students with a grounding in the extensive literature of slavery in the United States from 1619 to the outbreak of the Civil War. We will examine slavery as an economic system of labor exploitation, a racialized hierarchy that legitimized white supremacy, and as a site of resistance and cultural formation. We will explore, additionally, the lives of enslaved individuals alongside our study of the institution of slavery.

HIST352 The Communist Experience in the Soviet Union (CLAC.50)
Like the parent course, HIST353: The Communist Experience in the 20th Century, this CLAC course will engage with the problem of experience through a series of themes: subjectivity; engaging in the political process of building socialism; aesthetics; travel and tourism; East and West; race and ethnicity; production and consumption; time and space; political engagement and disengagement; science and technology; and emotions. We will work with sources from oral histories, diaries, film, television, and the press. The final project would involve a close reading and paper on a theme covered in class using both primary and preapproved secondary sources in Russian. The student language background appropriate for this class is (preferably advanced) intermediate to native.

HIST353 The Communist Experience in the 20th Century
Two decades have passed since the collapse of Communism, its empire, and its utopian vision of the kingdom of heaven on Earth. Indeed, the Communist collapse was heralded as not just the end of the Cold War but the end of history itself. Yet how do we understand the nature of the communist way of life, the causes of its decline, and the meaning of its demise? This course will trace the development of Communism's answer to capitalist modernity from the 1917 Revolution through the Soviet collapse. It will seek to shed light on the birth, life, and death of Communist modernity through history, literature, and art, by exploring the world socialism created as an ideological model and a way of life. The emphasis of the course will be on the lived experience of Communism, primarily within the Soviet Union, but also beyond it (in Eastern Europe and Asia). In the global conflict between capitalism and Communism, how did people understand the competing demands of ideology and reality, individual and society, private and public, production and consumption, labor and leisure? How did the state manage the contradictions that arose when lofty ideologies encountered everyday life, and how did citizens make sense of these ideological transformations? What killed Communism: bombs and diplomacy, or refrigerators and Finnish shoes?

HIST353Z The Communist Experience in the Twentieth Century
More than thirty years have passed since the collapse of Communism, its empire, and its utopian vision of the kingdom of heaven on Earth. Indeed, the Communist collapse was heralded as not just the end of the Cold War but the end of history itself. Yet how do we understand the nature of the Communist way of life, the causes of its decline, and the meaning of its demise? This course will trace the development of Communism's answer to capitalist modernity from the 1917 revolution through the Soviet collapse. It will seek to shed light on the birth, life, and death of Communist modernity through history, literature, and art, by exploring the world socialism created as an ideological model and a way of life. The emphasis of the course will be on the lived experience of Communism, primarily within the Soviet Union but also beyond it (in Eastern Europe and Asia). In the global conflict between Capitalism and Communism, how did people understand the competing demands of ideology and reality, individual and society, private and public, production and consumption, labor and leisure? How did the state manage the contradictions that arose when lofty ideologies encountered everyday life, and how did citizens make sense of these ideological transformations? What killed Communism: bombs and diplomacy, or refrigerators and Finnish shoes? This course is an intensive reading, research, and writing seminar.

- This course is held entirely online and is a hybrid synchronous and asynchronous format.

- You should be prepared to spend at least 4-6 hours/day on class work.

- There is a class every day: on Mondays and Thursdays we will meet synchronously on Zoom at our regular class time (3:30-5:10 pm); on Tuesdays, Wednesdays, and Fridays, the format will be asynchronous (meaning you can engage with the day's materials at your own pace within a 24-hour window).

- You are expected to participate in each class having read the assigned material and reflected on them in your forum comments. Each day's online discussion will cover the topic and materials of the day.

- Each day you are expected to post at least one original comment of your own, and to respond to at least one comment by a classmate.

- The questions will be posted by 12 pm the day of the class, and the forum will be open for 24 hours, until 12 pm the following day.

- Be prepared to engage with the sources critically--to raise important issues, ask for clarification, and/or propose alternative interpretations, and to bring your own questions into the discussion. When possible, point to specific examples in the text and reference sources/page numbers to make the discussion easier to navigate for the class.

- Your active engagement in the seminar--both on the forum and in the synchronous sessions--is absolutely essential.

HIST354 Slavery and the American Legal System
This class will uncover the deep, foundational relationships between American slavery and the nation's legal, constitutional, and judicial traditions. It will, in turn, consider the historical and structural tensions between democratic state-building and the social, economic, and security imperatives of a slave society. It will begin with a historical analysis of how, starting in the seventeenth-century British empire, slaveholder sought to shape the construction of what would become the foundations of American law. After considering the historical foundations of American slavery, the class will turn toward an examination of how slavery's legal foundations shaped American legal, constitutional, and jurisprudential practices after its abolition. Students will complete final projects that work to uncover the extent of slavery's continued presence in the precedents and traditions that shape the modern American judiciary.

HIST354Z Self and Text in Roman North Africa: Augustine's Confessions
The native North African Augustine of Hippo wrote the most influential autobiographical text in (so-called) Western literature. It remains the most brilliant text I have ever read: a mind-bendingly complex and yet fully coherent literary self. Let's read it together. Set between Carthage and Rome in 400, Augustine wrote just 10 years before the Eternal City would be sacked by the disaffected former legions of the empire (the Goths). Split between conqueror and conquered, civilization and apocalypse, Augustine wove humanity's existential and epistemological questions into a literary tapestry for the ages: Who am I? How do you speak? Who are you? How do I listen? Who are we? How do we know? At once memoir, critique of empire, philosophy, psychology, theology, personal history, criticism, and a letter, these Confessions require close, careful, focused, attentive readings from a diverse group of interpreters. Join our learning community and spend two snowbound weeks at Wesleyan with a book you will never forget.

HIST356 Between Worlds: Change and Continuity in Early Latin America
The conquest and colonization of the Americas challenged long-held assumptions about geography, time, history, nature, theology, and humanity for both indigenous societies and Europeans. Modern scholars have described the encounter either as an earth-shattering moment of revolutionary intellectual reverberations or, alternatively, as one of limited and slower impact.

This course examines the ways in which diverse actors in the Iberian colonial world confronted change and continuity in their societies. In particular, it seeks to understand how they approached the conquest and its environmental, political, religious, legal, and social repercussions. Through the study of chronicles, graphic materials, poetry, omens, grammars, and maps, we will look at how missionaries, indigenous scholars, scientists, and nuns interpreted the forces transforming their communities. We will pay particular attention to the traditions and practices that they mobilized to explain the past and convey its present and future significance. Major themes include religious conversion and its consequences, the emergence of new social and ethnic identities under colonial institutions, linguistic change, and the writing of history.

HIST357 Regulators: The Administrative State in Modern America
How much arsenic is permissible in drinking water? Should financial firms be required to hold on to some of the risky securities they issue? Can a company sell a jar of peanut butter that contains only 90% peanuts? In the modern United States, the answers to these questions are determined by the administrative state - a collection of dozens of regulatory agencies, bureaus, and commissions comprising millions of officials and staff. Historians, political scientists, and other scholars have long recognized the administrative state as an important site of governance. But unlike Congress, the courts, or the Presidency, most of us have little idea about what exactly the administrative state does, much less how these regulatory bodies came to have so much power and responsibility. EPA G-Men banging down doors in Springfield might get a laugh on "The Simpsons," but why do EPA special agents carry guns?

This course approaches the making of the administrative state as a central component in the history of the modern United States. The seminar begins in the late 19th century, when elected officials created commissions of experts in an attempt to govern an increasingly complex economy, and continues through the 20th century, with its bursts of new state authorities and responsibilities, before concluding in the present, asking what a long history of the administrative state can teach us about contemporary policy. To understand the context in which the administrative state emerged and evolved, we cast a wide net. Among other subjects, students will consider popular movements for environmental protection and worker safety, intellectual transformations in understandings of risk and public welfare, political fights over the scale and scope of the government, and biographies of regulators and the powerful institutions that they make up. Readings include classic texts and new scholarship across different disciplines, alongside contemporary journalism and novel approaches like podcasts - returning throughout the semester to the question of how we can tell an engaging and vital history of the administrative state. Toward that end, students will also explore a variety of different primary source materials throughout the semester before embarking on their own original research projects.

HIST358 The "Self" in Self-Determination: Personhood & Peoplehood in Empire & Decolonization
This seminar course will explore the historical literature on self-determination and decolonization movements in the twentieth century across the globe. Combining the fields of US imperial history, international history, global indigenous studies, and diasporic studies, this course will delve deep into the historical development of right of self-determination within and outside of imperial regimes. It interrogates how peoples articulated their sense of "personhood" and "peoplehood" to claim political rights within the borders of nations and empires, as well as on the international stage. The course will also explore how decolonization as a concept transformed beyond the realm of law and personhood and encompassed culture, the environment, and lifeways.

HIST359 Reorienting East Asia: A Thematic Study of China, Japan, Korea, and Beyond
Although the concept of East Asia is firmly cemented in the western imagination, the reality behind the east Asian region -- if one was to call it that -- is far more complex. This course will explore topics in history, politics, religion, language, economics, and modern media as they relate to the three countries usually characterized as east Asia: China, Japan, and Korea. In so doing, you will learn about various connections that bind the countries together as well as the areas in which they do not connect. You will also learn about other players in the region who do not typically receive the attention they deserve, such as Mongolia, Tibet, India, the Ryukyu Islands, and Indochina. By the end of this course, you will be able to highlight unique aspects of each country and qualify the connections made between multiple cultures that have been neighbors for over a millennium.

HIST360 Evidence: A History
What counts as evidence and proof has changed and varied over time. This class will introduce students to the changing nature of evidence and proof in history, science, law, medicine, and news media. Topics include histories of trial by ordeal, trial by jury, photography, the footnote, fact checkers, expert testimony, the polygraph, statistics, DNA, and AI. Students will read amicus briefs, watch films, write papers, create evidence for mock trials, and study the rise and political effects of "alternate facts" discourse.We will also explore the ways that historical narratives, museums, and commemorations use evidence to tell stories through exhibits, monuments, plays, textbooks, and markers. The class will also discuss the history of landmark legal trials where new forms of evidence were central, and discuss the different ways that films handle evidence in genres such as true crime documentary. This is a discussion-based course that aligns with the Center for Humanities theme for Fall 2025: "Genres of Proof. Assignments include oral and written reports, a creative visual assignment, and a final research paper.

HIST361 Race and Immigration in U.S. History
This seminar asks us to consider how we might understand the histories of race and im/migration within the context of a settler colonial nation, beyond the mythology of a "nation of immigrants" at a time when immigrants, migrants, refugees, and non-citizens are under renewed attack in the United States.
An emphasis will be placed on interdisciplinary historical approaches to U.S. immigration, demonstrating its intersection and entanglement with U.S. imperialism, racial capitalism, transnational racial formations, and the carceral state and policing throughout U.S. history. Students will be exposed to the approaches of cultural, social, gender, political, labour, and legal historians who study these issues, alongside the work of various interdisciplinary scholars of race and im/migration. Though chronologically organized, each session will focus on a different set of peoples, migrations, and themes. Taken together, the course will provide for a strong foundation to understanding the entangled histories of race and im/migration in the United States.

HIST362 Issues in Contemporary Historiography
This course is designed to introduce history majors to a range of problems, debates, and critical practices in the discipline of history. Part I explores the ethical and public dimensions of history; Part II focuses on key schools of historical thought; Part III examines historical interpretation and primary sources; and Part IV samples varieties of evidence.

This course should be taken in the student's junior year.

HIST363 Histories of Mexican America
This course will explore and allow for discussion of key themes in Mexican American and Mexican immigrant history in the modern United States. The course will cover diverse geographies and time periods, from the northern borderlands of colonial New Spain to postwar California to contemporary New Haven and rural Vermont. Alongside ranging geographies and temporalities, the course will also pay specific attention to various communities who have historically -- whether proudly, ambiguously, or reluctantly -- been part of the peoples we now call Mexican Americans and Mexican immigrants. It will serve as a critical exploration of the intertwined histories of both Mexican American and Mexican immigrant communities in the United States -- of where, how, and why they have historically intersected, collaborated, and stood in solidarity with one another alongside when they have been at odds with each other throughout U.S. history. An emphasis will be placed on interdisciplinary historical approaches to Mexican American and Mexican migrant histories. Students will be exposed to the approaches of cultural, social, political, gender, oral, labour, and legal historians alongside various interdisciplinary Ethnic Studies scholars.

HIST364 Thinking with Objects: Processing a Museum Collection from Southern Africa
In Thinking with Objects, students will gain hands-on experience processing a collection of Namibian artifacts in Wesleyan's care. The course will introduce students to many of the ethical and practical challenges facing museum collections today, providing an opportunity to apply the ideas we discuss all semester by processing a collection of decorative and everyday objects made from diverse materials (wood, beads, animal hide, and shells). Part of the course will be the investigation of the origins and function of these objects. Learning how to handle, label, store, and potentially exhibit objects from the collection will enable students to reflect on Wesleyan's relationship to the African continent, and to think more generally about university and museum collections and methodologies

HIST365 North/South Borderlands of the United States
This advanced seminar on the U.S.-Mexico and U.S.-Canada borderlands situates our current moment's renewed anti-migrant and pro-border policing politics within a longer history of mobility, immigrant exclusion, labour exploitation, and border violence while disrupting common assumptions that place the northern and southern borders of the United States in binary opposition to one another. The course guides us in thinking expansively about what constitutes border violence and policing within differing racial and national contexts. We will engage with histories and historiographies from Canada, the United States, and Mexico, pulling together diverse countries that nonetheless share not only geographies but political visions of mobility and migrant life, whether dictated "from above" by state actors or "from below" by communities acting (at times) in solidarity with one another. The class traces border politics at hemispheric, national, and local levels along with immigrant, labour, and Indigenous politics from the nineteenth century to the present day. The course will help us make historical sense of renewed calls for immigration restriction alongside opposing calls for solidarity that are envisioned in the popular slogan "No One is Illegal on Stolen Land."

HIST366 A History of Incarceration in the United States
This course examines the history of incarceration in the United States from the 18th century to the late 20th century. It begins with history of indentured servitude in the colonial era and then considers the intensification of the enslavement of blacks in the 19th century as well as the expansion of prisons in the 20th century. The course seeks to engage how systems of confinement accompanied the development of a political system based on the languages of liberty.

HIST367 Life of Modern Fact
Facts aren't born; they are made. The challenge is to understand how people have come to think of facts as existing in the world independent of human intervention. This seminar explores the tools and techniques that people have used to craft facts. We consider examples from the 18th century through the present day, such as training manuals, films, and instruments. We also examine how broader structures such as social networks and the law help produce facts as people share, defend, and use them. Finally, this course encourages skepticism and creativity in the use of primary sources and the formulation of original research, questioning the givens of human knowledge.

HIST368 Energy Legacies and Ecological Futures
Rooted in a history of energy production, this course explores the possible futures of aging fossil fuel infrastructure, a primary political, economic, and ecological crisis of the 21st century. Students will participate in the planning of a conference on the "Futures of Fossil Fuel Infrastructure" to be held at Manresa Island in South Norwalk, CT. Manresa, in the marine estuary of the Long Island Sound, is the site of a shuttered coal- and oil-fired power plant planned as a public park with the support of a philanthropic 501(c)3.

In this course, students will consider multiple prescriptions for remediation, public access, community, ecological restoration, landscape architecture, and adaptive re-use in historical perspective. Students will have the opportunity to formulate and exhibit their own visions informed by historical examples.

HIST371 Fascism
This seminar aims to identify varieties and components of fascist ideologies and to undertake comparative analysis of European fascist movements in the first half of the 20th century. The initial focus will be on the several ways fascism has been defined and understood, including examples of how the term has been utilized to characterize certain governments and personalities. Specific attention then will be devoted to Italy, Germany, Spain, and France, with emphasis on Mussolini and Hitler and their regimes. Additionally, apparent linkages of fascism to post-1945 politics, such as the National Front in France, will be explored. Other fascist movements may be chosen as the subject of a major research paper. Materials for the seminar will include documentary sources, films, interpretive studies, and biographies.

HIST372 Historical Narrative and the Graphic Novel
Historical narratives are all around us -- from the films and television we watch, to the murals and monuments we walk past on the street, to the underlying foundations of the jokes we tell or the phrases we say. Building from this assumption, that we are surrounded by historical narratives both explicitly and subliminally, this seminar will focus on the ways that graphic novels engage with historical storytelling and historical narratives. The course will focus on how graphic novelists tell history, with particular emphasis on modern U.S. history in a transnational framework. We will read across graphic novel genres, from historically-inspired mysteries to memoirs to young adult fiction set in the contemporary moment. Alongside these graphic novels, we will read the work of historians and interdisciplinary scholars who have written about the histories told in illustrated format. The course will therefore provide snapshots of transnational twentieth- and twenty-first-century U.S. histories, with each focusing on a different time period and community, while asking us to take seriously the question of how we tell history beyond the confines of academia.

HIST373 Language and Power in Latin America
What is a perfect language? Societies across the globe, in different times and places, have sought to answer this question. In the process they have posited a diversity of theories about the relationships among language, individual and group identity, social harmony, religious devotion, and political power. This seminar investigates the ways in which Latin American societies, from the colonial period until the present, grappled with the problem of language and its ability to shape their communities. From Indigenous polities, to the

imperial monarchies that conquered and colonized the Americas, to the nation-states that emerged in the 19th century, all have had to confront the realities of a diverse and profoundly multilingual region. The course will be organized around representative case studies. It will draw from a variety of fields (e.g., linguistics, philosophy, history, anthropology, and history of science) to consider how language served as either a resource or an obstacle to be surmounted in the creation of ideal religious, political, and intellectual communities in Latin America. Significant themes include the role of language in conquest and colonization, the development of cultural institutions to regulate and standardize language usage, the prevalence of bilingualism in many regions, the proliferation of literacy campaigns as a hallmark of the revolutionary governments of the mid-20th century, and the emergence of Indigenous peoples as social and political actors in contemporary Latin America.

HIST374 Food Security: History of an Idea
The Food and Agricultural Organization of the United Nations has held that "food security exists when all people, at all times, have physical, social and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life." This course is a history of food insecurity as a material condition and a geopolitical concept for explaining uneven access to provisions. Although we begin with the emergence of food security as a concept during World War II, we will spend the majority of the course studying other ways of organizing access to the means of subsistence. Topics discussed will include why human beings share food, the invention of agriculture, transportation infrastructure, international trade, food aid, agricultural research and development, poverty, conflict, and famine.

HIST375 Unraveling Nature: Environmental Histories of Latin America
In the late eighteenth century, as almost three-hundred years of Spanish-rule in the Americas neared collapse, the Colombian scholar Francisco José de Caldas wrote that the key to understanding human variety lay in the different environments that human societies inhabited. For Caldas, nowhere was this more evident that in the Andes, where within close proximity a variety of temperature ranges and degrees of atmospheric pressure clearly influenced the character and customs of people. From the depths of the Amazon to the highest peaks of the Andes and the semi-arid lowlands of the Gran Chaco, the Latin American environment has continually inspired chroniclers, scientists, state-planners, and environmental activists, all seeking to unravel its workings in the service of their economic, political, social, and religious ideals. This class investigates the range of technologies and genres that scholars, administrators, local experts, and communities across Latin America have used to make the region's varied geographic spaces intelligible from the fifteenth century until the present day. It explores tensions between material and theoretical influences on the spatial imaginary and examines how environments were made and remade to serve imperial, colonial, national, and global projects. Important themes include Indigenous cosmologies and natural knowledge, the establishment of colonial extractive economies, the export-led growth of the nascent Latin American nations, the developmentalist projects of the late twentieth century, and recent efforts to contest the exploitation of nature by endowing natural bodies, like rivers and mountain ranges, with legal rights.

HIST376 Travel and Communication in Europe
This course will explore the character of travel and communication networks, patterns, technologies, and ideas in Europe in the medieval and early modern periods. Students will therefore learn the concept of travel and mobility, whether commercial, cultural, or bureaucratic, and the concept of notable reconfigurations and acceleration of exchange in this period. Beyond ideas, the networks they linked to will be prominent. These include technologies such as the bridge, road, and wayfinding, as well as cybernetic creations like the riding horse (with iron shoes and complex needs); the development of institutions of hospitality, like the monastery, the hostel and the inn; and the adaptation of writing to facilitate motion and communication. Due attention will be paid to exotic travel such as crusading, pilgrimage and warfare; however, routine business travel will be key, such as the trips required by law, by trade, by the search for money, and the desire to see family.

Methodologically, the course will focus on the idea of networks and the techniques of the digital humanities. Thus, text mining for information; mapping in GIS (Geographic Information Systems); and analyzing network relations will be important additions to the usual historical skills of reading and writing essays.

HIST378 LAND BACK! Indigenous Sovereignty Politics
This advanced research seminar will feature a look at the contemporary LAND BACK movement through current case studies with a focus on tracing the historical and legal genealogies of settler colonial land dispossession, indigenous land title, and self-governance issues bounded to territory (recognized and otherwise). We will examine different historical periods, moments, geographical sites, and case studies to explore the complexities of life for Indigenous peoples in the Pacific Islands and North America subject to the authority of the United States in relation to land as a central part of exercising sovereignty. In relation to these themes, the course will also examine: Indigenous peoples' varied political statuses in settler colonial context; self-determination; structures of domination and resistance; Indigenous agency; Native nationalism and decolonization. Readings will focus on the recognition and assertion of collective land rights, treaty rights, as well as land claims, land recovery, and land reclamation.

HIST379 The Fire Next Time: The Modern Black Freedom Struggle
The Fire Next Time explores the spectrum of African American politics in the mid-20th century United States. It will examine not only the nonviolent social movement against the Jim Crow South but will scrutinize expanding notions of black militancy against racial oppression in modern America. We will complete and discuss readings on the "short" and "long" civil rights movements; the position of women in movements for black equality; the leadership of Martin Luther King, Jr. and Malcolm X; the work of civil rights activists in the urban North; and the movement for Black Power. This course seeks to provide students with an understanding of the major themes and contexts of the most important social movement of the 20th-century United States.

HIST380 Transforming Bodies: Movement and Agency in West Africa
Dancers in West Africa embody human agency and transform historical worlds. As one elder farmer proclaimed: "Our ciwara have power[!]" Masked ciwara dancers on the Mande Pleateau call upon the collective labor of farmers to produce rural life, and more recently, have responded to transformations of the agricultural landscape. They emphasize the power of the human body over agricultural machines. Elsewhere in West Africa, the Atsiagbekor dance energized and celebrated Ewe male soldiers by acting out scenes from the battlefield. The dance movements were also secret codes used during battle to give instructions. How and when to fight, defend, or retreat depended on this embodied communication. The accompanying loud drum music served an added purpose of instilling fear in enemy ranks because it created the impression of a mighty army on the march. Still performed, the dance now symbolizes Ghanaian cultural heritage and helps to shape local historical memory.

In this course we will examine the body as an active agent in West African social and political life. We will study the historical and contemporary meanings of laboring bodies through dance and everyday movement, such as women's pounding of fufu or stirring of toh daily meals. We will also reflect on the ritual enactment of enslavement or colonial rule as a means to subvert old power structures. The body in these cases was a tool for resistance. We will also unpack multiple interpretations for specific women's embodied protests such as "sitting on a man." Collective body movement was powerful, but individual bodies might also enact healing or express religious devotion. Spirit possession, for example, marked the body as a site for human interaction with the supernatural. In this and other examples, the body is an archive in motion and subject to social renewal. By taking the body and movement as a lens, we will explore shifting histories of labor, performance, gender, politics, aesthetics, and religion from the pre-colonial era to the contemporary moment. We will also learn new ways to creatively move and narrate the African past and present.

HIST382 Anthropocene as Modern Grand Narrative
The Anthropocene refers to the new age in which humankind started to have a significant impact in altering or rupturing the Earth's systems, where the Earth is now moving out of its current geological epoch (the Holocene) and into "a less biologically diverse, less forested, much warmer, and probably wetter and stormier state." (Steffen, Crutzen, and McNeill 2007, Sciences Module, 614). This course begins by examining the debates on the definition and periodization. It then explores precursors to the concept of the Anthropocene, such as Confucian and Daoist writings on the taming of the natural environment for human needs, the catastrophism versus uniformitarianism debate, and contesting definitions of sustainability. Finally, it looks at how recent works of environmental history engaged with the concept of the Anthropocene and brought our attention to the impact of the transition from organic economy to carbon economy. Is the Anthropocene a new meta-narrative that professes to be the theory that explains all human activity? Is the Anthropocene a call to arms for environmental justice? Is the Anthropocene just a declensionist fairy tale--one that leads us down a dead end, throwing up our arms in resignation over the irreversible destruction of the natural environment?

HIST385 Science and the State
Over the past two centuries, states have been among the most prodigious producers and consumers of scientific information. Broad areas of scientific inquiry--such as demography, economics, geography, and ecology--substantially developed in response to the need of states to manage their populations, their economies, and their natural resources. State-directed scientific and technological innovation has also played a critical role in the pursuit of national security and infrastructural development, most notably through the development of nuclear weapons, missiles, and an array of military technologies. Finally, states have turned to scientific experts to enhance the credibility and legitimacy of policy decisions. This course introduces students to literature in the history of science that explores the connections between systems of knowledge and state power. Themes developed include the tensions between expertise and democracy, secrecy and scientific openness; the relationship between political culture and scientific and technological development; and the role of quantification, standardization, and classification in producing political order.

HIST386 China as Scientific Powerhouse
Science, technology, and medicine played an integral role in the China's transition to modernity and inspired dramatic economic, social, and political transformations. As scholars of modern China developed a keen interest in transnational histories and comparative methodologies, they have paid closer attention to the histories of science, technology, and medicine. This course introduces students to this emerging field of study. It examines broad

philosophical questions that motivate the research in history of those areas. We will learn to explore science, technology, and medicine in China on "its own terms" by understanding how the unique political and social challenges of modern China shaped Chinese science.

HIST389 Sachem School: Indigenous Lifeways and Settler Radicalism After 1600
In the 21st century, we face a series of interconnected reckonings: environmental collapse, economic disparity, racial inequality, and more. There were, and still are, alternative ways of organizing our economies, reframing our relationships with the land, and creating kinship networks that mitigate against inequality and enmity. This class will explore what settlers learned -- and refused to learn -- from the Indigenous societies they encountered after contact in northern North America. From Roger Williams's ideas of religious toleration in the 1640s to #landback today, settlers have at times demonstrated a willingness to learn from Indigenous lifeways and employ those lessons in ways deemed "radical" by Western standards. Understanding this history illuminates a path toward a future in which we continue learning from Indigenous nations and work to repair the damage settler societies have inflicted on each other and our world.

HIST390 The Redeemed Narrative: Microhistories in Early America
This course will guide students in thinking about American social history, the efforts by historians to recover the lived experiences of those who did not leave substantial archival documentation, through a close examination of examples of microhistory in early America. Microhistory, situated between the New Social History, influenced by the Annalistes and British Marxists, and the Cultural Turn, influenced by critical and linguistic theory, offers a unique opportunity to analyze the ways that early American historians creatively utilize evidence. We will pay particular attention to the ways that microhistory recovers histories of race and gender despite the paucity and problematic nature of archival sources. While students will receive a grounding in the theories of archival source interpretation, emphasis will be placed on the ways that historians have put those theories into practice. The course is designed to be an upper-level seminar, preparing students with the research tools to write their senior thesis or major capstone paper.

HIST391 The Treason of the Intellectuals: Power, Ethics, and Cultural Production
In his 1928 essay Julien Benda railed against the "treason" of the European intellectual establishment who abandoned disinterested intellectual activity in favor of political and nationalist engagement. In this course we will explore the relation of intellectuals to politics and the ethical ramifications thereof. Beginning with the Dreyfus Affair, the course will emphasize political involvement in France to focus on the vexed relationship between political action and intellectual production. We will examine figures such as Zola, Benda, Breton, Celine, Sartre, Camus, Beauvoir, Aron, Fanon, Foucault, Mbembe, Derrida, Kristeva, and Cixous.

HIST392 The Acceleration of Europe: Mobility and Communication, 1000---1700
This research course explores the thesis that during the Middle Ages, Europeans began to move faster, to move more often, and, by doing so, transformed the nature of social life, cultural life, and the character of selves and minds in the world. The course will explore the material aspects of this, such as the nature and development of roads and bridges, ships and canals, inns and hospitality that sustained and encouraged advancing travel. Thematic importance will be given to the place of horses and horseriding in these developments. The course is about the history of communication and the idea that a particular sort of traveler was created through later medieval travel and became the means of cultural and psychological acceleration. The social and cognitive networks established through travel, including the exchange of letters and messages, linked the local to the national. Merchants, pilgrims, soldiers, judges, students, preachers, and bureaucrats became the means of spreading news, changing views, and speeding up the world. This course will expose students to methods and skills in the digital humanities such as network analysis, geographic information systems, and database analysis.

HIST393 Materia Medica: Drugs and Medicines in America
This course investigates the identification, preparation, and application of drugs and medicines in the United States, emphasizing the period before the 20th-century institutionalization of corporate research and development. Topics include early modern European prospecting for medicinal plants, the

development of an international drug trade, and the formation of national pharmaceutical markets in the Untied States in the 19th century. Participants will explore the production, circulation, and restriction of medical knowledge through local practice, public and private institutions, trade and commerce, and regulation. In addition to knowledge of the social history of drugs and medicines in the United States, students are expected to develop competencies in historical research using primary and secondary sources. The final weeks of the course are devoted to applying historical knowledge to contemporary debates in global public health, including international pharmaceutical research, drug development, and epidemic disease.

HIST394 Seminar: Topics in the History of Europe Since 1945
This seminar is devoted to study of selected topics in the history of Europe after the Second World War. These will include the end of the war in 1945; the origins and developments of the Cold War, 1945--1962; France and the war in Algeria; de Gaulle's Fifth Republic and the events of 1968; Spain since 1975; Germany's ascendancy; the decline and collapse of the Soviet Union; the European Union; and contemporary Europe.

HIST395 "If there is no God, then everything is permitted?" Moral Life in a Secular World
In Fyodor Dostoevsky's The Brothers Karamazov, Dmitri Karamazov famously poses the question of what would happen to mankind "without God and immortal life," asking whether this means that "all things are permitted." Made famous by Dostoevsky, the question of whether we can be moral without God has always haunted secularism and has consistently been the most vocal criticism of unbelief. From papal condemnations of secularism and "godless Soviets," to the contemporary consensus that belief in God is evidence of moral goodness and its absence a sign of a broken ethical barometer, the assumption has been that transcendental authority is all that stands between us and moral abyss. When the atrocities committed by "totalitarian" regimes are cited as evidence of this, it is only the most radical articulation of a broader narrative of secular modernity.

One of modernity's master narratives is that people go from being under the care of the church to being under the care of the state, and our focus will be on historical cases where the question of secular values was explicitly engaged by the state. We will examine individual and collective articulations of morality in three prominent models of secularism: American civil religion, French laïcité, and Communist official atheism. What constitutes the moral foundation of a world without God? Can religion's moral and spiritual function be performed by a different kind of belief system?

HIST396 The U.S. South: A Global History
When people think of the U.S. South, they often think of a place that's isolated and insular--a region cut off from the rest of the United States and the wider world. Yet nothing could be further from the truth. Throughout its history, the South has been deeply entangled in the world and in the larger processes of globalization. Few regions of the United States have been more connected or more cosmopolitan. This seminar explores the global history of the U.S. South from the early 1800s to the present. By tracing the transnational movement of people, ideas, and commodities, it seeks to understand how the world has shaped the South, and also how the South has shaped the world.

HIST397 United States Overseas Empire
The United States is an empire: an empire that expands beyond the North American continent into many islands across the globe. From Puerto Rico and the U.S. Virgin Islands in the Atlantic to American Samoa and Guam in the Pacific, the US remains an imperial power with unincorporated island territories, a euphemism for replacing the anachronistic term "colonies." The residents of these territories have truncated political rights; they do not have voting representation in U.S. Congress, and they cannot vote in U.S. Presidential elections. Though U.S. territories are usually footnotes in the grand narrative of U.S. history, this course argues that they are integral to understanding the

United States as a whole. We will examine the history of how the U.S. acquired and governed the territories from the perspective of the islands themselves, emphasizing the local effects of U.S. colonial policies. We will analyze how U.S. foreign policy split indigenous peoples into separate political entities, how economic interests changed native political systems, how U.S. militarism affected the ecology of whole islands and the culture of territorial residents, and how public health policies racialized island peoples. We will also explore how self-determination and decolonization movements were stymied by the U.S. government, and how a whole host of other colonial policies and actions has affected and continues to affect the territories. The course will cover islands currently under U.S. control, including American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, Puerto Rico, the United States Virgin Islands, and Hawaii. It will also examine former territories, Trust Territories of the Pacific, and occupied islands including the Philippines, Cuba, Haiti, the Dominican Republic, among others. With the changing nature of U.S. imperialism, we will also consider the United States expansive military base presence throughout the globe. The history of these islands can tell us much about limits of U.S. citizenship, about the growth of U.S. commerce and militarism globally, about patterns of migration and immigration, and about the changing discourse of race and indigeneity.

HIST398 Visions of the Future: Capitalism and Colonialism in the World's Fairs
This course will explore the history of the world's fairs from the 1851 Great Exhibition in London to the 1939 New York World's Fair. These events showcased the newest technologies that would revolutionize life and labor for millions of human beings around the world. They also presented to the public new consumer goods and forms of entertainment such as music, dances, and sports. Moreover, they were sites of competition for rising nations and empires. Each participant country brought artifacts that demonstrated their (often idealized) national characteristics and development. Western powers displayed colonial products and peoples to show how they had been advancing in their expansionist enterprises. The students will read works on the humanities and social sciences that delve into the meanings of the world's fairs. They will also analyze primary sources (texts, paintings, film, songs, cartoons, and more) which will allow them to ask their own questions about these events.

LATIN AMERICAN STUDIES PROGRAM

Latin American Studies (LAST) is an interdisciplinary program designed to provide an integrated view of Latin America and the Caribbean. The program draws on faculty with expertise in Latin America whose home departments are Anthropology, History, Government, Economics, Hispanic Literatures & Cultures, and Theater. Courses in the humanities and social sciences taught by faculty who are not formally affiliated with the program but that are centrally concerned with Latin America are often cross-listed with Latin American Studies.

AFFILIATED FACULTY

DEPARTMENTAL ADVISING EXPERT

The Latin American Studies Advising Expert is the LAST Program Chair, which in 2020-21 is Melanie Khamis.

- Undergraduate Latin American Studies Major (p. 1085)

LAST121 Tales of Resistance: Modernity and the Latin American Short Story (In English)
Latin American writers from the early 20th century forward have regarded the short story as a vehicle through which to make their mark and engage the great cultural issues of the day. Jorge Luis Borges and Julio Cortázar, two of Latin America's most well-known literary figures, dedicated their careers almost exclusively to the genre. In this course, as we consider the privileged status of the short story in Latin American letters, we will examine the ways in which writers have used the genre to comment on important aspects of modernization both within and outside their respective countries. Some of those aspects will concern the Mexican Revolution, bourgeois and mass culture, nationalism, globalization, as well as immigration to Europe and the United States.

LAST126 Intro to History: Heretics on Trial: The Holy Inquisition and Its Enemies
The Inquisition was among the most feared institutions of the early modern West. In its efforts to impose religious orthodoxy, it persecuted minorities, prohibited behaviors it deemed heretical--like magic and unbelief--and censored intellectual inquiry. Yet despite its resoluteness, the ability of the Catholic Church to impose control varied widely across time and place and was often met with equally firm resistance. This introductory course examines how the Catholic Inquisition functioned, from its origins in the medieval period to its final demise in the nineteenth century, paying particular attention to geographic and temporal specificities. From Cartagena de Indias to Lima, Goa, Rome, and Toledo, inquisitorial tribunals spanned a significant portion of the Atlantic world. The records produced by its scribes are some of the richest sources of the social, cultural, religious, and economic history of the era, yet they are also some of the most challenging to deal with, both epistemologically and morally. Historians have relied on Inquisition archives to reconstruct the lives of individuals and communities who left no other written records, all the while seeking to acknowledge that the records were produced under duress by officials who suspected the accused of the terrible crime of heresy. Through a wide range of primary sources like trial transcriptions, Inquisition "autobiographies," written confessions, censored books, and literary sources, students will both survey the lives of people who faced the Inquisition's scrutiny, while considering the role of violence, persecution, and resistance in the creation of the very records that allow for historical reconstruction.

LAST218 From Chocolate to Coca: Commodities and the Making of Latin America
Bananas, silver, and coffee connect Latin America to consumers across the globe. From the discovery of massive silver deposits in Potosí in the 16th century to the growth of the illegal drug industry in the 20th century, these commodities have shaped how people work and eat, not only in Latin America but worldwide. Everyday goods like sugar or rubber have also given rise to political revolutions, environmental destruction, scientific discovery, and new literary and artistic movements across the region. How do commodities shape the societies that produce or consume them? What commodities are shaping today's global economy? Is it possible to extract these goods in a sustainable way?

This course combines approaches from anthropology, history of science, and environmental history to study key commodities in the history of Latin America from the colonial period until the present day. It will examine the ways in which various material goods linked local actors to broad networks of production and consumption of an increasingly interconnected global economy. The course will pay particular attention to how these relationships irretrievably changed local communities and to the ways in which historical actors contested, adapted to, or transformed production and consumption regimes.

LAST219 Latin American Economic Development-Macro
In this course, we try to understand the puzzle of differential economic development of Latin America as a region and its countries in particular. Our lens of analysis is employing economic tools but also draws on other disciplines such as history and sociology. The course covers a broad range of economics and introduces you to aspects of macroeconomics, microeconomics, international economics, labor and development economics. Initially, we will study different ways to measure development in Latin America. We will then begin our journey to identify reasons and causes for various development outcomes of the Latin American region and differential economic success and failure of specific countries. In the first half of the semester we will examine the historical background and endowments, policies of export-led growth and import-substitution, the debt crisis and the subsequent stabilization. We will cover the financial crisis of the late 1990s and the early 2000s. Then we will turn our focus to the recent years and challenges to economics growth in Latin America and Latin American countries. Here, we will assess trade, investment climate, poverty, and inequality in the region. The situation and policies addressing the informal economy, education and health in Latin America will be discussed in detail. Thereafter, we will analyze gender and ethnicity in the context of Latin American development.

LAST226 Survey of Latin American Literatures, Cultures, and Ideas
A close study of texts from the colonial period to the present will serve as the basis for a discussion of some of the major ideas and cultural and political debates that have emerged in modern Latin America to this day. Thinkers include Las Casas, Sor Juana, Bolívar, Sarmiento, Martí, Neruda, Borges, García Márquez, Menchú, and Bolaño, among others. For purposes of understanding context, students will also read selected chapters from works by historians and cultural

critics and will watch several films. (Please note that this course was previously called "Spanish American Literature and Civilization.")

LAST229 Between Worlds: Change and Continuity in Early Latin America
The conquest and colonization of the Americas challenged long-held assumptions about geography, time, history, nature, theology, and humanity for both indigenous societies and Europeans. Modern scholars have described the encounter either as an earth-shattering moment of revolutionary intellectual reverberations or, alternatively, as one of limited and slower impact.

This course examines the ways in which diverse actors in the Iberian colonial world confronted change and continuity in their societies. In particular, it seeks to understand how they approached the conquest and its environmental, political, religious, legal, and social repercussions. Through the study of chronicles, graphic materials, poetry, omens, grammars, and maps, we will look at how missionaries, indigenous scholars, scientists, and nuns interpreted the forces transforming their communities. We will pay particular attention to the traditions and practices that they mobilized to explain the past and convey its present and future significance. Major themes include religious conversion and its consequences, the emergence of new social and ethnic identities under colonial institutions, linguistic change, and the writing of history.

LAST232 Dialogue of Poets: Classical and 20th-Century Poetry in Spain and Latin America
This course samples the rich tradition of Spanish-language verse from its beginnings to the present. It is organized around four primary dialogues: (1) the creative reception by leading 20th-century poets from Spain and Latin America (e.g., Neruda, Lorca, Machado, Borges, Paz, Rossetti) of classical poets (Saint John of the Cross, Góngora, Quevedo, and Sor Juana Inés de la Cruz); (2) the interplay of poetry and essays by those same poets; (3) the round-trip fertilization of popular and elite, oral and written forms of poetry; and (4) the crossing of linguistic, ethnic, religious, and gender boundaries that has shaped Spanish-language verse from its beginnings as love lyrics embedded in Hebrew and Arabic poems (jarchas) to the creative stimulus of other Romance languages (especially Galician and Catalan) in Spain, through Latin American poets open to Amerindian and African influences, and Hispanic-American poets exploring bilingualism in the U.S. We will read lyric, epic, and burlesque verse on a wide variety of themes (mysticism, sex, history, reason, travel, love, politics, sensory perception, death, and poetry itself); reflect on how poetry can best be enjoyed and understood; and consider how poetry has been produced, heard, read, and used (ritual and spontaneous song; minstrel performance of epic and ballads; courtly patronage, literary academies, and manuscript circulation; private reading of printed texts and commodification; and 20th-century singer-songwriter musical settings and politics). Although no prior expertise in poetry is expected, a willingness to engage it closely (textually and historically) is essential.

LAST239 Writings from the Abyss: Andean Women Authors Between Territory, Memory, and Body
This course explores literature written by Andean women through a lens that centers the body, gender, and territory as key axes of resistance writing. We will ask ourselves how authors from regions such as Peru, Bolivia, and Ecuador -- from the mid-20th century to the present -- articulate their experiences and genealogies from positions that engage with ancestral knowledge, Indigenous worldviews, Andean spiritualities, and political memory. The selected texts highlight representations of the female body as a site of conflict, pleasure, maternity, trauma, and rebellion. Topics will include the coloniality of gender, state violence, language and orality, racialization, and sexual dissidence. The course is organized thematically and combines literary analysis with approaches drawn from cultural studies, Andean feminisms, and decolonial theory. Readings will include texts written in Spanish as well as bilingual or translated works from Quechua, Aymara, or Kichwa, alongside visual materials, interviews, and digital archives when relevant.

LAST240 From the Banjo to Dembow: Afro-Caribbean Music in Motion
This course analyzes the global circulation of Afro-Caribbean musicians, dancers, audiences, musical styles, and even musical instruments from the beginning of European colonialism to the present day. We will seek to understand the political interconnections between the Caribbean and the wider world by focusing our attention on specific "musical itineraries." These will include, among others, the creation of the banjo by enslaved people in the Caribbean and the instrument's role in black resistance in North and South America, the musical aftershocks of the Haitian Revolution in Cuba and Louisiana, the production of black internationalist politics at weekly "regge" dances led by Jamaicans in early 20th-century Costa Rica, and the rise of reggaetón between Panama, Puerto Rico, Cuba, the Dominican Republic, and the United States.

We will question how these musical itineraries propelled black political movements and shaped larger ideas about race, nation, diaspora, and the meaning of "the Caribbean" itself. No prior musical knowledge is required for this course.

LAST241 Contested Archives: Power and Memory in Latin American Archival Practices
This course explores the histories and politics of archiving in Latin America, from colonial record-keeping and imperial control to contemporary community-led, feminist, and dissident archival projects. What counts as an archive? Who decides what is preserved and erased? How are bodies, languages, and stories made (in)visible through archival dynamics? What alternative archival imaginaries emerge from Latin America's colonial and postcolonial contexts? We will analyze how archives have functioned both as instruments of domination and as tools of resistance, central to the construction of national histories,

racial hierarchies, and cultural identities, but also capable of challenging erasure and reclaiming marginalized memories. Through an interdisciplinary and decolonial lens, we will engage with both historical texts and cultural and artistic interventions that challenge dominant archival logics, including literary works, films, visual art, performance, and digital media that interrogate, fictionalize, or subvert archival practices. We will examine a variety of materials, including state archives, ecclesiastical records, truth commissions, community memory projects, and speculative/fictional texts based on archival material. By reading across genres and media, the course highlights how cultural production can both expose and reimagine the power of the archive. Works include texts by Diamela Eltit, Horacio Castellanos Moya, Cristina Rivera Garza, Patricio Guzmán, Diana Taylor, Silvia Rivera Cusicanqui, Aníbal Quijano, installation and performatic art by Regina José Galindo and diverse materials from archives and memory projects throughout Latin America.

LAST242 Histories of the Caribbean: New Questions, Methods, and Vantage Points
This course explores some of the most exciting new trends in historical scholarship on the Caribbean. We will consider how recent scholars of the Caribbean have turned a critical eye to existing methods and reimagined "archives" as they have crafted new stories about gender, sexuality, race, the environment, and the rise of modern capitalism. In this way, we will question how these new directions in Caribbean studies have reshaped the study of history more generally. We will use a wide geographic lens in order to gain an expansive vision of the circuits of the Greater Caribbean, stretching from Antigua, Guadeloupe, Barbados, Martinique, Jamaica, Trinidad, Guyana, Cuba, Puerto Rico, and Haiti into the wider Atlantic world.

LAST244Z Imagining the End: Neoliberalism and the Arts
Many of us now like to paraphrase the philosopher Frederic Jameson when he argued that it has become "easier to imagine the end of the world than the end of capitalism." As the recent deluge of post-apocalyptic movies and documentaries about melting glaciers makes clear, this is an accurate statement. Yet while most of us imagine how neoliberal capitalism will bring about the end of the world, others try to imagine the end of the status quo. Since neoliberalism became the global hegemonic system, artists of all kinds have been imagining ways we can survive and (perhaps) overcome it: think about the songs of Tracy Chapman or Residente, the street art of Keith Haring or Lady Pink, the movies of Chloe Zhao or Alejandro González Iñárritu, or the writings of Ursula Le Guin or Roberto Bolaño. This course explores how engaged art from the 1970s to the present has responded to -- and fought against -- neoliberal hegemony in the United States, Latin America, and beyond. Through the arts, we will explore the nightmares of global collapse and the dreams of a new egalitarian and sustainable society. In addition to analyzing movies, poems, short stories, songs, and street art, we will read theoretical and historical studies that help us understand how neoliberalism shapes contemporary culture and makes art into one of the few areas in which dissent can be expressed.

LAST245 Modern Latin America Since 1810
This lecture course explores some of the main themes of Latin America's modern history from the beginning of the independence movements in the 19th century until the present day. In particular, it traces the contentious processes of state-formation and the creation of national and regional identities. Governments, elites, and popular movements fought over questions of race, economic development, and inequality in their attempts to formulate a particular vision of the nation. We will contextualize these struggles in global economic transformations and pay particular attention to the rise of the United States as force in the region.

LAST247 Caribbean Writers in the U.S. Diaspora
The Caribbean cloaks a complex history in a Club Med exterior. While white sands and palm trees proclaim it the "antidote to civilization," Caribbean writers undertake to represent a fuller picture of the individual in a world shaped by colonialism, slavery, nationalism, and cultural striving. This course will examine selected literary texts as part of an ongoing dialogue among the region's history, mythology, and aesthetics.

LAST251 Cycles of Resistance: Indigenous Voices in Latin American Literature and Culture
This course explores the richness and diversity of Indigenous voices in Latin America, from early colonial records to contemporary expressions. Using a transhistorical methodology, we will examine how socio-political issues and topics like land defense, cultural resilience, gender violence, hybrid identity, and political resistance persist and evolve through diverse perspectives in Indigenous discourse and cultural production. We will analyze and compare foundational texts like the Popol Vuh and Nueva corónica y buen gobierno, as well as original manuscripts alongside contemporary voices such as those of Humberto Ak'abal, Yana Lucila Lema, and Sonia Guiñansaca. Special attention will be given to the writings of indigenous women, exploring how they have challenged hegemonic narratives and reclaimed their bodies and territories. Additionally, we will explore multimedia expressions and digital activism to understand how indigenous individuals and communities adapt and resist in a globalized world. This course invites students interested in literature, cultural studies, gender studies, and human rights to engage critically with indigenous perspectives, fostering a deeper understanding of the complexities of Latin American cultures.

LAST252 Race and Nation in Latin America
How does race operate in Latin America, and in what ways does it intersect with the concept of nation and national belonging? The regions we call Latin America and the Caribbean have, since the first human encounter between "Old" and "New" Worlds of the 15th century, been often understood as places

of mixture--both cultural and biological. From at least the early 19th century, when independent nations in the region began to emerge from colonial rule, intellectuals, statesmen, and citizens alike have had to contend with "race" and its inextricable connection to the concept of "nation." This course aims to introduce students to the history of race and national formation in Latin America and the Caribbean, from the wake of the independence movements of the early 19th century to the present. It draws on historical, anthropological, and literary approaches to identifying, analyzing, and interpreting the varied meanings of race and nation throughout the region.

LAST254 Tales of Resistance: Modernity and the Latin American Short Story
Latin American writers from the early 20th century forward have regarded the short story as a vehicle through which to make their mark and engage the great cultural issues of the day. Jorge Luis Borges and Julio Cortázar, two of Latin America's most well-known literary figures, dedicated their careers almost exclusively to the genre. In this course, as we consider the privileged status of the short story in Latin American letters, we will examine the ways in which writers have used the genre to comment on important aspects of modernization, both within and outside their respective countries. Some of those aspects will concern the Mexican Revolution, bourgeois and mass culture, nationalism, globalization, and immigration to Europe and the U.S.

LAST258 Bolívar's Interpreters: Nation Construction in the Americas
No figure has been seized upon more as a symbol of cultural and political unity in Latin America than the liberator Simón Bolívar. In this course, we will examine not only the case of contemporary Venezuela with its cult-like tradition but also several of the countless appropriations of Bolívar that have occurred across the Americas and in Europe in the 180 years since his death. From the Cuban José Martí to the Colombian García Márquez, from the Spaniard Miguel de Unamuno to the U.S. socialist Waldo Frank, from, to be sure, the powerful tradition of the Latin America essay with its identity politics to the U.S.-led Pan Americanism of the 1920s, '30s, and '40s, Bolívar has been made to serve complex and important functions in discourse about national and continental identity. To consider all this, we will study a number of rewritings of Bolívar's life and works, focusing on the dynamic process in which literary, cultural, and political traditions have been formed around him, while giving special attention to issues bearing on race, gender, and modernization. A wide range of texts will be examined, including letters, essays, poems, novels, screenplays, and films.

LAST260 Neotropical Acuatic Ecosystems: Their Importance, Sustainable Use, and Conservation (CLAC 1.0)
(English translation below Spanish text) El curso de Ecosistemas Acuáticos Neotropicales permitirá a los estudiantes buscar información y discusión sobre la diversidad y complejidad de los ambientes acuáticos en la América tropical. Comenzaremos a aprender definiciones, características, distribución y ejemplos de humedales, lagos, ríos y muchos otros hábitats acuáticos en todo el neotrópico. El origen del sistema hidrológico. Evolución de las principales cuencas: Amazonas, Magdalena, Orinoco y Paraná. El Paleo Orinoco-Amazonía: Importancia geológica y biótica. Dinámica geológica. Evidencia geológica y biológica. Hipótesis evolutivas de la fauna piscícola. Evolución del paisaje amazónico como parte del conocimiento para comprender los diversos procesos y patrones de riqueza y distribución de la biodiversidad. Los humedales (sabanas inundadas) de Colombia-Venezuela como ejemplo de humedales neotropicales. El Pantanal brasileño y las llanuras colombo-venezolanas como "áreas de criadero" para la biota acuática y terrestre y su importancia para el mantenimiento de la biodiversidad. Los estudiantes también leerán y buscarán información sobre el Sistema Fluvial Orinoco como ejemplo de estudio. La importancia biótica, el desarrollo sostenible y la conservación. Identificar los factores antrópicos que afectan al sistema. El desarrollo social y económico, y las contribuciones a través de los Programas de Evaluaciones Acuáticas Rápidas (RAP's) como metodología para producir información que permitió proponer áreas para la conservación de la biodiversidad. Terminamos con un análisis de los recursos y la importancia pesquera de las principales cuencas neotropicales: Amazonas, Orinoco y Paraná-Paraguay. Seguridad alimentaria. Ejemplos de ríos en riesgo.

This course will examine why the Orinoco and Amazon basins in South America harbor a biological richness much larger than other river basins around the world. About 50% of all higher plant species of the world are included in these basins. Data on vertebrates showed that about 3,000 freshwater fish species, thousands of birds (migratory and local), and hundreds of amphibians, reptiles, and mammals have been found so far in those basins geographically included in six countries: Bolivia, Brazil, Colombia, Ecuador, Peru, and Venezuela. We will examine the key factors that have affected their historical-geological development, the actual richness, and the threats to sustainable development and conservation. We will ask questions about the nature and interactions of the key factors and agents that harbor and transformed the high ichthyological and other aquatic biota diversity, reflected by the wide range of landscapes and aquatic ecosystems included in those basins. We will try to identify fragile aquatic ecosystems depending upon the biological richness, endemicity, importance for local communities, and potential threats. We will examine the current trends in the fisheries, forest exploitation, and agriculture for human consumption, noting that stocks of many species of fish are in steep decline, and that current fishing practices are not sustainable. Finally, the major impacts and threats faced by the fishes and aquatic ecosystems of the Orinoco River Basin are discussed with the purpose of studying potential plans for sustainable development. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

LAST265 Multilingual Aesthetics in Latin America
This course examines writings by Latin American authors who are multilingual or have an intercultural awareness as a result of colonization, cosmopolitanism, migration, or bicultural upbringing. First, students will learn about a variety of Spanish American movements, such as "modernismo," "creacionismo," "negrismo," "indigenismo," "neoindigenismo," and "indianismo," all of which dialogued with diverse cultures and languages other than Spanish. Then, we will examine a series of collaborative projects, such as a quadrilingual poem co-written by Octavio Paz (Mexico), Jacques Roubaud (France), Edoardo Sanguineti (Italy), and Charles Tomlinson (UK); a selection of English-Spanish poems by Marjorie Evasco (Philippines) and Alex Fleites (Cuba); and the "Festival de poesía: lenguas de América," a bi-annual event that gathers poets from diverse

multilingual regions in the Americas. Lastly, we will examine literary and scholarly work by/about Latin American writers of indigenous descent, as well as works in Spanish, English, and "Spanglish" by Chicano, U.S. Latino, and Filipino American writers. Throughout the semester students will reflect on how multilingualism can serve as a medium for aesthetic experimentation, intercultural dialogue, and/or political resistance. All discussions will be held in Spanish, and all readings will be in their original Spanish or in Spanish/English translation.

LAST267 Caribbean Geographies
This course will explore how human and non-human encounters induced through slavery, indentureship and colonialism have been imagined and contested by Caribbean geographers, ecologists, artists, and poets. Students will gain an immense understanding of how Caribbean communities have experienced and countered geographic problems like uneven development, vaccine apartheid and gender-based violence. Students will think through concepts that define Caribbean geographies, such as 'the plot,' 'the bounty,' 'black land,' and the 'kala pani.'

LAST268 Black Religions in the Americas
This course will focus on the African-based religious systems that cultivated traditional ways to survive slavery, white supremacy, and state violence. We will focus on Vodou in Haiti, Regla de Ocha (Santeria) and Palo Mayombe in Cuba, Obeah in Jamaica, and aspects of Black religions in the US. We will discuss questions of method and themes of political resistance, orality, secrecy, magic, "authenticity," commodification, and the ethics of representation. We will also look at the Black church and especially the rise of the Pentecostal movement in African and Afro-Caribbean spaces, as well as visionary Black religious thought.

LAST271 Political Economy of Developing Countries
This course explores the political economy of development, with a special focus on poverty reduction. We discuss the meaning of development, compare Latin American to East Asian development strategies (focusing on Argentina, Brazil, Mexico, South Korea, and Taiwan), examine poverty-reduction initiatives in individual countries (including Bangladesh, Chile, and Tanzania), and evaluate approaches to famine prevention and relief. Throughout the course, we pay close attention to the role of procedural democracy, gender relations, market forces, and public action in promoting or inhibiting development.

LAST272 Cubanidad: Diaspora, Exiles, and Cultural Identity in Cuban Literature and Film
This course will examine shifting notions of Cubanness, or "cubanidad," from the 19th century to the present times from a diasporic framework. We will discuss writings by/about African slaves, Chinese indentured laborers and migrants, and Spanish immigrants in Cuba, as well as Cuban exiles in the U.S. and Spain from the 19th century to the beginning of the 20th century. Through a variety of literary texts and films, we will then study select cases of European exiles who visited Cuba in the 1930s and '40s, the later massive waves of Cuban migration to the U.S. after the Revolution, and the more recent immigrants who have settled in Cuba.

LAST273 Beyond Machu Picchu & Macondo: Real and Imaginary Worlds in Latin American Letters
Latin American writers and intellectuals have long conceived of their particular literary and cultural practices in connection to individual spaces and sites, both real and imagined. In this course we will examine why and how they have done so, looking not only at well-known if not legendary ones such as Machu Picchu and Macondo, invented, respectively, by Neruda and García Márquez in certain moments of their careers, but also the América and Gran Colombia of Simón Bolívar, the New York City of the Cuban intellectual José Martí (1880s) and Nuyorican writer Tato Laviera (1970s), as well as Violeta Parra's other Chile, César Aira's Colón (Panamá), Fernando Vallejo's Medellín (Colombia), and Mayra Montero's eroticized Caribbean. In each case we will be concerned with understanding the relationship between local, national, and hemispheric history and the new imaginarios created by the author/intellectual in question in the context of north-south relations. Topics to be considered within this critical framework will include the Wars of Independence, industrialization in the late 19th-century, the construction of the Panama Canal (1904--1914), the Cold War (1947--1991), Latino identity in the context of Puerto Rico and New York City, the drug wars, and sexual identity. When possible, films and short videos will be used to help build knowledge of historical context.

LAST274 Insular Borders of Latin(x) America
Before and at the same time the United States established itself throughout the 19th century as a major power in the Americas and the world, various Latin American republics inherited and acted upon a similar imperialist agenda to expand their borders not only to neighboring territories but also across oceans. In this class, we will study and compare these imperialist gestures, among them the Spanish Empire's control of its remaining insular colonies in the 19th century (e.g., Cuba, Puerto Rico, the Philippines, and Guam) and the United States' successive claim to these very same islands. We will analyze literary works and films that interrogate these imperialist claims as well as the trajectories of islanders: for instance, the forced migration of the Rapanui (Easter Island people) in the second half of the 19th century (first as slaves to Peru and then to the town of Hanga Roa in Easter Island) and the island-to-island "intra-colonial" (Joanna Poblete) recruitment of Filipino and Puerto Rican laborers in sugar plantations in Hawai'i at the beginning of the 20th century. Some of the questions we will explore are: Why are islands so coveted by old and new empires? How have Rapanui, Filipino, and Puerto Rican migrants and their descendants resisted authorities on the insular borders of empire? How

do writers and artists tell these silenced histories? Can we speak of Latinidad and Edouard Glissant's concept of Poetics of Relation in a Pacific Ocean context? Readings will be in Spanish and English. All discussions and assignments will be in Spanish.

LAST276 Body, Voice, Text: Theater and the Transmission of Experience
Theater can and does exist as a written text, but we all know that its existence on the page is meant as a precursor to its live performance out in the world. In this course, our approach to a series of Latin American plays will be informed by competing notions of the theater as both a field of academic inquiry (built on reading, study, research, and interpretation) and also as an art form (built on reading, rehearsal, repetition, direction, and interpretation). We will combine traditional academic study of the written dramatic text with theater workshop exercises meant to train actors for the delivery of the staged performance text. Students will thus gain an understanding of how academic study and and workshop rehearsal take different approaches to what is essentially the same goal/problem: how to interpret the text written by the dramatist, whether for meaning or performance. This course will be taught in Spanish.

Prereq: **None**

LAST277 The Secret Life of Waste: Trash in Latin American Art & Literature
From space junk to microplastic particles found in human blood, man-made waste and pollution are ubiquitous. What are the effects of waste on the environment? What can the decomposition of waste create and/or undo? What is the afterlife of waste? Is waste apocalyptic? Through figures such as rottenness, radioactivity, mutation, and zombies, we will explore the ways in which Latin American art and literature try to answer some of these questions by imagining living amidst the remnants of hyperconsumption and by exploring the unforeseen effects that coexisting with waste could have upon the land and the body. We will study a wide range of visual and literary engagements with trash from novels, poetry, comics, and films to environmental art projects. Artists and writers may include Cecilia Vicuña, Daniel Lie, Samanta Schweblin, Fernanda Trías, Vik Muniz, H. G. Oesterheld, Javier Campos, and Alejandro Durán, among others.

Identical With: **SPAN277**
Prereq: **SPAN221**

LAST278 Narratives of the Latin American Jungle
This course is a critical exploration of the ways in which forests and its plurality of beings, and particularly the tropical territories marked as jungle or rainforest in South America (the Amazon, the Darién), have been narrated, imagined, and contested in cultural production and in indigenous and peasant ontologies and place-based practices for more than a century. We will investigate the construction of jungle as a territory of dwelling shaped by the relational condition between human and other-than-human beings (plants, animals, water) and as a place where diverse anxieties about sovereignty, politics, race, development, gender, and subversion collide. We will examine this cultural geography in relation to diverse histories of modernization, development and extractivism, the global angst over the environment and its destruction, local processes of (cosmopolitical) resistance, and the various political and environmental conflicts that have shaped the region over the past century. Attending to Amazonian indigenous thought and to political ecology and other intellectual practices emerging from Latin America, as well as to literature, film, popular culture and visual art, we will discuss the potential to disavow modern/colonial binaries like nature-culture, human-nonhuman and civilization-barbarism, in a place that has been central to the way in which Latin America has been imagined for centuries.

LAST279 Christianity and Globalization
This course focuses on recent developments in global Christianity. We will look at various interlinked dynamics: the rise of spirit-filled Evangelicalism, especially Pentecostalism, faith-based humanitarianism, child-sponsorship programs, and themes of militarism such as spiritual warfare. We will pay attention to the role of U.S. power in the world and how the narratives that various Protestant Christians tell through their writings and media shape life across international spaces. We will sample a variety of methods in how one studies the field of Christianity. These will include historical, sociological, and anthropological methods, all of which challenge traditional scholarly accounts (meaning those in the field of church history) in order to expand our understandings of Christianity in the modern period.

LAST280 Screening Youth in Contemporary Latin American Cinema
This course will examine some of the most important Latin American films from the past three decades that also happen to cast children and teenagers as protagonists. We will analyze a large body of films that address issues of historical memory, economic inequality, social conflict, political activism, education, sexuality and gender, cultural identity, and citizenship through the lens of youth. These films question the roles of minors in relation to politics and resistance, and reflect upon the cultural constructions of childhood that operate at a social level with important political implications. Students will explore the aesthetic and social dimensions at play in these films and develop interpretative filmic skills through an exploration of the connections between the technical composition of the works and the social, political, and cultural contexts that they address. Besides the varied cultural, theoretical, formal, and historical elements that this course will examine, this course includes a creative project by which students will develop an idea for a short film based on their own personal coming-of-age narrative.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**

Identical With: **SPAN280**
Prereq: **SPAN221**

LAST281 Labor in Latin America and the Caribbean: Pedestals and Veils of Disposability
This course examines the racialized and gendered exploitation of labor that has long structured everyday life across the Western hemisphere. It asks how shifting productions of race and gender mediate the distinction between productive and disposable humanity. We will examine a variety of materials from the region spanning the colonial period to the present, including literature, film,

visual and performance art, economic theory, political philosophy, grassroots activism, testimonials, chronicles, and journalism. Through these texts, we will problematize a range of interdisciplinary issues, such as the veiled continuities of conquest and enslavement, the accelerated pace of capitalist extraction of human and non-human value, and state responses to forced migrations of populations considered criminal, undesirable, or superfluous. We will also study aesthetic and lived examples of resistance from Latin America, the Caribbean, and their diasporas, with particular interest in how collective organizing has taken on new forms in the face of work's increasing informalization and precaritization. Building off these examples, students will develop an accessible final project that applies their research and analytical skills not only to produce knowledge, but to cultivate critical consciousness for the reader, listener, or viewer.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Identical With: **SPAN281**
Prereq: **SPAN221**

LAST283 The Other 9/11: Dictatorial and Post-Dictatorial Films and Literature in Chile
This course explores how poetry, novels, and films, produced during and after Chile's military regime (junta de gobierno), try to make sense of state violence and cruelty. This class suggests that by actively performing the work of memory, of remembering the violent past and the forcefully disappeared ones (detenidos desaparecidos), films and literature oppose the politics of oblivion instantiated by the post-dictatorial state while claiming for and imagining social justice. We will understand films and literature as active, ethical memory technologies which we will read against the grain of Chilean politics and history (políticas de los acuerdos).

Some of the poets we will read include Eugenia Brito, Carmen Berenguer, Teresa Calderón, Malú Urriola, Rosa Betty Muñoz, and Raúl Zurita. In addition, we will watch films by Patricio Guzmán, Cecilia Vicuña, and Pablo Larraín. Finally, we will read novels by Alejandro Zambra, Roberto Bolaño, and Nona Fernández.
Offering: **Crosslisting**

Gen Ed Area: **HA-RLAN**
Identical With: **SPAN282**
Prereq: **None**

LAST286 Racial Capitalism and Resistance in Central America
In modern-day Central America and its diasporas, the most precarious communities are descendants of colonized, enslaved, and dispossessed populations. Yet while the fact of race and class intersecting is evident, why and how they have evolved together is not. This course examines the relationship between race formation and economic dispossession across the region through a transnational perspective. Through a wide range of Central American and hemispheric cultural objects, theoretical frameworks, and grassroots praxes, we will meditate on the theoretical paradigm of racial capitalism, which holds that racialism and capitalism are co-constituting and have evolved together to produce an economic world order dependent on colonialism, violence, exploitation, and containment. Students will develop their interpretive and analytical skills by collaboratively examining issues of whiteness, mestizaje, and multiculturalism; resource extraction; economic exploitation and expulsion; rage, resistance, and revolution; policing, counterinsurgency, and criminality; migration; identity and ethno-politics; and education. Beyond these cultural, theoretical, historical, and aesthetic concerns, a central component of the course is a creative or community engaged project that students will develop in close collaboration and in stages throughout the semester.

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Identical With: **SPAN285**
Prereq: **SPAN221**

LAST288 Territories of Dwelling, Desire and Resistance in Latin America
What does it mean to dwell in a place? How are spatial orders and more-than human dimensions conceived of and what is the symbolic and material weight of these conceptions? This course seeks to examine the ways in which diverse spaces categorized as rural or as "natural frontiers" in Latin America have been inhabited, negotiated, and contested in the 20th and 21st centuries. How have cultural practices constructed them as territories of dwelling, desire, possession, dispossession, and resistance? How does narrative and art reflect on local modes of dwelling and on the relationships between community, embodiment, desire, memory and the materiality of place? We will focus on texts and artistic practices--literature, film, performance, and the visual arts--that, in thinking about mountains, rivers and other bodies of water, plants, more-than-human beings, seek to destabilize the hegemonic (colonial) gaze that has been projected onto rural spaces for centuries and complicate extractivist and other capitalist logics that have sought to transform them. We will trace how these texts intervene in urgent debates about extractivism, the destiny of rural lands, the uses, abuses and rights of nature, the struggles for peasant and indigenous rights, environmental justice, and the defense of alternative ontologies. We will focus particularly on the Andean and Amazon regions of South America, with specific attention to Colombia and Perú.

LAST290 Current Environmental Issues in Latin America (CLAC 1.0)
(English translation below Spanish text) Este curso proporcionará información histórica y actual sobre el desarrollo de temas ambientales en América Latina. La información se dividirá en la evaluación del uso del medio ambiente durante los períodos precolombino y colonial (a); y b) período moderno. Se discutirá la organización, estructura y gobernanza del medio ambiente. El desarrollo de políticas públicas, planes de gestión, factores que se deterioran y los posibles usos sostenibles del medio ambiente y sus recursos. Leeremos literatura interdisciplinaria incluyendo: académica, informes, documentos oficiales gubernamentales y proyectos de ONG dedicados al diagnóstico, desarrollo y uso o nuestros recursos en América Latina. Por último, se estudiarán casos particulares de países latinoamericanos como Argentina, Brasil, México, Costa Rica, Perú y Venezuela. El curso se presenta en un formato de lectura/discusión en el que todas las lecturas, escritos y discusiones estarán en español. This course will provide historical and current information on the development of environmental issues in Latin America. The information will be divided into assessing the use of the environment during (a) pre-Columbian and colonial periods and (b) the modern period. The organization, structure, and governance of the environment will be discussed, as will the development of public policies, management plans, factors that deteriorate, and the potential sustainable uses of the environment and its resources. We will be reading interdisciplinary literature including academic, reports, official governmental documents, and NGOs' projects dedicated to the diagnostic, development, and use of resources in Latin America. Finally, particular cases of Latin American countries such as Argentina, Brazil, Mexico, Costa Rica, Peru, and Venezuela will be studied. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

LAST291 From the Muralists to the Narconovela: The Public Intellectual in Mexico
Mexican writers, intellectuals, and artists, both male and female, have long been recognized for the brilliance with which they have used their work to comment on and shape the direction of the Mexican state and to engage with the multiple traditions (indigenous, European, and mestizo) that define them. In this course, we will examine the writings and artistic and filmic work of several major figures with the goal of understanding how they see and imagine Mexico in particular historical moments. The course will cover the entirety of the 20th-century and the beginning of the 21st, extending from the Mexican Revolution (1910--1917) and the Muralists (1920s--40s), through the post-1945 period including 1968, and to the drug wars and the Zapatista movement (since 1994). Students will analyze novels, essays, art, poetry, and film.

Identical With: **SPAN290**
Prereq: **SPAN221**

LAST292 Spanish American 'Modernismo' in a Global Context
The publication of Nicaraguan Rubén Darío's AZUL... in 1888 is often considered to be the inaugural event of "modernismo," the first Spanish-language literary movement that originated in Spanish America and spread thereafter throughout the Hispanophone world. In March 1916, about a month after Darío's death, a magazine in the Philippines claimed that Darío also belonged--at least "spiritually"--to the Philippines. Inspired by this statement, in this course students will read poems, short stories, and crónicas (short journalistic articles) by canonical Spanish American modernista writers, such as Darío, Julián del Casal, José Martí, Amado Nervo, José Enrique Rodó, Leopoldo Lugones, and Delmira Agustini, in conjunction with Filipino modernistas, including Fernando María Guerrero, Jesús Balmori, Manuel Bernabé, and Evangelina Guerrero. We will also read a selection of works of Spanish writers, such as Salvador Rueda, who visited Cuba and the Philippines in the 1910s. Some of the salient characteristics of modernismo that we will cover are the rejection of immediate reality and materialism, the search for linguistic renovation and cosmic harmony, and the celebration of Hispanism. When focusing on this last aspect, we will assess how modernismo helped to keep Spanish America connected not only to Spain but also to the Philippines, which became a U.S. territory in 1898, alongside Cuba and Puerto Rico. Thus, we will explore to what extent modernista writers responded to the spread of U.S. imperialism.

LAST294 Queering Latin America: Contemporary Gay, Lesbian, and Transgender Literature and Film
This course studies important and groundbreaking films, novels, and poetry by contemporary gay, lesbian, and transgender artists. It focuses on their strategies to survive, respond to, and defy the changing socio-political Latin American landscape of the last 80 years. We will introduce some key critical concepts and debates from queer theory to guide our discussions. Some of the artists we will study include: Alejandra Pizarnik, Lucía Puenzo, Manuel Puig, Pedro Lemembel, Karim Aïnouz, Lorenzo Vigas, Rosamaría Roffiel, and Norma Mosgrovejo, among others.

LAST295 Voices, Noises, and Son: Modern Sounds in Hispanic Caribbean Cultures
What happens to our understanding of Hispanic Caribbean cultures if we think about it through the category of sound? From the recorded voices of indigenous Caribbean peoples denouncing the atrocities of neo-colonialism to the contemporary Afro-Caribbean reggaeton rhythms in San Juan, sound has been a key component for this region's expressions and literatures. In this course, students will explore how multiple kinds of sound-voices, noises, music, and rhythms-shape and define the literatures and cultures of the Caribbean basin. We will read literary works and pay attention to the "sounds" described

in them in order to examine how diverse ethnic groups have contributed to the production, perception, and transformation of various Caribbean "sonorous" landscapes.

LAST296 Colonial Latin America
This course studies the history of Latin America and the Caribbean from pre-conquest times to the emergence of independence movements in the early 19th century. Lectures will explore the key environmental, cultural, economic, political, and religious transformations that shaped colonial societies throughout the region. Beginning with the formation of indigenous and Iberian polities before 1492, we will consider how early modern colonial governance functioned and evolved throughout the period of Spanish and Portuguese rule in the Americas. Through an array of primary and secondary sources we will reconstruct the lived experiences of a diversity of actors across the colonial world. We will pay particular attention to the methods and approaches that scholars have used to understand the history of the region.

LAST297 "Un pedacito de la historia negra": Afro-Latin American Literature and Culture
The significant contributions of Afro-descendent individuals to the development of Latin American culture have been frequently overlooked or torn to pieces. Yet, the experiences and bodies of racialized people have been key in shaping and transforming the region's culture. Beyond their representation in early colonial and republican works, Afro-descendent writers and characters have been crucial in the modern aesthetics of Latin American literatures. Along with musicians and other artists, they have provided a continuous challenge to the idea of Latin America and its cultural production as a product of a homogeneous cultural and racial miscegenation. Inspired by Colombian artist Joe Arroyo's opening to a famous salsa song, wherein he sets out to tell "un pedacito de la historia negra," in this seminar we will study short stories, novels, poetry, music, and film, including works that explore the experience of being racialized in Latin America, poetic experimentalism through orality, and the retelling of the history of Black resistance in the Caribbean through modern media. Engaging with historical and contemporary issues such as racial discrimination, social inequality, and cultural pride and preservation, this course invites students to critically analyze the fundamental role of Afro-Latin Americans in shaping Latin American cultures and histories.

LAST298 Food Security and Environmental Conservation (CLAC 1.0)
(English translation below Spanish text) En este curso los estudiantes investigarán información y discusión sobre la seguridad alimentaria y el uso del medio ambiente en una selección de países de América Latina. Haremos preguntas sobre la base de la producción y disponibilidad de alimentos. También examinaremos la información disponible de las agencias públicas y privadas sobre los programas establecidos por los países para garantizar la seguridad alimentaria de sus habitantes y el uso sostenible y la conservación del medio ambiente. Discutiremos conceptos como: La soberanía alimentaria y la seguridad como un sistema alimentario en el que las personas que producen, distribuyen y consumen alimentos también controlan los mecanismos y políticas de producción y distribución de alimentos; La nutrición como normas mundiales y particulares de consumo de alimentos; La Justicia social relacionada con la accesibilidad de los alimentos; y el derecho humano a una alimentación adecuada y a la libertad del hambre como uno de los objetivos del milenio de las Naciones Unidas. El estudiante revisará casos particulares en América Latina. El curso se presenta en un formato de lectura/discusión en el que todas las lecturas, escritos y discusiones estarán en español. In this course students will research and discuss food security and the use of the environment in a selection of Latin American countries. We will ask questions about the basis of food production and availability. We will also examine the available information from public and private agencies about programs established by countries to ensure the food security of their inhabitants and the sustainable use and conservation of the environment. We will discuss concepts such as: food sovereignty and security as a food system in which the people who produce, distribute, and consume food also control the mechanisms and policies of food production and distribution; nutrition as a global and particular standard of food consumption; social justice related to the accessibility of food; and the human right to adequate food and freedom from hunger as one of the United Nations' objectives of the millennium. Students will look at particular cases in Latin America. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

LAST299 Decolonizing Speculative Fiction in Latin America
This course interrogates what it means to imagine alternative futures in colonial and postcolonial settings. As the writings of conquistadors, explorers and missionaries show, Europe envisioned the New Continent as the land of the future or utopia, to the point that contemporary decolonial theorists have observed that nothing was "discovered" by the first European travelers to America but the idea of discovery itself. Modern temporalities of progress became thus inseparable from the image of the Americas as a frontier of imperial expansion, religious conversion, and economic exploitation. If European SF (science fiction/speculative fiction) emerged hand-in-hand with positivist notions of progress and civilization, Latin American SF contested Eurocentric epistemologies by claiming the ability to imagining the future and fictionalizing worlds otherwise. The course will center on three key moments of Latin American literary history: 1) the early to mid-twentieth century experiments in fantastic literature from the Southern Cone, which broke with realist mimesis from the margins of modernity; 2) post-1989 SF novels from Bolivia, Guatemala and Chile, that address the making of neoliberal globalization from the vantage point of the Global South; and 3) contemporary Dominican and Cuban works in which Afro-Caribbean religions and gender formations engage in productive conversations with digital technologies, biomedical engineering, game cultures, and climate change.

LAST302 Latin American Politics
This course explores democracy, development, and revolution in Latin America, with special attention to Argentina, Brazil, Cuba, and Nicaragua. Questions to be addressed include: why has Argentina lurched periodically from free-wheeling

democracy to murderous military rule? Why is authoritarianism usually less harsh, but democracy often more shallow, in Brazil than in Argentina? How democratic are Latin America's contemporary democracies? What accounts for the success or failure of attempted social revolutions in Latin America? Why did postrevolutionary Cuba wind up with a more centrally planned economy and a more authoritarian political system than postrevolutionary Nicaragua? How much progress has each of these countries made toward creating a more affluent, educated, healthy, and equitable society?

LAST307 Contemporary Challenges in Latin American Politics
Latin America's contemporary challenges include corruption, crime, economic woes, social policy shortcomings, populism, declining political trust, the erosion of fragile democracies, and the political underrepresentation of women and minority groups. This course examines the historical legacies, international influences, and social-structural factors that shape and constrain how Latin American citizens and governments are responding to these challenges. Weekly readings and discussions, along with a succession of analytic exercises, will prepare students to write a research paper on a Latin American politics topic of their choice.

LAST308 Greater Latin America: Ideas, Politics, and Culture in the Americas
What is "Latin America," who are "Latin Americans" and what is the relationship among and between places and people of the region we call Latin America, on the one hand, and the greater Latin diaspora in the US on the other? This course will explore the history of Latin America as an idea, and the cultural, social, political, and economic connections among peoples on both sides of the southern and eastern borders of the United States. The course will draw from a variety of sources, including literature, visual arts, music, and oral history. Topics we will consider include the origin of the concept of "Latin" America, Inter-Americanism and Pan-Americanism, transnational social movements and intellectual exchanges, migration, and identity politics.

LAST309 Territory, Community, and Identity in the Americas
How does a place shape community social relations? And in what ways do peoples' relationships to natural resources and the built environment shape their political identities? This course will explore these questions by focusing on particular case studies in the Western Hemisphere. We will consider the ways in which communities are tethered to a particular idea of territory, whether they be "fugitives," "runaways," "natives," or "immigrants." The cases we will explore include quilombos and palenques comprised of people who escaped enslavement in Portuguese and Spanish America, indigenous communities forged before, during, and after colonization by Europeans, and newfound communities or colonies comprised of relatively recent (im)migrants.

LAST315 Cuban Literature and Film: Imagination, Revolt, and Melancholia
This course surveys the major aesthetic and socio-historical movements in modern and contemporary Cuba. Since the late 19th century, the island of Cuba has been at the center of a number of key epochal disputes: between colonialism and independence, racism and racial justice, neocolonialism and revolution, liberalism and socialism, isolationism and globalization. In the arts, the turn of the century launched a period of great imaginative invention. Considering the singular place of Cuba in Latin America, the Caribbean, and the globe, this course addresses some of the most representative works of Cuban literature and film since independence until the present time. Imagination, revolt, and melancholia are the three concepts that will orient our discussion. Imagination refers both to artistic creation and to the collective capacity of projecting new worlds, utopias, or impossible realities. Revolt, as opposed to revolution, is not restrained to politics as usual but relates rather to a deep experience of discontent and a return (from the Latin revolvere) to ancient psycho-social strata. Finally, melancholia serves as a point of view to understand what happens when history does not live up to emancipatory expectations. Special attention will be given to Afrocubanismo, ethnographic literature, the avant-garde aesthetics of the group Orígenes, Marvelous Realism, testimony, revolution, socialist experimental film, diaspora, the Special Period, and post-Soviet life.

LAST320 Media and Power in Latin America: From Quipus to Twitter
This interdisciplinary seminar explores how media technologies have shaped Latin American societies and politics from the colonial encounter to the dawn of the digital age. Investigating the local histories of indigenous forms such as the Andean knotted quipu and scribal texts, along with newspapers, radio, photography and social media, we examine how Latin Americans made and used these technologies to assert power, claim status, and launch protests. Through brief theoretical readings and historical case studies, we explore such themes as the relationship between colonialism and the written word, the enduring legacy of alternative indigenous literacies, the importance of rumor and oral communication in societies with low literacy rates, and the role of mass media in identity formation and contemporary social movements.

Structured in part as a lab, the class will be organized around producing a physical and digital exhibition of Latin American media materials available in Wesleyan's collections, to be displayed for the broader university community and beyond. We will produce this exhibition over the course of the semester, integrating individual research projects into our broader collective project that will be conducted as a collaborative/team effort. Along the way we will experiment with hands-on activities that might include making quill pens, setting type, and operating a printing press, take field trips to examine rare media materials first hand, and learn from on-campus experts as we develop our public exhibition.

LAST321 Secrets, Lies, and Fictions in the Americas
In 1964, historian Richard Hofstadter underlined the spread of a "paranoid style" in American politics. Although Hofstadter's description seems more appropriate today than ever, in an increasingly interconnected global order the role of misinformation, uncertainty, manipulation, and conspiratorial imaginaries in shaping and limiting democracies and public spheres cannot be exclusively assigned to any particular locale. From a continental standpoint, this course offers analytical tools to explore the political complexity of lies, secrets, and fictions in both the United States and Latin America since the mid-twentieth century to this day. By studying a series of cases--including the Guatemalan civil war, the assassination of John F. Kennedy, the Pentagon Papers, the U.S. intervention in the Middle East, the "dirty war" in Latin America, censorship in socialist Cuba, the arrest of Augusto Pinochet in London, Wikileaks, hacker practices in the early days of internet, or Cambridge Analytica--we will address the relations between surveillance, spectacle, and conspiracies (both factual and imagined) in the contemporary techno-political landscape. Moreover, the course emphasizes the speculative and theoretical potentials of art and literature when it comes to understanding socio-political phenomena. Beyond distinctions between truth and falsehood, fictional constructions are key to our collective capacity to imagine alternative worlds. By mapping out the ways in which fictions circulate as such or rather as truthful versions of reality, we will problematize the limits and uses of truth, lies, and official and alternative narratives, as well as the power of states, corporations, individuals, and collectives to direct attention and frame information.

LAST322 Exploration, Conquest, and Insurrection: The History of the Amazon 1542 to Present
Dark, wild, primitive, Edenic and infinitely wealthy: the Amazon has been many things in many times and places. From the disgruntled Spanish conquistadors who first traversed the jungle's rivers in search of cinnamon, to the 19th-century scientific expeditions of enlightened explorers, to contemporary environmentalists, the Amazon remains a mysterious object of inquiry. It still incites the imagination of travelers, filmmakers, and politicians alike. This seminar investigates the multiple ways in which the Amazon and its peoples have been portrayed in chronicles, scientific writings, and film. We will confront the historical circumstances, motives and ideologies that prompted each of these depictions and how, in turn, they shaped the colonization of the region. We will pay close attention to genre, and to themes such as cross-cultural encounter, imperialism, and the representation of indigenous societies. We begin in 1542 with the chronicle of Francisco de Orellana. As the first Spaniard to navigate the entire length of the Amazon River, Orellana influenced how Europeans imagined the jungle well into the 19th century. Subsequently, we apply readings in history of science and anthropological theory to Claude Lévi-Strauss account of Amazonian tribes in Tristes Tropiques (1955). Students will then conduct independent research into a representation of their interest. Possible topics include scientific expeditions in the region, the jungle and modernization, global warming, or human rights. Finally, we will reflect on the Amazon as a metaphor for the human condition with Werner Herzog's film Fitzcarraldo (1982).

LAST335 Nature, Science, and Empire in Early Latin America
This seminar will introduce students to a diversity of scientific practices that flourished in the Hispanic World between 1400 and 1800. We will begin by analyzing how a debate known as the "polemic of Spanish Science," together with the Black Legend conditioned the ways in which colonial Latin American science was traditionally approached. From available studies we will then survey some of the significant contributions to botany, astronomy, medicine, and metallurgy of Mesoamerican and Andean civilizations. From there we will read an array of primary and secondary sources in order to reconstruct the varied, and often eclectic knowledge gathering and knowledge making practices that missionaries, humanists, and crown-officials devised to understand the natural world. We will pay close attention to their particular goals and methods and the manner in which they were influenced by the encounter with foreign peoples, the dynamics of conquest and colonization, the movement of books and commodities, and institutions of censorship and patronage.

LAST343 Empires of Captivity: The Resurgence of Atlantic Slavery in the Age of Emancipations
The dawn of the 19th century was marked by a series of challenges to Atlantic slavery, epitomized first by the unprecedented victories of the Haitian Revolution and then by the implementation of municipal bans and bilateral treaties that sought to limit the international trade in African captives. Yet seemingly paradoxically, this same period saw the rapid expansion of new zones of enslavement stretching from the U.S. South to Cuba, Brazil, and beyond. Proslavery forces mobilized across these jurisdictions in order to reverse the tide of abolition and to participate in (or simply to profit from) a burgeoning illegal trade in captives. Meanwhile, people of African descent who were enslaved or re-enslaved during this period built upon the precedent of emancipation in Haiti and other antislavery jurisdictions as they mounted claims to freedom for themselves, their families, and their communities. They continuously pushed forward the halting pace of general emancipation, laying the foundations for struggles for recognition and restitution that continue to the present day.

LAST344 The Haitian Revolution Beyond Borders
In 1791, enslaved people rose up against their masters in the French colony of Saint-Domingue, at the time the most profitable plantation society in the world. Thirteen years later, their efforts would culminate in the declaration of independence of Haiti, a nation founded on the pillars of antislavery, anticolonialism, and racial equality. This course investigates the regional and global significance of this revolution through its interconnections with Haiti's neighbors in the Caribbean and across Latin America. First, we will look at the immediate implications of Haiti's founding for the fate of New World slavery during the Age of Revolutions. Next, we will consider Haiti's long-term impact on national identities, racial formations, and future revolutionary struggles in the Americas over the course of the 19th and 20th centuries.

LAST348 Urban Histories of Latin America
Cities have occupied Latin American writers, artists, and scholars since the early decades of the sixteenth century. Mapped on to preexisting settlements of indigenous importance, colonial cities became the center of Iberian administration in the New World. They imparted justice, granted citizenship rights, set the standard of civility and religious orthodoxy, and held the promise of economic improvement. The preeminence of cities in Latin America continued into the modern period. Mexico, Buenos Aires, and Rio de Janeiro became opulent and unequal metropolitan centers in the nineteenth century. Unconstrained growth brought about the megalopolises of our current day.

This seminar will explore Latin America's major urban centers in significant moments from the pre-Hispanic period until the present day. Through chronicles, travel narratives, photography, legal writings, newspaper archives, maps, and film we will reconstruct the many dimensions of urban culture in the region. The course will be organized thematically and geographically. We will begin by studying the ways in which Latin American writers have understood the role of the city, and its dwellers, in shaping the trajectory of their various nations. We will pay particular attention to themes like the city and modernity, the every-day experiences of urban residents, racial, gender, and social inequality, the city as a site of historical memory and violent contestation, the environmental challenges of urban growth, and the rise and fall of counter-cultural and protest movements.

LAST373 Language and Power in Latin America
What is a perfect language? Societies across the globe, in different times and places, have sought to answer this question. In the process they have posited a diversity of theories about the relationships among language, individual and group identity, social harmony, religious devotion, and political power. This seminar investigates the ways in which Latin American societies, from the colonial period until the present, grappled with the problem of language and its ability to shape their communities. From Indigenous polities, to the imperial monarchies that conquered and colonized the Americas, to the nation-states that emerged in the 19th century, all have had to confront the realities of a diverse and profoundly multilingual region. The course will be organized around representative case studies. It will draw from a variety of fields (e.g., linguistics, philosophy, history, anthropology, and history of science) to consider how language served as either a resource or an obstacle to be surmounted in the creation of ideal religious, political, and intellectual communities in Latin America. Significant themes include the role of language in conquest and colonization, the development of cultural institutions to regulate and standardize language usage, the prevalence of bilingualism in many regions, the proliferation of literacy campaigns as a hallmark of the revolutionary governments of the mid-20th century, and the emergence of Indigenous peoples as social and political actors in contemporary Latin America.

LAST375 Unraveling Nature: Environmental Histories of Latin America
In the late eighteenth century, as almost three-hundred years of Spanish-rule in the Americas neared collapse, the Colombian scholar Francisco José de Caldas wrote that the key to understanding human variety lay in the different environments that human societies inhabited. For Caldas, nowhere was this more evident that in the Andes, where within close proximity a variety of temperature ranges and degrees of atmospheric pressure clearly influenced the character and customs of people. From the depths of the Amazon to the highest peaks of the Andes and the semi-arid lowlands of the Gran Chaco, the Latin American environment has continually inspired chroniclers, scientists, state-planners, and environmental activists, all seeking to unravel its workings in the service of their economic, political, social, and religious ideals. This class investigates the range of technologies and genres that scholars, administrators, local experts, and communities across Latin America have used to make the region's varied geographic spaces intelligible from the fifteenth century until the present day. It explores tensions between material and theoretical influences on the spatial imaginary and examines how environments were made and remade to serve imperial, colonial, national, and global projects. Important themes include Indigenous cosmologies and natural knowledge, the establishment of colonial extractive economies, the export-led growth of the nascent Latin American nations, the developmentalist projects of the late twentieth century, and recent efforts to contest the exploitation of nature by endowing natural bodies, like rivers and mountain ranges, with legal rights.

LAST383 Venezuela: The Effect of Oil Discovery on People, the Environment, and on Democracy (CLAC 1.0)
(English translation follows below) Este curso examinará los factores clave que han afectado el desarrollo de Venezuela y su entorno desde el período precolonial hasta el presente. Dividiremos la historia de Venezuela en dos períodos críticos: antes y después del descubrimiento de petróleo. Haremos preguntas sobre la naturaleza y las interacciones de los factores y agentes clave que transformaron a Venezuela de una colonia a la de un país económicamente independiente. Al examinar los períodos económicos anteriores y posteriores al petróleo por separado, aprenderemos que los factores clave, como la agricultura, el uso de la tierra y la influencia colonial europea, cambiaron drásticamente, transformando así muchas instituciones sociopolíticas. Los contrastes incluirán la resiliencia y la erradicación de enfermedades, los derechos humanos y la esclavitud, la propiedad de la tierra, la salud humana, los impactos en la biodiversidad y la salud humana, y la protección de las culturas indígenas. En última instancia, examinaremos los factores que han llevado al colapso de la democracia. Leeremos una literatura interdisciplinaria que incluye antropología, religión, sociología, ciencias ambientales, derecho e historia. El curso se presenta en un formato de lectura / discusión en el que todas las lecturas, escritos y discusiones serán en español. This course will examine the key factors that have affected the development of Venezuela and its environment from the pre-colonial period to the present. We will divide the history of Venezuela into two critical periods: before and after the discovery of oil. We will ask questions about the nature and interactions of the key factors and agents that transformed Venezuela from a colony to that of an economically independent country. By examining the pre- and post-oil economic periods separately, we will learn that the key factors, such as agriculture, land use, and European colonial influence, changed dramatically, thereby transforming many sociopolitical institutions. The contrasts will include resilience to and eradication of diseases, human rights and slavery, land ownership, human health, impacts on biodiversity and human health, and protections of indigenous cultures. Ultimately we will examine the factors that have led to the collapse of democracy. We will read an interdisciplinary literature that includes anthropology, religion, sociology, environmental sciences, law, and history. The course is presented in a reading/ discussion format in which all readings, writings, and discussions will be in Spanish.

LESS COMMONLY TAUGHT LANGUAGES

Instruction in Less Commonly Taught Languages is offered through the Alternative Language Study Options Program. Located in the Fries Center for Global Studies, this program is designed to extend Wesleyan's already rich language offerings by expanding the range of opportunities for students wishing to learn a language not offered at Wesleyan through traditional language departments.

This program is well suited to prepare for study abroad experiences or to continue learning a language picked up while studying abroad. Students have also taken advantage of these opportunities to enhance their qualifications when applying for international fellowship, to pursue more personal goals like learning more about the heritage language of their family - or simply because they like learning new languages.

Students can register for regularly scheduled courses listed on Wesmaps such as American Sign Language, which includes a three semester study sequence, Modern Greek or Swahili. They can also petition to study a language via individual or group tutorials or more independently through the Mango Languages online platform. Full, partial, not for credit, graded or CR/U options are available, depending on the type of modality offered for each language.

For more information about the various options available, please visit the Alternative Language Study Options website. (https://www.wesleyan.edu/cgs/also/)

LANG101A Beginning Danish I
This quarter-credit online course is intended to prepare students with fundamental language skills and discover Danish language and culture. LANG141 Elementary Modern Greek
The course is an introduction to the language and culture of modern Greece. The fundamentals of reading, writing, and speaking are taught. We start by learning the Greek alphabet and sounding out basic words and expressions. We then progress to acquiring useful vocabulary; practicing in-class dialogue exercises; and eventually constructing original sentences for use in conversation. In addition, we examine different aspects of Greek culture including modern Greek literature in translation, the Mediterranean Diet, contemporary Greek history, and Orthodox Christian spirituality and holiday customs.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **HA-LANG**
Prereq: **None**

LANG142 Elementary Modern Greek II
The course builds upon the language skills acquired in LANG 141. Students learn how to count, tell time, and give directions in Greek; compose short descriptive essays in the target language; and translate passages into English. Student-led conversation hours outside of class provide further opportunity to practice speaking and to explore interests such as Greek music, social media, and travel. In class, we also examine historical and cultural topics including life in contemporary Athens, the Greek War of Independence, and the story behind the modern revival of the Olympic Games.

Credits: **0.50**
Gen Ed Area: **HA-LANG**
Prereq: **None**

LANG160 Introduction to Tamazight: The Native Language of North Africa and Beyond (CLAC.50)
This course will introduce students to the language (sounds and script) and culture of the Amazigh people, an ethnic group (commonly known as Berbers) native to North Africa and West Africa, specifically Morocco, Algeria, Tunisia, Libya, Mauritania, northern Mali, and Niger, with some oases in Egypt and the Canary Islands. The Tamazight language--the alphabet of which is called Tifinagh--has been a written language for almost 3000 years, although it was disrupted throughout history due to various invasions and conquests of the area. The Tuareg people of the Sahara desert in Northern Africa, and as of late Morocco and Algeria, have been using the Tifinagh alphabet (oldest dated inscription from about 200 BC) and the Tamzight language as a secondary national language. The objectives of this course are: 1. To introduce students to the sounds and script of Tifinagh; 2. To teach students basic conversation and essential elements of the Tamazight language; and 3. To familiarize students with the culture of the different Amazigh peoples.

LANG233 Introduction to ASL / English Interpretation (CLAC 0.5)
Having completed course work in Beginning ASL I, II and Intermediate I, II, students who have demonstrated a strong interest in continuing their studies at a more sophisticated and challenging level may find this course work interesting pursuant to becoming a professional, credentialed Sign Language Interpreter.

This experience will provide students with a working knowledge of the profession of interpreting including the Code of Professional Conduct, certification criteria, the roles and responsibilities of a professional interpreter and discussions of the role of the interpreter in a variety of professional settings including educational, medical, legal, the performing arts, counseling, and rehabilitation.

Students who attend this course demonstrate that they are able to express in ASL, with some confidence, routine and everyday experiential topics within a conversational format with some elaboration. They demonstrate clear and accurate signing and fingerspelling at a moderate rate of speed.

This coursework uses a process-oriented approach for applying the essential cognitive strategies for interpretation. These strategies include organizing and manipulating visual images, analyzing message for meaning, and self-monitoring for message accuracy. This experience serves as a transition from language learning to beginning interpretation.

LANG250 Visual Gestural Communication
The Visual Gestural Communication course (VGC) is an introduction to communication mostly based on iconicity via gestures. Students will use body movements in performance-like activities to model people's actions in the real world or in imaginary universes, facial expressions to convey feelings and emotions as well as some ideas and concepts, hand gesticulations to represent objects and concepts. Students will practice their non-verbal (aka not based on language) communication in diverse settings on a variety of topics taking into account different perspectives and sensibilities in the world: countries, cultures, languages, minorities, genders, ages, etc. Students will also be exposed to a stylized form of signed language used by the Deaf community in international settings, commonly called International Sign Language. This course does not require previous exposure to American Sign Language.

LANG290 Intermediate American Sign Language I
This course is the third (3rd) of six American Sign Language (ASL) courses encompassing two terms for Elementary, two for Intermediate, and two for Advanced. The two Intermediate ASL courses are an introduction to communication in ASL. You will expand your vocabulary and enhance your grammar while starting to get a basic understanding of the Deaf experience. The course will be taught primarily in ASL and with clarifications in written English as needed. Interactive activities in class and homework assignments will provide you with ample opportunities to practice communication in ASL as much as possible. Because of the absence of a standardized written system for ASL, you will complete many of the assignments by recording yourself on video.

LANG311 Beginning Pequot Language and Culture II
This course is the continuation of Beginning Pequot Language and Culture I. This course is designed to further develop conversational proficiency in Pequot language. Pequot is an Algonquian language spoken by many of the Native American people indigenous to Connecticut, including the Wangunks who lived in the area that is now Middletown. This course will focus on acquiring linguistic concepts aimed at developing conversational proficiency, but will also include readings and discussions about Wangunk history and culture.
Offering: **Host**
Grading: **Cr/U**
Credits: **1.00**
Gen Ed Area: **HA-LANG**
Prereq: **None**

LANG419 Student Forum
Student-run group tutorial, sponsored by a faculty member and approved by the chair of a department or program.
Offering: **Host**
Grading: **Cr/U**

LANG420 Student Forum
Student-run group tutorial, sponsored by a faculty member and approved by the chair of a department or program.
Offering: **Host**
Grading: **Cr/U**

LANG466 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

MATHEMATICS AND COMPUTER SCIENCE

The Department of Mathematics and Computer Science offers undergraduate majors in mathematics and in computer science. We also participate in the College of Integrative Sciences, the Data Analysis minor, the IDEAS minor, and the Informatics and Modeling minor. The department's graduate programs include a PhD in mathematics and MA programs in mathematics and in computer science.

Each student's course of study is designed to provide an introduction to the basic areas of mathematics or computer science and to provide the technical tools that will be useful later in the student's career. The course of study is planned in consultation with the student's faculty advisor and the department's advisory committees, DADCOM for mathematics and CADCOM for computer science.

The department's graduate programs include a PhD program in mathematics and MA programs in mathematics and in computer science. The research emphasis at Wesleyan at the doctoral level is in pure mathematics and theoretical computer science. One of the distinctive features of our department is the close interaction between the computer science faculty and the mathematics faculty, particularly those in logic and discrete mathematics.

Graduate students at Wesleyan enjoy small classes and close interactions with faculty and fellow graduate students. Graduate students normally register for three classes a semester and are expected to attend departmental colloquia and at least one regular seminar. The number of graduate students ranges from 17 to 21, with an entering class of three to six each year. There have always been both male and female students, graduates of small colleges and large universities, and U.S. and international students, including, in recent years, students from Australia, Chile, Ecuador, Iran, Nepal and Turkey. All of the department's recent PhD recipients have obtained faculty positions. Some have subsequently moved to mathematical careers in industry and government.

For additional information, please visit wesleyan.edu/mathcs/graduate/ (http://www.wesleyan.edu/mathcs/graduate/).

AFFILIATED FACULTY

Tsampikos Kottos
BA, University of Crete; MS, University of Crete; PHD, University of Crete
Professor of Physics; Lauren B. Dachs Professor of Science and Society; Professor, Mathematics; Professor, Integrative Sciences

Mostafa Mirabi
PhD, Wesleyan University; MS, Amirkabir University of Technology; BS, Amirkabir University of Technology
Visiting Scholar in Mathematics

COMPUTER SCIENCE

COMP112 Introduction to Programming
The course will provide an introduction to a modern, high-level programming language including a discussion of input/output, basic control structures, types, functions, and classes. The lectures will also discuss a variety of algorithms as well as program design issues.

The second meeting time for each section is a computer lab.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

COMP112Z Introduction to Programming
This course will provide an introduction to imperative programming including a discussion of variables, basic control structures, and functions, with other topics as time permits. The lectures will also discuss a variety of algorithms as well as program design issues. The language is typically a standard high-level language like Java or Python, but the choice is up to the instructor, and may differ between different COMP 112 sections.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

COMP113 Bioinformatics Programming
This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL265, MB&B265, CIS265**
Prereq: **[MB&B181 or BIOL181]**

COMP113Z Bioinformatics Programming
This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics. MB&B/BIOL181 or POI: Those not meeting the prerequisite should contact the professor directly.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL265Z, CIS265Z, MB&B265Z**
Prereq: **MB&B181 OR BIOL181**

COMP114 How to Talk to Machines
How do we tell robots and computers how to do what they do? Getting a handle on this question is the goal of this course. Since telling a device how to do something depends a lot on what that device can do, along the way we will learn a bit about what is "in the box." We will start with the kind of programming one might use to instruct a robot how to interact with the world around it. That will lead us to the Turing machine, a beautiful mathematical model of a computer. We will adapt that model to something that is closer to how most computer systems today are designed. We will end with an introduction to high-level programming, learning the fundamentals of programming in a language such as Python or Java.

The goal of the course is to understand not just programming, but how computers are designed, and how those designs are reflected in the way we program them. After passing this course, students will have a basic knowledge of programming and how a computer works. COMP 114 can be used to satisfy the COMP 211 prerequisite and also the mathematics major "elementary knowledge of algorithms and computer programming" requirement.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

COMP114Z How to Talk to Machines
How do we tell robots and computers how to do what they do? Getting a handle on this question is the goal of this course. Since telling a device how to do something depends a lot on what that device can do, along the way we will learn a bit about what is "in the box." We will start with the kind of programming one might use to instruct a robot how to interact with the world around it. That will lead us to the Turing machine, a beautiful mathematical model of a computer. We will adapt that model to something that is closer to how most computer systems today are designed. We will end with an introduction to high-level programming, learning the fundamentals of programming in a language such as Python or Java.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

COMP115 How to Design Programs
In this course, students will learn to systematically design programs, going from a problem statement to a well-organized solution in a step-by-step fashion. We will apply these program design skills to many applications within computer science and in other disciplines. Students will develop their mathematical skills, because we will use a symbolic view of computation that explains the process of running a program as simple manipulations of its text. Students will also develop their technical reading and writing skills, such as understanding complex problem descriptions and precisely articulating the design of solutions. No prior experience with programming or computer science is expected.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

COMP116 Introduction to Programming and Machine Knitting
Knitting is a fabrication technique with a long history, producing items from everyday garments to e-textiles. Since the invention of the first knitting machine in 1589, knitting technology has evolved significantly, leading to the

sophisticated computerized knitting machines we use today. This course serves as an introduction to programming, computer science, and machine knitting, especially for students interested in textile design and making. Students will learn imperative programming using a high-level programming language, covering topics such as data types, control structures, functions, and objects. We will also cover how to program and operate a knitting machine. No prior knowledge in programming or knitting is required. This course provides an equivalent introduction to programming to COMP 112/113/114/115 and will satisfy any requirements or prerequisites that those courses satisfy.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-IDEA, NSM-MATH**
Identical With: **IDEA116**
Prereq: **None**

COMP131F Can Machines Think? (FYS)
In his 1950 article "Computing Machinery and Intelligence," Alan Turing considered the question "can machines think?" He proposed replacing it by a test, famously called the Turing test, or -- in Turing's words -- the imitation game, in which a subject can ask written questions to one of two hidden sources: a computer and a human being. The machine passes the test if its answers fool the subject into thinking it's the human being most of the time. In light of the quality of answers that we get from generative AI programs based on Large Language Models, such as chatGPT, can we say that the Turing test has been passed?

If one believes the answer is yes, or close enough to yes to warrant believing the moment is at hand, then Turing's reformulation of the "can machines think?" question is inadequate, because it's safe to say that few people believe chatGPT can think. In fact, it isn't even trying. That is to say, its creators aren't. As AI pioneer Geoffrey Hinton and others have pointed out, such programs are not implementing human thinking at all. And there is certainly no hint of a claim that consciousness is close to being reproduced by such programs, just imitated. Is that enough? I (and many others) are also interested in what I will call the rebound question: How does this sharpen or muddy our notion of what we humans are? (cf. B.F. Skinner's question "Can humans think?")

This brings to mind a trope that has had some vogue in philosophy of mind, namely the figure of the

zombie. Zombies are creatures "exactly like us in all physical respects but without conscious experiences." The subsequent literature on zombies is vast. One of many objections is that zombies cannot exist (Dennett). But, in the admittedly restricted but wide domain of expression in a natural language, aren't chatGPT and its progeny zombies? They cannot think or feel, have no concept of meaning, do not understand what they are doing, or anything else, but to an extent not remotely seen just a few years ago, they speak like us, more or less. Zombies bring into sharper focus the question: what's missing? What exactly is it that has to be added to zombies to make them conscious? This is the so-called hard problem of AI: how to define and reproduce consciousness.

Well, maybe there's another question coming round the bend. Will the two groups merge at some point? Will more and more refined imitations, possibly embodied, incorporating simulations (just simulations) of feelings, morality, pain, pleasure, be made and do much more? Will it turn out not just in theory, but backed up in practice that that's all we are? Are we Zombies 5.0?

These and other topics, including an introduction to programming with Python, the social and human

impact of AI, the issues in neuroscience, and philosophy of mind will be the subject of the course. Grading will be based on programs, essays, presentations, and three tests.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

COMP211 Computer Science I
This is the first course in a two-course sequence (COMP211-212) that is the gateway to the computer science major. It is intended for prospective computer science majors and others who want an in-depth understanding of programming and computer science. Topics to be covered in COMP211-212 include an introduction to the fundamental ideas of programming in imperative and functional languages, correctness and cost specifications, and proof techniques for verifying specifications.

Specifics such as choice of programming language, which topics are covered in which semesters, etc., will vary according to the tastes of the faculty offering the courses.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP112 OR COMP113 OR COMP114 OR COMP115**

COMP212 Computer Science II
This is the second course in a two-course sequence (COMP211-212) that is the gateway to the computer science major. It is intended for prospective computer science majors and others who want an in-depth understanding of programming and computer science. Topics to be covered in COMP211-212 include an introduction to the fundamental ideas of programming in imperative and functional languages, correctness and cost specifications, and proof techniques for verifying specifications.

Specifics such as choice of programming language, which topics are covered in which semesters, etc., will vary according to the tastes of the faculty offering the courses.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP211**

COMP260 Special Topics in Computer Science
This course is designed for nonmajors who wish to pursue some topic in computer science beyond introduction to programming. Topics will vary according to the instructor.
Offering: **Host**

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **QAC260**
Prereq: **COMP112**

COMP260A Software Design and Engineering
Programming is only one ingredient for creating industry-grade software. Eliciting requirements from stakeholders, modeling the architecture of a system, selecting appropriate development tools, and testing and maintaining a codebase are some of the aspects that elevate programming to software engineering. Focusing on the development of mobile and web apps, students in this course will gain expertise in common front-end and back-end technologies as well as related tooling. We will also cover the organization of software projects and their social implications, which are so important to recognize for the modern software engineer.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **COMP112**

COMP260B Scientific Computing
This course will introduce students from various disciplines to computing as applied to scientific problems. The course aims to provide a theoretical background in computational sciences and insight in understanding how popular algorithms and advances in hardware are used to solve problems drawn from chemistry, physics, biology, and bioinformatics. Topics covered will include simulation techniques, analysis of trajectories, clustering, probabilistic modeling, networks, artificial intelligence, neural networks, population dynamics, and high-performance computing.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP211**

COMP266 Bioinformatics
This course is an introduction to bioinformatics for students with interest in the life sciences. The course is similar to BIOL265 but only meets in the second half of the semester (with BIOL265) and is designed for students with programming background, ideally in Python. The course introduces problem areas and conceptual frameworks in bioinformatics and discusses programming approaches used in bioinformatics such as sequence matching and manipulation algorithms using dynamic programming, clustering analysis of gene expression data, analysis of genetic nets using Object Oriented Programming, and sequence analysis using Hidden Markov Models, Regular Expressions, and information theory.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL266, MB&B266, CIS266**
Prereq: **[MB&B181 OR BIOL181]**

COMP301 Automata Theory and Formal Languages
This course is an introduction to formalisms studied in computer science and mathematical models of computing machines. The language formalisms discussed will include regular, context-free, recursive, and recursively enumerable languages. The machine models discussed include finite-state automata, pushdown automata, and Turing machines.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP500**
Prereq: **COMP211 AND COMP212 AND MATH228**

COMP312 Algorithms and Complexity
The course will cover the design and analysis of efficient algorithms. Basic topics will include greedy algorithms, divide-and-conquer algorithms, dynamic programming, and graph algorithms. Some advanced topics in algorithms may be selected from other areas of computer science.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP510**
Prereq: **COMP212 AND MATH228**

COMP321 Design of Programming Languages
This course is an introduction to concepts in programming languages. Topics include parameter passing, type checking and inference, control mechanisms, data abstraction, module systems, and concurrency. Basic ideas in functional, object-oriented, and logic programming languages will be discussed.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP521**
Prereq: **COMP212 AND MATH228**

COMP323 Programming Language Implementation
This course is an introduction to the implementation of programming languages.

Students will learn how to formally describe and implement major components of the implementation pipeline. Topics may include lexical analysis and parsing (checking whether source code is well-formed and converting it to an internal programmatic representation), type-checking and -inference (static program analysis for safety features), interpretation (direct execution of a high-level language program), and compilation (translation to a low-level language such as assembly or bytecode).
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP523**
Prereq: **COMP212 AND MATH228**

COMP324 Program Analysis
Program analysis refers to techniques for describing program behavior as well as detecting "bad" behavior before execution or preventing it during execution. This course focuses specifically on information flow, where the goal is to ensure that secure or confidential information (such as passwords) is not transmitted to insecure or public channels. The course will cover techniques for describing program execution, how we describe permissible information flow, and dynamic (runtime) and static (compile-time) enforcement techniques.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP325 Logic and Functional Program Languages
Functional Programming Languages (Lisp, Scheme, ML, ocaml, Haskell, and many others) and Logic Programming Languages (Prolog, lambda-Prolog, etc.) have been developed within mathematical frameworks based on Logic. In this course, we will explore the basic structure of functional and logic programming

languages starting from the Mathematical Logic foundation that gave rise to them. This will give some deep and interesting insights into present and (likely) future programming language design.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP327 Evolutionary and Ecological Bioinformatics
Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL327, BIOL527, COMP527, CIS327**
Prereq: **[BIOL182 or MB&B182] OR [BIOL196 or MBB196] OR COMP112 OR COMP211**

COMP331 Computer Structure and Organization
The purpose of the course is to introduce and discuss the structure and operation of digital computers. Topics will include the logic of circuits, microarchitectures, microprogramming, conventional machine architectures, and an introduction to software/hardware interface issues. Assembly language programming will be used to demonstrate some of the basic concepts.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP531**
Prereq: **COMP212**

COMP332 Computer Networks
This course will provide an introduction to the fundamentals of computer networks. Computer networks have become embedded in our everyday lives, from the Internet to cellular phones to cloud networking, enabling applications such as email, texting, web browsing, on-demand video, video conferencing, peer-to-peer file sharing, social networking, cloud computing, and more. This course will delve into the infrastructure and protocols that have allowed computer networks to achieve their current ubiquity. While the primary focus of the course will be on the Internet's architecture, protocols, and applications, we will also touch on other types of computer networks. Programming assignments will be done using Python; prior knowledge of Python is not required.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 and MATH228**

COMP333 Software Engineering
Software engineering is the application of engineering principles to the software development process. Eliciting requirements from stakeholders, designing the architecture of a program, performing usability studies, and testing a codebase are some of the aspects that elevate program development to software engineering. Focusing on web and mobile apps, students in this course will gain expertise in state-of-the-art frontend, backend, and mobile technologies, as well as related tooling. We will also cover the collaborative organization of software projects, software licensing, software business models, and ethical considerations for professional software engineers.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **IDEA333**
Prereq: **COMP211 AND COMP212**

COMP334 Information Security and Privacy
This course explores principles and practical applications of computer security and privacy. Some of the topics covered include static and dynamic code analysis, secure authentication, privacy enhancing technologies, usable privacy and security, and web tracking. We will also touch upon theoretical areas, such as basic cryptographic concepts as well as differential privacy. The course has the objective to provide students with the conceptual knowledge and technical skills to identify and resolve privacy and security issues in the design, development, and evaluation of information systems.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP341 Artificial Intelligence
This course is an introduction to creating programs that appear to behave intelligently. Topics will include search algorithms for problem solving, as well as probabilistic reasoning, including regression, classification, and decision making. Sample topics include Bayesian networks, basic neural networks and reinforcement learning.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP343 Machine Learning
This course will provide an introduction to machine learning. The field of machine learning studies how to design systems that learn from experience. We will cover fundamental concepts and algorithms used in machine learning, as well as give an introduction to basic probability and statistics. Sample topics include regression, classification, Bayesian networks, Gibbs sampling, particle filtering, maximum likelihood estimation, neural networks, deep learning, clustering, bias/variance trade-offs, cross-validation, and practical advice. Programming assignments will be done using Python; prior knowledge of Python is not required.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP350 Computational Media: Videogame Development
This course examines the interplay of art and science in the development of contemporary videogames using the Unity development platform and commercial artistic game tools. Students develop a comprehensive understanding of computational media, including legal and commercial aspects, combined with hands-on experience in a creative process that integrates design, art, and coding. There will be discussions with invited industry leaders in various subject areas. Students will have the opportunity to work as part of development teams and create working prototypes to better understand the challenges and rewards of producing graphic interactive software within a professional context.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **2.00**
Gen Ed Area: **NSM-IDEA**
Identical With: **IDEA350, FILM250, CIS350**
Prereq: **None**

COMP353 Robotics
Students will use hands-on projects, building and programming Arduino-based robots to learn about the field of robotics. Topics will include perception, locomotion, localization, common programming frameworks for robotics, and ethical considerations. Some background in electronics and mechanical construction may be helpful but is not required.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **IDEA353**
Prereq: **COMP211**

COMP355 Computational Design and Fabrication
This course introduces students to computational design and fabrication, which is an exciting application of computing and lays the foundation for the future manufacturing industry. We will focus on how computing can support computational design and also working with fabrication technologies such as 3D printing and laser cutting. Lecture topics include hardware abstraction languages, geometry processing fundamentals, physics-based simulation, optimization techniques, and data-driven design methods. Hands-on activities will complement lectures, providing practical experience with fabrication hardware and software tools. No prior knowledge of fabrication is required. Some background in linear algebra (MATH 221 Vectors and Matrices or MATH 223 Linear Algebra) is helpful but not necessary. Students who have not taken one these classes may want to do some reading before the course or be prepared to learn some of that material as the course progresses.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **IDEA355**
Prereq: **COMP212 AND MATH228**

COMP360 Special Topics in Computer Science: Information Security and Privacy
This course explores principles and practical applications of computer security and privacy. Some of the topics covered include static and dynamic code analysis, secure authentication, privacy enhancing technologies, usable privacy and security, and web tracking. We will also touch upon theoretical areas, such as basic cryptographic concepts as well as differential privacy. The course has the objective to provide students with the conceptual knowledge and technical skills to identify and resolve privacy and security issues in the design, development, and evaluation of information systems.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP360A Special Topics in Computer Science
The course will be an introduction to automated reasoning for computer science. Decision procedures for the satisfiability of formulas of propositional logic and of various fragments of first-order equational theories will be covered. For the application part of the course, students will use the automated modeling tool Alloy to design and analyze software systems. Student work will include both mathematical exercises and programming exercises.
Offering: **Host**
Grading: **OPT**

COMP360B Special Topics in Computer Science
This course covers special topics in computer science. Topics will vary according to the instructor.

Spring 2026 topic: This course will give an introduction to quantum computing, cryptography, and communication from a computer science perspective. Basic concepts such as qubits, entanglement, teleportation, quantum gates, and quantum measurements will be introduced, and key algorithms such as Simons', Shor's and Grover's will be covered. This course will additionally involve some coding using Qisket. Some background in linear algebra (e.g., MATH 221 or 223) and probability (e.g., MATH 132) is highly recommended, though the basics will be reviewed at the start of the course.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP360C Special Topics in Computer Science: Computer-Checked Programs and Proofs
There is a strong correspondence between mathematics and programming, under which mathematical proofs correspond to programs. A _proof assistant_ is a tool that a mathematician/programmer can use to represent proofs/programs, in such a way that a computer can verify whether or not they are correct. The use of proof assistants in math and computer science is becoming ever more important for managing the increasing complexity of proofs and programs. Proof assistants have been used to check significant mathematical theorems, such as the Four Color Theorem and the Feit-Thompson Odd-Order Theorem, as well as large pieces of software, such as a C compiler and the definition of the Standard ML programming language. In this course, students will learn to use the Agda proof assistant to write computer-checked programs and proofs.

Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP360E Special Topics in Computer Science: Functional Data Structures
Advanced data structures from a functional programming perspective. The focus will be on the use of lazy evaluation as a technique for designing efficient

data structures, especially in the presence of persistence (when the state of the structure must be preserved even after updates). Assessment will consist primarily of programming and written assignments.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **COMP212 AND MATH228**

COMP360G Special Topics in Computer Science: High Performance Scientific Computing
Students will learn about high performance computing techniques as applied to scientific computations. We will work on Wesleyan's high performance computing (HPC) cluster, gaining familiarity with the HPC environment including the BASH shell and the multiuser queueing system for job submissions. We will design and implement high performance python code, including how to take advantage of parallel processing in central processing units (CPUs) and graphical processing units (GPUs).

We will consider the AMBER molecular dynamics package as a case study of a professional high performance computing package illustrating highly performant code optimized at many levels, and survey a selection of other packages for comparison. The final project will enable students to explore the major themes of the course as applied to their particular areas of interest.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **COMP212 AND MATH228**

COMP360H Topics in Computer Science: Static Program Analysis
Static program analysis refers to a collection of techniques for analyzing source code to predict execution behavior. It is used for areas such as compiler optimization, programming error detection, and security analysis. This course will focus on the latter two areas, to explore fundamental techniques and concepts. There will be foundational and programming work centered around a medium-scale project.

This course may be used to satisfy the PL Core Area requirement for the COMP major.
Offering: **Host**

Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

COMP521 Design of Programming Languages
This course is an introduction to concepts in programming languages. Topics include parameter passing, type checking and inference, control mechanisms, data abstraction, module systems, and concurrency. Basic ideas in functional, object-oriented, and logic programming languages will be discussed.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP321**
Prereq: **COMP212 AND MATH228**

COMP523 Programming Language Implementation
This course is an introduction to the implementation of programming languages.

Students will learn how to formally describe and implement major components of the implementation pipeline. Topics may include lexical analysis and parsing (checking whether source code is well-formed and converting it to an internal programmatic representation), type-checking and -inference (static program analysis for safety features), interpretation (direct execution of a high-level language program), and compilation (translation to a low-level language such as assembly or bytecode).
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP323**

Prereq: **COMP212 AND MATH228**

COMP527 Evolutionary and Ecological Bioinformatics
Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

MATH114 History and Philosophy of Mathematics (for Everyone) (FYS)
Mathematical knowledge is a pinnacle of human knowledge and achievement, so we will never have an adequate account of human knowledge until mathematical knowledge is properly understood. For this reason, the course addresses the question: How do we come to know mathematical truths? What is distinctive about the course is that we will try to answer this philosophical question via scientifically, culturally, and historically informed reflection. This "humanizes" mathematical thought by finding its origins in humans (and in animals), and by finding it in specific cultural contexts and practices and in the historical expression and transmission of ideas. We will reflect on examples of proto-mathematical practices (measurement, record-keeping, writing), on the cognitive or psychological limitations that we overcome mathematics, as well as on some of the history of properly mathematical practices (arithmetic, geometry, algebra). We will identify the distinctive features of various mathematical practices and ask why they take the forms they do and what general morals can be drawn from them. You will also be invited to draw a philosophical moral about the nature of mathematical truth. Meetings will be a mixture of lectures, discussion, and review. Assignments will include writing assignments, problem sets, and "explainer" presentations in which you explain what's going on in a given passage. Hints and pointers about the readings will be provided. Never fear; no calculus will be presupposed or taught!

Gen Ed Area: **NSM-PHIL**
Identical With: **PHIL229F**
Prereq: **None**

MATH114F History of Math (Is for Everyone!) (FYS)
Mathematics is often taught as an abstract realm of eternal truths. The aim of this course is to "humanize" mathematical thought by re-embedding it in specific cultural contexts, material practices, and the historical transmission of ideas. We will focus on developments in geometry and algebra (and their interaction) in Ancient Greece, Medieval Islam, and Renaissance Europe, culminating in the analytic geometry of René Descartes. The principal aim of the course, however, is not to equip students with specific mathematical skills that they will go on to exercise in other contexts; it is rather to identify and reflect on the distinctive features of culturally specific mathematical practices and why they take the form they do. This will involve doing a good deal of math, but that mathematical study will be wedded to historical and philosophical inquiries. Historically, we will study the relation of particular mathematical practices to other cultural activities (commerce, taxation, the arts, etc.), their dissemination across space and time (through different places, cultures, and generations), and how their reception in different places and ages has led to transformations in the practices themselves.

We will make use of Special Collections to consider different ways mathematics has been performed and preserved in writing, the role of mathematical texts in education, and the material transmission of mathematical knowledge: e.g., how a demonstration makes its way from Syracuse in 250 BC into a textbook printed in the United States over 2000 years later. Philosophically, we will interrogate the notion of mathematical proof by considering different methods of demonstration (reductio, construction, exhaustion, induction, analysis) and identifying the principles of adequacy to which they appeal. We will also reflect on the forms in which mathematical knowledge is presented (axiomatic systems, treatises, problems, theorems, methods) and ask what makes a result significant or generative in a specific tradition or paradigm. No special mathematical background is presupposed, but the class will require significant effort of everyone, regardless of mathematical experience. It is difficult to internalize the intellectual styles of different mathematical paradigms and to appreciate their distinctive methods and results. Some results (such as the Pythagorean theorem) will be familiar, but our approach to them likely will not be. There will be problem sets and tutorial sessions to help us digest the mathematical content. Assignments will include art projects, essays, problem sets, and "explainer" presentations.

MATH117 Introductory Calculus
This course is designed to introduce basic ideas and techniques of differential calculus. Students should enter with sound precalculus skills but with very limited or no prior study of calculus. Topics to be considered include differential calculus of algebraic, exponential, and logarithmic functions. (Integral calculus will be introduced in MATH118.)
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH118 Introductory Calculus II: Integration and Its Applications
This course continues MATH117 and is designed to introduce basic ideas and techniques of calculus. Students should enter MATH118 with sound precalculus skills and with very limited or no prior study of integral calculus. Topics to be considered include differential and integral calculus of algebraic, exponential, and logarithmic functions.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH119 Elements of Calculus, Part I
This course is the first half of a two-semester calculus sequence (MATH119, MATH120). This sequence is designed for students who have not previously studied calculus. The course, together with MATH120, will cover limits, derivatives, and integrals. Exponential, logarithmic, and trigonometric functions will be introduced and their calculus will be studied. Applications of calculus to biology, economics, physics, and/or other fields will be emphasized.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH120 Elements of Calculus, Part II
This course is the second half of a two-semester calculus sequence. This sequence is designed for students who have not previously studied calculus. The course, together with MATH119, will cover limits, derivatives, and integrals. Exponential, logarithmic, and trigonometric functions will be introduced and their calculus will be studied. Applications of calculus to biology, economics, physics, and/or other fields will be emphasized.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH119**

MATH121 Calculus I
MATH121, together with MATH122, will cover both theoretical and practical aspects of limits, derivatives, and integrals; the calculus of exponential, logarithmic, trigonometric, and inverse trigonometric functions; techniques of integration; plane analytic geometry; various applications of calculus; and sequences and series, including power series and intervals of convergence.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH122 Calculus II
The continuation of MATH121. Topics covered include techniques and applications of integration and an introduction to sequences and series.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH123F Mathematical Deduction with Calculus (FYS)
This course is a first-year seminar (FYS). Topics covered include techniques and applications of integration and an introduction to sequences and series, with an emphasis on mathematical writing. Weekly papers will be required.It is suitable for students who have already taken calculus and are interested in pursuing the mathematics major. Students may not receive credit for both MATH 122 and MATH 123.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH121**

MATH132 Elementary Statistics
Topics included in this course are organizing data, central measures, measures of variation, distributions, sampling, estimation, conditional probability (Bayes' theorem), hypothesis testing, simple regression and correlation, and analysis of variation.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH133 Intermediate Statistics
This class continues the study of statistics begun in MATH 132. Topics will include experimental design, ANOVA, multiple regression, non-parametric tests, and further topics as time permits. This course is an ideal continuation for students who have taken MATH 132 or who got a 4 or 5 on the AP Statistics exam and who wish to deepen their statistics knowledge.
Offering: **Host**

Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH132**

MATH134F Mathematical Thinking (FYS)
In this course we seek to illustrate for the students that mathematics is an organic way of thinking, with a beauty and elegance of its own, that also includes its essential applications to many concrete physical models. Students will learn the techniques of mathematical writing, as well as take a survey of important mathematical topics.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH211 Problem Solving for the Putnam
This course will explore the problems and problem-solving techniques of the annual William Lowell Putnam mathematical competition. Particular emphasis will be placed on learning to write clear and complete solutions to problems. The competition is open to all undergraduate students.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH221 Vectors and Matrices
This is a course on the algebra of matrices and vector spaces. It emphasizes a concrete approach to the material. Topics include solving systems of linear equations, vector algebra, matrix algebra, properties of invertible matrices, determinants, the vector space Rn and its subspaces, dimension, and linear transformations. It concludes with a discussion of eigenvalues, eigenvectors, and matrix diagonalization. If time permits, additional topics such as the dot product, the Gram-Schmidt process, and basic aspects of vector spaces will be discussed. MATH 221 and MATH 223 cover very similar material, but they are intended for students with different experience in mathematics. MATH 221 takes a more concrete approach to the material, and it is suitable for students who have not yet engaged with proof-based mathematics. MATH 223 takes a more theoretical approach that is appropriate for students who have taken proof-based math courses already or for students with strong mathematics backgrounds who are willing to learn how to read and write proofs in parallel with linear algebra. MATH 221 and MATH 223 fulfill the same requirement for the mathematics major, and students need only select the option that is best suited to their current background in mathematics.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH122**

MATH222 Multivariable Calculus
This course treats the basic aspects of differential and integral calculus of functions of several real variables, with emphasis on the development of calculational skills. The areas covered include scalar- and vector-valued functions of several variables, their derivatives, and their integrals; the nature of extremal values of such functions and methods for calculating these values; and the theorems of Green and Stokes.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH223 Linear Algebra
This is a first course on linear algebra. It emphasizes a theoretical approach to the material. Topics include vector spaces, subspaces, dimension, linear transformations and matrices, determinants, eigenvalues and eigenvectors, and diagonalization of linear operators. If time permits, additional topics such as inner product spaces, Hermitian and unitary transformations, and elementary spectral theory will be discussed. MATH 221 and MATH 223 cover very similar material--they are both linear algebra courses--but they are intended for students with different experience in mathematics. MATH 223 takes a more theoretical approach that is appropriate for students who have taken proof-based math courses already or for students with strong mathematics backgrounds who are willing to learn how to read and write proofs in parallel with linear algebra. MATH 221 takes a more concrete approach to the material, and it is suitable for students who have not yet engaged with proof-based mathematics. MATH 221 and MATH 223 fulfill the same requirement for the mathematics major, and students need only select the option that is best suited to their current background in mathematics.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH122**

MATH225 Introduction to Real Analysis
In this rigorous treatment of calculus, topics will include, but are not limited to, real numbers, limits, sequences and series, continuity and uniform continuity, differentiation, the Riemann integral, sequences and series of functions, pointwise and uniform convergence of functions, and interchange of limiting processes. MATH228 or comparable experience in writing mathematical proofs is strongly recommended for success in this course.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **(MATH222 AND MATH221) OR (MATH222 AND MATH223)**

MATH226 Complex Analysis
This course will present the basic properties of complex analytic functions. We begin with the complex numbers themselves and elementary functions and their mapping properties, then discuss Cauchy's integral theorem and Cauchy's integral formula and applications, Taylor and Laurent series, zeros and poles and residue theorems, the argument principle, and Rouche's theorem. In addition to a rigorous introduction to complex analysis, students will gain experience in communicating mathematical ideas and proofs effectively.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **(MATH222 AND MATH221) OR (MATH222 AND MATH223)**

MATH228 Discrete Mathematics
This course is a survey of discrete mathematical processes. Students will be introduced to the process of writing formal mathematical proofs, including mathematical induction. Topics may include set theory, logic, number theory, finite fields, permutations, elementary combinatorics, or graph theory.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **None**

MATH229 Differential Equations
This course is an introduction to the theory of ordinary differential equations. Topics will include existence and uniqueness theorems as well as techniques to

solve systems of equations, with applications in pure mathematics and related fields such as physics, chemistry or biology.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **(MATH221 AND MATH222) OR (MATH222 AND MATH223)**

MATH231 An Introduction to Probability
This course teaches the basic theory of probability. Although the notions are simple and the mathematics involved require only a basic knowledge of the ideas of differential and integral calculus, a certain degree of mathematical maturity is necessary. The fundamental concepts to be studied are probability spaces and random variables, the most important ideas being conditional probability and independence. The main theorems we will study are the law of large numbers and the central limit theorem.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH222 AND MATH228**

MATH232 Mathematical Statistics
This course covers the basic notions of estimation, hypothesis testing, regression, analysis of variance, experimental design, and other topics in statistics from a rigorous mathematical perspective. This material will be supplemented by various case studies.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH231**

MATH233 Stochastic Processes
This course provides a rigorous introduction to the theory of stochastic processes. Topics include a review of basic concepts of probability theory (probability spaces, random variables, expectation), Markov chains, Poisson processes, random walks, and Brownian motion. Students entering the course should have completed MATH231, and be comfortable with multivariable calculus and linear algebra.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH231**

MATH241 Set Theory
A course on axiomatic set theory, emphasizing its dual role as a foundation upon which the rest of mathematics can be built, and as a rich subject in its own right, primarily concerned with the nature of the infinite. The axioms of Zermelo-Fraenkel Set Theory (ZFC); the interpretation of mathematical concepts, including the standard number systems, inside set theory; finite, countable, and uncountable sets; cardinal and ordinal numbers and their arithmetic; transfinite induction and recursion; the role of the Axiom of Choice; the cumulative hierarchy of sets.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH242 Knot Theory
This course is an introduction to topology, the study of space in a general sense. We will approach topology through knot theory, the study of embeddings of a circle in a three-dimensional space.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH243 Mathematical Logic
This course is an introduction to mathematical logic, including first-order logic and model theory, axiomatic set theory, and, as time permits, Goedel's incompleteness theorem.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH244 Topology: Point Set
This is an introduction to general topology, the study of topological spaces. We will begin with the most natural examples, metric spaces, and then move on to more general spaces. This subject, fundamental to mathematics, enables us to discuss notions of continuity and approximation in their broadest sense. We will illustrate topology's power by seeing important applications to other areas of mathematics.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH246 Applied Topology
This course teaches the main concepts in Applied Topology. Students will learn to apply nonlinear methods to analyze the shape of data sets. These approaches are drawn from classical topology and focus on the shape in one of two ways: they either 'measure' it, that is count the occurrences of patterns within the data set; or build combinatorial representations of the data set. As an example of the former, we will look at persistent homology, whereas the latter will be represented by mapper. The topics covered include: basic notions from topology, simplicial complexes (Cech complexes, Vietoris-Rips complexes, etc.), homology, persistent homology and applications, mapper.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH223**

MATH247 Applied Linear Algebra
This is a course on topics in linear algebra that are the foundations of modern data science and machine learning. Topics include dimensionality reductions, matrix decompositions, elementary spectral theory, multivariate optimizations, and their applications to machine learning such as gradient descent and support vector machines.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **(MATH221 OR MATH223) AND MATH222**

MATH252 Differential Forms
This class will be an introduction to differential forms, a central tool in modern topology, geometry, and physics. The course begins where MATH222 ends, with Green's theorem, the divergence theorem, and Stokes' theorem. All of these theorems are special cases of one theorem, known as the general Stokes' theorem, about integration of differential forms. The objective of the first part of the course will be to understand and prove this theorem. We will then

discuss manifolds and what can be learned about them using differential forms, concentrating on de Rham cohomology.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **(MATH221 AND MATH222) OR (MATH222 AND MATH223)**

MATH255 Advanced Topics in Real Analysis
Topics to be addressed include convergence of sequences and series of functions, spaces of functions and their topologies, the Lebesgue integral (on the line) and its basic convergence theorems, and Fourier series.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH225**

MATH261 Introduction to Abstract Algebra
This course is an introduction to abstract principles based on the special properties of the integers, rational, real and complex numbers. The course will cover general algebraic structures as well as their quotients and homomorphisms, with emphasis on fundamental results about groups and rings.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **(MATH221 AND MATH228) OR (MATH223 AND MATH228)**

MATH262 Advanced Topics in Abstract Algebra
This second course in abstract algebra will cover fields and polynomial rings, as well as Galois theory and the insolvability of the quintic polynomial. Additional topics will be covered as time permits.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH261**

MATH264 Algebraic Geometry
This course is an introduction to algebraic geometry, the study of the geometric structure of solutions to systems of polynomial equations. These may take the form of lines, circles, parabolas, ellipses, hyperbolas, elliptic curves, leminiscates or Cassini ovals.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH261**

MATH265 Mathematics of Quantum Computing
This is a one-semester course introducing students to the mathematics of quantum computing. No prior understanding of quantum mechanics will be assumed. However, the course will rely heavily on material from linear algebra, and will also assume students are familiar with basic concepts from group theory. Classical computers store information in the form of bits -- a binary state of zero or one. In a quantum computer, information is processed in the form of qubits, which can exist not just in these two classical states, but in combinations of these two states -- this is the notion of superposition. In this course, we study how to model the fundamental notions of quantum computing with mathematics, and explore the ways quantum computing may supersede classical computing for certain tasks. The precise topics covered will depend in part on the backgrounds and interests of enrolled students, but primary topics for the course include Bell's inequality, Shor's algorithm, and Grover's search algorithm. Other aspects of quantum computing will be explored as time permits.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH261 AND (MATH221 OR MATH223)**

MATH271 Error-Correcting Codes
Nowadays messages are sent electronically through different kinds of communication channels. Most of these channels are not perfect and errors are created during the transmission. The object of an error-correcting code is to encode the data so that the message can be recovered if not too many errors have occurred. The goal of this course is to introduce the basic mathematical ideas behind the design of error-correcting codes. It makes use of algebraic techniques involving vector spaces, finite fields, and polynomial rings. These techniques will be developed in this course so that prior knowledge is not necessary.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH221 OR MATH223**

MATH272 Elementary Number Theory
This is a course in the elements of the theory of numbers. Topics covered include divisibility, congruences, quadratic reciprocity, Diophantine equations, and a brief introduction to algebraic numbers.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH273 Combinatorics
This course will present a broad, comprehensive survey of combinatorics. Topics may include partitions, the topic of inclusion-exclusion, generating functions, recurrence relations, partially ordered sets, trees, graphs, and min-max theorems.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH274 Graph Theory
A graph is a set V of elements called vertices and a set E of pairs of elements of V called edges. From this simple definition, many elegant models have been developed. Indeed, graph theory is essential to applications of computer science to network analysis and planar mapping.

This course will be an introduction to graph theory and its applications.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH228**

MATH283 Differential Geometry
This course is an introduction to the classical differential geometry of curves and surfaces in Euclidean 3-space. Topics from global differential geometry and extensions to higher dimensions will be considered as time and the background of the students permit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

Gen Ed Area: **NSM-MATH**
Prereq: **(MATH222 AND MATH221) OR (MATH222 AND MATH223)**

MATH284 Euclidean and Non-Euclidean Geometry
Euclid developed an axiomatic system to describe plane geometry in 300 BC. This system is fundamental to our understanding of mathematics today. In this course, we will compare and contrast plane geometry and its axiomatic system with several beautiful geometries, including spherical, elliptical and hyperbolic geometries, and their applications.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH222 AND (MATH221 OR MATH223)**

MATH285 Introduction to Lie Theory
Lie theory is a fundamental area of mathematics, with many applications to physics and other sciences. In this course, we will study the basics of elementary Lie theory. This course will focus on matrix groups, which have concrete descriptions and include all of the Lie groups that commonly arise in applications. Topics covered in this class will include the algebra and topology of matrix groups, Lie algebras, matrix exponentiation, and applications.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Prereq: **MATH261**

MATH401 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH402 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH407 Senior Tutorial (downgraded thesis)
Downgraded Senior Thesis Tutorial - Project to be arranged in consultation with the tutor. Only enrolled in through the Honors Coordinator.
Offering: **Host**
Grading: **A-F**

MATH408 Senior Tutorial (downgraded thesis)
Downgraded Senior Thesis Tutorial - Project to be arranged in consultation with the tutor. Only enrolled in through the Honors Coordinator.
Offering: **Host**
Grading: **A-F**

MATH409 Senior Thesis Tutorial
Topics to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH410 Senior Thesis Tutorial
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH411 Group Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH412 Group Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH419 Student Forum
Student-run group tutorial, sponsored by a faculty member and approved by the chair of a department or program.
Offering: **Host**
Grading: **Cr/U**

MATH421 Undergraduate Research, Science
Individual research projects for undergraduate students supervised by faculty members.
Offering: **Host**
Grading: **OPT**

MATH422 Undergraduate Research, Science
Individual research projects for undergraduate students supervised by faculty members.
Offering: **Host**
Grading: **OPT**

MATH423 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

MATH424 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

MATH465 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

MATH466 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

MATH469 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH470 Independent Study, Undergraduate
Credit may be earned for an independent study during a summer or authorized leave of absence provided that (1) plans have been approved in advance, and (2) all specified requirements have been satisfied.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **None**

MATH491 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

MATH492 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

MATH495 Research Apprentice, Undergraduate
Project to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **Cr/U**

MATH496 Research Apprentice, Undergraduate
Project to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **Cr/U**

MATH500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop before the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **ASTR500, CHEM500, BIOL500, E&ES500, MB&B500, MUSC500, PHYS500, PSYC500**
Prereq: **None**

MATH501 Individual Tutorial, Graduate
Topic to be arranged in consultation with tutor.
Offering: **Host**
Grading: **OPT**

MATH502 Individual Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH503 Selected Topics, Graduate Sciences
Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **OPT**

MATH504 Selected Topics, Graduate Sciences
Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **OPT**

MATH507 Topics in Combinatorics
A graph is a set of vertices with an accompanying set of pairs of vertices, called edges. Given a set of searchers, a vertex search is a series of steps in which a searcher is either placed on or removed from a vertex in the graph. When both incident vertices of an edge simultaneously contain a searcher, then the edge is said to be cleared. The question of what is the minimum number of searchers needed to clear a graph is related to deep theorems of the structure of graphs, such as theorems about the pathwidth and treewidth of graphs. Graph searching and its variants are related to the game of Cops and Robbers (also called the pursuit-and-evasion game) which has applications in many areas, including robot movements and network security. A partially ordered set (poset) is a set with an order relation that is reflexive and transitive. Finite posets are used as finite models for topological spaces, which can describe large data sets. We will study both their topological and algebraic properties, including the Moebius and zeta functions, R-labelings, shellable labelings, lexicographically shellable labelings, and their homology. Special cases of posets such as Cohen-Macaulay posets, lattices, and modular and distributive lattices will be important examples. These topics are being used in current work in topological data science.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH509 Model Theory
An introduction to model theory: The syntax and semantics of first-order logic, definability, compactness and Löwenheim-Skolem theorems, realizing and omitting types, quantifier elimination and model completeness, countable models of complete theories.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH511 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH512 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MATH513 Analysis I
MATH513 and MATH 514 constitute the first-year graduate course in complex analysis, real analysis, and functional analysis. The Fall semester is devoted to complex analysis and measure theory. Fall topics include holomorphic functions, Cauchy's theorem, Cauchy's integral formulas, analytic continuation, the calculus of residues, the maximum modulus principle, and conformal mappings; sigma algebras, Borel measures, Lebesgue-Stieltjes measures, measurable functions, the dominated convergence theorem, Egorov's theorem, and Littlewood's principles. Spring topics continue with the development of measure theory before moving on to functional analysis. Spring topics may include product measures, Fubini's theorem, and the Radon-Nikodym theorem; Banach spaces, Hilbert spaces, linear functionals, linear operators, the Banach-Alaoglu theorem, and the Hahn-Banach theorem.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH514 Analysis I
MATH513 and MATH 514 constitute the first-year graduate course in complex analysis, real analysis, and functional analysis. The Fall semester is devoted to complex analysis and measure theory. Fall topics include holomorphic functions, Cauchy's theorem, Cauchy's integral formulas, analytic continuation, the calculus of residues, the maximum modulus principle, and conformal mappings; sigma algebras, Borel measures, Lebesgue-Stieltjes measures, measurable functions, the dominated convergence theorem, Egorov's theorem, and Littlewood's principles. Spring topics continue with the development of measure theory before moving on to functional analysis. Spring topics may include product measures, Fubini's theorem, and the Radon-Nikodym theorem; Banach spaces, Hilbert spaces, linear functionals, linear operators, the Banach-Alaoglu theorem, and the Hahn-Banach theorem.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH515 Analysis II
This is a topics course in analysis and varies from year to year. It may be repeated for credit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH516 Analysis II
This is a topics course in analysis and varies from year to year. It may be repeated for credit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **MATH513**

MATH523 Topology I
This course is an introduction to topological spaces and the fundamental group; topological spaces, continuous maps, metric spaces; product and quotient spaces; compactness, connectedness, and separation axioms; and introduction to homotopy and the fundamental group.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH524 Topology I
A continuation of MATH523, this course will be an introduction to algebraic topology, concentrating on the fundamental group and homology.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH525 Topology II: Topics in Topology
This is a topics course in topology that varies from year to year. This course may be repeated for credit. Recent topics have included knot theory, homotopy theory, Lie groups, and topological graph theory.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH526 Topology II
This is a topics course in topology that varies from year to year. It may be repeated for credit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH543 Algebra I
This course covers group theory including Sylow theorems, and basic ring and module theory, including structure of finitely generated modules over principal-ideal domains.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH544 Algebra I
This course studies Galois theory, finitely generated modules over principal-ideal domains, and other topics as time permits.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH545 Algebra II: Topics in Algebra
This is a topics course in algebra that varies from year to year. This course may be repeated for credit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH546 Algebra II
This is a topics course in algebra that varies from year to year. It may be repeated for credit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MATH549 Advanced Research Seminar, Graduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

MATH550 Advanced Research Seminar, Graduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

MATH572 Special Topics in Mathematics
This is a supervised reading course on advanced topics in number theory. This course may be repeated for credit.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**

Prereq: **None**

COMPUTER SCIENCE MAJOR

MAJOR DESCRIPTION

The Major in Computer Science (COMP) gives students an understanding of the foundational concepts and technical tools used for solving computational problems and building computational systems. Students learn to program in high-level programming languages, analyze the efficiency and correctness of programs, and create original computational structures. Each students course of study is planned in consultation with their faculty advisor and the department's advisory committee.

Computer science spans a spectrum between mathematics and engineering, and students choose to study computer science for a variety of reasons. For example, a COMP major might be interested in the mathematical foundations of computation and programming, or in creating software and hardware systems, or in the applications to other fields of study. To that end, the Computer Science program helps students both to develop a rigorous foundation of logical and mathematical thinking and to apply those foundations in a principled way to topics including robotics, privacy, networks, computational science, and the foundations themselves.

After graduation, Computer Science majors pursue a range of advanced study and professional roles. Some students go on to advanced study in masters and PhD programs in computer science, software engineering, computer engineering, computational science, and related fields. Some students go on to professional roles in fields such as software engineering, data science, cybersecurity, information systems, and information technology. These roles span various industries, including technology, finance, healthcare, and entertainment. Some students complete a second major in addition to computer science and apply computational skills in a job or further degree program related to their second major.

ADMISSION TO THE MAJOR

To declare the computer science major, a student must have

- earned a C- or higher in COMP211;
- either earned a C- or higher in COMP212 or be enrolled in COMP212 and be earning a grade of C or higher based on completed work; and
- either earned a C- or higher in MATH228 or MATH261 or be enrolled in MATH228 or MATH261 and be earning a grade of C or higher based on completed work.
- Courses taken in Spring 2020, Fall 2020, or Spring 2021 may be taken Cr/U to satisfy the major declaration requirements, in which case a student must have earned Cr.

MAJOR REQUIREMENTS

To complete the computer science major, a student must complete the following courses:

Code	Title	Hours
Gateway Courses		
COMP211 & COMP212	Computer Science I and Computer Science II	2
Core Courses*		**4**
Electives		
Any COMP courses 300-level or higher except COMP409 and COMP410		2
Mathematical Foundations		
MATH228	Discrete Mathematics	1
or MATH261	Introduction to Abstract Algebra	
Any other MATH course 200-level or higher		1
Total Hours		**10**

* Must take one course from each of the following four areas:

- Models of computation: any **COMP** course numbered **300-305**.
- Algorithms: any **COMP** course numbered **310-315**.
- Programming languages: any **COMP** course numbered **320-325**.
- Systems: any **COMP** course numbered **330-335**.

Notes:

- No course may be used to satisfy more than one requirement.
- At most one individual or group tutorial may be used to satisfy major requirements unless prior approval is given.
- An individual or group tutorial may be used to satisfy a core area requirement only if prior approval is given.
- Only 1.0-credit courses taken A–F may be used to satisfy major requirements.
- Courses taken in Spring 2020, Fall 2020, or Spring 2021 may be taken Cr/U to satisfy major requirements, in which case a student must have earned Cr.
- In some circumstances, a 1.0 credit graded research experience may be split over 2 consecutive semesters. Such an experience must include work that is equivalent to a 1.0 credit graded 300-level course. The faculty member directing the research must request approval from CADCOM prior to the end of the first semester; the student may not make this request independently.

STUDENT LEARNING GOALS

- Understanding abstraction: At its heart, computer science is the study of abstractions for the purpose of understanding computation, and as such, students must learn appropriate levels of abstraction for solving computational problems. All courses in the curriculum contribute to this goal.
- Programming: Students must learn how to program in a high-level language, as such programming is the primary tool in computer science. This is typically

how students are first exposed to the field, and our majors achieve this goal in their first or sophomore years by taking the gateway sequence COMP211–212.

- Analysis: Students must learn how to reason about computation; this includes analyzing algorithms and proving properties such as correctness and complexity, and requires an understanding of appropriate mathematical tools. The courses that focus primarily on this goal are COMP312 (Design and Analysis of Algorithms) and COMP321 (Design of Programming Languages).
- Creation: Students must learn how to create original computational structures; this requires an understanding of fundamental techniques in algorithm and data structure design and an ability to combine established techniques in novel ways. All courses in the curriculum contribute to this goal.
- Limits: Students must understand not only how to analyze and create computational structures, but also the limits of computation itself; this requires an understanding of the mathematical foundations and formalisms of computer science. This goal is primarily addressed in COMP301 (Automata Theory and Formal Languages).

TRANSFER CREDIT

The transfer credit policy for the COMP major is:

- You can transfer at most 2 courses per semester (or summer, or winter session) away towards the COMP major.
- You can transfer at most 4 courses in total towards the COMP major.
- You must take at least 2 of COMP211, COMP212, and MATH228 at Wesleyan.
- You must take at least three 300-level COMP courses used to satisfy the major requirements at Wesleyan.

RELATED PROGRAMS OR CERTIFICATES

Informatics and Modeling Certificate. The department is an active participant in the Informatics and Modeling Certificate (wesleyan.edu/imcp (http://wesleyan.edu/imcp)). The certificate provides a framework to guide students in developing analytical skills based on the following two pathways:

- Computational Science and Quantitative World Modeling (CSM): wesleyan.edu/imcp/csm.html (http://wesleyan.edu/imcp)
- Integrative Genomic Sciences (IGS): wesleyan.edu/imcp/igs.html (http://wesleyan.edu/imcp)

The CSM pathway introduces students to modeling techniques and provides students with a foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena. The IGS pathway introduces students to the interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics. The department offers courses that support both pathways, such as COMP211 and COMP212, and also offers special interdisciplinary courses for the IGS pathway, such as COMP327 and COMP350. The certificate requirements are described in the links for the two pathways.

BA/MA PROGRAM

This program provides an attractive option for mathematics and computer science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit wesleyan.edu/grad/degree-programs/ba-ma.html (http://wesleyan.edu/grad/degree-programs/ba-ma.html). Advanced undergraduates may enroll in graduate (**500-**level) courses.

ADDITIONAL INFORMATION

COLLOQUIA AND SEMINARS

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in the computer science seminar.

HONORS

An undergraduate may achieve the BA with honors in computer science via the following route:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.

CAPSTONE EXPERIENCE

We encourage all students to participate in faculty research via individual tutorials and/or a Senior thesis. There is no mandatory capstone experience.

MATHEMATICS MAJOR

MAJOR DESCRIPTION

The Major in Mathematics broadly explores the relationships between numbers, shapes, measurements, structures, and patterns. Students gain strong computational abilities, abstract mathematical reasoning skills, an understanding of how to apply mathematical theories in practice, and the ability to write and speak clearly and elegantly about mathematics.

Students who are interested in developing strong analytical reasoning and logical thinking skills, attention to detail, and persistence in tackling complex problems should consider majoring in mathematics.

Mathematics majors graduate with knowledge and skills that are valued in many fields, including data analysis, software development, accounting, finance, insurance, operations, statistics, quantitative research, business, the physical and biological sciences, engineering, and education.

ADMISSION TO THE MAJOR

Every student is welcome to major in mathematics. Students are advised to finish calculus up to MATH222 and linear algebra (either MATH221 or MATH223), and MATH228 before making the decision.

MAJOR REQUIREMENTS

- A year of differential and integral calculus (typically MATH121 and MATH122)
- MATH221 or MATH223
- MATH222
- An elementary knowledge of algorithms and computer programming. (Successful completion of either COMP112 or COMP211 satisfies this requirement.)
- MATH261 and MATH225 (recommended for juniors or seniors)
- A coherent selection of four additional electives, chosen in consultation with an advisor from the department. Any 1.0 credit **MATH** course at the **200+** level can be used as an elective for the major.

Notes:

- Students who have completed a year of calculus in high school may place out of one or both of MATH121 and MATH122.
- An AP score of 4 or 5 on the AB calculus exam indicates the student should begin in MATH122.
- An AP score of 4 or 5 on the BC calculus exam indicates the student should consider beginning in any of MATH221, MATH222, or MATH223.
- Students may not earn credit for both MATH221 and MATH223.
- Students must complete either MATH228 or MATH261 by the end of their junior year.
- With advance approval from the departmental advisory committee, mild adjustments are allowed. For example, a Wesleyan course with substantial mathematical content but that is not listed in **MATH** may be used toward the four-electives requirement. Please note, however, that both MATH225 and MATH261 must be taken at Wesleyan to complete the major, and substitutions for these courses will not be approved.

STUDENT LEARNING GOALS

The department has the following learning goals for mathematics majors:

- Develop a basic understanding of, and computational facility with, major objects of mathematical and applied interest, such as differentiable functions, graphs, groups, manifolds, rings, or vector spaces.
- Understand abstract mathematical reasoning, e.g., understand an abstract system of rules, find examples of objects that satisfy those rules, conjecture theorems from those examples, and prove those theorems.
- Understand some mathematical applications and ways to use mathematics in practice, and be able to make connections to topics outside of the strict course content.
- Students should be able to write about and speak about mathematics, clearly and elegantly.

LANGUAGE REQUIREMENT

Undergraduate majors in mathematics are encouraged to study languages while at Wesleyan; majors who are considering graduate study in mathematics should note that graduate programs often require a reading knowledge of French, German, and/or Russian.

BA/MA PROGRAM

This program provides an attractive option for mathematics majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit wesleyan.edu/grad/degree-programs/bama.html (http://www.wesleyan.edu/grad/degree-programs/bama.html). Advanced undergraduates may enroll in graduate (**500-**level) courses.

ADDITIONAL INFORMATION

COLLOQUIA, SEMINARS, AND MATH CLUB

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in graduate seminars. All students interested in mathematics are invited to attend the annual Coven-Wood Lecture Series in Mathematics. The first talk in the series is accessible to students at all levels. The undergraduate Math Club hosts informal talks in mathematics and other mathematical activities.

HONORS

An undergraduate may achieve the BA with honors in mathematics via one of two routes:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.
- A strong performance in a suitable sequence of courses, normally including some graduate courses, selected in consultation with a member of the department's advisory committee. The candidate also is expected to prepare a public lecture on a topic chosen together with a faculty advisor.

CAPSTONE

* SENIOR THESIS-two semesters
* HONORS PRESENTATION
* APPROVED GRADUATE COURSEWORK IN MATH
* TUTORIAL WITH FACULTY

Students pursuing the Mathematics major are not required to complete a capstone experience. However, there are several options available if they wish to pursue one. These include:

* ***Graduate Coursework***: completing one or more approved graduate mathematics courses with a performance deemed satisfactory by the instructor(s). Students should consult with their major advisor or the department advisory committee to select appropriate coursework.
* ***Honors Presentation***: satisfactorily completing the public presentation related to departmental Honors
* ***Senior Thesis***: satisfactorily completing a Senior thesis under conditions monitored by the University Committee on Honors
* ***Tutorial with Mathematics Faculty***: Students may register for a tutorial with a faculty member to pursue study or research on a topic that will deepen or broaden the student's knowledge. Tutorials may involve independent research by the student, but

this is not a requirement for the tutorial. To qualify as a capstone experience, the tutorial should culminate in a project or presentation by the student at the end of the semester.

In practice, students often complete more than one of the above experiences. Sophomores and juniors who are considering adding a capstone experience during their senior year may enjoy participating in the department's directed reading program and attending events and talks in the departmental Math Club.

DOCTOR OF PHILOSOPHY IN MATHEMATICS

The Mathematics and Computer Science department's doctoral studies emphasize pure mathematics and theoretical computer science. The close interaction between the computer science faculty and the mathematics faculty—particularly those in logic and discrete mathematics—is a distinctive feature of the department. Students enrolled in the program enjoy small classes and build close connections with faculty and fellow graduate students.

The Doctor of Philosophy in Mathematics degree demands a breadth of knowledge, an intense specialization in one field, a substantial original contribution to the field of specialization, and a high degree of expository skill. Possible fields of specialization for PhD candidates include algebraic geometry, analysis of algorithms, arithmetic geometry, arithmetic theory of quadratic forms, combinatorics, complex analysis, computational logic, dynamical systems, enumerative combinatorics, ergodic theory, geometric group theory, graph theory, higher-order languages, homogeneous dynamics, homotopy type theory, hyperbolic geometry, information security, knot theory, logic programming, mathematical logic, metric geometry, model theory, network and data science, non-Euclidean geometry, number theory, probability theory, proof theory, and topological dynamics.

At least 16 one-semester courses are required for the PhD degree, and graduate students are expected to attend departmental colloquia and the regular seminars.#Five years are usually needed to complete all requirements for the PhD, and two years of residence are required. Proficiency sufficient for reading the mathematical literature in French, German, or Russian is required. Every PhD student in satisfactory academic standing is supported by an annual stipend. Most students work as teaching assistants to faculty members for 10 hours a week during the Fall and Spring semesters, but a student who has passed all written preliminary examinations may teach up to one course a year as a lecturer under the guidance of a faculty member. The PhD dissertation is written under the mentorship of a faculty advisor. It must contain a substantial original contribution to the candidate's field of specialization and meet the quality standards of the current research journals in mathematics.

COURSES

At least 16 one-semester courses are required for the PhD degree. Several of the courses are to be in the student's field of specialization, but at least three one-semester courses are to be taken in each of the three areas: algebra, analysis, and topology. First-year students are expected to take the three two-semester sequences in these areas. However, students interested in computer science may replace coursework in one of these areas with coursework in computer science, with the permission of the departmental Graduate Education Committee.

LANGUAGE REQUIREMENT

Students must pass reading examinations in either French, German, or Russian. It is strongly recommended that PhD candidates have or acquire a knowledge sufficient for reading the mathematical literature in all three of these languages. Knowledge of one of these three languages is required.

PROGRESS AND QUALIFYING EXAMS

General preliminary examinations. The general preliminary examinations occur in the summer after the student's first year of graduate study and cover algebra, analysis, and topology (or computer science, in the case of students including this option among their three first-year subjects).

Special preliminary examination. For a graduate student to become an official PhD candidate as recognized by the department, the student has to pass the Special Preliminary Examination, an oral examination that must be passed by the end of the student's third year of graduate work. The student's Examination Committee determines the subject matter content of the Special Preliminary Examination. This committee is chaired by the student's dissertation advisor and must include at least two additional faculty members of the department. The Special Preliminary Examination will be based primarily, but perhaps not exclusively, on the student's field or specialization. Specific details of the form and content of the examination shall be determined by the Examination Committee at the time the subject matter content is discussed.

TEACHING

Most students work as teaching assistants beginning in the first year of study. After passing the general preliminary examinations, most PhD candidates teach one course per year (typically of 20 students, supervised by senior faculty) working as teaching assistants in the remaining semester.

DISSERTATION AND DEFENSE

- **Dissertation.** The dissertation, to be written by the PhD candidate under the counsel and encouragement of the thesis advisor, must contain a substantial original contribution to the field of specialization of the candidate and must meet standards of quality as exemplified by the current research journals in mathematics.
- **Selection of dissertation advisor.** A graduate student should select a dissertation advisor by the end of the student's second year of graduate work.
- **Defense of dissertation.** The final examination is an oral presentation of the dissertation in which the candidate is to exhibit an expert command of the thesis and related topics and a high degree of expository skill.

MASTER OF ARTS IN MATHEMATICS OR COMPUTER SCIENCE

MASTER OF ARTS IN MATHEMATICS

The Mathematics and Computer Science department’s Master of Arts program in mathematics is designed to ensure basic knowledge and the capacity for sustained independent scholarly study. The MA in Mathematics degree requires six one-semester 500-level courses in addition to the Advanced Research Seminars (MATH549 and#MATH550). Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree.

Students enrolled in the BA/MA program in mathematics must meet the full requirements of the MA degree in mathematics, and may not reuse any courses they have counted towards their BA degree.

Guided by a faculty advisor, master’s candidates produce a thesis based on independent research and a study of the current topical literature. In the final defense of their thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill along with indications of original insight.

MASTER OF ARTS IN COMPUTER SCIENCE

The Mathematics and Computer Science department’s Master of Arts program in Computer Science is designed to ensure basic knowledge and the capacity for sustained independent scholarly study. There are two distinct routes to an MA in Computer Science, one designed for students who have not received an undergraduate degree in Computer Science from Wesleyan and those applying through Wesleyan's BA/MA program.

The standard MA in Computer Science requires six one-semester courses in addition to the Advanced Research Seminars (COMP549#and#COMP550). These courses, which may include individual and/or group tutorials, must be at the 500-level and chosen with the permission of the MA advisor and the department's Graduate Education Committee (GRECO)."

Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree.

The BA/MA program in Computer Science requires six one-semester courses including the Advanced Research Seminars (COMP549#and#COMP550). These courses may include individual and/or group tutorials and should be chosen with the permission of the department's Graduate Education Committee. Two semesters of full-time study beyond obtaining a Computer Science BA from Wesleyan are usually needed to complete the requirements for the MA degree.

MA students receiving a graduate stipend must serve as teaching assistants for 10 hours per week during the fall and spring academic semesters. Those who do not receive a stipend are also eligible to work as teaching assistants.

Guided by a faculty advisor, master’s candidates produce a thesis based on independent research and study of the current topical literature. In the final defense of their thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill along with indications of original insight.

COURSES

Six one-semester courses are required for the MA degree in Mathematics in addition to research units MATH549 and MATH550. These courses must be at the 500-level and chosen with permission of the MA advisor and the department's Graduate Education Committee (GRECO).

A total of six one-semester courses are required for the MA degree in Computer Science. The six courses must include COMP549 and COMP550. These courses are expected to be 500-level and chosen with permission of the MA advisor and the department's Graduate Education Committee (GRECO). Any alternative choices must be approved by the MA advisor and GRECO.

PROGRESS AND QUALIFYING EXAMS

Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree. For students completing the BA/MA program, relevant coursework usually begins in the final year of undergraduate student. Any program leading to the MA degree must be planned in consultation with the departmental Graduate Education Committee.

TEACHING

MA students receiving a stipend are obliged to serve as teaching assistants for 10 hours per week during the fall and spring academic semesters. Those who do not receive a stipend are also eligible to work as teaching assistants.

THESIS AND DEFENSE

The thesis is a written report of a topic requiring an independent search and study of the literature under the supervision of the advisor. Performance is judged largely on scholarly organization of existing knowledge and on expository skill, but some indications of original insight are expected.

In the final examination, an oral presentation of the MA thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill. The defense may include an oral examination on coursework, including material associated with the general preliminary exam. A faculty committee evaluates the candidate's performance.

ADDITIONAL INFORMATION

For additional information, please visit wesleyan.edu/mathcs/graduate/ (http://wesleyan.edu/mathcs/graduate/).

MEDIEVAL STUDIES PROGRAM

The medieval studies program provides an interdisciplinary context for students who wish to study the European Middle Ages. Students normally concentrate on one of three fields: art history and archaeology, history and culture, or language and literature. They are also expected to do coursework in the other fields. In certain cases the program may also provide a framework for students wishing to cross the temporal, topical, and geographical boundaries of medieval studies to consider such problems as the relationship between classical and medieval literature or art, or the broader history of the preindustrial European societies.

Students have a number of opportunities to experience medieval materials firsthand, including working with rare manuscripts in Special Collections, singing in the Collegium Musicum, or participating on an archaeological dig. The Medieval Studies Department brings distinguished visitors to campus each year to give public talks and to work one-on-one with students. Field trips to places such as the Cloisters Museum in New York City and to concerts in the nearby area foster a sense of community in addition to providing access to materials.

The skills typically acquired by medieval studies students—knowledge of European culture, ability to analyze "foreign" texts, experience handling artifacts and manuscripts, and familiarity with Latin—provide good preparation for advanced degrees, whether in the humanities, law, or other professional schools.

MDST125 Love, Sex, and Marriage in Renaissance Europe
This writing-intensive seminar will compare literary and artistic depictions of love, sex, and marriage during the Renaissance by authors and artists from England, Spain, France, Flanders, Germany, and Italy. We will read both male and female writers in genres ranging from poetry, the short story, and theater to the essay, the travel narrative, and the sermon. We will also examine other arts such as painting, sculpture, and the decorative arts (e.g., wedding chests). Questions we will explore include, but are not limited to: How were love and marriage related during the Renaissance? What role did sex, gender, and violence play in relationships between couples and within society? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about same-sex unions? Other topics will include virginity and celibacy, erotic literature, family and class structures, and divorce.

Identical With: **RL&L123, FGSS123**
Prereq: **None**

MDST125F Love, Sex, and Marriage in Renaissance Europe (FYS)
This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, Italy, the Low Countries, Spain, and Sweden. (Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about homosexual love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how do contemporary (21st-century) writers reimagine Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. Students will also have the opportunity to write creatively should they so choose.

MDST125Z Love, Sex, and Marriage in Renaissance Europe
This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, the Italian Peninsula, the Low Countries, Portugal, Spain, and Sweden. (N.B. Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about "homosexual" love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how have contemporary (21st-century) writers reimagined Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. Students will also have the opportunity to write creatively should they so choose.

MDST128 Rome After Rome: Culture and Empire of Constantinople
Rome did not fall. Rome was swallowed by a new idea of what it means to be Roman when, in the fourth century, the empire left its own founding city behind and moved the capitol to the newly-minted city of Constantine, Constantinople. This course gives students a hands-on introduction to one of the most astounding sociopolitical transformations in human history, tracing out the cultural, political, and economic trajectories of the Roman empire of the Middle Ages.

In exploring the textual and material relics of this medieval metropolis on their own terms, students apply and publish their research interests on the collaborative place-based interactive teaching encyclopedia Constantinople as Palimpsest (https://arcg.is/0e4Lb4). For their final project students will design a unit for a high school history course, using Constantinople as Palimpsest to introduce the diversities and paradoxes of life in the city of New Rome.

MDST131 Introduction to Western Art I: Ancient to Medieval
This course introduces the art and architecture of the Western world during the ancient and medieval periods. The artistic traditions of the Near East, Europe, and the wider Mediterranean will be surveyed from the prehistoric era to ca. 1400 CE. Questions of style, content, function, and cultural and historical context will be examined alongside such perennial concerns as religion, rulership, social class, luxury, and the definition of art within its ancient and medieval milieus.

Gen Ed Area: **HA-ART**
Identical With: **ARHA109**
Prereq: **None**

MDST135F Entangled Sounding Objects: The Social Life of Musical Instruments (FYS)
Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they serve as both tangible and symbolic objects that hold significant meanings for the communities they serve. This course examines the social lives of musical instruments worldwide, focusing on Central Asia, a region that extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south. Students explore theories and concepts derived from interdisciplinary literature on material and sound culture and apply them to case studies of a variety of musical instruments -- lutes, flutes, zithers, harps, and drums -- in Central Asia and beyond. Through these case studies, students learn about the historical trajectories and cultural significance of individual instruments in various societies; consider how instrument making and performance are influenced by indigenous religious beliefs and cosmology, political ideology, ecology, and economy; and interrogate the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

MDST151 European Architecture and Urbanism to 1750
This course is an introduction to architecture and related visual art as an expression of premodern Western European civilizations, from ancient Greece through the early 18th century, including Roman, Early Christian, Byzantine, early medieval, Romanesque, Gothic, Renaissance, and Baroque architecture, landscapes, and cities. The focus is on analysis of form in architecture and the allied arts. Emphasis is on relationships between style and patronage. In each era, how does architecture help to constitute its society's identity? What is the relationship between style and ideology? How do architects respond to the works of earlier architects, either innovatively or imitatively? How do patrons respond to the works of their predecessors, either locally or distantly? How are works of architecture positioned within those structures of power that the works, in turn, help to define? How do monuments celebrate selected aspects of history and suppress others? How were the major buildings configured, spatially and materially? Emphasis will be on continuities and distinctions between works across time, seeing Western traditions as a totality over centuries. Lectures and readings convey different historiographic approaches to these issues.

MDST203 Introduction to the Hebrew Bible (Old Testament)
The Hebrew Bible is one of the most influential texts in the world. From antiquity to the present, it has served as a source of philosophical, literary, and artistic reflection. It is a fascinating document, combining narrative, poetry, law, prophetic proclamations, and puzzling parables. What kind of book is the Hebrew Bible? Who wrote it and why? How do we approach such a text across the distance of time? Through a systematic reading from the very beginning, we will place the Bible in its historical context while giving special attention to the philosophical and literary questions it raises: Is obedience to authority always justified? Why do good people suffer unjustly? What is God's gender? In answering these and other questions, you will gain an understanding of the ways contesting interpretations make authoritative claims.

Prereq: **None**

MDST204 Medieval Europe
This introductory lecture course is a history of European politics, culture, and institutions from the end of the Roman Imperial era through 1520. Within a chronological framework we will focus on the creation of kingdoms and government; the growth and crises of papal-dominated Christianity, its crusades and its philosophy; the rise and role of the knight, lady, and aristocratic culture; masculinity and gender relations; the crises of the later Middle Ages, including the Black Death, heresy, mysticism, and war. These all contributed to the beginnings of the modern world, including the Renaissance and the Reformation, events that ended the medieval period. We will also at least glance at the borderlands of Europe, the edges of Islamic and Orthodox worlds.

MDST207 Chaucer and His World
In this course, we will read Chaucer's fascinating dream-visions, The BOOK OF THE DUCHESS and THE HOUSE OF FAME and his best-known work, THE CANTERBURY TALES. We will also read selections from Chaucer's sources and consider how he adapts these texts in his own literary works. Some of the topics we will explore are the various genres of Chaucer's poetry (allegory, epic, romance, satire), medieval ideas about psychology and dreams, the ideology of chivalry, Chaucer's reinvention of the classical world, and views of gender and sexuality. All readings will be in Middle English, so we will read slowly and carefully, with attention to the language.

Prereq: **None**

MDST209 Mosque and Cathedral: Islam and the West, c. 600-1500
This course examines the interaction between the Islamic world and medieval Europe from the perspective of art and architecture, from late antiquity and the rise of Islam through the end of the Middle Ages. Our approach will seek out both intersections and comparisons: while attending to the borders, crossings, and overlaps that existed between medieval Christendom and the Islamic world, this course will also stage comparisons of key themes specific to these traditions, chief among them the picturing of divinity, the status of a sacred text, the organization of sacred space, and the practice of luxury. We will survey a series of historical encounters, including Byzantine Iconoclasm, the Crusades, and trade and diplomacy in general, before culminating in Renaissance Italy. Special emphasis will be reserved for key geographies of exchange, including Spain, Sicily, North Africa, and the Holy Land. Consideration will be given to the media of architecture, mosaic, painting, relief sculpture, decorated books, ivory, metalwork, and textiles. Questions of geography, ethnicity, the other, the idol, cultural translation, and the status of text vs. image will be threaded throughout.
Offering: **Crosslisting**
Grading: **A-F**

MDST210 Romanesque and Gothic Art and Architecture
This course introduces the art and architecture of Romanesque and Gothic Europe, that is, later medieval Europe ca. 1100-1400, focusing especially on Germany, France, Italy, England, and Spain, as well as the wider Mediterranean. Architecture, painting, sculpture, and the luxury arts (e.g., metalwork, ivory, and textiles) will be our focus, supplemented by primary-source texts and secondary literature. Key themes will include sacred spaces, such as cathedrals and monasteries; sacred images and devotion; gender; pilgrimage and the relic; geography; the Other; the monstrous and the miraculous; courtly love and chivalry; the relationship between Christianity, Judaism, and Islam; and premodern definitions of art, the artist, the donor, craftsmanship, and value.

MDST211 Magic, Witchcraft, and Miracle, from Saints to Salem
Until the "disenchantment of the world" in the 18th and 19th centuries, Europeans lived in a universe shot through with hidden and awesome power. God's action in the world was possible, but puzzlingly he often operated through other agents, through the saints and by miracle. On the other hand, humans were often tempted to appeal to other powers to get what they wanted, and the use of magic--some pagan in origin, some not--was a pervasive influence. The world was full of demons and even devils, who used illusion and magic to entrap people by possessing them or turning them toward witchcraft in exchange for wealth and health. Surprisingly, the occult was not all bad, and Catholics and later Protestants too wrestled with the question of what to accept and what to suppress. Magical forces did not fade with the Renaissance but actually grew alongside the first developments toward modern natural science in the 16th and 17th centuries. The necromancer joined the saint, the priest, and the witch as the faces of occult power. This course will take a broad look at the people and powers that filled the place where science and a lot of religion sit today. The course will survey medieval developments and will end in New England in the 17th century. The instructor will provide background and narrative history in order to place the readings into their appropriate context. In surveying the long history of magic and miracle in Europe, we shall ask such questions as: What exactly do these terms mean and how have the meanings changed? How far away from such a worldview are we today and did magic really end in the 17th century? And, if so, why? Who controlled the use of magic and how was its misuse identified and punished? Were the processes of law, inquisition, and prosecution fair or effective? Were there really witches or just witch hunts? Why did people believe in miracles and magic? Who were the practitioners? Why did it all decline?

MDST212 Wesleyan University Collegium Musicum
The Collegium Musicum (literally "company of musicians") is a vocal performance ensemble dedicated to exploring and performing the diverse European repertories of medieval, renaissance, and baroque music. Emphasis is given to the study of musical styles, performance practices, vocal independence, healthy singing, and musicianship. Students investigate various cultural aspects of the production of music, including primary sources, acoustics, and cultural heritage. In spring 2026, we begin our celebration of the Collegium's 25 Years of early music at Wesleyan with a program entitled "Song of Songs, Old and New." Like much Biblical literature, the Song of Songs can be traced back to Sumerian origins. Our program will intersperse ancient Mesopotamian poetry relating to the spiritual marriage of Inanna (Sumerian goddess of love, fertility, and war) and Dumuzi (the shepherd god) with music that reflects the Jewish and Christian understandings of the related mystical union. Biblical language that evokes the fragrance of wine, blossom, fruits, and spices was particularly appealing to European Renaissance composers. We will present a simple Icelandic form of discant, a polytextual French motet, complex polyphony in multiple parts by Palestrina, Lassus, Bouzignac, and Aleotti, and some contemporary responses to these popular texts.

MDST213 Cross, Book, Bone: Early Medieval Art, ca. 300-1100
This class surveys the art and architecture of early medieval Europe, from the decline of the Roman Empire and the multiculturalism of Late Antiquity through the glory of Byzantium, the rise of Islam, and the establishment of Germanic kingdoms in Northern Europe. Style, content, function, and historical context shall be examined across monuments of architecture, sculpture, mosaic, manuscripts, painting, and the luxury arts. Questions of religious practice, political messaging, and cross-cultural translation shall be threaded throughout, for example: How might one picture God? How might one build a house of worship or decorate a sacred text? How might one best picture a ruler? How were art and artistry defined in early medieval Europe? How might we see dialogue, overlap, and/or competition between the art and architecture of Islam and Christianity, among other religious traditions? The art historical periods considered will include Late Antique, Byzantine, Umayyad, Abbasid, Migration, Insular, Carolingian, Mozarabic, Ottonian, and Viking art.

MDST214 Introduction to the New Testament
The purpose of this course is to provide an introduction to those writings of the earliest Christians that came to be included in the Bible. These writings will be examined critically with respect to their social-historical origin, religious content, and place within the development of ancient Christianity. Interpreting early Christian texts constitutes the most important task in the study of the New Testament. We will therefore focus on a close reading of the New Testament in light of historical situations and social contexts in the Greco-Roman world, having as one of the chief aims of the course the acquisition of critical skills in reading and understanding the Bible. In the process we will necessarily engage secondary scholarship and wider theoretical interests, thereby providing students with a general introduction to the academic study of religion.

MDST215 Religion and Politics in Early Christianity
The first four centuries of the Christian era will illustrate the lively twists and turns of social experimentation that set the stage for the emergence of the Christian religion. This course will be concerned with fundamental arenas of intellectual and social conflict, including constructions of Christian myths of apostolic origins and authority; the appropriation of the Jewish epic; the challenge of gnosticism; the domestication of Greek philosophy; interpretations of sexuality and gender; experiences of martyrdom and prosecution; theological reflections on human nature and society; and the ways Christians were seen by Romans. The objective will be to grasp the beginnings of the Christian religion as a human achievement of cultural consequence.

MDST219 Northern Renaissance Art
The Northern Renaissance, roughly ca. 1400-1600, was a period of thrilling transition in Europe and profound change for the Western tradition of art and architecture. For art history, the period's many paradigm shifts include the rise of oil painting, the spread of the printing press and print media, the growth of middle-class patronage, the Protestant Reformation, radical developments in the practice of portraiture, an increasingly global worldview and mentality, the foundations of what might be referred to as an art market, and a fundamental revision of the purpose and definition of both art and the artist. This course explores these and other histories as they played out within panel painting, book painting, the sumptuous arts (e.g., tapestries and metalwork), printing, sculpture, and architecture, focusing mainly on France, the Low Countries, Germany, and England. We will begin within the late medieval world of Burgundy, Prague, and Germany before progressing through such key artistic personalities as Sluter, Broederlam, the Limbourgs, Campin, van Eyck, van der Weyden, Fouquet, Riemenschneider, Lucas van Leyden, Bosch, Dürer, Grünewald, Altdorfer, Cranach, Holbein, and Bruegel. Such a narrative will be equally enriched with less familiar and less canonical works. Threaded throughout are questions of mimesis, realism, skill, medium, and the growing cult of genius, as well as the relationship with the Italian Renaissance, the Mediterranean, and the expanding globe.

MDST220 Love and Loss in Medieval and Early Modern French Literature and Culture
The interconnected themes of love and loss encompass others such as desire, passion, friendship, death, separation, and grief. This course introduces students to the uses of these themes in French literature of the medieval and early modern periods by reading a range of texts, from the courtly romance and lyric poetry, to the essay, the novella, and theater. We will examine how men and women treat these themes, and we will be especially sensitive to the ways in which women write in genres traditionally dominated by men. Topics of study will include the body, virtues and vices, marriage, sexuality, seduction, chastity, and violence. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.

MDST221 Mystical Visions, Medieval Women, and the Performance of Early Music
This course challenges the traditional male-dominated history of early music by focusing on the women who commissioned, performed, heard, and composed music in pre-modern times. Discovering love lyrics that express desires, conflicts, and sufferings that seem equally true today helps collapse the notion of linear time. In addition to finding similarities across centuries, we will draw from multiple disciplines, including comparative literature, religion and cosmology, and gender and sexuality studies. An interdisciplinary approach will guide our investigation of the mystical and visionary aspects of medieval music. Topics to be explored include communal music-making practices, authorship, power and politics, and the multiple civic and social functions of music. We investigate how the music of worship differs from that of romance, public ceremony, and private entertainment. These inquiries help to cultivate skills not only to appreciate our musical heritage but also to better understand contemporary social and cultural practices.

Various "medievalisms"--modern interpretations of the medieval--are explored, to show how musicians continue to interact with early practices in new and exciting ways. This allows us to talk not only about performers of historical early music, but also about composers like Kaija Saariaho, folk groups like Vulcan's Hammer and Folkal Point, and pop artists like Janelle Monaé and Florence Welch. The creation of medievalist music for films and video games is also relevant, as an arena where musicians reimagine the medieval for new audiences.

Coursework involves learning through performance, examination of manuscripts, research, writing, transcription, and editing. There are also weekly listening assignments and readings.

MDST222 Early Renaissance Art and Architecture in Italy
This course surveys key monuments of Italian art and architecture produced between ca. 1300 and 1500. Focusing on major centers such as Florence, Milan, Rome, and Venice, as well as smaller courts such as Urbino and Mantua, it considers the works and careers of the most important artists and architects of the period, among them Giotto, Brunelleschi, Donatello, Giovanni Bellini, Botticelli, and Leonardo da Vinci. Monuments are studied in their broader intellectual, political, and religious context, with particular attention paid to issues of patronage, devotion, gender, and spectatorship. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

MDST223 The Good, the Bad, and the Ugly: Rethinking the Italian Renaissance
In this course we explore the intellectual achievements of the Italian Renaissance. We study the development of new secular values and the quest for the fulfillment of body and soul, glory, and exuberant pleasures. We question notions of beauty, symmetry, proportion, and order. We also unveil often-neglected aspects of Renaissance counter-cultures, such as the aesthetics of ugliness and obscenity and practices of marginalization (e.g., misogyny, homophobia). We inquire into the rediscovery of classical civilizations. We consider how the study of antiquity fundamentally changed the politics, literatures, arts, and philosophies of Italy at the dawn of the modern era. Through a close reading of texts by authors such as Francesco Petrarca, Niccolo Machiavelli, and Michelangelo, we investigate continuities and ruptures between their quest for human identity and ours. This course is conducted in English, and all primary and secondary sources are in English.

MDST224 Re-imagining Dante's Inferno: Social Justice and the Arts
Sentenced to death for crimes he did not commit, Dante Alighieri wrote his epic poem about a journey from hell to heaven in an impoverished state of exile. Drawing on innovative techniques of music, dance, painting, and theater Dante denounced political corruption and social injustice in a story that has inspired artists throughout the world to create new work about the search for freedom, including the Russian dissident poet Osip Mandelstam, Black revolutionary playwright Amiri Baraka, the Chinese artist/activist Wei Wei, and 17th century prisoners of the Inquisition. Students will read selected cantos from Dante's "Commedia," consider contemporary news accounts of modern equivalents to medieval injustices, examine previous adaptations of the poem, and devise their own responses to Dante in the art form of their choice (theater, dance, poetry, playwriting, rap, music, spoken-word, visual arts).

MDST226 The Cosmos of Dante's "Comedy"
In 1321, Dante Alighieri completes the final cantos of the "Comedy" and breathes his last. After 700 years, the "Comedy" has not finished saying what it has to say. This course provides an in-depth introduction to Dante's masterwork as a point of entry to the history of Western literature, philosophy, and science. The core of the course consists of an intensive study of Dante's encyclopedic poem in relation to the culture and history of Medieval Europe. We examine the poem as both a product and an interpretation of the world it describes. We also observe how the "Comedy" casts its long shadow on modern culture: in Primo Levi's description of the horror of Nazi concentration camps, or in Amiri Baraka's fragmentary representation of America's infernal racist system. We investigate the challenges that Dante's text elicits when it migrates to visual and cinematic arts (from medieval illuminations to Robert Rauschenberg to David Fincher), continuously camouflaging and adapting to different media. Major topics of this course include: representations of the otherworld; the soul's relation to the divine; Dante's concepts of governance and universal peace; mythology and theology in Dante's Christian poetics; the role of the classics in the Middle Ages; intertextuality and imitation; genres and genders in medieval literature; notions of authorship and authority during the 13th and 14th centuries; the culture and materiality of manuscripts in the Middle Ages; and the reception of Dante's work from the 14th century to the present. The course combines a close analysis of Dante's inventiveness and literary strategies with exercises in analytical writing and in multimedia translation and adaptation, aimed at prompting critical reflection on the ways in which present cultural practices are built upon the practices of the past. This course is conducted in English; no previous knowledge of Italian is required.

MDST227 What Can the Middle Ages Teach Us About Nature?
Today nature is at the center of our preoccupations. This course will go back to a time before human beings thought they were the masters of nature, when nature was at the same time teaching and allegory, metaphor and science. We will explore the different functions of nature in bestiaries, poems, romances, and herbaria from the Middle Ages to the beginning of the Early-Modern period (in modern French translation). We will be able to see a real herbarium in the Special Collections & Archives. Students will also visit the Davison Center for the Arts and the Joe Webb Peoples Museum to explore visual representations of nature as well as scientific displays. During the semester, students will put together a herbarium that will be displayed in an exhibition at the end of the semester.

MDST228 Heroes, Lovers, and Swindlers: Medieval and Renaissance Spanish Literature and History
This course is designed to develop students' ability to make informed and creative sense of four fascinating, complex, and influential medieval and Renaissance Spanish texts in their multiple (literary, historical) contexts: the "national" epic EL CID (12th-13th century); the bawdy and highly theatrical prose dialogue known as LA CELESTINA (1499); the anonymous LAZARILLO (1554), the first picaresque novel; and María de Zayas's proto-feminist novella THE WAGES OF VICE (1647). Through these and selected historical readings, the course is also intended to provide students with a basic knowledge of Spanish culture (in its plurality) from the 11th through the 17th centuries, the texture of everyday life, and the larger movements of long-term historical change. We will draw on literature and history to imagine the world of chivalry and crusade in the medieval Spain of "the three religions of the book" (Judaism, Christianity, and Islam); of mercantile values, courtly love, and prostitution in the Renaissance city; of social injustice and religious hypocrisy in imperial Spain; and of the exacerbated gender and caste tensions that followed from the political crises of the 1640s. We will reflect on the interplay of literature and history in our efforts to come to grips with a past both familiar and strange; address the crossing of linguistic, artistic, ethnic, religious, caste, and gender boundaries that has long been a conspicuous feature of Spanish society; and consider what texts and lives of the past might still have to say to us today. No prior historical or

literary preparation is required, only a willingness to engage the readings closely (textually and historically).

MDST229 Fight like the French: Debates, Quarrels and Polemics in French Culture
In the age of "fake news" and polarization, knowing how to debate is essential. The French are notoriously practiced in debate; the importance of public opinion and the figure of the public intellectual have made French society as a whole particularly prone to the agonistic discussion of ideas. This course will survey foundational aesthetic and political debates in French culture from the 15th century to this day, focusing on those that were led by writers, philosophers, and intellectuals and that have entered French literary and cultural history. The course will show how controversies mark and make paradigmatic changes in the cultural landscape, advancing the arts and sciences and voicing political dissent. Throughout the course we will read literary works, treatises, letters, and newspapers.

MDST230 Lancelot, Guinevere, Grail: Enigma in the Romances of Chretien de Troyes
Chretien de Troyes, the greatest writer of medieval France, was the first to tell the stories of Lancelot and Guinevere's fatal passion and of the quest for the Holy Grail. Written at the height of the Renaissance of the 12th century, his Arthurian tales became the basis for all future retellings of the legend. We will read these tales in depth, paying particular attention to their enigmatic quality.

MDST231 Cuneiform to Kindle: Fragments of a Material History of Literature
This course provides a theoretical and historical investigation of diverse media of literary expressions from clay tablets to digital texts. We will inquire into the history of writing through different technologies and modes of composition, circulation, and reception from antiquity to the present day. By engaging in such topics as the transition from scroll to codex, from manuscript to print, and from book to Kindle, we will consider the history of literacy in relation to other forms of expression (oral, visual, networked) and analyze different practices of organizing textual materials (punctuation, paragraphing, annotation). We will scrutinize paratextual elements (title, front matter, opening information, foreword) and various forms of verbal accretions (glosses, commentaries, editorial interventions). We will examine shifting notions of authorship and originality and explore different systems of storage (libraries, archives, museums). And by questioning the multifaceted, nondeterministic interplay between literary artifacts and the media by which they are formalized and materially formed, we will provide a critical and historical reflection on the nature of textuality, writing, and media. Readings will set essays in the history of the book and media studies alongside key literary case studies from various periods and geographical areas. Projects will engage with textual materiality (including through the creation of book-objects of our own). The course will be conducted in English.

MDST232 Obscure Enigma of Desire
This course is an introduction to the study of the ways we create meanings when we read texts. It will focus on several deliberately obscure literary texts from twelfth-century France and will examine them in the light of the classical and medieval concepts of enigma, the marvelous (wonderful), fabula, and allegory as well as some modern theoretical works about how we understand narratives. We will seek to understand why deliberate obscurity is an important part of literature and how medieval authors created narratives that seem particularly meaningful precisely because they are obscure. We will consider why we feel these texts have meaning and the ways in which we make them meaningful to us. This course will be co-taught in parallel with a course (in English) on the same subject offered at the Charles University in Prague by Professor Lucie Dolezalova. About half of the classes will be conducted together with the class in Prague through teleconferencing and Professor Dolezalova will teach one week of the course at Wesleyan and meet with students while she is here.

MDST236 Don Quixote: How to Read the Ultimate Novel
No novel is more celebrated than "Don Quixote," albeit in often contrary ways: touchstone at once of the modern and the post-modern; of prosaic and magical

realism; of Romantic idealism and skepticism, relativism, or materialism; of a truth-telling folly; and of the competing claims of books and "life" or history and fiction. Sample superlatives: the one text that can challenge Shakespeare in the Western canon (Harold Bloom), all prose fiction is a variation on its theme (Lionel Trilling), one of the four great myths of modern individualism (Ian Watt). Each generation recognizes itself differently in it and every major literary tradition has made it its own. One secret of its lasting appeal is that, brilliantly improvisatory and encyclopedic, it resists being pinned down. Nothing quite prepares us for the hallucinatory thing itself. There is something for every taste: self-invention; the biology of personality; humor, pathos, and tragicomedy; high and low culture; prose, poetry, and theatrics; episodic variety in a long narrative arc; probing examination of the ambiguities of heroism with a parade of spirited and resourceful heroines who rival and often upstage the heroes; and the disruptive transformations of a new world order (the print, educational, and military revolutions; early modern globalization; incipient capitalism; the explosive growth of profit-driven entertainments). A celebration of the transformative power of imagination even as it casts a gimlet eye on how fantasies can go awry, what passes for "the real world" is often as nutty as the hero himself. We will read, discuss, and write about "Don Quixote" in English, together with key examples of the critical, philosophical, literary, and artistic responses it has inspired. The course assumes no familiarity with literature, history, or Spanish; it does call for an interest in grappling with this wonderful text closely, imaginatively, and historically.

MDST237 Dante in His World: Politics, Poetry, Religion
Dante Alighieri is one of the great figures of European history and culture. He has been famous since his life, especially for his poem "The Divine Comedy," including its depictions of the Inferno, Purgatory, and Heaven. It reveals his massive intellectual knowledge and his deep and complex commitments. It might be less well known that he was also an active politician and a political theorist, as well as a student of literature and style.

This course will examine the body of his work and use it to outline some of the great political, moral, and religious crises of Europe around the year 1300, a moment closely connected to the very idea of the Middle Ages. Important course themes will include the question of the political balance of church and state, the role of mysticism and philosophy in expressing ethics, and the uses of history, theory, and poetry in seeking the good life. Readings will focus on Dante's own writings, including "The Divine Comedy," "The New Life" (La Vita Nuova), and "On Monarchy."

MDST238 Mystics and Militants: Medieval Women Writers
In this class we will read a wide range of works written by European women between ca. 1100--1400, including courtly, devotional, and polemical texts. The course will explore ideologies of gender in the Middle Ages and examine the ways in which our authors confronted the antifeminist discourses of their eras with learning and imagination. We will consider such topics as constructions of sexuality and the body, "courtly love," mystical religious experience, heresies, humanism, and utopian realms. In short, we will read works by women who created their own forms of authority and in doing so, both influenced and defied the authorities of their time.

MDST241 Your Revolutionary Life: Biography as Political Power from Antiquity to Modernity
Death is not enough to turn a life into a political movement. That translation requires a story. This course asks why, since Gandhi, few leaders have successfully drawn upon the power of adopting a revolutionary approach to living as a means of effecting political, social, and cultural change. A student-centered collaborative pedagogy equips students with the tools and concepts to collectively workshop principles drawn from a wide range of examples of revolutionary living from the period known as the middle ages; from well-known and widely imitated examples such as the Buddha, the Prophet, and the Christ, to lesser-known examples including cross-dressing nuns, hermits on pillars, desert mothers, begging collectives, and much more. Students will then apply the ways these past lives were remembered and transmitted to contemporary movements such as Occupy Wall Street or the Black Lives Matter CHOP in Seattle. Course assignments consist of short essays, presentations, and a self-designed final project that can be analytical, creative, or demonstrative.

MDST245 The Invention of Fiction: Giovanni Boccaccio's Decameron
In this course we read and discuss Giovanni Boccaccio's Decameron (ca. 1353), a collection of 100 short stories traded by an "honest brigade" of 10 Florentine men and women. They tell each other these stories while sheltered in a secluded villa as the plague of 1348 rages in Florence. We study the Decameron as both a product and an interpretation of the world Boccaccio inhabited. We examine the Decameron's tales and narrative frame as a point of entry into the cultural and social environment of medieval Italy. We look at its scurrilous, amusing, and provocative innuendos as traces of erotic, religious, ethnic, and cultural questions. We investigate the sexual exuberance of many of Boccaccio's tales and the tension between "high" and "low" culture. We consider the development of mercantilism and literacy in early-modern Europe and its emerging virtues of wit and self-reliance. We review the dynamics of composition and reception in manuscript culture and the book's adaptation into different media, from illuminations to film. And by impersonating the 10 Florentines, we will reenact their pastime of telling stories and appreciate Boccaccio's remarkably modern sensibility and unsurpassed art of writing fiction. This course is conducted in Italian.

MDST247 Devotion and Deception: Erotic Discourse from Dante to Petrarca
In this course, we will investigate the ideology, content, and material forms of love literature from Dante Alighieri to Francesco Petrarca. Through a close reading of such texts as Dante's Vita nova (ca. 1295), Giovanni Boccaccio's Decameron (ca. 1353), and Petrarca's Rerum vulgarium fragmenta (often referred to as the poetry book par excellence: il canzoniere, ca. 1374), we will unveil the literary and fictitious nature of medieval erotic literature. We

will explore the origins of love poetry in medieval France and its subsequent interpretation and rewriting in Italian courts and comuni. We will inquire into the cultural constructions of the medieval notion of the lyrical self and how it still has an impact on our own notion of consciousness. We will study the forms, themes, and characters that populate 'love stories' in the Middle Ages. We will analyze the dynamics of composition, circulation, and reception in manuscript culture. Our close analysis of the texts as they have been preserved in manuscript form will help us gauge the differences between medieval and contemporary ways of writing, reading, and loving. This course is conducted in Italian.

MDST249 The Fall of Rome and Other Stories
The fifth-century fall of Rome to barbarian invaders is an idea that slowly crystallized over time. This course will examine the birth and development of this "fall"--one of the most persistent stories in history--using the very texts in which it was first articulated. We will work with selections from a range of authors--Suetonius, Eusebius of Caesarea, Ammianus Marcellinus, Augustine of Hippo, Jordanes, Procopius of Caesarea, and many others--to connect the fall of Rome with other attempts to explain catastrophe and change. The course will conclude by surveying the persistence of the fall of Rome as an idea, through the medieval, early modern, and modern periods, right into contemporary discourse.

MDST254 Cervantes
Cervantes is known chiefly for DON QUIXOTE, often described as the first modern novel and fountainhead of one of the great modern myths of individualism. DON QUIXOTE also reimagines virtually every fashionable, popular, and disreputable literary genre of its time: chivalric, pastoral, picaresque, sentimental, adventure, and Moorish novels; the novella; verse forms; drama; and even the ways these kinds of literary entertainment were circulated and consumed, debated, celebrated, and reviled. It is a book about the life-enhancing (and endangering) power of books and reading and the interplay of fiction and history and truths and lies. Cervantes' art remains fresh and unsettling, sparing no one and nothing, including the author and his work. Distinguished by its commitment to the serious business of humor, make-believe, and play, the novel is at once a literary tour de force and a fascinating lens through which to examine the political, social, religious, and intellectual debates of its moment. Characteristic themes include social reality as artifact or fiction, the paradoxical character of truths, the irreducible diversity of taste and perception, the call for consent in politics and love, and personal identity (including gender) as a heroic quest. In this course, we will read, discuss, and write about DON QUIXOTE, along with a sampling of critical, philosophical, literary, and artistic responses it has inspired.

MDST255 The Vikings and the Viking Age, 700-1243
The Vikings erupted from their isolated northern homelands throughout Europe from the eighth century, and arguably reoriented European history both in the West, where they were instrumental in the history of the British Isles and France, as well as the East, where they were founders of the Russian kingdom. By 1100, they and their descendants had also established themselves in the Mediterranean, Italy, Sicily, and the Holy Land. This course will examine the reasons the Vikings emerged, and will explain their role not only as warriors, but as important merchants, administrators, and contributors to a robust European literary culture. They provide the perfect avenue by which to understand the creation of European culture and politics. The course will also act as an introduction to the dark age history of England, France, and Northern Europe.

MDST257 Knights, Fools, and Lovers: An Introduction to Medieval and Renaissance French Culture
The study of history and past literature provides intellectual, psychological and emotional resources that make one more resilient in adapting to new circumstances, enable one to see new possibilities of being-in-the-world, and provide new capacities for self-understanding. A knowledge of the European past, moreover, can be an advantage for people seeking to study, live, or work in Europe. This course will help students develop those resources and knowledge through a study of various forms of short fiction and poetry from the French Middle Ages and the Renaissance (12th-16th centuries). We will focus on the representations of human relations, above all romantic relations and their inherent conflicts of power, in these works. We will also view a couple of historical films in order to develop our visual imagination.

MDST258 Medieval Gigs: Saints, Scholars, Sailors, Sinners
A friar preaching to birds, a scoundrel passing as a saint, a nun conversing with Jesus, a Greek hero sinking into hell, a scholar talking to the dead, and a merchant exploring uncharted territories: We find unusual professional figures gigging in Italy circa 1300. In this course we explore medieval alterity through the voices of its most illustrious representatives: from Francis of Assisi to Dante Alighieri, and through a variety of other workers in the Italian economy. We examine various aspects of medieval religious culture ranging from mystical visions to the institutional politics of the Church. We consider the development of mercantile capitalism and its emerging virtues of wit and self-reliance. We track seafarers as they encounter the Other during their maritime voyages. For those staying closer to home, like clerics and other literate "Italians," we review the dynamics of composition and reception from orality to manuscript culture. We observe how medieval culture is embodied through different media, from manuscript illuminations to film. And by combining micro- and macro-perspectives, we approach the Italian Middle Ages from a broad aesthetic, historical, and socio-anthropological standpoint.

The course is conducted in Italian. Authors include Francis of Assisi, Catherine of Siena, Angela of Foligno, Giotto, Dante Alighieri, Francesco Petrarca, Giovanni Boccaccio, Marco Polo, and Christopher Columbus.

MDST260 Entangled Sounding Objects: The Social Life of Musical Instruments
Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they serve as both tangible and symbolic objects that hold significant meanings for the communities they serve. This course examines the social lives of musical instruments worldwide, focusing on Central Asia, a region that extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south. Students explore theories and concepts derived from interdisciplinary literature on material and sound culture and apply them to case studies of a variety of musical instruments -- lutes, flutes, zithers, harps, and drums -- in Central Asia and beyond. Through these case studies, students learn about the historical trajectories and cultural significance of individual instruments in various societies; consider how instrument making and performance are influenced by indigenous religious beliefs and cosmology, political ideology, ecology, and economy; and interrogate the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

MDST268 The Origins of Global Capitalism: Economic History, 1400--1800
This course explores how the modern market economy came into being in Europe and why this system expanded outward to bring the rest of the world into its orbit by 1800. Among other things, it seeks to provide answers for why China's economy--perhaps the most sophisticated in the world before 1500--fell into relative stagnation and why Europe was the first region to develop mechanized industry and break out of a poverty trap that had restricted prosperity for millennia. The course begins by exploring late medieval European agriculture, market systems, institutions, and technology to reveal how the paths of economic development taken in Europe began to diverge fundamentally from those taken by societies in Africa, Asia, and the Americas. It will explore the role of the spice trade in the expansion of European influence abroad, the significance of new food and cash crops in the development of plantation systems and long-haul trade, the impact of organized coercion in the development of monopolies and monopoly companies, and the role of proto-industrial methods of production and colonial economies in the birth of the Industrial Revolution. The course aims to be accessible, broad, and comparative, drawing insights from many fields to consider the environmental, geographical, cultural, institutional, and political factors shaping the economic changes that have created modern capitalism.

MDST272 Law, Court, and Crime in England, 600--1660
This course will discuss the nature and development of law, dispute resolution, custom, and rule in England from the arrival of the English on the island in the age of Arthur when feud and compensatory justice dominated. It will then examine the rise of royal power, local custom, and the common law in the 12th and 13th centuries, including the Magna Carta crisis. We will focus on the growing politicization of law and the development of courts and lawyers alongside new sorts of lawmaking in parliament and through the power of the king. The growth and challenge of royal and parliamentary power will frame the last parts of the course that anticipate the revolutionary crisis of the 17th century. Along the way, the course will ask, Who gets to make law, what is the role of writing in the development of custom and law, how did the English decide who was right and who wrong: calculation, testimony, jury, or ordeal? What were the forms of punishment and compensation employed, and what did this tell us of conceptions of the person: mutilation, execution, or incarceration? How did social status and gender shape expectations and outcomes in the legal process: Who could be a legal actor, a responsible malefactor, a property owner, or a slave; who could be judge and legislator? The course will be based on the examination both of recent scholarship and a wide array of primary sources such as law codes, court record books, advice manuals, literature, treatises on law, and the practical documents from lawyers in courts and judges that are plentiful in medieval, Tudor, and Stuart England. The course provides a background to the sources of law in early America as well as other common law countries around the world.

MDST273 The History of Science in Islam
This course will examine the intellectual legacy of the sciences in the Islamic world. Premodern Muslims cultivated various dimensions of what are today understood as the "hard sciences," including physics, mathematics, biology, and chemistry. In addition to exploring Islamic contributions to these fields during the classical period, known according to some sources as the "Golden Age of Islamic Science," we will explore Islamic medicine and medical theories, astronomy and astrological works (including tools used for astronomical observation), and the sciences of optics and alchemy. We will chart the development of these sciences while looking at the broader cultivation of scientific knowledge in Islamic societies, including the establishment of scientific institutions such as universities, observatories, hospitals, and pharmacies.

MDST302 The Arthurian Legend on Film
This course will serve both as an introduction to the Arthurian legend and to its cinematographic representation since the 1940s. Medieval texts will be paired with films that are "based" -- more or less closely -- on them. We will consider the ways in which these stories are told in literature and in film and the differences between them. We will also consider the ways in which the legend was used to address both medieval and modern preoccupations.

MDST310 Muslims, Jews, and Christians: Convivencia in Medieval Iberia
For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual well-being.

This seminar will explore the works produced by the pluralistic societies of medieval Iberia from the perspectives of art, architecture, history, archaeology, literature, and music. As we study renowned monuments such as the synagogues of Toledo, the Alhambra, and the Way of St. James, we will learn to decode elements such as dress and home decor, food and hygiene, and gardening and agriculture, to expand our picture of culture and lived experience. Finally, we will ask why "convivencia" ultimately failed, and how the medieval Iberian experience can enlighten our own uneasy attempts at building a multicultural, multi-confessional society.

MDST311 The Body in Medieval Art
Medieval thinkers theorized the body in ways vastly different from how human bodies are conceptualized and defined today in the twenty-first-century West. Indeed, the "medieval body" was not at all a stable or monolithic entity, but rather a shifting constellation of ideas and practices that waxed, waned, and coexisted throughout the European Middle Ages, ca. 400-1400. The diversity of medieval attitudes toward the body helped inform its representation in art, which, simultaneously, was also dependent upon conventions of craft, medium, artistry, preciousness, and style. "Body" signals not only earthly bodies -- sexed, fleshly, corruptible, and soon to decay -- but also the soul (whose well-being was equally fragile), as well as heavenly, angelic, and divine bodies, including that of Christ. This course analyzes medieval strategies of representing these bodies while situating them in their respective intellectual and cultural environments. Primary-source materials will be contextualized by secondary literature, and our inquiries will remain cognizant of gender-, sexuality-, race-, and performance-critical methods. The bodies examined will include, and are not limited to, saintly, gendered, racialized, clerical, monstrous, virginal, heretical, sickly, healthy, courtly, resurrected, and uncircumscribable bodies.

MDST312 The Medieval Beast
How did medieval writers think about the distinction between human and animal? This course will begin with the categories of soul and body, ruler and ruled, speech and noise--among others. We will also read about human-animal hybrids like werewolves and bird-men in order to think through some of these binaries. Texts will include bestiaries (encyclopedias of animals), treatises on hunting, beast-fables from Christian, Muslim, and Jewish traditions, Marie de France's "Lais" and "Fables," Chrétien de Troyes's "Knight of the Lion," "Sir Gawain and the Green Knight," and Chaucer's "Parliament of Fowls."

MDST313 Medieval Manuscripts
Medieval manuscripts were dense, considered gatherings of text and image, and they are among the richest of artifacts bequeathed to us by the Middle Ages. Manuscripts both crystallized and intervened in many of the key intellectual, religious, and aesthetic foundations of medieval Europe. To step into a luxurious medieval manuscript--into its script, its miniatures, its marginal decoration, its scribbles, its little monsters and unexpected grotesques, its tears and signs of use--is to probe a particular artform, distinct to pre-modernity, in which the definition of painted image and written word differed markedly from later centuries of the Western tradition. Throughout, basic questions of the relationship between text and image, and the linguistic and the pictorial, repeatedly beg attention. How were these books made, who used them (if they were used at all), how did the reading process unfold in the medieval period, and how did pictorial decoration assist in revealing--or, perhaps, obscuring--truth? These questions, and more, will inform this seminar's systematic inquiry of the making, function, and layout of the medieval book, from its Late Antique origins to the 15th century advent of printing.

MDST315 The Politics of the French Language and the Birth of the French State
Today, the advantages of national borders and monolinguistic language policies are being trumpeted all across the world. And yet, the study of premodern languages and literatures reveals that the history of national languages has always been a multicultural affair. In this course, we will look at the case of the French language, particularly the establishment of French as a literary language through strategies of legitimization. Starting with an examination of the first text written in the language that would later become French, from the 9th century, we will then go on to study (in modern French) a series of medieval and early-modern poems, plays, treatises and essays that borrow from other languages and literatures, even as they establish French as a literary and a national language. The final portion of this class will include a meditation on the status of French language in contemporary Francophone countries based on Derrida's essay "Le monolinguisme de l'autre."

MDST321 Dialogues of Love: A Close Reading
Towards the end of the fifteenth century amidst the burgeoning cultures of the Italian Renaissance in Naples, Genova, and Venice, the exiled Ibero-Sephardic philosopher and physician Judah Abravanel (Leone Ebreo) composed a philosophical work on erotic ethics as a dialogue between love (Philone) and wisdom (Sophia). "The Dialogues of Love" (1535) presented early modern readers with an erotic cosmology which drew upon Ancient and Medieval texts including Plato, Neo-Platonism, Neo-Aristotelianism, Kabbalah, and scriptural commentary. Widely translated, read, and reprinted throughout the sixteenth century, this text animated literary and cultural life throughout sixteenth-century Europe, finding its way into the work of poets and fiction writers such as Miguel de Cervantes. This course engages this unique and breathtaking work of early modern philosophy through a close reading of a Renaissance cosmos staged as a lovers' courtship.

MDST350 The First Female Historian: The Crusade-Era Epic History of Anna Komnena
Why did it take until the 11th century for a woman to write a work in the genre of history? What did it take for Anna Komnena -- a renowned student of ancient literature, mathematics, astronomy, and philosophy, and a princess of the East Roman (Byzantine) Empire -- to finally break into this most gendered of genres? And, how has Anna Komnena's accomplishment been received? This course will spend an entire semester delving into this deeply literary history, and its influence from the Middle Ages to the present. Students will engage with The Alexiad through close intertextual readings, critical scholarship in history, relevant work in theory, and digital research methods.

MDST353 Race, Ethnicity, and Religion in Medieval Literature
Why do white supremacists celebrate the European Middle Ages as a lost era of racial and religious purity? This course approaches that question and related issues by considering the emergence of medieval ideas of race, ethnicity and religious difference. We will also think through the meaning of these categories and recent controversies about locating "race" in medieval studies. Our focus will be on a selection of texts dealing with encounters -- real and imaginary -- of Western European Christians with cultures ranging from the Mongol Empire to the Jewish communities in their own territories. The readings will begin historically with the Crusades and the gruesome chronicles written by Christian, Muslim, and Jewish authors. We will move on to religious polemics, travel accounts, and romances: fictions that re-imagine the past in terms of exoticized sexuality, racial transformation, cannibalism, and nationalist fantasies.

MDST354Z Self and Text in Roman North Africa: Augustine's Confessions
The native North African Augustine of Hippo wrote the most influential autobiographical text in (so-called) Western literature. It remains the most brilliant text I have ever read: a mind-bendingly complex and yet fully coherent literary self. Let's read it together. Set between Carthage and Rome in 400, Augustine wrote just 10 years before the Eternal City would be sacked by the disaffected former legions of the empire (the Goths). Split between conqueror and conquered, civilization and apocalypse, Augustine wove humanity's existential and epistemological questions into a literary tapestry for the ages: Who am I? How do you speak? Who are you? How do I listen? Who are we? How do we know? At once memoir, critique of empire, philosophy, psychology, theology, personal history, criticism, and a letter, these Confessions require close, careful, focused, attentive readings from a diverse group of interpreters. Join our learning community and spend two snowbound weeks at Wesleyan with a book you will never forget.

MDST360 The Mediterranean Archipelago: Literary and Cultural Representations
"Islands which have / never existed / have made their ways / onto maps nonetheless" (Nicholas Hasluck). In this course, we study Mediterranean islands as geographical, textual, and metaphorical spaces. We focus on specific islands -- both fictional and real -- as case studies for the aesthetic, political, and metaphysical implications of insularity, while also aiming to present the Mediterranean as a spatial, historical, and cultural network of relationality and conflict. Elaborating upon Predrag Matvejevitc's statement that "the Mediterranean is not only geography," we approach Mediterranean insularity not only in cartographical representations (from Greek geographers to Arab cartographers), but also as poetic topos (from Ariosto's Island of Alcina to Goethe's Capri), narrative stratagem (from Homer's Phaeacia to Boccaccio's Rhodes), literary protagonist (from Deledda's Sardinia to Murgia's Sardinia), political concept (from Plato's Atlantis to Campanella's Taprobane), and existential condition (from Cervantes's Cyprus to Cavafy's Ithaca). We engage in a diachronic and synchronic exploration of Mediterranean islands' inherent dialectic between resistance and occupation, identity and assimilation, marginality and integration, zoological extinction and speciation, inbreeding and metissage, autochthony and allogeny, linguistic conservatism and creoleness, territorial boundedness and internal division. Our approach will also be archipelagic and include methods and concepts from historical linguistics and dialectology to diplomatic history and postcolonial poetics.

MDST363 (Un)Popular Performances/Performances (Im)Populaires
In 1607, a young Scotsman named William Drummond was studying law in Bourges, France, a popular "study-abroad destination" for Scottish students as well as an important stopover city on the routes of itinerant professional and amateur actors. While in Bourges, these actors performed a variety of different kinds of plays, including tragedies, comedies, tragicomedies, pastorals, and farces. Although these performances were often met with hostility from the city's religious authorities, Drummond attended several plays during his stay and, lucky for us, took rather detailed notes about them. His observations from the 1607 "season" are preserved in his personal papers in the National Library of Scotland. This course will use Drummond's notes as a guide to discover and examine other forms of evidence--both traditional and nontraditional--that help us understand what was at stake in theater, performance, and (un)popular culture in late 16th- and early 17th-century France. We will study the ways the past has been organized and cataloged, how traditional sources and research have shaped our view of the past, and how unconventional methodologies can help us locate new sites of knowledge and culture. Written assignments, class discussions, and (most) readings will be in French.

MDST373 From Courtly Love to Cannibalism: Medieval Romances
Romance is the narrative form of medieval sexualities and courtly love, but it also gives literary shape to social worlds in which a protagonist switches genders, skin color changes with religion, and a dog might be the hero of a narrative. In

this course, we will begin with texts that date from the Romance's origins in 12th-century France and continue with the form's development up to the well-known Middle English texts of the 14th century, including Sir Gawain and the Green Knight set at King Arthur's court. Some of the topics we will consider are Romance's engagement with "chivalry," the religious and racial conflicts of the Crusades, and of course, Christian mysticism and the Holy Grail.

MDST376 Travel and Communication in Europe
This course will explore the character of travel and communication networks, patterns, technologies, and ideas in Europe in the medieval and early modern periods. Students will therefore learn the concept of travel and mobility, whether commercial, cultural, or bureaucratic, and the concept of notable reconfigurations and acceleration of exchange in this period. Beyond ideas, the networks they linked to will be prominent. These include technologies such as the bridge, road, and wayfinding, as well as cybernetic creations like the riding horse (with iron shoes and complex needs); the development of institutions of hospitality, like the monastery, the hostel and the inn; and the adaptation of writing to facilitate motion and communication. Due attention will be paid to exotic travel such as crusading, pilgrimage and warfare; however, routine business travel will be key, such as the trips required by law, by trade, by the search for money, and the desire to see family.

Methodologically, the course will focus on the idea of networks and the techniques of the digital humanities. Thus, text mining for information; mapping in GIS (Geographic Information Systems); and analyzing network relations will be important additions to the usual historical skills of reading and writing essays.

MDST378 Visionary Journeys through Sacred Landscapes: Japanese Art of Pilgrimage
This course examines the ways in which religious paintings were used and viewed in medieval Japan. Emphasis will be laid on images of sacred landscapes and the visionary journeys they inspired. Though primarily conceived as fundraising tools and advertisements aimed at inspiring viewers to undertake a physical journey to the illustrated site, these images became sacred in their own right and were approached by worshipers as one would approach the enshrined deity of the represented site. They also allowed spiritual travel through the images, providing virtual pilgrims with the karmic benefits of actual pilgrimage without the hardships of travel. Each week we will immerse ourselves in a sacred site, reading about its history, deities, religious practices, and unique benefits. We will then look at how these were given visual form and the artistic language developed to endow these visual representations with the power to inspire and move contemporary audiences.

MDST390 Directed Research in European Studies
This course is intended for students who wish to undertake a significant research project or get a head start on a senior essay or thesis devoted to any aspect of European civilization from 500 to 2021. The course will begin with three weeks of regular meetings devoted to the purpose of academic research in the humanities and social sciences, developing and refining a research topic, organizing one's research, bibliographies and sources, the construction of an argument, and the organization of a research paper. Students will work on their research projects individually during the rest of the semester, although the class will meet as a group from time to time so students can present and discuss the state of their work. Students will also have weekly tutorials with the instructor to discuss their progress and plan their next steps. Students who are able to do so are encouraged to engage with research materials in languages other than English.

MDST427 Central Asian Music Ensemble
The Central Asian Music Ensemble is dedicated to the study and performance of music from a region at the crossroads of Eurasia, encompassing the post-Soviet states of Kazakhstan, Kyrgyzstan, Uzbekistan, Tajikistan, and Turkmenistan. Established in Fall 2023, the ensemble currently comprises Kazakh and Kyrgyz plucked and bowed lutes, plucked zithers, end-blown flutes, clay ocarinas, jaw harps, frame drums, and other percussion instruments. Students learn the basic techniques of playing the instruments and singing in a variety of regional styles while exploring the history and cultural significance of music in nomadic and sedentary Central Asian societies through individual tutorials, group rehearsals, and engagement with visiting artists from Central Asia. In addition to playing traditional and contemporary repertoires from the region, students are encouraged to compose and improvise with ensemble instruments. Previous experience with string or wind instruments such as the guitar, violin, cello, or flute is desirable but not required. Students from diverse backgrounds are welcome to participate.

MOLECULAR BIOLOGY AND BIOCHEMISTRY

AFFILIATED FACULTY

Manju Hingorani
BS, University of Bombay; PHD, Ohio State University
Distinguished Research Professor in Molecular Biology Bioc; Distinguished Research Professor in Molecular Biology Biochemistry

Brenda Nallely Santos Ocampo
Visiting Scholar in Molecular Biology Biochemistry

Colin A. Smith
BA, New York University; PHD, University of California, San Francisco
Associate Professor of Chemistry; Associate Professor, Integrative Sciences; Associate Professor, Molecular Biology and Biochemistry

Francis W. Starr
BS, Carnegie Mellon University; PHD, Boston University; MS, Boston University
Professor of Physics; Foss Professor of Physics; Professor, Integrative Sciences; Professor, Molecular Biology and Biochemistry; Professor, Design and Engineering Studies

Erika A. Taylor
BS, University of Michigan; PHD, University of Illinois Urbana
Chair, Chemistry; Professor of Chemistry; Professor, Environmental Studies; Professor, Integrative Sciences; Professor, Molecular Biology and Biochemistry; Director of the Wesleyan Mathematics and Science Scholars Program

CHAIR

Rich Olson
BA, Cornell University; PHD, Columbia University
Coordinator, Molecular Biophysics; Chair, Molecular Biology and Biochemistry; Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

EMERITI

Anthony A. Infante
BA, Temple University; PHD, University of Pennsylvania; MAA, Wesleyan University
Professor of Molecular Biology and Biochemistry, Emeritus

Robert P. Lane
BA, Colgate University; PHD, California Institute Tech
Professor of Molecular Biology and Biochemistry, Emeritus

Ishita Mukerji
AB, Bryn Mawr College; PHD, University of California, Berkeley
Fisk Professor of Natural Science, Emerita

FACULTY

Cori Anderson
BS, Wheaton College; PHD, Dartmouth College
Associate Professor of the Practice in Molecular Biology and Biochemistry

Oriana Fisher
MS, Brandeis University; BS, Brandeis University; PHD, Yale University
Assistant Professor of Molecular Biology and Biochemistry

Scott G. Holmes
BS, College of William and Mary; PHD, University of Virginia
Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Amy MacQueen
BA, Columbia University; PHD, Stanford University
Associate Professor of Molecular Biology and Biochemistry; Associate Professor, Integrative Sciences

Donald B. Oliver
BS, Brandeis University; PHD, Tufts University; MAA, Wesleyan University
Professor of Molecular Biology and Biochemistry; Daniel Ayres Professor of Biology; Professor, Integrative Sciences

Rich Olson
BA, Cornell University; PHD, Columbia University
Coordinator, Molecular Biophysics; Chair, Molecular Biology and Biochemistry; Professor of Molecular Biology and Biochemistry; Professor, Integrative Sciences

Teresita Padilla-Benavides
BS, Escuela Nacional de Ciencias B; MS, Centro de Investigacion y Estu; PHD, Centro de Investigacion y Estu
Assistant Professor of Molecular Biology Biochemistry; Assistant Professor, Integrative Sciences

VISITING FACULTY

Max Baymiller
BA, New Mexico Institute of Mining and Technology; PhD, University of Illinois at Urbana-Champaign
Visiting Professor of Molecular Biology and Biochemistry

MB&B101F The Personal Genomics Revolution (FYS)
The first draft of the human genome sequence was published approximately 15 years ago, having taken more than a decade to complete at a cost of approximately three billion dollars. With incredible advances in sequencing technology, accompanying analysis tools, and maturation of sequence databases, we have arrived at the beginning of an era of "personal genomics." Today, individuals can have their genomes sequenced in a few hours for a few hundred dollars! This course explores the kinds of information contained within one's genome and the various ways in which genome sequences can be used for improving quality of life. Students will conduct original research to explore societal attitudes about the use of personal genomics for the purpose of making lifestyle choices (dating, diet, vocations, etc.); establishing notions of personal identity (race, gender, nationality, etc.); creating new social networks (based on genetic kinship); or prolonging life span (and revolutionizing medicine). As part of this research, students will also consider ethical issues (e.g., privacy, discrimination) surrounding the use of personal genomics, as well as how education might impact societal attitudes on particular applications of this technology. As this is an FYS course, student work will focus on developing skills in scholarly writing, which will include peer evaluations of other student writing and production of a final scholarly paper based on the results of their research project.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B102F Writing about Science (FYS)
This first-year seminar course will cover topical areas of science including the chemistry of foods and food additives, drugs, diseases and their treatments, the environment, and reproductive technologies. This class would be an excellent choice for prospective non-science majors who have an interest in understanding how modern science works. The course will emphasize writing and how to convey complex scientific concepts to a lay audience. Students will take on special projects and work to understand and present their findings in presentations and written form.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B103 Copernicus, Darwin, and the Human Genome Project
Much of art and philosophy is inspired by the question: What does it mean to be human? The project of science has provided rational explanations of human identity that threaten our self-perception as special beings--beginning with the Copernican revolution and discoveries about our unspecial place in the universe. In this course, we will discuss three paradigms arising from modern molecular biology that provide perspective on the lines between living and non-living, human and non-human life, and human and machine by exploring the science of DNA, evolution, and the Human Genome Project, respectively. As part of both discussions, we will consider how society negotiates with science, as depicted in politics and popular art, ethical issues pertaining to the advancement of scientific (e.g., reproductive, genetic) technologies, and plausible resolutions to the tension between science and society that arise from a detailed understanding of the scientific method. Little or no background knowledge in science/biology will be assumed.
Offering: **Host**
Grading: **A-F**

Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B107 The Science of Human Health: Microbiology and Immunology
Studying the molecular and cellular biology of disease-causing viruses and bacteria, we will survey the basic mechanisms that they deploy to colonize and harm our bodies. We will also learn about the cells and macromolecules that comprise our immune system, how they act in concert to detect and combat disease or, in certain instances, cause autoimmune disease. A case-study approach will be pursued to join these two subjects and to illustrate the complex interplay between pathogens and the immune system that allows us to successfully combat certain diseases, become persistently infected by others, or succumb to debilitating or fatal illnesses.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B108F Discutamos la Ciencia en Español (Let's Discuss Science in Spanish) (FYS)
This introductory course is designed for students with intermediate to advanced knowledge of the Spanish language. The class focus is to help students understand basic scientific concepts in Spanish and discuss scientific literature of general interest in Spanish. The goal is to develop language skills (reading, listening, writing, and speaking) with focus on scientific topics.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B108Z Discutamos la ciencia en Español (Lets discuss science in Spanish)
This introductory course is designed for students with intermediate to advanced knowledge of the Spanish language. The class focus is to help students understand basic scientific concepts in Spanish and discuss scientific literature of general interest in Spanish. The goal is to develop language skills (reading, listening, writing, and speaking) with focus on scientific topics.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B111 Introduction to Environmental Toxicology
This course will look at the human health consequences of anthropogenic and natural toxins in the environment. We will examine how chemicals are absorbed, distributed, and detoxified within our bodies, and the mechanism of acute and chronic damage to our health. We will explore how toxins travel through the environment and how permissible levels of exposure are decided upon. This naturally leads to a discussion about the perception and management of risk. We will look at case studies relating to industrial pollution, accidents, and contamination of our air, water, and food through the lens of human disease and social cost. Students are asked to think critically about available scientific evidence and form opinions about how much risk is acceptable in our daily lives.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B112 Fundamentals of Public Health and Communicable Diseases Epidemiology
As Influenza, HIV-AIDS, and COVID-19 pandemics have made abundantly clear, Public Health is a vital field of science and medicine that impacts the health and well-being of our communities on a global scale. In this course, we will learn the core principles of public health approaches, their functions, and how they translate into a comprehensive public health system. Focus will be on important emerging and re-emerging infectious diseases of global impact. Lectures, discussions, and case studies will be utilized to weave infectious diseases and public health responses together to illustrate effective and innovative ways of improving the health of our world community. Economic, social, and medical barriers that impare progress will be addressed.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B113F The mRNA Revolution in Medicine: A Misunderstood & Mistrusted Science (FYS)
The first use of messenger RNA (mRNA) vaccines saved millions of lives in the COVID-19 pandemic. Yet mRNA technology has been widely mistrusted from its first public introduction into the present day. This course will detail how mRNA medicine works, and why it has enormous therapeutic potential in areas ranging from cancer to rare genetic diseases. Grounded in this scientific understanding, students will then develop their own project that explores why this revolutionary medical technology is met with such resistance today. Examples of possible areas of focus include the psychology of belief, pseudoscience, and comparative historical perspectives on other medical advancements.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B117 Life in the Cell from a Molecule's Perspective
What does DNA look like when it is not condensed into chromosomes? How do partners in molecular processes find each other? If a molecular motor "walks," how does it take a step? We will explore these major topics in molecular biophysics by discussing primary scientific literature. Emphasis will be placed on revealing the ways in which our understanding of biological processes can be improved by understanding the underlying physics. Students should have a broad high school science background, familiarity with quantitative and algebraic concepts, and a desire to incorporate quantitative thinking into verbal discourse. Writing is a core element of the course.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS107**
Prereq: **None**

MB&B119 Biology and Chemistry in the Modern World: A Survey of Drugs and Disease
This course will cover a wide range of topics of current interest that are at the intersection of biology and chemistry. In particular, the molecular basis of issues related to drugs and disease will form a focus of the course. Topics to be discussed will include psychoactive and performance-enhancing drugs, mad cow, cancer, viral and bacterial diseases, and the chemistry of foods.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM119**

Prereq: **None**

MB&B155 Tiny Organisms with a Big Effect: The Microbiome
With the advent of advanced sequencing technology, we are able to characterize the microflora that lives on and inside of multicellular organisms, including humans. It follows that there are still many unknowns with respect to the function and dynamics of relationships between bacterial communities and their hosts. These bacterial communities, colonizing humans and other organisms with millions of microbes, have captured the interest of the public. Popular news outlets have made the disparate claims that the right human microbiome can act as a panacea and the wrong microbiome is such a calamity that it can destroy an individual's health. This course will look at the true nature of the microbiome, to the extent that current research has revealed. We will discuss both normal and abnormal bacterial community compositions and any related disease states. Similarly, we will cover changes in microbiome composition over time and with respect to host development. In class, we will also consider the microbiomes of other organisms and how the presence and composition of the microbiome relates to disease states and/or life history.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL155**
Prereq: **None**

MB&B155Z Tiny Organisms with a Big Effect: The Microbiome

MB&B160 Biochemical and Molecular Basis of Human Diseases
This general education course will cover the biochemical, molecular, genetic, and cellular aspects of selected human diseases. The basic anatomy of each relevant system will also be covered, along with ethical questions that can arise when addressing each condition. Topics will include sickle cell anemia, diabetes, atherosclerosis, and prion diseases.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **None**

MB&B181 Principles of Biology I: Cell Biology and Molecular Basis of Heredity
This course presents an exploration of the contemporary view of the cell and an introduction to the molecules and mechanisms of gene function. The course will have two major themes. First, we will focus on the central dogma of molecular biology, describing the process of information transfer from the genetic code in DNA through protein synthesis and function. Topics include DNA replication, chromosome dynamics, transcription, translation, and gene regulation. Second, we will focus on cell theory and the underlying molecular mechanisms of cellular activity, including transport across cell membranes, cellular energetics, protein sorting, cell motility, and cell cycling. Lectures will stress the experimental basis of conclusions presented and highlight important details and major themes. The course will also emphasize problem solving approaches in cell and molecular biology. This course will require about 10 hours per week of engagement. Students should enroll separately in MB&B/BIOL191 Principles of Biology 1 - Laboratory.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL181**
Prereq: **None**

MB&B181Z Principles of Biology I: Cell Biology and Molecular Basis of Heredity
This course presents an exploration of the contemporary view of the cell and an introduction to the molecules and mechanisms of genetics and gene function. The course will have two major themes. First, we will focus on the central dogma of molecular biology, describing the process of information transfer from genetic code in DNA through protein synthesis and function. Topics include DNA replication and repair, chromosome dynamics, RNA transcription, protein translation, gene regulation, and genomics. Second, we will focus on cell theory and the underlying molecular mechanisms of cellular activity, including cell signaling, energetics, cell motility, and cell cycling. Lectures will stress the experimental basis of conclusions presented and highlight important details and major themes. The course will also emphasize problem solving approaches in cell and molecular biology.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL181Z**
Prereq: **None**

MB&B182 Principles of Biology II
This course covers biological principles at tissue, organ, organismic, and population levels of organization. We will review how animals regulate their internal environment to control or adapt to changes in temperature, salt levels, nutrients, levels of oxygen and carbon dioxide, and the presence of infectious agents. We will examine the molecular, cellular, and tissue mechanisms that underlie the hormonal, neuronal, and behavioral processes that underlie these responses. We will learn how these systems develop in the embryo. At the population level, we will review evidence for evolution, including the tenets of Darwin's theory of evolution by natural selection. We will also discuss the nature and importance of variation among organisms, stochastic processes in evolution, and modern theories of speciation and macroevolution. Finally, the course addresses ecological aspects of population biology, including patterns and processes that inform the distribution and abundance of biodiversity, population growth, organisms' responses to environmental variation, and interactions among species. Each of the topics of the course is explored from a comparative viewpoint to recognize common principles as well as variations among organisms that indicate evolutionary adaptation to different environments and niches.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL182**
Prereq: **MB&B181 OR MB&B181Z**

MB&B182Z Principles of Biology II
This course covers biological principles at tissue, organ, organismic, and population levels of organization. We will review how animals regulate their internal environment to control or adapt to changes in temperature, salt levels, nutrients, levels of oxygen and carbon dioxide, and the presence of infectious agents. We will examine the molecular, cellular, and tissue mechanisms that underlie the hormonal, neuronal, and behavioral processes that underlie these responses. We will learn how these systems develop in the embryo. At the population level, we will review evidence for evolution, including the tenets of Darwin's theory of evolution by natural selection. We will also discuss the nature and importance of variation among organisms, stochastic processes in evolution, and modern theories of speciation and macroevolution. Finally, the course addresses ecological aspects of population biology, including patterns and processes that inform the distribution and abundance of biodiversity, population growth, organisms' responses to environmental variation, and interactions among species. Each of the topics of the course is explored from a comparative viewpoint to recognize common principles as well as variations among organisms that indicate evolutionary adaptation to different environments and niches.

Identical With: **BIOL182Z**
Prereq: **BIOL181Z**

MB&B191 Principles of Biology I--Laboratory
This laboratory course, to be taken concurrently with MB&B181 or BIOL181, provides experience with techniques used in cell biology and molecular biology. These include polymerase chain reaction (PCR), electrophoresis, enzyme assays, and spectrophotometry.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL191**
Prereq: **None**

MB&B192 Principles of Biology II: Laboratory
This laboratory course, designed to be taken concurrently with BIOL182 or MB&B182, will introduce students to experimental design, laboratory methods, data analysis, and empirical approaches to developmental biology, physiology, ecology, and evolution. A specific emphasis will be placed on science communication.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL192**
Prereq: **[MB&B191 or BIOL191]**

MB&B193 Principles of Biology I Laboratory (Online)
This laboratory course, to be taken concurrently with MB&B181 or BIOL181, provides experience with techniques used in cell biology and molecular biology. These include polymerase chain reaction (PCR), electrophoresis, enzyme assays, and spectrophotometry.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL193, NS&B193**
Prereq: **None**

MB&B194 Principles of Biology II: Advanced Topics
This course provides an optional supplement to the introductory course in physiology, development, evolution, and ecology (BIOL182, which should be taken concurrently). It is designed for highly motivated biology students who seek to enrich their understanding by engaging with current research in an intensive seminar setting. Students in BIOL194 will read and discuss recent journal articles that probe in greater depth some of the subjects covered in BIOL182. Weekly meetings will consist of a short lecture by the professor followed by group discussion of the readings.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL194**
Prereq: **BIOL181 or MB&B181**

MB&B198 Principles of Biology II Laboratory _ Online
This laboratory course, designed to be taken concurrently with BIOL182 or MB&B182, will introduce students to experimental design, laboratory methods, data analysis, and empirical approaches to developmental biology, physiology, ecology, and evolution. Laboratory exercises use the techniques of electrophysiology, microscopy, computer simulations, and analyses of DNA sequence data. Some exercises will include exploration of physiological processes in living animals.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **BIOL198, NS&B198**
Prereq: **BIOL192**

MB&B207 Introduction to Biophysics
This course will introduce students to major topics in biophysics with an emphasis on the statistical physics of biological systems at the microscopic or molecular level. Topics covered will include molecular motors, self-assembly, and single-molecule manipulation. Students will learn how physical arguments and reasoning can provide significant insight into the design and function of biological systems. While this course is geared toward students who have had a full year of calculus-based physics, relevant concepts in biology and chemistry will be introduced as needed. No detailed knowledge of biology or chemistry beyond the high-school level is required for this course.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS207**
Prereq: **PHYS116**

MB&B208 Molecular Biology
This course is a comprehensive survey of the molecules and molecular mechanisms underlying biological processes. It will focus on the cornerstone biological processes of genome replication, gene expression, and protein function. The major biomacromolecules -- DNA, RNA, and proteins -- will be analyzed to emphasize the principles that define their structure and function. We will also consider how these components interact in larger networks within cells to permit processing of external and internal information during development and how these processes become perturbed in disease states.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL208**
Prereq: **MB&B181 OR MB&B181Z**

MB&B209 Research Frontiers in Molecular Biology and Biochemistry
This course of weekly discussions of current research is for students who have completed the MB&B or BIOL introductory series. Discussions will be informal in nature and cover topics of current interest in molecular biology and biochemistry, emphasizing possibilities for future research areas for the students.

Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Prereq: **MB&B181 or BIOL181**

MB&B210 Genetics and Genomics
Genetics has provided a foundation for modern biology. We will explore the classical genetics and go on to consider how genomics has transformed this field. This course is intended to introduce students to the fields of genetics and genomics, which encompass modern molecular genetics, bioinformatics, and the structure, function, and evolution of genomes. We will discuss important new areas of research that have emerged from the genome projects, such as epigenetics, polymorphisms, transgenics, systems biology, stem cell research, and disease mapping. Students will also discuss bioethical issues we face in this new postgenome era.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL210**
Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

MB&B212 Principles and Mechanisms of Cell Biology
The cell is the smallest structural and functional unit of an organism. The primary goal of this course is to understand the structure, organization, regulation and behavior of cells, because with this perspective one can begin to ask complex questions including: why does mutating a protein cause a cell to malfunction and how does this cause tissue malfunction or disease? We will examine the cell mainly in the context of the multicellular organism--where cells respond to as well as regulate their local environment. Hence, this course provides students with a firm foundation in cell biology as we examine eukaryotic cell structure, organelle function, cell adhesion and motility, signal transduction and cell differentiation, cell survival and apoptosis, and consider how these mechanisms integrate to generate coherent cell behaviors. Published research will be discussed throughout the course in order to build students' understanding of research in cell biology. Lectures, assignments and assessments include opportunities for students to develop a broad and deep knowledge of cell biology, gain understanding of the scientific process of inquiry, experimentation and interpretation, and develop skill in analytical and critical thinking and scientific writing.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL212**
Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

MB&B213 Informal Science Education for Elementary School Students I
This service-learning course will focus on designing and implementing original, effective, and engaging science-based lesson plans for elementary-age children in an afterschool program taking place at five local elementary schools. The classroom components include writing, testing, and critiquing lesson plans and organizing a once-a-semester event, Science Saturday. Members of the class are required to volunteer weekly, co-lead Science Saturday, complete individual work, and organize meetings for projects outside of class.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CIS213**
Prereq: **None**

MB&B214 Informal Science Education for Elementary School Students II
This service-learning course will focus on designing and implementing original, effective, and engaging science-based lesson plans for elementary-age children in an afterschool program setting at five local elementary schools. The classroom component includes writing, testing, and critiquing lesson plans and organizing a once-a-semester event, Science Saturday. Members of the class are required to volunteer weekly, co-lead Science Saturday, complete individual work, and organize meetings for projects outside of class. This course is a continuation of CHEM241.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CIS214**
Prereq: **None**

MB&B223 The Molecular Basis of Cancer
Cancer is a group of diseases characterized by unregulated cell growth and tissue invasion. This course will focus on the molecular events that lead to cancer. We will cover topics in both molecular and cellular biology and genetics that are relevant to understanding the differences between normal and cancer cells. Particular focus will be placed on oncogenes and tumor suppressor genes, DNA damage responses, the p53 signaling pathway, cell cycle regulation, and the molecular basis of cancer therapies. This course will utilize both the textbook and primary scientific literature in the study of cancer.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **BIOL223**
Prereq: **MB&B181**

MB&B228 Medical Biochemistry
This introductory course will focus on the essential concepts of biochemistry important to students interested in the health professions, including the chemical and biological foundations of cellular metabolism and related disease states. Major topics will include the structure and function of biological molecules in the human body (proteins, carbohydrates, fats, nucleic acids, vitamins), enzyme catalysis, cellular signaling, and digestion, absorption, and processing of nutrients for energy and growth.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL228**
Prereq: **[MB&B181 or BIOL181] AND CHEM251**

MB&B231 Microbiology
This course will study microorganisms in action, as agents of disease, in ecological situations, and as tools for research in molecular biology, genetics, and biochemistry. Particular emphasis will be placed on new ideas in the field.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL231**
Prereq: **BIOL182 OR MB&B208**

MB&B232 Immunology
In this introduction to immunology, particular emphasis will be given to understanding both the innate immune response and its agents as well as the acquired immune response mediated by B and T cells. Cellular and antibody responses in health and disease will be addressed, along with mechanisms of immune evasion by pathogens, autoimmune disease, and cancer.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL232**
Prereq: **([MB&B181 or BIOL181] AND [BIOL182 or MB&B182]) OR [MB&B208 or BIOL208]**

MB&B233 Cellular Mechanisms of Gene Regulation and Gene Editing Tools
This course will explain the mechanisms of gene expression in eukaryotes. Then we will define the main and current techniques used for gene editing (CRISPR/Cas9, TALEN, site director mutagenesis, CRE/Lox recombination). Discussions will include how these technologies can be used to optimize organisms for health, food, and energy applications. Ethical use and current regulations of gene editing tools will also be considered.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **MB&B181**

MB&B235 Microbiology Laboratory
This laboratory, to be taken concurrently with MB&B231, is an essential part of learning microbiology. Techniques in general and specific areas of microbiology including recombinant DNA procedures involving microorganisms will be taught.
Offering: **Host**
Grading: **OPT**

Prereq: **None**

MB&B237 Signal Transduction
Cells contain elaborate systems for sensing their environment and for communicating with neighbors across the membrane barrier. This class will explore molecular aspects of signal transduction in prokaryotic and eukaryotic cells. Topics will include membrane receptors, GPCRs, kinases, phosphorylation, ubiquitination, calcium signaling, nuclear receptors, quorum sensing, and human sensory systems. We will integrate biochemical functional approaches with structural and biophysical techniques.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **BIOL237**
Prereq: **[MB&B208 or BIOL208]**

MB&B240 How Do We Build Muscle? The Molecular Basis of Skeletal Muscle Development and Disease
This lecture- and discussion-based course examines the molecular mechanisms that govern skeletal muscle development, homeostasis, regeneration, and disease. Through critical analysis of primary research articles, students will explore the regulation of myogenesis, including transcriptional control, chromatin remodeling, signaling pathways, mitochondrial metabolism, and ion homeostasis. Emphasis is placed on understanding how disruptions in these processes lead to muscle disorders such as muscular dystrophies, mitochondrial myopathies, cachexia, and metabolic muscle disease. Students will learn to interpret experimental approaches commonly used in muscle biology, including genetic models, cell culture systems, multi-omics analyses, and physiological assays. The course integrates developmental biology with disease mechanisms, fostering mechanistic thinking and critical evaluation of scientific evidence. Designed for advanced undergraduates interested in molecular biology, physiology, regenerative biology, and biomedical research.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **(MB&B181 OR BIOL181) AND (MB&B182 OR BIOL182) AND MB&B208 AND CHEM251**

MB&B265 Bioinformatics Programming
This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL265, COMP113, CIS265**
Prereq: **[MB&B181 or BIOL181]**

MB&B265Z Bioinformatics Programming
This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics. MB&B/BIOL181 or POI: Those not meeting the prerequisite should contact the professor directly.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL265Z, CIS265Z, COMP113Z**
Prereq: **MB&B181 OR BIOL181**

MB&B266 Bioinformatics
This course is an introduction to bioinformatics for students with interest in the life sciences. The course is similar to BIOL265 but only meets in the second half of the semester (with BIOL265) and is designed for students with programming background, ideally in Python. The course introduces problem areas and conceptual frameworks in bioinformatics and discusses programming approaches used in bioinformatics such as sequence matching and manipulation algorithms using dynamic programming, clustering analysis of gene expression data, analysis of genetic nets using Object Oriented Programming, and sequence analysis using Hidden Markov Models, Regular Expressions, and information theory.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL266, COMP266, CIS266**
Prereq: **[MB&B181 OR BIOL181]**

MB&B285 Molecular Biology Journal Club I
This course involves presentation and discussion of recent literature in the field of molecular and cellular biology.
Offering: **Crosslisting**

Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B585**
Prereq: **None**

MB&B286 Molecular Biology Journal Club II
This course includes the presentation and discussion of recent findings in the field of molecular and cellular biology.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B586**
Prereq: **None**

MB&B303 Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function
Membrane proteins constitute one-third of all cellular proteins and one-half of current drug targets, but our understanding of their structure and function has been limited in the past by technological obstacles. In spite of this, the past 10 years have yielded a wealth of new membrane protein structures that have helped to uncover the mechanistic underpinnings of many important cellular processes. This class will examine some of the new insights gained through the various techniques of modern structural biology. We will start with a general review of membrane properties, structural techniques (e.g., x-ray crystallography, EM, NMR), and protein structure analysis. We will then look at common structural motifs and functional concepts illustrated by different classes of membrane proteins. Students will read primary literature sources and learn how to gauge the quality and limitations of published membrane protein structures. These tools will be generally applicable to evaluating soluble protein structures as well.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **NS&B303, MB&B523**
Prereq: **(CHEM251 AND CHEM252 AND [MB&B208 or BIOL208])**

MB&B306 Epigenetics
Basic genetics states that individuals with different DNA sequences express different traits. However, a large number of permanent and heritable changes to cells and organisms occur in the absence of changes to DNA sequence. Such epigenetic mechanisms explain a variety of disparate observations, including the ability of a zygote to develop into dozens of distinct cell types in multicellular organisms using one common DNA blueprint, the observation that grandchildren of individuals subject to famine have higher rates of metabolic defects, and the ability of neurons to mediate formation of long-term memories. In this course we will use a variety of examples from cell biology and genetics to examine the template-dependent processes governing the perpetuation of discrete phenotypes. Topics will include the molecular biology of prions (infectious proteins) and environment-induced alterations in gene expression that may be transmitted to offspring.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B506**
Prereq: **MB&B181**

MB&B307 Molecular Biophysics Journal Club I
This course includes presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from journals including but not limited to the Biophysical Journal, Biopolymers, Current Opinion iIn Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B507, CHEM507, CHEM307, PHYS317, PHYS517**
Prereq: **None**

MB&B308 Molecular Biophysics Journal Club II
Presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B508, CHEM508, PHYS318, PHYS518, CHEM308**
Prereq: **None**

MB&B309 Molecular and Cellular Biophysics
This course is an integration of the physical and chemical principles underlying biological systems from molecules to cells. The objectives are to develop an understanding of the underlying biological and physical principles that inform biophysical methods (e.g., protein-protein interaction studies, enzyme kinetics, spectroscopy, structural biology), how these concepts and techniques can be used to address open scientific questions, and how to critically evaluate their use in scientific literature. Particular emphasis will be placed on the biophysical concepts underlying studies of proteins, enzymes, and metalloproteins.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM309, CHEM509, MB&B509, PHYS339, PHYS539**
Prereq: **None**

MB&B310 Mechanisms of Protein Trafficking Within Eukaryotes
This course surveys the mechanisms of protein trafficking and sorting within eukaryotic cells with an emphasis on the major protein exocytosis pathway.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B510**
Prereq: **[MB&B208 or BIOL208] OR [BIOL212 or MB&B212]**

MB&B311 Genomics Analysis
This course is an introduction to genomics and analysis for students with interest in life sciences. It introduces current applications of genomics techniques, covers how to build a genomics workflow, and introduces statistical analyses in R programming language. This course assumes little or no prior programming experience and will provide hands-on experience in taking raw next-generation sequencing data through a custom workflow and ending with analyses in R statistical software. This course emphasizes hands-on computational methodology, bioinformatics data analysis, and interpretation of quantitative information. The primary method of evaluation is through written work and weekly homework assignments and the course will increase students skill in scientific writing and scholarship. Classes will consist of lectures, discussion groups and cloud based computational projects designed to train transferable skills in big data analysis. Lectures, labs, assignments and assessments will promote deep knowledge in genomics and informatics, gaining understanding

in the scientific process, thinking analytically and critically about biological questions, and formulating original ideas and testing them with big data. Skills gained during the course will include quantitative, statistical and graphical tools, scientific writing, oral communication and deep thinking about ethics in a genomics-enabled world.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL310, CIS310**
Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

MB&B313 Molecular, Proteomic, and Cell Biological Analysis of Telomere Composition and Function
This course will focus on a critical feature of the eukaryotic cell known as the telomere, or linear chromosome end. We will discuss the diverse set of critical molecular mechanisms affected by and involving telomeres including chromosome segregation, cellular aging, meiotic gamete production, and cancer progression. We will also focus on the physical architecture of the telomere, how this architecture dynamically alters in different biological contexts, and the types of molecules known to associate with telomeres in multiple model organisms including yeast and human cells. An emphasis will be placed on experimental strategies used for identifying new components of the telomere complex and for understanding telomere function during normal and diseased cellular states.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B513**
Prereq: **None**

MB&B315 The Regulation of Ribosome Biosynthesis
This course will focus on understanding one of life's original, and still greatest, feats: namely, how cells make proteins. Since early life forms evolved ribosomes several billion years ago, their synthesis, regulation, function, and evolution have been at the core of all aspects of biology.

This act of protein translation is remarkable, not only for its efficiency and fidelity, but also for the sheer complexity of the reaction, including the wide variety of molecules (e.g., mRNAs, tRNAs, rRNAs, proteins, amino acids) that need to be harnessed for its execution. In this course, we will investigate the biosynthetic pathways that are involved in effecting protein synthesis from various approaches. Both prokaryotic and eukaryotic systems will be considered, including the questions of how ribosome biosynthesis and activity is relevant to genetic diseases, cancer, cell growth, and antibiotic activity.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B515**
Prereq: **[MB&B208 or BIOL208]**

MB&B316 Advanced Topics in Structural Biology
This course will examine how researchers use the tools of structure determination to explore current fundamental questions in the biological sciences. Beginning with a short history of the field of structure biology, we will examine the benefits and limitations of various techniques used to study protein and DNA structure. We will read primary literary sources on a number of contemporary topics for which structural biology has made important contributions. This may include (but is not limited to) microbial pathogenesis, immunology, gene regulation, membrane protein biology, neurological signaling, signal transduction, and metabolism. This course will explore how the study of structural biology contributes to our understanding and treatment of human diseases, including the development of drugs and other therapeutic interventions.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B516**
Prereq: **None**

MB&B317 Advanced Topics in Recombinant DNA
The breaking and rejoining of DNA molecules is at the heart of so many cell biological processes, including adaptive immunity, the common emergence of new viral variants (such as the flu), the fundamental life cycle of other viruses (such as retroviruses), the prevention of aneuploidy in reproductive cells, the production of chromosomal rearrangements in cancer cells, and the repair of damaged DNA. Used as a tool by molecular biologists, recombinant DNA has led to tremendous insight into cell function, development, and disease. Recombinant DNA methodology is growing in its capacity to precisely change the genes carried by organisms, which has important implications for both the food industry and medicine. In this half-semester course, we will examine primary literature that touches on how recombination between DNA sequences is utilized within cells and as a research tool by humans to promote new genetic outcomes.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B517**
Prereq: **None**

MB&B321 Biomedicinal Chemistry
This course is designed to explore the molecular basis of disease and treatment options. Topics will reflect the importance of chemistry and biochemistry in the advancement of medicine today and will include treatment of metabolic disorders, rational drug design, and mode of drug action. A large portion of the course will be dedicated to learning computer programs used in computational drug design as part of a final drug design project.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM321**
Prereq: **(CHEM251 AND [CHEM383 or MB&B383])**

MB&B322 Mechanisms of Protein Trafficking Within Prokaryotes
This course surveys the mechanisms of membrane protein topogenesis and protein secretion within E coli, the quintessential prokaryote, where sophisticated genetic and biochemical analysis has been possible. The course surveys the primary literature with student presentations and a written final examination.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B522**
Prereq: **[MB&B208 or BIOL208] OR [BIOL212 or MB&B212]**

MB&B325 Introduction to Biomolecular Structure
This course aims to provide a framework for understanding three-dimensional structures of proteins, nucleic acids, and their complexes. The first half of the course emphasizes structural modules and topological patterns in major classes of proteins and nucleic acids. The second part of the course covers novel structural motifs, such as helix-turn-helix, zinc-finger, and leucine zipper,

that are responsible for recognition of specific nucleotide sequences in nucleic acids by proteins. Analysis of structures using tools available on the Web and independent exploration of protein and nucleic acid databases are strongly encouraged.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM325**
Prereq: **None**

MB&B328 Topics in Eukaryotic Genetics: Transcription
This half-semester course will follow two principal themes: We will examine the use of genetic methods in current biological research and apply these methods to address questions about the regulation of gene expression in eukaryotes. Our examination of transcriptional regulation will lead us into the related topics of gene organization, chromosome structure, and signal transduction.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B528**
Prereq: **None**

MB&B330 Molecular and Cellular Basis of Human Diseases
This course will cover the molecular, genetic, cellular, and biochemical aspects of selected human ailments. Topics will include aging, atherosclerosis, osteoporosis, diabetes, obesity, and Alzheimer's disease.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **MB&B530**
Prereq: **[MB&B208 or BIOL208] OR [CHEM383 or MB&B383]**

MB&B333 Gene Regulation
This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. We will discuss various "Omics" tools, and in particular, sequencing-based strategies that provide information about the transcriptome and epigenome. We will also discuss current models on how transcriptional regimes unfold during the activation (or silencing) of genes, and how these processes become disrupted in various diseases. Finally, we will consider stochastic attributes of gene regulation that challenge "all or nothing" perspectives on cellular states (e.g., perspectives that genes are either "on" or "off," or that cells are either "differentiated" or not). An overarching theme is how genomes encode and execute regulatory programs in response to environmental and developmental cues.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **MB&B533, BIOL533, BIOL333**
Prereq: **MB&B181 OR BIOL181**

MB&B334 Stochastic Biology: Randomness and Order in Gene Regulation
While much of biology is discussed with assumptions of "determinism" (e.g., the cell is instructed to express a transcription factor that activates a downstream gene in a deterministic and entirely predictable way) and "homogeneity" (e.g., a population of cells all behaving synchronously in the same way), there is a growing appreciation that many biological outcomes are, in fact, statistical phenomena and stochastic in nature. In this half-credit module, we will discuss stochastic behavior in biology from the perspective of gene expression. A focus will be on emerging molecular and cellular techniques that enable observation of stochastic behavior at a single-cell resolution, thus permitting researchers to characterize molecular behavior as it actually occurs, as opposed to averaging a behavior across a population of otherwise diverse individuals. Insights on stochastic behaviors have far-reaching implications in biology, challenging long-held perspectives on transcription, replication, signal transduction, enzymatics, disease states (such as cancer), stems cells, cell differentiation, aging, and adaptive evolution. This course will focus primarily on one of these: stochastic behavior in transcription and chromosome dynamics and its implications to understanding cell and tissue behavior.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B534**
Prereq: **None**

MB&B335 Protein Folding: From Misfolding to Disease
Amyloidogenesis, the process by which proteins and peptides misfold to form amyloid fibers, is at the root of several different diseases, including Parkinson's disease, Alzheimer's disease, mad cow disease, and type II diabetes to name a few. This course will focus on current research in the field that seeks to understand why a functional, well-folded protein adopts the misfolded amyloid form. In the course of discussing the misfolded nature of these proteins, we will review central elements of protein structure and stability to better understand the protein-folding landscape and the process of misfolding. We will also discuss how the process of misfolding leads to the different diseases and disease pathologies. We will read current literature that studies the molecular nature of these diseases and discuss the strategies used to detect, identify and study these misfolded proteins in the body and in the test-tube.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B535, CHEM335, CHEM535**
Prereq: **MB&B208 OR MB&B325**

MB&B336 Metals, Metalloenzymes, and Disease
This course examines how transition metals regulate cellular biochemistry and how disruptions in metal homeostasis contribute to human disease. Through analysis of primary scientific literature and active discussions, students will explore the roles of metals such as copper, iron, and zinc in enzymatic activity, mitochondrial function, redox balance, and gene regulation. Emphasis is placed on understanding how metal deficiency, overload, or mislocalization leads to developmental and degenerative disorders. Case studies include Wilson disease, Menkes disease, mitochondrial myopathies, neurodegenerative diseases, and cancer. Students will connect molecular mechanisms to tissue dysfunction and clinical outcomes while developing skills in critical analysis of experimental design and data interpretation.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B536**
Prereq: **MB&B191 AND MB&B208 AND CHEM251**

MB&B338 Biology and MB&B Symposium I
Weekly seminars by distinguished national and international scientists. The seminar series provides an exciting opportunity to hear about advances in research in the life sciences.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **BIOL338, BIOL538, MB&B538**
Prereq: **None**

MB&B339 Biology and MB&B Symposium II
Weekly seminars by distinguished national and international scientists. The seminar series provides an exciting opportunity to hear about advances in research in the life sciences.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **BIOL339, BIOL539, MB&B539**
Prereq: **None**

MB&B340 Practical Methods in Biochemistry
This course centers on currently used techniques for protein separation, characterization, and purification, such as ultracentrifugation, gel electrophoresis, and chromatography. These topics will be introduced within the general context of the behavior of macromolecules in solution. The relative stability of proteins in different media, the forces stabilizing protein structure, and the interaction of proteins will be discussed. We will explicitly consider different techniques used to study proteins. Relatively novel techniques to be discussed include surface plasmon resonance, microarray methods and mass spectrometry, and single molecule microscopy. In the course, we will go through three or four different protein purification protocols and discuss the methods used in each one. We will also touch upon the commonly used spectroscopic techniques used to characterize proteins, including absorption, fluorescence, and circular dichroism. The course will focus on biochemical techniques and understanding the physical principles underlying these techniques and will also discuss tactics for optimizing established isolation and purification procedures and for isolating and characterizing an unknown protein.

The course content is appropriate for advanced undergraduates (juniors/seniors) and beginning graduate students from chemistry, biology, molecular biophysics or MB&B.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

Identical With: **CHEM390**
Prereq: **[MB&B208] OR [CHEM383 or MB&B383]**

MB&B361 RNA Biology
RNA is often sidelined as simply the intermediary between genomic information in DNA and the cell's crucial effectors in proteins. Yet the presence of RNA at the center of the central dogma not only hints at a key role in life origins, but also indicates the enormous power of RNA in controlling gene expression. This course will first cover RNA structural & catalytic capabilities, their possible role in life's origins, and their use in cells today. Second, we will detail how RNA participates in gene regulation via translation, splicing, modification, localization, quality control, decay, and more. Third, we will investigate emerging RNA technologies in both research and medicine that exploit RNA's centrality to macromolecular processes in the cell.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B561**
Prereq: **MB&B181**

MB&B364 Metals in Biochemistry
Approximately one third of all proteins are metalloproteins. This course covers how metal ions and cofactors are employed by biological systems, with a focus on metalloproteins and enzymes. Students will learn how metals interact with macromolecules and modern experimental methods used to study the structural, chemical, and physical properties of metalloproteins. Current literature from the field of bioinorganic chemistry will be discussed.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B564**
Prereq: **MB&B208 AND CHEM141 AND CHEM142**

MB&B367 Principals of the Cytoskeleton: How Cells Move and Change Their Shape
Cells come in all shapes and sizes and can dynamically change their shapes in response to environmental cues. How is cell shape determined and regulated? Intricate intracellular networks of protein polymers, that constitute the cytoskeleton, provide a rigid structure that determines cell shape. These cytoskeletal networks are dynamic and can generate forces that push or pull against cell membranes, producing protrusions or invaginations. The cytoskeleton can also produce forces that fold tissues to shape whole multicellular organisms. In cell-walled organisms (plants, fungi, and bacteria), rigid cell walls demarcate cell shape, and the cytoskeleton directs the deposition of new cell-wall material, shaping the cell wall as cells grow. Because the cytoskeleton plays a central role in cellular structural integrity, it is commonly targeted by pathogens, including Chlamydia trachomatis, Vibrio cholera, Listeria monocytogenes, and Rickettsia rickettsia. Each of these pathogens has evolved mechanisms to hijack and weaponize the host cytoskeleton to facilitate host cell invasion. In this discussion-based course we will read and discuss the primary research literature to answer questions such as: How is a single cytoskeletal polymer assembled? How are polymers arranged into networks? How do pathogens co-opt elements of the cytoskeleton during infection? During the course students will gain valuable skills in scientific communication and in how to plan, interpret and critique experimental protocols and data, all while discovering the design principles and amazing capabilities of the cytoskeleton.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

Identical With: **MB&B567**
Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

MB&B375 The Cell-Division Cycle and Cancer
This course will cover a broad range of topics that are related to the process of cell division. We will discuss how the cell cycle is executed and regulated in a variety of eukaryotic systems. Major consideration will be applied to discussions of cancer and the defects in cell-division regulation that underlie this disease. Some of the topics include growth factors, signaling pathways, apoptosis, cyclin-dependent kinases as cell-cycle regulators, transcriptional and posttranscriptional control of cell-cycle genes, DNA replication, DNA damage checkpoints, and tumor suppressors.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**

Identical With: **MB&B575**
Prereq: **None**

MB&B377 Advanced Genetics
This course will focus on classical genetics, a discipline that grew from a desire to explain how adaptive traits are passed from generation to generation. Special emphasis will be placed on model organism genetics and on understanding how classical genetic analysis, in conjunction with the analysis of cellular and chromosome behavior, led to key discoveries about the nature of the gene, DNA, RNA, protein, and cellular function.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B577**
Prereq: **None**

MB&B381 Physical Chemistry for the Life Sciences
The course is concerned with the basic physicochemical principles and model systems essential to understanding, explaining, and predicting the behavior of biological systems in terms of molecular forces. The course integrates fundamental concepts in thermodynamics, kinetics, and molecular spectroscopy with the structures, functions, and molecular mechanisms of biological processes. The objectives of the course are to (1) familiarize life science students at the advanced undergraduate and beginning graduate level with basic physicochemical laws, theories, and concepts important to the life sciences; (2) provide a working knowledge of mathematical methods useful in life science research; (3) develop a critical perspective on explanation of biological processes and understanding biological systems; and (4) survey the main applications of physical chemistry in the life sciences. Theory, methodology, and biophysical concepts are distributed throughout the course.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **CHEM381, MB&B581, ENVS382**
Prereq: **(CHEM251 AND MATH120) OR (CHEM251 AND MATH121)**

MB&B382 Practical and Theoretical NMR
Nuclear magnetic resonance (NMR) is an extremely powerful and flexible technique that can be used to analyze molecules sized from just a few atoms up to tens of thousands of atoms. This course will provide an introduction to how NMR spectroscopy works and background on the important theoretical aspects relevant for the most common NMR experiments. Time will be spent gaining practical experience in conducting NMR experiments both during and outside class. The ultimate goal of both the theoretical and hands on sections of this course is to enable you to correctly select and perform NMR experiments necessary to characterize molecules. In addition to learning how NMR hardware is used to produce spectra, we also cover important tasks like sample preparation and the finer points of data processing that will help you get better data. Beyond simple one-dimensional experiments, we will discuss a number of different multidimensional NMR experiments for determining the structures of small organic molecules, including COSY, HSQC, HMBC, and NOE. Furthermore, you will learn how protein structures are solved using 2D and 3D experiments, and how the motion of those proteins can be measured at the atomic level.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM382**
Prereq: **None**

MB&B383 Biochemistry
This rigorous introductory course to the principles and concepts of contemporary biochemistry presents both the biological and chemical perspectives. The major themes will be the structure and function of the major macromolecules (proteins, lipids, and carbohydrates), the basis and measurement of enzymatic activity, and general mammalian and plant cellular metabolism.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM383**
Prereq: **CHEM252 AND MB&B208**

MB&B386 Biological Thermodynamics
This course is addressed to undergraduate and graduate students interested in biological chemistry and structural biology. The course presents thermodynamic methods currently used to relate structure to function in biological molecules. Topics include binding curves, chemical ligand linkages, binding polynomial, cooperativity, site-specific binding processes, and allosteric effects. Several models for allosteric systems, such as the Monod-Wyman-Changeux model, the induced-fit model, and the Pauling model, are analyzed in detail. Applications of these models are illustrated for functional regulation of respiratory proteins and for protein-nucleic-acid complexes involved in control of gene expression.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM386**
Prereq: **(MATH121 AND MATH122)**

MB&B387 Enzyme Mechanisms
The chemical mechanisms involved in the action of a series of typical enzymes will be considered.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM387**
Prereq: **[CHEM383 or MB&B383]**

MB&B394 Advanced Laboratory in Molecular Biology and Genetics
This course is designed to familiarize students with current research techniques in molecular biology, biochemistry, and genetics. A variety of methods and approaches will be applied in a series of short projects, primarily using E. coli and Saccharomyces cerevisiae (budding yeast) as model systems. Students will gain hands-on experience employing recombinant DNA, microbiology, protein biochemistry, and other methods to answer basic research questions. This course provides excellent preparation for students planning to conduct independent research at the undergraduate level (MB&B401/402) and beyond.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Prereq: **[MB&B208 or BIOL208]**

MB&B395 Structural Biology Laboratory
One of the major catalysts of the revolution in biology that is now under way is our current ability to determine the physical properties and three-dimensional structures of biological molecules by X-ray diffraction, nuclear magnetic resonance (NMR) spectroscopy, cryo-electron microscopy, and other spectroscopic methods. This course is designed to familiarize students with current research techniques in biochemistry and molecular biophysics. Students will perform spectroscopic investigations on a protein that they have isolated and characterized using typical biochemical techniques, such as electrophoresis,

protein purification, and column chromatography. The course will provide hands-on experience with spectroscopic and biophysical methods such as fluorescence, UV-Vis absorption, X-ray crystallography, isothermal titration calorimetry, and circular dichroism as well as bioinformatic computational methods. All of these methods will be applied to the study of biomolecular structure and energetics. This course provides a broad knowledge of laboratory techniques valuable for independent research at the undergraduate level and beyond.
Offering: **Host**

Grading: **OPT**

MB&B500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop before the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **ASTR500, CHEM500, BIOL500, E&ES500, MUSC500, PHYS500, PSYC500, MATH500**

Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **OPT**

MB&B506 Epigenetics
Basic genetics states that individuals with different DNA sequences express different traits. However, a large number of permanent and heritable changes to cells and organisms occur in the absence of changes to DNA sequence. Such epigenetic mechanisms explain a variety of disparate observations, including the ability of a zygote to develop into dozens of distinct cell types in multicellular organisms using one common DNA blueprint, the observation that grandchildren of individuals subject to famine have higher rates of metabolic defects, and the ability of neurons to mediate formation of long-term memories. In this course we will use a variety of examples from cell biology and genetics to examine the template-dependent processes governing the perpetuation of discrete phenotypes. Topics will include the molecular biology of prions (infectious proteins) and environment-induced alterations in gene expression that may be transmitted to offspring.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B306**
Prereq: **MB&B181**

MB&B507 Molecular Biophysics Journal Club I
This course includes presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from journals including but not limited to the Biophysical Journal, Biopolymers, Current Opinion iIn Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B307, CHEM507, CHEM307, PHYS317, PHYS517**
Prereq: **None**

MB&B508 Molecular Biophysics Journal Club II
Presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B308, CHEM508, PHYS318, PHYS518, CHEM308**
Prereq: **None**

MB&B509 Molecular and Cellular Biophysics
This course is an integration of the physical and chemical principles underlying biological systems from molecules to cells. The objectives are to develop an understanding of the underlying biological and physical principles that inform biophysical methods (e.g., protein-protein interaction studies, enzyme kinetics, spectroscopy, structural biology), how these concepts and techniques can be used to address open scientific questions, and how to critically evaluate their use in scientific literature. Particular emphasis will be placed on the biophysical concepts underlying studies of proteins, enzymes, and metalloproteins.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B309, CHEM309, CHEM509, PHYS339, PHYS539**
Prereq: **None**

MB&B510 Mechanisms of Protein Trafficking Within Eukaryotes
This course surveys the mechanisms of protein trafficking and sorting within eukaryotic cells with an emphasis on the major protein exocytosis pathway.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B310**
Prereq: **[MB&B208 or BIOL208] OR [BIOL212 or MB&B212]**

MB&B511 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MB&B513 Molecular, Proteomic, and Cell Biological Analysis of Telomere Composition and Function
This course will focus on a critical feature of the eukaryotic cell known as the telomere, or linear chromosome end. We will discuss the diverse set of critical molecular mechanisms affected by and involving telomeres including chromosome segregation, cellular aging, meiotic gamete production, and cancer progression. We will also focus on the physical architecture of the telomere, how this architecture dynamically alters in different biological contexts, and the types of molecules known to associate with telomeres in multiple model organisms including yeast and human cells. An emphasis will be placed on experimental strategies used for identifying new components of the telomere complex and for understanding telomere function during normal and diseased cellular states.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B313**
Prereq: **None**

MB&B515 The Regulation of Ribosome Biosynthesis
This course will focus on understanding one of life's original, and still greatest, feats: namely, how cells make proteins. Since early life forms evolved ribosomes several billion years ago, their synthesis, regulation, function, and evolution have been at the core of all aspects of biology.

This act of protein translation is remarkable, not only for its efficiency and fidelity, but also for the sheer complexity of the reaction, including the wide variety of molecules (e.g., mRNAs, tRNAs, rRNAs, proteins, amino acids) that need to be harnessed for its execution. In this course, we will investigate the biosynthetic pathways that are involved in effecting protein synthesis from various approaches. Both prokaryotic and eukaryotic systems will be considered,

including the questions of how ribosome biosynthesis and activity is relevant to genetic diseases, cancer, cell growth, and antibiotic activity.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B315**
Prereq: **[MB&B208 or BIOL208]**

MB&B516 Advanced Topics in Structural Biology
This course will examine how researchers use the tools of structure determination to explore current fundamental questions in the biological sciences. Beginning with a short history of the field of structure biology, we will examine the benefits and limitations of various techniques used to study protein and DNA structure. We will read primary literary sources on a number of contemporary topics for which structural biology has made important contributions. This may include (but is not limited to) microbial pathogenesis, immunology, gene regulation, membrane protein biology, neurological signaling, signal transduction, and metabolism. This course will explore how the study of structural biology contributes to our understanding and treatment of human diseases, including the development of drugs and other therapeutic interventions.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B316**
Prereq: **None**

MB&B517 Advanced Topics in Recombinant DNA
The breaking and rejoining of DNA molecules is at the heart of so many cell biological processes, including adaptive immunity, the common emergence of new viral variants (such as the flu), the fundamental life cycle of other viruses (such as retroviruses), the prevention of aneuploidy in reproductive cells, the production of chromosomal rearrangements in cancer cells, and the repair of damaged DNA. Used as a tool by molecular biologists, recombinant DNA has led to tremendous insight into cell function, development, and disease. Recombinant DNA methodology is growing in its capacity to precisely change the genes carried by organisms, which has important implications for both the food industry and medicine. In this half-semester course, we will examine primary literature that touches on how recombination between DNA sequences is utilized within cells and as a research tool by humans to promote new genetic outcomes.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B317**
Prereq: **None**

MB&B520 Topics in Nucleic Acid Structure
This course focuses on the principles of nucleic acid structure. The scope of this course is to go beyond the common DNA structures such as B-DNA and A-DNA helical structures. The course will concentrate on other DNA structural motifs such as branched DNA, supercoiled DNA, triplex DNA, and quadruplex DNA. Physical characterization of these structures as well as the functional implication of these structures (in terms of DNA replication, transcription, telomeres, etc.) will be discussed extensively. Discussion will also center on the forces that stabilize these structures, such as H-bonding and stacking interactions. The course will also cover other important DNA structural motifs such as curved or bent DNA as found in A-tracts and the relevance of these structures in promoter recognition and gene expression. Important RNA structures, such as ribozymes and pseudoknots, will be discussed. We will also discuss the significance of DNA structural motifs in eukaryotic genomes and the application of bioinformatic tools to search for these motifs.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **None**

MB&B522 Mechanisms of Protein Trafficking Within Prokaryotes
This course surveys the mechanisms of membrane protein topogenesis and protein secretion within E coli, the quintessential prokaryote, where sophisticated genetic and biochemical analysis has been possible. The course surveys the primary literature with student presentations and a written final examination.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B322**
Prereq: **[MB&B208 or BIOL208] OR [BIOL212 or MB&B212]**

MB&B523 Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function
Membrane proteins constitute one-third of all cellular proteins and one-half of current drug targets, but our understanding of their structure and function has been limited in the past by technological obstacles. In spite of this, the past 10 years have yielded a wealth of new membrane protein structures that have helped to uncover the mechanistic underpinnings of many important cellular processes. This class will examine some of the new insights gained through the various techniques of modern structural biology. We will start with a general review of membrane properties, structural techniques (e.g., x-ray crystallography, EM, NMR), and protein structure analysis. We will then look at common structural motifs and functional concepts illustrated by different classes of membrane proteins. Students will read primary literature sources and learn how to gauge the quality and limitations of published membrane protein structures. These tools will be generally applicable to evaluating soluble protein structures as well.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B303, NS&B303**
Prereq: **(CHEM251 AND CHEM252 AND [MB&B208 or BIOL208])**

MB&B528 Topics in Eukaryotic Genetics: Transcription
This half-semester course will follow two principal themes: We will examine the use of genetic methods in current biological research and apply these methods to address questions about the regulation of gene expression in eukaryotes. Our examination of transcriptional regulation will lead us into the related topics of gene organization, chromosome structure, and signal transduction.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B328**
Prereq: **None**

MB&B530 Molecular and Cellular Basis of Human Diseases
This course will cover the molecular, genetic, cellular, and biochemical aspects of selected human ailments. Topics will include aging, atherosclerosis, osteoporosis, diabetes, obesity, and Alzheimer's disease.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **MB&B330**

Prereq: **[MB&B208 or BIOL208] OR [CHEM383 or MB&B383]**

MB&B533 Gene Regulation
This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. We will discuss various "Omics" tools, and in particular, sequencing-based strategies that provide information about the transcriptome and epigenome. We will also discuss current models on how transcriptional regimes unfold during the activation (or silencing) of genes, and how these processes become disrupted in various diseases. Finally, we will consider stochastic attributes of gene regulation that challenge "all or nothing" perspectives on cellular states (e.g., perspectives that genes are either "on" or "off," or that cells are either "differentiated" or not). An overarching theme is how genomes encode and execute regulatory programs in response to environmental and developmental cues.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **MB&B333, BIOL533, BIOL333**
Prereq: **MB&B181 OR BIOL181**

MB&B534 Stochastic Biology: Randomness and Order in Gene Regulation
While much of biology is discussed with assumptions of "determinism" (e.g., the cell is instructed to express a transcription factor that activates a downstream gene in a deterministic and entirely predictable way) and "homogeneity" (e.g., a population of cells all behaving synchronously in the same way), there is a growing appreciation that many biological outcomes are, in fact, statistical phenomena and stochastic in nature. In this half-credit module, we will discuss stochastic behavior in biology from the perspective of gene expression. A focus will be on emerging molecular and cellular techniques that enable observation of stochastic behavior at a single-cell resolution, thus permitting researchers to characterize molecular behavior as it actually occurs, as opposed to averaging a behavior across a population of otherwise diverse individuals. Insights on stochastic behaviors have far-reaching implications in biology, challenging long-held perspectives on transcription, replication, signal transduction, enzymatics, disease states (such as cancer), stems cells, cell differentiation, aging, and adaptive evolution. This course will focus primarily on one of these: stochastic behavior in transcription and chromosome dynamics and its implications to understanding cell and tissue behavior.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B334**
Prereq: **None**

MB&B535 Protein Folding: From Misfolding to Disease
Amyloidogenesis, the process by which proteins and peptides misfold to form amyloid fibers, is at the root of several different diseases, including Parkinson's disease, Alzheimer's disease, mad cow disease, and type II diabetes to name a few. This course will focus on current research in the field that seeks to understand why a functional, well-folded protein adopts the misfolded amyloid form. In the course of discussing the misfolded nature of these proteins, we will review central elements of protein structure and stability to better understand the protein-folding landscape and the process of misfolding. We will also discuss how the process of misfolding leads to the different diseases and disease pathologies. We will read current literature that studies the molecular nature of these diseases and discuss the strategies used to detect, identify and study these misfolded proteins in the body and in the test-tube.
Offering: **Host**
Grading: **A-F**

Identical With: **MB&B335, CHEM335, CHEM535**
Prereq: **MB&B208 OR MB&B325**

MB&B536 Metals, Metalloenzymes, and Disease
This course examines how transition metals regulate cellular biochemistry and how disruptions in metal homeostasis contribute to human disease. Through analysis of primary scientific literature and active discussions, students will explore the roles of metals such as copper, iron, and zinc in enzymatic activity, mitochondrial function, redox balance, and gene regulation. Emphasis is placed on understanding how metal deficiency, overload, or mislocalization leads to developmental and degenerative disorders. Case studies include Wilson disease, Menkes disease, mitochondrial myopathies, neurodegenerative diseases, and cancer. Students will connect molecular mechanisms to tissue dysfunction and clinical outcomes while developing skills in critical analysis of experimental design and data interpretation.

MB&B561 RNA Biology
RNA is often sidelined as simply the intermediary between genomic information in DNA and the cell's crucial effectors in proteins. Yet the presence of RNA at the center of the central dogma not only hints at a key role in life origins, but also indicates the enormous power of RNA in controlling gene expression. This course will first cover RNA structural & catalytic capabilities, their possible role in life's origins, and their use in cells today. Second, we will detail how RNA participates in gene regulation via translation, splicing, modification, localization, quality control, decay, and more. Third, we will investigate emerging RNA technologies in both research and medicine that exploit RNA's centrality to macromolecular processes in the cell.

Identical With: **MB&B364**
Prereq: **MB&B208 AND CHEM141 AND CHEM142**

MB&B567 Principals of the Cytoskeleton: How Cells Move and Change Their Shape
Cells come in all shapes and sizes and can dynamically change their shapes in response to environmental cues. How is cell shape determined and regulated? Intricate intracellular networks of protein polymers, that constitute the cytoskeleton, provide a rigid structure that determines cell shape. These cytoskeletal networks are dynamic and can generate forces that push or pull against cell membranes, producing protrusions or invaginations. The cytoskeleton can also produce forces that fold tissues to shape whole multicellular organisms. In cell-walled organisms (plants, fungi, and bacteria), rigid cell walls demarcate cell shape, and the cytoskeleton directs the deposition of new cell-wall material, shaping the cell wall as cells grow. Because the cytoskeleton plays a central role in cellular structural integrity, it is commonly targeted by pathogens, including Chlamydia trachomatis, Vibrio cholera, Listeria monocytogenes, and Rickettsia rickettsia. Each of these pathogens has evolved mechanisms to hijack and weaponize the host cytoskeleton to facilitate host cell invasion. In this discussion-based course we will read and discuss the primary research literature to answer questions such as: How is a single cytoskeletal polymer assembled? How are polymers arranged into networks? How do pathogens co-opt elements of the cytoskeleton during infection? During the course students will gain valuable skills in scientific communication and in how to plan, interpret and critique experimental protocols and data, all while discovering the design principles and amazing capabilities of the cytoskeleton.
Offering: **Crosslisting**
Grading: **A-F**

Identical With: **BIOL571**
Prereq: **None**

MB&B575 The Cell-Division Cycle and Cancer
This course will cover a broad range of topics that are related to the process of cell division. We will discuss how the cell cycle is executed and regulated in a variety of eukaryotic systems. Major consideration will be applied to discussions of cancer and the defects in cell-division regulation that underlie this disease. Some of the topics include growth factors, signaling pathways, apoptosis, cyclin-dependent kinases as cell-cycle regulators, transcriptional and posttranscriptional control of cell-cycle genes, DNA replication, DNA damage checkpoints, and tumor suppressors.

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **MB&B375**
Prereq: **None**

MB&B577 Advanced Genetics
This course will focus on classical genetics, a discipline that grew from a desire to explain how adaptive traits are passed from generation to generation. Special emphasis will be placed on model organism genetics and on understanding how classical genetic analysis, in conjunction with the analysis of cellular and chromosome behavior, led to key discoveries about the nature of the gene, DNA, RNA, protein, and cellular function.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B377**
Prereq: **None**

MB&B581 Physical Chemistry for the Life Sciences
The course is concerned with the basic physicochemical principles and model systems essential to understanding, explaining, and predicting the behavior of biological systems in terms of molecular forces. The course integrates fundamental concepts in thermodynamics, kinetics, and molecular spectroscopy with the structures, functions, and molecular mechanisms of biological processes. The objectives of the course are to (1) familiarize life science students at the advanced undergraduate and beginning graduate level with basic physicochemical laws, theories, and concepts important to the life sciences; (2) provide a working knowledge of mathematical methods useful in life science research; (3) develop a critical perspective on explanation of biological processes and understanding biological systems; and (4) survey the main applications of physical chemistry in the life sciences. Theory, methodology, and biophysical concepts are distributed throughout the course.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B381, CHEM381, ENVS382**
Prereq: **(CHEM251 AND MATH120) OR (CHEM251 AND MATH121)**

MB&B585 Molecular Biology Journal Club I
This course involves presentation and discussion of recent literature in the field of molecular and cellular biology.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B285**
Prereq: **None**

MB&B586 Molecular Biology Journal Club II
This course includes the presentation and discussion of recent findings in the field of molecular and cellular biology.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **MB&B286**
Prereq: **None**

MB&B587 Seminar in Biological Chemistry
This course involves weekly presentations and discussions based on current research.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **CHEM587**
Prereq: **(CHEM383 or MB&B383 or CHEM325 or MB&B325 or MB&B208)**

MB&B588 Seminar in Biological Chemistry
This course involves weekly presentations and discussions based on current research.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **CHEM588**
Prereq: **(CHEM383 or MB&B383 or CHEM325 or MB&B325 or MB&B208)**

MOLECULAR BIOLOGY AND BIOCHEMISTRY MAJOR

MAJOR DESCRIPTION

The Major in Molecular Biology and Biochemistry (MB&B) is designed to accommodate a broad range of academic interests and allow students to concentrate on particular disciplines such as molecular biology, biochemistry, biophysics, structural biology, cell biology, genetics, epigenetics, genomics, and computational modeling.

While focused on exploring and understanding the molecular basis of life, the MB&B major allows for flexible, interdisciplinary studies, enabling students to couple their affinity for biological sciences with other majors.

Curious students who bring a passion for learning about the intricacies of the natural world, have a keen interest in science, and apply a logical, analytical, meticulous approach to their studies are likely to find great meaning and satisfaction in the MB& B major. Students with mathematical aptitude, perseverance, patience, and effective communication skills are those who excel in this course of study.

The Major in Molecular Biology and Biochemistry provides foundational training for various professional careers in medicine, public health, the pharmaceutical/ biotechnology industry, public policy, science journalism, and teaching, among others.

ADMISSION TO THE MAJOR

Students are encouraged to begin coursework toward the MB&B major in their first year to take maximum advantage of upper-level MB&B courses, research, and study-abroad opportunities in later years. However, the major can certainly be completed successfully if initiated during sophomore year.

MAJOR REQUIREMENTS

The requirements for the MB&B major are described in detail on this page. See the (https://www.wesleyan.edu/mbb/major/pathway.html)**Pathway Through the Major** page for a recommended path to fulfill the MB&B requirements.

The MB&B major begins with the core introductory biology series (the MB&B181 and MB&B182 lecture series and the associated laboratory MB&B191 and MB&B192) and/or the core general chemistry series (CHEM141/CHEM143 and CHEM142/CHEM144 lecture plus the associated laboratory, CHEM152). Our introductory cell and molecular biology course, MB&B181, is offered in small sections featuring problem-based learning to help students acclimate to their first semester of university-level biology. Visit Frequently Asked Questions About Introductory Biology for more information (https://www.wesleyan.edu/mbb/major/intro-faq.html).

The Molecular Biology and Biochemistry major requires the following coursework:

Code	Title	Hours
Introductory Biology		
MB&B181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
MB&B191	Principles of Biology I--Laboratory	0.5
MB&B182	Principles of Biology II	1
MB&B192	Principles of Biology II: Laboratory	0.5
General Chemistry		
CHEM141/143	General Chemistry I	1
CHEM142/144	General Chemistry II	1
CHEM152	Introductory Chemistry Laboratory	0.5
Gateway Molecular Biology		
MB&B208	Molecular Biology	1
Organic Chemistry		
CHEM251	Organic Chemistry I	1
CHEM252	Organic Chemistry II	1
Mathematics		
Select one Mathematics course (calculus or statistics recommended)		1
Physical Chemistry		
MB&B381	Physical Chemistry for the Life Sciences	1
Biochemistry		
MB&B383	Biochemistry	1
Advanced Laboratory		
MB&B394	Advanced Laboratory in Molecular Biology and Genetics	1
or MB&B395	Structural Biology Laboratory	
Electives		
Select two elective courses, at least one of which must be a **300**-level **MB&B** course		2

We require one semester of a chemistry lab course, which would typically be satisfied by introductory lab CHEM152 (offered in both fall and spring). This lab course requirement can also be satisfied by taking the intermediate chemistry lab, CHEM257.

One semester of college mathematics, typically calculus or statistics, is required (AP credit is not accepted). Students with deep theoretical knowledge in areas of mathematics, as evidenced by advanced coursework (e.g., in physics) or quantitative forms of research, may petition for the use of a less theoretical mathematics course (e.g., QAC courses) to satisfy the MB&B math major requirement.

One advanced laboratory class is required. Majors interested in a concentration in molecular biology should take MB&B394, which is offered every spring semester and generally taken in the junior or senior year. Students interested in the molecular biophysics minor should take MB&B395, which is offered every other year in fall semester. The Chemistry Integrated Laboratory courses (CHEM375 and CHEM376) do not satisfy the lab course requirement. Students taking both of the advanced lab courses (MB&B394 and MB&B395) may count one of the two courses as their 300-level elective.

MB&B381 may be replaced by two semesters of Introductory Physics (PHYS111 and PHYS112, or PHYS113 and PHYS116) or by Physical Chemistry (CHEM337 and CHEM338). Students who take two semesters of physics or physical chemistry may count MB&B381 as one of their required 300-level electives.

One of the two required electives must be a 300-level MB&B course. This may be fulfilled by taking a 1.0-credit 300-level course, or by taking two 0.5-credit 300-level courses.

The second elective may be a 200-level or 300-level MB&B course. Two consecutive semesters of research (in the same laboratory) for credit (MB&B423 and MB&B424, Advanced Research Seminar) with an MB&B faculty member (or a pre-approved faculty member in another department conducting research in molecular biology/biochemistry/biophysics) can be substituted for the 200-level elective, provided that it is taken for 1.0 credit each semester and a grade of B or higher is achieved. Honors Thesis (MB&B409 and MB&B410) may not be used to satisfy an elective requirement.

For potential elective courses outside of MB&B, including study abroad courses, students must consult with their faculty advisor and the MB&B chair in a timely manner. Prior approved courses outside MB&B that can be taken to satisfy the lower-level elective requirement include BIOL218 Developmental Biology, BIOL334 Shaping the Organism, and CHEM396 Molecular Modeling and Design. These courses offered by other (non-MB&B) departments may only be used to satisfy the 200-level elective requirement for completion of the MB&B major (even if the course has a 300-level designation).

All courses credited toward the MB&B major, both those hosted inside and outside the department, must be taken for a letter grade.

Pre-meds and pre-grads: Organic chemistry laboratory courses (CHEM257 and CHEM258) are requirements for virtually all graduate and medical schools. Most medical schools also require one year of physics with related labs and two semesters of mathematics. Many MB&B majors take more than the two required electives to better prepare for graduate or medical school.

All of the life science community is enriched by the weekly departmental seminar series (https://www.wesleyan.edu/mbb/seminars/)held on Wednesdays at 12:10 p.m. during the academic year, in which speakers are invited from different institutions to speak about their research. All are welcome to come learn about the latest cutting-edge work in the life sciences. You may receive a quarter credit for your attendance by enrolling in MB&B338 and/or MB&B339.

COURSES FOR NON-MAJORS

MB&B offers several courses designed to broadly introduce molecular biology to non–life science majors. Examples include MB&B103, MB&B107, and

MB&B117. Alternatively, many non-science majors will take one of our introductory courses, MB&B181, or MB&B182 to meet NSM requirements. See WesMaps (https://www.wesleyan.edu/wesmaps) for current course offerings.

MB&B228 is an introductory biochemistry course for non-majors intending to pursue a medical degree.

STUDENT LEARNING GOALS

- Acquire mastery of core foundational knowledge of molecular biology and biochemistry
- Acquire selective familiarity with our primary literature and key resources
- Achieve familiarity with major questions at the forefront of our field
- Acquire mastery of analytical, quantitative, and creative approaches to analyze problems in our field and to synthesize them in order to create logical hypotheses and experimental plans
- Acquire ability to use multidisciplinary approaches to synthesize a cogent experimental plan
- Acquire mastery of important methodologies in our field
- Acquire hands-on experience with key experimental techniques in our field
- Acquire proficiency in oral, written, and visual modes of effective scientific communication

STUDY ABROAD

Like all Wesleyan students, MB&B majors often choose to study abroad for a semester or more. In recent years, MB&B majors have visited Australia, Chile, Denmark, South Africa, England, France, Tanzania, and Germany, among other countries. During their semester abroad, MB&B majors may choose to take courses that satisfy their major or general education requirements, and may also arrange to do research at the host institution. Decisions about whether courses taken abroad can count for credit towards the MB&B major are made by the department on a case-by-case basis. Students should consult with their major advisor and receive course approval from the chair of the MB&B department prior to their departure.

ADVANCED PLACEMENT

Wesleyan awards one credit to students with AP Biology scores of 4 or 5. Since high school AP Biology courses rarely include the full range of topics or depth covered in MB&B181, this credit does not automatically place out students from MB&B181, our introductory cell and molecular biology course. Students with exceptional preparation can place out of MB&B181 by passing a placement exam. The placement exam must be taken during the first week of the student's first semester at Wesleyan (this applies to both incoming freshmen students and transfer students). Interested students should contact Professor Cori Anderson (canderson05@wesleyan.edu (canderson@wesleyan.edu/)) to schedule a placement exam.

Prospective MB&B majors with a score of 4 or 5 in AP Chemistry must meet the Chemistry Department requirements for advanced placement credit.

AP credit is not accepted for the math requirement.

PRIZES

Majors are eligible for several prizes based on their academic performance and contributions to the MB&B Department.

Hawk Prize: The gift of Philip B. Hawk, Class of 1898, as a memorial to his wife, Gladys, to the students who have done the most effective work in biochemistry.

Scott Biomedical Prize: Awarded to a member or members of the Molecular Biology and Biochemistry senior class who have demonstrated excellence and interest in commencing a career in academic or applied medicine.

William Firshein Prize: In honor of founding faculty member William Firshein, awarded to the graduating MB&B student who has contributed the most to the interests and character of the Molecular Biology and Biochemistry department.

American Society for Biochemistry and Molecular Biochemistry Honor Society: The ASBMB Honor Society recognizes exceptional undergraduate juniors and seniors pursuing a degree in the molecular life sciences. Students are recognized for their scholarly achievement, research accomplishments, and outreach activities in the molecular life sciences.

American Society for Biochemistry and Molecular Biochemistry Research Award: The ASBMB rewards exceptional rising seniors pursuing a degree in the molecular life sciences who have developed an exciting research project. More information is available on the ASBMB web page (http://www.asbmb.org/education/studentchapters/awards/ugresearch/).

Dr. Neil Clendeninn Prize: Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed his or her sophomore year and in that time have exemplified those qualities of character, leadership, and concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

RELATED PROGRAMS OR CERTIFICATES

Molecular Biophysics Minor (https://www.wesleyan.edu/molbiophys). Molecular biophysics is an interdisciplinary area of research situated at the intersection of molecular biology, chemistry, chemical biology, physical chemistry, and molecular physics. Wesleyan's program includes faculty in the MB&B, chemistry, physics, and biology departments. Students are strongly encouraged to conduct independent research in the laboratory of a molecular biophysics program faculty member.

Informatics and Modeling Minor (https://www.wesleyan.edu/imcp/). The Integrative Genomic Sciences (IGS) pathway is an integrative program of coursework and research in the areas of bioinformatics, genomics, computational biology, and bioethics. IGS involves faculty and students in the life sciences, physical sciences, information sciences, and philosophy.

BA/MA PROGRAM

This program provides an attractive option for life science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. More information is available here (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html).

ADDITIONAL INFORMATION

UNDERGRADUATE RESEARCH OPPORTUNITIES

Undergraduate research is an important part of the curriculum for many MB&B majors. Wesleyan's small but excellent graduate program makes it possible for majors to work alongside PhD and MA students at the cutting edge of discovery in molecular biology and biochemistry. To complement laboratory experiences, MB&B majors are also encouraged to gain exposure to current research through journal clubs and seminars. Undergraduate research encompassing multiple semesters or summers may be used towards completion of a senior honors thesis, or form the basis for pursuing a Master of Arts in MB&B through the BA/MA program.

Students interested in independent research for credit must find a faculty research mentor and submit an electronic tutorial form (Research Tutorial, MB&B423 or MB&B424) using the drop/add system in their portal. Based on discussions with the faculty research mentor, students may sign up for 0.25, 0.5, or 1.0 credits. Students enrolling for 1.0 credit are expected to dedicate at least 10 hours per week to their research project, which includes attendance in weekly group meetings and reading and discussion of current literature with group members, in addition to planning and performing experiments. Students will discuss specific expectations with their research mentor.

MB&B majors not participating in research tutorials will gain research experience in the Department's advanced laboratory courses; they are also encouraged to gain exposure to current research through journal clubs and seminars.

HONORS

To be considered for departmental honors, a student must:

- Be an MB&B major and be recommended to the department by a faculty member. The student is expected to have a B average (grade point average 85) in courses credited to the major.
- Submit a thesis based on laboratory research, performed under the supervision of an MB&B faculty member or pre-approved faculty member in another department conducting research in the fields of molecular biology, biochemistry, or biophysics.

Two readers (in addition to the research mentor) must be selected for review of honors theses in MB&B. It is expected that these readers will be MB&B research faculty; any exception requires approval of the MB&B department chair.

CAPSTONE EXPERIENCE

Independent laboratory research is strongly encouraged as it provides students with an exceptionally valuable learning experience. As research students, MB&B majors interact with faculty and graduate students in an environment that fosters strong intellectual and social connections. Moreover, many graduate and professional schools specifically recruit candidates with research experience. MB&B majors not participating in laboratory research can get a measure of this experience through participation in departmental and inter-departmental seminar series and journal clubs.

Faculty research interests cover an exciting range of current topics in molecular and cellular biology and biochemistry. Research areas include DNA replication and repair mechanisms, membrane transport processes, DNA-protein interactions, gene regulation, genome organization and structure, and membrane protein structure-function and dynamics. Students are encouraged to learn more about ongoing research (https://www.wesleyan.edu/mbb/grad_studies/research_areas.html) in the MB&B department. Many MB&B majors gain research experience at Wesleyan and other institutions in the summer months; the MB&B office and Wesleyan Career Resource Center can direct students to research opportunities.

All MB&B majors participate in independent research projects as part of our experiment-based advanced laboratory courses MB&B394 and MB&B395, at least one of which is required.

DOCTOR OF PHILOSOPHY IN BIOLOGY AND BIOCHEMISTRY

The Molecular Biology and Biochemistry (MB&B) Department program focuses on the molecular basis of life—on mechanisms by which cells process, integrate, and act on information to create and propagate living organisms. The PhD program focuses on advanced scientific inquiry in molecular genetics, molecular biology, biochemistry, and molecular biophysics.#The program's low student-faculty ratio (2.5:1) ensures close contact between students and their mentors and enables students to customize their course of study.

The emphasis of the program is on an intensive research experience culminating in a dissertation. Within this general framework, an individual program of study tailored to fit the student's background and interests is designed in consultation with their advisor.#PhD candidates will normally complete two lab rotations during their initial two semesters, gaining exposure to various research techniques and topics. The program of study also includes a series of courses covering the major areas of molecular biology, biochemistry, and biophysics; journal clubs in which current research is discussed in an informal setting; practica designed to introduce first-year students to the research interests of the faculty; and several seminar series in which either graduate students or distinguished outside speakers participate.#Two specialized interdisciplinary paths in the areas ofMolecular Biophysics (https://www.wesleyan.edu/molbiophys/)#andInformatics and Modeling (https://www.wesleyan.edu/imcp/) are also offered. PhD candidates are expected to participate as teaching assistants (TAs) in undergraduate courses for at least their first 3 semesters.

The program culminates in the student's writing and defense of their PhD thesis—an original contribution to the field that merits publication. The PhD candidate will receive advice and guidance from their advising committee, and the thesis is expected to demonstrate both originality and scientific competence.

COURSES

Ideally, incoming students will have completed courses in general biology, cell and molecular biology, genetics, biochemistry, general chemistry, organic chemistry, physical chemistry, and calculus. Deficiencies in any of these areas would normally be made up in the first year on a case-by-case basis. A core curriculum of graduate courses in the following general areas is offered on a two-year cycle:

- regulation of gene expression
- regulation of chromosome dynamics and the cell cycle

- structural mechanisms and energetics of nucleic acid structure and protein-nucleic-acid interactions
- protein structure, folding, and trafficking in cells
- molecular genetics
- the cell cycle
- biological spectroscopy and physical techniques
- bioinformatics and functional genomics
- molecular, biochemical, and cellular bases of cancer and other human diseases

Within this general framework, an individual program of study tailored to fit the student's background and interests is designed in consultation with the graduate committee and the student's advisor. Graduate students must take at least 3.0 credits of 'lecture-style' courses in order to be eligible to take the Stage I Qualifying examination, which is generally taken in January of the second year of study.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

The criteria for admission to candidacy for the PhD will be performance in courses, aptitude for research, and two qualifying examinations taken in the second year. The Stage I Qualifying Examination is a written examination taken in January, and the Stage II Qualifying Examination is an oral defense of an original research proposal presented by the middle of the fourth semester.

TEACHING

PhD candidates in the MB&B department are expected to participate as teaching assistants (TAs) in undergraduate courses for at least their first 3 semesters. If available, some students may then receive research assistant stipends (RAs) from extramural grants for the remainder of their PhD studies; otherwise, students may continue to receive TA stipends with associated teaching responsibility for the remainder of their PhD studies.

RESEARCH

PhD students will normally complete two lab rotations during their initial two semesters, gaining exposure to a broad range of research techniques and topics in molecular biology. Students generally select one of these rotation labs to pursue their PhD thesis work by the end of the first year, and will begin working on their thesis project during the first summer. The overarching goals of the research experience are to: (i) develop expertise in research methodologies; (ii) develop expertise at the cutting edge of a scientific field, including mastery of relevant literature; (iii) to contribute to the advancement of the field, typically culminating in two published papers in international peer-reviewed scientific journals; (iv) to become effective presenters of scientific data, in the context of their own published manuscripts, seminar presentations, written reports and thesis documents, evaluating published data in journal clubs and coursework, and by presenting at a professional scientific meeting. The MB&B department offers research opportunities across a broad range of topics including but not limited to:

- molecular mechanisms of cell differentiation
- biological roles of transition metals
- mechanisms of DNA repair
- cell and molecular biology of meiosis
- single-molecular studies of protein-DNA interactions
- structural dynamics of nucleic acids and proteins
- chromatin control of chromosome dynamics and gene expression
- UV resonance Raman spectroscopy of biological macromolecules
- biological assembly mechanisms
- structural studies of bacterial virulence factors
- the mammalian olfactory system
- see individual faculty web pages (https://www.wesleyan.edu/mbb/grad_studies/research_areas.html) for specific research projects

CONCENTRATIONS

Molecular Biology and Biochemistry offers two interdisciplinary paths in the areas of Molecular Biophysics (https://www.wesleyan.edu/molbiophys/) and Informatics and Modeling (https://www.wesleyan.edu/imcp/). Specialization in these areas is achieved through course work, seminars, journal clubs, and dissertation work performed under the guidance of program faculty.

DISSERTATION AND DEFENSE

The most important requirement is a PhD thesis, an original contribution to the field that merits publication. The candidate will receive advice and guidance from their advising committee but must demonstrate both originality and scientific competence. Normally, the candidate will choose a thesis topic during the second year of graduate work in consultation with faculty mentors. Students will select a thesis committee consisting of three additional faculty members, chosen by the student and thesis advisor, with at least two of these members being from the MB&B department. Thesis committee meetings must be scheduled at least once per year in order to provide committee members with updates on progress towards the degree. This committee determines when sufficient experimental work has been completed to begin writing the thesis towards a defense of the body of work. This committee serves as the final examination committee that must approve the final written document and its defense.

ADDITIONAL INFORMATION

For additional information, please visit the department website (https://www.wesleyan.edu/mbb/).

MUSIC

All the world's musics warrant close study. The ability to engage with new or unfamiliar musical traditions is an essential aspect of 21st-century musicianship. And scholarship, performance, theory, and practice are all mutually reinforcing endeavors. These defining principles of Wesleyan's Music Department are reflected in the depth and breadth of expertise of our faculty and the extraordinary range of courses we offer in music history, culture, composition, theory, and performance. The Music Department has a particularly vibrant performance program which offers ensemble courses in an unusually wide variety of traditions and approaches as well as private instrumental and vocal instruction. Our World Music Program, one of the first in the nation, dating from the 1960s, attracts an internationally and musically diverse cohort

of graduate student musicians, composers, and scholars who fully participate in our community. In this community we seek to create an exceptional artistic and educational environment where students can develop their skills while also expanding their awareness of the full range of the world's musics and expressive technologies.

AFFILIATED FACULTY

Jin Hi Kim
BA, Seoul National University; MFA, Mills College
Director, Korean Drumming Ensemble; Assistant Professor of the Practice in Music, Part-Time; Director of the Korean Drumming Ensemble

Jody Cormack Viswanathan
BA, University of Washington; PHD, Wesleyan University
Visiting Scholar in Music; Visiting Scholar of Music

CHAIR

MUSC102 World Music
This course will explore the diversity and range of musical expression around the world, mapping styles across Asia, Africa, Europe, and the Americas. We will immerse ourselves in a combination of extensive listening to recordings and viewing videos, reading, discussion, in-class performances, and attending relevant cultural events. The world as a whole will be surveyed and regional traits will be identified. Emphasis will be placed on specific pieces, musical instruments, artists, genres, and countries; discovering cross-cultural commonalities and differences; and understanding histories and processes of globalization. Assignments will consist of quizzes on the listening material, Moodle Forum posts, recording and concert reviews, and midterm and final group or solo projects. Three parallel goals will be pursued: 1) to become literate in a broad range of music from around the world; 2) to become familiar with a variety of approaches to understanding music from around the world; and 3) to experience the creative formation of a global music community in microcosm through midterm and final projects.

MUSC103 Materials and Design
Materials and Design is an introduction to some of the elements of musical notation within the Western European musical tradition. Its primary aim is to provide students with a vocabulary and set of tools with which they can describe their experience of music, broadly understood. Focused on music's formal construction and operation within a specific cultural practice, the course also encourages critical listening and thinking skills across genres and geographies. It presumes no prior musical knowledge or training. This particular version of Materials and Design (Spring 2027) is an experimental version that examines how musical notational and theoretical practices are often encoded in digital audio workstations by teaching Ableton Live alongside introductory music theory. The class culminates in final creative projects developed over the course of the semester. Additional lab sessions outside of class are required for developing both theory and software skills. Prior experience with Ableton or digital audio tools are not required.

Prereq: **None**

MUSC103T Theory of Pop Music
This class endeavors to introduce students to fundamental music theory topics through analysis of popular music from the 20th and 21st centuries. We will use the work of such artists as The Beatles, Radiohead, Lauryn Hill, Beyoncé, Kendrick Lamar, Prince, etc., to teach scales and modes, basic jazz fundamentals, chord progressions, secondary functions, and song form. Besides discussion and in-class analysis, students will build their compositional "toolkit" by studying and discussing compositional techniques, learn how genre is created using theoretical principles, and will be asked to write in those genres through templated compositional exercises. Students will demonstrate theoretical analysis of pop songs in essay form and will learn to transcribe pop songs by ear, notating the chord progressions and melodies. As students progress in their theoretical knowledge, they will practice analyzing their own -- and each other's -- music.

MUSC103Z Materials and Design
Materials and Design is an introduction to some of the elements of musical notation within the western European musical tradition. Its primary aim is to provide students with a vocabulary and set of tools with which they can describe their experience of music, broadly understood. Focused on music's formal construction and operation within a specific cultural practice, the course also encourages critical listening and thinking skills across genres and geographies. It presumes no prior musical knowledge or training. Unlike the Fall and Spring versions of MUSC 103, this version of Materials and Design is expanded in terms of scope and the level of student engagement. In the case of the former, the summer terms will allow for vibrant discussions about the history of musical "materials"--instruments, natural resources, and people--as well as how these materials are "designed"--notational practices, improvisation, the formation of canons, accessibility related to class, gender, sexuality, race, and place of origin. In the case of the latter, whereas the Fall and Spring versions of the course are designed for the quick acquisition of a specific skill set, the immersion format of the summer course will allow for greater and more individualized exploration, including independent and group listening assignments, improvisation exercises, discussion posts, and more.

MUSC104 Rhythms of the World: An Introduction to Rhythm, Meter, and (Musical) Time
In MUSC 104, students explore the diverse ways people around the world use rhythm and time in musical expression. Through a combination of experiential learning and theoretical investigation, students will discover what rhythmic models reveal about music cultures and how these models resonate in us when we put them into practice. Our direct interactions with varied musical traditions will deepen students' rhythmic skills, broaden their musical creativity, and provide a foundation for deeper engagement in Wesleyan's musical offerings.

MUSC105 MF DOOM and Pierre Henry
This course will explore the relationship between hip hop and musique concrete by investigating the works of MF DOOM and Pierre Henry. The music of both employs the full range of sound through techniques of turntablism and sound sampling. In this course, we will explore the basic processes of sampling and field recording and use the compositional methods of DOOM and Henry in the creation of our own pieces. In this process, we will also examine the role of these methods in the history of hip hop and musique concrete. Course work will consist of weekly writing assignments and discussions plus monthly creative compositional assignments. Any choice of sampling software may be used in the completion of those assignments.

MUSC106 A Thousand Years of Music History
This course will offer a history of European art music from the early Middle Ages to the present day. Featured composers will include Hildegard, Machaut, Strozzi, Bach, Handel, Mozart, Beethoven, Debussy, Stravinsky, Beach, and Cage. Students will relate course content to art, architecture, and literature of the periods, as well as to major economic and historical events. We will explore the technical workings of music and together build a vocabulary for analyzing music and articulating a response to it; music will be interpreted as a cultural phenomenon. By the end of the semester, students should be equipped for a lifetime of informed listening.

Prereq: **None**

MUSC108 History of Rock and R&B
This course will survey the history of rock and r&b (broadly defined as a conglomeration of loosely connected popular musical genres) from their origins in the 1940s and '50s through the early 1990s. Three parallel goals will be pursued: to become literate in the full range of their constituent traditions; to experience the workings of the music industry by producing group projects; and to become familiar with a variety of theoretical approaches to the music, confronting issues such as economics of the industry, race relations and identities, youth culture and its relationship to American popular culture, and popular music as a creative, cultural, and social force. For the midterm and final projects, the class will form a music industry in microcosm (musicians, journalists, producers, video and sound engineers, visual artists), resulting in audio and video releases and a magazine.

MUSC109 Introduction to Experimental Music
This course is a survey of recent and historical electronic and instrumental experimental works. MUSC 109 begins with early experimentalists and germinal works of John Cage, then quickly moves to a wide range of composers working with idiosyncratic electronics, invented instruments, intermedia, sound art, and many other areas of sound exploration and inquiry. Artists works include (and are not limited to) Henry Cowell, Earle Brown, Christian Wolff, Morton Feldman, Anthony Braxton, La Monte Young, Terry Riley, David Behrman, Gordon Mumma, Alvin Lucier, La Monte Young, Muhal Richard Abrams, George Lewis, Roscoe Mitchell, Robert Ashley, Steve Reich, Philip Glass, Meredith Monk, Laurie Anderson, Arthur Russell, John Zorn, and Julius Eastman. The course includes discussions of recent work by composers, performers, and sound artists such as Pamela Z, Tristan Perich, Guillermo Galindo, Lesley Flanigan, Jace Clayton (DJ / rupture), Holly Herndon, Raven Chacon, Jennifer Walshe, and Object Collection. The course includes lectures, demonstrations, and performances, and occasional visits by special guests.

MUSC110 Introduction to South Indian Music
This course will introduce students to one of the world's great musical traditions, one that has been part of Wesleyan's renowned World Music Program for more than 60 years. Students will learn beginning performance techniques in melody (raga) and rhythm (tala), the cornerstones of South Indian music. Through a listening component, they will also learn to identify important ragas (melodic modes). Lectures will cover a wide range of topics, including karnatak (classical) music, temple and folk traditions, music in South Indian film, and pop music. Readings and lectures will also provide the historical and cultural context for this

rich and diverse musical world and will prepare students for the fullest possible enjoyment of the annual Navaratri Festival in October.

MUSC111 Music and Theater of Indonesia
Since the early history of Indonesia, the Indonesian people have continually been in contact with a number of foreign cultures. Particularly, Hinduism, Islam, and the West have had significant impact on the development of Indonesian culture. This course is designed as an introduction to the rich performing arts and culture of Indonesia. A portion of the course is devoted to demonstrations and workshops, including instruction of an Islamic frame drum ensemble, singing, and Gamelan (percussion ensemble of Java and Bali).

MUSC115 Introduction to North Indian Music
This course will introduce students to North Indian Hindustani classical music, one of the two classical musical traditions of India. Students will learn about the basic concepts of melody and rhythm--the cornerstones of Indian music. Through listening components, they will also learn to sing the basics and identify important ragas (melodic modes) and tal (rhythm). Lectures will cover a wide range of topics, including Hindustani (classical) music, light classical music genres, folk music traditions, music in Bollywood film, and contemporary pop music. Readings and lectures will also provide the historical and cultural context for this rich and diverse musical world.

MUSC116 Visual Sounds: Exploring the Landscape and Architecture of Musical Notation
This course examines a diverse range of musical works seeing their notation as a process of translation, transformation, provocation, and imagination. Tracing a thread from medieval notations through to contemporary scores, we investigate the shifting tensions between the sonic and the visual over the long arc of music history. Why were sounds inscribed in the 9th century? How do 1960s scores reflect the radicalism of their era? Connections across centuries help shed light on musicians for whom the creative potential of notation surpasses its descriptive and prescriptive functions. Featured composers will include Hildegard of Bingen, Guillaume de Machaut, La Monte Young, George Brecht, Earle Brown, John Cage, Cornelius Cardew, Cathy Berberian, Yoko Ono, Pauline Oliveros, Mark Applebaum, and Claudia Molitor. Complementary materials comprise visual art, concrete poetry, and live theater.

One of the reason composers started to experiment with open scores in the 1950s and '60s was to develop a kind of musical notation that could be read, and therefore performed, even by those who did not identify as musically literate. This course is, accordingly, open to all students. No prior knowledge of musical notation or instrumental expertise is required. Meetings will involve discussion of a wide range of readings with the goal of expanding understanding of multiple relationships between music and visual materials.

Learning Objectives:

- To gain familiarity with the diversity of forms of musical notation.

- To recognize the variable relationships between inspiration, transcription, performance, and recordings.

- To consider musical notation as a form of design, a language code, and a form of translation.

- To develop creative processes and understand the creative processes of others.

MUSC117 Musicking Body
"What is this thing called music?" asks Christopher Small in his book "Musicking" (1998) and observes, "Music is not a thing at all but an activity, something that people do." Taking a cue from Small's concept of "musicking" as an inherently social and physical process, this course will explore the role of the human body in the act of music performance and the creation of musical meaning. We will discuss interdisciplinary approaches to the study of music as embodied experience, drawing insight from fields as diverse as philosophy, feminist and performance studies, anthropology, ethnochoreology,

and ethnomusicology. We will examine the modes, aesthetics, and cultural connotations of bodily expression, movement, and gesture in a variety of music and dance traditions worldwide--from Sufi-shamanic rituals in Central Asia to Indian classical vocal music, and from drumming and martial arts in East Asia to African American popular genres. By engaging with a range of theoretical perspectives and case studies of embodied sounds, we will reflect on the corporeal, sensory aspects of music performance and perception, the tacit nature of learning and transmission, the intersections of human musicking with the environment and technology, and the ways in which the musicking body is entangled with the physical, social, spiritual, and political forces that shape our lives.

MUSC118F Bob Dylan and His World: Sources and Legacies (FYS)
Bob Dylan's songwriting, recordings, and performances in the 1960s are widely recognized as causing a seismic shift in American music and in the youth counterculture. He did not exist in a vacuum, though, and drew deep from the wells represented by songwriter Woody Guthrie, mountain ballad singer Jean Ritchie, and blues musician Robert Johnson, among many others. His meeting with the Beatles and subsequent world tour with the Band caused unforeseen reverberations, such as the Beatles moving into increasingly sophisticated lyrical territory and Aretha Franklin covering a song by the Band. Many artists covered Dylan songs early on (Stevie Wonder, Sam Cooke, the Byrds, and Sonny and Cher), and many credited Dylan with opening up new avenues of creative expression, including Joni Mitchell, who has been recognized as one of the most inspiring and accomplished singer-songwriters of any era. In this course we will explore (1) the sources of Dylan's art; (2) Dylan's albums, performances, and films throughout his career, with a primary focus on the 1960s; and (3) artists who have been touched by Dylan's legacy, including those outside of North America. We bypass hero worship in favor of understanding cultural and social currents that enable individuals like Dylan to blossom. In addition to collecting, interpreting, analyzing, and presenting evidence as part of written scholarly arguments, which will be stressed throughout the semester, either the midterm or final project may take the form of a creative work other than a paper.

MUSC119F Jazz in the 1960s (FYS)
The 1960s were a turbulent but stimulating time for the world of jazz. The R&B-based soul jazz movement was at its peak and often at odds with the still-developing avant-garde aesthetic. Certain other influences, such as those of Brazilian and African music, were becoming widespread in jazz for the first time. Older forms of jazz like bebop, big band music, and traditional jazz (aka "Dixieland") were struggling to remain viable and relevant. Rock music's surge in popularity was threatening the commercial solvency of jazz while acting as a musical and cultural force to which all jazz musicians had to react in some manner. Meanwhile much of this decade's jazz is inexorably linked to the political and social upheaval of the era, particularly those aspects relating to Black Americans' sense of identity and struggles for equality.

In this course, we will broadly explore the various movements that made up the jazz of this decade. We will delve more deeply into the music of some of the most important figures in jazz during this time, such as Art Blakey, John Coltrane, Miles Davis, Ornette Coleman, Charles Mingus, Stan Getz, Rahsaan Roland Kirk, Jimmy Smith, Yusef Lateef, and Sun Ra. We will study musicians who typified a particular movement, those who assimilated several into a personal style, and those who moved freely among factions. All the while, we will be contextualizing the music within the social and political climate of the decade and the broader artistic and commercial landscape of music at the time.

MUSC120F Music, Place, and Culture: An Exploration of African American Soundscapes and Traditions (FYS)
This course will explore African American soundscapes and traditions through the lens of New Orleans, a cradle of jazz, brass bands, Mardi Gras celebrations, and more. From the historically significant grounds of Congo Square to the mean streets of the Calliope; from the moving voice of gospel singer Mahalia Jackson to the edgy flows of southern hip-hop artist Mystikal; from the sweet trumpet sounds of jazz pioneer Louis "Satchmo" Armstrong to the emphatic full body twerk of bounce artist Big Freedia; from the inspiring soulful sounds of Tank and the Bangas to the powerful sonic echoes of parading brass bands, New Orleans is a place where music and culture bubbles up from the streets and travels throughout the world.

New Orleans is also a place of perpetual marginalization stemming from systemic racist policies that often lead to life-threatening forms of policing and gentrification. These policies disproportionately affect the very African American communities that provide the world such rich, and sometimes healing, iconic sounds. New Orleans serves as an ideal place--bearing strong African American musical roots--to study the manner in which culturally invested people understand, negotiate, and produce space musically. Course participants will immerse themselves in the varied genres of African American music-making traditions through reading and writing assignments, in-class discussions, active music listening, video screenings, creative projects, and possible guest artist

engagement. Music genres to be studied include jazz, gospel, soul, funk, blues, hip-hop, rap, zydeco, and bounce.

MUSC121 Queering Russian Music
How have the sexuality of a Russian composer Pyotr I. Tchaikovsky and international success of a popular music duo t.A.T.u. shaped the understanding of gender, sexuality, and queerness in the Russian context? This entry-level course introduces a variety of theoretical and journalistic approaches and presents a historical overview of Russian music centered around queerness, gender, sexuality, and power. Using methodologies of queer studies and queer theory, we will examine a variety of musical genres and musicians ranging from Imperial Russia to the present-day Russian popular and film music. The topics will focus on women composers, queer genres, queer sexual and musical identity.

Selected personalities examined in the course:

Catherine II (the Great), Pyotr I. Tchaikovsky, Vaslav Nijinsky, Sofia Gubaidulina, Galina Ustvolskaya, Alla Pugacheva, Zemfira, t.A.T.u, Pussy Riot, AIGEL, Little Big, Manizha, Oxxxymiron, ICEPEAK

MUSC122 Sample, Remix, Reuse, and Replay: Approaches to Musical Adaptation in Audiovisual Culture
Many of the musics we listen to and encounter are palimpsests, collages, and assemblages. Texts are layered upon and juxtaposed against pre-existing texts, creating polyvocal dialogues and contrasting and complementary systems of meaning. This class introduces students to questions and controversies of adapted and remixed musical media in 20th and 21st century society, analyzing the ways music and other texts and materials (e.g., paintings, plays, places, novels, technologies, genres, historical events, preexisting music) are adapted through processes of revision, remix, remediation, sampling, restaging, and reinterpretation to create new layers of meaning. The course will consider the roles of film, television, video games, music video, digital audiovisual formats and technologies, and related audiovisual media. We will journey from the recycling of preexisting classical music in video games to the remediation and transmission of live operas to the movie theater screen in the MET Live in HD series, from compositions that translate the visuality of iconic paintings into sound to the practice of remix and sampling in hip hop culture, from the digital adaptation of operatic conventions in Final Fantasy VI to cover versions that complicate listeners' expectations of gender performance, from the live performance of video game soundtracks by a symphony orchestra in Video Games Live and Pokémon: Symphonic Evolutions to the compilation mixtape scores of Hollywood films, and from Tan Dun's Internet Symphony for the YouTube Orchestra to how the urban neighborhood of Washington Heights in New York City is repurposed, staged, and cast as a central character in In the Heights or how American political history is adapted and revitalized in Hamilton. Themes in the course include, among others, the changing roles and responsibilities of musicians in an age of digital globalization; the power of musical media and referential texts to structure human experience; and the role of the composer and listener as manipulators and interpreters of musical meaning across comparative audiovisual texts. This seminar draws on the classroom community's interdisciplinary backgrounds and interests as well as readings and case studies that cross and challenge disciplinary boundaries. Students can achieve success in this course without previous musical knowledge.

MUSC122F Writing about Sound: What the audible can teach us about our world
Sound speaks volumes, even if what it tells us can be tricky to put into words. If we listen critically, sound can teach us important lessons--like how technology is evolving, society changing, and what it means to be human. That is why sound has recently preoccupied the academic study of music, visual arts, media, ecology, race, disability, architecture, economics, and the history of science. Touching on each of these areas, this course blends core texts and case studies in the interdisciplinary field of sound studies to offer something interesting to all students, regardless of their chosen major. As part of Wesleyan's first-year seminar program, the course has two aims: to explore how philosophers, ethnographers, practitioners, and journalists have written about sound; and to help students cultivate good habits for putting their own arguments into writing. There are no prerequisites to join the class, and assignments will focus on developing weekly reading responses into longer-form essays.

MUSC123F Afrobeats Nation: History, Creativity, and Transatlantic Performance (FYS)
Afrobeats has become a global phenomenon in recent years. With Burna Boy and Tems' Grammy win, and performance at the Coachella festival alongside Rema, Fireboy, and Wizkid, Afrobeats appeals to a borderless "Afronation" in the post-Fela era. Given the entries on global music charts (Billboard Hot 100), streaming numbers, and performances at the Grammy Awards, Paris La Défense Arena,

Afro Nation, Glastonbury Festival, Wireless Festival, Madison Square Garden, and Citi Field, Afrobeats artists are shaping the global music scene. This course examines the creativity, social history, and transnationality of West African popular music from 1960 to date. We will cover issues of hip hop appropriation and resistance, gender politics, visual culture, Fela Kuti's Afrobeat and Black consciousness, and the global appreciation of contemporary Afrobeats music.

MUSC124F Mapping Culture (FYS)
What is a culture, how can it be intimately wrapped up in a location, and how can that be mapped out to better understand its inner workings? In the face of globalization and pervasive online communities, what can conventional wisdom--"location, location, location" and "All politics is local"--tell us about the importance of actual places in cultural formations? We will first orient ourselves with a wide range of music-mapping projects, as well as projects that directly address the significance of a location. From a base in the interdisciplinary field of ethnomusicology, we will then examine how scenes and subcultures can congeal in particular places and times, mapping them in New York City's Lower East Side (punk), Greenwich Village (urban folk revival), and South Bronx (early hip-hop). Deploying a broad conception of culture, we will cover other art forms (e.g., graffiti) and social formations. Haight Ashbury (San Francisco) 1960s counterculture, Laurel Canyon (L.A.) 1970s singer-songwriters, Chicago 1980s post-disco house, and London 1980s post-punk goth will provide complementary case studies. These examples will provide models as students embark on their own to map out a culture of their choice as their midterm and final projects, using Google maps, Story Maps, or some other interactive multimedia format. Readings on theories of place and of subcultures will provide blueprints for issues to be explored, including how group identity and a sense of community can be locally constructed and the significance of physical in-person contact in a world of increasingly virtual relationships.

MUSC125 Music and Downtown New York, 1950-1970
This course will explore the history, interconnections, and simultaneous flourishing of four distinct music communities that inhabited and shaped downtown New York during two particularly rich decades in American culture: Euro-American experimentalists; African American jazz-based avant-garde; blues and folk revivalists; and Lower East Side rock groups. Much of the course will be devoted to understanding their points of convergence and divergence, especially in conversation with broader currents of the time (e.g., the Civil Rights Movement and related notions of freedom, shifting youth subcultures, and avant-garde aesthetics). We will read about and listen to recordings of a wide variety of musicians, identify aesthetic and cultural trends, and study the local industry that supported them. Student research, interpretation, and writing will be emphasized throughout the semester.

MUSC127 C-Pop in the Shadow of a Rising China
Explore the emotional aspect of a rising China and understand the inner feelings of contemporary Chinese youth through C-pop. How did "red songs" from the Cultural Revolution become popular songs in the 21st century? How did an "extremely soft and feminine" voice threaten the Chinese Communist Party? Why do songs from the "jazz capital of the Orient" trigger nostalgia? How do underground rock and punk bands negotiate their existence? How is rap in China different from that of the US or anywhere else? How do Chinese artists deal with LGBTQ issues and ethnic minority issues in popular music? Why do TV variety shows matter? What future is there for China's burgeoning "internet songs"? Popular music in a rising China presents complex issues of state-sponsored popular culture intersecting with bottom-up popular taste and desire, the repressive collective "we" intersecting with the resilient individual "I" in artistic expressions, the imagined "ancient China" intersecting with contemporary sound and technology, and the intensifying nationalistic sentiment intersecting with China's expanding global ambition. This course offers students opportunities to explore aesthetic, political, and cultural meanings expressed in China's popular music from the 1980s to the present. Chinese language knowledge is not necessary.

MUSC128F Music and the Moving Image: From Music Video to Film to Digital Media (FYS)
On August 1, 1981--the day that a cable TV channel playing music videos 24/7 made its debut--the inaugural video aired on MTV by the band The Buggles announced to viewers, "Video Killed the Radio Star." Since the launch of MTV, music videos have shaped popular culture, and their production, narrative, multimodal, and editing aesthetics have influenced other musical screen media, including film, commercials, television title sequences and end credits, film trailers, live concert films, video games, YouTube fan remixes and more. The development of digital new media technologies made the production technologies once only accessible to commercial record labels and production

companies available to fans and consumers on their computers, cameras, and mobile media devices. This course explores the relationships between music and moving images (e.g. television, film, computer, video games, mobile media, digital media), and how the music video format has influenced modes of music making, performance, reception, and circulation. Music videos have shaped the aesthetic style of a wide range of screen media genres, serving as a form of branding popular music and artists, introducing experimental and avant-garde techniques to a mass audience, and facilitating participatory fan musicking. This course thinks deeply about several key issues concerning music and moving images (e.g. virtuality, identity politics, cross-cultural exchange, participatory musicking, fandom, virtuosity, adaptation, branding, liveness, nostalgia), examining how screen media with their visual and auditory content can be listened to and read as cultural texts.

Case studies in this seminar range from the history, genre expectations, and experimentalism of music videos to ethnographic filmmaking, from the visual album (Beyoncé's LEMONADE) to fan produced video game music machinima, from the sound design of documentary film to the movie musical, from Hollywood compilation soundtracks to the pace, camera angles, and dance sequences of post-MTV Bollywood film, from 8-bit video game sound to the music pedagogy of children's television programs (Sesame Street's "Geometry of Circles" scored by Philip Glass), and from the use of pre-existing music in television commercials (United Airlines' use of George Gershwin's RHAPSODY IN BLUE, Michael Jackson's "Billie Jean/New Generation" for Pepsi), video games (ETERNAL SONATA, TETRIS), and mobile media apps (the Clapping Music app, the John Cage Prepared Piano app) to expressions of Indigenous musical modernity (Tanya Tagaq's multimedia collaboration NANOOK, the Anishinaabe singing mobile game app HONOUR WATER, the soundscapes of the Iñupiat Alaskan Native video game NEVER ALONE).

MUSC129 The Art of Listening
Over the 20th century, the advent of electronic sound recording and transmission triggered rapid changes in all forms of auditory culture. We will examine this evolution through the different approaches to listening that emerge with the concepts of soundscape, sound object, sound art, and sound design. We will give particular attention to the artists and composers who explicitly shaped these concepts through their work. This includes figures such as writer William S. Burroughs, composer John Cage, singer Bing Crosby, pianist Glenn Gould, theatre director Elizabet LeCompte, filmmaker Walter Murch, artist Max Neuhaus, composer Pauline Oliveros, guitarist Les Paul, composer R. Murray Schafer, and theorist Pierre Schaeffer. In addition to readings, listenings, and viewings, class members will perform works by composers such as Maryanne Amacher, John Cage, Alvin Lucier, and David Tudor and create sound works of their own. The class should be of interest to anyone who anticipates working with sound in their creative endeavors, whether as a musician, artist, dancer, or filmmaker.

MUSC130F Wagner and Wagnerism: Richard Wagner's Music and Influence from the 1840s to the Present (FYS)
Richard Wagner is perhaps the most influential composer who ever lived. Not only an influence on every musician who followed him, he has also had enormous influence on literature, the theatre, visual arts, and even politics. His music is beautiful but controversial. His ideas range from the most exalted, idealistic visions of the future and human possibility to some confused political notions and a particularly virulent antisemitism. In the words of one of his countless biographers, "Humanity has paid dearly for the Wagnerian patrimony." He was a particular favorite of Hitler, but also of W.E.B. Du Bois. Can Wagner and his legacy be redeemed? Should it? The first step is to understand exactly what this complicated man and his long shadow are all about.

MUSC133F Caribbean Connection: Music and Culture of Trinidad and Tobago Music (FYS)
MUSC 133F will examine the history and development of three major genres of music from Trinidad and Tobago: Calypso, Soca, and Chutney music. In this course we will explore issues relating to culture, tradition, colonialism, gender, identity, religion, and sexuality in Trinbagonian party music. We will survey scholarly material as we listen and analyze the lyrical and visual components found in popular music videos, as well as the party/fete arena, to gain a better understanding of how these styles of writing and visual portrayals have shaped Carnival music today. Additionally, we will begin this course with an introductory examination of the musical traditions within some of the Spanish, French, Dutch, and English-speaking Caribbean, ending the course by probing the many ways Caribbean countries connect culturally and historically.

Although this is not a performance-based course, students would have a firsthand opportunity to play the steelpan and auxiliary percussion instruments as we learn about the invention of the instrument, as well as hear directly from Trinbagonian musicians and other Caribbean musicians via zoom.

Some styles of music explored in this course are: Tamboo bamboo, calypso, soca, chutney, chutney-soca, Jamoo, shango (orisha), tassa drumming, rhythm sections (folk drumming), steelpan, extempo, parang (parranda), parang-soca, zess, zouk, ska, rocksteady, reggae, reggaeton, afro-cuban, merengue, bachata, and vodou-jazz.

N.B. This course is open to ALL students and requires no prior knowledge of or experience in Caribbean music.

Prereq: **None**

MUSC134F Video Game and Anime Music Since the Year 2000 (FYS)
In this course, we will focus on two of the dominant popular media forms of the twenty-first century, video games and anime (broadly defined), to approach questions about the role of music in the digital era. We will ask: what role do sound and music play in these complex audiovisual art forms? As anime's production globalizes, to what extent can it considered an exclusively Japanese product? (And conversely, how does anime's global popularity point to longstanding anxieties in the anglophone world about "the rise of Japan"?) How do video games and anime bring to the forefront important conversations about the relationship between creative arts, technology, and economic systems? And finally, who are the figures creating this music, and how does their role differ from that of pre-twenty-first century composers? The course will include two major projects: (1) an in-class midterm presentation contrasting the role of sound and music in two different media, and (2) a digital ethnographic project exploring the role of community in a particular video game or online fan space.

MUSC135F Entangled Sounding Objects: The Social Life of Musical Instruments (FYS)
Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they serve as both tangible and symbolic objects that hold significant meanings for the communities they serve. This course examines the social lives of musical instruments worldwide, focusing on Central Asia, a region that extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south. Students explore theories and concepts derived from interdisciplinary literature on material and sound culture and apply them to case studies of a variety of musical instruments -- lutes, flutes, zithers, harps, and drums -- in Central Asia and beyond. Through these case studies, students learn about the historical trajectories and cultural significance of individual instruments in various societies; consider how instrument making and performance are influenced by indigenous religious beliefs and cosmology, political ideology, ecology, and economy; and interrogate the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

MUSC201 Tonal Harmony
This course builds on the foundations established in Materials and Design, with an expanded focus on the analysis of Western European music from the Common Practice period (c. 1700-1900). Through guided listening, written analytical exercises, and in-class discussion, students will develop a deeper understanding of harmony, melody, and formal structures characteristic of the late Baroque, Classical, and early Romantic traditions. Weekly lab sessions emphasize the practical application of these concepts through sight-singing, dictation, and keyboard work, with sustained use of solfège to strengthen aural and theoretical fluency.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC103**

MUSC202 Theory and Analysis
Grounded in the European art music tradition, this course offers a global approach to the study of harmony and form. Through analysis, critical listening, and composition we will explore how musical structures shape expression across time and place. While focusing on Classical and Romantic repertoire, we'll also consider how diverse musical systems around the world engage with similar -- or radically different -- ideas of form and tonality.

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC201**

MUSC203 Chromatic Harmony
This course is an investigation of the tonal system as it functions in extreme situations: selected highly chromatic passages in Mozart, Beethoven, and Schubert; the more adventurous compositions of Chopin and Liszt; Wagnerian opera-drama; and late-19th-century works in which the tonal system approaches collapse (Hugo Wolf, early Schoenberg). Recently developed models from the music-theoretical literature will be introduced. Chromatic harmony will be considered from both technical and expressive points of view.
Offering: **Host**
Grading: **A-F**

Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC202**

MUSC207 Orchestration
Students will write for the various groups of the orchestra (strings, winds, brass, percussion) and for the entire ensemble.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**

Prereq: **MUSC201 OR MUSC202**

MUSC208 Post-Tonal Music Theory
At the dawn of the 20th century, European composers began to experiment with a radically new and completely decentered tonal language. Leaving the practice of tonality behind them, these composers used unorthodox numerical relationships to create formal links and motivic connections between the sounds of their compositions. Post-tonal theory represents the body of scholarship that attempts systematically to examine the formal procedures and properties associated with this modernist music; it also represents one attempt to understand the relationships between musical pitches that hold outside the framework of tonality. This course will serve as a general introduction to post-tonal music theory and will also serve as an introduction to the music of the Second Viennese School: Arnold Schoenberg, Alban Berg, and Anton Webern. Beyond the music of these composers, we will also contemplate applications of post-tonal theory to more recent music.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC201**

MUSC210 Theory of Jazz Improvisation
This course concentrates on the vocabulary of improvisation in the African American classical tradition. Rhythmic, melodic, and harmonic knowledge will be approached through the study of scales, chords, modes, ear training, and transcription. Theoretical information will be applied to instruments in a workshop setting. Intensive practice and listening are required. This course may not be repeated for credit.

MUSC212 South Indian Music: Solkattu
Solkattu is a system of spoken syllables and hand gestures used to teach and communicate rhythmic ideas in all of South India's performing arts. It has been part of Wesleyan's program in karnatak music for more than 40 years. Students of many different musical traditions have found solkattu valuable for building and sharpening rhythmic skills and for understanding the intricacies of karnatak tala (meter). Building on the fundamental skills acquired in MUSC110, students will learn increasingly advanced and challenging material in a variety of talas. An extended composition, developed for the group, will be performed in an end-of-semester recital.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

MUSC219 I am the Loudest Sound in This Room // I am the Softest Sound in This Room
I am the Loudest Sound in This Room // I am the Softest Sound in This Room (MUSC 219) examines the use of feedback-based systems in performance, composition, and sound art. Particular emphasis will be given to the creation and exploration of recursive systems, starting with Alvin Lucier's seminal work I am Sitting in a Room. The class will overlap with explorations of instrument design, acoustics, orchestration, improvisation, idiosyncratic electronic systems and programming, and performance. Students will be encouraged to create original work as part of the class. The class will use softwares such as Max/MSP, Reaper, and other systems as necessary for the class.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC220 Composing, Performing, and Listening to Experimental Music
This is a first course in the composition of music that does not does not treat pitch relations as primary but, instead, finds approaches that can engage with all forms of sound whether pitched, unpitched, contextually specific, or abstract. Pieces from the last 100 years that have developed this approach will be presented and the ideas underlying their making (as likely to be drawn from acoustics, psychoacoustics, acoustical ecology, and sound engineering as music theory or history) will be discussed.

Weekly course work will focus on short compositional studies that respond to the pieces discussed and explore different digital and analog compositional techniques (tape manipulation, sound sampling, granular synthesis, frequency modulation, feedback, etc). Two larger creative projects will be completed, one at the eighth week of the semester and the other as an end-of-semester term project.

There will also be one primarily technological assignment. This will be to design a "plug-in" that could add a useful capability to your working environment (most likely Audacity, Reaper or Ableton Live). You will also attempt to build this plug-in using an AI tool, such as ChatGPT or Claude, capable of performing the coding on the basis of verbal prompts. (Ideally, this will yield a tool that facilitates your term project, but its role as an assignment is simply to demonstrate your ability to clearly communicate compositional and technological ideas.)
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC221 Live-Electronics for Composition, Improvisation, and Sound Art
This course delves in to Max with the goal of creating live-electronics sound-based systems. The class begins by looking at seminal works in experimental live electronics performance and interactive arts and quickly maneuvers into other arenas of performance and composition. Max for Live, Jitter, Mira, and experimental controllers will also be discussed and further pursued depending on individual student projects to be completed by the end of the semester.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC109**

MUSC222 Sound Art, Music, and Interactive Media
The focus of this course is on creative projects in digital media conceived in relation to historical considerations of these same techniques. Recording, amplification, and radio transmission have exerted a profound effect on musical practices of all forms since the beginning of the 20th century. In the period immediately after World War II, composers and artists began to focus on changing the relation of composers, performers, and listeners to sound in response to those techniques. We will consider those artistic strategies and the role they have played in shaping musical genres such as musique concrete, serial and spectral composition, interactive computer music systems, circuit bending, and entirely new genres such as sound, video, and performance art. Student

projects will be focused on the creation of music, installations, and performances that respond to those ideas and issues. Our primary tool for those projects will be MAX/MSP/Jitter, a software environment designed to enable the composition of real-time interactive sound, video, and network connections.

The fundamental goal of this course is to develop the combination of technical skills and historical awareness needed to creatively engage the ever-expanding accumulation of data and social media that is currently enabling a new period of change in artistic practice.

Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **DDC223**
Prereq: **MUSC103 OR MUSC201**

MUSC224 Experiments in Sound and Technology
This course will explore hybrid approaches to performance that combine live coding with analog electronics. SuperCollider and its extensions will be our live coding environment. Analog approaches will include both synthesizers (Arp 2600, Moog Modular), homemade/home modified electronics devices drawn from the David Tudor Collection of Electronic Instruments, and Instrumentation and other devices prototyped in class. Coursework will center on collaborations with classmates with complementary backgrounds and skills. To that end, this class is open to anyone who can demonstrate background in any one of the following areas: experimental music composition, sound production, performance video, computer programming, or electronic circuitry. Students interested in the course will be asked to provide a statement about their background and the nature of their interest in the course.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC225 Sound Systems and Chamber Electronics
A course in live electronic music centered on the transformation and spatial redistribution of sound. Coursework includes individually creating interpretations of fixed media work (by a composers such as Eliane Radigue, Luc Ferrari, Robert Ashley) for specific spaces using a sound system designed for that space and that piece. Collectively we will prepare realizations of ensemble pieces that played a pivotal role in the development of this music (such as John Cage's Cartridge Music and David Tudor's Rainforest IV). Term projects will take the form of concert music or sound installation or other hybrid forms.

On a technical level we will explore different generations of electronic instruments and instrumentation drawn from Wesleyan's World Instrument Collection. This ranges from found objects such as slinky's and bird calls to Moog and Arp synthesizers and guitar pedals and other idiosyncratic synthesis devices. We will expand this vocabulary with digital sound techniques using SuperCollider 3, a free music programming environment that extends the DIY sensibility to software.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC226 Field Recording
Behind every sound we hear while listening to music, watching television, playing games, or browsing the internet, an incredible amount of thought went into how to best capture and reproduce it. There are so many amazing sounds, and having the skillful ingenuity to capture those moments, often outside the convenience of a studio, is key to ensuring the ephemeral sonic elements in our world are incorporated into the lives of anyone who wants to listen. The practices discussed in this course will be focused on both the flexibility and practical considerations of creating from a home studio in the 21st century, and framed to fit a range of artistic and professional endeavors such as album production, broadcasting, ethnographic documentation, and sound recording for visual media. This course will illuminate every step of that process, from choosing equipment for making a particular recording, to editing, cleaning up, and mastering the deliverable result, while also touching on specific historical and technical elements of recording technology. By the conclusion of this course, students will have the foundations to share the sounds they hear--in the way they want them to be heard--with the world.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **HA-DDC**
Prereq: **None**

MUSC227 Sound Production
Presenting art conceived as sound goes far beyond setting up a pair of speakers. With the immersive potential of new audio technologies, artists are empowered to think outside the box and create unique super-systems to express themselves. These endless possibilities can be immensely exciting or potentially overwhelming, depending on how much an artist is able to internalize where art and technology overlap. This course will prepare creative thinkers to incorporate audio into their work by establishing a fundamental understanding of modern speaker/transducer designs and configurations, FOH mixers and large-scale audio routing/processing technologies, control interfaces/protocols for producing and interacting with sound, basic room acoustics and strategies on maximizing the potential of a space, and methods of incorporating microphones/live audio into a project. By the end of this course, students will have the tools they need to set up and manage unique and complex audio systems, and better realize their relationship between art and technology.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **HA-DDC**
Prereq: **None**

MUSC230 Music Theater Workshop
This class will be a collaborative, hands-on workshop for playwrights and composers who will work together throughout the semester, simulating the real-world process of writing a piece of musical theater. Students will explore standard works in the musical theater canon as well as less traditional pieces, concentrating on dramaturgical elements specific to the form (opening numbers, "I Want/I Am" songs, extended musical sequences, act one finales, 11 o'clock

numbers, etc.). Students will then apply this knowledge to their own work as they generate scenes, songs, and outlines for libretti. Students will leave the class with a grasp of the classic components of this art form, hopefully inspired to follow or bend the "rules" to suit their own creative instincts. This course counts towards the Theater Arts category for the THEA major.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-THEA**
Identical With: **THEA279**

Identical With: **DANC231, THEA213**
Prereq: **None**

MUSC232 Instrument-Body
The ancient Greek word organon meant both instrument and sense organ, hence the development of a shared word in English for organ (as in a Hammond B3 organ) and organ (as in a kidney). This etymological overlap opens onto a set of generative questions into the nature of instruments: Are they inside or outside the body? Is the body an instrument? If the body is an instrument, who plays it? If an instrument is outside the body, what kind of object is it--a fetish? a prosthetic? an enhancement? an extension? a tool? a commodity? a technology?--and what does it do to the player? Can experimenting with new body-instrument relations become a pathway towards re-organ-izing the body and its relations? Instrument-Body is both a seminar and a studio course that takes these questions as a point of departure for creative and critical experimentation. We will read widely across the fields of musicology, art history, performance studies, queer studies, and critical race studies to investigate questions of instrumentality, embodiment, and technology. In addition, we will create performances across three units: "make an instrument," "break an instrument," and "make yourself an instrument." Students who already play instruments are encouraged to enroll, as are students that have no preexisting relationship to musical instruments.

MUSC240 Visual Sounds: Exploring the Landscape and Architecture of Musical Notation
This course examines a diverse range of musical works seeing their notation as a process of translation, transformation, provocation, and imagination. Tracing a thread from medieval notations through to contemporary scores, we investigate the shifting tensions between the sonic and the visual over the long arc of music history. Why were sounds inscribed in the ninth century? How do 1960s scores reflect the radicalism of their era? Connections across centuries help shed light on musicians for whom the creative potential of notation surpasses its descriptive and prescriptive functions. Featured composers will include Hildegard of Bingen, Guillaume de Machaut, La Monte Young, George Brecht, Earle Brown, John Cage, Cornelius Cardew, Cathy Berberian, Yoko Ono, Pauline Oliveros, Mark Applebaum, and Claudia Molitor. Complementary materials comprise visual art, concrete poetry, and live theater. One of the reasons composers started to experiment with open scores in the 1950s and 60s was to develop a kind of musical notation that could be read, and therefore performed, even by those who did not identify as musically literate. This course is, accordingly, open to all students. No prior knowledge of musical notation or instrumental expertise is required. Meetings will involve discussion of a wide range of readings with the goal of expanding understanding of multiple relationships between music and visual materials. Learning Objectives: To gain familiarity with the diversity of forms of musical notation. To recognize the variable relationships between inspiration, transcription, performance, and recordings. To consider musical notation as a form of design, a language code, and a form of translation. To develop creative processes and understand the creative processes of others.

MUSC241 Mystical Visions, Medieval Women, and the Performance of Early Music
This course challenges the traditional male-dominated history of early music by focusing on the women who commissioned, performed, heard, and composed music in pre-modern times. Discovering love lyrics that express desires, conflicts, and sufferings that seem equally true today helps collapse the notion of linear time. In addition to finding similarities across centuries, we will draw from multiple disciplines, including comparative literature, religion and cosmology, and gender and sexuality studies. An interdisciplinary approach will guide our investigation of the mystical and visionary aspects of medieval music. Topics to be explored include communal music-making practices, authorship, power and politics, and the multiple civic and social functions of music. We investigate how the music of worship differs from that of romance, public ceremony, and private entertainment. These inquiries help to cultivate skills not only to appreciate our musical heritage but also to better understand contemporary social and cultural practices.

Various "medievalisms"--modern interpretations of the medieval--are explored, to show how musicians continue to interact with early practices in new and exciting ways. This allows us to talk not only about performers of historical early music, but also about composers like Kaija Saariaho, folk groups like Vulcan's Hammer and Folkal Point, and pop artists like Janelle Monaé and Florence Welch. The creation of medievalist music for films and video games is also relevant, as an arena where musicians reimagine the medieval for new audiences.

Coursework involves learning through performance, examination of manuscripts, research, writing, transcription, and editing. There are also weekly listening assignments and readings.

MUSC242 Baroque and Classical Music
This discussion-based seminar provides an overview of the history of Western European music from the Baroque and Classical periods (roughly 1600 to 1800). More than a survey course, however, it engages students in some of the significant debates around the character and function of music, with a special focus on music's role in defining the modern era. Together, we will consider (and in some cases, reconsider) the following questions: How does music express? What were some of the paradigms for conveying meaning with music? Why does music feature so prominently in contemporaneous discourses as varied as the natural sciences, aesthetics, rhetoric, and others? By the end of the semester, students should expect to acquire some techniques for articulating their experience of music and relating that experience to compositional procedures idiomatic to the style. Repertoire to be considered will include works by Monteverdi, Lully, J.S. Bach, Haydn, Mozart, and Beethoven. We will also devote time to exploring the role of this music in cultural exchanges in Asia and the Americas. Facility with musical notation is expected.

MUSC243 Music of the 19th Century
The nineteenth century is a time of great change--politically, socially and artistically. We will study many of the major composers, and major trends, through their relationship to Richard Wagner. Wagner's life intersects with almost every major figure in nineteenth century music, in one way or another, and his legacy defines much of the twentieth century, extending all the way to today. In addition to European composers, we will study selected composers in the United States as well. Europeans include Beethoven, Chopin, Berlioz, Schubert, Liszt, Louise Ferenc, Brahms, Arthur Sullivan, and Hugo Wolf. Americans include Frank Johnson (the first published African American composer), Louis Moreau Gottschalk, and "the Beethoven of America," Anthony Philip Heinrich.

MUSC244 Music of the 20th Century
In the 20th century, European and American art music (classical music in common parlance) became increasingly fragmented. Composition splintered into diverse idioms and methods: the minimalism of Steve Reich, impressionism of Claude Debussy, and indeterminacy of John Cage, to name only a few. Often, the proponents of one school vehemently rejected the techniques of the others. Perhaps as a result of such schisms, the audience for classical music--particularly contemporary composition--diminished in size, to the point that critics were hailing the "postclassical era" by the 1990s. The concert hall ceased to be a showcase for contemporary compositions and became a kind of museum devoted to preserving (and occasionally reinventing) canonic works of the past. Commercial popular musics such as jazz and rock eclipsed classical music in audience appeal and relevance. While some composers attracted listeners through their interface with folk and popular musics or with film (e.g., Aaron Copland, Leonard Bernstein), others preferred to cultivate small but devoted audiences of initiates for their challenging works (e.g., Milton Babbitt, Arnold Schoenberg). Meanwhile, the advent of mass-produced sound recordings enabled music from distant times and places to be preserved, transported, and heard on demand, with profound consequences for the creation, performance, and consumption of music. In this course, we will explore the many trends that have marked classical musicking in the 20th century. Through extensive listening assignments and primary source readings, we will meet many of the century's influential composers, performers, critics, record producers, pedagogues, patrons, and listeners. In discussions and writing, we will explore what the past century's legacy means for us as musicians and listeners today. While previous experience with music is useful, it is not a requirement for success in this course.

MUSC245 Music in the United States in the Nineteenth Century
The musical culture of the United States in the nineteenth century is very rich and diverse. American composers of the period are far better, and more interesting, than is generally assumed. This course will focus on music of the concert hall, church music, and popular music. Composers studied will include Anthony Philip Heinrich ("the Beethoven of America"), George Bristow, Francis "Frank" Johnson (the first published African American composer), and the early compositions of Amy Beach, Charles Ives, and others whose careers spill over into the twentieth century.

MUSC246 The Symphony: Evolution of Genre
This course will explore cultural settings and key elements in development of the orchestra as a performing force, conducting as an art form, organology, and music history, by means of tracing the evolution of a single genre: the symphony (from 1750s through 1950s). Preliminary list of composers includes J. Haydn, W. A. Mozart, M. Martines, L. v. Beethoven, J. Bologne, F. Schubert, F. Mendelssohn, H. Berlioz, P. Tchaikovsky, J. Brahms, A. Dvorzak, A. Beach, L. Farrenc, G. Mahler, J. Sibelius, F. Price, W. Grant Still, R. Vaughan Williams, D. Shostakovich, S. Prokofiev.

MUSC247Z Women Writing Symphonies
The course focuses on the lives and work of pioneer female composers of the 19th and early 20th centuries who dared to venture into the traditionally male-dominated field of writing for orchestras -- symphonies, in particular. We will examine their compositional style in context of the "norms and traditions" of the day, survey critical reception and response to the premieres, as well as current scholarship, and take a closer analytical look at some of the scores that illustrate particularly innovative approaches to the genre of symphony. Featured composers are Louise Farrenc (1804-1875, France), Emilie Mayer (1812-1883, Germany), Alice Mary Smith (1839-1884, Great Britain), Amy Beach (1867-1944, United States), and Florence Price (1887-1953, United States). This course requires the ability to read music and knowledge of basic music theory.

MUSC248 Music in Outer Space
Very few people have traveled out of the Earth's atmosphere, but many composers have voyaged extensively in the conceptual realms of outer space. Throughout human history, musicians have been inspired by the "harmony of the spheres," knowledge of the universe, celestial bodies, and planetary motion. From Pythagorus, Boethius, Philippe de Vitry, John Dunstaple, Johannes Kepler, Gustav Holst, György Ligeti, John Cage, Judith Weir, Alvin Lucier, Brian

Eno, Karlheinz Stockhausen, Sun Ra, and Jeff Mills to the 1977 Voyager Golden Record, Hawkwind, David Bowie, the Grateful Dead, Pink Floyd, John Williams, Kraftwerk, and the Beastie Boys, we explore the importance of constellations to musical creativity, and the ways in which cosmic sounds have influenced artists. The course will approach the topic through various interpretative lenses. Readings are drawn from a wide range of sources--theoretical, scientific, poetic, and experiential. Discussion topics will include theories relating to the music of the spheres, the study of geometry and proportion, astro-acoustics, sonification, the use of metaphor (in naming the planets in our solar system, lunar and solar imagery), and the influence of imagined and documented sounds of space on composers past and present. Students will each construct their own soundscape of space in the near future. Musicians, astronomers, theorists, and composers: All are welcome.

MUSC249 Calderwood Seminar in Public Writing: Music Journalism and Public Musicology
The internet has revolutionized how people consume music, and how they read and write about it. This course will offer an introduction to music journalism as a practice of public musicology, one that has become central to contemporary life. Students will analyse and apply techniques used to write about music for the wider public, learn how to develop ideas, sharpen critical skills, and complete a series of reporting assignments. We will look at the history and function of music criticism, assess different kinds of music writing, discuss changing perceptions of music as a public art form, and the role of journalism in cultural preservation. The class will write and collaboratively edit a series of reviews, and make a short radio feature in collaboration with WESU (88.1FM). The reviews will focus on recordings, live events, and books on musical cultures. Students will have the opportunity to engage with professional music writers, which will help to prepare them for later work in music journalism, or in arts or media organizations.

MUSC250 Film and Folk Music of India
What is film music culture in India? What is folk music in India today? How do these genres interact and influence one another? Most research on the music of India has focused on the classical systems. However, for many people, the most important musical expressions found in their personal and social lives are film and folk musics. Even though film music is considered to be entertainment, it reflects almost all aspects of Indian music and culture. Students will be introduced to the culture and heritage of India. Film and folk music will be analyzed with reference to ancient and modern musical treatises. Topics covered will include the diverse cultures within India and its global diaspora. Students will be encouraged to sing or play the pop and folk songs of India.

MUSC252Z Expressions of Indigeneity in Music and Sound
What would an opera about Thanksgiving composed by a Native American artist sound like? To explore the politics of representation in Indigenous sound and music, this course draws students into a global dialogue about Indigeneity. Topics include the interplay of tradition and modernity, the impact of colonization, music production and consumption, and the politics of knowledge production through various media. In addition to reading and listening assignments, the students will engage in a local ethnographic project--creating an Indigenous sound map in the locale of their choice. For the final project, informed by readings and listening in class, students can choose their formats, either a research project, a creative project, or a combination of both.

MUSC256 A Celebration of Women in Jazz: A Critical Analysis of Gender
How can we take the lessons of Jazz with us into other spaces? In this course, students will study Women in Jazz and examine the broad impact of our social structures and power systems to consider how the lessons of Jazz can help us navigate our future. How can we take the values of Jazz, such as improvisation, listening skills, democracy, a celebration of diversity, and equity work, and use our agency to effect change for the better in our communities? This course will examine the traditionally male-dominated nature of Jazz, its history of misogyny, and underrepresentation of women and other gender expressions. Students will learn in general about the musical art form of Jazz, its history as Black American music, and its unique qualities including improvisation, the blues, and swing. There will be a strong focus on listening to music from women musicians, and students will learn how to actively listen to jazz and all music. Together, we will look at case studies of successful women musicians and composers from the history of Jazz through the present, reading biographical information and reviewing their performance and compositional contributions. Musicians may include Mary Lou Williams, Carla Bley, Terri Lynn Carrington, esperanza spalding, Nina Simone, Billie Holiday, Ella Fitzgerald, Melba Liston, Lil' Hardin Armstrong, Dinah Washington, Abbey Lincoln, Toshiko Akiyoshi, and Marian McPartland.

MUSC260 Entangled Sounding Objects: The Social Life of Musical Instruments
Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they serve as both tangible and symbolic objects that hold significant meanings for the communities they serve. This course examines the social lives of musical instruments worldwide, focusing on Central Asia, a region that extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south. Students explore theories and concepts derived from interdisciplinary literature on material and sound culture and apply them to case studies of a variety of musical instruments -- lutes, flutes, zithers, harps, and drums -- in Central Asia and beyond. Through these case studies, students learn about the historical trajectories and cultural significance of individual instruments in various societies; consider how instrument making and performance are influenced by indigenous religious beliefs and cosmology, political ideology, ecology, and economy; and interrogate the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

MUSC261 Music and Modernity in China, Japan, and Korea
This course examines the relationships between music and modernity in China, Japan, and Korea and the interactions between the impact of Western music

and nationalism and contemporary cultural identities. In particular, it explores the historical significance of the Meiji restoration on Japanese music tradition; the Japanese influence on Chinese school songs; the origins of contemporary music in China, Japan, and Korea; the adaptation and preservation of traditional music genres; and the rise of popular music and the music industry. We will focus on the cultural conflicts encountered by East Asian musicians and composers and their musical explorations and experiments in searching for national and individual identities in the processes of nation-building and modernization. The course aims to provide knowledge on East Asian music genres, insight on the issues of global/local cultural contacts, and a better understanding of music's central role in political and social movements in 20th-century East Asia.

MUSC262 Korean Music from Shamanism to Television (CLAC.50)
This course is open to intermediate learners, advanced learners, and native speakers. The discussion topics will be broadly approached, utilizing various music video examples as vehicles to deeper social, religious, and cultural understanding. These various music examples are from ancient to current Korean music practices. Historically, Korean music was integrated with dance, literature, art, song, and ceremony. Therefore, music (sound) was not separated from other elements but was essential to daily life, community activities, religious practice, artistic collaboration, costumes, food, and the very soul of the Korean people. Traditional Korean music is imbued with the history of court ritual, folk village stories, and myths, in addition to religious rituals of Confucianism, shamanism, and Buddhism. The music is central to a broad range of cultural, social, and humanitarian aspects of Korean life.

Korean traditional music has been evolving for over 2,000 years, and it is now rapidly moving in many directions with contemporary life and influence from Western culture. Historically, music was created as a group activity by village people oftentimes working with a spiritual leader shaman. Currently, the most acceptable music is created and performed by individual performers as a repertoire for TV programs. In the 21st century, as society changes, Korean music is changing also, with differing values of popular culture brought in through recordings, film, and of course the internet. Young musicians go beyond traditional music and are developing a new repertoire that mixes Western instruments or electronics with various traditional instruments. This is a new Korean identity. Newly created Korean ensembles and bands such as K-pop are successfully beginning to dominate the international music scene. In contrast to the formerly inner-looking "Hermit Kingdom," Korea has now entered into instant global communications with the production of more individual music in various styles.

MUSC263 Queering Russian Music
This course takes Russian and Russophone music out of its usual frames and asks what happens when we listen through the lenses of gender, sexuality, and power. Using methodologies of queer studies and queer theory, we consider how music both reflects and reshapes ideas of "Russianness." From imperial ballet to Soviet pop, from Tchaikovsky to contemporary queer artists in media, the course highlights intersections of music, identity, and politics. Special attention is given to the 2000s wave of Ukrainian musicians (Ivan Dorn, 5'nizza, and others) whose presence redefined the sound and style of Russian pop music in the 21st century. Students develop tools for critical listening, music analysis, and cultural interpretation while engaging broader debates about identity, politics, and belonging in today's Russian cultural sphere.

MUSC265 African Presences I: Music in Africa
This is a team-taught course, with instructors Charry and Dankwa bringing their complementary areas of expertise for a wide-ranging, interactive, and engaging immersion into the music, history, and cultures of Africa. We will explore the diversity of musical expression throughout the African continent with a combination of intensive reading, listening to recordings, viewing videos, discussion, and hands-on performance (all levels welcome). We will survey the continent as a whole, explore regional features, discuss in depth specific pieces, genres, and countries, and look at the social and political horizons of music, including its role in everyday life and rituals and how musical experiences have changed in contemporary life. We will also explore the presence of African music in social media, including the spread and impact of African rap and hip hop.

MUSC265Z African Presences I
One of the assets of Africa's music scene is its vast plurality. Traditional music conceived, developed, and performed in Africa over many centuries coexists and interacts with contemporary art and popular music. Through readings, classroom discussions, listening, viewing, and practical performances, this course will examine some selected musical traditions linked geographically and historically to various areas of Africa. The course highlights several themes: structure and style; interconnection of traditional, popular, and art music forms; circulation of African music; and music's role in shaping African identities in the globalized world.

MUSC270 A&R: Past, Present & Future -- a Deep Dive into the Recording Industry
Have you ever wondered how the recording industry really works and how hits become hits? This course will teach you everything you've ever wanted to know about A&R (Artists & Repertoire) as the engine that has driven the music business since the 19th century. Beginning with the invention of recorded sound, we'll trace the evolution of the business -- musically and technologically -- through current day. We'll study the formats of recorded music (both physical and digital) alongside of the colorful characters who brought them and the songs within to the public. The second half of the course transitions from theory to practice, with students taking on the role of adjunct A&R representatives for Pure Tone Records, studying contemporary A&R methods and applying lessons from the past. The course culminates in students discovering and pitching new artists for potential signing. Course taught by two-time Grammy award-winning music producer and A&R executive Pete Ganbarg (Wes class of '88).
Offering: **Host**

MUSC272 History of Jazz in American Culture
Jazz, has been a staging ground for working out some of the most defining issues and aspects of American culture. These include the dynamics of race relations, the articulation of gender roles and class distinctions, artistic expressions of freedom and democracy, the creative possibilities of the encounter of European- and African-based cultures on American soil, and an extraordinarily influential aesthetic of cool. Jazz was the dance and listening music of choice for most Americans from the 1920s-40s, until it was displaced and pushed to the margins by R&B and rock in the 1950s. But it has remained an inspiration for many artists up to the present day, including Kendrick Lamar's jazz-drenched To Pimp A Butterfly and Janelle Monae's 21st-century Afrofuturism deeply indebted to Sun Ra.

This course will provide students with a broad-based literacy in the history of jazz, while examining its significance and impact within American culture. We will explore its early 20th-century origins in New Orleans, its rise as America's popular dance music in the 1920-30s, a shift to a more concert art-oriented form in the 1940s-50 (representing the epitome of cool and hipness), avant garde expressions of the 1960s (representing a new kind of universal spirituality), its move into rock and the growth of artist-based collectives of the 1970s, and its emergence in hip hop samples in the 1990s. We will learn about major artists and their classic recordings, including Billie Holiday, Thelonious Monk, John Coltrane, and Miles Davis, as well as new directions from recent generations. We will immerse ourselves in a combination of listening to recordings, viewing videos, reading, discussion, and in-class performances. Throughout the semester we will pursue the parallel goals of using jazz history to understand American history and vice versa. This is a jazz history course with a difference, able to accommodate curious newcomers as well as aficionados, and those interested in the social and cultural dynamics as well as the musical materials.

Prereq: **None**

MUSC275 Music and Downtown New York
This course will explore the history and flourishing of four distinct music communities that inhabited and shaped downtown New York City during two especially rich decades (the 1950s and 60s): urban blues and folk revivalists; an African American jazz-based avant-garde; Euro-American experimentalists; and Lower East Side rock groups. These four vanguard musical movements--at the heart of major cultural shifts at the time, with reverberations and legacies that remain relevant up to the present day--are an essential part of U.S. history. We will uncover their points of convergence and divergence, especially in conversation with broader contemporaneous currents, including the Civil Rights Movement and related notions of freedom, shifting youth cultures, music and politics, and avant-garde aesthetics. Drawing from primary sources, we will read about and discuss recordings of a wide variety of musicians, view a broad cross-section of film, identify aesthetic and cultural trends, and study the local industry that supported them. A key theme will be the importance of a place. Projects throughout the semester can include written papers, recordings, artwork, culture mapping, or other creative endeavors somehow related to each of the four topics.

MUSC277 Jazz Avant-Gardes
What is an avant-garde and what does it mean in the context of jazz? This course will explore this question focusing on the 1950s and 60s and beyond. We will take a holistic approach, examining the music and its surrounding community within the broader social and cultural currents of the times. These currents include European-inherited avant-garde aesthetics, the increasingly urgent civil rights movement and changing conceptions of freedom, artist collectives, and Afrofuturism. Three key artists will provide a focal point: Ornette Coleman, Cecil Taylor, and Sun Ra. Others will expand our view, including Thelonious Monk, John Coltrane, Alice Coltrane, the Art Ensemble of Chicago, Anthony Braxton, Yoko Ono (a non-jazz artist who contributed to an experimental sensibility in NYC), and others. We will immerse ourselves in a combination of reading, listening to recordings, viewing videos, discussion, and some in-class performances. Throughout the semester we will pursue the parallel goals of using this movement in jazz to expand our understanding of avant-garde movements in general and using historical avant-garde movements to expand our understanding of how the phenomenon has played out in jazz. The first two weeks will function as a Jazz 101 boot camp, so no prior experience in jazz is necessary.

MUSC278 Survey of Jazz Styles
This course is a study of how jazz works, developing the awareness and tools that allow us to understand and evaluate what we are hearing when we listen to live or recorded jazz--how and why the musicians do what they do and the larger context into which a performance fits. We explore historical developments and chronology, the structures that govern jazz improvisation and other performance practices and the instrument roles and sub-styles that typically make up the music. Though there will be ample relevant information for musicians, a background in music theory or performance is not at all necessary for this course.

MUSC279Z Music and Wellbeing
IN-PERSON COURSE: 10:00am-noon and 4:00pm-6:00pm, Monday through Friday. Please note: Students should expect some readings and assignments to be due during winter break, prior to the beginning of Winter Session class meetings. Music has been, and continues to be, an essential component of the practices of traditional healers in most indigenous cultures. Methods vary greatly from culture to culture, and from ancient to modern times. Hindustani (North-Indian art) music is unusual in having a very well-established written record, as well as an oral history. But although knowledge of the medicinal effects of Hindustani musical tones and modes was once integral to understanding and selecting the rags (melodic systems) that make up this music, much of this knowledge has been lost. The sarangi (North-Indian viol) is an instrument closely associated with musical healing. Oral history transmitted through generations of sarangi players makes it possible to trace a lineage of music's medicinal purposes back to the Mughal era.

This course draws on my experience and knowledge as a Hindustani music scholar and an eighth-generation sarangi player from a hereditary musical family to open up a space for the development of community-focused performance methodologies. It looks at ways that my inherited tradition can provide a model for musical healing in contexts outside of India. Acknowledging the capacity for music to activate and influence autonomic system responses, components of the course involve research into the neuroscience of musical healing, public health initiatives, and the relationship to composition and to improvisation.

An integral part of the course, the "lab" will teach you strategies for listening and learning songs composed in rags. It will include structured breathing and yogic-postural forms, combined with healing strategies drawn from diverse sound-based creative practices. Borrowing tools from ethnomusicology, music-therapy, and medical anthropology, the course will extend the listening part of the lab to draw comparisons and analyze music healing practices. In addition, students will be encouraged to investigate, compare, and draw parallels to their own culture(s) and the discipline of music(s) they belong. Detailed and guided listening will make it possible for you to integrate emerging understandings of the relationships between ritual, music, and the health care. The course goal is to broaden your understanding of music as therapy, while raising awareness of the cultural processes that are constructed through musical practice. Syllabi for Winter Session courses will be posted to https://www.wesleyan.edu/wintersession/courses.html as soon as they are available.

MUSC285 Global Hip Hop of the Non-Anglophone World (CLAC .50)
Proficiency in a language other than English is required. Each student will present to the class a single piece of their choice in a non-English language every other week (for a total of five presentations). Presenters will provide the class with written lyrics in both the original language and in English translation. In lieu of analyzing recordings by others, students have the option to compose their own non-English rap songs and record (or perform) them for in-class discussion. The final paper will tie the five presentations together in a single formal document (or website). Class discussion will be in English, but the topics will all be rap lyrics and hip hop/youth culture in the non-Anglophone world.

MUSC290 Research Skills in Ethnomusicology--IRL & Digital
This course provides an introduction to research methods in ethnomusicology, a discipline that studies all types of music (and sound), both in real life and digital, from diverse humanistic and social scientific perspectives. The course is organized around weekly hands-on exploratory and empirical mini projects moving from virtual field to real-world fieldwork to interviewing musicians to digital sound-mapping and music video editing, from learning about Wesleyan's wide-ranging music ensembles to writing album reviews to "composing" an ethnography, which will offer orientation to a discipline that has been central to Wesleyan's approach to music and sound for over 60 years.

MUSC291 The Gendering of Music in Cross-Cultural Perspective
This course presents a critical examination of issues explored and debated in recent studies of gender, sexuality, power, identity, and music from diversified music traditions, including Western art music, popular music, and world musics. Drawing upon interdisciplinary discourse on theories of feminism and gender, gay and lesbian musicology, as well as queer theory in ethno/musicology, through case studies and analysis of various musical examples, we will investigate the following topics: women's multiple roles in the historical and contemporary practices of music; desire, sexuality, and women's images in music; and how gender ideology, contextualized by sociocultural conditions, both constructs and is constructed by musical aesthetics, performance practice, creative processes, and the reception of music.

MUSC293 Mapping Culture
What is a culture? How can it be intimately wrapped up in a location and how can that be mapped out to better understand its inner workings? In the face of globalization and pervasive online communities, what can conventional wisdom--"location, location, location" and "all politics is local"--tell us about the importance of actual places in cultural formations? We will first orient ourselves with a wide range of music-mapping projects, as well as projects that directly address the significance of a location (Nile Project, Playing for Change). From a base in the interdisciplinary field of ethnomusicology, we will then examine how scenes and subcultures can congeal in particular places and times, mapping them in New York City's Lower East Side (punk), Greenwich Village (urban folk revival), and South Bronx (early hip hop). Deploying a broad conception of culture, we will cover other art forms (e.g., graffiti and other street art) and social formations. Haight-Ashbury (SF) 1960s counterculture, Laurel Canyon (L.A.) 1970s singer-songwriters, Chicago 1980s post-disco house, and London 1980s post-punk goth will provide complementary case studies. These examples will provide models before students embark on their own to map out a culture of their choice as their final project, using either Google Maps or Story Maps. Readings on theories of place and of subcultures will provide blueprints for issues to be explored, including how group identity and a sense of community can be locally constructed and the significance of physical in-person contact in a world of increasingly virtual relationships.

MUSC294 Queer Opera
Opera is a total art: It weds elaborate fashions with scene design and lighting to create incredible dramas set to music. For this reason, opera forces us to think interdisciplinarily about the narratives it portrays. Every action, every emotion, every decision and recognition in the drama is conveyed to the audience in multiple and sometimes contradictory ways. Operas are also fantastic living experiments in the performative representation of human sexuality. In addition to all of the love and sex that occurs explicitly on the opera stage--and there is plenty of that--operatic narratives also bear witness to changing structures of normativity; regimes of social control are thematized, sometimes lampooned, and often transgressed within the drama, and operas allow us to see how this unfolds within an interconnected ensemble of media. This course serves to introduce students to the world of the opera stage and, through that world, the foundational texts of queer theory. Together we will explore operas from the 17th century to the present day, opera theory of the past century, and queer theory of the past three decades to ask what these bodies of knowledge have to teach each other.

MUSC295 Global Hip-Hop
Over the past two decades, hip-hop, in its various facets of rap, deejaying, dance, visual art, fashion, and attitude toward authority, has gradually taken over as a primary medium of expression for youth around the world. Used as mass entertainment, elite aesthetic statement, social and political commentary, tool for education and social change, vehicle for economic opportunity, and as the core of a cultural movement, hip-hop has proven malleable enough to thrive embedded in scores of different languages and cultures around the world and

effectively speak to local needs. Yet its local manifestations have also managed to retain their membership in a global hip-hop culture.

In this seminar we will study the global spread of hip-hop from an interdisciplinary approach, examining its varieties of expression from aesthetic, cultural, social, musical, linguistic, kinetic, economic, and technological perspectives. We will first come to an understanding of the rise and dispersion of hip-hop culture in the United States. Then, beginning with France, where it first took hold, we will move around the world examining local case studies and their more global implications.

MUSC296 Soundscapes of Islam
From the melodious recitation of the Qur'an and Sufi-inspired sung poetry to popular soundtracks of religious revival and resistance, the world of Islam has generated myriad sonic expressions across its diverse historical and geocultural milieus. While recognized for its affective and transformative powers, music has also been the subject of a longstanding polemic in Islamic societies, its moral and ethical status being debated and contested. This course will survey the soundscapes and ideoscapes of Islam, exploring the manifold roles and meanings assigned to music among Muslim communities. It will examine a range of sound practices and related discourses to discover the ways in which locally distinct religious and social customs have shaped concepts of music and sonic articulations of Muslim identity. We will locate the varied and shifting attitudes toward music and musicians within the context of political censorship, colonialism, nationalism, and cosmopolitan modernity, and consider the impact of current conflicts and migratory processes on the local-global circulation of religious ideologies and sounds. Drawing from selected case studies of sacred and secular performance, we will explore the musical construction of gender, place, and architecture; the role of media in the formation of Muslim 'counterpublics'; and the mediation of aesthetic sensibilities through style. Topics covered will include: views on music within the Islamic tradition (the Qur'an and Sunna, shari'a law, theology, and Sufism); philosophies and cosmologies of music in Islam; music at the courts of Islamic rulers; religious chant and art singing in the Middle East; sound, healing, and exorcism in North Africa; ritual, devotional, and mystical practices in Central Asia; Islamic performing arts in Indonesia; Sufi world music and Muslim pop and hip-hop across Asia and Africa, and among immigrants and refugees in Europe and North America. Throughout the course, Islam will be encountered as a widely diverse spiritual and sociocultural system that has been a source and stimulus for creativity among Muslim peoples worldwide.

MUSC297 Music of Central Asia: From Throat-singing to Heavy Metal
The music of the Hu was chosen as the soundtrack to Star Wars Jedi: Fallen Order because it sounded otherworldly to Western audiences. In fact, the Hu draw on ancient musical traditions from Central Asia, one of the most culturally and musically diverse areas of the world. This course introduces students to a wide range of music practices, genres, and styles in historically nomadic and sedentary regions of Central Asia: throat-singing, sounds of shamanic and Sufi Islamic rituals, epic performance, narrative instrumental playing, oral poetry competitions, folk and art singing, Western-influenced classical and popular music genres, including Central Asian repertoires of opera and symphony, Azerbaijani jazz, Uzbek estrada, Kazakh Q-pop and crossover music, Mongolian heavy metal, and hip hop. The roles and meanings of music are discussed in relation to wider aspects of culture and social life, the impact of Soviet culture policies, post-Soviet national revival, and globalization.

The course includes a performance component. Students learn to play a variety of Kazakh and Kyrgyz musical instruments, including plucked and bowed lutes, a plucked zither, clay ocarinas, jaw harps, and percussion instruments. Previous musical training is not necessary. The course draws on extensive audiovisual materials and is open to students of all levels.

Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC308 Composition in the Arts
Composition, the manner in which elements are combined or related to form a whole in space and time, is a basic practice in all the arts. This course brings together practitioners from diverse art forms and traditions to address the basic issue of composition.

In this seminar, we will explore the compositional process through assignments that address the interacting concepts of site and information. By "site," we mean a semantic field extending through corporeal, environmental, and social dimensions. By "information," we mean representations abstracted from sites, "meaningless" when independent of any specific semantic interpretation. Participants will compose individual and collaborative interventions in a wide range of sites--public, private, physical, and electronic--in response to the problems posed.

This course is permission-of-instructor, and is intended for upper-level majors in Art, Dance, Film, Music, and Theatre, and others with sustained compositional practices suitable to the course.

MUSC309 The Winslow Archives: Composition, Education, History
Richard Winslow taught at Wesleyan from 1949 to 1983, where he was the key figure in establishing the World Music Program and Wesleyan's continuing commitment to experimental music. In retirement, he remained very active as a composer and thinker. His long life ended in 2017, a few months short of his 100th birthday. In 2019, the family donated his papers and other materials to the Wesleyan archives; these have now been processed, and a basic but complete finding aid is available at https://archives.wesleyan.edu/repositories/sca/resources/richard_k_winslow_papers.

Partly to honor his work, but mostly because he was such an extraordinary composer and thinker, Wesleyan is initiating a more detailed study of the archival materials, together with a series of performances. This seminar helps students gain a closer familiarity with Winslow's life and work through hands-on study of manuscripts, correspondence, and recordings. It will be of interest to composers, who will study Winslow's techniques as revealed in sketches, scores, and annotations; to musicologists and historians, who will help construct a complete chronology of Winslow's life and especially of his activities as a Wesleyan professor; and to archivists, librarians, and digital humanists, who will gain first-hand experience with the problems that attend categorizing, describing, and disseminating archival materials in a variety of media.

MUSC405 Private Music Lessons for Nonmusic Majors
Private instrumental and vocal lessons meet once a week at a regularly scheduled time. Permission of the instructor is required. Students contract to take 12 lessons. Each instructor sets his or her criteria for accepting students. Returning students may register during pre-registration. Students new to the Private Lessons Program must contact the instructor to determine whether an interview during the first week of classes is required. This course may be repeated four times for credit towards graduation regardless of section or combination of sections. Each section is for different instrument or voice lessons. Please see each section for the instrument/voice lessons taught by that instructor. (Section 01 is only for Bass lessons). A full list of instructors and their instruments can be found under the Private Lessons section of the Music Department website.

In most cases the student needs to provide their own instrument. Piano and drums are available to students for lessons, and certain other orchestra instruments may be available to private lessons students.

Course Fee: $780 for 12 lessons billed through the Student Account. Financial support may be available for those who qualify. Please see the Music Department web site under Private Lessons for details.

MUSC413 Korean Drumming and Creative Music Ensemble
This course is an experiential, hands-on percussion ensemble with the predominant instrument in Korean music, the two-headed janggo drum. Students will learn to play a range of percussion instruments including janggo, barrel drum (buk), hand gong (kwenggari), and suspended gong (jing). Through the janggo, drumming students gain first-hand experience with the role music plays in meditation and the benefits it offers to develop a calm, focused group experience. In the end they integrate their focused mind, physical body energy, and breathing through a stream of repetitive rhythmic cycles. The students will be introduced to traditional folk and court styles of janggu drumming. The ensemble plays pieces derived from tradition and new ideas, and creates new works exploring imaginative sounds on their instruments. If there is an opportunity during the semester, the students will have a creative collaboration with a dancer(s) or musician(s) from other cultures. The ensemble will experience a deep respect for the diverse cultural backgrounds of the students developed from the efforts of teamwork and creating music together through Korean drumming. The semester will end with a live performance for the public.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **CEAS413**
Prereq: **None**

MUSC414 Korean Drumming and Creative Music Ensemble Advanced
This class offers more advanced techniques for those students who have taken the beginner course or who have some basic experiences in Korean drumming or who have long-term drumming experiences of any other cultures including Western drum set. Attendance and additional practice time are mandatory. In comparison to the beginner class, the advanced class will play rapid, vigorous, and seamless rhythmic patterns on janggu, buk, and kwenggari. Students are expected to be creative in utilizing materials given during the semester. Each student will focus on a lengthy solo work on any of these instruments, as well as ensemble playing. Students will explore both traditional and new emerging styles of Korean drumming. In the end, they will integrate their solos in the ensemble piece and create a new piece. The ensemble will experience a deeper level of drumming from contributing solo work to the ensemble and the efforts of teamwork. They will learn about group activity in music-making through sharing ideas and assisting each other. The semester will end with a live performance(s) for the public.

MUSC416 Beginning Taiko--Japanese Drumming Ensemble
This course introduces students to Japanese taiko drumming. The overarching goal of this class is to gain a broad understanding of Japanese culture by studying the theory, performance practices, and history of various genres of classical, folk, and contemporary music traditions. Students will gain a better understanding of the spirit behind the matsuri (festival) and Japanese performance arts through learning basic taiko technique and one or two pieces on the Japanese taiko drum. Students should wear clothes appropriate for demanding physical activity (i.e., stretching, squatting, various large arm movements). Students with a musical background might find MUSC 417 Intermediate Taiko to be a suitable alternative, as it covers the same theoretical and historical content but at an accelerated pace and includes additional repertoire.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

Identical With: **CEAS416**
Prereq: **None**

MUSC417 Intermediate Taiko--Japanese Drumming Ensemble
This course introduces students to Japanese taiko drumming. The overarching goal of this class is to gain a broad understanding of Japanese culture by studying the theory, performance practices, and history of various genres of classical, folk, and contemporary music traditions. Students will gain a better understanding of the spirit behind the matsuri (festival) and Japanese performance arts through learning basic taiko technique and a couple of pieces on the Japanese taiko drum. The distinction between this course and MUSC 416 Beginning Taiko lies in the pace of instruction and the quantity of musical pieces covered. Students should wear clothes appropriate for demanding physical activity (i.e., stretching, squatting, various large arm movements).

MUSC427 Central Asian Music Ensemble
The Central Asian Music Ensemble is dedicated to the study and performance of music from a region at the crossroads of Eurasia, encompassing the post-Soviet states of Kazakhstan, Kyrgyzstan, Uzbekistan, Tajikistan, and Turkmenistan. Established in Fall 2023, the ensemble currently comprises Kazakh and Kyrgyz

plucked and bowed lutes, plucked zithers, end-blown flutes, clay ocarinas, jaw harps, frame drums, and other percussion instruments. Students learn the basic techniques of playing the instruments and singing in a variety of regional styles while exploring the history and cultural significance of music in nomadic and sedentary Central Asian societies through individual tutorials, group rehearsals, and engagement with visiting artists from Central Asia. In addition to playing traditional and contemporary repertoires from the region, students are encouraged to compose and improvise with ensemble instruments. Previous experience with string or wind instruments such as the guitar, violin, cello, or flute is desirable but not required. Students from diverse backgrounds are welcome to participate.

MUSC432 South Indian Voice--Advanced
Development of a repertoire of compositions appropriate for performance, along with an introduction to raga alapana and svara kalpana, the principal types of improvisation.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC430 OR MUSC431**

MUSC433 South Indian Music--Percussion
Students may learn mridangam, the barrel-shaped drum; kanjira, the frame drum; or konnakkol, spoken rhythm. All are used in the performance of classical South Indian music and dance. Beginning students will learn the fundamentals of technique and will study the formation of phrases with stroke combinations. Advanced classes will be a continuation of lessons in a variety of talas. Individual classes are supplemented by a weekly group section.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **[MUSC212 or GSAS212]**

MUSC434 Improvisational Techniques in South Indian Music
This course will introduce advanced students of karnatak vocal music to raga alapana and svara kalpana, the most important forms of melodic improvisation. Students will begin by learning precomposed examples of these forms. As they become comfortable with idiom, they will progress to designing their own improvisations.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC435 Keyboard Techniques for Composers and Conductors
This course is intended for students who wish to master fundamental keyboard techniques. Through regular playing/performance assignments, this course will improve the students' ability to use the piano as a tool toward their musical careers. Students will focus on harmonization, score reading, and their ability to accompany and lead from the keyboard. This course is performance-based and requires weekly practice. Basic conducting and rehearsing strategies will also make up part of the curriculum. Students should have basic piano skills and a solid foundation in basic keyboard harmony.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC103**

MUSC436 Wesleyan Concert Choir
This choral ensemble welcomes members of both Wesleyan and Middletown communities and is devoted to performance of standard choral repertoire from the 17th century to the present day, both accompanied and a cappella. Solo and leadership opportunities will be available for advanced singers.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC437 Singing to Your Instruments
Students will learn South Indian classical music by learning to sing and then applying this knowledge to non-Indian instruments they already play. They can then use their own instruments in recitals of South Indian music and dance. Beginners will be introduced to basic exercises and simple compositions. Advanced students will be introduced to improvisation in addition to different types of compositions in various ragas and talas. Students will form an ensemble that will be encouraged to participate in on- and off-campus performances.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **GSAS437**
Prereq: **None**

MUSC438 Wesleyan University Collegium Musicum
The Collegium Musicum (literally "company of musicians") is a vocal performance ensemble dedicated to exploring and performing the diverse European repertories of medieval, renaissance, and baroque music. Emphasis is given to the study of musical styles, performance practices, vocal independence, healthy singing, and musicianship. Students investigate various cultural aspects of the production of music, including primary sources, acoustics, and cultural heritage. In spring 2026, we begin our celebration of the Collegium's 25 Years of early music at Wesleyan with a program entitled "Song of Songs, Old and New." Like much Biblical literature, the Song of Songs can be traced back to Sumerian origins. Our program will intersperse ancient Mesopotamian poetry relating to the spiritual marriage of Inanna (Sumerian goddess of love, fertility, and war) and Dumuzi (the shepherd god) with music that reflects the Jewish and Christian understandings of the related mystical union. Biblical language that evokes the fragrance of wine, blossom, fruits, and spices was particularly appealing to European Renaissance composers. We will present a simple Icelandic form of discant, a polytextual French motet, complex polyphony in multiple parts by Palestrina, Lassus, Bouzignac, and Aleotti, and some contemporary responses to these popular texts.
Offering: **Host**
Grading: **A-F**

MUSC439 Wesleyan University Orchestra
The Wesleyan University Orchestra is a student-community ensemble that is open to everyone with a passion for orchestral literature. Prospective members should have an intermediate-to-advanced skill level of performance on an orchestral instrument. The orchestra performs music from all genres and time periods, ranging from the 18th-century "classics" to contemporary academic and popular compositions. The orchestra presents three concerts each year: a "masterworks" program in early December, often featuring one of the department's private lessons instructors or a guest artist as a soloist; a children's concert in early March; and the Student Concerto Competition concert in early May. The orchestra occasionally collaborates with the Wesleyan Concert Choir. For more information about the orchestra visit: https://orchestra.site.wesleyan.edu/

MUSC440 Vina and Voice in South Indian Music - Beginners
In this course, beginning students will learn the fundamental technical exercises of Vina performance and develop an understanding of phrase formation. The lute-type Vina is among the oldest and most revered instruments in South Indian music. Advanced classes will continue this training through more complex lessons and sustained practice in a variety of talas.

Prereq: **None**

MUSC441 Piping Performance: An Exploration of Artistic Expression through the Pipe Organ
With the ability to create the most delicate and jarring of timbres, and to fill the space with "other-worldly" soundscapes, the pipe organ is a vehicle that transports one toward artistic and musical growth. This course will introduce students to the history and development of the instrument, while fostering other musical skills and studies that assist each student to find their voice as an artist-creator. This multi-track course allows students to select their focus in one or more organ-related disciplines: improvisation, composition, performance practice, repertoire playing, church music, musicological research, etc. Students utilize their growing knowledge of the organ to complete three musical performance or research-related projects that they develop over the course of the semester. Final projects are publicly presented. A lab time in the form of private lessons, consultation, and individual practice is required.

Prereq: **None**

MUSC442 Chamber Music Ensemble
This course may be repeated for credit. A variety of small chamber music ensembles will be coached by instrumental teachers.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC443 Wesleyan Wind Ensemble (WesWinds)
Rehearsals will combine intensive concert preparation with occasional readings of works not scheduled for performance. Open to all members of the Wesleyan/Connecticut community.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC444 African Popular Music Performance
This course aims at bringing together students with diverse musical skills to explore the riches of African popular music (broadly defined to include a range of styles such as highlife, hiplife, hip-hop, dancehall, reggae, azonto, and gospel highlife) through performance. Popular music, first and foremost, is an urban genre. Its origins go back to the early 1900s when, because of European presence in the coastal areas of West Africa, and later spreading to other parts of the continent, new musical instruments, ideas, and imaginings became available. Today, popular music is the driving force of the music industry in Africa. Through intensive studio practice, reading, listening, viewing, and individual and group rehearsals, the goal of the course is twofold: to develop proficiency in African pop music performance and to become familiar with the intellectual discourse

on African popular music, its interactions with traditional African music, and its role in the formation of generational identities. The course is fundamentally performance-based; hence, enrollment is limited to skilled musicians with some proficiency in singing and the following instruments: guitar, keyboard, drum sets, bass guitar, saxophone, trumpet, and trombone.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC445 West African Music and Culture: Beginners
This is a performance-based course that focuses on West African music. The course is designed to provide a practical and theoretical introduction to traditional West African music and culture. Students experience the rhythms, songs, movements, and languages of Ghana and its neighboring countries through oral transmission, assigned readings, film viewing, and guided listening to commercial and/or field recordings. This interdisciplinary approach to learning is in keeping with the integrated nature of drumming, dancing, singing, and hand clapping in West Africa. Students learn to play a range of instruments, including drums, metal bells, and gourd rattles.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC446 West African Music and Culture--Intermediate
This course is designed to build on the skills developed in MUSC445. The beginner repertoire is reviewed, and more demanding call-and-response patterns are learned, along with new, more challenging repertoire. Students may be asked to perform on and off campus.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC445**

MUSC447 West African Music and Culture--Advanced
This course is designed to build on the skills developed in MUSC445 and MUSC446. Complex repertoire is learned and brought to a higher performing standard. Students experience the intricacies of dance accompaniment while drumming and singing with the advanced West African dance class. The student ensemble will be asked to perform on (and possibly off) campus.
Offering: **Host**
Grading: **A-F**

Gen Ed Area: **HA-MUSC**
Identical With: **AFAM241**
Prereq: **None**

MUSC450 Steelband
This is an ensemble course in the musical arts of the Trinidadian steelband. Students learn to perform on steelband instruments and study the social, historical, and cultural context of the ensemble. We also address issues of theory, acoustics, arranging, and composing. Readings, recordings, and video viewings supplement in-class instruction. The ensemble will present public performances.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **AFAM450**
Prereq: **None**

MUSC451 Javanese Gamelan--Beginners
Dominated by colorful bronze percussion instruments, the Gamelan ensemble features gongs, bronze and wooden xylophones, drums, and vocalists. Other instruments include bowed- and plucked-string instrument and flute. Some of the instruments date back to the 12th century in Java, Indonesia. The main content of the course is the instruction of various levels of difficulty in the playing techniques of different instruments and singing. Previous formal music instruction is not necessary.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **GSAS451**
Prereq: **None**

MUSC452 Javanese Gamelan--Advanced
Dominated by colorful bronze percussion instruments, the Gamelan ensemble features gongs, bronze and wooden xylophones, drums, and vocalists. Other instruments include bowed- and plucked-string instrument and flute. Some of the instruments date back to the 12th century in Java, Indonesia. This course is advanced-level performance of central Javanese gamelan. Emphasis on the classical repertoire.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **GSAS452**
Prereq: **MUSC451**

MUSC453 Keyboard Techniques II: Conducting and Score Reading
This course is intended for advanced piano students who wish to master advanced keyboard techniques. Through regular playing/performance assignments, this course will improve the students' ability to use the piano as a tool toward their musical careers. Students will focus on harmonization, score reading, and their ability to accompany and lead from the keyboard. This course is performance-based and requires weekly practice. Basic conducting and rehearsing strategies will also make up part of the curriculum. Students should have taken Keyboard Skills 1
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC454 Latin Jazz Ensemble
This course is intended for those who would like to learn about the wide variety of instrumental and vocal genres known as "Latin jazz." Students should have intermediate to advanced musical ability, but singers who are fluent in Spanish are highly desirable. Students should have comfort with a mix of reading and improvisation, as Latin jazz charts are often a combination of chord symbols and

classical reading. The main genres we will explore are salsa, bachata, bossa nova, rhumba. Repertoire from Celia Cruz, Tito Puente, Spanish Harlem Orchestra, Chucho Valdés will be mixed with jazz standards performed in the Latin jazz idiom. The final project will consist of a public concert.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC455 Jazz Ensemble
This course builds small-group performance skills including improvisation, accompaniment, pacing, interaction, repertoire, and arrangements.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC456 Jazz Improvisation Performance
In this extension of MUSC210, Theory of Jazz Improvisation, all materials previously explored will be applied to instruments in a workshop setting. Intensive practice and listening are required.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **AFAM390**
Prereq: **None**

MUSC457 Jazz Orchestra I
This course is for those with commitment to the American musical tradition called jazz. Skill and experience are highly desirable but, consistent practice is the biggest prerequisite. Small and large-ensemble repertoire composed by Duke Ellington, Charles Mingus, Thad Jones, Thelonious Monk, Charlie Parker, Fletcher Henderson, John Coltrane and many other composers will be deeply engaged. Intensive practice and rehearsal of the compositions, as well as class presentations of readings, will lead to development of ensemble and solo skill. The commitment to rehearsal of the compositions, as well as listening and reading assignments, will culminate in an end of semester public concert.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Identical With: **AFAM396**
Prereq: **None**

MUSC458 Jazz Orchestra II
A continuation of MUSC 457, this course is for those with commitment to the American musical tradition called jazz. Skill and experience are highly desirable but, consistent practice is the biggest prerequisite. Small and large-ensemble repertoire composed by Duke Ellington, Charles Mingus, Thad Jones, Thelonious Monk, Charlie Parker, Fletcher Henderson, John Coltrane, and many other composers will be deeply engaged. Intensive practice and rehearsal of the compositions, as well as class presentations of readings, will lead to development of ensemble and solo skill. The commitment to rehearsal of the compositions, as well as listening and reading assignments, will culminate in an end of semester public concert.

Gen Ed Area: **HA-MUSC**
Identical With: **AFAM397**
Prereq: **None**

MUSC459 Methods of Improvisation Ensemble
The ensemble is open to musicians of all backgrounds, stylistic orientations, and traditions seeking to develop their improvisational abilities. All instruments are welcome. Weekly rehearsals will explore improvisation from a method-based perspective in order to develop the skills needed to create spontaneous compositional works as an ensemble. Each student will learn how to develop their musical foundational skills to be able to create unique rhythmic and sonic environments as both a soloist and an ensemble member. Traditional notations will not be used. Instead, graphic- and prose-based notations will be employed to facilitate the forging of a musical language unique to the ensemble.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC461 Sound Systems: The How of Hearing
Since the late 19th century artists, corporations and composers have all proposed, developed, presented, and occasionally commercialized physical systems that reconfigure how sound can be experienced. The early impact of the entertainment industry ranged from the introduction of stereo to movie theaters in Walt Disney's Fantasia to the development of close miking for the crooning of Bing Crosby to McCune sound service's introduction of stage monitors for the benefit of Judy Garland. Artists and composers used related methods to propose entirely new understandings of how music can be. Futurist Luigi Russolo's Intonarumori of 1913 proposed an Art of Noise, while Pauline Oliveros' concept of deep listening developed listening as a foundational form of music making. R. Murray Schafer's concepts of soundscape and acoustic ecology project a music of environmental relations mediated through sound, while Maryanne Amacher's sound characters create individual sounds understood as capable development and change beyond the expanse of any one performance or composition. This class will be a performing ensemble focused on "sound systems" as musical instruments and musical practices performing live and fixed media sound pieces through sound systems we will configure for different sites on campus. Together with developing the technical skills required to mount these pieces, we will also investigate and discuss the varied musical, social, acoustical, and psycho-acoustical understandings of music and sound that influenced their shaping.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **MUSC109**

MUSC463 Teaching Music Lessons to Children in Local Schools
This is a service-learning course. Wesleyan students will teach private and small group music lessons to local children. These sessions will be augmented by a weekly classroom session in which readings and the student teachers' journals will be discussed. Some of the Wesleyan Department of Music's private lesson instructors may visit to answer questions and guide the student teachers through the issues, musical and extra-musical, that the lessons will raise. Written assignments will include responses to weekly readings, regular journal entries, and an end-of-semester paper.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC464 Laptop Ensemble
This course promotes knowledge and skills in live electronics performance, cultivates new musical repertoire for the group, and increases public awareness of new forms of working music technology while developing overall technological and troubleshooting proficiency. The course accomplishes this through regular rehearsals as well as a combination of required group and "satellite"

performances. A range of repertoire is curated over the course of the semester involving new pieces created for the ensemble, as well as the reinterpretation of historical works using live electronics.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC465 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

MUSC466 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

MUSC470 Independent Study, Undergraduate
Credit may be earned for an independent study during a summer or authorized leave of absence provided that (1) plans have been approved in advance, and (2) all specified requirements have been satisfied.
Offering: **Host**
Grading: **OPT**

MUSC491 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

MUSC492 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

MUSC500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop before the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **ASTR500, CHEM500, BIOL500, E&ES500, MB&B500, PHYS500, PSYC500, MATH500**

MUSC502 Individual Tutorial for Graduate Students
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MUSC503 Selected Topics, Graduate Sciences
Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **OPT**

MUSC504 Selected Topics, Graduate Sciences
Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **OPT**

MUSC505 Topics in Applied Ethnomusicology/Public Musicology
Work in applied ethnomusicology and public musicology includes a wide range of activities and formats, including: blog posts, magazine articles, public community music performances, tweets, podcasts, pre-concert and public lectures, forensic testimony, and the development of digital open-access tools and resources. What unifies these and many other possible forms is a desire by scholars to convey the cultural relevance and influence of music by engaging audiences outside the academy. Many are concerned with the social responsibility of the university, and developing methods and projects to collaborate with and give back to the communities in which we live, work, and research. The seminar will also address what the tools, methods, and values of the interdisciplinary field of digital humanities can offer applied ethnomusicology and public musicology. We will apply a suite of open-source analytic, pedagogical, networking, research, and presentation tools developed by digital humanists to our own projects. Through readings and research-creation projects we will better understand the work of institutions for cultural preservation, the role of activist and political scholarship, how to write accessibly for all readers, and how to convey our ideas in a number of different formats (e.g. blogs, "think pieces" or online articles, pre-concert lectures, open-access digital archives and research webspaces).
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC506 Reading Ethnomusicology
As one of the two core introductory courses to ethnomusicology, this course lays a general intellectual groundwork for MA students with a concentration in ethnomusicology through in-depth reading of some of the most important writings in ethnomusicology. Focusing on both intellectual history and current issues, the course evolves around the key concepts and themes that have defined, expanded, or challenged the field. Students will critically and comparatively discuss the approaches and contributions of each work they study. At another level, this course also aims at broadening students' knowledge of world musics through studying a wide range of music ethnographies.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC507 Practicing Ethnomusicology
This course provides a broad introduction to the research methods of ethnomusicology. The theory and practice of musical ethnography are examined, including fieldwork techniques, ethnographic writing, research ethics and

representation, bi-musicality, approaches to the transcription and analysis of musical sound, ownership, repatriation, and dissemination of ethnographic materials. Students gain an understanding of the historical development of ethnomusicology and its relationship to allied disciplines such as musicology and anthropology, become familiar with the work of prominent scholars in the field, and acquire practical skills of ethnographic research.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC508 Graduate Seminar in Composition
This course is designed for first- and second-year composition students in the Graduate Program. We will discuss and analyze works covering a broad range of compositional styles and techniques, inviting composers to share their original work and research. In addition, students often perform their own works and those of fellow course members. Special guest composers and ensembles interact with the course when possible.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC509 Special Topics in Contemporary Music
Offerings of this seminar focus on different issues of specific relevance to contemporary music compostion.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC510 Graduate Proseminar in World Music Studies
This introductory seminar is offered every fall as a required course for all first-year music MA students. The primary focus is developing research, writing, and critical interpretive and analytical skills necessary for initiating and completing the MA thesis projects. Students will be exposed to the breadth of the music department's specialties, and we will identify and discuss current issues that cut across concentrations within the department.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC511 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MUSC512 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

MUSC513 Improvisation in Cross-Cultural Perspective
This course will explore musical improvisation around the world from a variety of theoretical and practical perspectives. Readings on theories of improvisational processes, as well as on specific musical traditions in the United States, India, Indonesia, Africa, and elsewhere, will complement practical transcription and analysis projects.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC515 Mapping Music as/in Motion: The Cartographies and Circulation of Aural Culture
Music circulates, moves, and is mapped through places, pathways, materials, bodies, and technologies. Together, we will encounter a series of conceptual frameworks and case studies that map the nodes, pathways, boundaries, and movements of sonic phenomena and musical life. How do the movements of music and musicians, the places they occupy, and the boundaries they negotiate communicate spatial information about music practices? How they circulate physically and virtually? What are the different methods that ethnomusicologists use to represent and map these circulating sounds? This seminar not only discusses the physical cartography and circulation of music cultures, but also, the virtual spaces music moves through. In the opening decades of the 21st century, new media practices and Web 2.0 modalities (e.g. Spotify, YouTube, Twitter, Facebook) have enabled new cartographies, patterns, and pathways of circulation, and engendered new approaches to participatory musicking. The seminar also raises questions of how technologies and modes of mobility interface with categories of identity, race, and gender.

In-class discussions foreground the role of movement and how musical movement is mapped and represented. The seminar addresses such topics as: musical movements by way of travel, habitation, refuge, trade, ghettoization, migration, or telecommunication; sonic geography; the ways sounds and music flow and vibrate through, in, and among places (e.g. urban streets and neighborhoods, spaces of protest, music scenes, performance venues); composition as travel writing; why some musics and musical actors are more mobile than others; how travel and migration shape music-making and musical senses of place; how the maps and cartographic representations of places are redrawn as music and musical actors move and aural culture makes claims to space; the place of border theory, cartography, migration studies, transnationalism, and human geography in ethnomusicology; the impact of travel, tourism, festivals, and tours on local music scenes; mobile media and technologies; how subversive and DIY cartographies of music cultures and their movements offer alternative representations to conventional social and political customs; and how the spatiality and materiality of musical mobility is experienced through aural, tactile, visual, and haptic sensations.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC517 Sex/Gender/Queerness in Music and Music Scholarship
This seminar is designed to involve all music graduate students, namely students in composition, ethnomusicology, and performance concentrations, from both MA or PhD programs. This course will examine the major ideas in the recent feminist, gender, and queer studies in the fields of composition, ethnomusicology, musicology, and popular music studies. The class will explore varied approaches in critical re/presentation of femininity/masculinity/transgender/queerness in composing, listening, performing, and analyzing music and sound. We will consider the significance of engaging feminism, gender studies, and queer studies in our varied relations with music. In so doing, each member of the class will have the opportunity to design their own final creative project and to develop a dialogue with the ideas presented in the readings.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**

Prereq: **None**

MUSC518 Music and Embodiment
This course will explore the role of the human body in music performance, transmission, and perception. Through discussion of interdisciplinary literature on embodiment, analysis of cross-cultural case studies, and ethnographic projects describing their embodied engagements with music, students will examine the biological and cognitive foundations of human musicality, the cultural and social dimensions of music as embodied practice and experience, and the body politics of musical expression and participation. Topics covered will include the role of movement and gesture in singing and instrumental playing; the interrelation of instrument morphology, body techniques, and music structure; the interplay of sound, space, and architecture; and intersections between human musicking, technology, and the environment.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC519 Current Issues in Ethnomusicology
This course concentrates on current scholarship, intellectual issues, and music ethnographies in ethnomusicology. It challenges the students with contemporary theoretical debates among ethnomusicologists, such as music and identity, music and gender, race and power, music and technology, and music and decolonialization. The course will closely examine the impact of interdisciplinary approaches on music ethnography through critical analysis of the readings.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-MUSC**
Prereq: **None**

MUSC520 Explorations in Musicology
What is Musicology? How and why do scholars write about music? This course will investigate some of the motivation for making music a scholarly object of inquiry. After reviewing some of the methodologies through which scholarship has been constructed (archival research, reception history, historiography, practice-led research), we will assess and discover new ways to write about music and the cosmos. This topic will serve as a prism through which musicological debate can be understood, and contrasted with ethnomusicological and other approaches. We will draw on a range of musicological approaches and frameworks--cultural, historical, scientific, and environmental studies, posthumanism, mythology, and countercultural spirituality.

Course Objectives:

- To gain familiarity with diverse thinking about music inspired by the great beyond

- To understand some of the reasons why musicians turn to cosmology

- To develop cross-cultural understandings of the collaborations of musicians and astronomers

- To explore celestial motion as a form of design, or a mode of rationalizing

- To use musicology tools to find new ways of analyzing phenomena
Offering: **Host**

Prereq: **None**

MUSC521 Seminar in Interdisciplinary Studies
The course, one of the four core PhD seminars in ethnomusicology, examines a number of disciplines as they relate to general current theoretical issues and the interests of ethnomusicology. Visitors from other departments will present their disciplinary perspectives.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC522 Seminar in Comparative Music Theory
In this seminar we will take a deep dive into historical texts of music theory from the 18th, 19th, and early 20th centuries. Because of its significant overlaps with physics, acoustics, aesthetics, and philosophy, music theory can serve as an important site for any inquiry into the history of ideas. Particularly distinctive in music theory of the 18th century and beyond are the linkages that join the empirical and physical sciences with speculative discourses on beauty and subjectivity. In addition to covering major figures in the canonic history of Western music theory after 1700, this seminar will focus in particular on moments of colonial encounter and exchange that occurred through music theory; our aim will be to understand how the modern, Western self was in part fashioned through its investigation of non-Western musical systems. For their final papers, students are encouraged to draw on their own research interests, placing them in dialogue with the historical texts and methodological concerns that we will explore together this semester.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

MUSC530 Department of Music Colloquium
This lecture series showcases new work by performers, composers, and scholars in ethnomusicology, musicology, music theory, sound art, and cultural history. The colloquia also invite dialogue with professionals working in arts education, curation, and administration. Typically, a 45-minute talk is followed by 30 minutes of questions and discussions.
Offering: **Host**

MUSIC MAJOR

MAJOR DESCRIPTION

The Major in Music has much flexibility and is built around the individual interests and needs of the student while providing a solid foundation in music history, culture, theory, composition, and performance. Students will explore how these different areas reinforce and inspire each other. Wesleyan's Music Department enjoys an international reputation for innovation, and majors will study at least one musical tradition outside their prime concentration. Special areas of strength include: experimental and digital music; composition and improvisation; American, European, and West African musics; and East, Southeast, South, and Central Asian musics.

Wesleyan Music Majors possess a unique passion with broad intellectual curiosity, an intense appreciation of artistic expression, dedication to their craft, a collaborative spirit, open-minded creativity, and an inspiring work ethic. Careers in music may include performance, composition, teaching, production, engineering and sound design, therapy, journalism and criticism, arts administration, entrepreneurship, and more.

ADMISSION TO THE MAJOR

Individual programs of study in the Music Major are developed by students with academic advisors. A student must have already taken at least one course in each capability area before applying for the major: theory/composition; history/culture; and performance. The Music Theory Gateway course (MUSC103) is a requirement of all majors which may be waived based on a placement test.

MAJOR REQUIREMENTS

Music majors take three courses in each capability area: theory/composition; history/culture; and performance. Two additional courses from the MUSC300-level Seminars for Music Majors bring the number of music credits to 11. The required senior project or senior honors thesis brings the total number of music credits to 12 or 13, respectively.

Diversity of musical experience is a core value of the Music Department and is expected of all music majors. Towards that goal, each major's program of study must include at least two Music credits out of the major's main area of interest.

Many Music majors, particularly those taking private lessons, end up taking more than 16 credits in music. However, since no more than 16 credits in music may be counted toward the 32 credits required for graduation, students must always complete at least 16 credits outside of music.

COURSES FOR NON-MAJORS

With the exception of Music Major Seminars, all classes offered by the Music Department are open to non-majors.

GENERAL EDUCATION

Music majors are advised to complete their General Education expectations (three each of Arts and Humanities, Natural Sciences and Mathematics, and Social Sciences courses). Prospective majors who have not taken enough courses outside the Music department may be refused entry into the major. Students who fail to fulfill the General Education expectations are not considered for department prizes and honors.

STUDENT LEARNING GOALS

At graduation, music majors will be able to:

- Think analytically and critically about musical languages, histories, and cultures
- Write effectively about music
- Perform and/or create music with proficiency and creativity
- Engage unfamiliar traditions and paradigms of humanly organized sound with sensitivity and insight
- Apply their musical knowledge and skills within broader investigations of the human experience

ADVANCED PLACEMENT

AP THEORY CREDIT IS CONSIDERED AS FOLLOWS:
AP THEORY CREDIT ON THE STUDENT'S WESLEYAN TRANSCRIPT

- A score of 4 or 5 does not complete a theory requirement for the major, but will provide one music credit beyond the requirements for the Music Major towards graduation
- Students will still need to complete 3 theory/composition credits for the major

STUDENTS WITH QUESTIONS REGARDING AP THEORY

- Should meet with the theory faculty of the Music Department teaching MUSC103 to discuss options

PRIZES

MERIT-BASED AWARDS THAT MAY BE AWARDED ANNUALLY

ELIZABETH VERVEER TISHLER PRIZE

Established in 1981 by a gift from Mrs. Tishler. Expanded in 1989 for excellence in piano performance.

GWEN LIVINGSTON POKORA PRIZE

Established in 1993, awarded annually to the outstanding undergraduate student in music composition.

LEAVELL MEMORIAL PRIZE

Awarded annually to a senior who has done outstanding work in music and whose work manifests the ideals of the World Music Program in the Music Department.

LIPSKY PRIZE

The gift of the Reverend and Mrs. Bailey G. Lipsky in memory of their son, Francis Jules Lipsky, Class of 1931, to the member of the choir possessing in the highest degree unfailing kindliness, quiet dignity, and brilliant scholarship.

SAMUEL C. SILIPO PRIZE

Awarded annually for the most valuable player(s) of the Wesleyan orchestra.

ADDITIONAL INFORMATION

SPECIAL ACTIVITIES

The department supports a number of unusual activities, many of which are available to the student body in general as well as to music majors. Among them are ensembles in various Asian, African, American, and European traditions, as well as a variety of chamber ensembles.

PRIVATE LESSONS PROGRAM

Private lessons are available for many instruments and voice in Western art music, African American music, and a variety of other musics from around the world. Lessons are considered one-credit-per-semester courses. An additional fee, $780 per semester, is charged for these private lessons (financial aid may be available to students eligible for university financial aid). Approved music majors in their junior and senior years are eligible for partial subsidy when taking one (1) private lesson, per semester, for academic credit with a private lessons teacher.

DEPARTMENTAL COLLOQUIUM

An ongoing departmental colloquium is intended for the entire music community. It includes presentations by Wesleyan faculty, students, and outside speakers and encourages general discussion of broad issues in the world of music.

FACILITIES

The study facilities include a working collection of musical instruments from many different cultures; a music-instrument manufacturing workshop; a 45-piece Javanese *Gamelan* Orchestra; a large formal concert hall and a small multipurpose concert hall; an electronic music studio coupled to a professional recording studio; a computer-arts studio capable of producing electronic music, video art, and environmental simulations; a music and record library; an electronic keyboard lab; and an archive of world music.

COURSES

The following is a listing according to categories of courses offered by the department:

Code	Title	Hours
FYS Courses		
MUSC116F	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation (FYS)	1
MUSC117F	Musicking Body (FYS)	1
MUSC118F	Bob Dylan and His World: Sources and Legacies (FYS)	1
MUSC119F	Jazz in the 1960s (FYS)	1
MUSC120F	Music, Place, and Culture: An Exploration of African American Soundscapes and Traditions (FYS)	1
MUSC124F	Mapping Culture (FYS)	1
MUSC125F	Music and Downtown New York, 1950-1970 (FYS)	1
MUSC126F	Poetry and Song (FYS)	1
MUSC128F	Music and the Moving Image: From Music Video to Film to Digital Media (FYS)	1
MUSC130F	Wagner and Wagnerism: Richard Wagner's Music and Influence from the 1840s to the Present (FYS)	1
MUSC131F	Gender and Sexuality in Hip Hop (FYS)	1
MUSC133F	Caribbean Connection: Music and Culture of Trinidad and Tobago Music (FYS)	1
Music Theory and Composition		
MUSC103	Materials and Design	1
MUSC104	Rhythms of the World: An Introduction to Rhythm, Meter, and (Musical) Time	1
MUSC105	MF DOOM and Pierre Henry	1
MUSC201	Tonal Harmony	1
MUSC202	Theory and Analysis	1
MUSC203	Chromatic Harmony	1
MUSC204	20th Century Compositional Techniques	1
MUSC205	Song: Music and Text	1
MUSC206	18th-Century Counterpoint	1
MUSC207	Orchestration	1
MUSC208	Post-Tonal Music Theory	1
MUSC210	Theory of Jazz Improvisation	1
MUSC212	South Indian Music: Solkattu	1
MUSC220	Composing, Performing, and Listening to Experimental Music	1
MUSC221	Live-Electronics for Composition, Improvisation, and Sound Art	1
MUSC222	Sound Art, Music, and Interactive Media	1
MUSC223	Music, Recording, and Sound Design	1
MUSC225	Sound Systems and Chamber Electronics	1
MUSC230	Music Theater Workshop (cross list)	1
MUSC240	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation	1

MUSC308	Composition in the Arts	1
Music History and Culture		
MUSC102	World Music	1
MUSC106	A Thousand Years of Music History	1
MUSC108	History of Rock and R&B	1
MUSC109	Introduction to Experimental Music	1
MUSC110	Introduction to South Indian Music	1
MUSC111	Music and Theater of Indonesia	1
MUSC115	Introduction to North Indian Music	1
MUSC116	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation	1
MUSC117	Musicking Body	1
MUSC121	Queering Russian Music	1
MUSC125	Music and Downtown New York, 1950-1970	1
MUSC127	C-Pop in the Shadow of a Rising China	1
MUSC129	The Art of Listening	1
MUSC241	Mystical Visions, Medieval Women, and the Performance of Early Music (cross list)	1
MUSC242	Baroque and Classical Music	1
MUSC243	Music of the 19th Century	1
MUSC244	Music of the 20th Century	1
MUSC245	Music in the United States in the Nineteenth Century	1
MUSC246	The Symphony: Evolution of Genre	1
MUSC248	Music in Outer Space	1
MUSC249	Calderwood Seminar in Public Writing: Music Journalism and Public Musicology	1
MUSC250	Film and Folk Music of India	1
MUSC261	Music and Modernity in China, Japan, and Korea	1
MUSC265	African Presences I: Music in Africa	1
MUSC269	Sacred and Secular African American Musics	1
MUSC272	History of Jazz in American Culture	1
MUSC273	BlaQueer Sounds: Queer Negotiations in African American Music	1
MUSC274	Hymnody in the United States Before the Civil War	1
MUSC275	Music and Downtown New York	1
MUSC277	Jazz Avant-Gardes	1
MUSC278	Survey of Jazz Styles	1
MUSC285	Global Hip Hop of the Non-Anglophone World (CLAC .50)	0.5
MUSC290	Research Skills in Ethnomusicology--IRL & Digital	1
MUSC291	The Gendering of Music in Cross-Cultural Perspective	1
MUSC293	Mapping Culture	1
MUSC294	Queer Opera	1
MUSC295	Global Hip-Hop	1
MUSC296	Soundscapes of Islam	1
MUSC297	Music of Central Asia: From Throat-singing to Heavy Metal	1
Music Major Seminars		
MUSC300	Seminar for Music Majors	1
MUSC304	Arranging and Composing for Jazz Orchestra	1
MUSC308	Composition in the Arts	1
Music Performance		
MUSC405	Private Music Lessons for Nonmusic Majors	1
MUSC406	Private Music Lessons for Declared Music Majors	1
MUSC413	Korean Drumming and Creative Music Ensemble	1
MUSC414	Korean Drumming and Creative Music Ensemble Advanced	1
MUSC416	Beginning Taiko--Japanese Drumming Ensemble	1
MUSC418	Taiko II: Japanese Drumming Ensemble	1
MUSC428	Chinese Music Ensemble	1
MUSC429	Voice Technique & Improvisation	1
MUSC430	South Indian Voice--Beginning	1
MUSC431	South Indian Voice--Intermediate	1
MUSC432	South Indian Voice--Advanced	1
MUSC433	South Indian Music--Percussion	1
MUSC434	Improvisational Techniques in South Indian Music	1
MUSC435	Keyboard Techniques for Composers and Conductors	1
MUSC436	Wesleyan Concert Choir	1
MUSC437	Singing to Your Instruments	1
MUSC438	Wesleyan University Collegium Musicum (cross list)	1
MUSC439	Wesleyan University Orchestra	1
MUSC440	Instrumental Conducting	1
MUSC441	Piping Performance: An Exploration of Artistic Expression through the Pipe Organ	1
MUSC442	Chamber Music Ensemble	1
MUSC443	Wesleyan Wind Ensemble (WesWinds)	1
MUSC444	African Popular Music Performance	1
MUSC445	West African Music and Culture: Beginners	1
MUSC446	West African Music and Culture--Intermediate	1
MUSC447	West African Music and Culture--Advanced	1
MUSC448	Ebony Singers: Gospel Music	0.5
MUSC450	Steelband	1
MUSC451	Javanese Gamelan--Beginners	1
MUSC452	Javanese Gamelan--Advanced	1
MUSC453	Keyboard Techniques II: Conducting and Score Reading	1
MUSC455	Jazz Ensemble	1
MUSC456	Jazz Improvisation Performance	1
MUSC457	Jazz Orchestra I	1
MUSC458	Jazz Orchestra II	1
MUSC459	Methods of Improvisation Ensemble	1
MUSC461	Sound Systems: The How of Hearing	1
MUSC463	Teaching Music Lessons to Children in Local Schools	1
MUSC464	Laptop Ensemble	1
Graduate Courses		
MUSC500	Graduate Pedagogy	0.5
MUSC505	Topics in Applied Ethnomusicology/Public Musicology	1

MUSC506	Reading Ethnomusicology	1
MUSC507	Practicing Ethnomusicology	1
MUSC508	Graduate Seminar in Composition	1
MUSC509	Special Topics in Contemporary Music	1
MUSC510	Graduate Proseminar in World Music Studies	1
MUSC513	Improvisation in Cross-Cultural Perspective	1
MUSC515	Mapping Music as/in Motion: The Cartographies and Circulation of Aural Culture	1
MUSC517	Sex/Gender/Queerness in Music and Music Scholarship	1
MUSC518	Music and Embodiment	1
MUSC519	Current Issues in Ethnomusicology	1
MUSC520	Explorations in Musicology	1
MUSC521	Seminar in Interdisciplinary Studies	1
MUSC522	Seminar in Comparative Music Theory	1
MUSC530	Department of Music Colloquium	0.25

HONORS

The senior project requirement may be satisfied by the completion of an honors project, a project that may encompass a composition, a concert, etc., but the honors project always contains a substantial written component; for this reason it is called the honors thesis. An honors thesis satisfies the departmental requirement for a senior project, even if it is not awarded honors. The honors thesis tutorial is always a two-semester undertaking.

CAPSTONE EXPERIENCE

All music majors are required to complete a senior project by the end of their final year. The purpose of the project is to give focus to the major by means of independent, creative work and to encourage independent study with the close advice and support of a faculty member. Students who choose to undertake an honors thesis may count this as their senior project.

DOCTOR OF PHILOSOPHY IN MUSIC

The Music Department offers degrees at both the master's and doctoral levels. The PhD is offered in ethnomusicology. Coursework takes the form of seminars and individual study with faculty members. The faculty represent many musical traditions teaching, performing and composing African American, East Asian, Central Asian, Euro-American, Indonesian, South Indian (Karnatak), West African, contemporary and experimental composition and improvisation.

PhD candidates in ethnomusicology typically enter the program with a grasp of ethnomusicology and its methods equivalent to that developed in the MA. Those with a different disciplinary background must complete the two MA ethnomusicology seminars together with their other work. PhD candidates are required to complete a dissertation and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices. Course work consists of six graduate seminars, two performance courses, a course outside of the department, four semesters of the Music Department Colloquium and thesis tutorials. Candidates must successfully complete the Qualifying Examination before they begin their dissertation writeup. PhD students are required to pass a proficiency exam in a field or research language, determined in consultation with their thesis advisor.

Most often, candidates complete coursework and the Qualifying Exam, undertake field work for a year or longer, and then return to complete the writing of their dissertations.

COURSES

Satisfactory completion of courses totaling at least 12 credits. Students are required to take one core seminar (MUSC519, MUSC521, MUSC520/MUSC522), five elective graduate-level seminars other than the core seminars (two of which may be satisfied with appropriate courses already taken at the master's level), two credits of performance (in different musics), one course outside the department, two credits of thesis tutorial (MUSC591/MUSC592), and four semesters of MUSC530. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

Two foreign languages are required for the PhD: one field language and one research language. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

PROGRESS AND QUALIFYING EXAMS

At the conclusion of the second year in residence, students take a qualifying examination consisting of a set of essays and a follow-up oral examination.

RESEARCH

PhD candidates in ethnomusicology are required to complete a dissertation and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/music/graduate. (http://wesleyan.edu/music/graduate)

NEUROSCIENCE AND BEHAVIOR

Neuroscience is a discipline that probes one of the last biological frontiers in understanding ourselves. It asks fundamental questions about how the brain and nervous system work in the expression of behavior. As such, the field takes on a clear interdisciplinary character: All scientific levels of organization

(behavioral, developmental, molecular, cellular, and systems) contribute to our understanding of the nervous system. Neuroscience has been a field of particularly active growth and progress for the past two decades, and it is certain to be an area where important and exciting developments will continue to occur. At Wesleyan, the neurosciences are represented by the teaching and research activities of faculty members in the departments of biology, psychology, and chemistry. The neuroscience and behavior (NS&B) curriculum is both comprehensive and provides diverse approaches to learning. Through lecture/seminars, lab-based methods courses, and hands-on research experience, students are afforded a rich educational experience. Unique among schools of comparative size, Wesleyan has small but active graduate programs leading to BA/MA and PhD degrees. This attribute, together with the high success rate of faculty in obtaining research grant support, further enhances the education of undergraduates by providing additional mentoring, more research opportunities, and access to state-of-the-art laboratories. The mission of the NS&B program is to provide the foundation for a variety of career options in science, medicine, and private industry. For more information, see wesleyan.edu/nsb/ (http://wesleyan.edu/nsb/).

AFFILIATED FACULTY

Gloster Aaron
BA, Oberlin College; PHD, University of Pennsylvania
Chair, Biology; Associate Professor of Biology; Associate Professor, Neuroscience and Behavior; Associate Professor, Integrative Sciences

Ni Ye Feng
BS, University of California, Los Angeles; PHD, Cornell University
Assistant Professor of Biology; Assistant Professor, Neuroscience and Behavior

Barbara Jean Juhasz
BA, Binghamton University; MA, University of Massachusetts at Amherst; PHD, University of Massachusetts at Amherst
Coordinator, Civic Engagement; Chair, Psychology; Professor of Psychology; Jeffrey L. Shames Professor of Civic Engagement; Professor, Neuroscience and Behavior; Professor, Integrative Sciences; Professor, Education Studies

Matthew Kurtz
BA, Reed College; MA, Princeton University; PHD, Princeton University
Professor of Psychology; Professor, Neuroscience and Behavior

Laverne Melon
BA, Middlebury College; MS, SUNY at Binghamton University; PHD, Purdue University W Lafyte
Assistant Professor of Biology; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences; Assistant Professor, Feminist, Gender, and Sexuality Studies

Alison O'Neil
BS, Binghamton University; PHD, Montana State University
Assistant Professor of Chemistry; Assistant Professor, Neuroscience and Behavior; Assistant Professor, Integrative Sciences; Assistant Professor, Biology

Andrea Patalano
BA, Brown University; MA, University of Michigan; PHD, University of Michigan
Professor of Psychology; Professor, Neuroscience and Behavior

Charles A. Sanislow
BS, Northrn Michigan Unv; MA, Ball State University; PHD, Duke University
Chair, Neuroscience and Behavior; Professor of Psychology; Professor, Neuroscience and Behavior

CHAIR

Charles A. Sanislow
BS, Northrn Michigan Unv; MA, Ball State University; PHD, Duke University
Chair, Neuroscience and Behavior; Professor of Psychology; Professor, Neuroscience and Behavior

FACULTY

Helen Treloar
BS, University of Melbourne; PHD, University of Melbourne
Professor of the Practice in Neuroscience and Behavior

VISITING FACULTY

Clarissa F. Cavarsan Muller
BS, Universidade Federal de Satilde;o Paulo (Unifesp); PhD, Universidade Federal de Satilde;o Paulo (Unifesp)
Visiting Professor of Neuroscience and Behavior

Eduardo Martin Lopez
BS, Universidad de Salamanca; PhD, Universidad Autoacute;noma de Madrid
Visiting Professor of Neuroscience and Behavior; Visiting Professor in Neuroscience and Behavior

Hanna Yousuf
BA, College of Wooster; PHD, University of Wisconsin-Milwaukee; MA, University of Wisconsin-Milwaukee
Visiting Professor in Neuroscience and Behavior; Visiting Professor in Neuroscience and Behavior

DEPARTMENTAL ADVISING EXPERT

Barbara Juhasz

- Undergraduate Neuroscience and Behavior Major (p. 800)

Master of Arts in Neuroscience and Behavior (p. 802)

NS&B149 Neuroethology: Sensory Basis of Animal Orientation and Navigation
This course is about the sensory and neuronal processes underlying the ability of animals to orient in and move through their environments. We will consider the basic functions of sensory and nervous systems that underlie the remarkable abilities of animals to orient themselves in personal space, move through their home range, and move through the world in long-distance migrations and in homing. Animals from invertebrates through fish, birds, and mammals will be considered. The format of the course will be seminar/discussion and some lectures with heavy student participation. The course is intended for first-year students with high school-level courses in at least two of the following: biology, chemistry, or physics.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL149**
Prereq: **None**

NS&B193 Principles of Biology I Laboratory (Online)
This laboratory course, to be taken concurrently with MB&B181 or BIOL181, provides experience with techniques used in cell biology and molecular biology. These include polymerase chain reaction (PCR), electrophoresis, enzyme assays, and spectrophotometry.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B193, BIOL193**
Prereq: **None**

NS&B198 Principles of Biology II Laboratory _ Online
This laboratory course, designed to be taken concurrently with BIOL182 or MB&B182, will introduce students to experimental design, laboratory methods, data analysis, and empirical approaches to developmental biology, physiology, ecology, and evolution. Laboratory exercises use the techniques of electrophysiology, microscopy, computer simulations, and analyses of DNA sequence data. Some exercises will include exploration of physiological processes in living animals.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **BIOL198, MB&B198**
Prereq: **BIOL192**

NS&B210 Research Methods in Cognition
This course will examine the experimental method as a means of gaining knowledge about human cognition. Students in this course will learn about general research methods in cognitive psychology related to experimental design, understanding and interpreting research, and ethical issues involved in research with human subjects. Classic research paradigms in cognitive psychology will be explored through the use of interactive demonstrations and in-class experiments.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **PSYC210**
Prereq: **(PSYC105 AND PSYC200) OR (PSYC105 AND ECON300) OR (PSYC105 AND QAC201) OR (PSYC105 AND MATH132)**

NS&B213 Behavioral Neurobiology
This course will introduce the concepts and contemporary research in the field of neuroscience and behavior. The course is intended for prospective neuroscience and behavior majors (for whom it is required) and for biology and psychology majors who wish a broad introduction to neuroscience. The initial few weeks will be devoted to fundamental concepts of neuroanatomy and neurophysiology. Subsequent classes will deal in-depth with fundamental problems of nervous system function and the neural basis of behavior, including neurotransmitter systems; organization of the visual system and visual perception; the control of movement; neurological and neuropsychiatric disorders; the neuroendocrine system; control of autonomic behaviors such as feeding, sleep, and temperature regulation; the stress response; and language, learning, and memory. Experimental results from a variety of species, including humans, will be considered. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL213, PSYC240**
Prereq: **None**

NS&B220 Cognitive Psychology
Cognitive psychology, a major branch in the field of psychology, is the scientific study of human adult mental processes. The goal of this course is to provide a broad introduction to the issues, methods, and phenomena that characterize the field. These will be brought to life with selected examples of influential empirical studies and, occasionally, practical applications. In seeking constraints on theories of how the mind works, we will draw primarily on studies of adult human behavior (e.g., reaction time, task accuracy), individuals with localized brain damage (e.g., visual agnosia), and measures of brain activity (e.g., as inferred using fMRI techniques). Computer models and nonhuman animal studies will also be considered. Broad topics will include attention, perception, memory, knowledge, reasoning, and decision making. The course is lecture-based but will incorporate discussions, demonstrations, video, and group activities. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC220**
Prereq: **PSYC105**

NS&B222 Sensation and Perception
This course explores our perceptual systems and how they create and shape our experience of the world around us. We will consider the neurophysiology of perceptual systems as well as psychological approaches to the study of perception, covering all of the human senses with a special emphasis on vision. Class demonstrations will introduce students to interesting perceptual phenomena. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC222**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

NS&B224 Hormones, Brain, and Behavior
Hormones coordinate the anatomical, physiological, and behavioral changes necessary for developmental, seasonal, and diurnal transition in animals. These molecules have profound effects on the development of the brain and on adult brain function. How do hormones orchestrate brain assembly and the expression of specific behaviors? How do behavior, social context, and the environment influence hormone secretion? This course will provide a critical survey of our understanding of the relationship between endocrinology, the brain, and behavior in a variety of animal systems. Select topics include insect metamorphosis; sexual differentiation of the vertebrate brain and behavior; reproductive and aggressive behavior in birds, lizards, and rodents; song learning and song production in birds; and the effects of hormones on sexual behavior and cognitive function in primates, including humans. The exploration of a variety of systems will provide students with an appreciation of the ways in which the relationships between hormones and behavior vary across species, as well as the extent to which these relationships are conserved.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL224**
Prereq: **[NS&B213 or BIOL213 or PSYC240] OR [BIOL182 or MB&B182]**

NS&B225 Cognitive Neuroscience
This course provides an introduction to cognitive neuroscience -- the study of how the brain enables the mind. We will begin with an overview of the neural

substrates of cognition and the tools for understanding the structure and function of the human brain. Then we will cover neural processes that support sensory perception and attention, memory, motor control, language, executive control, and emotional and social functioning. We will also discuss mechanisms of brain evolution, development, and repair, and their implications for various diseases and disorders. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC225**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

NS&B227 Motivation and Reward
This course will focus on motivation and reward, providing students with a background in and understanding of the various theories and approaches to studying the topic of motivation, including an introduction to some of the history and the current advances in the field. The course uses animal and human research to try to unravel the brain areas and neurotransmitter systems involved in different forms of reward, including food, sex, and drugs, and examine cases of disordered motivation such as drug addiction, obesity, and disordered gambling. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **PSYC227**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

NS&B228 Clinical Neuropsychology
This introductory course will examine the relationship between brain functioning and cognition, behavior, and emotion through the study of human brain disorders. The course will begin with a brief overview of basic human regional neuroanatomy, followed by an exploration of neuropsychological assessment and intervention (its history, rationale, goals, and procedures). These topics will provide a foundation for the discussion of more specific topics in neuropsychology (e.g., traumatic brain injury, dementia, psychiatric disorders, cerebrovascular disorders, seizure disorders, learning disabilities, autism) and the role that neuropsychologists play in the evaluation and treatment of individuals with these disorders. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC228**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

NS&B238 Psychological Theories of Learning and Motivation
The goals of this course are to help students develop practical, evidence-based skills for effective classroom learning, understand and appreciate research on the neuroscience of learning and motivation across species, and apply theories of learning and motivation to understanding human behavior. Course objectives for achieving these goals include: implementing evidence-based practices; dispelling myths about learning; explaining mechanisms of memory consolidation and factors that modulate it; distinguishing between and identifying components of operant and classical conditioning; and explaining how each theory of motivation can be used to understand why people behave in certain ways. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC226**
Prereq: **PSYC105 OR NS&B213**

NS&B239 Functional Anatomy of the Human Brain
The human brain is an organ with the consistency of firm Jell-O, weighing about 2.5 pounds in an adult. It is made of 86 billion neurons and approximately the same number of non-neuronal cells. Contrary to common misconceptions, we use all the neurons in our brains, not just a small fraction of them from the regions dedicated to the function being performed. Brain cells organize in distinctive anatomical structures, which are interconnected through complex circuits that control nearly every function of the body, such as learning and memory, thinking, consciousness, and aesthetic appreciation. Its malfunction results in a variety of diseases, including senility, mood disorders, and motor/sensory dysfunctions. This course will examine in some detail the complex organization of the brain and how it performs some of its basic functions. The course will familiarize students with the medical terminology and neurological concepts for a general understanding of the human brain and spinal cord, being of special interest for pre-med students, NS&B, biology, and psychology majors; and anyone simply interested in how the brain works. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL239, PSYC239**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B243 Neurohistology
The aim of this course is to study the microscopic structure of the nervous system. Structural and functional relationships between neurons and glia, as well as the organization of major brain regions (cortex, hippocampus, and cerebellum) will be examined. In addition to traditional histological preparations, modern techniques including confocal microscopy and immunohistochemistry will be studied and performed. Laboratory exercises will include the preparation and visualization of microscopic slides using a variety of techniques. While this course will focus on mammalian nervous system, skills learned in this course will be applicable in a variety of research models.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL243**
Prereq: **[NS&B213 or BIOL213 or PSYC240] OR [MB&B181 or BIOL181]**

NS&B244 Neuropharmacology
This course will introduce students to the physiological and molecular effects of drugs on neuronal activity and behavior. We will cover key concepts in neuropharmacology, including pharmacokinetics and pharmacodynamics, alongside techniques used in modern pharmacotherapeutic discovery as it relates to the treatment of neurological and neuropsychiatric disease. Student assessment will include in-class quizzes and exams.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL244, BIOL544**
Prereq: **BIOL182 OR BIOL182Z AND NS&B213**

NS&B245 Cellular Neurophysiology
This neurophysiology course is mostly a study of how neurons send, receive, and integrate the signals that produce nervous system activity. Using the tools of electrophysiology (the electrical recording and manipulation of neurons), we can better understand synaptic plasticity, neuronal oscillations, and network activity.

In the last module of the course, students will use their knowledge of a diversity of voltage-gated channels, neurotransmitter systems, and neuron categories to better understand the neurophysiology of epileptic seizures and sensorimotor systems and locomotion. We will also examine articles about human-machine interfaces that are being developed in the diagnosis and treatment of epilepsy as well for the restoration of motor activity and somatosensation.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL245, BIOL599**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B247 Laboratory in Neurophysiology
The course is designed to teach techniques and offer independent research experience. Students study living nervous systems and measure the electrical signals at the heart of nervous system function. In the first part, experiments include intracellular recordings of rest and action potentials, synaptic transmission, sensory coding and integration in simple nervous systems. Students learn surgical and electrophysiological recording techniques working with invertebrate and cold-blooded vertebrate animals including crayfish, mollusks (Aplysia), leeches, fish, and amphibians. In the second part of the course, students will use these techniques in novel, independent research projects.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL247**
Prereq: **([NS&B213 or BIOL213 or PSYC240] AND [BIOL182 or MB&B182])**

NS&B250 Laboratory in Cellular and Behavioral Neurobiology
The goals of the course are to introduce students to a number of contemporary laboratory techniques in neuroscience and behavior. The laboratory introduces students to experimental method and techniques including neuroanatomy, immunohistochemistry, primary neuronal and astrocyte cell culture methods, analyses of electrical activity in the brain, and behavioral analyses of learning, memory, social behavior, and social dominance in inbred strains of mice.

Students will learn to analyze experimental data and write a series of laboratory reports on the experiments done during class. In addition, students will write a term paper related to one of the experimental approaches.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL250, NS&B555**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B251 Laboratory in Basic Practices in Neuroscience
This course will provide students with the knowledge and some tools to solve problems in neurobiology. Topics covered include a fundamental review of neurobiology and approaches in neuroscience research methods, behavioral studies, tissue/cell preparation, and histology/microscopy.

Students will learn how the applications of advanced neuroscience techniques have answered fundamental questions in neurobiology and neurophysiology. Modern approaches and their applications will be discussed, including behavioral studies, tissue preparation and analysis, histology, and microscopy.
The learning outcomes will be assessed by a project, oral presentation of the project, written laboratory class reports (lab notebooks), and a lab practicum.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL251**
Prereq: **NS&B213 OR BIOL213 OR PSYC240**

NS&B252 Cell Biology of the Neuron
Understanding the cellular biology of neurons is critical for understanding neurological disorders as well as neuropharmacological methods for treating the nervous system. In this course, we will explore how neurons function, focusing on structure-function relationships of the molecular building blocks of neurons. We will examine the basic cell biological mechanisms that underlie the formation, function, and plasticity of neurons and circuits. Areas studied will include cytoskeleton, cellular polarity, synapse formation, synaptic transmission, inter- and intra-cellular transport, neuronal plasticity, and regeneration. This course is designed to follow on from NS&B213 Behavioral Neurobiology.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL252**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B254 Comparative Animal Behavior
In this survey course, we explore a wide range of animal behaviors at the proximate and ultimate levels of analysis. Main topics include: the principles of communication, genetic regulation of behavior, neuroethology, biological rhythms, hormones and behavior, reproduction, and animal cognition. Students gain foundational knowledge by engaging with textbook readings and traditional lectures. Students practice self-directed inquiry, peer-assisted learning, and scientific communication through in-class work sheets, group discussions, take-home assignments, and presenting topics of their choosing. Finally, students will learn about research and the academic career path through scholar highlights, interacting with guest speakers, and reading primary literature.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL254**
Prereq: **[BIOL182 or MB&B182] OR [BIOL196 or MBB196] OR [NS&B213 or BIOL213 or PSYC240] OR BIOL182Z**

NS&B257 Neurogenetics
Genes are the basic functional units of heredity. This course is an introduction to the study of genes and their role in shaping neuronal structure, neuronal function, and behavior. We will learn about classic and modern approaches used to probe the relationship between genes and behavior, with a focus on studies using model organisms (e.g., flies, mice, worms). We will discuss the molecular genetics of neurological disorders with high heritability and the use of genetic tools to treat these conditions, and we will consider the ethics surrounding treatment and diagnosis of these disorders. Student assessment will include short written responses, in-class quizzes, and exams.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **BIOL257**
Prereq: **BIOL181 AND BIOL182**

NS&B280 Applied Data Analysis
In this project-based course, you will have the opportunity to answer questions that you feel passionately about through independent research based on existing data. You will develop skills in generating testable hypotheses, conducting a literature review, preparing data for analysis, conducting descriptive and inferential statistical analyses, and presenting research findings. The course offers one-on-one support, ample opportunities to work with other students, and training in the skills required to complete a project of your own design. These skills will prepare you to work in many different research labs across the University that collect empirical data. It is also an opportunity to fulfill an important requirement in several different majors.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Identical With: **QAC201, GOVT201, PSYC280**
Prereq: **None**

NS&B280Z Applied Data Analysis
In this project-based course, you will have the opportunity to answer questions that you feel passionately about through independent research based on existing data. You will develop skills in generating testable hypotheses, conducting a literature review, preparing data for analysis, conducting descriptive and inferential statistical analyses, and presenting research findings. The course offers one-on-one support, ample opportunities to work with other students, and training in the skills required to complete a project of your own design. These skills will prepare you to work in many different research labs across the University that collect empirical data. It is also an opportunity to fulfill an important requirement in several different majors.

Identical With: **QAC201Z, GOVT201Z, PSYC280Z**
Prereq: **None**

NS&B299 Waves, Brains, and Music
Pressure waves bounce against the ear, and we create perceptions called sounds from them. We organize sounds to make music, making more waves, and the cycle goes forward. This course will provide an introduction to the fraction of these phenomena that can be measured and analyzed, focusing on the mathematics of signal analysis, auditory physiology, and the physiology of musical perception and production. Periodic waveforms include musical tones and the voltage fluctuations that can be measured from brains. The first third of this course (waves) is an introduction to the quantitative analysis of periodic waveforms, with the goal that the student will have a better understanding of how to interpret the analysis of both musical sounds and neuronal recordings. The second part of the course (brains) examines the known mechanical processes (physiology) by which the mammalian brain analyzes the periodic waveforms that we interpret as sound. The third part of the course uses these lessons to examine original research articles about the neuroscience of music, that is, how neuronal networks produce musical perception.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL299**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B302 Neurobiology of Aging
This course is designed to explore the intricate relationship between the aging process and the nervous system. As our population ages, understanding the underlying neurobiology of aging becomes increasingly important. This course delves into the physiological, cellular, and molecular aspects of how the nervous system changes over time and the impact of these changes on cognition, behavior, and overall well-being.

This course will introduce the student to the study of aging (gerontology) and the effects of normal aging and pathological aging on the nervous system. We will discuss general concepts of aging, and biochemical, physiological, and behavioral age-associated changes in the motor, sensory, cognitive, and neuroendocrine systems. By the end of the course, the student should have a clear understanding of what aging is and what effects it has on normal brain function. In class, I will introduce the topic with slide presentation and after that, we will discuss the topic based on the scientific article discussion. After the last class, students will have extensive opportunities for feedback and will write a project and present it in class as an oral presentation. Student evaluation will include weekly quizzes, project, a midterm and final exams, and class participation/attendance.

Course Objectives:

By the end of this course, students will:

1. Gain a Comprehensive Understanding: Develop a comprehensive understanding of the neurobiological processes associated with aging, including neurodegenerative diseases.

2. Explore Structural Changes: Examine structural changes in the aging brain, such as alterations in neuron density, synapse formation, and brain volume.

3. Analyze Functional Changes: Analyze functional changes in the aging nervous system, including changes in memory, cognition, sensory perception, and motor function.

4. Study Neurodegenerative Diseases: Investigate common neurodegenerative diseases associated with aging, such as Alzheimer's disease, Parkinson's disease, and age-related macular degeneration.

5. Explore Cellular and Molecular Mechanisms: Explore the cellular and molecular mechanisms underlying age-related changes in the nervous system, including oxidative stress, inflammation, and genetic factors.

6. Examine Potential Interventions: Review potential interventions and strategies to promote healthy aging and delay or mitigate age-related neurobiological changes.

Prereq: **NS&B213**

NS&B303 Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function
Membrane proteins constitute one-third of all cellular proteins and one-half of current drug targets, but our understanding of their structure and function has been limited in the past by technological obstacles. In spite of this, the past 10 years have yielded a wealth of new membrane protein structures that have helped to uncover the mechanistic underpinnings of many important cellular processes. This class will examine some of the new insights gained through the various techniques of modern structural biology. We will start with a general review of membrane properties, structural techniques (e.g., x-ray crystallography, EM, NMR), and protein structure analysis. We will then look at common structural motifs and functional concepts illustrated by different classes of membrane proteins. Students will read primary literature sources and learn how to gauge the quality and limitations of published membrane protein structures. These tools will be generally applicable to evaluating soluble protein structures as well.

NS&B304 Glia: Not just neuronal glue!
Historically, neuroglial cells (i.e., astrocytes, oligodendrocytes, and microglia) were considered the space-filling cells of the brain, simply the brain's "glue." Later, their primary role was considered metabolic support of neurons (e.g., buffer extracellular potassium, recycle neurotransmitters, myelination, etc.). However, the notion of glia as inert bystanders has recently been revised. It is now accepted that glial cells play critical physiological roles in normal nervous system development and function, including controlling brain wiring, modulation of synaptic transmission, regulating blood flow, and serving as the brain's lymphatic system just to name a few functions. Moreover, glia contributes to a variety of neurological disorders such as epilepsy, glioma, multiple sclerosis, neurodegenerative diseases, and psychiatric disorders like major depressive disorder and schizophrenia. Hence, these underappreciated cells are long overdue recognition. This is an interdisciplinary course in which students will engage in a focused, in-depth exploration of how glial cells contribute to neurological and psychiatric disorders. Lectures by both basic scientists and clinicians will highlight recent research on the molecular mechanisms by which glial cells contribute to the establishment and progression of neurological and psychiatric disorders.

This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature. After the classes, students will have extensive opportunities for feedback and will be requested to write a simple paragraph for the next class and/or answer a small quiz, based on the new knowledge acquired. Student evaluation will include quizzes and assessments for a lay audience, a midterm and a final exam, class participation, and attendance.

Course Objectives:

1. Describe the development, histology, and normal physiological function of glial cells.

2. Describe the role inflammation plays in neurological and psychiatric conditions.

3. Describe the role traumatic brain injury plays in neurological and psychiatric conditions.

4. Describe the role genetics plays in neurological and psychiatric conditions.

5. Describe the physiology, pathology, and disease mechanisms of neurological and psychiatric conditions.

6. Demonstrate effective written communication skills to construct a succinct "News & Views" style summary of a primary research report for a lay audience.

NS&B316 Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives
The goal of this seminar will be to critically investigate the concept of schizophrenia as a unitary disease construct, from historical, neuroscientific, and phenomenological approaches, and the implications of these views for our understanding of treatment of the disorder. How are we to make sense of a psychiatric disorder that has changed so substantially in definition over time, with wide interindividual difference in symptom expression and functional outcome, a wide array of competing theories regarding etiology and biological mechanisms, and correspondingly diverse treatment interventions? We will engage these questions through three separate units that will evaluate the disorder from three different levels of analysis: (1) readings in the history of psychiatry and the perspective they cast on schizophrenia as a unitary disease concept; (2) an analysis of contemporary work in neuroimaging and experimental cognition in the disease and the current status of creating a coherent account of

neurocognitive mechanisms of the disease, as well as a neurocognitive approach to novel interventions; and (3) new work on understanding the experience of the disease from first-person accounts and the systematic analysis of these accounts as a window to understanding heterogeneity in the disease and novel approaches for therapy.

NS&B317 Neuroethics
Ethics, or morality, is one of the complex features of human behavior. This course will explore "Neuroethics" from two perspectives: (1) the neuroscience of ethics (i.e., the role of the human brain in ethical or moral behavior) and (2) the ethics of neuroscience (i.e. the ethical implications of manipulating the brain). The first perspective will relate to the premise that human morality is embodied in and operates based on the principles of the functional architecture of the brain, in particular, the cerebral cortex. The course will examine the organization and neural networks, especially of the association cortices (prefrontal Cortex: ventromedial, dorsolateral and orbitofrontal cortex; the cingulate cortex; temporal association cortex; and the inferior and superior parietal lobes). The course will review studies on the development of moral values in children and their neural underpinnings, leading to studies of the functions of the adult brain in moral or ethical decision-making. Topics such as the neural basis of resolving the "Trolley Problem," neuroeconomics, altruism, poverty, forgiveness, and compassion will provide the basis for this discussion. We will evaluate from a neuroscience perspective questions such as determinism and free will, and the sense of "self"--ideas that have played a significant role in ethical theories. Based on this body of knowledge, we will look at emerging ethical issues arising from technological developments that allow for manipulating the normal and diseased brain. A variety of questions will be examined, including brain imaging and privacy; enhancement of normal brain function through chemical, electrical, and electromagnetic stimulation; implanted neural interfaces; restoring brain damage; and neuroscience and the law.
Offering: **Host**

Prereq: **[PSYC225 or NS&B225] OR [NS&B213 or BIOL213 or PSYC240]**

NS&B320 Neuroscience of Learning and Memory
One of the fundamental functions of our nervous system is to encode and store memories, which allows us to survive and shape our personal identities. In this course we will cover different animal models of learning and memory, which have been useful tools to understand maladaptive memories underlying neuropsychiatric and neurological disorders such as post-traumatic stress disorder, substance use, and Alzheimer's disease. We will look in detail at how neurons and neural circuits change and respond when an organism learns something new or recalls a past experience. This course will also involve detailed discussions related to sex differences in both learning behavior and the biological basis of memory processes. The central focus of the course will be integrating current work in basic cellular and molecular neurobiology with the experimental psychology of learning and memory. This course counts as an elective towards the psychology major.
Offering: **Host**

Gen Ed Area: **NSM-NSB**
Identical With: **PSYC305**
Prereq: **NS&B213**

NS&B323 Biochemistry of Neurodegenerative Disease
Broadly defined, neurodegenerative disease occurs when a specific class of neuron dies and thus fails in its biological action. In this course, we will delve into the many different, intricate ways neuron death can occur and cause disease. From the chemistry of neurotransmitters, aggregation of proteins, and the collapse of neuromuscular junctions, many areas of the neurobiology can go awry. The focus of the course will be on understanding the complex interplay of small molecules and proteins that keep neurons healthy and functional. In this course, we will use current primary literature and lecture to understand the varied topics. This course aims to improve skills in reading and analysis of primary literature as well as the written and oral presentation of scientific findings.
Offering: **Crosslisting**

NS&B326 History of the Brain
The course is designed to trace the people, experiments, social forces, and ideas that have helped shape the legacy of current neuroscientific knowledge. The course will be broken up into five parts. Part one will look at Ancient Egyptian, and Classical Greek and Roman conceptions of brain function. Part two will investigate methodological advances in the study of electricity and cell-staining techniques -- both developed in the 18th-19th century -- that paved the way for novel ways of looking at brain function and human behavior and how these new conceptualizations impacted the culture at large. Part three will investigate the history of assigning specific cognitive, emotional, and behavioral function to specific structures in the brain. Part four will link developments in neuroscientific study with their impact (both positive and ill) on the treatment and care of people with psychiatric and neurological illness form the 19th-century to the present day. Part five will present a summing up and an overview of contemporary models of brain and mind.
Offering: **Crosslisting**

NS&B328 Chemical Senses
The least well understood of the senses, chemical sensation, is key to survival and behavior of many species. This course covers the structure and function of sensory neurons in both the gustatory and olfactory systems, as well as in chemosensory irritation. We will examine coding of sensory information to understand how higher cortical areas interpret stimuli. We will look at a variety of animal models and discover common organizing principles across phyla. Emphasis will be placed on the cell biology of these systems. Students will participate in reading, analyzing, and presenting recent studies from different areas within chemical sense to highlight recent findings and where the emphasis in chemosensory research is focused.
Offering: **Host**

Identical With: **BIOL328**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B329 Neural Costs of War
This course focuses on stress reactions that result because of exposure to war, combat, and related atrocities. You will learn about the diagnosis of PTSD, including its development and history. There is a strong emphasis on the neural and cognitive mechanisms for stress-related psychopathology and the overlap of psychological and neural systems with the damaging effects of traumatic brain injury. While interactions of these mechanisms with social and cultural processes are considered, the primary emphasis is on the neural and cognitive mechanisms. To be fully prepared for this course, students should have a solid grounding in neuroscience and behavior, as well as basic psychopathology.
Offering: **Crosslisting**

Prereq: **None**

NS&B341 Psychology of Human Memory
This seminar course is designed to provide students with an in-depth exploration of the psychological science of human memory. We will examine current issues and theories in human memory research and the methods by which human memory is explored. Both classic and contemporary research findings from the disciplines of cognitive psychology, cognitive neuroscience, and neuropsychology will be brought together to paint a picture of the current understanding of human memory. Topics to be covered include different memory systems and frameworks (e.g., working memory, semantic memory, episodic memory), remembering and forgetting (e.g., phenomenal experience of remembering, various mechanisms of forgetting), reality/source monitoring (e.g., memory attributions, true and false memories), the influence of emotional and social factors on memory (e.g., social remembering), and memory in clinical populations.
Offering: **Crosslisting**

NS&B344 Developmental Biology of the Nervous System
Near the top of the list of unsolved mysteries in biology is the enigma of how the nervous system constructs itself. Here is a part of our body that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. We

will also discuss some disorders and dysfunctions that may happen during the neurobiology of development, such as cerebral palsy, autism, and attention-deficit hyperactivity disorder (ADHD). We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature. After the classes students will have extensive opportunities for feedback and will be requested to write a simple paragraph for the next class and/or answer a small quiz, based on the new knowledge acquired. Student evaluation will include weekly quizzes and/or assessment, a mid-term and a final exam, and class participation.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL344**
Prereq: **NS&B213 OR BIOL213 OR PSYC240**

NS&B345 Developmental Neurobiology
Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL345, NS&B545, BIOL545**
Prereq: **(NS&B213 AND MB&B181 AND BIOL182) OR (NS&B213 AND MB&B181 AND BIOL196) OR (NS&B213 AND MBB195 AND BIOL182) OR (NS&B213 AND MBB195 AND BIOL196)**

NS&B347 Mammalian Cortical Circuits
The mammalian cortex is where conscious perception and thought is generated, but the mechanistic details governing those processes are not well known. Studies of those circuits have revealed a heterogeneity of neuronal classes in the cortex and their proposed roles in these processes. Detailed wiring diagrams of local and long-distance cortical circuits are emerging, colored with dynamic connections that are helping us understand the cortex with these reverse-engineering strategies. Most of the readings for this course will be taken from the recent primary literature; areas of the cortex that will be studied include sensory cortex as well as studies of hippocampal cortical circuits.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL347**
Prereq: **NS&B213**

NS&B348 Topics in Cognitive Development
In this course we will discuss in depth a selection of current topics in cognitive development research. We will read and discuss primary literature and focus on cutting-edge debates in the field, surveying evidence from different stages of human individual development as well as (when appropriate) evidence from different nonhuman species.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC348**
Prereq: **None**

NS&B351 Neurobiology of Learning and Memory
Animals as varied as sea slugs and humans display a number of types of learning, ranging from the capacity to acquire species-specific behavior to the ability to form arbitrary associations. Just as varied are the philosophies governing the choice of how to best study the neurobiology of learning and memory. Through lectures, class discussion, student presentations, and a critical reading of the primary literature, the advantages and disadvantages of these various approaches will be investigated. While the specific focus of this class will be on learning and memory, other ways in which the brain learns will also be explored. Normal brain ontogeny relies to some extent on invariant cues in the animal's environment, making this process somewhat analogous to learning. In fact, the neural substrates for learning are likely to be a subset of the basic steps used during brain development. Moreover, the developmental rules guiding brain assembly place constraints on the what, how, and when of brain function and learning. Therefore, this course will also cover select topics in basic developmental neurobiology.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL351**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B353 Neurobiology of Neurological Disorders
This course aims to provide a foundation in the underlying mechanisms of neurological and psychiatric disorders. We will explore through lectures and readings of primary literature a number of important neurological and psychiatric diseases, including including schizophrenia, Alzheimer's disease, sleep disorders, anxiety disorders, and Parkinson's disease. This course focuses on the fundamental molecular and cellular mechanisms that underlie neurological disorders and is designed to engage students who wish to study basic aspects of brain function.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL353, PSYC353**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B356 Neurodevelopmental Disorders
This course aims to provide a foundation in the underlying mechanisms of neurodevelopmental disorders. We will explore through lectures and readings of primary literature a number of important neurological and psychiatric diseases, including genetic disorders such as Down syndrome, Fragile X, and Williams syndrome; spectrum disorders such as autism and fetal alcohol syndrome; ADHD, Tourettes, cerebral palsy, and some motor disorders including developmental coordination disorder, stereotypic movement disorder, sensory ingration disorder, and neonatal hypoxia. This course focuses on the fundamental molecular and cellular mechanisms that underlie neurological disorders and is designed to engage students who wish to study basic cellular aspects of brain function.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL356, PSYC356**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B357 Sex and Gender: From Synapse to Society
From movies like Think Like a Man to songs like "God Made Girls," from federal policies to gender reveal parties, much of our experience is defined by an ideology of gender dichotomy and an endorsement of fundamental sex differences in behavior. But does science agree? The field of neuroscience is bursting with research that both supports and questions inherent differences in the brains and behavior of men and women. In this course we will be taking an open and critical look at this scientific literature. We will begin by clarifying what it means, biologically, to be male/female, determine the limits to these definitions, and evaluate how these biological elements (genes/hormones/anatomy) interact with our environment and society to influence our behavior and gender identity. Additionally, we will evaluate nonhuman animal and human data regarding sex differences in behaviors (e.g., aggression, verbal communication) and neuropathological states (e.g., addiction, autism spectrum disorder). Student evaluation will include effortful participation, biweekly concept checkpoints, a final paper/presentation, and weekly editorials.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **None**
Identical With: **BIOL357, FGSS357**
Prereq: **BIOL182 AND NS&B213**

NS&B358 Neurobiology of Movement
This course is designed to take a comparative approach to understanding the major motor systems of the brain and will cover the basic elements of motor "control." However, the motor system does much more than contract muscles. Even the most basic movements such as walking require whole-body coordination that must be learned and adapted to our environment. During active sensation, motor systems even modulate our sensory perceptions. Much of what we have learned about motor systems comes from animals as diverse as crickets, electric fish, and birds. This course uses a comparative approach to understand the functions various brain regions contribute to our active lives.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL358**
Prereq: **NS&B213**

NS&B360 Neuroplasticity and Neurogenesis in Health and Disease: Molecules, Cells, and Circuits
This course will examine structural and functional neuroplasticity in the nervous system. The ability of the nervous system to reorganize itself by forming new connections, strengthening existing connections, or pruning away old synaptic connections is regulated by our environment, both within the body and the external world. We'll examine critical periods in development when sensory experiences change and sculpt the wiring of the brain, learn how the birth of new neurons changes across the lifespan, and discover how adult neurogenesis is altered by the aging process, physical exercise, stress, and neuropsychiatric disorders, such as epilepsy and Alzheimer's disease. We'll also learn about potential stem cell therapies for enhancing brain repair and plasticity after brain injuries. Students will prepare for class by reading scientific papers and reviews on the topic. In class, I will introduce the topic with slide presentations, and after that we will discuss the topic based on the scientific article discussion. After the classes students will have extensive opportunities for feedback and will be requested to write a simple paragraph for the next class and/or answer a small quiz, based on the new knowledge acquired. Student evaluation will include weekly quizzes and/or assessment, a final exam, and class participation.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **BIOL360**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NS&B360Z Neuroplasticity and Neurogenesis in Health and Disease: Molecules, Cells, and Circuits
This course will examine structural and functional neuroplasticity in the nervous system. The ability of the nervous system to reorganize itself by forming new connections, strengthening existing connections, or pruning away old synaptic connections is regulated by our environment, both within the body and the external world. We'll examine critical periods in development when sensory experiences change and sculpt the wiring of the brain, learn how the birth of new neurons changes across the lifespan, and how adult neurogenesis is altered by aging process, physical exercise, stress, and neuropsychiatric disorders, such as epilepsy and Alzheimer's Disease. We'll also learn about the potential stem cell therapies for enhancing brain repair and plasticity after brain injuries. After the basic material is introduced, class sessions will be scientific article discussion-based. Students will prepare for class by reading scientific papers and reviews on the topic. In class, we will introduce the topic with slide presentation and after that, we will discuss the topic based on the scientific article discussion.
Offering: **Host**
Grading: **A-F**

NS&B373 Exploring the Brain-Body Interface: The Neuroscience of Basic Survival
Basic survival depends on the brain's regulation of fundamental behaviors and physiological pathways, such as drinking, eating, digestion, thermoregulation, breathing, and cardiovascular function. How do the brain and body communicate with each other to achieve homeostasis under different physiological states, and what goes awry in disease? How have species adapted to thrive in challenging environments, such as extreme temperatures and resource scarcity? In this advanced seminar, students will take a deep dive into the exciting research taking place at the brain-body interface. We will explore the main components of the peripheral nervous system, such as the vagus nerve and the dorsal root ganglia, that act as gatekeepers into our internal and external sensory worlds. We will also explore pathways within the central nervous system that regulate our basic bodily functions. By reading primary literature and review papers and participating in in-class discussions, students will gain deep knowledge of this burgeoning field of neuroscience. Through short written assignments and oral presentations on topics of their choosing, students will gain practical skills in scientific scholarship and communication.

Prereq: **(BIOL181 OR MBB 181) AND (BIOL182 OR MB&B182) AND (BIOL213 OR NS&B213)**

NS&B378 Advanced Research in Cognitive Neuroscience
This advanced research course provides in-depth training in the experimental methods of cognitive neuroscience, focused on human memory. Students will work individually and in groups on semester-long projects, which will include literature reviews, experimental design, data collection, analysis, journal-formatted writing of results, and oral presentations.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC378**

Prereq: **None**

NS&B382 Advanced Research in Decision Making
This course is designed to allow students to conduct supervised research in the area of the cognitive psychology of reasoning and decision making. Working as a team with the instructor and other members of the research group, students will undertake a semester-long experimental research project on a topic in reasoning and decision making.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **PSYC382**
Prereq: **None**

NS&B383 Advanced Research in Learning and Memory
This advanced research course is designed to allow students to conduct supervised research in the area of human learning and memory. Working with the instructor, students will become part of an active research lab, undertaking a semester-long experimental research project that seeks to answer a current question in the field of memory research.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC383**
Prereq: **None**

NS&B390 Experimental Investigations into Reading
Experienced readers can easily recognize thousands of words. The mental dictionaries of these readers are efficiently organized to allow rapid and seemingly effortless word recognition. There are still many unanswered questions about the processes involved in visual word recognition. In this class, students will work together with the instructor to design and carry out an experimental investigation relating to reading and word recognition. The semester will provide students with a chance to integrate all aspects of the experimental process: idea formation, experimental design, data collection and analysis, interpretation, write-up, and presentation.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC390**
Prereq: **None**

NS&B392 Behavioral Methods in Affective Neuroscience
This research methods course teaches experimental design and methods in experimental psychopathology using tools to conduct behavioral research in cognitive-affective neuroscience. Course material includes studies from the contemporary psychopathology research literature, with a focus on cognition-emotion interactions. Methods taught will vary by semester and individual research projects and will include statistical procedures (e.g., repeated measures ANOVA), tools for conducting research and analyzing data (e.g., computer programming for stimuli presentation and data processing), and neuroimaging techniques (e.g., event-related potential). There is high expectation that those enrolled in this course will take initiative to extend their learning to areas for which they have specific interests related to the course objectives. Students are also expected to work independently.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC392**
Prereq: **None**

NS&B393 Advanced Research in Cognition and Neuropsychiatric Illness
Students in this advanced undergraduate research course will work in teams on novel and ongoing research studies focused on understanding neurocognitive dysfunction and its treatment in neuropsychiatric illness. Students will be matched to a research project and will participate in different aspects of this research including background literature review, acquiring elementary skills in neurocognitive and symptom assessment, and collecting and/or analyzing extant data using SPSS. Students may also be involved in learning cognitive training procedures.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **PSYC393**
Prereq: **None**

NS&B401 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B402 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B407 Senior Tutorial (downgraded thesis)
Downgraded Senior Thesis Tutorial - Project to be arranged in consultation with the tutor. Only enrolled in through the Honors Coordinator.
Offering: **Host**
Grading: **A-F**

NS&B408 Senior Tutorial (downgraded thesis)
Downgraded Senior Thesis Tutorial - Project to be arranged in consultation with the tutor. Only enrolled in through the Honors Coordinator.
Offering: **Host**
Grading: **A-F**

NS&B409 Senior Thesis Tutorial
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B410 Senior Thesis Tutorial
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B411 Group Tutorial, Undergraduate

Offering: **Host**
Grading: **OPT**

NS&B412 Group Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B420 Student Forum
Student-run group tutorial, sponsored by a faculty member and approved by the chair of a department or program.
Offering: **Host**
Grading: **Cr/U**

NS&B421 Undergraduate Research, Science
Individual research projects for undergraduate students supervised by faculty members.
Offering: **Host**

Grading: **OPT**

NS&B422 Undergraduate Research, Science
Individual research projects for undergraduate students supervised by faculty members.
Offering: **Host**
Grading: **OPT**

NS&B423 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

NS&B424 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

NS&B466 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

NS&B491 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

NS&B492 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

NS&B501 Individual Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B502 Individual Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

NS&B503 Selected Topics, Graduate Sciences
Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **OPT**

NS&B509 Neuroscience Journal Club I
Presentation and discussion of current research articles in the field of neuroscience.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **BIOL509**
Prereq: **None**

NS&B510 Neurosciences Journal Club II
Presentation and discussion of current research articles in the field of neuroscience.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **BIOL510**
Prereq: **None**

NS&B543 Muscle and Nerve Development
This course will examine the structure and function of muscle cells, the development of muscle cell identity, the development of motor neurons, and the interactions between nerve and muscle that lead to a functioning neuromuscular system. The primary focus will be on vertebrate model systems such as chick, mouse, and fish. We will also examine human diseases, including muscular dystrophies and other neuromuscular disorders.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL343, BIOL543, NS&B343**

NS&B549 Advanced Research Seminar, Graduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

NS&B550 Advanced Research Seminar, Graduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

NS&B555 Laboratory in Cellular and Behavioral Neurobiology
The goals of the course are to introduce students to a number of contemporary laboratory techniques in neuroscience and behavior. The laboratory introduces students to experimental method and techniques including neuroanatomy, immunohistochemistry, primary neuronal and astrocyte cell culture methods,

analyses of electrical activity in the brain, and behavioral analyses of learning, memory, social behavior, and social dominance in inbred strains of mice.

Students will learn to analyze experimental data and write a series of laboratory reports on the experiments done during class. In addition, students will write a term paper related to one of the experimental approaches.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**

Identical With: **BIOL250, NS&B250**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

NEUROSCIENCE AND BEHAVIOR MAJOR

MAJOR DESCRIPTION

The Program in Neuroscience and Behavior (NS&B) opens avenues for students to explore the role of the brain in expressing behavior in animals including humans. Students who major in NS&B learn the details of how the nervous system works and how it functions with other biological and psychological systems. New technologies in contemporary neuroscience have helped to bring about many important discoveries, with more on the horizon. Wesleyan neuroscience students learn in an interdisciplinary environment that includes coursework in biology, psychology, and chemistry. Students often expand their learning to include topics such as statistics, computer programming, design, and philosophy of science. Lab-based methods courses and hands-on research in state-of-the-art laboratories give students a rich educational experience that provides a foundation for various career options that include medicine, basic and applied research in the public or private sector, and scientific writing or reporting.

Students who pursue the NS&B major bring a strong curiosity about the intricate workings of the brain and nervous system. They strive to integrate knowledge and research from relevant areas of science to understand behavior. They develop analytical, detail-oriented problem-solving expertise and they learn how to stay current with the latest advancements in neuroscience.

ADMISSION TO THE MAJOR

One or more of the foundation courses in biology (BIOL181, BIOL182) are prerequisites for the advanced **NS&B** courses offered by the Biology Department. Although not legislated as prerequisites, NS&B213 and **NS&B** laboratory courses provide important conceptual and practical background for independent research in the junior and senior years.

A recommended course sequence for students with a strong background in science would include BIOL181 and BIOL182 (and associated labs) along with introductory chemistry in the first year. Other students may wish to take the Introductory Chemistry Sequence in the first year prior to the Introductory Biology sequence. In the sophomore year, one would take NS&B213. The other required courses and research tutorials would be spread out over the last two years. For information on the pathway through the major, please visit wesleyan.edu/nsb/pathways.html (http://www.wesleyan.edu/nsb/pathways.html) for further information.

To be admitted to the major during March of the sophomore year, a student must have completed, with grades of C- or better, at least two of the full-credit courses listed in foundation and core courses that follow. At least one of these credits must be either NS&B213 or BIOL181.

MAJOR REQUIREMENTS

FOUNDATION COURSES

Code	Title	Hours
BIOL181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
BIOL191	Principles of Biology I--Laboratory	.5
BIOL182	Principles of Biology II	1
BIOL192	Principles of Biology II: Laboratory	0.5
CHEM141 & CHEM142	General Chemistry I and General Chemistry II	2
or CHEM143 & CHEM144	Honors General Chemistry I and Honors General Chemistry II	
CHEM251 & CHEM252	Organic Chemistry I and Organic Chemistry II	2
Two additional courses from the following (beginning with the graduating class of 2016):		
PSYC105	Foundations of Contemporary Psychology	1
PHYS111	Introductory Physics I	1
or PHYS112	Introductory Physics II	
or PHYS113	General Physics I	
MATH117	Introductory Calculus (or higher)	1
COMP112	Introduction to Programming (or higher)	1

Core Course

Code	Title	Hours
NS&B213	Behavioral Neurobiology	1

ADVANCED COURSES

Five advanced courses from the following list are required for students; two must be cross-listed with biology; two cross-listed with psychology; and one, a research tutorial or methodological course. Some courses appear in both Biology and Psychology lists but may be counted only once, in either category.

Cross-listed with Biology

Code	Title	Hours
NS&B224	Hormones, Brain, and Behavior	1
NS&B239	Functional Anatomy of the Human Brain	1
NS&B244	Neuropharmacology	1
NS&B245	Cellular Neurophysiology	1
NS&B251	Laboratory in Basic Practices in Neuroscience	1

NS&B252	Cell Biology of the Neuron	1
NS&B254	Comparative Animal Behavior	1
NS&B299	Waves, Brains, and Music	1
NS&B302	Neurobiology of Aging	1
NS&B302Z	Neurobiology of Aging	1
NS&B303	Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function	1
NS&B304	Glia: Not just neuronal glue!	1
NS&B317	Neuroethics	1
NS&B320	Neuroscience of Learning and Memory	1
NS&B323	Biochemistry of Neurodegenerative Disease	1
NS&B325	Stem Cells: Basic Biology to Clinical Application	1
NS&B328	Chemical Senses	1
NS&B343	Muscle and Nerve Development	1
NS&B344	Developmental Biology of the Nervous System	1
NS&B345	Developmental Neurobiology	1
NS&B347	Mammalian Cortical Circuits	1
NS&B351	Neurobiology of Learning and Memory	1
NS&B353	Neurobiology of Neurological Disorders	1
NS&B357	Sex and Gender: From Synapse to Society	1
NS&B356	Neurodevelopmental Disorders	1
NS&B358	Neurobiology of Movement	1
NS&B360	Neuroplasticity and Neurogenesis in Health and Disease: Molecules, Cells, and Circuits	1
NS&B373	Exploring the Brain-Body Interface: The Neuroscience of Basic Survival	1

Cross-listed with Psychology

Code	Title	Hours
NS&B220	Cognitive Psychology	1
NS&B222	Sensation and Perception	1
NS&B225	Cognitive Neuroscience	1
NS&B227	Motivation and Reward	1
NS&B228	Clinical Neuropsychology	1
NS&B238	Psychological Theories of Learning and Motivation	1
NS&B239	Functional Anatomy of the Human Brain	1
NS&B302	Neurobiology of Aging	1
NS&B316	Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives	1
NS&B317	Neuroethics	1
NS&B320	Neuroscience of Learning and Memory	1
PSYC322	Psychology of Decision-Making	1
NS&B329	Neural Costs of War	1
PSYC332	Seminar in Cognitive Neuroscience	1
NS&B335	Behavior Genetics	1
NS&B341	Psychology of Human Memory	1
NS&B348	Topics in Cognitive Development	1
PSYC351	Your Brain on Drugs: The Neuroscience Behind Drugs of Abuse and Addiction	1
NS&B353	Neurobiology of Neurological Disorders	1
NS&B356	Neurodevelopmental Disorders	1
NS&B358	Neurobiology of Movement	1

Research Methods and Practica

Code	Title	Hours
MATH132	Elementary Statistics	1
PSYC200	Statistics: An Activity-Based Approach	1
NS&B210	Research Methods in Cognition	1
NS&B215		1
BIOL242	Quantitative Methods for the Biological and Environmental Sciences	1
NS&B243	Neurohistology	1
BIOL247	Laboratory in Neurophysiology	1
NS&B250	Laboratory in Cellular and Behavioral Neurobiology	1
BIOL251	Laboratory in Basic Practices in Neuroscience	1
NS&B280	Applied Data Analysis	1
PSYC378	Advanced Research in Cognitive Neuroscience	1
PSYC382	Advanced Research in Decision Making	1
NS&B383	Advanced Research in Learning and Memory	1
NS&B390	Experimental Investigations into Reading	1
NS&B392	Behavioral Methods in Affective Neuroscience	1
NS&B399		1.25
The following are taken for two semesters, both in the lab of the same faculty member:		
NS&B409 & NS&B410	Senior Thesis Tutorial and Senior Thesis Tutorial (two semesters, both in the lab of the same faculty member)	1
or NS&B423 & NS&B424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	

Note: MATH132 can be taken to meet requirements for either the methodological or foundation major requirements, but not both. Methodological courses cannot be credited toward the requirements of advanced courses cross-listed with biology or psychology. *Courses listed in both categories A. or B. can be counted only in A. or B. but not both.

Courses of relevance outside the program. Though not requirements of the major, students should be aware that courses in organic chemistry and molecular biology, as well as courses in non-neuroscience areas of biology and psychology, complement the **NS&B** major and should be considered, in consultation with your advisor, when planning your program of study.

SUBSTITUTING OUTSIDE COURSES FOR CREDIT TO THE MAJOR

Foundation courses: A student who has taken foundation courses outside of Wesleyan may be able to apply them to the major. As a general rule, courses acceptable to the biology, chemistry, and physics departments for university credit are acceptable to the NS&B program for substitution for foundation courses.

Advanced courses: Advanced courses, inside or outside of the University, might be acceptable as substitutes for the advanced courses of the NS&B major. In general, only one such course can be substituted, and approval must be obtained in advance from the program director.

UNDERGRADUATE RESEARCH

NS&B majors are encouraged to become involved in the research of the faculty. Research tutorials and senior thesis tutorials are taken with mode of grading and amount of credit to be arranged with the research supervisor. Research tutorials are numbered NS&B411/NS&B412, NS&B409/NS&B410, and NS&B423/NS&B424. These courses can fulfill the research methods requirement or can receive graduation credit. For the most up-to-date information on NS&B faculty research, please visit our department website (http://www.wesleyan.edu/nsb).

STUDENT LEARNING GOALS

Our program offers a curriculum that encourages fluency across multiple disciplines in the field of neuroscience and behavior. Immersion in this field requires thinking across multiple levels of analysis and an appreciation for how complex and broad questions can be made amenable to scientific inquiry. In terms of goals, we have three areas of knowledge that we expect all students to acquire by the time they have completed the NS&B major:

- **Structure:** The parts and how they connect. Structural knowledge includes neural development, neuroanatomy, neurotransmitters, and the cell and molecular biology of the neuron.
- **Function:** How the parts come together to produce systems. Such systems include various sensory, motor, and neuroendocrine systems. Knowledge concerning function is gained by studies of structures and studies of perception, learning and memory, behavior, and cognition.
- **Theory:** Governing principles that can be proposed from all the above. Examples of theories include those that address the relationships between brain and behavior, articulate how brain structure and function changes over time, and explain cognitive and perceptual processes.

In addition, it is our goal that all students can skillfully apply and analyze knowledge gained from their studies. Statistics courses, lab-based methods courses, and/or direct experience in research projects serve this goal.

ADVANCED PLACEMENT

AP credit may be used to place out of any of the foundation courses, subject to the guidelines of the department hosting these courses.

PRIZES

George H. Acheson and Grass Foundation Prize in Neuroscience: Established in 1992 by a gift from the Grass Foundation, this prize is awarded to an outstanding undergraduate in the Neuroscience and Behavior Program who demonstrates excellence in the program and who also shows promise for future contributions in the field of neuroscience.

BA/MA PROGRAM

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, please visit https://catalog.wesleyan.edu/departments/nsb/grad-nsb/ as well as the Graduate Studies page: http://wesleyan.edu/grad/degree-programs/bama.html (http://www.wesleyan.edu/grad/degree-programs/bama.html).

ADDITIONAL INFORMATION

- **Teaching apprenticeships.** Students may be appointed teaching apprentices with the approval of the participating faculty member and the Office of Academic Affairs. The apprenticeship position involves assisting a faculty member in the teaching of a course. Concurrently, the apprentice enrolls in an apprenticeship tutorial (NS&B491/NS&B492) that is usually a one-credit course and operates in either the graded or credit/no credit mode.
- **Petitioning for exemptions.** A student may request a variance from the requirements of the major or for honors by submitting a written petition to the chair of the program. The petition should indicate why the requirement cannot be met and the educational justification for the alternative. The petition will be considered by the NS&B faculty, and the student will receive a statement of the decision by letter.
- **Seminars.** The program periodically invites neuroscientists from outside Wesleyan to come here and describe their research. These seminars frequently complement course material and give students the opportunity to interact with noted researchers. The talks are usually scheduled for noon on Wednesdays. Students are encouraged to attend.

HONORS

To be considered for honors, a student must be an NS&B major and have a B average (grade average 85) in the courses credited to the major. The student must submit a laboratory research thesis that was supervised by a member of the NS&B faculty and be recommended for honors by the NS&B faculty.

MASTER OF ARTS IN NEUROSCIENCE AND BEHAVIOR

The Program in Neuroscience and Behavior (NS&B) opens avenues for students to explore the role of the brain in expressing behavior in animals including humans. Students learn the details of how the nervous system works and how it functions with other biological and psychological systems. New technologies in contemporary neuroscience have helped to bring about many important discoveries, with more on the horizon. Wesleyan neuroscience students learn in an interdisciplinary environment that includes coursework in biology, psychology, and chemistry. Students often expand their learning to include topics such as statistics, computer programming, design, and philosophy of science. Lab-based methods courses and hands-on research in state-of-the-art laboratories give students a rich educational experience that provides a foundation for various career options that include medicine, basic and applied research in the public or private sector, and scientific writing or reporting.

The NS&B program offers graduate study leading to the degree of Master of Arts through the BA/MA program. Admission to the program is competitive and requires completion of an independent research thesis. In their MA year, students work closely with faculty research mentors while they complete coursework and participate in seminars. Prospective candidates are expected to declare their intention to enter the BA/MA program in the first

semester of their junior year to permit the design of an acceptable program of study.

MA candidates complete at least six credits in addition to the 32 credits required for the Wesleyan BA. Three MA credits are earned through Journal Club, Advanced Research, and the Research Seminar. The remaining MA credits are earned through lecture, lab, or seminar coursesdetermined by the student and mentor and approved by the Office of Graduate Student Services. Students in the MA program will submit a written thesis describing their research that they will present orally to their committee in a closed-door defense of the thesis and present publicly during the research seminar.

COURSES

BA/MA PROGRAM

The MA will require a minimum of 6 credits in addition to the 32 necessary for the Wesleyan BA. Three credits will be earned through Journal Club I & II (0.25 credits x 2 = 0.50), Advanced Research NS&B549/NS&B550 (1.0 credits x 2 = 2.0) and Research Seminar (.50 credits). The remaining credits will be earned through lecture, lab, or seminar courses (200, 300, or 500-level) determined by the student and mentor; a minimum of two of these must be one-credit courses. MA credit will only be awarded for academic work in which grades of B minus or higher have been earned. A student in the BA/MA program who earns more than 32 credits during the BA may apply any excess credits toward the MA, providing that they are relevant to the research area and they have not been used to fulfill an undergraduate major requirement. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

There are no language requirements for the BA/MA Program in NS&B.

PROGRESS AND QUALIFYING EXAMS

A 3-member committee of the faculty will be established upon acceptance in the BA/MA program. The candidate will meet with their committee in early stages of research and meet with them in the second semester of their MA year. This committee determines when sufficient experimental work has been completed and must approve the final written document. Students in this program are required to submit a MA thesis describing the research which they have carried out in partial fulfillment of the degree requirements.

TEACHING

There are no requirements for BA/MA candidates to teach although the opportunity may arise.

RESEARCH

Students conduct research and complete a written thesis in partial fulfillment of their MA degree. For the most recent information regarding the research carried out by faculty in the NS&B program, please visit the NS&B website: https://www.wesleyan.edu/nsb/faculty.html

THESIS AND DEFENSE

Students in this program will submit an MA thesis describing the research and will present this to their committee in a closed-door oral defense of the thesis. Following the oral defense with the thesis committee, the students will receive two grades for their thesis work: one for the oral component and one for the written component of the thesis. Additionally, students are required to give a public presentation during the research seminar (BIOL557 or CHEM587/CHEM588) describing their research as partial fulfillment of the degree requirements.

PHILOSOPHY

Doing philosophy means reasoning about questions that are of basic importance to the human experience—questions like, What is a good life? What is reality? How are knowledge and understanding possible? What should we believe? What norms should govern our societies, our relationships, and our activities? Philosophers critically analyze ideas and practices that often are assumed without reflection. Wesleyan's philosophy faculty draws on multiple traditions of inquiry, offering a wide variety of perspectives and methods for addressing these questions.

- Undergraduate Philosophy Major (p. 1098)

PHIL112 Virtue and Vice in History, Literature, and Philosophy
Examines the long, complex and sometimes contradictory associations of virtue with piety, salvation, righteousness, intensity, strength, and, more recently with vulnerability and suffering. Beginning with Confucius and Aristotle, and winding our way through Christianity, humanism, postmodernism until the present, we will explore the ethics, power, and politics of the ideas of virtue and vice.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-COL**
Identical With: **COL228, CHUM228, HIST140**
Prereq: **None**

PHIL118 Reproduction in the 21st Century
This course will cover basic human reproductive biology, new and future reproductive and contraceptive technologies, and the ethics raised by reproductive issues.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **BIOL118, FGSS118, STS118**
Prereq: **None**

PHIL151 Living a Good Life: Chinese Lab (CLAC.50)
This optional "lab" class is intended for students (1) who have taken or are currently taking PHIL 210: Living a Good Life; and (2) who have little or no exposure to classical Chinese. Each weekly session will introduce students to aspects of the classical Chinese language--the written language of pre-20th-century China. Students will be able to read (in Chinese) and discuss (in English) key passages from the Confucian classics on which the Living a Good Life courses is partly based. No previous knowledge of Chinese (classical or modern) is necessary.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **SBS-PHIL**
Identical With: **CGST224, CHIN151**
Prereq: **None**

PHIL152 Living a Good Life: Greek Lab (CLAC.50)
This half-credit "Greek Lab" uses a slow reading of Plato's Republic to invite students into the world of Ancient Greek. In the first three weeks of the semester, students will be introduced to the Ancient Greek alphabet and explore the meanings of two key Greek philosophical terms -- eudaimonia (often translated as "happiness" or "flourishing") and dikaiosune ("justice" or "righteousness") -- that will set the stage for our study of Plato. In subsequent weeks, we will progress through each of the ten books of the Republic, highlighting a pivotal Greek keyword in each class session and discussing how its nuances inform Plato's argument for the good life as the just life.

No prior experience with Greek (ancient or modern) is required, and all readings and discussion will be geared toward students with little to no background in classical languages. Our goal is twofold: to develop an appreciation for Attic Greek, and to discover how direct exposure to the language enhances our understanding of a core text in the history of philosophy. Through short reading assignments prior to class, followed by group work and guided discussion in class, students will gain a unique perspective on some of philosophy's most enduring questions, while also developing the tools to navigate Ancient Greek terminology with confidence. Please note: this course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative and is not meant

to replace a full introductory course in Ancient Greek. Students seeking more in-depth language training should enroll in GRK 101.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **SBS-PHIL**
Identical With: **CGST225**
Prereq: **None**

PHIL160 Philosophy and the Movies: The Past on Film
This course examines how films represent the past and how they can help us understand crucial questions in the philosophy of history. We begin with three weeks on documentary cinema. How do documentary films achieve "the reality effect"? How has the contemporary documentary's use of reenactment changed our expectations of nonfiction film? Much of the course is devoted to classic narrative films that help us critically engage questions about the depiction of the past. We think about those films in relation to texts in this history of philosophy and contemporary film theory.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-FILM**
Identical With: **FILM360, HIST129**
Prereq: **None**

PHIL185 Let's Talk: Civil Disagreement and Dialogue
This class is designed to help students improve their communication and dialogue skills through character development. We will consider ways to build community and trust in order to productively engage in and facilitate difficult conversations across political and social differences. Rooted in a philosophical framework for the study of values and virtue, we will reflect upon and incorporate the moral and intellectual features of good dialogues into our everyday lives. Our goal is to become the sort of people who can communicate effectively across differences in careful, constructive, open dialogues aimed at truth and justice.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **SBS-ALLB**
Identical With: **CSPL184, RELI184, SOC276**
Prereq: **None**

PHIL185F Reasonable Disagreements: Science, Philosophy, Magic, & Society (FYS)
Much of contemporary social and political discourse revolves around science--with many assuming that science is rational, objective, true, and the ultimate source of knowledge. As a result, it would seem unreasonable to believe in things like astrology, magic, alchemy, and other non-scientific ideals, or even to suggest that science might not be as objective, rational, or true as we might think. In this class we will explore different historical and philosophical approaches to distinguishing "legitimate" forms of inquiry and knowledge, considering the ways that our contemporary perspectives on science have been shaped by a long history of philosophy, "natural" philosophy, magic, theology, and "pseudosciences." We will investigate issues and concepts within and about science, including topics such as the nature of theories, the nature of scientific progress, and the relations among science, values, and society.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-ALLB**
Identical With: **CSPL185F, RELI185F, STS185F**
Prereq: **None**

PHIL195 Mellon Mays Fall Seminar
This course is for participants in the Mellon Mays Undergraduate Fellowship program. It is designed to introduce students to the requirements and rigors of graduate school. A central focus of the seminar will be to develop a research project on which the students would work over a two-year period.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL196 Mellon Mays Spring Seminar
This course is for participants in the Mellon Mays Undergraduate Fellowship program. It is designed to introduce students to the requirements and rigors of graduate school. A central focus of the seminar will be to develop a research project on which the students would work over a two-year period.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL201 Philosophical Classics I: Ancient Western Philosophy
This course provides an overview of the development of Ancient Greek and Roman philosophy, from its inception in the 6th century BCE through to Socrates, Plato, Aristotle, the Epicureans, and the Stoics. In exploring this material, we will touch on all or nearly all of the central concerns of the Western philosophical tradition: metaphysics, epistemology, ethics, politics, aesthetics, religion, and logic. Our focus in class will be on the close analysis of primary texts. Students must be willing to engage with readings that are fascinating but at the same time dense, difficult, and perplexing. The course requires no prior experience in philosophy and should be of equal interest to students who are pursuing or intend to pursue other majors.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Identical With: **COL359, CLST217**
Prereq: **None**

PHIL202 Philosophical Classics II: Early Modern Philosophy from Descartes Through Kant
Can we ever hope to attain certain knowledge of the external world? Can we know ourselves? How is our mind related to our body? Are our senses more reliable than our intellect? Or is it the other way round? Can we have science without a belief in God? These are some of the questions that excited the philosophical imagination of the major intellectual figures of the early modern period, an era of unparalleled collaboration between science and philosophy. In this course we will examine how the Scientific Revolution encouraged philosophers toward radical innovation in epistemology and philosophy of mind, laying the foundations for our own modern conceptions of natural law, scientific explanation, consciousness and self-consciousness, knowledge and belief. We will be reading, analyzing, and arguing with some of the most influential works in the history of Western philosophy, including Descartes' MEDITATIONS, Locke's ESSAY CONCERNING HUMAN UNDERSTANDING, Hume's ENQUIRY CONCERNING HUMAN UNDERSTANDING, and Kant's CRITIQUE OF PURE REASON.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Identical With: **COL360**
Prereq: **None**

PHIL204 Philosophical Classics IV: 20th-Century Analytic Philosophy
This course will study selected writings by the antispeculative, logic- and language-oriented thinkers who have shaped 20th-century Anglo-American philosophy--including Peirce, Frege, Moore, Russell, Wittgenstein, Carnap, Quine, Ryle, and Austin.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Prereq: **PHIL202 OR PHIL101**

PHIL205 Classical Chinese Philosophy
Topics in this critical examination of issues debated by the early Confucian, Daoist, and Mohist philosophers will include the nature of normative authority and value, the importance of ritual, and the relation between personal and social goods.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Identical With: **CEAS261, RELI228**
Prereq: **None**

PHIL206 Community-Engaged Philosophy: Teaching the Search for a Good Life
In this half-credit course, students who have successfully served as discussion facilitators for PHIL210: Living a Good Life will learn how to teach an abbreviated version of the course to local high school students in a nine-week voluntary after-school program. Having been trained in this special approach to discussion facilitation for their fall semester work in PHIL210, students will be able to deepen their knowledge of both course content (philosophy) and their facilitation skills through guided experiential learning. Course topics will focus on the skills of learning through close observation and reflection on one's teaching (reflective practice), understanding one's students (adolescent development, cultural consciousness), and pedagogical knowledge regarding lesson planning, student engagement, developing productive classroom climate, promoting self-directed learning, and authentic assessment. Students must have served as discussion facilitators/leaders for PHIL210.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **SBS-ALLB**
Identical With: **CSPL310**
Prereq: **None**

PHIL207 Live Like a Philosopher
Philosophy in the ancient world was viewed not simply as a discipline or body of doctrine but as a way of life. In this project-based learning course, we will study and put into practice the theoretical views of four schools of ancient philosophy in the Greek and Roman world: Platonist, Aristotelian, Epicurean, and Stoic. After some preliminary work introducing ourselves to each of these schools, the majority of this course will be divided into four units. In each unit, students will "live like a philosopher" by incorporating the thought of each school into their daily lives. The aims of this course are to test the viability of these philosophical theories, consider how they may be put into practice, and explore how they may illuminate for us what it means to lead a well-lived life.
Offering: **Host**
Grading: **Cr/U**
Credits: **1.00**
Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL207F Live Like a Philosopher (FYS)
Philosophy in the ancient world was viewed not simply as a discipline or body of doctrine but as a way of life. PHIL208 Teaching Fellowship for National Education Leaders
This course is for students to serve as Teaching Fellows for a course with the National Education Opportunity Network (neonopportunity.org), which provides college courses to Title I and Title I-eligible high schools nationwide. Please inquire with the instructor for information on course topics available this semester. Students will: -Host weekly 45-minute synchronous discussion sessions with 15-25 high school scholars via Zoom to enhance their engagement with course content, expose them to college-level seminar-style discussions, and help improve their analytical and metacognitive skills. -Evaluate and provide feedback on student work. Specific time assignments for sessions with high school students and required Teaching Fellow group meetings will be scheduled at the same time every week based on availability. This course counts for 10 hours toward the 20-hour practicum requirement in the EDST major or minor. The other 10 hours can be completed by repeating this class or through an independent practicum.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-EDST**
Identical With: **EDST405, QAC302, CSPL305**
Prereq: **None**

PHIL210 Living a Good Life
For many philosophers, Eastern and Western, philosophy has been more than an effort to answer fundamental theoretical questions. It has been an activity aimed at changing one's orientation to the world and, thus, how one lives one's life. We will explore Chinese, Greco-Roman, and contemporary versions of the idea that philosophy should be seen as a way of living a good life. How does philosophical reasoning interact with lived practice? How do views about metaphysics or psychology lead to ethical commitments? Despite their differences, Confucians, Daoists, Aristotelians, and Stoics all agreed that philosophy should aim at making us better people. Can such an idea still get traction in today's world? This course will typically have a large-group lecture each Monday, smaller breakout sections with the instructors on Wednesdays in which the texts and ideas will be discussed, supplemented by smaller weekly student-led dialogue sessions on Fridays. For details about the structure of the course and a syllabus of class meetings, along with the locations of plenary lecture sessions, breakout sessions, and dialogue sessions, please see this year's course website and past versions of the course at the following link: https://livingagoodlife.com. Students who would like to explore the ancient Chinese and Greek texts on which the course draws are encouraged to enroll in either of two, optional 0.50-credit classes that are associated with our course: PHIL151 Living a Good Life: Chinese Lab; and PHIL152 Living a Good Life: Greek Lab. These courses will expose students with no prior background to the Classical Chinese and Greek languages. See their separate entries in WesMaps for more information.
Offering: **Host**
Grading: **Cr/U**

Identical With: **CEAS253, COL210**
Prereq: **None**

PHIL211 Critical Philosophy of Race
What is race? Can philosophy account for it or describe it? This class will serve as an introduction to the field of philosophy of race, and examine the general crises or problems that race and racism raise for philosophical projects and methods. We will explore topics such as the ontology of race, its relationship to other social formations like class and gender, its foundations in violence, and its fugitive possibilities. We will read work from classical philosophers of race--like Charles Mills, Linda Alcoff, and David Haekwon Kim--and from scholars at the margins of philosophy--like Gloria Anzaldua, Adrian Piper, and Fred Moten.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PHIL**
Identical With: **AFAM211**

Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL212 Introduction to Ethics
This course will begin with some ancient questions about values. We find that two ancient approaches to right living (Platonic-Stoic and Aristotelian) differ radically over how much experience or society can teach us about what is good. Yet both insist that moral life is essentially connected to individual happiness. Turning next to modern ideas of moral action (Kantian and utilitarian), we find that they both emphasize a potential gulf between individual happiness and moral rightness. Yet, like the ancients, they disagree over whether morality's basic insights derive from experience. The last third of the course explores more recent preoccupations with ideas about moral difference, moral change, and the relation between morality and power. Especially since Marx and Nietzsche, moral theory faces a sustained challenge from social theorists who allege moral norms and judgments serve hidden ideological purposes. Some have sought to repair universal ethics by giving an account of progress or the overcoming of bias, while others have argued for plural or relative ethics. Ecological critics have challenged moral theorists to overcome their preoccupation with exclusively human interests and ideals. What kinds of moral reflection might be adequate to problems of global interdependence? Students will come to understand the distinctive insights and arguments behind all of the positions considered, to recognize more and less cogent lines of response to them, and to shape their own patterns of moral reasoning through careful reflection.

PHIL213 Introduction to Existentialism
This course covers the wide variety of thinkers who may be considered a part of the existentialist tradition. The political and cultural phenomenon of existentialism asks questions concerning the essence of freedom in modern society, the role of emotions and passions in subjectivity, how meaning is brought to life, and the tensions between individuality and society. We will address these questions through the writings of thinkers such as Friedrich Nietzsche, Fyodor Dostoevsky, Jean-Paul Sartre, Simone de Beauvoir, Emilio Uranga, Leopoldo Zea, Gloria Anzaldúa, and Frantz Fanon. Throughout we will investigate what lessons for political life and belonging we can draw from these thinkers in our contemporary world.
Offering: **Host**
Grading: **A-F**

Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL214 Reasoning About Justice
This course introduces students to the disciplined study of philosophy through reflection on justice and the grounding and authority of claims invoking justice. The central theme of the course is that conceptions of justice and its authority cannot be understood or established in isolation. The meaning and authority of claims about justice and injustice can only be established through inferential relations to other philosophical issues, for example, concerning reason, knowledge, reality, agency, and identity. These issues will be explored through reflective engagement with classic treatments of these issues by Plato, Hobbes, Kant, and more contemporary philosophical work. The contemporary readings include discussions of distributive justice (concerning access to resources and opportunities); the interplay between gender, race, and conceptions of justice; and whether justice and injustice can be assessed comparatively without reference to a comprehensive, ideal social order.

PHIL214F Thinking with Animals (FYS)
Non-human animals are all around us but often we don't think about them, and more often than not, we don't consider thinking with them. Some people continue to believe that animals don't think at all. In this course we will explore our relationships with other animals, what we think of living with and around them, what we imagine they think about living with and around us. We will use philosophical, scientific, and literary texts to help us explore our complex relationships with other animals.

PHIL215 Humans, Animals, and Nature
A variety of important issues are central to understanding the complexity of relationships between humans, nonhumans, and the rest of nature. The goals of the course are to help students to think critically, to read carefully, to argue well, and to defend their own reasoned views about the moral relations between humans, animals, and nature.

PHIL216F Whither Democracy? Introduction to Political Philosophy (FYS)
The course introduces students to some of the major philosophical perspectives that continue to inform contemporary social and political thought. We begin with the two paradigmatic arguments for obedience to the state and arguments for civil disobedience given by Plato and Dr. Martin Luther King Jr. We then look at the main justifications for obedience to the state--the social contract, freedom and equality (by looking at the topic of work and a universal basic income)--and then explore the contemporary crisis of democracy. We then conclude by exploring civil disobedience as the legacy of Dr. King in light of Tahrir Square/ Occupy Wallstreet/BLM.

PHIL217 Truth & the Poet: Introduction to Phenomenology and Lyric Thinking
What is lyric poetry? What is phenomenology? Can poetry think phenomenologically? What can phenomenology tell us about the way lyric poetry communicates experience? What is the nature of poetic experience, and how does it relate to the structure of experience more generally? What is the relationship between subjectivity and objectivity in experience and the meaning that we give to it? This course provides a foundation for (1) ways of reading and discussing lyric poetry, and (2) understanding and engaging with the school of philosophical thought known as phenomenology. We will read poems from a wide variety of periods, languages, and cultures including Sappho, Césaire, Vallejo, Plath, Dickinson, Rilke, Rimbaud, Stevens, Baudelaire, Dylan, and many others. We will build a basic approach to phenomenology through select readings of Husserl and Heidegger. This course is designed for students with no prior knowledge of philosophy or poetry. By working interdisciplinarily with various thinkers and poets, this course will introduce or continue familiarity with close reading in the College of Letters and other areas of the humanities. This course is recommended but not required prior to taking COL 309 (The Poet & Truth).

PHIL218 Personal Identity and Choice
This course explores philosophical reflections on the problem of personal identity and its relationship to matters of choice and freedom. How do certain experiences and thoughts and physical materials compose oneself? Am I the same person over time even through complete transformations of experience, thought, and material? Can I choose which elements of my existence to count as essential? Some argue the concept of a unified and enduring self partakes of illusion; at the other extreme, some argue for the permanent integrity of individual souls. Regarding choice and freedom, we find a related debate, ranging from those who deny free will altogether to those who define humanity's essence in terms of choice and agency. Might we coherently say that some human selves can have more integrity and others less? What gives a measure of meaningful coherence to a person's life? Similarly, can we distinguish some choices as more free than others? What makes for meaningful choice? Besides serving as an introduction to philosophical reasoning, the course will draw interdisciplinary connections on themes such as social identities, religious experience, political freedom, and legal responsibility.

PHIL220 Human Nature
The idea of "human nature" plays an important role in all sorts of explanations, but what does it mean? What is it to be a human? Are we just rational animals? Do some humans have different natures than others? Is it possible for us to change our nature or is it innate? Are we products of nature, nurture, or some combination? Are humans fundamentally evil or good? By examining philosophical, historical, religious, theoretical, and scientific literatures, this course will examine various answers to these questions.

PHIL221F Philosophy as a Way of Life (FYS)
For many philosophers, East and West, philosophy has been more than an effort to answer fundamental questions. It has been an activity aimed at changing one's orientation to the world and, thus, how one lives one's life. We will explore Chinese, Greco-Roman, and contemporary versions of the idea that philosophy should be seen as a way of life. How does philosophical reasoning interact with lived practice? How do metaphysical views lead to ethical commitments? Despite their differences, Confucians, Christians, Aristotelians, and Stoics all agreed that

philosophy should aim at making us better people. Can such an idea still get traction in today's world?

PHIL222 Global Philosophy
Philosophy is not now, nor has it ever been, narrowly confined to one culture, tradition, or civilization. As European and then American power reached around the world in recent centuries, so too have Euro-American philosophical traditions acquired a global audience, but other philosophical traditions did not disappear. These other ways of approaching philosophy have been re-emerging or reconstituting themselves--sometimes drawing on and sometimes contesting assumptions from the Euro-American traditions--in what can loosely be called our post-colonial world. This course asks what "philosophy" means in these different contexts and explores how philosophy was and is done within various traditions. In addition, we probe and assess distinct approaches to making philosophy more global, which at the very least must mean more cognizant of the presence of multiple ways of doing philosophy.

PHIL229F History and Philosophy of Mathematics (for Everyone) (FYS)
Mathematical knowledge is a pinnacle of human knowledge and achievement, so we will never have an adequate account of human knowledge until mathematical knowledge is properly understood. For this reason, the course addresses the question: How do we come to know mathematical truths? What is distinctive about the course is that we will try to answer this philosophical question via scientifically, culturally, and historically informed reflection. This "humanizes" mathematical thought by finding its origins in humans (and in animals), and by finding it in specific cultural contexts and practices and in the historical expression and transmission of ideas. We will reflect on examples of proto-mathematical practices (measurement, record-keeping, writing), on the cognitive or psychological limitations that we overcome mathematics, as well as on some of the history of properly mathematical practices (arithmetic, geometry, algebra). We will identify the distinctive features of various mathematical practices and ask why they take the forms they do and what general morals can be drawn from them. You will also be invited to draw a philosophical moral about the nature of mathematical truth. Meetings will be a mixture of lectures, discussion, and review. Assignments will include writing assignments, problem sets, and "explainer" presentations in which you explain what's going on in a given passage. Hints and pointers about the readings will be provided. Never fear; no calculus will be presupposed or taught!

PHIL231 Reason and Paradox
This course is an introduction to philosophy, logic, and conceptual issues underlying the foundations of the natural and social sciences. We will examine and analyze a range of patterns of reasoning that lead to surprising, even alarming, conclusions. These go from fallacious arguments whose mistakes can be clearly pinpointed, to conceptual puzzles whose resolution leads to insights about reasoning, to four genuine paradoxes for which there are no clear solutions at all. Most of these paradoxes have been known since antiquity: Zeno's Paradox, about the concepts of space, time, and motion; the Liar Paradox, about the notions of truth and reference; the Sorites Paradox, about the notion of vagueness; and a surprise paradox to be announced in class. The analysis of fallacies and puzzles leads to the study of deductive logic. On the basis of a working knowledge of logic, we will be in a position to see how the paradoxes challenge both the fundamental assumptions that we make in thinking about the world and the very assumptions that underlie rational thought itself.

PHIL233F Bodies and Experiences (FYS)
Philosophers study the world with their minds. But who says that they should only discuss "mental" stuff such as concepts, rationality, or logic? This course is about bodies, and about the experiences that we have in virtue of those bodies. We will explore a variety of contemporary philosophical topics that have bodies and experiences at their center. These include the experience of skilled movement when we dance or play a sport, having a physical disability, or being shamed for our body size. We will discuss the ways we experience race, gender, sex, and sexual orientation. We will learn what makes a question distinctly philosophical and what methods philosophers follow to answer it. But most importantly, we will learn to be OK with the fact that there might be no true answer at all.

PHIL242 Introduction to Buddhist Thought and Practice
This course will introduce significant aspects of Buddhist thought and practice, primarily as it manifested through the literature of India, South Asia, and East Asia. It begins with an overview of the historical Buddha's life and the development of early Buddhist ideas and practices. The course then introduces the Mahayana or Great Vehicle tradition that began to emerge around the first century BCE, as well as later forms of esoteric Buddhism known as Tantra. The course concludes with the development of modern Buddhism in Asia and its manifestation in the West. Readings consist mainly of primary Buddhist texts in translation, which are supplemented as necessary by works of secondary scholarship. The course broadly examines the topics of Buddhist philosophy and ethics, monastic and ascetic life, meditation and ritual practices, and the material culture of Buddhist societies, including artistic traditions, architecture, and book culture.

PHIL250 Thinking By Analogy: The Philosophical Use of a Literary Form
"Juliet is the sun!" So says Romeo, but what does it mean to say someone is the sun? Presumably, Juliet is the sun in being the source of warmth, life, and light in Romeo's world. Yet Juliet is of course not the sun in being an object of astrophysical study, or a giant ball of burning gas. Romeo's claim works, it seems, through a curious interweaving of being and not-being; of sameness and difference. Analogical thinking serves as a source of illumination in all human cultures, and is a pivotal method of comparative and critical inquiry across a range of diverse fields. It facilitates the exploration of abstract themes in literature, aids in drawing insightful inferences in scientific discovery, navigates the complexities of case precedents in legal reasoning, and supports the crafting of compelling ethical arguments. This course will examine the art of analogy as a tool for philosophical understanding and creative thought, tracing its development in the history of philosophy through to its contemporary applications. Roughly half of the semester will focus on premodern perspectives on analogical thinking and verbal image-making, with an emphasis on the contributions of Plato and Aristotle. The remaining half will focus on later works of philosophy and literature that theorize about or employ analogical methods. Our interest throughout will be in how such thinking helps address issues surrounding the nature of reality, representation, and interpretation.

PHIL251 Classical Chinese Philosophy: Chinese Lab (CLAC.50)
This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Classical Chinese Philosophy (PHIL205) course. Students must have taken PHIL205 in the past or be enrolled in it simultaneously. The course will have two main foci: introducing students to modern and contemporary Chinese-language debates about Chinese philosophy and exploring in greater depth the meaning of key passages from the classical works students are reading in translation in PHIL205.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Familiarity with classical Chinese is desirable but not required. Assignments will include presentations in Chinese and some written work in English; evaluation will be tailored to each student's language background. If you are unsure whether your language background is sufficient for the course, please contact the instructor.

PHIL252 Nietzsche - Science, Psychology, Genealogy
This course offers an intermediate survey of Friedrich Nietzsche's mature philosophical writings. Nietzsche's thought is centrally concerned, throughout his career, with a cluster of classical philosophical questions--does human life have meaning? What makes an action right or wrong? Can we comprehend the true nature of reality? What undergirds our normative judgments (of beauty or justice)? We will be especially concerned with tracking Nietzsche's reflections on the impact of modern science (especially the advent of Newton's mechanical physics and Darwin's evolutionary biology) on our conceptions of value and meaning in human life.

Prereq: **None**

PHIL253 Nietzsche als Versucher (CLAC.50)
The term "Versucher" combines three meanings: (i) a writer of essays, (ii) a maker of experiments and hypotheses, and (iii) a tempter who seductively tests convictions and provokes latent desires. Friedrich Nietzsche draws on all these senses when he proposes "Versucher" as "the not-undangerous name [he] dares to bestow" on the "philosophers of the future"--a coming generation of free spirits who will (finally) be capable of appreciating and continuing his intellectual legacy (Beyond Good and Evil, §42).

This course will interrogate Nietzsche's conception of a philosophical Versucher and examine how this concept might apply to Nietzsche himself: as an experimenter with literary style and genre (including the essay form) and as a polarizing cult figure who has attracted the fascination of generations of teenagers and the most diverse (often diametrically opposed) ideological movements. How is it that Nietzsche inspires such passionate attachment in such radically different readers? What is it about his philosophical style and literary form that cultivates a feeling of intimacy and fierce allegiance while also admitting such aggressively divergent interpretations? To explore these questions, we will read and discuss excerpts from Nietzsche's writings and correspondence alongside texts by his friends and interlocutors--such as Richard Wagner, Paul Rée, and Nietzsche's unrequited paramour, Lou Andreas-Salomé. We will also look at prominent cases of his cultural reception--notably by the Nazi party (due to the influence of Nietzsche's sister, who was a party member)

and simultaneously by opponents of totalitarianism such as Robert Musil, Karl Löwith, and Walter Kaufmann.

This course is part of the Fries Center for Global Studies' Cultures and Languages Across the Curriculum (CLAC) initiative. It is taught in German and associated with COL290/PHIL252 "Nietzsche - Science, Psychology, Genealogy," though students can take either course independent of the other. No background in philosophy or literature is required for this course, but advanced-intermediate (B2+) reading and spoken German is a must.

PHIL254 The Rationalist Tradition in Early Modern European Philosophy
This course offers an intermediate-level survey of the Rationalist tradition in Early Modern European Philosophy. Broadly speaking, Rationalism (with a capital 'R') is the view that human reason can deliver insight into significant philosophical truths, without relying on sense experience. We will explore varieties of this methodological commitment in connection with several core topics - including the existence of God, the nature of the human mind (or soul), its relation to the body, and the possibility of empirical knowledge. We will read texts by René Descartes, Princess Elisabeth of Bohemia, Margaret Cavendish, Baruch Spinoza, G.W. Leibniz, and Emilie Du Châtelet.

PHIL255 Moral Psychology
Moral psychology is the study of our minds that is aimed at an understanding of how we develop, grow, and flourish as moral beings. In this course we will examine historical and contemporary texts from philosophy, psychology, and spiritual writings that deal with the nature of the good life for human beings, the development of virtues, and the cultivation of ethical understanding and moral sensibilities. Emphasis will be both on careful understanding of the texts and on the attempt to relate the theories discussed to our own moral lives.
Offering: **Host**
Grading: **Cr/U**
Credits: **1.00**
Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL257 Human Nature in Chinese Thought
This is a course on theories and practices regarding human nature in the history of Chinese traditions, such as Confucianism, Daoism, Legalism, Buddhism, and Neo-Confucianism. What does it mean to be a human? Do all humans have something in common? How should we conduct our lives with respect to those common characteristics? Thinkers from both Western and Eastern traditions have offered their own distinctive and thought-provoking answers to those questions. In the West we are more familiar with the concept of "rational animal" which remains the classical understanding of human nature since the time of Plato and Aristotle. In the history of the Chinese tradition, however, very different approaches towards human nature were adopted, such as the concepts of sympathy, effortless action, no-self, and original enlightenment. Together they can offer us some new insights into the concept of human nature beyond just rationality.

Identical With: **CEAS267**
Prereq: **None**

PHIL258 Post-Kantian European Philosophy
In this study of 19th- and 20th-century philosophy in Europe (primarily France and Germany), special attention will be devoted to the interpretation of modern science, its significance for understanding the world as distinctly modern, and ourselves and the world as natural (or as transcending nature). Related topics include the scope and limits of reason, the role of subjectivity in the constitution of meaning, the place of ethics and politics in a science-centered culture, and the problems of comprehending historical change. Philosophers to be read include Kant, Hegel, Marx, Nietzsche, Husserl, Heidegger, Weber, Marcuse, Habermas, and Foucault. The course is designed to introduce students to a very difficult but widely influential philosophical tradition and will emphasize close reading and comparative interpretation and assessment of texts and reasoning. This course meets the Social, Cultural, and Critical Theory Certificate's requirement in philosophical origins of theory.

PHIL265 Postanalytic Philosophy: Science and Metaphysics
The analytic movement in early 20th-century philosophy distinguished the domain of philosophy from that of empirical science. The sciences were empirical disciplines seeking facts, whereas philosophy primarily involved the analysis of linguistic meaning, often using the resources provided by formal logic. Criticisms of this conception of philosophy and its relation to the sciences have shaped much of the subsequent development of anglophone philosophy. This course will examine closely some of the most influential later criticisms of the early analytic movement and the resulting reconceptions of philosophy as a discipline. The central themes of the course cut across the fields of epistemology, metaphysics, and the philosophy of language and mind. Special attention will be given to philosophy's relation to the empirical sciences, since this has been a prominent issue raised by the criticisms of the early analytic movement. Among the philosophers most prominently considered are Quine, Sellars, Davidson, Putnam, Dennett, Kripke, Brandom, and Haugeland.

PHIL267 History and Limits of Aesthetic Theory
This class will engage significant contributions to Aesthetic Theory in the West from antiquity to the modern period along three dimensions: theoretical, critical, and historical. From a theoretical standpoint, we will address perennial questions in aesthetics, such as what makes something a work of art in the first place, what it means for art to be "beautiful" or otherwise "successful," how differences in media condition and contribute to artistic meaning, what genera are and how they evolve, whether and how art can be ethically or politically significant, why we care about fiction, why and how we "enjoy" tragic plays or horror films, and how artistic tradition can (and should) inform individual works. From a critical standpoint, we will consider how works of art contemporaneous with each theoretical account either reinforce or challenge its specific proposals. And from a historical standpoint, we will seek to understand how aesthetic theories both respond to the specificities of their own epoch and situate themselves relative to the artistic and aesthetic traditions of their predecessors. Readings will include texts by Aristotle, Hume, Kant, Lessing, and Hegel.

Credits: **1.00**
Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL269 Modern Aesthetic Theory
As a philosophical discipline, aesthetic theory initially coalesced around a cluster of related issues concerning the nature of beauty and the norms governing its production, appreciation, and authoritative assessment. Beginning in the nineteenth century, however, both art and aesthetics undergo a conspicuous yet enigmatic shift, signaled by (among other things) Hegel's declaration that "art, in its highest vocation, is and remains for us a thing of the past." Rather suddenly, classical accounts of beauty, genius, aesthetic experience, and critical taste are beset by anxieties about the autonomy and significance of

aesthetic praxis in human life and, subsequently, by a series of challenges to the tenebility of traditional aesthetic categories--author, text, tradition, meaning and interpretation, disinterested pleasure, originality, etc. Our aim in this course is to track these conceptual shifts and to interrogate the rationale behind them. (This course complements, but does not presuppose COL 266: History and Limits of Aesthetic Theory.)

PHIL270 Environmental Philosophy
This course offers philosophical resources for understanding and addressing environmental concerns. At the same time, we will recognize how ecological insights challenge some of the most influential ideas in the European philosophical tradition--human-centered and individualist accounts of existence, agency, knowledge, and value. Shared questions may include: Is there a coherent way of distinguishing "nature" from the non-natural? What can we understand about non-human experience and value? How do people become motivated to recognize and respond to problems whose effects play out in far-away or unfamiliar bodies? How do concepts of moral responsibility apply to climate change? How does environmentally directed action relate to social justice? When there are ecological impacts attached to choices that are conventionally seen as matters of personal liberty (such as food choices, living arrangements, reproductive choices), how do we constructively engage with one another? Despite near consensus about our times being rife with environmental crises, concepts like "environment" and "nature" defy any straightforward account. Similarly, it seems even when people come together around problems of injustice and unsustainability, they may not share any clear positive account of justice or of sustainability. Rather than be defeated by the lack of shared foundational concepts, students will become familiar with at least three patterns of critique--each of these being not a theory or kind of information but a set of skills with perceptual, conceptual, and dialogical aspects. These three patterns of critique are ecological critique, standpoint critique, and sustainability critiques, and they correspond roughly to three traditional domains of philosophy: inquiry into being (metaphysics), inquiry into knowledge and understanding (epistemology), and inquiry into norms and ideals for action (ethics). Understanding these three patterns of critique allows students to address emerging environmental problems more effectively, recognizing the intertwined relations among empirical inquiry, moral accountability, and social justice.

PHIL271 Data, Privacy, and Ethics
Paying for items at the grocery store has become automated thanks to self-checkout stations. Grabbing a coffee at McDonalds involves plugging an order onto a screen. These and other new technologies positively and negatively impact society. For instance, many of these now automated procedures were once occupations, and research shows that automation is displacing jobs that would normally serve underrepresented communities. What's more is that these machines store your information: what you bought, how many items, and at what time you made the purchases. The internet and various social media websites store even more information that is bought and sold to companies and organizations. Thus, should it be permissible for automation to replace workers? What is and isn't moral use of such information? Who is responsible if a machine does something wrong? Are there scenarios in which an organization should not have access to data? In this class, we will explore these questions and other normative questions on data-driven technologies by way of case studies on particular topics. We will the explore the following topics: data ownership, surveillance and privacy, algorithmic bias and its solutions, misinformation, 'the black box problem,' opacity in machine learning, and societal implications of automaton. Authors to be read include Emmanuel Mesthene, Cathy O'Neil, Wendell Wallach, Frances Haugen, Sina Fazelpour, David Boonin, and more. Some relevant movies that touch on these topics include Chappie, Coded Bias, the Minority Report, and the Great Hack.

PHIL272 Human Rights Across Cultures
Are human rights universal? Do cultural differences matter to judgments about human rights? We will look at the current international human rights institutional framework and at theoretical perspectives from Europe and America, China, and the Islamic world. We will look primarily at philosophical materials but will also pay some attention to the premises of international legal documents like the Universal Declaration of Human Rights and to the assumptions behind activist organizations such as Amnesty International.

PHIL273 Philosophy of Law
This course will consist of four sections. We will start by understanding what law is by looking at a classic debate within the philosophy of law between natural law and legal positivism (whether law and morality are connected). We will then look at adjudication, the different methods that judges use to interpret laws and we will do this by looking at famous, recent supreme court judgments. We will then look at freedom of religion cases and think about whether religious practices should be exempt from general laws that normally applies to everyone. We will end with the largest section of the course: the legal regulation of freedom of speech and then connect it to freedom of speech on the internet.

Prereq: **None**

PHIL274 Self & Social Transformation
Racism, sexism, and classism are deeply ingrained in our habits and feelings. It seems that in order to change objective conditions we need to change ourselves and our communities. But given that our habits and feelings are often unconscious and resistant to change, how do we philosophically go about doing this? This class tries to answer this question. It starts theoretically with ancient Greek and ancient Chinese virtue ethics as well as Foucault's later work on self-transformation. It then takes these concepts/theories and sees them in action in contemporary movements of self/community transformation. We start with a paradigmatic political activist movement of self-transformation: the Black feminist transformative justice movement with the goal of prison abolition. But as we progress, we will explore less obvious and seemingly more mundane movements of self- and community transformation such as Saba Mahmood's dawa movement from Egypt, Weight Watchers, and finally "ballroom" culture from Detroit. Anthropological ethnographies of these movements will help show how we can self-reflexively shape our own habits and transform ourselves.

PHIL275 Aesthetics of the Uncanny
In contrast to beauty, pleasure, and harmony, uncanniness stands as the ugly stepchild of philosophical aesthetics. In this class, we will survey ways of interpreting, explaining, and appreciating the aesthetic experience that more literally translates from German as "the unhomely" or "the not-at-home." As such, and more precisely, this course will explore the aesthetic experience of the unfamiliar or the unnaturally familiar. Our survey will take us through the horror genre, the post/modernist avant-garde, Internet aesthetics, terror-tinged spirituality, and psychedelicism, as well through theorists like Stanley Cavell, Sigmund Freud, and Cynthia Freeland.

PHIL276 Virtue Ethics: Traditional, Comparative, and Contemporary Approaches
This course provides an overview and evaluation of various virtue-based approaches to ethics in the Western and Eastern traditions. In the first part of the course, we will get a basic sense for the structure and distinctive features of ancient virtue-based ethical theories. In the second part of the course, we will follow the trajectory of these approaches through to their revival in the late 20th century in the contemporary virtue ethics movement.

PHIL277 Feminist Philosophy and Moral Theory (FGSS Gateway)
This course explores the dialogue between feminist concerns and moral theory. It will explore not only how moral theory might support certain central feminist insights and aims but also why some feminists cast doubt on the project of "doing moral theory." Does the language of existing philosophical moral theories (reason, fairness, equality, utility, human nature, rights) sufficiently allow articulation of feminist problems? If not, how can feminist moral theorists move us beyond the grip of familiar gender-loaded oppositions? After surveying a range of perspectives on feminism and philosophy, we will give a deep reading to three book-length developments of feminist ethics: one from a Kantian perspective, one focused on care, and one focused on virtue ethics. As a gateway course for the FGSS program, this course serves to introduce critical thinking about the construction of gender and the intersection of gender with race, ethnicity, class, and sexuality.

PHIL278 Political Philosophy
The United States incarcerates more people than any other country in the world. Over 2 million people are caught in the criminal justice system today. A disproportionate number of those incarcerated are people of color, particularly black, Latino, and indigenous men. Women, too, are a growing part of the prison population, as are queer, transgender, and gender-nonconforming people. Children, particularly impoverished black youth and, increasingly, immigrants, are funneled into correctional supervision. In this course we will ground philosophical explorations of freedom and captivity by exploring the vexing problems faced by those who are incarcerated.

Prereq: **None**

PHIL279 Race and Animals
Is there any connection between racism and human exceptionalism? This course will explore questions of if and how the processes of racialization and animalization are linked. Are racialized others always also dehumanized? What is the ontological significance of animalized racial caricatures? How do both processes connect to colonial violence? Readings will draw from a wide variety of disciplines and media, including primary historical sources, philosophical essays, film and documentary, and works in political theory, critical theory, post- and de-colonial theory, and history.

Gen Ed Area: **SBS-PHIL**
Prereq: **None**

PHIL280 Theory, Critique, Politics
The subject of this course centers on two questions in 20th century continental philosophy. First, what can theory bring to our understanding of politics? Second, what is the role of critique for political judgment? We will begin with Kant for an understanding of the meaning of "critique" that many 20th century continental philosophers draw upon. Following this introduction, the course will be split between German philosophers and French philosophers to allow us to understand the tensions and convergences between the two camps. The German philosophers we will read are Heidegger, Adorno, Herbert Marcuse, and Ernst Bloch. For the French philosophers, we will read Jean-Paul Sartre, Simone de Beauvoir, Maurice Merleau-Ponty, and Michel Foucault. By the end of the course students will be able to assess how different thinkers attempted to resolve the relationship of the philosopher to political society.

PHIL282 Reason and Revelation: An Introduction to the Philosophy of Religion
With the dawning of modernity, Europe's colonial and scientific adventures opened a distinction of mutual suspicion between theology and philosophy. Broadly speaking, "philosophy of religion" is the effort to evaluate the claims of revelation and reason in terms of one another. We will examine some of the major texts within this field, whose authors include deep skeptics, committed Christians, committed anti-Christians, secular and nonsecular Jews, feminists, ethicists, idealists, empiricists, Romantics, and liberationists. Themes include proofs of God's existence--along with refutations of those proofs and rebuttals to those refutations--the problem of evil, religious ethics, religious experience, the possibility of a universal religion, "divine" racism, the gender of God, the ecocidal

tendencies of Abrahamic theology, and the role theology might or might not play in efforts toward ecological, sexual, and racial justice.

PHIL286 Philosophy of Mind
This class is a philosophical investigation into the nature of the mind. We will explore such questions such: What kinds of beings are capable of having mental states? Can non-human animals or computers think and feel? What is it to be conscious, and can the subjective, first-personal experience of consciousness be adequately captured by a scientific theory? How do our minds represent the world? By what mechanism do our thoughts, feelings, and desires get linked up to the things around us? We will ask these questions with the goal of shedding light on our nature as thinking, feeling beings, and on the relation of our inner lives to the physical world.

PHIL288 Sciences as Social and Cultural Practices
Philosophers long construed scientific knowledge as achieved and assessed by individual knowers, but recent work has recognized a greater epistemic role for scientific communities, disciplines, or practices and has taken seriously the social and cultural context of scientific research. This course surveys some of the social, cultural, and political aspects of the sciences that have been most important for scholars in science studies, including differences between experimental, field, and theoretical science; the role of disciplines and other institutions in the sciences; interactions between science and its various publics; the politics of scientific expertise and science policy; the globalization of science; the social dimensions of scientific normativity, from metrology to conceptions of objectivity; race and gender in science; and conceptual exchanges between sciences and other discursive practices. The concept of the social will also receive critical attention in its purported contrasts to what is individual, natural, rational, or cultural.

PHIL291 Reason and Its Limits
This course offers a close study of Immanuel Kant's magnum opus, the Critique of Pure Reason, supplemented by related writings by Kant and some secondary literature. Kant observes that the history of philosophy is rife with disagreements, even though philosophers purport to traffic in necessary truths disclosed by reason alone. This scandalous fractiousness calls into question reason's ability to offer substantive insights into necessary truths. Kant's "critique" aims to vindicate reason by distinguishing, in a principled manner, the sorts of things we can know with certainty from those that lie beyond the limits of human understanding. His central thesis, "transcendental idealism," holds that "reason has insight only into what it produces after its own plan" (Bxiii). In other words, we can indeed be certain of key structural features of reality such as its spatiotemporality and causal interconnectedness--but only because those features are, in some crucial sense, mind-dependent. This class will explore in detail the arguments for these claims as well as prominent interpretations of their philosophical upshot.

Prereq: **None**

PHIL292 Philosophy of Logic and Mathematics
This course focuses on some principal philosophical issues raised by logic and mathematics. In the first half, we will investigate a range of characterizations of the nature of logic and address the following questions. Is logic a set of true propositions or a set of rules governing correct reasoning? How, if at all, is logic connected with psychology, i.e., with facts about how we think? Is logic in some sense necessary? What, if anything, can logic tell us about the nature and constitution of reality? In the second half we shift to 3 main positions on the nature of mathematics. We start with the view that mathematics is just logic, a view known as logicism. We elaborate logicism by contrast with the Kantian view that mathematics rests on the spatial and temporal forms of one of our cognitive faculties, and against the background of certain conceptual development in 19th-century mathematics. We will go into some relatively non-technical details of how Gottlob Frege and Bertrand Russell attempted to justify logicism. We will uncover some deep problems with logicism, which partly motivates the other two positions we will examine: the (Kantian) formalist conception of mathematics advanced by David Hilbert, and the (Kantian) intuitionist conception of mathematics advocated by L. E. J. Brouwer.

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Prereq: **PHIL202**

PHIL294 Heidegger and the Being Question
Martin Heidegger argued in BEING AND TIME that philosophy has only one question at its heart, the question of the sense of being, even though that question has been trivialized or obscured by the philosophical tradition. This course will explore this question; its relation to more traditional topics in metaphysics, epistemology; and the philosophy of mind, language, and science; and its implications for how philosophy should be done, to what ends. Our primary readings will be BEING AND TIME and various secondary literature, but the aim will be to formulate, pose, and address the question of what it means to be, rather than to interpret or assess Heidegger's own views about this question.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Prereq: **None**

PHIL295 Philosophy of Mathematics and Logic
An introduction to the principal philosophical positions on the nature of mathematics and logic. The theories of mathematics to be examined include logicism, formalism, intuitionism, constructivism, and structuralism. The theories about logic to be discussed include monism vs. pluralism, extensionalism vs. intensionalism, theories of logical constants, and the status of second-order logic. Some of knowledge of deductive logic, such as PHIL 231 or MATH 243, is very helpful, but not required.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PHIL**
Prereq: **PHIL202 OR PHIL231**

PHIL296 Philosophy of Psychology
How does the mind work? So-called "computationalists" think that the mind (and the brain) works as a computer, which first forms and manipulates symbols (usually called "mental representations") according to rules, and then issues "commands" to guide behavior. On the other hand, the "5E" (Ecological, Embodied, Embedded, Enactive, Extended) approach rejects the computer analogy. 5E theorists insist that minds, and minded organisms more generally, cannot be understood in isolation from their environment. Cognition doesn't happen "in a vacuum," and it isn't separable from action. As a consequence, the mind can extend beyond the boundaries of our skull and even of our whole body. This course is devoted to comparing and contrasting the computationalist and the 5E approaches to cognition. We will examine similarities and differences, assumptions and commitments with respect to core debates at the interface of philosophy, psychology, and cognitive science such as, for instance, the nature of visual perception.

PHIL297 The Problem of Language in Chinese Philosophy
The class examines the criticisms of language in various schools of Chinese thought, exploring themes such as the ineffability of the absolute, the rejection of logic, naturalistic criticism of language as a vehicle of propositional knowledge, the "heart that precedes words" in apophatic practice, words as generator of duality, and more. Special emphasis will be given to the paradox of "saying the unsayable" in Daoism and Chan Buddhism, and on the various literary techniques by which the early thinkers have tried to avoid this conflict.

Identical With: **CEAS298, STS202**
Prereq: **None**

PHIL298 Feminist Epistemology
Traditionally, the project of theorizing about knowledge (including concepts such as justification, belief formation, and rationality) assumes that such an enterprise is possible even if one ignores the context and situation of the knower: Philosophers can theorize about, say, belief formation, even if we ignore who is forming the belief--that is, we can ignore their educational, socio-economic background, gender, ethnicity, race, and disability status. Feminist epistemologists question this assumption: They think the context and situation of the knower is relevant for knowledge acquisition and generation. In this course, we will specifically focus on scientific knowledge, since science is typically assumed to be 'pure' and 'isolated' from socio-political and cultural influences. Some questions we will address include the following: Is the notion of scientific objectivity gendered? Is rationality gendered? In what ways can the process of scientific theorizing be more equitable? Do the ideals and standards of science themselves need to change? This course will study the work of Linda Alcoff, Elizabeth Anderson, Sandra Harding, bell hooks, Helen Longino, Maria Lugonés, Alison Wylie, and more.

PHIL301 Du Chatelet's Philosophy of Science
Èmilie Du Châtelet was a respected and lauded natural philosopher, mathematician, and physicist during her time. She published an essay on fire in 1739 alongside Voltaire, and published two editions of her work on physics

and philosophy, namely the Foundations of Physics, in 1740 and 1742. After Du Châtelet's death in 1749, her former math tutor collected and submitted for publication her translation and commentary of Newton's Principia. It was successfully published and remains the leading translation of Newton's work today in France. Despite her success in the 18th century, Du Châtelet has been a neglected, and she remains an understudied figure in the history and philosophy of science since the 20th century. This course seeks to critically examine Du Châtelet's philosophy of science taking into account the authors with whom she engaged (Newton, Leibniz, and Descartes in particular) as well as the current state of scholarship concerning her work. The main text of study will be her Foundations of Physics, and the main topics of discussion will include the following: principles of knowledge, hypotheses, method, space and time, matter, motion, and gravity. Alongside the Foundations of Physics, we will also read Katherine Brading's Émilie Du Châtelet and the Foundations of Physical Science.

PHIL302 Catching Glimpses: Perceiving Infinitesimals in the Scientific Revolution
The rise of mathematical natural science in the early modern period marked the dissolution of objective reality as it had previously been known. Since Aristotle, perceptible objects had been understood to be enduring substances whose identities were inscribed in their very being and which retained these identities through change. The mechanistic worldview of the 17th and 18th centuries exploded this stable order into a telescoping multiplicity of material systems, from the infinitesimally small to the infinitely large. Rather than encountering a world of enduring and identifiable substances--animals, vegetables, and minerals; people and artifacts--the perceiver was instead confronted with fleeting constellations of homogeneous matter in a perpetual flux, no sooner glimpsed than gone. This metaphysical picture of infinitary flux was complemented by a new branch of mathematics, the infinitesimal calculus, which proved immensely successful both in uncovering new theorems and in modeling empirical phenomena.

Both the metaphysics and the mathematics of the new science were, however, rife with paradox. If material objects not only harbor a microscopic substructure but are, in fact, divisible without end, then we are faced with pluralities of pluralities without any underlying unities--parts of parts of parts...and not a whole among them. Conceptual instability afflicted the infinitesimals used in calculus, as well. In some contexts they were treated as very small but non-zero quantities, in others as strictly zero--provoking one critic to call them "ghosts of departed quantities."

In conjunction with the CHUM theme "Ephemera," this class will study the philosophical turbulence induced by the new science--in particular, by the mechanical philosophy and infinitesimal calculus. We will pay special attention to its consequences for the philosophy of perception. Aristotle compared perceptible objects to signet rings impressing their distinctive forms on the receptive wax of the human sensorium. But if there are no enduring substances or determinate forms, how are we to understand our perceptual relation to the world? How must perceptual experience be reconceived so as to accommodate the fleetingness and flux of material phenomena? And how is it that, though we are awash in ephemera, we nevertheless enjoy an (illusory?) impression of endurance and stability?

PHIL303 Plato's REPUBLIC
"The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato." This declaration, famously made by Alfred North Whitehead in the early 20th century, seems especially true of Plato's Republic. No other work in the Western tradition can lay claim to setting the tone so influentially for the development of philosophy as a discipline. Almost every branch of philosophical thought we are familiar with today--on matters of ethics, politics, moral psychology, epistemology, metaphysics, and aesthetics--receives a major formulation in this text. This seminar will be devoted to a close reading of each of the 10 books of The Republic alongside various perspectives that have been taken on this magisterial work in contemporary philosophy, journalism, and literature. We will focus on The Republic primarily as a work of moral psychology by investigating the topical question of the dialogue: Why is it better to live justly rather than unjustly? For Plato, a just life is one governed by the pursuit of wisdom or learning, and this he believes will also be a psychologically healthy one. By contrast, a life governed by the indiscriminate pursuit of power--the life of a tyrant--is psychologically corrupted. These are bold claims. What is Plato's argument for them? In raising this question, we will consider the political project Plato embarks upon in the Republic in constructing a just society, as well as connected issues he raises in the dialogue concerning the nature of human motivation, the distinction between belief and knowledge, the distinction between appearance and reality, the importance of a proper education to the human good, and the role of art and beauty in furthering the common good. Alongside Plato, we will read various works of secondary literature, journalistic pieces, and works of fiction this semester, all inspired by The Republic.

PHIL304 Infinity and the Mathematization of Nature: Early Modern Perspectives
The "mathematization of nature" is a hallmark of the so-called "scientific revolution" in sixteenth- and seventeenth-century Europe. By privileging quantitative methods for measuring and explaining natural phenomena, thinkers broke with the largely "qualitative" forms of explanation typical of the Aristotelian tradition. Especially with the development of new mathematical methods--notably, advances in algebra, analytical geometry, and the development of infinitesimal calculus--the scope and explanatory power of natural philosophy was considerably extended. At the same time, however, new puzzles arose about how the pristine models of abstract mathematics could apply to the messy reality of concrete nature. This question was especially pressing in connection with new mathematics' exploitation the notion of infinity: infinite series, infinite extensions, infinitesimally small quantities, and even infinities greater than other infinities. Should we take the successful application of such infinitary mathematics to natural phenomena to imply that nature itself harbors an infinity of infinities? And how must we reconceive the cognitive powers of the human mind to make room for the fact that infinity has ceased to signify the unknowable as such and has instead become a primary tool for producing scientific knowledge?

In this seminar, we will examine some of the most prominent Early Modern applications of infinitary mathematical methods in the study of natural phenomena as well as central debates about what sense, if any, can be made of these procedures and their apparent success.

PHIL306 Sophist, Statesman, Philosopher: Plato's Later Metaphysics and Politics
How is it possible to speak falsely? Plato connects this question with a puzzle he inherits from the great pre-Socratic philosopher Parmenides: to speak falsely is to speak about what is not; but in speaking about what is not, we ascribe being somehow to not-being, which sounds like a contradiction. This seminar will focus on the metaphysical, epistemological, and political issues generated by Parmenides's puzzle and explore Plato's solution to them in two of his later-period works: the Sophist and the Statesman. In the process, we will see how Plato rethinks his theory of forms in these dialogues, how he learns to let go of Socrates, how a sophist should be distinguished from a philosopher, and how all of this is relevant to politics and the art of ruling.

PHIL321 American Pragmatist Philosophy: Purposes, Meanings, and Truths
This course sketches and evaluates an American tradition of more or less overtly pragmatist thinkers in philosophy and the human sciences, stretching roughly from Emerson and Peirce at the beginning; through William James, George Herbert Mead, and John Dewey in the heyday of the pragmatist public intellectual; to recent and current writers as diverse as Cornell West, Robert Brandom, Richard Rorty, Ian Hacking, and Ruth Millikan. These thinkers offer variations on the premise that all meanings gesture not only backward to facts and things but also forward to the practical circumstances and purposes of interpreters. As purposes shift, so do meanings, and as meanings shift, so does truth--for whether we accept a claim as true depends above all else on its meaning. Pragmatist theories have been subjected to frequent caricature as implying that ideas can mean whatever we take them to mean or that what is true varies according to what each individual finds convenient and expedient to believe. What does it mean, then, to retain a sense of respect for truth? While some pragmatist accounts do explicitly deflate the importance of the concept of truth, others claim not only to respect truth but to offer an account of truth that allows us to inquire more clearly into the evolving but real meaning of moral judgments, religious and aesthetic claims, psychological attributions, and other deeply contested candidates for human belief.

PHIL327 Progressive Confucianism and Its Critics
Contemporary "Confucianism" designates a diverse set of philosophical, social, political, and religious approaches that are rooted in traditional East Asia and are playing significant--and increasing--roles in the modern world. "Progressive Confucianism" designates a subset of these approaches, emphasizing the ways that the Confucian tradition has developed throughout the centuries and arguing both that modern Confucianism must continue to develop, and that a properly developed Confucianism has much to contribute to contemporary philosophy and to modern societies. This seminar will explore the background out of which progressive Confucianism has emerged; its distinctive approach and key contributions to Confucianism and to global philosophy more generally; and central criticisms that it has faced, with sources ranging from more conservative (or even fundamentalist) Confucians to liberals and progressives.

PHIL331 The World Viewed
"Why are movies important?" With this question, posed on the second page of The World Viewed, Stanley Cavell both inaugurates and pre-emptively rejects the tradition of English-language philosophy of film. Published in 1971 and written at Wesleyan, Cavell's masterpiece was arguably the first full-length manuscript on film written by a British-American academic philosopher. And yet it has largely been disregarded or even denigrated by the tradition that followed it, in large part because of the radicality of Cavell's starting point. Rather than initiating the study of film by asking "Why are movies important?", most academic philosophers initiate that study by asking "What are movies, and how are they unique?" The force and novelty of Cavell's theory of film depends on his intuition that this latter question is the wrong basis for such a theory. In this course, we will closely read the entirety of The World Viewed. This exercise in close reading is also an exercise in desedimentation: by taking Cavell's poetic, autobiographical, far-reaching, and intentionally obscure writing seriously, we will attempt to deconstruct our notions of philosophy, film, thought, and the places the threee intersect. Special attention will be paid to Cavell's inaugural question. Readings will be supplemented by regular film screenings and additional work by Cavell, Noel Carroll, Susanne Langer, and others.

PHIL340 Human Nature
The idea of "human nature" plays an important role in all sorts of explanations, but what does it mean? What is it to be a human? Are we just rational animals? Do some humans have different natures than others? Is it possible for us to change our nature or is it innate? Are we products of nature, nurture, or some combination? Are humans fundamentally evil or good? By examining philosophical, historical, religious, theoretical, and scientific literatures, this course will examine various answers to these questions.

PHIL344 Horror in Black Philosophy
This class will trace notions of horror through the history of Black philosophy, through close readings of works such as W.E.B. DuBois's Souls of Black Folk, Sylvia Wynter's "Unsettling the Coloniality of Being/Power/Truth/Freedom," Calvin Warren's Ontological Terror, and Denise Ferreira da Silva's Towards a Global Idea of Race. We will then examine Black horror films in the context of this philosophical lineage. We will pay special attention to the use of concepts of ineffability, inarticulability, and unintelligibility in the articulation of Blackness and anti-Black violence, and connect these concepts to the aesthetics and phenomenology of horror.

PHIL345 The Problem of the Negro as a Problem for Thought
Philosophical inquiries into the "the Negro problem" -- the question of what blackness is and how we socially reckon with its existence -- have historically flourished outside of the academic mainstream, weaving through a myriad of forms -- art, criticism, sociology, autobiography, oral traditions, etc. -- that are typically not counted as philosophy. This class will challenge our assumptions about where good and rigorous philosophy happens by attempting to track the metaphilosophical challenges that the study of blackness produces. We will read a survey of black studies texts from writers including Nahum Chandler, Marquis Bey, Christina Sharpe, and Fred Moten.

PHIL347 Ethics, Ecology, and Moral Change
People commonly recognize that in facing global climate crises, we need to change our habits and practices. Yet our activities are bound up with our perceptions and with our embodied experience of value and possibility. This seminar dives into recent attempts to radically rework our ways of understanding and inhabiting the world. As the flip-side of environmental alienation is alienation from our embodiment, our sessions will incorporate movement and other challenges to sedentary classroom habits.

Given an account of thinking and action as always actively embodied and embedded in our surroundings, we will consider the hypothesis that shifts in action emerge together with shifts in perception. Radical accounts of metaphor and its uptake will help us develop accounts of perceptual change. Our readings will follow a variety of metaphorical directions, including animism and animacies, affordance and hyperobject, process, event and intra-action, native and other, inflammation and balance, dwelling and death, consumption and sustainability. How -- and with what risks and unexpected outcomes -- can these patterns of recognition help in orienting us to the challenges of environmental interdependence and volatility?

This course benefits from collaborative visits with philosopher-dancer Jill Sigman, via Wesleyan's Creative Campus Initiative. Sigman will co-shape discussion and activities during at least two of our sessions.

PHIL350 Radical Self-Care
This is a higher-level seminar on philosophy as a way of life that will explore how the notion of self-care has been developed and deployed throughout history by several political theorists and activists, including Mohandas Gandhi, MLK Jr., Nelson Mandela, Audre Lorde, Angela Davis, bell hooks, and Sara Ahmed.

When conducted in the present day, reflection on how one should live naturally requires attending to matters of sociopolitical concern, such as healthcare inequities, environmental degradation, wealth disparities, and prison reform. An investigation into the links between personal and social well-being has so far been something of a lacuna in the field of philosophy as a way of life, though in a variety of formulations and across several traditions, practices of self-care and self-formation have typically been seen as continuous with (and even a prerequisite for) a robust engagement with others and the pursuit of social justice causes. We will explore the connection between these two domains in this course. As a project during the semester, students will be asked to engage in a cause that matters to them by implementing selected ideas from the thinkers and activists that we'll be studying.

PHIL351 Deconstruction and Politics
Following the later work of Jacques Derrida, we will investigate the significance of the concepts of sovereignty and democracy in some important texts of 20th-century continental philosophy. We shall attempt to understand why these notions are taken at face value and yet still pose many problems for that tradition. Why did democracy and sovereignty give rise to many complications and paradoxes while, at the same time, they continue to hold a vital conceptual import within the political as such. We will thus ask why are political philosophies so invested in sovereignty and democracy? Ultimately, we will consider the possibility of a close affinity between the political and the rhetorical, and will try to understand why democracy and sovereignty tend to exceed conceptual grasp. Because our approach will be primarily deconstructive, we shall also attempt to compare it to other modern and contemporary approaches.

PHIL352 Black Thought and Critical Theory
This course follows Stuart Hall's insistence in "What is this 'Black' in Black Popular Culture?" that the theoretical articulations of "blackness" are always "conjunctural." We will investigate how black thought has been conjoined with critical theory through phenomenology, pragmatism, Marxism, semiotics, and psychoanalysis. In our readings of a variety of 20th- and 21st-century thinkers, we will elaborate the philosophical richness and contradictory tensions embedded in the notion of "blackness" at specific historical and theoretical conjunctions. How is "blackness" useful for social theory? Must we assume there is a transhistorical identity to "blackness"? In what ways does "blackness" conjoin with the conceptualizations of gender, sexuality, class, and religion? Black thought and critical theory is the provocation that we attend to the tensions

these questions raise. In this course, we will read the works of James H. Cone, Cornel West, Hortense Spillers, Saidiya Hartman, Sylvia Wynter, Denise Ferreira da Silva, Frank Wilderson, Calvin Warren, Tommy J. Curry, Stuart Hall, and Frantz Fanon.

PHIL353 Blackness in the Anthropocene
To deny the "unprecedented" geological impact of humans' force on nature is now practically untenable. Theorists in the humanities, nonetheless, remain unimpressed with what this "new era" has afforded us in terms of critical potential. From accusations that what we now call the "Anthropocene" has merely established a hegemony of brute facts at the expense of critique, to concerns about the multiple ways in which the term continues to obscure catastrophic socio-ecological relations, it is fair to say that the scenes of the "Anthropocene" are still contested terrains. The aim of this course is to investigate the Anthropecene's many forms of socio-political erasures and theoretical "blind-sights." We will examine the ways in which Anthropocenean discourses have been powerful at disavowing racial antagonism in our current ecological crisis. More specifically, in this course, will study the ecological negative effects on black communities around the globe with the aim to questions the shortcomings of ethics in Anthropocenean times. We will explore questions like "who are 'recognizable/legitimate' victims in environmental disasters," "do events like hurricane Katrina or the migration crisis teach us anything about our human condition," and "what is the 'post' in post-humanism." We will read philosophical works ranging from Immanuel Kant and Baruch Spinoza to Rosi Braidotti and Karen Barad.

PHIL354 Ecologies of Attention: Biosemiosis, Attunement, and Ethics
We consider variants on biosemiotic accounts of meaning, following one thread through Emerson to Nietzsche, another from Peirce and James to Bateson (Ecology of Mind, 1972) and Gibson (Ecological Approch to Visual Perception, 1979), and a third through contemporary indigenous thinkers and anthropologists attempting to bridge scientific ecology and animist panpsychism--Kimmerer, Whyte, Kohn, Ingold, Strathern. While most of the texts here focus on the nature of meaning as a living process, they are also in constant dialogue with normative concerns, being both motivated by subversive or non-humanist ecological values and inspiring distinctive insights about how to lead meaningfully connected lives.

PHIL356 Afro-Caribbean Philosophy
This seminar focuses on the philosophical production of Afro-Caribbean thinkers since the middle of the twentieth-century. We focus on close readings of Frantz Fanon, Édouard Glissant, and Sylvia Wynter alongside others to consider a Caribbean approach to questions and problems of modernity, relationality, space, race, belonging, the human, creolization, language, anti-colonialism, and liberation. We consider the roots of some of these questions in the work of earlier thinkers such as Aimé Césaire, as well as contemporary influences of their work across and beyond the Caribbean. We will work beyond the linguistic divisions of the Francophone, Hispanophone, or Anglophone Caribbean to consider conversations in common across the archipelago, in a multiplicity of languages.

PHIL358 Decolonial Theory
Decolonial/Post-Colonial theory has always been a creatively different way to approach topics of social justice. This course has four parts. The first quarter will be both about defining what post-colonialism is through foundational texts, but also differentiating its methodology from liberalism and Marxism. We will then apply this knowledge by looking at how decolonization/post-colonialism feminism thinks differently about equality and freedom. In the second half of the course, we will focus on contemporary and cutting-edge readings on how decolonial/post-colonialism can help us think differently about our degraded environment and the looming climate crisis. The third quarter of the course links together Indigenous sovereignty and environmentalism, and we end the course with a look at the new internationalism about climate justice.

PHIL362 Origins of the Human Mind
Since classical antiquity, philosophers have often characterized human beings by way of contrasts between ourselves and nonhuman animals, particularly in

terms of mental abilities humans possess and nonhuman animals (putatively) lack, such as reasoning and language. Only recently, however, have the sciences--particularly evolutionary biology, cognitive psychology, anthropology, and cognitive ethology--begun to offer the tools needed to characterize differences in the cognitive tool kits of different species and to attempt to piece together hypotheses about how human minds differ so greatly from those of our nearest relatives, the great apes, in spite of our genetic similarity and the comparatively brief period since the time of our last common ancestors. In this course, we will read several recent works by philosophers and scientists presenting theories of the evolution of distinctively human cognition.

PHIL363 Philosophy of Perception
Roughly, perception is the cognitive activity embodied creatures engage in in order to find out things about their environment. In the most basic sense, perception involves conscious awareness of something other than ourselves, which causally depends on sensory organs (our eyes, ears, nose, etc.) being stimulated by something external to our physical body. In this course, we will explore the several different "levels" at which philosophers think about perception and the different questions being asked. At the metaphysical level, the central question is: What kind of "things" do we perceive? What is perceptual awareness of? At the epistemological level, we will deal with the question: can we gain knowledge about the world through perception? Finally, at the psychological level, we will ask: How do the psychological processes--studied by sciences like cognitive science, neuroscience, physiology, etc.-- relate to the metaphysical and epistemological questions?

PHIL366 Bodies, Machines, and Meaning: Cultural Studies of the Sciences
Cultural studies of the sciences shift the focus of interdisciplinary science studies from understanding the sciences as producing and justifying knowledge to understanding them as meaning-making and world-transforming practices. Cultural studies attend to scientific meaning-making at multiple levels, and to the interactions among them: concrete material relations among bodies, technologies, and their settings or situations; verbal, visual, corporeal, mathematical, and other expressive performances; and social, cultural, or political institutions, practices, boundaries, and movements across and within them. Cultural studies of science also emphasizes political engagement with scientific practices and their broader cultural entanglements. This course explores what it means to do cultural studies of science, with a focus on three interrelated themes: alternative conceptions of what it means to make claims and reason about what happens in "nature"; case studies in how scientific meaning and understanding are embodied and prosthetically extended technologically; and some specific conceptual and material relations among scientific understandings of life, bodies, sex, reproduction, and being human.

PHIL381 Topics in Philosophy of Mind
This course will explore recent discussions in philosophy of mind. Topics will change from year to year. This year we will look at perspectival pluralism - the view that we understand the mind through a variety of cognitive lenses -- perspectives, frames, models -- that bring different things into focus and involve different forms of reasoning and representation. In addition to an introduction to perspectival pluralism, we will explore its possible implications in philosophy of science, theory of knowledge, truth, and metaphysics.

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-PHIL**
Prereq: **None**

PHIL383 Mind, Body, and World
This seminar in the metaphysics of mind and meaning begins with the philosophical and scientific background to cognitivist conceptions of mind and artificial intelligence. Both classic and recent criticisms of cognitivism and early AI emphasize the role of bodily movement and skill, language, social normativity, and engagement with and within the world as integral to conceptualization and understanding. These themes will then be explored constructively in some recent reconceptions of cognition as embodied and social-pragmatic, and of language and other conceptual repertoires as integral to bodily involvement in the world and with one another.

PHIL385 Understanding Life and Mind
Philosophical conceptions of mind and language are now typically "naturalistic" in the sense that they take these phenomena to be part of the natural world and understandable scientifically. Naturalistic conceptions of mindedness (and many of the sciences of mindedness) still mostly take their lead from a Cartesian tradition of understanding mindedness as an "internal" representation of an "external" world, now located in the brain or central nervous system rather than an immaterial soul. This advanced seminar instead explores the possible philosophical significance of recent developments in evolutionary and developmental biology for understanding mindedness. The course takes up four primary themes: organism/environment entanglement; relevant background from the recent emergence of an "extended evolutionary synthesis;" reconceptions of mindedness as ways organisms inhabit and respond to environments rather than as internal representations; and the evolution and development of language as a form of evolutionary niche construction that coevolves with human organisms and ways of life.

PHIL389 A Book of Nonsense: Wittgenstein's Tractatus
Wittgenstein's Tractatus Logic-Philosophicus is one of the most enigmatic and yet influential texts of 20th-century European philosophy. In this seminar we will explore its major themes in depth. In the Tractatus, Wittgenstein advances a conception of the nature of all representation. This conception invokes, on the one hand, the making of pictures, and, on the other, the uses of language. Central to the conception is the idea that representation and represented necessarily share a common form. So if language represents reality, then reality has the form of language. Wittgenstein thus declares, "The limits of my language signify the limits of my world." The pre-eminent place of language in the Tractatus is one of its most impactful legacies, contributing to the "linguistic turn" that can be observed in analytic philosophy around the turn of the twentieth century. Via this linguistic turn, Wittgenstein transforms the Kantian idea of the bounds of sense into a doctrine of meaningful linguistic use: distinguishing significant linguistic representations from signs that merely seem to make sense -- i.e., nonsense masquerading as sense. The Tractatus rejects "traditional" metaphysical philosophy as at bottom nonsense which says nothing true or false. But Wittgenstein also advances a distinction between what can be said by means of language, and what shows itself in our uses of language. And it turns out that what can be shown cannot be said. The twin ideas of nonsense and of showing lead to the deepest mysteries of the Tractatus: some seemingly "metaphysical" positions, such as solipsism and mysticism, in spite of being nonsense, nevertheless show what are, in some sense, truths. Most paradoxically, the words of the Tractatus themselves turn out to be nonsense and say nothing. Our final aim is an elucidation of what and how one is to learn from such a book of nonsense.

PHIL390 Topics in Metaphysics
Philosophy, especially in the European tradition, has perennially been interested in necessary features of reality, and in the nature of necessity itself. It has also been inveterately invested in rationality, and in discovering its nature. Is there such a thing as necessity that stems from rationality? One answer that has had much staying power is that logic and its laws frame the most fundamental type of necessity: it is impossible, for example, that there both is and isn't anything that travels faster than the speed of light in vacuum, for any such supposed situation violates the logical law of non-contradiction, and so is in a sense not really intelligible. (Except possibly in Australia.) This seminar is an examination of this answer through discussion of views of two seminal figures in modern European philosophy: Immanuel Kant and Gottlob Frege. We will focus on a recently prominent style of reading Kant as inheriting and transforming Aristotle's hylomorphism, and on the ways in which some proponents of this style of interpretation see Frege's conception of logic as closer to that of G. W. Leibniz. We will assess the extent to which such interpretations may be sustained by the actual writings of the philosophers just mentioned, as well as how well they hold up philosophically.

PHIL391 Topics in Philosophy of Logic and Mathematics
Is logic distinct from mathematics? This is the overarching question of this seminar. Specifically, we will discuss two contrasting types of answers to this question. One, which can be traced to Leibniz, holds that the answer is no, that the truths of mathematics, in part or altogether, are logical truths. The other, which can be traced to Kant, answers yes, because knowledge of mathematics requires some non-logical form(s) of intuition, perhaps of space and time. We will look closely at versions of the Leibnizian answer advanced by two originators of analytic philosophy: Gottlob Frege and Bertrand Russell. Both, but Frege in particular, have deep philosophical reasons for their positive answer, which is nowadays known as logicism. We will discuss some of those philosophical reasons. More importantly, both insist that their answers would not be truly compelling unless they identified precisely the fundamental truths of logic, and gave rigorous proofs of axioms of mathematical theories from the truths of logic. Part of our work is to understand Frege's proofs of the Dedekind-Peano axioms of arithmetic from his formulation of logic. We will discuss how Russell, through the Paradox that bears his name, demonstrates the inconsistency of Frege's logic. We will then investigate two programs of salvaging logicism. One, called neologicism, attempts to show how arithmetic is derivable from a consistent variant of Frege's logic. The other, due to Russell, is to circumvent his Paradox by a conception of logic as governing a hierarchy of types of entities, and then deriving arithmetic from this type-theoretic logic. We will next turn to a version of the Kantian answer advanced by David Hilbert. This answer, called (Hilbertian) formalism, holds that genuinely contentful mathematics rests on something like our intuitive knowledge of the possibilities of operations with signs, but that all of classical infinitary mathematics may be justified as a conservative extension of this content. If time permits, we will examine Kurt Gödel's theorems of the incompleteness of arithmetic and the trouble they raise for Hilbert's formalism.

PHIL393 Do We Truly Choose? Free Will in Philosophy and Theology
Free will has been a central pillar of philosophical inquiry throughout history. While contemporary debates often focus on issues of consciousness, mechanics, neurobiology, and physics, premodern discussions frequently revolved around the role of God in defining the boundaries of human freedom. This seminar will delve into diverse perspectives on free will, drawing from philosophical traditions across time and place -- both past and present, East and West -- with particular emphasis on the Islamic context. Through a close reading of key sources, the course examines how different thinkers have conceptualized human agency and the extent to which it determines action. Ultimately, the seminar will grapple with the vexed question: do human agents actually enable their acts, or, in the final analysis, truly "do nothing"?

PHYSICAL EDUCATION

Wesleyan does not offer a major program in physical education. A for-credit program emphasizes courses in fitness, aquatics, lifetime sport, and outdoor education activities.

No more than one credit in physical education may be used toward the graduation requirement. Physical education (.25 credit) courses may be repeated once only.

Limited-enrollment courses. Students taking a class for the first time are given preference over students wishing to take a class a second time, and upper-class students have preference over lower-class students. Performance tests may be required to qualify for intermediate and advanced classes.

ATHLETICS AND PHYSICAL EDUCATION AT WESLEYAN— A STATEMENT OF PHILOSOPHY

"I have always thought that sports are an integral part of liberal education...The reason has to do with the difference between being active and remaining passive. Sports provide the occasion for being intensely active at the height of one's powers. The feeling of concentrated and coordinated exertion against opposing force is one of the primary ways in which we know what it is like to take charge of our own actions."—Louis Mink

Professor Mink, in *Thinking About Liberal Education,* said that liberal education is an intensive quest for fulfillment of human potential. It challenges the whole person—mind, body, emotions, and spirit—to pursue mastery of skills, broad and focused knowledge, coherent understanding of human experience, and a passionate desire to exploit one's capacity in the service of human freedom and dignity. As Mink suggests, structured physical activity is a key part of that pursuit. When it is in harmony with the broader educational purposes of an institution, it contributes to them, draws significance from them, and enhances the educational result.

The Department of Physical Education and Athletics provides the Wesleyan University community with a spectrum of activities that will be of benefit in developing healthy, energetic, and well-balanced lives. The objective is to meet the needs of students and to engage other campus constituencies in physical activity. Physical education and athletics at Wesleyan also reflect a commitment to equal opportunity for men and women at all levels of achievement.

Intercollegiate athletics provides the student with the advantage and privilege to achieve a more sophisticated mastery of skills through practice and contests. The pursuit of excellence can be realized through elite NCAA Division III competition with a focus on regular season and New England Small College Athletic Conference (NESCAC) conference play. In the pursuit of excellence, the

Athletic Department strives to be the most innovative and successful athletic program in the prestigious NESCAC and a leader at the national level.

Wesleyan University pursues excellence in all of its programs. Athletics, as an integral part of the overall educational process, is uniquely positioned to enhance a liberal arts education. Wesleyan coaches share the same goal as the entire Wesleyan community: to transform the lives of our students. To achieve this goal, the University is committed to support our highly trained and dedicated faculty-coaches who practice their craft in state-of-the-art facilities.

Programmatic balance is a key criterion of physical education. The program is internally balanced to ensure equal opportunity for the pursuit of its several objectives. Moreover, physical education at Wesleyan is designed within the controlling context of liberal education.

PHED101 Tennis, Beginning
This course is designed for those who have had no formal instruction in tennis. Basic grips and stroke technique will be taught for the forehand, backhand, serve, and volley. Also covered will be equipment selection, court etiquette, and proper scoring of games, sets, and matches. The introduction of basic doubles formation will also be included. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED102 Tennis, Intermediate
This course is designed for those who have taken beginning tennis and have learned the basic grips and strokes. The intermediate group will have a more detailed analysis of stroke technique. Ladder match play will give students the opportunity to learn singles and doubles strategy. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED104 Golf
This course is designed to teach the basic information necessary to play and enjoy the game of golf. Each classroom period is spent teaching beginning golfers to play the game correctly from the start: mastering the pre-swing, fundamentals of grip and aim, addressing the ball, and swing technique. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED105 Everyday Athlete
By the end of the course, students will be able to: 1. Demonstrate proper technique in fundamental movement patterns (squat, hinge, push, pull, carry, core). 2. Understand and apply key training principles such as overload, progression, and recovery. 3. Track and reflect on their own physical progress and wellness habits. 4. Build a personal weekly fitness plan that balances strength, cardio, mobility, and rest. 5. Recognize the mental performance components of training: motivation, focus, and resilience.
Offering: **Host**
Grading: **A-F**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED106 Fitness, Beginning
This course is designed to meet the needs of the individual interested in establishing a self-paced exercise program. The emphasis of this course is on the development of cardiovascular endurance. Individuals are instructed how to determine personal work-load levels and pace themselves during various classroom aerobic activities. Participants also receive additional instruction in strength training. Cardiovascular activities include fast walking, jogging, aerobic exercise, rope jumping, interval training, and rowing ergometer work. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED107 Inner Game of Golf
Golf is traditionally taught with verbal instruction from the teacher to the student. The students in this class will be taught with learning by feel. Through this unique approach, students will learn that their natural swing is already present within themselves and they simply need to allow it to come out. Through various drills and learning techniques, students will also discover that enjoyment of golf comes first, success comes second. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED112 Advanced Olympic Weightlifting and Powerlifting
The focus of the class will be on advanced weight room techniques. Half of the quarter will emphasize the art of Olympic weightlifting, including the clean and jerk and the snatch movements. The other half of the quarter will emphasize the art of powerlifting, including the three power movements--squat, deadlift, and bench press. Safety in these advanced techniques is always prioritized.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED118 Strength Training, Introduction
This course is designed for the individual who is unfamiliar with or has had no experience in programs focusing on building body strength. This course includes an introduction to the strength-training facilities at Wesleyan, proper strength-training techniques, and various elementary training programs. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED119 Strength Training, Advanced
This course is designed to meet the needs of students who are sincerely involved in strength training, body building, and/or competitive lifting. The course will include the use of four weight-lifting machines and instruction in competitive lifting techniques. There will also be discussion and demonstration of various progressive resistance modes that develop muscular strength and endurance. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED120 Swimming, Beginning
The objective of this course is to equip students with basic water safety skills and knowledge to make them reasonably safe while in, on, or about the water. We will introduce skills designed to improve stamina and basic coordination and to increase individual aquatic abilities. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**

Prereq: **None**

PHED121 Swimming, Advanced Beginner
This course is designed to build upon the skills learned in beginning swimming. Emphasis is placed on improving the overhand crawl stroke with rotary breathing. Students will be introduced to the basic skills needed to learn the backstroke and breaststroke. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED122 Swimming for Fitness
This program is designed for the lap swimmer who is interested in learning and applying cardiovascular conditioning and training to swimming. Instruction is given in breathing exercises and pacing techniques. Individual work-load levels are determined, and self-paced programs are centered around those levels. Various training techniques are discussed and used in the program. A course prerequisite is the ability to swim 25 yards (any stroke) continuously and comfortably. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED123 Lifeguard Training
This course is designed to teach potential lifeguards the skills and knowledge needed to prevent and respond to aquatic emergencies. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED124 Squash
This course is geared toward the beginner but may be taken by those who have played some before. Basic grips and strike technique will be taught for the forehand, backhand, serve, and volley. Also covered will be safety precautions, court etiquette, and proper scoring of games and matches. The intermediate player may not get much attention the first two weeks while the beginners learn the basics. The first class of each quarter will meet in the lobby of the Freeman Athletic Center. Students must have their own racket and goggles.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED125 Table Tennis
Table tennis (also known as ping-pong) is a racket sport derived from tennis but distinguished by its playing surface being on top of a stationary table, rather than a court on which players stand. Table tennis uses paddles, vs a stringed racket, a small hollow plastic ball, and a net. While played in basements the world over, this course will teach you how to play the sport competitively. It will address technique, strategy, and rules and we will learn how to play both singles and doubles. Table tennis is played in so many different settings from backyards at home to rec rooms at work, and from university all the way to the Olympics. This is the perfect course to learn the sport from scratch or hone existing skills for social events, networking opportunities, or the sheer fun of playing. Basic paddles and balls will be provided. Non-marking shoes are required.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED127 Tabata/Fitness Training
Tabata/fitness training is a program designed to enhance an individual's competency at all physical tasks. The student will perform exercise elements successfully at multiple, diverse, and randomized physical challenges. Areas of fitness will include cardiovascular endurance, stamina, strength, power, speed, balance, agility, and coordination. The start-stop training design is based on 20-second bursts of high-intensity workout followed by a 10-second rest. Each high-intensity burst/rest is repeated 4--8 times. The course will provide challenging workout programs that provide the health benefits of cardiovascular workouts with high- to moderate-intensity training and/or high- to moderate-intensity interval training. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED130 Skating, Beginning
This introduction course to ice skating will include lectures as well as work on ice and covers all basics of skating. Progress is self-paced. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED133 Interval Training
Interval training involves a series of low- to high-intensity exercise workouts interspersed with rest or relief periods. This course includes a variety of cardio drills and resistance training exercises designed to challenge and improve cardio and muscular strength while maintaining a strong core. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED137 Rowing for Fitness
This course is designed to introduce individuals to the use and benefit of rowing as a lifetime fitness activity. Through the use of the Concept II rowing ergometer, students will be taught proper rowing technique, conditioning, injury prevention, and ways to include rowing as a part of an overall exercise program. No previous rowing experience is necessary. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED138 Indoor Cycling
Indoor cycling, as an organized activity, is a form of exercise with classes focusing on endurance, strength, intervals, high intensity (race days), and recovery that involves using a special stationary exercise bicycle with a weighted flywheel in a classroom setting. During the class the instructor simulates the ride. Together you travel on flat roads, climb hills, sprint, and race! This is a truly fantastic cardiovascular class. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED139 Running for Fitness
This course is an introduction to the basic principles of a fitness running program. The training program will be individualized for each student based on individual goals. Topics will include proper training techniques, running gear, injury prevention, and stretching. All levels of running welcome. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED140 Racketlon
Racketlon combines tennis, badminton, squash, and table tennis into one sport. It is racketsports' answer to other combination sports such as triathlon or decathlon. Very commonly played in Europe, opponents play each of the sports to 21 points, and the winner is the person with the highest total points. Racketlon is also played in a doubles format where teams of two opponents play against each other. This class will introduce students to each of the four racketsports and how to play them in combination within the sport of racketlon. As a capstone experience, the class will play both a singles and a doubles racketlon. Previous racketsport experience will be valuable in this class, but is not required. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED142 Yoga for Fitness
This yoga class is designed to improve the health, performance, and mental acuity of students interested in improving their level of fitness. The class will blend balance, strength, flexibility, and power in a fitness format. This practical and user-friendly style of yoga is accessible, understandable, and achievable by individuals at any level of fitness. Attendance is required. The first class in each quarter will meet in the lobby of Freeman Athletic Center Lobby. This class meets in the second quarter.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED145 Indoor Cycling and Yoga
This is a combination class that warms up your body with some sun salutations, strengthens your lower body with a cycling ride, and then stretches your hard-worked muscles with yoga asanas. Yoga and indoor cycling are natural complements to one another because each exercise has a mental and a physical component and trains your body while developing mind/body awareness. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**

Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **None**

PHED152 Outdoor Hiking
Hiking is merely walking on a footpath, whether on a neighborhood path or a more adventurous trail that involves some climbing. Hiking is a moderate cardiovascular activity. Common benefits include weight loss, prevention of osteoporosis, decreased blood pressure, and relief of back pain. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED155 Speed Agility Plyometric Training
Learn to increase your cardio by speed and quickness. Agility training focuses on foot speed, quickly changing direction and improving reaction to visual cues. Plyometrics is an explosive movement to build muscle. The two will be combined to enhance the over all body conditioning. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED157 Pickleball
Pickleball is a paddle sport with combined elements of tennis, badminton, and ping pong, and played on a doubles badminton court. The net is similar to a tennis net, but is two inches lower. The game is played with a hard paddle that is similar to table tennis and usually made up of graphite or composite. The ball is comparable to a whiffle ball.

The game can be played in either singles' or doubles' matches. For new players, the basics of the sport are easy to learn. Typically, one session of three or four games is all that it takes to grasp the basics.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED158 Wiffle Ball
This course is an introduction to the game of Wiffle Ball. The course is designed to teach the basic rules, fundamentals, and techniques of the game. The course includes instruction on pitching, fielding, baserunning and hitting, as well as game strategy. We will also include game play to be able to compete with the skills that we have developed. Game play will focus on the slow/med speed pitch version of the game. Classes will take place in Bacon Field House, which offers an ideal size and surface for instruction and game play.
Offering: **Host**
Grading: **A-F**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED159 Cross Training Fitness
This class will use dynamic warm-up, dynamic flexibility, bodyweight, dumbbells, free weights, kettleballs, interval training, cardio/fitness machines, aquatic training, core training, and neuromuscular training in a fun, progressive way so students have a variety of ideas to implement to stay fit for life. The first class of each quarter will meet in the lobby of Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED160 Move Well: Mobility, Flexibility, and Longevity in Physical Activity
This course introduces students to foundational mobility, flexibility, and recovery practices designed to improve movement quality, reduce injury risk, and support lifelong physical well-being. Through guided foam rolling, stretching, and mobility exercises, students will develop an understanding of how the body moves and how to care for it amid academic, athletic, and daily life demands. Classes will emphasize practical, accessible techniques that can be applied before and after physical activity, during periods of high stress, or as part of a regular wellness routine. The course is designed for students of all fitness levels and athletic backgrounds and encourages sustainable, lifelong approaches to physical activity.
Offering: **Host**
Grading: **A-F**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED170 Sculling
This course is designed for those students that have completed the introductory Rowing for Fitness course (PHED137). It gives them the opportunity to take these skills to the water and learn a fitness activity that can last a lifetime. The first class of each quarter will meet in the lobby of the Freeman Athletic Center.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **PHED137**

PHED172 Dorm to 5k: Running for Fitness
This course is designed to introduce students to the fundamentals of physical fitness, focusing on developing the stamina, technique, and mental strategies needed to successfully complete a 5K run. Students will progressively improve their endurance, strength, and overall fitness through a combination of running, cross-training, and education on healthy lifestyle habits. By the end of the course, students will be able to complete a 5K race and incorporate sustainable fitness practices into their daily routines.
Offering: **Host**
Grading: **A-F**

Credits: **0.50**
Gen Ed Area: **None**
Prereq: **None**

PHED195 Theory of Coaching
This course is designed to introduce students to the basic principles and theories of coaching. Students will become familiar with coaching philosophies, coaching objectives, leadership, and motivation styles. Students will also be introduced to team management and planning techniques, evaluation tools, training techniques, and risk management concerns for coaches. This course has no prerequisite and is open to all students.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED196 Basketball Fundamentals
This course is designed to introduce students to the fundamentals of basketball. From the basic skills of the game -- dribbling, shooting, passing, defending -- to the rules of the game that govern the sport. Students will enjoy both skill development and game strategy as the grow from 2 v 2 games into a full 5 v 5 environment. In addition to basketball fundamentals, the course will cover the importance of overall physical fitness and how to set themselves up for a lifetime of activity.
Offering: **Host**
Grading: **A-F**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED201 Practicing Mindfulness Techniques During Activity
This course will provide students with an introduction to mindfulness and teach them mindfulness tools they can use to better self-regulate their emotional states and manage the stress-reaction cycle so many college students find themselves in.

Mindfulness can be brought to any activity. In this course, students will practice different mindfulness techniques through various types of physical activity such as walking meditation, yoga, and time in nature, to name a few. Part lecture, part activity class, students will acquire skills that aid in reducing stress caused by many of life's major stressors: time, people, sleep, work/academics, roles, food, pain, change, fear, panic, and anxiety.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHED401 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYSICS

"Physics is the liberal arts education for a technological society."—Joseph Pimbley

Participation in research and proficiency in the main subject areas of physics are the twin goals of the physics program. The major program is designed to develop competency in quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed-matter physics. Preparation in mathematical and computational methods is an integral part of the program.

Interested and qualified students may pursue several opportunities for advanced work, including graduate courses and participation with graduate students and faculty in research. The department encourages its students to "do physics" at the earliest opportunity by making arrangements to work with one of the research groups or by arranging an independent research tutorial. Research may be experimental or theoretical and may, but need not, result in a senior honors thesis. Most majors who intend to write a thesis begin research no later than the junior year and continue it through the summer into the senior year. Current research interests include quantum computing, single molecule biophysics, soft condensed-matter physics, charge transport in photovoltaic devices, fluid dynamics, laser plasmas, spectroscopy, collision studies involving excited atoms and molecules, and wave transport in complex media.

Many students also take advantage of Wesleyan's computing facilities in their research or coursework. The University has a large computer cluster available to all who are doing research.

Each semester, opportunities exist to serve as a teaching apprentice, course assistant, or department assistant in one of the introductory or intermediate-level courses. Many physics majors have found that this is a stimulating way to learn more about the fundamentals of the discipline and how to teach them. The Cady Lounge in the department serves as a focus for the major by providing a place where students can study and discuss physics. There is also a study room where students in the introductory courses can come to get help and to work together. Students are encouraged to attend the weekly colloquium series and to participate in the weekly research seminars in atomic and molecular physics, chemical physics, condensed-matter physics, and theory. The Society of Physics Students is also a great resource for sharing ideas and questions with like-minded students.

AFFILIATED FACULTY

Laureano Andrés Bulus Rossini
PhD, Universidad Nacional de la Plata
Visiting Scholar in Physics

Lucas Jonatan Fernández-Alcázar
Visiting Scholar in Physics; Visiting Scholar of Physics

Thomas J. Morgan
BA, Montana State University; BS, Montana State University; MSC, University of California, Berkeley; PHD, University of California, Berkeley; MAA, Wesleyan University
Foss Professor of Physics, Emeritus; Research Professor in Physics

Alba Yanina Ramos

PHD, National University of Cordoba
Visiting Scholar in Physics; Visiting Scholar of Physics

CHAIR

Brian A. Stewart
BS, Stanford University; PHD, Massachusetts Institute of Technology
Chair, Physics; Professor of Physics; Professor, Environmental Studies; Professor, Integrative Sciences

EMERITI

Ralph F. Baierlein
BA, Harvard University; PHD, Princeton University; MAA, Wesleyan University
Charlotte Ayres Professor of Physics, Emeritus

Fred M. Ellis
BS, University of Massachusetts at Amherst; PHD, University of Massachusetts at Amherst; MAA, Wesleyan University
Professor of Physics, Emeritus

Lutz Hüwel
PHD, University of Gottingen
Professor of Physics, Retired

Richard W. Lindquist
BS, Worcester Poly Institute; MA, Princeton University; PHD, Princeton University; MAA, Wesleyan University
Professor of Physics, Emeritus

PHYS105 Calderwood Seminar in Public Writing: Radical Sustainability
The environmental challenges widely known and discussed for the past 50 years not only remain: they have grown. Maybe we haven't worked hard enough, or maybe we've been going about sustainability the wrong way. Radical sustainability explores the intersection of these now-critical challenges--extinction, climate change, and many others--as well as the physical and social constraints on action to address them. Our aim is to identify the pressure points for an effective response within the geo-ecosystem and the human systems embedded within it, and then to focus on making change through writing.

Calderwood Seminars in Public Writing are writing-intensive courses that emphasize writing for general audiences about expert subject matters. Students work with their peers to hone the skills that enable them to translate scientific understanding of sustainability for the public. Using an intensive author/editor model, students will explore public communication in a variety of forms, including news articles, radio features, and editorials. The goal is prose that is polished and persuasive. Course readings are chosen to highlight the physical nature of human systems as they relate to natural systems. While there is no prerequisite, the course is intended for upper-level students with experience in environmental and sustainability studies.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **ENVS235, WRCT235**
Prereq: **None**

PHYS107 Life in the Cell from a Molecule's Perspective
What does DNA look like when it is not condensed into chromosomes? How do partners in molecular processes find each other? If a molecular motor "walks," how does it take a step? We will explore these major topics in molecular biophysics by discussing primary scientific literature. Emphasis will be placed on revealing the ways in which our understanding of biological processes can be improved by understanding the underlying physics. Students should have a broad high school science background, familiarity with quantitative and algebraic concepts, and a desire to incorporate quantitative thinking into verbal discourse. Writing is a core element of the course.

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **MB&B117**
Prereq: **None**

PHYS111 Introductory Physics I
This course, along with PHYS 112 in the spring semester, is an introduction to the fundamental principles of physics. Employing trigonometry and algebra the goal is to provide tools for the quantitative understanding of a wide variety of phenomena, with many examples taken from the life sciences. The lab PHYS 121 is recommended. Since algebra is an important prerequisite for PHYS 111, we strongly recommend that all students take a diagnostic test prior to the start of the course. It can be found at https://www.khanacademy.org/math/algebra/test/subject-challenge?modal=1 Taking this "Course Challenge" will take 30-45 minutes and leave you with a good idea of where your algebra skills might need review. Follow-up guided lessons can be chosen at this website.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS112 Introductory Physics II
This is the second of two non-calculus courses covering fundamental principles of physics. The emphasis is on developing a conceptual understanding of the physical processes that govern our universe. Proficiency in elementary algebra, vector algebra, trigonometry, and arithmetic is required. The lab PHYS122 is recommended.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **PHYS111**

PHYS113 General Physics I
This course is the first term of a general physics course with calculus, recommended for students interested in majoring in the sciences. With the focus on Newtonian dynamics, PHYS 113 seeks to develop both conceptual understanding and the ability to use this knowledge to obtain quantitative predictions of how the universe works. Through a collaborative and interactive classroom experience, students develop problem-solving skills and a mathematical description of mechanics. The associated lab, PHYS123, is highly recommended. PHYS113 and PHYS116 are part of a sequence of courses that lead into the physics major. PHYS113 is a pre-requisite for PHYS116; therefore, students must take them in sequence.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS116 General Physics II
This course is the second term of a general physics course with calculus, recommended for students interested in majoring in the sciences. The focus is on the physics of charged particles, including an introduction to the concepts of electric and magnetic fields. Students will develop both conceptual understanding of how charged particles give rise to both electricity and magnetism and the ability to use this knowledge to quantitatively describe the behavior of these particles in a variety of contexts, including electrical devices. Through a collaborative and interactive classroom experience, students develop problem-solving skills and a mathematical description of electricity and magnetism. The associated lab PHYS124 is highly recommended; any student wishing to major in physics should enroll in PHYS124, since it is a requirement for the major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **PHYS113**

PHYS116P General Physics II Problem Solving
This course in the problem solving session component of General Physics II. All students enrolled in PHYS 116 must register for one section of PHYS 116P. This course meets weekly for a session focused on direct solving of problems based on material that is covered during General Physics II class time. Students will work in collaboration to develop the problem solving skills that will allow them to succeed in General Physics II and beyond.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.00**
Gen Ed Area: **None**
Prereq: **None**

PHYS121 Introductory Physics Laboratory I
This laboratory course provides experience with phenomena discussed in PHYS111 lectures. While this course is not required by the Physics Department, students planning to enter the health professions should be aware that a year of physics WITH LABORATORY is usually required for admission. Consult your major advisor if you are in doubt about similar requirements in your field. Each laboratory is limited to 16.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS122 Introductory Physics Laboratory II
This course provides laboratory experiences for students taking PHYS112.

This laboratory course teaches students how to obtain, process, and evaluate data and compare these data with quantitative models of how our world works.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS123 General Physics Laboratory I
This laboratory course provides experience with phenomena discussed in PHYS113 lecture, integrating calculations with the experiments. Students will get hands-on experience with physical systems that demonstrate the principles being studied in PHYS113. Hands-on experience helps in developing physical intuition, a deeper understanding of the course material, and the world around us. The emphasis in this course is on experimental technique and the proper identification, appreciation, and handling of experimental error.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS124 General Physics Laboratory II
This laboratory course is designed to be taken in conjunction with PHYS116. Students will get hands-on experience with physical systems that demonstrate the principles being studied in PHYS116. Hands-on experience helps in developing physical intuition, a deeper understanding of the course material, and the world around us. The emphasis in this course is on experimental technique and the proper identification, appreciation, and handling of experimental error.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **PHYS113 OR PHYS123**

PHYS170Z Introduction to Design and Engineering
This course will provide a hands-on introduction to design and engineering. Students will engage in individual and team projects in a studio environment where we seek to develop a shared practice and understanding of the engineering design process. We will study biological organisms to find inspiration for design of hoppers, swimmers, and climbers. Students will build skills using computer-aided design (CAD) software and using tools for fabrication and prototyping including laser cutting and 3D printing. We will also hone skills in identifying which scientific and engineering principles need to be understood to achieve design goals.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-CIS**
Identical With: **IDEA170Z, CIS170Z**
Prereq: **None**

PHYS205 Introduction to Mechanical Design and Engineering
This course will provide a hands-on introduction to design and engineering. Students will engage in individual and team projects in a studio environment where we seek to develop a shared practice and understanding of the engineering design process. We will study biological organisms to find inspiration for design of hoppers, swimmers, and climbers. Students will build skills using computer-aided design (CAD) software and using tools for fabrication and prototyping including laser cutting and 3D printing. We will also hone skills in identifying which scientific and engineering principles need to be understood to achieve design goals.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **1.00**
Gen Ed Area: **NSM-CIS**
Identical With: **IDEA170, CIS170**
Prereq: **None**

PHYS206 Introduction to Electrical Design & Engineering
Students will learn about engineering mechanics, electronic control systems, and physical actuators (e.g., for movement) using a microprocessor platform, sensors and motors. The final project will require a student team to ideate, design, analyze, and optimize a mechatronic system. This course will allow students to better understand components, methods, and challenges in mechatronics systems commonly found in automation and robotics.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **1.00**
Gen Ed Area: **NSM-CIS**
Identical With: **IDEA175, CIS175**
Prereq: **None**

PHYS207 Introduction to Biophysics
This course will introduce students to major topics in biophysics with an emphasis on the statistical physics of biological systems at the microscopic or molecular level. Topics covered will include molecular motors, self-assembly, and single-molecule manipulation. Students will learn how physical arguments and reasoning can provide significant insight into the design and function of biological systems. While this course is geared toward students who have had a full year of calculus-based physics, relevant concepts in biology and chemistry will be introduced as needed. No detailed knowledge of biology or chemistry beyond the high-school level is required for this course.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **MB&B207**
Prereq: **PHYS116**

PHYS210 How Things Fail: Mechanics and Materials
This lab/lecture engineering course is a foundational cornerstone of structural analysis and mechanical design. It will provide students with a theoretical and practical understanding of static equilibrium, force systems, material response to loading, and analysis of failure modes for each of the fundamental types of stress and strain (axial, flexural, and torsional). These skills are vital for students from a range of disciplines, including mechanical engineering and architecture. The final project will entail design, implementation, and testing of an optimized model of a structure.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-IDEA**
Identical With: **IDEA210, CIS210**
Prereq: **IDEA170 AND (PHYS111 OR PHYS113)**

PHYS213 Waves and Oscillations
The properties of periodic motion recur in many areas of physics, including mechanics, quantum physics, and electricity and magnetism. The ubiquity of oscillatory motion in biological and chemical systems, as well as engineering, provides interdisciplinary importance for developing the formal description of periodic motion. We will explore the physical principles and fundamental mathematics related to periodic motions. Topics will include damped and forced harmonic motion, normal modes, the wave equation, Fourier series and integrals, and complex analysis. Principles and techniques developed in this course are central to many subsequent courses, particularly Quantum Mechanics (PHYS214, PHYS315), Classical Dynamics (PHYS313), and Electricity

and Magnetism (PHYS324). An important component of this course is to develop the ability to use mathematical software packages to graph expressions, solve equations, and obtain numerical solutions to differential equations.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **PHYS116**

PHYS214 Quantum Mechanics I
This course provides an introduction to wave and matrix mechanics, including wave-particle duality, probability amplitudes and state vectors, eigenvalue problems, and the operator formulation of quantum mechanics.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **(PHYS213 AND MATH221) OR (PHYS213 AND MATH223)**

PHYS215 Special Relativity
This calculus-based half-credit, half-semester introduction to Einstein's theory of special relativity promotes both a qualitative understanding of the subject and a quantitative problem-solving approach.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS217 Nonlinear Dynamics and Chaos
Why is it often very difficult to predict the behavior of systems even when we know the interactions between the constituent parts? When the interactions are nonlinear, the tools of linear mathematics are inadequate. When nonlinear systems have more than three dimensions in their state space, they are often chaotic with fundamental limits on predictability. This course systematically addresses one and two dimensional nonlinear systems, analyzing fixed points, bifurcations, and limit cycles. We then explore chaos in continuous systems and discrete maps. The course balances mastery of mathematical tools for analyzing nonlinear systems, development of physical intuition, and practical problem-solving.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **PHYS213**

PHYS219 Introduction to Contemporary Physics
This course examines the foundations of modern physics, including special relativity, the building blocks of matter, the fundamental interactions and gravity, and recent views of the universe such as entanglement, supersymmetry, strings, and dark matter and dark energy.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **(PHYS113 AND PHYS116)**

PHYS313 Classical Dynamics
This is a course in classical mechanics at the intermediate level that utilizes problem solving instruction and learning. It approaches Newtonian mechanics from a more advanced point of view and introduces Lagrangian and Hamiltonian dynamics.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS513**
Prereq: **(PHYS213 AND MATH222) AND (MATH221 OR MATH223)**

PHYS315 Quantum Mechanics II
This course will expand the formalism of quantum mechanics to include spin and angular momentum in three dimensions. The quantum theory of identical particles will be developed and applied to multi-electron atoms.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS515**
Prereq: **(PHYS214 AND MATH223) OR (PHYS214 AND MATH221)**

PHYS316 Thermal and Statistical Physics
Thermodynamics and statistical mechanics are pillars of physics. Thermodynamics provides a framework through which we can understand the rules for the conversion of energy and matter from one form to another. As we will learn, every transfer of energy results in the conversion of some energy into an unusable form. Using the tools of thermodynamics, we can establish limits for the amount of useful work that can be extracted from any process. These limits have important implications for the quest to achieve sustainability in our use of energy and materials. As we learn about thermodynamics, we will spend some time exploring this real-world application of the material covered. Likewise, statistical mechanics provides us with a set of tools for understanding how the behavior of individual atoms and molecules impacts the properties and behavior of materials that can be observed in our daily lives. Our approach to this material differs from many previous physics courses and requires a mixture of statistical and counting skills, coupled with physical intuition for the nature of matter. In addition to explaining phase transitions, critical phenomena, and the statistical nature of fermions and bosons, the tools of statistical mechanics are essential for understanding phenomena like evaporative cooling and the greenhouse effect. We will explore the conditions that lead to these phenomena and discuss the role they may play in a comprehensive approach to sustainability.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS516**
Prereq: **PHYS214**

PHYS317 Molecular Biophysics Journal Club I
This course includes presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from journals including but not limited to the Biophysical Journal, Biopolymers, Current Opinion iIn Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B507, MB&B307, CHEM507, CHEM307, PHYS517**
Prereq: **None**

PHYS318 Molecular Biophysics Journal Club II
Presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Crosslisting**
Grading: **Cr/U**

Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B508, MB&B308, CHEM508, PHYS518, CHEM308**
Prereq: **None**

PHYS320 Introduction to Tensors and General Relativity
Students will learn the basics of physics in curved spacetime and the use of tensors to describe physical quantities and laws. Geodesics in curved spacetimes and how space and time change in general relativity will be a particular focus.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Prereq: **MATH222 AND PHYS215 OR PHYS313**

PHYS321 Physics Research at Wesleyan
This seminar introduces students to the exciting and diverse research conducted within the physics department. Faculty members from various research areas will give talks showcasing their work, providing insight into both fundamental and applied physics. The goal is to help students explore different research topics, understand what physics research entails, and discover potential opportunities to get involved in faculty-led projects. This seminar is open to all students with an interest in physics who are curious about research, but have not yet chosen a specific focus, particularly first- and second-year students and also graduate students in their first year of study. The course is structured as a series of faculty presentations, followed by discussions where students can engage with researchers, ask questions, and explore potential research pathways.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **PHYS523**
Prereq: **None**

PHYS322 Physics Colloquium with Journal Club II
Students will review and discuss materials in preparation for attending the physics colloquium. Attendance at the colloquium is also required.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **None**

PHYS324 Electricity and Magnetism
This course covers the classical field theory of electricity and magnetism. The core of the course covers electrostatics and magnetostatics with emphasis on both physical insight and the partial differential equations that describe these fields. We then cover electrodynamics to complete Maxwell's equations and to derive the elementary properties of electromagnetic radiation.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS524**
Prereq: **PHYS116 AND PHYS124 AND PHYS213 AND MATH222**

PHYS339 Molecular and Cellular Biophysics
This course is an integration of the physical and chemical principles underlying biological systems from molecules to cells. The objectives are to develop an understanding of the underlying biological and physical principles that inform biophysical methods (e.g., protein-protein interaction studies, enzyme kinetics, spectroscopy, structural biology), how these concepts and techniques can be used to address open scientific questions, and how to critically evaluate their use in scientific literature. Particular emphasis will be placed on the biophysical concepts underlying studies of proteins, enzymes, and metalloproteins.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B309, CHEM309, CHEM509, MB&B509, PHYS539**
Prereq: **None**

PHYS340 Computational Physics
Most modern problems in physics cannot be analytically solved, making numerical solution necessary. This course introduces students to vital numerical methods used in modern computational physics. Students will develop code to calculate exact numerical solutions to a range of physics problems, such as N-body motion, the solution of Schrödinger's equation, and phase transitions. Methods covered include root finding, numerical integration of initial and boundary value problems, Monte Carlo techniques, and an introduction to machine learning methods. Code will be developed using Python and there will be opportunities to gain experience in the C programming language as well. Previous programming experience is strongly encouraged but not required.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **(MATH221 AND PHYS213) OR (MATH223 AND PHYS213)**

PHYS342 Experimental Optics
This is an experimental course in optics, including lenses, lens combinations, interference and diffraction, interferometry, and spectrometry.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS542**
Prereq: **(PHYS116 AND PHYS213)**

PHYS345 Electronics Lab
This laboratory course covers the fundamentals of analog and digital electronics: passive DC and AC circuits, linear transistor and integrated circuits, and digital integrated circuits.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS545**
Prereq: **(PHYS116 AND PHYS213)**

PHYS358 Condensed Matter
This calculus-based course is an introduction to the physics of the solid state. It includes topics such as the reciprocal lattice, elastic constants, band structure, and Fermi surfaces.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS558**
Prereq: **PHYS316 AND PHYS315 AND PHYS324**

PHYS377 Chemistry of Materials and Nanomaterials
This course will provide an introduction to materials chemistry, with a special emphasis on nanomaterials. Topics covered will include colloidal metal nanomaterials; semiconductors and quantum dots; carbon nanotubes, fullerenes, and graphene; metal-organic frameworks; self-assembly and metamaterials; electron and scanning probe microscopies; and lithography. The course will also discuss applications of these materials and techniques in areas such as plasmonics and sensing, catalysis, energy generation, and medicine.
Offering: **Crosslisting**

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **CHEM377**
Prereq: **CHEM251**

PHYS395 Structural Biology Laboratory
One of the major catalysts of the revolution in biology that is now under way is our current ability to determine the physical properties and three-dimensional structures of biological molecules by X-ray diffraction, nuclear magnetic resonance (NMR) spectroscopy, cryo-electron microscopy, and other spectroscopic methods. This course is designed to familiarize students with current research techniques in biochemistry and molecular biophysics. Students will perform spectroscopic investigations on a protein that they have isolated and characterized using typical biochemical techniques, such as electrophoresis, protein purification, and column chromatography. The course will provide hands-on experience with spectroscopic and biophysical methods such as fluorescence, UV-Vis absorption, X-ray crystallography, isothermal titration calorimetry, and circular dichroism as well as bioinformatic computational methods. All of these methods will be applied to the study of biomolecular structure and energetics. This course provides a broad knowledge of laboratory techniques valuable for independent research at the undergraduate level and beyond.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MBB**
Identical With: **MB&B395, CHEM395**
Prereq: **(CHEM142 OR CHEM142Z OR CHEM144) AND (CHEM325 OR MB&B208 OR PHYS207)**

PHYS401 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS402 Individual Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS407 Senior Tutorial (downgraded thesis)
Downgraded Senior Thesis Tutorial - Project to be arranged in consultation with the tutor. Only enrolled in through the Honors Coordinator.
Offering: **Host**
Grading: **A-F**

PHYS408 Senior Tutorial (downgraded thesis)
Downgraded Senior Thesis Tutorial - Project to be arranged in consultation with the tutor. Only enrolled in through the Honors Coordinator.
Offering: **Host**
Grading: **A-F**

PHYS409 Senior Thesis Tutorial
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS410 Senior Thesis Tutorial
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS411 Group Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS412 Group Tutorial, Undergraduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS419 Student Forum
Student-run group tutorial, sponsored by a faculty member and approved by the chair of a department or program.
Offering: **Host**
Grading: **Cr/U**

PHYS420 Student Forum
Student-run group tutorial, sponsored by a faculty member and approved by the chair of a department or program.
Offering: **Host**
Grading: **Cr/U**

PHYS421 Undergraduate Research, Science
Individual research projects for undergraduate students supervised by faculty members.
Offering: **Host**
Grading: **OPT**

PHYS422 Undergraduate Research, Science
Individual research projects for undergraduate students supervised by faculty members.
Offering: **Host**
Grading: **OPT**

PHYS423 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

PHYS424 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

PHYS465 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

PHYS466 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

PHYS470 Independent Study, Undergraduate
Credit may be earned for an independent study during a summer or authorized leave of absence provided that (1) plans have been approved in advance, and (2) all specified requirements have been satisfied.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **None**

PHYS491 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

PHYS492 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

PHYS500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop before the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **ASTR500, CHEM500, BIOL500, E&ES500, MB&B500, MUSC500, PSYC500, MATH500**
Prereq: **None**

PHYS501 Individual Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS502 Individual Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS504 Selected Topics, Graduate Sciences
Topic to be arranged in consultation with the tutor. A seminar primarily concerned with papers taken from current research publications designed for, and required of, graduate students.
Offering: **Host**
Grading: **A-F**

PHYS505 Condensed Matter Physics Seminar I
Presentations and discussions of material at the forefront of the discipline, emphasizing emerging, novel physics topics.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHYS506 Condensed Matter Physics Seminar II
Presentation and discussion of material at the forefront of the discipline, emphasizing emerging, novel physics topics.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHYS507 Atomic and Molecular Physics Seminar I
Presentations and discussions of material at the forefront of the discipline, emphasizing current research at Wesleyan.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **PHYS214**

PHYS508 Atomic and Molecular Physics Seminar II
Presentations and discussions of material at the forefront of the discipline, emphasizing current research at Wesleyan.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHYS509 Theoretical Physics Seminar I
Presentations and discussions of material at the forefront of the discipline, emphasizing emerging, novel physics topics.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **([PHYS313 or PHYS513] AND PHYS214 AND [PHYS315 or PHYS515] AND [PHYS316 or PHYS516])**

PHYS510 Theoretical Physics Seminar II
Presentations and discussions of material at the forefront of the discipline, emphasizing emerging, novel physics topics.
Offering: **Host**
Grading: **OPT**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **([PHYS315 or PHYS515] AND [PHYS324 or PHYS524] AND [PHYS316 or PHYS516])**

PHYS511 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS512 Group Tutorial, Graduate
Topic to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **OPT**

PHYS513 Classical Dynamics
This is a course in classical mechanics at the intermediate level that utilizes problem solving instruction and learning. It approaches Newtonian mechanics from a more advanced point of view and introduces Lagrangian and Hamiltonian dynamics.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS313**
Prereq: **(PHYS213 AND MATH222) AND (MATH221 OR MATH223)**

PHYS515 Quantum Mechanics II
This course will expand the formalism of quantum mechanics to include spin and angular momentum in three dimensions. The quantum theory of identical particles will be developed and applied to multi-electron atoms.
Offering: **Crosslisting**

Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS315**
Prereq: **(PHYS214 AND MATH223) OR (PHYS214 AND MATH221)**

PHYS516 Thermal and Statistical Physics
Thermodynamics and statistical mechanics are pillars of physics. Thermodynamics provides a framework through which we can understand the rules for the conversion of energy and matter from one form to another. As we will learn, every transfer of energy results in the conversion of some energy into an unusable form. Using the tools of thermodynamics, we can establish limits for the amount of useful work that can be extracted from any process. These limits have important implications for the quest to achieve sustainability in our use of energy and materials. As we learn about thermodynamics, we will spend some time exploring this real-world application of the material covered. Likewise, statistical mechanics provides us with a set of tools for understanding how the behavior of individual atoms and molecules impacts the properties and behavior of materials that can be observed in our daily lives. Our approach to this material differs from many previous physics courses and requires a mixture of statistical and counting skills, coupled with physical intuition for the nature of matter. In addition to explaining phase transitions, critical phenomena, and the statistical nature of fermions and bosons, the tools of statistical mechanics are essential for understanding phenomena like evaporative cooling and the greenhouse effect. We will explore the conditions that lead to these phenomena and discuss the role they may play in a comprehensive approach to sustainability.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS316**
Prereq: **PHYS214**

PHYS517 Molecular Biophysics Journal Club I
This course includes presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from journals including but not limited to the Biophysical Journal, Biopolymers, Current Opinion iIn Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B507, MB&B307, CHEM507, CHEM307, PHYS317**
Prereq: **None**

PHYS518 Molecular Biophysics Journal Club II
Presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B508, MB&B308, CHEM508, PHYS318, CHEM308**
Prereq: **None**

PHYS521 Physics Colloquium I
Presentations by outside experts and discussion of material at the forefront of the discipline, emphasizing emerging, novel physics topics.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **None**

PHYS522 Physics Colloquium II
Presentations by outside experts and discussion of material at the forefront of the discipline, emphasizing emerging, novel physics topics.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Prereq: **([PHYS315 or PHYS515] AND [PHYS313 or PHYS513])**

PHYS523 Physics Research at Wesleyan
This seminar introduces students to the exciting and diverse research conducted within the physics department. Faculty members from various research areas will give talks showcasing their work, providing insight into both fundamental and applied physics. The goal is to help students explore different research topics, understand what physics research entails, and discover potential opportunities to get involved in faculty-led projects. This seminar is open to all students with an interest in physics who are curious about research, but have not yet chosen a specific focus, particularly first- and second-year students and also graduate students in their first year of study. The course is structured as a series of faculty presentations, followed by discussions where students can engage with researchers, ask questions, and explore potential research pathways.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **PHYS321**
Prereq: **None**

PHYS524 Electricity and Magnetism
This course covers the classical field theory of electricity and magnetism. The core of the course covers electrostatics and magnetostatics with emphasis on both physical insight and the partial differential equations that describe these fields. We then cover electrodynamics to complete Maxwell's equations and to derive the elementary properties of electromagnetic radiation.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS324**
Prereq: **PHYS116 AND PHYS124 AND PHYS213 AND MATH222**

PHYS531 Research Frontiers in Physics I
This seminar focuses on presenting general methods used in current theoretical and experimental research performed in the Physics Department. The exposition will be done by student participants, guided by the instructing faculty.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS532 Research Frontiers in Physics II
This seminar focuses on presenting general methods used in current theoretical and experimental research performed in the Physics Department. The exposition will be done by student participants, guided by the instructing faculty.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS533 Research Communication in Physics I
This course consists of weekly meetings for students to practice their scientific presentation and listening skills. Students will each claim responsibility for one or two meetings. Presentations may consist of research-relevant papers, practice talks for conferences, or research updates for the general graduate audience.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS534 Research Communication in Physics II
This course consists of weekly meetings for students to practice their scientific presentation and listening skills. Students will each claim responsibility for one or two meetings. Presentations may consist of research-relevant papers, practice talks for conferences, or research updates for the general graduate audience.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS539 Molecular and Cellular Biophysics
This course is an integration of the physical and chemical principles underlying biological systems from molecules to cells. The objectives are to develop an understanding of the underlying biological and physical principles that inform biophysical methods (e.g., protein-protein interaction studies, enzyme kinetics, spectroscopy, structural biology), how these concepts and techniques can be used to address open scientific questions, and how to critically evaluate their use in scientific literature. Particular emphasis will be placed on the biophysical concepts underlying studies of proteins, enzymes, and metalloproteins.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-CHEM**
Identical With: **MB&B309, CHEM309, CHEM509, MB&B509, PHYS339**
Prereq: **None**

PHYS542 Experimental Optics
This is an experimental course in optics, including lenses, lens combinations, interference and diffraction, interferometry, and spectrometry.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS342**
Prereq: **(PHYS116 AND PHYS213)**

PHYS545 Electronics Lab
This laboratory course covers the fundamentals of analog and digital electronics: passive DC and AC circuits, linear transistor and integrated circuits, and digital integrated circuits.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS345**
Prereq: **(PHYS116 AND PHYS213)**

PHYS549 Advanced Research Seminar, Graduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

PHYS550 Advanced Research Seminar, Graduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

PHYS558 Condensed Matter
This calculus-based course is an introduction to the physics of the solid state. It includes topics such as the reciprocal lattice, elastic constants, band structure, and Fermi surfaces.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PHYS**
Identical With: **PHYS358**
Prereq: **PHYS316 AND PHYS315 AND PHYS324**

PHYS563 Analytical Mechanics
Advanced classical mechanics: multidimensional motion, rigid bodies and rotational dynamics, chaotic dynamics, elementary continuum mechanics, and applications.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **(PHYS213 AND PHYS217 AND PHYS313) OR (PHYS213 AND PHYS217 AND PHYS513)**

PHYS565 Mathematical Physics
Historically, physics and mathematics are closely related. Physics uses powerful tools developed by mathematicians, while physicists, investigating the actually existing universe, provide mathematicians with new concepts and ideas to explore. This way, many mathematical techniques, and even entire areas of mathematics, developed from the need to solve certain real-life problems posed by physical reality. The purpose of this course is to give students an overview of the powerful array of mathematical tools available for the solution of physical problems. Starting with the presentation of tools of complex analysis, we will apply them to the solution of ordinary and partial differential equations. We will encounter Fourier and Laplace transforms and will study the Green's function method for the solution of bound and scattering problems. We will also look into the elements of Group Theory and apply it to angular momentum in quantum many-body systems.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **MATH222 AND MATH223 AND PHYS313 AND PHYS315 AND PHYS324**

PHYS566 Electrodynamics
This course covers boundary value problems, Green's functions, multipoles, fields in dielectric and magnetic media, electromagnetic radiation, and wave guides.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **PHYS324**

PHYS567 Statistical Mechanics
This course will develop important concepts in statistical physics by examining several applications in detail. The areas covered will include the classical and quantum gases, critical behavior and phase transitions, and elementary transport phenomena.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

Gen Ed Area: **None**
Prereq: **[PHYS316 or PHYS516]**

PHYS568 Quantum Mechanics
This course will develop advanced concepts of quantum mechanics.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **[PHYS315 or PHYS515] AND [PHYS313 or PHYS513]**

PHYS571 Advanced Topics in Atomic and Molecular Physics
Topics in modern optical and atomic physics will be explored with an emphasis on precision time metrology. Fundamental questions, experimental challenges, and various applications will be discussed.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **PHYS315**

PHYS572 Advanced Topics in Atomic and Molecular Physics
Several plasma applications will be discussed, for example, in fusion, chemical analysis, surface treatment, and medicine.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **PHYS515**

PHYS573 Advanced Topics in Condensed Matter
The course will cover advanced topics in condensed-matter physics, with emphasis on current research problems within the department.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **PHYS324 OR PHYS524**

PHYS574 Advanced Topics in Condensed Matter
The course will cover advanced topics in condensed-matter physics, with emphasis on current research problems within the department. This course may be repeated for credit.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **PHYS324 OR PHYS524**

PHYS575 Advanced Topics in Theoretical Physics
This graduate course presents advanced topics in theory of relevance for current research in the department. The specific material varies each time the course is taught.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **None**
Prereq: **PHYS213 AND PHYS214 AND PHYS324**

PHYS576 Advanced Topics in Theory
This graduate course will present advanced topics in theory of relevance for current research in the department.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-PHYS**
Prereq: **None**

PHYS588 Seminar in Atomic and Molecular/Chemical Physics.
Weekly seminars presented jointly with the Chemistry Department under the auspices of the Chemical Physics Program. These informal seminars will be presented by students, faculty, and outside visitors on current research and other topics of interest.
Offering: **Host**
Grading: **Cr/U**
Credits: **0.25**
Gen Ed Area: **None**
Identical With: **CHEM548**
Prereq: **None**

PHYSICS MAJOR

MAJOR DESCRIPTION

The Major in Physics equips students with an understanding of the fundamental laws that shape the universe and develops the skills needed to succeed in a technology driven society. Students develop competency in the main subject areas of quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed matter physics. Preparation in mathematical and computational methods is an integral part of the program. Students are encouraged to consider faculty-mentored research, working collaboratively with other undergraduate and graduate students. Additionally, opportunities are available to work as a teaching assistant and to pursue advanced coursework in graduate courses.

The model Physics student is insatiably curious about the workings of the universe and has a healthy intellectual humility that enables them to learn through investigation. Students conduct experiments with precision, analyze the results, critically grasp deeper concepts, and communicate complex theories and real-world applications. Physics students are encouraged to cultivate an analytical mindset, strong quantitative aptitude, and the ability to understand complex mathematical models with the ultimate goal of expanding the boundaries of human knowledge through meaningful discovery. In addition, students should develop their communication skills for both technical and lay audiences.

Armed with problem-solving skills and a deep understanding of physics principles, Physics graduates have a wide range of career options in various industries. Example career paths include research and development, engineering, data analytics, computational science, education, finance and banking, medical physics, geophysics, and environmental science.

ADMISSION TO THE MAJOR

The appropriate course for each student depends primarily on their level of preparation and previous coursework. Prospective majors should consult with a member of the Physics faculty to determine their most suitable course of study. There are four common paths into the Physics major.

1. PHYS113 : A calculus-based introductory mechanics course requiring one semester of calculus, taken in either secondary school or in college, at or about the level of MATH121. A student who has had no calculus may take

calculus during the first year, then PHYS113 in the first semester of the sophomore year, or they may take PHYS113 simultaneously with their first calculus course.

2. PHYS215/PHYS219: A vailable to first-year or other students who have had both integral and differential calculus at about the level of MATH121/MATH122 and a solid course in mechanics with calculus at the level of PHYS113.
3. PHYS116: Students from both of the above gateways merge into the electricity and magnetism course, PHYS116, in the spring. Students intending to major in physics should complete either track no later than the end of their sophomore year, preferably by the end of their first year. The PHYS113/PHYS116 sequence has associated laboratory courses, PHYS123 in the fall and PHYS124 in the spring. These sections are half-credit courses associated with the lecture courses. The laboratory course PHYS124 is required to enter the major.
4. PHYS213 : Exceptionally well-prepared students who have already mastered the material of PHYS113/PHYS116 should consult with a member of the Physics faculty to pursue this gateway to the major.

MAJOR REQUIREMENTS

The sequence of gateway courses describes the foundation for the core major courses.

By the end of sophomore year, students should complete the following courses:

PHYS113; PHYS116; MATH121; MATH122; MATH221; and MATH222. Students considering graduate work in physics should also complete PHYS213 and PHYS214 by the end of sophomore year.

Note: Completion of PHYS116 in your first year will add flexibility to planning for your major coursework.

Some advanced courses may not be offered every year, and you should plan accordingly.

To fulfill the major in physics, a student must complete eight lecture courses and two laboratory courses.

The lecture course requirements include four core physics courses which must be taken graded (A-F): PHYS213; PHYS214; PHYS316; and PHYS324. In addition, four elective lecture credits at the 200, 300, or 500 level are required. At least one of the elective courses must be a PHYS lecture course at the 300 level, usually PHYS313 or PHYS315.

The two required laboratory courses can be chosen from PHYS342, PHYS345, PHYS340, or a 1-credit research tutorial with a Physics faculty member. One of the two laboratory courses must be an advanced experimental laboratory class, currently PHYS342 or PHYS345 , or an experimentally focused research tutorial.

Students planning graduate study in physics are advised to take a minimum of 14 credits at the 200 level or higher in physics, mathematics, and computer science. PHYS313, PHYS315, and PHYS358 are essential. The department strongly recommends PHYS565, MATH226, and MATH229. Graduate physics courses may be selected with permission, and experience in computer programming is extremely valuable.

Students not planning graduate study in physics and who are interested in applying their knowledge of physics to other areas of the curriculum may substitute up to two upper-level lecture courses from other departments. This must be done in consultation with the Physics Major advisor, and the selections must constitute a coherent, coordinated program of study. Substitution of more than two courses requires approval from the department. Preapproved tracks that may include electives from outside Physics are available here (https://www.wesleyan.edu/physics/tracksportal.html).

PHYSICS MAJOR REQUIREMENTS

COURSE CODE	COURSE TITLE
Gateway courses: The necessary foundation for the physics major.	
PHYS113	General Physics I
PHYS116 and PHYS124	General Physics II and General Physics Laboratory II
MATH221 or MATH223	Vectors and Matrices or Linear Algebra
MATH222	Multivariable Calculus
Core Courses: Four required courses which must be taken graded (A-F)	
PHYS213	Waves and Oscillations
PHYS214 (prerequisite MATH221 or MATH223. Math requirement can be taken concurrently)	Quantum Mechanics I
PHYS324 (prerequisite PHYS124 and MATH222)	Electricity and Magnetism
PHYS316	Thermal and Statistical Physics
Electives: Four credits from the following list of lecture courses.* **One of the four needs to be a 300-level physics course.**	
PHYS207	Introduction to Biophysics
PHYS215 (half credit)	Special Relativity
PHYS217	Nonlinear Dynamics and Chaos
PHYS219 (half credit)	Introduction to Contemporary Physics
PHYS313	Classical Dynamics
PHYS315	Quantum Mechanics II
PHYS358 (Pre-requisite PHYS315)	Condensed Matter Physics
Laboratory Courses:** Two laboratory courses	
PHYS342 (half credit)	Experimental Optics
PHYS345 (half credit)	Electronics Lab
PHYS340 (half credit)	Computational Physics
PHYS423/PHYS424 (1 credit)	Research Seminar, Undergraduate

* It is possible for elective credits to be substituted by upper-level lecture courses in other departments. This must be done in consultation with the physics major advisor, and the selections must constitute a coherent, coordinated program of study. Preapproved tracks that satisfy the elective lecture course requirement are available.
** One of the laboratory courses must be an advanced experimental lab, currently either PHYS342 orPHYS345.

COURSES FOR NON-MAJORS

The Physics department offers two two-semester survey courses covering many of the main subject areas of physics (mechanics, electromagnetism and optics, thermodynamics, and kinetic theory):

- PHYS111/PHYS112 uses less calculus and is often the choice for students studying physics for life science applications.
- PHYS113/PHYS116 uses more calculus and is the foundation for future work in physics, engineering, and related fields.

Associated laboratory courses, PHYS121/PHYS122/PHYS123/PHYS124, are also offered. Either of these two-semester course sequences (with the lab) typically satisfy the Physics requirement for admission to most schools of medicine, dentistry, or architecture. However, some graduate-level programs require a calculus-based series. It is recommended that students confirm the specific requirements with their prospective schools.

GENERAL EDUCATION

There are no General Education requirements imposed by the Physics Department for either the Physics major or honors in Physics. However, students should be aware that several forms of university honors do require completion of stage 2 general education expectations.

STUDENT LEARNING GOALS

Physics majors acquire the following knowledge and competencies:

- Application of precision and predictive mathematics to expand the description of natural phenomena
- Observation of physical phenomena through experimentation and research
- Determining the relevant parameters to quantify a complex system
- Open-ended problem-solving skills
- Quantum theory
- Electromagnetism and optics
- Thermodynamics
- Statistical mechanics
- Classical dynamics
- Condensed-matter physics
- Mathematical and computational methods

Students will demonstrate their knowledge and abilities through research projects, critical analysis papers, participation in class discussions and collaborative group work, and multi-media presentations. Written exams, peer review, and self-assessment will also evaluate their class performance.

STUDY ABROAD

Study abroad provides Physics majors an opportunity to gain appreciation of their potential as citizens of the world scientific community. Careful planning in consultation with a Physics advisor is recommended to determine the optimum semester for a study abroad experience, and to ensure that requirements for the major can be fulfilled.

ADVANCED PLACEMENT

Students may receive a maximum of two AP Physics credits if they have obtained a score of 5 on the AP Physics C, Mechanics exam, or the AP Physics C, Electricity and Magnetism exam. Special regulations apply to other Physics credits. Please check with the registrar or a departmental advisor.

PRIZES

Bertman Prize - Awarded to a senior majoring in physics who emulates the qualities that made Bud Bertman a valuable friend and respected colleague, e.g., physical insight and intuition, enthusiasm, resourcefulness, perseverance, and eagerness to help others.

Van Dyke Prize - Awarded to students majoring in physical science who show outstanding academic achievement and a promise of productivity in a professional career.

Outstanding Contribution to Science Education Award - Awarded to a senior who has demonstrated exceptional skills as an undergraduate course assistant.

Johnston Prize - In recognition of those first-year students or sophomores whose performance in their first two semesters of physics shows exceptional promise.

TRANSFER CREDIT

Up to two registrar-approved outside credits for physics courses may be applied toward the Physics major from another institution. Prior permission must be obtained from both your Physics advisor and the departmental liaison, Professor Brian Stewart (bstewart@wesleyan.edu), to ensure the creditability of the specific courses.

RELATED PROGRAMS OR CERTIFICATES

Dual-degree programs in science and engineering.

Wesleyan maintains dual-degree programs with Columbia University, the California Institute of Technology, and Dartmouth College for students wishing to combine the study of engineering with a broad background in the liberal arts. For all options, participating students receive two degrees: a BA from Wesleyan and a BS or BE in engineering from our partner school.

- The “3-2 program”: Students spend their first three years at Wesleyan, followed by two years at the engineering school. At the end of the fifth year —after completing all degree requirements from both schools—students receive the two bachelor’s degrees. During the first three years, prospective 3-2 students complete the minimal requirements of their elected Wesleyan major and, in addition, fulfill science and mathematics requirements for

the first two years of the engineering school and engineering major of their choice. During the two years at the engineering school, students follow the regular third- and fourth-year curriculum in their selected engineering field. During that time, other courses may also be taken to satisfy the degree requirements of Wesleyan and/or the engineering school.

- The “4-2 option,” offered by Columbia University. Students complete four years at Wesleyan before pursuing an engineering degree.

- The “2-1-1-1” option is offered by Dartmouth University. Students spend their junior year at Dartmouth, returning to Wesleyan for their senior year and graduation. A fifth year is at Dartmouth required to finish their engineering degree.

Contact the dual-degree advisor for further information and consult with your class dean to ensure that you can meet all Wesleyan University requirements for graduation.

ADDITIONAL INFORMATION

The Physics department encourages students to become creators of physics knowledge through faculty-mentored research or by arranging independent research tutorials. Research can be experimental or theoretical and may culminate in a senior honors thesis or a peer-reviewed publication. Students planning to write a senior thesis should begin research no later than their junior year and continue through the summer into their senior year. Faculty research expertise includes quantum computing, soft condensed matter physics, computational materials science, charge transport in photovoltaic devices, fluid dynamics, laser plasmas, spectroscopy, collision studies of excited atoms and molecules, wave transport, and photonics. Many students also utilize Wesleyan’s shared high-performance computing facilities for their research.

Opportunities are also available to serve as a teaching apprentice or course assistant, which many students find to be a stimulating way to improve their understanding of physics fundamentals. Serving as a course assistant is also an excellent opportunity to develop communication skills and learn the art of teaching.

The Cady Lounge provides a community space where students can study, discuss physics, and connect with peers. Additionally, there is a study area in the science library (the “STEM zone”) where students in introductory courses can get help and collaborate.

Colloquia: This seminar series features distinguished scientists from other institutions who present lectures on their research findings. Seminars are usually held on Thursdays at noon in Exley 058 and are open to all members of the university community. Students may enroll in the colloquium course for credit.

Topical Seminars: The department hosts weekly seminars highlighting cutting-edge research in various areas, including condensed matter physics and atomic and molecular physics. These seminars include student-led research presentations, discussions of recent research literature, and advanced topics selected collaboratively by faculty and students.

Society of Physics Students (SPS): SPS is a national association of undergraduates interested in sharing their physics experiences. Wesleyan’s SPS chapter meets to support each other in the scientific community, plan department activities, and pursue community outreach. The chapter mentor is Professor George Paily (gpaily@wesleyan.edu).

BA/MA PROGRAM

This is a curricular option for those students who, along with their research mentor, desire an intensive research experience that an additional year of study can afford. During the additional year, the student will complete additional coursework and write an MA thesis based on original research. Interested students should consult their research mentor as early as possible.

HONORS

Honors candidates in Physics must submit a thesis describing the investigation of a project carried out by the candidate under the direction of a member of the Physics department. The candidate must also have attained a minimum average of B (85.0) for honors and B+ (88.3) for high honors in the eight lecture courses applied to the major (except those taken in the final semester of the senior year). Honors status is recommended by the faculty thesis readers and confirmed by the department.

CAPSTONE EXPERIENCE

The Physics department offers the following capstone experiences:

Two-semester senior thesis
Seminar in atomic and molecular physics (PHYS507/PHYS508)
Seminar in condensed matter physics (PHYS505/PHYS506)
Seminar in theoretical physics (PHYS509/PHYS510)

Physics Colloquium (PHYS521/PHYS522)

DOCTOR OF PHILOSOPHY IN PHYSICS

The Physics program equips students with the foundational skills to become innovators in science and engineering, providing cutting-edge education and research at#Bachelor, Master, and PhD levels. Students perform both experimental and theoretical research, mastering topics in focus#areas that include quantum computing, high-energy plasmas, low-temperature superfluids, photonics, materials science, biomolecular interactions, the physics of animal behavior, fluid#mechanics, and more. Degree candidates work side-by-side with faculty on research that is supported by major national granting agencies, such as the National Science Foundation (NSF), the National Institute of Standards & Technology, Defense Department agencies, and others.

The small size of the program permits the design of individual programs of study and the development of a close working colleagueship among students and faculty. Students engage in physics research from the start of their graduate studies, rather than spending one or two years focused on coursework before starting research. Thus, graduate students join the department's research activities upon arrival.

PhD candidates must take (or place out of) five PhD-level graduate core courses and five advanced topics courses.#Each student is given the opportunity for

undergraduate teaching under direct faculty supervision. Direct classroom teaching experience is also a possibility for more advanced and qualified students. Each PhD candidate must write and defend a dissertation on original and significant research. It is expected that the candidate will submit the results of their work to a scholarly journal for publication.

COURSES

PhD students must take (or place out of) five PhD-level graduate core courses and five advanced topics courses. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. Students must have demonstrated proficiency in the main subject areas of physics by the time they have completed the program. Incoming students plan a course of study in consultation with the graduate advisor to prepare for the qualifying examination. Each student, after passing the first examination (see below), selects an advisory committee of three faculty members. The committee assists the student to design a program of study, monitors progress, and makes annual recommendations to the department regarding the student's continuation in the program. The advisory committee also administers subsequent examinations.

LANGUAGE REQUIREMENT

There is no foreign language requirement.

PROGRESS AND QUALIFYING EXAMS

Three formal examinations serve to define the various stages of the student's progress to the degree. The qualifying examination, usually taken at the end of the first year, is a written examination on material at an advanced undergraduate level. Advancement to the second stage of candidacy depends on passing this examination as well as on coursework and demonstrated research potential. After passing the qualifying examination, each student should form an advisory committee in consultation with their research advisor. Usually by the end of the second year, each student takes the PhD candidacy examination, which consists of an oral presentation before the student's advisory committee, describing and defending a specific research proposal. (The proposal might, but need not, grow out of previous research or be adopted by the student as a thesis topic.) The committee then recommends to the department whether to admit the student to the final stage of PhD candidacy or whether to advise the student to seek an MA degree.

Each student who has passed the candidacy examination is required to present an annual informal talk on his or her thesis work in a departmental seminar.

TEACHING

Although the emphasis in the program is on independent research and scholarly achievement, graduate students are expected to improve their skills in teaching and other forms of oral communication. Each student is given the opportunity for some undergraduate teaching under direct faculty supervision. While this usually consists of participation in teaching undergraduate laboratories, direct classroom teaching experience is also possible for more advanced and qualified students.

RESEARCH

Current experimental research areas are concentrated in atomic/molecular physics and condensed matter physics. Current interests include Rydberg states in strong fields, molecular collisions, photo-ionization, laser-produced plasmas, wave transport, granular and turbulent fluid flows, single-molecule biophysics, and optoelectronics of renewable energy materials.

Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, and wave transport in complex media.

DISSERTATION AND DEFENSE

Each candidate for the PhD degree is required to write a dissertation on original and significant research supervised by a member of the faculty. The work must be defended in a final oral examination administered by the advisory committee. This oral examination covers the dissertation and related topics and is open to all members of the Wesleyan community. It is expected that the candidate will submit the results of his or her work to a scholarly journal for publication.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/physics/graduate (http://wesleyan.edu/physics/graduate).

PSYCHOLOGY

Psychology is the scientific study of mind, brain, and behavior. Areas of psychology represented in the department include human development, social psychology, cognitive psychology, cultural psychology, neuroscience, and psychopathology. Psychology majors receive broad training across these areas, have opportunities to pursue topics of particular interest in greater detail, and develop skills in research methods and statistics. Many majors also take advantage of opportunities to work in research laboratories, to serve as teaching assistants, and to participate in service learning courses. Students interested in this major are strongly encouraged to visit the Psychology Department (http://www.wesleyan.edu/psyc/) and to download and read the Department Majors Manual for more detailed information, as early planning is important for preparing to declare and complete the major.

AFFILIATED FACULTY

Caitlin Ann Martin-Wagar
Visiting Scholar in Psychology

Kathleen Marie Pike
BA, Johns Hopkins University; MA, Yale University; PHD, Yale University
Visiting Scholar in Psychology

CHAIR

Barbara Jean Juhasz
BA, Binghamton University; MA, University of Massachusetts at Amherst; PHD, University of Massachusetts at Amherst
Coordinator, Civic Engagement; Chair, Psychology; Professor of Psychology; Jeffrey L. Shames Professor of Civic Engagement; Professor, Neuroscience and Behavior; Professor, Integrative Sciences; Professor, Education Studies

EMERITI

David Adams
AB, Columbia University; PHD, Yale University
Professor of Psychology, Emeritus

Nathan Brody
BA, University Of New Hampshire; MA, University of Michigan; PHD, University of Michigan; MAA, Wesleyan University
Professor of Psychology, Emeritus

Karl E. Scheibe
BS, Trinity College; PHD, University of California, Berkeley; MAA, Wesleyan University
Professor of Psychology, Emeritus

John Seamon
BS, Columbia University; PHD, University of Massachusetts at Amherst
Professor of Psychology, Emeritus

DEPARTMENTAL ADVISING EXPERTS

Sarah Carney, Michael Perez

- Undergraduate Psychology Major (p. 863)

Master of Arts in Psychology (p. 866)

PSYC105 Foundations of Contemporary Psychology
This course will include an introductory-level presentation of ideas and research findings in the major areas of psychology. It will serve as both preparation for upper-level courses in psychology and as a valuable contribution to students' liberal arts education. This course will help students discover what psychology is and what psychologists do. Not only will students learn the basic content of psychology, but the course should help them to think critically about such everyday issues as, In what ways are we like other humans, and how do we differ? What do babies perceive and think? Why do we dream? Content areas include history of psychology, methods of psychological research, biological basis of human behavior, motivation and emotions, learning and memory, sensation and perception, cognitive and social development, personality, intelligence, and psychopathology.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC105F Foundations of Contemporary Psychology (FYS)
This course will introduce the field of psychology through digital projects that include data collection and analysis, video production/editing, graphic design, and script writing. Students will learn about contributions of the brain to our behavior, sensation and perception, emotions, development, learning, mental health, memory, our social world, and more.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC105Z Foundations of Contemporary Psychology
This course will include an introductory-level presentation of ideas and research findings in the major areas of psychology. It will serve as both preparation for upper-level courses in psychology and as a valuable contribution to students' liberal arts education. This course will help students discover what psychology is and what psychologists do. Not only will students learn the basic content of psychology, but the course should help them to think critically about such everyday issues as, In what ways are we like other humans, and how do we differ? What do babies perceive and think? Why do we dream? Content areas include history of psychology, methods of psychological research, biological basis of human behavior, motivation and emotions, learning and memory, sensation and perception, cognitive and social development, personality, intelligence, and psychopathology.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC117F Psychological Science and the Good Life (FYS)
How can we use psychological science to help improve our coping, resilience, and well-being? We are in an intense period of adjustment - historical change in how society functions, a recent shift to a world with Covid-19, and, for you, the transition to Wesleyan and college. Fortunately, psychological science has given us many helpful research findings about how the mind and brain work, how to improve well-being, and how to change our own behaviors and mindsets for a better life. In this course, we will learn about the scientific findings that point us toward well-being, and we will practice the skills that are supported by such evidence. The aim of the course is to leave with a better understanding of psychological science, a toolkit of research-supported practices we can use in our everyday lives, and a supportive community.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC118F Social Psychology of Close Relationships: Examining Human Connections (FYS)
This course introduces first-year students to reading, writing, and discussing research in social psychology focused on relationships. We will cover topics pertaining to experiences that are common in college or university, including friendships, love, attraction, romantic relationships, family relationships, and group dynamics. Students will learn to review, understand, and critique research studies in social psychology. Students will be encouraged to apply research to their own experiences through several short writing assignments, group activities, and class discussions. Students will also develop an APA-style research paper over the course of the semester, which will be presented during class. This course counts as an elective towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**

Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC119F Conflict Resolution for College Students (FYS)
Human interaction inevitably results in conflict. Yet not all conflict is destructive; at times conflict can lead to growth. The college years are replete with examples of interpersonal conflicts, such as those with roommates, friends, family, professors, employers, and strangers. In addition, students may be part of a team or organization and conflict can happen at the organizational level as well. Further, individuals and organizations are embedded within different cultural contexts, which can also yield conflicts with other cultures in terms of values and priorities.

This course will focus on the psychological causes and consequences of interpersonal, intergroup, and intercultural conflict. Topics discussed will include the role of power, status, trust, communication, and social identity as well as different models of negotiation and mediation. Students will learn about various theories related to the causes of conflict along with practical strategies for navigating conflict in ways that are constructive.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC120F Stress, Trauma, and Resilience (FYS)
This First Year Seminar uses examples of stressful and traumatic exposures to war-time combat and interpersonal violence drawn from literature, film, and real life, to study the continua of changes to psychological and biological mechanisms involved in the human response to life threatening experiences. Psychiatric diagnosis of the response to stress and trauma are introduced and the utility and limitations of the descriptive approach are considered. Key mechanisms studied include those from the psychological domains of fear and anxiety, memory and cognition, habits and reward processing, and social processes. Alterations in these mechanisms are used to illustrate the manner in which trauma alters human behavior in ways that can be both adaptive and problematic. Students in this course also learn how to methodically read, interpret, and explain findings from scientific journal articles; oral presentations developed in class are used to create outlines for written assignments throughout the semester that, in turn, serve as building blocks for a final paper. This course counts as an elective towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC121F The Brain: Fact or Fiction?
Dopamine fasting, bio-hacking, and nootropics, oh my! It seems like every day experts present us with a new method to "fix" or "understand" our brains. But, how do we assess what is true in the world of neuroscience? In this course, we will discuss some common misconceptions about the brain perpetuated in the media and discover the origins of these common myths. Not only will we learn some neuroscience, but this course will also teach the basics of assessing scientific claims. Students will get practice reading primary scientific articles, writing accurately about psychological research, and critiquing brain science as depicted in their favorite (or least favorite) media, from podcasts to science fiction. Assignments will include two short writing assignments and one long paper that will be written throughout the duration of the course.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC122F Psychology of Communication (FYS)
Language is unique to human beings and a central component of human cognition. This class is designed to introduce students to the role of language in thought and the psychology that underlies how we use language to communicate, both as speakers and listeners. We will cover major themes in this area of study, including different levels of linguistic analysis, the psychology of communication processes, the relationship between speaking and thinking, and the role of efficiency in communicative behavior. The course will be largely discussion-based, centered on the regular readings of scholarly articles. There will be several short writing assignments and content-based assignments, as well as a longer final paper.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC123F Diagnosing Ourselves and Others: Psychological Classifications in Everyday Life (FYS)
Our understanding of self and others increasingly relies on psychological classifications such as anxiety, trauma, imposter syndrome, attachment style, boundaries, narcissism and the like. We share common meanings of these mental terms though usually we are unaware of their origins or scientific status. The seminar explores the circulation of this phenomenal psychological discourse in science, personal life and social media. We trace the evolution of popular diagnostics of ourselves and others, asking how their everyday usage shapes our cognition, behavior, and relationships. We also consider this vocabulary's underlying counter punctual themes of human vulnerability and resistance along with their effects on our moral life. This course counts as an elective requirement towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC124 Lab - Research Methods in Psychological Science
This course is the laboratory component that accompanies PSYC 212 Research Methods in Psychological Science with Lab. This course counts as an elective requirement towards the psychology major. PSYC 124 and PSYC 212 Research Methods in Psychological Science with Lab must be taken concurrently.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC125F Psychology of Queer Issues (FYS)
While the LGBTQ+ community itself, and acceptance of LGBTQ+ community, have increased over the course of history, members of the community continue to have unique interpersonal experiences and experience bias at both the individual and systemic level. This course will cover major perspectives that aim to provide interdisciplinary insights into our understanding of the experiences of LGBTQ+ people. Topics for this course will include psychological theories that can contribute to widely held perceptions and attitudes about the LGBTQ + community, the role of ideologies, as well as intersectional perspectives that provide a more wholistic understanding of the queer experience. Additionally, this course will also discuss how the issues faced by LGBTQ+ people may not only stem from outside the community, but also within the LGBTQ+ community, and the unique consequences these may have. Through reading and discussion

of theoretical and experimental research, we will analyze and learn the perspectives that researchers use to understand the experience of LGBTQ+ people, while also considering the social implications that can come from our current psychological understanding about the queer experience. This course counts as an elective towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC126F Speaking Your Language (FYS)
How do(es) the language(s) we speak shape our perception of the world? How is our perception of others shaped by their language, accent, or dialect? This course will investigate these questions through psychological research as well as a variety of other sources. We will learn about different theories of language acquisition, myths surrounding bilingualism as well as linguistic relativity. The second half of the course will focus on accents, accented speech, and accent bias. Throughout the course students will be challenged to consider their own linguistic backgrounds and examine how it shaped their experiences growing up. As a first-year seminar, this course will give students the necessary skills to become critical consumers of both empirical and non-empirical sources as well as to articulate their opinions in both spoken and written forms.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC200 Statistics: An Activity-Based Approach
This course will introduce the concepts and methods used in the analysis of quantitative data in the behavioral and life sciences. The approach will emphasize activity-based learning. Lectures will be used for the initial presentation and wrap-up of topics, but most class time will be devoted to activities in which students perform analyses. The topics covered will include descriptive statistics, sampling distributions, estimation, hypothesis testing, analysis of variance, and regression. All sections of this course will satisfy the statistics requirement for the PSYC major and the methodological requirement for the NS&B major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **PSYC105**

PSYC201 Psychological Statistics
This course provides a general introduction to the use of statistics in everyday life and in psychological research. Special emphasis will be placed upon the development of critical thinking skills for evaluating the validity of statistically-based claims found in the media and in published research. In addition, the course will focus on the practical application of statistics and the logical connection between various analytic techniques. Both descriptive and inferential statistics will be discussed, and students will learn to clean and analyze data using Microsoft Excel and specialized statistical software (e.g., SPSS and/or R).
Offering: **Host**
Grading: **Cr/U**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **PSYC105 OR PSYC101**

PSYC202 Qualitative Research Methods in Psychology
The goal of the course is to introduce students to basic research strategies for investigating human thought and behavior, with a focus on qualitative methods. The course provides detailed introduction to different qualitative methods, including interview, observation, case study, content analysis, archival, life history, and narrative techniques. Attention is given to the framing of research questions, design of studies, the ethics of psychological research with humans, and assumptions about human nature. The course is problem- and project-based, providing hands-on research experience.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC206 Research Methods in Cognitive Development and Education
This course introduces students to translational research in psychology--research that draws on psychological science to inform practice. The first third of the course will cover basic research methods, fulfilling the requirement for the major and preparing students to critically read, interpret, and engage in research. Then, we will investigate a series of case studies in which people have attempted to take basic research in developmental science and apply it to education settings. Example research-based interventions we might choose to study include mindfulness, growth mindset, early numeracy, reading instruction, teacher development, and anti-bias education. We will ask questions like: Which aspects of the research did the interventions account for, and which aspects were set aside? What are the factors that facilitate or block the use of research in practice? How are research-based interventions evaluated, and how do the outcomes of those evaluations affect our interpretations of the original research findings? What tradeoffs are made when putting research findings into the real world? How do seemingly small details about how interventions are designed and implemented affect the research-practice interface? Through our discussions, we will cover some core topics located at the bridge between research and practice such as practitioner expertise, science communication, participatory action research, educational design, and implementation science.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC207 Research Methods in Developmental Psychology
The goal of this course is to introduce students to basic research strategies and methods, with a focus on those pertinent to developmental psychology. Course materials will focus on conceptual, design, and analytic issues. This course is designed to provide students with the knowledge, skills, and understanding to conduct and evaluate research. In the service of these goals, students will participate in lectures, readings, discussions, and hands-on projects.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC208 Research Methods on Emotion
This course will focus on methods and techniques to study emotions in their social context, including emotional narratives, interviews, experiments with emotional stimuli (e.g., mood induction), surveys, and daily diaries. We will investigate which methods and techniques are best suited to study various positive and negative emotions. The course will give special attention to ethical issues in emotion research.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC200 OR QAC201 OR ECON300 AND PSYC105 OR PSYC105F OR MATH132**

PSYC210 Research Methods in Cognition
This course will examine the experimental method as a means of gaining knowledge about human cognition. Students in this course will learn about general research methods in cognitive psychology related to experimental design, understanding and interpreting research, and ethical issues involved in research with human subjects. Classic research paradigms in cognitive psychology will be explored through the use of interactive demonstrations and in-class experiments.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **NS&B210**
Prereq: **(PSYC105 AND PSYC200) OR (PSYC105 AND ECON300) OR (PSYC105 AND QAC201) OR (PSYC105 AND MATH132)**

PSYC211 Research Methods in Clinical Psychology
The goal of this course is to introduce students to basic research strategies and methods of psychological science, with a focus on those most relevant to clinical psychology.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **(PSYC105 AND PSYC200) OR (PSYC105 AND QAC201) OR (PSYC105 AND ECON300) OR (PSYC105 AND PSYC201) OR (PSYC105 AND MATH132)**

PSYC211Z Research Methods in Clinical Psychology
The goal of this course is to introduce students to basic research strategies and methods of psychological science, with a focus on those most relevant to clinical psychology.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC212 Research Methods in Psychological Science with Lab
This course introduces students to basic quantitative research methods in psychological science, with a laboratory component. This course is designed to provide students with the knowledge, skills, and understanding to conduct and evaluate research in psychological science. Lectures, readings, discussions, and hands-on research projects will be included. This course counts as a research methods or elective requirement towards the psychology major and the lab course counts as an elective. PSYC212 and PSYC124 Lab - Research Methods in Psychological Science must be taken concurrently.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC213 Research Methods in Social Psychology
The course examines research methods and techniques used in social psychology, including observation, correlation, and experimentation. Students will learn about study design, research ethics, and how to collect and analyze data, as well as effective ways to report results. All students are expected to undertake a research project.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC214 Research Methods in Sleep Research
Have you ever read an empirical research article and wondered where the authors got the idea for their research study? Have you ever thought about how researchers decide on which participants to select and what questions to ask of their study participants? How can we assess the value of a theoretical idea based on empirical evidence? And why might there be conflicting findings when researchers test the same phenomenon? This course is designed to help students explore these and other questions related to research methods in psychology, with a focus on sleep research. This is an interactive lecture and lab-based course. Through a series of hands-on lab assignments, students will acquire the necessary skill set to be able to critique, analyze, and design psychological research. Students will explore both qualitative and quantitative methodological designs used in psychological research (e.g., experiments, interviews, and surveys). Additionally, students will gain skills in conducting basic statistical analyses (e.g., correlation, t-test, ANOVA). The course will culminate with a final project in which students will design an original research study.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC214Z Research Methods in Sleep Research
Have you ever read about a published study and wondered where the authors got the idea for their research study? Have you ever thought about how researchers decide on which participants to select and what questions to ask of their study participants? How can we assess the value of a theoretical idea based on empirical evidence? And why might there be conflicting results when researchers study the same phenomenon? This course is designed to help students explore these and other questions related to research methods in psychology, with a focus on sleep research. Through a series of interactive lectures and hands-on class activities that complement the assigned textbook chapter readings, you will acquire the necessary skill set to critique, interpret, and design psychological research. The intensive nature of winter courses (10 classes, 4 hours each) requires that students are fully engaged with the material and will keep up with all assigned readings (~2 textbook chapters and 1 assigned empirical article per class). Course content will be grounded within the field of sleep health research, with an emphasis on quantitative research methods and design. You will be expected to apply your knowledge of research methods in psychology by designing an original research study on a sleep-related topic of your choice.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC220 Cognitive Psychology
Cognitive psychology, a major branch in the field of psychology, is the scientific study of human adult mental processes. The goal of this course is to provide a broad introduction to the issues, methods, and phenomena that characterize the field. These will be brought to life with selected examples of influential empirical studies and, occasionally, practical applications. In seeking constraints on theories of how the mind works, we will draw primarily on studies of adult human behavior (e.g., reaction time, task accuracy), individuals with localized brain damage (e.g., visual agnosia), and measures of brain activity (e.g., as inferred using fMRI techniques). Computer models and nonhuman animal studies will also be considered. Broad topics will include attention, perception, memory, knowledge, reasoning, and decision making. The course is lecture-based but will incorporate discussions, demonstrations, video, and group activities. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**

Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B220**
Prereq: **PSYC105**

PSYC222 Sensation and Perception
This course explores our perceptual systems and how they create and shape our experience of the world around us. We will consider the neurophysiology of perceptual systems as well as psychological approaches to the study of perception, covering all of the human senses with a special emphasis on vision. Class demonstrations will introduce students to interesting perceptual phenomena. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B222**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

PSYC225 Cognitive Neuroscience
This course provides an introduction to cognitive neuroscience -- the study of how the brain enables the mind. We will begin with an overview of the neural substrates of cognition and the tools for understanding the structure and function of the human brain. Then we will cover neural processes that support sensory perception and attention, memory, motor control, language, executive control, and emotional and social functioning. We will also discuss mechanisms of brain evolution, development, and repair, and their implications for various diseases and disorders. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B225**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

PSYC226 Psychological Theories of Learning and Motivation
The goals of this course are to help students develop practical, evidence-based skills for effective classroom learning, understand and appreciate research on the neuroscience of learning and motivation across species, and apply theories of learning and motivation to understanding human behavior. Course objectives for achieving these goals include: implementing evidence-based practices; dispelling myths about learning; explaining mechanisms of memory consolidation and factors that modulate it; distinguishing between and identifying components of operant and classical conditioning; and explaining how each theory of motivation can be used to understand why people behave in certain ways. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B238**
Prereq: **PSYC105 OR NS&B213**

PSYC227 Motivation and Reward
This course will focus on motivation and reward, providing students with a background in and understanding of the various theories and approaches to studying the topic of motivation, including an introduction to some of the history and the current advances in the field. The course uses animal and human research to try to unravel the brain areas and neurotransmitter systems involved in different forms of reward, including food, sex, and drugs, and examine cases of disordered motivation such as drug addiction, obesity, and disordered gambling. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **NS&B227**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

PSYC228 Clinical Neuropsychology
This introductory course will examine the relationship between brain functioning and cognition, behavior, and emotion through the study of human brain disorders. The course will begin with a brief overview of basic human regional neuroanatomy, followed by an exploration of neuropsychological assessment and intervention (its history, rationale, goals, and procedures). These topics will provide a foundation for the discussion of more specific topics in neuropsychology (e.g., traumatic brain injury, dementia, psychiatric disorders, cerebrovascular disorders, seizure disorders, learning disabilities, autism) and the role that neuropsychologists play in the evaluation and treatment of individuals with these disorders. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B228**
Prereq: **PSYC105 OR [NS&B213 or BIOL213 or PSYC240]**

PSYC230 Developmental Psychology
This course is an introduction to human behavior and psychological development focusing on infancy and childhood. We will examine theory and research about physical, social, emotional, language, brain and cognitive development, with emphasis on cognitive development. This course counts as an elective or column 2 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC230Z Developmental Psychology
In this two-week, full-credit course, students will learn how children develop across different domains -- physical, cognitive, language, social-emotional, identity, personality. We will emphasize the primary research literature in developmental science and expose students to the fundamental methods and theories used to study how children develop. In the process, we will learn to appreciate the beauty and detail of human development, as well as the ingenuity of research in the field over the last several decades.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **EDST231Z**
Prereq: **None**

PSYC239 Functional Anatomy of the Human Brain
The human brain is an organ with the consistency of firm Jell-O, weighing about 2.5 pounds in an adult. It is made of 86 billion neurons and approximately the same number of non-neuronal cells. Contrary to common misconceptions, we use all the neurons in our brains, not just a small fraction of them from the regions dedicated to the function being performed. Brain cells organize in distinctive anatomical structures, which are interconnected through complex circuits that control nearly every function of the body, such as learning and memory, thinking, consciousness, and aesthetic appreciation. Its malfunction

results in a variety of diseases, including senility, mood disorders, and motor/sensory dysfunctions. This course will examine in some detail the complex organization of the brain and how it performs some of its basic functions. The course will familiarize students with the medical terminology and neurological concepts for a general understanding of the human brain and spinal cord, being of special interest for pre-med students, NS&B, biology, and psychology majors; and anyone simply interested in how the brain works. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-BIOL**
Identical With: **NS&B239, BIOL239**
Prereq: **[NS&B213 or BIOL213 or PSYC240]**

PSYC240 Behavioral Neurobiology
This course will introduce the concepts and contemporary research in the field of neuroscience and behavior. The course is intended for prospective neuroscience and behavior majors (for whom it is required) and for biology and psychology majors who wish a broad introduction to neuroscience. The initial few weeks will be devoted to fundamental concepts of neuroanatomy and neurophysiology. Subsequent classes will deal in-depth with fundamental problems of nervous system function and the neural basis of behavior, including neurotransmitter systems; organization of the visual system and visual perception; the control of movement; neurological and neuropsychiatric disorders; the neuroendocrine system; control of autonomic behaviors such as feeding, sleep, and temperature regulation; the stress response; and language, learning, and memory. Experimental results from a variety of species, including humans, will be considered. This course counts as an elective or column 1 breadth course towards the psychology major.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-NSB**
Identical With: **NS&B213, BIOL213**
Prereq: **None**

PSYC245 Psychological Measurement
This course will discuss various approaches to the measurement of psychological constructs such as intelligence and personality. Topics covered will include ability tests (e.g., IQ tests), achievement tests (e.g., classroom assessments), and diagnostic clinical assessments (e.g., the draw-a-person test). Strengths and weaknesses associated with various methods of measurement (e.g., self-report vs. performance measures) will also be discussed. Special attention will be given to the criteria used to critically evaluate the psychometric quality of measurement instruments. Students will learn the steps necessary to develop psychometrically sound, practically useful, and legally defensible tests. This course counts as an elective or column 2 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC246 Behavior Change, Clinical Interventions and Health Promotion
This class will review the current science and historical context of mental and physical health behavior change approaches across three levels of intervention: the self, the individual, and society. Major topics will include fundamental behavioral principles, basic elements of empirically supported individual treatments (e.g., cognitive behavioral therapies, interpersonal therapy), and the design and evaluation of population-level health interventions. Lectures, readings, and clinical examples will illustrate both the theory and step-by-step practice of evidence-based approaches to behavior change across levels. Assignments may include a self-monitoring exercise, in-class role plays, a group project, an exam, and brief writing assignments. This course is designed to introduce students to a broad range of contemporary approaches to psychological and behavioral treatments; however, it will not provide the skills needed to implement psychological interventions. This course counts as an elective or column 2 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC248 Adolescence and Emerging Adulthood
This course takes a global, cultural perspective to the study of human development during adolescence (ages 10-18 years) and emerging adulthood (ages 18-25 years). Students will gain a deeper understanding of key aspects of psychosocial functioning during these two developmental age periods. The course approaches adolescence and emerging adulthood as periods of both opportunity and vulnerability. Topics include cognitive development, love and sexuality, media, peer relationships, and risk and resilience. Class activities and assignments provide opportunities for students to actively engage with the material presented and discussed in class. Students also will have the opportunity to participate in a cross-cultural experience, culminating in a class documentary on a selected topic related to adolescent and emerging adulthood development. This course counts as an elective or column 2 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105 OR PSYC105F**

PSYC251 Psychopathology
This course provides an overview of psychopathology, the study of "abnormal" behavior or mental disorders. From various theoretical perspectives, the ways that abnormality is defined will be considered. You will learn what we know and don't know about the phenomenology, diagnosis, and causes of mental disorders. Major domains of psychopathology, the symptoms and behaviors associated with common mental disorders, and the mechanisms hypothesized to be involved with them will be covered. The ways that different paradigms steer the development and implementation of treatments will be examined. This course is not designed to help resolve personal experiences with mental illness. This class will challenge widely accepted ideas about mental illness. You will learn to think critically about how mental illness is understood by society, mental health professionals, and clinical researchers. This course counts as an elective or column 2 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **PSYC105**

PSYC253 Educational Psychology
This course will focus on three major topics and how they relate to current educational policy debates. The first topic will be an examination of the fundamental purpose of school. We will discuss theoretical and empirical perspectives on why schools exist and ways in which school purpose varies by school type (e.g., public, private, charter) and location (e.g., by state and country). The second topic to be covered relates to the implementation of school mission. In this context, we will reflect on how theories of child development, student motivation, classroom management, and pedagogy inform instructional practice. Finally, the third major topic that will be covered is how to determine whether schools are achieving their stated goals. We will examine the appropriate (and inappropriate) uses of assessment for understanding whether

students are learning, whether teachers are effective, and whether a school has a positive or negative climate. This course counts as an elective or column 2 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **EDST253**
Prereq: **None**

PSYC259 Discovering the Person
This course surveys major developments in psychology and psychiatry from 1860 to the present. Through readings and lectures, the course introduces the major schools, theories, and systems in the American "psy" sciences. We examine the kinds of persons who were "discovered," the techniques of discovery, the extensions of psychological ideas to institutions and policy formulations, and the consequences of these discoveries for public as well as private life. We examine phenomena that were located, catalogued, and explained by these sciences, including rationality, gender, cognition, personality, race, emotion, psychiatric disorders, development, intelligence, and the will. Attention is given to the scientific grounds of investigations and the empirical evidence sought in the century-long process of discovering and naming psychological kinds. Readings include primary source documents, histories, and philosophical analyses. This course counts as an elective or column 2 breadth course towards the psychology major. Students who have taken PSYC310 or SISP312 cannot take this course.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **STS259**
Prereq: **PSYC105**

PSYC260 Social Psychology
What leads us to become attracted to one person rather than another? How does prejudice develop, and how can it be reduced? Can psychological research help protect the environment and, if so, how? This course offers an overview of classic and contemporary social psychology, covering topics such as group behavior, friendship, stereotyping, conformity, obedience, and conflict resolution. This course counts as an elective or column 3 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC265 Culture in Psychology: An Introduction to Theory and Research
Culture is central to the study of mind and behavior. This course will provide students with an introduction to theory and research on culture in psychology. We will discuss what culture is, the methods that psychologists use to study culture, and how much of our behavior is universal or culture-specific. We will explore how culture influences how we think, feel, and behave. This course counts as an elective or column 3 breadth course towards the psychology major.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC277 Psychology and the Law
This course will offer an introduction to the range of topics that are of concern both to psychologists and to members of the legal profession. We will investigate how psychologists may enter the legal arena as social scientists, consultants, and expert witnesses, as well as how the theory, data, and methods of the social sciences can enhance and contribute to our understanding of the judicial system. We will focus on what social psychology can offer the legal system in terms of its research and expertise with an examination of the state of the social science research on topics such as juries and decision making, eyewitness testimony, mental illness, the nature of voluntary confession, competency/insanity, child testimony, repressed memory, and sentencing guidelines. In addition, this course will look at the new and exciting ways legal scholars and psychologists/social scientists are now collaborating on research that looks at topics such as the role of education in prison, cultural definitions of responsibility, media accounts and social representations of crime and criminals, death penalty mitigation, and gender/race discrimination within the criminal justice system. This course will introduce students to this field, especially to the growing body of applied and theoretical work and resources available for study and review. Students will be encouraged to explore the connections between issues of social science and the law, translating legal issues into social scientific research questions that can then be examined more closely in the literature. This course counts as an elective or column 3 breadth course towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **AFAM287**
Prereq: **PSYC105**

PSYC280 Applied Data Analysis
In this project-based course, you will have the opportunity to answer questions that you feel passionately about through independent research based on existing data. You will develop skills in generating testable hypotheses, conducting a literature review, preparing data for analysis, conducting descriptive and inferential statistical analyses, and presenting research findings. The course offers one-on-one support, ample opportunities to work with other students, and training in the skills required to complete a project of your own design. These skills will prepare you to work in many different research labs across the University that collect empirical data. It is also an opportunity to fulfill an important requirement in several different majors.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Identical With: **QAC201, GOVT201, NS&B280**
Prereq: **None**

PSYC280Z Applied Data Analysis
In this project-based course, you will have the opportunity to answer questions that you feel passionately about through independent research based on existing data. You will develop skills in generating testable hypotheses, conducting a literature review, preparing data for analysis, conducting descriptive and inferential statistical analyses, and presenting research findings. The course offers one-on-one support, ample opportunities to work with other students, and training in the skills required to complete a project of your own design. These skills will prepare you to work in many different research labs across the University that collect empirical data. It is also an opportunity to fulfill an important requirement in several different majors.
Offering: **Crosslisting**

Prereq: **None**

PSYC281 Investigaciones Importantes en Psicología (CLAC.5)
This course will focus on several key empirical studies that have had an impact on the field of psychology. We will explore the big-picture question each study was examining, what the thinking in the field was then and is now on this big-picture

question, how the data were gathered and analyzed, what relevant replication attempts have found, and what the implications of the findings are for the field of psychology. Lectures and conversations will be conducted in Spanish. Readings will generally be in Spanish, but some may be in English. Students should be at the intermediate level or above.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **SBS-PSYC**
Identical With: **CGST238**
Prereq: **SPAN110 OR SPAN111 OR SPAN112 OR SPAN113**

PSYC282 People and Places: An Introduction to Environmental Psychology
This course explores human-environment interactions and the relationships between natural, social, and built environments in shaping people as individuals, and in turn, how people shape their environment(s). This course will critically explore theories and research that serve as the foundation of the field, as well as examine applications to real-world problems. This course will incorporate inquiry-based approaches to environmental psychology including the methods of participant observation and PhotoVoice. This course will engage ecological approaches and multi-level concepts in understanding human-environment dynamics and interactions from the home/personal space, community, and urban life, among others, as well as reflect on students' experience of their physical and social environments. As a survey course, this course will cover myriad topics with consideration to social justice, and varying conceptualizations and experiences addressing gender, race, class, age and people with disabilities. Considering the COVID-19 pandemic, this course will give special consideration to public space and home environments. As a discussion-based seminar, topics will ultimately be driven by student interest. Several films and podcasts may be incorporated into class. This course counts as an elective towards the psychology major.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-ENVS**
Identical With: **ENVS246**
Prereq: **None**

PSYC283 Trouble in Mind: The History of Psychiatry in the United States
This is a class in the history of psychiatry (and to a lesser degree, the disciplines that comprise clinical psychology). Many of us experience disturbances of mood, thought, and behavior over the course of our lives. When we do, we sometimes seek help from those with training in medicine or psychology. This has not always been the case, however. The question we explore in this seminar is how this came to be. In so doing, we will consider how theories seeking to explain the mind and therapies seeking to treat its invisible wounds have evolved over the past two-plus centuries, and how that evolution has shaped and been shaped by the shifting ways we see, hear, imagine, react to, and -- ultimately -- attempt to relieve mental anguish.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-HIST**
Identical With: **HIST295**
Prereq: **None**

PSYC285 The Narratives of Illness and Recovery
This course provides a detailed examination of primarily first-person accounts of illness and recovery. The focus will be on narratives that deal with mental illnesses and trauma or the psychological aspects of physical illnesses. We will explore the relationship of story and narrative to the healing process. Students will analyze across texts the common psychological traits that lead to recovery and generativity, as well as the response to loss and the experience of suffering. Particular emphasis will also be placed on the role of "the wounded healer," those persons who have suffered and then choose to assist others who face similar predicaments.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-COL**
Identical With: **COL200, ENGL200**
Prereq: **None**

PSYC286 Contemporary Literacy: What Does It Mean to Be Literate in the 21st Century?
How do humans learn to read and write -- and how has that learning evolved in a rapidly changing media landscape? This course explores the cognitive, social, and cultural processes involved in literacy acquisition, from early development to advanced academic and digital literacies. Rooted in Paulo Freire's concept of literacy as a practice of meaning-making and empowerment, the course invites students to critically examine how literacy is shaped by power, identity, and access.

Drawing on contemporary multiliteracies research, students will explore the diverse ways literacy is practiced in today's digitally mediated world. Special attention will be given to media and information literacy--essential skills for navigating misinformation, algorithms, and fragmented media environments. This course will also center on literacy as the foundation for civic learning and engagement, inviting students to think about the ways schools scaffold citizenry through literacy instruction. Through critical inquiry, hands-on analysis, and reflective practice, students will develop the tools to access, evaluate, and produce information in a way that is ethical, critical, and socially responsive.

This course is ideal for students interested in education, media studies, communication, and anyone seeking to understand literacy beyond the printed word in our complex digital age.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-EDST**
Identical With: **EDST226**
Prereq: **None**

PSYC287Z Understanding Inequality: Psychological and Educational Perspectives
This class focuses on recent work by psychologists, economists, and education researchers examining the effects of growing inequality on our collective mental health and on the school-related performance of children in particular. One class theme is that U.S. economic inequality has grown substantially in the past few decades, so that we now have one of the highest levels of inequality of any advanced industrialized country in the world. A second key theme is how few Americans are aware of the extent of these changes and their effects on the well-being of children and adults. The course also focuses on the nature of the "American Dream" and how distorted perceptions of social mobility affect many Americans' concerns about inequality. The overall class concentrates on how these economic realities and related psychological misperceptions have combined to create a cascade of negative psychosocial and educational consequences, ranging from "deaths of despair" in adults, to increased mental health issues in children, to the growing polarization of educational opportunities and outcomes at all ages. Among the topics that will be covered are: the growth of wealth and income inequality in U.S. (including comparisons with other advanced, industrialized countries); psychological research on how people perceive and misperceive inequality; the moral nature of inequality in

relation to thinking about distributive justice; the psychological literature on the consequences of inequality; and, finally, the limitations of a meritocracy for addressing these consequences. This course fulfills the Category 1 requirement for the Education Studies Major and Minor, and an elective credit for the Psychology Major.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-EDST**
Identical With: **EDST211Z**
Prereq: **None**

PSYC288Z Zero to Infinity: The Psychology of Numbers
What are the origins of mathematical thinking, and why do some people become experts while others get nervous calculating a tip? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their intuitive understanding of numbers, geometry, and space to successfully navigate their environments. Yet, individual differences in math achievement emerge early in development and often persist throughout children's education. In this course we read and discuss both foundational and cutting-edge articles from cognitive science, education, and psychology to understand how mathematical thinking develops. We will also tackle questions such as: How do culture and varying social contexts affect numerical understanding? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? This class will involve a blend of synchronous class-time meetings and asynchronous work.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-EDST**
Identical With: **EDST250Z**
Prereq: **None**

PSYC293 Towards Antiracist Psychological Science
What does it mean to conduct "antiracist" studies that "decenter whiteness"? What investigative practices are warranted and what scientific foundations are necessary for doing innovative, antiracist research? This course takes up these questions, grounding exploration of scientific practices in a fuller understanding of psychology's history and epistemology. We examine past practices that fostered and sustained racist beliefs, consider race theories, and explore key concepts including reflexivity, positionality, diversity, elite capture, race theory, indigenous psychologies, and social justice. These and related concepts along with historical, philosophical, and theoretical analyses are engaged to locate research methods and professional practices that move toward realizing antiracist science.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **PSYC105**

PSYC295Z The Science of Happiness
Positive psychology is the study of human strengths and happiness. The field has compiled an enormous research base offering evidence of the fundamental components of well-being and flourishing. While early research employed a narrow, "Western" definition of happiness, the discipline later broadened its focus to include traditionally "Eastern" concepts such as social harmony and compassion. More recently, the field has been redefined through second-wave and third-wave positive psychologies, which seek to break free from the binary concepts of "positive" and "negative" in favor of a dialectic approach, while utilizing concepts of flourishing through suffering, and including models for systemic change. This course will primarily utilize journal articles to trace the history and development of positive psychology from its inception to the current state of the field. Core concepts will be discussed and critiqued. Students will be required to keep a "flourishing journal" and complete out-of-class activities for personal reflection and practice of individual experiences of well-being. Additional course requirements include shorter and longer reflection papers, in-class discussion, and a final project. This course is being offered as a blend of synchronous class meetings and asynchronous work.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC303 Social Media and Development: Constructing the Self Online
Humans typically develop their view of themselves, or their self-concept, through interactions with others in their community. For adolescents, this takes place typically within school environments and other community institutions as they begin to rely less on their parents. With the dawn of social media, these interactions are taking place on a global scale with increased anonymity. How does this social and technological change impact how teens and young adults form their views of themselves? What implications do these changes have for adults who work with adolescent populations? This course will explore these questions, illuminating an understanding of the accepted model of self-concept development and the impacts of social media. Students will also explore related concepts of self-esteem and social development. This course will use empirical research to examine and critique the overall negative view of social media usage amongst adolescents, and train students to probe commonly accepted viewpoints using careful scholarship. The course will provide a discussion of research standards in the field of social media research and encourage critical evaluation of empirical research.

PSYC304 Celebrating Learner Differences: Creating Inclusive Classrooms Using Research
How do humans develop the capacity to learn? This course will focus on the dynamic influence of the cognitive, social emotional, and demographic factors involved in this process, using a research-based framework. Students will be encouraged to evaluate the learning process throughout K-12 educational settings and will explicitly learn to read and critique research in the learning sciences. Students will also evaluate the utility of research in different learning settings and the effectiveness of associated pedagogical tools and strategies.

The course will begin with a discussion on learning sciences research and explicit instruction for research evaluation. Topical considerations will include the development of human memory, executive function, attention, and other cognitive processes that underlie learning and information processing. Students will also explore background factors, including socioeconomic status, and social emotional factors, including motivation and emotion, as predictive and associated factors for learning and information processing.

This course fulfills the Category 1 requirement for the Education Studies Major and Minor. It satisfies the ELECTIVE only requirement for the PSYC major.

Prereq: **None**

PSYC305 Neuroscience of Learning and Memory
One of the fundamental functions of our nervous system is to encode and store memories, which allows us to survive and shape our personal identities. In this course we will cover different animal models of learning and memory, which have been useful tools to understand maladaptive memories underlying neuropsychiatric and neurological disorders such as post-traumatic stress disorder, substance use, and Alzheimer's disease. We will look in detail at how neurons and neural circuits change and respond when an organism learns something new or recalls a past experience. This course will also involve detailed discussions related to sex differences in both learning behavior and the biological basis of memory processes. The central focus of the course will be integrating current work in basic cellular and molecular neurobiology with the experimental psychology of learning and memory. This course counts as an elective towards the psychology major.
Offering: **Crosslisting**

Prereq: **NS&B213**

PSYC316 Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives
The goal of this seminar will be to critically investigate the concept of schizophrenia as a unitary disease construct, from historical, neuroscientific, and phenomenological approaches, and the implications of these views for our understanding of treatment of the disorder. How are we to make sense of a psychiatric disorder that has changed so substantially in definition over time, with wide interindividual difference in symptom expression and functional outcome, a wide array of competing theories regarding etiology and biological mechanisms, and correspondingly diverse treatment interventions? We will engage these questions through three separate units that will evaluate the disorder from three different levels of analysis: (1) readings in the history of psychiatry and the perspective they cast on schizophrenia as a unitary disease concept; (2) an analysis of contemporary work in neuroimaging and experimental cognition in the disease and the current status of creating a coherent account of neurocognitive mechanisms of the disease, as well as a neurocognitive approach to novel interventions; and (3) new work on understanding the experience of the disease from first-person accounts and the systematic analysis of these accounts as a window to understanding heterogeneity in the disease and novel approaches for therapy.

PSYC320 Practicing Science: Thinking and Writing
This course is designed to provide students with instruction and practice in academic writing in science. Students will complete and discuss assigned readings about academic science writing. They will engage in writing with peer and instructor feedback, in a supportive community of practice. This course counts as a specialized or elective requirement towards the psychology major.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC321 Seminar on Social Action
This seminar introduces students to theoretical and empirical research on conceptions, perceptions, and outcomes of strategies for social action, including scholarship on individuals' and groups' change efforts. In this course, students will engage with social psychological concepts both classical and modern to answer pressing questions such as when is social action (in)effective or (in)authentic? What (dis/en)courages people to join movements and what behaviors support (or undermine) them? What explains backlash against change initiatives? Students will be asked to consider the benefits and constraints of social action strategies and develop their own theories as to what forms of action are most (or least) conducive to change and when. This course counts as a specialized or elective requirement towards the psychology major. This course counts as a specialized or elective requirement towards the psychology major.

Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC322 Psychology of Decision-Making
We make decisions all the time. The vast majority of decisions have little consequence, though some are monumental and can deeply affect our lives. The broad goal of this course is to explore the science of judgment and decision-making. We will leverage concepts and research from the fields of psychology, neuroscience, and economics to understand how an individual makes judgments and decisions, why these decisions are subject to bias, and whether humans are "rational" decision-makers. Along the way, we will examine major questions that have guided decision research, consider domains where decision-making could be improved, and think of practical applications of course concepts to everyday life. Foundations of Contemporary Psychology (PSYC 105) is strongly recommended as a prerequisite (plus any courses listed under individual

sections), as this is an upper-level course (that relies on student contributions) in the Psychology Department.
Offering: **Host**
Grading: **A-F**

Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC326 History of the Brain
The course is designed to trace the people, experiments, social forces, and ideas that have helped shape the legacy of current neuroscientific knowledge. The course will be broken up into five parts. Part one will look at Ancient Egyptian, and Classical Greek and Roman conceptions of brain function. Part two will investigate methodological advances in the study of electricity and cell-staining techniques -- both developed in the 18th-19th century -- that paved the way for novel ways of looking at brain function and human behavior and how these new conceptualizations impacted the culture at large. Part three will investigate the history of assigning specific cognitive, emotional, and behavioral function to specific structures in the brain. Part four will link developments in neuroscientific study with their impact (both positive and ill) on the treatment and care of people with psychiatric and neurological illness form the 19th-century to the present day. Part five will present a summing up and an overview of contemporary models of brain and mind.
Offering: **Host**

PSYC327 Psychology of Queer Issues
While the LGBTQ+ community itself, and acceptance of LGBTQ+ community, have increased over the course of history, members of the community continue to have unique interpersonal experiences and experience bias at both the individual and systemic level. This course will cover major perspectives that aim to provide interdisciplinary insights into our understanding of the experiences of LGBTQ+ people. Topics for this course will include psychological theories that can contribute to widely held perceptions and attitudes about the LGBTQ + community, the role of ideologies, as well as intersectional perspectives that provide a more wholistic understanding of the queer experience. Additionally, this course will also discuss how the issues faced by LGBTQ+ people may not only stem from outside the community, but also within the LGBTQ+ community, and the unique consequences these may have. Through reading and discussion of theoretical and experimental research, we will analyze and learn the perspectives that researchers use to understand the experience of LGBTQ+ people, while also considering the social implications that can come from our current psychological understanding about the queer experience.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC327Z Psychology of Conflict Resolution
This course will focus on the psychological causes and consequences of interpersonal, intergroup, and international conflict. Topics discussed will include the role of power, status, trust, and social identity. Students will learn about various theories related to the causes of conflict, as well as practical techniques for navigating conflict, including negotiation, mediation, and facilitation.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC329 Neural Costs of War
This course focuses on stress reactions that result because of exposure to war, combat, and related atrocities. You will learn about the diagnosis of PTSD, including its development and history. There is a strong emphasis on the neural and cognitive mechanisms for stress-related psychopathology and the overlap of psychological and neural systems with the damaging effects of traumatic brain injury. While interactions of these mechanisms with social and cultural processes are considered, the primary emphasis is on the neural and cognitive mechanisms. To be fully prepared for this course, students should have a solid grounding in neuroscience and behavior, as well as basic psychopathology.

PSYC330 Engaging Antiracist Psychological Science: From History and Theory to Practice
Responding to calls for antiracist psychological science, this seminar explores what it means to design and conduct that science. What does it mean to conduct "antiracist" studies that "decenter whiteness"? The exploration of scientific practices is grounded in gaining a fuller understanding of psychology's history, epistemology, research practices, and influence on social policy. Upon surveying past practices that fostered and sustained racist beliefs, we examine race theories and explore key concepts including reflexivity, positionality, diversity, elite capture, race theory, indigenous psychologies, and social justice. These historical, philosophical, and theoretical analyses are engaged to locate research methods and professional practices that move toward realizing antiracist science. The course incorporates lab activities, 6 papers, and a final project that engages a key concept or practice of antiracist psychology.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **PSYC105**

PSYC332 Seminar in Cognitive Neuroscience
This seminar is an in-depth analysis of the ways that scientists study the neural basis of cognition in humans. Topics to be covered include the representation of visual categories, the neural influence of attention, episodic memory, theories

of spatial cognition, and decision-making. Through reading and discussion of primary research articles, we will evaluate the methods and theoretical debates in each domain, while recognizing and integrating common themes that link across the field. Students will also learn how to work with simple computer models and simulations (using Python), in order to gain a strong foundation in the computational principles that underlie recent advances in the field of cognitive neuroscience.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC334 Seminar in Social Neuroscience
One of the most complex functions we (and other animals) exhibit is the ability to interact with other members of our species. Social behavior, in turn, depends on processes at scales ranging from the entire nervous system down to the effects of individual hormones and genes. This course will examine phenomena such as facial processing, attributions of agency and mental states, aggression, dominance, social isolation, in-group/out-group identification, and group decision-making.

To understand these concepts, we will discuss experimental findings that employ a variety of methods, ranging from behavioral studies to physiological assays, but with particular emphasis on methods from cognitive neuroscience. As we discuss primary research in the field, students will not only gain insight into the specific social behaviors covered, but a broader understanding of research approaches in psychology and neuroscience. Foundations of Contemporary Psychology (PSYC 105) is strongly recommended as a prerequisite.
Offering: **Host**
Grading: **A-F**

Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC337 Psychology of Language
Language is central to both cognition and the human experience. This class is designed to familiarize students with the fundamental principles and questions that surround the study of language and communication from a cognitive psycholinguistic perspective. The course will cover different approaches to the study of language, focused on the role of language in cognition. Additionally, we will cover how speakers and listeners use language to successfully communicate with one another. The course will be a mix of both lectures and discussions, centered on regular readings of scholarly articles that are foundational to the field. Students will be evaluated on routine writing exercises, including periodic short assignments and a longer final paper. Students may also be evaluated on participation, engagement, short quizzes, and/or short homework assignments. Formally, students will be asked to engage with peer-reviewed research, utilize library resources, engage critically with course material, discuss new ideas with peers, and improve their academic writing capabilities on complex and current scientific topics. Students who have taken PSYC122F will not be admitted due to the overlap in content.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC338 Masculinities
This course examines masculinities and the psychology of men using theories and research findings. We survey a range of perspectives on men and masculinity, drawing from evolutionary theory, cognitive psychology, psychoanalysis, social psychology, and queer theory. We will ask how the psychological attributes associated with men relate to private life and public spaces, and whether our enactments and conceptions of masculinity have changed over time. Exploration of these questions will be informed by both psychological research and close analysis of media representations; the course thus emphasizes methods for examining representations of masculinity in science and the media.

PSYC339 Psychology of Human Sexuality
This course introduces the psychology of human sexuality in its evolutionary, physiological, reproductive, and social contexts. We'll explore various psychological theories of human sexuality, as well as sexual motivations, sexual anatomy, sexual response, sexual pleasure, gender and gender identity, sexual orientation, sexual behavior, sexuality across the life span, safe sex, and consent. In addition, this course covers contemporary issues that may arise each week, such as sex education, gender diversity, and sexual orientation. In light of the current political climate, it is anticipated that politically sensitive topics may be discussed in class to sort out myths from evidence supported by scientific research. The course emphasizes current research in psychology, sexology, and sociology and will be inclusive across cultures, races, ethnic groups, gender, sexual orientation, and relationship orientation. This course is also intended to be responsive to student questions and to provide a space for discussions in a non-judgmental, inclusive, and accepting environment.

PSYC340 Seminar on Migration and Child Development
How do the current politics of borders and citizenship impact the well-being of migrant children, youth, and families? How do U.S. immigration policies intersect with what research tells us about what children need to thrive? Is there a role for psychologists to inform today's discourse on immigration policy? These are a few of the questions that we will be exploring throughout our time in this class.

Through class readings, discussions, and course assignments, we will examine why and under what circumstances children and families migrate to the United States. We will explore how various parts of the migration experience relate to child and adolescent development. Together we will analyze contemporary immigration policies through the lens of developmental psychology. Students will learn to grapple with the opportunities and limitations of developmental science to inform immigration policies that matter for the day-to-day lives of immigrant children and families.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC341 Psychology of Human Memory
This seminar course is designed to provide students with an in-depth exploration of the psychological science of human memory. We will examine current issues and theories in human memory research and the methods by which human memory is explored. Both classic and contemporary research findings

from the disciplines of cognitive psychology, cognitive neuroscience, and neuropsychology will be brought together to paint a picture of the current understanding of human memory. Topics to be covered include different memory systems and frameworks (e.g., working memory, semantic memory, episodic memory), remembering and forgetting (e.g., phenomenal experience of remembering, various mechanisms of forgetting), reality/source monitoring (e.g., memory attributions, true and false memories), the influence of emotional and social factors on memory (e.g., social remembering), and memory in clinical populations.
Offering: **Host**

PSYC343 Sleep and Psychosocial Functioning in Youth
This course is designed to orient students to the fascinating world of sleep and psychosocial functioning, with a focus on the adolescent and emerging adulthood years. We will explore how sleep relates to various aspects of psychosocial functioning, including cognitive development (e.g., memory), emotional well-being (e.g., mental health), social adjustment (e.g., social media use), and cultural contexts (e.g., race-ethnicity). The content for this course is primarily based on published empirical research and theory. The seminar format of this course is designed to facilitate a dynamic and interactive learning environment and requires active participation from all students.

Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC344Z Parenting
This course engages students with the science and practice of parenting through an interdisciplinary and cross-cultural lens. A critical component of the course is the integration of interdisciplinary perspectives on parenting-related topics that highlight the cultural nuances that inform parenting norms, beliefs, and practices. Consequently, assigned readings will be based on selected chapters and empirical research articles within the fields of psychology, sociology, and anthropology. Students will also evaluate the relevance and validity of parenting-related content in popular media (e.g., social media, websites, books, podcasts, and blogs), in relation to published theory and empirical research. Student evaluation will be largely based on students' contributions (written and oral) to class discussions. Assignments are designed to assess students' ability to understand, critique, and apply course content. Topics include parenting styles, discipline, parent-child sleep, and gender socialization. All assigned readings will be posted in Moodle.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC347 Science of Suicide Risk & Prevention
This course will explore the science of suicide research, prevention, and intervention. Topics will include terminology, epidemiology, historical and contemporary theories of suicide, ethical and methodological challenges to suicide research, risk and protective factors, empirically supported approaches to prevention and intervention, suicide in the media and popular culture, and emerging issues and controversies in the field of suicidology. In many ways, the field of suicide research is young and knowledge is rapidly changing. Special attention will be paid to novel methodological advances in clinical psychological science. The course will use books, empirical articles, class discussion, critical thinking, exams, and writing assignments to accomplish its learning objectives. This course is not designed to resolve personal experiences with suicidal thoughts, suicide loss, or mental illness nor will it address assessing suicide risk among friends or family members.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC348 Topics in Cognitive Development
In this course we will discuss in depth a selection of current topics in cognitive development research. We will read and discuss primary literature and focus on cutting-edge debates in the field, surveying evidence from different stages of human individual development as well as (when appropriate) evidence from different nonhuman species.
Offering: **Host**

Prereq: **None**

PSYC351 Your Brain on Drugs: The Neuroscience Behind Drugs of Abuse and Addiction
Substance use disorder (colloquially known as drug addiction) is a pervasive disease that has touched countless lives. In order to understand the disease, one must first understand the mechanism of actions of addictive substances. This course will cover several major classes of abused drugs (nicotine, alcohol, amphetamines, cannabis, psychedelics, etc.) through a combination of lectures and discussion of current research articles studying these substances and their effects on the brain. Societal influences on the conception of addiction and addiction treatment will also be discussed. This course is largely discussion based, with a final project on a drug of choice.
Offering: **Host**
Grading: **OPT**

PSYC358 Seminar in Intergroup Peace and Conflict
This seminar is an in-depth analysis of key psychological readings on the topic of intergroup peace and conflict. Topics covered include key psychological theories in intergroup relations used to articulate the reasons and sources for intergroup conflict (i.e., Social Identity Theory, Realistic Group Conflict Theory), topics covering how intergroup conflict is perpetuated (i.e., revenge, collective memory and collective victimization), strategies to reduce conflict and promote peace (i.e., contact theory, norm interventions, intergroup dialogues, protest), and behaviors that ideally progress beyond conflict (i.e., apologies, forgiveness, reconciliation, reparation). Additionally, the course examines philosophies of peace. Students in the course will not only discuss psychological strategies that are used to move toward peace, but critically consider/reconsider what a peaceful society means and what one would actually look like. Through reading and discussion of theoretical and experimental research articles, we will not only evaluate the methods scholars use to study these real-world issues, but also critically analyze and deconstruct the theoretical underpinnings influencing how psychologists approach and evaluate intergroup conflict and peaceful societies.

Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC365 Seminar on Emotion
This seminar aims to provide an intensive introduction to what emotions are and how they influence our relations with other people. The seminar will cover general theory on emotion as well as theory on specific emotions (e.g., anger, shame, envy, humiliation). As emotions are multicomponential processes, we will examine how the social context shapes different components of the emotion process (e.g., phenomenological experience, regulation, and expression of emotion). Moreover, we will explore how emotions operate at the individual, interpersonal, intergroup, and cultural levels of analysis.

PSYC374 Early Childhood Practicum
In this small intensive practicum course, students will spend a minimum of 3 hours per week working in early childhood education settings. The practical experience will be complemented by contemporary research about early child development, education, policy, and practice. Course topics will be driven by the interests of the group, by the questions that naturally emerge from the practicum placement experience, and by current debates in the field. Such topics include but are not limited to: diversity in language acquisition; scaffolding children's autonomy and executive function; the unique functions of exploratory play in human learning and development; and in-the-field consequences of new legislation (e.g., Connecticut's 2023HB-06880-R02-BA mandates on play-based learning and raising the kindergarten age). In addition to reading primary sources and working within early childhood classrooms, we will benefit from conversations with experts actively working to integrate research, practice, and policy. Students will keep journals documenting their field placements, submit response papers to class readings, participate actively in class discussions, and complete an in-depth exploration of a topic of their choice that bridges across the scholarly literature and the field placement experience. This is an advanced class available by Permission of Instructor (POI). Previous coursework in psychology is strongly recommended. Students are encouraged to participate for the full year (.5 credit per semester), and those who intend to do so will be given priority.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC375 Advanced Research in Social Psychology: Social Representations of Crime in Children's Television
This is an advanced research seminar examining the relationship between adult understandings about crime and criminals and the images depicted in children's entertainment. Working with the instructor, students will become part of an active research lab, collecting and analyzing qualitative data that will ultimately contribute to a project that aims to connect early childhood media exposure to adult understandings about such things as the "causes" of crime, the demographics of crime, and solutions to crime. Students will gain significant knowledge about and fluency with social representation theory, as well as hands-on experience using a variety of qualitative data analysis techniques.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC376 Advanced Research in Adolescent Development
This course is designed to provide students with experience conducting research in adolescent development. Students will learn about community-based and online research methods with immigrant youth and families. There will be opportunities to gain competencies in various research-based skills such as conducting literature reviews, data management, collecting and analyzing quantitative and qualitative data.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC377 Advanced Research in Racism and Intergroup Relations
Students in this advanced research course will contribute to ongoing research studies on the topics of race, racism, and intergroup relations. Students will be introduced to social psychological and cultural psychological research methods within the study of racism and intergroup relations. Students will contribute to different aspects of the research process such as literature reviews, collecting and analyzing quantitative and/or qualitative data, data management, and manuscript preparation.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC378 Advanced Research in Cognitive Neuroscience
This advanced research course provides in-depth training in the experimental methods of cognitive neuroscience, focused on human memory. Students will work individually and in groups on semester-long projects, which will include literature reviews, experimental design, data collection, analysis, journal-formatted writing of results, and oral presentations.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B378**
Prereq: **None**

PSYC379 Advanced Research in Conceptual Development
Students in this course work on new and ongoing research projects in the Cognitive Development Laboratory. Students will be individually matched to a research project and participate in all aspects of research including background literature review and designing, running, and analyzing experiments.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC380 Advanced Research in Social Identity
Students in this course will contribute to ongoing research on topics related to social identity. As part of the research team, students will learn and apply social psychological approaches to investigate how people understand their social group memberships, experience or express identity-based bias, and evaluate strategies for addressing prejudice, discrimination, and stereotyping. As part of an active research lab, this course will provide an overview on how to conduct experimental research in social psychology.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC382 Advanced Research in Decision Making
This course is designed to allow students to conduct supervised research in the area of the cognitive psychology of reasoning and decision making. Working as a team with the instructor and other members of the research group, students will undertake a semester-long experimental research project on a topic in reasoning and decision making.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Identical With: **NS&B382**
Prereq: **None**

PSYC383 Advanced Research in Learning and Memory
This advanced research course is designed to allow students to conduct supervised research in the area of human learning and memory. Working with the instructor, students will become part of an active research lab, undertaking a semester-long experimental research project that seeks to answer a current question in the field of memory research.

Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B383**
Prereq: **None**

PSYC384 Advanced Research in Cognitive Development
This course is designed to allow advanced students to conduct a supervised group research project in cognitive development. Working with the instructor, students will conduct an experiment that seeks to answer a current question in the field of cognitive development.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **None**

PSYC385 Advanced Research in Digital Learning
This hands-on research seminar offers applied experience in the design, implementation, and evaluation of digital learning. Students will develop expertise in curricular design, critically reviewing research on project-based learning strategies, and supporting digital learning across diverse educational settings.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC386 Advanced Research in Sleep
This advanced research course is designed to provide students with an in-depth understanding of how to critique and analyze psychological research. Specifically, we will focus on research within the field of sleep and psychosocial functioning. This seminar course takes an intensive lab-based approach. Students will have access to a comprehensive dataset that includes assessments of stress, anxiety, depression, physical activity, interpersonal relationship quality, personality, procrastination, and chronotype. Based on this data, students will be expected to commit to a semester-long project, which involves analyzing data and reporting findings on a self-selected topic. Upon completion of this course, students will have a strong working knowledge of the field of sleep and psychosocial functioning. This course also provides opportunities for students to develop analytical, writing, critical thinking, and presentation skills. Students also will gain data analytic skills using the Statistical Package for the Social Science (SPSS) program.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **(PSYC105 AND PSYC200)**

PSYC388 Advanced Research in Measurement
In this advanced seminar on psychological measurement, students will receive individualized mentoring from the instructor on each aspect of the course, including conducting an in-depth literature review on a topic, developing a new measurement instrument, gathering and analyzing pilot data using a variety of advanced statistical methods (e.g., factor analysis, Rasch measurement, item response theory), and writing a professional paper reporting on the results and future directions.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Prereq: **PSYC105**

PSYC389 Advanced Research in Social and Historical Process
Students will become familiar with core theories on the temporal dynamics and cultural diversity of psychological phenomena. Students will work collaboratively on empirical projects that engage and appraise the theories.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC105**

PSYC390 Experimental Investigations into Reading
Experienced readers can easily recognize thousands of words. The mental dictionaries of these readers are efficiently organized to allow rapid and seemingly effortless word recognition. There are still many unanswered questions about the processes involved in visual word recognition. In this class, students will work together with the instructor to design and carry out an experimental investigation relating to reading and word recognition. The semester will provide students with a chance to integrate all aspects of the experimental process: idea formation, experimental design, data collection and analysis, interpretation, write-up, and presentation.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B390**
Prereq: **None**

PSYC392 Behavioral Methods in Affective Neuroscience
This research methods course teaches experimental design and methods in experimental psychopathology using tools to conduct behavioral research in cognitive-affective neuroscience. Course material includes studies from the contemporary psychopathology research literature, with a focus on cognition-emotion interactions. Methods taught will vary by semester and individual research projects and will include statistical procedures (e.g., repeated measures ANOVA), tools for conducting research and analyzing data (e.g., computer programming for stimuli presentation and data processing), and neuroimaging techniques (e.g., event-related potential). There is high expectation that those enrolled in this course will take initiative to extend their learning to areas for which they have specific interests related to the course objectives. Students are also expected to work independently.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B392**
Prereq: **None**

PSYC393 Advanced Research in Cognition and Neuropsychiatric Illness
Students in this advanced undergraduate research course will work in teams on novel and ongoing research studies focused on understanding neurocognitive dysfunction and its treatment in neuropsychiatric illness. Students will be matched to a research project and will participate in different aspects of this research including background literature review, acquiring elementary skills in neurocognitive and symptom assessment, and collecting and/or analyzing extant data using SPSS. Students may also be involved in learning cognitive training procedures.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-PSYC**
Identical With: **NS&B393**
Prereq: **None**

PSYC396 Advanced Research on Culture and Emotion
This course offers an in-depth examination of how culture (e.g., cultural values, norms) influences the emergence, experience, expression, and social consequences of emotions. Students will work in a team on a semester-long research project on culture and emotion (e.g., envy, humiliation, shame, happiness). The course includes advanced theoretical and empirical literature. The readings and research projects will give special attention to how gender intersects with culture in emotional experience and expression. Students will also learn how to adapt methods (e.g., narrative approaches, diary studies, field experiments) and techniques (e.g., adjustment of research measures to specific cultural communities, translation) to study emotions in their cultural context.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **PSYC265 OR PSYC208 OR PSYC365 OR PSYC200 OR QAC201 OR ECON300**

PSYC397 Advanced Research in Clinical Psychology
This advanced research course provides students the opportunity to conduct supervised research in clinical psychology, specifically in the area of suicide and self-injurious behaviors. Depending on the semester and student interests, tasks may include study design, data collection, clinical interviewing, data management, data analysis, and manuscript preparation. Weekly lab meetings will focus on current topics in clinical research and will include student presentations. All students will complete a research paper in journal article format. It is expected that those enrolled in this course will work independently and take initiative to extend their learning in the areas most consistent with their interests. Note: This course is not designed to resolve personal experiences with suicidal thoughts, suicide loss, or mental illness, nor will it address assessing suicide risk among friends or family members.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-PSYC**
Prereq: **None**

PSYC401 Individual Tutorial, Undergraduate

Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

PSYC424 Advanced Research Seminar, Undergraduate
Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**
Grading: **OPT**

PSYC465 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

PSYC466 Education in the Field, Undergraduate
Students must consult with the department and class dean in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation.
Offering: **Host**
Grading: **OPT**

PSYC467 Independent Study, Undergraduate
Credit may be earned for an independent study during a summer or authorized leave of absence provided that (1) plans have been approved in advance, and (2) all specified requirements have been satisfied.
Offering: **Host**
Grading: **OPT**

PSYC468 Independent Study, Undergraduate
Credit may be earned for an independent study during a summer or authorized leave of absence provided that (1) plans have been approved in advance, and (2) all specified requirements have been satisfied.
Offering: **Host**
Grading: **OPT**

PSYC470 Independent Study, Undergradua
Credit may be earned for an independent study during a summer or authorized leave of absence provided that (1) plans have been approved in advance, and (2) all specified requirements have been satisfied.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

PSYC491 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

PSYC492 Teaching Apprentice Tutorial
The teaching apprentice program offers undergraduate students the opportunity to assist in teaching a faculty member's course for academic credit.
Offering: **Host**
Grading: **OPT**

PSYC496 Research Apprentice, Undergraduate
Project to be arranged in consultation with the tutor.
Offering: **Host**
Grading: **Cr/U**

PSYC500 Graduate Pedagogy
The elements of good teaching will be discussed and demonstrated through lectures, practice teaching sessions, and discussions of problems encountered in the actual teaching environment. The staff consists of faculty and experienced graduate students. An integral part of the course is a required one-day workshop before the first day of formal classes.

Training in pedagogy in the first semester of attendance is required for all incoming Wesleyan MA and PhD students who have not already fulfilled this requirement at Wesleyan. BA/MA students are not required to get training in pedagogy but may choose to do so.
Offering: **Crosslisting**
Grading: **Cr/U**
Credits: **0.50**
Gen Ed Area: **None**
Identical With: **ASTR500, CHEM500, BIOL500, E&ES500, MB&B500, MUSC500, PHYS500, MATH500**

Research in the field, normally on thesis project.
Offering: **Host**
Grading: **A-F**

PSYC562 Graduate Field Research
Research in the field, normally on thesis project.
Offering: **Host**
Grading: **OPT**

PSYCHOLOGY MAJOR

MAJOR DESCRIPTION

Psychology is the scientific study of behavior, mind, and brain. We seek to understand how people think and act, both as individuals and in groups. The department has 18 faculty providing expertise in six subareas of study: cognitive, cultural, developmental, social, psychopathology, and neuroscience. Features of the major include foundational courses, training in statistics and research

methods, small advanced seminars, and opportunities to conduct original research.

ADMISSION TO THE MAJOR

Students wishing to declare a major in psychology should prepare as early as possible. Declaration must be done in the second semester during sophomore year. Thus, by the end of the first semester in the sophomore year, students should have completed all requirements for entry into the major.

At the time of application, a student must demonstrate that he or she (1) has taken two full-credit courses in the field of psychology at Wesleyan and received a B or higher in each course; (2) has completed the introductory psychology (or a replacement breadth course that allows an AP or IB credit in place of introductory psychology), research methods, and introductory statistics (these same courses may be used to fulfill the first requirement as well); and (3) has fulfilled the University's stage I General Education Expectations.

MAJOR REQUIREMENTS

Ten full-credit psychology courses and General Education Expectations stages I and II are required for completion of the major. Nine of the 10 credits required for the major must be taken for a grade. Courses in introductory psychology and introductory statistics must be taken for a grade. Required elements of the major are introductory psychology (one credit), an introductory statistics course (one credit), research methods (one credit), one breadth course from each of three areas of psychology (three credits), a specialized course (one credit), and three additional elective credits that can come from any courses and tutorials associated with the major. All courses must be completed by the end of the senior year.

INTRODUCTORY PSYCHOLOGY

PSYC105, a lecture class that provides a broad overview of the field, is required for the major and should be taken in the first or second year. The course must be taken graded if used for the major. One can alternatively transfer a psychology AP or IB credit in place of this course (see the Advanced Placement section). Only one can be counted toward the major.

INTRODUCTORY STATISTICS

A psychological statistics course provides an introduction to data analysis in psychology. PSYC200, PSYC201, or PSYC280 is typically used to fulfill this requirement, but ECON300 and MATH132 are acceptable as well. The course must be taken graded if used for the major. A course in introductory statistics should be taken in the first or second year (some research methods courses require statistics as a prerequisite). Only one can be counted towards the major.

RESEARCH METHODS

A research methods course trains specific skills for evaluating and performing research. Research methods courses are numbered **PSYC202-219**. A 200-level course in research methods should be taken in the first or second year (some research methods require statistics as a prerequisite).

BREADTH REQUIREMENT

Students are expected to develop knowledge across the entire field of psychology. Toward this goal, students must choose a minimum of one course from each of the three columns below. These breadth courses (numbered **PSYC220-279**) can be taken throughout one's four years. When possible, a student should start with breadth courses of particular interest so that he or she can later do more advanced work in these areas. One course from each of the following areas: 1) cognitive/neuroscience; 2) developmental/clinical; 3) social/cultural. Please see our Psychology Majors Manual (https://www.wesleyan.edu/psyc/about/psyc_manual.pdf) for a list of courses by area.

SPECIALIZED

These courses (**PSYC311-399, excluding PSYC395**) aim to ensure that students study at least one subfield of psychology in depth. These courses have a variety of formats, including seminars (**PSYC311-369, excluding PSYC395**) and advanced research labs (**PSYC370-399**), and admission is typically by permission of instructor. A student must take at least one specialized course that deepens the knowledge she or he gained in a breadth course.

ELECTIVES

To reach the 10 course credits necessary for the major, one may count any other courses, tutorials, or teaching apprenticeships offered by the department or creditable to the major. Exceptions include: (A) only one introductory psychology course; (B) one introductory statistics course (PSYC200, QAC201/PSYC280, ECON300, or MATH132); (C) no more than two teaching apprenticeship tutorials; and (D) four tutorials (or six including senior thesis tutorials). The teaching apprenticeship can be repeated with the same course number. For electives, two half-credit courses may be used in place of one full-credit course. Some courses (cross-listed with psychology or hosted in other departments) can be used as electives for the major but fulfill no other requirements and cannot be used for admission to the major. See Department Majors Manual (http://www.wesleyan.edu/psyc/about/major_guides.html) for details.

COURSES FOR NON-MAJORS

PSYC105 is appropriate for non-majors.

GENERAL EDUCATION

Stage I General Education Expectations must be satisfied at the time of admission to the major (six different departments, please refer to WesMaps for Gen Ed Area Dept.). Fulfilling stage II General Education Expectations is required for completion of the major.

STUDENT LEARNING GOALS

The psychology department learning goals are organized by four objectives:

Objective 1: Knowledge Base in Psychology

- To understand and interpret basic theoretical perspectives, scientific principles, and empirical findings in three major content areas of psychology: (1) neuroscience and/or cognition, (2) psychopathology and/or developmental psychology, and (3) social and/or cultural psychology.
- To learn how to formulate research questions and conduct psychological studies.
- To obtain skills in statistical and data analysis techniques, quantitative and qualitative, and apply these techniques to psychological studies.

Objective 2: Scientific Inquiry and Critical Thinking

- To critically assess scientific methodologies in psychology, including:
  - understanding hypothesis formation;
  - applying standardized, reliable, and valid outcome measures;
  - applying sound data-analytic techniques; and
  - appreciating the importance of conducting research with samples that reflect the diversity of human experience, behavior, culture, and populations, including participants of color, women, LGBTQ+ people, individuals with disabilities, and other groups that have historically been underrepresented or marginalized in psychological research.
- Integrate knowledge and methodologies across different kinds of observation in the study of human behavior and mental processes, including social, cognitive, perceptual, and biological processes, as well as influences of culture and gender.
- Identify, understand, and address the ways that psychological research has been and often continues to be rooted in white sociocultural norms.

Objective 3: Ethical and Social Responsibility

- Recognize the necessity for ethical behavior in all aspects of the science and practice of psychology.
- Critically evaluate relations of psychological and behavioral knowledge with social policy, public health, and clinical practice.
- Use psychological knowledge to clarify social disparities, and to promote human well-being and change in a multicultural and global context.
- Endeavor to make psychology more inclusive, including practices that help dismantle systemic and structural forms of racism in psychological science, training, and applied settings.

Objective 4: Communication

- Acquire effective communication skills by disseminating research findings through skill-building in oral expression and expository writing.

STUDY ABROAD

For students in the **class of 2025, 2026, or 2027** planning to study abroad, the Department Advising Coordinator, Prof. Sarah Carney, handles preapproval requests for psychology major transfer credits. You can reach her at scarney_at_wesleyan.edu, 860-685-4976. Her office hours are available on her faculty website. It is highly recommended to obtain preapproval for a course before taking it.

Starting with the class of 2028, the Psychology Department encourages students to learn about cultures outside the United States through study abroad, but courses taken abroad cannot be used to satisfy psychology major requirements.

Study Abroad Course Approval. For students in the **class of 2025, 2026, or 2027**, study abroad courses must be submitted through WesPortal. For students in the class of 2027 and earlier, up to two credits can be transferred from study abroad programs. **Starting with the class of 2028,** study abroad courses will only count toward university credit and not the psychology major.

ADVANCED PLACEMENT

Students who receive a Psychology AP score of 4 or 5 or an IB (International Baccalaureate) score of 6 or 7 and complete a full-credit breadth requirement course **(PSYC220-279)** with a grade of B or better, can receive one credit for the AP/IB score. This credit will replace the introductory course requirement *only* if it appears on the Wesleyan transcript after completing the necessary breadth required course.

AP scores are posted in students' Placement Score and Recommendation link in WesPortal. To have the prerequisite for PSYC105 based on the AP score, students need to have their AP score on file with the University before preregistration begins for the upcoming semester. Once the breadth requirement course is completed, students go through their WesPortal to submit a request to post it on their transcripts. (If the AP is not in the folder, students should contact the Registrar's office.) This will also allow the preregistration system to automatically grant a prerequisite override for courses in which PSYC105 is required. All requests and actions regarding AP score and credit should be done through the Placement Scores and Recommendations link in WesPortal. For IB credit, contact the Dean's Office to have it transferred.

AP/IB credits count as transfer credits. AP/IB credits apply towards oversubscription. The AP/IB credit counts as the one non-graded course allowed towards the major. AP/IB credits may not be used towards major admission.

LANGUAGE REQUIREMENT

No language requirement.

TRANSFER CREDIT

The only credits that can be applied to the psychology major from other schools are credits that the University has authorized from a transfer student's previous full-time institution and that have been approved by the Psychology Department Advising Coordinator, Sarah Carney.

Transfer students should request that the Registrar's Office or their class dean send a copy of their previous institution's transcript to Prof. Carney for review of psychology courses toward the major. For transfer students, a maximum of three transfer credits can be counted towards the major.

For students in the **class of 2025, 2026, or 2027** taking courses at domestic institutions, up to two credits may be transferred towards the major.

Transfer Credit Course Approval. To request transfer credit approval, email the advising coordinator with:

- A course description from the university's catalog
- The syllabus
- The purpose of the course
- The transferable credit amount to Wesleyan
- The class year
- The Permission to Transfer Credit form from the Office of Student Affairs

RELATED PROGRAMS OR CERTIFICATES

Concentrations: Students are not obligated to do a concentration within psychology, and the vast majority of students do not specialize in a particular area. However, we do have two concentrations within the major—in cognitive science and in cultural psychology. These are essentially ways of traversing the major (with a few additional courses) for students who would like to organize their coursework around either of those two themes. Concentrations are not declared at major declaration. Rather, a requirements worksheet for each concentration is to be turned in by early February in the second semester of the

senior year. Students who successfully complete the requirements will receive a departmental certificate indicating completion.

- **Cognitive Science Concentration.** Cognitive science is the interdisciplinary study of mental processes. Many areas of psychology contribute to the study of cognitive science, including cognitive psychology, developmental psychology, and cognitive neuroscience, fields that most typically use scientific research methods to study human mental processes. Beyond psychology, scholars use diverse methods to study mental processes in humans and nonhumans, including fields such as philosophy of mind, neuroscience and behavior, artificial intelligence, linguistics, education, and others. The focus of coursework within our department involves understanding the mental and underlying neural processes involved in areas such as human perception, attention, memory, language, and reasoning; as well as the development of these processes over the life span. Participation in laboratory research is expected. See the Cognitive Science Concentration Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.
- **Cultural Psychology Concentration.** Cultural psychology considers how the vast domain of culture and society is studied by psychologists, how cultural dynamics influence individuals, and how cultural practices define the various psychologies we practice. Many areas within psychology contribute to the study of cultures, including psychological measurement; social psychology, both experimental and qualitative; clinical psychology; developmental psychology; historical psychology; and cultural psychology. Beyond psychology, scholars in allied human sciences contribute to better understanding the dynamic relation of culture and psychology. Methods and theories abound in culture and psychology. Some focus on comparative research, others on ways of bringing the presence of underrepresented populations into scholarly projects, and some examine socio-political differences both between and within societies. While investigating social structures such as race, ethnicity, religion, gender, sexuality, and class is often central to works in this area, also of importance is understanding how such forces come to manifest themselves within the field of psychology and in our collective psychologies. See the Cultural Psychology Concentration Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.

BA/MA PROGRAM

The psychology department offers the BA/MA degree program. Wesleyan non-psychology students can apply to the program to work under the mentorship of a psychology faculty. For more information, please visit the Office of Graduate Student Service (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html)s (http://www.wesleyan.edu/grad/).

HONORS

By the beginning of their spring semester junior year, psychology majors who have earned at least a B+ average in all psychology courses and at least a B average in all non-psychology courses are eligible to pursue honors in psychology by writing a thesis. A student must have a faculty advisor to write a thesis. An advisor should be secured by spring of the junior year through discussion with appropriate faculty. Honors will be awarded only if both the advisor and a second faculty reader evaluate the thesis worthy of honors.

CAPSTONE EXPERIENCE

Students interested in research opportunities are encouraged to develop statistics and research methods skills as early as possible, to develop broad knowledge in the research area of interest, and to then apply for permission of the instructor to enroll in an advanced research seminar. Speaking with individual faculty members about research opportunities that might be available in their labs is also appropriate.

MASTER OF ARTS IN PSYCHOLOGY

Psychology offers the Master of Arts degree via the BA/MA program. Upon successful completion of the BA degree requirements, students become graduate students for two semesters and complete the MA. There is no stand-alone MA program in Psychology; the combined BA/MA program is only available to Wesleyan students.

The BA/MA program involves a close working relationship between a student and a faculty advisor who will supervise the research through the conclusion of the MA degree. Students have to be accepted by a faculty mentor before applying to the program. Non-psychology students can apply to the program to work under the mentorship of a psychology faculty, but need to demonstrate preparation for advanced study and research in psychology.

Courses

The MA in Psychology requires a minimum of 6 credits above the 32 credits needed for the BA. These courses include:

- PSYC 549 & 550: Thesis Research/Advanced Research Seminar (2 credits; one credit per term of second year).
- Four credits for advanced coursework: Any other graduate tutorials (PSYC 501/502, 503/504, 511/512; these can be taken during the undergraduate or graduate year), undergraduate tutorials taken for graduate credit (specifically, 401/402, 411/412, or 421/422; these can be taken only during the undergraduate year), undergraduate non-tutorial courses in any department (usually 200- or 300-level courses) taken for graduate credit, or graduate seminars. No more than *two* of these four credits may come from tutorials.
- Note that teaching assistantships of any kind may *not* be used for graduate credit.

In order for any course to be counted towards the graduate degree, the following conditions must be met.

1. It must not have been counted towards the undergraduate Psychology major or minor as declared on the Major Certification Form or towards any Wesleyan undergraduate graduation requirements.
2. It must be taken for graduate credit.
3. A grade of a B- or better must be earned in the course. Courses taken Pass/Fail cannot be counted towards the degree.
4. The course needs to be reasonably related to the MA thesis student's research. If the course is not directly related to the research project, it needs to make a well-justified contribution to a MA course of study.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

With the approval of the faculty mentor and BA/MA committee, students can apply extra credits from the BA years to the MA degree.

LANGUAGE REQUIREMENT

No language requirement.

PROGRESS AND QUALIFYING EXAMS

The faculty mentor and psychology BA/MA committee review student progress in courses and thesis research.

TEACHING

No teaching required.

RESEARCH

Students are expected to spend at least 20 hours per week engaged in research. The research experience culminates with an MA thesis demonstrating a student's original contribution to knowledge in the field. Many students in the BA/MA program choose not to write an undergraduate honors thesis because they will be writing a more substantial MA thesis.

Ethics approval is required prior to initiating data collection for your research. Faculty mentors should be consulted about preparing the ethics proposal. If your proposed research poses minimal or no risk to participants, does not involve vulnerable populations, or does not include the collection of sensitive data, then you may submit a protocol for your proposed research to the Psychology Ethics Committee (https://www.wesleyan.edu/psyc/resources/) (via Catherine Race, administrative assistant). If you plan to conduct higher risk research, study vulnerable populations, collect sensitive data, or if your research involves other complications, then you are required to submit your protocol to the University IRB (https://www.wesleyan.edu/acaf/support/reviewboard.html).

THESIS AND DEFENSE

Work on the MA thesis should progress as follows under the guidance of the faculty advisor.

Developing a proposal and establishing a committee. An MA thesis committee should be established and must include the advisor and two or more additional faculty. Both the advisor and at least one of the additional faculty members must be in Psychology. The student should consult with the faculty mentor about possible committee members and guidelines for the proposal. The Psychology Department requires that students submit a proposal to the committee and meet with the committee at the beginning of the MA process.

Students are encouraged to initiate this process as soon as they have committed to the MA program; some students complete the proposal approval process in May or June, depending on the availability of the committee members. The approval process must be completed by the end of September; the deadline is for all students, including those starting their MA in the spring. By the first week of the fall semester, the student must get confirmation from committee members for a date for the committee to discuss and approve the thesis proposal (this can be done using an emailed calendar invitation once a satisfactory date is found). The committee meeting and approval of the thesis proposal should be completed by the end of September. The proposal must be sent to committee members at least two weeks before the meeting date. Student should take the Thesis Proposal Approval Form to the thesis proposal meeting and return the signed form along with a copy of the proposal to the faculty advisor immediately afterward.

Summer research. Many students find it advantageous to use the summertime to make progress on literature reviews and research. Funding is available for students who receive financial aid for the MA program. Students not on financial aid should discuss expectations and funding opportunities for summer research with their faculty mentor.

The MA year. During the MA year, the student must complete the thesis. Unlike most other rules and requirements of the program, the rules governing the completion of an MA thesis are largely determined by the University's Office of Graduate Student Services (OGSS); all of the relevant forms are included on the Graduation Requirements – MA website. All forms are electronic and accessible through WesPortal/Academics/Graduate Exit Forms. The electronic forms are automatically routed to the pertinent faculty members for their approval.

Forms required by the Office of Graduate Student Services related to completion of the thesis are available online – see Graduation Requirements-MA: at https://www.wesleyan.edu/grad/academics/graduationrequirementsma.html

The **final copy** of the written thesis should be given to committee members by the student at least two weeks before the oral defense date; the specific timing is up to the student's committee. Note that the OGSS has a number of formatting guidelines for preparation of the thesis that are available on the Graduation Requirements – MA website.

Oral Defense. The oral defense/examination must be held during the oral exam period designated by the OGSS. This period is usually 3.5 weeks long and begins in mid-April and ends the first week of May. The specific dates for the beginning and end of the oral exam period are posted on the University's Academic Calendar as well as in the MA exit packet. Corrections/edits from committee members must be completed before the scheduled exit interview.

The exact format of the defense varies by individual faculty in the Psychology Department. You and your advisor should decide a format that works for you and your research. The basic flow is:

You give a research presentation on your thesis.

- The length (somewhere between 15 and 45 minutes) is negotiable.
- Whether it is open (to your friends, faculty, public) or closed (just your committee) is also negotiable.
- There is an open question period after the talk.
- You leave the room while the committee deliberates.
- You return to the room to receive your grade, feedback, and (assuming things have gone as planned) congratulations.
- Your committee will let you know what revisions or corrections MUST BE MADE in order for the thesis to be complete and ready for submission.

You will receive separate grades for your written thesis and oral defense. These do not go on your transcript. They do stay in your file. You may decide, at some point in the future, to authorize someone (e.g., another graduate program) to access your grade.

ADDITIONAL INFORMATION

To apply to the program, please go to the Office of Graduate Student Services (OGSS) website. (https://admission.wesleyan.edu/apply/)

For additional information and all department forms, please visit Psychology Department BA/MA Guide https://www.wesleyan.edu/psyc/about/bama_guides.html

QUANTITATIVE ANALYSIS CENTER

The Quantitative Analysis Center (QAC) coordinates support for quantitative analysis across the curriculum and provides an institutional framework for collaboration across departments and disciplines in the area of data analysis. Through its programs, it facilitates the integration of quantitative teaching and research activities and provides experiential learning opportunities in statistical computing across academic fields and disciplines. The Center contributes to the development of digital and computational studies initiatives, sponsors data analysis labs, and oversees the Data Analysis Minor (p. 1121) and the Applied Data Science Certificate (p. 1130) programs.

AFFILIATED FACULTY

Sebastian Zimmeck
LLM, University of California, Berkeley; PHD, University of Kiel; MS, Columbia University; PHD, Columbia University
Associate Professor of Computer Science; Fellow in Applied Computational Data Analysis

CHAIR

Emmanuel Kaparakis
Director, Hazel Quantitative Analysis Center; Adjunct Assistant Professor of Quantitative Analysis; Director of Centers for Advanced Computing

EMERITI

Robert Ira Kabacoff
BA, University of Connecticut; PHD, University of Missouri, St. Louis
Professor of the Practice in Quantitative Analysis, Emeritus

FACULTY

Maryam Gooyabadi
PhD, University of California-Irvine
Assistant Professor of the Practice in Quantitative Analysis

Emmanuel Kaparakis
Director, Hazel Quantitative Analysis Center; Adjunct Assistant Professor of Quantitative Analysis; Director of Centers for Advanced Computing

Antonio Laverghetta
BS, University of South Florida; MS, University of South Florida; PhD, University of South Florida
Assistant Professor of the Practice in Quantitative Analysis

Valerie Nazzaro
BA, University of Connecticut; MA, University of Connecticut; MS, University of Connecticut; PHD, University of Connecticut
Professor of the Practice in Quantitative Analysis; Professor of the Practice in Quantitative Analysis

Pavel V Oleinikov
Associate Professor of the Practice in Quantitative Analysis

Jennifer S. Rose
BA, University of Rhode Island; MA, University of Rhode Island; PHD, University of Rhode Island
Director, Institutional Review Board; Professor of the Practice in Quantitative Analysis; Professor of the Practice, Education Studies

Sanaz Vajedian
BS, Amirkabir University of Technology; MS, University of Tehran; PhD, University of Tehran
Assistant Professor of the Practice in Quantitative Analysis; Assistant Professor of the Practice in Earth and Environmental Sciences

VISITING FACULTY

Yujin Kim
BA, Chung-Ang University; MA, Seoul National University; PhD, The University of Texas at Austin
Postdoctoral Researcher in Quantitative Analysis

Jason Platt Zolov
BA, Wesleyan University; MBA, Columbia University
Visiting Professor of Quantitative Analysis

ADVISORY BOARD

Francis Starr, *Professor of Physics,* ***Chair***
Erika Franklin Fowler, *Associate Professor of Government*
Daniel Krizanc, *Professor of Computer Science*
Manolis Kaparakis, *Director of Centers for Advanced Computing,* ***ex officio***
David Baird, *Vice President for Information Technology and CIO*
Marc Eisner, *Professor of Government and Dean of the Social Science*
Diane Klare, *Head of Research Services, Olin Memorial Library*

- Data Analysis Minor (p. 1121)

QAC133F Data-fy That: Theory and Practice of Digital History (FYS)
History is not simple. It is not the past, but a way of talking about the past with a unique claim to authority. For this reason no imperialism ever fails to claim a history, while at the same time every revolution rewrites it. History is an activity, it is a practice. Whether in the analog world of pen and paper or in the digital metaverse, history is its data. To practice history is to select an object of study and to "data-fy" it. In this course you will be empowered to become not only a reader of history, but a creator of historical data, a scholar actively seizing the current digital history moment as an occasion to break down history's myths

through the activities of research, datafication, and analysis. We will critique the past as it has been conceived by upending archives through the construction of relational databases: a quiet revolution defying the colonizer and empowering the colonized. History can always be claimed by the powerless. Everywhere, and out of anything, we seek to democratize the historical present. Join the revenge of the archive.

Identical With: **COL133F**
Prereq: **None**

QAC150 Working with SQL and Databases
Many of you have heard of studies that analyzed Twitter messages and predicted some phenomena--spread of flu in New York, consumer confidence index, and so on. Behind the success of these studies are the systems for data storage and retrieval. A regular user can access only the latest nine days of tweets. Any study that aspires to analyze longer periods has to deal with the issues of storing the observations and retrieving them later for analysis. The goal of this course is to show you how to do that--how to connect to various types of databases and how to retrieve and update your data. We will start with relational databases; learn SQL, the language used to query and update the data; and explore the latest developments in the database field--Hadoop and MapReduce.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC151 Working with Excel and VBA
Many of us know Excel for its spreadsheets: a quick and easy way to store some information, share it, and maybe make some charts. The goal of this course is to show you the more advanced features of Excel. We will write code in Visual Basic for Applications (VBA), learn how to import data from external databases and Web-based resources, create custom menus to interact with a user, and examine how Excel can be used in business decision making.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC153 Working with Mathematica
This course introduces students to Mathematica's computing environment and all the basic features of the software. Starting with basic operations and computations, students will be introduced to graphics, visualization, and mathematical computations and will learn through a series of hands-on lab exercises to use the Mathematica programming language for modeling and data analysis. While there are no prerequisites, a basic familiarity with computing tools, an understanding of descriptive statistics, a basic calculus background, and a willingness to make mistakes and learn from them is expected.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC**
Prereq: **None**

QAC154 Working with MATLAB
The content of this course focuses on learning the basics of utilizing MATLAB to program and solve basic problems. We will operate on the assumption that students have no prior experience with programming. The goals of the course will be to develop algorithmic thinking, problem solving, and quantitative skills within the context of MATLAB. The course will cover essential mechanics of programming, many of which are common to all programming languages, as well as some selected advanced topics. With the expectation that students with a broad background with various motivating factors lead them to enroll in the course, students will be invited to apply the skills learned in the course to completing the culminating final project related to their specific interests.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Identical With: **IDEA154, CIS154**
Prereq: **None**

QAC155 Working with Python
This course introduces students to programming, data management, and analysis with Python. Through a series of hands-on lab exercises, students learn to work with a variety of data using a high-level programming language and associated libraries to effectively manage and analyze their data. The emphasis is on data exploration and visualization and includes work with unstructured data generated by social media interactions. While there are no prerequisites, a basic familiarity with computing tools, an understanding of descriptive statistics, and a willingness to make mistakes and learn from them is expected.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC156 Working with R
This course introduces students to programming, data management, and analysis with R. Through a series of hands-on lab exercises, students learn to work with a variety of data formats and use R's programming language and associated packages to effectively manage and analyze their data, with an emphasis on data exploration and visualization. While there are no prerequisites, a basic familiarity with computing tools, an understanding of descriptive statistics, and a willingness to make mistakes and learn from them is expected.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC157 Working with SAS
This course introduces students to programming, data management, and analysis with SAS. Through a series of hands-on lab exercises, students learn to work with a variety of data formats and use SAS's programming capabilities to effectively manage and analyze their data, with an emphasis on data exploration and visualization. While there are no prerequisites, a basic familiarity with computing tools, an understanding of descriptive statistics, and a willingness to make mistakes and learn from them is expected.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC158 Working with Stata
This course introduces students to programming, data management, and analysis with Stata. Through a series of hands-on lab exercises, students learn to work with a variety of data formats and use Stata's programming capabilities to effectively manage and analyze their data, with an emphasis on data exploration and visualization. While there are no prerequisites, a basic familiarity with computing tools, an understanding of descriptive statistics, and a willingness to make mistakes and learn from them is expected.
Offering: **Host**

Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC159 Working with High Performance Computing (HPC) Tools
This is a cross-disciplinary course designed to introduce students to UNIX and learn how to perform calculations/analysis in a high performance computing (HPC) environment. We assume students have a basic understanding of computing, but no prior experience with working with UNIX or HPC is expected. All students will gain experience working on Wesleyan's High Performance Computing cluster. We will learn to work in a UNIX environment, how to write BASH scripts, and how to schedule and complete our work in a multiuser HPC environment. In the second part of the course, we shift the focus to parallel computing. We introduce CUDA devices used for parallel computing, and work to convert a serial program into its parallel version. Students will develop and implement a project of their choosing, which may involve UNIX and HPC combined with any area of interest. Anticipating the course will be taken by students studying a broad range of disciplines brought together by a common interest in HPC, individualized support and feedback will be provided at several checkpoints throughout the course. Students will gain insight into the many ways UNIX and HPC are crossing traditional disciplinary boundaries to advance research in a variety of fields, expanding the possibilities in our data-driven era.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **SBS-QAC**
Prereq: **COMP112**

QAC171 Business Modeling with Excel
Broadly speaking, this course is about evidence-based decision-making. It is intended for students with a background in Excel and VBA who want to learn how to use spreadsheets to develop business and financial models and communicate the results. Model building is different from the usual Excel skills as it focuses more on the analytical/mathematical aspects than on data wrangling and requires some basic familiarity with economic/financial models and data analysis tools. We will start with problems where the inputs are deterministic and we must decide on optimal allocation of resources. We will then advance to problems with stochastic inputs and explore solutions either through simulation or through optimization of goal functions. Through this work we will develop the appropriate programming skills (e.g., VBA) and learn to effectively use Excel to implement our models and display the results of our analyses.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **QAC151 AND ECON300**

QAC190F Big Data, Big Promises, Big Problems? (FYS)
This seminar explores the transformation of the modern data landscape from its pre-datafication beginnings in the early 90s to the contemporary age of "big data." Throughout this transformation, various sectors of society, including healthcare, education, business, urban planning, governance, sustainability, media, science, and art, have experienced unprecedented opportunities for growth and advancement. However, alongside these opportunities, significant challenges have arisen, including privacy concerns, fairness and bias issues, data governance, and model interpretability, all of which have far-reaching implications. The seminar provides a systematic exploration of the characteristics of the "big data" landscape, its impact on the production and distribution of goods and services, and its "data ethics" implications. We will explore the promises, and problems, of our data-driven era, paving the way for informed discussions and critical thinking in our fields of study.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Prereq: **None**

QAC201 Applied Data Analysis
In this project-based course, you will have the opportunity to answer questions that you feel passionately about through independent research based on existing data. You will develop skills in generating testable hypotheses, conducting a literature review, preparing data for analysis, conducting descriptive and inferential statistical analyses, and presenting research findings. The course offers one-on-one support, ample opportunities to work with other students, and training in the skills required to complete a project of your own design. These skills will prepare you to work in many different research labs across the University that collect empirical data. It is also an opportunity to fulfill an important requirement in several different majors.
Offering: **Host**
Grading: **A-F**

Prereq: **None**

QAC203 Hollywood and Big Data
Taught by a media research executive with a long industry experience this course is designed to provide students with an introduction and understanding of how the media industry is using data to make decisions that shape the art landscape of our times. Data around consumer behavior--what, how and why people are watching--has exploded recently and is extensively used in making decisions about what TV shows and movies to produce, how to promote them and how to make them. The course will explore how the media industry quantifies different kinds of content, the ways in which people watch and pay for that content, and how value is attributed across the media landscape. Students will be introduced to essential "media metrics" (e.g. viewership, box office, engagement) and learn to evaluate different data sets for their integrity and representative insights. Visiting media executives will discuss how data informs their jobs ("evidence-based decision making"). Assignments will include written briefs based on different data sets and a final project presentation highlighting skills in analyzing and presenting insights extracted from media research data. By the end of this course, students will be familiar with key decision-making tools in the media industry and be able to analyze and understand the impact on media output

QAC204 Visualizing Firearms History: An Applied Quantitative and Archival Approach for a Project-Based Expl

This project-based course provides a unique cross-disciplinary opportunity to study important historical questions surrounding firearms. Combining quantitative methodology in data science with qualitative research methods in history, students will answer questions they are passionate about based on existing datasets. Students will read, discuss, and write responses to the latest historical scholarship on the technological development of guns, firearms in media, gun violence statistics, and advertisements. Students will choose one of four datasets to research and analyze. These include data sets related to firearms patents since the 1820s, firearms in media (film, television, anime, games), firearms-related deaths, and advertisements of firearms. Students will develop skills in hypothesis testing and inferential statistical analysis alongside qualitative research methods used in history. The course offers one-on-one support and training in the skills required to complete a team-based final project. The final project will be hybrid between a research paper and also an exhibit (e.g., film, website, media, art installation). Students will present their work at the center's third annual undergraduate research conference (Spring 2025). Select students can apply to continue on as QAC summer apprentices and Baker Collabria Fellows in Data Analysis, and as CSGS NEH-funded summer history research fellows and as History thesis researchers.

Gen Ed Area: **SBS-HIST**
Identical With: **HIST278, CHUM278**
Prereq: **None**

QAC205Z Building a Relational Database: Introduction to Historical Research Data

This course empowers students to become not only readers of history but creators of historical data, new scholars actively seizing the current digital history moment as an occasion to break down history's myths through the activities of research, datafication, and analysis. The digital age -- even the advent of GenAI -- has changed nothing fundamental about the practice of historical research. But it could: the digital age is an opportunity for scholars to act as agents of change. This winter course focuses on the role of data in existing historical practices. Our series of focused workshops and targeted research investigations will enact and enable new methods and practices of history. Targeted readings address current theories and methods for working with the range of historical source materials: moth-eaten archives, curated library collections, digitizations, and digital-born objects. We will then get right to work on practices and your own research projects. Students will set up an archival relational database through the web-based tool Nodegoat. They will finish the session by curating their own historical archive, which they will codify as a relational database, and then explore development through further research or publication.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-COL**
Identical With: **COL375Z, HIST275Z**
Prereq: **None**

QAC211 Digging the Digital Era: A Data Science Primer

The course introduces students to the practice of what has come to be known as data science. Using a multidisciplinary approach and data from a variety of sources that cover any aspect of everyday life--from credit card transactions to social media interactions and Web searches--data scientists try to analyze and predict events and behavior. The first part of the course defines the area and introduces basic concepts, tools, and emerging applications that will include a broad introduction to machine learning tools and algorithms. It will include a brief mathematical background and introduction to modeling across disciplines. In part two of the course, we work on data acquisition and management and introduce appropriate programming and data management tools. In part three, we concentrate on basic analytical and visualization techniques as we explore and understand the emerging patterns. Using a learning-by-doing approach in a computing laboratory, students will learn how to write computer programs in R to access, organize, and analyze data through a series of small projects designed to illustrate the application of the techniques we develop for a variety of data sets and situations. The class will include hot topics like big data, privacy, and ethical issues around data, to name a few. Students will also engage in a semester-long project where they will address their own research questions working with "messy data."
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC216 Introduction to Survey Design and Analysis

Survey data provide valuable information for the study of public opinion and behavior, and they are commonly used in several fields such as political science, public policy, economics, education and psychology. This course is an introduction to survey design, current implementation methods, and survey data analysis. By the end of the course, students will be able to design and conduct their own survey research projects. The class meetings include lectures, discussions, hands-on exercises, and work on a term project.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Prereq: **None**

QAC220 Applied Vectors and Matrices

An introduction to the mathematics of matrices and their application in traditional and modern methods of data analysis and scientific computing. The course promotes an interdisciplinary approach, and topics may include: - Coordinate transformations in data visualization, iterated patterns in mosaics and art - Use of least squares approach with linear solvers for regression, as well as image alignment - PCA-decomposition of computer images (the "eigenfaces" example) - Matrix decomposition methods: Singular Value Decomposition and Non-negative Matrix Factorization - Dimensionality reduction and data compression - Matrix operations in deep learning. - ChatGPT and word vector embeddings Students will use R for most of the computational tasks, and Mathematica for symbolic math and deep learning.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Prereq: **MATH121**

QAC231 Introduction to (Geo)Spatial Data Analysis and Visualization

Geographic information systems (GIS) provide researchers, policy makers, and citizens with a powerful analytical framework for spatial pattern recognition, decision making, and data exploration. This course is designed to introduce social science and humanities students to spatial thinking through the collection, management, analysis, and visualization of geospatial data using both graphical and command line-based spatial analysis platforms. Classes will consist of short lectures, hands-on training, group projects, critiques, and class discussions. Weekly readings and assignments will build skills and reinforce concepts introduced in class. The course will culminate in a group project developed through student-driven inquiry and including geocomputation. Readings across multiple disciplines will allow students to comprehend the breadth of applied geospatial thinking in today's research arena. The course is part of Wesleyan's Digital and Computational Knowledge Initiative and is aimed at students with limited or no prior GIS experience.

Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC232Z Mapping the Pandemic
The COVID-19 pandemic has altered the global community's daily relationship with space and movement, both at a hyperlocal scale of social distancing to a global scale of disease spread. Spatiotemporal visualizations in the form of maps and apps have allowed us to watch the worldwide spread of COVID-19 and keep tabs on local case counts in our own spaces. Geographic information systems (GIS) provide citizens, researchers, health care providers, and policy makers with a powerful analytical framework for visualization, data exploration, spatial pattern recognition, response planning, and decision making within our life in the time of COVID-19. This course is designed to develop spatial thinking and visualization skills relevant to COVID-19. Students will look at (and critically evaluate) existing maps and apps related to the current pandemic, create their own maps and apps, and critically evaluate their classmates' maps and apps. Class meetings will consist of case study lectures/discussions, instructor-led skill-building workshops, studio work sessions, and presentation/critique sessions. Spatial data collection, management, analysis, and visualization will occur within a cloud-based GIS (ArcGIS Online). Readings prior to the first class will establish a baseline for student comprehension of the breadth of applied geospatial thinking in today's research arena. The course is aimed at students with limited or no prior GIS experience.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-EES**
Identical With: **E&ES271Z**
Prereq: **None**

QAC234 Working with Remote Sensing Data with Applications in Social Science Research
The last decade has seen an increase in application of remote sensing data in social science research: nighttime light data is used to support research into economic development and urbanization, measurements of pollutants serve as a proxy for economic activity, digital elevation models are used by historians to reconstruct most probable locations of ancient roadways, and archeologists use image analysis to discover ancient sites. This course will introduce students to the universe of publicly available remote sensing data products and will teach the students how to work with the remote sensing data (e.g., using Google's Earth Engine and its scripting platform). Topics covered in the course include the manipulation of geometric features, making of maps and animations of environmental variables, generation of time series for geographic regions, and operations on aerial photography.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **QAC155 OR QAC156 OR COMP112 OR COMP114**

QAC239 Proseminar: Machine Learning Methods for Audio and Video Analysis
In this course, students are introduced to machine learning techniques to analyze image, audio, and video data. The course is organized in three parts, and in each part we will first introduce how these nontraditional data can be converted into appropriate (mathematical) objects suitable for computer processing, and, particularly, for the application of machine learning techniques. Students then will learn and work with a number of machine learning algorithms and deep learning methods that are effective for image and audio analysis. We will also explore major applications of these techniques such as object detection, face recognition, image classification, audio classification, speaker detection, and speech recognition.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Identical With: **CIS239**
Prereq: **COMP112 OR QAC155 OR QAC156 OR COMP112Z**

QAC241 Introduction to Network Analysis
This is an interdisciplinary hands-on course examining the application of network analysis in various fields. It will introduce students to the formalism of networks, software for network analysis, and applications from a range of disciplines (history, sociology, public health, business, political science). We will review the main concepts in network analysis and learn how to use the software (e.g., network analysis and GIS libraries in R) and will work through practice problems involving data from several sources (Twitter, Facebook, airlines, medical innovation, historical data). Upon completion of the course, students will be able to conduct independent research in their fields using network analysis tools.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Identical With: **CIS241**
Prereq: **None**

QAC250 An Introduction to Data Journalism
This course is designed to familiarize students with the basic principles and tools of data journalism and to provide a wider understanding of the role of basic data analysis in society. To that end, the course will focus on developing a solid familiarity with basic data analysis and visualization software. It will also focus on developing the tools of journalism: retrieving public data, interviewing people and databases, and the basic principles of journalistic writing. By the end of the course, students will be able to analyze data, identify stories within the data, and create a news story complete with data visualizations of publishable quality--a skill transferable to many fields and disciplines. Both online and traditional print platforms will be covered.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Identical With: **CSPL250, WRCT250**
Prereq: **None**

QAC251 Data Visualization: An Introduction
This course will introduce students to the principles and tools necessary to present quantitative information in a visual way. While tables and graphs are widely used in our daily lives, it takes skill to deconstruct what story is being told. It also takes a perceptive eye to know when information is being misrepresented with particular graphics. The main goals of the course are for students to learn how to present information efficiently and accurately so that we enhance our understanding of complex quantitative information and to become proficient with data visualization tools. Beginning with basic graphing tools, we will work our way up to constructing map visualizations and interactive graphs. This course will require a substantial amount of computation in R. No prior programming experience is necessary, but learning does require willingness and time.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Identical With: **CIS251**
Prereq: **None**

QAC251Z Data Visualization: An Introduction
This course will introduce students to the principles and tools necessary to present quantitative information in a visual way. While tables and graphs are widely used in our daily lives, it takes skill to deconstruct what story is being told. It also takes a perceptive eye to know when information is being misrepresented with particular graphics. The main goals of the course are for students to learn how to present information efficiently and accurately so that we enhance our understanding of complex quantitative information, and to become proficient with data visualization tools. Beginning with basic graphing tools, we will work our way up to constructing map visualizations and interactive graphs. This course will require a substantial amount of computation in R. No prior programming experience is necessary, but learning does require willingness and time.

QAC260 Special Topics in Computer Science
This course is designed for nonmajors who wish to pursue some topic in computer science beyond introduction to programming. Topics will vary according to the instructor.
Offering: **Crosslisting**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-MATH**
Identical With: **COMP260**
Prereq: **COMP112**

QAC300 Data Science I: Statistical Foundations
The course bridges classical statistical theory with modern data science applications, providing students with rigorous mathematical foundations and practical computational skills. Topics progress from probability theory and hypothesis testing to predictive modeling, regularization, and overview of machine learning methods. We emphasize the transition from traditional inference to prediction-oriented data science, covering bootstrap methods, robust inference, linear and logistic regression, model selection, and ensemble methods. Ethical considerations in algorithmic bias and responsible AI are integrated throughout. Extensive hands-on work includes computational assignments with emphasis on reproducible research practices.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Prereq: **QAC201 OR QAC201Z OR QAC211 OR BIOL242 OR MATH132 OR PSYC200**

QAC301 Statistics Education Practicum
This course will serve students who are pursuing their undergraduate degree in a variety of disciplines but who want to expand their skills in statistics and applied data analysis in preparation for a future career. It will also serve students who are currently pursuing independent, quantitative research at the undergraduate or graduate level. The course will center on personal interaction in support of introductory statistics students. Active peer mentoring and supporting experiences will be based on the theory that good teachers (and learners) of statistics need to be developed, as opposed to being trained. In line with this theory, this hands-on course will provide an intensive opportunity to build specific knowledge regarding teaching and learning in the area of data-driven statistical inquiry. Students enrolled in this course will (1) attend statistics-mentoring development sessions (one hour per week); (2) provide one-on-one support for introductory statistics students during workshop-oriented class sessions (three hours per week); (3) lead small group-mentored meetings for five to six statistics students (one hour per week); and (4) monitor and critique progress on applied data assignments (one hour per week). In addition to these hands-on experiences, students will pursue a project aimed at furthering the field of statistics education. Projects may take the form of course evaluation, content/conceptual curriculum development, or translation of educational statistical software materials. Similar to QAC380 (Introduction to Statistical Consulting), this course is aimed at providing students with an opportunity to enhance their statistical skills beyond the introductory level.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **None**

QAC302 Teaching Fellowship for National Education Leaders
This course is for students to serve as Teaching Fellows for a course with the National Education Opportunity Network (neonopportunity.org), which provides college courses to Title I and Title I-eligible high schools nationwide. Please inquire with the instructor for information on course topics available this semester. Students will: -Host weekly 45-minute synchronous discussion sessions with 15-25 high school scholars via Zoom to enhance their engagement with course content, expose them to college-level seminar-style discussions, and help improve their analytical and metacognitive skills. -Evaluate and provide feedback on student work. Specific time assignments for sessions with high school students and required Teaching Fellow group meetings will be scheduled at the same time every week based on availability. This course counts for 10 hours toward the 20-hour practicum requirement in the EDST major or minor. The other 10 hours can be completed by repeating this class or through an independent practicum.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-EDST**
Identical With: **EDST405, CSPL305, PHIL208**
Prereq: **None**

QAC305 Exploratory Data Analysis and Pattern Discovery
The course introduces the theory and practice of exploring, describing, summarizing and detecting patterns of interest in complex datasets. Various approaches including aggregation, clustering, data visualization, and latent variable modeling will be employed. This course will give students an opportunity to develop computational skills (primarily in R) and to learn how to discover and interpret relationships in unstructured observational data. The applications and examples for this course will be broad and relevant to many fields of study.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **QAC211 OR ECON300 OR GOVT367**

QAC307 Experimental Design and Causal Inference
The course provides the foundations and statistical thinking to design, collect, and analyze experimental data and introduces appropriate techniques for observational data when causal inference is the objective of the analysis. Throughout the course, we introduce and compare various experimental designs. We will discuss sample size and power calculations as well as the advantages and disadvantages of each of these designs. With observational data, we will explore difference-in-difference models, propensity score matching techniques, regression discontinuity designs. This course gives students the opportunity to develop further their computational skills as we learn how to describe, interpret, control, and draw inferences from experimental and observational data.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**

Identical With: **CIS307**
Prereq: **QAC201 OR PSYC200 OR MATH132 OR ECON300**

QAC311 Longitudinal Data Analysis
Work across different fields, from medicine and public health to social sciences and education, often involves the collection and analysis of longitudinal data--combination of cross-sectional and time series (repeated measures for the unit of observation) data. This rich data structure provides opportunities to explore questions that could not be addressed with simpler data sets, but at the same time requires special considerations because we are analyzing observations that are not independent. The course introduces students to appropriate graphical exploration of the data and the specification and estimation of fixed and random-effects models. It also develops the basic framework for difference-in-differences models and explores their applications.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **[QAC201 or GOVT201 or PSYC280 or NS&B280] OR QAC380 OR ECON303 OR GOVT367 OR PSYC200**

QAC312 Hierarchical Linear Models
Research questions cannot always be explored by collecting data with independent observations. Sometimes this is due to limitations or constraints on the data collection method, and other times our questions pertain to data that are measured at both the individual and group levels (e.g., patients from different hospitals or students from different schools that belong to different districts). Hierarchical linear models (HLM), also called multi-level or mixed models, explicitly model such nested data structures and address analytical and estimation issues not accounted within the framework of the classical linear model. Using data sets from different fields of study (e.g., education, medicine, and health) students will learn to formulate multilevel research questions, estimate and critically examine HLM applications.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **[QAC201 or GOVT201 or PSYC280 or NS&B280] OR QAC380 OR ECON303 OR GOVT367 OR PSYC200**

QAC313 Latent Variable Analysis
The course is an introduction to latent variable modeling. Students will learn the fundamental statistical methods for structural equation modeling (SEM), including principal component analysis, confirmatory factor analysis, path analysis, and SEM for both quantitative and binary observed variables. In addition, students will learn the basic components of SEM, such as assumptions, testing model fit and indices of fit, testing competing models, estimation methods, and issues in model identification. Students will learn to develop structural equation models using AMOS, R, and/or Mplus statistical software.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **[QAC201 or GOVT201 or PSYC280 or NS&B280] OR QAC380 OR ECON303 OR GOVT367 OR PSYC200**

QAC314 Survival Analysis
Survival or event history analysis focuses on modeling and analysis of time-to-event data--such as onset of a disease; duration of a strike; failure of a biological, physical, or social system; or recidivism). This course introduces students to survival and hazard functions, the analysis of censored data using parametric and non-parametric estimation methods; compares survival curves for different groups; and discusses competing risk models. The emphasis is on the applications of the different methods with the objective of broadening computational skills in R and/or SAS and to reinforce statistical writing and communication. These skills will be applied to a variety of problems in political science, public health, engineering, and medicine.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **[QAC201 or GOVT201 or PSYC280 or NS&B280] OR QAC380 OR ECON303 OR GOVT367 OR PSYC200**

QAC320 Applied Time Series Analysis
Understanding and modeling the past allows us to extract insights in our areas of study that are not possible to extract without time series data. This course is an introduction to the theory and practice of time series analysis. We will learn to identify and model the components of a time series process, and to properly model relationships among variables over time. By emphasizing the practical applications of time series analysis, the course will give students an opportunity to further develop computational skills and learn how to develop forecasting models, and to make inference using time series data.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **SBS-QAC**
Prereq: **ECON300 OR QAC201**

QAC323 Bayesian Data Analysis: A Primer
This course introduces the applied principles of Bayesian statistical analysis. The Bayesian paradigm is particularly appealing in research where prior research and historical data are available on parameters of interest. This course will teach students appropriate techniques for analyzing data of this nature as well as broaden computational skills in R. The course will lay the foundation for Bayesian data analysis that students can use to further develop skills in decision making.
Offering: **Host**
Grading: **A-F**
Credits: **0.50**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Identical With: **CIS323**
Prereq: **MATH132 OR ECON303 OR GOVT367**

QAC356 Advanced R: Building Open-Source Tools for Data Science
An in-depth exploration of the R programming language and development environment; from syntax and data structures, to data analysis and visualization, report writing, project management, and software development. Students will work in teams to create open-source data science applications that can be used to manage and prepare data, perform statistical analysis, and create compelling visualizations and reports. Students will also have an opportunity to contribute to a shared Wesleyan R package that contains datasets and functions that are useful for teaching introductory and advanced data science courses.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **QAC201 or MATH132 or ECON300 or QAC302 AND COMP112 AND QAC156 or QAC211 or QAC251**

QAC375 Advanced Research in Digital History
The digital age has changed everything and nothing about the practice of historical research. After being equipped with core concepts, terminology, and practices of historical research, students will engage and explore various applications: across moth-eaten archives, curated library collections, optical scans, and digital-born objects. We will then immediately apply this work to collectively setting up an archival relational database through the digital tool Nodegoat. Students will finish the semester by curating their own historical archive and codifying it as a relational database. Depending on the specific

project and student abilities, students will also connect this work to utilizing and/or learning skills in translation, GIS, database creation, database management, and digital visualization. Successful students will be connected to the Travelers' Lab international network: an opportunity to connect, receive feedback from, and collaborate with professors at higher education institutions in the United States and around the world. Depending on the year students may also be offered conference presentation and publication opportunities.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-COL**
Identical With: **COL375, HIST293**
Prereq: **None**

QAC378 DeltaLab: Computational Media Analysis
The content of this course focuses on Wesleyan Media Project media data, including advertising and local television news, and exposes students to a variety of computational ways of making that data more accessible through computational analyses and visualization. Projects are often but not exclusively group-based and draw upon the range of different disciplinary perspectives. Students will engage with the instructors and other lab members once a week for updates on their projects, will attend skill demonstration meetings and smaller group sessions to facilitate lab knowledge transfer, and will engage regularly in hands-on work with the data.
Offering: **Host**
Grading: **OPT**
Credits: **0.50**
Gen Ed Area: **SBS-QAC**
Identical With: **GOVT381**
Prereq: **None**

QAC380 Introduction to Statistical Consulting
In this course, students will be exposed to realistic statistical and scientific problems that appear in typical interactions between statisticians and researchers. The goal is for students to apply what they have learned in their basic statistics and data analysis courses to gain greater experience in the areas of research collaboration, data management and analysis, and writing and presenting reports on the results of the analyses. An important objective of the course is to help develop communication skills, both written and verbal, as well as the professional standards and interpersonal skills necessary for effective statistical consulting.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **MATH132 OR ECON303 OR PSYC200 OR [QAC201 or GOVT201 or PSYC280 or NS&B280]**

QAC381 QAC Praxis Service Learning Lab
As a service learning lab, this course provides students with an opportunity to further develop their abilities to analyze data and apply their knowledge and statistical computing skills as they work closely with nonprofit community partners on data analytic projects. Students in the course will identify research questions of interest to the community partner, gather and manage data, conduct statistical analyses, and interpret and summarize results. The service component involves providing statistical consulting to community partners by formulating and completing data analytic projects, the results of which may be used to improve services, identify areas requiring increased services and areas in which services can be made more efficient, as well as improving data collection, data reporting, and organizational functioning.
Offering: **Host**
Grading: **A-F**
Credits: **1.25**
Gen Ed Area: **SBS-QAC**
Prereq: **MATH132 OR ECON300 OR PSYC200 OR QAC201 OR SOC257 OR GOVT201 OR PSYC280 OR NS&B280**

QAC385 Applications of Machine Learning in Data Analysis
The course provides a broad overview of machine learning algorithms and focuses on their application in data mining. Building on a basic background of regression analysis, and following a learning-by-doing approach, students are introduced to data mining tools and techniques that are used to identify patterns and relationships in large and complex data. While the emphasis is on intuition and application rather than theoretical results, through different case studies, students are introduced to the fundamentals of the different methods and learn how to conceptualize a problem, analyze it using appropriate tools, and communicate their results.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **NSM-QAC, SBS-QAC**
Prereq: **QAC211 OR PHYS221 OR ECON303 OR GOVT367 OR MATH231 OR MATH232**

QAC386 Quantitative Textual Analysis: Introduction to Text Mining
We encounter computerized processing of text in almost every field of life. Google tries to infer the meaning of our search queries, online review engines try to extract information about what products are popular with the users, and across different fields scholars analyze text for insights into the processes and phenomena they study. This course will introduce you to the skills necessary to mine text for information and knowledge. You will learn how to use Python to retrieve text from a variety of sources, how to use regular expressions to identify which pieces of text are useful to your study, and how to use techniques from data mining to analyze the processed text to extract information and for classification and prediction.
Offering: **Host**
Grading: **A-F**

QAC387 Generative AI -- LLM Tools for Data Analysis
The goal of this course is to educate students in the techniques of doing data analysis with the assistance of artificial intelligence. The course will cover the use of Generative AI -- Large Language Models (LLMs) and consider the ethical dimensions in the development of AI tools and their applications. Through hand-on exercises and a term project students will develop the understanding and the skills for development, application, and appropriate use of AI tools in data analysis to advance empirical research and evidence-based decision making.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **None**

QAC388 Deep Learning and Large Language Models: An Introduction
You have probably used ChatGPT, DeepSeek, Midjourney, or another generative AI in your lifetime. But how do these tools actually work? This course will help you answer that question by introducing you to the theory and practice of deep learning, the fundamental technology underlying generative AI. Students will learn the building blocks of modern neural networks, including matrix and vector operations, embeddings, backpropagation, and attention. This will culminate in the implementation of the original GPT transformer language model from scratch in PyTorch. We will then explore extensions of transformers in other modalities, including vision and diffusion transformers for understanding and generating images, and transformers for time series analysis. Along the way, we will cover other types of neural networks, including multilayer perceptrons, CNNs, and

RNNs. We will use these models in a variety of practical applications using real-world datasets.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **None**
Prereq: **(MATH 221 OR MATH 223 OR QAC 220) AND (COMP341 OR QAC 239 OR QAC 305 OR QAC 385 OR QAC 386)**

RELIGION

The Religion Department offers a cross-cultural, interdisciplinary, and critical program that explores the variety of religious experiences and expressions. In addition to courses that demonstrate the power and limits of various critical approaches to the study of religion, the department provides opportunities to analyze practices of interpretation, systems of belief, and patterns of religious behavior; the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection. Religion classes cultivate the ability to interpret and analyze social and cultural systems, to critically analyze texts, and to craft arguments in a variety of genres.

Most courses are open to all students without prerequisites, although those with no background in the academic study of religion should consider starting with a 100 or 200-level course. A minor is available for those who wish to develop a modest program in religion in support of another major. The major is open to all students seeking an interdisciplinary home in the humanities and social sciences.

RELI102F Sex and Sexuality in Islam (FYS)
Islamic societies have long traditions of commentary about the body and sexuality. Islamic texts are replete with references to homosexual and erotic love that challenge the assumption, common today, that Islamic society is restrictive by its very nature. In this course, we will explore how the body and connected understandings of sex and sexuality have been conceptualized by Muslims throughout time. Instead of essentializing the Islamic "viewpoint" on sexuality, we will survey the variety of opinions and ideas about sex from medieval Islam to the modern world. We will draw on the Quran, early Abbasid erotic poetry and literature, Islamic medical manuals, philosophical works, belles-lettres, and modern sex manuals and debates, among other sources, in order to trace how different understandings of the body and sexuality have unfolded over time. In particular, we will focus on the notion of complementarity between the sexes, the role of marriage and procreation, the effects of medical theories on understandings of bodily health and illness, the ethical and legal frameworks governing sexual conduct in Islam, and the references to homoeroticism, pederasty, and female same-sex desire found in Arabic and Persian love poetry and literature.
Offering: **Crosslisting**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-COL**
Identical With: **COL102F, FGSS102F, HIST120F**

RELI115F Theorizing Religion with Zombies (FYS)
This course introduces students to theories in religious studies in order to investigate the intellectual and cultural histories of two highly influential and essentially religious ideas: the zombie and the apocalypse. We will critically trace their representations in popular culture in order to explore writings in biblical narrative, history, modernity, monster theory, alterity, gender, capitalism, race, epidemiology, film theory, and media studies. We will begin with ancient texts, move to the history of the concept of the zonbi in Haiti, and then trace the trope of this modern monster and its various meanings into the contemporary moment.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-RELI**
Prereq: **None**

RELI151 What is Religion? Kool-Aid, Sacred Space, and the "God-Emperor"
This course will introduce students to the academic study of religion. It will not offer a survey of "world religions"; rather, it will call upon a set of case studies to help us explore various theoretical issues in the study of religion. These include theories of religious experience, the interpretation of religious texts, the relationship between thought and practice, and the intersections of religion with law, culture, race, gender, and national identity. Perhaps most importantly, we will examine some of the historical, social, and political processes that have produced "religion" as a category in the first place. Together, these discussions will offer us a set of descriptive and analytical tools for understanding the role of religion in social, economic, and political life in both premodern and contemporary settings.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **SBS-RELI**
Prereq: **None**

RELI151F What is Religion? JewBus, Museums, and the First Amendment (FYS)
Why did the FBI assault the Branch Davidians' compound near Waco, Texas, thinking it was a cult, while those inside viewed the government as serving the anti-Christ? Can one be Buddhist and Jewish at the same time? Are museums religious spaces? Does secularism protect religion from the government or the government from religion? This class will introduce you to the ways in which we study religions by reading critical case studies, including those about Muslims debating the hijab, the treatment of sacred objects in museums, and freedom of religion court cases. This is not a survey of world religions, and once you've taken What is Religion?, you'll know why we don't teach that at Wes. You will

also have a critical set of intellectual tools for understanding the role of religion in the contemporary world.

RELI167 Introduction to History: Yoga: A Global History
Yoga as a philosophical, religious, and ascetic discipline has shaped the lives of major world-historical figures, including the Buddha, the Mughal emperor Akbar, Mahatma Gandhi, and Steve Jobs. Though yoga is usually understood today as a timeless set of disciplines that inculcate spiritual and physical well-being, it has experienced dramatic change over the millennia--not least with the rise of "postural" yoga in India from about 1000 CE, its systematization as "hatha yoga" by about the sixteenth century, and its growing popularity in the West since the early twentieth century. The aim of this course is to introduce students to the rich global history of yoga, to foster an understanding of and appreciation for the philosophical and psycho-somatic dimensions of yoga, as well as the political and cultural transformations that shaped and were shaped by yoga (and prominent yogis and yoginis) as it spread from India to both the East and West.

RELI173F Invoking the Earth Mother: Ecofeminisms and Indigenous Spiritual Ecologies (FYS)
Over the past 50 years, a radical reshaping of our relationship to the organic world has infused national economic strategies, United Nations discourses, indigenous land rights movements, and environmental legal frameworks with language that invokes the Mother Earth. This seminar will explore the social, legal, and metaphysical aspects of eco-feminist and indigenous spiritual ecologies. We will explore these worldviews and ritual practices from animist, pantheist, monist and panentheist perspectives, with a particular focus on gender constructs, implicit and explicit, within these movements. What is the relationship between the 1970s environmental movement and the rise of Goddess worship in the U.S.? Between the United Nations and Amazonian ayahuasca practitioners? Legally, Should Trees Have Standing (Stone 1972)? Politically, Is the Goddess a Feminist (Hiltebeitel & Erndl 2000)? Is Mother Earth, ultimately, empowering for LGBTQ2S foks? Engaging emerging podcasts, shamanic documentaries, social manifestos, and provocative religious studies texts, students will wrestle with a profound set of humanistic questions that may prove crucial to our survival as a species, namely: under what circumstances do we successfully invoke Mother Earth, the Pachamama, or the Goddess to self-regulate the ecologically destructive practices of our late-stage capitalism?

RELI174F Jesus Chicken: Business and Religion in America (FYS)
Summary: Although many Americans are aware of the religious identity of the fast-food chain Chick-fil-A (earning it the moniker of "Jesus Chicken" in some communities), there is nothing new about businesses that project a religious ethos. This First Year Seminar explores the blurry boundary between business and religion in America, examining the ways in which businesses use religion and the ways in which religious entities often function as businesses. Although this course primarily focuses on the Christian tradition, it will also examine the ways in which other religious communities (such as Jewish and Buddhist) approach the marketplace. Chronologically, the course spans the 17th to 21st centuries, paying special attention to the emergence of the market economy in the U. S. from 1800-1850 and the growth of consumer culture in the second half of the 20th century. This course will provide students with an introduction to historical methods and the critical study of religion, while focusing on developing collegiate-level reading, writing, and critical thinking skills that will form a foundation for any major at Wesleyan.

RELI176F Morality and Health: Religion, Bodies, and Biomedicine (FYS)
We often think of religion and medicine as diametrically opposed. Faith, prayer, and alternative health methods can seem incompatible with science and biomedical care. Yet, throughout most of human history, religion and health have been intimately intertwined. And they still are. The ways that we treat our bodies--individual and collective--are often influenced by religious ideas, moral systems, and embodied spiritual practices. This course explores differing religious approaches to life, personhood, and death. We will ask how race, gender, and sexuality intermix with religiously derived ideas about morality and health. Readings will cover birthing, dying, healing pilgrimages, self-help, organ transplantation, Artificial Reproductive Technologies, vaccination, and more.

RELI177 Introduction to Black Religions in the Americas
This course will both introduce students to the themes of Black religions formed in and through the Americas, and specific traditions, for example Santería, Islam, Christianity, and Buddhism. The Americas are formed in and through Black Atlantic. The phrase the Black Atlantic centers the forced movement of enslaved Africans from Africa to the Americas and Europe as the center of a set of complex forces: European global expansion, land expropriation, indigenous extermination and, of course African enslavement. The term aptly captures the shifting geographies we call the Americas. Africans were not solely objects of dehumanizing subjugation and property. Africans co-created the new world of the Americas through material practices, traditions of knowledge, and meaning making summed up in religion. Students will read scholarly articles and engage multi-sensory sources and first-person accounts of both themes and traditions. All resources will be provided in class or via Moodle. Books for purchase are not required.

RELI179F Not Like Us: Religion, Race, Pop Culture (FYS)
Starting with the work of Pulitzer Prize and Grammy award-winning, Super Bowl-performing artist Kendrick Lamar, this course examines how Black culture, and thus race, is often interpreted through religion. Afro-British theorist and cultural studies pioneer Stuart Hall famously published the article "What is this 'Black' in Black Popular Culture" in the 1990s. In that essay, Hall sought to examine the work of the signifier of race in relationship to the idea of culture. This course, following Hall, will enable students to examine the relationship between structures, practices and ideas of race, with structures, practices and ideas of religion in defining Black people in the modern world. Through Hall's lens of culture, the class will examine people, places and periods, from witches and demons to Blues and Spirituals, Martin Luther King Jr. to Malcolm X, the Black Arts Movement to Black Lives Matter, Beyoncé to Kendrick Lamar, Marlon Riggs to Michaela Coel, by considering questions of authenticity, claims of Africanity, and formations of religiosity all in the word Black. Course focuses on digital humanities in learning and assignments. Books for purchase are not required.

RELI184 Let's Talk: Civil Disagreement and Dialogue
This class is designed to help students improve their communication and dialogue skills through character development. We will consider ways to build community and trust in order to productively engage in and facilitate difficult conversations across political and social differences. Rooted in a philosophical framework for the study of values and virtue, we will reflect upon and incorporate the moral and intellectual features of good dialogues into our everyday lives. Our goal is to become the sort of people who can communicate effectively across differences in careful, constructive, open dialogues aimed at truth and justice.

RELI185F Reasonable Disagreements: Science, Philosophy, Magic, & Society (FYS)
Much of contemporary social and political discourse revolves around science--with many assuming that science is rational, objective, true, and the ultimate source of knowledge. As a result, it would seem unreasonable to believe in things like astrology, magic, alchemy, and other non-scientific ideals, or even to suggest that science might not be as objective, rational, or true as we might think. In this class we will explore different historical and philosophical approaches to distinguishing "legitimate" forms of inquiry and knowledge, considering the ways that our contemporary perspectives on science have been shaped by a long history of philosophy, "natural" philosophy, magic, theology, and "pseudosciences." We will investigate issues and concepts within and about science, including topics such as the nature of theories, the nature of scientific progress, and the relations among science, values, and society.

RELI201 Introduction to the Hebrew Bible (Old Testament)
The Hebrew Bible is one of the most influential texts in the world. From antiquity to the present, it has served as a source of philosophical, literary, and artistic reflection. It is a fascinating document, combining narrative, poetry, law, prophetic proclamations, and puzzling parables. What kind of book is the Hebrew Bible? Who wrote it and why? How do we approach such a text across the distance of time? Through a systematic reading from the very beginning, we will place the Bible in its historical context while giving special attention to the philosophical and literary questions it raises: Is obedience to authority always justified? Why do good people suffer unjustly? What is God's gender? In answering these and other questions, you will gain an understanding of the ways contesting interpretations make authoritative claims.

RELI205 Dharma, Karma, and Living with the God/dess/es: Hindu Lives
Through fiction, autobiography, biography, art, a comic book, a city, and a village, this course explores some of the myriad understandings of what it is to be Hindu. In an effort to introduce students to Hindu culture and religion, a number of approaches shall engage the questions: what is Hindu dharma, and what is it to be Hindu? The class will also investigate the issue of "Hinduism," a term created in the 19th century to identify a Hindu "religion" rejected by many 21st-century Hindus. This issue expresses just one of many arising from the Indian experience of contact with the West. Overall, the course immerses students in the lives of Hindu individuals and communities so that we, as a class, can draw our conclusions about Hindu practices and meanings in different political, mythic, social, and cultural contexts.

RELI207F Who is the Dalai Lama? (FYS)
This First Year Seminar introduces the institution of the Dalai Lama of Tibet and the individuals who have filled that role from a wide range of sources and perspectives. Topics include regional histories of Buddhism; the unique Tibetan tradition of recognized reincarnations (tulkus) and the Buddhist philosophical principles that support it; and a survey of prominent Dalai Lamas from the 15th century to the present day. The seminar examines the activities of the current Dalai Lama in his role as traditional Buddhist teacher, political leader, and international superstar, through the lenses of the PRC government media, Indian exile communities, and the modern West. Later classes will also address issues of Western and Chinese forms of Orientalism and myth-making about Tibet. Readings include the writings of past and current Dalai Lamas as well as supporting secondary literature.

RELI208 Sex and Sexuality in Islam
Islamic societies have long traditions of commentary about the body and sexuality. Medieval Islamic texts are replete with references to homosexual and erotic love that challenge the assumption, common today, that Islamic society is restrictive by its very nature. In this course, we will explore how the body and connected understandings of sex and sexuality have been conceptualized by Muslims, both historically and in the contemporary world. Instead of essentializing the Islamic "viewpoint" on the body, we will survey the variety of opinions and ideas about the body that Muslims have held. We will draw on the Quran, early Abbasid erotic poetry and literature, Islamic medical manuals, philosophical works, belles-lettres, and contemporary sources, in order to trace how different understandings of the body and sexuality have unfolded over time. In particular, we will focus on the notion of complementarity between the sexes, the role of marriage and procreation, the effects of medical theories on understandings of bodily health and illness, the ethical and legal frameworks governing sexual conduct, and the references to homoeroticism, pederasty, and female same-sex desire found in Arabic and Persian love poetry and literature. While the course primarily focuses on the premodern period, it will also delve into contemporary Islamic discourses.

RELI209 Anthropology and/of Islam
This course examines the relationship between the discipline of Anthropology and Islam while also surveying the development of the Anthropology of Islam. Until the middle of the 20th century, Western study of Islam was dominated by Orientalists and colonial social scientists. As the study of Islam and its social worlds entered into the field of modern anthropology alongside decolonizing processes worldwide, the anthropological study of Islam was caught up in, and crucial to, the various critical turns in the discipline that faced as it attempted to decoupled itself from colonialism. With this as the backdrop, "Anthropology and/of Islam" takes on the rich and varied, often complicated, canon of the "Anthropology of Islam" with a particular focus on the Middle East and North Africa primarily between 1975 and 2025 but with an eye to the field globally. It also also attends to the ways in which this field has been responsible for paradigmatic shifts in the Anthropology itself.

RELI209F Religion, Science, and Empire: Crucible of a Globalized World (FYS)
The development of modern science--and of modernity itself--not only coincided with the rise of European imperialism: it was abetted by it. Meanwhile, religion was integral to both the roots of European science and Western encounters with others. This class will explore how the intersections of religion, science, and empire have formed a globalized world with examples of European engagement with the Americas, Middle East, and, particularly, India from the age of Columbus through to the space race. We will examine how the disciplines we know today as biology, anthropology, archaeology, folklore, and the history of religions all crystallized in the crucible of imperial encounter and how non-Westerners have embraced, engaged, and resisted these epistemes.

RELI210 Gender and Spirituality in the United States
Reclaim your goddess energy. Worship at the altar within. Celebrate your moon cycle. Good vibes only. Messages like these invite women to sanctify themselves, find meaning in the workings of their bodies, and connect to supreme natural forces. They also have powered spiritual and political movements over the past 70 years. While we might we be inclined to relegate an interest in astrology, crystals, aromatherapy, yoga, or reiki to the realm of hobbies or health practices, this course will instead provide a more nuanced view. We will learn the historical and religious contexts of contemporary American spiritualities, particularly as they have been practiced by and marketed to women. We will answer questions such as: How different is spirituality from religion? Why has spiritual practice been commodified and gendered feminine since the New Age era of the 1960s? How has women's spirituality reflected changing ideals of womanhood and the feminine over time? Throughout the class, we will read and listen to popular spiritual content and contextualize it within broader struggles over identity, sexuality, and feminism. In particular, we will interrogate issues of religious appropriation and consider the effects of contemporary movements on the communities who have cultivated sacred practices for centuries.

RELI211 Black Women and the Sacred
This course examines how Black women engage spiritual practices, in and beyond religious traditions to remake an anti-Black world. Black women have famously been called the "mule of the world." In this role, the Black woman is beast of burden, property, ungendered, enslaved. As such the Black woman constitutes a limit for the normal, the human, and thus the religious. In the study and practice of religions in the modern, western world, Black women are included through exclusion as heretics, demons, and witches. Nevertheless, Black women and their practices across normative formations of nation, race, and religion have cultivated social practices, ideas, and communities which form a counter-poetics, a counter-mythology, and an otherwise possibility of what religion, unbounded and non-normative might be. This course examines typical accounts of Black women in different religious traditions, but more importantly, the course examines how Black women's practices upset normal accounts of nation, race, gender, sexuality, and religion. Course focuses on digital humanities in learning and assignments. Books for purchase are not required.

RELI212 Introduction to the New Testament
The purpose of this course is to provide an introduction to those writings of the earliest Christians that came to be included in the Bible. These writings will be examined critically with respect to their social-historical origin, religious content, and place within the development of ancient Christianity. Interpreting early Christian texts constitutes the most important task in the study of the New Testament. We will therefore focus on a close reading of the New Testament in light of historical situations and social contexts in the Greco-Roman world, having as one of the chief aims of the course the acquisition of critical skills in reading and understanding the Bible. In the process we will necessarily engage secondary scholarship and wider theoretical interests, thereby providing students with a general introduction to the academic study of religion.

RELI213 Refugees & Exiles: Religion in the Diaspora
Recent years have seen the on-going tragic refugee crisis, with millions of people being displaced because of war and ecological disasters. This course deals with the meaning of refuge, exile, and diaspora through three perspectives: philosophical, historical, and literary. What does it mean to be forced to leave one's home? How is it possible to make sense of such a tragedy? What creative power can diaspora muster to the rescue of culture? In our search for answers, we will examine a variety of case studies including the contemporary refugee crises in the Middle East, the border between the United States and Mexico, the black transatlantic, and the destruction of the temple in the Hebrew Bible. This course is a project-based Service Learning in which all assignments are geared toward the final project, in which each student will produce a radio show based on an analysis of a refugee crisis of their choice. These shows will air on WESU 88.1 FM Middletown. To learn more and listen to previous seasons of last year's radio shows visit https://reli213.site.wesleyan.edu

RELI214 Postcolonial Religion: Pentecostalism and the Global South
This course examines the concepts and structures of the city and religion throughout the postcolonial global south through traditions and practices of Pentecostalism. The postcolonial marks both a theoretical and a historical break with the structured violence and domination imposed on most of the world through European expansion, land expropriation, indigenous extermination, African enslavement and Christian evangelization. Postcolonial religion, thus marks a reworking of the past, reforging of the present, and otherwise possibilities for communities and their sacred traditions in the future. This seminar will stretch and test this thesis through an examination of global Pentecostalism, a religion, which both marks the colonial, especially Christian evangelization, even as its rapid expansion in the global south among Latin American, sub-Sahara African and Black-descended people in the US and Europe expresses creolization, indigenization and urbanization. Perhaps, rather than a clean break, postcolonial religion, in the form of Pentecostalism indicates ongoing refusals, ruptures and relations between the metropole, and a history of subjugation and imagined utopian cities and futures of abolition. Seminar focuses on digital humanities in learning and assignments. Books for purchase are not required.

RELI216 Jesus Through Jewish Eyes
In this course, we explore the visual and textual representations of the vexed relation between Jews and Christians throughout history. Looking at the various ways in which Christianity and Judaism define themselves vis-à-vis the other allows us to understand what mechanisms of cultural appropriation, subversion, and hidden polemics are at work. Special attention will be given to the figure of Jesus as a point of artistic and theological contention. How do artistic representations change our understanding of religious themes? What is at stake for each religion in the encounter with the other? What are the political implications of theological debates? Is this dialogue needed, or even possible, in our post-secular age?

RELI217 The Environment, The Bible, and Moral Debate
The environment is a pressing concern for many people and is the center of much modern debate. Within this debate, many people draw on biblical texts for a source of religious or moral superiority. These biblical texts have been used to support many different, and often contradictory, arguments within the environmental debate. So what does the bible actually say about the environment? Is there a singular "biblical" view about what the environment is and how one should treat it? This course aims to look at how the bible has been used in environmental debate and then look at the texts cited, analyzing both in a modern and ancient context.

RELI218 The Cosmos of Dante's "Comedy"
In 1321, Dante Alighieri completes the final cantos of the "Comedy" and breathes his last. After 700 years, the "Comedy" has not finished saying what it has to say. This course provides an in-depth introduction to Dante's masterwork as a point of entry to the history of Western literature, philosophy, and science. The core of the course consists of an intensive study of Dante's encyclopedic poem in relation to the culture and history of Medieval Europe. We examine the poem as both a product and an interpretation of the world it describes. We also observe how the "Comedy" casts its long shadow on modern culture: in Primo Levi's description of the horror of Nazi concentration camps, or in Amiri Baraka's fragmentary representation of America's infernal racist system. We investigate the challenges that Dante's text elicits when it migrates to visual and cinematic arts (from medieval illuminations to Robert Rauschenberg to David Fincher), continuously camouflaging and adapting to different media. Major topics of this course include: representations of the otherworld; the soul's relation to the divine; Dante's concepts of governance and universal peace; mythology and theology in Dante's Christian poetics; the role of the classics in the Middle Ages; intertextuality and imitation; genres and genders in medieval literature; notions of authorship and authority during the 13th and 14th centuries; the culture and materiality of manuscripts in the Middle Ages; and the reception of Dante's work from the 14th century to the present. The course combines a close analysis of Dante's inventiveness and literary strategies with exercises in analytical writing and in multimedia translation and adaptation, aimed at prompting critical reflection on the ways in which present cultural practices are built upon the practices of the past. This course is conducted in English; no previous knowledge of Italian is required.

RELI219 Online and #IRL: Digital Media, Power, and Religion
From meditation apps and Zoom church to TikTok witches and spiritual influencers, religion and spirituality pervade the Internet. Yet digital media reflects social, economic, and political negotiations of power that often elude our scrolling eyes. This course critically examines digital media and religion by asking how the "power" of digital infrastructures affects religion. Together we will map different platforms and mediators (social media, material technologies, and corporate gatekeepers) that shape "power" and "religion" online. We will survey how religious practitioners navigate digital media through case studies of ex-Evangelical Twitter users, Hindu mega-temple live streams, ritual smartphone apps, and more. We will discuss "spiritual machines" and ask, "Has digital technology become a new god?" This course takes an interdisciplinary approach and engages research from technology studies, media studies, and religious studies. Students will also examine methods, ethics, and theories of studying digital religion and develop their own digital religion case studies.

RELI220 Modern Christian Thought
This course will provide an introduction to the field of Christian thought by exploring the relationship between conceptions of God and conceptions of selfhood, from St. Augustine through liberation, feminist, evangelical, process, and eco-theologies. How do the ways people think about God reflect, support, or interrupt the ways they think about the human subject? And what sorts of ethics, communities, and political decisions do these models underwrite?

RELI221 Islam and Muslim Cultures: Introduction with Case Studies
This course provides an introduction to Islamic traditions and Muslim societies. No background is required. Using a variety of in-depth case studies (Black Muslims in the US, Islamist women of Egypt, and gender dynamics among Hyderabadi Shia), the course familiarizes students with many of the beliefs and practices Muslims associate with Islam and examines commonalties and diversity in how Muslims live their religion. While paying particular attention to peoples and places in South Asia, the Middle East, and the U.S., the course will demonstrate how contemporary Muslim communities exist within global networks that shape local and transnational religion, cultures, and politics.

RELI222 Identity and Jewish Literature: Sexuality, Race, and Gender
What, if anything, is Jewish literature? What, if anything, does it tell us about the history of the people called Jews? This course explores those questions through a variety of sources from Jewish writers, including Sholem Aleichem, Cynthia Ozick, Franz Kafka, I.B. Singer, and others (flexible based on student interest). Through these readings, we will explore how Jewish literature relates to broader questions of sexuality, race, gender, colonialism, etc., as well as specific questions of Jewish history, like the Holocaust and the state of Israel. All works will be read in translation and no previous knowledge of Jewish studies or Judaism is required.

RELI223 Jewish Identity in the Ancient World
Jewish Identity is not monolithic but instead, wonderfully, varied, and diverse. The Hebrew Bible gives a multitude of accounts of how many different identities within the course of history came to be and through analyzing these accounts, this course will aim to answer the questions of: What did Jewish Identity look like in the time period of ancient Israel? What variety of identities can be seen in the Hebrew Bible itself? What key historical events aided in the development of different identities in the ancient world? What was the process of identity formation in the ancient world? Is that process of identity formation different than how one might construct identity today? Is it right to even speak of Jewish Identity in 600-700 years in which the Hebrew Bible was written?

RELI224 Zen Buddhism Across East Asia: Teaching and Practice
In this course, we will examine Zen/Chan Buddhism in history and in its contemporary practice. We will trace how Zen Buddhism sprouted from Chinese religious traditions in the Tang Dynasty (618-907), flourished in the Song Dynasty (906-1279), and then spread to other East Asian countries such as Japan and Korea. Then, we will pay attention to the ways in which Zen Buddhism found its way to modern Western society, through figures such as D. T. Suzuki and Okakura Kakuzo since the 19th century. Course readings consist of primary sources of Zen Buddhism, which are available in English translation. A wide range of texts will be read closely, from early manuscripts discovered in Dunhuang to contemporary works inspired by Zen Buddhism, supplemented by secondary scholarship. We also investigate how Zen Buddhism has been expressed in garden designing, poetry, tea ceremony, and as a way of life in contemporary Western society. A field trip to a Zen meditation center will be organized during the course.

RELI225 Socialist Utopias: Transcendence and Religion in Communist States
Socialism is a political system predicated on building a better future by transcending the present. But what kind of utopias were imagined in and by actual socialist states like the Soviet Union? Why was atheism so central to Marx's vision of socialism, and what kinds of futures did communists imagine were possible, once religion was removed from society? What kinds of transcendence did communists imagine would exist once they transcended religion? What kinds of religious practices were enabled despite and sometimes because of the state's repression of organized religion? We will read some Marx, some Soviet science fiction as well as ethnographies, ranging from studies that explore how communism is and isn't like a religion, how former atheists became missionaries, how some religious communities survived communism, how mangos became Mao's relics, how Vietnamese spirit mediums channel Ho Chi Minh, and what kinds of imaginaries can flourish in post-socialist ruins like Moscow and Silicon Valley.

RELI226 American Christianities: What Do Christians Want?
The course explores contemporary Evangelical Christianity in the United States, and focuses largely on white Evangelicals and how they are shaping our current moment in profound ways. We will interrogate how ideals of the nation, civil religion, the prosperity gospel, capitalism, and the family shape Christian social action. Religion is not only what groups think and believe, but also what they do. We will examine why Christians love Wal-Mart, fund global humanitarian efforts, travel on international missions, use digital media and become influencers, support anti-abortion activism, wage spiritual warfare against demons, and more. By considering a variety of conservative Christian groups, we will critically evaluate the diverse social imaginaries, theological frameworks, and historical foundations that shape this strand of contemporary U.S. Christianities.

RELI229 Tibetan Religion
This course serves as an introduction to major themes of Buddhist thought and practice within the cultural and historical framework of Tibet and the wider Himalayan world. In doing so, it examines various approaches to the study of religion and questions traditional definitions of categories such as "religion" and "Buddhism" themselves. Beginning with a close study of Patrul Rinpoche's classic 19th-century guide to Tibetan Buddhism, the early part of the course focuses on the doctrinal foundations of the tradition. This is followed by a historical and more critical examination of Tibetan religious history, proceeding from Buddhism's Indian antecedents and its initial arrival in Tibet during the seventh century through the present day. The course will explore a wide range of Tibetan religious cultures and practices including Buddhist ethics, systems of monastic and ascetic life, ritual activities, sacred geography and pilgrimage, lay religion, as well as the status of Tibetan Buddhism under Chinese occupation and in the West. It will also examine the lesser-known communities of Tibetan Muslims and Christians inside Tibet and in exile. The majority of readings will consist of primary texts in translation, and will concentrate on Tibet's rich narrative literary tradition. These will be supplemented by secondary literature on the study of religion and Tibetan Buddhism.

RELI230 Cinematic Encounters: Muslims and/in/of the West
Please note: students will be required to view all films prior to the first day of class, and to submit pre-session assignments. Examining contemporary films by and about Britons, Indians, Pakistanis, Afghans, and Black and white Americans offers the opportunity to challenge the simplistic binaries of West versus Islam upon which popular representations often rely. We will pay attention to the aesthetic choices made by directors and screenwriters as they depict themes of Muslim emigration, European imperialism and colonialism, religion and secularism, terrorism and state violence, representations of gender, and issues of multiple belonging. Particular analytic emphasis will be given to the concept of nationalism. Films that may be included are "The Outpost," "The Kingdom of God," "The Battle of Algiers," "Lagaan," "Zero Dark Thirty," "The Beauty Shop of Kabul," "Restrepo," "Khuda ke Liye," "My Name Is Khan," "Malcolm X," and "AmericanEast."

RELI231 Greeks-Romans-Christians
Western civilization emerged, in part, out of the achievements of ancient Greeks, Romans, and Christians. Art, architecture, philosophy, and literature were all forged in a crucible of clashing cultures. This course will introduce students to the religious worlds of Greek, Roman, and Christian antiquity. Attention will be given to the mythologies of the gods and cultic practices of the people, including religious sanctuaries, festivals, and sacrifices; divination, magic, and the mysteries; philosophy, ethics, and theology. We will conclude with an assessment of the rise and eventual triumph of Christians, their appropriation and critique of Greco-Roman culture, and their obsession with martyrdom and the cult of the dead.

RELI234 Ancient Christianity irl: Art, Objects, and Sacred Spaces in the Roman Empire
This course will introduce students to ancient Christianity through the study of a variety of sources, including textual, material, and visual. We will examine the development of Christianity in the Roman Empire during the first six centuries CE, following the rise of Christianity from a religious movement to an imperial religion. We will investigate the myriad representations of Christianity throughout the ancient Mediterranean world: amulets, magical spells, books deemed crucial for the faith and those deemed heretical, the earliest images of Jesus and his followers, and those spaces devoted to Christian cultic practices. This course requires no background and will engage topics in units diachronically so that students can understand the evolution of ancient Christianity from the Classical period through late antiquity.

Prereq: **None**

RELI235 Gods, Heroes, and Chaos!: An Introduction to Greek and Roman Mythology
This class will dive into the wild and tumultuous world of ancient Greek and Roman mythology to begin to understand its impact on culture and identity in both the ancient and modern world, reading primary source literature, looking at iconography and material culture, and studying later examples of mythological reception. Primary sources span mythical stories of the creation of the universe and the gods themselves; the dramatic exploits, interrelationships, and depictions of the gods; the careers of major heroes and heroines; and the myth of the Trojan war and its long aftermath. While we read ancient works, we will discuss the impact of mythology on religious and cultural practices, history, cultural identity, art, politics, and day-to-day life. We will also discuss the enduring influence these myths have on modern culture -- for better and for worse -- in today's politics, culture and art. Students will acquire mythological literacy, to understand the language of myth itself in both the ancient and modern world, to be able to read the impact myth continues to have on the way we define the natural world, the divine, and humanity's place in the universe. This course counts towards the Literature and Performance track of the Classics major.

RELI239 Modern Shamanism: Ecstasy and Ancestors in the New Age
The wise and mysterious native shaman has long held a particular fascination for Western scholars of religion, but does this figure even exist? What does it mean to be a practicing shaman today? Beginning with Eliade's definition of "archaic ecstasy," we examine the idea of the shaman, their role in the New Age movement, and the challenges faced by contemporary indigenous shamans, from negotiating international intellectual property rights law to Ayahuasca tourism and environmental activism. Course materials are supplemented by A/V materials from the instructor's fieldwork in Siberia.

RELI241 Cults, Crusades, Jihad, and Multiculturalism: On (Non)Religious (In)Tolerance
"More people have died in the name of religion than any other cause on Earth." Is this true? If not, why do so many people believe it? Even if it is not true, a great many people have died for causes propelled by religious ideologies and sentiments. Then again, a great many people have been killed because of their religious identities and associations. How do religious traditions generate emotions of empathy, suspicion, antagonism, and/or indifference? And how do secular traditions promote similar emotions toward specific religions and toward religion in general? This course will investigate what these dynamics tell us about various religions in different cultures--specifically those of South Asia and the United States--and how some social ideologies allow only for specific religions or all religions. We will explore these in the context of the so-called "cult" of the Branch Davidians in Waco, Texas; the pogrom against Muslims by Hindu nationalists in India; various jihads in Afghanistan, Pakistan, and India; and the role of imagined Muslims in the language of tolerance among the American republic's founders.

RELI242 Introduction to Buddhist Thought and Practice
This course will introduce significant aspects of Buddhist thought and practice, primarily as it manifested through the literature of India, South Asia, and East Asia. It begins with an overview of the historical Buddha's life and the development of early Buddhist ideas and practices. The course then introduces the Mahayana or Great Vehicle tradition that began to emerge around the first century BCE, as well as later forms of esoteric Buddhism known as Tantra. The course concludes with the development of modern Buddhism in Asia and its manifestation in the West. Readings consist mainly of primary Buddhist texts in translation, which are supplemented as necessary by works of secondary scholarship. The course broadly examines the topics of Buddhist philosophy and ethics, monastic and ascetic life, meditation and ritual practices, and the material culture of Buddhist societies, including artistic traditions, architecture, and book culture.

RELI250 Islamic Movements and Modernities
No background is required for this seminar. The so-called Islamic State once grabbed headlines daily with criminal acts primarily committed against other Muslims, but also against non-Muslims. Its violence overshadowed even al-Qaeda and the Taliban in media coverage. This seminar will track the development of these groups as well as the many more Islamic movements that reject violence and seek peaceful social change. Indeed, many Muslims object to the name "Islamic State" because they recognize the group as neither Islamic nor a legitimate state. The seminar examines how specific Muslim communities in the Middle East, Europe, South Asia, and the United States have engaged the modern conditions of Western imperialism, nationalism, and globalization and shaped their own forms of modernity. The seminar also investigates the increasingly digital, transnational, and intercultural realms of Muslim experiences.

RELI251 Not Like Us: Religion, Race, Pop Culture
Starting with the work of Pulitzer Prize and Grammy award-winning, Super Bowl-performing artist Kendrick Lamar, this course examines how Black culture, and thus race, is often interpreted through religion. Afro-British theorist and cultural studies pioneer Stuart Hall famously published the article "What Is This 'Black' in Black Popular Culture" in the 1990s. In that essay, Hall sought to examine the work of the signifier of race in relationship to the idea of culture. This course, following Hall, will enable students to examine the relationship between structures, practices and ideas of race, with structures, practices and ideas of religion in defining Black people in the modern world. Through Hall's lens of culture, the class will examine people, places and periods, from witches and demons to Blues and Spirituals, Martin Luther King Jr to Malcolm X, the Black Arts Movement to Black Lives Matter, Beyoncé to Kendrick Lamar, Marlon Riggs to Michaela Coel, by considering questions of authenticity, claims of Africanity and formations of religiosity all in the word Black. Course focuses on digital humanities in learning and assignments. Books for purchase are not required.

RELI252 The Five Rachels: Jewish Women in Contemporary American Culture
The course will focus on five iconic contemporary female TV characters, actors, and creators; American, Jewish, and incidentally--or not--sharing the same name: Rachel. Rachel Green ("Friends"), Rachel Berry ("Glee"), Rachel Menken ("Mad Men"), and Rebecca Bunch ("Crazy Ex-Girlfriend"), played by Rachel Bloom, and Midge Maisel ("The Marvelous Mrs. Maisel"), played by Rachel Brosnahan. These five complement each other and offer us a panoramic view of the American Jewish female experience: discrimination, inclusion, the generational gap, and their relationship with Israel. In addition, they allow us to explore the three most common stereotypes associated with the Jewish woman: the Jewish nose, the Jewish mother, and the Jewish American princess. We will discuss the conflicts and the societal shifts these characters embody, and how they define themselves, their Jewishness, their femininity, their unique surroundings, and place in history.

RELI255 Heretics and Heresy
What is religion all about? Is it fundamentally about belief, truth, or God? About understanding, revelation, or salvation? Is religion about one's origins, identity, or destiny? Is it about what one does or is supposed to do? How would we ever know? And who gets to say so? This class will explore the emergence of "heresy"--notions of error--in the construction of religious belief and practice in ancient Christianity, and how "heretics" became central to the way Christianity defined itself in relation to Jewish and Greco-Roman religious traditions. We will examine these issues, in part, by reading a number of remarkable, and recently discovered "heretical" texts from antiquity and early Christianity, including the Gospel of Thomas, the Gospel of Mary, the Gospel of Judas, the Gospel of Truth, and the Cologne Mani Codex.

RELI260 Ancient Jewish Mysticism
This course examines how ancient Israelite/Judahite communities (Bronze Age through the Iron Age) imagined, accessed, and managed the "invisible world": the dead, hostile spirits/demons, divine messages about the future, and the binding power of spoken formulas (oaths, blessings, curses). Rather than treating "mysticism" as later contemplative tradition, we use the term in a deliberately narrow, historical sense: ritual and textual techniques meant to cross or manipulate the boundary between human and nonhuman realms -- especially under conditions of threat, uncertainty, or political pressure. Working historically and comparatively, we read biblical texts alongside contemporary ancient Near Eastern ritual and inscriptional evidence (Akkadian, Aramaic, Sumerian, Ugaritic), asking: What practices do the texts presuppose? What do polemics against "illicit" rites reveal about what people actually did? How do treaties, curses, and apotropaic objects encode beliefs about divine enforcement? And how does material culture (amulets, inscriptions, ritual installations) complicate strictly "literary" reconstructions?

RELI263 God & Guns: The History of Faith and Firearms in America
This course examines the history of firearms and religion in the United States, ultimately seeking to understand the significance of gun culture within American Christianity and the powerful "God & Guns" story at the core of many Americans' identity. Beginning with an overview of colonial and revolutionary-era views of firearms and violence, the course examines the influence of slavery, gender, and the wars of the 20th century, paying special attention to the emergence of a masculine, warrior Jesus within evangelical and fundamentalist communities during the Cold War. Students will be challenged to consider the ways in which this story helps explain one facet of popular support for Donald Trump and to reflect on how firearms are central to the identity of many conservative American Christians.

RELI265 The History of Emotions & Religion: Feeling One's Way to the Past
When examining the lives of communities, societies, and religions, scholars tend to focus on ideas and practices such as "justice" and "salvation" or fair elections and religious discipline. But what about emotions? For reasons we will examine, Western scholars -- and, thus, students -- have often overlooked the centrality of emotions in the social interactions of and between various cultures. This seminar will consider various historical (and a few contemporary) references to emotion in written texts. It will take into account the variability of the language about emotions (indeed, does the category of "emotion" even translate into all languages?). Emotions examined in American, European, South Asian, and Middle Eastern contexts include those that might be translated into current American English as fear, love, awe, submission, dispassion, pride, and loyalty. Each will be considered in their historical context with reference to the contemporary terms used and their linguistic register. Papers will involve the use

of historical dictionaries and encyclopedias in order to understand period uses of terms we might now described as "emotive." Seminar members will visit with Wesleyan's Rare Books staff in preparation for a final project that will require use of the archives of either Wesleyan or the Middlesex Historical Society.

RELI266 Confucian Ethics
Is human nature fundamentally good or fundamentally bad? How do we live a good life? Is there a universally correct priority in value conflicts? This course focuses on various ethical topics that are explored within the Confucian tradition. The course will combine lecture with discussion of primary and secondary sources, as well as group and individual presentations.

RELI268 Black Religions in the Americas
This course will focus on the African-based religious systems that cultivated traditional ways to survive slavery, white supremacy, and state violence. We will focus on Vodou in Haiti, Regla de Ocha (Santeria) and Palo Mayombe in Cuba, Obeah in Jamaica, and aspects of Black religions in the US. We will discuss questions of method and themes of political resistance, orality, secrecy, magic, "authenticity," commodification, and the ethics of representation. We will also look at the Black church and especially the rise of the Pentecostal movement in African and Afro-Caribbean spaces, as well as visionary Black religious thought.

RELI270 Magical Money and Enchanted Capitalisms
In the early days of the 20th century, Max Weber foresaw that with the rise of capitalism and modernity, the world would become increasingly disenchanted. Now, with the turn of the 21st century, people all over the world experience capitalism as a realm of enchantment. In Malaysia, ghosts possess factory workers; in South Africa, capitalism produces zombies; and in Bolivia, mines eat their miners. Instead of Weber's "iron cage," we live in a world of "voodoo economics" where Korean shamans conduct ceremonies to bless new businesses, Russian psychics curse business competitors, and prosperity theology preaches that God will make you rich. This class explores the enchantment of the financial sphere, combining theory on the disenchantment of modernity (Max Weber) and commodity fetishism (Karl Marx, Sigmund Freud, William Pietz) with ethnographic accounts of how capitalism and the economy become mystified and enchanted.

RELI271 Secularism: Godlessness from Luther to Lenin
Secularism is more than just the absence of religion. It is a political and ideological project with a long history that seeks to separate political and religious authority and imagines whether human life can be richer without religion. This course traces the idea and ideal of secularism as an ideological project from classic Enlightenment philosophers to contemporary critics. We begin with Martin Luther's arguments for the separation of church and state, examine utopian ideals of secular humanism in Mill, Locke, Hume, and Marx. We then trace how these philosophies were embodied in state-sponsored atheism in the Soviet Union and how secularism came to stand for religious freedom during the Cold War. Finally, we examine critiques of the secular project (such as Asad, Mahmood, and others), focusing on secularism as a realpolitik approach to governing multireligious societies and the idea of religious freedom as a universal human right. This is a seminar focused on close readings of philosophical and critical texts. Assignments include reading responses and reflective essays.

RELI272 Ethics After the Holocaust
The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human after Auschwitz. In this course, we will investigate how the Holocaust orients contemporary discussions on questions of guilt, forgiveness, and evil. What does it mean to remember, to forgive, and to forget? Can one ethically represent the Holocaust in art? We will explore these questions using various sources, including works by Hannah Arendt, Adorno, and Emmanuel Levinas, as well as museums, memorial sites, and cinematic representations.

RELI272F Ethics After the Holocaust (FYS)
The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human. We will engage films, graphic novels, art, and philosophical works as we try and grapple with the contemporary presence and relevance of the Holocaust. Are comparisons of other genocides to the Holocaust helpful or offensive? Was the Holocaust a lapse into barbarism or a dark side to the logic of modernity? We will see how thinkers such as Hannah Arendt, Emmanuel Levinas, and Martin Buber grappled with these and related questions such as the problem of evil, the meaning of suffering, and the presence of God in the death camps.

RELI274 The History of Science in Islam
This course will examine the intellectual legacy of the sciences in the Islamic world. Premodern Muslims cultivated various dimensions of what are today understood as the "hard sciences," including physics, mathematics, biology, and chemistry. In addition to exploring Islamic contributions to these fields during the classical period, known according to some sources as the "Golden Age of Islamic Science," we will explore Islamic medicine and medical theories, astronomy and astrological works (including tools used for astronomical observation), and the sciences of optics and alchemy. We will chart the development of these sciences while looking at the broader cultivation of scientific knowledge in

Islamic societies, including the establishment of scientific institutions such as universities, observatories, hospitals, and pharmacies.

RELI275 Moral Complexity in Islam: Origins to the Present
Ethics seem straightforward, until you need to explain your choices. How do you judge actions of truth and deception, love and hate, wealth and poverty, pain and punishment, freedom and slavery? Over the long history of Islamic cultures, how did people describe a good, full life? Is there a unique Islamic ethos of action? Do Islamic thinkers tie values and decisions to divine revelation, or to reason? How do we determine the nature of good and evil? Can God do evil, and what would that even mean? In confronting these questions along with Islamic philosophers and thinkers we will find a surprising range and diversity, and some of history's most compelling answers. Diverse and creative, these answers from the Islamic past compel us to rethink some of our basic presuppositions. Blending theory with case studies from the Islamic past and present, we will approach some of the hard ethical questions that Muslims across the world have had to deal with historically and continue to address today.

RELI275F Religions Resisting Modernity (FYS)
Why did some Native Americans turn to dance while resisting federal troops? Why do creationists reject evolution? Why do some French Muslims wear a veil when their mothers didn't? Why did Gandhi insist that Indian nationalists spin their own thread? Throughout the last century, resistance has risen to modernity, and religion has played an increasingly important role in challenging the globalization of modern Western values. This seminar will explore how Europe transformed itself into a modern society with worldwide influence. Then it will investigate how the Lakota Sioux, Christian creationists, and Mohandas Gandhi each have used religion in an attempt to resist some aspect of modernity, either outside the Western world or within it. No background in the study of religions is necessary. Ultimately, the course will challenge our very understandings and expectations of what it means to be modern.

RELI277 Magick and Her Practices, of Late
In this course we ask why paganism and Goddess worship have become "the fastest growing American religion," examining the tensions between science and society that so often provoke magic-infused social resistance movements. We explore the rise of Goddess worship in the Americas since the 1970s, considering its ties to ecofeminist, womanist, indigenous, and environmentalist movements. We examine the force of agency and its relation to ritual magic.

We then dive into the purported roots of several modern magic traditions, including Wicca, Dianic witchcraft, Feri traditions, and Haitian Vodou, among others, and ask how these cosmovisions define and/or transcend our gendered personhoods.

As we find our way back to a renewed understanding of modern paganisms, students will design individual or small group projects wherein they experience, ethnographically consider and/or perform extant manifestations of magic and ritual, bringing peoples lived experiences into conversation with course readings. This class is taught as a twice-weekly seminar designed around written assignments and engaged discussions, while inviting but not requiring students to engage in phenomenological experiences outside of class that may inform their written work. Students will produce ethnographic essays that are both analytical and personally reflective.

RELI280 Mixed in America: Race, Religion, and Memoir
This course examines the history of mixed-race and interfaith identities in America. Using the genre of the memoir as a focusing lens, we will look at the various ways that Americans of mixed heritage have found a place, crafted an identity, and made meaning out of being considered "mixed." How has being multiracial or bi-religious changed in the course of history in this country? What has occasioned these changes, and what patterns can we observe? We will explore questions of racial construction; religious boundary-making; rites of passage; gender, sexuality, and marriage; and some literary and media representations of mixed-heritage people.

RELI281 Political Fantasies of Zion
Palestine, Zion, Judah, the Promised Land. A small piece of land in the Middle East has a very long and contested history full of religious meaning for Judaism, Christianity, and Islam. Some imagine the State of Israel as an island--"the only democracy in the Middle East" or the only Western state in the region--surrounded by a hostile environment. The geographical area, by contrast, has often been portrayed as a crossroad, a place where cultures clashed, merged, and exchanged ideas.

In this class, we will examine this tension between a physical and imagined space, between political reality and idea, by recovering alternative Zionist, non-Zionist, and anti-Zionist visions of the Zion. Jewish statehood is a very recent phenomenon. Throughout the modern period, the vast majority of Jews lived under empires, whether Habsburg, French, Romanov, British, or Ottoman. How did the imperial experience shape Jewish religious and political views? What role does the imagination of Zion play in today's political context? Reading political pamphlets, poetry, maps, artworks, and utopian fiction, we will pay attention to the construction of the Zionist idea not just in political Zionism but also in contrasting visions including Canaanism, cultural Zionism, diaspora nationalism, a Jewish-Arab federation, a binational state, and the rejection of statehood as heresy. In the last part of the class, we will look at recent contemporary issues from the news, e.g., the agreements between the State of Israel and the United Arab Emirates, or government corruption in Israel, in order to see how these ideas of Zion are still present in today's discourse.

RELI282 Religion and the Scientific Imagination
Where do we get the idea that science and religion are opposed to one another? What did Darwin do to classic proofs of the existence of God and how have those proofs bounced back? What sort of evidence do theologians marshal in support of their hypotheses, and what sort of spiritualities do scientists generate in support of theirs? What do neuroscientists think they're finding when they measure the neural activity of meditating monks? What are the "new atheists" so annoyed about? How do cosmologists talk about the origins of the world, and how do climate scientists talk about its end? In this class we will explore the many ways "religion" and "science" have interacted, conflicted, collided, and combined with one another--in an effort to move beyond the frankly boring "debates" between them.

RELI283 Jesus and His Interpreters
The search for the Jesus of history -- what can be known as a matter of historical record about Jesus of Nazareth, apart from religious beliefs and commitments -- creates unending challenges. Jesus left us nothing in writing. Everything we have heard about him comes from texts written many years -- even decades -- after he lived. And indeed, the New Testament never claims that Jesus himself said and did all the things attributed to him. To understand the figure of Jesus, therefore, we must investigate what his many interpreters said about him, and why. This course will focus principally on a close reading of the Gospels in the New Testament (Matthew, Mark, Luke, and John) as well as the two earliest Gospels (the Sayings Gospel "Q" and the Gospel of Thomas) that are not included

in the Christian Bible. We will seek to understand how and why these texts interpreted Jesus the way they did.

RELI289 Indigenous Religions: Politics, Land, Healing
From wise old shamans to heroic pipeline protestors, the media is full of romantic representations of indigenous religion, but what do you really know beyond the stereotypes? If indigenous religion is just religion practiced by indigenous people, is it a category at all? Since the first days of colonialism the question of whether or not the "natives" have or are capable of having religion has had political consequences. This class introduces students to the historical and political contexts within which indigenous peoples practice their religions, and critically engages with popular stereotypes. Using ethnography, fiction, critical theory, and the instructor's own fieldwork materials, we will examine some of the criteria by which indigenous religious practices have been romanticized or judged lacking by outsiders: What does an oral tradition sound like? What does it mean to engage in place-based religion? What is a "noble savage," what are sacred sites, animate landscapes, and what are some of the ways indigenous peoples really do relate to the environment in radically different ways? What are some of the contradictions and complications of multiculturalism and the politics of recognition when it comes to indigenous populations? While this is not a survey course, students will be introduced to case studies of indigenous religious practices from North America, Australia, and Siberia.

RELI291 From Jerusalem to Ground Zero: Muslim, Jewish, Christian, Sioux, and Hindu Notions of Sacredness
Many Jews, Christians, and Muslims view Jerusalem as a "sacred" place. But what does this mean? How does a place--or an object or person--become sacred, holy, revered? Is Ground Zero sacred? If so, how do we compare the destruction of an office building that makes part of Manhattan sacred and Native American efforts to protect venerated sites from "development" that they describe as "desecration"? Does the term "sacred" even translate in other languages? When does a stone sculpture become an embodiment of a Hindu deity?

Using examples such as Jewish, Christian, and Muslim views of Jerusalem, Lakota Sioux recognition of revered places and wicasa wakan (medicine men), and Hindu engagements with divine images, this seminar will explore these questions.

RELI292 Reason and Revelation: An Introduction to the Philosophy of Religion
With the dawning of modernity, Europe's colonial and scientific adventures opened a distinction of mutual suspicion between theology and philosophy. Broadly speaking, "philosophy of religion" is the effort to evaluate the claims of revelation and reason in terms of one another. We will examine some of the major texts within this field, whose authors include deep skeptics, committed Christians, committed anti-Christians, secular and nonsecular Jews, feminists, ethicists, idealists, empiricists, Romantics, and liberationists. Themes include proofs of God's existence--along with refutations of those proofs and rebuttals to those refutations--the problem of evil, religious ethics, religious experience, the possibility of a universal religion, "divine" racism, the gender of God, the ecocidal tendencies of Abrahamic theology, and the role theology might or might not play in efforts toward ecological, sexual, and racial justice.

RELI295 Religion in Dungeons and Dragons
As a fantasy roleplaying game, Dungeons & Dragons has been prevalent for over 40 years. In this game, players partake in fantastical journeys, slaying beasts, completing quests, and interacting with divine beings. Though not often discussed, religion has played an important role in Dungeons & Dragons since its creation: clerics pray to their gods and invoke physical changes in the world, strange cults organize and perform perverse rites, summoning ancient beings for evil. There have been many different editions of Dungeons & Dragons, and each treats these religious elements in a different way. This course answers the questions, "What role does religion play within Dungeons & Dragons and how does the presentation of religion within Dungeons & Dragons map onto scholarly trends within Religious Studies?"

RELI299 Imagining Communities: National Religions and Political Rituals
From the Catholic-Protestant troubles in Northern Ireland, Christian nationalism in Serbia, Hindu-Buddhist conflict in Sri Lanka, and the Taliban in Afghanistan, religious nationalism often produces virulent and violent conflict. Yet the Virgin of Guadeloupe is a national symbol of Mexico, Catholicism was central to the Polish Solidarity movement, and America defines itself as "one nation under God." How are we to understand the relationship between religion and national identity, and how do political rituals, both religious and secular, help form communities? Popular media and political science analysis define religious nationalism as dangerous and secular nationalism as good. We will investigate this claim over the course of the semester by asking what the study of religion and ritual can bring to the topic. Are religious and secular political rituals really as different as they seem? We will read and discuss the classic social theories of Samuel Huntington, Benedict Anderson, Emile Durkheim, Victor Turner, Clifford Geertz, and Talal Asad, and these readings will be interspersed with case studies that illustrate how these theories help us understand the world. Case studies include the war in Bosnia-Herzegovina, the arrest and trial of the punk band Pussy Riot in Russia, and the Yasukuni shrine in Japan, where the souls of kamikaze pilots and World War II war criminals are enshrined. In addition, students will pick a case study of their own for a research project. This project will be conducted through multiple small assignments over the course of the semester that will be combined into a final research paper and class presentation.

RELI300 Semiotics of al-Barzakh: The Grammars of the End of Days and Horizons of Possibility
This course builds from the Islamic eschatological concept of "al-Barzakh" as it has been taken up in anthropological theories, as well as in Islamic thought more generally, with careful attention to the term's semiotic transformations and significations. It does so in order to explore both how the term describes an earthly place and an eschatological hereafter as well as a theoretical and practical alternative to the notion of the liminal personhood.

Since at least the 12th century, thinkers have explored the Islamic concept of al-Barzakh to explore the connection between the earthly present and the heavenly hereafter and the scales of judgment in between. This term, somewhat akin to Christian notion of purgatory or limbo, appears only three times in the Qur'an. It is explained as being like the productive firmament that separates salt and sweet water. In places like Morocco, this is commonly interpreted as referring to the Strait of Gibraltar and the underwater isthmus that separates and produces the waters of the Atlantic Ocean and the Strait of Gibraltar.

We will read both contemporary scholarly apprehensions of this term and its various applications in Muslim-majority contexts such as Morocco, Egypt, Sudan, and Iran--often ethnographic--as well as Islamic philosophy that attempts to bring the concept into relation with earthly personhood. In our approach, we will move through a variety of scholarly genres and epochs in order to trace the genealogies of present-day popular invocations of the term as we contrast it with other apprehensions of the eschatological and the liminal.

We will work to understand how this term contains space for both an imagination of everyday life as well as the boundary-generating difference marking here and there, then and now, by looking at how the term is evoked by artists, scholars, religious adherents, psychoanalysts, and border crossers. As we go along, we will pay special attention to the languages of belonging and difference evoked by this term and attend to how an anthropological approach to semiotics might elucidate new grammars of community and horizons of possibility that exist alongside notions of the liminal, uncanny, dreaming, the hereafter, and the imagination of the end of days.

RELI301 Jesus and the Gods: Christianity and the Religions of Antiquity
How did Jesus of Nazareth come to be understood as a god, who dies and rises, in a world brimming with gods? Why was he remembered as a philosopher and a martyr, like Socrates? How did early Christians understand their rituals of death and resurrection in terms of salvation and sacrifice? How--and with what motives--did writers throughout history compare Jesus with the priests and kings of ancient Israel or with the gods and goddesses of the "Mystery Religions"? This course will focus on the methods and politics of comparing Christianity and the religions of antiquity. Considering themes and theories of religion and sacrifice, wisdom and prophecy, ethics and philosophy, and mythmaking and cultural critique, we will ask how the politics of classification and comparison have shaped not only our understanding of Jesus and Judaism, and of ancient Greece and Rome, but also the construction of Judaism and Christianity as religions, and the very category of religion itself.

RELI302 Kierkegaard: An Advanced Seminar in Absurdity
Throughout Kierkegaard's "pseudonymous authorship"--a set of books written by different characters he dreamed up to remove the burden of authorship from himself--we encounter the possibility that, from the perspective of ethics, philosophy, and even religion, the truth will seem ridiculous. Truth, for these pseudonymous authors, takes the form of paradox, that reason and common sense can only call "absurd." Of course, it is no surprise that a paradox seems absurd; if it is not absurd, it is not a paradox. For the pseudonyms, it is therefore either the case that truth is paradoxical, exceeding the realms of ordinary thinking and existing, or that it is not. If it is not, then the absurd is simply absurd and both philosophy and religion are right to reject it. But if truth "is" paradoxical, then we are faced with the problem of thinking the unthinkable, communicating the incommunicable, and getting serious about absurdity. In this seminar, we will wrangle some of these pseudonyms' best-known, most exciting, and crankiest books, along with a few of Kierkegaard's signed, vitriolic attacks on the established church.

RELI303 Extinction/Rebellion: Christianity and the Climate Crisis
Although this course is not devoted specifically to the subject of "XR"--the decentralized environmental activist organization and global campaign of civil disobedience--it borrows the movement's self-designation as a point of departure for an exploration of the historical, conceptual, and geopolitical significance of Christianity to the "Anthropocene." How is Christianity entangled among the "historical roots of our ecologic crisis"? What is "eco-theology"? How do ancient narratives of creation and traditional Christian teachings regarding the origin of humankind continue to shape modern, scientific, and popular assumptions about the natural world and our place in it? What does the book of Genesis have to say about commercial agriculture, ethical veganism, and the relation of divinity with the more-than-human, animal-vegetal-mineral web of life? Whence this "planet of slums" and whither Paradise or the Promised Land? Which elements of the Christian imagination enabled colonization of the New World, indigenous displacement and genocide, the transatlantic slave trade, and capitalist globalization? Is another world still possible, and could Christian thought and practice play a pivotal part in actualizing an alternative planetarity today? We will pursue these questions together by way of readings in theology, philosophy, critical science studies, ecology, geography, political economy, Black feminism, queer theory, and Indigenous studies. Ultimately, the course analyzes aspects of Christianity's intimate involvement in the history of climate change and considers how critical attention to this history may contribute to collective acts of rebellion against mass extinction.

RELI305 Pantheologies: Animal, Vegetable, Mineral, World
Pantheism teaches that the world itself is divine. The idea seems simple enough, yet it has suffered extraordinary ridicule at the hands of western philosophers and theologians, who have considered "matter" to be lifeless, dark, and feminine (which is to say, as different as possible from "God.") This course will explore this generalized panic over pantheism--in particular, the anxieties it encodes over

gender, race, nationality, and class, and the contribution such anxieties have made to an unequally distributed attack on the "environment."

Seeking an alternative to our raced and gendered ecocidal metaphysic, the course then turns to contemporary pantheologies. To what extent are recent theories of cosmology, complexity, and materiality setting forth subtle pantheisms? What are the feminist, anti-racist, and ecological stakes of these theories? Properly conceived, what is pantheism; is it ultimately distinguishable from atheism; and what use are any of these platforms in developing an ethic and politic of environmental justice?

RELI306 Animate Landscapes: Spirits and Sovereignty in Indigenous Religions
Scientific understandings of the world are grounded in a distinction between animate beings and inanimate matter, but people all over the world have understood land and landscapes as alive and filled with agency. Indigenous religious practices often include relationships with mountains, rivers, glaciers, and other powerful "other-than-human persons" who must be respected, who can protect, but who are also feared. In the eyes of early Christians and often in contemporary popular culture, these animate and agentive landscapes can seem monstrous. We will explore medieval ideas about the Wild Man of the Forest, Indigenous and Feminist theory, and draw on case studies from North America, Siberia, Mongolia, and the instructor's fieldwork materials with landscape beings in Buryatia. The class will explore the different relationships human beings have with animate and sacred landscapes, think about the ramifications these relationships have for sovereignty over and in the "natural" world and why the idea that land is alive might be threatening. The course includes a 4 day/3 night trip to Penikese Island off Cape Cod for an immersive learning experience with the Gull Island Institute during Fall Break. The trip will be fully funded with no cost to the students). The trip is required, and in order to take the class you must be available to participate in this travel during Fall Break (10/24-10/27).

RELI307 Ritual
Religion can be defined through beliefs or traditions or texts, but it always takes physical form through ritual. Ritual is the one universal in religion, but the question of how to understand ritual is possibly the most contested question in the study of religion, and not all rituals are religious. Can a ritual be read like a text? How do symbols produce effects, and how should we understand these effects? What is performative speech and how does it work? How does ritual behavior reflect and shape social relationships? This course introduces students to the major approaches to the study of ritual. The readings draw heavily, but not exclusively, on anthropological approaches to ritual, both classic texts and recent innovative approaches focusing on language and embodiment. Students will pick a ritual that they are interested in and will attend that ritual several times over the semester, conducting practical fieldwork exercises and applying the theories we read in class. The assignments culminate in a paper in which students will be required to analyze "their" ritual using the theory we read together in class. For these assignments, students are encouraged to define ritual broadly and creatively. The goal of the class is to gain an understanding of theoretical approaches to ritual by applying these theories to the social world around them.

RELI308 Trump-Evangelicals: the History of Fundamentalism and Evangelicalism in America
This course examines the history of American evangelicalism and fundamentalism, beginning with a brief overview of Protestantism in the colonial and revolutionary eras. Then, the course examines revivalism, slavery, and the emergence of fundamentalism during the 19th century. Special attention is paid to the re-emergence of evangelicalism after World War II, the establishment of the religious right, global evangelicalism, and subcultures (such as Christian music). The course concludes by investigating the core evangelical support for the candidacy and presidency of Donald Trump. Students will be challenged to consider the ways issues of gender, race, and economics have shaped fundamentalism and evangelicalism, and reflect on how these movements' views of American history contribute to their own sense of identity and purpose.

RELI309 Scoundrels, Sinners, and Saints: Approaches to Buddhist Life Writing
This seminar will examine a variety of religious biographies and autobiographies in order to evaluate the significance of life writing in the Buddhist traditions of Asia. Materials will cover a broad range of historical periods, from early medieval to modern, and geographic regions, including South Asia, East Asia, the Himalayas, and Tibet. Topics include the structure, function, style, production, and reception of biographies and autobiographies, as well as more thematic questions of religious transmission, soteriology and praxis, formations of self-identity, gender, and the relationships of biographical literature to art and pilgrimage. Readings include primary Buddhist texts in translation supplemented by secondary scholarship on hagiography and sainthood, literary theory, narrative constructions of the self, and Buddhist history.

RELI311 Pain and Punishment in the Hebrew Bible
The Hebrew Bible has many graphic depictions of pain and punishment; some inflicted upon the Israelites and many inflicted by the Israelites themselves. Many of the laws of the Hebrew Bible describe the proper ways to inflict punishment and many of those same laws describe the ways in which someone might be absolved of punishment. This course aims to answer the questions of: What role did pain and punishment play in the ancient world? How was the physical experience of either connected to religious experience? In what ways was pain, and often disgust, utilized to either connect or separate someone from the divine? What is the relationship between divinity, power, physicality, and punishment? In asking these questions, this course will demonstrate that, much of the time, spirituality, devotion, and religiousness, need not be divorced from the physical world and need not be considered metaphysical qualities.

RELI312 Judaism in the Time of Jesus
This course is designed to help us understand the emergence of Judaism - its practices and beliefs, as a philosophy, a way of life, a religion -- from the formation of the Hebrew Bible (ca. 400 BCE) to the parallel development of rabbinic Judaism and early Christianity (ca. 100 CE). We will be concerned with the creation of community and its institutions, the rise of sectarianism and claims of normativity, the creation of the Bible as scripture and various modes of its interpretation, the relationship of early Judaism to ancient Israelite religion and society, and relations between Jews and Judaism to gentiles and gentile culture. Attention will be given to the creativity of Jewish literature, its common setting in times of oppression, and its place in the religious heritage of Judaism and Christianity.

RELI313 Curating Religion: Museums, Monuments, and Memorials
Museums, monuments, and memorial sites have long been important sites for public reckoning with the past. But they are not only about the past, they represent present struggles about the meaning of history and the possibility of imagining different futures. In this multidisciplinary class, we will work as a group to examine diverse case studies in which religion and memorial culture intersect in acts such as curation, representation, conservation, and repatriation. Visiting exhibitions and working with Wesleyan's collections, some of the questions we will ask include: What are the ethics of the treatment of objects in museums and of repatriation? How does space shape religious experience in an arguably secular setting? How do monuments invoke religious imagery and symbolism in their construction of history? In what ways does placing something behind a glass case give it a religious aura, and in what ways does it drain an object of its sacrality?

RELI314 Buddhist Traditions of Mind and Meditation
This seminar surveys a range of Buddhist meditation practices in the context of traditional theories of mind, perception, and cognition, with an emphasis on the traditions of South Asia, East Asia, and the Himalaya. Beginning with canonical descriptions of the mind and its variety of mental states, the course will then examine early scriptural expositions on the two principal types of meditation techniques: tranquility or concentration meditation (samatha) and insight meditation (vipasyana). Next will be an examination of techniques for cultivating compassion and the view of emptiness that were central to the later Indian traditions of the Mahayana or Great Vehicle. The course will finally turn to the elaborate systems of Tantra that developed in India and spread through Tibet, which incorporate the visualization of deities and recitation of mantras. Readings will include both primary Buddhist canonical works and commentaries by contemporary Buddhist teachers in English translation as well as secondary scholarship on the historical context of Buddhist meditation systems, cognitive theory, and ritual practice.

RELI315 Ethics and Action in the Buddhist Cosmos
We often think about nirvana, or "enlightenment," as the ultimate goal of Buddhist practice. But the reality is much more complex. Buddhist traditions imagine a huge range of positive outcomes for moral behavior: immediate material benefits, rebirth in a better body or in a wealthier family, and enjoyment of gold-paved heavens or eternally blissful Pure Lands.

In this seminar we will read Buddhist scriptures, commentaries, biographies, narrative anthologies, and scholarly works that trace the many ways of thinking about ethics, action, and rebirth in the vast Buddhist cosmos. We will tour Buddhist heavens and hells, Pure Lands and political dystopias, as well as the complex worlds of Buddhist modernity. Along the way we will begin to think about key issues in the study of religion: narrative and ethics, magic and material culture, cosmology and sacred presence, modernity and globalization.

RELI316 Human Rights and Spiritual Ecologies of Indigenous Peoples
This seminar will explore the social, legal, and metaphysical aspects of indigenous spiritual ecologies and their relation to United Nations discourses, indigenous community media production, and land rights movements. We will consider how indigenous peoples both respond to legal frameworks and press their positions into national and international human rights standards, on issues ranging from governance to cultural survival, from environmental management to language policy.

A particular emphasis will be put on the Andean and Amazonian regions of South America, the Mesoamerican highlands (Chiapas, Guatemala), the United States, and the United Nations Permanent Forum on Indigenous Issues, but students are encouraged to pursue their research projects across Abya Yala (the Americas).

This course focuses on developing critical thinking skills and places a special emphasis on writing and thoughtfully responding to the materials presented in class. Classes will not only consist of framework lectures and discussion questions, but also a combination of student panel presentations and writing in a collaborative environment. Participation in these activities is crucial to success in this course. Opportunities for student engagement in Manhattan at the April 2024 United Permanent Forum on Indigenous Issues are currently in development.

RELI317 Colonizing Space: Exploration, Extraction, and Inhabitation
In his 2025 Inauguration Address, the US President promised that the nation "will pursue our manifest destiny into the stars, launching American astronauts to plant the Stars and Stripes on the planet Mars." What is "manifest destiny," and what does it have to do with outer space? Would planting a flag on Mars amount to claiming it as territory? And why is this administration setting its highest hopes on Mars? This course will track the ideological and colonial history

of the Apollo era before approaching the scientific, economic, and legislative landscape of the corporate sector known as "NewSpace." It will explore the mythological underpinnings, narrative imaginings, and theological justifications for the unfettered exploitation and inhabitation of Earth, the Moon, asteroids, and Mars. Finally, it will ask whether an ethically and ecologically sustainable space program is possible.

RELI317F Colonizing Space: Exploration, Extraction, and Inhabitation (FYS)
Under its "Artemis Mission," NASA plans to put "the first woman and first person of color" on the Moon to build a permanent outpost. This lunar base will allow NASA to mine the Moon, extract precious metals from asteroids, and eventually colonize Mars--hopefully before China and Russia do the same. Thanks to recent legislation, NASA will rely throughout this mission on the rocket and extractive technologies of private corporations like SpaceX, Blue Origin, Moon Express, and Deep Space Industries, whose CEOs proclaim they are saving the human race by expanding it into space. It will also rely on the backing of the newly-created sixth branch of the U.S. military: the Space Force.

This course will track the ideological and colonial history of the Apollo era before approaching the scientific, corporate, and legislative landscape of "NewSpace." It will explore the mythological underpinnings, narrative imaginings, and theological justifications for the unfettered exploitation and inhabitation of the Earth and its cosmic neighbors. Finally, it will ask whether an ethically and ecologically sustainable space program is possible.

RELI318 Awesome Cinema: Religion, Art, and the Unrepresentable
How does one represent the unrepresentable? In particular, how might a medium like cinema, founded on recording the visible world, move us to sense something beyond human experience? Various artistic, religious, and religiously artistic traditions use mystery, horror, surprise, disgust, and pleasure to evoke the uncanny, the majestic, the terrifying, and even the sublime in us. This class examines how filmmakers prompt audiences to feel awe (which might be awesome, awful, or both) and how that relates to religious engagement with the non-rational. Noting parallels in painting, ritual, architecture, and other means of expression, we consider how art structures emotion, perception, and cognition to exceed representation of the known. This class will examine how aliens, avatars, black holes, death, deities, demons, saints, saviors, superheroes, and nature have been conduits to that which appears to escape reason.

RELI320 Schemers and Redeemers: Capitalism and Christianity in the Early Republic
This course examines the intersection of two of the most significant themes in U.S. history: Capitalism and Christianity. Beginning with the Early Republic (1790s) and continuing through the mid-19th century, this course asks students to explore how Americans used their religious identities to negotiate and shape market activity and institutions (and in turn, how the marketplace shaped their religion). Students will investigate the varied ways in which religious women and men resolved tensions between gender, class, slavery, moral dogma, and market imperatives. Finally, this course will require students to reflect on how the early 19th-century U.S. experience informs our understanding of the relationship between capitalism and Christianity in 21st-century America.

RELI321 Visual Worlds of Himalayan Religions
How do Tibetan Buddhists look at religious images? What do pilgrims in Nepal see when faced with sacred monuments? Why do devotees in Bhutan display erotic caricatures in public? This seminar will explore the ubiquitous role of images and imagining in the religious traditions of the Himalayan region. Readings and viewings will examine the painting, sculpture, architecture, and performing arts of the Himalaya (including Tibet, Nepal, north India, and Bhutan), placing them in the context of local religious beliefs, ritual practices, and literary canons. The seminar aims to understand how Himalayan cultures produce religious images and the ways of seeing that invest them with meaning. Classes will address specific modes of visual representation, the relationships between text and image, and the social lives of images, as well various theoretical and methodological approaches for their reading and interpretation. Particular attention will be paid to representations of Buddha Sakyamuni and visual expressions of his life.

RELI322 Playing God: Race, Colonialism, and Raising Dinosaurs from the Dead
This seminar draws on the fields of religious studies, ecocriticism, philosophy of science, decolonial thought, Black studies, political anthropology, and queer theory to examine our culture's fascination with dinosaurs. Questions discussed include: What are the ethical implications of "discovering" dinosaur fossils on stolen Indigenous land? How have "philanthro-capitalists" used dinosaurs to promote the ideology of American exceptionalism? How do fossil fuels and their extraction relate to searches for fossil animals? Why do creationists believe dinosaurs still live, and how is this a remnant of European imperialism? Is the dream of resurrecting extinct species scientific or religious? How do natural history museums benefit from and contribute towards colonialism? Is the past more like a natural resource or public utility? In the process of addressing these and many more questions, students will examine what dinosaurs can teach us about humans, non-humans, post-humans, extinction, and the end of the world.

RELI323 The Black Charismatic
In this course we will explore the interplay between black politics and popular culture in the post-civil rights era. More specifically, we will examine the aesthetics of affective (commonly called "charismatic") black political leadership by attending to Tavis Smiley's yearly "State of the Black Union" address, 2000-2010. We will rely almost entirely on film, video, and digital archives in order to trace the eleven-year-long evolution of Smiley's annual event,

while focusing our hermeneutic attention on the racialized and gendered performances of Louis Farrakhan, Michael Eric Dyson, Cornel West, and others. Through close readings of their televised performances, then, this course will require students to think and write about the practice and rhetoric of the black charismatic. How might the black charismatic threaten to undermine the political opportunities afforded by the success of the modern civil rights movement? How did Smiley's yearly event create the illusion of a black public sphere? What are the unintended consequences of substituting affect for political action? Similarly, what are the potential perils of a politics that results in ephemeral catharsis without dangerous political consequences? While participating in the general discussion across the semester, students will be searching out specific research topics of their own, topics relating the seminar conversation to original research questions about: the new liberalism of black politics; the crisis of the black public intellectual; the importance of technology (particularly the ways in which new media have changed, even upended the political habitus itself); and the relationship between gender (particularly black masculinity), charismatic leadership, and respectability politics. Authors will include (in no particular order): Adolph Reed, Richard Iton, Hazel Carby, Hortense Spillers, Houston Baker, Erica Edwards, Melissa Harris-Perry, and others.

RELI324 Biopolitics, Blackness and Spirit Baptism: The Birth of American Pentecostalism
American Pentecostalism is a conservative, Protestant, Evangelical revival movement that emerges in and through Black practices that constitute an exclusion in the racialized religious, social, cultural, and political formations of early 20th-century United States. Rather than examining Pentecostalism through a single lens called "religion," this course will use the themes of Biopolitics and Blackness to examine Pentecostalism through its most commonly known feature--an experience called the baptism of the Holy Spirit. Pentecostals were narrated in popular and critical accounts in the late 19th and early 20th century as exhibiting criminality, insanity, and raced, gendered, and sexed Black pathology. These marks of abnormality were all part of a formation of power in America known as biopolitics. As an idea, biopolitics is popularized by French historian/philosopher Michel Foucault. Foucault's concept attempts to explain how different intellectual and professional disciplines emerge in nations during the late 19th and early 20th centuries to best create a thriving population, which could be made to live. The power of the nation-state had traditionally been expressed in and through the power to kill. As a revival movement, Pentecostalism rehearses these themes, as early adherents fight over what it means to be made alive when racial Blackness is almost often seen as a mark of and for death. The course will study original accounts and sources from the historical period, read critical, interpretive accounts, and use a variety of media. All resources will be provided in class or via Moodle.

RELI325 The Black Soul: DuBois and the Practice and Grammar of Religion
W.E.B. DuBois is a foreparent in modern sociology, history, poetics, and aesthetics. DuBois was no less formidable and foundational for understanding religion in general, and Black religions in particular. This course seeks to read several of the great works of DuBois, interpreting them in light of their relevance for the study of religion. The course will also give extensive consideration to how DuBois both studied and used religious grammar and practices to build his intellectual program. The course will examine DuBois's impact on the study of religion globally in the aftermath of his work. DuBois's works will be considered, along with interpretations from Edward Blum, Hazel Carby, David Chidester, Gary Dorrien, Cheryl Sanders, Theodore Vial, Stephanie Shaw, Victor Anderson, and Rebecka Rutledge Fisher.

RELI326 Religion and Rocks
In the last few decades, scholars have increasingly cautioned against anthropocentrism in the natural and social sciences, calling our critical and ethical attention to the worlds of nonhuman animals, vegetables, funghi, bacteria, and even quarks. Attuned as we've become to this entangled riot of agents, one might be forgiven for wanting something unquestionable (not to mention unmoving) to stand on. Nevertheless, this course will suggest we turn our attention to the literary, religious, cultural, and scientific imagination of rocks. Why do children collect rocks; what do geologists learn from them; what does industry do to them? How does a mountain become sacred; how do sages encourage stones to speak; who buys and sells crystals, and why? And why is it the case that, even though particular people hold particular stones, gems, mountains, planets to be powerful and even sacred, the category of "rocks" seems not to merit much critical (much less ethical) consideration?

RELI327 How to Be a Buddha: Buddhist Philosophy in Practice
What does it mean to become a buddha? How might one lead an awakened life? This advanced seminar explores the paths of ethical practice, philosophical insight, and meditative cultivation through one of Mahayana Buddhism's most celebrated and influential texts: The Guide to the Bodhisattva's Way of Life (Bodhicaryavatara). Composed in verse by the renowned eighth-century Indian scholar Shantideva, this masterwork of Indian philosophy and Buddhist literature sets forth in vivid detail the ideal of the bodhisattva, an individual focused on attaining the state of a buddha for the benefit of others. Through a close reading of Shantideva's work in various translations, traditional Buddhist commentaries, and secondary scholarship, we will follow Shantideva's account of the bodhisattva path, examining key points along the way including the nature of suffering and the possibility of liberation; the ethical frameworks of bodhicitta (the mind of awakening); the tension between individual agency and interdependence; the nature of mind; views of no-self and emptiness; and the unfolding of wisdom. The seminar will also consider how, in recent decades, the Guide has been recast and reinterpreted under the rubric of human flourishing and as an approach to living a "good life."

RELI337 Missionary Mysteries: the Objects and Archives of Wesleyan's Missionary Past
This course examines the history of Wesleyan University's connections to missionary work in the nineteenth and early twentieth centuries, as seen through the university's archival and object collections. Students will spend the bulk of classroom time in hands-on learning as they engage with the archives of the Wesleyan Missionary Lyceum and cultural heritage collections obtained by

missionaries and brought back to the University. Beginning with an overview of historical, archival, and museum methods, the course then will examine objects and written records from the Americas, West Africa, East Asia and the South Pacific. Students will be challenged to consider the ways in which Wesleyan has been engaged in colonialism, imperialism, and global evangelism. Topics of investigation will include: gender, linguistics, museum ethics and repatriation, the use of objects as educational tools.

RELI373 Religion, Science, and Empire: Crucible of a Globalized World
The development of modern science--and of modernity itself--not only coincided with the rise of European imperialism, it was abetted by it. Meanwhile, religion was integral to both the roots of European science and Western encounters with others. This class will explore how the intersections of religion, science, and empire have formed a globalized world with examples of European engagement with the Americas, Middle East, and, particularly, India from the age of Columbus through to the space race. We will examine how the disciplines we know today as biology, anthropology, archaeology, folklore, and the history of religions all crystallized in the crucible of imperial encounter and how non-Westerners have embraced, engaged, and resisted these epistemes.

RELI375 Relic and Image: The Archaeology and Social History of Indian Buddhism
This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (first to third century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts, then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha's relics, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodh Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

RELI377 Worlding the World: Creation Myths from Ancient Greece to the Multiverse
This course will focus on two questions that have thwarted and enthralled scientists, philosophers, and theologians for millennia: Where have we come from? and Where are we going? By reading ancient Greek and early Christian sources alongside contemporary astrophysicists, we will witness the reconfigured resurrection of some very old debates about the creation and unmaking of the world. Is the universe eternal, or was it created? Is it finite or infinite? Destructible or indestructible? Linear or cyclical? And is ours the only universe, or are there others?

The semester will be divided into four sections. The first will explore the dominant, or "inflationary," version of the big bang hypothesis in relation to Christian and indigenous myths of creation. The second will consider the possibility that the whole universe might be a negligible part of a vast "multiverse" in conversation with the early Greek atomists, who posited an extra-cosmic space teeming with other worlds. The third will explore contemporary cyclical cosmologies--that is, theories that posit a rebirth of the cosmos out of its fiery destruction--in relation to early Stoic philosophy and cross-cultural cyclic mythologies. The fourth will explore quantum cosmologies, in which the universe fragments into parallel branches each time a particle "decides" upon a position. We will examine these varied cosmologies of multiplicity, not with a view toward adjudicating among them, but toward pointing out their mythic and ontological genealogies and consequences.

RELI391 Religion and the Social Construction of Race
In this course we examine aspects of the intersections between race and religion in a number of historical and social contexts. We place at the center of our discussions the question of how race and religion are co-constructed categories that function as a prism through which people come to understand and experience their own identities and those of others. We will privilege interpretations that emphasize (a) the intersections of race and religion as a process in which power plays a pivotal role; and (b) the means through which communities form collective identities. We will read a range of historical analysis and primary source materials from the U.S. and the Caribbean. After a theory module, we will examine a colonial-era captivity narrative, antebellum pro-slavery document, missionary works, analyses of anti-Semitism, works on Father Divine, the Nation of Islam, Rastafari, Haitian Vodou, Jonestown, the Christian White Supremacy movement, as well as the contemporary U.S. relationship to the Middle East.

RELI393 "If there is no God, then everything is permitted?" Moral Life in a Secular World
In Fyodor Dostoevsky's The Brothers Karamazov, Dmitri Karamazov famously poses the question of what would happen to mankind "without God and immortal life," asking whether this means that "all things are permitted." Made famous by Dostoevsky, the question of whether we can be moral without God has always haunted secularism and has consistently been the most vocal criticism of unbelief. From papal condemnations of secularism and "godless Soviets," to the contemporary consensus that belief in God is evidence of moral goodness and its absence a sign of a broken ethical barometer, the assumption has been that transcendental authority is all that stands between us and moral abyss. When the atrocities committed by "totalitarian" regimes are cited as evidence of this, it is only the most radical articulation of a broader narrative of secular modernity.

One of modernity's master narratives is that people go from being under the care of the church to being under the care of the state, and our focus will be on historical cases where the question of secular values was explicitly engaged by the state. We will examine individual and collective articulations of morality in three prominent models of secularism: American civil religion, French laïcité, and Communist official atheism. What constitutes the moral foundation of a world without God? Can religion's moral and spiritual function be performed by a different kind of belief system?

RELI393Z "If there is no God, then everything is permitted?" Moral Life in a Secular World
Please note: Students should expect some readings and assignments to be due during winter break, prior to beginning Winter Session. Please visit the Winter Session website for the full syllabus -- http://www.wesleyan.edu/wintersession.

In Fyodor Dostoevsky's The Brothers Karamazov, Dmitri Karamazov famously poses the question of what would happen to mankind "without God and immortal life," asking whether this means that "all things are permitted." Made famous by Dostoevsky, the question of whether we can be moral without God has always haunted secularism and has consistently been the most vocal criticism of unbelief. From papal condemnations of secularism and "godless Soviets," to the contemporary consensus that belief in God is evidence of moral goodness and its absence a sign of a broken ethical barometer, the assumption has been that transcendental authority is all that stands between us and moral abyss. When the atrocities committed by "totalitarian" regimes are cited as evidence of this, it is only the most radical articulation of a broader narrative of secular modernity.

One of modernity's master narratives is that people go from being under the care of the church to being under the care of the state, and our focus will be on historical cases where the question of secular values was explicitly engaged by the state. We will examine individual and collective articulations of morality in three prominent models of secularism: American civil religion, French laïcité, and Communist official atheism. What constitutes the moral foundation of a world without God? Can religion's moral and spiritual function be performed by a different kind of belief system?

RELI395 The Anthropology of Religion
What do we study when we study religion? We can observe practices, record speech, examine objects and actions--but what do these things tell us? If religion is about belief, what can we say about belief from documenting actions? Perhaps we must conclude that religion is not about belief, but if so, are in danger of "explaining away" the very phenomena we seek to understand? This course will introduce students to a cross-cultural, comparative perspective on religious practice and belief in order to critically reflect on the role of methodology and research design in the study of religion and the social sciences more broadly. How do we know what we know? How do we plan research in order to find out what we want to know? The course has a significant methods component. Students will be expected to do field research exercises in a local religious community and prepare a methodology research proposal for a fictional or real project as a final assignment. Methodological exercises will be interspersed with ethnographic texts that allow us to reflect on how religion is studied, experienced, and explained. Students planning theses or other research projects with an ethnographic component, in any social science field, may use the class and the final assignment to conceptualize and plan their projects.

RELI398 Majors Colloquium in Religious Studies
This course is designed to teach us how to reflect critically upon the theories, methods, and discourses that constitute the academic study of religion. We will be concerned with current studies in history and the history of religions, classic theory on religion, ethnographic methods, and contemporary theory on secularism. Our task is to understand and assess how scholars of religion make critical judgements. And so, since the building blocks of argumentation remain constant -- definitions, classifications, data, and explanations -- we will seek to identify and evaluate each scholar's principles of selection, means of description, stipulation of evidence, use of comparative categories, and methods and models of argumentation.

ROMANCE LANGUAGES AND LITERATURES

The Department of Romance Languages and Literatures (RL&L) is a cornerstone of the humanities at Wesleyan and the University's gateway to the French-, Italian-, and Spanish-speaking worlds. We represent literary and cultural traditions that extend from the Middle Ages to the present. We teach languages, literatures, and cultures that span Europe, Asia, Africa, and the Americas. Our students develop and apply their knowledge and skills through the extracurricular activities and study-abroad opportunities that we promote. Through a network of collaborations across departments and divisions, we support a wide array of majors, academic programs, and initiatives.

ADDITIONAL INFORMATION

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered **101–112**) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as **101–102**), he or she will have priority for the second course, just like first-year and sophomore students.

FRENCH

FREN101 Elementary French I
This course is designed for first-time French learners who wish to acquire and develop listening, speaking, reading, and writing skills by learning basic vocabulary, useful expressions, and fundamental grammatical structures. Students will also gain cultural insights into the French-speaking world, from Senegal to New Caledonia, from Quebec to Louisiana, from Belgium to Guadeloupe, and beyond. In class, students will participate in activities that promote communicative proficiency and cultural competence through vocabulary and grammar exercises, games, skits, conversation, authentic readings, and the use of various audio-visual materials. Classes are conducted in French. FREN 101 is the first semester of the elementary French language sequence.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN102 Elementary French II
This second-semester elementary French course is designed for students who have taken FREN101 or have had one or two years of French in high school and placed into FREN102 through the language placement test. The main goal of this course is to enable students to achieve intermediate communicative proficiency in French by developing their listening, speaking, reading, and writing skills. Students will thus increase their vocabulary, learn more advanced grammatical structures, and gain further cultural insights into the French-speaking world. In class, students will participate in activities that promote communication and cultural competence through vocabulary and grammar exercises, games, skits, conversation, authentic readings, and the use of various audio-visual materials. Classes are conducted entirely in French.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN110 Accelerated Intermediate French I & II
This course combines two semesters of intermediate French into one to allow for a faster track in French. The course develops students' abilities in the four basic skills of listening, speaking, reading, and writing through oral and written practice. It focuses on grammatical structures and vocabulary at the intermediate level and introduces students to contemporary French-language cultures from around the world through discussion of cultural and literary texts and use of audiovisual material.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN111 Intermediate French I
Students will develop their abilities in the four basic skills of listening, speaking, reading, and writing through oral and written practice. The course focuses on grammatical structures and vocabulary at the intermediate level and introduces students to contemporary French-language cultures from around the world through discussion of cultural and literary texts and use of audiovisual material.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN112 Intermediate French II
This is a course for students who have taken FREN 111 or arrive at Wesleyan with a good command of French. It builds on students' previous knowledge to expand and refine their ability to express themselves, both orally and in writing, through exposure to a variety of challenging cultural and literary materials in various media. The course includes a review of basic grammar but emphasizes more complex linguistic structures.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN215 Advanced Intermediate French
This course prepares students for upper-level French courses and for study abroad. It offers students the opportunity to review and strengthen their speaking, writing, and reading abilities in French. Class time is devoted to grammar review and to discussions of short reading assignments (literary and non-literary) from the French-speaking world (France, Africa, and the Caribbean). The semester ends with students reading an entire novel in French. Daily class discussions, oral presentations, weekly discussions with French teaching assistants, outside-of-class grammar review, and compositions are to be expected.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN216 Introduction to French Literature and Culture: From Notre Dame to The Terror
This class will introduce students to the ideas, culture, art, and literature of pre-Revolutionary France. We will read a "romance" by Chrétien de Troyes, bawdy tales by Rabelais, poems by Louise Labé and Ronsard, Montaigne's mediation on cannibals, a play by Molière, and a short "science fiction" tale by Voltaire. This class is designed to help students improve their writing and speaking skills and prepare for a term abroad in a francophone country.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN217 Exoticism: Imaginary Geographies in the 19th-century French Short Story
In this seminar we will consider the fascination with the exotic--with foreign landscapes, customs, and culture--in 19th-century French fiction, particularly in the genre of the short story. Discussions will focus on the representation of foreignness, the construction of the exotic woman, and the status of the European gaze. Major authors may include Bernardin de Saint-Pierre, Chateaubriand, Balzac, Merimee, Loti, Flaubert, Hugo, Baudelaire, and Théophile Gautier. Although a 20th-century text, we will also read Duras's L'Amant.
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN219 "Enfances": Literature and Childhood
At the heart of our discussions in this class will be the question of how adults construct the child's point of view. How can we define childhood? How can we evoke it through narrative? How ought we make art for children? We'll explore a variety of literary and cinematic sources from the French speaking world including Marjane Satrapi's Persepolis, the Comtesse de Ségur's Les Malheurs de Sophie, François Truffaut's L'Argent de Poche, and assorted French-language picture books. Along the way we will work on developing analytic and creative writing skills in French. (This course is conducted in French.)
Offering: **Host**

Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN220 Lancelot, Guinevere, Grail: Enigma in the Romances of Chretien de Troyes
Chretien de Troyes, the greatest writer of medieval France, was the first to tell the stories of Lancelot and Guinevere's fatal passion and of the quest for the Holy Grail. Written at the height of the Renaissance of the 12th century, his Arthurian tales became the basis for all future retellings of the legend. We will read these tales in depth, paying particular attention to their enigmatic quality.

FREN221 French Mythologies
Starting from "Mythologies" by Roland Barthes (1957) and "Nouvelles Mythologies" edited by Jerome Garcin (2007), this course examines how contemporary social values are turned into modern myths and some of the domains that seem to define France in the 21st century. How do the representations of food, fashion, le chic, la laïcité, strikes, colonialism and post-colonialism, etc., in contemporary novels and films still define France today?
Offering: **Host**
Grading: **OPT**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN222 Love and Loss in Medieval and Early Modern French Literature and Culture
The interconnected themes of love and loss encompass others such as desire, passion, friendship, death, separation, and grief. This course introduces students to the uses of these themes in French literature of the medieval and early modern periods by reading a range of texts, from the courtly romance and lyric poetry, to the essay, the novella, and theater. We will examine how men and women treat these themes, and we will be especially sensitive to the ways in which women write in genres traditionally dominated by men. Topics of study will include the body, virtues and vices, marriage, sexuality, seduction, chastity, and violence. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**

FREN223 French Way(s)
What are "French" ways? What is important to the French, and how do they view themselves? What do they think about issues facing their country, Europe, and the world at large? What relationship does France have with the francophone world? What does it even mean to be "French?" Students in this course will explore these questions by examining a variety of materials including the press, comic strips, films, music, vlogs, television and radio broadcasts, and other selected readings. This course is designed for highly motivated students with a firm foundation in French who wish to refine their skills in listening, speaking, reading, and writing while gaining more insight into French life and culture.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**

FREN224 Cultural Mo(uve)ments from the 19th to 21st Centuries
The purpose of this course is to familiarize students with movements such as romanticism, realism, surrealism, and the Nouveau Roman, to name a few. Some of these movements stem directly from the political context, while others seem to have grown almost organically. Though the course will primarily rely on

literary texts, it will also examine the "passerelles" between literature, music, and painting.

FREN225 20th-Century Franco-Caribbean Literature and the Search for Identity
This course investigates how 20th-century Francophone literature from the Caribbean defines Caribbean identity. Through a study of literary texts, films, and paintings from Guadeloupe, Martinique, Haiti, Guyana, and Louisiana, we will explore the evolution of Caribbean self-definition, focusing on the major concepts of Negritude, Antillanite, Creolite, and Louisianitude. This course is taught entirely in French. Readings, written assignments, and class discussions will be in French. Any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course. It is an advanced course intended for students who have not yet studied abroad in a French-speaking country. Students who are not admitted to the course through pre-registration are strongly encouraged to submit an enrollment request and attend the first class. This course will count as one course toward the French studies major and minor, the Romance Studies major, and the COL major. It also fulfills the language requirement for the ARHA major and GEM (Global Engagement Minor).
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

FREN226 From the Diary to the Graphic Novel, Women Writers from the 17th to the 21st Centuries
While women in France were for a long time not welcomed in the literary sphere, they have nonetheless participated in the various movements that have affected literature from the 17th century on. The purpose of this course is to discuss women's space within the literary field. Through the study of various texts, this course will examine women's compliance and defiance towards literary trends. Far from only writing diaries and fairy tales, French women writers have considerably expanded their presence in genres that seemed resolutely closed to them.
Offering: **Host**

FREN227 Revolutions: American, French, Haitian
This 200-level course (which is open to students who have taken FREN215) examines the American, French, and Haitian Revolutions through a comparative historical and literary lens, with particular attention to political language, revolutionary texts, and transatlantic exchange. We will read short excerpts from primary documents -- pamphlets, declarations, speeches, letters, and constitutional texts -- alongside selected secondary sources in order to analyze how revolutionary figures articulated concepts of liberty, rights, sovereignty, and citizenship across the Atlantic world. One of the primary goals will be to consider how revolution was experienced and represented differently in colonial North America, metropolitan France, and Saint-Domingue (Haiti), and how race, slavery, and empire shaped each revolutionary trajectory. There will be three short papers, class presentations, and a final term paper.
This course is taught entirely in French. Readings, written assignments, and class discussions will be in French. Any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course. It is an advanced course intended for students who have not yet studied abroad in a French-speaking country.

Students who are not admitted to the course through pre-registration are strongly encouraged to submit an enrollment request and attend the first class.

This course will count as one course toward the French studies major and minor, the Romance Studies major, the COL major. It also fulfills the language requirement for the ARHA major and GEM (Global Engagement Minor).

FREN228 Fight like the French: Debates, Quarrels and Polemics in French Culture
In the age of "fake news" and polarization, knowing how to debate is essential. The French are notoriously practiced in debate; the importance of public opinion and the figure of the public intellectual have made French society as a whole particularly prone to the agonistic discussion of ideas. This course will survey foundational aesthetic and political debates in French culture from the 15th century to this day, focusing on those that were led by writers, philosophers, and intellectuals and that have entered French literary and cultural history. The course will show how controversies mark and make paradigmatic changes in the cultural landscape, advancing the arts and sciences and voicing political dissent. Throughout the course we will read literary works, treatises, letters, and newspapers.

FREN229 What Can the Middle Ages Teach Us About Nature?
Today nature is at the center of our preoccupations. This course will go back to a time before human beings thought they were the masters of nature, when nature was at the same time teaching and allegory, metaphor and science. We will explore the different functions of nature in bestiaries, poems, romances, and herbaria from the Middle Ages to the beginning of the Early-Modern period (in modern French translation). We will be able to see a real herbarium in the Special Collections & Archives. Students will also visit the Davison Center for the Arts and the Joe Webb Peoples Museum to explore visual representations of nature as well as scientific displays. During the semester, students will put together a herbarium that will be displayed in an exhibition at the end of the semester.

FREN230 Knights, Fools, and Lovers: An Introduction to Medieval and Renaissance French Culture
The study of history and past literature provides intellectual, psychological and emotional resources that make one more resilient in adapting to new circumstances, enable one to see new possibilities of being-in-the-world, and provide new capacities for self-understanding. A knowledge of the European past, moreover, can be an advantage for people seeking to study, live, or work in Europe. This course will help students develop those resources and knowledge through a study of various forms of short fiction and poetry from the French Middle Ages and the Renaissance (12th-16th centuries). We will focus on the representations of human relations, above all romantic relations and their inherent conflicts of power, in these works. We will also view a couple of historical films in order to develop our visual imagination.

FREN231 By Sword, By Cross, and By Pen: An Introduction to Early Modern French Literature and Culture
This course introduces French literature and culture from the 15th to the 17th centuries, when the French territory expanded to its present borders with the rise of the French monarchy. Historical developments include religious upheaval and civil war, overseas exploration and conquest, and the greater dissemination of written works with the invention of the printing press. In this evolving context we will read a variety of literary works of prose and poetry. We will follow the emergence of genres such as the essay and the novel, and observe how different literary forms served to express ideas ranging from personal experiences to sociopolitical aspects of contemporary society. Several film representations of this period will also help us consider how we envision the past.

FREN232 French Society in Music From the Roaring Twenties to Today
Music has kept the beat of French history through its ordinary and extraordinary chapters. How has music supported France's cultural power and interacted with its external influences? How do songs guard dominant narratives or rally people under revolutionary banners of protest? Over the course of the semester, we will explore music (and its multimodal nature) as a site of cultural expression and a means of understanding social and political movements of modern French society over the last 100 years.

In the first part of this course, we will situate the music of artists such as Josephine Baker, Edith Piaf, Boris Vian, and Serge Gainsbourg in relation to major 20th-century events, from post-World War I Annés folles to May '68. We will consider how songs engage political events and discover the ways in which music shapes and is being shaped by its society. The second part of the course focuses on contemporary music of French expression (Indochine, Orelsan, Yseult, Angèle, Stromae) as related to questions of gender and sexuality, the legacy of decolonization, immigration, technology, and consumerism. Listening to the voices of France and its "others," we will examine expressions of belonging and alienation within a society that constantly reinvents itself while endeavoring to preserve its "inherent" characteristics. Close readings of lyrics paired with historical contextualization will be supplemented with theoretical and literary texts, excerpts from films and documentaries, posters, and photography.

FREN233 French and Francophone Gastronomy (CLAC .50)
This course explores the variety of French and Francophone gastronomy through texts, recipes, and other media such as films and cooking shows. Through these materials, students will reflect on the relationship between food and culture and the shape it takes in French and Francophone cultures. They will develop a deeper knowledge and appreciation for various foods and dishes. The course will include a hands-on component through which students will cook and taste foods from various areas in the Francophone world. The course will culminate in a final public event during which students will introduce and share foods from the Francophone world, which attendees will have the opportunity to taste. In addition to weekly meetings, there will be a few cooking workshops. Grade will be based on class participation, weekly reflection journals, a final presentation, and a final paper. This course is taught entirely in French. Readings, written assignments, and class discussions will be in French. Any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course. It is an advanced course intended for students who have not yet studied abroad in a French-speaking country. Students who are not admitted to the course through pre-registration are strongly encouraged to submit an enrollment request and attend the first class. This course will count as one course toward the French studies major and minor, the Romance Studies major, and the COL major. FREN234 Francophone Belgian Culture
The Kingdom of Belgium gained its independence from the United Kingdom of the Netherlands after the Belgian revolution of 1830 and has since then developed as one of the central powers of the European Union, of which it was a founding member and whose principal institutions are located in the Belgian capitol, Brussels. The kingdom contains four linguistic regions: Dutch-speaking Flanders, French-speaking Wallonia, German-speaking Eupen-Malmedy, and bilingual (French-Dutch) Brussels. This course will study the development of Francophone Belgian culture since the mid-20th century. We will focus on authors like Georges Simenon, Marguerite Yourcenar, Jean Bofane, Joseph Ndwaniye, Amélie Nothomb, Nicolas Ancion, and Bernard Quiriny; musicians like Toots Thielemans, Jacques Brel, Cecile Kayirebwa, Princesse Mansia M'Bila, Dieudonné Kabongo, Zap Mama, Hooverphonic, Stromae, Damso, Romeo Elvis, and Angèle; and cineastes like Chantal Akerman, Jaco Van Dormael, Jean-Pierre and Luc Dardenne, Lucas Belvaux and Bouli Lanners. The course will also include a unit on the well-known bandes dessinées (comic books) created by Belgian authors and artists, like Herge (Tintin), Morris et Goscinny (Lucky Luke), Jean Van Hamme (Thorgal, XIII, Largo Winch), Hermann (Jeremiah), and Spenale (Wonder Pony).

FREN236 Going South: "Le Sud" and Its Representations in French Literature and Culture
The course explores representations of "le Sud" across media, from myths and legends to songs, literature, film, and television. We will learn the origins of Provençal identity and how its portrayal has evolved over time. We will gain

a greater knowledge of the many artists and thinkers who have been drawn to the South. Eventually, we will work out a new definition of "le Sud," from Provence to one that includes other Souths such as the global South represented by immigrants from former French colonies.

Although a geographical denomination, a cardinal point, "le Sud" is a contradictory and moving space. The French anthem was first sung on one of Marseille's streets (rue Thubaneau), and the city remains a cosmopolitan port, open to migrations. The 2005 riots did not affect Marseille, yet the first elected mayors from the far-right Front National were in Orange, Toulon, and Vitrolles. The South remains a place of light and sun that attracted numerous painters and a place of dark and shady business run by local and international mafias. How have these contradictions shaped "le Sud" as territory, community, and idea, and how do they function within definitions of French identity?

FREN237 Francophone North America: French-Canadian, Cajun, Creole, and Haitian Cultures in North America
This course introduces students to key cultural and political mo(ve)ments that made the Francophone (French-speaking) communities in Canada, Maine, and Louisiana. From the tragic Grand Dérangement of Acadians (1755-1763), and the Creole Saint-Domingue refugees in Louisiana (1792-1809), to the more recent arrival of French-speakers from Haiti, Africa, and Asia, Francophone cultures in North America continue to evolve as their diversity grows with each new migration. Special attention will be paid to Canadian and U.S. linguistic policies, migration policies, and the role of art (literature, cinema, etc.) and activism in shaping Francophone identities in an Anglophone context.

Writers studied may include Réjean Ducharme (Québec), Dany Laferrière (Québec-Haïti), Kim Thùy (Québec-Vietnam), Victor Séjour (Louisiana), Zachary Richard (Louisiana), as well as a few writers in English such as Kate Chopin (Louisiana), Edwidge Danticat (US-Haïti), Louise Penny (Québec), and singer-songwriter Josée Vachon (Québec-Maine) who straddle the Francophone-Anglophone divide.

The course will be conducted entirely in French except for a few readings in English.

FREN238 Representing the Self, Representing Yourself
In our digital age, with the pervasiveness of Facebook, Instagram, and other forms of social media, what can testimony do? What stories are told? How are they told? What do they mean? How do writers, artists, musicians, intellectuals, and politicians represent themselves? As students, how can you give your memories material substance? How do others' narratives influence the way you interpret your own being? In this course, we will begin to answer these questions by reading, watching, and examining a vast selection of French and Francophone texts, films, and images that recount the self from the Middle Ages to today. There will be a particular focus on queer people, women, and people of color, and how they negotiate difference and alterity in their work. Throughout the course, you will also journal your own experiences and imitate other writers' modes of expression (e.g., memoires, autobiographies, autofiction, the graphic novel, film, documentary, theater, poetry, music, photography). The course will culminate in the creation of your own story, which will in turn prepare you to think critically about the world around you and how to tell your story in interesting, creative, and provocative ways. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.

FREN239 A Virtual Semester in Paris
This course will introduce students to different aspects of life in Paris. It will include virtual visits to museums, monuments, and neighborhoods; lectures by faculty from the Vassar-Wesleyan Program in Paris; and online meetings with different people in Paris. Students will undertake a research project on an aspect of Paris that is of particular interest to them.

FREN240 Cinema and the French Theatrical Tradition
This course examines the connections between French theater and film by looking at manifestations of the theatrical tradition in 20th- and 21st-century cinema. We will read four plays and view a selection of films, along with commentary by directors, playwrights, and actors on their craft. Coursework will focus on the development of literary and visual analysis, the acquisition of terminology related to theater and film, and the appreciation of these two art forms in their past and current contexts.

FREN241 Seeing Is Believing?: The Search for Cinematic Truth
The French director Jean-Luc Godard once remarked that, "Cinema is the truth 24 times per second." Godard refers here to an interplay between truth, time, and the mechanics of film. But does cinema really show us the truth? What kind of reality is it able to capture and how does "truth" relate to its means of representation? This course examines how Francophone film treats the relationship of cinema to truth, covering aspects of film history, theory, and its technical construction. The course is organized around four main areas of inquiry: we first consider the role fantasy and spectacle in the early films from Georges Méliès and the Lumière Brothers, before exploring how cinema re-orients its relationship to the "real" via social realism and the experimental documentary style of the French New Wave. We then discover how cinematic "truth" is reclaimed by filmmakers outside of France, before finally turning to the highly-aestheticized, non-narrative films of "Cinéma du look."

This course will familiarize students with the basics of film analysis and critique, while also providing a foundation in the technical aspects of cinema and how it has evolved as both an art and a science. Each film will be accompanied by readings, and the theoretical framework of the course will derive from André

Bazin's Qu'est-ce que le cinéma? and excerpts from Gilles Deleuze's Cinéma II: L'Image-temps. For their final project, students may submit either a traditional research paper or an original film project that engages with cinematic theories and techniques discussed over the course of the semester.

FREN242 Francophone Graphic Novels: Text, Image and the Spaces In-Between
This course introduces students to Francophone graphic novels (bandes dessinées) from regions such as Côte d'Ivoire, Rwanda, Belgium, Quebec, the French Caribbean, and France, showcasing their cultural and artistic diversity. After an introduction to key concepts in comics studies, students will engage with acclaimed works like Persepolis (Satrapi, 2000), Aya de Yopougon 1 (Abouet & Oubrerie, 2005), and Péyi an nou (Oublié, 2017). These texts serve as a lens to examine pressing debates on identity, migration, memory, race, gender, and religion. Coursework includes critical readings, visual and textual analysis, and creative writing/drawing. By discussing the content of these graphic novels, students will become familiar with a broad range of human experiences as well as major global events. By also focusing on their multimodal form, they will develop a toolbox for analyzing this unique textual/visual medium on its own terms and in relation to other media, especially visual art, cinema, and literature. The class is taught in French.

FREN246 Writing Diaspora: Introduction to Asian Francophone Literature and Art
The transnational and open category of Asian Francophonie can inspire students who are language learners of French to contemplate their relationship with the language. Designed for those who are new to Diaspora Studies and Asian Francophone literature, this course introduces a wide range of personal trajectories, challenging the binary division between a mother tongue and a foreign language. Through close-readings of novels, essays, haiku, and experimental literature, students will analyze the correlation between transgressing generic expectations and the desire to overcome the challenge of narrating diasporic experiences. The syllabus includes writers based in France such as Dai Sijie, François Cheng, Shan Sa, and Linda Lê, as well as those in Canada including Ying Chen, Ook Chung, Kim Thúy, and Aki Shimazaki. It concludes with Theresa Hak Kyung Cha, an Asian American multilingual writer and artist. Materials also include their feature-length films, video art, calligraphy, and installation art to explore these artists' multi-media creativity in challenging conventional historical narratives.

This course is taught entirely in French. Written assignments, class discussions, and most readings will also be in French. Any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course. It is an advanced course intended for students who have not yet studied abroad in a French-speaking country.

Students who are not admitted to the course through pre-registration are strongly encouraged to submit an enrollment request and attend the first class.

This course will count as one course toward the French studies major and minor, the Romance Studies major, the COL major. It also fulfills the language requirement for the ARHA major and GEM (Global Engagement Minor).

FREN247 What (Not) to Wear: Fashion in French Literature and Art
In this course we will consider the political, social, historical, and artistic importance of French fashion through a series of case studies. We will explore a number of sources such as ancien régime costume design, realist novels, memoirs, impressionist paintings, 20th-century advertising, and archival fashion magazines. Attention will be paid not only to what was being worn, but also to those who helped make fashion materially possible, for instance textile workers both in France and in colonized areas. This course is taught in French.

FREN248 Colonial/Decolonial
Colonial/Decolonial is taught in French and open to anyone who has completed FREN 215. It offers an exploration of the often-contentious debates surrounding colonization and its aftermath in shaping French and Francophone cultures and societies. The course examines the historical processes, theoretical frameworks, and artistic expressions that define colonial and postcolonial dynamics. In the first half, we trace the intellectual and cultural justifications and critiques of colonial expansion through readings from Bougainville, Diderot, and Prévost, alongside representations of the "other" in the Encyclopédie and the Description de l'Égypte. The second half explores postcolonial and decolonial thought as both historical phases and interconnected schools of theory. Topics include the specifics of decolonization from France, portrayals of the French colonizer, and connections between the Francophone world and other formerly colonized regions. Guiding these discussions are works by Aimé Césaire, Frantz Fanon, Edward Said, Maryse Condé, Assia Djebar, Albert Memmi, and Henri Laurens. The course also includes screenings of Pépé le Moko (1939, dir. Julien Duvivier), The Battle of Algiers (1966, dir. Gillo Pontecorvo), Adieu Bonaparte (Egypt, 1985, dir. Youssef Chahine), and Atlantique (2019, dir. Mati Diop). Additional insights are drawn from several podcasts and interviews on Radio France, linking colonial, postcolonial, and decolonial discourses to contemporary theoretical, political, and artistic debates.

FREN249 The Art of the Essay: A Creative Non-Fiction Class
This is both a creative writing and literature seminar, a hybrid experience where students will read some of the most momentous and important examples of the essay genre while simultaneously producing their own interpretative compositions. We will begin by reading a few essays by Montaigne (the writer who effectively defined the genre) before moving on to other authors from the French and Francophone world (e.g., Baudelaire, Voltaire, Césaire, and Beauvoir) who gravitated to this open and highly personal way of writing. We will also speak to several essayists during the semester.

FREN253F French Literary Masterpieces on Screen (CLAC 0.5)
This CLAC course is linked to the FYS RL&L 252F: French Literary Masterpieces in Translation and on Screen. In this CLAC course, conducted entirely in French, students will have the opportunity to read the texts in their original language, and to hone their French speaking, listening, and writing skills. Assignments will include written commentaries (i.e., close readings) and short presentations on the material. As for the films, students in the CLAC course will be expected to watch and discuss French-language adaptations. This CLAC course is intended for students who have at minimum an advanced intermediate level of French. Learners of French as well as native and heritage speakers of French are welcome. Credit: 0.5. Regardless of students' previous exposure to the French language, including AP and IB courses, students interested in the CLAC course must take Wesleyan's French placement test and score into at least FREN 215 (Advanced Intermediate French). Should they place into FREN 215, they must enroll in this class in order to be eligible for the CLAC course. Students who place into FREN 112 or below will not generally be eligible due to the degree of difficulty, though students may submit a petition. Moreover, all students must meet with the instructor before enrolling in the CLAC course for an oral comprehension and expression evaluation. This CLAC course, in combination with the FYS in English, will count toward the French Studies Major or Minor, as well as the Romance Studies Major.

FREN254 Paris to Saigon: French Representations of Asia
The course explores the ways in which French explorers, writers, and artists traveled to Asian countries, such as Japan, China, and Vietnam, in the 19th, 20th, and 21st centuries and represented "Extrême-Orient," a Eurocentric designation. Attentive analysis of their works will allow us to question the colonial construction of the Far East as "other"; examine Asian influences on cultural, aesthetic, and literary expressions; and discuss Asian presence in postcolonial France. Issues such as orientalization, eroticization, and hybridization of genres and identities will be the subjects of our study.

FREN270 Monstrous Margins & Otherness
This course proposes to study monsters as a critical lens for examining sociocultural tensions, hopes, and anxieties in French literature and culture from the Renaissance to the present day. Dwelling across borders and boundaries, the monster is a paradoxical figure: it is unsettlingly close to us yet also marked by radical otherness. Throughout the semester, we will explore this dual dynamic: on the one hand, it is a figure that threatens social, moral, and cultural norms, and on the other, the monster exposes the failures and blind spots of the very structures that try to contain it. From fairy-tale villains and vampires to the postmodern zombie, we will examine what the monsters tell us about being human and about our perceptions of reality. Class readings include a variety of genres (fairy tales, short stories, poetry) and media forms (literature, visual arts, film). Class work will combine close readings of literary and visual texts with theoretical frameworks, as well as creative writing.
Readings, written assignments, and class discussions will be conducted in French. Any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may enroll in this course. It is an advanced course intended for students who have not yet studied abroad in a French-speaking country. Students who are not admitted to the course during pre-registration are strongly encouraged to submit an enrollment request and attend the first class meeting. FREN273 The Business of Letters: The French Epistolary Novel
Before the 18th century, the first-person narrative was often perceived as self-indulgent, not to mention distasteful. Eighteenth-century readers, however, became fascinated with the intimacy, immediacy, realism, and confessional aspect of highly charged first-person perspectives. It comes as no surprise, then, that this was the golden age of the Roman Epistolaire, the novel composed entirely of letters. In this class we will read a number of epistolary novels that allowed for the development of highly subjective, and often challenging, points of view. Sample works include Madame de Graffigny's critique of European society (Lettres D'une Peruvienne), Mme de Charriere's praise of female independence (Lettres de Mistriss Henley), Montesquieu's political satire of French life through the eyes of Persian travelers (Lettres Persanes), and Laclos's tale of seduction and aristocratic libertinage (Les Liaisons Dangereuses). We will also read one example of the epistolary novel's stylistic counterpart, the Roman-Memoire.

FREN275 Histories of Race: Science and Slavery in an Age of Enlightenment
The concept of race was first "invented" during the 18th century by anatomists, natural historians, and, ultimately, the century's classifiers. This class will come to grips with the birth of this concept in two ways. First, we will read excerpts from travelogues to Africa and the Caribbean (as well as short excerpts from natural history) in order to chart the slow and halting creation of the concept of race as it crystallized in European thought during the 18th century. Having studied this "proto-raciology," the class will then examine 16 unpublished manuscripts that were submitted to a contest on the source of "blackness" organized by the Bordeaux Royal Academy of Sciences in 1739. These include essays submitted by priests, anatomists, and partisans of climate theory. Students in this class will actively engage with these materials by producing glossary definitions that will be published along with the entire collection of essays. The ultimate goal of this course is to provide students with an understanding of the concept of race that will inform their reactions to this question as both a historical concept . . . and an ongoing problem that affects all of us in the present.

FREN281 French and Francophone Theater in Performance
This course introduces students to the richness of the French and Francophone dramatic repertories, on the one hand, and, on the other, invites them to discover acting techniques (such as movement, physicalization, memorization,

mise en scène, and so forth). Students will thus put their language skills into motion, and the course will culminate in a public performance at the end of the semester. (Special accommodations will be made for students who do not wish to perform publicly). Taught exclusively in French, the course will place particular emphasis on the improvement of students' oral skills through pronunciation and diction exercises, all the while polishing their written expression and enhancing their aural comprehension.

FREN301 The Race Makers: How the Enlightenment Invented the Most Dangerous Idea in History
The concept of race was first "invented" during the 18th century by anatomists, natural historians, and, ultimately, the century's classifiers. While this seminar is constructed as something of an intellectual history seminar, it will also delve into the lives and (often messy) psychologies of several of the people who helped develop the idea of race during the eighteenth century. We will become familiar with a French king and the signatory of the Code Noir (Louis XIV), the Swedish inventor of the term Homo sapiens (Linnaeus), the theorist of human degeneration from a white prototype (Buffon), the most famous philosopher of the eighteenth century (Voltaire), the theorist of human stage theory (Robertson), a skull-measuring naturalist (Blumenbach), and an American president, in Thomas Jefferson. The class will also examine 16 manuscripts that were submitted to a contest on the source of "blackness" organized by the Bordeaux Royal Academy of Sciences in 1739. The goal of this course is to provide students with an understanding of the origins of race that will inform their reactions to this question as both a historical concept, and an ongoing problem that affects all of us in the present.

FREN302 West African Literatures and Cultures in French
This course explores major texts in modern and contemporary Francophone African literature by delving into four major themes that traverse the recent cultural, literary, and political history of Francophone West Africa.

The course starts by investigating the relationships between orality and literature through the lens of often-intersecting debates around tradition and modernity; the focus will then shift to articulations of nation, liberation, and the promises of independence, war, and memory, and finally the ruptures and continuities of the post-colonial, neoliberal present.

By spending significant time with primary sources that span over a century of literary and cultural production from and about Francophone Africa, students will have a deep understanding of the urgencies animating writers wrestling with the weight of the colonial past, the violence of decolonization, the brightness of independence, and the uncertainty of the present. A thorough engagement with some of the most important authors of the last 60 years (e.g. C. H. Kane, B. Diop, Y. Ouloguem, M. Condé, among others) will allow us to deep-dive into the possibilities of literary expression, as well as questions of belonging, nation, and evolving ideas of "Africa."

FREN304 The Art of the Essay: Creative Nonfiction in French
The Art of the Essay is both a creative nonfiction writing class and a literature seminar, a hybrid experience where students will read some of the most momentous and important examples of the essay genre while simultaneously producing their own interpretative compositions. Writing experiences may include opinion pieces, historical fiction, writing on art or music, and biographical sketches. To improve our own writing, we will read essays by Montaigne (the writer who effectively defined the genre) before moving onto later authors from the French and Francophone world (e.g., Voltaire, Baudelaire, Césaire, Beauvoir) who gravitated to this open and highly personal way of writing to further their own artistic or ideological positions. As a supplement to the class we will also be inviting journalists and essay writers from both France and the United States to speak to us. This course is taught entirely in French. Readings, written assignments, and class discussions will also be in French. While any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course, it is an advanced course intended for students who have already taken two courses in French beyond FREN 215 or already have studied abroad in a French-speaking country. Students who are not admitted to the course through pre-registration are strongly encouraged to submit an enrollment request and attend the first class. This course will count as one course toward the French studies major and minor, the Romance Studies major, and the COL major. It also fulfills the language requirement for the ARHA major and GEM (Global Engagement Minor).

FREN305 Negotiating French Identity: Migration and Identity in Contemporary France
With the largest minority in France being of Maghrebi origin, Islam has become the second largest religion in France today. What are the repercussions of this phenomenon for French identity? How did French society understand its identity and regard foreigners in the past? What do members of the growing Franco-Maghrebi community add to the ongoing dialogue surrounding France's republican and secular identity? This course will analyze the recent attempts at redefining French identity through a study of literary texts, films, and media coverage of important societal debates (e.g., the Scarf Affair, French immigration laws, the Algerian war). Readings, discussions, and papers will be in French.

FREN306 Spectacles of Violence in Early Modern French Tragedy
The French Kingdom endured decades of socio-political unrest and religious wars during the sixteenth and early seventeenth centuries. The tragedies that emerged from these bloody conflicts--many of which staged physical violence--not only reflected but also actively participated in the debates surrounding the 'troubles civils.' In this advanced seminar, we will study such tragedies in order to examine the uses, functions, and ethics of spectacular violence, in plays that adapt mythological stories (e.g., Medea), religious narratives (e.g. David and Goliath, Saint Cecilia), and current events (e.g., executions, assassinations, and regicides) for the stage. We will read the plays alongside and against the competing theoretical frameworks of violence found in various poetic treatises of the time period, yet we will also keep in mind the practical constraints and conditions of performance in early modern France. Finally, we will reflect on why we should read these plays today and how they inform our contemporary moment. Readings, written assignments, and discussion will be in French.

FREN308 Southern France Today: Villages, Territories, and Metropolises
This course offers an interdisciplinary exploration of Southern France, with a focus on Marseille, through historical, literary, sociological, and comparative approaches. It is designed to encourage students to question prevalent stereotypes and controversial contemporary issues related to the region.

Throughout the course, students will examine various topics such as migration, ethnic and social segregation, economic growth, safety, the environment, housing, transportation, urban planning, metropolization, education, and culture. By using Marseille as a case study, students will reflect on the notion of scale in the context of French and European governance.

Students will engage with a range of materials, including novels, short stories, graphic novels, journalistic investigations, films, archival footage, and testimonials from residents, association representatives, experts, and researchers. Additionally, the course will include a comparative analysis with Paris, other French cities, and Mediterranean regions.

By the end of the course, students will gain a deeper understanding of the region's place in French politics, society, and culture, while also developing critical thinking, research, and analytical skills.

FREN309 Writing Childhood in Contemporary French Literature
In the 20th century, children's literature and writings about childhood expanded alongside commercial book publishing, greater literacy, and theories on childhood. This course will follow the development of formal and creative expressions of childhood by turning first toward children's literature, including picture and comic books and classic works such as "Le Petit Prince." Literary depictions of childhood, as memory, testimony, and social commentary, will compose the second half of the course. Visual imagery (book illustrations, films) will be studied as well to consider the connections between childhood and its representations--for example, how children's literature reflects modernity and how childhood is a means to make sense of adulthood.

FREN310 French Crowds, Mobs, and Mobilities
Under the date of 14th July 1789, Louis XVI entered in his diary but one word: "Rien." That day, a crowd of sans-culottes flooded the streets of Paris, overwhelmed the guards, and captured the Bastille. What the king could not foresee is the political power of a mob, a "foule," deriving its etymology and strength from the pressure of thousands of feet pounding the pavement. From this founding event on, the building of the French nation could be read as a history of mobile crowds kept alive today in yearly student and union demonstrations. How does "rien" become the emblematic event of French national identity? What moves a crowd, and what does a crowd move? What do such gatherings accomplish, and how do they form in France and why? Can governments bring crowds to a stop? What does immobility mean for the French?

Drawing on French sociology and literature, this course will explore the influence that crowds have exerted on French politics, society, and aesthetics. We will discuss the power of numbers by focusing on major events in French history from the 18th century to contemporary France: the French Revolution, the Paris Commune, May 1968, the 1983 March for Equality and Against Racism, the Yellow Vests, and the COVID-19 lockdowns. Students will be encouraged to relate the course to their own experience of mobile crowds, in concerts or sports events, on more quotidian moves such as commuting, and to draw comparisons across time and space.

FREN312 Clandestins, Sans-Papiers, Migrant/e/s: 100 Years of Illegalization in the Francophone Mediterranean
Who is illegal, and why? When did "migrating illegally" across the Mediterranean start, and how? How did we come to think about certain ways of moving across borders as a criminal act? Using sources and literature on and about empire, borders, citizenship, seafaring, smuggling, and human rights, the course will attempt to answer these questions in the specific context of the Francophone Mediterranean, intended here as a space of migration much broader than the

sea itself. We will read about Algerian workers hidden in the hulls of steamships at the turn of the century, watch Tunisian border policemen helplessly patrol an endless stretch of desert in a sandstorm, and read from "illegal" Africans seeking refuge inside the church of St. Bernard, in Northern Paris, in the hot summer of 1986, before police broke in. Through this heterogenous set of encounters, students will be able to explore, engage critically, and respond to some of the discursive, legal, and logistical devices that made and still make people on the move "illegal" in contemporary France and in the long wake of its colonial empire.

FREN314 From the Diary to the Graphic novel, Women Writers from the 17th to the 21st Centuries
While women in France were for a long time not welcomed in the literary sphere, they have nonetheless participated in the various movements that have affected literature from the 17th century on. The purpose of this course is to discuss women's space within the literary field. Through the study of various texts, this course will examine women's compliance and defiance towards literary trends. Far from only writing diaries and fairy tales, French women writers have considerably expanded their presence in genres that seemed resolutely closed to them.

FREN315 The Politics of the French Language and the Birth of the French State
Today, the advantages of national borders and monolinguistic language policies are being trumpeted all across the world. And yet, the study of premodern languages and literatures reveals that the history of national languages has always been a multicultural affair. In this course, we will look at the case of the French language, particularly the establishment of French as a literary language through strategies of legitimization. Starting with an examination of the first text written in the language that would later become French, from the 9th century, we will then go on to study (in modern French) a series of medieval and early-modern poems, plays, treatises and essays that borrow from other languages and literatures, even as they establish French as a literary and a national language. The final portion of this class will include a meditation on the status of French language in contemporary Francophone countries based on Derrida's essay "Le monolinguisme de l'autre."

FREN316 Women Writing in the Renaissance
Women writing in 16th-century France--the French Renaissance period--had the recent advantage of print publication to circulate their works despite great social limitations on women's roles and education. This course explores their writing--including fiction, poetry, epistolary, and polemic--and choices of subject matter with a focus on references to writing as/by women. We will situate these writers in their historical, cultural, and literary environments and read critical scholarship on this field of study. We will also take a comparative approach by looking at 15th- and 17th-century authorship to see how circumstances evolved and at several contemporary perspectives to consider the currency and perhaps continuity of early modern women's literary production and creations.

FREN317 The New World Bites Back: Cannibalism and the Colonial Encounter
What is the cannibal? Perhaps it makes us think of Hannibal Lecter or zombies from Dawn of the Dead. How do we understand the horror and fascination the cannibal, whose monstrosity depends in some sense on its humanity? An emblematic figure of the tension between alterity and resemblance, this course examines the diverse political, cultural, literary and economic representations of cannibalism that underly the relationship between Europe and the "New World."

Major Readings: Montaigne's "Des Cannibales," Voltaire's Candide, Dutertre's Histoire des Antilles, Marx, Capital (excerpts) Aimé Césaire's Une Tempête, Suzanne Césaire's Le Grand camouflage. 40-50 pages of reading per week.

FREN318 French Renaissance Theater Lab
In this seminar students will explore a variety of dramatic texts written and performed during the French Renaissance (c. 1500-1610). The first two-thirds of the semester will provide an overview of the poetics, rhetoric, and performance of early French theater, followed by discussions about gender, religion, politics, violence, and other topics as they arise within each play. Authors will include Marguerite de Navarre, Jean de La Péruse, Étienne Jodelle, François d'Amboise, Louise Labé, Robert Garnier, and Catherine Des Roches. During the last third of the semester, students will participate in a collaborative digital (online) critical edition of one of the plays studied. Emerging technologies in the field of digital humanities will be integrated into this lab portion of the seminar, as well as more conventional methods of establishing critical editions. Readings, written assignments, and class discussions will be in French.

FREN322 The French New Wave: From National to World Cinema
This course introduces students to one of the most creative and influential moments in cinema history: the French New Wave (Nouvelle Vague). Flourishing in the post-World War II period between the 1950s and 1960s, this new generation of film critics and filmmakers sought to redefine what François Truffaut calls a certain qualité française through cinematic experimentation, while using their works to comment on global geopolitical conflicts. The course situates the Nouvelle Vague within its local production context while also studying its contribution to cinema as a global artform. The filmmakers studied include core members of the Cahiers du Cinéma, such as François Truffaut, Claude Chabrol, and Jean-Luc Godard, as well as extended members of the Left Bank Group, including Alain Resnais, Chris Marker, and Agnès Varda. The final week will focus on the international legacy of the French New Wave, with East Asian New Wave movements as key examples. This course will be conducted entirely in French except for a few readings in English.

FREN324 Interpreting the "New World": France and the Early Modern Americas
The impact and long-lasting effects of the "discovery" of the "New World" on Europeans cannot be overestimated. This advanced seminar will compare and contrast styles of expedition and conquest among the European nations, though the course will focus on the French context and the various events and encounters that occurred in the early modern Americas, particularly between 1492 and 1610, a period that laid the groundwork for the subsequent colonial project. Throughout the course, we will pay special attention to the Amerindians' points of view. In turn, students will examine the insights and blind spots in 16th-century French navigators', cosmographers', cartographers', and intellectuals' interpretations, representations, and negotiations of difference by critically engaging with concepts such as nature, culture, alterity, gender, sexuality, marriage, religion, exchange, possession, conquest, and war. Reading, writing, and class discussions will be in French.

FREN325 Museums, Objects, and Empire: Exhibiting the Self, Exhibiting the Other
This course will analyze the relationship between colonization and material culture. Using literary and historical documents, we will ask how objects helped to construct identities by studying the way objects were collected, used, and displayed during the colonial period. The course will also analyze how spectacles, exhibits, and museums have shaped a discourse about the other. The course will lead to an exhibition based on student work. Reading, writing, and class discussion will be in French.

FREN326 Topics and Genres in French Popular Culture
Spanning the mid-19th century to the present, this course will present and examine the expansion of such genres as newspapers' feuilletons (serialized novels), romans de gare (easy literature), detective novels, and bandes dessinées (graphic novels). Though at times poor in their execution, such productions are a revealing window into French society, and their popularity has only increased. The course will particularly focus on the participation of renowned writers in so-called low-cultures genres, as well as on women writers' growing presence in the field.

FREN328 The "Cold" War in Motion: Memories through French Post-war Cinema
This course examines in parallel cinema history and global geo-political history during the post-war period (1945-1990s). How does a portable camera travel to document the "hot" realities of the "Cold" War? How does the thinking power of montage reconstruct histories of destruction into collective memories in sound, color, and image? Through close analysis of short and feature-length films produced by French filmmakers, students will dissect the art of filmmaking into philosophical penmanship, as reflected in the notion of "caméra-stylo". Materials include documentaries, essay-films, and fictional films from Alain Resnais, Chris Marker, Agnès Varda, Jean-Luc Godard, William Klein, Marcel Ophüls, Jean-Pierre Melville, and Louis Malle. These filmmakers reflect on the histories of the Second World War, colonialism, and the Cold War, as well as on countries that represented political and cultural alternatives during the time of reconstruction. This course is taught entirely in French. Written assignments, class discussions, and most readings will also be in French. While any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course, it is an advanced course intended for students who have already taken two courses in French beyond FREN 215 or already have studied abroad in a French-speaking country. Students who are not admitted to the course through pre-registration are strongly encouraged to submit an enrollment request and attend the first class. This course will count as one course toward the French studies major and minor, the Romance Studies major, the COL major. It also fulfills the language requirement for the ARHA major and GEM (Global Engagement Minor).

FREN330 Lancelot, Guinevere, Grail: Enigma in the Romances of Chretien de Troyes
Chretien de Troyes, the greatest writer of medieval France, was the first to tell the stories of Lancelot and Guinevere's fatal passion and of the quest for the Holy Grail. Written at the height of the Renaissance of the 12th century, his Arthurian tales became the basis for all future retellings of the legend. We will read these tales in depth, paying particular attention to their enigmatic quality.

FREN333 Asia and the Making of France
Enlightenment philosophers, impressionist painters of the 19th century, and French Maoist intellectuals in the 1960s were all influenced by Asia. Although these influences from Asia were at times the fruit of solid knowledge, they were also often the result of imagination. In addition to attracting French intellectuals and artists, Asia also contributed very concretely to the economic development of modern France and its geopolitical position in the world. This relationship relied on voluntary exchanges but also on violence and French exploitation of Asian territories and people. Through the study of historical documents, films, and literary texts, this course aims to understand the various ways Asia shaped France. We will consider the various representations of Asia conveyed in 19th- and 20th-century France and the historical context of their production by focusing on key moments such as the Opium Wars in China, French colonialism in Indochina, and the two world wars. Reading, writing, and discussion will be in French.

FREN345 Weird Literature: Tales of the Supernatural, Inexplicable, and Bizarre
In this course we'll look at fantastic literature (broadly defined) from 19th century France: tales of the supernatural, the inexplicable, and the bizarre. This genre flourished in post-enlightenment, post-revolutionary France. Part of our task will be to consider what made stories of the strange so appealing to French authors at this point in time, and how writers used the genre to grapple with societal changes and scientific advances. We will examine some formal definitions of the fantastic and the uncanny, and work towards our own characterizations, as we consider issues such as madness and sanity, provincial superstition, the clash of science and the inexplicable, and the place of gender within such narratives. We will also consider the reception of these texts: how they were illustrated and/or adapted and where (if at all) we can find echoes of them in modern culture. Authors to be studied include Maupassant, Merimée, and Villiers de L'Isle-Adam.

FREN348 Artistic Creation in Fin-de-siècle France
The end of the nineteenth and beginning of the twentieth century--the so-called fin de siècle--was a period of remarkable creative energy, production, and upheaval in France. Many of the most-recognized names in the art world were active there during that time: Debussy, Monet, Picasso, Stravinsky, Matisse, Baudelaire, Van Gogh...and many of them collaborated across media. In this course, we'll dig deep into the music, visual arts, and literature of the period, relying on contemporaneous primary sources (literature, of course, but also newspapers and popular periodicals, artists' letters and manifestos, performance reviews and notes, etc) as well as relevant secondary analyses, to get a sense of the competing energies of liberation and decadence that nourished so many remarkable and influential works of art.

FREN356 From the Diary to the Stage: Women Writers and Literary Genres from the 17th to the 21st Centuries
While women in France were not welcomed in the literary sphere, they have nonetheless participated in the various movements that have radically affected literature from the 17th century on. The purpose of this course is to discuss women's space within the literary field. Through the study of various texts, this course will examine women's compliance and defiance toward literary trends. It will also investigate the roles of literary categories (letters, plays, fairy tales, poems, novels, and essays) in women's production.

FREN357 Autobiography and Photography; Text and Image
Over the last decades, the question of autobiography as a genre has been thoroughly analyzed. The issue is further complicated by the use of photography within autobiographical texts, whether they are included in the text or merely described. In this course, we will examine the various roles of photography in autobiography. Is photography a way to trigger memory? Is it more referential than the word? How is the reader to read the coexistence of word and image? Such are some of the questions that will be discussed.

FREN360 Clair Obscur: Literature and Culture in 19th-Century France
This seminar will explore the literature and culture of 19th-century France with a specific focus on Paris and its development over the course of the century. We will consider the impacts of population growth, the industrial revolution, political upheavals, artistic developments, and the transformation of the cityscape itself. How did novelists, poets, journalists, and composers use their works to depict and to grapple with the transformation of the city? We will also consider how colonialism and empire manifested themselves within the boundaries of the colonizing state, for example in the Expositions Universelles. Texts studied will include works by Charles Baudelaire, Victor Hugo, Louise Michel, Jacques Offenbach, and Guy de Maupassant. Towards the end of the course we will turn our attention to artistic representations of Paris across the century. Readings, written assignments, and class discussions will be in French. While any student who has completed FREN 215 (with a minimum grade of B) or has placed out of FREN 215 through the placement test may sign up for this course, it is an advanced course intended for students who have already taken two courses in French beyond FREN 215 or already have studied abroad in a French-speaking country. FREN363 (Un)Popular Performances/Performances (Im)Populaires
In 1607, a young Scotsman named William Drummond was studying law in Bourges, France, a popular "study-abroad destination" for Scottish students as well as an important stopover city on the routes of itinerant professional and amateur actors. While in Bourges, these actors performed a variety of different kinds of plays, including tragedies, comedies, tragicomedies, pastorals, and farces. Although these performances were often met with hostility from the city's religious authorities, Drummond attended several plays during his stay and, lucky for us, took rather detailed notes about them. His observations from the 1607 "season" are preserved in his personal papers in the National Library of Scotland. This course will use Drummond's notes as a guide to discover and examine other forms of evidence--both traditional and nontraditional--that help us understand what was at stake in theater, performance, and (un)popular culture in late 16th- and early 17th-century France. We will study the ways the past has been organized and cataloged, how traditional sources and research have shaped our view of the past, and how unconventional methodologies can help us locate new sites of knowledge and culture. Written assignments, class discussions, and (most) readings will be in French.

FREN372 Exoticism: Imaginary Geographies in 18th- and 19th-Century French Literature
This course will consider the fascination with the exotic -- with foreign landscapes, customs, and culture -- in 18th- and 19th-century French fiction and, to a lesser extent, poetry. Discussions will focus on the representation of foreignness and the construction of the exotic woman, as well as on the status of the European gaze. Major authors may include Bernardin de Saint-Pierre, Chateaubriand, Balzac, Mérimée, Loti, Flaubert, Hugo, Baudelaire, and Gautier.

FREN382 Jungle and Desert in Francophone African Literature
This course analyzes the constellation of images and sensations conjured up by the terms "jungle" and "desert," which are opposite but equally extreme. We will explore European adventure tales and travelogues, contemporary non-Western novels, children's books, and films in a quest to understand the imaginative power of these landscapes.

Through our readings of such a wide range of texts, we will ask questions such as, What do these landscapes signify? How do descriptions of landscape convey a sense of individual and collective identity? What psychological terrain is explored when writing about extreme landscapes? And, finally, how do we each see ourselves in relation to landscape? What is our own version of an "extreme" landscape?

FREN390 Directed Research in European Studies
This course is intended for students who wish to undertake a significant research project or get a head start on a senior essay or thesis devoted to any aspect of European civilization from 500 to 2021. The course will begin with three weeks of regular meetings devoted to the purpose of academic research in the humanities and social sciences, developing and refining a research topic, organizing one's research, bibliographies and sources, the construction of an argument, and the organization of a research paper. Students will work on their research projects individually during the rest of the semester, although the class will meet as a group from time to time so students can present and discuss the state of their work. Students will also have weekly tutorials with the instructor to discuss their progress and plan their next steps. Students who are able to do so are encouraged to engage with research materials in languages other than English.

FREN391 Diderot: An Encyclopedic Mind
In this class we will come to know the most progressive and often radical thinker of the French Enlightenment, Denis Diderot (1713-1784). We will begin this seminar with an examination of how this country abbot grew into the most well known atheist of his generation. We will then move onto his famous 74,000 article Encyclopédie, a book that not only dragged sacrilege and freethinking out into the open, but triggered a decades-long scandal that involved the Sorbonne, the Paris Parliament, the King, and the Pope. (During this portion of the class, students will undertake translations of select entries [from French to English] of the "dictionnaire" for possible publication.) In the second half of the semester, we will also study the writer's freewheeling art criticism. Finally, we will read two groundbreaking novels. The first of these, "La Religieuse", is a gripping pseudo-memoir of a nun who suffers unspeakably cruel abuse after she announces that she wants to leave her convent. The second, "Jacques le Fataliste", is a freewheeling anti-novel where Diderot used fiction to take up the problem of free will. In the final portion of the class, we will also read selections from his anticolonial and antislavery writings.

FREN397 Forbidden Love: From the Middle Ages to the French Revolution
This seminar examines the notion of "forbidden love" in prose fiction, memoirs, poetry, and theater written in French from the Middle Ages to the French Revolution. Students will gain a theoretical and historical understanding of concepts such as love and desire, and how they inform ideas of race, gender, and sexuality in the early francophone world. Students will also watch 20th- and 21st-century film and theatrical adaptations of selected works. By the end of the course, students will have acquired an appreciation for a central but often neglected dimension of francophone literature and culture, become familiar with a method combining a historical approach with the use of essential theoretical concepts, explored how attention to noncanonical and/or "nonliterary" material can extend their knowledge of the period, and provided evidence of competence in critical reading and in the presentation of independent research.

FREN399 French Histories: National Identity and Narratives since the Third Republic
At the end of the nineteenth century, schooling became free and mandatory in France. Since then, politicians have often considered the teaching of history as key to the construction of French national identity. Even today, some argue that the role of school is to equip children with a national narrative. French historians have questioned and resisted this instrumentalization, denouncing oversimplifications and ideological distortions. They also acknowledge that some biases have pervaded French history.

Through readings of historical novels, biographies, essays, and graphic novels as well as selected film and documentary viewings, this course will explore some of these national narratives and the way French historians, philosophers, and artists have participated in the construction of a French national identity.

The course will focus on France and its colonies since the 1870's and the Third Republic. Preliminary knowledge of the period is not required for this class. The final project will be a re-telling of a French historical event through students' preferred medium (video, graphic novel, essay, or podcast). The assignments during the semester will help students accumulate material and hone their skills toward this goal.

ITALIAN STUDIES

ITAL101 Elementary Italian I
Italian 101 is the first half of a two-semester elementary sequence. Our emphasis is on the development of basic oral and written competence, and reading and aural comprehension skills. In this course, you will master the linguistic skills necessary to function in day-to-day circumstances in Italian as you develop the ability to speak and understand Italian in a communicative and meaningful context. The course also challenges you to recognize, explore, and understand cultural differences and similarities between your native culture and Italian culture.

Grammar undergirds everything we do and say in this course; whether or not we are engaged in an explicit grammar exercise, you are always learning grammar that enables you to communicate effectively. Specifically, you will learn to talk about things in your own immediate environment, such as family, friends, daily routine, likes and dislikes, and you will learn how to handle basic social interactions such as meeting people, planning events, eating out, inquiring about other people's lives, and relating information in simple terms. We will explore roughly five units of the textbook; additionally, your linguistic experience will be broadened by reading authentic texts and by viewing, listening to, and discussing cultural artifacts such as films, songs, and commercials. Class is conducted entirely in Italian. Because you will work collaboratively with your classmates and your instructor, your attendance, participation, and preparation are of the utmost importance.

Students are strongly encouraged to enroll in the continuation of the Italian Elementary sequence in Spring (Italian 102): language learning is cumulative and requires time and consistent effort. Italian 101 and Italian 102, taken together, will provide a strong linguistic foundation--which is necessary to access Intermediate and Advanced courses at Wesleyan and to succeed in study abroad experiences in Italy.

ITAL102 Elementary Italian II
This course is the second half of a two-semester elementary sequence. Our emphasis is on the continuing development and strengthening of oral and written competence, and reading and comprehension skills. Specifically, you will master the linguistic skills necessary to describe and narrate simple events in the past and in the future, make comparisons, express possibility, express your point of view, and agree and disagree with the opinions of others. You will also reach a better understanding of culture, society, and everyday life in Italy as you develop the ability to speak and understand Italian in a communicative and meaningful context. The course also challenges you to recognize, explore, and understand cultural differences and similarities between your native culture and Italian culture. By the end of this course, you can expect to be able to function quite ably and with assurance in day-to-day circumstances in Italian. We will explore roughly five units of the textbook; additionally, your linguistic and cultural experience will be broadened by reading authentic texts and by viewing, listening to, and discussing cultural artifacts such as films, songs, and commercials. Grammar undergirds everything we do and say in this course; whether or not we are engaged in an explicit grammar exercise, you are always learning grammar that enables you to communicate effectively. Class is conducted entirely in Italian. Because you will work collaboratively with your classmates and your instructor, your attendance, participation, and preparation are of the utmost importance. Students are strongly encouraged to enroll in this course after taking Italian 101 to continue their Italian Elementary sequence: language learning is cumulative and requires time and consistent effort. Italian 101 and Italian 102, taken together, will provide a strong linguistic foundation--which is necessary to access Intermediate and Advanced courses at Wesleyan and to succeed in study abroad experiences in Italy.

ITAL103 Intensive Italian
Intensive Italian is a course designed for highly motivated students who wish to learn the basics of Italian language in one semester. The course emphasizes the development of basic oral and written competence, and reading and aural comprehension skills. In this course, you will master the linguistic skills necessary to function in day-to-day circumstances in Italian as you develop the ability to speak and understand Italian in a communicative and meaningful context. The course also challenges you to recognize, explore, and understand cultural differences and similarities between your native culture and Italian culture.

Grammar undergirds everything we do and say in this course; whether or not we are engaged in an explicit grammar exercise, you are always learning grammar that enables you to communicate effectively. We will use the textbook both in class and at home; additionally, your linguistic experience will be broadened by reading authentic texts and by viewing, listening to, and discussing cultural artifacts such as films, songs, and commercials. Class is conducted entirely in Italian. Because you will work collaboratively with your classmates and your instructor, your attendance, participation, and preparation are of the utmost importance.

This course is particularly recommended for students with a background in other romance languages, such as Spanish, French, or Portuguese.

ITAL111 Intermediate Italian I
Italian 111 is the first half of a two-semester intermediate sequence. Authentic artifacts such as literary excerpts, films, newspaper articles, songs, and commercials constitute the starting points of this course. These include topics ranging from stereotypes and perceptions of Italy to significant moments in Italian history and politics, family and student life, employment, immigration/ emigration, organized crime, and environmental awareness, all of which shed light on the rich diversity and complexities within Italy and offer a variety of opportunities to improve and refine your ability to speak and understand Italian in a communicative and meaningful context. The course also challenges you to recognize, explore, and understand cultural differences and similarities between your native culture and Italian culture. Grammar undergirds everything we do and say in this course; whether or not we are engaged in an explicit grammar exercise, you are always learning grammar that enables you to communicate effectively. Specifically, you will build on previously learned grammatical structures and acquire more complex ones that will allow you to improve your ability to relate information, narrate stories, make hypotheses, express your opinions, and debate the opinions of others, both in writing and in conversation. Class is conducted entirely in Italian. Because you will work collaboratively with your classmates and your instructor, your attendance, participation, and preparation are of the utmost importance. Students are strongly encouraged to enroll in the continuation of the Intermediate Elementary sequence in Spring (Italian 112): language learning is cumulative and requires time and consistent effort. Italian 111 and Italian 112, taken together, will provide a strong linguistic and cultural foundation--which is necessary to access Advanced courses at Wesleyan and to succeed in study abroad experiences in Italy.

ITAL216 Words and Sex: Storytelling, Censorship, and Boccaccio's Decameron
We will explore literary genres and representations of sex and gender in Boccaccio's Decameron. Through close readings of selected tales and cultural analyses of their trans-historical and transnational reception, we take the Decameron's words as point of departure for the study of storytelling and the politics of readership. As modern readers of Boccaccio's renowned and classic Medieval collection of short tales, we investigate the text's notions of love, gender, and sexuality by comparing and contrasting the Decameron with various other texts across varying media, from the works of Petrarch and Chaucer to the modern readings of D. H. Lawrence and Pier Paolo Pasolini, and from visual arts to digital humanities. Students are invited to creatively engage with these and other texts of their choice (and with approval of the instructor) in order to produce, by the end of the course, either a) an analytic blog post that may be published on the H-Net of the Transnational Italian Studies working group; or b) an individual or collective project inspired by Boccaccio's Decameron.

ITAL217 Infernal Passions: Love, Sex, and Desire from Dante to Today
This course traces the explosive themes of love, sex, and desire in contemporary Italian cultural productions. At the heart of this exploration is Dante, whose Divine Comedy transformed personal passion into cosmic drama, making him a foundational voice in how desire, transgression, and redemption have been conceived and represented in Italian culture. His legacy serves as both a mirror and a provocation for today's artists, writers, and filmmakers. Each unit pairs Dante's verses with 20th- and 21st-century texts and cinematic works that engage in a dialogue about power, eroticism, and resistance -- exploring the tension between the sacred and the profane, the persistence of obsessive love, the commodification of sex, and the subversion of heteronormative desire. Tracing these echoes across time, we will uncover how Italian culture continuously redefines the politics of the body, gender, and sexuality.

ITAL220 Italian Gaming Lab: Using Tabletop Games for Language Learning (CLAC.50)
Italian Gaming Lab is designed as a game-based Italian language laboratory that will focus on why and how tabletop games can be effective tools for language learning; examples will include board games, card games, and tabletop role-playing games (TTRPGs), an increasingly popular type of game that is based on collaborative storytelling in which participants either impersonate one or more characters or create and organize entire worlds.

In this CLAC course, we will explore how a game-informed pedagogy can work in Italian language and culture classrooms and to highlight analog gaming approaches that have worked inside and outside the language classroom. We will discuss the basics of Game-Based Learning (GBL) applied to L2 acquisition, as well as play a series of games that can illustrate the gameful principles previously studies. Participants will discuss the application of gaming principles to L2 acquisition and create reports and playful presentations on their linguistic journey through play. The course offers students the opportunity to use language creatively and to develop critical knowledge within the rising and innovative field of Game-Based Learning and educational game design.

The course will be conducted in Italian, and games will be played in Italian. Both intermediate/advanced learners of Italian (second-year level or above) and native speakers are welcome. If you are unsure about whether your language background is sufficient for the course, please contact the instructor.

ITAL221 Culture, Society, and History in Italy
This course is designed for students who have completed at least two years of college-level Italian or who have achieved equivalent competency through study in Italy. Our primary objective is to enhance students' speaking abilities and Italian cultural literacy through exposure to a variety of Italian texts and contexts. The course will be organized both thematically and chronologically, taking into consideration a group of three themes that could change from one year to the next. Some groups or themes that might organize the course include the following groupings: l'amore, la morte, e l'altro; la città, la campagna, i sogni; il passato, il presente, e il futuro. We examine these themes in literary texts, paying attention to the different genres, and in opera and film. Students are expected to participate actively in this seminar setting. Class is conducted entirely in Italian.

ITAL222 Ruin and Redemption: Narrating Twentieth-Century Italy
When fugitive far-left terrorist Cesare Battisti was extradited to Italy in January 2019 to serve out a life sentence for crimes committed in the late 1970s, he provided fresh evidence for the way that 20th-century events still cast long shadows into contemporary Italy. The events, their narration and re-narration over time tell the story of unresolved conflicts and overturned verdicts in a context characterized by repression, revisionism, and rehabilitation. In this course we study three historical events of the past century that continue to haunt contemporary Italian society, culture, and politics: fascism; civil war and resistance; and the political violence of terrorism in the 1970s and 80s. We approach these events by examining the ever-changing narratives about them. For each narrative we focus on specific issues (e.g., for fascism: the rise of fascism, racism and anti-Semitism, colonialism, Mussolini's cult of personality, the exaltation of war, fascist intellectuals, the art of the regime, etc.), but we use these as an entry point to articulate contradictions and complexity. We explore these narratives through various media and forms of expression: from films to novels, from landmarks to newspaper articles, from poems to billboards. By exploring how the polarizations of these narratives flow into the 21st century, we unveil the fractures and conflicting agents at the core of contemporary Italy.

The course is conducted in Italian. Authors include: Gianni Amelio, Marco Bellocchio, Italo Calvino, Liliana Cavani, Umberto Eco, Beppe Fenoglio, Dario Fo, Natalia Ginzburg, Helena Janaczek, Primo Levi, Pier Paolo Pasolini, Luisa Passerini, Cesare Pavese, Rossana Rossanda, Roberto Rossellini.

ITAL223 Home Movies: Italian "Families" on Film
What is "the family" in an Italian social and cultural context? How has it changed over time? How has it responded to the transformations of Italian society since the time of the postwar economic miracle until today? Have its contours changed to adapt to new values? Has it fossilized existing values? Are families limited to flesh-and-blood kinship or are they constructed along lines of shared values and loyalty? This course seeks some answers to these questions through a sustained exploration of a variety of types of families as they are presented in Italian cinema from roughly 1950 until today. We will take stock of representations of the "traditional" family and the related social values, seeking to understand how Italian filmmakers, through their focus on the family, enter into the debate concerning tradition and change within Italian society, culture, and history. To that end, we will examine family dynamics along a broad spectrum of relative and intersecting aspects including affiliation, love, and rivalry; elective families (organized around crime syndicates, families constituted according to affinity); "failed" and "challenged" families and what that means; and examples of single-parent and same-sex families that seek to challenge conventional heteronormative paradigms. Along the way, we will recur to some critical readings (in sociology, history, and anthropology) that will help us frame our inquiry. This course is conducted in Italian. ITAL 223 is an appropriate course for anyone seeking an advanced class after ITAL112.

We will screen one primary film each week, which will anchor our discussions and serve as the basis for that week's activities. Students will also make 10-15 minute presentations on a secondary film that will serve as a "companion" to the primary text and will thicken our understanding of that week's themes.

ITAL224 The Good, the Bad, and the Ugly: Rethinking the Italian Renaissance
In this course we explore the intellectual achievements of the Italian Renaissance. We study the development of new secular values and the quest for the fulfillment of body and soul, glory, and exuberant pleasures. We question notions of beauty, symmetry, proportion, and order. We also unveil often-neglected aspects of Renaissance counter-cultures, such as the aesthetics of ugliness and obscenity and practices of marginalization (e.g., misogyny, homophobia). We inquire into the rediscovery of classical civilizations. We consider how the study of antiquity fundamentally changed the politics, literatures, arts, and philosophies of Italy at the dawn of the modern era. Through a close reading of texts by authors such as Francesco Petrarca, Niccolo Machiavelli, and Michelangelo, we investigate continuities and ruptures between their quest for human identity and ours. This course is conducted in English, and all primary and secondary sources are in English.

ITAL225 Italian/Middletown: Podcasting Middletown's Italian Treasures
This class uncovers Italian Treasures in Middletown, both on and off campus. An advanced course in Italian that is as suited for fifth-semester students as it is for those returning from Bologna or who have already taken a course in Italian, we will explore Italian podcasts and podcasting in Italian before turning our attention to podcast production of our own. Our course begins with audio explorations of podcasts in Italian, which will allow us to examine a variety of themes and subjects (e.g., true crime, sports, health, politics, among others), conducting contextualized grammar review as we go. Alongside study of both the medium of podcasting and examples of Italian podcasts, we will learn about the history of Middletown's Italian community and conduct a hunt for Italian treasures to explore and study. How does Middletown's Italian past link to its present? And to Wesleyan? Where can we find Italian "treasures" on campus and off? Throughout the semester, students will produce several short audio assignments, for which they will prepare (and submit) scripts. In service to all audio assignments, students will work on their pronunciation and diction with the Foreign Language Teaching Assistant from the University of Bologna. In addition to the brief audio assignments and scripts, major assignments include one 5-min podcast episode at midterm and one 7-min episode by the end of November. In the last week of class, students will collaborate on editing and producing a 55-min podcast that folds together all their individual chapters and includes music and linking narrative. This final podcast will be broadcast on Wesleyan's WESU.

ITAL226 The Cosmos of Dante's "Comedy"
In 1321, Dante Alighieri completes the final cantos of the "Comedy" and breathes his last. After 700 years, the "Comedy" has not finished saying what it has to say. This course provides an in-depth introduction to Dante's masterwork as a point of entry to the history of Western literature, philosophy, and science. The core of the course consists of an intensive study of Dante's encyclopedic poem in relation to the culture and history of Medieval Europe. We examine the poem as both a product and an interpretation of the world it describes. We also observe how the "Comedy" casts its long shadow on modern culture: in Primo Levi's description of the horror of Nazi concentration camps, or in Amiri Baraka's fragmentary representation of America's infernal racist system. We investigate the challenges that Dante's text elicits when it migrates to visual and cinematic arts (from medieval illuminations to Robert Rauschenberg to David Fincher), continuously camouflaging and adapting to different media. Major topics of this course include: representations of the otherworld; the soul's relation to the divine; Dante's concepts of governance and universal peace; mythology and theology in Dante's Christian poetics; the role of the classics in the Middle Ages; intertextuality and imitation; genres and genders in medieval literature; notions of authorship and authority during the 13th and 14th centuries; the culture and materiality of manuscripts in the Middle Ages; and the reception of Dante's work from the 14th century to the present. The course combines a close analysis of Dante's inventiveness and literary strategies with exercises in analytical writing and in multimedia translation and adaptation, aimed at prompting critical reflection on the ways in which present cultural practices are built upon the practices of the past. This course is conducted in English; no previous knowledge of Italian is required.

ITAL227 Devotion and Deception: Erotic Discourse from Dante to Petrarca
In this course, we will investigate the ideology, content, and material forms of love literature from Dante Alighieri to Francesco Petrarca. Through a close reading of such texts as Dante's Vita nova (ca. 1295), Giovanni Boccaccio's Decameron (ca. 1353), and Petrarca's Rerum vulgarium fragmenta (often referred to as the poetry book par excellence: il canzoniere, ca. 1374), we will unveil the literary and fictitious nature of medieval erotic literature. We will explore the origins of love poetry in medieval France and its subsequent interpretation and rewriting in Italian courts and comuni. We will inquire into the cultural constructions of the medieval notion of the lyrical self and how it still has an impact on our own notion of consciousness. We will study the forms, themes, and characters that populate 'love stories' in the Middle Ages. We will analyze the dynamics of composition, circulation, and reception in manuscript culture. Our close analysis of the texts as they have been preserved in manuscript form will help us gauge the differences between medieval and contemporary ways of writing, reading, and loving. This course is conducted in Italian.

ITAL228 Writing the Self
This course examines literary self-writing as a practice through which identity is questioned, shaped, and reimagined, with particular attention to writing across languages and cultural contexts. Through readings by Italian and transnational authors (including Alba de Cespedes, Anna Banti, Italo Svevo, Jhumpa Lahiri, Espérance Hakuzwimana) the course explores how narratives of the self engage with issues of gender, class, race, memory, and social belonging. Students will analyze a range of autobiographical and autofictional forms while developing their own sustained work of self-writing in Italian, shaped through ongoing revision and discussion. The course is thought in Italian.

ITAL229 Roads to Rome: Italian Cinema from Neorealism to Today
Do all roads lead to Rome? In ancient times, people across the Mediterranean referred to Rome as Caput Mundi, "the capital of the [Western] world." In 1906, while living there, James Joyce wrote to his brother Stanislaus: "Rome reminds me of a man who lives by exhibiting to travellers his grandmother's corpse." Four decades later, in 1948, film critic Jean-Georges Auriol remarked: "At present, there is no doubt that Rome is the capital of cinema in Europe, if not the world."

This course offers a virtual journey to the Eternal City by means of a critical survey of Italian cinema from neorealism to the present. By analyzing fundamental films that take Rome as their setting and subject, we will discuss major trends in postwar Italian cinema as we explore the history of Italy from fascism to today. Through the works of Federico Fellini, Cecilia Mangini, Pier Paolo Pasolini, Paolo Sorrentino, Lina Wertmüller, and others, including several Academy Awards winners and nominees, we will address topics such as the legacy of World War II and the transition to democracy, traditional and queer notions of love, the relationship between Italy and the United States, Catholic religion and the Vatican, politics and organized crime, and the transnational representation and aestheticization of Italy.
This course is conducted in Italian.

ITAL230 The Sick Body: Illness, Medicine, and Mourning in Italian Culture
This course approaches Italian literature and film through the lens of the medical humanities, examining how illness and mourning are narrated across time. From plague narratives and early medical thought to modern psychiatry, institutional care, and the AIDS crisis, the course explores how bodily vulnerability is shaped by cultural beliefs, social norms, and medical practices. Literary texts and visual materials -- including anatomical studies and film -- invite students to consider illness not only as a biological condition but as a lived experience structured by gender, sexuality, class, religion, and power.

ITAL231 Italian Colonialism and Its Legacies
This course is an introduction to the history and consequences of Italian colonialism. We will study literary and historical texts describing the social and political forces that led to colonization as well as writings by colonized people and their descendants in order to gain a balanced, comprehensive understanding of this often-overlooked moment in Italian history. Students will read futurist, fascist and postcolonial theoretical work and will examine Italian, African and Albanian cultural artifacts representative of the colonial experience. We will also discuss current debates about immigration in Italy and their relationship to this colonial history. Literary texts will include: Dell'Oro's L'abbandono; Cialente's Cortile a Cleopatra; Ali Farah's Madre piccola; Marinetti's Mafarka futurista; and work by prominent Italian scholars of colonialism such as Del Boca and Isnenghi. This course is conducted in Italian.

ITAL232 Italy at School: Biography of a Nation
Soon after the unification of Italy (1861), the Coppino Law extended primary school to five years, making it free of charge and mandatory for its first three years (1877). Edmondo De Amicis would subsequently depict these reforms in his best-selling novel Cuore (1886), a text that introduced some enduring features of school narratives but also many stereotypes, thus attracting constant criticism and inspiring several parodies of its moralistic underpinnings. Ever since then school narratives have become a key component of Italian culture, creating a genre that has thrived especially in the last three decades, with a number of both fiction and nonfiction books published by teacher-writers who have reflected on their experience.

In this course we will study Italy from the perspective of these texts about school that often originated within school walls themselves. In so doing, we will reconstruct the history of a relatively young country, Italy, through the institution that, like no other, has been given the responsibility of "making Italians." At the same time we will question the image of Italian society that school narratives have, intentionally or not, contributed to portraying. In addition to reading Lucio Mastronardi's Il maestro di Vigevano (1962), we will focus on a wide range of materials, including novels, memoirs, poems, popular songs, films, and works

of art that, even in the absence of a unanimously acclaimed "classic" of the genre, have shaped the Italian collective imaginary. Materials will be organized around five poles that have been quintessential to the debate on school in Italy across politics and culture: characters (teachers and students, obviously, but also colleagues, classmates, and families), labor and working conditions (including themes such as precarious work, class conflict, labor rights), gender and identity (questioning traditional gender roles and discussing integration of migrants at school), places and geographies (addressing topics from school design to teaching in prisons, as well as center-periphery integration and north-south divide), and actions (both those of teachers and of students, such as obtaining a certification vs. passing a test, disciplining students vs. questioning teachers' authority, resigning from job vs. cutting classes). The course will be conducted in Italian.

ITAL233 Modern Italy on the Silver Screen: 1960--2015
This course is an introduction to modern Italian culture through the lens of Italian cinema. Beginning in the postwar era, we will look at the radical transformations that have shaped contemporary Italy by examining the aesthetic and narrative trends of the silver screen. Italian cinema holds an important place in global film culture, giving rise to new artistic forms (from neorealism to spaghetti westerns and arthouse slashers) that have dramatically impacted foreign and domestic sensibilities. Among the films screened are Fellini's La dolce vita, Pasolini's Mamma Roma, De Sica's Matrimonio all'italiana, Leone's Il buono, il brutto, il cattivo, Argento's Suspiria, Moretti's Caro diario, Ozpetek's Saturno contro, and Giordana's Quando sei nato non puoi più nasconderti. Each film screening is accompanied by a brief presentation of the socio-historical context in which it was produced, allowing students to situate the artistic projects within broader Italian social and political histories. By the end of the term students will have an understanding of the last half-century of Italian national history and will be familiar with key terms in film theory and analysis. This course is taught in English; films will be screened in Italian with English subtitles.

ITAL235 The Invention of Fiction: Giovanni Boccaccio's Decameron
In this course we read and discuss Giovanni Boccaccio's Decameron (ca. 1353), a collection of 100 short stories traded by an "honest brigade" of 10 Florentine men and women. They tell each other these stories while sheltered in a secluded villa as the plague of 1348 rages in Florence. We study the Decameron as both a product and an interpretation of the world Boccaccio inhabited. We examine the Decameron's tales and narrative frame as a point of entry into the cultural and social environment of medieval Italy. We look at its scurrilous, amusing, and provocative innuendos as traces of erotic, religious, ethnic, and cultural questions. We investigate the sexual exuberance of many of Boccaccio's tales and the tension between "high" and "low" culture. We consider the development of mercantilism and literacy in early-modern Europe and its emerging virtues of wit and self-reliance. We review the dynamics of composition and reception in manuscript culture and the book's adaptation into different media, from illuminations to film. And by impersonating the 10 Florentines, we will reenact their pastime of telling stories and appreciate Boccaccio's remarkably modern sensibility and unsurpassed art of writing fiction. This course is conducted in Italian.

ITAL236 Inferno
In this course we read and discuss Dante's Inferno (ca. 1306-1309) and its afterlife. Inferno is the poetic description of Dante's (imagined or actual) journey through Hell. We study how its poetry and narrative embody the notions of love, sorrow, evil, guilt, redemption, and punishment. We examine the poem as both a product and an interpretation of the world it describes and of its radical otherness: its representation of the otherworld, its relationship with religion and faith, its fear of death, its obsession with the Devil. We inquire into Dante's inventiveness and poetic technique, reviewing his magisterial use of realistic and figurative language. We observe how Inferno casts its long shadow on modern culture: in the description of the horror of Nazi concentration camps (Primo Levi's memoir), or in the representation of the inauthentic life in consumerist society (Pier Paolo Pasolini's rewriting of Inferno in contemporary Italy). We investigate the challenges that Dante's text elicits when it migrates to visual and cinematic arts (or to Disney comics), continuously camouflaging and adapting to different media. And we critically reflect on how, after seven hundred years, Inferno has not finished saying what it has to say. The course is conducted in Italian.

ITAL238 What's in a Name? Autobiography and Autofiction in Modern Italian Culture
This course explores the relationship between a person's (or a character's) identity and their name, examining the crucial relevance of naming and renaming practices in shaping individual identities and collective narratives through a wide variety of Italian texts. In the first module, we read Holocaust memoirs and contemporary short fiction and we listen to podcasts and songs by Black and Jewish Italian authors to analyze the nuanced ways in which names shape racial identity, from the derogatory act of name-calling and the deprivation of personal names to the empowering act of reclaiming one's name and narrative. In the second part of the course, we consider coming out stories and gender transition accounts, including graphic novels and feature films, to reflect on the impact of putting into words one's gender identity and choosing new names in individual journeys of self-discovery and affirmation. In our last module, we focus on the last twenty years of Italian literature to study one of its dominant genres (that some Italian critics polemically named a "disease"): autofiction, a blend between autobiography and fiction. For the final essay or project, each student will choose a recently published novel to read, analyze, and adapt or (partially) translate. This course is conducted in Italian.

ITAL241 Antonioni and Cinema of the Environment
From its earliest days, the cinema has sought to capture the wonders of the world: exotic landscapes, industrial inventions, and human prowess in the face of nature. At the same time, many important filmmakers--and particularly those in the Italian tradition--have mined their medium's capacity to register and comment upon environmental change. Few directors traversed the upheavals of the 20th century quite like Michelangelo Antonioni. Beginning with his early documentaries, we'll explore cinema's relationship to both the natural world and the built environment across Antonioni's long career. From the foggy landscape

of the Po valley to the urban centers of Milan, Rome, London, and Los Angeles, we will assess the images produced by location shooting and realist techniques, but also by formal abstraction and non-narrative time. What might Antonioni's inclination toward abstraction and detachment ("Antoniennui," in a memorable pun) tell us about the world? How should we square his stylistic tendencies with his camera's attention to an environment under pressure? What lessons does his cinema hold for the present?

We'll approach these questions using the core methods of the humanities: close reading, careful viewing, and critical analysis. Along the way, we'll sharpen our understanding of film scholarship, and explore how to make critical (and creative) arguments about cinema and the environment.

ITAL244 Re-imagining Dante's Inferno: Social Justice and the Arts
Sentenced to death for crimes he did not commit, Dante Alighieri wrote his epic poem about a journey from hell to heaven in an impoverished state of exile. Drawing on innovative techniques of music, dance, painting, and theater Dante denounced political corruption and social injustice in a story that has inspired artists throughout the world to create new work about the search for freedom, including the Russian dissident poet Osip Mandelstam, Black revolutionary playwright Amiri Baraka, the Chinese artist/activist Wei Wei, and 17th century prisoners of the Inquisition. Students will read selected cantos from Dante's "Commedia," consider contemporary news accounts of modern equivalents to medieval injustices, examine previous adaptations of the poem, and devise their own responses to Dante in the art form of their choice (theater, dance, poetry, playwriting, rap, music, spoken-word, visual arts).

ITAL245 Not Just Neorealism: Italian Cinema, its History and Politics (CLAC.50)
This 0.5-credit course is conducted in Italian and designed to supplement the English-language Italian cinema course "Not Just Neorealism: Italian Cinema, its History, and Politics" (RL&L 245). The presentations that are part of the requirements for the parent course (RL&L 245) will serve as our basis in this discussion-based section: Students will be responsible for screening films in addition to those required for 245, for presenting them, and, during the discussion sections in Italian, responsible also for linking them to the course material. Further, students enrolled in the CLAC will also make mini-presentations to the broader body of the students enrolled in the parent course only, linking the extra screenings to those that are part of the course syllabus, and enriching the discourse and knowledge base.

Students are required to be simultaneously enrolled in the parent course in order to enroll in the CLAC section. For this reason, enrollment is granted on a POI basis.

Students must have advanced competency in Italian: completed ITAL 221 or a course with a higher number, spent a semester (or more) in Wesleyan's Program in Bologna, or be linguistically proficient. For any questions about linguistic preparation, please contact the instructor.

Please note that at present this section is not acceptable as one of the nine required courses for the ITST major.

ITAL246 Crises and Emergencies in Modern Italy
The COVID-19 pandemic revived a longstanding concern in Italian theory about the relationship between rule of law and state of exception. This course draws upon biopolitics and cultural studies to investigate the relevance and ramifications of the emergency management paradigm in modern Italy. It also provocatively questions an established trend in public discourse, namely the rhetoric of the crisis: "crisi di governo," "crisi di valori," but also "emergenza migratoria," "emergenza ambientale," and so on. Why is Italy constantly in crisis? By relying on various genres of literature and on a wide range of media including films, songs, and social media, we will analyze artistic representations of these crises and emergencies, as well as the state responses to them. The critical exploration of case studies from four interconnected thematic areas revolving around issues of public health, power, body, and space will often unveil diverging narratives, allowing for reflections on the tension between safety and freedom, vulnerability and resistance, individual and collective memory, and truth and fiction.

ITAL247 Coming Out/Coming of Age: Narratives of Becoming in Italian Culture
By examining narratives of "becoming" in Italian literary and screen texts, we will work to read against a dominant "master" narrative of Italian culture that is cis-male, patriarchal, and "white." The literary and screen texts we will explore in depth include some "classic" narratives of coming of age in the Italian cultural tradition which we will lay alongside Italian cultural "coming out" narratives, some "classic," others less so. What can we learn from such adjacencies? What does one "come out" of with regard to either strand of inquiry? Is adolescence a "closet" out of which one emerges with a sexual identity? Does one come of age as an artist or "come out" as a practitioner of a particular artistic genre (filmmaker, poet, novelist)? How do artistic choices of practice subtend and inform sexual identity? What gets left behind in this "progress" of "becoming"? These are some of the questions we will address in this course, conducted in Italian.

ITAL249 Italian Filmmaking by the Book: Adaptations, Texts, and Contexts
This course explores the adaptations and transformations of Italian literary texts into their cinematic and televisual counterparts. We will principally study Italian narratives from the 20th and 21st centuries and their screen adaptations

as a way of uncovering the modes and means by which Italian screen culture borrows from literary antecedents. Is the relation between literary texts and their screen adaptations a love story or bad romance? Is it characterized by a "faithfulness" to the text or a "betrayal"? Throughout the semester, students will acquire an enriched understanding of the assorted texts and their contexts by studying varied genres (short fiction, novels, nonfiction, detective stories), a variety of themes (crimes both real and imagined, petty and powerful; historical revisionism; personal and political dilemmas), and diverse geographical settings focusing principally on Southern Italy (including cities and islands reaching from the Mediterranean to the Adriatic).

All students in the course will study a common core of five author/director pairs. The core consists of "Il Gattopardo" (di Lampedusa/Visconti); "Io non ho paura" (Ammaniti/Salvatores); "L'amica geniale" (Ferrante/Costanzo); "Gomorra" (Saviano/Garrone/Sollima); and "Novelle per un anno/Caos" (Pirandello/Taviani). Additionally, students will, in consultation with the instructor, choose a sixth pairing from the list of the following titles, which will serve as the basis of their end-semester presentation as well as an element of the oral final exam: "Il giorno della civetta" (Sciascia/Damiani); "Il contesto/Cadaveri eccellenti" (Sciascia/ Rosi); "I Malavoglia/La terra trema" (Verga/Visconti); "Padre Padrone" (Ledda/Taviani); "Quo vadis, baby?" (Verasani/Salvatores); "Acciaio" (Avallone/Mordini); "Il conformista" (Moravia/Bertolucci); "Todo modo" (Sciascia/Petri); "Minchia di re/Viola di mare" (Pilati/Maiorca); "Benzina" (Stancanelli/Stambrini); "Il padrino" (Puzo/Coppola); "La tregua" (Levi/Rosi); and "Le forme dell'acqua" (Camilleri/Sironi). Students may also care to consider literary texts from earlier historical periods: Basile's 16th-century "Il cunto de li cunti/Il racconto dei racconti" (Garrone) and Collodi's 19th-century "Pinnochio" (with adaptations by Disney, Benigni, and Garrone). This course will be conducted in Italian. This course is appropriate for all students who have completed ITAL 112 or whose placement exam indicated a course numbered ITAL 221 or higher.

Students are encouraged to put the lengthened winter break to good purpose. All students are expected to read the first book of Ferrante's Neapolitan quartet, "L'amica geniale," during the winter break. It is a long novel, but students will find that the Italian is not challenging. Any edition in Italian will be fine (e.g., electronic, print, used, etc.). Reading in advance of the semester will facilitate students' workload as well as keep Italian flowing during the lengthy pause. It is further greatly recommended that students read di Lampedusa's "Il Gattopardo" in advance of the semester. If students have already taken an Italian course numbered 221 or higher, or have already studied in Italian, it is recommended that they read "Il Gattopardo" in Italian. Any edition will serve.

ITAL256 Medieval Gigs: Saints, Scholars, Sailors, Sinners
A friar preaching to birds, a scoundrel passing as a saint, a nun conversing with Jesus, a Greek hero sinking into hell, a scholar talking to the dead, and a merchant exploring uncharted territories: We find unusual professional figures gigging in Italy circa 1300. In this course we explore medieval alterity through the voices of its most illustrious representatives: from Francis of Assisi to Dante Alighieri, and through a variety of other workers in the Italian economy. We examine various aspects of medieval religious culture ranging from mystical visions to the institutional politics of the Church. We consider the development of mercantile capitalism and its emerging virtues of wit and self-reliance. We track seafarers as they encounter the Other during their maritime voyages. For those staying closer to home, like clerics and other literate "Italians," we review the dynamics of composition and reception from orality to manuscript culture. We observe how medieval culture is embodied through different media, from manuscript illuminations to film. And by combining micro- and macro-perspectives, we approach the Italian Middle Ages from a broad aesthetic, historical, and socio-anthropological standpoint.

The course is conducted in Italian. Authors include Francis of Assisi, Catherine of Siena, Angela of Foligno, Giotto, Dante Alighieri, Francesco Petrarca, Giovanni Boccaccio, Marco Polo, and Christopher Columbus.

ITAL260 Castles of Cards: Italian Romance Epic Storytelling Lab
Celebrated authors of 20th-century Italian literature such as Italo Calvino and Gianni Celati have included in their works several features of Renaissance romance epic, from the importance of orality and the idea of sharing stories with a community of listeners to multi-threaded narratives and a playful attitude to the world of storytelling. The current popularity of fantasy literature and TV series puts us in an ideal position for the study of the chivalric romance and for an exploration of the continuities and the differences between past and present literary forms. In this course we focus on canonical and less canonical texts of the Italian Renaissance epic and their modern rewritings. After a multimedia investigation of Andrea da Barberino's "Guerrin Meschino," Luigi Pulci's "Morgante," Boiardo's "Inamoramento de Orlando," Ariosto's "Orlando Furioso," and Tasso's "Gerusalemme liberata" along with their rewritings by authors such as Bufalino, Nori, Celati, Calvino, and Giuliani, we will take inspiration from Calvino's "Il castello dei destini incrociati" to transform the classroom into a storytelling lab. The same deck of tarot cards that Calvino used for his book will help us to take part in a role-playing game and create a collaborative story that will gradually unfold throughout the semester. The class aims both at studying the Italian romance epic in order to reenact it creatively and also at using this collaborative rewriting as an interpretive tool to explore Renaissance literature from within.

ITAL263 Mythic & Modern: Reappropriating Classical Themes in Contemporary Drama and Performance
What does it mean to defy the authority of the patriarch, of family, or of government? How do these structures of authority intersect in contemporary society? How do we, today, understand "destiny"? How do we challenge it, and what are the consequences for doing so? How do we break the patterns of shame and disenfranchisement inherited from the shared past? These are just some of the social, political, and ethical concerns transmitted over time by playwrights, stage and performance artists, and film directors who treat classical myths as valuable constructs for interrogating our contemporary world and society. In this collaborative, project-based course we explore how classical myths have been appropriated within the modern Italian and Italophone cultural context. Just as important as our study and discussion of modern adaptations of classical models are the staged readings of key scenes incorporated strategically throughout the semester that help us develop an organic understanding of

the material from the inside. Our overarching aims include: 1) exposing what persists in modern adaptations of classical myths, 2) tracking the kernels of change that the adaptations present, and 3) understanding why performers over time, working in disparate cultural milieus, continue to seek and derive inspiration from classical myths. The mythic figures we examine may include any of the following: Sophocles' Antigone, Euripides' Oedipus and Medea, Aeschylus' Agamemnon, as well as figures from the Oresteia and from such epics as Homer's "Iliad" and Virgil's "Aeneid." This course is taught in conjunction with ITAL263 and FREN263. The final collaborative performance, scheduled during the final exams period, will involve students from across the Romance Languages and offers the unique opportunity for cohort building among students of French, Italian, and Spanish.

ITAL267 Female Dicks: Police, Detectives, and Private Investigators in Contemporary Italian Culture
Through the act of detection and "solution" of a crime, classic detective stories and police procedurals often serve as consoling narratives, knitting up the unraveled social fabric and seeing that justice will either be served or promised. In solving the crime, the detective--sometimes called a "dick" in the classic American hard-boiled detective literature--often restores order to social chaos. What changes when women--female dicks--conduct the investigation? Do women investigators, as agents of detection, uphold existing (patriarchal) power structures, dynamics, and epistemologies? Challenge them? Transform them? These are some of the themes we will contemplate as we study Italian "gialli" published since 1995.

We will concentrate on three different types of female dicks: la Deferente (the deferential), la Scomoda (the disquieting, uneasy), and la Vendicatrice (the vindicator). We will read novels in several different book series privileging Bologna as a location; further, we will also explore films and television series, trying to plumb the relationship of these Italian screen texts to the phenomenon of global and transnational noir.

This course is conducted through the medium of Italian and is suitable for anyone who has already taken a fifth-semester course (or one that is more advanced) on the Middletown campus or who has participated on the ECCO Program in Bologna. If you have questions about whether this is the course for you, please contact the instructor.

ITAL280 Journeys of the Mind and Body
From Dante's descent into the underworld to contemporary narratives of migration, journeys -- both real and imaginary -- have shaped Italian literature, art, and film production. This course explores how movement, whether physical, psychological, or symbolic, serves as a catalyst for transformation, self-discovery, and historical reckoning. We will examine visionary landscapes in Dante and Leopardi, shifting bodies in Tasso and Tondelli, evolving female identities from Veronica Franco to Elena Ferrante, and testimonies of displacement from Primo Levi to Igiaba Scego. How do literary and artistic journeys negotiate the tension between reality and imagination? In what ways does movement -- whether forced or voluntary -- reshape identity and power? How do historical and cultural contexts influence the meaning of travel?

ITAL289 The Mediterranean Archipelago: Literary and Cultural Representations
"Islands which have / never existed / have made their ways / onto maps nonetheless" (Nicholas Hasluck). In this course, we study Mediterranean islands as geographical, textual, and metaphorical spaces. We focus on specific islands -- both fictional and real -- as case studies for the aesthetic, political, and metaphysical implications of insularity, while also aiming to present the Mediterranean as a spatial, historical, and cultural network of relationality and conflict. Elaborating upon Predrag Matvejevitc's statement that "the Mediterranean is not only geography," we approach Mediterranean insularity not only in cartographical representations (from Greek geographers to Arab cartographers), but also as poetic topos (from Ariosto's Island of Alcina to Goethe's Capri), narrative stratagem (from Homer's Phaeacia to Boccaccio's Rhodes), literary protagonist (from Deledda's Sardinia to Murgia's Sardinia), political concept (from Plato's Atlantis to Campanella's Taprobane), and existential condition (from Cervantes's Cyprus to Cavafy's Ithaca). We engage in a diachronic and synchronic exploration of Mediterranean islands' inherent dialectic between resistance and occupation, identity and assimilation, marginality and integration, zoological extinction and speciation, inbreeding and metissage, autochthony and allogeny, linguistic conservatism and creoleness, territorial boundedness and internal division. Our approach will also be archipelagic and include methods and concepts from historical linguistics and dialectology to diplomatic history and postcolonial poetics.

PORTUGUESE

PORT101 Portuguese I
Introduction to the Portuguese language and the Lusophone-world with a focus on Brazil. Students will develop basic language skills (reading, listening, writing, and speaking) along with an awareness of the Portuguese-speaking world in Africa, Asia, Europe and the Americas, including its presence in the United States. PORT 101 and PORT 102 are designed as a year-long sequence, with each course covering half the textbook, along with other materials including Brazilian film, poetry, media, children's literature, journalism and music.
Offering: **Host**
Grading: **A-F**

ROMANCE LANGUAGES AND LITERATURES IN ENGLISH

RL&L115F Italian Cinema, Italian Society (FYS)
This First Year Seminar on Italian cinema (taught in English) investigates major silent and sound films and contextualizes them, their production, and the subjects they treat within a historical, cultural, and political framework. We will trace the intersection among politics, ideology, and Italian cinema, from its Golden Age of silents through fascism and neorealism (as well as its contested legacy), from a consideration of the "exquisite" examples of auteur directors like Fellini and Sorrentino to the ways these and other directors enter into dialogue with popular genre cinema (the giallo, spaghetti westerns, melodrama, etc.), and beyond. Featured filmmakers will be drawn from this list: Pastrone, Ophuls, Rossellini, De Sica, Fellini, Bertolucci, Antonioni, Wertmuller, Cavani, Pasolini, the Taviani Brothers, Leone, Sorrentino, Rohrwacher, Nicchiarelli, Crialese, and others.

Major Screenings will be organized for students. Students are not responsible for purchasing the films.

RL&L120F Tales of Resistance: Modernity and the Latin American Short Story (FYS)
Latin American writers from the early 20th century forward have regarded the short story as a vehicle through which to make their mark and engage the great cultural issues of the day. Jorge Luis Borges and Julio Cortázar, two of Latin America's most well-known literary figures, dedicated their careers almost exclusively to the genre. In this course, as we consider the privileged status of the short story in Latin American letters, we will examine the ways in which writers have used the genre to comment on important aspects of modernization both within and outside their respective countries. Some of those aspects will concern the Mexican Revolution, bourgeois and mass culture, nationalism, globalization, as well as immigration to Europe and the United States.

RL&L122F The Little Prince and Beyond: Literature and Childhood (FYS)
This first-year seminar will explore French literature and films for and about children. At the heart of our discussions in this class will be the question of how adults construct the child's point of view. How can we define childhood? How can we evoke it through narrative? How ought we make art for children? We'll look at a variety of sources including Marjane Satrapi's graphic novel memoir Persepolis, Antoine de St. Exupéry's The Little Prince, 19th-century didactic literature, films by François Truffaut, and classic fairy tales. No knowledge of French is required; all readings will be in translation and discussions will be in English. We will work on a variety of critical writing formats and students will also have the opportunity to produce creative writing as well.

Prereq: **None**

RL&L123 Love, Sex, and Marriage in Renaissance Europe
This writing-intensive seminar will compare literary and artistic depictions of love, sex, and marriage during the Renaissance by authors and artists from England, Spain, France, Flanders, Germany, and Italy. We will read both male and female writers in genres ranging from poetry, the short story, and theater to the essay, the travel narrative, and the sermon. We will also examine other arts such as painting, sculpture, and the decorative arts (e.g., wedding chests). Questions we will explore include, but are not limited to: How were love and marriage related during the Renaissance? What role did sex, gender, and violence play in relationships between couples and within society? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about same-sex unions? Other topics will include virginity and celibacy, erotic literature, family and class structures, and divorce.

RL&L123F Love, Sex, and Marriage in Renaissance Europe (FYS)
This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, Italy, the Low Countries, Spain, and Sweden. (Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about homosexual love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how do contemporary (21st-century) writers reimagine Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. Students will also have the opportunity to write creatively should they so choose.

RL&L123Z Love, Sex, and Marriage in Renaissance Europe
This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, the Italian Peninsula, the Low Countries, Portugal, Spain, and Sweden. (N.B. Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about "homosexual" love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how have contemporary (21st-century) writers reimagined Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. RL&L125 Jungle and Desert Adventures
This course analyzes the constellation of images and sensations conjured up by the terms "jungle" and "desert" that are opposite but equally extreme. We will explore European adventure tales and travelogues, contemporary non-Western novels, children's books, and films in a quest to understand the imaginative power of these landscapes. Through our readings of such a wide range of texts, we will ask questions such as, What do these landscapes signify? How do descriptions of landscape convey a sense of individual and collective identity? What psychological terrain is explored when writing about extreme landscapes? And finally, how do we each see ourselves in relation to landscape? What is our own version of an "extreme" landscape?

RL&L126 El Greco to Picasso: Modern Art's Passion for Golden Age Spain
This course examines the life and afterlife of the Spanish artists of the Golden Age, whose achievements reached unprecedented heights in the 17th century. Centuries later, their works took on new roles as artists of other times and cultures found their own inspiration in works of the past: Manet copied Velázquez, Picasso copied El Greco, and (famously on "Project Runway") Christian Soriano copied Murillo. What allowed these complex works to resonate so strongly in another era? Is such influence automatically a sign of success? And why have the works of Francisco Goya inspired more filmmakers than any other artist? Students will be introduced to the reading of visual art for stylistic, historical, and political content and develop a critical understanding of art and society in Golden Age Spain, as well as insights into the role of art as a cultural currency.

RL&L127 Catholicism and Ideology in the Hispanic World
Catholicism has played a number of roles in the cultural politics of the Hispanic world, appearing as a place of national being, resistance, and conservatism. In this course, we will read a number of texts from different periods and national contexts with a view to understanding how writers and intellectuals from Spain, Latin America, and the U.S. engage with Catholicism and the historical conditions under which they do so.

RL&L129 Writing the French Revolution
"Liberty, equality, and fraternity" was the slogan of the French Revolution and features three concepts of enduring interest. In this seminar we will explore the French Revolution and its antecedents -- and what these can mean for us today. In the process we will delve into a number of ways of thinking and modes of representation: historical thinking, of course, but we will also get a sense of the origins of sociology and political science, the power of scientific thinking, and differences between literary and visual representation (especially films). This course will also serve as a writing workshop emphasizing the nuts and bolts of good writing and experimenting with such rhetorical modes as argument, personal narrative, persuasion, and fiction-writing.

RL&L130F If This Is an Author: Primo Levi and the Politics of Authorship (FYS)
In this First Year Seminar, we look at what makes an author to help you become a better writer. Through the case study of Primo Levi, we address questions of authorship, reception, and appropriation. From his seminal Holocaust text, "If This Is a Man" (first published in 1947, also known in the States as "Survival in Auschwitz"), to the philosophical essays of "The Drowned and the Saved" (1986), Levi was a writer of many genres (memoir, poetry, short fiction, novel, non-fiction) who confronted some of the most crucial themes of the 20th century: genocide, moral choices, the uses of science and technology, the relationship between historical truth and memory, and the power of language. In this course, we reflect on what an author is in theory (Barthes, Foucault, Sedgwick, Spivak, etc.) and in practice, engaging with and reacting to Levi's writing through such questions as: what makes a literary work authentic and why should we trust the words of an author? How do authors affirm their authority in their own country and abroad, and what is the role of publishers, translators, and critics in their reception? What happens when an author becomes a character for another author, and, more generally, what are the aesthetic and ethical implications of appropriating an author's body (of work)? As we critically read a significant portion of Levi's "Complete Works", you will hone your interpretative and writing skills through class discussion, short writing assignments, in-class presentations, and ample feedback, understanding how questions of authorship do not pertain solely to a literary author like Primo Levi, but can also help you become a more confident writer.

RL&L140F Van Gogh and the Myth of Genius (FYS)
This seminar will investigate in depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth-making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. We will both investigate the formation of this myth and view it critically, balancing it against the artist's own account of his career in his paintings and prodigious correspondence. Van Gogh's extensive, insightful, and fascinating writing begs the question of how one should treat an artist's statements when interpreting his works. We will also examine the role of biography in art. Finally, rather than viewing the artist as an isolated creator, we will situate his work within the artistic landscape of late 19th-century Europe, and especially France, where he spent his most productive years as an artist, 1886--1890.

RL&L141 Van Gogh: Modernity, Utopia, and Nineteenth-Century Art
This course will investigate in-depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. This class goes beyond the media image of the artist and looks hard at his paintings, drawings, and letters, placing them in their respective artistic, literary, and historical contexts. Van Gogh engaged with social issues, above all the plight of peasants, artisans, the poor, and the marginalized--the most vulnerable members of society. He sought to give form to their experience in ways that were mediated by Dutch and French landscape painting and French naturalist literature. Upon moving to Paris, van Gogh absorbed the lessons of Impressionist, Neo-impressionist, and Symbolist painters before moving to the south of France, where he created his most memorable works of sun-drenched fields, bar and café interiors, and common workers. Toward the end of his life, he increasingly conceived of art as a site for utopian projections and emotional solace. We shall study the work of this immensely productive artist and along the way develop art historical skills, including visual and textual analysis, historical and contextual interpretation, how to evaluate an artist's personal correspondence in relationship to his painted oeuvre, and independent research.

RL&L148F Responding to Political Turmoil (FYS)
"What just happened? What's going to happen? What do we do now?" Political turmoil, while disconcerting to say the least, is nothing new. This course will look at case studies from various times and regions--including the creation of the U.S.; Fascist Spain; the 1960s in the U.S., France, and elsewhere; Brazil's military dictatorship; Italy in the 1990s; the Arab Spring; contemporary Mali and D. R. Congo--to see how others have responded to periods of political oppression and upheaval. After an initial period of discussion based on readings, we will hold conversations with members of our campus community who have experienced various forms of authoritarianism. The course is both academic and project-based: as we gain perspective through academic readings and assignments on the issue of political turmoil, we will turn what we learn into well-informed, measured, concrete action. In particular, we will workshop several writing exercises related to the topic and intended to make an impact (e.g., letter to the editor, letter to an elected official, public service announcement for the radio). All students (including those whose first language is not English) are welcome in the course and will receive individualized attention to their writing.

RL&L150F Undoing Gender in Medieval France (FYS)
In this course, we will go way back--before Stonewall and even Simone de Beauvoir--to depictions of gender diversity in multiple medieval literary genres including romances, songbooks, lais, and chantefable. We will dive deep into medieval French texts with an ability to hold ambiguous and complex representations of gender and sexuality. We will discuss canonical French literary works in translation and also in medieval manuscript, alongside contemporary works on gender, queer, and trans theory, in order to illuminate what medieval literature can teach us about gender identities and desire processes that trouble or even escape the gender binary, as it is commonly understood today. As will become clear from our explorations of medieval French texts and manuscripts, many identity categories that we take to be stable, eternal, or "natural," are contingent and simply "naturalized." Medieval genders are not ours, and our genders will not be those of future generations.

This is a writing-intensive course, and you will produce upwards of 20 pages of academic writing by the semester's end. In this class, we will consider writing a collaborative and ongoing process. In the first few weeks, you will be exposed to ideas about gender and sexuality that surprise you. Your first written assignment will be to describe something "weird" that intrigues you and that you would like to investigate more. Sparks of confusion and intrigue are often seeds that grow into ideas and ultimately arguments! As you investigate this topic, you will be encouraged to begin writing about it, and sharing your writing with your peers. In addition to reviewing drafts of your peers essays, you will produce abstracts, outlines, and short conference papers to practice different means of focusing your thought in writing and communicating your thoughts to an audience. Our course will culminate in a collaborative miniconference, where we will work collaboratively to trouble and undo commonsense notions of gender.

RL&L203 Modern Europe
This course surveys the history of Europe since 1815 and is intended primarily as an introduction to decisive events and interpretation of central themes. Attention will be devoted to major political, social, economic, and cultural developments, beginning with the many dimensions of the political and industrial revolutions of the 19th century; continuing with the emergence of nation-states and nationalism, working-class movements, the consequences of imperialism and the World War I, and communism and fascism; and concluding with study of the World War II, the reassertion of Europe, the collapse of the Soviet system, and contemporary issues.

RL&L210 Romanesque and Gothic Art and Architecture
This course introduces the art and architecture of Romanesque and Gothic Europe, that is, later medieval Europe ca. 1100-1400, focusing especially on Germany, France, Italy, England, and Spain, as well as the wider Mediterranean. Architecture, painting, sculpture, and the luxury arts (e.g., metalwork, ivory, and textiles) will be our focus, supplemented by primary-source texts and secondary literature. Key themes will include sacred spaces, such as cathedrals and monasteries; sacred images and devotion; gender; pilgrimage and the relic; geography; the Other; the monstrous and the miraculous; courtly love and chivalry; the relationship between Christianity, Judaism, and Islam; and premodern definitions of art, the artist, the donor, craftsmanship, and value.

RL&L212 Early Renaissance Art and Architecture in Italy
This course surveys key monuments of Italian art and architecture produced between ca. 1300 and 1500. Focusing on major centers such as Florence, Milan, Rome, and Venice, as well as smaller courts such as Urbino and Mantua, it considers the works and careers of the most important artists and architects of the period, among them Giotto, Brunelleschi, Donatello, Giovanni Bellini, Botticelli, and Leonardo da Vinci. Monuments are studied in their broader intellectual, political, and religious context, with particular attention paid to issues of patronage, devotion, gender, and spectatorship. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

RL&L213 Introduction to Existentialism
This course covers the wide variety of thinkers who may be considered a part of the existentialist tradition. The political and cultural phenomenon of existentialism asks questions concerning the essence of freedom in modern society, the role of emotions and passions in subjectivity, how meaning is brought to life, and the tensions between individuality and society. We will address these questions through the writings of thinkers such as Friedrich Nietzsche, Fyodor Dostoevsky, Jean-Paul Sartre, Simone de Beauvoir, Emilio Uranga, Leopoldo Zea, Gloria Anzaldúa, and Frantz Fanon. Throughout we will investigate what lessons for political life and belonging we can draw from these thinkers in our contemporary world.

RL&L217 Venice and the Renaissance
Venice -- a city built almost impossibly on a forest of stilts sunk into the mud of the lagoon and buttressed by powerful myths of divine origins, permanence, and prosperity - produced some of the most spectacular works of Renaissance art and architecture. This introductory-level course on the art and culture of Venice's "golden age" considers the works of artists such as Carpaccio, Bellini, Giorgione, Titian, Veronese, and Tintoretto, and architects such as Codussi, Sansovino, and Palladio in the context of the city's unique setting, social and governmental structure, cultural and political milieu, and larger geopolitical significance. It also positions Venice's artistic production within the broader framework of early modern Europe, exploring its connections with Byzantium and the Islamic world. The course also introduces students to key issues and methods of art history.

RL&L218 Art and Architecture of Renaissance Florence
How did Florence rebound from calamitous plague to become the self-styled locus of the Renaissance? This survey of the art and architecture of Florence evaluates its cultural achievements against the improbabilities of their success. The city had negligible Roman history but championed the revival of classical antiquity; it was repressive but pushed the boundaries of representing gender and sexuality; its government slid from a republic to an absolute monarchy but fostered creative latitude; it spawned one of Italy's most popular religious zealots and popularized secular ideals; it had no empire but became a hub of global trade and knowledge transmission. To understand how this happened, we will study famous artists like Botticelli, Leonardo da Vinci, and Michelangelo alongside their lesser-known and even nameless contemporaries. Painting, sculpture, architecture, drawing, and printmaking will come alive in lectures and by discussing related texts in translation, recreating artistic techniques, and examining original Renaissance artworks in person.

RL&L219 Global Rome: Art and Architecture in Early Modernity
Rome has long called itself the "head of the world," but in the early fifteenth century, it was a backwater. This course surveys the art and architecture of Rome as it reclaimed the papal seat, grew its population, witnessed their deaths amid an infamous sack, and then amassed singular power through the transoceanic expansion of Catholicism. The local particulars of Rome will be considered alongside its global history, situating the accomplishments of Raphael, Michelangelo, Caravaggio, Artemisia Gentileschi, Bernini, and others in relation to Rome's ties to Europe, Africa, the Americas, and Asia. Particular attention will be given to Rome's relationship to its ancient empire, as well as the roles of female artists and patrons in a city whose population skewed increasingly male. Students will study architecture, painting, sculpture, drawing, print, tapestry, arms and armor, jewelry, clothing, and ephemeral design, as well as period texts in translation.

RL&L220 Authority and Resistance: France Since 1870
Historians suggest it may be normal for France to be always on the verge of crisis owing to the persistence of irreconcilable conflicts and a celebration and practice of resistance. They conclude that France may be ungovernable, noting that five presidents since 1981, frustrated and resisted, have accomplished very little. This course studies France under three republics and a dictatorship, beginning with defeat in war and revolutionary upheaval in 1870-1871 and concluding with current, sustained challenges to state authority and liberal democracy. We will survey this 150-year history, emphasizing political forms, ideologies and movements, social change, the economy, and cultural developments. Particular consideration will be given to revolutionary ideas and activities, working-class organizations, socialism and communism, conservative thought and action, extreme rightist movements, the degradation of rural life, the experiences of three wars against Germany, imperialism and decolonization, key personalities, and styles of authority and resistance. Times of emergency and crisis will command attention, specifically the Paris Commune of 1871; the Dreyfus Affair of the 1890s; the Great War of 1914-1918; the Popular Front of the 1930s; the military defeat of 1940; the drama of collaboration or resistance, 1940-1944; the early years of the Fifth Republic, 1958-1969; the extraordinary career of General de Gaulle; and the "yellow vests" in 2018-2019.

RL&L221 The Pedagogy of Second Language Teaching and Learning
This course offers a foundation for second language (L2) acquisition in the classroom and teaching approaches. Specifically:

- characteristics of L2 learning

- an understanding of the most commonly used L2 methodologies and strategies

- basic know-how for analyzing and creating materials for language learning/ teaching

- L2 teaching as a profession

Classes and readings will be in English, given that the tutorial combines students of French and Spanish. However, the development of students' target language (TL) is also considered a priority in the course, supported by looking at authentic and pedagogical materials, creating pedagogical materials of their own, and by using the language in class during volunteering hours.

This course is intended for students who, being FREN, HISP, or RMST majors or advanced learners in French or Spanish, may be considering a career in education, and who commit to volunteering at the Middletown public schools while taking this course (at the very least). There is a volunteering commitment of 2 hours/week minimum during the semester. Students must take this course concurrently with a FREN or SPAN course numbered 215 or above.

RL&L222 Re-imagining Dante's Inferno: Social Justice and the Arts
Sentenced to death for crimes he did not commit, Dante Alighieri wrote his epic poem about a journey from hell to heaven in an impoverished state of exile. Drawing on innovative techniques of music, dance, painting, and theater Dante denounced political corruption and social injustice in a story that has inspired artists throughout the world to create new work about the search for freedom, including the Russian dissident poet Osip Mandelstam, Black revolutionary playwright Amiri Baraka, the Chinese artist/activist Wei Wei, and 17th century prisoners of the Inquisition. Students will read selected cantos from Dante's "Commedia," consider contemporary news accounts of modern equivalents to medieval injustices, examine previous adaptations of the poem, and devise their own responses to Dante in the art form of their choice (theater, dance, poetry, playwriting, rap, music, spoken-word, visual arts).

RL&L223 Second Language Acquisition and Teaching
This course introduces students to the field of Second Language Acquisition (SLA) and addresses the following questions: How do humans learn additional languages after they have acquired their first? Why is there such variability observed in the rates and outcomes of second language learning? Is it possible to attain native(-like) linguistic competence in another language?

We begin with the theories and applications of SLA, and then examine major pedagogical movements in Second Language Teaching in the U.S. Students will develop the ability to critically assess current methods, materials, and techniques for teaching various language skills and will produce their own pedagogical activities to be used in a classroom setting. Students of French and Spanish may also wish to enroll in RL&L 223L, a 0.5 credit service learning course in which students volunteer in the Middletown Public Schools.

RL&L224 The Good, the Bad, and the Ugly: Rethinking the Italian Renaissance
In this course we explore the intellectual achievements of the Italian Renaissance. We study the development of new secular values and the quest for the fulfillment of body and soul, glory, and exuberant pleasures. We question notions of beauty, symmetry, proportion, and order. We also unveil often-neglected aspects of Renaissance counter-cultures, such as the aesthetics of ugliness and obscenity and practices of marginalization (e.g., misogyny, homophobia). We inquire into the rediscovery of classical civilizations. We consider how the study of antiquity fundamentally changed the politics, literatures, arts, and philosophies of Italy at the dawn of the modern era. Through a close reading of texts by authors such as Francesco Petrarca, Niccolo Machiavelli, and Michelangelo, we investigate continuities and ruptures between their quest for human identity and ours. This course is conducted in English, and all primary and secondary sources are in English.

RL&L225 French Literary Masterpieces in Translation and on Screen
In this First-Year Seminar students will study five novels originally written in French, from the seventeenth to the twentieth centuries, alongside and against their respective cinematic adaptations. We will begin with Marie-Madeleine de Lafayette's The Princess of Clèves (1678), one of Europe's first psychological novels, and Christophe Honoré's The Beautiful Person (2008). We will then read Choderlos de Laclos's epistolary novel Dangerous Liaisons (1782) and watch Roger Vadim's Les Liaisons dangereuses 1960, followed by Gustave Flaubert's Madame Bovary (1856) and Anne Fontaine's Gemma Bovery (2014). Moving into the twentieth century, we will discuss Colette's Chéri (1920) and Stephen Frears's Chéri (2009). We will end the course with Nobel-prize winner Annie Ernaux's Happening (2000) and Audrey Diwan's Happening (2021). Other adaptations that students may wish to explore include but are not limited to: Jean Delannoy's La Princesse de Clèves (1961), Manoel de Oliveira's The Letter (1999), Andrzej Zulawski's Fidelity (2000), and Rémy Sauder's 2011 documentary on how The Princess of Clèves has been taught in a French high school in Marseille; Miloš Forman's Valmont (1989), Stephen Frears's Dangerous Liaisons (1998), and Roger Kumble's Cruel Intentions (1999); adaptations of Madame Bovary by Vincent Minnelli (1949), Claude Chabrol (1991), and Sophie Barthes (2014); Pierre Billon's Chéri (1950). These novels and their adaptations will allow us to think about notions of canon formation (i.e., how do we define, and who decides, what a "masterpiece" is?); genre and narrative; the uses of history in fiction; censorship, controversy, and scandal; gender, sex, and class; and how these texts have been and continue to be read, used, adapted, translated, and transformed from their time of publication to the present day. Students who have sufficient knowledge of French will have the opportunity to read the texts in their original language and have discussions and written assignments in French.

RL&L225F Writing Biography: Denis Diderot, a Case Study (FYS)
How does one re-create someone else's life, in words? How does one conjure up the historical context that surrounds a far away existence? How does one bring together different forms of evidence--from the archive, primary sources, secondary sources, and written shreds of a life--to create the illusion of knowing the dead? In this course, we will ask these questions about the most fascinating figure of the French Enlightenment, Denis Diderot (1713--1784). In addition to editing the greatest encyclopedia of the 18th century, this would-be priest turned atheist also dreamt of natural selection before Darwin, the Oedipus complex before Freud, and a form of genetic manipulation centuries before Dolly the Sheep was born, all the while making significant contributions to art criticism, dramaturgy, natural history, and political philosophy. His private life, which includes affairs and prison, is also worthy of scrutiny and examination. While reading about his existence and studying a selection of his works, students in this class will undertake a series of biography-related written exercises that seek to resurrect various aspects of this intriguing thinker or members of his cohort. This course and readings are in English.

RL&L226 The Cosmos of Dante's "Comedy"
In 1321, Dante Alighieri completes the final cantos of the "Comedy" and breathes his last. After 700 years, the "Comedy" has not finished saying what it has to say. This course provides an in-depth introduction to Dante's masterwork as a point of entry to the history of Western literature, philosophy, and science. The core of the course consists of an intensive study of Dante's encyclopedic poem in relation to the culture and history of Medieval Europe. We examine the poem as both a product and an interpretation of the world it describes. We also observe how the "Comedy" casts its long shadow on modern culture: in Primo Levi's description of the horror of Nazi concentration camps, or in Amiri Baraka's fragmentary representation of America's infernal racist system. We investigate the challenges that Dante's text elicits when it migrates to visual and cinematic arts (from medieval illuminations to Robert Rauschenberg to David Fincher), continuously camouflaging and adapting to different media. Major topics of this course include: representations of the otherworld; the soul's relation to the divine; Dante's concepts of governance and universal peace; mythology and theology in Dante's Christian poetics; the role of the classics in the Middle Ages; intertextuality and imitation; genres and genders in medieval literature; notions of authorship and authority during the 13th and 14th centuries; the culture and materiality of manuscripts in the Middle Ages; and the reception of Dante's work from the 14th century to the present. The course combines a close analysis of Dante's inventiveness and literary strategies with exercises in analytical writing and in multimedia translation and adaptation, aimed at prompting critical reflection on the ways in which present cultural practices are built upon the practices of the past. This course is conducted in English; no previous knowledge of Italian is required.

RL&L227 Desire, Deception, Disenchantment: Five French Novels in Translation and on Screen
This course aims to study five French novels from the 17th to the 20th centuries in translation, alongside and against their respective cinematic adaptations. We will begin with Lafayette's The Princess of Cleves (1678), one of the Western world's first psychological novels, and then move on to Choderlos de Laclos' epistolary novel Dangerous Liaisons (1782). We will then read Gustave Flaubert's Madame Bovary (1856), Albert Camus' The Stranger (1942), and Marguerite Duras's The Lover (1984). Films will include: Jean Delannoy's 1961 adaptation of Lafayette's novel, Christophe Honoré's The Beautiful Person (2008), a modern-day adaptation of the story, and Rémy Sauder's 2011 documentary on how the novel is being used in a French school in Marseille; three adaptations of Laclos's novel: Roger Vadim's cutting-edge Les Liaisons dangereuses 1960, Miloš Forman's 1989 Valmont, and Stephen Frears's 1998 acclaimed Dangerous Liaisons; three adaptations of Madame Bovary: Vincent Minnelli's film (1949), Claude Chabrol's adaptation from 1991 starring Isabelle Huppert, and Sophie Barthes's version (2014); Luchino Visconti's adaptation of Camus' The Stranger (Lo straniero, 1967); and Jean-Jacques Annaud's The Lover (1992). These novels and their adaptations will allow us to think about notions of canon formation; genre and narrative; the uses of history in fiction; censorship, controversy, and crime; gender, class, race, and (post)colonialism; translation; and how these texts have been and continue to be read, used, adapted, and transformed from their time of publication up to the present day.

RL&L229 Political Turmoil
"What just happened? What's going to happen? What do we do now?" Political turmoil, while disconcerting to say the least, is nothing new. This course will look at case studies from various times and regions--the creation of the US; Fascist Spain; the 1960s in the U.S., France, and elsewhere; Brazil's military dictatorship; Italy in the 1990s; the Arab Spring; contemporary Mali and D. R. Congo, among others--to see how others have responded to periods of political oppression and upheaval. After an initial period of discussion based on readings, we will hold conversations with members of our campus community who have experienced various forms of authoritarianism. The goal of the course is ultimately project-based: as we gain perspective on the issue of political turmoil, we will turn what we learn into well-informed, measured, concrete action. In particular, we will workshop several writing exercises related to the topic and destined to make an impact (e.g., letter to the editor, letter to an elected official, public service announcement for the radio). All students (including those whose first language is not English) are welcome in the course and will receive individualized attention to their writing.

RL&L230 Between Marx and Coca-Cola: European Cinema of the 1960s and 1970s
In the 1960s and early 1970s, a growing sense of alienation and social unrest spread across Europe, making their marks in both society and cinema. Borrowing the words of New Wave director Jean-Luc Godard, these years led to the emergence of "the children of Marx and Coca-Cola." This course, taught in English, will introduce students to a multi-faceted portrait of Europe in the 1960s and 70s through avant-garde and popular cinema from France, Italy, Spain, Germany, and Eastern Europe. We will focus on films that depict global capitalism, gender relations, and government control. Some of the themes we will discuss include the critique of consumerism and materialism, the changing

role of women in society, life under socialism and dictatorship, and youth counterculture. Last but not least, students will learn how New Wave directors challenged traditional approaches to narrative cinema.

RL&L231 Mystics and Militants: Medieval Women Writers
In this class we will read a wide range of works written by European women between ca. 1100--1400, including courtly, devotional, and polemical texts. The course will explore ideologies of gender in the Middle Ages and examine the ways in which our authors confronted the antifeminist discourses of their eras with learning and imagination. We will consider such topics as constructions of sexuality and the body, "courtly love," mystical religious experience, heresies, humanism, and utopian realms. In short, we will read works by women who created their own forms of authority and in doing so, both influenced and defied the authorities of their time.

RL&L232 Obscure Enigma of Desire
This course is an introduction to the study of the ways we create meanings when we read texts. It will focus on several deliberately obscure literary texts from twelfth-century France and will examine them in the light of the classical and medieval concepts of enigma, the marvelous (wonderful), fabula, and allegory as well as some modern theoretical works about how we understand narratives. We will seek to understand why deliberate obscurity is an important part of literature and how medieval authors created narratives that seem particularly meaningful precisely because they are obscure. We will consider why we feel these texts have meaning and the ways in which we make them meaningful to us. This course will be co-taught in parallel with a course (in English) on the same subject offered at the Charles University in Prague by Professor Lucie Dolezalova. About half of the classes will be conducted together with the class in Prague through teleconferencing and Professor Dolezalova will teach one week of the course at Wesleyan and meet with students while she is here.

RL&L233 Modern Italy on the Silver Screen: 1960--2015
This course is an introduction to modern Italian culture through the lens of Italian cinema. Beginning in the postwar era, we will look at the radical transformations that have shaped contemporary Italy by examining the aesthetic and narrative trends of the silver screen. Italian cinema holds an important place in global film culture, giving rise to new artistic forms (from neorealism to spaghetti westerns and arthouse slashers) that have dramatically impacted foreign and domestic sensibilities. Among the films screened are Fellini's La dolce vita, Pasolini's Mamma Roma, De Sica's Matrimonio all'italiana, Leone's Il buono, il brutto, il cattivo, Argento's Suspiria, Moretti's Caro diario, Ozpetek's Saturno contro, and Giordana's Quando sei nato non puoi più nasconderti. Each film screening is accompanied by a brief presentation of the socio-historical context in which it was produced, allowing students to situate the artistic projects within broader Italian social and political histories. By the end of the term students will have an understanding of the last half-century of Italian national history and will be familiar with key terms in film theory and analysis. This course is taught in English; films will be screened in Italian with English subtitles.

RL&L234 Cuneiform to Kindle: Fragments of a Material History of Literature
This course provides a theoretical and historical investigation of diverse media of literary expressions from clay tablets to digital texts. We will inquire into the history of writing through different technologies and modes of composition, circulation, and reception from antiquity to the present day. By engaging in such topics as the transition from scroll to codex, from manuscript to print, and from book to Kindle, we will consider the history of literacy in relation to other forms of expression (oral, visual, networked) and analyze different practices of organizing textual materials (punctuation, paragraphing, annotation). We will scrutinize paratextual elements (title, front matter, opening information, foreword) and various forms of verbal accretions (glosses, commentaries, editorial interventions). We will examine shifting notions of authorship and originality and explore different systems of storage (libraries, archives, museums). And by questioning the multifaceted, nondeterministic interplay between literary artifacts and the media by which they are formalized and materially formed, we will provide a critical and historical reflection on the nature of textuality, writing, and media.

Readings will set essays in the history of the book and media studies alongside key literary case studies from various periods and geographical areas. Projects will engage with textual materiality (including through the creation of book-objects of our own). The course will be conducted in English.

RL&L235B Curatorial Workshop: Art and the Ecological Imagination, 1840-1870
This course examines the emergence of an "ecological consciousness" in art during the mid-19th century through readings, discussion, and firsthand study of works in the Davison Art Center print collection. Although the term "ecology" was first coined in 1866, 19th-century thinkers had long been concerned with the interrelationship of organisms, including humans' place and impact on nature. This class examines how visual artists before Impressionism contributed to the 19th century's "ecological imagination" through their representations of landscapes. Known as the "Barbizon School," this group of artists left the metropolis of Paris to immerse themselves in the wild and rugged terrain of the Fontainebleau Forest while also embarking on journeys to remote regions of France. These members of the first artists' colony seceded from the French Academy of Fine Arts and pursued strategies of independence that were allied at the time with radical politics. In their works they experimented with new materials and approaches to composition that included but no longer prioritized humans, in order to foreground processes of transformation internal to nature itself. The consciousness that artists forged through painting and printmaking led them to become among the world's first conservationists; they successfully petitioned the French government to protect parts of the Forest of Fontainebleau some 20 years before the creation of the first National Park in the United States.

The first half of the course will be devoted to reading and discussion; the second half will center on the study of works in the Davison Art Collection, which includes a superb collection of original and experimental prints by Barbizon School artists. The final project will be the curation of a temporary exhibition of works from the collection, including a selection and arrangement of works, explanatory texts, and a public gallery talk.

RL&L236 Don Quixote: How to Read the Ultimate Novel
No novel is more celebrated than "Don Quixote," albeit in often contrary ways: touchstone at once of the modern and the post-modern; of prosaic and magical realism; of Romantic idealism and skepticism, relativism, or materialism; of a truth-telling folly; and of the competing claims of books and "life" or history and fiction. Sample superlatives: the one text that can challenge Shakespeare in the Western canon (Harold Bloom), all prose fiction is a variation on its theme (Lionel Trilling), one of the four great myths of modern individualism (Ian Watt). Each generation recognizes itself differently in it and every major literary tradition has made it its own. One secret of its lasting appeal is that, brilliantly improvisatory and encyclopedic, it resists being pinned down. Nothing quite prepares us for the hallucinatory thing itself. There is something for every taste: self-invention; the biology of personality; humor, pathos, and tragicomedy; high and low culture; prose, poetry, and theatrics; episodic variety in a long narrative arc; probing examination of the ambiguities of heroism with a parade of spirited and resourceful heroines who rival and often upstage the heroes; and the disruptive transformations of a new world order (the print, educational, and military revolutions; early modern globalization; incipient capitalism; the explosive growth of profit-driven entertainments). A celebration of the transformative power of imagination even as it casts a gimlet eye on how fantasies can go awry, what passes for "the real world" is often as nutty as the hero himself. We will read, discuss, and write about "Don Quixote" in English, together with key examples of the critical, philosophical, literary, and artistic responses it has inspired. The course assumes no familiarity with literature, history, or Spanish; it does call for an interest in grappling with this wonderful text closely, imaginatively, and historically.

RL&L237 Making New Worlds: Encounters on Turtle Island
From before the arrival of the earliest fishing ships off the coast of Newfoundland to the fall of New France at the close of the Seven Years' War, Turtle Island (North America) was the site of entangled encounters. Overlapping imperial claims and the construction of new societies took place on Indigenous homelands with deep histories. This course will examine North America as a contested and negotiated territory in which imperial plans were subjected to local contexts and contingencies. Using primary and secondary sources, we will examine major events (explorations, encounters, and wars), the rise and fall of imperial powers (French, British, Dutch, and Spanish), and the daily realities that shaped experiences in North America (trade, religion, sex, forced migrations, and disease). Throughout, we will focus on the persistence and resistance of Indigenous nations who protected (and still protect) their homelands and lifeways.

RL&L238 America 250: The Promises and Tragedies of Independence, 1763-1815
Independence was a process, not an event. The Declaration built on relationships and identities that formed before 1776 and its impact reverberated across the globe in the decades (and centuries) after. But what kind of world did the drafters of the Declaration imagine? What did their document actually create? What other conceivable futures were sacrificed so that Independence could succeed? Exploring the era that made Independence possible helps illuminate the paradoxes, complexities, promises, and tragedies of the North American experiences at the end of the eighteenth century. The Declaration of Independence opened one future and foreclosed on others. The Revolution required to make Independence a reality was a brutal conflict that divided families, destroyed economies, shattered kinship networks, and created not one but (eventually) two countries. Revolution and Independence looked different to women, labourers, the enslaved, loyalists, and Indigenous nations who were swept up in the American project and had to navigate the new realities it brought about. That the United States would become a super power was far from the minds of those fighting for or against American independence.

RL&L239 Van Gogh: Modernity, Utopia, and Nineteenth-Century Art
This course will investigate in-depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. This class goes beyond the media image of the artist and looks hard at his paintings, drawings, and letters, placing them in their respective artistic, literary, and historical contexts. Van Gogh engaged with social issues, above all the plight of peasants, artisans, the poor, and the marginalized--the most vulnerable members of society. He sought to give form to their experience in ways that were mediated by Dutch and French landscape painting and French naturalist literature. Upon moving to Paris, van Gogh absorbed the lessons of impressionist, neo-impressionist, and symbolist painters before moving to the South of France, where he created his most memorable works of sun-drenched fields, bar and café interiors, and common workers. Toward the end of his life, he increasingly conceived of art as a site for utopian projections and emotional solace. We shall study the work of this immensely productive artist and along the way develop art historical skills, including visual and textual analysis, historical and contextual interpretation, how to evaluate an artist's personal correspondence in relationship to his painted oeuvre, and independent research.

RL&L240 Revolutionary France and the Birth of Modern Art, 1789-1900
This course examines the birth of modern art in the wake of the French Revolution and traces the evolution of modern art throughout what would prove to be an extraordinary century of social transformation and formal experimentation, ending in the Dreyfus Affair and Post-Impressionism. Themes this class explores include the advent of a public sphere for art-making and the relationship between artistic advance and appeals to an ever-widening public;

painting and revolution in France and its colonies; the redefinition of history painting in light of the abolition of slavery and the Declaration of the Rights of Man; the expansion of France's colonial empire and the representation of racial difference; the rise of feminism and attempts on the part of women artists to find their own voice in a masculine practice; the destabilization of classicism in light of scientific discoveries and ideas of "primitivism"; and the conflict between the unabashed pursuit of artistic individualism and the need to define collective values and experience. Although these developments took place two centuries ago, they continue to define the field of modern art today.

RL&L241 Introduction to European Avant-Garde, 1880-1940
This course introduces students to the major avant-garde art movements from the first half of the 20th century as they took root in France, Germany, Italy, Holland, and Russia. Our focus will be on painting, but we will also look at attempts to go beyond painting in an attempt to gain greater immediacy or social relevance for art. Topics that will receive special emphasis include the relationship between abstraction and figuration, the impact of primitivism and contact with non-Western arts, modernism's relationship to mass culture, war and revolution, gender and representation, art and dictatorship, and the utopian impulse to have the arts redesign society as a whole.

RL&L242 Italian and Italian American Cinema: Not Just Mafia Movies
The entanglements of Italian and Italian American cinema date to the medium's silent era. If the Taviani Brother's 1987 film Good Morning, Babylon is to be believed, while filming Intolerance (1916) D.W. Griffith lauded and lamented the genius of Giovanni Pastrone's colossus Cabiria (1912), doubting that his own epic film would be able to match the virtuosity of the earlier Italian example. Flash forward to 1931-32 and the trio Little Caesar (1931), Public Enemy (1931), and Scarface (1932) sear into the American imaginary the cinematic representation of the Italian mobster. Beyond Italian artistry and aesthetics of the sort Griffith ostensibly applauded, and the numerous examples of the violent, lawless gangster of Italian descent, what are some other (stereo) typical intersections between Italian and Italian American cinema?

Mapping the Transatlantic transmissions of representations, stereotypes, and aesthetic values reveals how these two cinematic traditions co-articulate and condition each other, with "Hollywood on the Tiber" offering a chief example of the ways Italian and American industrial contexts invoke and implicate each other. How do Hollywood's glamorized gangsters inform Italian representations of organized crime? How do American cinematic "Latin lovers" draw on Italian models? How have representations of masculinity, men, and fathers; femininity, women, and mothers; (large) families, food, religion, class mobility, questions of race and racism, and immigration unfolded in their respective contexts and what do intersections among them reveal?

Two non-fiction films from Scorsese help draw our parameters for our discussion: Italianamerican (1977), for socio-cultural codes; for cinematic contexts, My Voyage to Italy (1999), in which the director reviews his Italian influences and which also serves as an introduction to Italian cinema. We subsequently investigate the indicated themes and topics as they range across a corpus of texts which includes, on the Italian American side: Scarface (Hawks, 1932), Not Wanted (Lupino, 1949), The Godfather (Coppola, 1972), Mean Streets (Scorsese, 1973), Rocky (Avildson, 1977), Raging Bull (Scorsese, 1980), Moonstruck (Jewison, 1987), Married to the Mob (Demme, 1988), True Love (Savoca, 1989), Do the Right Thing (Lee, 1989), The Freshman (Bergman, 1990), Goodfellas (Scorsese, 1990), My Cousin Vinny (Lynn, 1992), Household Saints (Savoca, 1993), The Sopranos (Chase, 1999), The Departed (Scorsese, 2006), Wendy and Lucy (Reicherdt, 2008), The Miracle at St. Anna (Lee, 2008). Alongside these, we examine Italian films drawn from this list: Cabiria (Pastrone, 1912), Umberto D. (De Sica, 1952), I Vitelloni (Fellini, 1953), Rocco and His Brothers (Visconti, 1960), Eclipse (Antonioni, 1962), Amarcord (Fellini, 1974), Kaos (Taviani Brothers, 1984), Mediterraneo (Salvatores, 1990), Johnny Stecchino (Benigni, 1991), Lamerica (Amelio, 1994), Gomorra (film Garrone 2008, series 2014), The Young Pope (Sorrentino, 2016), and The Confessions (Andò, 2016). The films for group presentations will also be drawn from these lists.

This course has no prerequisites. We will work on students' capacity for formal film analysis as we go along and, at the beginning of the course, some students may have greater proficiency in this area. At the same time, other students may initially have a broader knowledge base of Italy and Italian society. Everyone has something to learn. Conducted in English.

RL&L243 Art and Culture of the Italian Baroque
This introduction to the arts and architecture of 17th-century Italy addresses one of the core paradoxes of the period: that startling innovation and creativity were not inconsistent with serving the purposes of patrons and ideologies that at first appear rigid and authoritarian. Supported by popes, cardinals, new religious orders, and private collectors, artists and architects such as Caravaggio, Artemisia Gentileschi, Pietro da Cortona, Gianlorenzo Bernini, and Francesco Borromini depicted saintly bodies in moments of divine rapture, opened up painted ceilings to elaborate illusionistic visions, and subjected the classical language of architecture to unprecedented levels of movement. Through lectures and discussions of key primary and secondary sources, we will explore the emotive and ideological power of Baroque art, considering the multitude of ways in which it shaped the visual, political, and religious worlds of its day.

RL&L244 European Architecture and Urbanism, 1750-1910
This course considers the history and theory of architecture and urbanism in Western Europe from the mid-18th to the early 20th century. A central theme is the relationship between historicism and modernity through the period. Topics include Neoclassicism, the picturesque landscape, the Gothic Revival, the Arts and Crafts Movement, the École des Beaux-Arts, the German Rundbogenstil, international expositions, and Art Nouveau. We will focus on specific sites in major cities, including Paris, London, Berlin, Munich, Vienna, Milan, Rome, Brussels, and Barcelona, among others. New or transformed building types include museums, railway stations, apartment blocks, department stores, and theaters. Urban forms include residential squares, boulevards, arcades, and

public parks. Architectural culture will be discussed as a response to changing political, economic, technical, and ideological conditions in newly modernizing societies. Urbanism includes the transformation of early modern cities due to industrialization, housing for different social classes, new towns, suburbs, utopian communities, the Garden City, and colonial centers such as Bombay (Mumbai), Algiers, and Hanoi.

RL&L245 Not Just Neorealism: Italian Cinema, Its History and Politics
This introductory course on Italian cinema, taught in English, investigates major silent and sound films and contextualizes them, their production, and the subjects they treat within a historical, cultural, and political framework. We will trace the intersection among politics, ideology, and Italian cinema, from its Golden Age of silents through fascism and neorealism (as well as its contested legacy), from a consideration of the "exquisite" examples of the auteur directors like Fellini and Sorrentino to the ways these and other directors enter into dialogue with genre cinema (the giallo, spaghetti westerns, melodrama, etc.), and beyond. Featured filmmakers will be drawn from this list: Pastrone, Rossellini, De Sica, Fellini, Bertolucci, Antonioni, Wertmuller, Cavani, Pasolini, the Taviani Brothers, Leone, Sorrentino, Rohrwacher, Nicchiarelli, Crialese, and others. Additional material includes readings in film theory and criticism, Italian history, literary sources, screenplays, and interviews. For interested students with advanced competency in Italian, there will be a .50 credit (CLAC) discussion section, ITAL245/CGST245, at a time to be determined but very likely after our second class of the week. Italian and Romance Studies Majors, please see additional comments below.

RL&L250 Integrative Learning Project 1: Crafting Your Digital Identity
Wondering about how you will explain your Wesleyan experience to someone who doesn't get what it is like to attend an eclectic liberal arts institution? Worried about how your experiences at Wesleyan will translate to your post-graduate life? Want to practice talking about yourself so you are ready to enter the job market or apply for graduate school? This course is for you! Throughout the semester, you will practice writing about yourself and will ultimately place what you write in WordPress, the world's most popular platform for website design. Along the way, you will learn about user experience (UX) design principles and research methodologies, so that the website you create draws in your audience and makes them want to learn more about you. Throughout the semester, we will meet once a week to do all of these things in a relaxed, collaborative environment. Join us and bring along some friends!

RL&L251 Italian Art and Architecture of the 16th Century
In addition to key monuments of 16th-century Italian art and architecture, this course seeks to introduce students to some of the most important figures of the period: artists and architects--such as Leonardo, Michelangelo, Raphael, Bronzino, Titian, and Palladio; their princely and ecclesiastical patrons--such as Cosimo I de' Medici and Pope Julius II; and their critics and biographers--such as Giorgio Vasari and Ludovico Dolce. Our aim will be to understand the complex artistic and architectural landscape of the period against the backdrop of shifting intellectual and religious trends, including the Counter-Reformation. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

RL&L252F French Literary Masterpieces in Translation and on Screen (FYS)
In this First-Year Seminar students will study an array of literary chefs-d'oeuvre originally written in French, from the seventeenth to the twenty-first centuries, alongside and against their respective cinematic adaptations. These novels and their adaptations will allow us to think about notions of canon formation (i.e., how do we define, and who decides, what a "masterpiece" is?); content and form, and how they relate to prose narrative and to the moving image; genre and narrative; the uses of history in fiction; censorship, controversy, and scandal; gender, sex, and class; and how these texts have been and continue to be read, used, adapted, translated, and transformed from their time of publication to the present day. Students will have the opportunity to write both academically and creatively. Students who have sufficient knowledge of French will be able to read the texts in their original language and have discussions and written assignments in French by enrolling in the 0.5 CR Cultures and Languages Across the Curriculum (CLAC) course linked to this seminar. (See the FREN 253F course description for the eligibility requirements to enroll in the CLAC course.)

RL&L254 Breaking the Waves: The Japanese and French New Wave Cinemas and Their Legacy
While the French and Japanese New Wave(s) existed as largely contemporaneous cinematic movements, rarely are they discussed together, instilling the impression of two parallel streams, never to converge or intersect. This course hopes to serve as an intervention into this perceived divide through close readings of these groundbreaking cinematic works and an examination of their revolutionary content in the interest of articulating shared philosophical concerns. In many cases, New Wave filmmakers worked as writers and critics before producing films themselves, a fact that speaks to the intensely theoretical nature of their cinema. This course will therefore examine critical writings published in the space of Cahiers du Cinema, Film Art, and other journals as a means of better understanding the thought process that underlies these films. How do these films figure as a response to that of the previous generation and how did they hope to revolutionize cinematic praxis? What was their relationship to political activism and the events of 1968? Finally, we will consider the legacy of these cinemas: What is the prevailing influence of the New Wave on Hollywood and global cinema? What aspects of the movement have been retained and what has been lost along the way?

RL&L261 Framed: Re/presenting Italian Women Filmmakers
This course trains on Italian films written and directed by women with women protagonists and their stories. Our explorations circulate around activities intended to anchor the course in the real and active and invite students to

reflect on the ways these activities and stories resonate in their own lives. Some activities whose filmic representations and reimaginings we will investigate include working, loving, sexing, framing, growing, thinking, collaborating, acting, and making. Our focus on filmmakers will comprise contributions by screenwriters, actors, directors, and editors and consequently we will explore the ways in which women have been "framed" by and for the camera and how women filmmakers have helped "reframe" those representations. Seen historically, our examination will reach from Elvira Notari's films (1911 to 1929) to significant post-WWII collaborations of women actors and directors (e.g., Anna Magnani [with both Luchino Visconti and Roberto Rossellini], Monica Vitti [and Michelangelo Antonioni], Sofia Loren [and Vittorio De Sica], Claudia Cardinale [Sergio Leone and Federico Fellini]). The 1970s and especially the cinema of Liliana Cavani and Lina Wertmuller, set the stage for many of Italy's contemporary women filmmakers, including Francesca Archibugi, Francesca Bertini, Laura Bispuri, Francesca Comencini, Wilma Labate, Alina Marazzi, Susanna Nicchiarelli, Costanza Quatriglio, Alice Rohrwacher, Marina Spada, and Angela Torre. Feminist film criticism and theory will also help us "frame" and "reframe" these contributions.

RL&L266 Introduction to Translation
Literary translation is popularly misunderstood to be the mechanical transfer of words from one language into the words of another. However, literary translators must also bring to life in a new language the intangibles of a text, such as the culture, the mood, the aesthetics, and the vibes. Our modern word vibes derives from an instrument often used in jazz performances called the vibraphone, a percussive instrument that produces a resonant, vibrato effect. In Sanskrit, this vibrato effect is defined by the versatile word dhwani, which is used to describe reverberations and echoes in music, poetry, and theater. In this class (taught by Distinguished Writer in Residence, Daisy Rockwell), we will try our hands at translating not just the words, but the dhwani of texts. This will help us explore what translation has entailed in various eras and cultures, and what we can learn from intermodal translation, when text is brought alive through non-linguistic media, such as sound, visual imagery, and dramatization. Students will formulate a final project halfway through the semester, such as the translation of a short story, a chapter of a book, or a set of poems.

RL&L271 The Sonnet: Forms of Love, Death, and Beyond
This course explores motifs of love, death, and beyond through a single poetic form: the sonnet. We will read transhistorically from the "invention" of the sonnet in the 13th-century Sicilian School to its use in contemporary American poetry, touching on poets in a variety of languages and time periods. From individual poems to sonnet sequences, we will explore the way in which lyric poetry engages non-narrative modes of meaning-making within the formal expectations of the sonnet. Are sonnets uniquely adapted to types of experience which defy easy articulation? In what ways does the form of the sonnet make it possible to give literary representation to the ineffable? This course pays close attention to the relationship between form and content in a variety of poetic works. Poets to be read include Dante, Labé, Shakespeare, Inés de la Cruz, Barrett Browning, Yeats, Millay, Rilke, and Stallings. Writing assignments will include both creative and analytic writing.

RL&L275F Religions Resisting Modernity (FYS)
Why did some Native Americans turn to dance while resisting federal troops? Why do creationists reject evolution? Why do some French Muslims wear a veil when their mothers didn't? Why did Gandhi insist that Indian nationalists spin their own thread? Throughout the last century, resistance has risen to modernity, and religion has played an increasingly important role in challenging the globalization of modern Western values. This seminar will explore how Europe transformed itself into a modern society with worldwide influence. Then it will investigate how the Lakota Sioux, Christian creationists, and Mohandas Gandhi each have used religion in an attempt to resist some aspect of modernity, either outside the Western world or within it. No background in the study of religions is necessary. Ultimately, the course will challenge our very understandings and expectations of what it means to be modern.

RL&L279 The Translation Circuit
In "The Translation Circuit," students will read twelve works in translation from around the world. The course will be taught by just as many instructors -- twelve Wesleyan professors and guests, each teaching a single text that has been translated into English from a language that we know or translate from ourselves. The course proceeds chronologically and traces, via translation history and practice, the lines of influence among major works of world literature, possibly including Sappho's fragments, Ovid's¿"Ars Amatoria," Ibn Hazm's "The Ring of the Dove," Nikolai Gogol's and Gabriel Garcia Marquez's short stories, Paul Celan's poems, Bertolt Brecht's plays, Oguz Atay's¿"Korkuyu Beklerken,"¿and Elena Ferrante's "Days of Abandonment."¿No prior knowledge of any specific language would be required, although we imagine that the student cohort collectively will have some knowledge of all the languages from which our texts have been translated.

RL&L280 Exploring Personhood in the 20th and 21st Centuries (CLAC 1.0)
The goal of this course is to provide a thorough examination of the concept of personhood in the 20th century by studying how it has been portrayed and understood in diverse cultural contexts across Arabic, English, and Francophone cultures. Through the use of comparative analysis and an interdisciplinary approach to cultural artifacts--such as works of literature, art, and religious texts as well as current debates around AI and personhood--students will explore how different cultures have approached the question of what it means to be a person and how this has evolved over time. By the end of the course, students will have a deeper comprehension of the various ways in which personhood has been created and perceived throughout different cultural and historical contexts.

The impact of historical occurrences and cultural movements on the construction of personhood, the influence of religion and politics or the fictional writing on conceptions of personhood, the representation of personhood in

literature and art, and the emergence of AI as a new frontier in the investigation of personhood are some of the major topics covered in the course. This will open up new discussion topics about posthuman beings and persona status, particularly in science fiction.

RL&L284 Comparative Politics of Western Europe
The leading nations of Western Europe--Great Britain, France, Germany, and Italy--have developed vibrant economies and stable democracies that differ in important ways from those of the U.S. and from each other. This course explores the ability of European economies to withstand pressures of globalization and the capacity of European democracies to integrate political newcomers such as women and immigrants. We address questions such as, Does New Labour provide a model for parties of the Left across the West, or is its success predicated on the foundations laid by Thatcherism? With the limited ability of the French people to influence politics, should we still consider that country a democracy? Has Germany definitively overcome its Nazi past, or does the strength of German democracy rely on a strong Germany economy? How can we make sense of the Italian "second republic"?

RL&L300 The Arthurian Legend on Film
This course will serve both as an introduction to the Arthurian legend and to its cinematographic representation since the 1940s. Medieval texts will be paired with films that are "based" -- more or less closely -- on them. We will consider the ways in which these stories are told in literature and in film and the differences between them. We will also consider the ways in which the legend was used to address both medieval and modern preoccupations.

RL&L301 History of Spanish Cinema
This course explores the development of Spanish cinema from the early 20th century to the present. We will evaluate how social, political, and economic circumstances condition Spanish cinematography at key junctures of Spanish cultural history in terms of the production and distribution of films, cinematographic style, and thematics. The course will also highlight key facets of the Spanish star system as well as the auteurism of those directors who have achieved international acclaim by reworking a national film idiom within international frames of reference.

RL&L302 West African Literatures and Cultures in French
This course explores major texts in modern and contemporary Francophone African literature by delving into four major themes that traverse the recent cultural, literary, and political history of Francophone West Africa.

The course starts by investigating the relationships between orality and literature through the lens of often-intersecting debates around tradition and modernity; the focus will then shift to articulations of nation, liberation, and the promises of independence, war, and memory, and finally the ruptures and continuities of the post-colonial, neoliberal present.

By spending significant time with primary sources that span over a century of literary and cultural production from and about Francophone Africa, students will have a deep understanding of the urgencies animating writers wrestling with the weight of the colonial past, the violence of decolonization, the brightness of independence, and the uncertainty of the present. A thorough engagement with some of the most important authors of the last 60 years (e.g. C. H. Kane, B. Diop, Y. Ouloguem, M. Condé, among others) will allow us to deep-dive into the possibilities of literary expression, as well as questions of belonging, nation, and evolving ideas of "Africa."

RL&L311 Translation Workshop in Early Modern Spain: Topographies of Love, Arcadia, and History
This course takes a practical approach to the translation of early modern Spanish literature. We will begin by consulting various comments on the art and craft of translation made by 16th-century Spanish translators in their own works before we encounter the curious case of the "pastoral prosimetrum," a type of narrative fiction that reimagined the author and their contemporaries under literary pseudonyms in an updated version of an idyllic Arcadian landscape. From Spanish to English, from experience to poiesis, we'll recontextualize these topographies of love in their own literary and historical moment in order to translate those imaginaries into contemporary English. Readings will be in English and Spanish. Discussions and translations will be in English. There are no prerequisites, but reading knowledge of Spanish is required. Please consult the instructor if you have questions about your language ability.

RL&L321 Dialogues of Love: A Close Reading
Towards the end of the fifteenth century amidst the burgeoning cultures of the Italian Renaissance in Naples, Genova, and Venice, the exiled Ibero-Sephardic philosopher and physician Judah Abravanel (Leone Ebreo) composed a philosophical work on erotic ethics as a dialogue between love (Philone) and wisdom (Sophia). "The Dialogues of Love" (1535) presented early modern readers with an erotic cosmology which drew upon Ancient and Medieval texts including Plato, Neo-Platonism, Neo-Aristotelianism, Kabbalah, and scriptural commentary. Widely translated, read, and reprinted throughout the sixteenth century, this text animated literary and cultural life throughout sixteenth-century Europe, finding its way into the work of poets and fiction writers such as Miguel de Cervantes. This course engages this unique and breathtaking work of early modern philosophy through a close reading of a Renaissance cosmos staged as a lovers' courtship.

RL&L325 Eloquent Forms: Topics in Italian Renaissance and Baroque Sculpture
Early modern Italy was a site of vibrant and far-reaching innovation in the plastic arts. Driven by intense artistic competition, sustained by lavish patronage, and produced for religious, commemorative, and decorative purposes in both public and private settings, sculpture reached an unprecedented peak of creative ambition, material experimentation, and theoretical reflection during this period. From monumental urban commissions such as fountains to small-scale precious objects prized by elite collectors, sculptural works profoundly shaped the visual and sensory worlds of early modern Italy. This seminar explores the making and meaning of sculpture in the Renaissance and Baroque periods through close engagement with the works and careers of key artists, including Lorenzo Ghiberti, Donatello, Andrea del Verrocchio, Niccolò dell'Arca, Francesco Laurana, Properzia de'Rossi, Michelangelo, Benvenuto Cellini, Giambologna, Leone Leoni, Gianlorenzo Bernini, and Alessandro Algardi, among others. Readings and discussions are organized around thematic issues such as the making and viewing of early modern sculpture; the rhetoric of sculptural materials; verisimilitude and animation; sculpture and the senses; fragmentation and the non finito; touch, desire, and the nude; representations of force and violence; antiquarianism and collecting; tombs and sculptural commemoration; and monsters and monstrosity in garden sculpture.

RL&L327 Criticism and Psychoanalysis
This course introduces some classical psychoanalytic methods of reading and interpretation, with accent on the four concepts Jacques Lacan identified as foundational: the unconscious, repetition, the transference, and the drive. We will approach psychoanalysis as a style of close reading whose influence on forms of interpretation--especially literary interpretation--has been immeasurable. One central concern will be the capacity of psychoanalysis to enable us to read ourselves reading, to make the interpretive situation itself the object of our analysis. Students with an interest in literary-critical methods will benefit from the course, as will students with an interest in the internal logic of an important body of thought.

RL&L333 Appeasement and the Origins of the Second World War
In this study of Europe's crisis, 1933-1939, from Hitler's appointment as chancellor of Germany to the outbreak of the Second World War, attention will focus upon the reassertion of German power and its effects upon the diplomacy and politics of Great Britain and France. Specific topics will include Hitler's aims and actions; critical events concerning the Rhineland, Spain, Czechoslovakia, and Poland; pacifism and the French Left; Neville Chamberlain and British conservatism; and the debate over the immediate origins of the war in 1939. Readings will include memoirs and contemporary diplomatic documents, newspapers, and journals.

RL&L339 Modernism and the Total Work of Art
The term "total work of art" refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner's ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner's works and writings provided the dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

RL&L350 Integrative Learning Project 2: Website Incubator
Have you developed knowledge or expertise about a topic through an internship, engagement in a student organization, time studying abroad, or through some other experience that you would now like to share with the world? This is the class for you! Throughout out the semester, you will work to translate your experience into a website. I will help you do this by asking you to think about the content you would like to share, the audience with whom you would like to share it, and the goal you have for that audience. Ultimately, you will share your experience through WordPress, the world's most popular platform for website design. Along the way, you will learn about user experience (UX) design

principles and research methodologies, so that the website you create draws in your audience and makes them want to learn more about your chosen topic. Throughout the semester, we will meet once a week to do all of these things in a relaxed, collaborative environment. Join us and bring along some friends!

RL&L351 Deconstruction and Politics
Following the later work of Jacques Derrida, we will investigate the significance of the concepts of sovereignty and democracy in some important texts of 20th-century continental philosophy. We shall attempt to understand why these notions are taken at face value and yet still pose many problems for that tradition. Why did democracy and sovereignty give rise to many complications and paradoxes while, at the same time, they continue to hold a vital conceptual import within the political as such. We will thus ask why are political philosophies so invested in sovereignty and democracy? Ultimately, we will consider the possibility of a close affinity between the political and the rhetorical, and will try to understand why democracy and sovereignty tend to exceed conceptual grasp. Because our approach will be primarily deconstructive, we shall also attempt to compare it to other modern and contemporary approaches.

RL&L382 Politics, Revolutions and Visual Culture in the Post-Revolutionary Arab Societies
The course "Politics, Revolutions, and Visual Culture in Post-Revolutionary Arab Societies" critically investigates the interaction of politics, social revolutions, and visual culture in the aftermath of the Arab Spring. This course examines the dynamic interaction between political transformation, revolutionary movements, and the various forms of artistic expression in Arab countries.

Students will delve into the complex interplay between politics and visual culture through a combination of theoretical discussions, case studies, and visual analysis, gaining a nuanced understanding of how images, art, photography, film, and other visual media have shaped and reflected sociopolitical changes in post-revolutionary Arab contexts.

RL&L390 Directed Research in European Studies
This course is intended for students who wish to undertake a significant research project or get a head start on a senior essay or thesis devoted to any aspect of European civilization from 500 to 2021. The course will begin with three weeks of regular meetings devoted to the purpose of academic research in the humanities and social sciences, developing and refining a research topic, organizing one's research, bibliographies and sources, the construction of an argument, and the organization of a research paper. Students will work on their research projects individually during the rest of the semester, although the class will meet as a group from time to time so students can present and discuss the state of their work. Students will also have weekly tutorials with the instructor to discuss their progress and plan their next steps. Students who are able to do so are encouraged to engage with research materials in languages other than English.

SPANISH

SPAN101 Elementary Spanish I
This introductory course is designed for students without prior Spanish language study. Students will develop basic receptive and productive language skills (reading, listening, writing, and speaking) along with an awareness of the various cultures of the Spanish-speaking world, including the United States. Note that Span 101 and Span 102 are designed as a year-long course, with each course covering half of the textbook, along with other materials. Completion of Span 102, or evidence of appropriate level, will be required to continue onto Intermediate Spanish (111-112).
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

SPAN102 Elementary Spanish II
This course is the continuation of SPAN101, though students may place directly into 102 via the Wesleyan Language Placement Exam. The course further develops basic language skills (reading, listening, writing, and speaking) and incorporates readings and media from a variety of sources, allowing students to explore the cultures of the Spanish-speaking world.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **SPAN101**

SPAN103 Elementary Spanish for High Beginners
SPAN103 is intended for students with prior experience in Spanish (and is considered the same level as SPAN 102). This language course places emphasis on the development of speaking, listening, reading and writing, within a cultural framework, so students can attain an intermediate level in the language (and subsequently enroll in SPAN 110 or 111).

To enroll in this course students must have placed into SPAN 102 or SPAN 103 on Wesleyan's Placement exam. Enrollment for Juniors and Seniors is contingent upon space availability during drop/add period. This course is not linked to another class.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

SPAN110 Spanish for High Beginners
Intermediate-level language course following SPAN103, with emphasis on the development of four basic language skills (reading, listening, writing, and speaking) within a cultural framework.
This course is comparable to SPAN111 and can be followed by SPAN112. Those seeking to follow with SPAN113 require permission of instructor. A weekly electronic journal is required for this course.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **SPAN102 AND SPAN103**

SPAN111 Intermediate Spanish I
This intermediate language course places continued emphasis on the development of reading, listening, writing, and speaking skills within a strong cultural framework. The sequence SPAN111 and SPAN112 seeks to expand students' active and passive control of vocabulary and grammar and for students to gain experience in using formal and informal registers of Spanish. Note that Span 101 and Span 102 are designed as a year-long course, with each course covering half of the textbook, along with other materials. Completion of Span 112, or evidence of appropriate level, will be required to continue onto Advanced Spanish - Introduction to Hispanic Literatures (Span 221).
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

SPAN112 Intermediate Spanish II
This course leads students through a review and in-depth examination of advanced Spanish grammar issues and vocabulary expansion within a cultural framework that explores an array of topics connecting to other academic disciplines. Students will experience working with written texts and other media materials and produce a variety of written pieces. The course is a continuation of Span 111, though students may place directly into the course via the Wesleyan Placement exam or an appropriate AP score.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **SPAN111 OR SPAN 110**

SPAN113 Intermediate-Advanced Spanish
Within a cultural framework focused on the Spanish-speaking world--especially Latin America--this course leads students through a review and in-depth examination of advanced Spanish grammar issues and vocabulary expansion while providing the experience of working with written texts and other media materials. Students will explore an array of topics that connect to other academic disciplines.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **SPAN110 OR SPAN111**

SPAN201 Spanish Play
Students will be in charge of directing and staging a play in Spanish with the assistance of a Spanish professor. The workshop will take place over 10 weeks. Minimum one hour per week, which will increase to 2 as the day of the opening approaches. Rehearsals will be split between activities including reading and commenting on the dramatic text and working on diction, which can be done collectively or in smaller groups, and workshopping and rehearsing the play. Although the play will be in Spanish, we will try to allow for a wider audience by providing a brief English translation of the plot.
Offering: **Host**
Grading: **Cr/U**

Credits: **0.50**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

SPAN203 Spanish for Heritage Speakers
This course is designed to meet the specific needs of students who are heritage speakers of Spanish to increase their language skills and confidence. Students who take this course must have placed into SPAN112 or above. Emphasis is placed on the following: development of linguistic strategies that advance students' written and oral expression beyond the colloquial level, grammatical and orthographic norms of Spanish, critical reading (reading for understanding and analyzing what is read), and expansion of vocabulary. The linguistic work will be conducted through course materials that explore, through a variety of literary and nonliterary texts, the use of Spanish in the U.S. Materials include a textbook or manual and topics related to the experience of Spanish speakers in the U.S.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

SPAN204 Teaching Spanish K-12: Second Language Pedagogy (CLAC 0.5)
This is a community engagement course in which students learn basic principles of language pedagogy and language acquisition to inform their teaching of Spanish to children at one of the Middletown public schools. Readings in English and Spanish; class discussion and assignments in Spanish. Students will familiarize themselves with characteristics of second language (L2) learning and teaching, a basic know-how on analyzing and preparing materials for language learning/teaching, and L2 teaching as a profession.

Language and course requirement: Students must have recently taken a SPAN course numbered 221 or above. Preference will be given to EDST and HISP majors, as well as juniors and seniors.
Offering: **Host**

SPAN221 Introduction to Hispanic Literatures and Advanced Practice in Spanish
Poems, plays, essays, short stories, and films representative of various Spanish-speaking countries and different periods of literary history are used to improve speaking and writing skills and to introduce students to the fundamentals of literary analysis. It includes a formal review of recurring grammatical and rhetorical problems students have at this level in Spanish. The course is conducted exclusively in Spanish. Besides the three hours of class sessions with the professor, all students are required to attend a weekly one-hour conversation section with a Colombian or Spanish TA.

SPAN225 Creative Writing in Spanish
Taught by renowned Mexican writer Cristina Rivera Garza, Distinguished Writer in Residence for 2024-25, this seminar will offer students the tools to articulate their ideas and experiences in Spanish in narrative forms. The course is designed to achieve this in two ways: learning specific techniques through readings of prose in Spanish and by working throughout the semester on crafting at least one short piece. The professor will make in-class observations and written suggestions on student texts as drafts of their work are presented. During the semester students will practice extensive writing, critical reading, and peer editing. The course introduces students to literary terminology and places significant emphasis on vocabulary building.

SPAN227 Writing Short Fiction in Spanish
This course will be both an examination of the short story form in Latin American letters, a genre that has been crucial to the region's intellectual traditions and its ruptures, and a deep exploration of the act of writing short fiction in Spanish. By examining diverse aspects of the craft of fiction writing, and through a discussion of their own writing and that of their peers, students will search for their (multilingual) voice to explore some of their philosophical, affective and linguistic concerns, become stronger writers and storytellers and improve their skills in Spanish. They will also familiarize themselves with some of the most captivating fiction produced by Latin American and Latinx short story writers over a century.

SPAN230 Heroes, Lovers, and Swindlers: Medieval and Renaissance Spanish Literature and History
This course is designed to develop students' ability to make informed and creative sense of four fascinating, complex, and influential medieval and Renaissance Spanish texts in their multiple (literary, historical) contexts: the "national" epic EL CID (12th-13th century); the bawdy and highly theatrical prose dialogue known as LA CELESTINA (1499); the anonymous LAZARILLO (1554), the first picaresque novel; and María de Zayas's proto-feminist novella THE WAGES OF VICE (1647). Through these and selected historical readings, the course is also intended to provide students with a basic knowledge of Spanish culture (in its plurality) from the 11th through the 17th centuries, the texture of everyday life, and the larger movements of long-term historical change. We will draw on literature and history to imagine the world of chivalry and crusade in the medieval Spain of "the three religions of the book" (Judaism, Christianity, and Islam); of mercantile values, courtly love, and prostitution in the Renaissance city; of social injustice and religious hypocrisy in imperial Spain; and of the exacerbated gender and caste tensions that followed from the political crises of the 1640s. We will reflect on the interplay of literature and history in our efforts to come to grips with a past both familiar and strange; address the crossing of linguistic, artistic, ethnic, religious, caste, and gender boundaries that has long been a conspicuous feature of Spanish society; and consider what texts and lives of the past might still have to say to us today. No prior historical or literary preparation is required, only a willingness to engage the readings closely (textually and historically).

SPAN231 Classic Spanish Plays: Love, Violence, and (Poetic) Justice on the Early Modern Stage
From 1580 to 1690, Spanish and Latin American playwrights created one of the great dramatic repertoires of world literature, as inventive, varied, and influential as the classical Greek and Elizabethan-Jacobean English traditions. A distinguishing feature of this theatrical tradition is the unusual prominence

it lent to actresses (and roles written for them), as well as to women in the paying audiences. This profit-driven popular entertainment of its day appealed to the learned and illiterate, to women and men, and to rich and poor alike. And the plays correspondingly mixed high and low characters, language, genres, and sources, with results regularly attacked by moralists. Vital, surprising, and ingenious, they exposed the creative tension between art and profit on a new scale, a tension that remains alive for us. We will examine five of the greatest of these plays by Cervantes, Lope de Vega, Calderón de la Barca, Tirso de Molina, and Sor Juana Inés de la Cruz (in Mexico or "New Spain") in a variety of genres and modes (history, epic, romantic comedy, tragedy, Islamic borderland, metatheater, parody, siege play, philosophical and theological drama), with their deft character portraits (the original Don Juan by Tirso; Calderón's "Spanish Hamlet" Segismundo; Lope's spitfire diva Diana, the Countess of Belflor; and Sor Juana's cross-dressing comic virtuosi) and their spirited dialogue, inventive plots, and dazzling metrical variety. We will look at the social conditions that enabled the Spanish stage to serve as a kind of civic forum, where conflicts between freedom and authority or desire and conformism could be acted out and the fears, hopes, dangers, and pleasures generated by conquest, urbanization, trade, shifting gender roles, social mobility, religious reform, regulation of matrimony and violence, and clashing intellectual and political ideals could be aired. We pay particular attention to the shaping influence of women on the professional stage (in contrast to England) and to performance spaces and traditions. Organized around the careful reading of five key play-texts in Spanish, together with historical, critical, and theoretical readings, this course assumes no familiarity with the texts, with Spanish history, or with literary analysis. However, an interest in engaging these wonderful plays closely, imaginatively, and historically is essential. There will be opportunities to pursue performance, adaptation, and translation. This counts as a Theater Method course for the Theater Major.

SPAN232 Dialogue of Poets: Classical and 20th-Century Poetry in Spain and Latin America
This course samples the rich tradition of Spanish-language verse from its beginnings to the present. It is organized around four primary dialogues: (1) the creative reception by leading 20th-century poets from Spain and Latin America (e.g., Neruda, Lorca, Machado, Borges, Paz, Rossetti) of classical poets (Saint John of the Cross, Góngora, Quevedo, and Sor Juana Inés de la Cruz); (2) the interplay of poetry and essays by those same poets; (3) the round-trip fertilization of popular and elite, oral and written forms of poetry; and (4) the crossing of linguistic, ethnic, religious, and gender boundaries that has shaped Spanish-language verse from its beginnings as love lyrics embedded in Hebrew and Arabic poems (jarchas) to the creative stimulus of other Romance languages (especially Galician and Catalan) in Spain, through Latin American poets open to Amerindian and African influences, and Hispanic-American poets exploring bilingualism in the U.S. We will read lyric, epic, and burlesque verse on a wide variety of themes (mysticism, sex, history, reason, travel, love, politics, sensory perception, death, and poetry itself); reflect on how poetry can best be enjoyed and understood; and consider how poetry has been produced, heard, read, and used (ritual and spontaneous song; minstrel performance of epic and ballads; courtly patronage, literary academies, and manuscript circulation; private reading of printed texts and commodification; and 20th-century singer-songwriter musical settings and politics). Although no prior expertise in poetry is expected, a willingness to engage it closely (textually and historically) is essential.

SPAN236 Cervantes
Cervantes is known chiefly for DON QUIXOTE, often described as the first modern novel and fountainhead of one of the great modern myths of individualism. DON QUIXOTE also reimagines virtually every fashionable, popular, and disreputable literary genre of its time: chivalric, pastoral, picaresque, sentimental, adventure, and Moorish novels; the novella; verse forms; drama; and even the ways these kinds of literary entertainment were circulated and consumed, debated, celebrated, and reviled. It is a book about the life-enhancing (and endangering) power of books and reading and the interplay of fiction and history and truths and lies. Cervantes' art remains fresh and unsettling, sparing no one and nothing, including the author and his work. Distinguished by its commitment to the serious business of humor, make-believe, and play, the novel is at once a literary tour de force and a fascinating lens through which to examine the political, social, religious, and intellectual debates of its moment. Characteristic themes include social reality as artifact or fiction, the paradoxical character of truths, the irreducible diversity of taste and perception, the call for consent in politics and love, and personal identity (including gender) as a heroic quest. In this course, we will read, discuss, and write about DON QUIXOTE, along with a sampling of critical, philosophical, literary, and artistic responses it has inspired.

SPAN239 Rebels and Rebellions in Early Modern Spain
What does it mean to be a rebel? This course examines literary, visual, and historiographical representations of rebels and rebellions in early modern Spain. Students will examine the uprisings of aggrieved comuneros (proto-bourgeois revolutionaries) in Castile and of outraged moriscos (Muslims converts to Christianity) in Granada and Aragon, the covert spiritual rebellions of crypto-Jewish conversas (Jewish converts to Christianity) and crypto-Muslim moriscas, as well as texts composed by women writers who rebelled against gender norms and Spain's most famous playwright's classic rebellion play. We will analyze the scathing testimonies of expelled moriscos and paintings that reimagine the pre-expulsion revolts of Valencian moriscos alongside gripping examples of local resistance to the moriscos' banishment, an astonishing and unprecedented tragedy in Spanish history. The seminar will introduce students to a critical framework for analyzing visual and multilingual texts. Close readings of "rebellious" texts will acquaint students with both known and nameless rebels of Spain, as well as with the unresolved legacies they left behind.

SPAN240 Writings from the Abyss: Andean Women Authors Between Territory, Memory, and Body
This course explores literature written by Andean women through a lens that centers the body, gender, and territory as key axes of resistance writing. We will ask ourselves how authors from regions such as Peru, Bolivia, and Ecuador -- from the mid-20th century to the present -- articulate their experiences and genealogies from positions that engage with ancestral knowledge, Indigenous worldviews, Andean spiritualities, and political memory. The selected texts highlight representations of the female body as a site of conflict, pleasure, maternity, trauma, and rebellion. Topics will include the coloniality of gender, state violence, language and orality, racialization, and sexual dissidence. The

course is organized thematically and combines literary analysis with approaches drawn from cultural studies, Andean feminisms, and decolonial theory. Readings will include texts written in Spanish as well as bilingual or translated works from Quechua, Aymara, or Kichwa, alongside visual materials, interviews, and digital archives when relevant.

SPAN241 Contested Archives: Power and Memory in Latin American Archival Practices
This course explores the histories and politics of archiving in Latin America, from colonial record-keeping and imperial control to contemporary community-led, feminist, and dissident archival projects. What counts as an archive? Who decides what is preserved and erased? How are bodies, languages, and stories made (in)visible through archival dynamics? What alternative archival imaginaries emerge from Latin America's colonial and postcolonial contexts? We will analyze how archives have functioned both as instruments of domination and as tools of resistance, central to the construction of national histories, racial hierarchies, and cultural identities, but also capable of challenging erasure and reclaiming marginalized memories. Through an interdisciplinary and decolonial lens, we will engage with both historical texts and cultural and artistic interventions that challenge dominant archival logics, including literary works, films, visual art, performance, and digital media that interrogate, fictionalize, or subvert archival practices. We will examine a variety of materials, including state archives, ecclesiastical records, truth commissions, community memory projects, and speculative/fictional texts based on archival material. By reading across genres and media, the course highlights how cultural production can both expose and reimagine the power of the archive. Works include texts by Diamela Eltit, Horacio Castellanos Moya, Cristina Rivera Garza, Patricio Guzmán, Diana Taylor, Silvia Rivera Cusicanqui, Aníbal Quijano, installation and performatic art by Regina José Galindo and diverse materials from archives and memory projects throughout Latin America.

SPAN242 Cycles of Resistance: Indigenous Voices in Latin American Literature and Culture
This course explores the richness and diversity of Indigenous voices in Latin America, from early colonial records to contemporary expressions. Using a transhistorical methodology, we will examine how socio-political issues and topics like land defense, cultural resilience, gender violence, hybrid identity, and political resistance persist and evolve through diverse perspectives in Indigenous discourse and cultural production. We will analyze and compare foundational texts like the Popol Vuh and Nueva corónica y buen gobierno, as well as original manuscripts alongside contemporary voices such as those of Humberto Ak'abal, Yana Lucila Lema, and Sonia Guiñansaca. Special attention will be given to the writings of indigenous women, exploring how they have challenged hegemonic narratives and reclaimed their bodies and territories. Additionally, we will explore multimedia expressions and digital activism to understand how indigenous individuals and communities adapt and resist in a globalized world. This course invites students interested in literature, cultural studies, gender studies, and human rights to engage critically with indigenous perspectives, fostering a deeper understanding of the complexities of Latin American cultures.

SPAN243 Latin American Philosophies of Education
This course offers an intellectual inquiry into educational thought situated firmly within the historical and cultural realities of Latin America. It asks how thinkers and educators from the region -- which includes Brazil and the Caribbean -- critique eurocentric models and affirm local traditions of schooling and knowledge. Thinking from the American university, we will explore what it means to consider the classroom a site of epistemic resistance that challenges the coloniality of power permeating teaching and learning across the hemisphere. Topics studied include colonial and decolonial pedagogy; feminist and ecofeminist pedagogies; popular education in campesino, indigenous, labor, and transnational movements; liberation theologies and pedagogies; rural teaching and teacher training; education and land dispossession; debt; schooling in times of war, climate disaster, and incarceration; and the crisis of the modern university. Readings include materials from Paolo Freire, Leopoldo Zea, José Vasconcelos, Ochy Curiel, the Landless Workers Movement (MST), Enrique Dussel, Yuderkys Espinosa, Emma Chirix, Mumia Abu-Jamal, Willy Thayer, Silvia Rivera Cusicanqui, Verónica Gago and Lucí Cavallero.

SPAN244 Boomerang and Back: The Central American Civil Wars in Hemispheric Perspective
The violence and wreckage long imposed on the Global South is now plainly felt in the United States, from its streets and schools to its places of work and worship. The "imperial boomerang," first theorized by Aimé Césaire, has returned home. This seminar draws on archival material from Central America to critically reflect back on the civil wars in Nicaragua, Guatemala, and El Salvador from a contemporary hemispheric lens. We will examine, among other topics, the colonial legacies of 20th-Century agricultural dispossession; theories of revolutionary Marxism and feminism; religion and liberation theology; discourses and ethics of survivor testimony; carceral aftermaths of counterinsurgency; and the politics of postwar reconciliation under neoliberalism. This course incorporates a wide range of cultural objects produced during and after the civil wars, including radio, poetry and literature, photography, children's drawings, artisan crafts, and fiction and documentary film. Alongside published works from Roque Dalton, Rigoberta Menchú, Susan Meiselas, Gioconda Belli, Otto René Castillo, Pamela Yates, and others, students will also study unpublished archival materials, such as broadcasts from Radio Venceremos, songs and embroidered testimonies from the Honduran refugee camps, and international solidarity art from Cuba, the US, Vietnam, and Spain.

SPAN250 Defiant Echoes: Resistance and Reinvention in the Spanish Canon
Can the literary canon be both a tool of oppression and a space for rebellion? In this course, we will challenge traditional notions of the Spanish canon, exploring how voices of dissent have reshaped it from the 18th century to today. Through literature, comics, memoirs, theater, and essays, we will uncover how writers and artists have resisted imposed identities and fought for a more inclusive cultural landscape. From the groundbreaking works of Emilia Pardo Bazán and Federico García Lorca to contemporary creators like Quan Zhou Wu, Ana Penyas, and Desiree Bela-Lobedde, we will analyze how these voices question authority,

identity, and belonging. Through engaging discussions and critical analysis, students will examine the evolving definition of Spanish identity and consider how narratives of power, exclusion, and resistance continue to shape the literary world. Whether you are interested in literature, history, cultural studies, or activism, this course will give you new perspectives on the power of storytelling as a force for change.

SPAN252 Tracing Identities: Graphic Narrative in the Hispanophone World
This course traces the construction of identities in Hispanophone graphic novels by focusing on how they build alternative spaces. Graphic novels have become highly popular in Spain, in part, for how they have created a space of dissent, a space where predominant discourses on identity, migration, memory, race, and gender are being reexamined, questioned, and (re)constructed. After an introduction to key concepts in comic studies, students will engage with relevant works by artists from Spain, Equatorial Guinea, or Argentina, such as Ana Penyas, Pere Ortín y Nzé Esono Ebale, Paco Roca, Quan Zhou Wu, Marcela Garcés, or Pepita Sandwich among others. By discussing the content of these graphic novels, students will develop crucial humanistic skills such as critical thinking, communication, teamwork, and cultural competencies and become familiar with a broad range of human experiences as well as major global events. Materially speaking, we will focus on their unique textual/visual medium and how they dialogue with other media, especially photography, but also cinema, and literature. Coursework includes critical readings, visual and textual analysis, and creative writing/drawing. This class is taught in Spanish.

SPAN254 The World of Federico García Lorca: Tradition and Modernity in the Spanish Avant-Garde
This course focuses on one of the most charismatic authors of the 20th century. Known primarily as a poet, playwright, and public intellectual, Federico García Lorca cultivated a literary language whose allure has proven to be timeless. By exploring the reasons for this, we will heighten our sensitivity not only to the magical power of Lorca's writing but to the potentially transformative power of language and literature in general.

Lorca's writing (1919-1936) spans a pivotal historical crossroads, when avant-garde artists sought to forge a new, revolutionary style representative of the profound social and political changes sweeping the world. Lorca, like so many others of his day, did so fully cognizant of the national traditions within which he worked, and with a keen desire to modernize those traditions. We aim to develop a deep understanding of how Lorca's verse, plays, and high-profile initiatives intersect with his context in these terms.

Please visit the course web site at http://span254.site.wesleyan.edu/ to review in detail the materials, objectives, and modes of assessment for this course.

SPAN255 Barcelona Beyond the Tourist Gaze: Margins, Memory, and Modernity
How do the margins of a city shape its identity? This course explores Barcelona beyond its iconic landmarks, focusing on how its cultural and physical landscapes have been constructed, contested, and reimagined over time. Through literature, film, photography, maps, and performance, we will examine how Barcelona's history of modernization, political struggles, and cultural production reflect broader tensions in contemporary Spanish and Catalan identity. Special attention will be given to the role of slavery, the city's penitentiary past, and the voices often left out of dominant narratives. By engaging with these complex histories, students will gain a deeper understanding of how the margins -- both literal and figurative -- reveal the layered realities of nationhood, memory, and artistic expression.

Gen Ed Area: **HA-RLAN**
Prereq: **SPAN221**

SPAN256 City, Mobility, and Technology: Towards the Modern City in Spain
Movements, itineraries, encounters--these are some of the elements that have characterized modern literature. From the Baudelairean figure of the flâneur to the car chases of popular movies like Bullit, the city is described from a series of journeys that create a representation of urban space. However, these narratives reveal more than a personal account of the city: they show the urban architectures that allow the movement in those spaces (ie, paths, roads, lighting) and in doing so they portray the development of the modern city.

With this framework in mind, in this course we will analyze the construction of the modern city in Spain through literary and filmic texts. We will pay special attention to Barcelona and Madrid, but we will also look at how other international cities are perceived and represented in Spanish literature. In doing so, we will explore how these authors understand the modern city and the international connections and influences that shaped it at specific historical moments.

SPAN257 Performing Ethnicity: Gypsies and the Culture of Flamenco in Spain
In this course, we will analyze how Gypsies and flamenco are associated, in fact and in fiction, and how and why they have emerged into the limelight of Spanish national cultural discourses. Although they represent discrete realities -- not all Gypsies identify with flamenco and not all flamenco artists are Gypsies -- correlations between the two have nonetheless been exploited by the media and by artists as an often unwanted emblem of Spanishness. The tensions surrounding this practice seem related to an undisputed fact of Spanish cultural history: Flamenco is unique within European culture; with a population of nearly one million, Gypsies are Spain's dominant minority; yet recognition of the artistic value of the former and acceptance and assimilation of the latter have been slow to congeal within Spanish society. Our practical aim will be to analyze these important aspects of Spanish culture in their historical context. We will study how the connection between Gypsies and flamenco has emerged; we will evaluate the extent to which it is valid; and we will attempt to assess what seems to be at stake in the struggles between those who promote and those who resist this connection as distinctive of Spanish national culture. In doing so, we seek to

foster a deeper understanding of the importance of the Roma community within the framework of European and Spanish culture and a deeper appreciation for flamenco as a unique form of cultural expression. On the theoretical plane, we seek to understand how music, dance, literature, cinema, performance, and art can give expression to ethnicity; how cultural hegemonies emerge; and what role artists play in supporting or contesting those hegemonies. In general, this course is designed to help students develop critical skills of cultural analysis while increasing their proficiency in Spanish.

SPAN259 Detective Fiction: Procedure and Paranoia in Spanish Narrative
The detective genre is the point of departure for an investigation that will lead us to solve a mystery: How do fictions about the detective--a person who is generally outside the law and sometimes crazy or paranoid--help us to understand the social construction of Spain? We will follow this figure through time (from the 19th century to the present) and space (visiting many Spanish cities) to build a theory of the genre in Spain and a panorama of Spanish society and culture. Following the trail left by novellas, novels, and short stories, together with critical texts, our investigation will allow us to unravel the mysteries of a multidimensional society.

SPAN260 Between Word and World: Major Spanish Poets of the 20th Century
Our goal in this course is to study how the leading poets in 20th-century Spain use the lyric mode to negotiate the relationship between themselves and their community at key junctures in the nation's history. In doing so, we will also identify and assess the various notions of community that arise in modern Spanish poetry, attempting to evaluate how those notions evolve or are affected by such events or movements as (1) the avant-garde and the second Republic (1920-1936), (2) the Civil War and the Franco regime (1939-1975), and (3) sweeping political and social transformations of the past 30 years as signaled by the country's democratization, integration into the European Union, economic development, and by the massive influx of immigrants from Africa, Latin America, and Eastern Europe (1977-present). Key essays (critical and theoretical), some by the poets themselves, are included in the syllabus to provide critical tools for discussing how the public experience is lyricized through the intimate filter of the poet's own sensitivity. We will seek to understand the role played by context in conditioning the decisions poets make in adopting the epic, elegiac, didactic, or testimonial mode of expression, to name just a few. The image of the poet standing at the crossroads of lyrical creativity--word--and historical circumstance--world--will be central to our critical inquiry.

SPAN261 Sites of Resistance & Memory: Theater, Performance & Political Consciousness in Contemporary Spain
Compared to other literary genres, and given its essentially social (public) format, theater is an especially vulnerable mode of cultural expression and, therefore, can easily fall victim to both overt (institutionalized) and covert (social) systems of censorship. The tendency for authoritarian regimes to scrutinize stage practices is exemplified by the state censorship that prevailed under Franco (1939-1975) and that prompted Spanish playwrights to develop subtle strategies for resisting authority and for addressing the crucial social and political concerns of the day. The parliamentary regime born in the aftermath of the dictator's death in 1975 ushered in an era of experimentation unprecedented in recent Spanish cultural history. During these years, playwrights have increasingly embraced the struggle against more covert (social, market-driven) forms of censorship in attempting to craft a new social order for a new political context: a democratic mindset that will serve to solidify the foundations of the young democratic state. Our goal in this course is to trace these trends through a close reading of key works by the major Spanish playwrights active since 1950. We will focus on context, on how theater, society, and politics are intertwined, by evaluating both works of dramatic literature themselves and the place and meaning of the public, commercial, and alternative theater circuits where many of these plays were premiered. Our aim, broadly, is to understand the extent to which collective memory and national identity, as staged over the past three-quarters of a century, have become a battleground where Spaniards either seek or resist reconciliation with legacies of repression.

SPAN262 Through Foreign Eyes: The U.S. in Spain in the 20th Century
Although the relationship between Spain and the U.S. has a long history that can be traced back to colonial times, during the 20th century, an extensive corpus of literature in which Spanish authors portray the U.S. prominently becomes visible. The appearance of this body of work gives rise to a series of questions: How do Spaniards see the U.S.? What are the consequences of this understanding? Why is there such interest in portraying the U.S. from a Spanish point of view? Of course, cultural and social definitions are constructions always limited to historic, social, and cultural events, be they of a military, political, or purely commercial nature. One could think that these portraits dwell on stereotypes; nonetheless, we are before a literary production that uses the U.S. to create a narrative about how Spain enters a global economic market through a cultural exchange. These are texts about traveling, the construction of the individual, and the shaping of a nation; texts that cross the boundaries of literary genres to define Spanish identity. We are before the construction of a narrative that questions the building of alterity and shapes the identity of modern Spain. In our approach to the main historic events that define the relationship between Spain and the U.S. during the 20th century, we will examine novels, poems, and movies that result from such events to analyze questions related to identity, globalization, localism, modernity, and nation. What we will engage in is, in fact, a debate about how we define ourselves, whether we are Spanish or American, through foreign eyes.

SPAN263 Mythic & Modern: Reappropriating Classical Themes in Contemporary Drama and Performance
What does it mean to defy the authority of the patriarch, of family, or of government? How do these structures of authority intersect in contemporary society? How do we, today, understand "destiny"? How do we challenge it, and what are the consequences for doing so? How do we break the patterns of shame and disenfranchisement inherited from the shared past? These are just some of the social, political, and ethical concerns transmitted over time by playwrights, stage and performance artists, and film directors who treat classical myths as valuable constructs for interrogating our contemporary world and society.

In this collaborative, project-based course we explore how classical myths have been appropriated within the modern Hispanophone cultural context. Just as important as our study and discussion of modern adaptations of classical models are the staged readings of key scenes incorporated strategically throughout the semester that help us develop an organic understanding of the material from the inside. Our overarching aims include: 1) exposing what persists in modern adaptations of classical myths, 2) tracking the kernels of change that the adaptations present, and 3) understanding why performers over time, working in disparate cultural milieus, continue to seek and derive inspiration from classical myths. The mythic figures we examine may include any of the following: Sophocles' Antigone, Euripides' Oedipus and Medea, Aeschylus' Agamemnon, as well as figures from the Oresteia and from such epics as Homer's Iliad and Virgil's Aeneid. This course is taught in conjunction with Italian 263 and French 263. The final collaborative performance, scheduled during the Final Exams period, will involve students from across the Romance Languages and offers the unique opportunity for cohort building among students of French, Italian, and Spanish.

SPAN264 Orientalism: Spain and Africa
Over the past several decades, North African and Middle Eastern cultures have become conspicuously important within the Spanish cultural arena. Translations of writers from Lebanon to Morocco abound in Spanish bookstores. Spanish writers have begun addressing North African and Middle Eastern issues with greater frequency, especially in their novels. The dramatic rise in the African immigrant population in Spain during the 1980s and 1990s, meanwhile, has been matched by a rise in press coverage of issues pertaining to Africa and the Middle East. These factors constitute the point of departure for our historical overview of the treatment of Islamic cultures in modern Spain, from early 19th century to the present. Guided by Edward Said's seminal essay, Orientalism, we will assess the extent to which (and the process by which) Spain passes from the Orientalized subject of European Romanticism (painting, literature, music) to an Orientalizing European power in the late 20th century. In doing so, we will seek to relate the representation of Islamic cultures in Spanish literature and painting to social, political, and economic factors, most important of which was Spain's military invasion into Morocco in the late 19th and early 20th centuries. We will also survey changing attitudes among Spanish intellectuals with regard to the Islamic world and toward Spain's Islamic heritage, the result, perhaps, of 20th-century modernization and, most recently, of Spain's full integration, after Franco's death, into Europe's military and political structures. The tools for this study include works of literature primarily, but we will also focus on painting, historical essays, newspaper articles, and film.

SPAN265 History of Spanish Cinema for Spanish Speakers (CLAC.50)
Spanish 265 is designed as a discussion section for students who are enrolled simultaneously in SPAN 301 and who have advanced proficiency in Spanish. This half-credit course offers students the opportunity to master the critical vocabulary and tools of film analysis in Spanish.

Weekly student-led discussions will provide students with the unique opportunity to exercise these tools regularly and gain greater fluency in the language. Students will be responsible for the same material included on the SPAN 301 website at: https://span301.site.wesleyan.edu/. Students will submit their assignments in Spanish and contribute weekly posts to a blog set up for SPAN 265.

SPAN267 Image/Word: Narrative and Photography in Contemporary Spain
The objective of this course is to analyze the relationship between literature and photography, questioning the idea of representation that usually unites them. This relationship goes further than the simple representation of the environment that surrounds us: literature and photography modify not only the perception of, for example, urban space, but also its organization; that is, they have a direct effect on the built environment. This effect creates a productive linkage that challenges the limits of these disciplines and the worlds in which they are created, proving how their work aims not exclusively to describe or represent but also to build. This idea of creating is the base for this seminar, where students will develop a photographic and a narrative/analytic project in which they will test firsthand the relationships and skills seen in the class. Thus, they will be able to see the connections between disciplines and cultures that guide our everyday life. In this seminar we will work with Cuban artist and writer Jacqueline Herranz-Brooks, who will work with students in their creative project.

SPAN269 Appearing Acts: Visual Histories and Identity Construction Through Photography in Spain
In her reading of Plato's "Allegory of the Cave," Susan Sontag finds a close bond between photography and the world, our cave. Photography, she says, shows us a new visual code that constructs narratives that "alter and enlarge our notion of what is worth looking at," and in doing so can influence, guide, and condition our knowledge of the world. Keeping this in mind, when it comes to Spain, what kind of world does photography construct? How does the visual field influence and guide our knowledge of modern Spain? In this seminar, we will reflect on how photography has conceptualized social and national identities in Spain from the 19th century to the present, asking how images create, shape, and question the cultural and social archive. Through the examination of photographs, theories, and methods, we will draw a contextualized history of photography that will help us to consider its role in the interdisciplinary construction of Spanish identity.

SPAN270 Survey of Latin American Literatures, Cultures, and Ideas
A close study of texts from the colonial period to the present will serve as the basis for a discussion of some of the major ideas and cultural and political debates that have emerged in modern Latin America to this day. Thinkers include Las Casas, Sor Juana, Bolívar, Sarmiento, Martí, Neruda, Borges, García Márquez, Menchú, and Bolaño, among others. For purposes of understanding context, students will also read selected chapters from works by historians and cultural critics and will watch several films. (Please note that this course was previously called "Spanish American Literature and Civilization.")

SPAN271 Against Epistemicide: Latin American Critical Thought
This class explores seminal social and political texts that reconceptualize America Latina against the legacies of colonialism and Eurocentrism. We will focus on Liberation and Decolonial Latin American Thought in order to move from the idea of Latin America to that of Abya Yala. We will begin with the triad: La ciudad letrada by Ángel Rama, Culturas híbridas by Néstor García Canclini, and Colonialidad del poder, eurocentrismo y América Latina by Aníbal Quijano. We will then decolonize their own theories through the work of women thinkers such as María Lugones, Yuderkis Espinosa, Ofelia Schutte, Mary Louise Pratt, Linda Martín Alcoff, and Catherine Walsh.

SPAN272 Cubanidad: Diaspora, Exiles, and Cultural Identity in Cuban Literature and Film
This course will examine shifting notions of Cubanness, or "cubanidad," from the 19th century to the present times from a diasporic framework. We will discuss writings by/about African slaves, Chinese indentured laborers and migrants, and Spanish immigrants in Cuba, as well as Cuban exiles in the U.S. and Spain from the 19th century to the beginning of the 20th century. Through a variety of literary texts and films, we will then study select cases of European exiles who visited Cuba in the 1930s and '40s, the later massive waves of Cuban migration to the U.S. after the Revolution, and the more recent immigrants who have settled in Cuba.

SPAN273 Beyond Machu Picchu & Macondo: Real and Imaginary Worlds in Latin American Letters
Latin American writers and intellectuals have long conceived of their particular literary and cultural practices in connection to individual spaces and sites, both real and imagined. In this course we will examine why and how they have done so, looking not only at well-known if not legendary ones such as Machu Picchu and Macondo, invented, respectively, by Neruda and García Márquez in certain moments of their careers, but also the América and Gran Colombia of Simón Bolívar, the New York City of the Cuban intellectual José Martí (1880s) and Nuyorican writer Tato Laviera (1970s), as well as Violeta Parra's other Chile, César Aira's Colón (Panamá), Fernando Vallejo's Medellín (Colombia), and Mayra Montero's eroticized Caribbean. In each case we will be concerned with understanding the relationship between local, national, and hemispheric history and the new imaginarios created by the author/intellectual in question in the context of north-south relations. Topics to be considered within this critical framework will include the Wars of Independence, industrialization in the late 19th-century, the construction of the Panama Canal (1904--1914), the Cold War (1947--1991), Latino identity in the context of Puerto Rico and New York City, the drug wars, and sexual identity. When possible, films and short videos will be used to help build knowledge of historical context.

SPAN274 Insular Borders of Latin(x) America
Before and at the same time the United States established itself throughout the 19th century as a major power in the Americas and the world, various Latin American republics inherited and acted upon a similar imperialist agenda to expand their borders not only to neighboring territories but also across oceans. In this class, we will study and compare these imperialist gestures, among them the Spanish Empire's control of its remaining insular colonies in the 19th century (e.g., Cuba, Puerto Rico, the Philippines, and Guam) and the United States' successive claim to these very same islands. We will analyze literary works and films that interrogate these imperialist claims as well as the trajectories of islanders: for instance, the forced migration of the Rapanui (Easter Island people) in the second half of the 19th century (first as slaves to Peru and then to the town of Hanga Roa in Easter Island) and the island-to-island "intra-colonial" (Joanna Poblete) recruitment of Filipino and Puerto Rican laborers in sugar plantations in Hawai'i at the beginning of the 20th century. Some of the questions we will explore are: Why are islands so coveted by old and new empires? How have Rapanui, Filipino, and Puerto Rican migrants and their descendants resisted authorities on the insular borders of empire? How do writers and artists tell these silenced histories? Can we speak of Latinidad and Edouard Glissant's concept of Poetics of Relation in a Pacific Ocean context? Readings will be in Spanish and English. All discussions and assignments will be in Spanish.

SPAN275 Multilingual Aesthetics in Latin America
This course examines writings by Latin American authors who are multilingual or have an intercultural awareness as a result of colonization, cosmopolitanism, migration, or bicultural upbringing. First, students will learn about a variety of Spanish American movements, such as "modernismo," "creacionismo," "negrismo," "indigenismo," "neoindigenismo," and "indianismo," all of which dialogued with diverse cultures and languages other than Spanish. Then, we will examine a series of collaborative projects, such as a quadrilingual poem co-written by Octavio Paz (Mexico), Jacques Roubaud (France), Edoardo Sanguineti (Italy), and Charles Tomlinson (UK); a selection of English-Spanish poems by Marjorie Evasco (Philippines) and Alex Fleites (Cuba); and the "Festival de poesía: lenguas de América," a bi-annual event that gathers poets from diverse multilingual regions in the Americas. Lastly, we will examine literary and scholarly work by/about Latin American writers of indigenous descent, as well as works in Spanish, English, and "Spanglish" by Chicano, U.S. Latino, and Filipino American writers. Throughout the semester students will reflect on how multilingualism can serve as a medium for aesthetic experimentation, intercultural dialogue, and/or political resistance. All discussions will be held in Spanish, and all readings will be in their original Spanish or in Spanish/English translation.

SPAN276 Body, Voice, Text: Theater and the Transmission of Experience
Theater can and does exist as a written text, but we all know that its existence on the page is meant as a precursor to its live performance out in the world. In this course, our approach to a series of Latin American plays will be informed by competing notions of the theater as both a field of academic inquiry (built on reading, study, research, and interpretation) and also as an art form (built on

reading, rehearsal, repetition, direction, and interpretation). We will combine traditional academic study of the written dramatic text with theater workshop exercises meant to train actors for the delivery of the staged performance text. Students will thus gain an understanding of how academic study and and workshop rehearsal take different approaches to what is essentially the same goal/problem: how to interpret the text written by the dramatist, whether for meaning or performance. This course will be taught in Spanish.

SPAN277 The Secret Life of Waste: Trash in Latin American Art & Literature
From space junk to microplastic particles found in human blood, man-made waste and pollution are ubiquitous. What are the effects of waste on the environment? What can the decomposition of waste create and/or undo? What is the afterlife of waste? Is waste apocalyptic? Through figures such as rottenness, radioactivity, mutation, and zombies, we will explore the ways in which Latin American art and literature try to answer some of these questions by imagining living amidst the remnants of hyperconsumption and by exploring the unforeseen effects that coexisting with waste could have upon the land and the body. We will study a wide range of visual and literary engagements with trash from novels, poetry, comics, and films to environmental art projects. Artists and writers may include Cecilia Vicuña, Daniel Lie, Samanta Schweblin, Fernanda Trías, Vik Muniz, H. G. Oesterheld, Javier Campos, and Alejandro Durán, among others.

SPAN278 Narratives of the Latin American Jungle
This course is a critical exploration of the ways in which forests and its plurality of beings, and particularly the tropical territories marked as jungle or rainforest in South America (the Amazon, the Darién), have been narrated, imagined, and contested in cultural production and in indigenous and peasant ontologies and place-based practices for more than a century. We will investigate the construction of jungle as a territory of dwelling shaped by the relational condition between human and other-than-human beings (plants, animals, water) and as a place where diverse anxieties about sovereignty, politics, race, development, gender, and subversion collide. We will examine this cultural geography in relation to diverse histories of modernization, development and extractivism, the global angst over the environment and its destruction, local processes of (cosmopolitical) resistance, and the various political and environmental conflicts that have shaped the region over the past century. Attending to Amazonian indigenous thought and to political ecology and other intellectual practices emerging from Latin America, as well as to literature, film, popular culture and visual art, we will discuss the potential to disavow modern/colonial binaries like nature-culture, human-nonhuman and civilization-barbarism, in a place that has been central to the way in which Latin America has been imagined for centuries.

SPAN280 Screening Youth in Contemporary Latin American Cinema
This course will examine some of the most important Latin American films from the past three decades that also happen to cast children and teenagers as protagonists. We will analyze a large body of films that address issues of historical memory, economic inequality, social conflict, political activism, education, sexuality and gender, cultural identity, and citizenship through the lens of youth. These films question the roles of minors in relation to politics and resistance, and reflect upon the cultural constructions of childhood that operate at a social level with important political implications. Students will explore the aesthetic and social dimensions at play in these films and develop interpretative filmic skills through an exploration of the connections between the technical composition of the works and the social, political, and cultural contexts that they address. Besides the varied cultural, theoretical, formal, and historical elements that this course will examine, this course includes a creative project by which students will develop an idea for a short film based on their own personal coming-of-age narrative.

SPAN281 Labor in Latin America and the Caribbean: Pedestals and Veils of Disposability
This course examines the racialized and gendered exploitation of labor that has long structured everyday life across the Western hemisphere. It asks how shifting productions of race and gender mediate the distinction between productive and disposable humanity. We will examine a variety of materials from the region spanning the colonial period to the present, including literature, film, visual and performance art, economic theory, political philosophy, grassroots activism, testimonials, chronicles, and journalism. Through these texts, we will problematize a range of interdisciplinary issues, such as the veiled continuities of conquest and enslavement, the accelerated pace of capitalist extraction of human and non-human value, and state responses to forced migrations of populations considered criminal, undesirable, or superfluous. We will also study aesthetic and lived examples of resistance from Latin America, the Caribbean, and their diasporas, with particular interest in how collective organizing has taken on new forms in the face of work's increasing informalization and precaritization. Building off these examples, students will develop an accessible final project that applies their research and analytical skills not only to produce knowledge, but to cultivate critical consciousness for the reader, listener, or viewer.

SPAN283 The Other 9/11: Dictatorial and Post-Dictatorial Films and Literature in Chile
This course explores how poetry, novels, and films, produced during and after Chile's military regime (junta de gobierno), try to make sense of state violence and cruelty. This class suggests that by actively performing the work of memory, of remembering the violent past and the forcefully disappeared ones (detenidos desaparecidos), films and literature oppose the politics of oblivion instantiated by the post-dictatorial state while claiming for and imagining social justice. We will understand films and literature as active, ethical memory technologies which we will read against the grain of Chilean politics and history (políticas de los acuerdos).

Some of the poets we will read include Eugenia Brito, Carmen Berenguer, Teresa Calderón, Malú Urriola, Rosa Betty Muñoz, and Raúl Zurita. In addition, we will watch films by Patricio Guzmán, Cecilia Vicuña, and Pablo Larraín. Finally, we will read novels by Alejandro Zambra, Roberto Bolaño, and Nona Fernández.

SPAN284 Tales of Resistance: Modernity and the Latin American Short Story
Latin American writers from the early 20th century forward have regarded the short story as a vehicle through which to make their mark and engage the great cultural issues of the day. Jorge Luis Borges and Julio Cortázar, two of Latin America's most well-known literary figures, dedicated their careers almost exclusively to the genre. In this course, as we consider the privileged status of the short story in Latin American letters, we will examine the ways in which writers have used the genre to comment on important aspects of modernization, both within and outside their respective countries. Some of those aspects will concern the Mexican Revolution, bourgeois and mass culture, nationalism, globalization, and immigration to Europe and the U.S.

SPAN285 Racial Capitalism and Resistance in Central America
In modern-day Central America and its diasporas, the most precarious communities are descendants of colonized, enslaved, and dispossessed populations. Yet while the fact of race and class intersecting is evident, why and how they have evolved together is not. This course examines the relationship between race formation and economic dispossession across the region through a transnational perspective. Through a wide range of Central American and hemispheric cultural objects, theoretical frameworks, and grassroots praxes, we will meditate on the theoretical paradigm of racial capitalism, which holds that racialism and capitalism are co-constituting and have evolved together to produce an economic world order dependent on colonialism, violence, exploitation, and containment. Students will develop their interpretive and analytical skills by collaboratively examining issues of whiteness, mestizaje, and multiculturalism; resource extraction; economic exploitation and expulsion; rage, resistance, and revolution; policing, counterinsurgency, and criminality; migration; identity and ethno-politics; and education. Beyond these cultural, theoretical, historical, and aesthetic concerns, a central component of the course is a creative or community engaged project that students will develop in close collaboration and in stages throughout the semester.

SPAN286 Bolívar's Interpreters: Nation Construction in the Americas
No figure has been seized upon more as a symbol of cultural and political unity in Latin America than the liberator Simón Bolívar. In this course, we will examine not only the case of contemporary Venezuela with its cult-like tradition but also several of the countless appropriations of Bolívar that have occurred across the Americas and in Europe in the 180 years since his death. From the Cuban José Martí to the Colombian García Márquez, from the Spaniard Miguel de Unamuno to the U.S. socialist Waldo Frank, from, to be sure, the powerful tradition of the Latin America essay with its identity politics to the U.S.-led Pan Americanism of the 1920s, '30s, and '40s, Bolívar has been made to serve complex and important functions in discourse about national and continental identity. To consider all this, we will study a number of rewritings of Bolívar's life and works, focusing on the dynamic process in which literary, cultural, and political traditions have been formed around him, while giving special attention to issues bearing on race, gender, and modernization. A wide range of texts will be examined, including letters, essays, poems, novels, screenplays, and films.

SPAN287 Constructions of the Self
How does one define oneself? What forces are active in the creation of our personal identities? How much control do we exercise over these processes? What role do writing and literature play in the construction of notions of the self? While these questions are timeless and know no geographical boundaries, we will examine how several different Latin American and U.S. Latino authors have addressed these concerns in their art, with an eye toward understanding the cultural specificity of each of their propositions, as well as how writing itself becomes the subject of writing in the search for subjectivity.
Offering: **Host**
Grading: **A-F**
Credits: **1.00**
Gen Ed Area: **HA-RLAN**
Prereq: **None**

SPAN288 Territories of Dwelling, Desire and Resistance in Latin America
What does it mean to dwell in a place? How are spatial orders and more-than human dimensions conceived of and what is the symbolic and material weight of these conceptions? This course seeks to examine the ways in which diverse spaces categorized as rural or as "natural frontiers" in Latin America have been inhabited, negotiated, and contested in the 20th and 21st centuries. How have cultural practices constructed them as territories of dwelling, desire, possession, dispossession, and resistance? How does narrative and art reflect on local modes of dwelling and on the relationships between community, embodiment, desire, memory and the materiality of place? We will focus on texts and artistic practices--literature, film, performance, and the visual arts--that, in thinking about mountains, rivers and other bodies of water, plants, more-than-human beings, seek to destabilize the hegemonic (colonial) gaze that has been projected onto rural spaces for centuries and complicate extractivist and other capitalist logics that have sought to transform them. We will trace how these texts intervene in urgent debates about extractivism, the destiny of rural lands, the uses, abuses and rights of nature, the struggles for peasant and indigenous

rights, environmental justice, and the defense of alternative ontologies. We will focus particularly on the Andean and Amazon regions of South America, with specific attention to Colombia and Perú.

SPAN289 Contact Zone: Introduction to Amazonian Narratives
Often, the Amazonian region has been considered a marginal space within the territorial limits of Perú, Colombia, Venezuela, and Brazil. However, this territory is and has been key for these nations' past, present, and future. Beyond its outstanding biodiversity, the Amazon rainforest has housed for various centuries multiple and diverse native and non-native linguistic and ethnic groups. From the original Yanomami inhabitants to the contemporary European descendant citizens of Iquitos, the Amazonian territory has been a zone of contact where multiple cultural and cosmological views interact. In this class students will engage with a variety of materials, including literary works, travel diaries, films, and photographs that explore the Amazon rainforest: modern odysseys (La Vorágine), shape-shifting ghost stories (Las tres mitades de Ino Moxo), accounts of guerrilla warfare in the jungle (Naturaleza común), and apocalyptic prophecies (A queda do céu). By analyzing the literary and audiovisual archive resulting from multiethnic and multilingual interactions in the region, students will examine the role of the Amazon and its inhabitants in shaping the modern Latin American nations surrounding it. They will acquire a comprehensive understanding of the Amazonian region, its cultural diversity, and the complex issues it faces, such as racial and ethnic clashes, resource extraction, and the existential threat this poses to both human and non-human beings inhabiting it.

SPAN290 From the Muralists to the Narconovela: The Public Intellectual in Mexico
Mexican writers, intellectuals, and artists, both male and female, have long been recognized for the brilliance with which they have used their work to comment on and shape the direction of the Mexican state and to engage with the multiple traditions (indigenous, European, and mestizo) that define them. In this course, we will examine the writings and artistic and filmic work of several major figures with the goal of understanding how they see and imagine Mexico in particular historical moments. The course will cover the entirety of the 20th-century and the beginning of the 21st, extending from the Mexican Revolution (1910--1917) and the Muralists (1920s--40s), through the post-1945 period including 1968, and to the drug wars and the Zapatista movement (since 1994). Students will analyze novels, essays, art, poetry, and film.

SPAN291 Spanish American 'Modernismo' in a Global Context
The publication of Nicaraguan Rubén Darío's AZUL... in 1888 is often considered to be the inaugural event of "modernismo," the first Spanish-language literary movement that originated in Spanish America and spread thereafter throughout the Hispanophone world. In March 1916, about a month after Darío's death, a magazine in the Philippines claimed that Darío also belonged--at least "spiritually"--to the Philippines. Inspired by this statement, in this course students will read poems, short stories, and crónicas (short journalistic articles) by canonical Spanish American modernista writers, such as Darío, Julián del Casal, José Martí, Amado Nervo, José Enrique Rodó, Leopoldo Lugones, and Delmira Agustini, in conjunction with Filipino modernistas, including Fernando María Guerrero, Jesús Balmori, Manuel Bernabé, and Evangelina Guerrero. We will also read a selection of works of Spanish writers, such as Salvador Rueda, who visited Cuba and the Philippines in the 1910s. Some of the salient characteristics of modernismo that we will cover are the rejection of immediate reality and materialism, the search for linguistic renovation and cosmic harmony, and the celebration of Hispanism. When focusing on this last aspect, we will assess how modernismo helped to keep Spanish America connected not only to Spain but also to the Philippines, which became a U.S. territory in 1898, alongside Cuba and Puerto Rico. Thus, we will explore to what extent modernista writers responded to the spread of U.S. imperialism.

SPAN295 Voices, Noises, and Son: Modern Sounds in Hispanic Caribbean Cultures
What happens to our understanding of Hispanic Caribbean cultures if we think about it through the category of sound? From the recorded voices of indigenous Caribbean peoples denouncing the atrocities of neo-colonialism to the contemporary Afro-Caribbean reggaeton rhythms in San Juan, sound has been a key component for this region's expressions and literatures. In this course, students will explore how multiple kinds of sound-voices, noises, music, and rhythms-shape and define the literatures and cultures of the Caribbean basin. We will read literary works and pay attention to the "sounds" described in them in order to examine how diverse ethnic groups have contributed to the production, perception, and transformation of various Caribbean "sonorous" landscapes.

SPAN296 Cuban Literature and Film: Imagination, Revolt, and Melancholia
This course surveys the major aesthetic and socio-historical movements in modern and contemporary Cuba. Since the late 19th century, the island of Cuba has been at the center of a number of key epochal disputes: between colonialism and independence, racism and racial justice, neocolonialism and revolution, liberalism and socialism, isolationism and globalization. In the arts, the turn of the century launched a period of great imaginative invention. Considering the singular place of Cuba in Latin America, the Caribbean, and the globe, this course addresses some of the most representative works of Cuban literature and film since independence until the present time. Imagination, revolt, and melancholia are the three concepts that will orient our discussion. Imagination refers both to artistic creation and to the collective capacity of projecting new worlds, utopias, or impossible realities. Revolt, as opposed to revolution, is not restrained to politics as usual but relates rather to a deep experience of discontent and a return (from the Latin revolvere) to ancient psycho-social strata. Finally, melancholia serves as a point of view to understand what happens when history does not live up to emancipatory expectations. Special attention will be given to Afrocubanismo, ethnographic literature, the avant-garde aesthetics of the group Orígenes, Marvelous Realism, testimony, revolution, socialist experimental film, diaspora, the Special Period, and post-Soviet life.

SPAN297 Caribbean Rebels and Revolutionaries: Modern and Contemporary Cuban, Dominican, and Puerto Rican Lit
This course offers an introduction to Hispanic Caribbean literature and cultural productions from the nineteenth century to the present with an emphasis on gender, sexuality, race, and politics. We will study works by representative writers, artists, and filmmakers from the Spanish-speaking insular Caribbean. They may include Julia de Burgos, Luis Palés Matos, Mayra Santos-Febres, Eduardo Lalo, and Noelia Quintero Herencia from Puerto Rico; Juan Francisco Manzano, Gertrudis Gómez de Avellaneda, José Martí, Nicolás Guillén, Lydia Cabrera, Severo Sarduy, Tomás Gutiérrez Alea, Sarah Gómez, Reinaldo Arenas, Nicolás Guillén Landrián, and Tania Bruguera from Cuba; and Salomé Ureña, Aída Cartagena Portalatín, José Zacarías Tallet, Rita Indiana, Elizabeth Acevedo, and Lorgia García-Peña from the Dominican Republic.

SPAN298 "Un pedacito de la historia negra": Afro-Latin American Literature and Culture
The significant contributions of Afro-descendent individuals to the development of Latin American culture have been frequently overlooked or torn to pieces. Yet, the experiences and bodies of racialized people have been key in shaping and transforming the region's culture. Beyond their representation in early colonial and republican works, Afro-descendent writers and characters have been crucial in the modern aesthetics of Latin American literatures. Along with musicians and other artists, they have provided a continuous challenge to the idea of Latin America and its cultural production as a product of a homogeneous cultural and racial miscegenation. Inspired by Colombian artist Joe Arroyo's opening to a famous salsa song, wherein he sets out to tell "un pedacito de la historia negra," in this seminar we will study short stories, novels, poetry, music, and film, including works that explore the experience of being racialized in Latin America, poetic experimentalism through orality, and the retelling of the history of Black resistance in the Caribbean through modern media. Engaging with historical and contemporary issues such as racial discrimination, social inequality, and cultural pride and preservation, this course invites students to critically analyze the fundamental role of Afro-Latin Americans in shaping Latin American cultures and histories.

SPAN299 Decolonizing Speculative Fiction in Latin America
This course interrogates what it means to imagine alternative futures in colonial and postcolonial settings. As the writings of conquistadors, explorers and missionaries show, Europe envisioned the New Continent as the land of the future or utopia, to the point that contemporary decolonial theorists have observed that nothing was "discovered" by the first European travelers to America but the idea of discovery itself. Modern temporalities of progress became thus inseparable from the image of the Americas as a frontier of imperial expansion, religious conversion, and economic exploitation. If European SF (science fiction/speculative fiction) emerged hand-in-hand with positivist notions of progress and civilization, Latin American SF contested Eurocentric epistemologies by claiming the ability to imagining the future and fictionalizing worlds otherwise. The course will center on three key moments of Latin American literary history: 1) the early to mid-twentieth century experiments in fantastic literature from the Southern Cone, which broke with realist mimesis from the margins of modernity; 2) post-1989 SF novels from Bolivia, Guatemala and Chile, that address the making of neoliberal globalization from the vantage point of the Global South; and 3) contemporary Dominican and Cuban works in which Afro-Caribbean religions and gender formations engage in productive conversations with digital technologies, biomedical engineering, game cultures, and climate change.

RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

The study of Russia, Eurasia, and East-Central Europe is fundamental in today's world. Solutions to many geopolitical and environmental crises require nuanced understanding of the countries that used to be part of the Soviet Union and the Russian Empire. Wesleyan's REES Department is unique among its peers in its impressive interdisciplinary makeup: The REES faculty specialize in literature, history, politics, music, cinema, art, dance, and religion. In addition to Russian, the REES faculty speak Ukrainian, Buryat, Tatar, and Kazakh languages. Most REES courses are taught in English and are designed for majors and non-majors alike. Our graduates have gone on to careers in research and cultural analysis, education, law, artistic production, diplomacy and public service, business, and communication.

AFFILIATED FACULTY

Saida Daukeyeva
BMU, Moscow State Tchaikovsky Conservatory; PHD, Moscow State Tchaikovsky Conservatory; PHD, School of Oriental and African Studies, University of London
Assistant Professor of Music; Assistant Professor, Russian, East European, and Eurasian Studies; Assistant Professor, Medieval Studies

Joseph J. Fitzpatrick
BA, Harvard University; PHD, Duke University
Chair, College of Letters; Associate Professor of the Practice in Letters; Associate Professor of the Practice, Russian, East European, and Eurasian Studies

Katja Kolcio
MA, University of Georgia Athens; PHD, Ohio State University; MA, Ohio State University
Chair, Dance; Associate Professor of Dance; Affiliated Member; Associate Professor, Environmental Studies; Associate Professor, Russian, East European, and Eurasian Studies

Nadya Potemkina
MM, University Nthrn Iowa; MM, Ball State University; DMA, The University of Memphis
Director of Private Music Lessons; Adjunct Associate Professor of Music; Adjunct Associate Professor, Russian, East European, and Eurasian Studies

Liana Pshevorska
BA, University of Arizona; MA, University of Arizona; PHD, Princeton University
Associate Professor of the Practice in French; Associate Professor of the Practice, Fries Center for Global Studies; Associate Professor of the Practice, Russian, East European, and Eurasian Studies

Justine Quijada
BA, University of Chicago; MA, Columbia University; PHD, University of Chicago

Associate Professor of Religion; Associate Professor, Russian, East European, and Eurasian Studies; Associate Professor, Environmental Studies

Sasha Rudensky
BA, Wesleyan University; MFA, Yale University
Associate Professor of Art; Associate Professor, Russian, East European, and Eurasian Studies

Peter Rutland
BA, Oxford University; DPHIL, York University
Colin and Nancy Campbell Professor in Global Issues and Democratic Thought; Professor of Government; Tutor, College of Social Studies; Professor, Russian, East European, and Eurasian Studies

Victoria Smolkin
BA, Sarah Lawrence College; PHD, University of California, Berkeley
Associate Professor of History; Associate Professor, Russian, Eastern European, and Eurasian Studies

CHAIR

Susanne Grace Fusso
BA, Lawrence University; MA, Yale University; PHD, Yale University
Chair, Russian, East European, and Eurasian Studies; Professor of Russian, East European, and Eurasian Studies; Marcus L. Taft Professor of Modern Languages

EMERITI

Irina Aleshkovsky
MA, Vilnius State University
Adjunct Professor of Russian Language Literature, Emerita

Priscilla Meyer
BA, University of California, Berkeley; MA, Princeton University; PHD, Princeton University; MAA, Wesleyan University
Professor of Russian Language and Literature, Emerita

Duffield White
BA, Wesleyan University; PHD, University of Michigan
Associate Professor of Russian Language and Literature, Emer

FACULTY
