Palestine, Zion, Judah, the Promised Land. A small piece of land in the Middle East has a very long and contested history full of religious meaning for Judaism, Christianity, and Islam. Some imagine the State of Israel as an island—"the only democracy in the Middle East" or the only Western state in the region--surrounded by a hostile environment. The geographical area, by contrast, has often been portrayed as a crossroad, a place where cultures clashed, merged, and exchanged ideas.

In this class, we will examine this tension between a physical and imagined space, between political reality and idea, by recovering alternative Zionist, non-Zionist, and anti-Zionist visions of the Zion. Jewish statehood is a very recent phenomenon. Throughout the modern period, the vast majority of Jews lived under empires, whether Habsburg, French, Romanov, British, or Ottoman. How did the imperial experience shape Jewish religious and political views? What role does the imagination of Zion play in today's political context? Reading political pamphlets, poetry, maps, artworks, and utopian fiction, we will pay attention to the construction of the Zionist idea not just in political Zionism but also in contrasting visions including Canaanism, cultural Zionism, diaspora nationalism, a Jewish-Arab federation, a binational state, and the rejection of statehood as heresy. In the last part of the class, we will look at recent contemporary issues from the news, e.g., the agreements between the State of Israel and the United Arab Emirates, or government corruption in Israel, in order to see how these ideas of Zion are still present in today's discourse.

CJST295 Religion in Dungeons and Dragons

As a fantasy roleplaying game, Dungeons & Dragons has been prevalent for over 40 years. In this game, players partake in fantastical journeys, slaying beasts, completing quests, and interacting with divine beings. Though not often discussed, religion has played an important role in Dungeons & Dragons since its creation: clerics pray to their gods and invoke physical changes in the world, strange cults organize and perform perverse rites, summoning ancient beings for evil. There have been many different editions of Dungeons & Dragons, and each treats these religious elements in a different way. This course answers the questions, "What role does religion play within Dungeons & Dragons and how does the presentation of religion within Dungeons & Dragons map onto scholarly trends within Religious Studies?"

CJST311 Pain and Punishment in the Hebrew Bible

The Hebrew Bible has many graphic depictions of pain and punishment; some inflicted upon the Israelites and many inflicted by the Israelites themselves. Many of the laws of the Hebrew Bible describe the proper ways to inflict punishment and many of those same laws describe the ways in which someone might be absolved of punishment. This course aims to answer the questions of: What role did pain and punishment play in the ancient world? How was the physical experience of either connected to religious experience? In what ways

was pain, and often disgust, utilized to either connect or separate someone from the divine? What is the relationship between divinity, power, physicality, and punishment? In asking these questions, this course will demonstrate that, much of the time, spirituality, devotion, and religiousness, need not be divorced from the physical world and need not be considered metaphysical qualities.

CJST312 Judaism in the Time of Jesus

This course is designed to help us understand the emergence of Judaism--its practices and beliefs, as a philosophy, a way of life, a religion--from the formation of the Hebrew Bible (ca. 400 BCE) to the parallel development of rabbinic Judaism and early Christianity (ca. 100 CE). We will be concerned with the creation of community and its institutions, the rise of sectarianism and claims of normativity, the creation of the Bible as scripture and various modes of its interpretation, the relationship of early Judaism to ancient Israelite religion and society, and relations between Jews and Judaism to gentiles and gentile culture. Attention will be given to the creativity of Jewish literature, its common setting in times of oppression, and its place in the religious heritage of Judaism and Christianity.

CJST314 Curating Religion: Museums, Monuments, and Memorials

Museums, monuments, and memorial sites have long been important sites for public reckoning with the past. But they are not only about the past, they represent present struggles about the meaning of history and the possibility of imagining different futures. In this multidisciplinary class, we will work as a group to examine diverse case studies in which religion and memorial culture intersect in acts such as curation, representation, conservation, and repatriation. Visiting exhibitions and working with Wesleyan's collections, some of the questions we will ask include: What are the ethics of the treatment of objects in museums and of repatriation? How does space shape religious experience in an arguably secular setting? How do monuments invoke religious imagery and symbolism in their construction of history? In what ways does placing something behind a glass case give it a religious aura, and in what ways does it drain an object of its sacralty?

CJST315 Hebrew in the Media: From National Literature to International Films and TV Shows (CLAC 1.0)

This new language course is offered as an enrichment opportunity to students with intermediate or advanced Hebrew skills who are interested in improving all their language skills and/or acquiring additional linguistic and cultural preparation for study abroad in Israel. Cultural activities including participating in the 23rd Annual Contemporary Israeli Voices 2024 and Lunch and Learn meetings with native speakers are part of the course. In addition, special writing workshops with internationally renowned Israeli scholars will be integrated into the course curriculum. The course explores the changes in Israeli society as it moves from national ideological literature to the exploration of new multicultural media such as films and TV shows and thus gaining international

fame and inspiring widespread emulation. The course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative sponsored by the Center for Global Studies. For more information, please check <http://wesleyan.edu/cgs/eventsprograms/clac/index.html>.

The course counts toward the minor in Jewish and Israel Studies.

CJST319 Crisis, Creativity, and Modernity in the Weimar Republic, 1918--1933

Born in defeat and national bankruptcy; beset by disastrous inflation, unemployment, and frequent changes of government; and nearly toppled by coup attempts, the Weimar Republic (1918--1933) produced some of the most influential and enduring examples of modernism. Whether in music, theater, film, painting, photography, design, or architecture, the Weimar years marked an extraordinary explosion of artistic creativity. New approaches were likewise taken in the humanities, social sciences, psychology, medicine, science, and technology, and new ideas about sexuality, the body, and the role of women were introduced. Nevertheless, Weimar modernism was controversial and generated a backlash that caused forces on the political right to mobilize to ultimately bring down the republic. This advanced seminar explores these developments and seeks to understand them within their political, social, and economic contexts to allow for a deeper understanding of Weimar culture and its place within the longer-term historical trajectory of Germany and Europe. This perspective allows for an appreciation of the important links between Weimar modernism and Imperial Germany, as well as an awareness of some of the important continuities between the Weimar and Nazi years.

CJST321 Dialogues of Love: A Close Reading

Towards the end of the fifteenth century amidst the burgeoning cultures of the Italian Renaissance in Naples, Genova, and Venice, the exiled Ibero-Sephardic philosopher and physician Judah Abravanel (Leone Ebreo) composed a philosophical work on erotic ethics as a dialogue between love (Philone) and wisdom (Sophia). "The Dialogues of Love" (1535) presented early modern readers with an erotic cosmology which drew upon Ancient and Medieval texts including Plato, Neo-Platonism, Neo-Aristotelianism, Kabbalah, and scriptural commentary. Widely translated, read, and reprinted throughout the sixteenth century, this text animated literary and cultural life throughout sixteenth-century Europe, finding its way into the work of poets and fiction writers such as Miguel de Cervantes. This course engages this unique and breathtaking work of early modern philosophy through a close reading of a Renaissance cosmos staged as a lovers' courtship.

CJST353 Race, Ethnicity, and Religion in Medieval Literature

Why do white supremacists celebrate the European Middle Ages as a lost era of racial and religious purity? This course approaches that question by considering the emergence of medieval ideas of race, ethnicity, and religious difference. We will also think through the meaning of these categories in medieval studies. Our focus will be on a selection of texts dealing with encounters--real and imaginary--of Western European Christians with cultures from the Mongol Empire to the Jewish communities in their own territories. The readings will begin historically with the Crusades and the gruesome chronicles written by Christian, Muslim, and Jewish authors. We will move on to religious polemics, travel accounts, and romances: fictions that re-imagine the past in terms of exoticized sexuality, racial transformation, cannibalism, and nationalist fantasy.

CJST413 Israeli Cinema (CLAC 1.0)

This Hebrew course will be linked to the film course, taught in English, entitled CJST 250: Eyes Wide Shut: The Eternal Presence of the Absent Arab in Israeli Cinema. This course is targeted toward students with very advanced knowledge of the Hebrew language. Students will mostly view the same films as the parent class, with special attention to the Hebrew language. We will analyze, discuss, and write on each of the films. The focus of the course will be to map the cultural and social changes in Israeli society reflected in the transformation in format and themes of Israeli films. Scholar visits will be part of the course, and students will attend a few cultural enrichment activities. This course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative; for more information, see <https://www.wesleyan.edu/cgs/eventsprograms/clac/index.html>.

CJST414 Israeli Cinema (CLAC 1.0)

This most advanced Hebrew course can be taken either as a language enrichment course to the parent course, CJS223: Israeli Women Filmmakers and Israeli Society, or taken by itself independently as an advanced Hebrew course. The focus of the course will be studying films made by female filmmakers. Students will analyze, discuss, and write on the films with special attention to mapping the cultural and social changes in Israeli society as well as changes in

films' formats and themes. Conversing in Hebrew with Israeli film directors and scholars during Lunch and Learn Meetings as well as attending the screening of films in Hebrew in the 18th Annual Ring Family Wesleyan University Israeli Film Festival and writing reflective papers on films will provide a cultural and social framework for the course. In addition, the course will include special workshops delivered by renowned Israeli filmmakers and scholars. The course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative sponsored by the Center for Global Studies. CHUM202F Deconstructing Democracy (FYS)

What role does democracy play in the narratives that political philosophers tell themselves about the moment human beings pass from the state of nature into civil society? Why is it that almost all political philosophies have almost nothing good to say about democracy? And how did it happen that democracy has come to be one of the most debated concepts straddling the borderline of the literary and the political, the real and the ideal? Seeking to answer these and other questions, this course will follow the concept of democracy through some canonical and non-canonical texts in or relating to political philosophy. We shall attempt to understand why democracy gives rise to the complications and paradoxes that are definitive of the conceptual space of political society.

CHUM204F Performance and Authenticity between Race and Gender (FYS)

This seminar is a cultural and intellectual history of fraudulence, fiction, and faking it. To deride a person or phenomenon as "all a performance" is to make an accusation of artificiality or inauthenticity. How do colloquial uses of

language reflect long-standing cultural suppositions, and how do connotations of performance as fakery or fabrication intersect with the actual work of performers themselves? In this interdisciplinary seminar, we will explore questions of performance, affective labor, subjectivity and self-making (and re-making), both onstage and off. We study performances found equally in everyday life, popular entertainment, and avant-garde art, and center the contributions of Black, feminist, and queer studies.

Topics include illusion, ventriloquism, and sleight of hand, as well as mimetic acting and the manufacture of "emotion," dance technique and the concealment of effort, and musical improvisation and the politics of invention. We consider the potent complexities of drag, camp, and minstrelsy--and historicize their surrounding discourses of fraudulence and authenticity. Looking at a range of (predominantly U.S.-based) practices from the mid-nineteenth century to the late twentieth, this course is not a comprehensive survey, but rather, examines key episodes in the history of modern "performers."

Together, we will grapple with the ways that artifice and theatricality have been historically reviled as qualities inherent to femininity and queerness, respectively; the historically complex entwinement between ideas of race and authenticity; and how hiding, fabulation, exaggeration, and duplicity have been mobilized as strategies of freedom and resistance--from the spectacular escape act of Henry "Box" Brown to the sensational camp and hyperbolic glamour of the East Los Angeles art collective Asco.

CHUM206F Art and the Global Contemporary (FYS)

This course introduces students to a range of artistic practices from the mid-20th-century to the present. We will consider the work of artists from Argentina, Brazil, Chile, Japan, Yugoslavia, Serbia, Germany, Poland, Ghana, Senegal, Mali, Nigeria, China, Iran, Iraq, Egypt, Lebanon, Morocco, Haiti, Cuba, Mexico, Vietnam, Thailand, South Korea, India, the Indigenous U.S. and the African Diaspora, among others.

We will not take our central terms for granted. Rather, we will ask: When, precisely, is the contemporary? How do different nations and cultures have varying notions of the present and the past? How do questions of tradition and futurity resonate in artworks, particularly in non-Western and postcolonial contexts?

Together, we will consider the status of the global and the role of the local. In the context of late modernity, can the "global," only ever name the circuits of capitalist exchange? We will consider how artists are both deeply attentive to local contexts, as well as engaged in a practice of diaspora; and how artists engage the politics of land, borders, the nation-state, and the violence that upholds them. That is, we will orient ourselves via a notion of cultural identity that, in Stuart Hall's terms, is "not an essence but a positioning."

CHUM214 The Modern and the Postmodern

In this course we will examine how the idea of "the modern" develops at the end of the 18th century and how being modern (or progressive, or hip) became one of the crucial criteria for understanding and evaluating cultural change during the last 200 years. Our readings will be drawn from a variety of areas--philosophy, novels, music, painting, and photography--and we will be concerned with the relations between culture and historical change. Finally, we shall try to determine what it means to be modern today and whether it makes sense to go beyond the modern to the postmodern.

CHUM233 All Ah We: Contemporary Afro-Caribbean Drama & Performance

What are the dramatic utterances of Afro-Caribbean artists? How do Afro-Caribbean playwrights and other narrative-based performance artists present "Caribbean" and/or "West Indian" subjectivities in ways that are shared, yet critically different? In what ways are Afro-Caribbean dramas and performance pieces repositories for the practical, the theoretical, the sociological, the political, the imagined, and the lost? In answering these questions and more, we examine these textual and embodied expressions from the complicated crossroads of class, creolization, diaspora, ethnicity, folklore, gender, history, indentured servitude, isolation, language, race, religion, and slavery. At all times, this course revels in the polyphony that is Afro-Caribbean drama and performance.

CHUM248 Shakespearean Revolutions

Shakespeare's works emerged during a period of revolutionary social, political, religious, economic, and cultural change, including the Protestant Reformation, the rise of print culture, the transition from feudalism to mercantile capitalism, early colonialism, global trade, and the emergence of the first, purpose-built, commercial playhouses. Innovations in dramatic form and genre, which Shakespeare helped craft, sought in varying ways to make sense of these momentous shifts for diverse theater publics. Revivals and adaptations of his works on stage and screen during times of revolutionary change have rendered the Shakespearean canon a site of subsequent social and cultural contestation. This class considers the "revolutionary" dimension of four Shakespeare plays both in their own time and place, and in later theatrical and filmic productions and adaptations. We will trace first-, second-, and third-wave feminist reimaginings of "The Taming of the Shrew"; Second World War- and

Vietnam War-era renderings of "Henry V"; civil rights and anti-apartheid era restagings of "Othello"; and attempts to decolonize "The Tempest."

CHUM288 Literary Perversions: Revolution, Democracy, Identity

The Federalist Papers wrote under the strong impression that the American Revolution was imperiled by an overwhelming debt and the lack of a national authority and identity to bind the States together. Public fear of moral degeneration via the replacement of the "Old World" symbolic order with a "New World" order under the aegis of "representative democracy" loomed over the republic.

Taking these concerns and the dissemination of The Federalist Papers as our point of departure, this course will examine how representations of "non-normative" identities in several major 19th-century works relate to the problems of representing democracy in the aftermath of the American Revolution. Many of the most famous canonical literary texts in the United States during the 19th century write about "non-normative" topics such as maternity, slavery, bestiality, and gender inequality in the context of narratives that attempt to rewrite the legacy of the American Revolution. By focusing on the literary treatment of these "perverse" topics, we shall attempt to understand whether the authors we will undertake close readings of in this course were successful in their endeavors

to not only amend the shortcomings of the Revolution, but also to think more rigorously about the history of slavery and gender inequality.

CHUM289 Staging Race in Early Modern England

This course analyzes the dramatic representation of race in the plays of Shakespeare and his contemporaries. We will examine the historical emergence of race as a cultural construct in relation to related conceptions of complexion, the humoral body, gender, sexuality, and religious, ethnic, and national identity. Readings focus on three racialized groups: Moors, Jews, and Native American "Indians." After reading the play-texts in relation to the historical moment in which they were first produced (using both primary and secondary sources) we will then consider their post-Renaissance performance histories, including literary, theatrical, and film adaptations.

CHUM301 Flaunting: Extreme Fashion on the Early Modern Stage

Frilly ruffs and cuffs, bulging codpieces, towering "chopines" (platform shoes)--oh my! This course considers the early modern stage as an engine of fashion and the forms of sartorial ostentation to which it gave rise. How did fashion contribute the rise of the commercial theater? How did clothing shape gender, sexuality, class and race in plays by Shakespeare and his contemporaries, which were performed by adult men and gender-fluid, "boy" actors? How did sartorial excess and the sumptuary laws that sought to control it affect social status and mobility during the rise of capitalism? And how were early modern fashion trends updated in later productions of these plays?

CHUM302 Black Speculative Fictions and the Anthropocene

The genre of black speculative fiction--in the form of literature, art, music, and theory--provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the "future," black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term "Anthropocene"

first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which "humans" had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a "species"? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene's attendant catastrophes, which include earthquakes, altered ocean waters, and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

CHUM303 The "Self" in Self-Determination: Personhood & Peoplehood in Empire & Decolonization

This seminar course will explore the historical literature on self-determination and decolonization movements in the twentieth century across the globe. Combining the fields of US imperial history, international history, global indigenous studies, and diasporic studies, this course will delve deep into the historical development of right of self-determination within and outside of imperial regimes. It interrogates how peoples articulated their sense of "personhood" and "peoplehood" to claim political rights within the borders of nations and empires, as well as on the international stage. The course will also explore how decolonization as a concept transformed beyond the realm of law and personhood and encompassed culture, the environment, and lifeways.

CHUM304 Entangled Sounding Objects: Musical Instruments of Central Asia

Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they are at once tangible and symbolic sounding objects that hold significant meanings for the communities they serve. This course will explore the social roles and cultural meanings of musical instruments in Central Asia, a region once traversed by the Silk Road, which extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south.

Drawing on theories and ideas derived from interdisciplinary studies of material and sound culture, the course will examine how instrument making and performance are shaped by and entangled with social systems of value and cosmology, political ideology, ecology, and economy. Class meetings will focus on case studies of bowed and plucked lutes, zithers, mouth harps, end-blown flutes, and frame drums among historically nomadic and sedentary peoples of Central Asia. Through these case studies, students will learn about the origins and historical trajectories of individual musical instruments from the pre-modern

period to the Soviet and post-Soviet eras; consider the social and political connotations of various performance configurations and repertoires; discuss the status of instruments in Islam and indigenous spiritual belief-systems, and the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

CHUM305 Semiotics of al-Barzakh: The Grammars of the End of Days and Horizons of Possibility

This course builds from the Islamic eschatological concept of "al-Barzakh" as it has been taken up in anthropological theories, as well as in Islamic thought more generally, with careful attention to the term's semiotic transformations and significations. It does so in order to explore both how the term describes an earthly place and an eschatological hereafter as well as a theoretical and practical alternative to the notion of the liminal personhood.

Since at least the 12th century, thinkers have explored the Islamic concept of al-Barzakh to explore the connection between the earthly present and the heavenly hereafter and the scales of judgment in between. This term, somewhat akin to Christian notion of purgatory or limbo, appears only three times in the Qur'an. It is explained as being like the productive firmament that separates salt and sweet water. In places like Morocco, this is commonly interpreted as referring to the Strait of Gibraltar and the underwater isthmus that separates and produces the waters of the Atlantic Ocean and the Strait of Gibraltar.

We will read both contemporary scholarly apprehensions of this term and its various applications in Muslim-majority contexts such as Morocco, Egypt, Sudan, and Iran--often ethnographic--as well as Islamic philosophy that attempts to bring the concept into relation with earthly personhood. In our approach, we will move through a variety of scholarly genres and epochs in order to trace the genealogies of present-day popular invocations of the term as we contrast it with other apprehensions of the eschatological and the liminal.

We will work to understand how this term contains space for both an imagination of everyday life as well as the boundary-generating difference marking here and there, then and now, by looking at how the term is evoked by artists, scholars, religious adherents, psychoanalysts, and border crossers. As we go along, we will pay special attention to the languages of belonging and difference evoked by this term and attend to how an anthropological approach to semiotics might elucidate new grammars of community and horizons of possibility that exist alongside notions of the liminal, uncanny, dreaming, the hereafter, and the imagination of the end of days.

CHUM306 Techniques of the Liar: Performance, Artifice, Fraud

This seminar is a cultural and intellectual history of fraudulence, fiction, and faking it. We will explore both specific performance practices as well as theorizations of artifice, fraud, and authenticity. Topics will include illusion, ventriloquism, and sleight of hand; mimetic acting and the manufacture of "emotion"; dance technique and the concealment of effort; and musical improvisation and the politics of invention. We will also consider the complexities of drag, camp, and minstrelsy and historicize their surrounding discourses, centering the contributions of feminist, queer, and critical race studies. Looking at a range of (predominantly U.S.-based) practices from the mid-19th century to the present, we will consider how artifice and theatricality have been historically reviled as qualities inherent to femininity and queerness, respectively; how "authenticity" is both gendered and racialized; and how hiding, fabulation, exaggeration, and duplicity have also offered means of freedom or resistance.

CHUM313 Performing Property: Legal Experimentation and Activism in Contemporary Art

Who owns works of art-artists, buyers, museums, or the public? Who is granted the privileged status of author? Do artworks comprise a special category of things? Such questions underlie attitudes concerning art and cultural artifacts, and they also inform intellectual property laws. Since the 1960s, conceptual and performance artists have taken up these queries to investigate the nature of authorship and ownership generally, experimenting with aesthetic strategies as well as legal tools like contracts to ask: How do social and visual cues communicate boundaries, shape territories, and perform property into being? What happens when materiality and ownership are contingent? Can artists model alternate property relations through their work? How might art expose fissures and failures in law? Recent calls for decolonization and the restitution of looted objects have also pushed museums and archives to reconsider whether they are the outright owners of cultural artifacts, or stewards responsible for their care. Furthermore, as surveillance technologies increasingly pervade daily life, and digitalization leads licensing to supplant ownership, the future of privacy and property norms is unclear. These developments render contemporary art fertile ground for attending to the ways in which property structures are conceived, take shape, are reproduced, and how they might be reformed, calling upon us to pay attention to intent, consent, and the needs of others.

Seminar readings will be drawn from the burgeoning subfield of Art and Legal Studies with texts by key scholars including Joan Kee and Martha Buskirk, complemented by legal theorists such as Sarah Keenan and Cheryl I. Harris whose work has influenced artists. Alongside, we will closely examine the work of artists who challenge traditional ownership relations to problematize law, such as Felix Gonzalez-Torres, Jill Magid, and Cameron Rowland. Class meetings

will be complemented by screenings and visits to local collections, as is feasible. Assignments include a brief paper on an artwork, as well as a final research paper or digital exhibition requiring students to examine a particular theme or artist in-depth.

CHUM317 Why Literary History?

Why should poems, novels and plays written centuries ago engage our attention? Why should we care? And how have answers to these questions themselves changed over the course of literary history? We will dwell, in particular, on two key historical turning points: eighteenth-century Britain, when influential canonizing projects in print worked to define a native "English" tradition at the same time as the country pursued imperial expansion, and mid-twentieth-century America, when New Criticism institutionalized certain modes of reading historical literature just as English as a discipline was taking something like its modern shape. And, of course, we will grapple with the purposes, the pleasures, and the possibilities of literary history now. Throughout, we will also be attending to the practical work of doing literary history - students will work in Special Collections to produce their own edition of a historical text.

CHUM320 Staging the Real in Early Modern England

The stage in Shakespeare's time was by modern standards "relatively bare," lacking illusionistic sets that would later be relied upon to conjure the reality of a particular time and place onstage. What, then, defined the "real" prior to the emergence of modern theatrical realism and the illusionistic conventions associated with it? What representational strategies (of text, costume, props, sound, stage machinery, etc.) were used to convey "realness" onstage at the Globe and other early English theaters, which lacked the "fourth wall" of the proscenium arch that separated the realities of the play-world from those of everyday life?

This course explores the dramaturgy of the "real" in early modern England in conjunction with the Center for the Humanities Spring 2024 theme of "Get Real," in plays by Shakespeare and his contemporaries that experimented with new ways of bringing to life the realities of war, true crime, sex and gender "deviance," street life and lingo in London's underworld, serendipitous wealth

gleaned from capitalistic enterprise, and other sensational news ripped from the headlines.

CHUM321 Secrets, Lies, and Fictions in the Americas

In 1964, historian Richard Hofstadter underlined the spread of a "paranoid style" in American politics. Although Hofstadter's description seems more appropriate today than ever, in an increasingly interconnected global order the role of misinformation, uncertainty, manipulation, and conspiratorial imaginaries in shaping and limiting democracies and public spheres cannot be exclusively assigned to any particular locale. From a continental standpoint, this course offers analytical tools to explore the political complexity of lies, secrets, and fictions in both the United States and Latin America since the mid-twentieth century to this day. By studying a series of cases—including the Guatemalan civil war, the assassination of John F. Kennedy, the Pentagon Papers, the U.S. intervention in the Middle East, the "dirty war" in Latin America, censorship in socialist Cuba, the arrest of Augusto Pinochet in London, Wikileaks, hacker practices in the early days of internet, or Cambridge Analytica—we will address the relations between surveillance, spectacle, and conspiracies (both factual and imagined) in the contemporary techno-political landscape. Moreover, the course emphasizes the speculative and theoretical potentials of art and literature when it comes to understanding socio-political phenomena. Beyond distinctions between truth and falsehood, fictional constructions are key to our collective capacity to imagine alternative worlds. By mapping out the ways in which fictions circulate as such or rather as truthful versions of reality, we will problematize the limits and uses of truth, lies, and official and alternative narratives, as well as the power of states, corporations, individuals, and collectives to direct attention and frame information.

CHUM322 Visions of the Future: Capitalism and Colonialism in the World's Fairs

This course will explore the history of the world's fairs from the 1851 Great Exhibition in London to the 1939 New York World's Fair. These events showcased the newest technologies that would revolutionize life and labor for millions of human beings around the world. They also presented to the public new consumer goods and forms of entertainment such as music, dances, and sports. Moreover, they were sites of competition for rising nations and empires. Each participant country brought artifacts that demonstrated their (often idealized) national characteristics and development. Western powers displayed colonial products and peoples to show how they had been advancing in their expansionist enterprises. The students will read works on the humanities and social sciences that delve into the meanings of the world's fairs. They will also analyze primary sources (texts, paintings, film, songs, cartoons, and more) which will allow them to ask their own questions about these events.

CHUM323 Documentary Fictions

How stable is the binary distinction between the documentary and the fictional? Is fiction's claim to representing reality any less valid than that of non-fiction?

How does creative non-fiction conjure the sense of the Real? Can an archival document convey the depth of spiritual, emotional, and aesthetically infused intimacy on its own? What happens when the documentary and the fictional overlap to produce competing versions of the Real? What is at stake in such an overlap when the competing versions of the Real vie for a definitive, true account of events past and present? This class investigates various genres of storytelling that appeal to the documentary and the factual in pursuit of authenticity: propaganda, counter-propaganda, conspiracy theories, political and artistic manifestos, historical fiction and cinema, diary writing, autobiography and memoir, and documentary photography and film. Focusing geographically on East-Central Europe and Russia and chronologically on the last 100 years, the class will take up such thematic units as civil war, socialist realism, capitalist realism, the deaths of dictators, revolutionary hagiography, homefront narratives, and survivor testimony.

CHUM324 Black Girl Magic?: Survival and Speculative Fiction in the Social World

"Black Girl Magic?" explores and examines the sociological origins, usages, and deployments of the now-popular hashtag. Shortened from "#BlackGirlsAreMagic," coined by CaShawn Thompson in 2013, #BlackGirlMagic has seen its share of celebration and controversy. Used by and for figures such as former First Lady Michelle Obama and Janelle Monae, the hashtag appears almost everywhere to provide exemplars for the resilience of Black women and girls. However, some critics have questioned trending characteristics among those who have been branded with the hashtag--cisgender, well-to-do, fit/thin, non-disabled, and/or famous--and have asked since the beginning: To whom exactly does this phrase belong? Who does it include? And why should we use it? This course aims to survey all those questions and more. It will highlight Black women, trans and gender non-conforming writers, as well as sociologists and those not officially affiliated with the field, to deepen our understanding of Black life experiences in a global social world. We will dive into and deconstruct what we know about concepts such as "survival," "joy," "imagination," and "community" via Black feminist thought, queer/quare studies, popular culture, political science, speculative fiction, and cultural sociology.

CHUM325 The Work of Art Against Work: Art, Labor, Politics

Understandings of late 19th- and early 20th-century avant-gardes are tied inextricably to leftist theory, particularly that of the Frankfurt School. This advanced seminar will consider the legacies of that entwinement, while focusing more specifically on its transformations from the late 20th century to the present: We will examine how artists have engaged the "work" of art in relation to the rise of post-Fordism, a globalized economy, and new theories of work and anti-capitalism. We will pay special attention to gendered notions of work and the division of labor (including "craft," affective labor, domestic work, care work, sex work, and more), to debt and racial capitalism, and to the rise of speculative finance and its links to the art market and the patron class.

CHUM330 Economies of Erasure: Exploring the Violence Concealed by the Liberal Promise of Care

This course will aid students in understanding and recognizing the processes of erasure that maintain ongoing regimes of domination. In particular, we will attempt to understand how the twinned promises of equity and tolerance made by seemingly liberal, multicultural democracies work to conceal the ongoing--and specifically targeted--violence that in fact constitute and continue to subtend these nation-states. How, we will ask, do these regimes make violence disappear through the promise to "care" for their citizens, even as they wield spectacular violence to maintain domination? How are we as subjects of these regimes conditioned to pay attention to certain events, ideas, and systems, and what is made to disappear through such selective forms of attention? What communities, bodies, and individuals are sacrificed by the liberal promise of care? To answer these questions, the course will juxtapose readings in philosophy and social theory with ethnographic and historical case studies, giving students both the conceptual tools to analyze erasure and a set of examples through which to understand how these forms of erasure operate in the world. Crucial to our tool kit is the concept of disavowal, best understood as an active deflection from attending to the obligations of what one knows or should know. Disavowal, as we will see, makes it possible for subjects to imagine the political, social, and cultural spaces in which they live as moral, legitimate, and ethical, taking violence as an aberration rather than as the normative maintenance of an order of domination. This disavowal, the course contends, grounds itself in the ideologically charged embrace of a liberal sense of care that is, in turn, abstracted away from actual and ongoing histories of power and domination. In order to manage the potential scale of this exploration, we will primarily examine examples from North America, examining how white supremacy, patriarchy, and settler colonial domination operate in tandem in order to legitimize regimes of power by disavowing their violence.

CHUM331 Sophist, Statesman, Philosopher: Plato's Later Metaphysics and Politics

How is it possible to speak falsely? Plato connects this question with a puzzle he inherits from the great pre-Socratic philosopher Parmenides: to speak falsely is to speak about what is not; but in speaking about what is not, we ascribe being somehow to not-being, which sounds like a contradiction. This seminar will focus on the metaphysical, epistemological, and political issues generated by Parmenides's puzzle and explore Plato's solution to them in two of his later-period works: the Sophist and the Statesman. In the process, we will see how Plato rethinks his theory of forms in these dialogues, how he learns to let go of Socrates, how a sophist should be distinguished from a philosopher, and how all of this is relevant to politics and the art of ruling.

CHUM333 About Clothes: Styles, Histories, Activisms, Poetics

In this course you will learn about some of the looks, discourses, forms of work, sensory meanings, and embodied histories relevant to/circulating around the wearing and study of clothing, in our time-place and at selected points over the past several hundred years. The syllabus includes works of literature, scholarship, visual art, performance, journalism, and activism. Among the questions we will ask: What does it mean to read clothes? How may we understand the

transatlantic and global circuits that have informed various fashion systems, including ideas about who may wear what kinds of clothes? How and why have the labor, products, pleasures, and pains of this (multi-billion-dollar) business been understood as trivial? Throughout the semester, you will conduct your own experiments at the intersections of language, identities, and the materiality of clothing.

CHUM334 Native Matters: Materiality in Indigenous Literatures Across the Pacific

This seminar contemplates the function and representation of materiality in contemporary indigenous literatures. It highlights the centrality of embodied practices in indigenous cultural lives. The primary texts for the course will be literary texts (novels, short stories, essays, and poems) from different indigenous communities, including from North America, East Asia, Austrasia, and Oceania. We may also deal with non-textual materials such as artifacts, maps, clothes, video games, etc. Readings will also include theoretical or philosophical works from indigenous and non-indigenous thinkers on the subject of materials and materiality.

The course will thematize materiality in two ways: the first is to understand materiality as a way for indigenous authors to represent or construct various understandings of indigeneity, either in traditional lifeways, modern indigenous realities, or indigenous futurisms, both within and between specific indigenous communities. The second is to engage with thing theory and materiality as a method of literary analysis.

CHUM335 Blackness and Affect

Critical theory and the humanities are in the throes of what has been termed "the affective turn," wherein scholars theorize affect--broadly construed as social feeling or bodily intensity--as central to understanding (post/human) relationality, the social, ethics, and the political. Haunting this field of inquiry is a series of questions: Can a turn to affect account for the figure of the Slave? Can an embrace of affectivity, as potential, bring Blackness into the realm of our understanding "without trying to fill in the void" (Hartman)? Rather than conceptualizing affect as the connective thread between bodies and worlds, or as a purely relational force, how might we think about affect and non-relationality; affect outside of and against the world; affect without the body? This seminar will engage these, and related, questions through extended explorations of the relationship between affect theory and Blackness. Readings will include: Frantz Fanon, Lauren Berlant, Brian Massumi, Sarah Ahmed, Rizvana Bradley, Xine Yao, Sianne Ngai, and Darieck Scott, among others.

CHUM336 Black Texts, Lost and Found

This course examines histories of loss and recovery of black texts in the US and the Atlantic world more broadly. We will bring a three-pronged approach to our subject matter. We will analyze first the constitutive silences of the archive: epistemic and material neglect, or what Michel Trouillot has termed the "silencing of the past"; second, the preservation efforts of black newspaper editors, librarians, and bibliophiles; and third, the "counter-archiving" work of Afro-diasporic historical and speculative fiction. As we traverse different periods and empires we will consider what the concepts of the "black archive" and "black ephemera" mean to different disciplines. We will study the repressions of black Arabic writing practices in the US South and our fragmentary recovery of them in the late 20th century, unfinished novels about Black Atlantic revolutions such as Martin Delany's "Blake," incomplete runs of historic black newspapers, debates about the illusions and desires of "recovery," and the criteria that determine what counts as ephemeral and when.

We will move across different media, from print--"I, Tituba," "M Archive," "Blake," "(Dis)forming the American Canon: African-Arabic Slave Narratives and the Vernacular"--to films--"The Watermelon Woman," "Looking for Langston," "The Last Angel of History"--and from digitized databases of photographs at the ongoing archiving project The Missing Chapter: Black Chronicles to digitized newspaper archives.

CHUM339 Catching Glimpses: Perceiving Infinitesimals in the Scientific Revolution

The rise of mathematical natural science in the early modern period marked the dissolution of objective reality as it had previously been known. Since Aristotle, perceptible objects had been understood to be enduring substances whose identities were inscribed in their very being and which retained these identities through change. The mechanistic worldview of the 17th and 18th centuries exploded this stable order into a telescoping multiplicity of material systems, from the infinitesimally small to the infinitely large. Rather than encountering a world of enduring and identifiable substances--animals, vegetables, and minerals; people and artifacts--the perceiver was instead confronted with fleeting constellations of homogeneous matter in a perpetual

flux, no sooner glimpsed than gone. This metaphysical picture of infinitary flux was complemented by a new branch of mathematics, the infinitesimal calculus, which proved immensely successful both in uncovering new theorems and in modeling empirical phenomena.

Both the metaphysics and the mathematics of the new science were, however, rife with paradox. If material objects not only harbor a microscopic substructure but are, in fact, divisible without end, then we are faced with pluralities of pluralities without any underlying unities--parts of parts of parts...and not a whole among them. Conceptual instability afflicted the infinitesimals used in calculus, as well. In some contexts they were treated as very small but non-zero quantities, in others as strictly zero--provoking one critic to call them "ghosts of departed quantities."

In conjunction with the CHUM theme "Ephemera," this class will study the philosophical turbulence induced by the new science--in particular, by the mechanical philosophy and infinitesimal calculus. We will pay special attention to its consequences for the philosophy of perception. Aristotle compared perceptible objects to signet rings impressing their distinctive forms on the receptive wax of the human sensorium. But if there are no enduring substances or determinate forms, how are we to understand our perceptual relation to the world? How must perceptual experience be reconceived so as to accommodate the fleetingness and flux of material phenomena? And how is it that, though we are awash in ephemera, we nevertheless enjoy an (illusory?) impression of endurance and stability?

CHUM343 Imitations of Life: Experimental Bodies at the Interface of Science and Culture

This seminar will examine scientific and cultural practices of corporeal simulation, or, practices of bodily substitution, imitation, and re/modeling. Topics examined will include: reproductive surrogacy; gender reassignment surgeries; experimental subject protocols; prosthetic enhancements; xenotransplantation; biometrics and alternative forms of bodily imaging; the use of nonhuman animals as human proxies; the rise of personalized medicine, and more. Students will engage with a wide range of case studies and theoretical materials from interdisciplinary perspectives. Special attention will be paid to the relationship between scientific discourses of "universality" and "particularity," where socio-cultural forms of difference (e.g., race, gender, disability, etc.) are at

once ignored and exacerbated. While most of the material addressed in the class will relate to recent phenomena, we will also be attentive to relevant histories of corporeal differentiation and reimagining.

CHUM347 Sound Systems: The How of Hearing

Since the late 19th century artists, corporations and composers have all proposed, developed, presented, and occasionally commercialized physical systems that reconfigure how sound can be experienced. The early impact of the entertainment industry ranged from the introduction of stereo to movie theaters in Walt Disney's Fantasia to the development of close miking for the crooning of Bing Crosby to McCune sound service's introduction of stage monitors for the benefit of Judy Garland. Artists and composers used related methods to propose entirely new understandings of how music can be. Futurist Luigi Russolo's Intonarumori of 1913 proposed an Art of Noise, while Pauline Oliveros' concept of deep listening developed listening as a foundational form of music making. R. Murray Schafer's concepts of soundscape and acoustic ecology project a music of environmental relations mediated through sound, while Maryanne Amacher's sound characters create individual sounds understood as capable development and change beyond the expanse of any one performance or composition.

This class will be a performing ensemble focused on "sound systems" as musical instruments and musical practices performing live and fixed media sound pieces through sound systems we will configure for different sites on campus. Together with developing the technical skills required to mount these pieces, we will also investigate and discuss the varied musical, social, acoustical, and psycho-acoustical understandings of music and sound that influenced their shaping.

CHUM348 Plague and Care-Work in Shakespeare's England

Plague exerted an enormous influence on the plays of Shakespeare and his contemporaries, and indeed on theater as a commercial enterprise. Pandemic theater closures and quarantines were frequent throughout his career, and it is likely that his son Hamnet died of plague. This seminar examines four Shakespeare plays (Romeo and Juliet, Hamlet, King Lear, The Winter's Tale) and their preoccupations with time, temporality, belatedness, mortality and ephemerality (of theater and the world-as-stage) and with an ethics and recognition of the work of care, as these are shaped by the recurrence of plague—a perspective that will allow us to draw connections and discern differences between Shakespeare's time and our own.

CHUM349 Body Histories in Africa

African bodies have long generated intrigue and misunderstanding. Outside observers, such as missionaries, travelers, colonial administrators, and anthropologists, have documented practices such as scarification and spirit possession as they simultaneously rendered their African practitioners "other." All too often the body as an instrument for creative expression, ritual healing, or social action was lost in translation. More recently Western feminists have focused their attentions on female circumcision. The persistence of circumcision (for both girls and boys) and other bodily practices speaks to their enduring social value and symbolic meaning. What can we learn from these and other body histories in Africa? In this course we will examine embodied rituals such as spirit possession, which marks the body as a site for human engagement with the supernatural. The widespread practice is also a gendered technique of healing documenting shifting understandings of health and illness. In addition, we will study the practice of "sitting on a man" by which women addressed the body politic through dance and collective nudity. The revealed body in motion shamed men into action and has been employed in the 21st century to shame oil companies for their greed and environmental destruction. In this and other examples, we will approach the body as an archive: it is an archive in motion and subject to social renewal. Our embodied evidence will allow us to explore shifting histories of religion, art, sexuality, the economy, and politics from the precolonial era to the contemporary moment. By taking the body as our lens we will also learn new ways to examine the African past through histories of aesthetics, value, labor, hierarchy, and knowledge production.

CHUM351 Melodrama Since 1700

Although today melodrama calls up ideas related to film, the term has musical origins: it originally indicated a work in which melos (music) and spoken drama were united in one multimedia format. Eighteenth-century melodrama admitted of many manifestations, encompassing everything from comic operas (like Mozart's Magic Flute, which alternated singing with spoken dialogue) to experimental symphonic works (in which a narrator's declaimed monologue was emotionally painted by the accompanying orchestra). Melodrama in this musical sense persisted through to the twentieth century, and included notable works such as Schoenberg's *Pierrot Lunaire*. But slowly melodrama as a term began to take on connotations relating to one of comic opera's central conceits: hyperbole and exaggeration. Melodrama became synonymous with comic excesses of emotional portrayal. Eventually, during the twentieth century, this meaning fastened onto a constellation of generic implications within the domain of film (think, for example, of Joan Crawford in *Mildred Pierce*). In its afterlife during the twenty-first century, melodrama has sometimes been used pejoratively: it can be employed as an epithet to disqualify the performance of emotion as inappropriately intense, or to designate emotion connected to an ostensibly inappropriate subject. But even in this new sense, melodrama retains an element of its early history insofar as it can be appropriated within subcultures in order to comically mock the traditions of mass culture. This course examines the long history of melodramatic art forms from the eighteenth century through to the present day. Together we will perform close readings of the objects within this rich tradition, supplemented by readings in queer theory, critical theory, and performance studies.

CHUM352 Following Fornés: Creativity, Intimacy, and Imagination

This course undertakes an investigation and application of the creative process of visionary iconoclast Maria Irene Fornés: a queer, Latinx playwright whose wildly idiosyncratic plays defied both convention and categorization. Fornés' legendary workshops shaped a generation of playwrights, including Nilo Cruz, Caridad Svich, and Sarah Ruhl.

Students will engage with Fornés' own creative process via her ephemera: in this case, the spoken fragments, outtakes, and audio marginalia left behind from the filming of her documentary collaboration with director Michelle Memran, "The Rest I Make Up." As I work to compile and cohere this material into a book, the class will be applying it, directly, to the conception and creation of their own performance works.

Students who are interested in writing/directing/devising live works of performance are best suited to this class. No former experience necessary, but a willingness to create and share live work and writing on a weekly basis is required. Our work will be contextualized by assigned research and writing into Fornés as a key figure of the American theater, and will culminate in the presentation of our creative projects.

CHUM353 Media Revolutions: Color Television and the Humanities in the 1960s and 1970s

This course visits some of the groundbreaking TV series that presented humanities and sciences to global mass audiences in the 1960s and 1970s. Television emerged as a powerful cultural presence and with remarkable speed. From the late 1960s, the British Broadcasting Company, in partnership with PBS in America, created a series of television programs (partly to widen the audience market for new color television programming). This course focuses on the role of television as a still new, and potentially disruptive, medium. We will look at and discuss a range of British TV series from Kenneth Clark's "Civilisation" and "Monty Python's Flying Circus" (both 1969) to Jacob Bronowski's "The Ascent of Man" (1973) and Alistair Cooke's "America" (1972), John Kenneth Galbraith's "The Age of Uncertainty" (1977), and David Attenborough's "Life on Earth" (first aired in 1979). We will read and discuss works of art and media criticism around this time that laid the groundwork for major conceptual and theoretical remappings of the fields of cultural and visual studies. We also will explore the impact of television on art worlds and museums, looking at how 1960s' color television documentaries influenced the way that humanities are presented televisually up to today. This course satisfies requirements for the "Visual and Material Culture" module in history and major requirements for the Science in Society Program.

CHUM355 Social Movements Lab

What can we learn from social justice activists about the economic, political, and environmental struggles facing us today, including mass incarceration, immigration, economic precarity, and the violence of the state? Where are the critical sites of queer, trans, left, feminist, black, indigenous, disability, and environmental struggle? How do these movements converge, and where do they diverge? This participatory, interdisciplinary research seminar enables you to embark on an independent, semester-long research project on the social movement or activism of your choice. We'll start with some foundational reading on multidisciplinary social movement research; archival, ethnographic, and participatory methodologies; and histories of social justice struggles in the U.S. The remainder and majority of the seminar is laboratory style, taking shape around your particular projects. Each week, we will collaboratively analyze one or two projects, mapping out and comparing methods, goals, visions, struggles, and contexts of the movements under study. Our goal is to understand a range of social justice activism in their economic, political, and historical context, with an eye toward integrating activist scholarship and social change. The activism you research can be contemporary or historical; local, national, or global; and can take any shape: direct action, community organizing, activist philanthropy, art as activism, etc. You do not need previous experience or activist contacts for this course—just passion and the desire to learn collaboratively!

CHUM359 Making the Psychological: Discovering, Manufacturing, Circulating

Psychology aims to explain human experiences and thoughts, including unconscious ones. Using scientific methods, psychology produces valid representations of human nature, names them, and circulates that knowledge for both its truth value and usefulness to society and individuals. Despite much success in these aims, the validity of much of psychology's knowledge is in being challenged - as evidenced in recent concerns about the reproducibility

of experiments. We will examine the epistemic grounds of psychology's truth claims and consider alternative models that understand the truth claims to be enactments, constructions, or ideologies that rehearse cultural beliefs. Case studies of science-based knowledge eventually found to be inaccurate or exaggerated (priming research; the power pose) are used to examine how some truth claims are generated and challenged, and cases of robust research are used to explore how some truth claims acquire credibility inside and outside the laboratory. We ask, too, how these claims travel to be taken up as new ways for individuals to experience the self and social world, and examine the public's and our own aspirations to expand consciousness and act otherwise. Students will develop case studies of psychological knowledge, its validation, circulation, and effects in the world.

CHUM360 The Environmental Crisis and Nuclear Testing Narratives in Global Francophone and Arabic Cultures

This interdisciplinary course examines nuclear themes, with a particular focus on nuclear testing as depicted in novels, film documentaries, and poetry within Francophone and Arabic cultures. It emphasizes the profound impact of nuclear testing on human life and the environment. The course analyzes literature in French and English as well as visual materials (photography and films), archival materials, political writings, news articles, and websites. Students must possess reading ability in French and an interest in North African culture.

CHUM361 Queer & Trans Erotic Archives

Is it possible to capture and archive ephemeral, flickering pleasures? This course addresses this question by problematizing the relationship between embodied pleasures and affective memories on the one hand and historical analyses on the other. Based on Derrida's critique of archives' selective preservation mechanisms and reification of normative narratives, queer studies scholars have tried to create their own "counter-archives," often by means of an alternative reading of conventional archives. First, participants will discuss the ethics of reenactments and appropriations of archived desires, analyzing specific case studies that will be an entry point into broader issues related to the scholar's involvement in the voyeurism of the archive. Second, participants will discuss how a focus on queer cultures leads to a rethinking of what constitutes archival material, expanding this definition to include erotica and porn, feelings, ephemera, performances, and mass media. Course readings will also reveal the artificiality of the established boundaries between high and low culture, between authoritative knowledge and experiments with bodily pleasures. The course interrogates pornography's potential as a historical source that reveals non-normative fantasies. Participants will discuss the relationship between sexual fantasy and social reality, between representations of idealized boundless pleasure, and historical contexts of stigmatization, pathologization, and institutional violence. This will lead to debates on archival sexual activism and minoritized bodies in the archive, in order to fully grasp the contraposition between over-determination and queer utopianism.

CHUM362 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of repatriation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and repatriation?

CHUM364 Shakespeare's Islands

How did England's insularity and expansionist ambitions on the world's stage shape Shakespearean dramaturgy in his many plays with island settings? This course, taught in conjunction with the Center for the Humanities' spring 2022 theme of "Islands as Metaphor and Method" considers how Shakespeare's island locales (e.g., in ancient and medieval Britain, the Mediterranean, and the Americas) transformed the Globe theater into a physical and conceptual site for imagining the utopian and dystopian potential of early English nation-building and colonial expansion, and for exploring the poetics of relation and alterity, peripherality and centrality, archaism and futurity. In addition to studying the play-texts themselves, we will consider how their island settings are explored in subsequent theatrical and film productions and adaptations.

CHUM366 Ecologies of Attention: Biosemiosis, Attunement, and Ethics

We consider variants on biosemiotic accounts of meaning, following one thread through Emerson to Nietzsche, another from Peirce and James to Bateson (Ecology of Mind, 1972) and Gibson (Ecological Approach to Visual Perception, 1979), and a third through contemporary indigenous thinkers and anthropologists attempting to bridge scientific ecology and animist panpsychism--Kimmerer, Whyte, Kohn, Ingold, Strathern. While most of the texts here focus on the nature of meaning as a living process, they are also in constant dialogue with normative concerns, being both motivated by subversive or non-humanist ecological values and inspiring distinctive insights about how to lead meaningfully connected lives.

CHUM371 Afro-pessimism, Gender, and Performance

This class engages African and African diaspora critical thought and aesthetic production (dance, visual art, performance art, installation, film) to think about colonial dispossession, objectification, and repatriation. We will address topics such as the repatriation of artifacts and other ephemera taken from Europe's colonies that are housed in the archives of European cultural institutions. The objects in question have been described as either artwork, artifacts, or anthropological fetish objects (depending on which field one engages with). How

can we rethink our understanding of objecthood as irreducible to "inanimate" things but as also signaling a regime of imperial domination and enslavement that violently turned African personality into a status of objecthood? What does it mean to think about the object (broadly defined) in relation to loss and the (im)possibilities of repatriation and reparation? How does the Black performer's body's disappearance/remains endow the Western art institution? The course will encourage students to think about repatriation as well as certain losses that can neither be repaired/repatriated nor evidenced in conventional ways. In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, as well as the promises and ends of repatriation? The assigned readings offer ways to think about colonial archives not merely as neutral repositories of past events, but also as performances; as enactments of power, aesthetic value judgment, and hierarchical arrangements of knowledge production. The theoretical, art historical, psychoanalytic, philosophical, and creative reading materials engage contemporary scholars', artists', and activists' response to both the recorded and ephemeral archives of Black dispossession. Students are encouraged to engage in events and workshops outside of the classroom, such as visiting library archives, attending performances, gallery exhibits, and film screenings.

CHUM372 Dangerous Realisms

The aim of this course is to explore realism's ideological possibilities, past and present. We will begin with an introduction to realism as the preeminent formal technique for narrating novels and proceed by looking at other genres that either adapt, or respond to, realist writing. Readings will be drawn from 19th-century Europe and 20th-century Africa and will include works of realism, naturalism, and modernism. These will be considered alongside theories of realism and the novel. Theorists may include Aristotle, Armstrong, Barthes, Hartman, Jameson, Lukács, and Watt. We will read novels by Chinua Achebe, Ayi Kwei Armah, Miguel de Cervantes, J.M. Coetzee, Daniel Defoe, and Gustave Flaubert.

CHUM374 Abolition and Social Praxis

This course will examine some of the analyses of society, social power, and societal reform advanced and practiced by diverse activists who organize their work around the theme of abolition. Inspired by activist efforts to eliminate prisons and policing, abolition is here understood as an attempt to link a worldview that advocates for the disassembly of existing, oppressive social structures combined with efforts to generate new, more liberatory forms of social relationship in the here and now. As a form of activism, abolition thus brings utopian dreams to bear upon concrete practice, seeking to generate new structures of agency and pointing toward ways in which liberal notions of consent occlude deep forms of structural power and implicit constraint. Students will be asked to take on an activist project as part of the course.

CHUM375 Censorship, Culture Wars, and Controversy in Art

Art history is marked by various forms of state, community, or institutional censorship. Such events can be flash points in culture wars, as in the United States in 1989, when four artists--most of them queer--were denied funding from the National Endowment for the Arts after their work was deemed "obscene." Sometimes art that unearths sensitive cultural histories can lead to calls for destruction, as in Sam Durant's 2012 work *Scaffold*, which referenced state violence against the Dakota people, leading tribe members to protest what they felt was Durant's insensitive handling of the subject. Events like these raise key questions within art and broader society: Who should have the authority to decide which art should be exhibited, and to what audiences? What constitutes censorship? When might censorship, or the curtailing of speech, be justified?

This course will examine these questions focusing on the 20th and 21st centuries in the United States, but also global contemporary art. We will consider such issues in the wake of a recent spate of museum exhibitions canceled due to controversial content, the dismantling of monuments to colonialism and the transatlantic slave trade, as well as today's culture wars as conservative book bans make headlines and hate speech abounds. We will also explore new channels for arts funding, exhibition, and publishing that emerge in response to censorship. In addition to important texts by art historians including Sarah Parsons, Aruna D'Souza, and Rosalyn Deutsche, among others, we will also read interdisciplinary legal scholars like Sonya Katyal and Amy Adler who write from the perspective of law and policy. We will also read the landmark Supreme Court case *NEA v. Finley*. Assignments include an in-depth case study of a canceled exhibition.

CHUM378 Decolonizing Indigenous Gender and Sexuality

This seminar focuses on the politics of decolonization in Indigenous contexts with regard to gender and sexuality. The seminar examines a variety of settler colonial contexts in North America and Oceania. Beginning with an historical exploration of gender and colonialism, students will examine how colonial processes, along with other forms of domination that include racializing technologies, have transformed gender and sexuality through the imposition of definitions and models of normative (often binary) gender subjectivity and relations, "proper" sexual behavior, preoccupations with "sexual deviance," sexual expression as a territory to be conquered, legacies of control, legal codification, and commodification. We will then assess how diverse modes of self-determination struggles negotiate gender and sexual decolonization, including feminist interventions in nationalist productions that sustain masculinist and homophobic agendas. In relation to these dynamics, we will study the growing body of work on Native feminisms and decolonial feminisms, as well as Two-Spirit and queer Indigenous studies.

CHUM380 Exploring Personhood in the 20th and 21st Centuries (CLAC 1.0)

The goal of this course is to provide a thorough examination of the concept of personhood in the 20th century by studying how it has been portrayed and understood in diverse cultural contexts across Arabic, English, and Francophone cultures. Through the use of comparative analysis and an interdisciplinary approach to cultural artifacts--such as works of literature, art, and religious texts

as well as current debates around AI and personhood--students will explore how different cultures have approached the question of what it means to be a person and how this has evolved over time. By the end of the course, students will have a deeper comprehension of the various ways in which personhood has been created and perceived throughout different cultural and historical contexts.

The impact of historical occurrences and cultural movements on the construction of personhood, the influence of religion and politics or the fictional writing on conceptions of personhood, the representation of personhood in literature and art, and the emergence of AI as a new frontier in the investigation of personhood are some of the major topics covered in the course. This will open up new discussion topics about posthuman beings and persona status, particularly in science fiction.

CHUM382 Politics, Revolutions and Visual Culture in the Post-Revolutionary Arab Societies

The course "Politics, Revolutions, and Visual Culture in Post-Revolutionary Arab Societies" critically investigates the interaction of politics, social revolutions, and visual culture in the aftermath of the Arab Spring. This course examines the dynamic interaction between political transformation, revolutionary movements, and the various forms of artistic expression in Arab countries.

Students will delve into the complex interplay between politics and visual culture through a combination of theoretical discussions, case studies, and visual analysis, gaining a nuanced understanding of how images, art, photography, film, and other visual media have shaped and reflected sociopolitical changes in post-revolutionary Arab contexts.

CHUM383 Reading Between Freedom and Necessity

Mostly the culture of literacy has taken shape within a realm of freedom, seemingly distant from the needs of the body and the demands of sustenance. At the same time, the world represented within so much of the world's narratives, both truth and fiction, has been saturated in struggle and deprivation. In this seminar we will try to make some sense of this juxtaposition, freedom on one side and necessity on the other, to explore the flip side of the drama of revolution in modern times. For us, revolutions, those great upheavals that unite

hope with practical action, will be the background against which we will try to understand the gravity and persistence of dispossession itself: the pull of past or residual forms of unfreedom in the sphere of cultural representation, within and against new or emerging expressions of emancipation, themselves accompanied or countered in modern times by ever-novel styles of exploitation.

CHUM385 Race, Capital, and Sexual Consent

Race, Capital, and Sexual Consent will focus on the early 19th century through to the Progressive Era. It will explore racialized sexual markets, from what Black feminist historian Adrienne Davis has called "The Sexual Economy of American Slavery," to the Victorian-era marriage market, to continuing and emerging sex work and pleasure economies. This course will focus on areas of overlap, tension, and reinforcement within and between these racialized sexual markets. Fundamental to this class will be the question of if/how sexual consent is configured within these markets, and what this means in the broader evolution of American liberalism in the 19th- and early 20th-century U.S.

CHUM388 Beyond Growth: Agrarian Visions

The era of endless growth has reached a point of crisis. In the face of climate catastrophe and widening inequality, of the proliferation of pointless work and spiraling burnout, it has become increasingly common to question the idea that human progress comprises ever-increasing levels of production and consumption. And yet in spite of a slew of attempts to transform the situation, from the Occupy movement to the recent mainstreaming of degrowth economics, it seems that things are only intensifying. How did we come to inhabit this world in which labor and economic growth are seen as ends in themselves? And how might we begin not just to refuse such understandings of labor and growth, but to imagine different forms that they might take? In this course we will confront these questions, exploring the relationship between labor, production, and human flourishing. We will begin by studying foundational articulations of this relationship from thinkers like Max Weber, Karl Marx, and Hannah Arendt, looking as well at the unique place that agricultural production, cultivation, has been understood to occupy therein. We will then turn to the agrarian realm as a particularly potent site from which to trouble and extend our conceptions of labor and growth, examining visions of spiritual labor, anticolonial resistance, and more-than-human entanglement in theoretical and literary texts from Leo Tolstoy, M.K. Gandhi, Mahasweta Devi, J.M. Coetzee, and others. Through our readings and discussions, we will learn to identify and critique the normative claims on which our current energy-intensive, exhaustion-inducing circumstances are based. At the same time, we will cultivate the skills required to seek out and imagine alternative forms of work, community, and the good life.

CHUM389 The Mediterranean Archipelago: Literary and Cultural Representations

"Islands which have / never existed / have made their ways / onto maps nonetheless" (Nicholas Hasluck). In this course, we study Mediterranean islands as geographical, textual, and metaphorical spaces. We focus on specific

islands—both fictional and real—as case studies for the aesthetic, political, and metaphysical implications of insularity, while also aiming to present the Mediterranean as a spatial, historical, and cultural network of relationality and conflict. Elaborating upon Predrag Matvejevitc's statement that "the Mediterranean is not only geography," we approach Mediterranean insularity not only in cartographical representations (from Greek geographers to Arab cartographers), but also as poetic topos (from Ariosto's Island of Alcina to Goethe's Capri), narrative stratagem (from Homer's Phaeacia to Boccaccio's Rhodes), literary protagonist (from Deledda's Sardinia to Murgia's Sardinia), political concept (from Plato's Atlantis to Campanella's Taprobane), and existential condition (from Cervantes's Cyprus to Cavafy's Ithaca). We engage in a diachronic and synchronic exploration of Mediterranean islands' inherent dialectic between resistance and occupation, identity and assimilation, marginality and integration, zoological extinction and speciation, inbreeding and metissage, autochthony and allogeny, linguistic conservatism and creoleness, territorial boundedness and internal division. Our approach will also be archipelagic and include methods and concepts from historical linguistics and dialectology to diplomatic history and postcolonial poetics.

CHUM390 Black Grief Geographies

This course introduces students to literature and practices centered on post-slavery and post-colonial bereavement. Employing an interdisciplinary framework of Black Geography, Feminist Geography, and Post-colonial thought, students will examine the spatial orientations of Black grief and mourning. Here students will also evaluate the connections and frictions between queries on emotional geographies and Black grief. What are the affective and material forces of Black grief and mourning and do they vary by place? How can we read Black grief and mourning beyond narratives of dispossession? What are the human and non-human assemblages that constitute Black grief and mourning? Is it possible to repair infrastructures that mark Black death? This course invites students to meditate on the above questions as well as to apply Black framings on grief to their own research by developing a 15-page visual essay or a 30-minute in-class lecture that draws on any of these questions.

CHUM391 Unsovereign Elements, Caribbean Poetics

This course aims to study and question sovereignty, begin to theorize "unsovereignty," and stake out what may be meant by "anticolonial imagination" in literary and other aesthetic forms, as well in the theories of history that it arranges under its name, "Unsovereign, Caribbean." Unsovereignty and the anticolonial will not be imagined as exact and liberated opposites of sovereignty and colonialism, but rather as epistemically and linguistically entangled therewith, and inviting further thought from Afro-Caribbean historical and deconstructive vantages. By reading richly symptomatic, primary, historical documents about race, geography, and slavery in San Domingue/Santo Domingo, as well as contemporary fiction, art, and criticism that re-narrate and theorize Caribbean history, we will focus on the historical frame of ~1492 into the 19th century. This frame holds with specific reference to Sara E. Johnson's notion of a foundational "state of war" against black people in the Americas and Frank B. Wilderson III's notion of when the "gratuitous violence" of the Middle Ages begins "to mark the Black ontologically." The 19th century will be studied comparatively, and not as the era of heralded "emancipation," but of abduction,

re-enslavement, "travestied freedom" (Hartman), anti-emancipation (Eller), and white psychosis. We will read sometimes for imperial notions of sovereignty, force, race, property, and labor, and other times for Caribbean notions and narratives that are sometimes at war with and sometimes in bed with said imperial schema and this episteme. In the face of some contemporary critical theoretical tendencies to use terms like "fugitivity," "resistance," "freedom," "abolition," "the commons," etc., as ones that are equally at stake for all, or that signify one shared known, fixed, and agreed-upon meaning, we will, rather (and especially), attend to the historical specificity and signifying work of marronage in the Caribbean region and the complex tropology of unsovereignty and "unruliness" in the Caribbean. Conceptually, the course thinks from and about Caribbean studies, Black critical theory, Black studies, Enlightenment thought, and Deconstruction. Students who want to nerd-out on critical theory, history, and Caribbean aesthetics are encouraged to apply.

We will study digitized versions of imperial naval and commercial maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal documents), including the writing and thinking of Christopher Columbus, Moreau de Saint Mery, Baudry des Lozieres, María de las Mercedes Santa Cruz, Immanuel Kant, and G.W.F. Hegel. We will also read selections from some of the following scholars, artists, writers: Colin Dayan, Sara E. Johnson, Evelynne Trouillot, Jacques Derrida, Robin Derby, Maryse Conde, Alejo Carpentier, Demetrius Eudell, Anne Eller, Dixa Ramírez D'Oleo, Ronald Mendoza de Jesús, Frank Wilderson III, Walter Benjamin, Gayatri Spivak, Aimé Césaire, Beatriz Santiago Munoz, Joiri Minaya, Jean Rhys, and others.

CHUM392 The Library: Its Past, Present, and Future

The library is both a repository and a site for disciplining information. It is, at once, a space for democratizing knowledge and a locus of exclusion. A lifeline and a tomb. A place of radicalization and community, but also the handmaiden of state power. Indeed, the library's vexed role in the history of Western colonization has prompted scholars of African and postcolonial literature like Simon Gikandi to ask whether one can be a revolutionary in the library. This question has shaped the archiving sensibilities of African American collectors and librarians like Arthur Schomburg and Dorothy Porter Wesley as well as those of contemporary Black librarians and artists. This will be one of the central questions we explore in this course, too. We will examine artistic and literary representations of libraries, archives, and museums ("The Library of Babel," The Shadow Book, Lote, The Name of the Rose, Voyage of the Sable Venus, Yinka Shonibare's "The British Museum"), paying special attention to the fantasies, nightmares, and cultural narratives that cohere around the idea of the library. We will pay special attention to the place of the library in the Black literary imagination and to the theoretical and political interventions that Black librarians and bibliophiles brought into systems for categorizing and recovering knowledge.

CHUM393 Afterparty: End Times, Pleasure, and Clean Up

What do we do in end times, or "after the party" as Joshua Chambers Letson would have it? Already exhausted, with streamers and confetti scattered on the ground, what happens after the party is over? How do we pick up the pieces and move on? Can narratives of perpetual end times create new beginnings and new horizons? Beginning at the end, this course will engage conversations in science fiction, Black studies, art and performance, Indigenous studies, queer of color critique, and environmental justice to explore the work of endings and beginnings, of hope and hopelessness, of destruction and desire. We will pay particular attention to questions of futurity and pleasure as they are manifest in the aesthetic. Writers and artists to be discussed will include N.K. Jemisin, Sylvia Winter, Ursula Le Guin, Katherine McKittrick, Ohan Breiding, Franny Choi, Saeed Jones, Calvin Warren, Joshua Chambers Letson, Dana Luciano, David Wojnarowicz, adrienne maree brown, Autumn Brown, José Esteban Muñoz, Nick Estes, Dionne Brand, Samuel Delany, Tourmaline, Allison Akootchook Warden (AKU MATU), Jordan Peele, and M.E. O'Brien & Eman Abdelhadi. Students will be invited to craft both creative and theoretical responses to class assignments.

CHUM394 Sachem School: Indigenous Lifeways and Settler Radicalism After 1600

In the 21st century, we face a series of interconnected reckonings: environmental collapse, economic disparity, racial inequality, and more. There were, and still are, alternative ways of organizing our economies, reframing our relationships with the land, and creating kinship networks that mitigate against inequality and enmity. This class will explore what settlers learned--and refused to learn--from the Indigenous societies they encountered after contact in northern North America. From Roger Williams's ideas of religious toleration in the 1640s to #landback today, settlers have at times demonstrated a willingness to learn from Indigenous lifeways and employ those lessons in ways deemed "radical" by Western standards. Understanding this history illuminates a path toward a future in which we continue learning from Indigenous nations and work to repair the damage settler societies have inflicted on each other and our world.

CHUM395 Creative Writing, Post-Modernism, and Future Theories

Two main lines of inquiry will guide this class. First, what historically has been the place of creative writing workshops and the products they have galvanized? Second, how has post-modernism been defined in the past and how is it defined now? With various strategies and daily practice alongside long-term goals, we will think and write to create assemblages of compositions that go beyond traditional expectations, and potential exhaustion with generic form, towards renewed inspiration and commitments.

CHUM396 Bored in the House: Work, Leisure, and the Domestic Mundane

At the beginning of the COVID epidemic, Detroit rapper Curtis Roach released an instant classic on TikTok, a fifteen second ditty capturing the zeitgeist of

the coming wave of domestic isolation: "Okay I'm bored in the house, and I'm in the house bored." The recent waves of mass quarantine, both forced and quasi-voluntary, have crystallized our focus on the domestic, and its attendant crises. More than ever, we must confront the vanishing material and psychic separations between work and leisure, the badly needed reimagining of public and private not anchored in a spectral domestic privacy, and the foundational dynamics of class, race, sexuality, gender, capacity, and institutionalized violence that structure where we can live, work, and play. This course has a special focus on the exhausting digital, which sucks up ever more energy (both in terms electric power--see the astounding energy use to train and deploy generative AI--and human attention and engagement) while leaving us with sleeping problems, carpal tunnel, and phantom vibrations.

This course seeks to be not just an academic study of the themes of this course, but an ongoing experiment in boredom praxis. We will think about what we do when we are bored, and why, and we will try to sit with and direct our boredom in gently investigational ways. This also extends to critically thinking about how we do work in this class, and our techniques and tactics of maintaining leisure time in academia.

CHUM397 Difficult Women: Post/Feminism in Television Comedies and Dramedies

Although postwar family sitcoms represented women as homemakers, one of the first and most popular sitcom wives also articulated discontent with domestic femininity. Lucy Ricardo became the prototype of the "unruly woman," a figure with feminist potential whose desires exceed and disrupt dominant gender norms. As those norms have shifted, so have TV's unruly women. Second-wave feminism, anticipated in *I Love Lucy*, was incorporated into a 1970s cycle of comedies centered on single working women whose career aspirations were rewarded. Over the following decades, a postfeminist sensibility dominated television comedies and dramas and became central to a gendered neoliberalism in which energetic individuals "empower" themselves. In recent years, a new type of female protagonist has emerged. Alongside the can-do optimism of single-women comedies from *The Mary Tyler Moore Show* to *Sex and the City* to *30 Rock* and *Parks and Rec*, a stream of comedies and dramedies, made largely by and for women, have depicted a variety of flawed, difficult, unruly women coming of age under conditions of socioeconomic precarity, whose less focused energies seem to articulate a more uncertain, downbeat, post-recessional mood. In this course we will situate the latter cycle in relation to both the longer history of televisual representations of women and to the current state of feminist politics. Among the shows we will look at are: *I Love Lucy*, *Bewitched*, *The Mary Tyler Moore Show*, *Sex and the City*, *Ally McBeal*, *Girlfriends*, *The Mindy Project*, *30 Rock*, *Parks and Rec*, *Girls*, *Insecure*, *Broad City*, *Better Things*, *Two Broke Girls*, *New Girl*, *Crazy Ex-Girlfriend*, *Jane the Virgin*, *Unreal*, *Abbott Elementary*, *Fleabag*, *Dear White People*, and *Somebody Somewhere*.

CHUM398 Marxism and Climate Crisis

Since the Communist Manifesto of 1848, the notion of "crisis" has played a prominent role in Marxist theorizing. Today's intensifying climate crisis is lending new theoretical and political weight to the Marxist critique of extractive and

consumptive capitalist actions that transform nature into a means of production for ensuring ceaseless economic growth through the accumulation of capital. The consequences of this are not only the exhaustion of human labor-power but also of non-human nature (fossilized carbon, wild animal biomass, top soils, clean water, etc.). Our perspective for studying and understanding this transformation of nature will primarily be informed by a set of recent "eco Marxist" writings that break with traditional Marxist productivism in favor of an eco-critical analysis that reconceptualizes capitalism neither as an economic nor social system but rather as "a way of organizing nature" (J. Moore). In light of the Center's semester theme of Energy and Exhaustion, we will ask three sets of questions: historical (about the origins of the Capitalocene and of "fossil capital"); theoretical (how is Marx's "general law of accumulation" also a law of environmental depletion and planetary limits?); and political (traditional "Promethean" Marxism envisioned revolution as the full actualization of productive forces; what is the meaning of revolution in the age of natural exhaustion and climate crisis, when the limits of human historical agency are drawing closer with each new tipping point?).

CHUM399 Burnout

Moderns have excelled at exhausting themselves, their others, and the planet. In this seminar we will explore the disposition toward depletion as a constitutive problem of life and thought in the twentieth and twenty-first centuries. Why do we wear the world out and who do we become in so doing? We will examine "burnout" as a condition connecting psychic, political, aesthetic, and ecological distress in the simultaneously listless and overexcited present. Convening resources from philosophy, history, anthropology, political theory, literary studies, and contemporary art, we will consider, among other things: fossil fuels, neoliberal economic thought, enervation and nervous over-animation, stimulants, thermodynamics, empty calories, extravagant gift-giving, geological science, secular finitude, the "End of History," the loss of utopias, and deficits of attention.

CENTER FOR THE STUDY OF PUBLIC LIFE (CSPL)

CSPL115F Diffusion of Innovation (FYS)

Most inventions never make it out of the laboratory. Few reach the public.

Why? Innovations and great ideas are not self-evident. Rather, inventors must persuade their fellow citizens that their ideas have merit and are worth adopting.

This course will survey the broad field of "Diffusion of Innovations." Through case studies from around the globe and discussions of diffusion theory, students will learn how innovations ranging from vaccines to the world's largest particle accelerator gained acceptance through analog and digital communication.

Students will also learn about diffusion failures ranging from water boiling to the DVORAK keyboard. They will then design a strategy for disseminating an existing but underappreciated scientific or technological innovation to United States adopters. The strategy will demonstrate a keen appreciation of scientific merit, diffusion of innovation theory, and the nuances of U.S. culture. This first year seminar course will also familiarize students with the methods used to collect, interpret, analyze, and present evidence in the social sciences, particularly in the field of communication.

CSPL116F Good Books on Bad Wars (FYS)

This course explores war through some of the best books of theory, fiction, and nonfiction. The purpose of war is to achieve a policy that leads to a better peace after the war's end than the peace that existed before the war began. But the nature of war is to serve itself if policy does not guide and constrain war. This course begins with discussion of the best foundational works of theory to build an understanding of the epistemology of war. The students will subsequently read, analyze, and discuss some of the best works of nonfiction and fiction on bad wars when judged by quality of strategy, magnitude of losses, or duration of fighting. The book subjects range from the American Civil War to the post-9/11 wars. The readings and seminar discussions vary from the reasons why the wars began to the conduct and outcomes of the wars. This course lies at the intersection of international relations, history, and conflict studies. It will increase the students' understanding of how policy, strategy, and war interact. A central aim of this seminar is to improve critical thinking and writing.

CSPL123 Organizations in Society: Case Studies

Organizations in Society (OIS) examines organizational forms designed to produce and deliver goods and services, commonly called "businesses." OIS will examine all types of such institutions including for-profits, nonprofits, civic associations, membership organizations, and others, and examine their relationship to the world at large.

This case study course aims to introduce students to how alumni practitioners, in a range of industries, deal with common business issues revolving around the current semester's theme. The fall 2023 theme is expected to be "Beauty," and the spring 2024 theme will likely be "Transformation." Future semester themes will be chosen and announced later.

The objective is to eliminate the artificial divide between academic and professional practices, and enable students to better understand how liberal arts is the foundation of all business careers. Students will have weekly readings that draw on multiple divisions spanning all three academic divisions. Note: this course may be repeated for credit one time (i.e., total of two enrollments).

CSPL127 Introduction to Financial Accounting

In this course, no prior accounting knowledge is required or assumed. Students learn how accountants define assets, liabilities, revenues, and expenses and where those items appear in firms' balance sheets and income statements. The purposes and limitations of these two financial statements as well as the statement of cash flows are considered. Students gain an understanding of the accounting choices allowed to firms for reporting to stockholders and creditors and learn how the use of different accounting methods for similar economic events creates challenges for analysts. Instances of questionable financial reporting and strategies that can aid in their discovery are addressed. Later assignments focus on ratio analysis of actual firms' financial statements, including techniques to identify firms in financial trouble.

CSPL130 Frontiers of Leadership

Frontiers of Leadership will focus on the basic principles of personal and interpersonal leadership that can be used in any life arena. The course will explore variables that affect productivity, effectiveness, and efficiency, and a variety of interpersonal skill sets. Emphasis will be placed on vision, decision-making, time management, career development, team building, conflict, ethics, identity, communication skills, and diversity issues. In addition, we will explore a variety of other topics including developing students' personal leadership

styles. Classroom teaching methods will include class discussion, group exercises, videos, oral presentations, written assignments, and a group project. By the end of the course, students will have increased their personal and interpersonal awareness, sharpened their analytical skills, and gained a greater understanding of the complex issues facing today's leaders. This quarter-credit course will take place over eight weeks and will meet on a weekly basis.

CSPL140F Thinking with Things (FYS)

This course explores the ways in which we think and act in relation to things. At times provocations for thought, at times emotional companions or functional collaborators, things are not only symbolic carriers of the values and meanings that we assign, but are also actors with agency and subjectivity. We critically consider the implications of this and the role of things in a variety of contexts from the historical to the emotional to the sociocultural to the sacred. The course considers how we make, use, and consume things and how, in turn, things make, use, and consume us. Transdisciplinary in its orientation, this course draws insight from anthropology, cultural studies, philosophy, material studies, art, and design. We will examine a number of projects dealing with objects and these will serve as inspirational, theoretical, and methodological models for the projects students will develop over the course of the semester.

CSPL150 Demystifying Finance

Finance is a widely spoken language, be it in newspapers, nonprofit boardrooms, investment banking, or personal finance. It sounds complicated, but many of

the concepts are easily graspable. In this class, we will be exploring the following questions: What is finance? How do companies make money? What do "equity" and "debt" mean, and how do companies use them? What do investment banks actually do? What makes companies increase or decrease in value, and what determines the price of stocks? This course is designed to be a basic introductory course, and no prior knowledge of financial concepts is required. Guest lecturers will help bring financial concepts to life. Women, first generation low income students, and students of color are encouraged to take this course. Please submit a short (max two paragraphs) email to amartin@wesleyan.edu describing any background you may have (none required) in finance and stating your reasons for wanting to take the course. Please note that priority is given to first years and sophomores.

CSPL185F Reasonable Disagreements: Science, Philosophy, Magic, & Society (FYS)

Much of contemporary social and political discourse revolves around science—with many assuming that science is rational, objective, true, and the ultimate source of knowledge. As a result, it would seem unreasonable to believe in things like astrology, magic, alchemy, and other non-scientific ideals, or even to suggest that science might not be as objective, rational, or true as we might think. In this class we will explore different historical and philosophical approaches to distinguishing "legitimate" forms of inquiry and knowledge, considering the ways that our contemporary perspectives on science have been shaped by a long history of philosophy, "natural" philosophy, magic, theology, and "pseudosciences." We will investigate issues and concepts within and about science, including topics such as the nature of theories, the nature of scientific progress, and the relations among science, values, and society.

CSPL187 From Shirtwaists to Hoodies: Fashion and Public Life

Pictured prevalently and worn close to the body, fashion is a powerful and personal means of expression and documenting public life. This course presents a loose chronology of fashion, from the twentieth century to today, through a selection of themes that will allow students to consider it in terms of its social, political, economic and aesthetic impact. Through the interplay of image, clothing, and text, each week, we will explore the fashion industry from various perspectives, examining the key role makers and consumers play in constructing fashion both historically and today. Specifically, we will question the ways

we deploy dress and style to document public life, from the personal to the political, and how it informs our material and visual relationships with the world. In addition to lectures and readings discussion, class time will be allotted to students' fashion documentation projects. Fashion theory will also be introduced to ground our explorations of fashion, variously as a cultural object, embodied practice, site of technological innovation, and tool for shaping one's identity.

CSPL202 Introduction to Design Thinking: Liberal Arts to Epic Challenges

Human-centered design or design thinking taps the creativity and diversity of a team to develop solutions to complex problems, following careful observation to gain the human perspective of a problem. Increasingly, this methodology is at the center of innovative practices in business, nonprofits, and governments. It can be particularly effective in addressing the human needs that are the focus of social enterprise and policy. Many of the disciplines that comprise the liberal arts education are valued sources of perspective and ideas contributing to solutions.

The most progressive and effective solutions to many problems are those that emerge from closely observing human patterns and then encouraging diverse imaginations to create rapid prototypes of solutions that can be tested and refined. The result is human-centered, rather than high-level policy influences for social change. Although the methodology is called "design thinking," the approach is used in designing experiences, services, and organizations, as well as objects. No design background is required.

The class sessions will consist of (1) the presentation of methods and theories, (2) case studies to be worked on in teams either in the session or between sessions, and (3) discussions with faculty members from other disciplines and designers who have worked on significant engagements for social change. Design thinking can be a purposeful link to the application of other disciplines to real-world problems, including anthropology, and behavioral economics.

An optional field trip is planned to work through a problem in the IBM Design Studio in New York City.

CSPL205F Success and Failure (FYS)

Students who get into colleges like Wesleyan are typically high achievers who are planning for successful futures. But success and failure are highly subjective concepts and often reflect unconscious beliefs about personal identities, what is expected of us by families, peers, and cultures, and our perceptions, right or wrong, of different occupations. Some of our most firmly rooted concepts of success and failure are based on where we come from, what our parents do, their level of education, and what our peers choose to pursue. Society also sends us strong messages about our identities, including gender, race, religion, and socioeconomic status. But what is particularly tricky is understanding what identities and cultural influences may be motivating us at any given time. While rooted in developmental psychology, this course will take an interdisciplinary approach to help students define success and failure for themselves, drawing from organizational behavior, sociology, education studies, religion, literature, film and more. We will ask: What is worth wanting? How important is it to find meaning and purpose in work? Can you flourish in life if you don't? What is the role of work in a life worth living?

CSPL206 Group Psychology in Politics: Local, State, and National Perspectives

This course is an introduction to the use of group dynamics to understand the deep personal and systems-level issues at play in the body politic. This framework is applicable at the local, state, national, and international levels. Often, if not most of the time, these issues play an outsized role in any public policy initiative, debate, vote, action, deliberation, and discourse--though they are rarely acknowledged. This class will examine group dynamics as it is practiced in the field of organizational development (OD), a branch of organizational psychology used to implement cultural changes across social systems. The application of OD to politics is not widespread, but its tools are useful in understanding the dynamics in political situations and in the understanding of how power is exercised. The course will introduce concepts in open systems theory and will introduce three models to "hold the data" in our case studies: the Burke-Litwin Model, BART, and GRPI.

CSPL211 Calderwood Seminar in Public Writing: Legal Advocacy for Disabled Veterans

The public rarely understands what it takes to fight for one's legal rights or benefits. Good writers can translate those battles in ways that teach, empower, and (re)build community support for struggling individuals. This course is a study in the translation of legal challenges into civic advocacy.

In this course, students will write about real plaintiffs and legal cases for public audiences. As part of their journey, students will delve into the military and medical files of a disabled veteran applying for a discharge upgrade from the military. Most discharge upgrade applicants suffer from addiction and/or mental health issues, the same issues that cut short the veterans' military careers. Using academic legal writing, news sources, and confidential personnel and medical files, students will describe issues facing veterans in general, and our veteran client specifically. Students will write for a disability blog, a legal services organization (LSO) website, a middle school social studies magazine, a podcast, and a newspaper. Students' writings will inform the instructor's writing--as the veteran's pro bono legal counsel--of a discharge upgrade brief.

CSPL212 Language and Politics: Making and Unmaking of Nations

This course explores the key topics at the intersection of language and politics, including language choice; linguistic correctness; (self-)censorship and hate speech; the performance of ethnic and national identity in language; gender politics and "powerful" language; rhetoric and propaganda; and changing conceptions of written language, driven in part by technological advances. One of the examples of such topics is Tweet politics or incivility on the web around the globe. This course consists of three modules. In the first two modules the above-mentioned topics will be discussed in general, while in the last module we will see how preferences in language policies and politics played a significant role in making and unmaking of nations in different parts of the world, from South Asia to East Asia to North America.

CSPL215 Human-Centered Design for Social Change

Design thinking is the way the creative mind approaches complex problem solving. Increasingly, it is at the center of innovative practices in business. Yet it can be particularly effective in addressing the human needs that are the focus of social enterprise and policy. This course will introduce a number of ways to understand how to use this method and will apply it to a number of real-world examples as team work in class. Invited designers who have worked in the field in the United States and in other countries will lead several sessions. An individual project will require fieldwork and will constitute the demonstration of mastery.

This course explores the techniques of human-centered design and design thinking for approaching social challenges ranging from election processes to subsistence challenges in impoverished rural populations. The most progressive and effective solutions to many problems are those that emerge from closely observing human patterns and then using creativity to make rapid prototypes of solutions that can be tested and refined. The result is human-centered, rather than high-level policy influences for social change. The class session will consist of (1) the presentation of methods and theories, (2) case studies to be worked on in teams either in the session or between sessions, and (3) discussions with designers who have worked on significant engagements for social change.

CSPL220 Participatory Design: From Helping to Solidarity

As artists and designers increasingly turn their efforts to altering conditions for the vulnerable and oppressed, stubborn questions arise around the ethics of engagement. Socially engaged projects seek meaningful change, yet often discourage dissent, reify privilege, remain agnostic about outcomes, and do little to alter larger, structural inequalities. Artists and designers can easily exit projects deemed failures and write these off as learning experiences. Moving from one social injustice to the next, crises and suffering become "sites" from which to develop serialized projects. Armed with empathy and expertise, but with little local knowledge, these practitioners struggle to form equitable relationships with partners and collaborators. This course will examine a range of projects initiated by artists and designers and will challenge the idea that helping is beyond reproach. The course asks how artists and designers might better situate themselves as allies through developing practices that foster solidarity, exercise humility, and distribute agency.

CSPL222 Disability Advocacy: Communicating the Legal Challenges of Disabled Plaintiffs to the Public

The public rarely understands what it takes to fight for one's legal rights or benefits. Good writers can translate those battles in ways that teach, empower, and (re)build community support for struggling individuals. This course is a study in the translation of legal challenges into civic advocacy.

In this course, students will write about real plaintiffs and legal cases for public audiences. In the first half of the course, students will read the military and medical files of a disabled veteran applying for a discharge upgrade from the military. Most discharge upgrade applicants suffer from addiction and/or mental health issues, the same issues that cut short the veterans' military careers. Using academic legal writing, news sources, and confidential personnel and medical files, students will describe issues facing veterans in general, and our veteran client, specifically. Students will write for a nonprofit website, a print newspaper, and a podcast, which the class will produce. These writings will inform the instructor's writing--as the veteran's pro bono legal counsel--of our client's discharge upgrade brief.

In the second half of the course, students will digest and synthesize legal pleadings from transgender disability suits (e.g., employment/Title VII, prison abuse). From these case files, students will write short pieces that educate the public about the lives and legal issues of transgender plaintiffs. Students will write for a nonprofit website, the six o'clock news, and a local online news or social media outlet.

CSPL224 Public Health, Migration, and Human Rights

How do human rights principles apply to the public health challenges faced by migrant populations? What is the situation of migrants arriving at the southern border of the United States? Crossing the Mediterranean Sea or the Darien Gap? What does human rights as a frame have to say about immigrants who are fleeing extreme poverty or are forcibly displaced by the climate crisis? This course seeks to address these and other related questions by examining the

intersection of public health, migration policy, and human rights standards. We do so by examining a series of case studies that consider the underlying issues from a variety of disciplines including economics, sociology, law, policy analysis, public health, and political science. Through this course, students will develop a critical understanding of the contemporary landscape and potential policy responses to promote public health and human rights in the international migration space.

CSPL225 Critical Design Fictions

Design fiction involves the deliberate use of diegetic prototypes to suspend disbelief about change. Through practices of estrangement and defamiliarization, and through the use of carefully chosen design methods, this course experiments with the creation of provocative scenarios and imaginative artifacts that can help us envision different ways of inhabiting the world. The choices made by designers are ultimately choices about the kind of world in which we want to live—expressions of our dreams, fantasies, desires, and fears. As an integrated mode of thought and action, design is intrinsically social and deeply political. In conversation with science fiction, queer and feminist theories, indigenous discourses, drag and other performative interventions, this course explores speculative and critical approaches to design as catalysts for imagining alternate presents and possible futures. We examine a number of environmental and social issues related to climate change, incarceration, gender and reproductive rights, surveillance, emerging technologies, and labor.

CSPL235 Activism and Theories of Change

In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education. What strategic, ethical, or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an activist for women's rights, queer rights, and economic justice. In addition, the course will feature a guest teacher for a segment of the semester: Beverly Tillery, Executive Director of the Anti-Violence project in NYC will look at the ways BIPOC and Queer BIPOC communities are reshaping the social justice landscape by addressing the safety of trans women, challenging the gender binary and reforming and ending the carceral legal system. We will allow time to discuss events that may occur in real time over the course of the semester. This course

will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

CSPL237 Communicate for Good: Public Speaking and Persuasion for Social Mobilization and Change

The world needs more...democracy, justice, equality, civility, love. Diagnosing that need is only the first step in changing society. To achieve social good, you must persuade your fellow citizens that the change is worthwhile and the path to change is worth it. In this public speaking and persuasion seminar, you will learn how to communicate for good. In the first half of the seminar, you will adopt the persona of a public organizer and develop mass media messages and public speeches to promote your public good. In the second half of the seminar, you will assume the mantle of leadership and produce a short speech and video storyboard for the leader of a nonprofit organization closely associated with your public good. In both halves of the course, you will be graded on your speech preparation and implementation (i.e., writing and speech).

CSPL239 Startup Incubator: The Art and Science of Launching Your Idea

The Startup Incubator is a one-semester, experiential learning program designed to teach and enable student entrepreneurs to develop sustainable business models from their ideas. The program will bring together an ambitious, committed, and diverse group of individuals from all classes and majors who are passionate about developing successful solutions to challenges; identify as entrepreneurs, disruptors, and thought leaders; and have the tenacity, work ethic, and ability to succeed. All participating students should have a promising business idea and take the course with the intention of launching or running their own venture. Student Incubator students actively participate in one cohort meeting a week: most are "classes" that take the form of lectures or workshops, and some are "practice days" that provide time to practice theories and methods necessary for success. Students also dedicate at least 10 additional hours per week to assignments, self-directed work, customer discovery, networking, and mentoring sessions. This course will feel like a combination of a college class and a rigorous startup incubator program. Success is a student using theories learned in class to validate their ideas by developing and accurately testing business assumptions, identifying and researching their target market, and pivoting to develop a sustainable business model. By enrolling, students make a commitment to themselves, the instructor, and the other members of the class.

CSPL244 From Litigation to Restorative Justice: Conflict Resolution in Practice

Litigation, mediation, reconciliation, and consciousness-raising. These and other techniques can help us solve seemingly intractable conflicts. But how does a litigator, mediator, reconciler, or consciousness-raiser select an appropriate strategy for a given conflict? And once a strategy is selected, how does a conflict resolution specialist lead the parties to resolution? This course will show you the way...

In the first part of this course, we will study and practice traditional dispute resolution techniques. Each student will participate in two-person and multi-party quasi-judicial role-playing exercises and arbitrations. In the second part of the course, we will study and practice mediation, reconciliation, feminist consciousness-raising, and community-building.

We will then draw upon theory and practice readings, and our experiences, to answer questions such as: Should we match dispute resolution strategies to parties' personalities or desired outcomes? Whose conception of fairness and social good should guide our negotiation practices? Are dispute resolution techniques gendered, raced, aged, abled, etc.? We will answer some of these questions with the help of other Wesleyan students at a conflict resolution teach-in led by members of the class.

CSPL245 Ethnography and Design

Exercising humility and developing methods of meaningful engagement are essential to becoming an effective ethnographer and designer. Collaboration with users provides knowledge that allows designers to imagine artifacts, places, and systems that are thoughtfully enhanced or radically new. This course rethinks power dynamics to better understand how to design both for and with other people. With successful completion of this course students will be able to demonstrate competence in developing, refining, and communicating research

interests in a committed, reflexive manner. They will gain an understanding of the strategic and tactical value of design and a sense of the practical problems involved in realizing design solutions and responses that are attuned to the needs of both an institution and individual users. Students will gain experience not only in theoretically framing social and political issues as these are expressed through design, but also in understanding the methodological tools needed to translate problems into creative interventions that are user-centered and compassionate.

CSPL246 Organizations in Society: Capitalism & Its Criticisms

In this course we will explore the concept of capitalism and how it carries variegated meanings, which spans a wide range of societies and differing relationships between economic, political, and civic institutions within them. Students will have the opportunity to examine various forms and perspectives of capitalism which include contraband capitalism, racial capitalism, gendered capitalism, and scientific capitalism. We will also track how conceptions of capitalism have changed over time and globally. Primary and secondary works from the field of history, law, economics, philosophy, religion, and sociology will be incorporated to carry out the goal of the course which is to provide tools and perspectives that help students engage thoughtfully in these debates and to extend them into application in their own roles as engaged citizen, corporate, nonprofit, public, and entrepreneurial leaders.

CSPL248 Organizations in Society: Business Ethics

Capitalism and competitive markets are often considered the most efficient system of simultaneously maximizing private wealth and public good. In the real world, however, truly competitive markets do not exist. Imperfect markets have been made to work efficiently while protecting public good through systems of public intervention, i.e., laws and regulations, and voluntary self-restraint by business organizations in response to societal expectations. In this class we will consider the role of ethics in business, with students analyzing the process by which ethical norms and strongly held moral beliefs guide the conduct of economically driven business organizations. Students will reflect on business managers' responsibility to their owners, i.e., shareholders, other stakeholders, and society at large.

CSPL250 An Introduction to Data Journalism

This course is designed to familiarize students with the basic principles and tools of data journalism and to provide a wider understanding of the role of basic data analysis in society. To that end, the course will focus on developing a solid familiarity with basic data analysis and visualization software. It will also focus on developing the tools of journalism: retrieving public data, interviewing people and databases, and the basic principles of journalistic writing. By the end of the course, students will be able to analyze data, identify stories within the data, and create a news story complete with data visualizations of publishable quality--a skill transferable to many fields and disciplines. Both online and traditional print platforms will be covered.

CSPL250P "It's a Mess": An Academic and Practical Look at Digital Media in the Late 2010s

Hot mess. Dumpster fire. Steaming turd pile. Commentators, journalists, and the public have all used these terms to describe the state of American digital media in 2018. While the profession of journalism is more noble in this era than in previous decades, the world of media creation and consumption is far more complicated than ever before. For young people hoping to get their start in the world of digital media in the late 2010s, catching a break is even harder.

The purpose of this class is twofold: It will introduce students to the larger issues spanning digital media--from a lack of diversity and inclusion to problems with monetization and "Fake News"--while also giving them the chance to walk through what it's actually like to pitch, write, and edit for an internet publication. Students will have the opportunity to write for a class blog using strategies that the digital media world uses today, and they'll spend time giving and receiving feedback on writing.

CSPL250R First Person Singular

This course will examine the techniques and skills of first person reportage, where the writer is present and part of the story. We will find and hone your own voices and points of view. We will examine the myth of objectivity; issues of fairness, accuracy, and moral relativity; the perils of cultural appropriation; the savior complex; and exoticism.

The course will include several short essays and one longer final project. It will draw on readings from The London Review of Books, The New York Times magazine, National Geographic magazine, Granta, Paris Review, The New Yorker, and the following authors: Lyn Freed, Rian Malan, Jonny Steinberg, Doris Lessing, Ryszard Kapuscinski, W.G. Sebald, Bruce Chatwin, VS Naipaul, Justice Malala, George Orwell, Zawe Ashton, Julian Sayararer, Cathy Renzenbrink, Sisonke Msimang, Thomas Paige McBee, Ahmet Altan, and Peter Godwin.

This course is offered by 2019 Koeppel Journalism Fellow, Peter Godwin. He is the author of five nonfiction books and is an award-winning journalist, war correspondent, and documentary filmmaker. Godwin's bio can be found here: <https://petergodwin.com/about/>

CSPL250W Topics in Journalism: The Art and Craft of Journalistic Nonfiction

Journalistic nonfiction uses the tools of the newsroom to create long-form stories that read like novels. Students will learn the skills to ensnare readers in any medium of narrative nonfiction writing, from articles and books to screenplays and teleplays. Journalists excel in conducting interviews and marshaling facts. But few journo's ever master the art of narrative storytelling. Nonfiction book writers can wield a narrative arc to tell a story. But many book writers are weak on basic reporting. We will read the work of newspaper reporters who learned to write long-form narratives, and magazine writers who learned the skills of the newsroom. By semester's end, students will know tools of both trades. We will hear from some of the writers about their work. To keep the focus on journalism, we will mostly skirt the genres of history and memoir. Students will write mostly in the third person, and primarily about events in living memory.

CSPL257 System Mapping for Social and Environmental Impact

In recent years, growing interest in social entrepreneurship has pushed students to "solve" complex social and environmental problems with new ventures of their own design. Unfortunately, this approach often overlooks a critical foundation of social change: understanding the root causes of problems and the contexts that surround them before seeking solutions.

In this six-week, half-credit class, students will study a problem and the systems that surround it. By the end of the course, students will create a "systems map" that documents the economic, political, and cultural factors behind their problem, as well as the current "solutions landscape."

CSPL264 Patricelli Center Fellowship I

The Patricelli Center Fellowship is a one-year, project-based, cohort-style learning experience. Fellows are a self-selected, committed, and diverse cohort of individuals or teams from all classes and majors who are passionate about innovation, creativity, and problem-solving; identify as entrepreneurs, intrapreneurs, changemakers, activists, disruptors, designers, inventors, and/or thought leaders; and have tenacity, empathy, interdisciplinary thinking, strong work ethic, and the ability to work independently. Some Fellows will launch or run their own project or venture, while others will not.

Patricelli Center Fellows actively participate in two cohort meetings per week: some are "classes" that take the form of lectures or workshops, and some are "labs" that serve as working or discussion sessions. Fellows also dedicate 10+ additional hours per week to assignments, self-directed work, portfolio-building, and engaging other members of the Wesleyan community.

This course will feel like a combination of a Wesleyan class, a C-level position on a startup team, and an extra-curricular leadership activity. By enrolling, Fellows make a commitment to themselves, the instructor, and the other members of their cohort.

CSPL266 Youth, Power, and Social Change

While young people have been at the helm of movements for social and racial justice throughout history, the 1990s saw the rise of youth organizing as an intentional strategy for transforming youth, communities, and the broader social and political structures and institutions that shape their lives. This course will examine the evolution of youth organizing and the ways in which it has disrupted the dominant narratives and traditional methods of youth learning and engagement at play in schools and youth service organizations. The course will explore the politics of power and identity in youth work, and the role and impact of current youth-led social change movements - from #blacklivesmatter to the work of Dreamers - in today's political climate. Please note that this course will require students to reflect on and contextualize readings and class discussion with their own lived experience and is therefore especially relevant for students that are engaged in community service, organizing and/or youth work.

CSPL267 Project-Based Learning Lab

In this course, students will bring ideas to life through project-based learning, translating theory to practice and developing a more sophisticated understanding of subjects they are studying in their other courses.

Students will enroll in the Project-Based Learning Lab with a problem they want to address or an idea they want to build. Throughout the semester, we will build a toolbox for studying problems and designing solutions. Themes will include systems thinking, root cause analysis, ethical community research, human-centered design, lean prototyping, and data-driven evaluation. There will be an emphasis on humility, teamwork, oral communication, responsible partnership, and lean experimentation. Most students will complete the semester having launched a basic MVP (minimum viable product) and a road map for continuing to pursue their idea after the conclusion of the semester.

CSPL268 Reporting on Global Issues: International Journalism in Action

This course is designed to introduce students to various mediums of international reporting beyond the traditional print format, like video and podcasting. Visual and auditory formats have gained widespread prominence, making journalism more accessible to diverse audiences. After delving into sourcing, research, and reporting techniques, students will engage in discussions with accomplished innovative journalists, hosts, and reporters who possess extensive experience in covering international issues. Throughout the semester, students will gain valuable insights from these conversations and collaborate in teams to produce a podcast episode for a class series focused on migration.

CSPL275 Action: Art, Politics, Counterpublics

In this interdisciplinary studio course, we explore action as a category of art practice. What does it mean to take action, either individually or collectively? What does it mean to refuse to take action? Through a series of projects, assignments, and discussions, we work through various possibilities, drawing on methods from public interventions, performance, institutional critique, social practice, experimental film, and work by non-art practitioners. The course is organized around the production of student projects and research, culminating in a self-directed capstone work. In the initial stages, students will be asked to work through three distinct modalities (performance, site-specific intervention, and collaborative practice) while developing their ideas. Time will be devoted to discussion of historic and contemporary examples, including European avant-gardes (Dada, Productivism), feminist film and performance, Happenings, Indigenous performance art, and work connected to political organizing, such as the Black Panther Party, United Farm Workers, Young Lords, ACT-UP, Art Workers' Coalition, and EZLN, among others. Students will be exposed to a variety of techniques and will gain access a range of facilities, including the woodshop, digital technologies through the Digital Design Studio, etc. Depending on Covid restrictions, trips to contemporary exhibitions will provide a theoretical framework. Work in this class can be created individually or collaboratively. Depending on interest, we may also organize an end-of-semester exhibit.

CSPL277 Community Impact: Building Capacity to Support Educational Enrichment and Socioemotional Development

In this half-credit course, students will build an intellectual and practical framework to guide their work in volunteer settings in the local community. What does it mean to "help?" How do we assess the needs of community partners and build the knowledge and skills that will allow us to address those needs? What do we need to know and understand about the people with whom we work? What does research have to say about effective tutoring techniques and practices? How can we design meaningful learning experiences? How can we maximize not only our impact in the community, but our own growth and learning?

Note: students taking this course must be engaged in at least 80 minutes per week of community service in an educational setting throughout the semester and must complete this questionnaire (<https://forms.gle/ay9xaXGn1wbxriHJ7>) before enrolling

CSPL285 The Sociology of Reality TV: Race, Colorism, and Xenophobia

The course will explore the ways in which reality television can help us reflect on how different social identifiers such as race, skin complexion, and ethnicity operate within American culture. For many, reality TV can be easily dismissed as a guilty pleasure, escapism, or "trashy" (e.g., Dehnart, n.d.). While reality television can be labeled as an innocuous pastime, its importance and impact in American culture cannot be overlooked or denied. Moreover, the way this form of entertainment reflects American behaviors and shapes or reaffirms thinking within our society around sociological descriptors like race and culture should be studied. Through a critical lens, we will delve into the ways this genre of television portrays women of color, the audiences who watch reality TV, and whether responsibility exists on the networks who help create these shows.

CSPL288 Introduction to Journalism: Constructing the News

Champions of journalism are fond of talking about bedrock values: fairness, objectivity, transparency. But like any idea--or ideology--these keywords have their own genealogies, and their own constructed natures; in other words, they came from somewhere. This course aims to pull apart our received notions of facticity, objectivity, and transparency in news/journalism/nonfiction, tracing their roots, understanding their historical context, and considering how we deploy them in our own work. Students will learn the fundamentals of reporting in hands-on assignments that pull them out into the world to gather stories. This journalistic work will occur alongside class discussions of canonical (and neglected) strands of journalism history, drawn in part from Bruce Shapiro's anthology *Shaking the Foundations: 200 Years of Investigative Journalism in America*. These include readings from early Black press pioneers (Ida B. Wells, Marvel Cooke), muckrakers and investigative journalists (Lincoln Steffens, Vera Connolly), and pathbreaking science journalism (Rachel Carson's *Silent Spring*). Readings will also include criticism that examines our present media situation, including selections from Raven Lewis Wallace's *The View from Somewhere: Undoing the Myth of Journalistic Objectivity* and Ben Smith's, *Traffic: Genius, Rivalry, and the Billion-Dollar Race to Go Viral*.

CSPL299 The Rest of the Story: Techniques for Investigative Reporting

Students will learn how to find out what public records exist on various topics, how to get their hands on those records, and how to use those records while reporting. Students will also learn key techniques to source development and how to engage communities that you are reporting about. Students will be teamed up to investigate a topic themselves during this semester. Students will also learn the fundamentals of journalism and the legal history of key cases. Each class will focus on a specific area of investigative journalism, including the history, the law, accessing public documents, research, narrative writing, and more.

CSPL300 Integrative Learning Project 2: Website Incubator

Have you developed knowledge or expertise about a topic through an internship, engagement in a student organization, time studying abroad, or through some other experience that you would now like to share with the world? This is the class for you! Throughout out the semester, you will work to translate your experience into a website. I will help you do this by asking you to think about the content you would like to share, the audience with whom you would like to share it, and the goal you have for that audience. Ultimately, you will share your experience through WordPress, the world's most popular platform for website design. Along the way, you will learn about user experience (UX) design principles and research methodologies, so that the website you create draws in your audience and makes them want to learn more about your chosen topic.

Throughout the semester, we will meet once a week to do all of these things in a relaxed, collaborative environment. Join us and bring along some friends!

CSPL306 Community-Engaged Qualitative Research: The Other 1%

This course will focus on context-specific, community-based participatory research methods. The first research project undertaken in this class (2023, 2024) will be investigating agricultural justice in Connecticut, gathering the stories and experiences of the 1% of farmers in Connecticut who are BIPOC. The goal of the project is to uncover and work towards dismantling some of the barriers to farming that currently exist for those populations (including bias in USDA grants, unequal access to resources and information through ag extension, etc.). Students will learn theories and methods of community-engaged research and CBPR through scholarly study and hands-on experience gathering and analyzing qualitative and ethnographic data, primarily interviews and observations, with a focus on using techniques of photo voice and Lightfoot's methods of portraiture in social science research. Students should be prepared to engage deeply with community members. In addition, this course will include a module using movement-based inquiry with a visiting artist/scholar. Some travel within Connecticut and farm visits outside of class time will be required.

CSPL307 Religious Subjects to Ethnic Minorities: Armenians in Turkey Between Empire and Republic

After World War I, Woodrow Wilson's Fourteen Points articulated a new vision for an international order based not on imperial ambition but on the self-determination of nations. Though empire persisted as a viable political form through the Second World War, the interwar years saw the breakup of some of the world's oldest dynastic empires into the much newer nation-state: the Austro-Hungarian Hapsburg Empire, the Ottoman Empire, and Imperial Russia all gave way to new political entities. At the same time, a transformation in the idea of political belonging occurred: citizenship now dominated the older concept of imperial subjects, and an idea of a national minority protected by an international regime of minority rights emerged. These ideas profoundly reshaped national and international politics.

This course focuses on the Armenians of Turkey across the transition from the Ottoman Empire to the Republic of Turkey, established in 1923. It uses the Armenians of Turkey as a case study in the emergence of secular nationalism as the dominant political ideal of the 20th century. Students will not only learn the history of the late Ottoman Empire, the Republic of Turkey, and the history of the Armenian minority in the Middle East, but will explore the transition from empire to republic at the end of the 19th century through the twin lenses of secularism and nationalism. Drawing on Ottoman and Turkish history, Armenian history, political science, and anthropology, the course introduces debates about nationalism, secularism, minority rights, and political belonging through the emphasis on Armenians in Turkey.

CSPL308 Trump-Evangelicals: the History of Fundamentalism and Evangelicalism in America

This course examines the history of American evangelicalism, seeking to understand the nature of its support for the presidency of Donald Trump. Beginning with a brief overview of religion in the colonial and revolutionary eras, the course examines revivalism, slavery, and the emergence of fundamentalism during the 19th century. Special attention is paid to the re-emergence of evangelicalism after World War II, the establishment of the religious right, global evangelicalism, and the core evangelical support for the candidacy and presidency of Donald Trump. Students will be challenged to consider the ways issues of gender, race, and economics have shaped 21st-century evangelicalism, and reflect on how the movement's view of American history contributes to its own sense of identity and purpose.

CSPL309Z Environmental Justice Advocacy: Assessing Law, Community-Based Engagement, and More

ONLINE COURSE: Synchronous class meetings via Zoom, 10am-noon and 2-5pm. Classes held Jan 4, 6, 8, 10, 12, 14, 16, 18. (Please note: Students should expect some readings and assignments to be due during winter break, prior to the beginning of Winter Session class meetings.) The concept of "environmental justice" focuses on the equitable distribution of pollution and health burdens--such as the siting of fossil fuel infrastructure and pollution-emitting facilities--as well as benefits such as clean air and clean water. Procedural justice and restorative justice are also key demands of the environmental justice movement. In addition, as communities of color and low-income communities disproportionately bear the burdens of climate change and resulting "climate gentrification," the overlap between environmental injustice and climate change is becoming increasingly apparent. After a brief introduction to the concept of environmental justice, this course will focus on advocacy efforts to promote environmental justice and, in particular, the benefits and limitations of various tools including the law, grassroots organizing, and policy work. For their final project, students will use what they learn in the course to design and propose their own environmental justice intervention. By the end of the course, students will understand the history, foundational theory, and key case studies of environmental justice as well as the tools and strategies that environmental justice advocates use. Syllabi for Winter Session courses will be posted to <https://www.wesleyan.edu/wintersession/courses.html> as soon as they are available.

CSPL310 Community-Engaged Philosophy: Teaching the Search for a Good Life

In this half-credit course, students who have successfully served as discussion facilitators for PHIL210: Living a Good Life will learn how to teach an abbreviated version of the course to local high school students in a nine-week voluntary after-school program. Having been trained in this special approach to discussion facilitation for their fall semester work in PHIL210, students will be able to deepen their knowledge of both course content (philosophy) and their facilitation skills through guided experiential learning. Course topics will focus on the skills of learning through close observation and reflection on one's teaching (reflective practice), understanding one's students (adolescent development, cultural consciousness), and pedagogical knowledge regarding lesson planning, student engagement, developing productive classroom climate, promoting self-directed learning, and authentic assessment. Students must have served as discussion facilitators/leaders for PHIL210.

CSPL311 Community Impact Practicum: Building Capacity to Support Educational Enrichment

In this practicum course, students will build an intellectual and practical framework to guide their volunteer work in educational settings in the local community. What does it mean to "help"? How do we assess the needs of community partners and build the knowledge and skills that will allow us to address those needs? What do we need to know and understand about the people with whom we work? What does research have to say about effective tutoring techniques and practices? How can we design meaningful learning experiences? How can we maximize not only our impact in the community, but also our own growth and learning? Through reflection on experiential learning and the study of scholarship addressing these questions, students will develop knowledge and skills to improve their effectiveness in supporting educational enrichment. Students taking this course must be engaged in at least 90 minutes per week of community service in an educational setting throughout the semester.

Please note: If you are looking for a practicum that is more focused on the K-12 classroom experience, please see EDST310: Practicum in Education Studies. In that practicum seminar, students carry out their own independent study related to their classroom placement.

CSPL312 The United Nations and Human Rights: Advocacy, Institutional Reforms, and Change in Turbulent Times

Human rights advocacy efforts frequently involve the United Nations in some capacity. Human rights activists frequently seek to raise awareness about a human rights issue before one of several UN institutions, or they might draw on norms or concepts that emerged from the United Nations. They might also wish to contribute to ongoing discussions at the international level, harnessing the perspectives of their constituencies and their field experience to influence the

shape of normative development at the global level. Despite the importance of the UN for human rights as a field, only a small circle of UN-specialists, insiders, and scholars understand and know to maneuver the institutional human rights machinery of the UN. This "black box" phenomenon is even more daunting for many of the communities and social activists meant to benefit most from the UN's human rights mechanisms. This course is an attempt to pierce that "black box," and to allow at least the graduates of this course to serve as effective "interpreters" of the UN human rights institutional landscape for the benefit of vulnerable individuals and communities. Students will contribute directly to human rights initiatives targeting the UN (or UN-adjacent institutions) as part of their human rights as part of their advocacy agenda. These projects will focus on a range of human rights issues (ex: climate change & migration, transitional justice, and the development of a human rights based governance approach to new and emerging technologies). Students will be active participants in the design of the course curriculum, directing their (our) collective learning around those issues most relevant to our advocacy projects.

CSPL313 Performing Property: Legal Experimentation and Activism in Contemporary Art

Who owns works of art-artists, buyers, museums, or the public? Who is granted the privileged status of author? Do artworks comprise a special category of things? Such questions underlie attitudes concerning art and cultural artifacts, and they also inform intellectual property laws. Since the 1960s, conceptual and performance artists have taken up these queries to investigate the nature of authorship and ownership generally, experimenting with aesthetic strategies as well as legal tools like contracts to ask: How do social and visual cues communicate boundaries, shape territories, and perform property into being? What happens when materiality and ownership are contingent? Can artists model alternate property relations through their work? How might art expose fissures and failures in law? Recent calls for decolonization and the restitution of looted objects have also pushed museums and archives to reconsider whether they are the outright owners of cultural artifacts, or stewards responsible for their care. Furthermore, as surveillance technologies increasingly pervade daily life, and digitalization leads licensing to supplant ownership, the future of privacy and property norms is unclear. These developments render contemporary art fertile ground for attending to the ways in which property structures are conceived, take shape, are reproduced, and how they might be reformed, calling upon us to pay attention to intent, consent, and the needs of others.

Seminar readings will be drawn from the burgeoning subfield of Art and Legal Studies with texts by key scholars including Joan Kee and Martha Buskirk, complemented by legal theorists such as Sarah Keenan and Cheryl I. Harris whose work has influenced artists. Alongside, we will closely examine the work of artists who challenge traditional ownership relations to problematize law, such as Felix Gonzalez-Torres, Jill Magid, and Cameron Rowland. Class meetings will be complemented by screenings and visits to local collections, as is feasible. Assignments include a brief paper on an artwork, as well as a final research paper or digital exhibition requiring students to examine a particular theme or artist in-depth.

CSPL314 The Health of Communities

Our focus will be on understanding the role of social factors (e.g., income, work environment, social cohesion, food, transportation systems) in determining the health risks of individuals; considering the efficacy, appropriateness, and ethical ramifications of various public health interventions; and learning about the contemporary community health center model of care in response to the needs of vulnerable populations. In this overview, we explore the history of social medicine, the importance of language in public health efforts to conceptualize and frame health concerns, the complexity of any categorization of persons in discussions of health and illness, ethical issues related to the generation and utilization of community-based research, the role of place and the importance of administrative and cultural boundaries in the variability of health risk, and the idea of just health care. Enrolled students serve as research assistants to preceptors at Middletown's Community Health Center (CHC) & Moses Weitzman Research Institute.

CSPL315 Policy and War through Film

This course explores how America's policies and wars interact with culture and identity. It combines films and readings to gain a deeper understanding of film as an artifact of culture, war, and identity. The course begins with a discussion of key foundational works to frame a common understanding about strategy, war, and American strategic culture. It then combines film viewings and critical scholarship to discover how the interpretations of America's wars through film shape American citizens' perceptions of war and their military. The films, readings, and seminar discussions will help students develop a better understanding of the differences between the realities and the perceptions of policy and war. This course lies at the intersection of international relations, history, and conflict studies. Participation in this course will increase the students' understanding of how U.S. policy, war, culture, and identity interact. It will also sharpen critical thinking and writing.

CSPL316 Human Rights Advocacy: Critical Assessment and Practical Engagement in Global Social Justice

The core animating principles and practices of human rights are under threat. Will the global human rights movement be able to respond effectively? How could or should the movement advance the cause of global social justice most effectively? This seminar seeks to answer these questions by assessing global rights defense and social justice practice and by engaging in structured, self-critical human rights advocacy.

Among the issues considered in this seminar will be the following: What are the origins of the human rights movement? Has the movement been dominated by ideas from the West and elite organizations from the Global North? What does it mean to be a human rights activist? What is the role of documentation, legal advocacy, and social media in human rights advocacy? What are the main challenges and dilemmas facing those engaged in rights promotion and defense?

Students will be required to write several short reflection papers. The final project will be an exercise in developing a human rights advocacy project or supervised engagement in actual human rights advocacy in conjunction with the University Network for Human Rights (humanrightsnetwork.org). This class is limited to students already admitted to the Human Rights Advocacy Minor.

CSPL318 Global Populism and the US Election. Are we witnessing a populism uprising?

In this course, we will unpack the factors pushing communities worldwide toward these political ideologies as well as the impact it has on global politics and international relations. We'll take a deep dive into the 2020 campaign cycle in the age of digital campaigning and online voting and analyze how Donald Trump and Senator Bernie Sanders are shaping our political discourse and how they fit into the global trend of populism. We'll study the defeat of democratic movements like the Arab Spring and the rise of authoritarian regimes in the region. Additionally, we'll break down how the failure of democratic movements in the MENA region led to the refugee crisis, which in turn inspired right-wing radicalization within Europe and the United States. This course provides an overview of the political landscape of the populism movements in the U.S. and around the world, focusing on the collapse of democratic movements and the

rise of populist leaders like Donald Trump, Boris Johnson, Narendra Modi, Jair Bolsonaro, and Marine Le Pen, among others. We'll begin with a brief overview of the history of populism and the theory behind it, before breaking down modern applications.

CSPL319 The Voice(s) of Expertise: How Podcasting Is Changing the Way We Listen and Learn

In this course, students will examine the changing nature of audio news and storytelling, and the extent to which traditional understanding of the voice of expertise is being disrupted by the rise of podcasting and other on-demand audio forms. The evolving digital media landscape has brought about an historic shift in the delivery of news and information. The shift has been celebrated--"the media has been democratized"--and reviled--"the media is too fractured and people are living in information bubbles." The shift is, at the very least, unsettling, in particular for journalists who find themselves working in an environment where the old rules and training seem outdated. But it also presents significant opportunities, especially in audio and broadcast journalism. The rise of podcasting, in particular, may challenge norms on how journalists explore and explain complex issues, and on who we hear as voices of expertise. This course will be a combination of media criticism, a study of best practices in journalism, and design thinking. As students examine the impact of new media on news and journalism, they will also develop their own ideas for on-demand audio (including podcast design) throughout the semester, working on an individual project, and in collaboration with other students.

CSPL322 Methods and Frameworks for Understanding and Overcoming Health Disparities

In recent years especially, the need for both interdisciplinary and mixed approaches to inquiries in public health research has become apparent in health promotion, policy formation and evaluation, service needs assessment, the social determinants of health, and program evaluation and outcomes measurement more generally. This course is intended to provide an overview of methodologies and frameworks used to examine and overcome disparities in health through research. A range of quantitative and qualitative research designs and methods will be introduced, and strategies to address challenges in real world program settings will be emphasized. This course will discuss approaches commonly used in public health and health services research, such as mixed methods, implementation science, community-based participatory research, and their strengths and limitations. Additionally, this course will examine how critical race theory and intersectionality, and additional theories and frameworks from ethnic studies, psychology, and sociology, can further advance public health's capacity and effectiveness in promoting health equity. The course will incorporate examples of applied research and opportunities to learn from the direct experiences of the instructor. There will be a mixture of discussion and lecture depending on the topic, with student participation and questions strongly encouraged. Preference will be given to students who have taken SOC/SISP 315 Health of Communities or SISP 262/SOC 259 Cultural Studies of Health.

CSPL323 Human Rights: Contemporary Challenges

This course will examine various pressing challenges to human rights in the US and around the world, based around a series of talks by visitors who are practitioners in the field. Topics covered range from refugees and war crimes to housing and educational access.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ALLB**

Identical With: **GOVT283**

Prereq: **None**

CSPL328 Advanced Human Rights Advocacy

This course will enable students to engage in critical assessment of human rights advocacy while participating directly in projects through the University

Network for Human Rights. Students in Professor Cavallaro's Fall CSPL 316 course are encouraged to apply, as are other students interested in gaining practical experience in human rights. The course will involve seminar discussions and readings that assess the strengths, weaknesses, and challenges facing the human rights movement domestically and internationally. In addition, students will be responsible for project-based work guided by Professor Cavallaro and the team of supervisors at the University Network for Human Rights.

Offering: **Host**

Credits: **1.00**

Gen Ed Area: **SBS-ALLB**

Prereq: **CSPL316**

CSPL329 Wars of Resistance in Scholarship and Film

This course explores the theory, practice, and interpretation of wars that see ostensibly stronger powers wage wars against relatively weaker resistance movements. It combines scholarly readings and interpretive films to gain a deeper understanding of how and why resistance and insurgency can prevail when confronting adversaries who are numerically superior. Students will analyze the inescapable paradoxes that can make wars of asymmetry difficult for stronger states. The seminar discussions will develop a keener grasp of the logic that permeates wars where the weak resist invasion and occupation. This course intersects international security studies, history, and conflict studies. This course will improve knowledge about asymmetric wars and for critical analysis. Though there are no prerequisites, it is desirable that students have previously taken a course in conflict studies or war.

Identical With: **GOVT316**

Prereq: **None**

CSPL330 Policy and Strategy in War and Peace

This course explores how the relations, relationships, and discourse between senior national civilian and military leaders influence the development and execution of policy and strategy in war and peace. In theory, the purpose of war is to achieve a political end that sees a better peace. In practice, the nature of war is to serve itself if it is not influenced and constrained by continuous discourse and analysis associated with good civil-military relations between senior leaders. This course begins with discussion of the key foundational works to build a common understanding. It then explores how civil-military interaction influenced strategy in war and peace for each decade from the Vietnam War to the present. The readings and seminar discussions also examine how the outcomes of wars influenced civil-military relations and the subsequent peace or wars. This course lies at the intersection of international relations, history, and conflict studies. Students will gain greater understanding of how U.S. policy makers, strategy, and war interact, while honing their critical thinking and writing skills.

CSPL332 Just Cities: Architectures of Public Encounter

What is "the public," and how has it been conceived, relative to notions of the urban--to the web of ideas, forms, and fantasies constituting "the city"? Can art and architecture play a role in defining the public, or does the public's political and social construction place it outside the scope of specifically aesthetic concerns? This course addresses these and other related questions, positioning art and architecture in their broader cultural and historical contexts. It explores a range of socially charged, experiential, and participatory aesthetic and political

practices, characterized by their distinctly public character and decidedly architectural and urban settings. At its core, it is concerned with issues of social justice as they relate to the material spaces of the modern city, and the manner in which those spaces are identified, codified, and made operative in the service of aesthetic, social, and political experience.

This course will be taught by M. Surry Schlabs, Yale School of Architecture.

CSPL333 Music Movements in a Capitalist Democracy

This course will focus on music movements that have used the presentation, expression, and production of music and music events to facilitate sociopolitical transitions. The vital context of these movements is the United States in particular, where the speed and power of commerce, as well as the concentration of capital, present unique opportunities for progressive values and goals in music.

We will look at huge events such as the Newport festivals, Woodstock, Michigan Womyn's Music Festival, Lillith Fair, and Bonaroo, and examine how these movements have both evolved and spread their tendrils into the world (if they have). We will also spend some time on smaller, grassroots venues and music series in Chicago, Boston, San Francisco, and New York and see how blues, folk, punk, and "Americana" venues have affected and interacted with their communities. We will look at how music scenes evolved and grew and sometimes became institutions, like the Chicago Old Town School of Music.

CSPL337 Practicing Democracy

Organizing can make a difference in addressing major public challenges that require civic action, especially by those whose voices will lead, by identifying, recruiting, and developing more leadership; building community around that leadership; and building power from the resources of that community. In this course, each student accepts responsibility for organizing constituents to achieve an outcome by the end of the semester. As reflective practitioners, students learn from critical analysis of their leadership of this campaign. We focus on five key practices: turning values into motivated action through narrative; building relationships committed to common purpose; structuring leadership collaboratively; strategizing to turn resources into the power to achieve outcomes; and turning commitments into measurable action enabling learning, accountability, and adaption.

CSPL338 Writing for Advocacy

This course will enable students to research effectively, marshal arguments and information, and write persuasively. Students will work closely with the instructor on a series of short and medium-length writing assignments. Students

will work closely with the instructor to input feedback and improve both their research and writing skills. Students enrolled in this seminar have been admitted to the Human Rights Advocacy Minor. When possible, assignments in the writing seminar will correspond to substantive issues examined in other elements of the Human Rights Advocacy Minor.

Gen Ed Area: **SBS-CSPL**

Prereq: **None**

CSPL341B Topics in Education, Innovation, and Entrepreneurship: Social Entrepreneurship in Education

This seminar focuses upon educational innovation and entrepreneurship as a form of social entrepreneurship, some of society's greatest challenges in education. Students will survey critical issues in contemporary education and explore innovative and entrepreneurial efforts to address these issues. Learners will explore how diverse education startups, non-profit organizations, and non-governmental organizations, individuals and grassroots groups, K-12 schools, universities, foundations, professional associations and others are responding to these issues in innovative ways. As the course progresses, students will explore the roles of foundations, corporations, and government policies and regulations upon educational innovation and entrepreneurship. As part of this course, learners will work individually or in groups to research solutions to a pressing contemporary educational challenge and propose or pitch a means of addressing that challenge through social entrepreneurship.

Offering: **Host**

CSPL341C Entrepreneurship in Education: Past, Present, and Future

Entrepreneurship plays an increasingly important role in the American public education system. This course examines the historic roots of entrepreneurship in education, looking at both the business side of entrepreneurship and the more recent emergence of social entrepreneurship. Furthermore, the course examines the current debates in the United States about the engagement of business with education, addressing such concerns as the proper role of risk, profit motives, privatization, and neoliberalism. The New Orleans public school system will serve as a case study for investigation in this discussion. Students will better understand the entrepreneurial personality, the sources of innovation, and the promise and pitfalls of entrepreneurship in public K-12 schooling.

Gen Ed Area: **SBS-CSPL**

Prereq: **None**

CSPL341D Topics in Education, Innovation, and Entrepreneurship: A Law and Policy Perspective

Entrepreneurial ideas in education invariably raise rich questions of policy and law. Innovations in the public schools, such as charter schools, the use of student test scores (e.g., value added modeling) to evaluate teachers, and alternative pathways to the profession (e.g., Teach for America) engender deep debate and discussion in policy and legal circles. This course will explore (from both a law and policy lens) the various education reform ideas that have been instituted or debated and characterized as innovative or entrepreneurial. The course material will be framed in a way to be accessible to those with a general interest in the area of education but without a background in law and policy per se. The course will draw heavily from guest lecturers and entrepreneurs working in the field.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-CSPL**

CSPL357 Saving the Republic: Lessons from Plato for our Time

More than two thousand years ago, Plato addressed the pressing issues of the day: the rise of the oligarchy, dwindling of public deliberation, increasing political factionalism, and erosion of credible information. Some argue that the lessons of his Socratic exchanges, captured in *The Republic*, are valuable to this day. In this course, students will immerse themselves in 403 B.C.E., a crucial moment in Athenian democracy. Following a close reading of *The Republic*, the classroom will become the Athenian state. Each member of the class will assume a particular place in Athenian society and in the factions of the day using highly-developed roles from the *Reacting to the Past* curriculum. As members of the gathered assembly, students will debate divisive issues such as citizenship, elections, re-militarization, and the political process. Then, students will develop, rehearse, and publicly perform a one-act play at the Russell Library in Middletown. The play will be set in ancient Athens and will demonstrate factionalism, information asymmetry, political brokering, and other political issues of that era. Following the performance, the students will engage the audience in a Q&A about the relevance of the play's themes for today. Students will be assessed in five ways: 1. Content quizzes on *The Republic*, 2. Written preparation for debates/assemblies, 3. Oral presentations in debates/assemblies, 4. Contribution to the class public performance, and 5. A short paper analyzing *The Republic's* relevance for contemporary United States.

CSPL366 A History of Incarceration in the United States

This course examines the history of incarceration in the United States from the 18th century to the late 20th century. It begins with history of indentured servitude in the colonial era and then considers the intensification of the enslavement of blacks in the 19th century as well as the expansion of prisons in the 20th century. The course seeks to engage how systems of confinement accompanied the development of a political system based on the languages of liberty.

CSPL367 Perspectives in Arts as Culture: Ukrainian Arts and Language as Resistance

Throughout history, arts and language have been central to Ukrainian resilience. This course will introduce students to basic elements of the Ukrainian language as well as the rich tradition of Ukrainian arts--dance, theater, poetry, literature, visual arts and crafts--and the way they have survived and thrived despite 400 years of censorship and persecution. Each week, one class will focus on the basics of the Ukrainian language, its history as a vital element of the Ukrainian culture, as well as current national language policy and practice. The second class will explore the ways that arts in Ukraine foster psychosocial, physical, and political resilience in the face of crisis. Students will engage with traditional arts and crafts, learn about leading experimental artists (1700s-present) and their role in major art movements in history, hear from an array of guest artists from Ukraine, and complete a final creative project that explores the current political moment and conflict in Ukraine.

CSPL374 Censorship, Culture Wars, and Controversy in Art

Art history is marked by various forms of state, community, or institutional censorship. Such events can be flash points in culture wars, as in the United States in 1989, when four artists--most of them queer--were denied funding from

the National Endowment for the Arts after their work was deemed "obscene." Sometimes art that unearths sensitive cultural histories can lead to calls for destruction, as in Sam Durant's 2012 work *Scaffold*, which referenced state violence against the Dakota people, leading tribe members to protest what they felt was Durant's insensitive handling of the subject. Events like these raise key questions within art and broader society: Who should have the authority to decide which art should be exhibited, and to what audiences? What constitutes censorship? When might censorship, or the curtailing of speech, be justified?

This course will examine these questions focusing on the 20th and 21st centuries in the United States, but also global contemporary art. We will consider such issues in the wake of a recent spate of museum exhibitions canceled due to controversial content, the dismantling of monuments to colonialism and the transatlantic slave trade, as well as today's culture wars as conservative book bans make headlines and hate speech abounds. We will also explore new channels for arts funding, exhibition, and publishing that emerge in response to censorship. In addition to important texts by art historians including Sarah Parsons, Aruna D'Souza, and Rosalyn Deutsche, among others, we will also read interdisciplinary legal scholars like Sonya Katyal and Amy Adler who write from the perspective of law and policy. We will also read the landmark Supreme Court case *NEA v. Finley*. Assignments include an in-depth case study of a canceled exhibition.

CSPL381 Intermediate Public Practice

What are the possibilities and challenges of making work in the public domain? This intermediate studio course provides students with the framework, conceptual language, and technical means to develop ambitious projects in public space. Over the course of the semester, students will be introduced to a range of working methods, including new genre public art, research-based practices, site-specific projects, and collaborative practices. While the course focuses on contemporary issues and debates, it situates these topics within a set of broader global and historical traditions. Through group discussions, critiques, site visits, and presentations, the course will assist students in developing a series of works that build towards a self-directed final project. We look thematically at a range of sites as spaces of memory and belonging, sociality and resistance. We explore the manifold ways in which people have engaged with place through a range of forms, including roadside monuments, site-specific sculptures, landscape films, community-based performances, architectural interventions, collective rituals, and political protests. Attention will be placed on sites around Middletown in order to situate our research and practice. These may include Harbor Park, Middlesex Historical Society, Beman Triangle, Connecticut Valley Hospital, Colt Armory, Portland Brownstone Quarries, among others. Support will be provided to students along the way in negotiating relationships with local institutions and stakeholders. Supplementary readings will introduce students to questions related to spatial theory and practice, agonism and democracy, monuments and counter-monuments. Successful completion of the course will prepare students for advanced work in the public domain. Course is open to all students. Preference given to students who have taken ARST131 and ARST235 or ARST238 or ARST239 or ARST245 or ARST 251 or ARST286 or other course in a related discipline.

CSPL397 Human Rights and the 2020 Elections

This seminar will examine the principal candidates for the presidency (and selected candidates for other major electoral positions) from the perspective of human rights. To begin, we will spend the first several weeks studying basic human rights standards, as well as the challenges to the promotion of

international human rights standards in the United States. We will then turn to particular rights and clusters of rights, considering the policies proposed by various candidates and their implications for human rights. After review of the particular right or cluster of rights, students will work in small groups to research and present the proposals of the various candidates to the class. In addition, representatives of the candidates will be invited to engage with the class (as well as in broader fora on campus).

CSPL399 Understanding the 2020 Presidential Election

In understanding the 2020 Presidential Election, students will learn how to read skeptically the political press and how to write critically about presidential campaign politics. Along the way, the course will touch on electoral history, political and social thought, public policy, media criticism, and much more. Students will read past examples of thought-provoking and influential commentary. They will read current coverage in the legacy press of the 2020 presidential election and come to class prepared to discuss the most important stories and issues of the week. Students will have the opportunity to learn about electoral politics and political writing alongside a veteran journalist. Students who have experience working for political campaigns will have a chance to share their knowledge and help the class incorporate their experience in a larger historical framework. They will have a chance to see their work published in the Editorial Board, the lecturer's daily politics newsletter. Students will attempt to do what political writers do in real-time: explain what's happening from a unique, particular, and informed point of view for the benefit of like-minded citizens seeking to achieve the ideal of self-government. In the end, the hope is that students see that campaign politics is simpler and more complex than it appears, but that neither is obvious without study, focus, and understanding.

CSPL405 Ideals into Practice

Through this course, students gain access to an e-portfolio to make connections between their academic curriculum and the practical experience they gain through campus employment, off-campus internships, community service, and extracurricular activities. By engaging in deep reflection about the skills they are gaining throughout their time at Wesleyan, students will be able to understand and explain to others how their liberal education prepares them for life after college. Permission of the instructor is required. Students must also obtain permission from their campus employer; when enrolling, students should register for the course and ask their supervisors to e-mail the instructor with their permission. Information for supervisors may be found on the Ideals into Practice website (idealsintopractice.site.wesleyan.edu). This course may be repeated for credit, but you may only count one full credit toward your degree.

CSPL480 Engaged Projects

Engaged Projects (EPs) are rigorous, self-designed endeavors in which a student studies a topic of their choice and completes a final project intended for a non-academic audience. Students are encouraged but not required to select a topic that is connected to another class or their major. Final projects can take the form of blogs, videos, a website, or other media; a work of art, an event, a workshop, a presentation, or panel; a policy proposal or analysis; a white paper or op-ed series; a business plan; and/or any other piece(s) thoughtfully designed for the public.

EP students will develop a self-directed research and project plan. They must enlist an EP Sponsor who will serve in an advisory/mentor role; Sponsors can be Wesleyan faculty, staff, alumni, or community partners; family members or friends; or other experts or professionals willing to play this role. Seeking and enlisting an appropriate Sponsor is a component of the EP learning experience.

In addition to conducting their own extensive research and producing a summative project by the end of the semester, students will write a series of reflections to document their progress and their learning.

CSPL494Z Internship: Elections

This course may be repeated for credit.

Through this course, students can earn academic credit for an internship, whether paid or unpaid, that involves learning about or participating in the electoral process. This course is part of Wesleyan's E2020 initiative. Students must apply through the instructor; if approved, they will need to register the internship through the Gordon Career Center. The internship must include at least 40 hours of work. In addition to completing the internship satisfactorily, students must comply with the learning requirements and deadlines laid out by the instructor.

CHEMISTRY (CHEM)

CHEM115 Chemistry in Your Life

This course will cover a wide range of topics of current interest that will show how chemistry is ever present in the world. In particular, the course will discuss the molecular basis of topics such as crime scene DNA testing, COVID-19 detection and vaccine development, the physical effects of drinking alcohol, and more.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM115F Chemistry in Your Life (FYS)

This course will cover a wide range of topics of current interest that will show how chemistry is ever present in the world. In particular, the course will discuss the molecular basis of topics such as crime scene DNA testing, COVID-19 detection and vaccine development, the physical effects of drinking alcohol, and more.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM118 DNA

This course provides an interdisciplinary view of the DNA molecule and its impact upon medicine, law, philosophy, agriculture, ethics, politics, and society at large. The course has two parts. In the first part, we will learn the chemistry and physics of DNA and the processes by which the information stored in DNA is expressed. In the second part of the course, we will discuss what DNA has done and still can do for us—for example, treat and prevent genetic diseases, improve our food through genetic engineering, achieve criminal justice through genetic fingerprinting, understand the evolutionary origin of humans, and enrich our idea of what it is to be human. The course assumes basic knowledge of chemistry

and biology at the general high school level. Independent exploration and inquiry are encouraged.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM119 Biology and Chemistry in the Modern World: A Survey of Drugs and Disease

This course will cover a wide range of topics of current interest that are at the intersection of biology and chemistry. In particular, the molecular basis of issues related to drugs and disease will form a focus of the course. Topics to be discussed will include psychoactive and performance-enhancing drugs, mad cow, cancer, viral and bacterial diseases, and the chemistry of foods.

Offering: **Crosslisting**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B119**

Prereq: **None**

CHEM121F Chemophobia: Precaution or Panic? (FYS)

Chemophobia is an aversion to or prejudice against chemistry and chemicals. There is abundant evidence of this across the mass media, and while some important issues have been brought to the forefront in this way, the hype and misunderstanding surrounding other issues has had adverse effects on our society. This course will look at both sides of the debate surrounding chemicals in our everyday lives—in our food, in our consumer products, and in our environment. We will begin with a discussion of how we arrived at our current perceptions of chemistry, and then we will delve into the facts and science behind some of the topical issues of concern to differentiate between what is merely hype and what we ought to be concerned about. This course is intended for anyone interested in the topic, regardless of their current knowledge of chemistry.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM127 Molecules on the Menu: From Classic Cuisine to Molecular Gastronomy

Cooking and baking are, at their core, chemistry in the kitchen. The taste, texture, structure, and appearance of our favorite foods result from the interactions—and reactions—of molecules. This course will explore the way that molecules interact with one another during the preparation of different recipes as well as how these molecules respond to external physical factors such as heat, cold, or stirring to give the final tasty result. By understanding what is happening when we follow a particular recipe, we will discover how to adapt recipes to our own tastes, troubleshoot recipes in different situations, and substitute ingredients.

The course will include a combination of lectures, cooking demonstrations, and weekly short experiments during which we will seek to answer questions such as: What is a cookie? How does one cook a "perfect" egg? Is it possible to cook without applying heat?

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM137F The Self-Made Tapestry: Pattern Formation in Nature (FYS)

The natural world is filled with intricate patterns: for example, the characteristic stripes and spots of animals, the shifting landscapes of wind-blown desert sand dunes, the hexagonal forms of honeycombs, the near perfect six-fold symmetry of snowflakes, the branching patterns of arterial structures, convection patterns in fluids, and the forms of soap films. Research suggests that many of these diverse patterns arise from a few relatively simple mechanisms that are independent of the fine details of each system. We will examine a wide range of these natural phenomena to develop insights into how complex morphologies may appear from a few simpler pattern-forming principles.

CHEM141 General Chemistry I

CHEM 141 is the first half of a standard introductory course in general chemistry, intended for science majors and appropriate for premedical studies. Proficiency in algebra is required. Prior completion of a high school chemistry course is typical, but not required. Students with advanced academic preparation in high school (especially AP/IB/A-Level CHEM) will not be granted credit if they enroll in this course and should instead take CHEM143. The topics covered will include measurement and dimensional analysis; atomic structure; electronic structure; formula calculations and the mole; stoichiometry; solutions and aqueous reactions, part 1; heat and enthalpy; structure and bonding; and states of matter. The full-year course is completed with CHEM 142.

Students considering CHEM 141 are strongly encouraged to consult https://www.wesleyan.edu/chem/undergraduate_program/first_year_students.html

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM141R General Chemistry I Recitation

Recitation is a fourth-hour period designed for small group workshops and interactive learning. All students enrolled in CHEM141 must register for one section of CHEM141R.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM141Z General Chemistry I

CHEM 141Z is an intensive version of CHEM141. CHEM 141Z is the first half of a standard introductory course in general chemistry, intended for science majors and appropriate for pre-medical studies. Proficiency in algebra is required. Prior completion of a high school chemistry course is typical, but not required. The topics covered will include measurement and dimensional analysis; atomic structure; electronic structure; formula calculations and the mole; stoichiometry; solutions and aqueous reactions, part 1; heat and enthalpy; structure and bonding; and states of matter. The full general chemistry course curriculum can be completed by continuing to CHEM142/142Z.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM142 General Chemistry II

CHEM 142 is the second half of a standard introductory course in general chemistry, intended for science majors and appropriate for premedical studies. Proficiency in algebra is required. Prior completion of a high school chemistry course is typical, but not required. Topics covered will include solutions and aqueous reactions; kinetics; equilibrium; acids and bases; solubility equilibria; thermodynamics; electrochemistry; and nuclear chemistry.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM141 OR CHEM141Z**

CHEM142R General Chemistry II Recitation

Recitation is a fourth-hour period designed for small group workshops and interactive learning. All students enrolled in CHEM142 must register for one section of CHEM142R.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM142Z General Chemistry II

CHEM 142Z is an intensive version of CHEM142. CHEM 142Z is the second half of a standard introductory course in general chemistry, intended for science majors and appropriate for pre-medical studies. Proficiency in algebra is required. Prior completion of a high school chemistry course is typical, but not required. The topics covered will include solutions and aqueous reactions, part 2; kinetics; equilibrium; acids and bases; solubility equilibria; thermodynamics; electrochemistry; and nuclear chemistry.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM141 OR CHEM141Z**

CHEM143 Honors General Chemistry I

The CHEM 143/144 course sequence is intended for students with previous advanced academic preparation, especially AP/IB/A-Level chemistry courses. The course sequence fulfills premedical requirements. Eligible students interested in the CHEM, MB&B, and NS&B majors are strongly encouraged to choose this option as the best preparation for further study. The topical focus will be on the concepts of electronic structure, molecular geometry, and equilibrium thermodynamics, with applications to current research. Note: CHEM 143/144 does not follow the same curriculum as CHEM 141/142; CHEM143 will not be accepted as a prerequisite for CHEM142.

Students considering CHEM 143 are strongly encouraged to consult https://www.wesleyan.edu/chem/undergraduate_program/first_year_students.html

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM144 Honors General Chemistry II

CHEM 144 is the second half of the honors general chemistry sequence, which completes a full year of instruction in general chemistry for science majors and for premedical studies. The focus of the course is the fundamentals of structure and bonding, with an emphasis on predicting reactivity. Major topical coverage

includes the reactivity of ions in aqueous solution, kinetics, modern electronic structure, and the chemistry of transition metal complexes, with applications to current research on, for example, food chemistry, functional materials, and artificial photosynthesis.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM143**

CHEM150 Introduction to Organic Chemistry

This course is designed as a "head start" to the organic chemistry sequence (CHEM 251/252), consisting of a weekly workshop designed to prepare students for the coming fall semester. Topics covered include structural formulas of organic compounds, organic chemical nomenclature and vocabulary, basic rules of writing organic reaction mechanisms, and how to use ChemDraw software.

Students who have completed CHEM 251 may not enroll in this course.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.25**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM141 OR CHEM143**

CHEM152 Introductory Chemistry Laboratory

This course introduces students to the application of chemical concepts in the laboratory. This one-semester course is the only laboratory course taken concurrently with general chemistry courses (CHEM 141/142 or 143/144), and it serves as the first course in a three-semester laboratory sequence designed to fulfill chemistry lab requirements for pre-medical/health studies. CHEM 152 is offered in both the fall and spring semesters. Students who place directly into CHEM 144 with advanced placement credit must take this laboratory course if they intend to take CHEM 257 in a future semester. Students who place directly into CHEM 251 with advanced placement credit do not take this laboratory course; these students should enroll directly into CHEM 257 instead.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM152Z Introductory Chemistry Laboratory

This course introduces students to the application of chemical concepts in the laboratory. This course is the only laboratory course taken concurrently with general chemistry courses (CHEM 141Z/142Z), and it serves as the first course in a three-semester laboratory sequence designed to fulfill chemistry lab requirements for pre-medical/health studies.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM241 Informal Science Education for Elementary School Students I

This service-learning course will focus on designing and implementing original, effective, and engaging science-based lesson plans for elementary age children in an afterschool program taking place at five local elementary schools. The classroom components include writing, testing, and critiquing lesson plans and organizing a once-a-semester event, Science Saturday. Members of the class are required to volunteer weekly, co-lead Science Saturday, complete individual work, and organize meetings for projects outside of class.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Identical With: **MB&B241**

Prereq: **None**

CHEM242 Informal Science Education for Elementary School Students II

This service-learning course will focus on designing and implementing original, effective, and engaging science-based lesson plans for elementary age children in an afterschool program setting at five local elementary schools. The classroom component includes writing, testing, and critiquing lesson plans and organizing a once-a-semester event, Science Saturday. Members of the class are required to volunteer weekly, co-lead Science Saturday, complete individual work, and organize meetings for projects outside of class. This course is a continuation of CHEM241.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B242**

Prereq: **None**

CHEM251 Organic Chemistry I

This course offers an introduction to the chemistry of carbon compounds with emphasis on the relationship between structure and reactivity. The laboratory course CHEM257 is normally elected concurrently but is not required. Students with advanced placement credit who wish to enroll in CHEM251 without having previously taken chemistry courses at Wesleyan are strongly encouraged to consult https://www.wesleyan.edu/chem/about_the_major/first_year_students.html

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM142 OR CHEM142Z OR CHEM144**

CHEM252 Organic Chemistry II

This course is a continuation of the chemistry of carbon compounds with emphasis on the chemistry of important functional groups. The laboratory course CHEM258 is normally elected concurrently but is not required.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM251**

CHEM257 Intermediate Chemistry Laboratory

This course is a continuation of CHEM 152, and it is designed to prepare students for more advanced chemistry lab courses. This course is normally taken concurrently with CHEM 251, and it fulfills part of the chemistry lab requirement for pre-medical/health studies. Students who place directly into CHEM 251 with AP/IB credit should enroll in this course without taking CHEM 152.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-CHEM**

Prereq: **(CHEM142 OR CHEM142Z OR CHEM144) AND (CHEM152 OR CHEM152Z)**

CHEM258 Organic Chemistry Laboratory

CHEM 258 is offered as an experience to reinforce the concepts learned in organic chemistry lecture courses and to provide hands-on experience to safely carry out basic organic synthesis laboratory techniques. This course will provide students with advanced experience in organic chemistry laboratory experiments. Students will learn to assemble laboratory apparatus for basic experimental

techniques such as vacuum filtration, recrystallization, reflux reaction setup, simple distillation, melting point analysis, and thin layer chromatography.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-CHEM**

Prereq: **(CHEM251 AND CHEM257)**

CHEM296 Braving the Elements: A Calderwood Seminar in Public Writing about Chemistry

Writing is hard. Writing about chemistry for a general audience is just a bit harder, but the ability to communicate technical information to the public and to policy makers has never been more important. Good chemistry writing requires a solid grasp of the science, the ability to identify the most essential concepts, and the talent to express them in non-technical, jargon-free language. All of these are learnable skills. Participants will produce pieces in a variety of short forms (e.g., essay, policy summary, annotated figure) to become better writers. In the Calderwood Seminar tradition, the course will be structured as a workshop with students serving as both writers and editors.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Prereq: **CHEM252**

CHEM307 Molecular Biophysics Journal Club I

This course includes presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from journals including but not limited to the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.

Offering: **Crosslisting**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B507, MB&B307, CHEM507, PHYS317, PHYS517**

Prereq: **None**

CHEM308 Molecular Biophysics Journal Club II

Presentation and active discussion of a series of current research articles in the field of molecular biophysics and biophysical chemistry from the Biophysical Journal, Biopolymers, Current Opinion in Structural Biology, Journal of Biomolecular Structure and Dynamics, and the Annual Review of Molecular Biophysics and Biomolecular Structure.

Offering: **Crosslisting**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B508, MB&B308, CHEM508, PHYS318, PHYS518**

Prereq: **None**

CHEM309 Molecular and Cellular Biophysics

This course is an integration of the physical and chemical principles underlying biological systems from molecules to cells. The objectives are to develop an understanding of the underlying biological and physical principles that inform biophysical methods (e.g., protein-protein interaction studies, enzyme kinetics, spectroscopy, structural biology), how these concepts and techniques can be used to address open scientific questions, and how to critically evaluate their use in scientific literature. Particular emphasis will be placed on the biophysical concepts underlying studies of proteins, enzymes, and metalloproteins.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B309, CHEM509, MB&B509, PHYS339, PHYS539**

Prereq: **None**

CHEM314 Environmental Chemistry

This course is designed for students with college-level general and organic chemistry background. Examples of topics to be covered include energy production and consumption, chemical pollution and environmental clean-up, among others. Analysis and criticism of environmental literature are included.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **(CHEM141 AND CHEM142 AND CHEM251 AND CHEM257) OR (CHEM143 AND CHEM144 AND CHEM251 AND CHEM257)**

CHEM317 Quantitative Chemical Analysis

Measurement and chemical analysis are at the very heart of the chemical sciences. Practicing chemists depend heavily on chemical analysis, as do medical professionals, environmental scientists, and many others. Quantitative chemical analysis is the science of determining "how much"--as in, "how much toxic lead is in your drinking water?" In this course, you will first learn how to treat measured chemical data to extract meaningful information, and then we will proceed to study classical methods of chemical analysis, expanding upon your knowledge of general chemistry. A practical laboratory experience will reinforce the curriculum and build your skills as a chemist. This course is part of the required curriculum listed in the American Chemical Society Guidelines for Bachelor's Degree Programs, and this course is highly recommended for students who intend to pursue graduate studies and/or employment in a chemical discipline.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **E&ES395**

Prereq: **(CHEM142 OR CHEM142Z OR CHEM144) AND (CHEM152 OR CHEM152Z)**

CHEM318 Instrumental Analysis

Chemical analysis has kept pace with the advent of modern technology through the development of instruments capable of ever-improving levels of detection for both qualitative and quantitative analysis. Many students are exposed to the use and interpretation of these modern methods of chemical analysis, but this experience typically comes with little understanding of how and why these instruments work. This course will investigate instrumentation across three broad categories of analysis: electrochemical, spectrochemical, and separations. The lecture course will be supplemented with a practical laboratory experience. Instrumental analysis is part of the required curriculum listed in the American Chemical Society Guidelines for Bachelor's Degree Programs, and this course is highly recommended for students who intend to pursue graduate studies and/or employment in a chemical discipline.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **E&ES396**

Prereq: **(CHEM142 OR CHEM142Z OR CHEM144) AND (CHEM152 OR CHEM152Z)**

CHEM321 Biomedical Chemistry

This course is designed to explore the molecular basis of disease and treatment options. Topics will reflect the importance of chemistry and biochemistry in the advancement of medicine today and will include treatment of metabolic disorders, rational drug design, and mode of drug action. A large portion of the

course will be dedicated to learning computer programs used in computational drug design as part of a final drug design project.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B321**

Prereq: **(CHEM251 AND [CHEM383 or MB&B383])**

CHEM323 Biochemistry of Neurodegenerative Disease

Broadly defined, neurodegenerative disease occurs when a specific class of neuron dies and thus fails in its biological action. In this course, we will delve into the many different, intricate ways neuron death can occur and cause disease.

From the chemistry of neurotransmitters, aggregation of proteins, and the collapse of neuromuscular junctions, many areas of the neurobiology can go awry. The focus of the course will be on understanding the complex interplay of small molecules and proteins that keep neurons healthy and functional. In this course, we will use current primary literature and lecture to understand the varied topics. This course aims to improve skills in reading and analysis of primary literature as well as the written and oral presentation of scientific findings.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **NS&B323**

Prereq: **BIOL181 AND CHEM252**

CHEM325 Introduction to Biomolecular Structure

This course aims to provide a framework for understanding three-dimensional structures of proteins, nucleic acids, and their complexes. The first half of the course emphasizes structural modules and topological patterns in major classes of proteins and nucleic acids. The second part of the course covers novel structural motifs, such as helix-turn-helix, zinc-finger, and leucine zipper, that are responsible for recognition of specific nucleotide sequences in nucleic acids by proteins. Analysis of structures using tools available on the Web and independent exploration of protein and nucleic acid databases are strongly encouraged.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B325**

Prereq: **None**

CHEM335 Protein Folding: From Misfolding to Disease

Amyloidogenesis, the process by which proteins and peptides misfold to form amyloid fibers, is at the root of several different diseases, including Parkinson's disease, Alzheimer's disease, mad cow disease, and type II diabetes to name a few. This course will focus on current research in the field that seeks to understand why a functional, well-folded protein adopts the misfolded amyloid form. In the course of discussing the misfolded nature of these proteins, we will review central elements of protein structure and stability to better understand the protein-folding landscape and the process of misfolding. We will also discuss how the process of misfolding leads to the different diseases and disease pathologies. We will read current literature that studies the molecular nature of these diseases and discuss the strategies used to detect, identify and study these misfolded proteins in the body and in the test-tube.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MBB**

Identical With: **MB&B535, MB&B335, CHEM535**

Prereq: **MB&B208 OR MB&B325**

CHEM337 Physical Chemistry I

A rigorous introduction to quantum mechanics, this course covers wave mechanics, operator methods, matrix mechanics, perturbation theory, angular momentum, molecular vibrations, atomic and molecular structure, symmetry, and spectroscopy.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **(CHEM142 OR CHEM142Z OR CHEM144) AND MATH122**

CHEM338 Physical Chemistry II

This course investigates chemical aspects of statistical mechanics and the laws of thermodynamics including free energy, chemical potential and chemical equilibria, and rates of chemical reactions.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM337**

CHEM340 Quantum Chemistry

This course is an introduction to modern molecular electronic structure calculations. Through in-class lectures and in-class exercises students will become familiar with some of the most popular methods for electronic structure calculations in molecules using the Gaussian computational chemistry package. The main emphasis of the course is to provide the students with the tools to devise their own computational chemistry calculations and to be able to assess whether any given calculation is likely to provide meaningful answers to chemical questions.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Identical With: **CHEM540**

Prereq: **CHEM337 OR PHYS315 OR PHYS515**

CHEM345 Molecular Spectroscopy

This is a lecture/discussion course in various selected topics in modern high-resolution spectroscopy. Microwave spectroscopy, angular momentum theory, electronic spectroscopy of diatomic molecules and vibrational normal mode analysis, and other topics will be covered dependent upon class interest.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **None**

CHEM358 Structure and Mechanism

This course will cover several important aspects of traditional and contemporary physical organic and mechanistic chemistry, including frontier molecular orbital theory and pericyclic reactions, organic photochemistry reactive intermediates (carbocations, carbanions, radicals, and carbenes), the thermodynamics and kinetics of organic reactions, and polymer chemistry.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM252**

CHEM359 Advanced Organic Synthesis

The control of reactivity and selectivity to achieve specific syntheses is one of the overarching goals of organic chemistry. This course is intended to provide advanced undergraduate and graduate students in chemistry with a sufficient

foundation to comprehend and use research literature in organic chemistry. Concentrating on the most important reactions and efficient synthetic methods used for organic synthesis, this course presents the material by reaction type. The planning and execution of multistep synthesis will also be included.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM251 AND CHEM252**

CHEM361 Advanced Inorganic Chemistry

This course is a survey of the chemistry of the inorganic elements, focusing on the relationship between electronic structure, physical properties, and reactivity across the periodic table. Major emphases include chemical applications of group theory in electronic structure and spectroscopy and reaction mechanisms of inorganic transformations.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM252**

CHEM373 Polymer Chemistry

The commercialization of plastics in the 20th century revolutionized our materials economy. In this course, we will examine the foundational principles of macromolecular chemistry, including polymer properties, synthesis, and characterization. Not only will we study the founding of polymer science, we'll look to the future and examine how we can design more sustainable materials.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM252**

CHEM375 Integrated Chemistry Laboratory I

This advanced lab course in chemistry involves work from the major subdisciplines: organic, inorganic, biochemistry, physical, and instrumental. Emphasis will be placed on integrated aspects of chemical synthesis, spectroscopic characterization and determination of physical properties in each exercise. Students will practice safety, scientific literacy, and scientific writing skills and will develop strong laboratory, problem solving and analytical skills.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM252 AND CHEM258**

CHEM376 Integrated Chemistry Laboratory II

The Integrated Laboratory sequence is a capstone for the chemistry major and is designed to provide students with: 1) documented experience in a variety of standard laboratory techniques and the operation of a range of analytical instruments; 2) advanced skills in searching, reading, and critically assessing the primary literature; and 3) practice in communicating science effectively in written, visual, and oral formats. Students, in collaboration with the course staff, develop individualized courses of study to achieve these goals.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM375**

CHEM377 Chemistry of Materials and Nanomaterials

This course will provide an introduction to materials chemistry, with a special emphasis on nanomaterials. Topics covered will include colloidal metal nanomaterials; semiconductors and quantum dots; carbon nanotubes,

fullerenes, and graphene; metal-organic frameworks; self-assembly and metamaterials; electron and scanning probe microscopies; and lithography. The course will also discuss applications of these materials and techniques in areas such as plasmonics and sensing, catalysis, energy generation, and medicine.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **PHYS377**

Prereq: **CHEM251**

CHEM379 Nanomaterials Lab

This course will be a combination of weekly lecture and laboratory exercises designed to introduce students to new developments in the chemistry of materials and nanomaterials. Concepts and theoretical background will be discussed during weekly lectures. Students will then apply those concepts to the preparation of materials/nanomaterials in weekly lab sections. Students will synthesize quantum dots, build solar cells, pattern surfaces using both photolithography and soft lithography, make conductive carbon nanofiber films, prepare high-temperature superconductors, and learn scanning probe microscopy techniques.

Offering: **Host**

Prereq: **(CHEM257 AND CHEM258)**

CHEM381 Physical Chemistry for the Life Sciences

The course is concerned with the basic physicochemical principles and model systems essential to understanding, explaining, and predicting the behavior of biological systems in terms of molecular forces. The course integrates fundamental concepts in thermodynamics, kinetics, and molecular spectroscopy with the structures, functions, and molecular mechanisms of biological processes. The objectives of the course are to (1) familiarize life science students at the advanced undergraduate and beginning graduate level with basic physicochemical laws, theories, and concepts important to the life sciences; (2) provide a working knowledge of mathematical methods useful in life science research; (3) develop a critical perspective on explanation of biological processes and understanding biological systems; and (4) survey the main applications of physical chemistry in the life sciences. Theory, methodology, and biophysical concepts are distributed throughout the course.

Prereq: **(CHEM251 AND MATH120) OR (CHEM251 AND MATH121)**

CHEM382 Practical and Theoretical NMR

Nuclear magnetic resonance (NMR) is an extremely powerful and flexible technique that can be used to analyze molecules sized from just a few atoms up to tens of thousands of atoms. This course will provide an introduction to how NMR spectroscopy works and background on the important theoretical aspects relevant for the most common NMR experiments. Time will be spent gaining practical experience in conducting NMR experiments both during and outside class. The ultimate goal of both the theoretical and hands on sections of this course is to enable you to correctly select and perform NMR experiments necessary to characterize molecules. In addition to learning how NMR hardware is used to produce spectra, we also cover important tasks like sample preparation and the finer points of data processing that will help you get better data. Beyond simple one-dimensional experiments, we will discuss a number of different multidimensional NMR experiments for determining the structures of small organic molecules, including COSY, HSQC, HMBC, and NOE. Furthermore, you will learn how protein structures are solved using 2D and 3D

experiments, and how the motion of those proteins can be measured at the atomic level.

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B382**

Prereq: **None**

CHEM383 Biochemistry

This rigorous introductory course to the principles and concepts of contemporary biochemistry presents both the biological and chemical perspectives. The major themes will be the structure and function of the major macromolecules (proteins, lipids, and carbohydrates), the basis and measurement of enzymatic activity, and general mammalian and plant cellular metabolism.

Offering: **Host**

Grading: **A-F**

Gen Ed Area: **NSM-CHEM**

Identical With: **MB&B383**

Prereq: **CHEM252 AND MB&B208**

CHEM385 NMR as a Tool for Structure Elucidation of Organic Compounds

Nuclear Magnetic Resonance (NMR) spectroscopy has emerged as such an extremely powerful tool for structure elucidation of organic compounds that its importance cannot be overstated. Automation of NMR data collection is becoming mainstream, and this course will focus on skills associated with spectral interpretation of organic compounds without involving complex mathematical equations. The course will take off with the basic principles and theory as applicable to ¹H and ¹³C NMR, then walk you through the tips and tricks for the analysis of spectra to identify functional groups, atom connectivity, and assignment to the molecular structure in a step-by-step manner, leading to the capability of reading an NMR spectrum to reveal the structure the way a physician reads an ECG (electrocardiogram) to know your heart's rhythm and electrical activity. The fundamentals of several 1D and 2D NMR techniques--such as DEPT, COSY, HSQC, HMBC, and NOE--and their importance in problem solving strategies for structural elucidation will be highlighted. The problem solving and analysis skills obtained by performing structural elucidation will be useful in fields beyond chemistry.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM251 AND CHEM252**

CHEM386 Biological Thermodynamics

This course is addressed to undergraduate and graduate students interested in biological chemistry and structural biology. The course presents thermodynamic methods currently used to relate structure to function in biological molecules. Topics include binding curves, chemical ligand linkages, binding polynomial, cooperativity, site-specific binding processes, and allosteric effects. Several models for allosteric systems, such as the Monod-Wyman-Changeux model, the induced-fit model, and the Pauling model, are analyzed in detail. Applications of these models are illustrated for functional regulation of respiratory proteins and for protein-nucleic-acid complexes involved in control of gene expression.

Prereq: **[CHEM383 or MB&B383]**

CHEM389 Pericyclic Reactions

Pericyclic reactions, which are also known by the name concerted organic reactions, are important topics in any chemistry postgraduate/undergraduate curriculum representing an important class of concerted processes involving pi-systems. Pericyclic reactions are governed by Woodward-Hoffmann rules. Concerted reorganization of bonding takes place throughout a cyclic array of continuously bonded atoms in these reactions. Cycloadditions, cheletropic reactions, electrocyclic reactions, sigmatropic rearrangements, and group transfer reactions are some of the major types of pericyclic reactions. Though initially considered as reactions aloof to solvent effects or the presence of catalysts, it has recently been shown that it is possible to influence pericyclic reactions using mechanical stress, catalysts, and notably enzymes. This course will uncover all the major topics in pericyclic reactions.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-CHEM**

Prereq: **CHEM251 AND CHEM252**

CHEM390 Practical Methods in Biochemistry

This course centers on currently used techniques for protein separation, characterization, and purification, such as ultracentrifugation, gel electrophoresis, and chromatography. These topics will be introduced within the general context of the behavior of macromolecules in solution. The relative stability of proteins in different media, the forces stabilizing protein structure, and the interaction of proteins will be discussed. We will explicitly consider different techniques used to study proteins. Relatively novel techniques to be discussed include surface plasmon resonance, microarray methods and mass spectrometry, and single molecule microscopy. In the course, we will go through three or four different protein purification protocols and discuss the methods used in each one. We will also touch upon the commonly used spectroscopic techniques used to characterize proteins, including absorption, fluorescence, and circular dichroism. The course will focus on biochemical techniques and understanding the physical principles underlying these techniques and will also discuss tactics for optimizing established isolation and purification procedures and for isolating and characterizing an unknown protein.

The course content is appropriate for advanced undergraduates (juniors/seniors) and beginning graduate students from chemistry, biology, molecular biophysics or MB&B.

CHEM395 Structural Biology Laboratory

One of the major catalysts of the revolution in biology that is now under way is our current ability to determine the physical properties and three-dimensional structures of biological molecules by x-ray diffraction, nuclear

magnetic resonance (NMR) spectroscopy, and other spectroscopic methods. This course is designed to familiarize students with current research techniques in biochemistry and molecular biophysics. Students will perform spectroscopic investigations on a protein that they have isolated and characterized using typical biochemical techniques, such as electrophoresis, enzyme extraction, and column chromatography. The course will provide hands-on experience with spectroscopic methods such as NMR, fluorescence, UV-Vis absorption, and Raman as well as bioinformatic computational methods. All of these methods will be applied to the study of biomolecular structure and energetics. This course provides a broad knowledge of laboratory techniques valuable for independent research at the undergraduate level and beyond.

Prereq: **None**

CHEM509 Molecular and Cellular Biophysics

This course is an integration of the physical and chemical principles underlying biological systems from molecules to cells. The objectives are to develop an understanding of the underlying biological and physical principles that inform biophysical methods (e.g., protein-protein interaction studies, enzyme kinetics, spectroscopy, structural biology), how these concepts and techniques can be used to address open scientific questions, and how to critically evaluate their use in scientific literature. Particular emphasis will be placed on the biophysical concepts underlying studies of proteins, enzymes, and metalloproteins.

CHEM535 Protein Folding: From Misfolding to Disease

Amyloidogenesis, the process by which proteins and peptides misfold to form amyloid fibers, is at the root of several different diseases, including Parkinson's disease, Alzheimer's disease, mad cow disease, and type II diabetes to name a few. This course will focus on current research in the field that seeks to understand why a functional, well-folded protein adopts the misfolded amyloid form. In the course of discussing the misfolded nature of these proteins, we will review central elements of protein structure and stability to better understand the protein-folding landscape and the process of misfolding. We will also discuss how the process of misfolding leads to the different diseases and disease pathologies. We will read current literature that studies the molecular nature of these diseases and discuss the strategies used to detect, identify and study these misfolded proteins in the body and in the test-tube.

CHEM594 Braving the Elements: A Calderwood Seminar in Public Writing About Chemistry

Writing is hard. Writing about chemistry for a general audience is just a bit harder, but the ability to communicate technical information to the public and to policy makers has never been more important. Good chemistry writing requires a solid grasp of the science, the ability to identify the most essential concepts, and the talent to express them in non-technical, jargon-free language. All of these are learnable skills. Participants will produce pieces in a variety of short forms (e.g., essay, policy summary, annotated figure) to become better writers. In the Calderwood Seminar tradition, the course will be structured as a workshop with students serving as both writers and editors.

Offering: **Host**

CHINESE (CHIN)

CHIN101 Chinese Character Writing

This course is the lab course for Elementary Chinese I (CHIN 103) and focuses on the writing of Chinese characters. It is not a course in Chinese calligraphy but in basic writing. Strict stroke order will be introduced. About 600 Chinese characters will be covered. This is required for students who will be taking CHIN 103.

Offering: **Host**
 Grading: **Cr/U**
 Credits: **1.00**
 Gen Ed Area: **HA-CEAS**
 Prereq: **None**

CHIN102 Chinese Character Writing

This course supplements Elementary Chinese I (CHIN103) and focuses on the writing of Chinese characters. It is not a course in Chinese calligraphy but in basic writing. Strict stroke order will be introduced. About 600 Chinese characters will be covered.

Offering: **Host**
 Grading: **Cr/U**
 Credits: **1.00**
 Gen Ed Area: **HA-CEAS**
 Prereq: **None**

CHIN103 Elementary Chinese I

Elementary Chinese is an introduction to modern Chinese (Mandarin), both spoken and written. This course is designed for beginners and students who have some Chinese learning experience and would like to consolidate their foundation in Chinese. Students with significant experience speaking Chinese (any dialect) at home should enroll in CHIN105 instead of CHIN103. Students should enroll in a continuation of the course in the Spring or trailing semester to receive the full 3 course credits. Those students who do not enroll in the Spring semester will be given 1.5 credits and the grade earned at the conclusion of the Fall or initial course sequence semester. Please contact the instructor with any questions.

Offering: **Host**
 Grading: **A-F**

Credits: **1.50**
 Gen Ed Area: **HA-CEAS**
 Prereq: **None**

CHIN104 Elementary Chinese II

Continuation of CHIN103, an introduction to modern Chinese, both spoken and written.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.50**
 Gen Ed Area: **HA-CEAS**
 Prereq: **CHIN103**

CHIN105 Elementary Chinese for Heritage Learners

This course is for students who have family backgrounds in Chinese language. It is appropriate for students who are already familiar with basic speaking and have excellent listening comprehension of any dialect of Chinese but cannot read or write. The course focuses on teaching students how to read and write Chinese characters. After this course, most students should be able to continue in second-semester Intermediate Chinese II (CHIN206) or Third-Year Chinese (CHIN218).

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**
 Gen Ed Area: **HA-CEAS**
 Prereq: **None**

CHIN151 Living a Good Life: Chinese Lab (CLAC.50)

This optional "lab" class is intended for students (1) who have taken or are currently taking PHIL 210: Living a Good Life; and (2) who have little or no exposure to classical Chinese. Each weekly session will introduce students to aspects of the classical Chinese language--the written language of pre-20th-century China. Students will be able to read (in Chinese) and discuss (in English) key passages from the Confucian classics on which the Living a Good Life courses is partly based. No previous knowledge of Chinese (classical or modern) is necessary.

Offering: **Crosslisting**
 Grading: **Cr/U**
 Credits: **0.50**
 Gen Ed Area: **SBS-PHIL**
 Identical With: **PHIL151, CGST224**
 Prereq: **None**

CHIN205 Intermediate Chinese I

This course continues an intense and engaging level of practice in listening, speaking, reading, and writing Chinese from CHIN103 and 104. We will conduct classes according to an interactive approach: between the reproductive and the performative, between role-playing and creative participation, and between oral sessions and written texts. Emphasis will be placed increasingly on expressive speaking and writing.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**
 Gen Ed Area: **HA-CEAS**
 Prereq: **CHIN104**

CHIN206 Intermediate Chinese II

This course continues all-round practice in listening, speaking, and writing Chinese from CHIN205. We will conduct classes according to an interactive approach: between the reproductive and the performative, between role-playing and creative participation, and between oral sessions and written texts. Emphasis will be placed increasingly on expressive speaking and writing.

Offering: **Host**
 Grading: **A-F**
 Credits: **1.00**

Gen Ed Area: **HA-CEAS**

Prereq: **CHIN205**

CHIN217 Third-Year Chinese I

Third-year Chinese is designed for advanced beginners who have a firm grasp of the Chinese language but a limited opportunity to expand vocabulary and fluency. The fall semester will cover a number of topics, including: smog, soft power, corruption in China, the craze of studying abroad in China, etc.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-CEAS**

Prereq: **CHIN206**

CHIN218 Third-Year Chinese II

A continuation of CHIN 217, this spring semester course will cover a number of topics, including Chinese festivals, cyberbullying and freedom of speech, left-behind children in China, privacy and security, the labor force in China, politics and identity in Taiwan, etc.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-CEAS**

Prereq: **CHIN217**

CHIN221 Fourth-Year Chinese I

This course is aimed at students who have completed six regular college semesters of Chinese courses or the equivalent. Its goal is to elevate students' language proficiency to the true advanced level. The course may use language textbooks, newspaper articles, literary texts, professional writing, academic papers, other authentic texts, television programs, and other media materials. The course will be conducted entirely in Chinese.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-CEAS**

Prereq: **CHIN218**

CHIN222 Fourth-Year Chinese II

This course is aimed at students who have completed seven regular college semesters of Chinese courses or the equivalent. Its goal is to continue elevating students' language proficiency to the true advanced level. The course may use language textbooks, newspaper articles, literary texts, professional writing, academic papers, other authentic texts, television programs, and media materials. The course will be conducted in Chinese.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-CEAS**

Prereq: **CHIN221**

CHIN223 Creative Writing in Chinese

The class will offer students a chance to use the Chinese language both communicatively and creatively in various literary genres including poetry, song lyrics, short stories, travelogues, memoir, plays, film scripts, and so on. The class is divided into three main sections. First, we will engage in close readings of some of the most interesting writings of contemporary Chinese literature that are both well-crafted and culturally significant. Second, using the class readings as reference points, the students will write their own pieces about their daily lives and dreams, oversea experiences as cultural observers, science fiction that portrays a future utopia, adaptations of Chinese ghost stories, and their imaginary lives as nonhuman animals. Third, the students will engage in dynamic class discussions and workshop each other's writings.

The class is not a standard advanced Chinese class. Bearing in mind that some of the most memorable Chinese poems and stories are written in simple language, participants in the class will focus on how to use the words and expressions they already know in fresh and innovative ways while expanding the horizon of their understanding of Chinese and global cultures. Native Chinese speakers, heritage speakers, and students who have taken Third Year Chinese and above can take the class and learn from each other in groups. No previous experience of creative writing is required.

CHIN230 Contemporary Society in China

This is an advanced language course in which students learn by reading and discussing the articles online on various current topics. Topics include culture, academic subjects, and controversial issues. Students will learn specific vocabulary of these topics to further understand the culture and social development of China. By the end of the course, students will have improved their oral and writing proficiency in professional use of the Chinese language.

CHIN301 A Glance at Chinese Literature and Culture

This is a general introduction to classical, modern, and contemporary Chinese literature. Students will read literary works valued greatly in Chinese history which will help frame an examination of Chinese language, literature, and culture. The values of Chinese culture that emerge in and from these texts will be discussed and contextualized.

CHIN302 Narrating China: Chinese Lab (CLAC.50)

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Narrating China: Introduction to Modern Chinese Literature (CEAS 202) course. It allows students to encounter a selection of modern and contemporary Chinese literary texts in their original Chinese. As the parent course guides students through major literary movements and themes from 20th-century China, students in the CLAC tutorial will read poems, short stories, or excerpts of longer texts from the same periods in the original Chinese. In weekly meetings, students will discuss the readings in Chinese, to delve deeper into their stylistic and linguistic characteristics unobservable in translations.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Evaluation is based on students' preparedness, participation, and formal oral presentations, and will be tailored to students' language background. If you are unsure about whether your language background is sufficient for the course, please contact the instructor.

CHIN303 Chinese Calligraphy (CLAC.25)

This 0.25 CLAC course will provide students with a brief understanding of the art of Chinese calligraphy through calligraphy practice. They will learn about the characteristics of Chinese calligraphy from the "Four Treasures of the Study," as the tools of calligraphy (writing brush, ink stick, ink stone, and paper). They will understand the development history of Chinese calligraphy from five basic scripts of Seal (zhuanhu), Clerical (lishu), Standard (kaishu), Semi-cursive (xingshu), and Cursive (caoshu). The course focuses on imitation and practice of the Standard script kaishu. Prerequisite: Current or future Chinese class students are preferred.

CHIN305 East Asian Culture Through Chinese Pop Music (CLAC .50)

Even after the meteoric rise of K-Pop in recent years, Mandarin Chinese Language pop music, also known as Mandopop, remains a highly popular musical genre that influences East Asian popular culture. This course introduces students to the literary history and cultural forces that shaped Chinese popular music. The songs featured in the syllabus serve as a soundtrack to the "Introduction to History: Foundations of East Asian Cultures," as the themes largely mirror the contents of the parent course.

CHIN351 Classical Chinese Philosophy: Chinese Lab (CLAC.50)

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Classical Chinese Philosophy (PHIL205) course. Students must have taken PHIL205 in the past or be enrolled in it simultaneously. The course will have two main foci: introducing students to modern and contemporary Chinese-language debates about Chinese philosophy and exploring in greater depth the meaning of key passages from the classical works students are reading in translation in PHIL205.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Familiarity with classical Chinese is desirable but not required. Assignments will include presentations in Chinese and some written work in English; evaluation will be tailored to each student's language background. If you are unsure whether your language background is sufficient for the course, please contact the instructor.

CLST115F Crafting (Un)Ideal States: Utopias and Games of the Mind, Past and Present (FYS)

Utopias are imaginary places that promise freedom, equality, and happiness. In this course, we will look at different visions of utopian living: What kinds of hope, longing, and impulses do these utopias fulfill? What kind of social critique do they imply? How can they offer freedom and happiness while built on strict programs of biological, psychological, and social engineering? When does one's utopia become another's dystopia?

We will start with ancient Greek poetry and philosophy--Homer, tragedy, Aristophanic comedy, and Plato--to trace the beginnings of utopian thinking and the promises that it makes. In the last part of the semester, we will look at how these early seeds of utopia are recast and developed in later and contemporary literature, theory, and television shows, including Thomas More's "Utopia" and Emily St. John Mandel's "Station Eleven"; selections from T. Adorno, E. Bloch, and F. Jameson; and select episodes from "Black Mirror."

CLST118 The Fall of Rome and Other Stories

The fifth-century fall of Rome to barbarian invaders is an idea that slowly crystallized over time. This course will examine the birth and development of this "fall"--one of the most persistent stories in history--using the very texts in which it was first articulated. We will work with selections from a range of authors--Suetonius, Eusebius of Caesarea, Ammianus Marcellinus, Augustine of Hippo, Jordanes, Procopius of Caesarea and many others--to connect the fall of Rome with other attempts to explain catastrophe and change. The course will

conclude by surveying the persistence of the fall of Rome as an idea, through the medieval, early modern, and modern periods, right into contemporary discourse.

CLST120F From Democracy to Autocracy: Demagogues, Tyrants, and Popular Media in Ancient Greece and Rome (FYS)

Although different, the political systems of Greece and Rome, many of which serve as a model for our own government, were carefully designed to balance military, social, and political participation and empowerment, and to defend against the consolidation of power by any single citizen or group. Eventually, both Greek democracy and the Roman Republic failed. Why? This course examines in depth the political and legal structures of two ancient societies which began with participatory or representative governments and slid toward autocracy. Drawing on a range of sources in translation (historical, legal, poetic), we will explore the emergence and evolution of political systems, from the rise of democracy in Greece to its lapse into oligarchy, and from the Roman Republic to its subversion by charismatic leaders and the advent of empire. Along the way, we will discuss the rise of a celebrity culture and the impact of the increasing importance of public spectacles and entertainments as a vehicle for the demoralization of citizens and the slide into autocracy. Where did they go wrong?

CLST130F Looking Back, Moving Forward: Identities, Politics, and Truth-Making in Classical Antiquity (FYS)

The world of classical antiquity has been both celebrated and reviled for its role in shaping historical notions of who and what matters, and whose truths are passed into posterity. From politics and media to social identities and the creation of canon, this course will explore constructions of authority, power, and truth-making in the classical world and their echoes in modern life. How does democracy enfranchise some and marginalize others? Who has the "authority" to decide what is natural law, scientific truth, divine right? Is there a difference between truth-telling and truth-making in the stories we tell, the information we share, the art that we make?

This course will turn to a variety of materials from the ancient Greek and Roman world--including myth, literature, medicine, law, drama, archaeological sites,

and monuments--to address these questions. Class, status, race, ethnicity, the marginalized "other," religion, civic identity, and the writing of history and science will emerge as central to ancient thinking and offer critical perspectives for reconsidering intersectional identities today. By looking systematically at different facets of the ancient world, we may come to a more nuanced understanding of injustices, inequities, and constructions of modernity through their ancient origins, and look critically at our current practices and perspectives.

CLST153F Single Combat in the Ancient World (FYS)

This course celebrates the clash of warriors in warfare, sport, and spectacle in the classical world. Using primary sources and archaeological evidence, the class will survey traditions of combat in ancient art, literature, and society, beginning with Greek and Near Eastern epic; the modes of warfare in Greek society; ancient Olympic combat sports; and, finally, Roman gladiator spectacle. We will examine the role of violent sport in Greek and Roman society, the reception of the competitors, and the use of these events for political or nationalistic ends. Throughout the course we will explore the flexibility of concepts such as military ethics, "western" warfare, violence, honor, and excellence, both in the classical world and in our modern lives.

CLST175F Hold My Wine: Drinking Culture in Ancient Greece (FYS)

Wine. Politics. Poetry. The potential for destructive behavior. All of these went hand-in-hand with the ancient Greek "symposium," or drinking party. In this course we will study this custom and the roles it played in Ancient Greek society and art, as an institution that regulated membership in elite society, a source of political and social unrest, a religious practice, an arena for the contestation of philosophical ideas, and a venue for the performance of music and poetry. In addition to the symposium itself, we will also consider related institutions, such as Spartan military feasting.

In this course, the symposium will be viewed through a variety of lenses. We will survey Greek literature from Homer down through Athenian drama and Plato. We will also study the archaeological record, with units on Greek vases and drinkware, and on the architecture of public and private drinking spaces. But the Greek symposium will itself be a lens through which we consider drinking culture in our own society, and its representation, for instance, in music and film.

CLST190F Beware the Ides, Beware the Hemlock: Roleplaying Crisis in Ancient Greece and Rome (FYS)

The Thirty Tyrants have at long last been expelled from Athens, and now it is up to you and your closest friends and enemies to determine the future of the greatest city-state in the Mediterranean. The conspiracy of Catiline has been uncovered, and the fate of the conspirators and of Rome rests in your hands. Two decades later, the dictator Julius Caesar has been assassinated, and it falls upon you to negotiate the Senate to decide what the People of Rome should do.

Students will play in a number of "Reacting to the Past" scenarios set in ancient Greece and Rome--becoming stakeholders in these world-changing crises as they fight, speak, study, sweet-talk, and coerce their way to power over their classmates, be they allies or adversaries. This course is suitable for students of all interests and backgrounds and will offer opportunities to develop writing public-speaking, critical thinking, and persuasion skills.

CLST201 Art and Archaeology of the Bronze Age Mediterranean

This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.

CLST202 Greek Drama: Theater and Social Justice, Ancient and Modern

This course introduces students to Greek drama as produced in its original setting in ancient Athens and then adapted in modern times. The majority of our readings will be drawn from classical material: tragedies by Aeschylus, Sophocles, and Euripides, comedies by Aristophanes, and selections from Aristotle's Poetics and Plato's Republic. We will look at production practices, acting and audience experience, and the role of theater in shaping cultural values. Questions will include: How does theater as art reflect the personal, social, and political life of the Athenians? What is the connection between the development of Greek drama and the growth of the first democracy? What are the emotions of tragedy & for its mythic characters and for its real audience? And why have we been talking about catharsis for centuries? What is the relationship between emotions, drama, and social justice? For the last part of the semester, we will turn to adaptations of Greek tragedy in the 20th and 21st centuries by Jean-Paul Sartre, Bertolt Brecht, Sarah Kane, and Yael Farber. We will discuss how the dilemmas and emotions of tragedy are replayed in response to World War II, the South African Truth and Reconciliation Commission, PTSD, and consumer culture, among others.

CLST205 Myths, Monsters, and Misogyny: An Introduction to Greek and Roman Mythology

In this class we will read literary versions of myths from Greece and Rome and look at representations in ancient and later art. Starting with myths of the creation, we will move on to look at the individual gods and goddesses, their powers, and their place in ancient religion, then to the often perilous interactions of humans and gods. In the second half of the semester, we will concentrate on the heroes and heroines of mythology, ending with the Trojan War and its

aftermath. The course aims to give a basic grounding in the stories and the images--creating mythologically literate students. As that analogy implies, we will also analyze myth as a system of communication and consider how these myths portray the world, the divine, and the place of men and women in relation to the gods, to nature, and to society.

CLST221 Law, Politics, and Order in the Ancient World

Legal texts--law codes, decrees, and edicts, juristic discussions, law court cases--help us understand the history of legal thinking and strategy, and the construction of constitutional frameworks. Yet Greek and Roman legal sources offer something more than a history: Although these texts in many ways served as the foundation for European legal systems, they nonetheless offer radically different ways of thinking about concepts such as private and public, rights versus responsibilities, and the possibility of freedom and happiness--some more progressive than our own. In an era when many of our institutions and conventions appear open to challenge, the classical sources offer alternate legal and social ways of thinking, and new tools for understanding our own time. This course will provide an introduction to legal thinking in classical antiquity and, drawing from a range of sources, will speak to the intersection of constitutional frameworks with political theory. Through narratives and case studies, we will examine Greek and Roman approaches to thorny legal issues that are still contested today: women's rights, wartime codes, the right to trial, torture, capital punishment, and immigration and citizenship, among others. The ancient sources will be brought into dialogue with current cases and debates. We will also explore the construction of constitutional frameworks and see how these are deployed alongside religious beliefs and collective mores to cultivate "civic thinking." For CLST Major requirements and for Classics/CCIV Major requirements, this course falls under the History, Politics, and Social Justice track.

CLST228 Classical Allusions in Film

This course surveys the influence of classical antiquity on Western filmmaking from the late 1970s to the present day, with an emphasis on exploring the ways in which filmmakers allude to and encounter classical themes, settings, characters, history, and literature in their works. Classical mythology and

history have been a source of fascination for filmmakers since the beginning of filmmaking itself. Ben Hur (1907), Quo Vadis (1913) and Cabiria (1914) were all silent but ambitious films depicting aspects of classical antiquity on an epic scale that would have a profound impact on the classical blockbusters of the 1950s and 1960s. Cecil B. DeMille reintroduced the classical model with Ten Commandments (1956), and the epic(ally expensive) Ben-Hur (1959), Spartacus (1960), and Cleopatra (1963) would follow under other directors. These films can be analyzed for their interpretation of ancient material; their contemporary political subtexts and attitudes towards race, ethnicity, and gender; and their influence on the way 20th century Western cultures viewed Greco-Roman antiquity. Other film classics depicted an ancient world that ranged from dreamlike (Fellini's Satyricon [1969]) to pornographic (Caligula [1979]), to fantastical (Clash of the Titans [1981]). We will briefly examine these films as a springboard for looking at late-20th and early-21st century adaptations of classical material.

Classical material in film regained popularity in the 2000s: Gladiator (2000), Troy (2004), Alexander (2004), 300 (2006), Clash of the Titans (2010), and Pompeii (2014), and the 2016 remake of Ben Hur. But beyond these obviously classically-inspired films, situated as they are in a version of classical antiquity, there are other modern films that draw less obviously on classical material. O Brother Where Art Thou? (2001) takes the Odyssey from Homer's Mediterranean world and drops it into Depression-era Southern America. Chi-raq resituates Aristophanes' Lysistrata in gang-ravaged Chicago. The Star Wars (1977-83) and Hunger Games (2012-15) trilogies use a reimagined Roman Empire to comment on spectacle and society in contemporary America.

We will study these films and others to analyze the trajectory of classical allusion in modern film: why do directors continue to revisit classical antiquity? What themes are pervasive? How do ancient archetypes like the seductive queen, evil sorceress, noble enslaved man, old philosopher, and debauched aristocrat help characterize modern film characters? What is the difference between adaptation and inspiration? How closely must modern interpretations cleave to the ancient material to be deemed "acceptable" by scholars and enthusiasts? How do these interpretations reshape our understanding of the ancient material? And why is classical antiquity still so compelling today?

CLST232 Roman History

This course traces the history of Rome from its foundation, through its rise as an Italic and Mediterranean power, up to the transfer of the empire to Constantinople. It focuses on the political, military, and social achievements of

the Roman people and the contributions of its principal historical figures, from the legendary kings of the regal period, to Republican leaders such as Marius, Sulla, Pompey, and Caesar, through Augustus and the establishment of the principate and subsequent emperors such as Vespasian, Hadrian, and Diocletian. This course will fall under the History/Social Justice track.

CLST234 Art and Society in Ancient Pompeii

This seminar surveys the art, architecture, and material remains of the cities buried by the eruption of Mt. Vesuvius in 79 CE. Through readings, class discussions, and student research presentations, we will explore the ways in which this material can be used to study the social and political life of a small Roman city and examine the unique evidence for reconstructing the private life of Roman citizens, from their participation in local politics and government, to their religious beliefs and lives, to the interior decoration of their homes and their burial customs.

CLST235 Greeks-Romans-Christians

Western civilization emerged, in part, out of the achievements of ancient Greeks, Romans, and Christians. Art, architecture, philosophy, and literature were all forged in a crucible of clashing cultures. This course will introduce students to the religious worlds of Greek, Roman, and Christian antiquity. Attention will be given to the mythologies of the gods and cultic practices of the people, including religious sanctuaries, festivals, and sacrifices; divination, magic, and the mysteries; philosophy, ethics, and theology. We will conclude with an assessment of the rise and eventual triumph of Christians, their appropriation and critique of Greco-Roman culture, and their obsession with martyrdom and the cult of the dead.

CLST244 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt

This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

CLST248 Language Matters: Etymology and the Roots of Social Injustice

Etymology is a course designed to prepare students for disciplines outside what is traditionally considered "classics." The course will provide a strategic presentation of key Latin and Greek roots, constructions, and linguistic frameworks, which pervade the terminology of numerous fields and disciplines: law, medicine, biology, ecology, sociology, religion, and many more.

This course is a history of words: how they are formed, what they mean, and how they change and change us. In addition to teaching how to deconstruct terminology, the course will explore the origins and evolution of many of the commonly used modern terms in their original historical contexts, providing a glimpse into the rich background that gave rise to their use and meaning today.

Each week we will focus on a specific modern discipline, our "unit." Mondays and Wednesdays will be devoted to the workings of the language itself. We will examine how Greek and Latin roots make up the technical language of that discipline, so that students learn to identify, break down, and understand such terminology and its uses. 2020 is an important year: social justice and how we talk about it, language itself, is a political issue as we come to the presidential election. On Fridays we will explore a divisive issue confronting each discipline today and investigate the roots of the problem in antiquity. Topics include: biological race, abortion, debt slavery, climate crisis, extinction, deforestation, the First Amendment, and many others. By thinking about the roots and words that shaped and expressed Greek and Roman ideas, as well as how they negotiated important social, political, legal, medical, and environmental issues, we can understand better the crucial issues facing our own language and society.

CLST249 Classics Beyond Whiteness

This course offers a vision of "classics" that decenters the white, elite, and masculine in favor of a more egalitarian approach to the discipline. Students will interrogate misconceptions that ancient Greeks and Romans were white, race and ethnicity in Graeco-Roman societies, the role of classics in modern racial politics, the name of "classics" itself, and non-white approaches to classics. This course considers race as social construct; white supremacy, fragility, and privilege; and critical-race theoretical study of ancient cultures. For CLST Major requirements and for Classics/CCIV Major requirements, this course falls under the History, Politics, and Social Justice track

CLST250 Comedy in Translation

The American comic tradition starts here. Raunchy comedies like *Bridesmaids* or *American Pie*, melodramatic sitcoms like *Modern Family*, and super-"meta" shows like *Parks and Rec* ultimately find their roots in the raunchy comedy of Aristophanes, the melodramatic sitcoms of Menander, and the often-"meta" plays of Plautus and Terence. This class will involve the reading (in translation), discussion, and performance of some of these playwrights' weirdest and funniest plays, culminating in public presentation (by you!) of adaptations of plays.

CLST255 Democracy and its Discontents

Today we are confronting enormous questions about democracy: how it is defined, how it is practiced, and, in some places, whether it can survive. Such questions, however, are not new. From its inception in ancient Athens through centuries of political development, democracy has drawn both fervent support and intense criticism. In this class we will read a selection of ancient and modern sources as a basis for our discussion of fundamental issues such as participation vs. representation, citizenship and civic responsibility, and the tension between private and public interests.

Readings will include selections from ancient sources such as Herodotus, Thucydides, Plato and Aristotle and modern scholars such as Paul Cartledge, Melissa Lane, Josiah Ober and Kurt Raaflaub.

CLST257 Plato's REPUBLIC

"The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato." This declaration, famously made by Alfred North Whitehead in the early 20th century, seems especially true of Plato's *Republic*. No other work in the Western tradition can lay claim to setting the tone so influentially for the development of philosophy as a discipline. Almost every branch of philosophical thought we are familiar with today--on matters of ethics, politics, moral psychology, epistemology, metaphysics, and aesthetics--receives a major formulation in this text. This seminar will be devoted to a close reading of each of the 10 books of *The Republic* alongside various perspectives that have been taken on this magisterial work in contemporary philosophy, journalism, and literature. We will focus on *The Republic* primarily as a work of moral psychology by investigating the topical question of the dialogue: Why is it better to live justly rather than unjustly? For Plato, a just life is one governed by the pursuit of wisdom or learning, and this he believes will also be a psychologically healthy one. By contrast, a life governed by the indiscriminate pursuit of power--the life of a tyrant--is psychologically corrupted. These are bold claims. What is Plato's argument for them? In raising this question, we will consider the political project Plato embarks upon in the *Republic* in constructing a just society, as well as connected issues he raises in the dialogue concerning the nature of human motivation, the distinction between belief and knowledge, the distinction between appearance and reality, the importance of a proper

education to the human good, and the role of art and beauty in furthering the common good. Alongside Plato, we will read various works of secondary literature, journalistic pieces, and works of fiction this semester, all inspired by *The Republic*.

CLST260 The Archaeology of Identities in the Ancient Mediterranean and Beyond

Human beings all hold a wide range of socially constructed and physically lived identities, expressed and experienced sometimes continuously and simultaneously, and sometimes only occasionally under specific circumstances. These identities might include, but are not limited to, race, ethnicity, gender, sexuality, social status, occupation, and health. Many of these identities, expressed and experienced in various tangible and intangible ways in our lived reality, can only be accessed indirectly through the physical proxy of the archaeological record when it comes to people living in the past. This course will explore a variety of archaeological methodologies for accessing the social identities of past lives, as well as the sometimes problematic role that archaeology has played in this type of research over the course of the 20th and 21st centuries (is ancient DNA bringing us back full circle to scientific racism?). The primary focus of the course will be on the ancient Mediterranean, with additional case studies drawn from other parts of the world serving to illustrate the cross-regional applicability of approaches to past identities.

CLST280 Social Justice Warriors: Inequality, Injustice, and Activism from Antiquity to Today

We tend to think of social justice as a modern preoccupation, but many Greek and Roman politicians, thinkers, and activists identified and attempted to alleviate issues of inequality, unequal distribution of power, and access to resources. Each week we will explore a divisive issue confronting America today and investigate its roots in antiquity. Topics include political representation, land rights, biological race and slavery, abortion, debt, climate crisis, extinction, deforestation, free speech, and many others.

Through a mixture of historical research and academic roleplaying of moments of political crisis, we will explore the roots of these issues and how ancient societies attempted to navigate them.

CLST283 Off with its Pedestal! The Greek Vase as Art and Artifact

This course explores the dual role of the Greek vase--as *objet d'art* and as material culture. The first half of the course will trace the origins and development of Greek vase painting from Mycenaean pictorial vases to the masters of Attic Red Figure, examining the painters, the themes, and (often titillating!) subject matter in its social and historical context. The second half will focus on the vase as an artifact and tool for reconstructing social values

and economic trends throughout the Mediterranean. We will look at rip-offs, knock-offs, and how much Attic pottery was really worth, and evaluate the use of pottery as an indicator of immigration or cultural imitation. The course will include work with 3D scanning and digital optimization, as well as the construction of a virtual museum exhibit.

The course falls under the Archaeology/Archaeological Science track of the Classics/CCIV Major requirements.

CLST324 Tales of Hope or States of Delusion? Utopias, Past and Present

Utopias are imaginary places that promise freedom, happiness, and justice. In this course, we will look at different visions of utopian living: What kinds of longing and impulses do different utopias fulfill? What kind of social critique do they imply? How can they offer freedom and happiness, while built on strict programs of biological, psychological, and social engineering? What makes for the distinction between utopia and dystopia?

We will start with ancient Greek poetry, drama, and philosophy--Homer, tragedy, Aristophanic comedy, and Plato--to trace the beginnings of utopian thinking, its promises and failures. In the last part of the semester, we will look at how these early seeds of utopia are recast and developed in later and contemporary literature, theory, and shows, including Thomas More's "Utopia," and Emily St. John Mandel "Station Eleven"; selections from T. Adorno, E. Bloch, J. Rawls, R. Nozick, and F. Jameson; and episodes from *Black Mirror*.

CLST327 Dangerous Acts: Theater, Transgression, and Social Justice, Ancient and Modern

The first plays in the history of theater feature transgressive acts: murder, illicit sex, violence, and torture. Action-packed, gory, and heart-wrenching, these spectacles of mass entertainment were also staged specifically to "train" citizens to be thoughtful legislators, jurists, and policy makers. They were deliberately crafted to make audiences grapple with demanding questions--legal, ethical, and moral: the "laws" of war; discrimination (based on gender, class, ethnic background); privacy and political participation; confession, guilt, and punishment; anger and sympathy in decision-making, and much more.

In this course, we will read a selection of Greek plays, ancient and modern critical works, and modern adaptations to consider the role of theater in politics, aesthetics, and social and emotional engineering.

Readings from antiquity will include plays by Aeschylus, Sophocles, Euripides, and Aristophanes and readings from Plato and Aristotle. Modern works will

include plays and writings by Jean-Paul Sartre, Bertolt Brecht, Sarah Kane, Yael Farber, and movie adaptations.

This course will fall under the Poetry & Performance and History/Social Justice tracks.

CLST330 Classical Studies Today: Writing for a General Audience

This will be a seminar for junior and senior departmental majors, offered in association with the Calderwood Seminars in Public Writing. The purpose of the class is to have students write about scholarly issues in a way that makes them accessible to broad non-specialist audiences. This practice is what one scholar has called "responsible popularization." The course will concentrate on writing and public presentations, and each week the students will take alternating roles as writers and editors. The work load consists of reading scholarly articles or book chapters, on academic topics from Classical Studies, and re-work them in compact genres like personal essays, op-eds, blog posts, and reviews. For the final project, the students will form teams of two, each of which will interview an eminent Classical scholar of their choice and produce a brief profile.

CLST340 Daemons, Enigmas, and the Cosmic Image: Classical and Modern Allegory

Allegories are everywhere--from novels, art, and philosophy to news, political rhetoric and the law. They confront us as something strange, as overly baroque or disappointingly simplistic, as a symbolic mystery that becomes blandly prosaic once the proper interpretive key has been found. Allegories can be abstract and ethereal (e.g. Dante traveling through the heavenly spheres), but they can also make abstract ideas concrete: the idea of justice becomes the Roman goddess Iustitia, blindfolded, holding a sword and a set of scales, a statue in front of a courthouse. They try to explain life's complexities, but the stories they tell are much stranger than the lives that we live: the insatiable longing for our significant other is really the search for our other true half, since once we were round creatures rolling happily around but were cut in half by Zeus for our transgressions. What are these allegorical texts doing for us, and why are they doing it in such bewildering ways?

This course looks at the persistence of allegory. We will inquire into its origins in the Classical world, and we will try to understand how it has been found (or made) useful by writers and literary theorists in the 20th and 21st centuries.

The texts that interest us will make simple things mysterious and mysterious things simple, transforming the imaginable into the visible and the visible into the imaginary. And we will try to find our way through this mode of writing and of reading that insistently brings opposites together, connecting different realms of experience, knowledge, and language in ways that both produce and defy sense.

CLST341 Visualizing the Classical

This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen--through landscape, sound, light, functionality/monumentality, and spatial relationships--shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at

the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

CLST352 Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean

This course brings a blend of ethnographic, environmental, philological, and scientific frameworks to the study of ancient medicine. For the first half of the class, students will explore the theories and concepts of medicine and the body in classical antiquity from Hippocrates to Galen. Students will tackle case studies (e.g., treatment of war wounds, epilepsy, gynecological ailments) and suggest appropriate treatments. The second half of the course will focus on medicinal plants as discussed in Dioscorides, considering their ecology, archaeology, and phytochemistry, with hands-on lab modules in which students will learn how to extract and analyze bioactive compounds of medicinal plant species. In final group-based projects, students will present a "plant biography," tracking the arc of the medicinal and cultural uses of a particular species from the ancient Mediterranean to the present day.

CLST363 Body Politics: Desire, Sexualities, and Gender, Past and Present

Sexuality as a category to define, construct, and control the "self" has been seen as a product of the 18th and 19th c. This course turns to ancient Greek society to look at body politics before sexuality and to examine the different ways in which sex and gender are experienced and constructed. We will approach sex and gender roles as organizing principles of private and public life. Using literary, scientific, historical, legal, and philosophical sources as well as material evidence, we will address issues including the creation of woman, conceptions of the male and female body, the legal status of men and women; what constitutes acceptable sexual practices and for whom (e.g., heterosexual relationships, homoeroticism, prostitution, adultery); and ideas regarding desire, self-control, masculinity and femininity, and their cultivation in social and political contexts. How ancient approaches to gender and sexuality are in dialogue or have informed recent debates will be a question throughout the course by looking at theoretical approaches and contemporary movements and debates. We will end by looking at how ideas about sexuality in classical antiquity were used in *Romer v. Evans*, otherwise known as the 1993 Colorado Gay Rights Case. For CLST Major requirements, this course counts toward the concentrations of Literature and Performance and History, Politics, and Social Justice.

CLST390 Making Rome: Monuments of Life in Ancient Rome

The Colosseum, the Circus Maximus, and the Forum are just the most famous monuments to adorn the ancient city of Rome: its streets and temples were cluttered with honorific statues, dedications, and inscriptions; monumental fountains marked the terminus of the great aqueducts supplying the city and its public baths; shops and markets jostled with shrines and workshops in the public plazas; and public works like harbors and warehouses ensured a steady flow of food, wine, and materials into the city. Through in-depth research into the literary and archaeological record of Rome students will examine these monuments in the context of their original urban spaces and reconstruct them digitally or through other visual and written media.

COLLEGE OF EAST ASIAN STUDIES (CEAS)

CEAS155 Fictional Japan: Introduction to Japanese Literature and Culture

This course will explore the evolution of Japanese fictional narrative, from Japan's first encounter with "modern" literary forms in the late 19th century to postmodern digital discourses advanced through anime and gaming. In so doing, we will discuss the ways in which Japanese theories of literature intersect with notions of national identity, modernity, and Westernization. How does the Japanese novel participate in the modern process of nation building, and how is it used to situate Japan's position in East Asia and the world? We will also consider fictional works from marginalized groups in Japan to address how notions of gender and ethnicity serve as an intervention into traditional

discourses on Japanese literature. Finally, we will explore new iterations of Japanese fiction in the form of digital media and database narratives. Does advanced technology fundamentally change how we produce and consume narratives and, therefore, view the world around us? How do these new forms impact constructions of national history and identity? Is this phenomenon somehow unique to Japan, or a simple product of globalization?

CEAS156F Sex, Ghosts, and Cannibalism: The Chinese Short Story FYS

This course takes the passionate, the strange, and the peculiar--sex, ghosts, and cannibalism--as a lens through which to explore big issues in the history of Chinese literature and culture.

Focusing on short stories from the 7th to 21st centuries, we ask what fiction can tell us about the real concerns that shaped the lives of Chinese writers. How do literary depictions of sex and desire relate to social issues surrounding gender, power, and family? What do supernatural characters--hungry ghosts, lofty gods, unruly demons, seductive snakes, and fox spirits--reveal about the human world and belief systems used to make sense of unusual occurrences? What do motifs of cannibalism and related themes linked to bodies, consumption, hunger, and food tell us about the social and political changes China witnessed on its path toward becoming a modern nation-state?

As a First Year Seminar, this course is writing-intensive and is meant to equip you with the writing, reading, research, and presentation skills needed at Wesleyan. You will have numerous opportunities to write and revise your work, share your insights during class discussion, and practice the core skills of effective reading and interpretation.

All texts will be taught in English translation. No prior knowledge of China or Chinese language is required.

CEAS157F Legacies of WWII in Postwar Japan (FYS)

In 1956, The Japanese Economic Planning Agency famously declared that "the 'post-war' is over." Indeed, by that time, the national economy had made a remarkable recovery since the end of WWII. Others place the end of the "post-war" with Emperor Hirohito's death in 1989. Still, was the "post-war" truly over for Japan? This seminar aims to tackle this dilemma of the "post-war" and assess how the war and the American occupation are remembered by the Japanese, as well as Americans and Asian neighbors, and how they continue to reverberate politically and culturally, seventy-odd years after the conflict's ostensible end. The course will begin with some history of WWII and the American occupation. Film, literature, and popular media, along with secondary scholarship, will energize discussions about topics such as the rise of anime and otaku culture, Orientalism, gendered racism in Japanese-American relations, the 1964 and 2020 Tokyo Olympics, American bases in Japan, and North Korea.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-CEAS**Prereq: **None****CEAS158F Literary Pop Culture: The Tale of Genji and The Story of the Stone (FYS)**

This first-year seminar addresses two of the great East Asian novels, "The Tale of Genji" (from Japan) and "The Story of the Stone" (also known as Dream of the Red Chamber) (from China), and their afterlives in modern and premodern popular culture. Topics of discussion include adaptations of both novels as literature and in other media forms (drama, film, TV, etc.); the two novels in painting/prints, games, fan fictions, etc.; shared themes such as family, romance, and power; and social issues including class, gender, and intergenerational conflict. No previous background in East Asian studies required.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-CEAS**Prereq: **None****CEAS160 Social and Political Changes in Korea**

Korea is currently the only divided country in the world, with two different political systems--democracy and dictatorship. This course explores developments on the Korean peninsula in the modern to contemporary period. We will examine social change, demography, culture, politics, and economy, as well as various social and cultural issues facing Korean society today.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-CEAS**Prereq: **None****CEAS180 Japan Rocks: Music in/as Contemporary Japanese Studies**

This course aims to consider topics in modern and contemporary (understood as post-War) Japanese society through the lens of musical expression. By attending to specific instances of musical expression in modern and contemporary Japan, we will strive to understand not only the songs themselves but the contexts within which they were produced. This course aims to take music not merely as an object of study/analysis but as a means by which we might both critique and build upon the discipline of Japanese studies and area studies in general.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-CEAS**Prereq: **None****CEAS181 Chinese Pop Culture**

Popular culture is closely associated with our daily life and ways of thinking, seeing, and connecting with the world. This course will introduce select aspects of modern and contemporary Chinese-language popular culture and its circulation among Chinese-speaking sites, including China, Taiwan, and Hong Kong. We will mainly focus on forms that have circulated and continue to circulate from the modern to the contemporary period, including movie musicals, martial arts, Internet culture, and singing contests. We will also study how Chinese pop culture has influenced audiences and (re-)construct their identities, as well as explore how cultural producers in Chinese language have engaged with issues of fandom, gender and sexuality, ethnicity, and material life through a variety of pop cultural forms. Throughout the course, we will discuss theories of pop culture and analyze primary materials to understand the production and circulation of Chinese pop culture. This course is taught in English.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-CEAS**Prereq: **None****CEAS201 Proseminar**

This seminar explores some of the key tenets and methodologies of the academic discipline broadly known as 'area studies,' with the aim of further preparing students to pursue their chosen avenues of research as scholars of East Asian Studies at Wesleyan University. It is required of all CEAS majors in their sophomore year, and is also open to CEAS majors in their junior or senior years who may have been unable to take the seminar previously. The specific topics and concerns addressed by the seminar shift from year to year and according to the instructor, but may include questions of geopolitics, Orientalism, modernization and modernity, and productive approaches to grappling with written, musical, and filmic texts in disparate contexts and historical moments.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-CEAS**Prereq: **None****CEAS202 Narrating China: Introduction to 20th- and 21st-Century Chinese Literature**

This survey course introduces students to major literary movements in 20th- and 21st-century China through selective works by representative authors. It has two major aims: (1) It invites students to explore how individual authors--at different historical moments and in different social positions--have responded to historical changes that radically unsettled their senses of self and nation and also how their literary expressions may reveal the shifting subjectivity of modern China and Chineseness. (2) At the same time, it introduces students to the academic discipline of literary criticism, develops or deepens students' critical close reading and textual analysis, and invites them to discover the joy and reward of plunging into a reading experience and coming out with interpretations of their own making.

While the course does attend to important historical flash points unique to Chinese history, it also explores literary themes that resonate globally, beyond the context of modern China. Varying slightly by semester, these themes could include the relation between politics and literature, revolution and revolutionary arts, alternative modernities, writerly authority and the individual self, gendered authorship, memory and trauma, ethnic governance and resistance, class divisions, ecological damages, labor migration, etc. This course assumes no prior knowledge of China or Chinese language, and all texts will be taught using English translations.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-CEAS**Identical With: **WLIT223**Prereq: **None****CEAS203 Faces of Korea**

This course addresses multiple topics that span both traditional and modern Korean culture, ranging from traditional cuisine, dance, music, art, architecture, and the modernization of Korea in the 20th century to Korean films, social issues, religion, and the Korean Wave.

CEAS204 Chinese Media in Chinese: Star, Fandom, and Identity

This course is conducted in Mandarin Chinese and designed to supplement the standard English-language Chinese Pop Culture (CEAS 181) course. The course will have two main foci: (1) introducing students to Chinese-language scholarship on Chinese media, particularly pop culture and its flow within East Asia, and (2) analyzing and discussing Chinese media in-depth in Mandarin Chinese.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. All the reading materials will be in Mandarin Chinese, and we will have oral presentations in Chinese and some written work in English. Evaluation will be tailored to each student's language background. If you are unsure whether your language background is sufficient for the course, please contact the instructor.

CEAS207Z Foundations of East Asian Cultures

This course introduces some of the cultural foundations of East Asia and how they have continued to resonate through history. We will be examining translated primary texts in history, literature, philosophy, and religion, mainly from China, Korea, and Japan. We will also be working with other media such as film and art. The course attempts to equip students with a basic fluency in interpreting ancient and modern materials from East Asia and identifying their cultural contexts. Some themes include the role of government, dilemmas of love, the methods and aims of education, gender roles and family, social inequality, self and society, and the social roles of literature and history. This course does not aim to be exhaustive, but seeks to enlarge narrow conceptions of Asian cultures and to offer tools for future exploration.

CEAS212 Introduction to Korean Cinema

During the last few decades South Korean cinema has taken center stage in world cinema with the phenomenal success of its film industry and critical acclaim in the global context. However, Korea has boasted a thriving film culture and aesthetics since the "golden age" of the 1950s, of which renowned contemporary directors such as Bong Joon-ho and Park Chan-wook have claimed they are the inheritors. This course introduces Korean cinema from its beginnings in the colonial era to its recent achievements. While learning the concepts and theories of film studies as well as the cultural and political contexts to which Korean film culture has responded, students will explore films by key directors that constitute the crucial "moments" of South Korean cinema. We will examine the main topics in Korean cinema, including colonial production, the liberation and Western influence, nation and nationalism, modernity and women, gender politics, realist and modernist cinema, popular cinema and cultural depression, the Korean New Wave, democratization and political cinema, the Korean blockbuster, the questions of "Koreanness," and the "Korean Wave" in the global film market.

The course also seeks to establish a balance between understanding Korean cinema as both a reservoir of historical memory and as an example of evolving world cinema. Through engagement with methodological issues from film studies in each week's readings, including the question of archives, national cinema discourse, feminist film theory, auteurism, and genre studies, students in this course will learn to analyze Korean filmic texts not only as a way to understand the particularity of Korean cinema but also as a frontier of cinematic language in the broader history of film.

CEAS213 The Chinese Canon and Its Afterlife

This course is an exploration of canonical works in Chinese literature, religious texts, historical narratives, art, and movies, with an emphasis on their aesthetic and cultural implications. Topics include Confucianism, Daoism, and Buddhism; folk religions and shamanism; cultural identity and self-cultivation; sexuality, cross-dressing, and gender politics; nature and utopias; emperors, scholars, and musicians; hermits and knights-errant; learned women poets and courtesans; drunken poets and Zen masters; fox spirits and ghosts; portraiture and representations of bodies; and secret societies and avant-garde artists. Several internationally acclaimed poets and translators of Chinese literature such as Eleanor Goodman and Zang Di will join the class discussion as guest speakers. They will discuss their writing process, and answer questions about their work. All readings are in translation. Although some Chinese characters will be introduced in calligraphy, no knowledge of Chinese is required.

CEAS216 History of Japanese Cinema

During the last several decades, Japanese cinema has won international acclaim for its artistic achievement in form and content while gaining commercial dominance over the power of Hollywood films in its domestic film market. What have been the driving forces for the development of Japanese cinema as both art and industry? How have Japanese filmmakers contributed to the creation and advancement of new cinematic languages and genres that appealed not only to domestic audiences, but also to global cinephiles? What have been the central issues and themes in Japanese film history?

This course surveys Japanese cinema from its beginnings to the work of contemporary film auteurs. Students will learn the history of Japanese cinema by watching and discussing the canonical pieces by the prestigious directors and the studio genre films produced by the various major and minor local film companies. At the same time, we will examine the main topics and trends of Japanese cinema such as the pure film movement, Shochiku's shoshimin eiga, wartime film culture, melodramas under the U.S. occupation, New Wave films and political cinema, art cinema, the popularity of "series" movies, and the transnational and digital film culture in contemporary Japan. We will explore the world of the masters of classical Japanese cinema, including the films of Ozu Yasujiro, Mizoguchi Kenji, and Kurosawa Akira, and also those by Kurosawa Kiyoshi and Koreeda Hirokazu--the major contemporary Japanese auteurs.

CEAS217F Who is the Dalai Lama? (FYS)

This First Year Seminar introduces the institution of the Dalai Lama of Tibet and the individuals who have filled that role from a wide range of sources and perspectives. Topics include regional histories of Buddhism; the unique Tibetan tradition of recognized reincarnations (tulku) and the Buddhist philosophical principles that support it; and a survey of prominent Dalai Lamas from the 15th century to the present day. The seminar examines the activities of the current Dalai Lama in his role as traditional Buddhist teacher, political leader,

and international superstar, through the lenses of the PRC government media, Indian exile communities, and the modern West. Later classes will also address issues of Western and Chinese forms of Orientalism and myth-making about Tibet. Readings include the writings of past and current Dalai Lamas as well as supporting secondary literature.

CEAS218 "Other Chinas": Literature from Taiwan, Hong Kong, and Sinophone Southeast Asia

How do we study literary and cultural products created in Taiwan, Hong Kong, Malaysia, Singapore, and those created by Chinese-educated Tibetan, Uyghur, Manchurian, or Mongolian authors and artists? Are they Chinese? Or not? How might their places of production bring about literary and cultural subjectivities that are distinct from those from mainland and Han-dominated China (i.e., the conventional domain of Chinese humanities studies)? How do writers and artists deliberately record, or even create, their own unique and place-based senses of identity? How do they struggle with the ideas of exile, diaspora, colonization, decolonization, autonomy, assimilation, resistance--both in relation to China and within global geopolitics--while also striking out on their own to depict the joys and sorrows of human everydayness?

This discussion-heavy course introduces students to a representative set of 20th- and 21st-century literary and cultural texts from some of these locales under the umbrella concept of the Sinophone. As Shu-mei Shih defines it, Sinophone aims to describe "Sinitic-language cultures and communities on the margin of China and Chineseness" where these cultures and communities engage in their own place-based cultural productions. It alerts us to the heterogeneity in the "Chinese-speaking world" and the relations of power that effected such heterogeneity. Students will read literary texts alongside relevant theoretical and historical writings, and parts of the course may include film and other cultural products as objects of critical examination. The course will be conducted in English, and all reading materials will be in English translation.

CEAS219 K-Wave: Korean Popular Culture and Literature

This course explores the dynamic landscape of Korean popular narrative within the context of the thriving media and popular culture scene known as the Korean Wave or Hallyu. Through a comprehensive analysis of scholarly approaches, this course provides a broad understanding of the Korean Wave, while connecting the literary texts and scholarly works to their historical and sociocultural significance in shaping modern Korean popular culture and global narrative trends. We will also examine historical and theoretical approaches to Korean sociocultural issues about modernity, the formation of Korean popular culture, and class, economic, gender, sexuality, migration, and political relations. Additionally, students will engage with a diverse range of media including literature, films, broadcasting, webtoons, and online games, delving into their content and analyzing their impact. Readings for this course will be available in English or in English translation. No previous knowledge of Korean history, literature, or culture is required. There are no prerequisites for this course.

CEAS221 Introduction to Premodern Chinese Literature

This course is an introduction to premodern Chinese literature that focuses on the role Chinese literary texts have played in defining selfhood, creating self-image, and articulating the place of the individual in relation to community and state. The arrangement of the course is primarily chronological, from the first millennium BC to the end of the Qing Dynasty in 1911, though texts that cut across history are also juxtaposed to show differences and continuities from a larger perspective. The course contains canonical pieces of the Chinese literary tradition that address similar issues or respond to each other. Besides literary texts, painting, music, and material culture are also incorporated to help students visualize the tradition. Students are encouraged to think about the close relationship between Chinese literati's creation of self-image and political trauma they experienced during dynastic changes.

CEAS222 China as Scientific Powerhouse

Science, technology, and medicine played an integral role in the China's transition to modernity and inspired dramatic economic, social, and political transformations. As scholars of modern China developed a keen interest in transnational histories and comparative methodologies, they have paid closer attention to the histories of science, technology, and medicine. This course introduces students to this emerging field of study. It examines broad philosophical questions that motivate the research in history of those areas. We will learn to explore science, technology, and medicine in China on "its own terms" by understanding how the unique political and social challenges of modern China shaped Chinese science.

CEAS223 Chinese Eco-Civilization: History, Experience, and Myths

The course traces the historical roots of the ideas of eco-civilization, a policy platform that appeared in the twenty-first century by examining how Chinese agrarian civilizations and their nomadic neighbors transformed the bio-physical environment over the course of 3,000 years of history.

We will draw on translations of Chinese literary texts including poetry, classical prose, and novels to explore the relationship between power and

social inequities as we explore the everyday politics of agrarian civilizations through China's transformation from feudal ages to the modern period. How did Confucian, Legalist, Buddhist, and Daoist teachings alter the dynamics of production and consumption? To what extent did traditional Chinese philosophies promote the ethos of ecojustice? Did competing regimes/dynasties create a sustainable political and economic system? Did bureaucrats improve the well-being of the population and maintain the balance of the ecosystem? Or did they deplete natural resources to meet their short-term needs?

CEAS224 Modern China: States, Transnations, Individuals, and Worlds

This course examines China's turbulent transition to modernity. It covers the Ming-Qing transition, Manchu conquest of central Eurasia, China's conflict and engagement with the West, birth of China's first republic, and the People's Republic of China under Mao Zedong, Deng Xiaoping, and his successors.

The dramatic transformation of China spanning the late 19th century to the present day is the focus of this course. The Chinese people today continue to deal with the legacy of these reforms, wars, and revolutions, as China's leaders and people dealt with unprecedented challenges. The three central themes of this course are (1) the reconstitution of (a somewhat) unified China after decades of political upheaval, (2) China's vulnerabilities in the face of domestic troubles and threats from abroad, and (3) the challenges of maintaining a high-growth economy with scarce resources.

CEAS228 Zen Buddhism Across East Asia: Teaching and Practice

In this course, we will examine Zen/Chan Buddhism in history and in its contemporary practice. We will trace how Zen Buddhism sprouted from Chinese religious traditions in the Tang Dynasty (618-907), flourished in the Song Dynasty (906-1279), and then spread to other East Asian countries such as Japan and Korea. Then, we will pay attention to the ways in which Zen Buddhism found its way to modern Western society, through figures such as D. T. Suzuki and Okakura Kakuzo since the 19th century.

Course readings consist of primary sources of Zen Buddhism, which are available in English translation. A wide range of texts will be read closely, from early manuscripts discovered in Dunhuang to contemporary works inspired by Zen Buddhism, supplemented by secondary scholarship. We also investigate how Zen Buddhism has been expressed in garden designing, poetry, tea ceremony, and as a way of life in contemporary Western society. A field trip to a Zen meditation center will be organized during the course.

CEAS229 Performing Indonesia

This course will examine the theater, dance, and puppetry of Indonesia in the context of its cultural significance in Indonesia and in the West. Students will read a variety of texts related to Indonesian history, myth, and religion. Students will also read books and essays by anthropologists Hildred Geertz, Clifford Geertz, and Margaret Mead to understand how the arts are integrated into the overall life of the island archipelago. Artifacts of physical culture will also be examined, including the palm-leaf manuscripts that are quoted in many performances; the paintings that depict the relationship between humans, nature, and the spirit world that are the subject of many plays; and the masks and puppets that often serve as a medium for contacting the invisible world of the gods and ancestors. Translations of Indonesian texts will be analyzed and adapted for performance. The direct and indirect influence of Indonesian performance and history on the West will be discussed by examining the work of theater artists such as Robert Wilson, Arianne Mnouchkine, Lee Breuer, and Julie Taymour, who have all collaborated with Balinese performers.

CEAS233 Transnational China: Writing and Screening Chinese Immigration

Migration is a crucial issue for centuries, and people move around the world involuntarily or voluntarily due to political force, economy, technology, and globalization. Chinese immigration to the world has its long history, and the dispersion of Chinese populations has contributed to the formation of Chinese-speaking sites globally and brought about the construction of Sinophone culture in various geographical locales.

This course will introduce the discourse of the Sinophone, a linguistic-oriented term that defines cultural productions with Sinitic languages in Chinese-speaking sites around the world and its relation to Chinese immigration, transnationalism, and heterogeneity. The critical questions we will explore in this course include (1) What is the relationship between the Sinophone (roughly, Chinese language users) and China, Chineseness, Chinese diaspora, and overseas Chinese studies? (2) What is China in the lens of Chinese immigrants? (3) How do cultural producers represent Chinese immigrants' lived experiences? We will read novels/novellas and watch films from writers and filmmakers who have experienced diverse migratory trajectories to get a picture of how they represent Chinese immigrants' identity formation and negotiation with local societies, as well as their roots of origin/homeland. Through reading scholarship on Sinophone and primary texts, students will understand the relationship between physical migration and cultural production and become acquainted with various forms of place-based cultural productions in three Sinophone spheres, including the United States, Taiwan, and Malaysia.

CEAS234 Modern Korea in Film and Fiction

How have writers and film directors responded to the rapid transformation of Korean society? In what ways have their works shaped the experience of Koreans and constructed Koreans' notion about the nation and the self? This course examines how Korean literature and film have acknowledged and represented the diverse political, social, and cultural changes that have occurred on the Korean Peninsula in the modern era. It also aims to build an understanding of the ways in which Korea has built the close historical, political, and cultural relationships with other East Asian countries.

Through selected literary and cinematic texts by prominent masters, students will investigate the critical moments of modern history that have deeply affected and altered social practices and the actual lives of twentieth-century Koreans. While observing the flow of change in Korean society, students will examine how gender, class, ethnicity, and generation profoundly impact one's sense of the nation and the self. The class consists of occasional in-class film screenings, lectures, student presentations, and discussions.

CEAS236A Curatorial Workshop: Images of the Floating World

This course will provide students with practical training in the design and development of a gallery installation in the Davison Art Center (DAC). The theme for this semester is Japanese woodblock prints. We will carry out the many and diverse components involved in creating a gallery installation, from conception to execution, including concept development, catalog and label entries, accessibility, layout, and design. The course will culminate with an installation at the DAC. Images of the floating world, or ukiyo-e, refers to a genre of Japanese art that emerged in the 17th century to depict the pleasures of life of that period--beautiful women, famous kabuki actors, views of famous places, and erotic pictures, among other subject matter. In most cases, these are woodblock prints, images produced by craftsmen from woodcuts based on originals painted by artists. Because they could be produced quickly, cheaply, and in large numbers, woodblock prints were exceptionally well-suited for the representation of the latest fashions or politics. Ukiyo-e prints made their way to

Europe in the 19th century and remain the most popular form of East Asian art in the West. The Davison Art Center has around 600 Japanese woodblock prints in its collection, ranging in date from the 17th to 20th centuries and including works from all the major artists of the Edo period (1615-1868).

CEAS237 Representations of Gender and Sexuality in China

This course explores the multifarious representations of men, women, and gender in literature, visual arts, philosophical texts, and historical narratives. It aims to provide an interdisciplinary reflection on conceptions of men, women, and gender: how they were created and transformed in history, how they reflect the power relations between men and women, and how they have further influenced the performance of gender in daily life.

Works discussed in this course include the Book of Songs, "Rhapsody on the Gaotang Shrine," "The Prose Poem of the Beautiful Woman," the Palace Style Poetry, "The Story of Yingying," The Peony Pavilion, Feng Menglong's collection of erotic poetry, "Sinking," Madame Mao and the Revolutionary Model plays, and Eat Drink Man Woman.

CEAS238 Wartime Film Culture in the Japanese Empire

Just as in many other countries, cinema, within a short time of its emergence, became the most popular entertainment in modern Japan. Mindful of this, the Japanese government tried to turn the country's film industry into an arm of its propaganda machine to support its imperial program, especially the military component. This began with Japan's invasion of the Chinese continent in 1931 and lasted through the end of World War II in 1945. How did Japan's private film studios respond to such governmental efforts? How did wartime Japanese cinema manage to strike a balance between being entertainment and political texts? What are the characteristics of Imperial Japan's wartime film culture, and how are they different from the counterparts in other countries? Was the campaign to support war via movie productions in Japan successful, in terms of providing seamless propagandistic messages? What kind of legacy has the wartime film culture left in contemporary Japan and East Asia?

In order to answer these questions, this course explores film culture of Imperial Japan and its territories during the wartime era, spanning roughly from the early 1930s through 1945. We will watch wartime films, and at the same time examine the ways in which the film culture coexisted along with other forms of visual propaganda practice and political discourses. While probing how the films reflect the "virtues" of wartime conservatism, patriotism, perseverance, and self-control, this course will explore topics that include the propaganda culture of wartime Japan as a whole, Nazi propaganda and Japan, cultural films, monumental cinema, films featuring Japan-China or Japan-Taiwan romances, children-centered films, "kokumin eiga," films of volunteers and Japanese Spiritism, "Military Mothers" and gender, and the defeatist aesthetics and cracks in Imperial Japanese cinema. While we will for the most part watch and discuss films directed by the Japanese of mainland Japan, including such prominent directors as Mizoguchi Kenji and Kurosawa Akira, the films produced in the

Japanese colonies of Korea, Taiwan, and Manchuria--whether independent productions or collaborative efforts--will also be examined. Film production in colonial Korea, in particular, was quite vibrant, relative to the cinematic output of Taiwan and Manchuria. We will observe how the films made in Japan's colonies joined the empire-wide filmic war-mobilization campaign, presenting their own justifications for war cooperation. Ultimately, this course will ask what kind of relationship Japanese cinema has had with the state and Japanese nationalism during the mid-century of Japan's tumultuous modern history.

CEAS239 Gender and Genre in Korean Cinema

This course welcomes students who are interested in the world of Korean cinema, where we will dive deep into the dynamic intersections of gender and genre from the late 1950s to the present. Students will sharpen their analytical skills and gain a profound understanding of film while critically examining a selection of Korean films. Through engaging guided analysis and discussions, we will explore various perspectives, including auteurism, national cinema, cultural studies, and global genres, to enrich our cinematic experience. Along with these perspectives, we will challenge conventional perceptions of femininity and masculinity while questioning how the Korean nation-state and its ever-evolving sociopolitical landscape have impacted gender and sexuality in cinematic narratives. All films will have English subtitles, all readings will be available in English; no prior knowledge of Korean film, history, or culture required to embark on this exciting cinematic journey.

CEAS240 Gender and Power in Chinese Literature

This course explores the intersections of gender, power, and performance in Chinese society. Drawing on literary and historical sources, theories of gender and sexuality, and with reference to media forms such as theater and film, we assess the significance of gender as an analytical framework for studying Chinese literature, culture, and society. What power dynamics drive conceptions of gender and gender ideology in Chinese literature and history? And how do discussions around gender roles and sexuality change in the modern and contemporary periods? Course topics include: Chinese feminism; depictions of women in classical literature; gender roles, family, and marriage; conceptions of the body; constructing identities; women writers; the "new woman"; themes of cross-dressing; classical romance narratives; gender performance in Chinese theater; queer narratives; and more.

CEAS241 Visualizing Japanese-ness: Transnational Cinema in Modern Japan

This course is designed to interrogate evolving notions of transnationalism in Japanese cinema, from the prewar avant-garde to the postcolonial present. We will use the assigned films and supplementary readings as a means to explore concepts of Japanese nationalism and uniqueness (nihonjinron), colonial memory, hybridity, multiculturalism, neoliberalism, and creolization, among others. We will then use this theoretical foundation to analyze representations of Japanese minority groups (such as zainichi Koreans) to inquire into the possibility

of obtaining a transnational or hybrid identity in the global era. How do these films "visualize" Japanese and/or transnational identity, and are these visions seen as compatible? In what ways and to what extent are these films engaged in a dialogue with theoretical concepts of postcoloniality and ethnicity?

CEAS242 Introduction to Buddhist Thought and Practice

This course will introduce significant aspects of Buddhist thought and practice, primarily as it manifested through the literature of India, South Asia, and East Asia. It begins with an overview of the historical Buddha's life and the development of early Buddhist ideas and practices. The course then introduces the Mahayana or Great Vehicle tradition that began to emerge around the first century BCE, as well as later forms of esoteric Buddhism known as Tantra. The course concludes with the development of modern Buddhism in Asia and its manifestation in the West. Readings consist mainly of primary Buddhist texts in translation, which are supplemented as necessary by works of secondary scholarship. The course broadly examines the topics of Buddhist philosophy and ethics, monastic and ascetic life, meditation and ritual practices, and the material culture of Buddhist societies, including artistic traditions, architecture, and book culture.

CEAS243 Chinese Theater and Drama

This seminar examines Chinese theater and drama from their beginnings to the late 20th-century. We engage dramatic texts as well as performance practices; thus, the course draws on material from theater history, performance and acting conventions, and the literary history of drama. Readings and discussions span major genres of dramatic writing and their different modes of performance, including the dramatic genres of zaju, chuanqi, and modern/contemporary spoken drama, and performance styles of Beijing opera, Kun opera (Kunqu), and huaju (spoken drama). Play topics range from ghost stories to romances, historical/political dramas to comedy. We explore the legacies of specific actors, including the famous Mei Lanfang; consider experiments in modern Chinese drama; and compare Chinese and "Western" ideas of theater (such as those put forth by Stanislavsky and Brecht). To the greatest extent possible, we will engage materially and physically with Chinese theater and drama history through archive visits and performance workshops.

CEAS244 Delicious Movement: Time Is Not Even, Space Is Not Empty

This course contemplates massive violence and bodily experiences of time and space through interdisciplinary discourse. Taught by NYC-based movement artist Eiko Otake, students will examine how being or becoming a mover reflects and alters each person's relationships with the environment, history, and other beings. Topics of study and discussion include war, atomic bomb literature, postwar Japan, and environmental violence such as the Fukushima nuclear explosions. A key concept of study will be metaphorical nakedness and how distance is malleable. Please note that homework load is heavy with weekly assignments and journals. Seeking collective learning, the course will culminate with a final project sharing. The class is fiercely non-competitive and non-

technical. No previous dance training is necessary, but willingness to move with and in front of others is important. Please visit eikootake.org to learn about this instructor. Write to eikootake@gmail.com with questions.

CEAS246 Eccentricity, Gender, and Occidentalism in Edo-Period Art (1615-1868)

The course will explore the history and artistic production of Japan's Edo period (1615-1868). This was a time of unprecedented peace, a time of social, economic, and political change that brought new modes and manners of visual expression and a sharpened focus on the individual artist. New trends in artistic identity emerged during this period, particularly those related to eccentricity, gender, and Sinophilia (love of Chinese culture). We will study the major artists and artistic movements of the Edo period, considering how these new trends found expression in the works of art produced during this time.

Formal examination of the material and expressive qualities of works of art will be followed by a consideration of how other factors such as location, social background, education, and the religious faith of the artist are visible in the works they produced. The interplay between historical and artistic movements will be examined through discussion of issues such as materiality and medium, patronage and individuality, and traditionalism and poetic expression. Students will become familiar with the various media employed by Japanese artists, the techniques of painting and printing, and the sources and theories that inspired the innovative objects under investigation. More broadly, this course aims to teach students how to "read" Japanese art, how to look at a work of Japanese art and understand what it is they are seeing.

CEAS248 South Korean Cinema: Re/imagining Modern History on Screen

From its first productions during the colonial period to contemporary mainstream hits, South Korean cinema has been a contested sphere of the popular imagination regarding gender politics, modern Korean history, and political change. This course explores the films by the main directors of Korea to interrogate key problematic subjects in South Korean cinema, which include the discourse of modernity, the representation of historical and political trauma, the problems surrounding gender roles, and practices of film culture and industry. The film texts examined in this course include not only the breakthrough masterpieces of prominent film auteurs but also popular genre films that enjoyed box-office success. Through these examples, students will examine how the most influential popular art form in South Korea has recognized, interpreted, and represented the Korean societal issues on screen.

This course also seeks to establish a balance between understanding South Korean cinema as both a reservoir of historical memory and as an example of evolving East Asian films and world cinema. Through engagement with methodological issues from film studies in each week's readings, including the question of archives, national cinema discourse, feminist film theory, auteurism, and genre studies, students will learn how to analyze Korean filmic texts not only as a way to understand the particularity of South Korean cinema and history but also as a frontier of cinematic language in the broader history of film. In addition, students in this class will be encouraged to perform the comparative studies with other East Asian cinema in their short papers or the final projects.

CEAS252 Global Philosophy

Philosophy is not new, nor has it ever been, narrowly confined to one culture, tradition, or civilization. As European and then American power reached around the world in recent centuries, so too have Euro-American philosophical traditions acquired a global audience, but other philosophical traditions did not disappear. These other ways of approaching philosophy have been re-emerging or reconstituting themselves--sometimes drawing on and sometimes contesting assumptions from the Euro-American traditions--in what can loosely be called our post-colonial world. This course asks what "philosophy" means in these different contexts and explores how philosophy was and is done within various traditions. In addition, we probe and assess distinct approaches to making philosophy more global, which at the very least must mean more cognizant of the presence of multiple ways of doing philosophy.

CEAS253 Living a Good Life

For many philosophers, Eastern and Western, philosophy has been more than an effort to answer fundamental theoretical questions. It has been an activity aimed at changing one's orientation to the world and, thus, how one lives one's life. We will explore Chinese, Greco-Roman, and contemporary versions of the idea that philosophy should be seen as a way of living a good life. How does philosophical reasoning interact with lived practice? How do views about metaphysics or psychology lead to ethical commitments? Despite their differences, Confucians, Daoists, Aristotelians, and Stoics all agreed that philosophy should aim at making us better people. Can such an idea still get traction in today's world?

This course will typically have a large-group lecture each Monday, smaller breakout sections with the instructors on Wednesdays in which the texts and ideas will be discussed, supplemented by smaller weekly student-led dialogue sessions on Fridays. For details about the structure of the course and a syllabus of class meetings, along with the locations of plenary lecture sessions, breakout sessions, and dialogue sessions, please see this year's course website and past versions of the course at the following link: <https://livingagoodlife.com>.

Students who would like to explore the ancient Chinese and Greek texts on which the course draws are encouraged to enroll in either of two, optional 0.50-credit classes that are associated with our course: PHIL151 Living a Good Life: Chinese Lab; and PHIL152 Living a Good Life: Greek Lab. These courses will expose students with no prior background to the Classical Chinese and Greek languages. See their separate entries in WesMaps for more information.

CEAS254 Breaking the Waves: The Japanese and French New Wave Cinemas and Their Legacy

While the French and Japanese New Wave(s) existed as largely contemporaneous cinematic movements, rarely are they discussed together, instilling the impression of two parallel streams, never to converge or intersect. This course hopes to serve as an intervention into this perceived divide through close readings of these groundbreaking cinematic works and an examination of their revolutionary content in the interest of articulating shared philosophical concerns. In many cases, New Wave filmmakers worked as writers and critics before producing films themselves, a fact that speaks to the intensely theoretical nature of their cinema. This course will therefore examine critical writings published in the space of Cahiers du Cinema, Film Art, and other journals as a means of better understanding the thought process that underlies these films. How do these films figure as a response to that of the previous generation and how did they hope to revolutionize cinematic praxis? What was their relationship to political activism and the events of 1968? Finally, we will consider the legacy of these cinemas: What is the prevailing influence of the New Wave on Hollywood and global cinema? What aspects of the movement have been retained and what has been lost along the way?

CEAS255 Irreducible Distance: Japan-Korea Relations through Literature and Visual Media

Despite physical proximity and shared cultural origins, the specter of imperialism and constant influence of economic competition has seemingly resigned Japan and South Korea as two nations that remain forever "close and yet so far." Beginning with the colonial period (1910--1945) and ending with the current day, this course examines works of literature and visual media from both the Japan and Korea sides that address issues of intercultural relations and communication. What position does Japan for Korea and Korea for Japan occupy in the cultural imagination and how has this image shifted since the end of the colonial period? What role does Japan have in the formation of the North Korean state and articulation of ideology? How do political developments and ongoing issues of war responsibility (e.g., comfort women) continue to dictate the state of Korea-Japan relations? This course will also examine the influence of peripheral spaces (such as Jeju Island) and marginalized groups (such as the Korean minority in Japan) have in mediating discourse between these nations. Finally, recent cinematic works such as Assassination (2015) and Spirits' Homecoming (2016) have witnessed a rekindled interest in the colonial period. We will thus discuss how these films constitute an effort to reexamine and reconstruct these historical events and how they view them as relevant to an understanding of the present day.

CEAS259 C-Pop in the Shadow of a Rising China

Explore the emotional aspect of a rising China and understand the inner feelings of contemporary Chinese youth through C-pop. How did "red songs" from the Cultural Revolution become popular songs in the 21st century? How did an "extremely soft and feminine" voice threaten the Chinese Communist Party? Why do songs from the "jazz capital of the Orient" trigger nostalgia? How do underground rock and punk bands negotiate their existence? How is rap in China different from that of the US or anywhere else? How do Chinese artists deal with LGBTQ issues and ethnic minority issues in popular music? Why do TV variety shows matter? What future is there for China's burgeoning "internet songs"? Popular music in a rising China presents complex issues of state-sponsored popular culture intersecting with bottom-up popular taste and desire, the repressive collective "we" intersecting with the resilient individual "I" in artistic expressions, the imagined "ancient China" intersecting with contemporary sound and technology, and the intensifying nationalistic sentiment intersecting with China's expanding global ambition. This course offers students opportunities to explore aesthetic, political, and cultural meanings expressed in China's popular music from the 1980s to the present. Chinese language knowledge is not necessary.

CEAS263 China's Economic Transformation

China is a country that is both transitioning to a market-oriented economy and developing rapidly into a global economic power. As such, it has characteristics of both an emerging market economy and a developing country. China is large enough to create its own institutional infrastructure to support a third way between capitalism and socialism. This course examines in detail China's great economic transformation beginning in 1978 in what is often described as a "gradualist" transition to market economy. In the past three decades, the speed of China's development and its growth rates of GDP are without precedent in history. The course concludes by addressing the incompleteness of China's transition to a mature, developed market economy and by probing the issue of what is left to be done to create a harmonious society.

CEAS265 Japan Since 1868: Society and Culture in Modern Japanese History

This course examines the history of Japan from roughly 1800 to the present. With a broad-ranging observation covering politics, economy, society, culture, and foreign relations, we will look at a variety of historical events that the Japanese people experienced. Our goal is not only to understand what happened when, but also to be concerned with how people at different historical stages saw the world around them. Major historical events, trends, ideas, and people will constitute the vital part of the course; however, we will also inquire into

everyday life of ordinary people, whose names do not remain in historical records. We will use a wide range of materials including written sources available in the English language, films, literature, and comics.

CEAS266 Modern Korean Women's Literature and Film

What are the salient issues addressed in Korean literature and film by female writers and directors? In what ways have Korean women intellectuals constructed their own identities in their literary and cinematic representations? How do female-authored works present women's problems in a light that differs from the predominant perspectives of their male counterparts? This course explores the female voice in novels, short stories, poetry, documentaries, and fiction films by Korean women from the 1910s to the present. Through selected works, we examine the struggles of early modern Korean feminists, women's lives in postwar society, and the female experience of displacement and belonging in contemporary Korea. In addition, the class occasionally questions how the Korean women's cinema and literature show the similarity with and/or difference from Chinese and Japanese counterparts in order to better contextualize the Korean cases within the East Asian and even broader world history and culture.

In this class, students will gain an understanding of the ways in which women come to a recognition of the problems they face and articulate these specific issues via their unique ways of representation. Through what are largely self-reflective narratives, students will explore how Korean women dealing with an oppressive political and cultural environment that had a variety of manifestations--such as colonialism, dictatorship, national division, and traditional patriarchy--strived to make heard and seen women's voice and vision and present their gendered experience as a critique of the male-centered society. The class consists of occasional film screenings, lectures, presentations, and discussions.

CEAS267 Human Nature in Chinese Thought

This is a course on theories and practices regarding human nature in the history of Chinese traditions, such as Confucianism, Daoism, Legalism, Buddhism, and Neo-Confucianism. What does it mean to be a human? Do all humans have something in common? How should we conduct our lives with respect to those common characteristics? Thinkers from both Western and Eastern traditions have offered their own distinctive and thought-provoking answers to those questions.

In the West we are more familiar with the concept of "rational animal" which remains the classical understanding of human nature since the time of Plato and Aristotle. In the history of the Chinese tradition, however, very different approaches towards human nature were adopted, such as the concepts of sympathy, effortless action, no-self, and original enlightenment. Together they can offer us some new insights into the concept of human nature beyond just rationality.

CEAS268 Music and Modernity in China, Japan, and Korea

This course examines the relationships between music and modernity in China, Japan, and Korea and the interactions between the impact of Western music and nationalism and contemporary cultural identities. In particular, it explores the historical significance of the Meiji restoration on Japanese music tradition; the Japanese influence on Chinese school songs; the origins of contemporary music in China, Japan, and Korea; the adaptation and preservation of traditional music genres; and the rise of popular music and the music industry. We will focus on the cultural conflicts encountered by East Asian musicians and composers and their musical explorations and experiments in searching for national and individual identities in the processes of nation-building and modernization. The course aims to provide knowledge on East Asian music genres, insight on the issues of global/local cultural contacts, and a better understanding of music's central role in political and social movements in 20th-century East Asia.

CEAS269 Chinese Cities

More than half of China's population now resides in cities. Within the next few years, China plans to accelerate the rate of urbanization by building sprawling cities and relocating more people into urban areas.

This course explores the history of Chinese cities from the imperial to modern age. Cities were centers of commerce, intellectual activity, and, in the words of historian and political scientist David Strand, "storehouses of political technique, strategy, and sentiment open to anyone with the understanding and the will to inventory to exploit them." We will study how cities supported massive populations with limited resources, inspired new forms of social organization, and transformed the political and social order of China.

CEAS274 Pirates, Traders, and Colonial Settlers in Maritime East Asia

Why is Maritime East Asia so contentious? Why is it emerging as the next global flashpoint? This course examines the historical roots of political tensions in Maritime East Asia by exploring the history of Taiwan. As early as the sixteenth century, merchant-pirates who dominated coastal China and Japan recognized Taiwan's strategic importance. For centuries, Dutch, British, American, and imperial powers used Taiwan as a springboard to gain a foothold in the Asia-Pacific region. Migrants from coastal China, who settled in Taiwan and Southeast Asia, worked with these imperial powers to colonize new frontiers and displace the indigenous population. The territorial disputes, economic rivalry, and business empires that shape our global economic order arise from the centuries-long struggle for dominance over Maritime East Asia. These historical legacies served as the driving force for political change. Maritime East Asia and particularly Taiwan not only transformed into an economic powerhouse but also stand at the forefront in the struggle against authoritarianism.

CEAS278 Gender and Sexuality in Chinese Narrative

This course pays particular attention to gender relations and representations of sexuality in Chinese narrative. This course will require close readings of translated Chinese novels, short stories and movies. We will explore themes and motifs such as gender roles in Confucianism, female chastity, same sex desire, cross-dressing, masculinity and femininity, manhood and misogyny, eroticism, the cult of qing (passion), the New Woman, socialist and post-socialist desires, and writing bodies in the era of globalization. In addition to providing a platform for appreciation of the aesthetic beauty of Chinese narrative, the course encourages students to think about how representations of gender and sexuality incorporate or confront the mainstream moral values and social principles in China.

All readings are in English, no prior knowledge of Chinese language or culture is required. No text book requirement.

CEAS279 The Making of Modern Japan, 1500 to Present

In a global context, Japan emerged as a major player on the world stage after 1500. While in the midst of what later was called the Warring States Period (sometimes dated 1468--1600), Japanese traders and others maintained a broad network of commerce that included not only Korea and China but spread to Southeast Asia. Europeans first reached Japan in 1543, and it was soon obvious that no European state had the military might to colonize Japan. These are the roots from which a modern Japan appeared that in the 19th and early 20th centuries militarized and set upon an imperial project until defeated at war in 1945. Since then, Japan has emerged as a postmodern, highly technological, pop culture-oriented, and aging country. One theme that will be examined across the semester is environmental change over the long term.

CEAS280 Losers of World War II

This course explores the experiences of Germany and Japan in the postwar era. These countries faced the dual challenge of making political transitions to democratic government and recovering from the economic ruin of World War II. Japan and Germany both were occupied and rebuilt by the United States, and both were blamed for the devastation of the war. How did Japan and Germany respond to being cast as worldwide villains? How strong were the democracies that developed? This course explores these questions by comparing the culture, history, and institutions of these two countries.

CEAS281 Modern Japanese Art

This class is an introduction to the history of Japanese art from the mid-nineteenth century to the present. In this chronological study we will encounter a range of forms--woodblock prints, painting, photography, sculpture, performance, and new media--and we will consider how Japanese artists responded to major societal, political, and economic changes over the last two centuries, including industrialization and modernization, major natural disasters, war, questions of cultural/national identity, and debates centering on what "tradition" meant to artistic practice in the modern and contemporary eras. Using visual analysis as our core skillset, this course will also rely on readings from secondary scholarship, as well as those by Japanese artists and art critics from each time period to help us better understand the historical contexts surrounding each artist, artwork, or art movement.

CEAS282 Place and Space in Literary Hangzhou

The city of Hangzhou is unique in the Chinese cultural imagination. As a former dynastic capital, Hangzhou is saturated with the intrigues of China's turbulent political and social history. But the city is also famous as a literary and cultural center--a prime leisure location along the Grand Canal; the site of the famous West Lake (just as famously compared to the mythically beautiful Xi Shi); and the setting for numerous poems, short stories, and dramas.

This seminar explores the literary culture situated in and around Hangzhou, considering topics such as food, folklore, and tourism, in addition to the city's depiction in poems, short stories, and dramas. Our aim is to explore how the Chinese cultural imagination about Hangzhou--part of a broader imagining of the southern region of Jiangnan ("South of the Long River")--is built through these many layers of texts, histories, and spaces. With Hangzhou as our geographical focus, we consider materials from a range of genres (poems, short stories, dramas, folktales, historical anecdotes) and time periods (Song to late Qing, with reference to the present as well). We consider how the image of Hangzhou is built up throughout time, and how the literary culture in and of Hangzhou is interwoven with the "real" experience of the city as a space/place.

CEAS284 Buddhist Art and Architecture

Visual imagery plays a central role in the Buddhist faith. As the religion developed and spread throughout Asia it took many forms. This class will first examine the appearance of the earliest aniconic traditions in ancient India, the development of the Buddha image, and early monastic centers. It will then trace the dissemination and transformation of Buddhist art as the religion moved north and then east through Central Asia, China, Korea, and Japan. In each region indigenous cultural practices and artistic traditions influenced Buddhist art. The class will address topics including the nature of the Buddha image, the expansion of the Buddhist pantheon, the function and reception of Buddhist images, the political uses of Buddhist art, and the importance of pilgrimage, both in the past and the present. Over the course of our study, we will consider four important movements in Buddhist practice: Mahayana, Pure Land, Esoteric, and Zen.

CEAS285 Pop Music Revolutionaries in Modern Japan

How do musicians, fans, industry stakeholders, and holders of political power use music to tell stories of everyday life? How does music become a means through which different visions for social, cultural, and political life are imagined and articulated, especially in moments of crisis and upheaval? This course introduces the work of influential musical figures in modern and contemporary Japan--from rock stars to folk singers, enka crooners to "idols"--and considers trends and topics in modern Japanese society through the lens of different forms of musical expression. By considering the work of these figures in their own historical contexts and in light of relevant scholarship, the course provides an opportunity to learn not only about songs and artists not often encountered outside of Japan, but also about the everyday historical, social, and political contexts within which they are embedded--and to which, often, they aim to speak back.

This course introduces early China by examining major archaeological discoveries from prehistory through the second century CE. We will analyze the formal and material features of early Chinese artifacts from important archaeological excavations at sites such as Liangzhu, Anyang, Zhouyuan, and Mancheng. We will discuss the ways in which these artifacts and archaeological sites demonstrate early Chinese cosmological beliefs and ritual practices, especially notions related to heaven, afterlife, and the transition from ancestor worship to the pursuit of personal welfare in immortality. In addition, we will study the iconography and symbolism of objects found in these archaeological discoveries, which would serve as a foundation for the inception of visual arts in the later periods of Chinese history.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-CEAS**Identical With: **ARCP290**Prereq: **None****CEAS291 East Asian Archaeology**

This course will introduce students to remarkable archaeological discoveries from East Asia, focusing on the archaeology of ancient China, but also including finds from Japan, Korea, and Mongolia. Beginning with "Peking Man" and Asia's earliest hominin inhabitants, we will explore the lives of Paleolithic hunter gatherers, the origins of domestic rice and pigs, the emergence of early villages and cities, the origins of writing, ancient ritual systems, long-distance interactions through land and maritime Silk Roads, and the archaeology of Chinese diaspora populations living in the 19th-century United States. We will also consider the current state of archaeological research in East Asia, focusing on site preservation, cultural heritage management, and the political roles of archaeology.

Often patronizingly dismissed as 'women's weepies', this course will examine the proliferation and transformation of melodrama film within various national, subnational, postcolonial, queer, and global contexts. The course will focus on the specific language and conventions of melodrama. We will watch a wide range of films from India, China, Japan, South Korea, Hong Kong, Hungary, Iran, Egypt, Kenya, Spain, Venezuela, Cuba, Argentina, and Mexico among various global film contexts. Importantly, this course will ask, what are the stakes and implications of 'Global' in "Global Film Melodrama"? Moving away from an additive model that often present global film histories as an addendum to the "mainstream" cinemas, the focus will instead be on the emergence and significance of melodrama, and its specific idioms within transnational contexts. The course is open to all sophomores including non-film minors and non-film majors at Wesleyan. No previous experience in Film is required.

This course presents works of literature from premodern Japan to consider how people conceptualized and struggled to attain the good life. How did people's evocations of their ideals and desires reflect and engage with the historical reality? How did their social status (such as a Buddhist monk, samurai, or a lady-in-waiting), occupation, and gender contribute to their aspirations as well as struggles? What were their strategies for not just survival but for fulfillment in periods of warfare or disasters? Works will encompass diary literature, essays, fiction, and poems from a variety of authors across most of Japanese premodern history. Practices such as the tea ceremony and works of art will also be discussed to fill out the cultural context.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-CEAS**Identical With: **WLIT226**Prereq: **None****CEAS296 Japanese Politics**

This introductory course in Japanese politics begins with an overview of the Japanese political system: its historical origins, institutional structures, and main actors. The course then moves on to explore specific policy areas such as industrial and financial policy, labor and social policy, and foreign policy. The course culminates in student research projects presented in an academic conference format of themed panels.

This course introduces different forms of storytelling in the Japanese Empire (1868-1945), and considers how the ghosts of Empire continue to haunt

storytelling in the postwar era (1945 ~), as well. By considering texts (in English translation) produced by different individuals navigating everyday life in disparate locations across the Empire (including Korea, Taiwan, and the "home islands" of Japan itself), the course aims to move beyond historical timelines of "big events" and introduce the material realities and struggles, the complexities and contradictions of everyday life under Empire. Although it certainly takes up literary "texts" in the traditional sense of short stories, novels, and poetry, the course understands storytelling as occurring through a range of mediums, including film, music, and manga/graphic novels. By considering a disparate selection of literary, musical, and filmic stories from this period, it strives to attend to some of the contested and competing desires of individuals and entities seeking to navigate conditions of empire, colonialism, and war.

CEAS301 Modern China and the World Since 1945

This class will tackle key international problems in modern China's history over the past 70 years, beginning with the civil war; the Korean war; the Great Leap Forward; the Cultural Revolution; Deng Xiaoping's economic reform; Tiananmen 1989; Hong Kong's reversion to the PRC; democratization movements in China, Hong Kong, and Taiwan; and cross-strait relations over the years. We will explore China's recent assertiveness on territorial issues, as well as the reaction over time to Chinese foreign policy by the United States, Russia, Japan, India, and other key players.

In addition to lectures and discussion, we will engage in some role-playing, with students taking various national and bureaucratic positions in mock negotiations and international exchanges. The goal will be to gain a better understanding both of Chinese options and the role of international players during key moments in modern China's history.

CEAS302 Minority Voices in Japanese Film and Literature

Although there is no such thing as a "homogeneous nation" in the world, Japan often has been falsely regarded as a country of a singular ethnicity and civilization. Is Japan a nation-state of one race and unified culture? Who are the voices in Japan defying this kind of Japanese myth? How do they claim their rights and agencies as members of Japanese society? What peoples have been discriminated against by other communities, despite their indigenous Japanese roots? What kind of relationship do these internal "others" have with the Japanese state?

This course explores Japan's domestic minorities as depicted in Japanese literature and film, whose stories and images have been largely untold and invisible in the mainstream culture. Among the various minority groups in Japan, we will pay special attention to four groups: (1) the country's culturally defined minority group since the feudal era, burakumin (the untouchables); (2) the country's oldest and biggest foreign ethnic group, Koreans ("zainichi"), and other Asians; (3) the people of Japan's internal colony, Okinawa; and (4) Japan's medical outcasts, the victims of atomic disasters in Hiroshima and Fukushima. Students will deal with materials about the specified groups produced by

prominent figures in Japanese literary and cinema history. At the same time, students will examine materials created by the otherized subjects themselves to probe how marginalized beings represent themselves in ways that are different from the dominant media portrayals.

CEAS306 Cinema and Moviegoing in American Chinatowns: Digital Tools and Storytelling

In the latter decades of the twentieth century, movie theaters dedicated to the screening of Chinese-language cinema dotted Chinatowns and Chinese ethnoburbs across the United States. What historical and economic forces explain the development of these unique exhibition sites, and how can we understand their social and cultural impacts? This seminar explores the production, distribution, and exhibition of Chinese-language films for overseas audiences and the moviegoing cultures that emerged around cinemas in Chinatowns and Chinese ethnoburbs. Units will explore Chinese immigration to North America, the establishment of Chinatowns, and early cinema spaces; Chinese immigrant and American-born Chinese filmmaking pioneers, the growth of "Chinese Hollywood," and challenges to Hollywood's dominant representations of Chinese characters and communities; the significance of diaspora audiences for Hong Kong movie studios and the creation of affiliated film distribution chains in the US; the expansion of Chinese-language cinemas in the 1960s and 1970s; the Mandarin and Cantonese films seen by overseas audiences and their range of appeals; and the social and cultural functions served by Chinese-language movie theaters. Students will learn qualitative and quantitative digital tools for film history research and use them to analyze original data sets, visualize research results, and create interactive GIS maps, storymaps, digital timelines, databases, web pages, oral histories, and other digital work related to cinema and moviegoing in American Chinatowns.

CEAS308 Comparative Urban Policy

Cities are home to more than half of the world's population, generate more than 80% of world GDP, and are responsible for 75% of global CO2 emissions. Once viewed as minor political players with parochial concerns, they are now--individually and collectively--major players on the global stage. This course will examine how cities are coping with the major policy issues governing our lives--from waste management and public safety to energy and housing policy. We will be examining how policies differ between big cities and small cities, what

cities in the global north are learning from the cities in the global south, and how cities are bypassing toxic partisan politics in their nations' capitals to form global networks promoting positive change. The class will involve local field trips and participant observation to see how some of these urban issues are playing out in the city of Middletown.

CEAS309 Scoundrels, Sinners, and Saints: Approaches to Buddhist Life Writing

This seminar will examine a variety of religious biographies and autobiographies in order to evaluate the significance of life writing in the Buddhist traditions of Asia. Materials will cover a broad range of historical periods, from early medieval to modern, and geographic regions, including South Asia, East Asia, the Himalayas, and Tibet. Topics include the structure, function, style, production, and reception of biographies and autobiographies, as well as more thematic questions of religious transmission, soteriology and praxis, formations of self-identity, gender, and the relationships of biographical literature to art and pilgrimage. Readings include primary Buddhist texts in translation supplemented by secondary scholarship on hagiography and sainthood, literary theory, narrative constructions of the self, and Buddhist history.

CEAS320 Literature and Media in China: From Inscriptions to Print Culture to New Media

What is the relationship between literary texts and "books"? How did people read before the advent of print, and in what forms/contexts did this reading take place? How does the format of a text shape the "message" that text conveys? How have new forms of media, such as digital technologies and the internet, changed how literature is understood and consumed? And how did all of these questions play out in the history of Chinese literature, specifically?

This course takes these questions as a starting point to examine the relationship between Chinese literary writing and the media forms in which this writing has circulated over time. The course is divided into three chronological units, based around the following core topics: (I) the material cultures of writing and reading in premodern China; (II) the advent of print and early modern Chinese textual cultures; and (III) forms of new media in modern Chinese literature. We begin each unit by studying some key methodological approaches to Chinese literature and its media forms. We then take up specific texts, examples, and case studies that explore the range of Chinese literary media. For the purposes of this course, the terms "literature," "media," and "text" are all broadly defined. Indeed, a primary goal of this course is to work toward a concept of Chinese literature that takes issues of media, such as materiality, circulation, reading habits, and the process of writing into account.

CEAS327 Progressive Confucianism and Its Critics

Contemporary "Confucianism" designates a diverse set of philosophical, social, political, and religious approaches that are rooted in traditional East Asia and are playing significant--and increasing--roles in the modern world. "Progressive Confucianism" designates a subset of these approaches, emphasizing the ways that the Confucian tradition has developed throughout the centuries and arguing both that modern Confucianism must continue to develop, and that a properly developed Confucianism has much to contribute to contemporary philosophy and to modern societies. This seminar will explore the background out of which progressive Confucianism has emerged; its distinctive approach and key contributions to Confucianism and to global philosophy more generally; and central criticisms that it has faced, with sources ranging from more conservative (or even fundamentalist) Confucians to liberals and progressives.

CEAS334 Native Matters: Materiality in Indigenous Literatures Across the Pacific

This seminar contemplates the function and representation of materiality in contemporary indigenous literatures. It highlights the centrality of embodied practices in indigenous cultural lives. The primary texts for the course will be literary texts (novels, short stories, essays, and poems) from different indigenous communities, including from North America, East Asia, Austrasia, and Oceania. We may also deal with non-textual materials such as artifacts, maps, clothes, video games, etc. Readings will also include theoretical or philosophical works from indigenous and non-indigenous thinkers on the subject of materials and materiality.

The course will thematize materiality in two ways: the first is to understand materiality as a way for indigenous authors to represent or construct various understandings of indigeneity, either in traditional lifeways, modern indigenous realities, or indigenous futurisms, both within and between specific indigenous communities. The second is to engage with thing theory and materiality as a method of literary analysis.

CEAS343 Tibetan Religion

This course serves as an introduction to major themes of Buddhist thought and practice within the cultural and historical framework of Tibet and the wider Himalayan world. In doing so, it examines various approaches to the study of religion and questions traditional definitions of categories such as "religion" and "Buddhism" themselves. Beginning with a close study of Patrul Rinpoche's classic 19th-century guide to Tibetan Buddhism, the early part of the course focuses on the doctrinal foundations of the tradition. This is followed by a historical and more critical examination of Tibetan religious history, proceeding from Buddhism's Indian antecedents and its initial arrival in Tibet during the seventh century through the present day. The course will explore a wide range of Tibetan religious cultures and practices including Buddhist ethics, systems of monastic and ascetic life, ritual activities, sacred geography and pilgrimage, lay religion, as well as the status of Tibetan Buddhism under Chinese occupation and in the West. It will also examine the lesser-known communities of Tibetan Muslims and Christians inside Tibet and in exile. The majority of readings will consist of primary texts in translation, and will concentrate on Tibet's rich narrative literary tradition. These will be supplemented by secondary literature on the study of religion and Tibetan Buddhism.

CEAS346 Contemporary East Asian Cinema

This is a seminar on comparative narrative and stylistic analysis that focuses on contemporary films from Hong Kong, Taiwan, China, South Korea, and Japan, regions that have produced some of the most exciting commercial and art cinema in the last thirty years. We will begin by examining the basic narrative and stylistic principles at work in the films, then broaden the scope of our inquiry to compare the aesthetics of individual directors. Our goals are to analyze the narrative and stylistic tendencies of filmmakers while considering their work in a historical, cultural, and industrial context, and to develop our film analysis skills via formal comparison. Films from Bong Joon-ho, Fei Mu, Hong Sang-soo, Hou Hsiao-hsien, Kitano Takeshi, Kore-eda Hirokazu, Jia Zhangke, Jeong Jae-eun, Kon Satoshi, Lee Chang-dong, Mizoguchi Kenji, Ozu Yasujiro, Suo Masayuki, Tian Zhuangzhuang, Johnnie To, Tsai Ming-liang, Tsui Hark, Wai Ka-fai, Wang Xiaoshuai, Wong Kar-wai, Yim Soon-rye, Yoon Ga-eun, Yuen Kuei, and others will be featured.

CEAS372 Hong Kong Cinema

This course offers an introduction to the dynamic history of Hong Kong cinema from 1960 to the present day. The course will acquaint students with Hong Kong's major films, genres, directors, and industrial trends; explore the factors that enabled the Hong Kong film industry to become a regional and global powerhouse; and consider the reasons behind the contraction of the industry since the mid-1990s and the outlook for Hong Kong cinema's future. Screenings will feature the films of Fruit Chan, Jackie Chan, Peter Chan, Chang Cheh, Mabel Cheung, Tony Ching Siu-tung, Chor Yuen, Stephen Chow, King Hu, Ann Hui, Michael Hui, Stanley Kwan, Andrew Lau & Alan Mak, Li Han-hsiang, Lo Wei, Johnnie To, Cecille Tong, Tsui Hark, Wang Tian-lin, Wong Kar-wai, John Woo, Corey Yeun Kwai, Toe Yuen Kin-to, and others. This class includes a mandatory 10-day trip to Hong Kong over Spring Break (March 10-21).

CEAS379 Visionary Journeys through Sacred Landscapes: Japanese Art of Pilgrimage

This course examines the ways in which religious paintings were used and viewed in medieval Japan. Emphasis will be laid on images of sacred landscapes and the visionary journeys they inspired. Though primarily conceived as fundraising tools and advertisements aimed at inspiring viewers to undertake a physical journey to the illustrated site, these images became sacred in their own right and were approached by worshipers as one would approach the enshrined deity of the represented site. They also allowed spiritual travel through the images, providing virtual pilgrims with the karmic benefits of actual pilgrimage without the hardships of travel.

Each week we will immerse ourselves in a sacred site, reading about its history, deities, religious practices, and unique benefits. We will then look at how these were given visual form and the artistic language developed to endow these visual representations with the power to inspire and move contemporary audiences.

CEAS381 Relic and Image: The Archaeology and Social History of Indian Buddhism

This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (first to third century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts, then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of

Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha's relics, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodhi Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

CEAS385 Legacies of Authoritarian Politics

This course explores the challenges and legacies faced by new democracies due to their authoritarian pasts. To examine legacies of authoritarian politics, we will first study the key features of authoritarian vs. democratic states. The second part will look at "life after dictatorship" including authoritarian successor parties, political participation, civic engagement, and policing in the post-authoritarian era.

CEAS388 Global Film Auteurs

This course offers a comparative introduction to film auteurs from around the world spanning the 1930s to the present day. Our aim is threefold: to analyze the narrative and stylistic tendencies of each filmmaker while considering their work in a historical and industrial context; to develop our film analysis skills via formal comparison; and to consider the formation, redefinition, and influence of film canons. Emphasis will be placed on describing and analyzing the functions of narrative and stylistic elements and their effects on the viewing experience. Each week will include two film screenings, a lecture, and a discussion. Screenings will include films directed by Andrea Arnold, Julie Dash, Fernando Eimbcke, Krzysztof Kieslowski, Akira Kurosawa, Jafar Panahi, Satyajit Ray, Ousmane Sembène, Céline Sciamma, Wong Kar-wai, Agnès Varda, Yim Soon-rye, and Zhang Yimou, among others.

CEAS390 Politics and Society in Japanese Women's Writing

How have some of modern Japan's most celebrated and insightful authors responded to key events and social conditions in contemporary Japan? What sorts of perspectives have these authors brought to issues of industrial pollution, or to youth crime and social change under capitalism, or to ongoing crises in Okinawa and Fukushima? This course seeks to hear the voices of these authors--and the social actors with whom they engage--by grappling with key modern Japanese literary texts in English translation.

CEAS395 A Wesleyan Student's Guide to Fascism: The Case of Modern Japan

"Fascism" is a term that is frequently encountered in social and political discourse. But what does this term actually mean? How can we conceive productively of different fascisms across different historical moments and (geo)political contexts—including our own? This course will consider fascism in modern Japan, and address the economic, (geo)political, social, and cultural circumstances that incited what we will call "fascist desire" in Japan's imperial moment and beyond. But while the specific experiences and characteristics of historical fascisms are informed by the unique contexts within which they unfold, including Japan's, fascism as phenomenon can never be reduced to national or cultural particularities, or confined to isolated historical moments. As one possible reaction to the experiences of modernity, that is, the specter of fascism is always with us, everywhere. By engaging with primary and secondary texts—scholarship, music, literature, film—that variously analyzed, challenged, bolstered, and critiqued fascism in the context of modern Japan, students will learn to recognize the specter of fascism in their own lived, everyday contexts, and grow in their ability to confront and counter the conditions and desires that help nourish it.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-CEAS**Identical With: **WLIT395**Prereq: **None****CEAS397 Cinema and City in Asia**

This course will look at the representation of the city in Asian cinema. It will explore links between urban and cinematic space across a range of thematic, historical, and cultural concerns. We will watch a wide range of films from China, Hong Kong, Japan, South Korea, Taiwan, India, Philippines, and Singapore—and learn to critically examine the ways in which cinema becomes an innovative and powerful archive of urban life as it engages with the events and experiences that shape the cultural, social, and political realities of the past, present, and future in Asia.

The course is open to all sophomores including non-film minors and non-film majors at Wesleyan. No previous experience in Film is required. Among other assignments like videographic criticism, students will also have an opportunity to make short city films using their phone-cameras and readily available editing software as an option for their final class projects.

Offering: **Crosslisting**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-FILM**Identical With: **FILM397**Prereq: **None****CEAS401 Individual Tutorial, Undergraduate**

Offering: **Host**Grading: **A-F****CEAS405 Curatorial Practice and Exhibition Creation**

This course in curatorial studies culminates in the curation of an exhibition to be featured in the Center for East Asian Studies (CEAS) Gallery the following semester. Through weekly or biweekly seminars, students will be introduced to curatorial thinking and strategies to develop the academic and practical skills in this practice. Students will learn, consider, and critique the different approaches to the display and interpretation of objects (how they are telling a story and why). Professional experience in the visual arts field will be gained through the planning, research, and realization of a project in the gallery. The course will be co-advised by the Associate Director of Visual Arts, the Exhibitions Manager, and a relevant member of the CEAS faculty, who will consult on the exhibition. The application will be selected by the chair of CEAS who will select one student or group (consisting of at most two students) whose previous experience, coursework, interests, and vision are most suitable. The approach can vary, but it must have an East Asian component. This seminar is an opportunity for students to work with Wesleyan arts professionals and faculty to curate an exhibition in this space. Artists may apply to curate their own work, or a student can curate the work of colleagues. The CEAS Art and Archival Collection (an educational resource collection that includes works of art in various media mostly relating to China in the nineteenth and twentieth centuries) could also be a resource from which to curate an exhibition, which would involve working with the Archeology Collections Manager. Other possibilities include historical explorations of a given topic or didactic approaches that dovetail with the CEAS Outreach program.

Offering: **Host**Grading: **A-F**Credits: **0.50**Gen Ed Area: **HA-CEAS**Prereq: **None****CEAS406 Senior Thesis Seminar**

This course will guide and support senior thesis writers in CEAS (College of East Asian Studies) to draft, revise, and complete their thesis projects. This course supplements students' one-on-one tutorials with their thesis advisors by offering a dedicated space to develop and discuss their projects in a supportive environment of peers. Over the course of the semester, students will utilize library resources, conduct empirical research, revise drafts of existing work, reflect on their own research and writing processes, and share their findings with classmates. Course materials will be drawn primarily from students' own thesis work.

Course topics include sessions on assessing sources, making strong arguments, formatting and bibliographies, understanding the "state of the field," writing and revising drafts, and sharing research findings. There will be numerous opportunities for giving and receiving feedback on work in progress.

CEAS413 Korean Drumming and Creative Music Ensemble

This course is an experiential, hands-on percussion ensemble with the predominant instrument in Korean music, the two-headed janggu drum. Students will learn to play a range of percussion instruments including janggu, barrel drum (buk), hand gong (kwenggari), and suspended gong (jing).

Through the janggu, drumming students gain first-hand experience with the role music plays in meditation and the benefits it offers to develop a calm, focused group experience. In the end they integrate their focused mind, physical body energy, and breathing through a stream of repetitive rhythmic cycles.

The students will be introduced to traditional folk and court styles of janggu drumming. The ensemble plays pieces derived from tradition and new ideas, and creates new works exploring imaginative sounds on their instruments. If there is an opportunity during the semester, the students will have a creative collaboration with a dancer(s) or musician(s) from other cultures. The ensemble will experience a deep respect for the diverse cultural backgrounds of the students developed from the efforts of teamwork and creating music together through Korean drumming. The semester will end with a live performance for the public.

CEAS414 Korean Drumming and Creative Music Ensemble Advanced

This class offers more advanced techniques for those students who have taken the beginner course or who have some basic experiences in Korean drumming or who have long-term drumming experiences of any other cultures including Western drum set. Attendance and additional practice time are mandatory. In comparison to the beginner class, the advanced class will play rapid, vigorous, and seamless rhythmic patterns on janggu, buk, and kwenggari. Students are expected to be creative in utilizing materials given during the semester.

Each student will focus on a lengthy solo work on any of these instruments, as well as ensemble playing. Students will explore both traditional and new emerging styles of Korean drumming. In the end, they will integrate their solos in the ensemble piece and create a new piece. The ensemble will experience a deeper level of drumming from contributing solo work to the ensemble and the efforts of teamwork. They will learn about group activity in music-making through sharing ideas and assisting each other. The semester will end with a live performance(s) for the public.

CEAS416 Beginning Taiko--Japanese Drumming Ensemble

This course introduces students to Japanese taiko drumming. The overarching goal of this class is to gain a broad understanding of Japanese culture by studying the theory, performance practices, and history of various genres of classical, folk, and contemporary music traditions. Students will gain a better understanding of the spirit behind the matsuri (festival) and Japanese performance arts through learning basic taiko technique and one or two pieces on the Japanese taiko drum. Students should wear clothes appropriate for demanding physical activity (i.e., stretching, squatting, various large arm movements). Students with a musical background might find MUSC 417 Intermediate Taiko to be a suitable alternative, as it covers the same theoretical and historical content but at an accelerated pace and includes additional repertoire.

CEAS428 Chinese Music Ensemble

The Wesleyan Chinese Music Ensemble is a performance group dedicated to exploring the modern Chinese ensemble and a variety of Chinese music styles. It is made up of a number of traditional Chinese instruments, including plucked lutes and zithers, hammered dulcimer, bowed fiddles, bamboo and reed flutes, and percussion. The course is designed to be hands-on and experiential, encouraging students to explore the basic ideas of Chinese music and culture through weekly rehearsals, practices, and performances.

CEAS460 Introduction to Sumi-e Painting

We will learn basic technique and composition of traditional Japanese sumi-e painting. Sumi-e is a style of black-and-white calligraphic ink painting that originated in China and was introduced into Japan by Zen monks around 1333. We will concentrate on the four basic compositions of sumi-e: bamboo, chrysanthemum, orchid, and plum blossom. We will also study the works of the more famous schools, such as Kano. Students will create a portfolio of class exercises and their own creative pieces.

Grading: **Cr/U**

Credits: **0.25**

Gen Ed Area: **NSM-CIS**

Prereq: **None**

CIS115 Experiential Design and Application

This course, co-taught with Director of Physical Plant Operations Mike Conte, will allow students to work directly with Facilities employees to design and execute modifications and repairs to existing Wesleyan spaces. The specific projects will change from semester to semester, but could include designing and building informal learning spaces, and planning and carrying out repairs and modifications to mechanical and plumbing systems. Students will learn design and engineering by carrying out projects to improve Wesleyan's facilities. Students must be willing to work with tools and machinery with supervision. The grading in this quarter-credit repeatable course will be based primarily on active participation, and the class meetings will be held on location and at times built around participants' schedules.

Offering: **Host**

Grading: **Cr/U**

Prereq: **None**

CIS160 Life in the Oceans in the Anthropocene and Beyond

Little is known about life in the deep sea, the largest habitat on Earth, even about the largest animals living there, such as the giant squid. Humans, however, are severely affecting even these most remote areas of our planet, and wildlife populations in the oceans have been badly damaged by human activity. We will look at the amazing diversity of ocean life and the disparate building plans of its animals, and see how oceanic ecosystems are fundamentally different from land ecosystems. Then we will explore how human actions are affecting oceanic ecosystems directly, for instance by overfishing (especially of large predators and filter feeders), addition of nutrients (eutrophication) and pollutants, and the spread of invasive species, as well as indirectly, through emission of carbon compounds into the atmosphere. Rising atmospheric CO₂ levels lead to ocean acidification and global warming, affecting the all-important metabolic rates of ocean life, as well as oceanic oxygen levels and stratification, thus productivity. We will try to predict the composition of future ecosystems by looking at ecosystem changes during periods of rapid warming in the geological past and see whether future ecosystems will become dominated by jellyfish, as they were 600 million years ago.

CIS221 Research Frontiers in the Sciences I

This seminar is designed to introduce students to the exciting and cutting-edge research activity at Wesleyan across all the sciences and mathematics, and to introduce faculty with active research labs to students interested in working in a lab. The course showcases what research at the college level actually entails, and which projects Wesleyan faculty are actively researching. CIS 221 is scheduled in the fall, CIS 222 in the spring. Both are gateway classes to admission into the CIS, but also recommended to students broadly interested in the sciences who have not yet decided on a major. There is no overlap in speakers between CIS 221 and CIS 222, and students may take both.

Prereq: **None**

CIS222 Research Frontiers in the Sciences II

This seminar is designed to introduce students to the exciting and cutting-edge research activity at Wesleyan across all the sciences and mathematics, and to introduce faculty with active research labs to students interested in working in a lab. The course showcases what research at the college level actually entails, and which projects Wesleyan faculty are actively researching. CIS 221 is scheduled in the fall, CIS 222 in the spring. Both are gateway classes to admission into the CIS, but also recommended to students broadly interested in the sciences who have not yet decided on a major. There is no overlap in speakers between CIS 221 and CIS 222, and students may take both.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **NSM-CIS**

Prereq: **None**

CIS239 Proseminar: Machine Learning Methods for Audio and Video Analysis

In this course, students are introduced to machine learning techniques to analyze image, audio, and video data. The course is organized in three parts, and in each part we will first introduce how these nontraditional data can be converted into appropriate (mathematical) objects suitable for computer processing, and, particularly, for the application of machine learning techniques. Students then will learn and work with a number of machine learning algorithms and deep learning methods that are effective for image and audio analysis. We will also

explore major applications of these techniques such as object detection, face recognition, image classification, audio classification, speaker detection, and speech recognition.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-QAC**

Identical With: **QAC239**

Prereq: **COMP112 OR QAC155 OR QAC156**

CIS241 Introduction to Network Analysis

This is an interdisciplinary hands-on course examining the application of network analysis in various fields. It will introduce students to the formalism of networks, software for network analysis, and applications from a range of disciplines (history, sociology, public health, business, political science). We will review the main concepts in network analysis and learn how to use the software (e.g., network analysis and GIS libraries in R) and will work through practice problems involving data from several sources (Twitter, Facebook, airlines, medical innovation, historical data). Upon completion of the course, students will be able to conduct independent research in their fields using network analysis tools.

Offering: **Crosslisting**

Grading: **A-F**

Gen Ed Area: **SBS-QAC**

Identical With: **QAC241**

Prereq: **None**

CIS251 Data Visualization: An Introduction

This course will introduce students to the principles and tools necessary to present quantitative information in a visual way. While tables and graphs are widely used in our daily lives, it takes skill to deconstruct what story is being told. It also takes a perceptive eye to know when information is being misrepresented with particular graphics. The main goals of the course are for students to learn how to present information efficiently and accurately so that we enhance our understanding of complex quantitative information and to become proficient with data visualization tools. Beginning with basic graphing tools, we will work our way up to constructing map visualizations and interactive graphs. This course will require a substantial amount of computation in R. No prior programming experience is necessary, but learning does require willingness and time.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-QAC, SBS-QAC**

Identical With: **QAC251**

Prereq: **None**

CIS251Z Data Visualization: An Introduction

This course will introduce students to the principles and tools necessary to present quantitative information in a visual way. While tables and graphs are widely used in our daily lives, it takes skill to deconstruct what story is being told. It also takes a perceptive eye to know when information is being misrepresented with particular graphics. The main goals of the course are for students to learn how to present information efficiently and accurately so that we enhance our understanding of complex quantitative information, and to become proficient with data visualization tools. Beginning with basic graphing tools, we will work our way up to constructing map visualizations and interactive graphs. This course will require a substantial amount of computation in R. CIS263 Demystifying Data: Introductory Data Analysis and Modeling

How do scientists make sense of the data they collect, especially as datasets grow in size and complexity? In this course, students will learn fundamental concepts in data collection, statistics, and modeling through hands-on analysis of publicly available datasets from the COVID-19 pandemic. We will cover the effects of biases in data collection, models of epidemic growth and spread, and the principles of studying a rapidly evolving pathogen. While we will use motivating examples from the life sciences, students can expect to learn techniques and ways of thinking that will form a foundation for evaluating and analyzing data across scientific disciplines. Students will learn the basics of using the R programming language to visualize, analyze, and model data, so no previous programming experience is expected.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL263**

Prereq: **MB&B181 OR BIOL182**

CIS265 Bioinformatics Programming

This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL265, MB&B265, COMP113**

Prereq: **[MB&B181 or BIOL181]**

CIS266 Bioinformatics

This course is an introduction to bioinformatics for students with interest in the life sciences. The course is similar to BIOL265 but only meets in the second half of the semester (with BIOL265) and is designed for students with programming background, ideally in Python. The course introduces problem areas and conceptual frameworks in bioinformatics and discusses programming approaches used in bioinformatics such as sequence matching and manipulation algorithms using dynamic programming, clustering analysis of gene expression data, analysis of genetic nets using Object Oriented Programming, and sequence analysis using Hidden Markov Models, Regular Expressions, and information theory.

Offering: **Crosslisting**

Grading: **A-F**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL266, COMP266, MB&B266**

Prereq: **[MB&B181 OR BIOL181]**

CIS270 Systems Biology with Programming

Systems--collections of entities that interact to form an interconnected whole--are present at every scale of organization in the life sciences. Biologists can take advantage of computational and mathematical tools to understand how these systems function and predict how they might change over time. This approach is critical in applications ranging from epidemic modeling to evolutionary theory. In this course, students will learn how simple rules and interactions can lead to complex behavior using examples from three main areas: regulatory networks, population genetics, and ecology. Students will spend the first part of the course

learning how to program in Python in order to model, simulate, and visualize these systems. No previous programming experience is expected.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL270**

Prereq: **BIOL181 OR BIOL181Z AND BIOL182 OR BIOL182Z**

CIS271 Systems Biology with Programming

This course is similar to BIOL270, but only meets in the second half of the semester with BIOL270 and is designed for students with a solid background in programming in Python. Systems--collections of entities that interact to form an interconnected whole--are present at every scale of organization in the life sciences. Biologists can take advantage of computational and mathematical tools to understand how these systems function and predict how they might change over time. This approach is critical in applications ranging from epidemic modeling to evolutionary theory. In this course, students will learn how simple rules and interactions can lead to complex behavior using examples from three main areas: regulatory networks, population genetics, and ecology.

CIS284 Data, Art, and Visual Communication

This course looks at the ways the digital arts--broadly defined--can be used to explore the intersections of research, data, design, and art. Following a creative software "bootcamp," students will execute projects intended to help them generate, manipulate, and remix data for the purposes of visual communication and art. Students will use Adobe Creative Suite and Processing, an open source programming language, and integrated development environment (IDE) built for electronic arts, new media, and visual design. In addition to working in the studio, seminars, readings, and student presentations will explore the role of data visualization, "big data," and the web in culture and society today. No prior software knowledge or coding skills are required. Students working in STEM, humanities, and social sciences are encouraged to enroll.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Identical With: **ARST484**

Prereq: **None**

CIS285 Digital Projects Lab

This intermediate course in design engages form and process as vital lineaments in digital images, systems, and objects today. Through a series of short, hands-on, thematic projects, students will move past the basics of digital technique and challenge themselves to articulate how and why things appear as they do. Rather than focus on specific tools or software, assignments will straddle creative platforms and media, incorporating methods such as live signal processing, data moshing, remixing, and interaction design. Early assignments will address narrow thematic concerns while a long-term final project driven by students' own directives will be developed and executed in the second half of term.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-CIS**

Identical With: **IDEA285**

Prereq: **None**

CIS307 Experimental Design and Causal Inference

The course provides the foundations and statistical thinking to design, collect, and analyze experimental data and introduces appropriate techniques for observational data when causal inference is the objective of the analysis. Throughout the course, we introduce and compare various experimental designs. We will discuss sample size and power calculations as well as the advantages and disadvantages of each of these designs. With observational data, we will explore difference-in-difference models, propensity score matching techniques, regression discontinuity designs. This course gives students the opportunity to develop further their computational skills as we learn how to describe, interpret, control, and draw inferences from experimental and observational data.

Offering: **Crosslisting**

Grading: **A-F**

Prereq: **QAC201 OR PSYC200 OR MATH132 OR ECON300**

CIS310 Genomics Analysis

This course is an introduction to genomics and analysis for students with interest in life sciences. It introduces current applications of genomics techniques, covers how to build a genomics workflow, and introduces statistical analyses in R programming language. This course assumes little or no prior programming experience and will provide hands-on experience in taking raw next-generation sequencing data through a custom workflow and ending with analyses in R statistical software. This course emphasizes hands-on computational methodology, bioinformatics data analysis, and interpretation of quantitative information. The primary method of evaluation is through written work and weekly homework assignments and the course will increase students skill in scientific writing and scholarship. Classes will consist of lectures, discussion groups and cloud based computational projects designed to train transferable skills in big data analysis. Lectures, labs, assignments and assessments will promote deep knowledge in genomics and informatics, gaining understanding in the scientific process, thinking analytically and critically about biological questions, and formulating original ideas and testing them with big data. Skills gained during the course will include quantitative, statistical and graphical tools, scientific writing, oral communication and deep thinking about ethics in a genomics-enabled world.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL310, MB&B311**

Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

CIS320 Advanced Academic Writing

This course is designed to help students master the skills needed for thesis-level academic writing. The course uses an example-driven approach emphasizing an iterative revision process, with an emphasis on expository writing skills appropriate for publishable literature. Students will be encouraged to focus on their own independent research work as subject matter of writing exercises.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-CIS**

Identical With: **CIS520**

Prereq: **None**

CIS321 Special Topics in Integrative Sciences

This is a special topics course open to all Wesleyan students to explore subjects that are at the boundaries of the canonical scientific disciplines, that are complex, and that have paramount societal impact (e.g., pandemics and public health, climate change, the search for life in the universe, and artificial intelligence and automation). There are also societal issues that deeply impact

and are vital for all the sciences (e.g., diversity, equity and inclusion of our communities, federal funding, and science policy). We will collectively identify one or two topics that we would like to focus on together as a class. With disciplinary humility, we will construct a syllabus that will include readings, classroom discussions, presentations, guest lectures, and writing that will integrate our knowledge, methodologies, and action across the sciences. This course is part of the CIS major, and it is expected that all senior CIS majors will be enrolled.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **NSM-CIS**

Prereq: **None**

CIS322 Senior Colloquium in Integrative Sciences

This is a special colloquium course focused on skills associated with science communication and, in particular, communicating student's own research to various audiences. Given the broad benefits that research has on society, and the federal funding derived from tax-payer dollars, scientists have an ethical obligation to communicate the results of their work to various stakeholders. In addition, scientists find that communicating and discussing their work with others is an invaluable method of idea generation. Finally, sharing our work with others is fun and gratifying, particularly at the end of a large project (e.g., a thesis)! These skills transcend our particular departments and are common across STEM fields. With disciplinary humility, we will engage in skill-building using various resources available to us on campus. There will be an opportunity for students to identify skill sets that they are particularly interested in, so that they can be incorporated into the course. There will be readings, classroom discussions, presentations, guest lectures, and visits to centers on campus. This course is part of the CIS major, and it is expected that all senior CIS majors will be enrolled.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **NSM-CIS**

Prereq: **None**

CIS323 Bayesian Data Analysis: A Primer

This course introduces the applied principles of Bayesian statistical analysis. The Bayesian paradigm is particularly appealing in research where prior research and historical data are available on parameters of interest. This course will teach students appropriate techniques for analyzing data of this nature as well as broaden computational skills in R. The course will lay the foundation for Bayesian data analysis that students can use to further develop skills in decision making.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-QAC, SBS-QAC**

Identical With: **QAC323**

Prereq: **MATH132 OR ECON300 OR GOVT367**

CIS327 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through

analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

Offering: **Crosslisting**

CIS331 Video Games as/and the Moving Image: Art, Aesthetics, and Design

Video games are a mess. As a relatively new medium available on a range of platforms and in contexts ranging from the living room to the line for the bathroom, video games make new but confusing contributions to the meaning and possibilities of the moving image. We will work to understand what games are, what they can do, and how successful games do what they do best. Students will complete game design exercises, create rapid prototypes, playtest their games, and iteratively improve their games with play and their players in mind. They will complete analyses of games and game design projects both alone and in groups and participate in studio-style critiques of one another's work. Experience with computer programming is helpful but not essential.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Identical With: **IDEA350, FILM250, COMP350**

Prereq: **None**

CIS375 Mass Extinctions in the Oceans: Animal Origins to Anthropocene

Geoscientists are debating whether we are living in the Anthropocene, defined as a period during which humans are having a significant effect on atmospheric, geologic, hydrologic, and biospheric earth system processes. There is considerable discussion whether we are indeed affecting the biosphere to such an extent that life on Earth will suffer an extinction similar in magnitude to those that have occurred during earth history. Studies of the fossil record provide unique evidence that is used to evaluate the large extinctions of the past and compare them to ongoing extinction processes, extinctions rates and patterns, and magnitude. Organisms with hard skeletons are most easily and most abundantly preserved in the rock record. Many of these are invertebrates that lived in the oceans (e.g., clams, sea urchins, corals). In the first part of this course, students will become familiar with the nature of the fossil record, the most common marine animals in the fossil record, and their evolution and diversification. Lectures will be combined with studying fossils. In the second part of the course, possible causes for mass extinction will be considered, together with their specific effects on environments and biota, and these predicted effects will be compared to what has been observed. Potential causes include asteroid and comet impacts, large volcanic eruptions, "hypercanes," and "methane ocean eruptions," and more exotic processes. Students will present in class on these topics, and we will compare rates and magnitude of environmental change with severity and patterns of extinction.

Offering: **Crosslisting**

Grading: **A-F**

COLLEGE OF LETTERS (COL)

COL102F Bodies and Sexualities in Medieval Islam (FYS)

Islamic societies have long traditions of commentary about the body and sexuality. Medieval Islamic texts are replete with references to homosexual and erotic love that challenge the assumption, common today, that Islamic society is restrictive by its very nature. In this course, we will explore how the body was conceptualized by medieval Muslims. Instead of essentializing the Islamic "viewpoint" on the body, we will survey the variety of opinions and ideas about the body in the medieval Islamic world. We will draw on the Quran, early Abbasid erotic poetry and literature, Islamic medical manuals, philosophical works, and belles-lettres, in order to trace how different understandings of the body and sexuality unfolded over time. In particular, we will focus on the notion of complementarity between the sexes, the role of marriage and procreation, the effects of medical theories on understandings of bodily health and illness, the ethical and legal frameworks governing sexual conduct, and the references to homoeroticism, pederasty, and female same-sex desire found in medieval Arabic and Persian love poetry and literature.

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-COL**

Prereq: **None**

COL109F "Real" Love: Subjects of Unreason

Is love a special kind of madness? Do love and madness lead to kindred encounters with the limits of experience? What are the subjects of unreason that inform our conceptions of the world and the "real"? How might the novel (as a literary genre) help us to reason philosophically about irrational experience?

This course explores love and madness through depictions of reason and unreason in two major prose works by the author of "the first modern novel," Miguel de Cervantes through a close reading of *Don Quixote* and *The Trials of Persiles and Sigismunda*. From the adventures of a country gentleman turned knight-errant to the trials and tribulations of two sojourning lovers repeatedly separated and reunited on the road, we will explore the lived and the ideal, the rational and the irrational, the presence and the absence, the mortal and the immortal in the erotic encounter at the outset of the modern literary imagination.

Both texts will be read in contemporary English translation. No foreign language knowledge is required. Recommendations for appropriate critical editions in Spanish will be provided for any student who wishes to read in the original language.

This is a discussion-based close reading seminar.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-COL**

Prereq: **None**

COL112F The European Novel from Cervantes to Calvino (FYS)

This course provides an introductory survey that tracks the development of the European novel through its major periods--from its origins in *DON QUIXOTE* through the rise of the novel in 18th-century Britain to romanticism, realism, and modernism.

We will focus on texts that had tremendous impact (and long afterlives) throughout Europe, that inspired responses and imitations in many different languages, and that provided European intellectual culture with archetypal characters and plots through which problems of history, politics, and philosophy were articulated--Voltaire's naïf and Dostoevsky's nihilist; Defoe's heroic bourgeois individualist and Kafka's victim of modern bureaucratic rationality. The readings will also introduce students to some of the European novel's important subgenres (e.g., romance, gothic, grotesque, the philosophical novel) and important narrative forms (e.g., epistolary novel, unreliable narration, free indirect discourse).

Offering: **Host**

Grading: **Cr/U**

Credits: **1.00**

Gen Ed Area: **HA-COL**

Prereq: **None**

COL115F Reading in Slow Motion (FYS)

In "The Return to Philology," Paul de Man wrote: "Mere reading, it turns out, prior to any theory, is able to transform critical discourse in a manner that would appear deeply subversive to those who think of the teaching of literature as a substitute for the teaching of theology, ethics, psychology, or intellectual history. Close reading accomplishes this often in spite of itself because it cannot fail to respond to structures of language which it is the more or less secret aim of literary teaching to keep hidden."

This course will introduce students to the theory and practice of reading literary texts closely, in slow motion. Engaging with short works of poetry and prose—including texts translated from languages other than English—students will learn to work with (and perhaps through) their uncertainties, bafflement, and non-understanding of the text and its structures of language. Secondary readings will include theoretical and critical essays drawn chiefly from the New Critics and American versions of deconstruction. While we will gain a basic understanding of key critical concepts such as author, reader, text, closure, and ambiguity, our focus will be on learning from the literary texts themselves rather than from the theoretical readings.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-COL**

Prereq: **None**

COL121F Writing About Social Issues (FYS)

This FYS course will involve close reading of classic journalistic books on complex social issues and opportunities for students to write their own articles on social and political concerns of interest to them. Texts will include William Finnegan's *COLD NEW WORLD*, Charles Barber's *CITIZEN OUTLAW*, Bryan Stevenson's *JUST MERCY*, Rebecca Skloot's *THE IMMORTAL LIFE OF HENRIETTA LACKS*, Barbara Ehrenreich's *NICKEL AND DIMED*, and Jennifer Gonnerman's reporting in "The New Yorker." The distinction and tensions between advocacy and "objective" reporting will be an ongoing point of discussion in the course.

Students will produce three feature-style pieces based on their own original research and reporting.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Prereq: **None**

COL123 Love, Sex, and Marriage in Renaissance Europe

This writing-intensive seminar will compare literary and artistic depictions of love, sex, and marriage during the Renaissance by authors and artists from England, Spain, France, Flanders, Germany, and Italy. We will read both male and female writers in genres ranging from poetry, the short story, and theater to the essay, the travel narrative, and the sermon. We will also examine other arts such as painting, sculpture, and the decorative arts (e.g., wedding chests). Questions we will explore include, but are not limited to, How were love and marriage related during the Renaissance? What role did sex, gender, and violence play in relationships between couples and within society? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about same-sex unions? Other topics will include virginity and celibacy, erotic literature, family and class structures, and divorce.

COL123F Love, Sex, and Marriage in Renaissance Europe (FYS)

This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, Italy, the Low Countries, Spain, and Sweden. (Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including

poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about homosexual love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how do contemporary (21st-century) writers reimagine Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. Students will also have the opportunity to write creatively should they so choose.

COL129 Writing the French Revolution

"Liberty, equality, and fraternity" was the slogan of the French Revolution and features three concepts of enduring interest. In this seminar we will explore the French Revolution and its antecedents—and what these can mean for us today. In the process we will delve into a number of ways of thinking and modes of representation: historical thinking, of course, but we will also get a sense of the origins of sociology and political science, the power of scientific thinking,

and differences between literary and visual representation (especially films). This course will also serve as a writing workshop emphasizing the nuts and bolts of good writing and experimenting with such rhetorical modes as argument, personal narrative, persuasion, and fiction-writing.

COL130F Thinking Animals: An Introduction to Animal Studies (FYS)

In 1789, British philosopher Jeremy Bentham wrote: "The question is not, 'Can they reason?' nor, 'Can they talk?' but, 'Can they suffer?'" This question, which challenged the social and legal norms of the 18th century that denied sentience to non-human animals, has influenced disciplines across the social sciences and humanities to focus on what has more recently become known as, "the question of the animal." Bentham's question has sparked centuries of debate about the sentience of non-human animals and our relationship to them. In this course, we will examine a range of theories and representations of "the animal" to understand the desire to tame or objectify animals (through zoos, factory farming, and taxidermy), as well as why they are often conceived of as guardians of inaccessible experience and knowledge, and how the human and its various gendered, classed, and racial manifestations have been conceived of through and against notions of animality. Readings may include Poe, Kafka, Derrida, Bataille, Haraway, and Coetzee (among others).

COL138F Masculinities (FYS)

This course offers an interdisciplinary approach to the study of masculinities, focusing on the difficulty of disentangling the (social-) scientific questions of what men are (and how they come to be that way) from the interpretive question of what masculinity means. We will survey a range of perspectives from evolutionary theory, cognitive psychology, psychoanalysis, social psychology, anthropology, feminist studies, and queer theory that describe and attempt to account for masculinities. In order to understand how these scholarly accounts might fit together to form a more comprehensive interpretive framework, we will also be engaging in critical analysis of examples from contemporary television and film that will help us to understand the role that representation plays in our cultural constructions of masculinity.

COL150F Great Books Unbound: Self and Other (FYS)

Where, how, and why do we draw the boundaries of self and other? In this course, we will discover, analyze, and debate how texts from antiquity to the present have generated and questioned ideas of me and you, us and them: from Descartes's philosophical account of the self as a thinking substance (*Meditations*), to Natalie Zemon Davis's history of appropriated identity (*The Return of Martin Guerre*), Kafka's allegories of human-animal metamorphoses, and Shelley's story of monstrosity and belonging (*Frankenstein*). This course equips students with the skills to unbind influential texts from their traditional readings using the collaborative and interdisciplinary approach of the College of Letters. This course combines small FYS discussion sections with weekly lectures by three professors from different disciplines (philosophy, literature, history), and occasional writing workshops. Designed as a gateway course to any of the core humanities disciplines, Great Books Unbound is not a prerequisite for a College of Letters major, but students considering the major are strongly encouraged to enroll.

COL189 Introduction to History: History of the Present

In this course we explore history as a critical endeavor. The aim is twofold: to reflect on the role history plays in making categories of contemporary debate appear inevitable, natural, or culturally necessary; to question underlying assumptions about the relationship between past and present that are so often taken for granted. We will examine both history's influence on politics and the politics of history as a discipline.

COL194 Civic Responsibility and Places of Remembrance: Historical Consciousness in Germany and Beyond

The Holocaust, Germany's STASI terror, resistance to dictatorships, debates about Germany's war memorials, and colonial history come to mind when we think of 20th-century Germany. In this seminar we will pursue the questions: What do we remember? How do we remember? What are places of remembrance, how are they created, and what functions do they have in our society and for us personally? The term "places of remembrance" comes from the French (*lieux de mémoire*, literally, places of memory). This term was coined by the French historian Pierre Nora. For him, places of remembrance are not only material places, but also the so-called 'immaterial' places such as people, data and concepts that are anchored in people's collective memory and have an identity-forming function. In relation to Germany, places of remembrance can be specific places (like Weimar) or memorial sites (the Auschwitz concentration camp), but also buildings (Kaiser Wilhelm Memorial Church in Berlin), monuments (Bismarck Monument in Hamburg), people (e.g., names of people on street signs), events (Fall of the Wall), customs (Christmas) or symbols. The French sociologist Maurice Halbwachs, who was murdered at Buchenwald, described memories as a connective structure. They connect people socially and temporally. But not only individuals, also societies, nations and cultures remember (= collective memory). According to Halbwachs, crystallization points or places of memory are needed for this process. Like pieces in a mosaic, these form the identity of a culture, a nation, or a society. Their meaning and their perception can change over time. Some things can also be forgotten, but places of remembrance can help us avoid forgetting. With

this caveat in mind, we want--among other things--to explore, discuss, and present "places of remembrance" and the role of memory culture in Germany and beyond.

COL198F Truth & the Poet: Lyric Subjectivity and Phenomenology for Beginners (FYS)

Who is the poet? What is subjectivity? How is the "Lyric I" located and articulated? Can lyric poetry make truth claims? What is the relationship between critique and creation? Can poetry work philosophically? Is philosophy engaged in poesis? Where is the boundary between objectivity and subjectivity? This course introduces students to key concepts in the history of phenomenology, and puts such understandings of subjectivity and the role of language into conversation with the "work" of several lyric poets.

This course is designed for students with no previous knowledge of philosophy or poetry. By working interdisciplinary with various thinkers and poets, this course will introduce students to close reading in the College of Letters and other areas of the Humanities.

COL199 Time Machines: Bringing the Past to the Present and the Future to the Past

In the course we will explore how ghosts of the past and imaginaries of the future haunt the present. We will do so by looking at the temporal disjuncture in canonical and seemingly concrete evidentiary categories of disciplinary history. In essence, we will see how they serve as time machines to bring the past into the present and the present to the future. The course will be organized around a variety of themes from ghosts, haunting, trauma, and historical injustice, through heritage, memory, and presentism, to technological imaginaries and the Anthropocene. In addition, we will look at the ways such imaginary time travel occurs in seemingly everyday sites as well such as supermarkets, films, and amusement parks.

COL200 The Narratives of Illness and Recovery

This course provides a detailed examination of primarily first-person accounts of illness and recovery. The focus will be on narratives that deal with mental illnesses and trauma or the psychological aspects of physical illnesses. We will explore the relationship of story and narrative to the healing process. Students will analyze across texts the common psychological traits that lead to recovery and generativity, as well as the response to loss and the experience of suffering. Particular emphasis will also be placed on the role of "the wounded healer," those persons who have suffered and then choose to assist others who face similar predicaments.

COL202 Sex and Sexuality in Islam

Islamic societies have long traditions of commentary about the body and sexuality. Medieval Islamic texts are replete with references to homosexual and erotic love that challenge the assumption, common today, that Islamic society is restrictive by its very nature. In this course, we will explore how the body and connected understandings of sex and sexuality have been conceptualized by Muslims, both historically and in the contemporary world. Instead of essentializing the Islamic "viewpoint" on the body, we will survey the variety of opinions and ideas about the body that Muslims have held. We will draw on the Quran, early Abbasid erotic poetry and literature, Islamic medical manuals, philosophical works, belles-lettres, and contemporary sources, in order to trace how different understandings of the body and sexuality have unfolded over time. In particular, we will focus on the notion of complementarity between the sexes, the role of marriage and procreation, the effects of medical theories on understandings of bodily health and illness, the ethical and legal frameworks governing sexual conduct, and the references to homoeroticism, pederasty, and female same-sex desire found in Arabic and Persian love poetry and literature. While the course primarily focuses on the premodern period, it will also delve into contemporary Islamic discourses.

COL204 British Literature in the Enlightenment: Individualism, Consumer Culture, and the Public Sphere

England was changing rapidly in the 17th and 18th centuries. Indeed, it is often said that this period was crucial for the emergence of individualism, consumer culture, and the public sphere--for the modern world itself. The period is sometimes described as the Age of Reason, but it was also an age of bawdy laughter, intense emotion, brazen self-promotion, serious faith, and gossip in coffeehouses and magazines. It was an age, too, of flourishing marketplaces, imperial expansion, slavery and abolition. This course will track how literary writers celebrated, condemned, participated in, or simply tried to make sense of their changing moment (and the changing understandings of literature available in it).

COL209 Appearing Acts: Visual Histories and Identity Construction Through Photography in Spain

In her reading of Plato's "Allegory of the Cave," Susan Sontag finds a close bond between photography and the world, our cave. Photography, she says, shows us a new visual code that constructs narratives that "alter and enlarge our notion of what is worth looking at," and in doing so can influence, guide, and condition our knowledge of the world. Keeping this in mind, when it comes to Spain, what kind of world does photography construct? How does the visual field influence and guide our knowledge of modern Spain? In this seminar, we will reflect on how photography has conceptualized social and national identities in Spain from the

19th century to the present, asking how images create, shape, and question the cultural and social archive. Through the examination of photographs, theories, and methods, we will draw a contextualized history of photography that will help us to consider its role in the interdisciplinary construction of Spanish identity.

COL210 Living a Good Life

For many philosophers, Eastern and Western, philosophy has been more than an effort to answer fundamental theoretical questions. It has been an activity aimed at changing one's orientation to the world and, thus, how one lives one's life. We will explore Chinese, Greco-Roman, and contemporary versions of the idea that philosophy should be seen as a way of living a good life. How does philosophical reasoning interact with lived practice? How do views about metaphysics or psychology lead to ethical commitments? Despite their differences, Confucians, Daoists, Aristotelians, and Stoics all agreed that philosophy should aim at making us better people. Can such an idea still get traction in today's world?

This course will typically have a large-group lecture each Monday, smaller breakout sections with the instructors on Wednesdays in which the texts and ideas will be discussed, supplemented by smaller weekly student-led dialogue sessions on Fridays. For details about the structure of the course and a syllabus of class meetings, along with the locations of plenary lecture sessions, breakout sessions, and dialogue sessions, please see this year's course website and past versions of the course at the following link: <https://livingagoodlife.com>.

Students who would like to explore the ancient Chinese and Greek texts on which the course draws are encouraged to enroll in either of two, optional 0.50-credit classes that are associated with our course: PHIL151 Living a Good Life: Chinese Lab; and PHIL152 Living a Good Life: Greek Lab. These courses will expose students with no prior background to the Classical Chinese and Greek languages. See their separate entries in WesMaps for more information.

COL213 Enlightenment and Science

This course will examine the positive and negative ways that 21st-century science and technology have been impacted by the Enlightenment. In this earlier time, without government or private sources of funding for science, the emphasis on immediate outcomes became common. Practitioners of science often had to be showmen to attract attention in order to get funding. Through the study of contemporary news articles, this class will also consider such ethical choices, many of them to do with resource allocation, that we are facing in science, medicine, and technology today. It has been assumed that the modern age was drawn from the scientific method and the scientific advances of the Enlightenment. It was Émilie du Châtelet and Voltaire, both strong supporters of Isaac Newton, who, in the mid-18th century, chose the rational, scientific method as the marker of their intellectual age, the Enlightenment. This choice was adopted by their intellectual cohort, and in turn it was slowly accepted as the standard by European society overall. Thus Enlightenment science did not only lead to modern, 21st-century science, it also directly shaped modern attitudes toward the proper running of society and this continues until today. Yet, little work has been done on what it means to organize a society along scientific principles, especially given that this represented a sharp shift away from traditional decision-making on the state level, and a move towards secularization. How did this new, rational approach shift the priorities of European societies, particularly in terms of the distribution of resources? In the 18th century, there was also a desire by educated readers who were not themselves practicing science to learn more about both the history of science and contemporary scientific discoveries. In this century, emerging modern science was relatively open to new types of people, not just new ideas. During the Enlightenment, science and technology were being advanced by artisans as well as privileged practitioners of science. Talented young men from less privileged backgrounds were, for the first time, slowly able to gain access to the major scientific circles during the Enlightenment. A surprising number of women (in a time when women had virtually no legal rights apart from their male relatives) were also active in scientific circles, perhaps most notably Margaret Cavendish, Émilie du Châtelet, and Caroline Herschel. Women were also the organizers of the intellectual salons in Paris and the political salons in London. In both cases, science was discussed as a normal topic of discussion, not just a subject for specialists. However, the professionalization and specialization of the sciences in the 19th century led to mixed results—it certainly allowed for a substantial increase in the scale of modern scientific work. Nevertheless, it also led to a less open attitude toward those not trained as scientists in the newly established manner. It also resulted in the end of educated people outside of the sciences considering science to be an area that they should know in order to be proper citizens, not just intellectuals. For centuries it was assumed that the modern age was drawn from the scientific advances of the European Enlightenment in the 18th century. Then, in the last few decades, many scholars started to attack what has been called the Enlightenment Project with its wholesale emphasis on science and rationality. Others have found that there were also valuable nonscientific achievements in Europe during the Enlightenment. However, there is a need to bring the scientific method and the technological advances of the 18th century back into the conversation about the science of that time and then of our own time. Given that we now live in an age both bettered and dominated by science and technology, it is of paramount importance to understand the origins of modern science and technology.

Offering: **Crosslisting**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-HIST**Identical With: **HIST261**Prereq: **None****COL214 The Modern and the Postmodern**

In this course we will examine how the idea of "the modern" develops at the end of the 18th century and how being modern (or progressive, or hip) became

one of the crucial criteria for understanding and evaluating cultural change during the last 200 years. Our readings will be drawn from a variety of areas—philosophy, novels, music, painting, and photography—and we will be concerned with the relations between culture and historical change. Finally, we shall try to determine what it means to be modern today and whether it makes sense to go beyond the modern to the postmodern.

The interconnected themes of love and loss encompass others such as desire, passion, friendship, death, separation, and grief. This course introduces students to the uses of these themes in French literature of the medieval and early modern periods by reading a range of texts, from the courtly romance and lyric poetry, to the essay, the novella, and theater. We will examine how men and women treat these themes, and we will be especially sensitive to the ways in which women write in genres traditionally dominated by men. Topics of study will include the body, virtues and vices, marriage, sexuality, seduction, chastity, and violence. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.

Offering: **Crosslisting**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-RLAN**Identical With: **FREN222, MDST220**Prereq: **None****COL218 The Family Memoir: A Contemporary Study of the Genre**

The course will focus on a series of contemporary family memoirs. Readings will include Mikal Gilmore's *SHOT IN THE HEART*, Edwidge Danticat's *BROTHER I'M DYING*, Sarah Broom's *THE YELLOW HOUSE*, Helen Macdonald's *H IS FOR HAWK*, and Mary Karr's *THE LIAR'S CLUB*. We will analyze different approaches to the genre, the diversity of ways and formats of telling stories about families, and what makes a particular memoir compelling and insightful. We will also discuss the elusive nature of truth versus fact in stories about families. Students will have the opportunity to write both analytical papers and short family memoirs of their own.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-COL**Prereq: **None****COL219 Modern Spain: Literature, Painting, and the Arts in Their Historical Context**

In this course, we study the so-called "masterpieces" of modern and contemporary Spanish literature, painting, and film (18th century to the present).

The works chosen represent the major literary and cultural movements of the past three centuries: the Enlightenment, Romanticism, realism, and naturalism, the generations of 98 and 27, the avant-garde, neorealism, and postmodernism. As masterpieces, they have achieved canonical status through either the influence they have come to exercise over successive generations or their popular reception at the time of their production. In our close analysis of these works, we will interrogate the processes and conditions of canonicity. We will emphasize the relationship between cultural production and historical context, seeking to draw analogies at all times between the short stories, novels, poems, plays, paintings, and movies under consideration and the social, political, and economic milieu from which they emerged.

COL221 Your Revolutionary Life: Biography as Political Power from Antiquity to Modernity

Death is not enough to turn a life into a political movement. That translation requires a story. This course asks why, since Gandhi, few leaders have successfully drawn upon the power of adopting a revolutionary approach to living as a means of effecting political, social, and cultural change. A student-centered collaborative pedagogy equips students with the tools and concepts to collectively workshop principles drawn from a wide range of examples of revolutionary living from the period known as the middle ages; from well-known and widely imitated examples such as the Buddha, the Prophet, and the Christ, to lesser-known examples including cross-dressing nuns, hermits on pillars, desert mothers, begging collectives, and much more. Students will then apply the ways these past lives were remembered and transmitted to contemporary movements such as Occupy Wall Street or the Black Lives Matter CHOP in Seattle. Course assignments consist of short essays, presentations, and a self-designed final project that can be analytical, creative, or demonstrative.

COL222 Ruin and Redemption: Narrating Twentieth-Century Italy

When fugitive far-left terrorist Cesare Battisti was extradited to Italy in January 2019 to serve out a life sentence for crimes committed in the late 1970s, he provided fresh evidence for the way that 20th-century events still cast long shadows into contemporary Italy. The events, their narration and re-narration over time tell the story of unresolved conflicts and overturned verdicts in a context characterized by repression, revisionism, and rehabilitation. In this course we study three historical events of the past century that continue to haunt contemporary Italian society, culture, and politics: fascism; civil war and resistance; and the political violence of terrorism in the 1970s and 80s. We approach these events by examining the ever-changing narratives about them. For each narrative we focus on specific issues (e.g., for fascism: the rise of fascism, racism and anti-Semitism, colonialism, Mussolini's cult of personality, the exaltation of war, fascist intellectuals, the art of the regime, etc.), but we use these as an entry point to articulate contradictions and complexity. We explore these narratives through various media and forms of expression: from films to novels, from landmarks to newspaper articles, from poems to billboards. By exploring how the polarizations of these narratives flow into the 21st century, we unveil the fractures and conflicting agents at the core of contemporary Italy.

The course is conducted in Italian. Authors include: Gianni Amelio, Marco Bellocchio, Italo Calvino, Liliana Cavani, Umberto Eco, Beppe Fenoglio, Dario Fo, Natalia Ginzburg, Helena Janacsek, Primo Levi, Pier Paolo Pasolini, Luisa Passerini, Cesare Pavese, Rossana Rossanda, Roberto Rossellini.

COL223 Home Movies: Italian "Families" on Film

What is "the family" in an Italian social and cultural context? How has it changed over time? How has it responded to the transformations of Italian society since the time of the postwar economic miracle until today? Have its contours changed to adapt to new values? Has it fossilized existing values? Are families limited to flesh-and-blood kinship or are they constructed along lines of shared values and loyalty? This course seeks some answers to these questions through a sustained exploration of a variety of types of families as they are presented in Italian cinema from roughly 1950 until today. We will take stock of representations of the "traditional" family and the related social values, seeking to understand how Italian filmmakers, through their focus on the family, enter into the debate concerning tradition and change within Italian society, culture, and history. To that end, we will examine family dynamics along a broad spectrum of relative and intersecting aspects including affiliation, love, and rivalry; elective families (organized around crime syndicates, families constituted according to affinity); "failed" and "challenged" families and what that means; and examples of single-parent and same-sex families that seek to challenge conventional heteronormative paradigms. Along the way, we will recur to some critical readings (in sociology, history, and anthropology) that will help us frame our inquiry. This course is conducted in Italian. ITAL 223 is an appropriate course for anyone seeking an advanced class after ITAL112.

We will screen one primary film each week, which will anchor our discussions and serve as the basis for that week's activities. Students will also make 10-15 minute presentations on a secondary film that will serve as a "companion" to the primary text and will thicken our understanding of that week's themes.

COL224 The Good, the Bad, and the Ugly: Rethinking the Italian Renaissance

In this course we explore the intellectual achievements of the Italian Renaissance. We study the development of new secular values and the quest for the fulfillment of body and soul, glory, and exuberant pleasures. We question notions of beauty, symmetry, proportion, and order. We also unveil often-neglected aspects of Renaissance counter-cultures, such as the aesthetics of ugliness and obscenity and practices of marginalization (e.g., misogyny, homophobia). We inquire into the rediscovery of classical civilizations. We consider how the study of antiquity fundamentally changed the politics, literatures, arts, and philosophies of Italy at the dawn of the modern era. Through a close reading of texts by authors such as Francesco Petrarca, Niccolò Machiavelli, and Michelangelo, we investigate continuities and ruptures between their quest for human identity and ours. This course is conducted in English, and all primary and secondary sources are in English.

COL225 20th-Century Franco-Caribbean Literature and the Search for Identity

This course investigates how 20th-century Francophone literature from the Caribbean defines Caribbean identity. Through a study of literary texts, films, and paintings from Guadeloupe, Martinique, Haiti, Guyana, and Louisiana, we will explore the evolution of Caribbean self-definition, focusing on the major concepts of Negritude, Antillanite, Creolite, and Louisianitude.

COL226 Dialogue of Poets: Classical and 20th-Century Poetry in Spain and Latin America

This course samples the rich tradition of Spanish-language verse from its beginnings to the present. It is organized around four primary dialogues: (1) the creative reception by leading 20th-century poets from Spain and Latin America (e.g., Neruda, Lorca, Machado, Borges, Paz, Rossetti) of classical poets (Saint John of the Cross, Góngora, Quevedo, and Sor Juana Inés de la Cruz); (2) the interplay of poetry and essays by those same poets; (3) the round-trip fertilization of popular and elite, oral and written forms of poetry; and (4) the crossing of linguistic, ethnic, religious, and gender boundaries that has shaped Spanish-language verse from its beginnings as love lyrics embedded in Hebrew and Arabic poems (jarchas) to the creative stimulus of other Romance languages (especially Galician and Catalan) in Spain, through Latin American poets open to Amerindian and African influences, and Hispanic-American poets exploring bilingualism in the U.S. We will read lyric, epic, and burlesque verse on a wide variety of themes (mysticism, sex, history, reason, travel, love, politics, sensory perception, death, and poetry itself); reflect on how poetry can best be enjoyed and understood; and consider how poetry has been produced, heard, read, and used (ritual and spontaneous song; minstrel performance of epic and ballads; courtly patronage, literary academies, and manuscript circulation; private reading of printed texts and commodification; and 20th-century singer-songwriter musical settings and politics). Although no prior expertise in poetry is expected, a willingness to engage it closely (textually and historically) is essential.

COL227 Life Writing: Writing About the Self and from Experience

This course will examine both the power and the complexities of writing that derives from personal experience. Topics to be addressed, in turn, are memory (and its reliability); experience (authoritative/reportorial vs. interpretative/symbolic); identity and voice of the narrator; and agency (the degree to which the narrator is in control, or not in control, of the narrative). Types of life writing that will be explored are coming-of-age narratives, illness and trauma narratives, confessional narratives, autobiographical poetry and song lyrics, and interviews/oral histories. Readings and materials include Shadd Maruna, William Styron, Mary Karr, Donna Tartt, James Joyce, and many others.

COL229 Heroes, Lovers, and Swindlers: Medieval and Renaissance Spanish Literature and History

This course is designed to develop students' ability to make informed and creative sense of four fascinating, complex, and influential medieval and Renaissance Spanish texts in their multiple (literary, historical) contexts: the "national" epic EL CID (12th-13th century); the bawdy and highly theatrical prose dialogue known as LA CELESTINA (1499); the anonymous LAZARILLO (1554), the first picaresque novel; and María de Zayas's proto-feminist novella THE WAGES OF VICE (1647). Through these and selected historical readings, the course is also intended to provide students with a basic knowledge of Spanish culture (in its plurality) from the 11th through the 17th centuries, the texture of everyday life, and the larger movements of long-term historical change. We will draw on literature and history to imagine the world of chivalry and crusade in the medieval Spain of "the three religions of the book" (Judaism, Christianity, and Islam); of mercantile values, courtly love, and prostitution in the Renaissance city; of social injustice and religious hypocrisy in imperial Spain; and of the exacerbated gender and caste tensions that followed from the political crises of the 1640s. We will reflect on the interplay of literature and history in our efforts to come to grips with a past both familiar and strange; address the crossing of linguistic, artistic, ethnic, religious, caste, and gender boundaries that has long been a conspicuous feature of Spanish society; and consider what texts and lives of the past might still have to say to us today. No prior historical or literary preparation is required, only a willingness to engage the readings closely (textually and historically).

COL230 Longform Narrative

This course will explore techniques and theories that sustain multifaceted and long narratives in fiction and nonfiction. Students will read texts that transpire over many pages, over long periods of time, and which involve deep explorations of character, setting, and theme. Readings will draw on various genres: classics ("Crime and Punishment" and Thomas Mann's "The Magic Mountain"), crime fiction (Donna Tartt's "The Secret History"), and narrative nonfiction (Rebecca Skloot's "The Immortal Life of Henrietta Lacks" and Gay Talese's "Honor Thy Father"). We will examine and explore the elements that sustain long and complex stories. Students will write one very long (50-page) essay or piece of fiction over the course of the semester.

COL231 Orientalism: Spain and Africa

Over the past several decades, North African and Middle Eastern cultures have become conspicuously important within the Spanish cultural arena. Translations of writers from Lebanon to Morocco abound in Spanish bookstores. Spanish writers have begun addressing North African and Middle Eastern issues with greater frequency, especially in their novels. The dramatic rise in the African immigrant population in Spain during the 1980s and 1990s, meanwhile, has been matched by a rise in press coverage of issues pertaining to Africa and the Middle East. These factors constitute the point of departure for our historical overview of the treatment of Islamic cultures in modern Spain, from early 19th century to the present. Guided by Edward Said's seminal essay, *ORIENTALISM*, we will assess the extent to which (and the process by which) Spain passes from the Orientalized subject of European Romanticism (painting, literature, music) to an Orientalizing European power in the late 20th century. In doing so, we will seek to relate the representation of Islamic cultures in Spanish literature and painting to social, political, and economic factors, most important of which was Spain's military invasion into Morocco in the late 19th and early 20th centuries. We will also survey changing attitudes among Spanish intellectuals with regard to the Islamic world and toward Spain's Islamic heritage, the result, perhaps, of 20th-century modernization and, most recently, of Spain's full integration, after Franco's death, into Europe's military and political structures. The tools for this study include works of literature primarily, but we will also focus on painting, historical essays, newspaper articles, and film.

COL232 Cuneiform to Kindle: Fragments of a Material History of Literature

This course provides a theoretical and historical investigation of diverse media of literary expressions from clay tablets to digital texts. We will inquire into the history of writing through different technologies and modes of composition, circulation, and reception from antiquity to the present day. By engaging in such topics as the transition from scroll to codex, from manuscript to print, and from book to Kindle, we will consider the history of literacy in relation to other forms of expression (oral, visual, networked) and analyze different practices of organizing textual materials (punctuation, paragraphing, annotation). We will scrutinize paratextual elements (title, front matter, opening information, foreword) and various forms of verbal accretions (glosses, commentaries, editorial interventions). We will examine shifting notions of authorship and originality and explore different systems of storage (libraries, archives, museums). And by questioning the multifaceted, nondeterministic interplay between literary artifacts and the media by which they are formalized and

materially formed, we will provide a critical and historical reflection on the nature of textuality, writing, and media.

Readings will set essays in the history of the book and media studies alongside key literary case studies from various periods and geographical areas. Projects will engage with textual materiality (including through the creation of book-objects of our own). The course will be conducted in English.

COL233 Visual Sounds: Exploring the Landscape and Architecture of Musical Notation

This course examines a diverse range of musical works seeing their notation as a process of translation, transformation, provocation, and imagination. Tracing a thread from medieval notations through to contemporary scores, we investigate the shifting tensions between the sonic and the visual over the long arc of music history. Why were sounds inscribed in the ninth century? How do 1960s scores reflect the radicalism of their era? Connections across centuries help shed light on musicians for whom the creative potential of notation surpasses its descriptive and prescriptive functions. Featured composers will include Hildegard of Bingen, Guillaume de Machaut, La Monte Young, George Brecht, Earle Brown, John Cage, Cornelius Cardew, Cathy Berberian, Yoko Ono, Pauline Oliveros, Mark Applebaum, and Claudia Molitor. Complementary materials comprise visual art, concrete poetry, and live theater. One of the reasons composers started to experiment with open scores in the 1950s and 60s was to develop a kind of musical notation that could be read, and therefore performed, even by those who did not identify as musically literate. This course is, accordingly, open to all students. No prior knowledge of musical notation or instrumental expertise is required. Meetings will involve discussion of a wide range of readings with the goal of expanding understanding of multiple relationships between music and visual materials. Learning Objectives: To gain familiarity with the diversity of forms of musical notation. To recognize the variable relationships between inspiration, transcription, performance, and recordings. To consider musical notation as a form of design, a language code, and a form of translation. To develop creative processes and understand the creative processes of others.

COL234 The Cosmos of Dante's "Comedy"

In 1321, Dante Alighieri completes the final cantos of the "Comedy" and breathes his last. After 700 years, the "Comedy" has not finished saying what it has to say. This course provides an in-depth introduction to Dante's masterwork as a point of entry to the history of Western literature, philosophy, and science. The core of the course consists of an intensive study of Dante's encyclopedic poem in relation to the culture and history of Medieval Europe. We examine the poem as both a product and an interpretation of the world it describes. We also observe how the "Comedy" casts its long shadow on modern culture: in Primo Levi's description of the horror of Nazi concentration camps, or in Amiri Baraka's fragmentary representation of America's infernal racist system. We investigate the challenges that Dante's text elicits when it migrates to visual and cinematic arts (from medieval illuminations to Robert Rauschenberg to David Fincher), continuously camouflaging and adapting to different media. Major topics of this course include: representations of the otherworld; the soul's relation to

the divine; Dante's concepts of governance and universal peace; mythology and theology in Dante's Christian poetics; the role of the classics in the Middle Ages; intertextuality and imitation; genres and genders in medieval literature; notions of authorship and authority during the 13th and 14th centuries; the culture and materiality of manuscripts in the Middle Ages; and the reception of Dante's work from the 14th century to the present. The course combines a close analysis of Dante's inventiveness and literary strategies with exercises in analytical writing and in multimedia translation and adaptation, aimed at prompting critical reflection on the ways in which present cultural practices are built upon the practices of the past. This course is conducted in English; no previous knowledge of Italian is required.

COL236 Don Quixote: How to Read the Ultimate Novel

No novel is more celebrated than "Don Quixote," albeit in often contrary ways: touchstone at once of the modern and the post-modern; of prosaic and magical realism; of Romantic idealism and skepticism, relativism, or materialism; of a truth-telling folly; and of the competing claims of books and "life" or history and fiction. Sample superlatives: the one text that can challenge Shakespeare in the Western canon (Harold Bloom), all prose fiction is a variation on its theme (Lionel Trilling), one of the four great myths of modern individualism (Ian Watt). Each generation recognizes itself differently in it and every major literary tradition has made it its own. One secret of its lasting appeal is that, brilliantly improvisatory and encyclopedic, it resists being pinned down. Nothing quite prepares us for the hallucinatory thing itself. There is something for every taste: self-invention; the biology of personality; humor, pathos, and tragicomedy; high and low culture; prose, poetry, and theatrics; episodic variety in a long narrative arc; probing examination of the ambiguities of heroism with a parade of spirited and resourceful heroines who rival and often upstage the heroes; and the disruptive transformations of a new world order (the print, educational, and military revolutions; early modern globalization; incipient capitalism; the explosive growth of profit-driven entertainments). A celebration of the transformative power of imagination even as it casts a gimlet eye on how fantasies can go awry, what passes for "the real world" is often as nutty as the hero himself. We will read, discuss, and write about "Don Quixote" in English, together with key examples of the critical, philosophical, literary, and artistic responses it has inspired. The course assumes no familiarity with literature, history, or Spanish; it does call for an interest in grappling with this wonderful text closely, imaginatively, and historically.

COL238 Animal Theories/Human Fictions

The question of "the animal" has become a recent focus of theory, although depictions of nonhuman animals can be traced to the very origins of representation. This course will move among literature, philosophy, art, and theory in an effort to trace the changing conceptions of human-animal difference and human-animal relations from 18th-century fictions of savage men and wild children to current theories of the posthuman. We will consider the ways that the representation of "the animal" intersects with theories of gender and race as it also contests the grounds of representation itself. Authors may include Rousseau, Poe, Sewall, Mann, Colette, Coetzee, Heidegger, Agamben, Derrida, and Harway.

COL239 Rebels and Rebellions in Early Modern Spain

What does it mean to be a rebel? This course examines literary, visual, and historiographical representations of rebels and rebellions in early modern Spain. Students will examine the uprisings of aggrieved comuneros (proto-bourgeois revolutionaries) in Castile and of outraged moriscos (Muslims converts to Christianity) in Granada and Aragon, the covert spiritual rebellions of crypto-Jewish conversas (Jewish converts to Christianity) and crypto-Muslim moriscos, as well as texts composed by women writers who rebelled against gender norms and Spain's most famous playwright's classic rebellion play. We will analyze the scathing testimonies of expelled moriscos and paintings that reimagine the pre-expulsion revolts of Valencian moriscos alongside gripping examples of local resistance to the moriscos' banishment, an astonishing and unprecedented tragedy in Spanish history. The seminar will introduce students to a critical framework for analyzing visual and multilingual texts. Close readings of "rebellious" texts will acquaint students with both known and nameless rebels of Spain, as well as with the unresolved legacies they left behind.

COL247 The Fall of Rome and Other Stories

The fifth-century fall of Rome to barbarian invaders is an idea that slowly crystallized over time. This course will examine the birth and development of this "fall"--one of the most persistent stories in history--using the very texts in which it was first articulated. We will work with selections from a range of authors--Suetonius, Eusebius of Caesarea, Ammianus Marcellinus, Augustine of Hippo, Jordanes, Procopius of Caesarea and many others--to connect the fall of Rome with other attempts to explain catastrophe and change. The course will conclude by surveying the persistence of the fall of Rome as an idea, through the medieval, early modern, and modern periods, right into contemporary discourse.

COL248 Foundations of Critical Theory: Marx, Nietzsche, and Freud

This course serves as an introduction to the main ideas of Marx, Nietzsche, and Freud, and their distinct yet similar techniques of interpretation. Michel Foucault once claimed that Marx, Nietzsche, and Freud "have changed the nature of the sign and modified the fashion in which the sign can in general be interpreted" -- which means that they changed the way in which we interpret and make sense of the world and of ourselves. Marx did so by leading his readers, in *Capital*, to "the hidden abode of production" where "the secret of profit-making must at last be laid bare;" Nietzsche did so by inviting his readers, in his *Genealogy of Morality*, to "go down and take a little look into the secret of how they fabricate ideals on earth;" Freud did so by teaching that we cannot know ourselves and are hence "not the master in our own house."

This course is designed to make critical theory and contemporary discourses in the humanities and social sciences more accessible by providing the modern historical and philosophical foundations for key critical concepts such as

interpretation, subject/agency, history, origin, society and social power, value, modernity, capitalism, socialism, and religion/morality. We will explore some of the most influential writings of the respective authors in a comparative manner and, thus, come to a better understanding of the genesis of critical modern thinking.

COL249 Thinking By Analogy: The Philosophical Use of a Literary Form

"Juliet is the sun!" So says Romeo, but what does it mean to say someone is the sun? Presumably, Juliet is the sun in being the source of warmth, life, and light in Romeo's world. Yet Juliet is of course not the sun in being an object of astrophysical study, or a giant ball of burning gas. Romeo's claim works, it seems, through a curious interweaving of being and not-being; of sameness and difference.

Analogical thinking serves as a source of illumination in all human cultures, and is a pivotal method of comparative and critical inquiry across a range of diverse fields. It facilitates the exploration of abstract themes in literature, aids in drawing insightful inferences in scientific discovery, navigates the complexities of case precedents in legal reasoning, and supports the crafting of compelling ethical arguments. This course will examine the art of analogy as a tool for philosophical understanding and creative thought, tracing its development in the history of philosophy through to its contemporary applications. Roughly half of the semester will focus on premodern perspectives on analogical thinking and verbal image-making, with an emphasis on the contributions of Plato and Aristotle. The remaining half will focus on later works of philosophy and literature that theorize about or employ analogical methods. Our interest throughout will be in how such thinking helps address issues surrounding the nature of reality, representation, and interpretation.

COL250 The Renaissance Woman

This course takes seriously the socioeconomic, cultural, religious, and physical restrictions placed on women writing in the 16th and 17th centuries. Through a selection of literary works, we will examine the ways in which early modern women exercised considerable authorial agency in the poetic-fashioning of the literary tropes, genres, and forms of thought that they inherited. Often re-forming, reinventing, revising, and re-imagining poetic spaces, these women developed their own styles of critique and creation from within their historically specific concerns. This course recovers works that were frequently written out of the study of the early modern during the 18th, 19th, and 20th centuries in order to grapple with the imaginative voices of women writing under the constraints of their time.

COL251 Kafka: Literature, Law, and Power

Elias Canetti claimed that among all writers, Kafka was "the greatest expert on power." In this course we will focus on Kafka's narratives of power relations. We will read and discuss Kafka's sometimes painfully precise descriptions of how power is exerted in the family and in personal relationships and how scrutiny and discipline are exercised over the body. We will also consider Kafka's depictions of physical violence and of apparatuses and institutions of power and the ethical and political implications of these depictions. The working hypothesis of this course is that Kafka not only tells stories about power, but that his stories also contain an implicit theory of how power works in modern society.

COL252 Writing Love: Articulations of Passion, Genres of Intimacy

What is love? How do we understand the amorous? How do we write the erotic? Is the passionate necessarily opposed to the intimate? Can the prosaic be poetic? This course investigates literary works that depict, problematize, immortalize, and give expression to the varied and nuanced forms of erotic love in human relationships. We will examine and employ the art of verbal language in articulations of passion and genres of intimacy found in philosophical discourse, lyric verse, epistolary exchanges, prose fiction, and dramaturgical and cinematic representations. By working through a liminal space between the sensible and the intelligible, desire and devotion, ineffability and fidelity, absence and presence, mortality and immortality, we will posit and discuss the perennial question: What is love?

Students will be given the opportunity to write analytically and creatively in response to the assigned readings.

COL253 Journey to the Divine: Islamic Mysticism in Thought and Practice

This course will explore the history, practice, and theory of Sufism, typically understood as the expression of mysticism in Islam. By carefully reading classics of the genre, we will aim to get a deeper understanding of key Sufi principles and priorities. Our survey will extend to Sufi classics such as al-Ghazali's *Deliverance from Error*, mystical poetry by greats like Jalal al-Din Rumi, and modern Sufi compilations by such diverse figures as the Pakistani thinker Muhammad Iqbal and the British mystic and scholar Martin Lings. We will also delve into philosophical Sufism, with a focus on the insights of the preeminent Andalusian mystic Muhyiddin Ibn 'Arabi, renowned as the "Greatest Master" of the Sufi path (al-Shaykh al-Akbar). Beyond textual analysis, the course incorporates an experiential dimension by delving into Sufi art, including various musical genres such as qawwali. Themes to be explored include divine love, spiritual purification, and truth according to the Sufi way. While our focus will be on reading the greats of Sufi literature, we will also incorporate history in order to give a historically situated understanding of the development of Sufi thought.

COL254 Folly & Enlightenment: Madness Before and After the Mind/Body Split

This course examines a variety of ways in which madness has been conceptualized in literary and philosophical texts. Through close readings of classical, early modern, and modern works we will consider forms of human disquiet which have been framed as amorous rapture, poetic furor, the wisdom of folly, visionary experience, satiric subversion, apotheosis, and enlightenment. We will reconsider Foucault's observation that madness is contingent on society by exploring the ways in which perceivably mad characters interact with the limits of their social restrictions and the boundaries of consciousness in order to reveal truths and manifest new outcomes. Special attention will be paid to relationship between insanity and intellect. What is madness? What does it reveal to us about ourselves and our worlds? How does the history of madness inform our understanding of contemporary discourse on mental health and psychic well-being?

COL255 The Invention of Fiction: Giovanni Boccaccio's Decameron

In this course we read and discuss Giovanni Boccaccio's *Decameron* (ca. 1353), a collection of 100 short stories traded by an "honest brigade" of 10 Florentine men and women. They tell each other these stories while sheltered in a secluded villa as the plague of 1348 rages in Florence. We study the *Decameron* as both a product and an interpretation of the world Boccaccio inhabited. We examine the *Decameron*'s tales and narrative frame as a point of entry into the cultural and social environment of medieval Italy. We look at its scurrilous, amusing, and provocative innuendos as traces of erotic, religious, ethnic, and cultural questions. We investigate the sexual exuberance of many of Boccaccio's tales and the tension between "high" and "low" culture. We consider the development of mercantilism and literacy in early-modern Europe and its emerging virtues of wit and self-reliance. We review the dynamics of composition and reception in manuscript culture and the book's adaptation into different media, from illuminations to film. And by impersonating the 10 Florentines, we will reenact their pastime of telling stories and appreciate Boccaccio's remarkably modern sensibility and unsurpassed art of writing fiction. This course is conducted in Italian.

COL256 European Realist Novels

The realist novel has a strangely ambivalent legacy. On the one hand, like other literary forms, it is repeatedly consigned, sometimes dismissively, to an earlier moment in literary history: surpassed by modernism, reimagined by postmodernism, and replaced by film, television, and whatever forms of new media might soon emerge. Yet it has also clearly endured--in the popular imagination as well as in the academy--as a pervasive norm, continually setting the standard against which popular narratives may be judged to be successful and (more importantly) serious. Reading these novels, then, does not just teach about an important period in literary history (though it does that, too); it gives us a better understanding of what we continue to expect from the fictional stories that claim to represent the world around us.

We will spend the first six weeks on an overview of the influential tradition of French realism, reading representative texts by Stendhal, Balzac, and Zola. In the second half of the semester, we will delve into two longer novels that have

often been regarded as exemplary (even paradigmatic) works of realist fiction: Eliot's *Middlemarch* and Tolstoy's *Anna Karenina*. While the emphasis will be on the novels themselves--what they do and how they work--we will also read a small selection of secondary texts (variously critical, historical, and theoretical) on realism, narrative, and the novel as genre.

COL257 Remembering Selves: Forces and Forms of Autobiography

The Delphic Oracle commands "know thyself," and perhaps in response, authors have felt compelled to confess, condemn, forget, and remember past selves in an effort to narrate and so envision who they are in the present. This course will look at a range of autobiographical works from The Confessions of Saint Augustine to contemporary graphic memoirs. We will ask how memory works to conserve, construct, or distance past selves; how bodies delimit selves; and how selves are conceived in and through our relations with others and with our worlds (material, social, and historical).

COL258 The Word for World is Information: Ideologies of Language in Science Fiction & Film

By the middle of the 20th century, it had begun to seem possible to produce a grand theory of communication that would use language as a basis for understanding all of human thought, behavior, and culture. As competing versions of such a theory circulated through academic disciplines as disparate as anthropology, neurophysiology, and the emerging field of computer science, they also filtered out--sometimes in strangely warped or oversimplified forms--into popular culture.

This course will examine the most interesting and influential of these theories, both in their scholarly origins and in their most puzzling and promising elaborations in works of literary and filmic science fiction. We will be particularly attentive to the ways that the narrative logic of science fiction texts can gloss over certain logical and philosophical inconsistencies in these theories while revealing others.

COL259 The Human Condition: Arendt, Nietzsche, Marx

"God is dead," the philosopher Friedrich Nietzsche wrote at the close of the 19th century, "and we have killed him!" Nietzsche presents these words as being proclaimed by "a madman who in the bright morning lit a lantern and ran around the marketplace crying incessantly." Both the content of this famous quotation and its setting express a concern with the internal and external conditions under which modern humans live and make sense of their lives: without the certainty of divine guidance and order (internally), encountering one another only as impersonal buyers and sellers on the marketplace (externally). In this seminar, we will study three strikingly unique yet nonetheless intersecting ways of addressing the human condition after the death of god. We will start with Hannah Arendt's magisterial "The Human Condition" (1958), in which she

presents the history of how in the Western philosophical tradition the active life (the *vita activa*, as distinguished from the *vita contemplativa*, the life of the mind) has been conceptualized. Drawing on Nietzsche's genealogical method, Arendt traces the genesis of concepts from their Greek, Latin, and Biblical origins to modernity. In doing so, she focuses on the activities of labor, work, and action: Labor is the "metabolism between humans and nature" (Marx), the process through which we appropriate the earth for our survival as a species; work is the transformation of the earth into a durable world; and plurality is the sharing of this world with others.

From Arendt's comprehensive conceptual history of the human condition, we will proceed in reverse chronological order to contextualize and challenge her claims. Arendt singles out Nietzsche and Marx as the paradigmatic modern "life and labor philosophers" and foremost representatives of philosophical "naturalism," and we will first examine Nietzsche's account of the devolution of European morality to nihilism and his critique of Western metaphysics as a "life-denying" death-cult, and will then, in the final third of the semester, investigate Marx's attempts to historicize and rethink the interdependence of humans and their natural environment in terms of an alienation of practice and the transformation (necessitated by the capitalist "law of value") of human labor into an abstract power of domination over humans and, eventually, the whole planet.

COL260 Detective Fiction: Procedure and Paranoia in Spanish Narrative

The detective genre is the point of departure for an investigation that will lead us to solve a mystery: How do fictions about the detective--a person who is generally outside the law and sometimes crazy or paranoid--help us to understand the social construction of Spain? We will follow this figure through time (from the 19th century to the present) and space (visiting many Spanish cities) to build a theory of the genre in Spain and a panorama of Spanish society and culture. Following the trail left by novellas, novels, and short stories, together with critical texts, our investigation will allow us to unravel the mysteries of a multidimensional society.

COL261 Castles of Cards: Italian Romance Epic Storytelling Lab

Celebrated authors of 20th-century Italian literature such as Italo Calvino and Gianni Celati have included in their works several features of Renaissance romance epic, from the importance of orality and the idea of sharing stories with a community of listeners to multi-threaded narratives and a playful attitude to the world of storytelling. The current popularity of fantasy literature and TV series puts us in an ideal position for the study of the chivalric romance and for an exploration of the continuities and the differences between past and present literary forms. In this course we focus on canonical and less canonical texts of the Italian Renaissance epic and their modern rewritings. After a multimedia investigation of Andrea da Barberino's "Guerrin Meschino," Luigi Pulci's "Morgante," Boiardo's "Innamoramento de Orlando," Ariosto's "Orlando Furioso," and Tasso's "Gerusalemme liberata" along with their rewritings by authors such as Bufalino, Nori, Celati, Calvino, and Giuliani, we will take inspiration from Calvino's "Il castello dei destini incrociati" to transform the classroom into a

storytelling lab. The same deck of tarot cards that Calvino used for his book will help us to take part in a role-playing game and create a collaborative story that will gradually unfold throughout the semester. The class aims both at studying the Italian romance epic in order to reenact it creatively and also at using this collaborative rewriting as an interpretive tool to explore Renaissance literature from within.

COL262 Tolstoy

During the 19th century when Tolstoy wrote his novels and stories, literature was viewed in Russia as the intelligentsia's primary medium for debating its big questions (such as how to resolve the inequalities that had been institutionalized under serfdom, or how to choose between new and old values as Russia experienced modernization). Writers like Tolstoy and Dostoevsky willingly assumed the responsibility to address a broad range of political, historical, and philosophical-religious questions in their fiction, and they wrote novels with radical formulations as well as solutions to these questions. However, they also viewed literature, particularly the novel, as a medium with rich potential for innovative formal experimentation, and so they resisted the call for conventional ideological novels. Each of Tolstoy's best works is an innovative formal experiment that creates an unprecedented, new type of novel. This course will study how Tolstoy's writings both responded to and transcended their times by creating new novelistic forms and new truths within those forms.

For native speakers and learners who have studied Russian for at least four semesters, a half-credit course is available in which we will read excerpts from Tolstoy's works (CGST 330).

COL265 Frankfurt School Critical Theory, Then and Now

This course serves as an introduction to Critical Theory as first envisioned and practiced in the 1930s and 1940s by a group of European refugee scholars in New York and Los Angeles associated with the "Institute for Social Research," which later became known as the "Frankfurt School" (the city of Frankfurt being the location of its European origin and post-WW2 abode). Drawing on the German philosophical (Kant and Hegel), sociological (Weber and Simmel), psychological (Nietzsche and Freud), and Marxist (Engels, Marx, and Lukacs in particular) intellectual traditions, "Critical Theory" was intended to shed light on the genesis of capitalist class societies' inherently antagonistic and irrational makeup. Uncompromisingly interdisciplinary, the critical theorists explored phenomena such as authoritarian movements, mass media, propaganda, and the culture industry, and in doing so championed the significance of art and radical thought for the prospects of liberation from authoritarianism and alienated social relations. For the first generation of Critical Theorists (who must be distinguished from their less radical heirs, such as Habermas and Honneth), critique was not a purely academic exercise, but was pursued for the sake of radical social transformation and thus was sparked by a utopian impulse.

COL266 History and Limits of Aesthetic Theory

This class will engage significant contributions to Aesthetic Theory in the West from antiquity to the modern period along three dimensions: theoretical, critical, and historical. From a theoretical standpoint, we will address perennial questions in aesthetics, such as what makes something a work of art in the first place, what it means for art to be "beautiful" or otherwise "successful," how differences in media condition and contribute to artistic meaning, what genera are and how they evolve, whether and how art can be ethically or politically significant, why we care about fiction, why and how we "enjoy" tragic plays or horror films, and how artistic tradition can (and should) inform individual works. From a critical standpoint, we will consider how works of art contemporaneous with each theoretical account either reinforce or challenge its specific proposals. And from a historical standpoint, we will seek to understand how aesthetic theories both respond to the specificities of their own epoch and situate themselves relative to the artistic and aesthetic traditions of their predecessors. Readings will include texts by Aristotle, Hume, Kant, Lessing, and Hegel.

COL267 Practical Criticism

In the early twentieth century, I.A. Richards, an instructor in English Literature at Cambridge, ran an experimental class he called "practical criticism." Each week, he distributed a single poem to his students without revealing the poem's title, author, and date of publication. He asked students to take the poem home, read it as many times as they felt necessary, and write a brief essay that simultaneously judged and interpreted the poem. This course revives Richards's experiment for the twenty-first century. We will follow Richards's protocols for a different set of twelve poems, which students must read, judge, and interpret. (Students must vow not to use Google to identify the authors.) The first half of seminar will be spent discussing the poems and the students' judgments of them; the second half will be spent reflecting on the discussions in the first half, with the help of theoretical writings by Immanuel Kant, Jeremy Bentham, Theodor Adorno, Frank Sibley, John Guillory, and Sianne Ngai.

COL269 Modern Aesthetic Theory

As a philosophical discipline, aesthetic theory initially coalesced around a cluster of related issues concerning the nature of beauty and the norms governing its production, appreciation, and authoritative assessment. Beginning in the nineteenth century, however, both art and aesthetics undergo a conspicuous yet enigmatic shift, signaled by (among other things) Hegel's declaration that "art, in its highest vocation, is and remains for us a thing of the past." Rather suddenly, classical accounts of beauty, genius, aesthetic experience, and critical taste are beset by anxieties about the autonomy and significance of aesthetic praxis in human life and, subsequently, by a series of challenges to the tenebosity of traditional aesthetic categories--author, text, tradition, meaning and interpretation, disinterested pleasure, originality, etc. Our aim in this course is to track these conceptual shifts and to interrogate the rationale behind them. (This course complements, but does not presuppose COL 266: History and Limits of Aesthetic Theory.)

Offering: **Host**

Grading: **OPT**

Credits: **1.00**Gen Ed Area: **HA-COL**Identical With: **PHIL269, GRST269**Prereq: **None****COL270 Modernist City-Texts**

Since the 19th century, the city has been both a privileged and a problematic object of representation for narrative realism: privileged because urban spaces have increasingly been seen as shaping or producing the very social relations and individual experiences that realism wants to describe; problematic because the city itself, as a coherent totality that might explain those relations and experiences, is too vast, heterogeneous, and complex to be represented through the traditional techniques of realism.

This course will approach the problems and possibilities of the city for realism through a close reading of two large, ambitious texts that attempt to represent the city as a totality: James Joyce's novel *ULYSSES* (1922) and David Simon's television series *THE WIRE* (2002-2008). We will be particularly concerned with two techniques, pioneered by Joyce, for representing the city: stream of consciousness, which creates a tour of the city from the perspective of a single, mobile flâneur; and montage, which creates a map of the city by juxtaposing various cross-sections of social life or various institutions central to the city's functioning.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-COL**Identical With: **ENGL272**Prereq: **None****COL271 Performing Ethnicity: Gypsies and the Culture of Flamenco in Spain**

In this course, we will analyze how Gypsies and flamenco are associated, in fact and in fiction, and how and why they have emerged into the limelight of Spanish national cultural discourses. Although they represent discrete realities--not all Gypsies identify with flamenco and not all flamenco artists are Gypsies--correlations between the two have nonetheless been exploited by the media and by artists as an often unwanted emblem of Spanishness. The tensions surrounding this practice seem related to an undisputed fact of Spanish cultural history: Flamenco is unique within European culture; with a population of nearly one million, Gypsies are Spain's dominant minority; yet recognition of the artistic value of the former and acceptance and assimilation of the latter have been slow to congeal within Spanish society. Our practical aim will be to analyze these important aspects of Spanish culture in their historical context. We will study how the connection between Gypsies and flamenco has emerged; we will evaluate the extent to which it is valid; and we will attempt to assess what seems to be at stake in the struggles between those who promote and those who resist this connection as distinctive of Spanish national culture. In doing so, we seek to foster a deeper understanding of the importance of the Roma community within the framework of European and Spanish culture and a deeper appreciation for flamenco as a unique form of cultural expression. On the theoretical plane, we seek to understand how music, dance, literature, cinema, performance, and art can give expression to ethnicity; how cultural hegemonies emerge; and what role artists play in supporting or contesting those hegemonies. In general, this course is designed to help students develop critical skills of cultural analysis while increasing their proficiency in Spanish.

This course will examine the intellectual legacy of the sciences in the Islamic world. Premodern Muslims cultivated various dimensions of what are today understood as the "hard sciences," including physics, mathematics, biology, and chemistry. In addition to exploring Islamic contributions to these fields during the classical period, known according to some sources as the "Golden Age of Islamic Science," we will explore Islamic medicine and medical theories, astronomy and astrological works (including tools used for astronomical observation), and the sciences of optics and alchemy. We will chart the development of these sciences while looking at the broader cultivation of scientific knowledge in Islamic societies, including the establishment of scientific institutions such as universities, observatories, hospitals, and pharmacies.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-COL**Prereq: **None****COL274 Outsiders in European Literature**

Modern literature is replete with protagonists who represent a position or identity that is outside an accepted mainstream; they are different, peculiar and/or attractive, and potentially dangerous. This course will focus on the experience of being or being made into such an outsider, or other, and on the moral, cultural, racial, gendered, sexual, or national norms or boundaries such an outsider establishes for the inside. Reading both fiction and theory, we will ask how the terms of inside and outside are culturally and historically constructed as we also look for proposals for dealing with outsiders and their otherness. Authors may include Kafka, Mann, Camus, Colette, Fanon, Sartre, Beauvoir, Duras.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-COL**Identical With: **ENGL264**Prereq: **None****COL275 Moral Complexity in Islam: Origins to the Present**

Ethics seem straightforward, until you need to explain your choices. How do you judge actions of truth and deception, love and hate, wealth and poverty, pain and punishment, freedom and slavery? Over the long history of Islamic cultures, how did people describe a good, full life? Is there a unique Islamic ethos of action? Do Islamic thinkers tie values and decisions to divine revelation, or to reason? How do we determine the nature of good and evil? Can God do evil, and what would that even mean? In confronting these questions along with Islamic philosophers and thinkers we will find a surprising range and diversity, and some of history's most compelling answers. Diverse and creative, these answers from the Islamic past compel us to rethink some of our basic presuppositions. Blending

theory with case studies from the Islamic past and present, we will approach some of the hard ethical questions that Muslims across the world have had to deal with historically and continue to address today.

COL275Z "Like Herding Cats"

What might it reveal that cats inhabit a common-parlance simile for the unwieldy? For that which cannot be gathered, not only without resistance but also without chaos? Is a simile for uncontrollability itself not a semantic and conceptual quandary? (Also, why are cats so meme-able?)

This course will explore the metaphorical and figurative uses of cats in 20th-century literature, experimental cinema, continental philosophy, and legal studies. What implications might figurative cats have for notions of sovereignty, a body politic, coercive consensus, and so on? We will consider the cultural, linguistic, and affective lineaments of representations of cats, sometimes, by looking at them directly (even though one always risks their disdain or indifference with direct engagement) in select works by Agnès Varda, Chris Marker, Jacques Derrida, Margaret Atwood, and others, and, sometimes, indirectly--through juxtaposition with a bestiary of animals that seem to generate other kinds of metaphors, such as dogs, pigs, possums, and snakes--in select works by Colin Dayan, Jamaica Kincaid, Robin Derby, and others. We will track the linguistic and iconographic tendencies in the Western imaginary of cats to signal something uncontrollable, peripatetic, esoteric, mysterious, luciferian, blackened, marked by the feminine, that understands and perhaps even has speech, but will not lower itself to mirror the limits of "civilized language." The assigned readings and viewings for this class engage Caribbean and "World" literatures, black critical theory, the figurative in representations of the history of slavery, deconstruction, French "New Wave" cinema, and animal studies.

COL276 Tolstoy Part One: War and Peace and Other Works

Lev Tolstoy (1828 -1910) lived longer than any of the other major nineteenth-century Russian writers. His career began in the 1850s, as Russian literature was moving out of the age of Romanticism, and extended into the twentieth century, as modernism was becoming the dominant mode of Russian literature. This course will deal with the first half of Tolstoy's career, beginning with his experiments in the narration of consciousness ("A History of Yesterday" and Childhood) and in the narration of the experience of war (Sevastopol Stories). The main part of the course will be devoted to his epic War and Peace, in which the Napoleonic invasion of 1812 serves as the vehicle for considering the nature of Russian nationhood, the place of the individual in large historical events, and the very essence of how history should be narrated. Each of Tolstoy's best works is an innovative formal experiment that creates an unprecedented, new type of novel. This course will study how Tolstoy's writings both responded to and transcended their times by creating new novelistic forms and new truths within those forms. The course will be conducted in English.

COL277 Tolstoy Part Two: Anna Karenina and Later Works

Lev Tolstoy (1828 -1910) lived longer than any of the other major nineteenth-century Russian writers. His career began in the 1850s, as Russian literature was moving out of the age of Romanticism, and extended into the twentieth century, as modernism was becoming the dominant mode of Russian literature. His influence in Russia went far beyond literature. By the end of his life, he was the leader of a moral movement known as Tolstoyanism, the major tenets of which were pacifism, vegetarianism, and a resistance to state power verging on anarchism. This course begins with Tolstoy's mid-career masterpiece Anna Karenina, in which Tolstoy explores the problematic nature of the Russian family through the experiences of two main characters: an adulterous wife, for whom the novel is named, and an autobiographical stand-in, Konstantin Lyovin, who is a mouthpiece for many of Tolstoy's own concerns about the post-emancipation Russian economy and the pernicious influence of the West. We will also read Tolstoy's final major novel, Resurrection, which calls into question all the bases of modern society, with the prison system as the primary embodiment of societal evil. The course will be conducted in English.

COL279 Good, Evil, Human: German Fairy Tales and Their Cultural Impact

The collected folk tales of Wilhelm and Jacob Grimm have had a substantial impact on the cultural history of Germany and beyond. Despite our sense that we already know these texts, it is worth taking a closer look at their messages. Deceptively simple, these little tales communicate and negotiate extraordinarily important and complicated messages about what it means to be human, to behave in acceptable ways, to have and control unwelcome desires, and to (be able to) imagine a better world. We will read selected fairy tales from the Grimm collection and other texts, investigate the historical context in which the Grimms undertook their ambitious project, learn about ways in which scholarship has framed fairy tales, and discuss adaptations of the fairy-tale tradition in films and texts of the 20th century.

COL280 Image/Word: Narrative and Photography in Contemporary Spain

The objective of this course is to analyze the relationship between literature and photography, questioning the idea of representation that usually unites them. This relationship goes further than the simple representation of the environment that surrounds us: literature and photography modify not only the perception of, for example, urban space, but also its organization; that is, they have a direct effect on the built environment. This effect creates a productive linkage that challenges the limits of these disciplines and the worlds in which they are created, proving how their work aims not exclusively to describe or represent but also to build. This idea of creating is the base for this seminar, where students will develop a photographic and a narrative/analytic project in which they will test firsthand the relationships and skills seen in the class. Thus, they will be able to see the connections between disciplines and cultures that guide our everyday life. In this seminar we will work with Cuban artist and writer Jacqueline Herranz-Brooks, who will work with students in their creative project.

COL281 Histories of Race: Science and Slavery in an Age of Enlightenment

The concept of race was first "invented" during the 18th century by anatomists, natural historians, and, ultimately, the century's classifiers. This class will come to grips with the birth of this concept in two ways. First, we will read excerpts from travelogues to Africa and the Caribbean (as well as short excerpts from natural history) in order to chart the slow and halting creation of the concept of race as it crystallized in European thought during the 18th century. Having studied this "proto-raciology," the class will then examine 16 unpublished manuscripts that were submitted to a contest on the source of "blackness" organized by the Bordeaux Royal Academy of Sciences in 1739. These include essays submitted by priests, anatomists, and partisans of climate theory. Students in this class will actively engage with these materials by producing glossary definitions that will be published along with the entire collection of essays. The ultimate goal of this course is to provide students with an understanding of the concept of race that will inform their reactions to this question as both a historical concept . . . and an ongoing problem that affects all of us in the present.

COL282 Death and the Limits of Representation

The disciplines of history, philosophy, and literature all hinge on the issue of representation. The ability to communicate ideas, visions, or arguments all depend on the ability to represent these abstract notions in a concrete and recognizable form. In this course we will problematize the basis of all three disciplines by exploring Death as the limit of representation: as that which is ultimately unknowable (or knowable only second-hand) and thus beyond representation. Indeed, what is the concept of the "ghost" but an attempt to represent someone who is dead in the recognizable form of the body that once lived. Yet, the ghost appears and disappears, is not bound by the laws of time or space, and is largely present in its absence. By exploring texts by such authors as Plato, Shakespeare, Poe, Derrida, Levinas, Mbembe, and Hartman, and studying historical events such as the "black death," the Middle Passage, and the Shoah, we will attempt to understand the project of representation and its limits.

COL283 The Rationalist Tradition in Early Modern European Philosophy

This course offers an intermediate-level survey of the Rationalist tradition in Early Modern European Philosophy. Broadly speaking, Rationalism (with a capital 'R') is the view that human reason can deliver insight into significant philosophical truths, without relying on sense experience. We will explore varieties of this methodological commitment in connection with several core topics - including the existence of God, the nature of the human mind (or soul), its relation to the body, and the possibility of empirical knowledge. We will read texts by René Descartes, Princess Elisabeth of Bohemia, Margaret Cavendish, Baruch Spinoza, G.W. Leibniz, and Emilie Du Châtelet.

COL285 When the Empire Strikes Back: (Post) Colonial Theory and Fiction

Throughout its history, the rulers of Russia—the tsarist Russian Empire, the USSR, and now the Russian Federation—have been focused on the expansion of Russia's territory via the conquest, subjugation, and/or assimilation of neighboring peoples. Russia's colonial condition, expressed in fiction, film, and other media, will be the focus of this course. We will discuss global postcolonial theory (Chinua Achebe, Edward Said, Gayatri Spivak) and critical works with a focus on Russian, East European, and Eurasian Studies (Ewa Thompson, Vitaly Chernetsky, Alexander Etkind), in order to see how Russia's colonial being can be compared to other empires. We will discuss such topics as The Empire and the Other, Culture and Imperialism, Language Politics, and strategies of resistance to imperial hegemony. Via specific cases in literature and art, we will see how Russian culture processes the colonization of Alaska, Siberia, and the Caucasus. We will pay special attention to the discourses of Chukchi, Tartar, Chechen, Khanty, and Ukrainian authors who write back to the Empire. The readings will include the writings of J.M. Coetzee, Joseph Conrad, Mikhail Lermontov, Yuri Rytkheu, Guzel Yakhina, Yeremey Aipin, and Viktor Astafiev. The course is taught in English. No knowledge of Russian is required.

COL287 Nietzsche als Versucher (CLAC.50)

The term "Versucher" combines three meanings: (i) a writer of essays, (ii) a maker of experiments and hypotheses, and (iii) a tempter who seductively tests convictions and provokes latent desires. Friedrich Nietzsche draws on all these senses when he proposes "Versucher" as "the not-undangerous name [he] dares to bestow" on the "philosophers of the future"—a coming generation of free spirits who will (finally) be capable of appreciating and continuing his intellectual legacy (Beyond Good and Evil, §42).

This course will interrogate Nietzsche's conception of a philosophical Versucher and examine how this concept might apply to Nietzsche himself: as an experimenter with literary style and genre (including the essay form) and as a polarizing cult figure who has attracted the fascination of generations of teenagers and the most diverse (often diametrically opposed) ideological movements. How is it that Nietzsche inspires such passionate attachment in

such radically different readers? What is it about his philosophical style and literary form that cultivates a feeling of intimacy and fierce allegiance while also admitting such aggressively divergent interpretations? To explore these questions, we will read and discuss excerpts from Nietzsche's writings and correspondence alongside texts by his friends and interlocutors--such as Richard Wagner, Paul Rée, and Nietzsche's unrequited paramour, Lou Andreas-Salomé. We will also look at prominent cases of his cultural reception--notably by the Nazi party (due to the influence of Nietzsche's sister, who was a party member) and simultaneously by opponents of totalitarianism such as Robert Musil, Karl Löwith, and Walter Kaufmann.

This course is part of the Fries Center for Global Studies' Cultures and Languages Across the Curriculum (CLAC) initiative. It is taught in German and associated with COL290/PHIL252 "Nietzsche - Science, Psychology, Genealogy," though students can take either course independent of the other. No background in philosophy or literature is required for this course, but advanced-intermediate (B2+) reading and spoken German is a must.

COL288 Introduction to Journalism: Constructing the News

Champions of journalism are fond of talking about bedrock values: fairness, objectivity, transparency. But like any idea--or ideology--these keywords have their own genealogies, and their own constructed natures; in other words, they came from somewhere. This course aims to pull apart our received notions of facticity, objectivity, and transparency in news/journalism/nonfiction, tracing their roots, understanding their historical context, and considering how we deploy them in our own work. Students will learn the fundamentals of reporting in hands-on assignments that pull them out into the world to gather stories. This journalistic work will occur alongside class discussions of canonical (and neglected) strands of journalism history, drawn in part from Bruce Shapiro's anthology *Shaking the Foundations: 200 Years of Investigative Journalism in America*. These include readings from early Black press pioneers (Ida B. Wells, Marvel Cooke), muckrakers and investigative journalists (Lincoln Steffens, Vera Connolly), and pathbreaking science journalism (Rachel Carson's *Silent Spring*). Readings will also include criticism that examines our present media situation, including selections from Raven Lewis Wallace's *The View from Somewhere: Undoing the Myth of Journalistic Objectivity* and Ben Smith's, *Traffic: Genius, Rivalry, and the Billion-Dollar Race to Go Viral*.

COL288Z Solitude, Society and Loneliness in Romanticism and Modern Culture

We are now living in an age of constant connection to anybody, anywhere, at any time. An indirect result of this is that individual privacy and solitude are being sacrificed (sometimes consciously, sometimes not) for the pleasures as well as the risks of interconnection. The recent COVID-19 pandemic has, however, highlighted the risks of extended solitude, which has made reconnection a newly relevant theme in our lives. We thus find ourselves at a moment in history when we think of both solitude and connection with deep feelings of ambivalence. How can literature, sociology, art, and film about solitude and connection help us to think clearly and deeply about their roles in our lives?

We will read and discuss authors who consider the risks and pleasures both of solitude and interconnection, from early Romantic writers such as Mary Shelley, to American Romantics such as Henry David Thoreau and Emily Dickinson, to modern European writers such as Franz Kafka and Dino Buzzati. We will also examine non-fiction works such as Sherry Turkle's *Reclaiming Conversation: The Power of Talk in the Digital Age* and Virginia Woolf's *A Room of One's Own*. We will use these works ultimately to consider our own culture of interconnectivity. What place and meaning do the solitude and privacy so prominent in Romantic literature have in a modern culture that makes them virtually obsolete? What can films such as Kieslowski's *A Short Film about Love* and Hitchcock's *Rear Window* show us about the relationship of solitude and privacy? More generally, what can these books and films tell us about solitude and interconnection in and since the nineteenth century?

COL289 Italian Filmmaking by the Book: Adaptations, Texts, and Contexts

This course explores the adaptations and transformations of Italian literary texts into their cinematic and televisual counterparts. We will principally study Italian narratives from the 20th and 21st centuries and their screen adaptations as a way of uncovering the modes and means by which Italian screen culture borrows from literary antecedents. Is the relation between literary texts and their screen adaptations a love story or bad romance? Is it characterized by a "faithfulness" to the text or a "betrayal"? Throughout the semester, students will acquire an enriched understanding of the assorted texts and their contexts by studying varied genres (short fiction, novels, nonfiction, detective stories), a variety of themes (crimes both real and imagined, petty and powerful; historical revisionism; personal and political dilemmas), and diverse geographical settings focusing principally on Southern Italy (including cities and islands reaching from the Mediterranean to the Adriatic).

All students in the course will study a common core of five author/director pairs. The core consists of "Il Gattopardo" (di Lampedusa/Visconti); "Io non ho paura" (Ammaniti/Salvatores); "L'amica geniale" (Ferrante/Costanzo); "Gomorra" (Saviano/Garrone/Sollima); and "Novelle per un anno/Caos" (Pirandello/Taviani). Additionally, students will, in consultation with the instructor, choose a sixth pairing from the list of the following titles, which will serve as the basis of their end-semester presentation as well as an element of the oral final exam: "Il giorno della civetta" (Sciascia/Damiani); "Il contesto/Cadaveri eccellenti" (Sciascia/Rosi); "I Malavoglia/La terra trema" (Verga/Visconti); "Padre Padrone" (Ledda/Taviani); "Quo vadis, baby?" (Verasani/Salvatores); "Acciaio" (Avallone/Mordini); "Il conformista" (Moravia/Bertolucci); "Todo modo" (Sciascia/Petri); "Minchia di re/Viola di mare" (Pilati/Maiorca); "Benzina" (Stancanelli/Stambrini); "Il padrino" (Puzo/Coppola); "La tregua" (Levi/Rosi); and "Le forme dell'acqua" (Camilleri/Sironi). Students may also care to consider literary texts from earlier historical periods: Basile's 16th-century "Il cunto de li cunti/Il racconto dei racconti" (Garrone) and Collodi's 19th-century "Pinochio" (with adaptations by Disney, Benigni, and Garrone). This course will be conducted in Italian. This course is appropriate for all students who have completed ITAL 112 or whose placement exam indicated a course numbered ITAL 221 or higher.

Students are encouraged to put the lengthened winter break to good purpose. All students are expected to read the first book of Ferrante's Neapolitan quartet, "L'amica geniale," during the winter break. It is a long novel, but students will find that the Italian is not challenging. Any edition in Italian will be fine (e.g., electronic, print, used, etc.). Reading in advance of the semester will facilitate students' workload as well as keep Italian flowing during the lengthy pause. It is further greatly recommended that students read di Lampedusa's "Il Gattopardo" in advance of the semester. If students have already taken an Italian course numbered 221 or higher, or have already studied in Italian, it is recommended that they read "Il Gattopardo" in Italian. Any edition will serve.

COL290 Nietzsche - Science, Psychology, Genealogy

This course offers an intermediate survey of Friedrich Nietzsche's mature philosophical writings. Nietzsche's thought is centrally concerned, throughout his career, with a cluster of classical philosophical questions--does human life have meaning? What makes an action right or wrong? Can we comprehend the true nature of reality? What undergirds our normative judgments (of beauty or justice)? We will be especially concerned with tracking Nietzsche's reflections on the impact of modern science (especially the advent of Newton's mechanical physics and Darwin's evolutionary biology) on our conceptions of value and meaning in human life.

COL291 Forward, Without Forgetting: The GDR in Literature and Film

In 1949, postwar Germany officially split into two separate countries with the formation of the German Democratic Republic. Also known as East Germany, the GDR was isolated from the Western world for four decades, and it developed its own, equally rich, literary and cinematic cultures. By looking at a range of textual and visual sources, students will engage critically with ways of understanding this "other" Germany and its distinctive cultural expressions, ideology, and history, including the role of the government and the Stasi. The course also explores phenomena like the "Ostalgie" and retro-chic that manifested themselves after the Fall of the Wall in 1989. The readings include short stories, songs, and excerpts by and among others: Wolf Biermann, Johannes Becher, Günther de Bryn, Stefan Heim, Rainer Kunze, Brigitte Reimann, Claudia Rusch, Susanne Schädlich, Maxi Wander, Christa Wolf. Participants will view and discuss films and TV series produced before and after unification.

COL292 Reason and Its Limits

This course offers a close study of Immanuel Kant's magnum opus, the Critique of Pure Reason, supplemented by related writings by Kant and some secondary literature. Kant observes that the history of philosophy is rife with disagreements, even though philosophers purport to traffic in necessary truths disclosed by reason alone. This scandalous fractiousness calls into question reason's ability to offer substantive insights into necessary truths. Kant's "critique" aims to vindicate reason by distinguishing, in a principled manner, the sorts of things we can know with certainty from those that lie beyond the limits

of human understanding. His central thesis, "transcendental idealism," holds that "reason has insight only into what it produces after its own plan" (Bxiii). In other words, we can indeed be certain of key structural features of reality such as its spatiotemporality and causal interconnectedness--but only because those features are, in some crucial sense, mind-dependent. This class will explore in detail the arguments for these claims as well as prominent interpretations of their philosophical upshot.

COL293 Words and Sex: Storytelling, Censorship, and Boccaccio's Decameron

We will explore literary genres and representations of sex and gender in Boccaccio's Decameron. Through close readings of selected tales and cultural analyses of their trans-historical and transnational reception, we take the Decameron's words as point of departure for the study of storytelling and the politics of readership. As modern readers of Boccaccio's renowned and classic Medieval collection of short tales, we investigate the text's notions of love, gender, and sexuality by comparing and contrasting the Decameron with various other texts across varying media, from the works of Petrarch and Chaucer to the modern readings of D. H. Lawrence and Pier Paolo Pasolini, and from visual arts to digital humanities. Students are invited to creatively engage with these and other texts of their choice (and with approval of the instructor) in order to produce, by the end of the course, either a) an analytic blog post that may be published on the H-Net of the Transnational Italian Studies working group; or b) an individual or collective project inspired by Boccaccio's Decameron.

COL294 Soundscapes of Islam

From the melodious recitation of the Qur'an and Sufi-inspired sung poetry to popular soundtracks of religious revival and resistance, the world of Islam has generated myriad sonic expressions across its diverse historical and geocultural milieus. While recognized for its affective and transformative powers, music has also been the subject of a longstanding polemic in Islamic societies, its moral and ethical status being debated and contested. This course will survey the soundscapes and ideoscapes of Islam, exploring the manifold roles and meanings assigned to music among Muslim communities. It will examine a range of sound practices and related discourses to discover the ways in which locally distinct religious and social customs have shaped concepts of music and sonic articulations of Muslim identity. We will locate the varied and shifting attitudes toward music and musicians within the context of political censorship, colonialism, nationalism, and cosmopolitan modernity, and consider the impact of current conflicts and migratory processes on the local-global circulation of religious ideologies and sounds. Drawing from selected case studies of sacred and secular performance, we will explore the musical construction of gender, place, and architecture; the role of media in the formation of Muslim 'counterpublics'; and the mediation of aesthetic sensibilities through style. Topics covered will include: views on music within the Islamic tradition (the Qur'an and Sunna, shari'a law, theology, and Sufism); philosophies and cosmologies of music in Islam; music at the courts of Islamic rulers; religious chant and art singing in the Middle East; sound, healing, and exorcism in North Africa; ritual, devotional, and mystical practices in Central Asia; Islamic performing arts in Indonesia; Sufi world music and Muslim pop and hip-hop across Asia and Africa, and among immigrants and refugees in Europe and North America. Throughout the course, Islam will be encountered as a widely diverse spiritual and sociocultural system

that has been a source and stimulus for creativity among Muslim peoples worldwide.

COL295 Rome After Rome: Culture and Empire of Constantinople

Rome did not fall. Rome was swallowed by a new idea of what it means to be Roman when, in the fourth century, the empire left its own founding city behind and moved the capitol to the newly-minted city of Constantine, Constantinople. This course gives students a hands-on introduction to one of the most astounding sociopolitical transformations in human history, tracing out the cultural, political, and economic trajectories of the Roman empire of the Middle Ages.

In exploring the textual and material relics of this medieval metropolis on their own terms, students apply and publish their research interests on the collaborative place-based interactive teaching encyclopedia Constantinople as Palimpsest (<https://arcg.is/0e4Lb4>). For their final project students will design a unit for a high school history course, using Constantinople as Palimpsest to introduce the diversities and paradoxes of life in the city of New Rome.

COL296 Devotion and Deception: Erotic Discourse from Dante to Petrarca

In this course, we will investigate the ideology, content, and material forms of love literature from Dante Alighieri to Francesco Petrarca. Through a close reading of such texts as Dante's *Vita nova* (ca. 1295), Giovanni Boccaccio's *Decameron* (ca. 1353), and Petrarca's *Rerum vulgarium fragmenta* (often referred to as the poetry book par excellence: *il canzoniere*, ca. 1374), we will unveil the literary and fictitious nature of medieval erotic literature. We will explore the origins of love poetry in medieval France and its subsequent interpretation and rewriting in Italian courts and comuni. We will inquire into the cultural constructions of the medieval notion of the lyrical self and how it still has an impact on our own notion of consciousness. We will study the forms, themes, and characters that populate 'love stories' in the Middle Ages. We will analyze the dynamics of composition, circulation, and reception in manuscript culture. Our close analysis of the texts as they have been preserved in manuscript form will help us gauge the differences between medieval and contemporary ways of writing, reading, and loving. This course is conducted in Italian.

COL297 Reading Nietzsche

Friedrich Nietzsche, trained philologist and self-proclaimed "free spirit," remains one of the most controversial figures in modern thought, a source of fascination and outrage alike. Best known as the philosopher of the "Dionysian," the "will to power," the "eternal return of the same," the "transvaluation of all values," and the "over-man," Nietzsche also proudly considered himself the most accomplished prose stylist in the German language. In this course, we will

examine two closely interrelated issues: (1) the genesis of Nietzsche's major philosophical thoughts in the areas of epistemology, aesthetics, ethics, and the critique of religion, from his earliest to his latest writings; (2) the cultivation of a philosophical style that, in its mobilization of highly artistic modes of aphoristic reduction, metaphorization, personification, and storytelling, aspires to turn critical thinking into a life-affirming art form.

The course will combine philosophical interpretation with textual analysis. No prior knowledge of Nietzsche's works is expected; however, a willingness to set aside significant chunks of time to dwell in Nietzsche's texts is required. Students with reading knowledge in German are encouraged to read at least some of the assignments in the original. Guidance in doing so will be provided based on individual need.

COL298 Music of Central Asia: From Throat-singing to Heavy Metal

The music of the Hu was chosen as the soundtrack to *Star Wars Jedi: Fallen Order* because it sounded otherworldly to Western audiences. In fact, the Hu draw on ancient musical traditions from Central Asia, one of the most culturally and musically diverse areas of the world. This course introduces students to a wide range of music practices, genres, and styles in historically nomadic and sedentary regions of Central Asia: throat-singing, sounds of shamanic and Sufi Islamic rituals, epic performance, narrative instrumental playing, oral poetry competitions, folk and art singing, Western-influenced classical and popular music genres, including Central Asian repertoires of opera and symphony, Azerbaijani jazz, Uzbek estrada, Kazakh Q-pop and crossover music, Mongolian heavy metal and hip hop. The roles and meanings of music are discussed in relation to wider aspects of culture and social life, the impact of Soviet culture policies, post-Soviet national revival, and globalization.

The course includes a performance component. Students learn to play a variety of Kazakh and Kyrgyz musical instruments, including plucked and bowed lutes, a plucked zither, clay ocarinas, jaw harps, and percussion instruments. Previous musical training is not necessary. The course draws on extensive audiovisual materials and is open to students of all levels.

COL300 Infinity and the Mathematization of Nature: Early Modern Perspectives

The "mathematization of nature" is a hallmark of the so-called "scientific revolution" in sixteenth- and seventeenth-century Europe. By privileging quantitative methods for measuring and explaining natural phenomena, thinkers broke with the largely "qualitative" forms of explanation typical of the Aristotelian tradition. Especially with the development of new mathematical methods—notably, advances in algebra, analytical geometry, and the development of infinitesimal calculus—the scope and explanatory power of natural philosophy was considerably extended. At the same time, however, new puzzles arose about how the pristine models of abstract mathematics could apply to the messy reality of concrete nature. This question was especially pressing in connection with new mathematics' exploitation the notion of infinity:

infinite series, infinite extensions, infinitesimally small quantities, and even infinities greater than other infinities. Should we take the successful application of such infinitary mathematics to natural phenomena to imply that nature itself harbors an infinity of infinities? And how must we reconceive the cognitive powers of the human mind to make room for the fact that infinity has ceased to signify the unknowable as such and has instead become a primary tool for producing scientific knowledge?

In this seminar, we will examine some of the most prominent Early Modern applications of infinitary mathematical methods in the study of natural phenomena as well as central debates about what sense, if any, can be made of these procedures and their apparent success.

COL301 Researching and Writing Historical Narrative Nonfiction: A Workshop

Historical Nonfiction will be a workshop-based course. Students will have the opportunity to work on a project led by Charles Barber, a book-in-progress of historical narrative nonfiction based in Palm Beach, Florida in the 1920s. The project involves a decade-long conflict between a gang and two father and son sheriffs, set against the explosive (and often corrupt) growth of Palm Beach as a resort in the early 19th century. Students will work with court and governmental records, as well as archival materials of all sorts. Students will receive professional credit for their contributions. A focus of the first part of the course will be historical methodology and evaluation of records; the second half of the course will address the question of transforming historical materials into compelling narratives. Readings will include models of historically based nonfiction, such as David Grann's *Killer of the Flower Moon* and Patrick Radden Keefe's *Say Nothing*.

COL302 Cultural Criticism and Aesthetic Theory: Walter Benjamin and Theodor Adorno

This seminar introduces and explores the cultural criticisms and aesthetic theories of Walter Benjamin and Theodor Adorno, two of the 20th century's most notable Marxist thinkers and critics. Our aim will be to illuminate the intimate interconnections between cultural criticism and aesthetic theory taking place concurrently with the rise of the artistic avant-gardes (with which both thinkers felt deep affinities). We will study the intellectual origins, cultural contexts, methods, and critical aims of Benjamin's and Adorno's uniquely individual yet also closely related practices of cultural criticism. Further, we will examine the assumptions underlying their aesthetic writings and seek to reconstruct their respective contributions to aesthetics.

Over the course of the semester, we will study the works of our protagonists both on their own terms and in comparison to each other. Major thematic units will include (but are not limited to) their writings on literary aesthetics, narrative, and translation; architecture and the city (Naples, Moscow, Paris, Berlin); landscape and nature; mass culture and aesthetic autonomy. Our starting point will be Georg Lukács's *Theory of the Novel*, a work to which both Benjamin and

Adorno were much indebted. On occasion, we will supplement our explorations with asides from the 1920s and 1930s (by Alfred Sohn-Rethel, Siegfried Kracauer, Bertolt Brecht, Asja Lachs, Ernst Bloch) as well as scholarship for optional reading (by Susan Sontag, Hannah Arendt, Fredric Jameson, Susan Buck-Morss, Miriam Bratu Hansen, Susan Ingram, Judith Butler, Esther Leslie).

COL303 Radical Self-Care

This is a higher-level seminar on philosophy as a way of life that will explore how the notion of self-care has been developed and deployed throughout history by several political theorists and activists, including Mohandas Gandhi, MLK Jr., Nelson Mandela, Audre Lorde, Angela Davis, bell hooks, and Sara Ahmed.

When conducted in the present day, reflection on how one should live naturally requires attending to matters of sociopolitical concern, such as healthcare inequities, environmental degradation, wealth disparities, and prison reform. An investigation into the links between personal and social well-being has so far been something of a lacuna in the field of philosophy as a way of life, though in a variety of formulations and across several traditions, practices of self-care and self-formation have typically been seen as continuous with (and even a prerequisite for) a robust engagement with others and the pursuit of social justice causes. We will explore the connection between these two domains in this course. As a project during the semester, students will be asked to engage in a cause that matters to them by implementing selected ideas from the thinkers and activists that we'll be studying.

COL304 The Enlightenment You Don't Know (And What It Can Tell You about the Digital World)

Who am I? How and what can I know? Is what I perceive of and present to the world the truth? What can and should I do? Who knows what about me? Such questions are asked with increased urgency as the sheer mass of information makes reliable orientation impossible, as social relations become unstable, as uncontrollable actors gather ever more information about us, and as the (neo)liberal sense of self starts to dissolve under the pressures of new media and accelerating social and political processes.

This course proposes that, to look for ways to navigate this situation, we ought to turn to the 18th century, a time when old certainties and assumptions collapsed under the emergence of modernity and new, "enlightened" views of humans and their world were developed. During that time, thinkers and artists set out to redefine the self, obsessively observing the individual, its cognition, and its role in the world. In doing so, they invented the modern self, one with rich inner lives, a keen interest in the observable reality, proud of its abilities, and aware of its role as a social being and its observation by others. They created elaborate modes of paying attention, of reading the human being in its complexity. Acquiring insight into their ideas can help us see what is being lost and gained today. We will focus largely on the German 18th century since it

produced some of the final instantiations of Enlightenment thought in a variety of disciplines.

In the first part of this course, we will read from a variety of disciplines that either were invented in the 18th century or underwent significant changes during that time, ranging from legal theory and natural sciences to philosophy and literature. In the second part, we will jump forward to the dissolution of this modern self in our current moment. We will engage with theory and digital art of the 21st century, exploring what it means to constantly be distracted, to be the focus of attention of algorithms, and to be confronted with a world which is both always at the disposal of our attention and always out of reach.

COL305 The Critic and Her Publics

The critic and her public are difficult concepts to define or fix. The critic is not a creative writer, an academic, a journalist, or a reporter, yet criticism borrows from the protocols of all four professions. The critic's publics are not made up exclusively of scholars, specialists, artists, or lay readers, but span these divisions. The aim of this course is to trace the evolution of the critic, her function, her style, and her publics from the seventeenth century to the present. Readings will include essays by Jane Anger, Margaret Cavendish, Joseph Addison, Richard Steele, Eliza Haywood, John Dryden, Samuel Johnson, Matthew Arnold, Henry James, T.S. Eliot, Virginia Woolf, Walter Benjamin, José Ortega y Gasset, Jorge Luis Borges, Clement Greenberg, James Baldwin, Mary McCarthy, Roland Barthes, Susan Sontag, Elizabeth Hardwick, Edward Said, Toni Morrison, Renata Adler, Michael Warner, Anne Carson, Margo Jefferson, and Elif Batuman. The class will be linked with the Shapiro Center talk series, "The Critic and Her Publics," and the Shapiro Center Master Classes.

COL306 Spectacles of Violence in Early Modern French Tragedy

The French Kingdom endured decades of socio-political unrest and religious wars during the sixteenth and early seventeenth centuries. The tragedies that emerged from these bloody conflicts--many of which staged physical violence--not only reflected but also actively participated in the debates surrounding the 'troubles civils.' In this advanced seminar, we will study such tragedies in order to examine the uses, functions, and ethics of spectacular violence, in plays that adapt mythological stories (e.g., Medea), religious narratives (e.g. David and Goliath, Saint Cecilia), and current events (e.g., executions, assassinations, and regicides) for the stage. We will read the plays alongside and against the competing theoretical frameworks of violence found in various poetic treatises of the time period, yet we will also keep in mind the practical constraints and conditions of performance in early modern France. Finally, we will reflect on why we should read these plays today and how they inform our contemporary moment. Readings, written assignments, and discussion will be in French.

COL307 Negotiating French Identity: Migration and Identity in Contemporary France

With the largest minority in France being of Maghrebi origin, Islam has become the second largest religion in France today. What are the repercussions of this phenomenon for French identity? How did French society understand its identity and regard foreigners in the past? What do members of the growing Franco-Maghrebi community add to the ongoing dialogue surrounding France's republican and secular identity? This course will analyze the recent attempts at redefining French identity through a study of literary texts, films, and media coverage of important societal debates (e.g., the Scarf Affair, French immigration laws, the Algerian war). Readings, discussions, and papers will be in French.

COL308 Translation in Theory and Practice

This seminar is a workshop devoted to helping students from a range of disciplines and departments hone their practices of translation. Translation is part of a wide range of academic, publishing, and creative activities: humanities and social science scholars read texts in translation, translate while doing field work and archival research, and include translations in their articles and books; translation is an engine of creativity for many writers, bilingual or not. This course will begin by looking at various alternate translations of the same texts, to expand our sense of options and possibilities. The next five weeks of reading will introduce students to some of the main debates, theories, and practices of translation into English.

The second half of the course will focus on students' own translation projects. While you are welcome to pursue a project you already have in mind, most students will be choosing and starting a new project, guided by the discussions and topics in the first half of the course. The scope can be small (a single short story, a chapter of a novel or biography, a few poems or song lyrics), or you can have an eye to a bigger project you want to pursue after the end of the semester (a senior thesis, a short-story submission for publication, a book pitch). Week by week, all students will respond in class and in writing to translations-in-progress. In the last week, we will get to see and respond to everyone's revisions.

Facility in a language other than English is required; perfect fluency is not required.

COL308Z Contemporary Short Stories in Translation

This course will introduce students to a wide range of contemporary short stories from around the world, translated into English. We will read fiction from four geographical clusters--Nordic Europe, Latin America, East Asia, Western Europe--as well as from outside these relatively well-defined categories. Along with exploring the fiction itself, we will consider how the English-language publishing industry treats these different zones, as we acknowledge the risk of ending up with national or regional stereotypes. We will also keep in mind the translator's

role as an active creator of the works we are reading. In week two, we will pay special attention to the crucial professional role of the translator in getting these authors published and recognized, and there will be in-class visits from one translator in each cluster. The objective of the course is to get a basic overview of different contemporary trends and traditions, and their various paths to publication in English, as well as hopefully finding one or two new favorite writers.

COL309 Truth & the Poet: Lyric Subjectivity and Phenomenology

Who is the poet? What is subjectivity? How is the "Lyric I" located and articulated? How do lyrics reify their own claims to truth? Is there a role for the poet in society? What is the relationship between critique and creation? This course examines the poet in relation to various formulations of subjectivity in the history of phenomenology. We will explore how lyric subjectivity may speak truth without deferring to or differing from empirical and objective truth claims. We will consider whether the history of the lyric can be read as a series of observations that contribute to understandings of subjectivity, agency, and intersubjectivity before and after the theological turn in French phenomenology. Readings in lyric poetry will be paired with readings in phenomenology as a way of putting poetry and philosophy into conversation. Assignments will be both analytic and creative.

COL310 More-Than-Human-Worlds: Theories and Fictions

How do we imagine the worlds of other life forms: what they know, what is meaningful to them, their ways of communicating? Which senses must we use and what forms of translation are necessary (if impossible) to turn their languages, their thoughts, their desires into our fictions or poetry or theory? What stories have been told and what stories could or should we tell in order to inspire more responsive and responsible relations between the diverse yet enmeshed worlds of human and non-human lives? These are some of the questions we will be asking as we move through a diverse range of writings about relations to other animals and to other worlds that are both within and beyond our own.

COL311 Translation Workshop in Early Modern Spain: Topographies of Love, Arcadia, and History

This course takes a practical approach to the translation of early modern Spanish literature. We will begin by consulting various comments on the art and craft of translation made by 16th-century Spanish translators in their own works before we encounter the curious case of the "pastoral prosimetrum," a type of narrative fiction that reimagined the author and their contemporaries under literary pseudonyms in an updated version of an idyllic Arcadian landscape. From Spanish to English, from experience to poesis, we'll recontextualize these topographies of love in their own literary and historical moment in order to translate those imaginaries into contemporary English. Readings will be in English and Spanish. Discussions and translations will be in English. There are no

prerequisites, but reading knowledge of Spanish is required. Please consult the instructor if you have questions about your language ability.

COL312 Love and Other Useless Pursuits

What is love? Is it an emotion? A judgment? A way of coming to know ourselves or others? What is the point of love? Does it have a defined object, a purpose, or an end? Does it have a logic or does it defy logic? What good or evil can it do in the world? "Love and Other Useless Pursuits" is an upper level seminar that approaches these questions through a comparative history of literature, literary theory, and philosophical aesthetics. The authors we read will likely include Plato, Andreas Capellanus, Tullia d'Aragona, Margaret Cavendish, Immanuel Kant, Stendhal, Johann Wolfgang von Goethe, Ralph Waldo Emerson, Marcel Proust, Djuna Barnes, James Baldwin, Simone de Beauvoir, bell hooks, and Lauren Berlant.

COL313 Classic Spanish Plays: Love, Violence, and (Poetic) Justice on the Early Modern Stage

From 1580 to 1690, Spanish and Latin American playwrights created one of the great dramatic repertoires of world literature, as inventive, varied, and influential as the classical Greek and Elizabethan-Jacobean English traditions. A distinguishing feature of this theatrical tradition is the unusual prominence it lent to actresses (and roles written for them), as well as to women in the paying audiences. This profit-driven popular entertainment of its day appealed to the learned and illiterate, to women and men, and to rich and poor alike. And the plays correspondingly mixed high and low characters, language, genres, and sources, with results regularly attacked by moralists. Vital, surprising, and ingenious, they exposed the creative tension between art and profit on a new scale, a tension that remains alive for us. We will examine five of the greatest of these plays by Cervantes, Lope de Vega, Calderón de la Barca, Tirso de Molina, and Sor Juana Inés de la Cruz (in Mexico or "New Spain") in a variety of genres and modes (history, epic, romantic comedy, tragedy, Islamic borderland, metatheater, parody, siege play, philosophical and theological drama), with their deft character portraits (the original Don Juan by Tirso; Calderón's "Spanish Hamlet" Segismundo; Lope's spitfire diva Diana, the Countess of Belflor; and Sor Juana's cross-dressing comic virtuosi) and their spirited dialogue, inventive plots, and dazzling metrical variety. We will look at the social conditions that enabled the Spanish stage to serve as a kind of civic forum, where conflicts between freedom and authority or desire and conformism could be acted out and the fears, hopes, dangers, and pleasures generated by conquest, urbanization, trade, shifting gender roles, social mobility, religious reform, regulation of matrimony and violence, and clashing intellectual and political ideals could be aired. We pay particular attention to the shaping influence of women on the professional stage (in contrast to England) and to performance spaces and traditions. Organized around the careful reading of five key play-texts in Spanish, together with historical, critical, and theoretical readings, this course assumes no familiarity with the texts, with Spanish history, or with literary analysis. However, an interest in engaging these wonderful plays closely, imaginatively, and historically is essential. There will be opportunities to pursue performance, adaptation, and translation.

This counts as a Theater Method course for the Theater Major.

COL314 Cuban Literature and Film: Imagination, Revolt, and Melancholia

This course surveys the major aesthetic and socio-historical movements in modern and contemporary Cuba. Since the late 19th century, the island of Cuba has been at the center of a number of key epochal disputes: between colonialism and independence, racism and racial justice, neocolonialism and revolution, liberalism and socialism, isolationism and globalization. In the arts, the turn of the century launched a period of great imaginative invention. Considering the singular place of Cuba in Latin America, the Caribbean, and the globe, this course addresses some of the most representative works of Cuban literature and film since independence until the present time. Imagination, revolt, and melancholia are the three concepts that will orient our discussion. Imagination refers both to artistic creation and to the collective capacity of projecting new worlds, utopias, or impossible realities. Revolt, as opposed to revolution, is not restrained to politics as usual but relates rather to a deep experience of discontent and a return (from the Latin *revolvere*) to ancient psycho-social strata. Finally, melancholia serves as a point of view to understand what happens when history does not live up to emancipatory expectations. Special attention will be given to Afro-Cubanismo, ethnographic literature, the avant-garde aesthetics of the group *Orígenes*, *Marvelous Realism*, testimony, revolution, socialist experimental film, diaspora, the Special Period, and post-Soviet life.

COL315 German Romanticism: Disenchantment and Re-enchantment

Famously, the sociologist Max Weber described the rational, enlightened age as "disenchanted": Unlike "the savage," he claimed, who uses "magical means" for manipulating "mysterious incalculable powers," the denizens of capitalist modernity use "technical means and calculation" to master "all things." At the same time, Weber indicated that the "process of disenchantment, which has been under way for millennia in Western culture," birthed abstract new enchantments: "Having lost their magic, the multiple gods of the past rise up from their graves in the form of impersonal forces, fighting for power over our lives and thus beginning anew their eternal struggle against one another." Against the backdrop of Weber's dialectic of disenchantment and re-enchantment, this course offers a representative overview of some of the key ideas, works, and authors of German Romanticism, a term that designates both a period that extends from about 1795 to 1848 and a style of creative and intellectual production that encompasses a remarkable diversity of phenomena, including the proto-avant-garde experiments with communal "sympoetry" and "symphilosophy" in the Early Romantic circles and the rise of "Dark Romanticism" that fuses a fascination with science and new technologies with a turn to the occult and demonic. In tracing the tensions between disenchantment and re-enchantment, we will consider works of literature, criticism, art, and music, including works by some of the key figures in the German intellectual and artistic tradition, such as Heinrich Heine, the Brothers Schlegel and the Brothers Grimm, E. T. A. Hoffmann, Ludwig Tieck, Caspar David Friedrich, Robert and Clara Schumann, Franz Schubert, Karoline von Günderrode, Bettina von Arnim, Novalis, Annette von Droste-Hülshoff, and the young Karl Marx.

COL316 Newest German Literature and Film

This seminar is designed to introduce students to films and literary texts produced in the German language in the past few years. Because the materials we will read and watch are of recent vintage, they are not yet part of an established canon: What their significance is and how and why we should engage with them is far from settled. For this reason, this seminar will fulfill a twofold task: (1) It will critically engage with some of the most cutting-edge literary and filmic creative work currently being done in the German language; and (2) it will offer extensive opportunities to explore and critique how these texts deal with contemporary social issues such as the revival of nationalist, Islamophobic, and authoritarian politics, the European Union's crisis of legitimacy in the wake of the Covid-19 pandemic, or the new "social question" arising from the dismantling of the welfare state and the growing "precarization" of work.

COL320 Places of Remembrance: Historical Consciousness in Germany

Memorial days and monuments: every nation recalls its history. Antisemitism, the Holocaust, East Germany's STASI terror and the resistance to dictatorships, and the more recent debates about Germany's colonial history come to mind when we think of 20th century Germany. In this seminar, we will explore the culture of remembrance (*Erinnerungskultur*) and visit places of remembrance (*Erinnerungsorte*) virtually. We will discuss how and what we do--and do not--remember, based on selected readings, documentaries, and memorial sites. Speakers from Germany will be invited via Zoom to talk about specific places and activities of remembrance. We will develop online projects, for example, one's own family history or that of others, or geo-mapping memorial sites.

COL321 Dialogues of Love: A Close Reading

Towards the end of the fifteenth century amidst the burgeoning cultures of the Italian Renaissance in Naples, Genova, and Venice, the exiled Ibero-Sephardic philosopher and physician Judah Abravanel (Leone Ebreo) composed a philosophical work on erotic ethics as a dialogue between love (*Philone*) and wisdom (*Sophia*). "The Dialogues of Love" (1535) presented early modern readers with an erotic cosmology which drew upon Ancient and Medieval texts

including Plato, Neo-Platonism, Neo-Aristotelianism, Kabbalah, and scriptural commentary. Widely translated, read, and reprinted throughout the sixteenth century, this text animated literary and cultural life throughout sixteenth-century Europe, finding its way into the work of poets and fiction writers such as Miguel de Cervantes. This course engages this unique and breathtaking work of early modern philosophy through a close reading of a Renaissance cosmos staged as a lovers' courtship.

COL323 Gender and History: Global Feminist Theories and Narratives of the Past (FGSS Gateway)

What is a female husband? In the 1980s an increasing number of feminist scholars posed questions about the relationship between biological sex and gender roles. The African scholar Ifi Amadiume, who studied the history of female husbands in West Africa, asserted that such relationships between sex and gender needed to be studied in a global context. More than two decades after Amadiume's influential book "Male Daughters, Female Husbands: Gender and Sex in an African Society" (1987) was published, the scholarship on global gender and sexuality is vibrant and dynamic. These works have shown gender to be central to understanding society at different periods and geographical locations, but it is far from a universally understood category.

This seminar will introduce first- and second-year students to the history of gender, sex, labor, and feminist activism from a global and comparative perspective with readings from the history of Africa, the Americas, Asia, and Europe. We will also cover the development of influential theories in the field and how they apply to the writing of history. This course is especially appropriate for prospective history and feminist, gender and sexuality majors, though all students interested in using gender as category of historical analysis for their scholarly work in other fields are welcome.

COL324 Interpreting the "New World": France and the Early Modern Americas

The impact and long-lasting effects of the "discovery" of the "New World" on Europeans cannot be overestimated. This advanced seminar will compare and contrast styles of expedition and conquest among the European nations, though the course will focus on the French context and the various events and encounters that occurred in the early modern Americas, particularly between 1492 and 1610, a period that laid the groundwork for the subsequent colonial project. Throughout the course, we will pay special attention to the Amerindians' points of view. In turn, students will examine the insights and blind spots in 16th-century French navigators', cosmographers', cartographers', and intellectuals' interpretations, representations, and negotiations of difference by critically engaging with concepts such as nature, culture, alterity, gender, sexuality, marriage, religion, exchange, possession, conquest, and war. Reading, writing, and class discussions will be in French.

COL326 Literary Movements: Conceptual and Experimental Fiction

The course seeks to examine the modern novel by focusing on fiction structured around a concept ("conceptual fiction") and fiction which deviates from the traditional modes of storytelling in a coherent enough way ("experimental fiction"). Together, we will examine novels and short stories in which an idea, an image, or metaphor directly informs the structure, plot, characterization, or all of the above of the work. We will also look at works of formal invention and/or subtle experimentation as far as they are constructed around a discernible and coherent pattern. There have been countless such works in the modern/contemporary period and some of the notable practitioners include Virginia Woolf, Moshin Hamid, George Saunders, Cormac McCarthy, Carlos Fuentes, Toni Morrison, and John McGregor, amongst others have work in this "movement." We will also look at critical essays around these books including from David Lodge, James Baldwin, and Victor Schlovsky, amongst others.

We will study texts from some of these writers (Woolf, Hamid, Saunders, McCarthy) closely and try to determine what it means to create fiction around a "concept." Implicit in this inquiry would be the broader question of form, formal invention, and the vagaries of experimentation. What makes a novel unique? What new grounds does this novel or story break? Does the experimental mode help or hinder meaning? What makes a novel unique? How does structure distinguish a novel rather than plot or characterization, or, for that matter, ideas? What are the ways by which a novel can subvert the traditional form of the novel? What are the strictures of genre and how do they constrain or help expand the art of storytelling?

COL327 Cervantes

Cervantes is known chiefly for DON QUIXOTE, often described as the first modern novel and fountainhead of one of the great modern myths of individualism. DON QUIXOTE also reimagines virtually every fashionable, popular, and disreputable literary genre of its time: chivalric, pastoral, picaresque, sentimental, adventure, and Moorish novels; the novella; verse forms; drama; and even the ways these kinds of literary entertainment were circulated and consumed, debated, celebrated, and reviled. It is a book about the life-enhancing (and endangering) power of books and reading and the interplay of fiction and history and truths and lies. Cervantes' art remains fresh and unsettling, sparing no one and nothing, including the author and his work. Distinguished by its commitment to the serious business of humor, make-believe, and play, the novel is at once a literary tour de force and a fascinating lens through which to examine the political, social, religious, and intellectual debates of its moment. Characteristic themes include social reality as artifact or fiction, the paradoxical character of truths, the irreducible diversity of taste and perception, the call for consent in politics and love, and personal identity (including gender) as a heroic quest. In this course, we will read, discuss, and write about DON QUIXOTE, along with a sampling of critical, philosophical, literary, and artistic responses it has inspired.

COL328 History and Theory

This seminar will explore the contemporary theory and philosophy of history, giving special attention to the publications of "History and Theory," the academic journal owned and edited by Wesleyan University faculty for the past 60 years. We might discuss such topics as the nature of historical truth; history as a science, with laws, and as an art, with style; the nature of historical time; gender history; agency and causation; history of the emotions; of animals, and history's moral imperatives; as well as the ramifications of the postmodern turn. We will give special attention to recent arguments about the theory of history and the nature of the past.

Key figures are likely to include Walter Benjamin, R. G. Collingwood, Michel Foucault, Hayden White, Frank Ankersmit, Nancy Partner, Joan Scott, Reinhart Koselleck and Gabrielle Spiegel.

COL329 Madness and Its Others: The Ethics of Intelligibility

What does it mean to make madness speak? In his 1961 "History of Madness," Foucault took a critical view of the history of censure and confinement which relegated madness to the periphery of the social whole. Within this view, Foucault historicized four phases (or epistemes) of madness: Antiquity, Renaissance, Classical, and Modern. But, as Derrida asked in his rejoinder essay, "Cogito and the History of Madness," is the historicization of madness not itself a kind of censure and confinement? This course takes up the question of madness and otherness at the intersection of ethics and intelligibility. In addition to the Foucault/Derrida debate on madness and reason in Descartes's "Meditations," we will consider the ethics of dialectic, understanding, and the sovereignty of reason in Shakespeare's King Lear, Truffaut's L'enfant sauvage, selections from Plato's Phaedrus, and Levinas's "Philosophy and the Idea of Infinity." Where intelligibility marks the boundary between reason and unreason--where what can be spoken, what can be thought, and the possibility of articulation and of being understood are contingent on the relation to the other--we will explore the ethics of reason and unreason, self and other, and the spaces in between.

COL330 The Craft of Criticism

This seminar will explore the craft of writing criticism for magazines and newspapers. Over the course of the semester, we will look at different genres of the form--the book review and the "briefly noted," the 4,000-word review-essay and the blurb, memorial essays and "braided" criticism--to consider the protocols of writing for different publications and publics. Students will be assigned to write four works of criticism of varying lengths and will be asked to select a different object for each assignment (e.g. novel, film, album, exhibition). A series of shorter reflections will also be assigned on questions of rhetoric, affect, and style in response to weekly readings. The course will be offered in conjunction with the Shapiro Center's "The Art of Editing" series and its master classes on editing and fact-checking taught by members of The New Yorker staff.

COL336 Theories of Translation

This course will examine a range of predominately 20th-century theoretical approaches to literary translation in the fields of philosophy, linguistics, literary criticism, and translation studies. In an effort to derive a definition of literary translation, we will focus on two questions. First: What is literal (or word-for-word) translation? How does it differ from other kinds of translation; how does it conceptualize meaning; what are its purposes; and what oppositions (e.g., literal vs. figurative) can we use to make sense of it? Second: What is the relationship between language and culture? Can translation give us access to an unfamiliar culture; can literary translation affect the culture in which it is produced; or does translation simply colonize foreign texts by transforming them into something legible to a domestic culture?

COL337 What is (a) Language?

Scholarly inquiries into language have always faced the distinctive (though not unique) problem of how to define their object of study. What is language? Language in general, human language, a particular language, language as opposed to dialect or idiolect, etc.

This course will not answer these questions. It will, however, examine the most important and influential ways that they have been formulated and answered throughout the Western tradition of linguistic inquiry. Our survey will be organized around two main tendencies that are sometimes distinct but often complementary. First, the question of origins: Where does (a) language come from, and what does this tell us about its nature? We'll look at etymology and theories of language change alongside thought experiments and evolutionary theories that try to narrate the emergence of language from nonhuman forms of animal communication. Second, the questions of structure and function: How does (a) language work; what do we use it to do? We'll look at the medieval trivium of grammar, logic, and rhetoric, alongside the (approximate!) modern analogues of morphosyntax, semantics, and pragmatics. Our goal will be to get a sense of the major theoretical issues that have run through scholarly inquiries into language(s) across disciplines ranging from linguistics and philosophy through anthropology, sociology, and literary theory, to cognitive studies and evolutionary biology.

While our scope is large, our method will be narrow, focusing on close readings of important primary texts in the history of Western linguistic thought. Since our emphasis will be on the coherence of theoretical positions rather the coherence of historical narratives, we'll focus especially on works that have exerted the strongest influence on contemporary understandings of language, particularly those from the 20th and 21st centuries.

COL338 Utter Nonsense: Modernist Experiments with Meaning

In "The Use of Poetry and The Use of Criticism" (1933) T.S. Eliot wrote, "The chief use of the 'meaning' of a poem, in the ordinary sense, may be [...] to satisfy one habit of the reader, to keep his mind diverted and quiet, while the poem does its work upon him: much as the imaginary burglar is always provided with a bit of nice meat for the house-dog."

To extend this analogy: this course will look at texts by meatless burglars, writers who set out not to sedate but to conscript the sense-sniffing house-dog as they pillage the house for things of value.

This course will survey some of literary modernism's most defamiliarizing texts, ones that challenge interpreters by withholding or avoiding that digestible (and perhaps soporific) "meaning" Eliot referred to. We will look at modernist formal experiments from Gertrude Stein and Guillaume Apollinaire through Dada, surrealism, the French New Novel, and the theater of the absurd, alongside the less prominent but equally influential exploration of aleatory, procedural, and machine-generated poetry by writers such as Jackson Mac Low and the Oulipo. Working with authors' manifestos and critics' interpretations alongside the primary texts, we'll pay special attention to the varied relationships to meaning that can be found at work in texts that a casual reader might lump together as simply meaningless or nonsensical.

As the semester progresses and we get a clearer sense of what these texts require from their readers, we'll begin to ask (with the help of some basic readings in semiotic and psychoanalytic literary theory) how our interpretive behavior when confronted with seeming nonsense might relate to the various things we do when we read normal or typical texts--ones that strike us as already or obviously meaningful. Is making sense something that a text can ever do on its own or something that we must always do to (or for) the text?

COL340 Daemons, Enigmas, and the Cosmic Image: Classical and Modern Allegory

Allegories are everywhere--from novels, art, and philosophy to news, political rhetoric and the law. They confront us as something strange, as overly baroque or disappointingly simplistic, as a symbolic mystery that becomes blandly prosaic once the proper interpretive key has been found. Allegories can be abstract and ethereal (e.g. Dante traveling through the heavenly spheres), but they can also make abstract ideas concrete: the idea of justice becomes the Roman goddess Iustitia, blindfolded, holding a sword and a set of scales, a statue in front of a courthouse. They try to explain life's complexities, but the stories they tell are much stranger than the lives that we live: the insatiable longing for our significant other is really the search for our other true half, since once we were round creatures rolling happily around but were cut in half by Zeus for our transgressions. What are these allegorical texts doing for us, and why are they doing it in such bewildering ways?

This course looks at the persistence of allegory. We will inquire into its origins in the Classical world, and we will try to understand how it has been found (or made) useful by writers and literary theorists in the 20th and 21st centuries.

The texts that interest us will make simple things mysterious and mysterious things simple, transforming the imaginable into the visible and the visible into the imaginary. And we will try to find our way through this mode of writing and of reading that insistently brings opposites together, connecting different realms of experience, knowledge, and language in ways that both produce and defy sense.

COL341 Plato's REPUBLIC

"The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato." This declaration, famously made by Alfred North Whitehead in the early 20th century, seems especially true of Plato's Republic. No other work in the Western tradition can lay claim to setting the tone so influentially for the development of philosophy as a discipline. Almost every branch of philosophical thought we are familiar with today--on matters of ethics, politics, moral psychology, epistemology, metaphysics, and aesthetics--receives a major formulation in this text. This seminar will be devoted to a close reading of each of the 10 books of The Republic alongside various perspectives that have been taken on this magisterial work in contemporary philosophy, journalism, and literature. We will focus on The Republic primarily as a work of moral psychology by investigating the topical question of the dialogue: Why is it better to live justly rather than unjustly? For Plato, a just life is one governed by the pursuit of wisdom or learning, and this he believes will also be a psychologically healthy one. By contrast, a life governed by the indiscriminate pursuit of power--the life of a tyrant--is psychologically corrupted. These are bold claims. What is Plato's argument for them? In raising this question, we will consider the political project Plato embarks upon in the Republic in constructing a just society, as well as connected issues he raises in the dialogue concerning the nature of human motivation, the distinction between belief and knowledge, the distinction between appearance and reality, the importance of a proper education to the human good, and the role of art and beauty in furthering the common good. Alongside Plato, we will read various works of secondary literature, journalistic pieces, and works of fiction this semester, all inspired by The Republic.

COL350 History as Tragedy: Genre, Gender, and Power in the Alexiad of Anna Komnena

Why did it take until the 11th century for a woman to write a work in the genre of history? What did it take for Anna Komnena--a renowned student of ancient literature, mathematics, astronomy, and philosophy, and a princess of the East Roman (Byzantine) Empire--to finally break into this most gendered of genres? And, how has Anna Komnena's accomplishment been received? This course will spend an entire semester delving into this deeply literary history, and its influence from the Middle Ages to the present. Students will engage with "The Alexiad" through close intertextual readings, critical scholarship in history, relevant work in theory, and digital research methods.

COL351 Catching Glimpses: Perceiving Infinitesimals in the Scientific Revolution

The rise of mathematical natural science in the early modern period marked the dissolution of objective reality as it had previously been known. Since Aristotle, perceptible objects had been understood to be enduring substances whose identities were inscribed in their very being and which retained these identities through change. The mechanistic worldview of the 17th and 18th centuries exploded this stable order into a telescoping multiplicity of material systems, from the infinitesimally small to the infinitely large. Rather than encountering a world of enduring and identifiable substances--animals, vegetables, and minerals; people and artifacts--the perceiver was instead confronted with fleeting constellations of homogeneous matter in a perpetual flux, no sooner glimpsed than gone. This metaphysical picture of infinitary flux was complemented by a new branch of mathematics, the infinitesimal calculus, which proved immensely successful both in uncovering new theorems and in modeling empirical phenomena.

Both the metaphysics and the mathematics of the new science were, however, rife with paradox. If material objects not only harbor a microscopic substructure but are, in fact, divisible without end, then we are faced with pluralities of pluralities without any underlying unities--parts of parts of parts...and not a whole among them. Conceptual instability afflicted the infinitesimals used in calculus, as well. In some contexts they were treated as very small but non-zero quantities, in others as strictly zero--provoking one critic to call them "ghosts of departed quantities."

In conjunction with the CHUM theme "Ephemera," this class will study the philosophical turbulence induced by the new science--in particular, by the mechanical philosophy and infinitesimal calculus. We will pay special attention to its consequences for the philosophy of perception. Aristotle compared perceptible objects to signet rings impressing their distinctive forms on the receptive wax of the human sensorium. But if there are no enduring substances or determinate forms, how are we to understand our perceptual relation to the world? How must perceptual experience be reconceived so as to accommodate the fleetingness and flux of material phenomena? And how is it that, though we are awash in ephemera, we nevertheless enjoy an (illusory?) impression of endurance and stability?

COL352 Coming Out/Coming of Age: Narratives of Becoming in Italian Culture

By examining narratives of "becoming" in Italian literary and screen texts, we will work to read against a dominant "master" narrative of Italian culture that is cis-male, patriarchal, and "white." The literary and screen texts we will explore in depth include some "classic" narratives of coming of age in the Italian cultural tradition which we will lay alongside Italian cultural "coming out" narratives, some "classic," others less so. What can we learn from such adjacencies? What does one "come out" of with regard to either strand of inquiry? Is adolescence a "closet" out of which one emerges with a sexual identity? Does one come of age as an artist or "come out" as a practitioner of a particular artistic genre (filmmaker, poet, novelist)? How do artistic choices of practice subtend and inform sexual identity? What gets left behind in this "progress" of "becoming"?

These are some of the questions we will address in this course, conducted in Italian.

COL354Z Self and Text in Roman North Africa: Augustine's Confessions

The native North African Augustine of Hippo wrote the most influential autobiographical text in (so-called) Western literature. It remains the most brilliant text I have ever read: a mind-bendingly complex and yet fully coherent literary self. Let's read it together. Set between Carthage and Rome in 400, Augustine wrote just 10 years before the Eternal City would be sacked by the disaffected former legions of the empire (the Goths). Split between conqueror and conquered, civilization and apocalypse, Augustine wove humanity's existential and epistemological questions into a literary tapestry for the ages: Who am I? How do you speak? Who are you? How do I listen? Who are we? How do we know? At once memoir, critique of empire, philosophy, psychology, theology, personal history, criticism, and a letter, these **CONFESSIONS** require close, careful, focused, attentive readings from a diverse group of interpreters. Join our learning community and spend two snowbound weeks at Wesleyan with a book you will never forget.

COL359 Philosophical Classics I: Ancient Western Philosophy

This course provides an overview of the development of Ancient Greek and Roman philosophy, from its inception in the 6th century BCE through to Socrates, Plato, Aristotle, the Epicureans, and the Stoics. In exploring this material, we will touch on all or nearly all of the central concerns of the Western philosophical tradition: metaphysics, epistemology, ethics, politics, aesthetics, religion, and logic. Our focus in class will be on the close analysis of primary texts. Students must be willing to engage with readings that are fascinating but at the same time dense, difficult, and perplexing. The course requires no prior experience in philosophy and should be of equal interest to students who are pursuing or intend to pursue other majors.

COL360 Philosophical Classics II: Early Modern Philosophy from Descartes Through Kant

Can we ever hope to attain certain knowledge of the external world? Can we know ourselves? How is our mind related to our body? Are our senses more reliable than our intellect? Or is it the other way round? Can we have science without a belief in God? These are some of the questions that excited the philosophical imagination of the major intellectual figures of the early modern period, an era of unparalleled collaboration between science and philosophy. In this course we will examine how the Scientific Revolution encouraged philosophers toward radical innovation in epistemology and philosophy of mind, laying the foundations for our own modern conceptions of natural law, scientific explanation, consciousness and self-consciousness, knowledge and belief. We will be reading, analyzing, and arguing with some of the most influential works in the history of Western philosophy, including Descartes' **MEDITATIONS**, Locke's **ESSAY CONCERNING HUMAN UNDERSTANDING**, Hume's **ENQUIRY CONCERNING HUMAN UNDERSTANDING**, and Kant's **CRITIQUE OF PURE REASON**.

COL363 (Un)Popular Performances/Performances (Im)Populaires

In 1607, a young Scotsman named William Drummond was studying law in Bourges, France, a popular "study-abroad destination" for Scottish students as well as an important stopover city on the routes of itinerant professional and amateur actors. While in Bourges, these actors performed a variety of different kinds of plays, including tragedies, comedies, tragicomedies, pastorals, and farces. Although these performances were often met with hostility from the city's religious authorities, Drummond attended several plays during his stay and, lucky for us, took rather detailed notes about them. His observations from the 1607 "season" are preserved in his personal papers in the National Library of Scotland. This course will use Drummond's notes as a guide to discover and examine other forms of evidence—both traditional and nontraditional—that help us understand what was at stake in theater, performance, and (un)popular culture in late 16th- and early 17th-century France. We will study the ways the past has been organized and cataloged, how traditional sources and research have shaped our view of the past, and how unconventional methodologies can help us locate new sites of knowledge and culture. Written assignments, class discussions, and (most) readings will be in French.

COL364 Body Politics: Desire, Sexualities, and Gender, Past and Present

Sexuality as a category to define, construct, and control the "self" has been seen as a product of the 18th and 19th c. This course turns to ancient Greek society to look at body politics before sexuality and to examine the different ways in which sex and gender are experienced and constructed. We will approach sex and gender roles as organizing principles of private and public life. Using literary, scientific, historical, legal, and philosophical sources as well as material evidence, we will address issues including the creation of woman, conceptions of the male and female body, the legal status of men and women; what constitutes acceptable sexual practices and for whom (e.g., heterosexual relationships, homoeroticism, prostitution, adultery); and ideas regarding desire, self-control, masculinity and femininity, and their cultivation in social and political contexts. How ancient approaches to gender and sexuality are in dialogue or have informed recent debates will be a question throughout the course by looking at theoretical approaches and contemporary movements and debates. We will end by looking at how ideas about sexuality in classical antiquity were used in *Romer v. Evans*, otherwise known as the 1993 Colorado Gay Rights Case. For CLST Major requirements, this course counts toward the concentrations of Literature and Performance and History, Politics, and Social Justice.

COL368 Nabokov

Vladimir Nabokov--brilliant writer, outrageous literary gamesman, and cosmopolitan exile--is a towering figure of 20th-century literature. His most famous novel, *"Lolita,"* propelled him to international stardom and changed the transnational literary landscape. Child of a turbulent century, Nabokov wrote exquisite and at times disturbing prose in Russian and English, balancing between imaginary worlds and harsh realities. This seminar offers a sustained exploration of Nabokov's major Russian and American writings as well as film adaptations of his *"Despair"* (Rainer Werner Fassbinder) and *"Lolita"* (Stanley Kubrick). We will consider memory, exile, trauma, nostalgia, and identity as we read Nabokov, who saw existence as a "series of footnotes to a vast, obscure, unfinished masterpiece."

COL369 Law, Politics, and Order in the Ancient World

Legal texts--law codes, decrees, and edicts, juristic discussions, law court cases--help us understand the history of legal thinking and strategy, and the construction of constitutional frameworks. Yet Greek and Roman legal sources offer something more than a history: Although these texts in many ways served as the foundation for European legal systems, they nonetheless offer radically different ways of thinking about concepts such as private and public, rights versus responsibilities, and the possibility of freedom and happiness--some more progressive than our own. In an era when many of our institutions and conventions appear open to challenge, the classical sources offer alternate legal and social ways of thinking, and new tools for understanding our own time. This course will provide an introduction to legal thinking in classical antiquity and, drawing from a range of sources, will speak to the intersection of constitutional

frameworks with political theory. Through narratives and case studies, we will examine Greek and Roman approaches to thorny legal issues that are still contested today: women's rights, wartime codes, the right to trial, torture, capital punishment, and immigration and citizenship, among others. The ancient sources will be brought into dialogue with current cases and debates. We will also explore the construction of constitutional frameworks and see how these are deployed alongside religious beliefs and collective mores to cultivate "civic thinking." For CLST Major requirements and for Classics/CCIV Major requirements, this course falls under the History, Politics, and Social Justice track.

COL370 Writing Fiction

Chinua Achebe was famous for his quote "If you don't like another person's story, write your own." Although disliking another's story could inspire creative writing, there are various reasons why people write, ranging from the basic human desire to understand the world through storytelling down to the desire to respond to the issues of the day--be it moral, political, religious--through fiction. The course is designed to help students gain skills in writing fiction; recognizing the literary conventions of fiction; reading and critiquing published work from a writer's perspective; making deliberate creative choices; engaging the work of others in a workshop setting; and revising their work using feedback from their peers and other writing strategies. As such, our reading list will be diverse in scope, cutting across various continents, races, and creeds. We will hope to use the work on the reading list as stepping points for creating our own stories whether in response to various prompts or as original stories to be discussed in workshops. At the end of the semester, you will not only have read a good chunk of fiction and have a good sense of how fiction works, you will also have produced--and substantially revised--some of that writing.

COL373 "Real" Love: Subjects of Unreason

Is love a special kind of madness? Do love and madness lead to kindred encounters with the limits of experience? What are the subjects of unreason that inform our conceptions of the world and the "real"? How might the novel (as a literary genre) help us to reason philosophically about irrational experience?

This course explores love and madness through depictions of reason and unreason in two major prose works by the author of "the first modern novel," Miguel de Cervantes through a close reading of *Don Quixote* and *The Trials of Persiles and Sigismunda*. From the adventures of a country gentleman turned knight-errant to the trials and tribulations of two sojourning lovers repeatedly separated and reunited on the road, we will explore the lived and the ideal, the rational and the irrational, the presence and the absence, the mortal and the immortal in the erotic encounter at the outset of the modern literary imagination.

Both texts will be read in contemporary English translation. No foreign language knowledge is required. Recommendations for appropriate critical editions in

Spanish will be provided for any student who wishes to read in the original language.

This is a discussion-based close reading seminar.

COL388 Weimar Modernism and the City of Berlin

One of the most fascinating aspects of Weimar modernism is the emergence of new forms of perception and consumption, reflected in a new urban consumer culture that generated an ever-changing array of visual and aural stimulations. This changed reality was perhaps best captured by the young medium of film, but older media like literature and painting also responded to this modernist challenge. This course will examine not only exemplary works of literary and visual production from the Weimar period, but also other aspects of Weimar modernism, such as the development of radio, design, fashion, advertising, and architecture, emphasizing analyses of the new mass culture of entertainment, distraction, and "pure exteriority" (Kracauer) in combination with left-wing cultural and political criticism. The city of Berlin, then the third largest in the world and in many ways the international capital of modernism, will provide the main locus of investigation. All course readings, discussions, and assignments will be in German.

COL390 Romanticism-Realism-Modernism

In the study of German literature (and art), the terms romanticism, realism, and modernism designate a span of time extending from the "Age of Goethe" to the mid-20th century literary cultures of West Germany, East Germany, Austria, and Switzerland. In this seminar, we want to take a closer look at representative examples for each of the three categories: What kind of subject matters are prevalent in each respective period, what narrative, dramatic, and poetic devices and forms are typically employed? What distinguishes these periods from one another, how useful are these distinctions? What, finally, is the purpose of such periodizing of literature?

The purpose of this seminar is twofold: 1. It is intended to provide a historical overview of German literature by engaging with representative romanticist, realist, and modernist works of prose, drama, and lyric; 2. It is designed to critically probe the concepts of romanticism, realism, and modernism: How useful are these categories in making us understand the evolution of fiction, authorship and readership, literary subjectivity, or narrative form? What are some pitfalls of using these categories?

All readings, papers, and discussions will be in German.

COL391 Diderot: An Encyclopedic Mind

In this class we will come to know the most progressive and often radical thinker of the French Enlightenment, Denis Diderot (1713-1784). We will begin this seminar with an examination of how this country abbot grew into the most well known atheist of his generation. We will then move onto his famous 74,000 article *Encyclopédie*, a book that not only dragged sacrilege and freethinking out into the open, but triggered a decades-long scandal that involved the Sorbonne, the Paris Parliament, the King, and the Pope. (During this portion of the class, students will undertake translations of select entries [from French to English] of the "dictionnaire" for possible publication.) In the second half of the semester, we will also study the writer's freewheeling art criticism. Finally, we will read two groundbreaking novels. The first of these, "La Religieuse", is a gripping pseudo-memoir of a nun who suffers unspeakably cruel abuse after she announces that she wants to leave her convent. The second, "Jacques le Fataliste", is a freewheeling anti-novel where Diderot used fiction to take up the problem of free will. In the final portion of the class, we will also read selections from his anticolonial and antislavery writings.

COL392 Empire, Memory, Translation: A Seminar on the Rings of Saturn

In this seminar, we will explore three themes: The lasting effects of European imperialism and colonialism in (mostly but not exclusively) Europe and their literary representations; the relationship between historical memory and fiction in these representations; and the role of translation in shaping the relationship between historical memory and fiction.

At the center of this course is W. G. Sebald's travelogue "The Rings of Saturn" ("Die Ringe des Saturn"), a work we will read in both its German original and its congenial English translation. Sebald's genre-defying narrative recounts the historical traces of empire, war, and colonialism in the observations and reminiscences of the protagonist's wandering through the de-industrializing landscape of England's Suffolk County during the early 1990s. Obsessively associating phenomena near and far in an almost paranoid fashion, Sebald's first-person narrator leads the reader to the devastations wrought in China during the Opium Wars and in the Congo during Belgian rule; the local and global effects of cycles of capital accumulation, resource exploitation, and climate change; and the challenges and pitfalls of memory's attempts to find an adequate narrative form for how the globally disparate effects of capitalist modernity are interlinked.

All discussions and papers will be in German, and readings will be in German and English, with a consistent focus on theoretical and practical questions of translating from German to English. We will proceed at a slow pace, with plenty of time to grant our superb primary text the time and attention it deserves. This course is designed for students who have taken GRST 213 or have spent a semester studying abroad in a German-speaking country. We will focus on developing critical writing, reading, interpretation, and translation skills in German. Since the quantity of reading is fairly modest, we will put much emphasis on regular writing and rewriting.

COL398 Marxism and Climate Crisis

Since the Communist Manifesto of 1848, the notion of "crisis" has played a prominent role in Marxist theorizing. Today's intensifying climate crisis is lending new theoretical and political weight to the Marxist critique of extractive and consumptive capitalist actions that transform nature into a means of production for ensuring ceaseless economic growth through the accumulation of capital. The consequences of this are not only the exhaustion of human labor-power but also of non-human nature (fossilized carbon, wild animal biomass, top soils, clean water, etc.). Our perspective for studying and understanding this transformation of nature will primarily be informed by a set of recent "eco Marxist" writings that break with traditional Marxist productivism in favor of

an eco-critical analysis that reconceptualizes capitalism neither as an economic nor social system but rather as "a way of organizing nature" (J. Moore). In light of the Center's semester theme of Energy and Exhaustion, we will ask three sets of questions: historical (about the origins of the Capitalocene and of "fossil capital"); theoretical (how is Marx's "general law of accumulation" also a law of environmental depletion and planetary limits?); and political (traditional "Promethean" Marxism envisioned revolution as the full actualization of productive forces; what is the meaning of revolution in the age of natural exhaustion and climate crisis, when the limits of human historical agency are drawing closer with each new tipping point?).

COLLEGE OF SOCIAL STUDIES (CSS)

CSS102F History and the Turn to the Present (FYS)

This course attempts to make sense of contemporary politics, economics, and society through an historical examination of the present. It will discuss contemporary topics such as neoliberalism, nationalism, COVID-19, critical race theory, the forever war, the New Cold War, etc. It will also raise methodological questions on the promises and perils of using history to understand the present.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-CSS**Prereq: **None****CSS213 History and the Turn to the Present**

This course attempts to make sense of contemporary politics, economics, and society through an historical examination of the present. Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-CSS**Prereq: **None****CSS220 Sophomore Economics Tutorial: Markets, Welfare & the State**

This tutorial takes a topical approach to studying economic ideas and policy. We start with writers who drew either the admiration or ire of Adam Smith. These include the scholastics, mercantilists, and physiocrats. Next, we compare the classical school with competing schools of economic thought from Marxian, utilitarian, and Austrian to neoclassical and Keynesian. Throughout the course, we read radical critiques from the political right and left, touching upon monetarist theory, supply-side economics, institutional, behavioral and evolutionist schools. We see how the policy and economic debates reflect the socio-economic struggles of their time and shed light on the controversies of our own.

Offering: **Host**Grading: **Cr/U**Credits: **1.50**Gen Ed Area: **SBS-ECON**Prereq: **None****CSS230 Sophomore Government Tutorial: State and Society in the Modern Age**

This tutorial examines the rise and evolution of the modern state. While many of the readings focus on Western Europe and the United States, the course draws on cross-regional comparisons to tease out theoretical propositions, compare historical processes across different parts of the world, and consider different understandings of the body politic. We start by exploring what factors account for the rise and consolidation of the nation state in the Western context, after which we consider how the process of state-building occurred in the Middle East and North Africa and explore some of the challenges the sovereign state model faces outside the European context. We then move on to discuss the emergence of different systems of governance and some of the challenges to the state. We will consider whether there are certain paths that lead to democracy and whether there is something unique about American democracy. We will take into account the challenges posed by modernization and evaluate what factors best explain the rise of communism and fascism. We will then consider how the communist and fascist past impacted the rise of the social democratic model in Europe and compare the European and Japanese approaches to welfare provisions. We conclude by considering yet another model for organizing the political community—the religious state. We will examine when, how, and why the notion of the Islamic state emerged, reflect on the extent to which the concept of an Islamic state challenges Western notions of the nation-state and investigate how the discourse on Islam and the state has changed over time in Indonesia, the largest Muslim majority country.

Offering: **Host**Grading: **Cr/U**Credits: **1.50**Gen Ed Area: **SBS-GOVT**Prereq: **None****CSS240 Sophomore History Tutorial: The Emergence of Modern Europe**

This tutorial sequence analyzes the formation of modern European society from the late 18th to the last quarter of the 20th century. Most attention will be placed on Britain, France, Germany and Russia as these countries were

shaped by, and responded to, demographic, economic, social, political, and intellectual forces that led to revolutions, political and social reforms, new modes of production, changes in social hierarchies, and new forms of warfare. Much attention will be placed on the social and political consequences of the French Revolution and industrialization, but empire, the origins and consequences of the two world wars (including the Russian revolution and the rise and defeat of Nazism) will also come under extensive discussion, as will the creation of a more stable and prosperous postwar European order. Europe's links to Africa, Asia and the Americas will be discussed in the context of imperialism and the two world wars. In addition to developing knowledge of the most important processes that have shaped the modern world, this tutorial seeks to foster a critical awareness of the varieties of historical narrative, the skills needed to interpret historical primary sources, and the possibilities and limits of history as a tool of social investigation.

CSS320 Junior Economics Tutorial: Topics in Latin American Economic History

This tutorial will focus on macroeconomic policies in post-1950s Latin America from a historical perspective. Specifically, it will address three key issues. First, we will analyze the long-standing debate on Latin American economic development, which revolves around the two paradigms of import substitution industrialization (ISI) and export-led growth. Second, we will examine the management of economic crises in the region, highlighting two major challenges: the tendency of Latin American economies to experience high inflation and constraints on the balance of payments. Finally, we will explore the predominance of informal labor, analyzing how it relates directly to the inability of Latin American governments to achieve full employment. In summary, the tutorial will provide a comprehensive overview of the historical roots of persistent heterogeneity and extreme inequality within the socio-economic structure of the region.

CSS330 Junior Government Tutorial: Uprisings and Revolutions in the Middle East: The Arab Spring in Context

The course examines the dynamics of uprisings and revolutions in the Middle East, with a primary focus on the "Arab Spring" and its historical antecedents. Drawing from theories of revolutions, contentious politics, and democratization, the readings examine both general patterns across the region and the political dynamics of individual cases. We will start with a discussion of the nationalist uprisings of the 1950s and the 1979 Iranian Revolution, after which we will examine the deep roots and major explanations of the Arab Spring. We will consider what explains the variation in protests and in government responses, what role different actors played during the uprisings, and what effects historical legacies had on the dynamics of the uprising. We will also attempt to understand what factors led to the militarization of the protests and the descent into civil war in Syria. The course concludes with a discussion of the aftermath, exploring

what factors led to the democratic breakdown in Tunisia a decade after the uprising.

CSS340 Junior History Tutorial: Women Make the World (Global Technologies and Gender)

Women are only recently appearing as actors in global histories of technology, yet they have long been inventors and creative innovators in a wide range of fields, from domestic textile production and technologies for household maintenance to industrial manufacture. In this tutorial we will explore the global history of technology with women at the center. Initially, scholars located women in relation to specifically gendered objects, such as reproductive technologies like the birth control pill, and tools for "women's work," such as the washing machine. Yet, women have also made "masculine" technological work such as engineering and computer programming their own. Few individual women are credited for their inventions, and one of our challenges will be to locate women's creative production of technological tools and processes in diverse societies from the Americas, Europe, Africa, and Asia. What constitutes women's technology, even women's work, is an unstable category that we will examine together. Moving beyond the domestic space and the family, women's technological work contended with new and emerging state projects related to the economy and politics. Women found their technological identities entangled with discourses of state building and increasingly, after the end of the Cold War, with narratives about international development. These histories of the state overlapped with the domestic, and, over the course of the semester, we will engage with women's global technological stories in relation to big questions about the family, sexuality, and gender and labor. In turn, these same histories will allow us to unpack the ways in which women have engaged with state and international discourses on the economy and development.

CSS391 Senior Colloquium: Big Powers and Small Wars

This course examines the international politics, theory, and logic of wars that see big powers wage wars of conquest against smaller powers. It explores and applies scholarly works of theory and analyzes historical case studies to gain a deeper understanding of how and why weaker belligerents can often achieve their political aims when facing stronger adversaries. Students will analyze the contradictions that can make these wars of asymmetry difficult for stronger states. The seminar discussions will develop a keener grasp of the politics and logic that inhere in conflicts where the weak fight defensive wars against the strong. This interdisciplinary colloquium intersects international relations,

conflict studies history, and theory. This course will improve students' knowledge in international security studies and hone their critical analysis skills.

COMP114 How to Talk to Machines

How do we tell robots and computers how to do what they do? Getting a handle on this question is the goal of this course. Since telling a device how to do something depends a lot on what that device can do, along the way we will learn a bit about what is "in the box." We will start with the kind of programming one might use to instruct a robot how to interact with the world around it. That will lead us to the Turing machine, a beautiful mathematical model of a computer. We will adapt that model to something that is closer to how most computer systems today are designed. We will end with an introduction to high-level programming, learning the fundamentals of programming in a language such as Python or Java.

The goal of the course is to understand not just programming, but how computers are designed, and how those designs are reflected in the way we program them. After passing this course, students will have a basic knowledge of programming and how a computer works. COMP 114 can be used to satisfy the COMP 211 prerequisite and also the mathematics major "elementary knowledge of algorithms and computer programming" requirement.

COMP115 How to Design Programs

In this course, students will learn to systematically design programs, going from a problem statement to a well-organized solution in a step-by-step fashion. We will apply these program design skills to many applications within computer science and in other disciplines. Students will develop their mathematical skills, because we will use a symbolic view of computation that explains the process of running a program as simple manipulations of its text. Students will also develop their technical reading and writing skills, such as understanding complex problem descriptions and precisely articulating the design of solutions. No prior experience with programming or computer science is expected.

COMP131F Can Machines Think? (FYS)

This course is a freshman seminar (an FYS course) that introduces students to foundational ideas in logic, formal languages, and computation that have been the basis of a revolution in thinking in the 20th century. The material includes a substantial logic component and an introduction to programming in SML, a so-called functional programming language, as well as readings about the philosophical impact of these ideas.

The impact of the new cycle of ideas mentioned above has been felt far beyond the confines of the computer science community. Ideas from logic, computation, and other branches of mathematics formerly regarded as "pure" have spread to computation, linguistics, cognitive science, and philosophy; conversely, results from philosophy, linguistics, and other areas have been applied in computer science. New "non-traditional" logics have found unexpected applications in computing.

Traditionally, the background in logic and computation upon which these ideas rest has been taught in advanced courses, although much of it is accessible to students with little or no background in the area (but some willingness to learn formal reasoning and mathematical arguments). Students will learn about the underpinnings of recent technical advances in these areas at an unusually early stage in their careers. We will learn how to code basic programs in SML as well. The course will continue with readings in expository texts about the impact and philosophical significance of important ideas in logic and computation. Some readings in Philosophy of Mind will be assigned and discussed.

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 AND MATH228**

COMP325 Logic and Functional Program Languages

Functional Programming Languages (Lisp, Scheme, ML, ocaml, Haskell, and many others) and Logic Programming Languages (Prolog, lambda-Prolog, etc.) have been developed within mathematical frameworks based on Logic. In this course, we will explore the basic structure of functional and logic programming languages starting from the Mathematical Logic foundation that gave rise to them. This will give some deep and interesting insights into present and (likely) future programming language design.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 AND MATH228**

COMP327 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present

the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

COMP331 Computer Structure and Organization

The purpose of the course is to introduce and discuss the structure and operation of digital computers. Topics will include the logic of circuits, microarchitectures, microprogramming, conventional machine architectures, and an introduction to software/hardware interface issues. Assembly language programming will be used to demonstrate some of the basic concepts.

Prereq: **COMP212**

COMP332 Computer Networks

This course will provide an introduction to the fundamentals of computer networks. Computer networks have become embedded in our everyday lives, from the Internet to cellular phones to cloud networking, enabling applications such as email, texting, web browsing, on-demand video, video conferencing, peer-to-peer file sharing, social networking, cloud computing, and more.

This course will delve into the infrastructure and protocols that have allowed computer networks to achieve their current ubiquity. While the primary focus of the course will be on the Internet's architecture, protocols, and applications, we will also touch on other types of computer networks. Programming assignments will be done using Python; prior knowledge of Python is not required.

Offering: **Host**

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 and MATH228**

COMP333 Software Engineering

Software engineering is the application of engineering principles to the software development process. Eliciting requirements from stakeholders, designing the architecture of a program, performing usability studies, and testing a codebase are some of the aspects that elevate program development to software engineering. Focusing on web and mobile apps, students in this course will gain expertise in state-of-the-art frontend, backend, and mobile technologies, as well as related tooling. We will also cover the collaborative organization of software projects, software licensing, software business models, and ethical considerations for professional software engineers.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-MATH**

Prereq: **COMP211 AND COMP212**

COMP334 Information Security and Privacy

This course explores principles and practical applications of computer security and privacy. Some of the topics covered include static and dynamic code analysis, secure authentication, privacy enhancing technologies, usable privacy and security, and web tracking. We will also touch upon theoretical areas, such as basic cryptographic concepts as well as differential privacy. The course has the

objective to provide students with the conceptual knowledge and technical skills to identify and resolve privacy and security issues in the design, development, and evaluation of information systems.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 AND MATH228**

COMP341 Artificial Intelligence

This course is an introduction to creating programs that appear to behave intelligently. Topics will include search algorithms for problem solving, as well as probabilistic reasoning, including regression, classification, and decision making. Sample topics include Bayesian networks, basic neural networks and reinforcement learning.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 AND MATH228**

COMP343 Machine Learning

This course will provide an introduction to machine learning. The field of machine learning studies how to design systems that learn from experience. We will cover fundamental concepts and algorithms used in machine learning, as well as give an introduction to basic probability and statistics. Sample topics include regression, classification, Bayesian networks, Gibbs sampling, particle filtering, maximum likelihood estimation, neural networks, deep learning, clustering, bias/variance trade-offs, cross-validation, and practical advice. Programming assignments will be done using Python; prior knowledge of Python is not required.

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 AND MATH228**

COMP350 Computational Media: Videogame Development

This course examines the interplay of art and science in the development of contemporary videogames using the Unity development platform and commercial artistic game tools. Students develop a comprehensive understanding of computational media, including legal and commercial aspects, combined with hands-on experience in a creative process that integrates design, art, and coding. There will be discussions with invited industry leaders in various subject areas. Students will have the opportunity to work as part of development teams and create working prototypes to better understand the challenges and rewards of producing graphic interactive software within a professional context.

Offering: **Crosslisting**

Grading: **A-F**

COMP360E Special Topics in Computer Science: Functional Data Structures

Advanced data structures from a functional programming perspective. The focus will be on the use of lazy evaluation as a technique for designing efficient data structures, especially in the presence of persistence (when the state of the structure must be preserved even after updates). Assessment will consist primarily of programming and written assignments.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MATH**

Prereq: **COMP212 AND MATH228**

COMP360G Special Topics in Computer Science: High Performance Scientific Computing

Students will learn about high performance computing techniques as applied to scientific computations. We will work on Wesleyan's high performance computing (HPC) cluster, gaining familiarity with the HPC environment including the BASH shell and the multiuser queueing system for job submissions. We will design and implement high performance python code, including how to take advantage of parallel processing in central processing units (CPUs) and graphical processing units (GPUs).

We will consider the AMBER molecular dynamics package as a case study of a professional high performance computing package illustrating highly performant code optimized at many levels, and survey a selection of other packages for comparison. The final project will enable students to explore the major themes of the course as applied to their particular areas of interest.

COMP527 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology

exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

DANCE (DANC)

DANC102F Perspectives: Dance as Cultural Knowledge (FYS)

This FYS course--a writing intensive and introduction to Wesleyan's culture--investigates the various social, political, and historical contexts that have contributed to the explosive evolution of dance since the nineteenth century, and conversely, explores the ways that performers and choreographers have utilized the medium of dance to reflect their personal concerns back to society in powerful ways. Dynamic artistic movements, choreographers, and dancers examined will include Imperial Russian Ballet, Gesamtkunstwerk of Diaghilev's Les Ballets Russes, gender manipulation in the roles of Nijinsky; WWI and II and its aftermath in the German Ausdrucksstanz of Mary Wigman and Kurt Jooss; Modernism's effect on seminal choreographers in America such as Martha Graham; politics, race, class, and the Harlem Renaissance; the anthropological research in dance of Black choreographers Katherine Dunham and Pearl Primus; experimentations of Merce Cunningham; exploration of Postmodern rebellion of the Judson Dance Theater; and the response of choreographers and performance artists to Civil Rights and the AIDS crisis. Students will view performance videos and documentaries, pursue extended research, and be expected to speak and write about dance in a way that will prepare them for academic writing at Wesleyan.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-DANC**

Prereq: **None**

DANC103 Dancing Bodies

This course introduces students to basic dance literacy by viewing dances on film and video, making movement studies, and practicing writing in different modes about bodies in motion. The utopian ideal of "the natural" dancing body will guide our investigation of dance as art and culture, from Isadora Duncan to the postmoderns. We seek answers to such questions as, What do performance codes about the natural body feel and look like? How do dance traditions preserve, transmit, and reconfigure eco-utopian desires? No dance experience is necessary. The desire and confidence to create and move collaboratively with others is expected.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-DANC**

Prereq: **None**

DANC104F Introduction to Contemporary Dance from Global Perspectives (FYS)

This interdisciplinary course aims to understand contemporary dance and the moving body from global perspectives. It draws from a range of approaches to aesthetics and choreography, politics, and understandings of culture-at-large. It examines an eclectic array of movement and choreographic styles from North America to Europe to Asia. The course is divided into 6 units: 1. Old and New Definitions of Contemporary Dance 2. "East Meets West" -- Global-Cultural Flows in Contemporary Dance 3. Social Justice and Contemporary Dance 4. Queering Contemporary Dance 5. Special Topics -- Stillness and Silence 6. Traditional Dance/Contemporary Dance -- Deconstruction and Reconstruction

Prereq: **None**

DANC105 Dance Tech Lab: Lights, Screen, Projection

This class includes the practicum and experimentation of lighting design and production with use of projection, video-screen technology, stage management, costume and scene design, and set construction.

The practical experience in the Dance Department's production season is emphasized in the course.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **HA-DANC**

Prereq: **None**

DANC107 Writing Is Dancing, Dancing Is Writing

We watch dance and then we write about it. Dance needs writing to be understood and to endure. Or maybe not. Maybe dance needs no help. Then, what do we write? Writing as dance, in dance, of, from, alongside... As readers, writers, and performers, we will explore established and experimental modes of writing and choreography and look for ways that each form can stretch and challenge the other.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-DANC**

Prereq: **None**

DANC111 Introduction to Dance

This is an introduction to dance as an educational, technical, and creative discipline for students with no previous formal dance training. Classes will introduce the basic components of dance technique--stretching, strengthening, aligning the body, and developing coordination in the execution of rhythmic movement patterns. Through improvisation, composition, and performing, students will develop a solid framework applicable to all forms of dance.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-DANC**

Prereq: **None**

DANC202 Ballet I: Practice and Theory

This elementary level ballet course is a mix of practice and theory. Ballet terminology and stylistic concepts will be introduced with emphasis on correct alignment, musicality, and movement flow. In addition to learning the basics of ballet technique, various ways that ballet choreographers have addressed issues of politics, race, and class are examined through films, readings, and discussions. Traditional ballets will be juxtaposed with iterations from contemporary choreographers who have created unique and powerful works addressing issues from the eighteenth century to today.

Offering: **Host**

Grading: **OPT**

DANC203 Body and Earth: Emergent Strategies for Reimagining the Human-Environment Relationship

We live in a world in which humans are inextricably connected to nature, humanity's life support system. Yet at the same time we live on a planet in peril, in which environmentalists across the globe are working to catalyze societal transformation for sustainable living on Earth. This course explores these

themes by 1) analyzing how social and ecological systems are intertwined, 2) exploring diverse ways of knowing nature through movement and mindfulness exercises, and 3) investigating and communicating mechanisms of sustainable environmental practice. The course will introduce conceptual frameworks and methodologies to explore the embeddedness of humans in nature--a task that remains critical for addressing today's environmental challenges. Students will engage with interdisciplinary frameworks engaging in environmental problem solving, as well as movement and place-based approaches for experiential learning. Through case studies and individual storytelling projects, we will examine how embeddedness in nature, interdisciplinary perspectives, and human agency provide sustainable pathways for both people and planet.

DANC205 Afro-Brazilian Dance I

Dance is a nexus between Africa and Brazil. It holds ancestral knowledge, and demonstrates a clear evolution of form, function, and tradition. This course will examine the study of embodied practices of the African diaspora as it relates to Brazilian life and culture. It will introduce various religious, social, and contemporary dance forms through a historical perspective of African identity in Brazil. Students will dive into the vibrant Afro-Brazilian culture and history through rigorous physical explorations, which will be complemented with lectures, readings, discussions, and video. Topics will include, yet are not limited to: the symbolic aspects of the body, historical context of movement behavior, the sociopolitical aspects of the dances, the derivation of the movement techniques, as well as connection of mind, body, and spirit in culture and dance.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **HA-DANC**

Prereq: **None**

DANC210 Afro-Brazilian Dance II

This level II course will bring deeper experience of embodied practices of the African diaspora as it relates to Brazilian life and culture. Level II will continue to explore various religious, social, and contemporary dance forms through a historical perspective of African identity in Brazil. Students will learn a greater perspective into the vibrant Afro-Brazilian culture and history through rigorous physical explorations, which will be complemented with lectures, readings, discussions, and video. Topics will include, yet are not limited to: the symbolic aspects of the body, historical context of movement behavior, the sociopolitical aspects of the dances, the derivation of the movement techniques, as well as connection of mind, body, and spirit in culture and dance.

Offering: **Host**

Grading: **A-F**

DANC212 Composition Across the Arts: Theory And Practice of Interdisciplinary Curating

Wesleyan's Center for the Arts (CFA) opened in 1972 with an understanding that throughout the 20th century, the arts have continued to move away from "tightly bound categories" once defined by medium or genre--and with the goal of providing "[a] complex in which the exploration of the role of the arts in society, their interrelationships and new forms may ... stimulate the student and provide a vital cultural force in the community." In short, the CFA's mission was (and remains) to foster interdisciplinarity both within and beyond the field of artistic practice. This course will explore both the theory and practice of interdisciplinary art curating and making. We will read texts that situate our keyword ("interdisciplinary") within the context of social, political, and pedagogical struggles from the 1950s to the present. Simultaneously, we'll look at how different artists, critics, and scholars have attempted to frame definitions of contemporary art in which the older discipline-specific criteria no longer apply. Throughout the course, we'll consider how the turn towards interdisciplinarity places pressure not only on artists but curators, while we work to envision what a liberatory, contemporary institution might be both aesthetically and politically.

Course readings relate to contemporary curating within the global arts ecosystem. Course work, however, will be derive directly from the skill sets most often sought in entry-level job postings for arts organizations--research, writing, project development, and management. Through this process, we will rethink the underlying assumptions and values reproduced by these skills and field-wide practices. Ultimately, students will be invited to experiment with day-to-day operations of the CFA and given a chance to have a direct impact on future programming for the CFA. One way we will do this is to invite enrolled students to help assemble and participate in a director's council that will impact the future of the Center for the Arts. If a director's council is traditionally populated with executive leaders, this student-led director's council will convene representatives from the largest and most impactful population of the Wesleyan community: the students.

DANC214 Hip Hop

This studio practice course introduces students to urban dance practices, aiming to broaden students' understanding of hip hop culture beyond the commercialized representations prevalent in the media today. This class will explore the history and practice of different forms of hip hop: b-boying/b-girling (breaking/breakdancing), uprocking, popping, waving, and locking. We will also

look at hip hop's connection to other club forms such as house dance and house-ballroom forms, waacking, and voguing. Students will view video performances of cultural practice (battles and "cyphers"), as well as media- and theatrically-influenced forms of hip hop, to identify significant commonalities and differences within hip hop practices.

Our classes will be conducted to hip hop, house, and dance music from the past four decades, and will begin with a set warm-up and follow with stretching and conditioning exercises. Class will always conclude with a combination that incorporates that week's dance form, and it will be compared to other hip hop dance forms we will be studying.

Required readings will explore these forms through the lens of historical context and critical theory perspectives on urban dance, supporting an immersive studio practice.

DANC215 Hip Hop Dance II

This intermediate hip hop studio practice course further develops urban dance practices, and broadens the hip hop culture beyond the commercialized representations prevalent in the media today. This class will further explore the history and practice of different forms of hip hop: b-boying/b-girling (breaking/breakdancing), uprocking, popping, waving, and locking. We will also look at hip hop's connection to other club forms such as house dance and house-ballroom forms, waacking, and voguing. Students will view video performances of cultural practice (battles and "cyphers"), as well as media- and theatrically-influenced forms of hip hop, to identify significant commonalities and differences within hip hop practices.

Our classes will be conducted to hip hop, house, and dance music from the past four decades, and will begin with a set warm-up and follow with stretching and conditioning exercises. Class will always conclude with a combination that incorporates that week's dance form, and it will be compared to other hip hop dance forms we will be studying.

Required readings will explore these forms through the lens of historical context and critical theory perspectives on urban dance, supporting an immersive studio practice.

DANC216 Contemporary Dance Technique: Dancing During Pandemic

This combined-level dance class draws on multiple approaches to dance technique and the moving body in an outdoor, site-specific, pandemic-specific context. We will focus on large group ensemble movement as well as on individual movement specificity, and developing awareness of space, time, energy, technical precision, and dynamic variation. Course content will

draw on modern dance techniques, contemporary/release techniques, and improvisational forms, as well as somatic practices.

During any major social transformation or crisis, like this pandemic, movement practice is essential. Our world and our rules of engagement are changing before our eyes. Creative physical movement is integral to our physical and psycho-social well-being, and through it we learn how to navigate the new context. On a basic level, we move our bodies to stimulate circulation of blood, breath, and digestive tract. But, equally important, and more central to higher education, we also need to move in ways that help us adjust to and make sense of our new circumstances--to orient ourselves to this new environment. This is the overarching purpose of this course: to collectively find new ways of being, understanding, moving, and creating our new world.

Classes will be held outside, and students will be expected to dress for the weather, and with freedom of movement in mind--in other words, wear safe footwear and clothing that does not constrict range of motion. Classes will only be canceled in the case of severe weather (i.e., hurricane). In those cases, hybrid practice-based assignments will be given to supplement in-class material.

This course is intended as an alternative to our regular Contemporary Technique course DANC300, which is being taught in an online format. Students are invited to choose the format that they feel most comfortable with. Both courses count toward major and minor requirements.

DANC220 Performing Indonesia

This course will examine the theater, dance, and puppetry of Indonesia in the context of its cultural significance in Indonesia and in the West. Students will read a variety of texts related to Indonesian history, myth, and religion. Students will also read books and essays by anthropologists Hildred Geertz, Clifford Geertz, and Margaret Mead to understand how the arts are integrated into the overall life of the island archipelago. Artifacts of physical culture will also be examined, including the palm-leaf manuscripts that are quoted in many performances; the paintings that depict the relationship between humans, nature, and the spirit world that are the subject of many plays; and the masks and puppets that often serve as a medium for contacting the invisible world of the gods and ancestors. Translations of Indonesian texts will be analyzed and adapted for performance. The direct and indirect influence of Indonesian performance and history on the West will be discussed by examining the work of theater artists such as Robert Wilson, Arianne Mnouchkine, Lee Breur, and Julie Taymour, who have all collaborated with Balinese performers.

DANC231 Performing Arts Videography

This course provides an introduction to shooting and editing video and sound with a particular focus on the documentation of dance, music, and theater

performance. Additional consideration will be given to the integration of videographic elements into such performances. Students will work in teams to document on-campus performances occurring concurrently. Related issues in ethnographic and documentary film will be explored through viewing and discussion of works such as Wim Wenders's *Pina*, Elliot Caplan's *Cage/Cunningham*, John Cohen's *The High Lonesome Sound*, and Peter Greenaway's *Four American Composers*.

DANC237 Performance Art

This course can be understood as an ephemeral, time-based art, typically centered on an action or artistic gesture that has a beginning and an end, carried out or created by an artist. It also contains the elements of space, time, and body. This hands-on course explores the history and aesthetics of performance art and how it relates to the performing arts (dance and theater). In a project-based format, students conduct performance assignments and conceptual research within the gaps that exist between performative art forms. The course focuses on analyzing and studying artists who used the concepts of chance, failure, or appropriation in their work.

DANC244 Delicious Movement: Time Is Not Even, Space Is Not Empty

This course contemplates massive violence and bodily experiences of time and space through interdisciplinary discourse. Taught by NYC-based movement artist Eiko Otake, students will examine how being or becoming a mover reflects and alters each person's relationships with the environment, history, and other beings. Topics of study and discussion include war, atomic bomb literature, postwar Japan, and environmental violence such as the Fukushima nuclear explosions. A key concept of study will be metaphorical nakedness and how distance is malleable. Please note that homework load is heavy with weekly assignments and journals. Seeking collective learning, the course will culminate with a final project sharing. The class is fiercely non-competitive and non-technical. No previous dance training is necessary, but willingness to move with and in front of others is important. Please visit eikootake.org to learn about this instructor. Write to eikootake@gmail.com with questions.

DANC249 Making Dances I: Solo Work

This course is a practical lab in body-based performance making with a focus on the solo form. Students will work towards developing and honing their personal artistic interests and goals, and supporting those of their peers. We will experiment with various modes of composition, viewing and researching a broad range of artistic work and ideas, expanding our notions of what constitutes a dance. Students will explore performance in public space, collaboration, and work across artistic disciplines, engagement with technology, awareness of cultural context and appropriation, and social practice/participatory/community engaged art. Finally, we will develop methods for peer critique, working towards finding a challenging and supportive approach that pushes each artist forward.

NOTE: This is a laboratory course for students interested in diving deeply into body-based artistic practice. It is appropriate to students with a background in any artistic discipline. An interest in rigorous (and playful) experimentation and research is key.

DANC250 Dance Composition: Choreography Workshop

This course in creating and performing choreography emphasizes the diversity of techniques, methods, and aesthetic approaches available to the choreographer. Assignments will revolve around inventing, organizing, and evaluating movement styles and on solving composition tasks that are drawn from various art mediums.

This class will focus on the process of making a dance in a theatrical setting. Skills in organizing and leading rehearsals, creative decision-making, and movement observation will be developed within the context of individual students honing their approach and style as choreographers. Practical and theoretical issues raised by the works in progress will frame in-class discussions and all necessary technical aspects of producing the dances will be addressed.

DANC260 West African Dance I

West African dance is a gateway to the cultures and ways of life of its people. It is the medium on which the very existence of the people is reinforced and celebrated. In this introductory course, students will learn the fundamental principles and aesthetics of West African dance through learning to embody basic movement vocabulary and selected traditional dances from Ghana. The physical embodiment of these cultures will be complemented with videos, lectures, readings, and discussions to give students an in-depth perspective on the people and cultures of Ghana. Students will also learn dances from other West Africa countries periodically.

DANC261 Bharata Natyam I: Introduction of South Indian Classical Dance

This course is designed to introduce students to the fundamental aesthetic, social, and technical principles underscoring the culture of Bharata Natyam dance in its both indigenous and modern contexts. The course introduces students to Bharata Natyam largely through classroom practice (in the form of rhythmic and interpretive exercises), supplemented by brief lectures outlining

the sociohistorical and cultural contexts of the form. Class lectures will also include video presentations. Occasionally, the class could include a guest lecture given by either a visiting scholar, dancer, or choreographer respected in the field of South Asian dance internationally.

DANC307 Mobilizing Dance: Cinema, the Body, and Culture in South Asia

This course focuses on questions of "mobility"—cultural, social, and political—as embodied in two major cultural forms of South Asia, namely "classical" dance and cinema. Using Tamil cinema and Bharatanatyam dance as case studies, the course focuses on issues of colonialism and history, class, sexuality and morality, and globalization. The course places the notion of "flows of culture" at its center and examines historical, social, and aesthetic shifts in these art forms over the past 150 years.

The course is both studio- and lecture-based. It includes learning rudimentary Bharatanatyam technique, watching and analyzing film dance sequences, and participating in guest master classes in ancillary forms such as Bollywood dance and Kathak (North Indian classical dance). The studio portion of this course is for beginners, and no previous dance experience is necessary.

DANC309 Modern Dance III

This advanced-level class draws on multiple approaches to dance technique and the moving body. Some of these include modern dance techniques, contemporary/release techniques, contact and other improvisational forms, as well as somatic practices. Modern III focuses on the exploration of complex dance movement sequences, cultivating a specific and personal engagement with movement material, along with heightened attention to the subtleties of phrasing, initiation, and musicality. The course's primary aim is each individual's continued development as a strong, well-rounded, creative, and thoughtful dancer.

DANC311 Immersive Theater: Experimental Design, Material Culture and Audience-Centered Performance

This course offers a comprehensive exploration of Third Rail Projects' approach to crafting and performing in immersive performance formats. Students will work closely alongside Co-Artistic Director Tom Pearson to explore Third Rail's toolbox of techniques, including:

- Developing presence and clarity around audience engagement
- Remaining spontaneous and responsive to the changing landscape of an active audience
- Generating game play for crafting immersive scenes
- Understanding ritual, narrative, and audience initiation through the study of a scene from one of our immersive productions

DANC320 Theatre for Social Change - Taught from Ecuador with Local Participants

This course is taught in Spanish. Students should have Spanish proficiency equivalent to SPAN 112 or higher. This course is designed to lead Wesleyan students and Ecuadorian community counterparts through the process of creating social change by practicing social change. Using exercises and activities that pull from the areas of Theatre of the Oppressed and Performance Activism, as well as traditional theatre tools such as movement and mask-making, we engage challenging concepts and conflicts by dialoguing via our performative work. Our exploration stretches from the theoretical foundations of structural and symbolic oppression to ongoing real-life events related to themes that are selected by the course participants (examples include cultural identity, systemic racism, privilege, power, environmental justice, and gender equality/equity).

Each course participant chooses a thematic area and joins a small group with which they will apply learned methods to exploring their theme. Together, Wesleyan students with local counterparts create short virtual theatrical projects to be presented to the whole cohort. Readings cover theory and methods in Applied Theatre, community-based case studies, and articles related to the chosen themes. The readings are contextualized to the diverse lived realities of the course's participants as well as to our globalized society.

Prereq: **None**

DANC322 Storying and Re-Storying (Storytelling for Social Change) - Taught from Ecuador w Local Participants

This course is taught in Spanish. Students must have proficiency in Spanish equivalent to SPAN 112. When we consciously appropriate the power of stories to collectively reimagine our world, we turn the word story into a verb. We "story" our world. When our "storying" seeks to transform a system founded on unjust stories, we are "restorying" our world. This course begins with our human ability, and need, to tell stories, examining how we use them for communication, as well as how we become empowered or disenfranchised by them. Based on the realities present in our communities (our local community of place, college campuses, cities, neighborhoods, spiritual communities, etc.), students work with their counterparts, combining theory with practice, to create and tell stories with the goal of identifying shared conflicts and inspiring change. Since stories are told in many ways, the course engages the "telling" through various methods: writing stories and poems, Spoken Word, coloring/drawing, mapmaking, and moving our bodies. In each project, we implement the elements of storytelling, balancing distinct narrative traditions, such as myth and legend, with influences of the modern world. Readings look at a wide array of narrative theory and methods, focusing on storytelling as a form of creating and expressing knowledge. The course concludes with the interweaving of local and international stories into "our stories."

DANC341 Dance Teaching Workshop

Leap, spin, fall, and reach! Dance Teaching Workshop familiarizes students with methods and practices for teaching dance and movement to children and adults. Combining theoretical perspectives on education, dance, embodiment, and creativity together with hands-on practice teaching dance, students will gain practical skill in syllabus design and methods of teaching while developing a "teaching statement" reflecting on the role of dance/movement in education.

Prior dance training is not required; however, students should have an interest and some experience in either dance, arts, or education.

As part of this course, students will design and teach a dance class of their choice in the community (concurrent enrollment in Dance Teaching Practicum DANC447, 0.5 credit, required).

DANC354 Improvisation: Diasporic Modalities

Freestyle, groove, jam: Improvisation has always been a key tool in the creation and evolution of dances of the African Diaspora. This movement-based course will deepen the inquiry of the Africanist aesthetic in dance through an improvisatory experiential framework. What movement conversations are created through a deep listening to self and our impulses to engage with sound/music, the environment, and our community? How do we honor the self in collective experiences? Students will embody explorations of the improvisatory concepts, sequences, and modalities that are rooted in the dances of: West African, Afro-Beats, Afro-Brazilian, Jamaican Dancehall, Capoeira, Jazz, African American Social Dances, House, and Bomba. We will use the foundational improvisational principles of these dance forms through a balance of play, investigation, and rigor. Studio work will be supplemented with readings, video, and homework assignments geared toward creating new improvisational scores. The course will also include visits from guest artists.

Identical With: **THEA354**

Prereq: **None**

DANC357Z Space and Materiality: Performing Place

Scenography explores and shapes the material world in and through the performative event. In site-specific performances, it transforms place and time to create an alternative reality in which the materiality of the artistic design and the performer's body intervene in the architecture of a place and the spectator's reception of meaning. In this course, we will study site interventions through the lens of street performance, immersive theater, and the theatrical apparatus to build a theoretical and direct understanding of the material potential and limitations of the four key elements involved in the scenographic project -- artistic design, the actor's body, local architecture, and time.

This course is divided into three units: (1) site-specific; (2) street performance; and (3) immersive theater. Each unit includes scholarly readings, assignments in performance and scenography, and specific showings. There will be two written responses for the course (5-to-7-page papers) on two of the works experienced at the festival that demonstrate the student's cumulative grasp of site specificity, scenography, and materiality. There will also be a final media journal showing.

Prereq: **None**

DANC359 Space Design for Performance

In this course, students will study, construct, and deconstruct the performative space, whether in the theater or site-based, by analyzing the space as a context to be activated by the body of the performer and witnessed by an audience. Through practical assignments, the class will learn the aesthetic history of the theatrical event (considering plays, rituals, street parades, and digital performances, among others), while developing and discovering the student's own creative process (visual, kinetic, textual, etc.). Students will be guided through each step of the design process, including close reading, concept development, visual research, renderings or drawings, model making and drafting.

In this course, special emphasis is given to contemporary performance as a mode of understanding cultural processes as a relational system of engagement within our ecosystem, while looking at environmental and sustainable design, materials, and the environmental impacts of processing. Students will create and design performance spaces, while realizing scale models and drawings and integrating the notions of design and environmental principles and elements.

Students will have the opportunity to develop skills using 3D-drafting and 3D-modeling software.

This course counts towards the Theater Arts category for the THEA major.

DANC362 Bharata Natyam II: Embracing the Traditional and the Modern

This advanced course is designed to further students' understanding of the technique, history, and changing nature of Bharata Natyam dance and of Indian classical dance in general. The primary aim of the course is to foster an understanding of the role, function, and imaging of Bharata Natyam dance vis-à-vis ideas about tradition and modernity. Although the course assumes no prior knowledge of Bharata Natyam, we will move rapidly through the material. We will focus mainly on more complex studio work, extensive readings, and video presentations. In preparation for this course, students should have movement experience in other dance tradition(s). Occasionally, the class could include a guest lecture given by either a visiting scholar, dancer, or choreographer respected in the field of South Asian dance internationally.

DANC363 Dancing Bodies, Cultures and Environments

This course will look at the intersections and common spaces between body/self, community/culture, and environment/place. To do this we will employ several research methods. Students will be asked to complete readings, participate in discussions, view relevant media, and participate in movement master classes. We will also create solo and group performance works that explore our individual and communal experiences of body/community/environment.

Students will be asked to complete readings, participate in discussions, participate in improvisational movement sessions, and work in a collaborative context. Each student will develop a final project that contains both a written and a performative component.

DANC365 West African Dance III

Building on the knowledge gained in West African Dance I and II (DANC260 and DANC360), this course is intended for the very advanced student who has a lot of experience in West African dance. Students will learn rhythmically and physically complex traditional dances from selected ethnic groups in Ghana and will continue to hone in on the general movement vocabulary and discourse of West African dance in general. Students will also learn original contemporary West African dance phrases choreographed by the instructor and be guided through a creative process through improvisation to create their own phrases.

Important Info: Students who take this Course-Embedded Experiential Learning (CEEL) course will be charged a program fee for the required travel during Spring Break. Students receiving full financial aid (with Expected Family Contribution [EFC] up to 25% of the cost of attendance) will have their program fee fully waived, students receiving no financial aid (EFC of 100%) will be charged \$3,000, and charges for students whose EFC is between 25% and 100% will be based on a sliding scale from \$1,000 to \$2,000. Details are available from the Office of Study Abroad.

DANC366 Queering the Dancing Body: Critical Perspectives on LGBTQ Representation

This course focuses on questions of "queering" dance as a historical, cultural, social, and political enterprise. Focusing on both historical and postmodern dance contexts, the course explores key issues around gender and identity, with special reference to the concepts of performativity, impersonation, sexuality, and transformation. The course places the notion of "flows of gender and transformation" at its center, and examines historical, social, and aesthetic shifts in these ideas over the past 50 years. It draws on case studies ranging from female/male dance traditions of impersonation in India, China, Japan, and Indonesia, to postmodern shifts of "classical" dance (such as the all-male cast of Matthew Bourne's "Swan Lake") and more popular forms such as voguing and "RuPaul's Drag Race."

DANC374 Perspectives in Dance as Culture: Black Praxis

In this project-based course we are shedding light on the magic of praxis. Our focus will be rooted in the work of Black artists and dance makers, tuning into the choreographic seeds of their processes. Most Black artists go unrecognized for their contributions and tools they have shared in the field of dance—how they do what they do. Together we will uplift the rigor, complex methodologies, embodied research practices, tools, devices, recipes, and alchemy that is present in crafting works. We will engage in the art of archive through research, witnessing, writing, interviews, multimedia, and embodied practice, disrupting a Eurocentric lens on documented compositional methods.

DANC375 Dance History: Why Dance Matters

Dance History: Why Dance Matters investigates myriad social, political, and historical events that have impelled performers and choreographers to create dances that broadcast their personal concerns to society in powerful ways. Artistic movements, choreographers, and dancers examined will include the aristocratic Imperial Russian Ballet; gender fluidity in Nijinsky's roles in Diaghilev's Les Ballets Russes; the microcosm of immigrant and black performers in vaudeville; dance and the Harlem Renaissance; the rejection of ballet by L  ie Fuller, Isadora Duncan, and Ruth St. Denis; the political work of early modern dancers Martha Graham, Doris Humphrey, and Charles Weidman; war's aftermath in the German Ausdruckstanz of Mary Wigman and Kurt Jooss and Japanese butoh; the anthropological research of black choreographers Katherine Dunham and Pearl Primus; the psychological dance-theater of Antony Tudor and Pina Bausch; democracy within the postmodern rebellion of the Judson Dance Theater; Civil Rights-era social activist choreographers; and the response of choreographers and performance artists to the culture wars of the 1990s and the AIDS crisis. Students will pursue extended research, view performance videos and documentaries, and be expected to write and talk about dance.

DANC376 The Artist in the Community: Civic Engagement and Collaborative Dancemaking

Through both theoretical analysis and practical application, students will grow their understanding of community-based performance and collaborative art-making. Grounded in readings and seminar discussions about the practice and process of community-based art, students will apply their learning through community-engaged research. Through direct practice, students in the course will explore how collaborative performance can address local issues, spark community dialogue, and encourage civic participation--whether on a college campus, in a neighborhood, or across a city.

Class meetings will take place virtually during the semester. Student research and project development will be conducted in person. Note: This course includes required Spring Break travel to work on a Forklift Danceworks project. Travel expenses for the trip are paid by the University.

DANC377 Perspectives in Arts as Culture: Ukrainian Arts and Language as Resistance

Throughout history, arts and language have been central to Ukrainian resilience. This course will introduce students to basic elements of the Ukrainian language as well as the rich tradition of Ukrainian arts--dance, theater, poetry, literature, visual arts and crafts--and the way they have survived and thrived despite 400 years of censorship and persecution. Each week, one class will focus on the basics of the Ukrainian language, its history as a vital element of the Ukrainian culture, as well as current national language policy and practice. The second class will explore the ways that arts in Ukraine foster psychosocial, physical, and political resilience in the face of crisis. Students will engage with traditional arts

and crafts, learn about leading experimental artists (1700s-present) and their role in major art movements in history, hear from an array of guest artists from Ukraine, and complete a final creative project that explores the current political moment and conflict in Ukraine.

DANC378 Repertory and Performance: The Jewel Thief: A Ballet of the Mind

In this permission of instructor repertory course, we will weave the past with the present in order to create a Neo-Baroque drama based on Alfred Hitchcock's thriller, To Catch a Thief that is studded with heiresses, thugs, and other underworld characters. Students will have the opportunity to learn 18th century French Baroque dance, the aristocratic entertainment that evolved at the court of Louis XIV. Once this foundation is laid, we will incorporate period dances and more contemporary movement into a lavish spectacle that draws inspiration from Madame Sevigny's reminiscences of the f  tes of Louis XIV's court, the 1920s modernist costume parties of the Bauhaus, and Truman Capote's infamous Black and White Ball of 1966. The course will culminate in a performance in the CFA theater December 6th and 7th, 2024, and is a collaboration with Wesleyan Music Professor Neely Bruce, composer of the score. Attendance is absolutely required. Three short reflections on your progression will be submitted over the span of the course. During performance week from Monday through Wednesday, students are required to be at all technical rehearsals in the CFA theater from 7:00 p.m. until 10:00 p.m. Dress rehearsal is Thursday, December 5th at 7:00, and the performances are on December 6th and 7th. This class is Permission of Instructor (POI). Students should have at least reached the level of Ballet II or Modern II at Wesleyan, however, movement ability of athletes and actors who have not taken those courses may all request permission of the instructor, and will be taken into consideration. Note: This narrative requires not only dancing, but the development of a character--students must be willing to abandon their comfort zone and go out on a limb! Sensational masks will be fashioned by students, and worn in performance. Please contact Professor (pbeaman@wesleyan.edu) if you have questions about the course.

DANC378A Repertory and Performance: Storied Places

Grounded in the experiences of the multiple African American migrations of the late-19th and early-20th centuries, this course will explore the ideas of migration, displacement, home, and place writ large. As a community, we will collaboratively develop a performance that will utilize movement, text, and objects as research tools and creative processes as our methodology to engage these themes.

Our process in creating this work will include improvisation, development of set materials, readings, discussion, and writing. Students will have the opportunity to work alongside professional dancers as well as Wesleyan faculty and their peers in preparation for an interdisciplinary performance in the spring.

DANC379 Dance as Activism

How does art effect change? Why does the phrase "social movements," include the action word - movement? In what ways does dance instigate action as a means of resistance? This course is an investigation into these questions through both lecture/discussion and embodied practices. It will look at various choreographers whose work is rooted in grappling social justice issues, choreographic and community engagement tools, as well as protests as choreographed performance art. All course work and inquiry will lead up to a final project wherein students create their own choreographic sketch/community engagement using the language of dance/performance art, as the foundation for addressing a particular historical or present social issue of their choice.

DANC380 Transforming Bodies: Movement and Agency in West Africa

Dancers in West Africa embody human agency and transform historical worlds. As one elder farmer proclaimed: "Our ciwara have power[!]" Masked ciwara dancers on the Mande Plateau call upon the collective labor of farmers to produce rural life, and more recently, have responded to transformations of the agricultural landscape. They emphasize the power of the human body over agricultural machines. Elsewhere in West Africa, the Atsiagbekor dance energized and celebrated Ewe male soldiers by acting out scenes from the battlefield. The dance movements were also secret codes used during battle to give instructions. How and when to fight, defend, or retreat depended on this embodied communication. The accompanying loud drum music served an added purpose of instilling fear in enemy ranks because it created the impression of a mighty army on the march. Still performed, the dance now symbolizes Ghanaian cultural heritage and helps to shape local historical memory.

In this course we will examine the body as an active agent in West African social and political life. We will study the historical and contemporary meanings of laboring bodies through dance and everyday movement, such as women's pounding of fufu or stirring of toh daily meals. We will also reflect on the ritual enactment of enslavement or colonial rule as a means to subvert old power structures. The body in these cases was a tool for resistance. We will also unpack multiple interpretations for specific women's embodied protests such as "sitting on a man." Collective body movement was powerful, but individual bodies might also enact healing or express religious devotion. Spirit possession, for example, marked the body as a site for human interaction with the supernatural. In this and other examples, the body is an archive in motion and subject to social renewal. By taking the body and movement as a lens, we will explore shifting histories of labor, performance, gender, politics, aesthetics, and religion from the pre-colonial era to the contemporary moment. We will also learn new ways to creatively move and narrate the African past and present.

DANC382 Bharata Natyam III

This is an advanced technique-based Bharatanatyam course. Students are required to have taken both Bharata Natyam I (DANC261) and Bharata Natyam II (DANC362). This is to ensure that students have a foundation in both the practical and theoretical study of Bharata Natyam prior to enrolling in this course. Evaluation for the course will be based on class participation, a full-length studio performance of Bharatanatyam compositions and a short journal

due at the end of semester. We will focus mainly on advanced studio work.

Students will also perform one repertory piece at the Worlds of Dance concert.

This advanced course is designed to further students understanding of the technique, history and changing nature of Bharatanatyam dance. The primary aim of the course is to foster an understanding of the role, function, and imaging of Bharatanatyam dance vis-à-vis ideas about tradition and modernity. The course will be moving rapidly through the material.

DANC398 Senior Colloquium in Dance Research

This course focuses on workshopping senior capstone research projects/theses, critically analyzing and situating their work within the larger fields of dance and dance research. In addition to sharing senior capstone research in progress, the course incorporates opportunities to interact and study with successful dance artists/scholars, including but not limited to, CFA visiting artists and current faculty, and to thereby encounter the most current shifts happening in the field of dance and dance research. Issues concerning dance/research that will be addressed include the following: relevance, validity, rigor, diversity and globalization, interdisciplinarity, citizenship, and social justice as they pertain to dance and dance research and to the senior capstone projects/theses specifically. This is an opportunity for our students to delve deeper into their own research while expanding their focus to better understand and frame their work in a larger context.

EARTH AND ENVIRONMENTAL SCIENCES (E&ES)

E&ES101 Dynamic Earth

The earth is a dynamic planet, as tsunamis, hurricanes, earthquakes, and volcanic eruptions make tragically clear. The very processes that lead to these natural disasters, however, also make life itself possible and create things of beauty and wonder. In this course, we will study the forces and processes that shape our natural environment, as well as the effect we have on this world. Topics range in scale from the global pattern of mountain ranges to the atomic structure of minerals, and they range in time from billions of years of Earth history to the few seconds it takes for a fault to slip during an earthquake. Hands-on activities and short field trips complement lectures to bring the material to life. So put on your hiking boots and get ready to explore our planet.

E&ES102Z Natural History of the Connecticut River Valley

Please note: Readings and assignments will be due during winter break, prior to arriving on campus for Winter Session. Please visit the Winter Session website for the full syllabus -- <http://www.wesleyan.edu/wintersession>.

What did Middletown look like 200 million years ago? What about 20,000 years ago, or 200 years ago? The natural history of Middletown and the broader Connecticut River valley is a rich tapestry. In this course, we will explore some of its major threads, including the geologic, glacial, Native American, early European, and industrial histories. The primary goal of the course is to deepen

your sense of place for this valley that you call home during your four years at Wesleyan. The majority of the class time will be spent visiting sites in the valley, both indoor and outdoor. You must be prepared to spend multiple hours outside, including walking up to two miles. The presence of snow may cause some trips to be postponed or cancelled. To remain flexible for these possible contingencies, students should keep the entire January 7-21 block open in their schedules.

E&ES111F As the World Turns - Earth History, with Life's Ups and Downs (FYS)

An introduction to the major events that shaped our modern Earth over the 4.5-billion-year history of our planet. We discuss the composition of the early atmosphere devoid of oxygen, the great oxygenation event related to the emergence of cyanobacteria, snowball Earth, origin and evolution of life prior to 500 million years ago, and then a treatment of the major asteroid impacts, mega-volcanic periods, and other disasters that catastrophically modified the Earth and influenced all that lived on it. We close with possibly the biggest disaster of them all: the human era, with the climate crisis, pollution, and possibly the largest extinction event ever? We use the Earth and environmental sciences, astronomy, and the basic sciences to introduce and explain the processes that ultimately shaped our modern world.

E&ES125 Black Speculative Fictions and the Anthropocene

The genre of black speculative fiction--in the form of literature, art, music, and theory--provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the "future," black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term "Anthropocene" first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which "humans" had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a "species"? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene's attendant catastrophes, which include earthquakes, altered ocean waters, and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human? Further, how does artificial intelligence complicate definitions of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course

takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

E&ES130F Digital Storytelling with Maps: Science Stories (FYS)

Digital storytelling describes the practice of using digital tools to tell a 'story' in an engaging and compelling format. A story map is a digital storytelling tool that combines maps with multimedia content (e.g., images, video, text) to convey geographic information as a narrative. In this course, students will employ elements of cartographic design, spatial analysis, and data visualization within story maps as a means for creating interactive 'stories' about empirical scientific data. (No prior experience with web maps or story maps is required.) Students will explore multiple story map formats and their utility in the effective communication of science to scientists, the public, and policy makers.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **None**

Prereq: **None**

E&ES142F Astrogeochemistry: The Search for Life in the Solar System and Beyond (FYS)

This course will examine the role that geochemistry plays in our search for life in the Solar System as well as exoplanetary systems. We will examine the habitability of different environments on different bodies (Venus, Mars, Europa, Enceladus), and compare them to the environments of the ancient and modern Earth. We will consider what would constitute geochemical evidence of life in these different systems, and how this can aid us to interpret chemical signals from exoplanets. We will also critically evaluate past and recent claims of extraterrestrial life.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-EES**

Prereq: **None**

E&ES151 The Planets

More than 100 planets are now known in the universe, eight of which circle the sun. NASA missions and improved telescopes and techniques have greatly increased our knowledge of them and our understanding of their structure and evolution. In this course, we study those eight planets, beginning with the pivotal role that they played in the Copernican revolution, during which the true nature of the Earth as a planet was first recognized. We will study the geology of the Earth in some detail and apply this knowledge to our closest planetary neighbors--the moon, Venus, and Mars. This is followed by a discussion of the giant planets and their moons and rings. We will finish the discussion of the solar system with an examination of planetary building blocks--the meteorites, comets, and asteroids. Additional topics covered in the course include spacecraft exploration, extrasolar planetary systems, the formation of planets, life in the universe, and the search for extraterrestrial intelligence.

Offering: **Host**

Grading: **OPT**

Credits: **1.25**

Prereq: **None**

E&ES155 Earth System Science

An introduction to Earth system science intended for students pursuing the Earth and environmental sciences major and others with good high school math and science preparation. Earth system science integrates chemistry, physics, biology and geology to understand the Earth as an integrated planetary whole. The course will focus on the four major earth systems: land, water, air, and life and how their interactions determine past, current and future global changes. Required laboratory sections will meet every other week and include a combination of lab and field exercises.

Offering: **Host**

Grading: **OPT**

Credits: **1.25**

Gen Ed Area: **NSM-EES**

Prereq: **None**

E&ES160 Life in the Oceans in the Anthropocene and Beyond

Little is known about life in the deep sea, the largest habitat on Earth, even about the largest animals living there, such as the giant squid. Humans, however, are severely affecting even these most remote areas of our planet, and wildlife populations in the oceans have been badly damaged by human activity. We will look at the amazing diversity of ocean life and the disparate building plans of its animals, and see how oceanic ecosystems are fundamentally different from land ecosystems. Then we will explore how human actions are affecting oceanic ecosystems directly, for instance by overfishing (especially of large predators and filter feeders), addition of nutrients (eutrophication) and pollutants, and the spread of invasive species, as well as indirectly, through emission of carbon compounds into the atmosphere. Rising atmospheric CO₂ levels lead to ocean acidification and global warming, affecting the all-important metabolic rates of ocean life, as well as oceanic oxygen levels and stratification, thus productivity. We will try to predict the composition of future ecosystems by looking at ecosystem changes during periods of rapid warming in the geological past and see whether future ecosystems will become dominated by jellyfish, as they were 600 million years ago.

E&ES201 Geology of Connecticut

The geology of Connecticut offers a unique opportunity to study the formation and deformation of rocks dating back more than a billion years. These rocks occur in belts that each record the arrival of exotic (plate tectonic) terranes that together built and rebuilt the Appalachian mountain belt. Few states in the nation possess a similar diversity of exposed rock and mineral occurrences. The course consists of weekly Friday afternoon field trips to key localities. Students will learn how to recognize and classify different rock types and distinguish their formational and deformational histories. Emphasis will be on learning (1) to recognize the clues to identifying the origin and evolution of the large variety of sedimentary, volcanic, metamorphic, and igneous rocks in Connecticut and (2) to use them to reconstruct their plate tectonic context. We will include visits to historic sites that influenced our socioeconomic development such as the brownstone quarries and "copper" mines in the Connecticut Valley, and the granite quarries in the southeastern part of the state. A one-day required Saturday field trip will be scheduled during the first class meeting. Student co-enrollment in EE&S 213 or 223 or 230 is encouraged.

This course will introduce students to laboratory techniques used in identifying and understanding rocks, minerals, and other Earth materials.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-EES**

Prereq: **None**

E&ES220 Geomorphology

This inquiry into the evolution of the landscape emphasizes the interdependence of climate, geology, and physical processes in shaping the land. Topics include weathering and soil formation, fluvial processes, and landform development in cold and arid regions on Earth and other planets. Applications of geomorphic research and quantitative theories of landform development are introduced throughout the course where appropriate. This course must be taken concurrently with E&ES 221: Geomorphology Laboratory.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-EES**

Prereq: **E&ES101 OR E&ES115 OR E&ES155 OR E&ES197 OR EES199**

E&ES221 Geomorphology Laboratory

This course will introduce various methods of measuring landforms in the field, including stream measurement, hazard assessment, and the classification of glacial, volcanic, coastal, and tectonic features. The course includes laboratory exercises in the utilization of topographic maps, aerial photographs, and various remote-sensing techniques. This will include field trips to various locations in CT. This laboratory class must be taken concurrently with E&ES 220: Geomorphology.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-EES**

Prereq: **E&ES101 OR E&ES115 OR E&ES155 OR E&ES197 OR EES199**

E&ES223 Structural Geology

Structural geology is the study of the physical evidence and processes of rock deformation, including jointing, faulting, folding, and flow. Geologic structures can be used to interpret tectonic history and understand physical process responsible for geologic hazards such as earthquakes, volcanoes, and landslides. Many structures also exert a primary control on fluid flow in the earth's crust and thus play an important role in determining the distribution of natural resources and environmental contaminants.

In this course students will learn the theoretical foundations, observational techniques, and analytical methods used in modern structural geology. Case studies are drawn from local field work (see description of E&ES224) and published data sets from around the world.

Offering: **Host**

Grading: **A-F**

E&ES230 Sedimentology

Sedimentary geology impacts many aspects of modern life. It includes the study of sediment formation, erosion, transport, deposition, and the chemical changes that occur thereafter. It is the basis for finding fossil fuels, industrial aggregate, and other resources. The sedimentary record provides a long-term history of biological evolution and of processes such as uplift, subsidence, sea-level fluctuations, climate change, and the frequency and magnitude of earthquakes, storms, floods, and other catastrophic events. This class will examine the origin and interpretation of sediments, sedimentary rocks, fossils, and trace fossils. Students must take E&ES231 Sedimentology/Stratigraphy Techniques concurrently.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-EES**

Prereq: **E&ES101 OR E&ES115 OR [E&ES197 or BIOL197 or ENVS197] OR EES199**

E&ES231 Sedimentology/Stratigraphy Techniques

This course provides macroscopic and microscopic inspection of sedimentary rocks. It will include field trips, experiments, and laboratory analyses. There will be an optional weekend field trip and there may be one daylong industry event. E&ES230 must be taken concurrently.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **NSM-EES**

Prereq: **None**

E&ES234 Geobiology

Fossils provide a glimpse into the form and structure of ancient ecosystems. Geobiology is the study of the two-way interactions between life (biology) and rocks (geology). Typically, this involves studying fossils within the context of their sedimentary setting. In this course, we will explore the geologic record of these interactions, including the fundamentals of evolutionary patterns, the origins and evolution of early life, mass extinctions, and the history of the impact of life on the climate.

E&ES236 Nuclear Power Plant Design and the Three Mile Island, Chernobyl and Fukushima Accidents

This course provides an introduction to radiation, nuclear physics, and nuclear power plant design. It will trace the steps that led to the three most well-known nuclear power plant accidents: Three Mile Island, Chernobyl, and Fukushima. It provides information useful for evaluating the impact of nuclear power on environmental decision-making.

Starting with a history of the atomic discoveries and fundamental physics that led to the atomic bomb production at the end of WWII, the course will then trace the design steps that allowed commercial nuclear power plants to evolve from those weapon-making discoveries. Finally it will trace the accidents and the aftermath from the Three Mile Island, Chernobyl, and Fukushima nuclear power accidents.

E&ES240 Invasive Species: Biology, Policy, and Management

Invasive species account for 39 percent of the known species extinctions on Earth, and they are responsible for environmental damages totaling greater than \$138 billion per year. However, the general population has little knowledge of what invasive species are or what threats they pose to society. In this course, we will explore the biological, economic, political, and social impacts of invasive species. We will begin by exploring a definition of an invasive species and looking at the life history characteristics that make them likely to become pests. Then we will consider the effects of invasive species expansion on the conservation of biodiversity and ecosystem function, as well as their global environmental and political impacts. Finally, we will explore the potential future changes in invasive species distributions under a changing climate.

E&ES250 Environmental Geochemistry

This course is a qualitative and quantitative treatment of chemical processes in natural systems such as lakes, rivers, groundwater, oceans, and the atmosphere. General topics include equilibrium thermodynamics, acid-base equilibria, the carbonic acid system, oxidation-reduction reactions in nature, and isotope geochemistry. The associated lab course (E&ES 251) must be taken concurrently if offered. The lab course will be a service-learning course in which students work with a community organization to solve an environmental problem or a semester-long research project.

There are no official prerequisite classes, but students should be comfortable with chemical concepts or should have taken introductory college chemistry or advanced high school chemistry courses.

Offering: **Host**

Grading: **A-F**

E&ES253 Energy Sustainability: An examination of US, New England and Connecticut Energy

This course will survey the state of energy generation and use in Connecticut, New England, and the U.S. It will include fundamental characteristics of fossil, nuclear, and renewable energy, plus their impact on the local and national energy grid. It will examine how utilities maintain power, including the variable nature of many renewable sources. The course will also examine fuel reliability and impact on local and global air pollution. The course will examine pathways forward for the local and national energy grid. One to two site visits may be incorporated as part of the class, with potential sites including: ISO New England (Holyoke, Mass.), Trash-to-Energy (Hartford, Conn.), combined cycle plant, Kleen Energy plant (Middletown, Conn.), and Combined Heat & Power (UConn Cogen).

Identical With: **ENVS253**

Prereq: **None**

E&ES254 Renewable Energy

This course is an introduction to renewable energy from an Earth science perspective, covering the physical principles of power generation from natural energy flows and the transformation, transmission, and storage of energy on the electrical grid, as well as topics from energy markets and utilization. We focus on hydroelectric, wind, solar, geothermal, wave, and tidal energy, along with modern bioenergy. For comparison, we also briefly cover the conventional energy technology of fossil fuels and nuclear power. We discuss each renewable-energy resource, including the advantages, disadvantages, and environmental impacts of its accompanying technology. The course is quantitative with bi-weekly problem sets. Students are expected to gain theoretical and practical knowledge of renewable energy.

E&ES255 The Changing Ocean

The Earth is always changing, and we're currently experiencing some of the most rapid changes to have occurred within the history of life. This course presents a topical approach to major oceanographic concepts, particularly those impacted by an anthropogenic change, by linking core concepts in modern oceanography with paleoceanographic proxies and the fossil record. We will integrate geological, chemical, physical, and biological oceanography across multiple timescales to build a conceptual understanding of not only how the

ocean works but how we can understand the past, present, and future of the world's ocean.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-EES**

Prereq: **None**

E&ES257 Environmental Archaeology

Archaeological materials provide long-term records of how humans have modified past environments and how human societies respond to environmental change. In this course, students will learn how data from ancient plants, animals, and soils can be analyzed in order to draw interpretations about past human-environmental interactions. We will also discuss key topics in environmental archaeology, including the long-term environmental impacts of plant and animal domestication and debates over environmental causes for the "collapse" of civilizations such as the ancient Maya. The course will involve hands-on preparation and cataloging of plant and animal specimens to add to the Wesleyan Environmental Archaeology Laboratory comparative collections. Students must be available for one weekend class meeting to complete the first stage of animal skeleton preparation.

Identical With: **ARCP257, ENVS257, ANTH257**

Prereq: **None**

E&ES258 Community Paleoecology

The study of community paleoecology seeks to derive ecological meaning from the reconstruction of ancient ecosystems. From this vantage point, fossil assemblages are used to observe long-term patterns in biogeography, evolution, and organism-environment interactions. The overarching themes in this course will emphasize theoretical frameworks in community ecology and stratigraphic paleobiology that advance the collective understanding of how to read and interpret the fossil record to document ecosystem interactions over geologic history. Case studies from across Earth's history will underscore the necessity of examining past ecosystems to contextualize modern and future ecosystem structure. We will accomplish these aims with lectures, readings and discussion of the primary literature, and student presentations. Pre/co-requisites: BIOL182, E&ES101, E&ES115, E&ES155, E&ES197, or E&ES199.

E&ES259 Introductory Ecological Methods in R

This lab class is required of students enrolled in the accompanying lecture (EES 258). We will learn to use R to analyze paleontological records with multivariate methods and specifically become familiar with the vegan package for interpreting large ecological datasets such as species abundance data. Prior knowledge of or experience with R is not a prerequisite and beginners are especially encouraged to enroll in this course. Students with intermediate and advanced R skills are still welcome to enroll, but should recognize that much of this course will focus on the beginner experience. Assignments and projects will be collaborative, such that students across experience levels will work together to complete the course material. Pre/co-requisites: BIOL181/BIOL182, E&ES101, E&ES115, E&ES155, E&ES197, or E&ES199.

E&ES260 Oceans and Climate

Earth's climate is not static. Even without human intervention, the climate has changed, but mostly at a slower rate. In this course we will study the major properties of the ocean and its circulation and changes in climate during the Cenozoic Era (the past 66 million years). We will examine the effects of variations in greenhouse gas concentrations, the locations of continents, and the circulation patterns of oceans and atmosphere. Once a basic understanding of the climate system is attained, the focus will be on how we know about past climates. Through reading and in-class exercises students will look at data from sediment cores, ice cores, and tree rings to learn about past climates. The final project will investigate measures humans can take to slow the rate of climate change. It is possible and must be done.

E&ES270 Quantitative Methods for the Biological and Environmental Sciences

This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulae. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

E&ES271Z Mapping the Pandemic

The COVID-19 pandemic has altered the global community's daily relationship with space and movement, both at a hyperlocal scale of social distancing to a global scale of disease spread. Spatiotemporal visualizations in the form of maps and apps have allowed us to watch the worldwide spread of COVID-19 and keep tabs on local case counts in our own spaces. Geographic information systems (GIS) provide citizens, researchers, health care providers, and policy makers with a powerful analytical framework for visualization, data exploration, spatial pattern recognition, response planning, and decision making within our life in the time of COVID-19. This course is designed to develop spatial thinking and visualization skills relevant to COVID-19. Students will look at (and critically

evaluate) existing maps and apps related to the current pandemic, create their own maps and apps, and critically evaluate their classmates' maps and apps. Class meetings will consist of case study lectures/discussions, instructor-led skill-building workshops, studio work sessions, and presentation/critique sessions. Spatial data collection, management, analysis, and visualization will occur within a cloud-based GIS (ArcGIS Online). Readings prior to the first class will establish a baseline for student comprehension of the breadth of applied geospatial thinking in today's research arena. The course is aimed at students with limited or no prior GIS experience.

E&ES274 Strategies in Conservation and Environmental Action

This course is only open to Wesleyan sophomores and above, with permission of instructor during pre-registration. This course provides students with a framework for better understanding how environmental policy, programs, and change goals are developed and actions are taken. Content will provide students with information from different disciplines in order to better understand the context, challenges, and intent of a specific environmental project to be addressed by the class over the course of the semester. The class project will have a land or material management focus and be developed with an environmental partner. Content topics may include logistics and impacts of various management systems; ecosystem function and landscape ecology; environmental policy and stakeholder dynamics; data collection and analysis; and communications and education. Project work will include research, meetings, and field work, including service work that contributes to short-term goals and tests protocol. Time required may vary by week. Class periods, assessments, and readings will be right-sized to facilitate this time commitment. Students will be assigned project tasks according to their major and skills. The class will collectively produce and present finished products to the environmental partner. Projects change with each semester and vary in emphasis and ecological vs. social components.

E&ES280 Introduction to GIS

Geographical information systems (GIS) are powerful tools for organizing, analyzing, and displaying spatial data. GIS has applications in a wide variety of fields including the natural sciences, public policy, business, and the humanities; literally any field that uses spatially distributed information. In this course, we will explore the fundamentals of GIS with an emphasis on practical application of GIS to problems from a range of disciplines. The course will cover the basic theory of GIS, data collection and input, data management, spatial analysis, visualization, and map preparation. Coursework will include lectures, discussions, and hands-on activities.

E&ES282 Earthwatch: Satellite Data Storytelling for Science Communication

The fingerprint of human activity on planet Earth continues to magnify as we move deeper and deeper into the Anthropocene. Satellite remote sensing is a rapidly developing field for monitoring and visualizing planetary change in real time. Vast amounts of satellite data are now freely available for documenting, mapping, and communicating the impacts of natural and human disturbances on the Earth system. Students in this course will learn how to 1) analyze remotely sensed imagery using open-source software, 2) make high-quality maps documenting planetary change, and 3) communicate satellite data patterns to broad audiences using data storytelling. Students will master a wide range of techniques for detecting and articulating the stories behind satellite images and data sets through visual, oral, and written assignments aimed at diverse public audiences.

E&ES301 New England Geology

For more than a century, students and professionals interested in the geology of New England have gathered at the annual meeting of the New England Intercollegiate Geologic Conference (NEIGC), a weekend of field-based education. In this seminar, we will choose three NEIGC fieldtrips to attend, study the appropriate background material in preparation for the trips, and compile our own guide to the trips that summarizes the appropriate background material. The class will culminate in attendance at the annual NEIGC meeting on the weekend of October 12-14, 2018 in the Lake George region of Upstate New York and Vermont.

At the end of this course, you will not only know a lot more about New England geology and have met many current and future field geologists, but you will also have learned to synthesize the literature to assess the current state of knowledge and evaluate how field studies can advance our understanding of regional geology and environmental issues.

E&ES306 Ecology and Natural History of Freshwater Fishes of South America

South America has the highest diversity of freshwater fishes anywhere in the world. In fact, there are more than twice the number of mammals and about the same number of birds in the world. Why has this remarkable radiation occurred in a relatively short period of time? How can so many fishes coexist in the same rivers, utilizing the same resources? In this intensive course, we will travel to Colombia during spring break (March 7-21) in order to gain firsthand knowledge about the ecology and natural history of freshwater fishes in South America. We will learn about the ecological and environmental factors that contribute to perhaps the largest biological radiation on the planet.

Students will obtain firsthand experience with the South American tropics, freshwater fishes, and with doing experiments in the field. Each day there will be a combination of lectures and field or laboratory exercises. We will travel to and explore fish ecology in different types of rivers at different elevations. Students will gather and analyze data about biological, physical, and environmental issues that are covered in the lectures. The habitats that we explore will be both terrestrial and freshwater rivers. Our base will be at the Instituto Humboldt in Villa de Leyva, Colombia. We will interact with Colombian students who are studying ecology and biodiversity at the Institute in order to exchange ideas about current environmental issues.

All the costs of travel, lodging, and meals will be covered by the course.

E&ES312 Global Change Biogeography

On our home planet, Earth, the current geologic epoch is characterized by rapid changes to the environment due to human behavior. Biogeography examines the spatiotemporal distribution of life on Earth, from species to ecosystems and from landscapes to continents. How is anthropogenic climate change modifying the distribution and function of organisms and ecosystems? What can we learn from the evolutionary history of the life-planet system that can help us understand the possible impacts of future climates on the biosphere? To address these questions rigorously, we will explore primary literature from a wide range of theoretical and empirical studies. The course emphasizes inquiry, contact with primary literature, discussion, statistical and spatial coding, learning to obtain data, and visualization. The beginning of the semester provides an overview of physical geography and the Earth System, with field and data experiences that build remote sensing and spatial analysis skills. The second half of the semester is focused on the exploration of relevant scientific literature based on student interests and recent papers, as well as independent research projects.

Offering: **Host**

E&ES319 Meteorites and Cosmochemistry

This course will focus on the materials in the world's collection of extraterrestrial samples and what they tell us about Earth, our nearest planetary neighbors, and the origin of our solar system. Planetary geochemical processes will be discussed through the examination of samples from comets, asteroids, Mars, the moon, Vesta, and Earth. Other topics covered will be impact cratering and the delivery of meteorites to Earth. Meteorites teach us about the earliest history of planet formation in this solar system, and we will compare this to what is observed in other solar systems. The course is intended for majors and graduate students in Wesleyan's Natural Science and Mathematics (NSM) division.

E&ES327 The Microbial Fossil Record

This course invites students to investigate the fossil record of microbial life to reveal the outsized impact microbes have on Earth and environmental systems.

We will explore topics such as the origin of life, micropaleontology, marine biogeochemistry, biological oceanography, environmental microbiology, and astrobiology. This course will present students with the opportunity to engage with primary literature, write integrative narratives, and craft microbially inspired creative works.

Offering: **Host**

Identical With: **ENVS327, E&ES527**

Prereq: **None**

E&ES329 Fire Ecology and Management

Fire is a fundamental ecological disturbance process that regulates the structure and function of plant communities worldwide. However, increasing aridity under climate change and shifting human land use in recent centuries have altered fire behavior, imperiling many species. This course explores the ecological and social aspects of fire and sustainable fire management on planet Earth. Students examine shifting fire regimes over time, from indigenous use of fire prior to European colonization of the globe, to contemporary fire management. Class participants study the effects of global climate change on fire regimes and how such changes influence contemporary fire regimes and human livelihoods. The course format consists of a mixture of lectures, field exercises, active class discussions, student presentations, and research papers.

E&ES336 Global Change Biogeography

On our home planet, Earth, the current geologic epoch is characterized by rapid changes to the environment due to human behavior. Biogeography examines the spatiotemporal distribution of life on Earth, from species to ecosystems and from landscapes to continents. How is anthropogenic climate change modifying the distribution and function of organisms and ecosystems? What can we learn from the evolutionary history of the life-planet system that can help us understand the possible impacts of future climates on the biosphere? To address these questions rigorously, we will explore primary literature from a wide range of theoretical and empirical studies. The course emphasizes inquiry, contact with primary literature, discussion, statistical and spatial coding, learning to obtain data, and visualization. The beginning of the semester provides an overview of physical geography and the Earth System, with field and data experiences that build remote sensing and spatial analysis skills. The second half of the semester is focused on the exploration of relevant scientific literature based on student interests and recent papers, as well as independent research projects.

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-EES**

Prereq: **None**

E&ES342 Ecological Resilience: The Good, the Bad, and the Mindful

This course will examine the concepts of resilience, fragility, and adaptive cycles in the context of ecosystem and social-ecological-system (SES) structures. These concepts have been developed to explain abrupt and often surprising changes in complex ecosystems and SES that are prone to disturbances. We will also include nonhierarchical interactions among components of systems (termed panarchy) to compare the interactions and dependencies of ecological and human community systems. A systems approach will be applied to thinking about restoration ecology, community reconstruction, and adaptive management theory.

All of the terms--resilience, fragility, adaptation, restoration, reconstruction--are fraught with subjectivity and valuation. We will use mindfulness and meditation techniques (including breathing and yoga) to more objectively and dynamically engage in the subject matter, leaving behind prejudice or bias. Students will be expected to approach these techniques with an open mind and practice them throughout the semester. The objective is to provide students with a more comprehensive framework with which to gain deeper understanding and integration of the science with the social issues.

Offering: **Crosslisting**

E&ES350 Animals in Archaeology

This laboratory course will explore how zooarchaeological methods for analyzing animal bones and teeth excavated from archaeological sites allow us to reconstruct ancient human-animal-environmental interactions. We will cover a range of topics and techniques, including hands-on sessions for the identification and quantification of faunal remains. By the end of the course, students will be able to identify every bone in the mammalian skeleton and distinguish between the bones of common non-mammalian taxa. Additional topics will include ancient DNA in zooarchaeology, bone stable isotope analyses, human-caused extinctions, animal domestication, bone artifact production, and animal sacrifice.

Identical With: **ARCP350, ENVS348**

Prereq: **None**

E&ES361 Living in a Polluted World

This course treats the occurrences and origins, natural pathways, toxicologies, and histories of the major environmental contaminants. We all know about lead and its effects on humans, but how about cadmium and hexachromium, or the many unpronounceable organic contaminants, usually referred to by some acronym (e.g., DDT, POPs)? We also deal with the larger topics of CO₂/climate change, the environmental nitrogen-oxygen balance, and eutrophication of coastal waters (the "dead zones"). To be effective in this course, students will need basic high school/college-level proficiency in chemistry and math as we will delve into aspects of geochemistry, geology, toxicology, environmental law, and some simple modeling. The class consists of lectures, one problem set, one Hg-in-hair class study, and a class project on lead in drinking water in the Middletown area. This is also a service-learning course, providing environmental outreach to the larger Middletown community on local pollution.

Offering: **Crosslisting**

E&ES375 Modeling the Earth and Environment

Models can provide insights into Earth systems that are difficult to obtain by direct experimentation or observation. This course will introduce students to the process of translating Earth systems into idealized mathematical models, specific methods for solving the resulting equations, and implementation of models in MATLAB. We will explore cases from a range of topics in the earth and environmental sciences to gain a better appreciation of the insights models can offer. Students should have MATLAB installed on a laptop computer for in-class work.

 Gen Ed Area: **NSM-EES**
 Identical With: **E&ES575**
 Prereq: **MATH120 OR MATH121**

E&ES376 Mass Extinctions in the Oceans: Animal Origins to Anthropocene

Geoscientists are debating whether we are living in the Anthropocene, defined as a period during which humans are having a significant effect on atmospheric, geologic, hydrologic, and biospheric earth system processes. There is considerable discussion whether we are indeed affecting the biosphere to such an extent that life on Earth will suffer an extinction similar in magnitude to those that have occurred during earth history. Studies of the fossil record provide unique evidence that is used to evaluate the large extinctions of the past and compare them to ongoing extinction processes, extinctions rates and patterns, and magnitude. Organisms with hard skeletons are most easily and most abundantly preserved in the rock record. Many of these are invertebrates that lived in the oceans (e.g., clams, sea urchins, corals). In the first part of this course, students will become familiar with the nature of the fossil record, the most common marine animals in the fossil record, and their evolution and diversification. Lectures will be combined with studying fossils. In the second part of the course, possible causes for mass extinction will be considered, together with their specific effects on environments and biota, and these predicted effects will be compared to what has been observed. Potential causes include asteroid and comet impacts, large volcanic eruptions, "hypercanes," and "methane ocean eruptions," and more exotic processes. Students will present in class on these topics, and we will compare rates and magnitude of environmental change with severity and patterns of extinction.

E&ES395 Quantitative Chemical Analysis

Measurement and chemical analysis are at the very heart of the chemical sciences. Practicing chemists depend heavily on chemical analysis, as do medical professionals, environmental scientists, and many others. Quantitative chemical analysis is the science of determining "how much"--as in, "how much toxic lead is in your drinking water?" In this course, you will first learn how to treat measured chemical data to extract meaningful information, and then we will proceed to study classical methods of chemical analysis, expanding upon your knowledge of general chemistry. A practical laboratory experience will reinforce the curriculum and build your skills as a chemist. This course is part of the required curriculum listed in the American Chemical Society Guidelines for Bachelor's Degree Programs, and this course is highly recommended for students who intend to pursue graduate studies and/or employment in a chemical discipline.

Offering: **Crosslisting**
 Grading: **A-F**
 Credits: **1.00**

 Identical With: **CHEM317**
 Prereq: **(CHEM142 OR CHEM142Z OR CHEM144) AND (CHEM152 OR CHEM152Z)**

E&ES396 Instrumental Analysis

Chemical analysis has kept pace with the advent of modern technology through the development of instruments capable of ever-improving levels of detection for both qualitative and quantitative analysis. Many students are exposed to the use and interpretation of these modern methods of chemical analysis, but this experience typically comes with little understanding of how and why these instruments work. This course will investigate instrumentation across three broad categories of analysis: electrochemical, spectrochemical, and separations. The lecture course will be supplemented with a practical laboratory experience. Instrumental analysis is part of the required curriculum listed in the American Chemical Society Guidelines for Bachelor's Degree Programs, and this course is highly recommended for students who intend to pursue graduate studies and/or employment in a chemical discipline.

E&ES497 Senior Seminar

This seminar-style capstone course for E&ES seniors focuses on career-building and improving scientific research skills by completing an original research project. In groups, students will develop original, field-based research projects, write a proposal, and complete the project. The goal of the course is to help students transition to independent, professional scientists. This year's trip is to Puerto Rico in mid-January 2025 for approximately one week. The department will cover the costs of airfare, food, and lodging. Students need to be comfortable being outside for hours with moderate hiking. Participation in the trip and the spring course (E&ES 498) is required to receive credit. In contrast to previous years, the course is not required for the E&ES major, but still counts

toward major requirements as an elective. This class requires the approval of the instructor (POI). To register for this class, please complete the Google Form that will be emailed to all current EES junior majors once pre-registration opens on April 2, 2024. POI decisions will be handled promptly.

E&ES519 Meteorites and Cosmochemistry

This course will focus on the materials in the world's collection of extraterrestrial samples and what they tell us about Earth, our nearest planetary neighbors, and the origin of our solar system. Planetary geochemical processes will be discussed through the examination of samples from comets, asteroids, Mars, the moon, Vesta, and Earth. Other topics covered will be impact cratering and the delivery of meteorites to Earth. Meteorites teach us about the earliest history of planet formation in this solar system, and we will compare this to what is observed in other solar systems. The course is intended for majors and graduate students in Wesleyan's Natural Science and Mathematics (NSM) division.

Offering: **Crosslisting**

Grading: **A-F**

E&ES523 Structural Geology

Structural geology is the study of the physical evidence and processes of rock deformation, including jointing, faulting, folding, and flow. Geologic structures can be used to interpret tectonic history and understand physical process responsible for geologic hazards such as earthquakes, volcanoes, and landslides. Many structures also exert a primary control on fluid flow in the earth's crust and thus play an important role in determining the distribution of natural resources and environmental contaminants.

In this course students will learn the theoretical foundations, observational techniques, and analytical methods used in modern structural geology. Case studies are drawn from local field work (see description of E&ES224) and published data sets from around the world.

E&ES560 Oceans and Climate

Earth's climate is not static. Even without human intervention, the climate has changed, but mostly at a slower rate. In this course we will study the major properties of the ocean and its circulation and changes in climate during the Cenozoic Era (the past 66 million years). We will examine the effects of variations in greenhouse gas concentrations, the locations of continents, and the circulation

patterns of oceans and atmosphere. Once a basic understanding of the climate system is attained, the focus will be on how we know about past climates. Through reading and in-class exercises students will look at data from sediment cores, ice cores, and tree rings to learn about past climates. The final project will investigate measures humans can take to slow the rate of climate change. It is possible and must be done.

E&ES570 Quantitative Methods for the Biological and Environmental Sciences

This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulae. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

Prereq: **None**

E&ES575 Modeling the Earth and Environment

Models can provide insights into Earth systems that are difficult to obtain by direct experimentation or observation. This course will introduce students to the process of translating Earth systems into idealized mathematical models, specific methods for solving the resulting equations, and implementation of models in MATLAB. We will explore cases from a range of topics in the earth and environmental sciences to gain a better appreciation of the insights models can offer. Students should have MATLAB installed on a laptop computer for in-class work.

E&ES580 Introduction to GIS

Geographical information systems (GIS) are powerful tools for organizing, analyzing, and displaying spatial data. GIS has applications in a wide variety of fields including the natural sciences, public policy, business, and the humanities; literally any field that uses spatially distributed information. In this course, we

will explore the fundamentals of GIS with an emphasis on practical application of GIS to problems from a range of disciplines. The course will cover the basic theory of GIS, data collection and input, data management, spatial analysis, visualization, and map preparation. Coursework will include lectures, discussions, and hands-on activities.

ECONOMICS (ECON)

ECON101 Introduction to Economics

A general introduction to the principles of economic analysis and their implications for public policy, covering concepts and issues in both microeconomics (concerning the function and performance of individual markets, organizations, or institutions) and macroeconomics (concerning the function and performance of the economy as a whole). This course is intended primarily for students without significant prior study in the discipline, and it satisfies the prerequisites for most 200-level economics electives.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON102 Mathematical Tools for Economic Analysis

This course will cover the basic mathematical tools students will need to understand and apply in ECON 110, the gateway introductory course for the economics major. Topics covered include basic arithmetic and algebraic calculations; analysis of functions, including the properties of specific functional forms; graphing of single-variable functions; basic single-variable differentiation and integration; and optimization of univariate functions. This course is not recommended for students who have taken two or more semesters of calculus or who have placed out of MATH 121

Offering: **Host**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON103 Introduction to Probability and Statistics for Economic Analysis

This course studies the mathematical concepts of probability and statistics as needed for ECON 300 and upper-level economics electives. Topics include sampling, descriptive statistics, probability distributions, estimation, and hypothesis testing. Students who received a 4 or 5 on the AP Statistics exam or have completed a course equivalent to MATH 132 or 231 are not allowed to take this course.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON108F Race, Ethnicity, and Economic Disparity (FYS)

This seminar explores the following questions: (1) How do economists explain economic disparity by race, ethnicity, and gender? (2) What policies follow from those explanations? The course devotes particular attention to the interplay among market forces, institutional structures, and the social constructs of race. Market outcomes by ethnicity, gender, and gender identity form another central line of inquiry. In the process of studying these topics, students investigate markets for labor, housing, and financial assets. Students will learn economists' methods for analyzing these markets. The seminar includes a strong writing component with assignments that emphasize writing for the social sciences. While exploring approaches used by economists, the seminar also introduces students to central debates within the discipline.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON110 Introduction to Economic Theory

An introduction to the principles of micro- and macroeconomic theory, this course is intended for prospective majors and students wishing to prepare themselves for a broad range of upper-level elective courses in economics. Mathematical tools essential for further study in economics are introduced throughout the course.

Offering: **Host**

ECON124F Political Economy (FYS)

Economic and political processes are intertwined in that political institutions have an impact on economic outcomes and vice versa. This course is a survey of some of the important topics in political economy. Some of the questions that will be addressed with the help of country-studies are: Do democratic institutions and greater political freedom result in higher economic growth? Is the size of

government determined by political decentralization and federalism? What is the role played by the different constituents in shaping societies' economic priorities? Do interest groups weigh economic outcomes in their favor?

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Prereq: **None**

ECON127 Introduction to Financial Accounting

In this course, no prior accounting knowledge is required or assumed. Students learn how accountants define assets, liabilities, revenues, and expenses and where those items appear in firms' balance sheets and income statements.

The purposes and limitations of these two financial statements as well as the statement of cash flows are considered. Students gain an understanding of the accounting choices allowed to firms for reporting to stockholders and creditors and learn how the use of different accounting methods for similar economic events creates challenges for analysts. Instances of questionable financial reporting and strategies that can aid in their discovery are addressed. Later assignments focus on ratio analysis of actual firms' financial statements, including techniques to identify firms in financial trouble.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Identical With: **CSPL127**

Prereq: **ECON101 OR ECON110**

ECON129 Selected Problems in American Criminal Law

Crime and punishment are constantly in the news, and lay observers of the American system of criminal justice are often puzzled by its procedures and outcomes. What exactly is the criminal law trying to do? Why does it seem so difficult to convict criminals? What are the governing principles of American criminal justice, and how are they actually applied in the courts? This First-Year-Initiative course is intended to address these questions through a close analysis of cases and related materials concerned with the substantive criminal law and, at the same time, to introduce students to the legal method itself and the close-case-analysis characteristic of legal argument. It is thus not a course in law and economics, or law and philosophy, or law and government, but a course in law itself, much as it is taught to law students. Topics include the legal definition of criminal acts, causation, the mental element of crime, basic principles of justification, criminal responsibility and mental abnormality, and the law of homicide. Readings consist entirely of judicial opinions and related materials, and in class we will analyze these readings in detail to expose their logic and consider their practical implications. These readings are dense and intensive, and students

will be asked in class to address difficult issues and defend their answers against rigorous critical questioning.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON168F Globalization and Development (FYS)

This class aims to provide first year students with a set of critical skills to succeed through their undergraduate studies while also introducing them to classic and contemporary discussions on development and globalization. Before getting into the core topics of the class, we will start by discussing the contemporary disciplinary fragmentation in social science, while reading about integrative approaches introduced to the discussion about the past, present, and future of social science. Additionally, the class will discuss the contributions of classic authors such as Karl Marx and Max Weber, who presented the founding theories about the interconnections between development and social change. Later, issues on modernization and development will be studied, as well as critiques on these issues coming from the Latin American Dependency School. This intellectual debate will set the ground to discuss contemporary approaches to development and globalization considering insights coming from the rise of East Asia and feminist approaches to development theory. Finally, the class will discuss what globalization is and how to approach development and social change in the current globalization era.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON206 Race and Education Policy

This course will provide a broad introduction to contemporary education policy centered on issues of race/ethnicity. This course introduces the application of economic analysis to education policy. The course will analyze major education policy debates such as school desegregation, school finance, school resources, school choice, student tracking, accountability, educator policies (diversity, certification), special education, college entrance, and the current policy landscape.

Offering: **Host**

Grading: **OPT**

Identical With: **EDST206**

Prereq: **ECON110**

ECON207 Demographic Economics

This course explores topics in demographic economics. It is divided into three main modules: macroeconomic effects of demographics, human migration, and family economics. In the first module, we explore issues such as population aging, population distribution across the globe, the Demographic Transition and the Industrial Revolution, and the environmental effects of population growth. In the second module, we discuss the costs and benefits of human migration from the point of view of both sending and receiving countries. Finally, in the third module, we investigate how economic incentives shape family formation and family decision-making.

Offering: **Host**

Grading: **OPT**

Gen Ed Area: **SBS-ECON**

Prereq: **None**

ECON210 Climate Change Economics and Policy

This course introduces students to the role of applied economics in climate change policy and analysis. Students will learn how economists view climate change causes, mitigation, adaptation, and policy challenges. Key topics include: economics of market failures, socially optimal greenhouse gas emissions, overview of theoretical and real-world policies to reduce emissions, evaluating the relative abatement costs of command and control versus market-based policies, valuing climate change impacts, evidence of adaptation strategies in the economy, discounting costs and benefits across multiple generations, impacts of uncertainty on optimal policy design, the role of international cooperation and consequences of unilateral action, and distributional effects.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Identical With: **ENVS214**

Prereq: **ECON110 OR ECON101**

ECON211 Introduction to Behavioral and Experimental Economics

This course compares what economic theory predicts with what economic agents actually do when faced with decisions. A number of in-class experiments will be conducted to identify systematic deviations or to confirm theoretical models. Students will learn new material both by participating in experiments and by studying related economic theory. This course will investigate some of the major subject areas that have been addressed by laboratory and field experiments: market behavior, decisions under risk, self-control issues, bargaining, auctions, public goods, cooperation, trust, and gender effects.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON110**

ECON213 Economics of Wealth and Poverty

Who are the very wealthy and how do they acquire their wealth? Why is poverty still with us after almost 50 years of antipoverty programs? What explains rising inequality in the distribution of income and wealth? These are just a few of the questions that we address in this course. The problem of scarcity and the question of production for whom are basic to the study of economics. Virtually all courses in economics give some attention to this topic, yet few study the distribution of income in depth. This course takes a close look at evidence on the existing distribution of income and examines the market and nonmarket forces behind the allocation process. Our investigation makes use of U.S. economic history, cross-country comparisons, and fundamental tools of economic analysis. Topics include normative debates surrounding the notions of equality and inequality, analytic tools for measuring and explaining income inequality, determinants of wage income and property income, the importance of inheritance, the feminization of poverty, and the economic analysis of racial discrimination. A central subject throughout the course is the role of policy in altering the level of poverty and inequality.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Identical With: **AMST274**

Prereq: **ECON101 OR ECON110**

ECON214 Introduction to Economic Networks

This course will serve as an introduction to networks and discrete structures as they're used in economics, sociology, and computer science. In this course, we will study the relationship between economic incentives and the structure of connections that are inherent in collections of individuals.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON215 Labor Economics

This course will introduce topics, theories, institutions, and policy issues relating to the functioning of labor markets. The topics we will cover include labor supply decisions, investments in human capital, compensating wage differentials, firms' labor demand decisions, compensation programs, the economics of unemployment, and labor market discrimination. We will begin the course by analyzing the neo-classical labor supply, demand, and equilibrium. Then, we will explore the possible reasons why labor market outcomes may deviate from what the perfectly competitive neo-classical model predicts: factors such as human capital accumulation choices, productivity heterogeneity, institutional rigidities (e.g., minimum wage, unions), labor mobility, and discrimination.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON220 Alliances, Commons, and Shared Resources

Some resources are only useful in large units and therefore need to be shared by multiple users. Examples include agricultural and forest land, fisheries, streaming video and music services, highways, computer platforms, and news reporting. This course studies methods of sharing resources including common property, formal and informal alliances, clubs, open source, and government regulation and ownership. Students interested in the environment, rural development, news and entertainment media, transportation, and communications should consider this course, as we will cover all of those topics and see their economic similarities.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON221 Economic Topics in Sports

This course intends to provide students with a new perspective on both sports and economics. It will not only shed light on the business components of professional sports, but also lead students through analyses of other aspects of sports such as the nature of the game on the field, how leagues are organized, how playing rules are formulated and enforced, and how owners and coaches make personnel decisions. The goal of this course is to reveal the persuasiveness of economic reasoning underlying such decision-making in the world of sports.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON110**

ECON222 Public Economics

In this course, we examine the economic roles of government and the tools that governments use to fulfill these roles. We will start with the questions, Under what circumstances is it possible for governments to improve on the outcomes that would occur in their absence? And how do we decide whether one outcome is better than another? The course will continue with an examination of the performance of governments in the United States. The primary questions addressed will be, What policies do governments pursue? How do they spend money to achieve the goals of these policies? How do they raise the money that they spend? And what sorts of undesired side effects might result from taxation and expenditure policies?

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON223 Finance, Regulation, and the Economy

With recent financial scandals and crises, it is important to ask whether the finance industry should be regulated and should undergo further policy reforms. Many scholars and policy experts contend that the current system is simply not designed to make policy choices on behalf of the public. In this course we will explore current financial innovations (e.g., mutual funds, hedge funds, securitizations, cryptocurrencies) and potential policy options in order to protect "Main Street" from "Wall Street." Additionally, we will explore the manner in which modern finance has grown out of powerful theories, both mathematical and psychological.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON224 Regulation and Antitrust: Government and the Market

Firms and the public sector interact via regulation and antitrust. Firms use (or fail to use) the regulatory process for competitive advantage, and agencies and legislators use (or misuse) regulation to accomplish their policy objectives. Topics covered in this course include the analysis of market power, predation and discrimination, mergers, regulation of infrastructure industries, and health and safety regulation. Case studies include railroads; telephone, cable, and broadband; the energy industry; differences between the EU and United States in merger reviews; and cybersecurity.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON225 Economic Analysis and the Law

This course uses economic analysis as a way of understanding the structure and evolution of the legal system from an economic perspective. Selected rules and institutional forms are drawn from the common law of tort, contract, property, and crimes. Students will be able to apply microeconomic theories (and thus develop economic intuition) by learning how legal rules evolve to handle imperfect information and especially moral hazard, which lead to disputes and lawsuits.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON227 Introduction to Financial Analysis

The course introduces students to the primary sources of information and data used in equity and debt valuation and portfolio management. Both corporate finance and investment finance topics will be covered: financial statement analysis, micro- and macroeconomic analyses of how industry trends and economic growth impact corporate performance, discounted cash flow analysis, asset pricing models (bonds, DDM, CAPM, APT), portfolio theory, and, time permitting, capital structure. This will be a very intense, inquiry-based course with significant hands-on work analyzing data of publicly traded companies.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON228 Investment Finance Principles

The course aims to develop an understanding of the application of the principles of economics to the study of financial markets, instruments, and regulations. The course emphasizes major financial institutions and methods: insurance, portfolio management, corporate management of dividends and debt, forwards and futures, options, and swaps. We will discuss the importance of human psychology in developing and utilizing financial tools as well as the difficulty of battling moral hazard. Students will work with financial data and case studies to explore the potential and limitations of financial theory in dealing with real-world problems.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON229 Applied Market Design

In 2012, the Nobel Memorial Prize in Economics Sciences was awarded to Alvin Roth and Lloyd Shapley for their theoretical and practical work on the design of matching markets. In 2020, the Nobel Prize in Economics was awarded to Paul Milgrom and Robert Wilson for their theoretical and practical work on auctions. This course provides an introduction to the field of market design, focusing on the functioning of specific markets and market mechanisms. Applications include but are not limited to: auctions, kidney exchange, medical match, school choice, course allocation, and trading on the stock market.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON110**

ECON231 Corporate Finance Principles

The course aims to develop an understanding of the application of the principles of economics to the study of the theory of corporate finance. Topics that will be covered include financial statement analysis, project valuation, and asset pricing (equity and debt). Students will work with financial data to explore the potential and limitations of financial theory in dealing with real-world problems

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON233 Economics of Discrimination

This is an applied economics course that introduces students to intuitions and concepts relating to race and gender discrimination in the labor market. It will provide an overview of the historical context, important economic models, and empirical research on this issue. While we will not delve into intensive analyses of the techniques used in these papers, we will discuss and present the findings and implications. The exams and assignments will focus on being able to explain the causes and consequences of gender and racial disparities and discuss the possible impacts of hypothetical policies.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON234 Economics of Religion

This class explores how economic ideas and statistical tools can be used to look at the role of religion in society. This course examines both the application of economic techniques to the study of religion and the relationship between economic and religious behaviors. Course topics may include: the demand for

religion, religious supply, giving behavior, religion-based terrorism/extremism, and religion and economic development.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON237 Financial Crises: Beginning to End

This course provides an introduction to the economics of financial crises. Using introductory economics we will examine banking, security, and currency crises in order to illuminate the role of financial crises more generally in the archetypical life cycle of financial systems. By the end of the course, students will be able to define what causes financial crises, how they lead to contractions in economic activity, why they reoccur, and what policy measures can be used to promote financial stability.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 or ECON110**

ECON241 Money, Banking, and Financial Markets

This course provides an introduction to money, banking, and financial markets, from both a theoretical and policy perspective. The class will emphasize the evolution of banking and financial market institutions--both in the United States and in other developed countries.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON110 OR ECON101**

ECON242 Banking and Financial Fragility

Why are banks susceptible to financial crises? This course studies the mechanisms behind banking crises as an introduction to the microeconomics of banking. Motivated by a survey on historical and empirical evidence on banking crises, we will study why an economy needs financial intermediation and why such intermediaries face crises. Based on these analyses, the last part of the course will discuss optimal design of financial regulation on banking systems. This course will also discuss topics such as recent developments in shadow banking and digital currencies.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON110**

ECON251 Economics of Alexander Hamilton's America

What was Alexander Hamilton's contribution to the early American republic? This course combines concepts and models from introductory economics with a mix of primary sources and modern-day scholarship. After a survey of the colonial American economy, we will focus on the role of economics in the American Revolution, the movement from the Articles of Confederation to the Constitution, and major economic policy debates of the early republic. Throughout, students will encounter the views and influence of the first U.S. Treasury Secretary, Alexander Hamilton. By the end of the course, students will be equipped to assess Hamilton's economic legacy.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON254 State and Economy in Industrial America, 1870--1940

This course considers the transformation of the political and economic institutions of the United States in the 70 years ending in 1940 and the revolution in political ideology that occurred alongside this transformation and helped bring it about. We begin by examining the growth of large corporations after 1870, the new techniques of management they called forth, and the antitrust movement that arose in response to them. We then turn to the many changes in American government brought by the Fourteenth Amendment, the granting of constitutional personality to business corporations, and the attempt of Progressives before World War I to analogize the administrative state to business firms and bring the newly developing techniques of management science to bear in politics and policy, an effort with profound effects on American life. Finally, the role played by war in these changes, the creation of the modern American economy in the 1920s, and the New Deal's attempt to adapt the nation's political and legal institutions to the economic and ideological realities of the 20th century are considered. Along the way, the course addresses a range of theoretical issues, including the contrast between markets and central planning as ways of organizing economic activity, the tension between the individual and the collective in complex societies, technocracy and social engineering, and the impact of war on economic and political institutions.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 or ECON110**

ECON255 Introduction to Open-Economy Macroeconomics

The course will explore current issues, models, and debates in the international finance and open-economy macroeconomics literature. Topics to be covered include international financial transactions and the determination of the current account balance, models of exchange-rate determination, monetary and fiscal policy in open economies, optimal currency areas, currency crises, and the international financial architecture. There may be scope for student input into the topics covered. Theoretical and empirical approaches will be explored.

ECON261 Latin American Economic Development-Macro

In this course, we try to understand the puzzle of differential economic development of Latin America as a region and its countries in particular. Our lens of analysis is employing economic tools but also draws on other disciplines such as history and sociology. The course covers a broad range of economics and introduces you to aspects of macroeconomics, microeconomics, international economics, labor and development economics. Initially, we will study different ways to measure development in Latin America. We will then begin our journey to identify reasons and causes for various development outcomes of the Latin American region and differential economic success and failure of specific countries. In the first half of the semester we will examine the historical background and endowments, policies of export-led growth and import-substitution, the debt crisis and the subsequent stabilization. We will cover the financial crisis of the late 1990s and the early 2000s. Then we will turn our focus to the recent years and challenges to economics growth in Latin America and Latin American countries. Here, we will assess trade, investment climate, poverty, and inequality in the region. The situation and policies addressing the informal economy, education and health in Latin America will be discussed in detail. Thereafter, we will analyze gender and ethnicity in the context of Latin American development.

ECON263 China's Economic Transformation

China is a country that is both transitioning to a market-oriented economy and developing rapidly into a global economic power. As such, it has characteristics of both an emerging market economy and a developing country. China is large enough to create its own institutional infrastructure to support a third way between capitalism and socialism. This course examines in detail China's great economic transformation beginning in 1978 in what is often described as a "gradualist" transition to market economy. In the past three decades, the speed of China's development and its growth rates of GDP are without precedent in history. The course concludes by addressing the incompleteness of China's transition to a mature, developed market economy and by probing the issue of what is left to be done to create a harmonious society.

ECON268 Economic History of Latin America Since Bretton Woods

In most historical accounts, Latin America has been cited as an example of underdevelopment, institutional instability, and external dependence. However, these perspectives often oversimplify its complex political economy. This course aims to examine the key institutional and structural elements that have shaped Latin American economies. To begin, we will explore the response to the Great Depression, which influenced Latin American positions on the Bretton Woods agreements. In the second part, we will review the region's macroeconomic, financial, and institutional evolution during the Golden Age of capitalism (1950-1970), noting the divergence between agricultural and industrialized economies. In the third part, the course will cover the impact of the Latin American Lost Decade, characterized by debt and currency crises. Afterwards, we will study the stabilization period of the 1980s-1990s, known as the Washington Consensus. Finally, we will analyze the commodities boom period of the 2000s.

ECON270 International Economics

This class examines the economic interactions between countries in the world economy and recent international economic events. The first part of the course will focus on explaining trade patterns between countries and the gains and losses associated with international trade. Trade policies such as tariffs and the institutional arrangements governing them (e.g., the World Trade Organization) will also be analyzed. The second part of the course covers international finance topics including the balance of payments, exchange rates, and the history of the international monetary system. We will also discuss how international linkages

between countries affect economic development. Economics majors who want to be exposed to a more advanced treatment of international trade and international finance topics are encouraged to take ECON371 and/or ECON331.

ECON273 Economic Growth and Development in Sub-Saharan Africa

This course will focus on macroeconomic theories and practices of growth and development by using the Sub-Saharan African economies as case studies. The course will be both a retrospective and prospective analysis of the Sub-Saharan African economies. In particular, it will attempt to provide some answers to various questions such as:

What are the determinants of long-run growth? Why has Sub-Saharan Africa lagged behind the rest of the world in terms of economic growth and development? What are the economic explanations and implications of some of the conflicts in Sub-Saharan Africa? What are the long run growth implications of foreign aid, remittances, and immigration?

ECON281 Introduction to Game Theory

This course is a quantitative introduction to game theory and its applications to economics. This means the application of algebra and logic to solving formal models of strategic situations. Topics will include strategic and extensive form games, pure and mixed strategies, Nash equilibrium, subgame perfect equilibrium, games of incomplete information, formation of expectations, collective action games, evolutionary games, and the suitability of equilibrium concepts. Examples will be drawn from bargaining, auctions, market competition, employment markets, voting and collective choice, and other areas. In-class experiments as time permits.

Gen Ed Area: **SBS-ECON**

Prereq: **ECON101 OR ECON110**

ECON300 Introductory Econometrics

This course is an introduction to econometric techniques widely used by economists. The weekly lab sections are required; labs explore issues relating to the nature and sources of economics data and introduce appropriate statistical computing tools. This class will meet three times each week: twice with an economics professor, and once with a Quantitative Analysis Center (QAC) instructor.

Offering: **Host**

Grading: **A-F**

Credits: **1.50**Gen Ed Area: **SBS-ECON**Prereq: **ECON110 AND (ECON103 OR PSYCH200 OR MATH 132)****ECON301 Microeconomic Analysis**

This course develops the analytical tools of microeconomic theory; studies market equilibrium under conditions of perfect and imperfect competition; and considers welfare economics.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON300****ECON302 Macroeconomic Analysis**

This course focuses on the study of economic aggregates such as employment and inflation and on the public policies (monetary and fiscal) aimed at controlling these aggregates. The first half of the course will concentrate on short-run issues: aggregate demand and supply in closed and open economies, business cycles, and stabilization policies. The second half of the course will focus on long-run issues: economic growth and microfoundations of unemployment and consumption. Upon completion of this course, students should be capable of an informed analysis of recent macroeconomic debates and should be prepared for upper-level electives on a variety of macroeconomic subjects.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON300****ECON306 Economics of Education**

This course introduces the application of economic analysis to education policy. The theoretical basis for private and public investment in education is examined. Additionally, the tools of empirical analysis are used to evaluate research. Topics covered include the returns to education, the importance of school resources, teacher labor market, school financing, school choice, and accountability among other education economics topics.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON301****ECON308 Healthcare Economics**

In this course, we examine the United States healthcare system in some detail, with some attention to useful international comparisons. We will start with the questions: What makes healthcare provision different from that of other goods and services? And How are these differences reflected in the structure of the healthcare industry in the United States? We will use our new understanding of the U.S. health system to evaluate various reforms that have been proposed. Other questions that we will address include, What is health? How is it measured and valued? What do we get for the money that we spend on health care? And How do we decide whether what we get is a "good value" or not?

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON301****ECON310 Economics of the Environment and Climate**

This course introduces environmental economics: we begin with the theory, including cost-benefit analysis, externalities, and concepts of economic efficiency that combine standard economic consumption with environmental benefits. We then turn to practical applications of the theory to policy questions: for example, in the contexts of air and water pollution, energy use, the economics

of the climate, and sustainability. These topics will be treated mathematically using formal economic models and also acknowledge that the field is heavily influenced by the natural sciences and policy constraints.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-ECON**Identical With: **ENVS312**Prereq: **ECON301****ECON311 Behavioral Economics**

This course is an advanced undergraduate treatment of behavioral economics. Behavioral economics is the study of human behavior that falls outside of the standard model of perfect rationality, pure selfishness, and exponential discounting. The objectives of this course include the following: (1) review the standard economic model; (2) show empirical evidence (both experimental and observational) that deviates from the standard model; (3) discover new models of decision making that better explain behavior in certain areas; and (4) learn about best practices in data collection and analysis. Course work will include readings of economics research papers as well as textbooks, along with problem sets with both theoretical and empirical aspects. Students will participate in classroom experiments and, as part of a final project, will write a behavioral economics research proposal.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON300 AND ECON301****ECON314 Comparative Economics of Child and Family Policy in Postindustrial Countries**

This course uses tools of economic analysis and measures of child well-being to make cross-country comparisons of policies and outcomes. Children rank high on the list of a country's most valuable resources. Yet equally rich nations differ dramatically in funding investments for children and providing support for the people who raise them. These differences in investment persist despite a growing body of research that shows costly negative consequences for early child development of both absolute and relative deprivation. With these observations in mind, this course investigates the following questions: Why do equally wealthy nations differ so profoundly when evaluated by these fundamental indicators of economic success? What factors and policies explain the differences? What are the economic consequences? How might the research on international comparisons inform the construction of more successful child and family policy?

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **(ECON300 AND ECON301) OR (ECON300 AND ECON302)****ECON315 Labor Economics**

This course will survey the economics of labor markets with a focus on the determinants of labor supply and labor demand. Other topics will include the returns to education, globalization, automation, pay gaps, and the minimum wage.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON300 AND ECON301****ECON316 Urban Economics**

This course uses economic methods and perspectives to analyze urban issues. The first half of the course has a more theoretical focus; the second half, a more applied and empirical focus. Topics covered include how and why cities arise and

develop and how their growth or decline is affected by various events. Policy areas studied in the second half of the course include regional development and zoning, housing programs and regulations, antipoverty programs, local public finance, development of transportation systems, education, and crime.

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON301**

ECON319 Low-wage Labor Markets - A Data-driven Exploration

This course is a data-driven exploration of low-wage labor markets providing students with the skills to work independently on a major project of their own design. In the first half of the course, students will be introduced to several data sets including the Panel Survey of Income Dynamics, the Current Population Survey, and the National Longitudinal Studies of Young Men and Women. During that time, students will also be introduced to useful resources for exploring research topics and will begin to craft research questions. In the second half of the course, students will design and complete their own research papers using the data sets and research resources introduced in the first half of the course.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON301 OR ECON302**

ECON321 Industrial Organization

This seminar focuses on game-theoretic and empirical research in several topic areas: extensions to the model of perfect competition, investment and preemption, network effects, and vertical interaction.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON301**

ECON322 Public Finance

This course analyzes the government's influence on economic efficiency, resource allocation, income distribution, and economic growth. The course covers government spending, regulation, and tax policy. Concepts discussed include tax incidence, public goods, market imperfections, and externalities.

Reference is made to issues of health care and environmental issues, welfare reform, the U.S. tax system, the federal budget, and the Congressional budget process.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON301**

ECON323 Media Economics

This course covers the economics of entertainment and news both in their traditional forms (newspapers, magazines, radio, television) and their social media manifestations (social networks, media sharing, discussion forums, blogging). It uses economic analysis to understand the structure of media industries, the characteristics of media products, the effects of regulation in media markets, and changes brought about by digital technology.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON300 AND ECON301**

ECON325 Law and Economics

This course examines the efficacy of alternative legal arrangements using microeconomics as the basic investigative tool. The core of the course consists of a thorough analysis of the common law, with emphasis on the areas of tort, contract, property, and criminal law.

To analyze tort law, a microeconomic model of accidents is developed; using this model, the rules of caveat emptor, strict liability, negligence, and contributory negligence are compared for determination of causation, damages, activity levels, and accident risk. With a discussion on product liability, we will shift the topic to contract law, in which we will study the contracting process as well as the rational conditions for breach of contracts. Viewing the relationship between the government and its people as a social contract, we will study cases of eminent domain and discuss whether the government performs land acquisitions with "just compensation." Lastly, we will analyze criminal law under a framework assuming that crime is a rational act (in some contexts). If time permits, we will study how different cost allocation rules influence litigation and settlement.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON301**

ECON326 Empirical Political Economy

This upper-level elective brings politics and political institutions into economics. In standard micro and macro classes, politics are absent from agents' decisions. In this class, we will study how states emerge, how dictators manage to remain in power, why countries democratize and what are the benefits of democratization, how electoral institutions affect policy outcomes, why people vote, what motivates politicians, and why groups engage in costly conflicts and war.

By the end of this course you should have gained a deeper understanding of political processes both in the developed world and in developing countries, and how important it is to think about political power to understand economic policy. In terms of methodology, we will focus on empirical approaches and on how to critically read and understand academic articles in the field.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**Prereq: **ECON301****ECON327 The Global Firm: A Calderwood Public Writing Seminar**

Students will combine their knowledge of economics, including macro, micro, and quantitative methodologies, with their skills at exposition in a journalistic format, in order to address current economic issues related to firm-level decisions (e.g., where to locate production) and the economic consequences of these decisions at home and abroad for different shareholders. Students will conduct independent research to produce weekly articles. Assignments may include coverage of journal articles, book reviews, and interviews with academic economists. Class sessions will be organized as workshops devoted to critiquing the economic content of student work.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON301 OR ECON302****ECON328 Investment Finance**

This course explores theoretical and empirical aspects of investment finance. Topics include portfolio theory, portfolio evaluation, and asset pricing models for equities, bonds, and options.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON301****ECON329 Corporate Finance**

The course aims to develop an understanding of the applications of the principles of economics to the study of financial markets, instruments, and regulations. The objective is to provide an understanding of the theory of corporate finance and how it applies to the real world. Students will work with financial data and case studies to explore the potential and limitations of financial theory in dealing with real-world problems.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON301****ECON330 The Multinational Enterprise**

An examination of the economic consequences of the globalization of markets and industries will be used as the foundation for discussion of firm-level responses, focusing on foreign direct investment and corporate strategy.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON302 OR ECON301****ECON331 Open-Economy Macroeconomics**

This course will consist of three broad modules all relating to international finance/open-economy macroeconomics. First, we begin by a discussion of national income accounting, and we will discuss concepts such as the balance of payments, current account, financial and capital accounts, and their interrelations. Second, we discuss how exchange rates are determined, and their role in shaping countries' macroeconomic trajectories. We will cover important concepts such as interest rate parity, purchasing power parity, and real exchange rates. Third, we will apply what we learned to discuss topics such as fixed versus flexible exchange rate regimes, how the international monetary system works and its history, optimum currency areas and the eurozone, and other relevant case studies.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON302****ECON332 Economics of Firms, Market Power, and Competition**

In this course, we study firm decision-making by exploring the fundamentals of demand and identifying categories of costs that firms must consider like pricing, exit, or market entry. We learn about market power, antitrust, and how the interplay between cost and demand fundamentals of various industries (e.g., healthcare, fintech/blockchain, social media, retail, fine arts, entertainment, and financial services to name a few) determines profit-maximizing decisions for firms. Lastly, we will explore strategic interactions between firms by way of games and "tactics." Specific, industrial organization frameworks such as holdouts, switch costs, multi-sided markets, network effects, and economies of scope will assist in deciphering firm behavior. Case studies will be used to sharpen and reinforce the principles of the course.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON 110****ECON333 Financial Intermediation and Crises**

This course applies economic theory to understand the functions and fragility of financial intermediation. The main focus of this course is to learn theoretical models of strategic interactions among economic agents to examine the causes and amplification mechanisms of banking crises. Through the lens of the models, we will discuss how to interpret the recent episodes of banking crises. We will then use the models to evaluate the effectiveness of various government policies in decreasing fragility. These concepts apply not only to traditional depository institutions but also to shadow banks and digitization.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON301****ECON341 Money, Banking, and Financial Markets**

This course applies macroeconomic theory and econometric tools to selected topics in money, banking, and financial markets. The course will cover monetary policy, financial crisis, financial regulation, and the role of financial development in economic growth. Students will replicate the key empirical results in the literature throughout the semester and, toward the end of the semester, write an empirical paper of their own. Proficiency in statistical softwares (e.g., Eviews or Stata) is required.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-ECON**Prereq: **ECON302****ECON347 Transmission Mechanisms of Monetary Policy**

This course applies macroeconomic theory and econometric tools to evaluate the empirical evidence on the timing and effect of monetary policy decisions on the economy. The course will explore several transmission channels of monetary policy, such as the interest rate, asset price, credit, and unconventional channels. Students will read about and evaluate key empirical results in the current literature throughout the semester and, toward the end of the semester, write a research paper of their own.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-ECON**

Prereq: **ECON300 AND ECON302**

ECON348 Equilibrium Macroeconomics

Since the 1970s, macroeconomics has witnessed a methodological shift away from models based on relationships among aggregate variables in favor of models based on optimizing individual behavior in multiperiod settings. This course will develop skills and introduce concepts and techniques necessary to understand these models. Likely topics include the Solow growth model, dynamic consumption theory, the equity-premium puzzle, and real-business-cycle theory. This course introduces some graduate-level material and makes intensive use of mathematics.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON302**

ECON349 Economic Growth

This course examines the causes and consequences of cross-country differences in economic performance. We will investigate why some nations are much wealthier than others. Using the neoclassical growth model as a starting point, we will explore the fundamental determinants of per-capita income and growth. In addition to the use of a standard textbook, we will work through a number of journal articles and policy papers to obtain a deeper understanding of the long-run drivers of economic development. Over the course of the semester, we will discuss numerous controversial issues with regard to economic growth. Examples include the importance of openness for the development process as well as the long-run impacts of colonialism.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON302**

ECON351 Introduction to Income and Wealth Inequality: Theory and Empirics

This course is an introduction to the research on income and wealth inequality. The first part of the course presents the main statistical and mathematical concepts applied to the study of income and wealth distribution. In the second part, we will deal with the conceptualization of income distribution from the time of the pre-classical and classical political economists (Petty, Quesnay, Ricardo, Marx) to the 20th-century economists (Pareto, Kuznets, Atkinson, Taylor, Milanovic, Piketty). In the third part, we will explore the methods for reconstructing income and wealth data and the main results exposed in several databases such as the World Inequality Database (WID), the LIS Database, and the Estimated Household Income Inequality Data Set (EHII). Finally, we will discuss the literature on the determinants and consequences of income and wealth inequality from a critical perspective. That literature review includes discussions about race, gender, class, and global inequality.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON300 AND ECON301 AND ECON302**

ECON352 Political Economy

This course introduces the tools of rational-choice and evolutionary game theory and applies them to the study of social interactions with both political and economic elements. This study concerns the distinction between public and private elements of social life. Topics covered include the economics of lawlessness and the emergence of property rights, the economic nature of the state, effects of political structure on economic development, and the economic determinants of democracy and dictatorship.

Offering: **Host**

Grading: **A-F**

ECON353 American Economic History

This course focuses on 19th- and 20th-century U.S. economic history. The course emphasizes the application of economic tools to the analysis of U.S. history. In addition, it aims to provide students with a sense of the historical dynamics that have shaped the contemporary economic system. Rather than providing a general survey of the economic history of the entire period, the course will focus on topics including cyclical fluctuations, the evolution of the monetary and financial systems, immigration, labor markets, and the role of government policy.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **(ECON300 AND ECON301) OR (ECON300 AND ECON302)**

ECON354 Institutions

Neoclassical economic theory has relatively little to say about the problem of economic organization, how the economic activity of individuals is structured and governed by a complex network of social institutions that includes the law of property and liability, informal codes of morality and fair dealing, and formal organizations. This course attempts to address this imbalance by examining the origins and historical development of two of the most important of these institutions, firms and states. Why do firms and states exist? What functions do they perform in economic systems? How do they arise, and how do they change over time? In considering these questions, students will be introduced to several contemporary alternatives to neoclassical analysis, including the institutional, Austrian, public-choice, and constitutional approaches to the problem of economic organization. All of these traditions have both a rich history and an active research community, and readings will include both classic texts and modern scholarship in each of them.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-ECON**

Prereq: **ECON301**

ECON356 American Macroeconomic Policy

What can history teach us about macroeconomic policy? This course will use American macroeconomic history from 1870 to the present to explore key issues in macroeconomic policy which remain relevant today. We will both extend the theoretical frameworks presented in ECON302 and delve into the empirical literature on both historical and contemporary monetary and fiscal policy. Students will produce an original, independent research paper on a topic relating to macroeconomics. Previous completion of or concurrent enrollment in ECON385 is useful though not required.

ECON361 Latin American Economic Development-Micro

This upper-level elective course will look specifically at the literature of labor markets and related human capital accumulation, mostly in the context of Latin America, which has emerged as an entirely separate area of research in recent years. Readings about other regions will be used to better develop a framework for studies of Latin America. In this course, students will read recent economic research papers, drawing on journal articles and policy papers in this area, and discuss the theoretical and empirical results from research and its implication for economic policy. Students are expected to actively present and discuss them and work on individual or group projects, and also have to produce their own research paper. Basic quantitative methods will be taught throughout the course, relating to the economic research papers, and the course will also draw on the resources provided by the Quantitative Analysis Center (QAC).

Offering: **Host**

ECON371 International Trade

This course examines the causes and consequences of cross-border flows of goods and services. We will investigate various theories of international trade and discuss the empirical validity of their predictions. Particular emphasis will also be placed on the motives for countries to restrict or regulate trade and the institutional arrangements governing the world trading system. Moreover, we will discuss how trade between countries can shape economic development. Over the course of the semester, we will also address numerous controversial issues with regard to international trade. Examples include the impact of trade on the environment, labor standards, wages, jobs, and inequality.

Prereq: **ECON301**

ECON380 Mathematical Economics

The uses of mathematical argument in extending the range, depth, and precision of economic analysis are explored. The central goal of the course is to promote sophistication in translating the logic of economic problems into tractable and fruitful mathematical models. Particular attention is paid to the analysis of optimization and strategic interaction.

ECON381 Advanced Game Theory

This course is a quantitative introduction to game theory. This means the application of algebra and logic to solving formal models of strategic situations. Topics will include dominance and rationality, pure and mixed strategies, Nash equilibrium, collective action problems, subgame perfect equilibrium, strategic moves, credibility, repeated interactions, asymmetrical information, adverse selection, signaling, and the suitability of equilibrium concepts. Wide applications of game theory in everyday life, economics, politics, international relations, management, sociology, and sports will be discussed in class.

Prereq: **(ECON301 OR ECON302) AND (MATH221 OR MATH223 OR QAC220)**

ECON386 Introduction to Forecasting in Economics and Finance

This course is an introduction to forecasting widely used by economists; forecasts are constantly made in business, finance, economics, government, and many other fields, and they guide many important decisions. The course focuses on core modeling and forecasting methods that are very widely applicable. We first introduce several fundamental issues relevant to any forecasting exercise, and then treats the construction, use, and evaluation of modern forecasting models.

Students work on individual research projects and learn how to build and use forecasting models.

EDUCATION STUDIES (EDST)

EDST101 Introduction to Education Studies

This seminar will provide a space for newly declared education studies majors and minors to come together and develop as a cohort through learning about each other's educational backgrounds and scholarly interests. In addition, students will learn more about the areas of research and pedagogy being implemented by the Wesleyan faculty in education studies and build rapport with faculty members. The course content will cover the areas defined in

the education studies major—including human development and learning; pedagogy; social, cultural, historical, and philosophical disciplines in education; transformative justice in education; methodologies in the study of education, including qualitative and quantitative; and the connection and tension between academic coursework and practical experiences in educational settings—and will introduce students to additional approaches and subfields.

Course components will include cohort-building activities to introduce the newly declared majors to each other and their educational backgrounds; collaborative reading and discussion of work taking place at Wesleyan and being studied by faculty in education studies; creating a space to discuss and read further about talks by visiting speakers, colloquia, or other events in the College of Education Studies; guest teaching by EDST and outside faculty; and a reflection paper on the path they plan to pursue through the major/minor.

Gen Ed Area: **SBS-EDST**

Prereq: **None**

EDST110F Writing about Teaching: An Exploration of American Educational Ideals through Writing and Film (FYS)

This seminar explores conceptions of teaching and learning through examination of fictional, ethnographic, and documentary accounts of teachers and their work. We will examine the portrayal of teaching in literature, creative nonfiction, journalism, and scholarly field research, as well as in film. What do these forms of representation tell us about cultural perceptions of schooling, teaching, and learning in the 20th and 21st century? What can we learn from close analysis of the ways in which authors use words and images to portray teachers and students? Participants in this seminar will have the opportunity to reflect upon their own perceptions of teaching and learning, to ground those perceptions in a philosophy of education, and to explore the ways in which writing well about teaching, from many disciplinary perspectives, can impact the profession and our understanding of the enterprise of teaching and learning. Students will practice a variety of modes of writing (critical and analytical essays; personal essays; creative writing; brief ethnography and Lightfoot's social science "portraiture" method) and analysis of both writing and film, as well as visual thinking strategies and techniques for observing and documenting cultures of learning.

EDST114F Why You Can't Write (FYS)

Institutions of higher education have required first-year students to take writing courses for well over a century. In doing so, they have made it clear that educational and professional success are deeply tied to writing skills. But why is this? This class asks what it means to teach students how to write by probing seemingly stable concepts and practices like language and communication. We will discuss the history of writing studies in higher education before taking up debates over literacy, language standardization, education as imperialism and colonialism, theories of writing instruction, assignment design, and assessment practices. In addition to introducing students to the field of composition, rhetoric, and writing studies, so, too, will this course center the practice of writing. As such, students can expect to write, revise, and comment on classmates' writing regularly. Assignments will include a personal literacy narrative, response papers, weekly journals, and creative projects like assignment and rubric design.

EDST116F Bad Ideas About Writing: Introduction to Writing Studies

Writing can be a divisive subject. Some people love writing poetry, fantasy, or romance in their free time but start biting their nails at the mention of an assigned writing project in class. Many have grown up hearing their writing is not good enough, that they need to "learn proper English," or that they "can't say that" in a school paper. *Bad Ideas About Writing: An Introduction to Writing Studies* provides a venue for reflection on writing education and personal literacy. We will analyze attitudes and practices around writing that stem from cultural movements and systemic discrimination. Additionally, students can expect to participate in peer review sessions to develop skills in giving and receiving feedback. This course is ideal for students interested in writing/literacy education as well as those who seek a better understanding of the process and theory of writing to benefit their own practice.

EDST140L Teaching English to Speakers of Other Languages

This course explores theories and teaching methods related to learning English as a second language (ESL). Students will critically examine current and past "best practices" for teaching ESL and the seminal theories they are based on. In addition, we will discuss the various needs of English language learners coming from a variety of social and cultural backgrounds, at varying levels and varying ages. As a service-learning course, students will have the opportunity to actively work with ESL students at SAWA, a refugee organization, or Beman Middle School. They will be asked to apply the theories and pedagogical techniques they are learning to their sessions at the school and reflect on their experience. They will also critique ESL textbooks, give teaching demonstrations, and add resources to the Wesleyan English Language Learners (ELL) Program.

EDST201 Writing Theory and Practice

Writing is central to education in the U.S., but how does someone learn to write? In this course, students will consider this question by reading theories of composition, debating key concepts of writing such as reflection, transfer, and translanguaging, as well as discussing scholarship out of cultural studies, literacy studies, genre studies, technical and professional writing, and public writing. Together we will explore the potential of writing education, carefully considering how we, as educators, can foster just and innovative writing education. As we read about writing instruction, literacy, and assessment, students will be expected to bring scholarship in dialogue with lived experience. To do so, they will engage in a number of praxis-based assignments, including group work to develop assignments, assessment practices, and curricular recommendations. The course will culminate in a final project of each students' design, that tackles the practicalities of teaching writing.

EDST202 Pedagogy for Teaching English to Speakers of Other Languages Tutors

This course offers an introduction to pedagogical techniques and theories for teaching English to Speakers of Other Languages (TESOL). The class is ideal for students considering a career in K-12 education, as the number of students whose first language is not English is rising in the US every year. Students enrolled in this course will gain practical experience by committing to volunteer with an organization working with English Language Learners (options will be provided). They are encouraged, but not required, to continue their service afterward with the Wes ELL Program. There is a volunteering commitment of two hours/week, or 20 hours a semester, minimum during the semester.

EDST204 Teaching Spanish K-12: Second Language Pedagogy (CLAC 0.5)

This is a community engagement course in which students learn basic principles of language pedagogy and language acquisition to inform their teaching of Spanish to children at one of the Middletown public schools. Readings in English and Spanish; class discussion and assignments in Spanish. Students will familiarize themselves with characteristics of second language (L2) learning and teaching, a basic know-how on analyzing and preparing materials for language learning/teaching, and L2 teaching as a profession.

Language and course requirement: Students must have recently taken a SPAN course numbered 221 or above. Preference will be given to EDST and HISP majors, as well as juniors and seniors.

EDST205 English Language Learners and US Language Policy

This course explores how explicit and implicit language policies in institutions of power affect businesses, schools, and the legal system. More specifically, the course investigates how language choices, translations, and the policies regarding both affect ESL programs in K-12 education, bilingual businesses, immigration policies, and the US legal system. We will also discuss the recommendations of scholars for increasing multilingualism in business and education, improving education for English-language learners, and efforts to improve non-native English speakers' ability to navigate the legal system. The course is recommended for non-native speakers of English and anyone

considering working with English-language learners such as teachers, tutors, NGO personnel, and legal or business professionals.

EDST207 Philosophy of Education

This course will explore central questions of philosophy of education such as: What does human flourishing entail? What is knowledge, how does it differ from belief, and how do we gain it? What is learning and what conditions make learning possible? What constitutes a teacher and what role should a teacher have? What should be learned and who should decide? What are the highest and most important aims of education? What does it mean for an education to be liberatory? What kind of education is needed in a democracy? We will seek perspectives from philosophers from traditions including transcendentalism, pragmatism, existentialism and critical theory, and class participants will be invited to articulate their own philosophies of education and to reflect on their educational experiences, placing them in conversation with our course readings. This course fulfills the Category 2 requirement for the Education Studies Major and Minor.

EDST209F Religion, Science, and Empire: Crucible of a Globalized World (FYS)

The development of modern science--and of modernity itself--not only coincided with the rise of European imperialism: it was abetted by it. Meanwhile, religion was integral to both the roots of European science and Western encounters with others. This class will explore how the intersections of religion, science, and empire have formed a globalized world with examples of European engagement with the Americas, Middle East, and, particularly, India from the age of Columbus through to the space race. We will examine how the disciplines we know today as biology, anthropology, archaeology, folklore, and the history of religions all crystallized in the crucible of imperial encounter and how non-Westerners have embraced, engaged, and resisted these epistemes.

EDST210 Educational Gaming Lab: Project-Based, Game-Based Pedagogy Approaches

In the past two decades, crowdfunding and renewed interest in games--board games, role-playing games, digital games, and instructional games--have created an increased and diverse gaming production, which has become the subject of several studies, articles, and projects related to all areas of education, from hard sciences to language learning and the arts. In an effort to explore how a game-informed pedagogy can work in various types of courses and to highlight analog and/or digital gaming approaches that have worked inside and outside the language classroom, this course will explore the basics of game-based learning (GBL) and discuss how games of all kinds can inform pedagogical discussions and the creation of learning materials.

Educational Gaming Lab is designed as a project-based gaming laboratory that will focus on why and how analog games can be effective tools for pedagogy. Examples will include board games, tabletop role-playing games, escape games, and puzzles. Participants will discuss the application of gaming principles to various subjects and types of classrooms; then, they will engage in a final project in which they will either adapt existing games for specific learning outcomes or create brand new educational games. The course will be conducted in English and games will be created in English.

EDST211Z Understanding Inequality: Psychological and Educational Perspectives

This class focuses on recent work by psychologists, economists, and education researchers examining the effects of growing inequality on our collective mental health and on the school-related performance of children in particular. One class theme is that U.S. economic inequality has grown substantially in the past few decades, so that we now have one of the highest levels of inequality of any advanced industrialized country in the world. A second key theme is how few Americans are aware of the extent of these changes and their effects on the well-being of children and adults. The course also focuses on the nature of the "American Dream" and how distorted perceptions of social mobility affect many Americans' concerns about inequality. The overall class concentrates on how these economic realities and related psychological misperceptions have combined to create a cascade of negative psychosocial and educational consequences, ranging from "deaths of despair" in adults, to increased mental health issues in children, to the growing polarization of educational opportunities and outcomes at all ages. Among the topics that will be covered are: the growth of wealth and income inequality in U.S. (including comparisons with other advanced, industrialized countries); psychological research on how people perceive and misperceive inequality; the moral nature of inequality in relation to thinking about distributive justice; the psychological literature on the consequences of inequality; and, finally, the limitations of a meritocracy for addressing these consequences. This course fulfills the Category 1 requirement for the Education Studies Major and Minor, and an elective credit for the Psychology Major.

EDST213Z Introduction to Social Justice Education

What is social justice? What are the origins and theoretical foundations of social justice education? What are effective methods of teaching social justice? This course will provide a space for students to learn about liberatory methods for teaching and practicing social justice while interrogating the historical discourses that have shaped social justice education. The first half of the course will focus on understanding the history and theoretical underpinnings of social justice education. In this section, we will focus on liberation philosophy, critical pedagogy, feminist theory, postcolonial theory, intercultural communication theories, queer theory, indigenous studies, and disability studies.

The second half of the course will focus on contemporary practices and perspectives related to social justice education with a particular focus on liberatory, dialogic, and nonviolent approaches to social change. The coursework will involve reflection essays on class lectures and readings as well as intergroup dialogue and group activities that will encourage students to examine their own connection to the theoretical concepts presented in the lectures and homework assignments. The culminating project/final will be a research paper wherein students will explore one aspect of their own educational journey and connect it to the course content. Students will be provided a course pack for this class with all required reading materials.

EDST221 Decolonizing Education

Who determines what is true and worth knowing? How has the construction of knowledge and academic traditions from across the globe been impacted by such phenomena as (post)modernity, (neo)colonialism, and (neo)liberalism? Why do any of the questions above matter to your own personal history, beliefs, and identity? This course will provide a space for students to critically examine the history and development of the discourses that have shaped their educational experiences and their understanding of the purpose of education. The first half of the course will focus on texts and assignments that interrogate how some of our modern epistemological discourses were formed and maintained through the lens of postcolonial studies and critical educational studies.

The second half of the course will center on ways people have worked within these dominant modes of thought to resist hegemonic modern discourses that privilege logical positivism, quantification, objectivism, and Western European histories and ideologies above all else. This course will involve reflection essays on weekly readings, intergroup dialogue, and activities that will encourage students to examine their own connection to the theoretical concepts presented in class. The culminating project/final will be a scholarly personal narrative wherein students will synthesize both what they learned about themselves and the content that was presented during the course.

EDST223 Second Language Acquisition and Teaching

This course introduces students to the field of Second Language Acquisition (SLA) and addresses the following questions: How do humans learn additional languages after they have acquired their first? Why is there such variability observed in the rates and outcomes of second language learning? Is it possible to attain native(-like) linguistic competence in another language?

We begin with the theories and applications of SLA, and then examine major pedagogical movements in Second Language Teaching in the U.S. Students will develop the ability to critically assess current methods, materials, and techniques for teaching various language skills and will produce their own pedagogical activities to be used in a classroom setting. Students of French and Spanish may also wish to enroll in RL&L 223L, a 0.5 credit service learning course in which students volunteer in the Middletown Public Schools.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-RLAN**

Identical With: **RL&L223**

EDST223L Second Language Acquisition & Pedagogy - Teaching Romance Languages

How do humans learn additional languages after they have acquired their first? Why is there such variability observed in the rates and outcomes of second language learning? Is it possible to attain native(-like) linguistic competence in another language? This course is intended for students who may be considering a career in education. We begin with the theories and applications of SLA, and

then examine major pedagogical movements in Second Language Teaching in the U.S. Students will develop the ability to critically assess current methods, materials, and techniques for teaching various language skills and will produce their own pedagogical activities to be used in a classroom setting.

In this service-learning course, students are required to volunteer a minimum of two hours per week in the Middletown Public Schools, assisting French, Italian, and Spanish teachers in their world language classes. Students will write weekly journal entries reflecting on their classroom experience, and will learn to evaluate, adapt, and create pedagogical materials. By the end of the semester, they will have created a portfolio of activities that can be used in a foreign language classroom.

EDST224 History & Current Forces Shaping Special Education

In the course History & Current Forces Shaping Special Education, students will critically examine how social/political forces and varying conceptions of disability have shaped special education in the United States over time. Course themes include the historical and legal context of the education of students with disabilities within public schools, the contested nature of disability labels and its effect on pedagogical methods, the racialization of high incidence disabilities in schools, and the lived experiences of students living and learning with disabilities. Students will engage in readings, film viewings, lectures, discussions, and other activities to promote their understanding of the course content. Students will complete two major assignments--an analysis of an education policy or case and its effects on students or special education processes and an in-depth interview with an individual associated with a special education program. This course is intended to prepare students to critically examine past and present special education policy and processes while imagining the possibility of what such supports could do for students in schools.

EDST225Z Education and Empire

Wherever the U.S. has sought to gain or maintain control, whether by way of enslavement, forced assimilation, settler colonialism, or military occupation and imperialist rule abroad, education has played an all-too-often-overlooked supporting role. Yet wherever this is true, there are also people who have used education as a means of resistance, rebellion, revolution, and liberation. This course offers an introduction to the transnational history of education in relation to the development of U.S. empire both at home and abroad. By bringing together topics often approached separately--like immigration, pedagogy, settler colonialism, African American history, and the history of the U.S. empire--we will interrogate the ways that education has been mobilized to deploy power: controlling knowledge, categorizing and policing difference, administering unequal paths to citizenship/belonging, forcing assimilation, promoting socioeconomic divides, and asserting discipline and control. Topics to be covered include American Indian education and self-determination, African American education in slavery and freedom, U.S. colonial education in the Philippines/Cuba/Puerto Rico, immigration and forced Americanization schooling, Latinx fights for educational access and autonomy, State Department experiments in educational diplomacy, and knowledge production for national security and the war on terror. Throughout, we will draw links between the past

and the present and between the classroom and geopolitics. Together, we will ask what it might mean to "decolonize" or "indigenize" education today and work on developing the ability to imagine otherwise.

EDST226 Contemporary Literacy: What Does It Mean to Be Literate in the 21st Century?

What does it mean to be literate in the 21st century? Through this course, students will delve into the process of literacy development and explore the implications of our global technological society for literacy development and literacy education. Topical explorations will include the cognitive and neuroscientific development of literacy, adolescent literacy considerations, media and digital literacy, and the potential effects of an ever-increasing digital society on literacy abilities and functions. Critical literacies, including critical media literacy, will be explored as a special topic.

Students will embark on an investigation into the abilities of American schools and educational media developers to meet dynamic, contemporary literacy demands by evaluating multiple forms of literacy tools aimed at children and teens. The course will also provide a discussion of research standards in the field of literacy and encourage critical evaluation of empirical research.

EDST232 Italy at School: Biography of a Nation

Soon after the unification of Italy (1861), the Coppino Law extended primary school to five years, making it free of charge and mandatory for its first three years (1877). Edmondo De Amicis would subsequently depict these reforms in his best-selling novel *Cuore* (1886), a text that introduced some enduring features of school narratives but also many stereotypes, thus attracting constant criticism and inspiring several parodies of its moralistic underpinnings. Ever since then school narratives have become a key component of Italian culture, creating a genre that has thrived especially in the last three decades, with a number of both

fiction and nonfiction books published by teacher-writers who have reflected on their experience.

In this course we will study Italy from the perspective of these texts about school that often originated within school walls themselves. In so doing, we will reconstruct the history of a relatively young country, Italy, through the institution that, like no other, has been given the responsibility of "making Italians." At the same time we will question the image of Italian society that school narratives have, intentionally or not, contributed to portraying. In addition to reading Lucio Mastronardi's *Il maestro di Vigevano* (1962), we will focus on a wide range of materials, including novels, memoirs, poems, popular songs, films, and works of art that, even in the absence of a unanimously acclaimed "classic" of the genre, have shaped the Italian collective imaginary. Materials will be organized around five poles that have been quintessential to the debate on school in Italy across politics and culture: characters (teachers and students, obviously, but also colleagues, classmates, and families), labor and working conditions (including themes such as precarious work, class conflict, labor rights), gender and identity (questioning traditional gender roles and discussing integration of migrants at school), places and geographies (addressing topics from school design to teaching in prisons, as well as center-periphery integration and north-south divide), and actions (both those of teachers and of students, such as obtaining a certification vs. passing a test, disciplining students vs. questioning teachers' authority, resigning from job vs. cutting classes). The course will be conducted in Italian.

EDST235 Globalization and Education

As we've seen with the COVID 19 pandemic and social movements against injustice such as the Movement for Black Lives and the movement for reproductive justice, our world is deeply interconnected in many ways, including socially, economically, culturally, technologically, and politically. The ways in which we understand who we are and our place(s) in the world are deeply informed by events, beliefs, narratives, and ideologies that circulate globally. Education has long been a space where these ideas and frameworks have been taken up, contested, and reimagined. In this course, we will draw on scholarship from a variety of disciplines, such as anthropology, sociology, political science, economics, and history, trace key theoretical frameworks and definitions of globalization, such as world culture theory and de/coloniality, and examine globalization's impacts on education around the world. We will also look at major global actors working in education, such as the World Bank, USAID, and UNESCO, and the ways they shape and impact education. The central question that we will grapple with is: How can understandings of the complex forms and impacts of globalization help us track and make sense of our experiences and ideas about what education is and what it could be? This course is a prerequisite for Theory and Methods in Comparative Education. It counts towards the Category 2 requirement of the Education Studies Major and/or Minor.

EDST237 Imperial Education: Colonial Template

Where, how, and for what reasons did our modern structures of education originate? Beginning with the sketching out of an educational model in the British Raj, we will examine the dissemination of that model globally, in the

British and French colonies of Asia, Africa, the Americas, and among immigrants and the proletariat. How and where does that model change, and to what effect? History will provide the context for our major subject matter: literature focussing on the educational experience. Among our historical and theoretical readings will be Macaulay's Minute on Indian Education, Viswanathan's *The Beginnings of English literary study in British India*, Wa Thiong'o's *Decolonizing the Mind*, Freire's *Pedagogy of the Oppressed*, and José Martí's *On Education*. We will also analyze literary texts and films, including Narayan's *The English Teacher*, Beti's *Mission to Kala*, Dangarembga's *Nervous Conditions*, Adichie's *Purple Hibiscus*, the film *Sugar Cane Alley*, and others.

EDST240 Critical Youth Studies

This course will use sociocultural lenses to examine, unpack, and trouble traditional understandings of youth and adolescence—or how society determines, monitors, and polices how human beings move towards and then reach adulthood. We will use various critical theoretical frameworks to study the assumptions placed on young people by different institutions and systems and the ways those assumptions control how, where, and who young people are allowed to be. Such an exploration is vitally important for the study of education because so much time is spent thinking about what and how young people should learn without ever really considering how we learn what a "youth" is thought to be. This course seeks to let go of normative modes of approaching and understanding the idea of "development" to better appreciate the myriad of ways that young people experience the process of moving toward adulthood.

EDST241 Childhood in America

Probably the first literature we fall in love with, children's literature shapes individuals and cultures in profound ways, investing us with important mythologies and guiding our identities and behaviors. This course will examine fairy tales, some works from the "golden age" of children's stories, and some contemporary works. We will enrich our reading of the fiction with some of the central theorists of this genre, including Bruno Bettelheim, Jack Zipes, and Maria Tatar.

EDST245 Children's Educational Media: Historical, Psychological, and Pedagogical Perspectives

This course will focus on the evolution of children's educational media from multiple perspectives, including a psychological lens to analyze learning and social emotional development, a pedagogical lens to analyze media content and delivery, and a historical lens to situate educational media within the context of larger society and political trends. Content will also include an exploration of digital media development for children and adolescents, including applications and supportive educational technology through the lens of academic achievement and learning. Students will explore theories, commentaries, and empirical research surrounding children's media production, including an in-depth look at psychological and educational supports for children's media (parental mediation, co-viewing). The course will mainly focus on preschoolers to

late elementary students but will discuss the limited educational media intended for adolescents.

EDST250Z Zero to Infinity: The Psychology of Numbers

What are the origins of mathematical thinking, and why do some people become experts while others get nervous calculating a tip? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their intuitive understanding of numbers, geometry, and space to successfully navigate their environments. Yet, individual differences in math achievement emerge early in development and often persist throughout children's education. In this course we read and discuss both foundational and cutting-edge articles from cognitive science, education, and psychology to understand how mathematical thinking develops. We will also tackle questions such as: How do culture and varying social contexts affect numerical understanding? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? This class will involve a blend of synchronous class-time meetings and asynchronous work.

EDST251 Sociology of Knowledge

To map power-knowledge relationships, the sociology of knowledge grounds an analysis of knowledge in terms of social structures, the sets of patterned practices that define and give meaning to social life at individual, communal, and institutional levels. In the broadest sense, the sociology of knowledge is concerned with the relationship between the (epistemic) content and the social context of knowledge. How was knowledge produced and with what institutional resources? Who produced knowledge and why did they produce it? Who benefits from the circulation of knowledge? What effects in the world does knowledge engender? Our basic course objectives are to a) introduce sociology of knowledge as a form of critical inquiry, b) describe and distinguish the approaches and research methods associated with the sociology of knowledge, and c) learn how to analyze knowledge and knowledge-making practices in their social context using these methods.

EDST252Z School Systems Around the World: An Introduction to Comparative Education

Nearly every town across the entire planet has a local school. In what ways is the nature of formal schooling the same across vastly different cultural contexts and in what ways does it differ? What kinds of contextual factors (e.g., infrastructure, population size, location, political situation, etc.) influence the setup and approach to schooling in different contexts? In this course, we will examine school systems across a wide variety of cultural contexts and compare them in terms of their underlying philosophy of education, their different approaches to implementing education within their cultural context, and consider the ways in which educational systems around the world are compared (both appropriately and inappropriately).

Gen Ed Area: **SBS-EDST**

Prereq: **None**

EDST253 Educational Psychology

This course will focus on three major topics and how they relate to current educational policy debates. The first topic will be an examination of the fundamental purpose of school. We will discuss theoretical and empirical perspectives on why schools exist and ways in which school purpose varies by school type (e.g., public, private, charter) and location (e.g., by state and country). The second topic to be covered relates to the implementation of school mission. In this context, we will reflect on how theories of child development, student motivation, classroom management, and pedagogy inform instructional practice. Finally, the third major topic that will be covered is how to determine whether schools are achieving their stated goals. We will examine the appropriate (and inappropriate) uses of assessment for understanding whether students are learning, whether teachers are effective, and whether a school has a positive or negative climate.

EDST266 Language, Inequality and Education

This course explores the complexities of language use and policy in formal schooling, and interrogates the role of education as a site of both linguistic oppression and assimilation as well as linguistic revitalization and diversity. Drawing on research, theory, and practice from a variety of disciplines--such as anthropology, sociolinguistics, language policy and planning, and applied linguistics--we will explore issues such as language ideologies, language and identity, raciolinguistics, and educational language policies (e.g., bilingual education policies). We will also examine specific cases at the global, regional, country, and district level to better understand how micro-level language use, ideologies, and policies are linked to larger macro structures such as white supremacy, capitalism, and coloniality.

EDST267 Qualitative Methods in Education Research

This course serves as an introduction to qualitative research methods in education and related disciplines. Through readings, lectures, and class discussions, students will develop an understanding of the purposes, philosophical assumptions, applications, and limitations of qualitative research

for education-related inquiries. We will explore approaches to qualitative research, such as case study, ethnography, discourse analysis, and youth-led/participatory action research (YPAR/PAR). We will discuss what it means to conduct ethical research, how our backgrounds influence our observations of the world and what we learn from others, and how, if at all, qualitative research can inform education policy and practice. Students will have opportunities to practice qualitative research skills and become critical consumers of qualitative research.

This course fulfills the Category 3 requirement of the Education Studies Major and/or Minor.

Offering: **Host**

Grading: **OPT**

Gen Ed Area: **SBS-EDST**

Prereq: **None**

EDST275 Uses and Abuses of Education Research

The class will critically analyze how research has been utilized--for better or for worse--by scholars who study education, schooling, and young people. Instead of asking "How does one do research?" we will focus our inquiry on a broader set of questions about research within the field of Education Studies. Namely:

- What is research?
- Who does research and/or who gets researched?
- What does research produce?
- What is the relationship between research and knowledge? Research and truth? Research and power?
- How has research been done?
- Who has it traditionally served?
- And what does research do?

By asking these (and other) questions about what comprises "research," we will engage in unpacking how it is we see, observe, perceive, and analyze the educational worlds around us specifically through the lenses of race, gender, class, sexuality, Indigeneity, and ability. Because Education Studies is a field that investigates how and what we learn--and because research, put succinctly, deals with the production and reproduction of knowledges--studying research through the field of Education Studies allows us to study how we learn about knowledge itself.

EDST288 Teaching and Learning: Designing Opportunities for People to Think, Create, and Innovate

What impacts what we learn and how we learn it? Understanding sociological, psychological and cultural influences--as well as modern brain science--will dramatically affect how we design, plan for, and teach others about specific content and concepts. Written curriculum is the roadmap to learning and reflects the beliefs and values of the organization implementing it. Instruction is how that learning is delivered to the students. Curriculum and instruction--teaching and learning--are the cornerstones of what we learn and how we learn it. Many variables (e.g., language, culture, poverty, race, gender, etc.) impact an individual's ability to access and think deeply about the curriculum. This course will engage in inquiry about how people learn and what impacts their learning, as well as how we can effectively plan for and design learning that everyone can access, regardless of the variables that could potentially impact them.

EDST301 Senior Seminar in Education Studies

The senior seminar will provide a space for seniors in the education studies major, as a learning community, to reflect on and deepen their knowledge and understanding in core areas of education studies. Students will be expected to bring in relevant material from their other courses; to learn and discuss new material; and to work collaboratively to develop a grounding in the study of education individually and as a group. The course content will cover the areas defined in the education studies major, including human development and learning; pedagogy; social, cultural, historical, and philosophical disciplines in education; transformative justice in education; methodologies in the study of education, including ethnography and quantitative approaches. Discussions will explore the connection and tension between academic coursework and practical experiences in educational settings, and introduce students to additional approaches and subfields.

Course components will include: (1) bridging across different students' distinct experiences in their classes relevant to each content area; (2) collaborative reading and discussion of new work beyond the scope of the existing EDST courses; (3) creating a space to discuss and read further about talks by visiting speakers, colloquia, or other events in the College of Education Studies; (4) guest teaching by EDST and outside faculty; and (5) an independent senior project (for thesis writers, this can serve as a scaffold to make progress on the thesis).

EDST307 ELL Literacy Development

In 2021, in the state of Connecticut, approximately 14% of the K-12 population were English Language Learners (ELL) (<https://portal.ct.gov/-/media/SDE/Performance/Research-Library/EL-DEMOGRAPHICS-10012020.pdf>). This growing population includes students whose written languages vary considerably from English, students whose education has been interrupted due to the chaos of war and resettlement in the U.S., and students who have undiagnosed learning disabilities. This service-learning course focuses on an area of great need for this population -- English literacy. This course will offer students an opportunity to tutor ELLs for 20 hours during the semester while studying and applying the theories and best practices of ELL literacy development. In addition, this course will discuss best practices for teaching math to ELLs, lesson planning, classroom management, and other necessary skills for successful teachers in any field.

EDST310 Practicum in Education Studies

This seminar is intended to help students develop the skills to learn from experience in educational settings, through rigorous reflection, analysis, scholarly inquiry into educational questions, and action/implementation of new ideas. It is designed for students with previous coursework in education, experience in educational settings, or both. Students will be placed in a variety of educational settings in the community and each student will craft an independent study, with ongoing guidance from the professor and from the group, related to their placement. Class sessions will be seminar-style with students sharing and workshopping their studies and their practice. There will be group readings on aspects of education studies including reflective practice, classroom ethnography/teacher research, and observational techniques, but students will also develop individualized reading lists according to the focus of their independent study. In addition to ongoing written work in the form of analytic journals and critical reading synopses, students will complete an individualized final paper or project integrating their research and experience over the semester, and give a final presentation.

EDST311 Community Impact Practicum: Building Capacity to Support Educational Enrichment

In this practicum course, students will build an intellectual and practical framework to guide their volunteer work in educational settings in the local community. What does it mean to "help"? How do we assess the needs of community partners and build the knowledge and skills that will allow us to address those needs? What do we need to know and understand about the people with whom we work? What does research have to say about effective tutoring techniques and practices? How can we design meaningful learning experiences? How can we maximize not only our impact in the community, but also our own growth and learning? Through reflection on experiential learning and the study of scholarship addressing these questions, students will develop knowledge and skills to improve their effectiveness in supporting educational enrichment. Students taking this course must be engaged in at least 90 minutes per week of community service in an educational setting throughout the semester.

Please note: If you are looking for a practicum that is more focused on the K-12 classroom experience, please see EDST310: Practicum in Education Studies. In that practicum seminar, students carry out their own independent study related to their classroom placement.

EDST315 Education Law in an Age of Change

This course is an introduction to the legal processes that shape public education in the United States. This course examines constitutional, statutory, regulatory,

and case law in education in order to see the efficacy and limitations of using the court to advance change in education. Through readings, class discussions, and assignments, we will grapple with the following questions:

1. What legal processes inform public education in the United States?
2. Which seminal court cases have shaped public education?
3. Who effects legal change in public education?
4. Do the various constituencies of public educational law function within symbiotic relationships?

This course is a school law class, not a law school class.

EDST333 Social Media and Development: Constructing the Self Online

Humans typically develop their view of themselves, or their self-concept, through interactions with others in their community. For adolescents, this takes place typically within school environments and other community institutions as they begin to rely less on their parents. With the dawn of social media, these interactions are taking place on a global scale with increased anonymity. How does this social and technological change impact how teens and young adults form their views of themselves? What implications do these changes have for adults who work with adolescent populations? This course will explore these questions, illuminating an understanding of the accepted model of self-concept development and the impacts of social media. Students will also explore related concepts of self-esteem and social development. This course will use empirical research to examine and critique the overall negative view of social media usage amongst adolescents, and train students to probe commonly accepted viewpoints using careful scholarship. The course will provide a discussion of research standards in the field of social media research and encourage critical evaluation of empirical research.

EDST335 Celebrating Learner Differences: Creating Inclusive Classrooms Using Research

How do humans develop the capacity to learn? This course will focus on the dynamic influence of the cognitive, social emotional, and demographic factors involved in this process, using a research-based framework. Students will be encouraged to evaluate the learning process throughout K-12 educational settings and will explicitly learn to read and critique research in the learning sciences. Students will also evaluate the utility of research in different learning settings and the effectiveness of associated pedagogical tools and strategies.

The course will begin with a discussion on learning sciences research and explicit instruction for research evaluation. Topical considerations will include the development of human memory, executive function, attention, and other cognitive processes that underlie learning and information processing. Students will also explore background factors, including socioeconomic status, and social emotional factors, including motivation and emotion, as predictive and associated factors for learning and information processing.

This course fulfills the Category 1 requirement for the Education Studies Major and Minor. It satisfies the ELECTIVE only requirement for the PSYC major.

EDST340 The Politics of Education

This course is an introduction to the complex political processes that shape public education in the United States. This course integrates concepts from multiple fields, including political science, government, sociology, and education, to examine how education is both a site of and a tool to manage broader social conflicts. Through readings, class discussions, and assignments, we will grapple with the following questions: Who governs public education in the United States? What forces and processes shape the formulation, enactment, and impact of education policies? How do educators, parents, and youth wield power to propel or resist education policy decisions? How do institutions of higher education, philanthropic organizations, governmental agencies, and other organizations influence the trajectory of education policy? This course will also introduce students to analytic tools that will allow them to unpack and interpret the politics surrounding education.

Offering: **Host**

Grading: **OPT**

EDST341 Case Studies in Educational Innovation and Entrepreneurship

Entrepreneurship, innovation, and reform are defining parts of the fabric of K-12 education in the US and other places, presenting opportunities and risks. For the first two months of the course, we will be visited most weeks by one or more experts who have led or studied innovative or entrepreneurial projects in the education sector. Perspectives and cases to be discussed include the founding of

schools and businesses, start-up ventures, social entrepreneurship and nonprofit organizations, educational law and policy, and innovation within public schools and districts. A visit to New York City to visit multiple start-ups and investors is also planned, schedules allowing.

Students will learn from conversations with experts in the field about how to define problems in education, how different people have approached solutions to these problems, and lessons learned. The professor and students will work together to draw connections between the various case studies and to articulate larger principles. Our study will culminate in a guided project in which students will develop or investigate an educational innovation to solve a specific problem that they have learned about, following some of the principles of design and innovation that they have learned.

EDST342 Questioning Authority: On the Politics of the Teacher-Student Relationship

What is the authority of the teacher in an era where the legitimacy of institutions and curriculum are under fire? Can hierarchical relationships between teachers and students be beneficial for learning and for political life? What are alternative conceptions of the teacher-student relationship? This course will explore different models of teaching within the history of political thought and beyond. From Socrates to the present, the context and manner of teaching has been just as important to political theorists as the content itself. The course will consider how questions of power, sexuality, risk, wisdom, and friendship inform different pedagogical styles and their implications for preparing citizens for democratic life. Readings include John Locke, Immanuel Kant, Alexis deTocqueville, John Dewey, Hannah Arendt, Mr. Rogers, Jacques Ranciere, Bernard Stiegler, Laura Kipnis, and others.

EDST345 Education Technology - Sociological Perspectives & Implications

How do computers, smartphones, the internet, and other educational technologies impact students and teachers? In this course, students will apply the fundamental tools and approaches of educational and social science research to better understand and evaluate the effectiveness of the educational technologies that surround and support students and teachers around the world. As such, students will learn about the history of education and evolution of technology with a focus on teaching, learning, and assessment applications in K12 education.

Through readings, class discussion, assignments, and analyses of real-world teaching and learning data, students will consider educational technology frameworks, research, practice, and policy. Specifically, students will consider how different student, teacher, and system-wide educational technologies: 1) have impacted students, teachers, families, schools, and communities across a broad range of educational outcomes and groups, i.e., gender, class, race/ethnicity.

EDST346 Schools and the Carceral Regime: Antiracism, Education Policy, and the (Un)Free

Over the past several decades, American schools have come to increasingly resemble prisons due to the adoption of certain policies and practices. Specifically, zero-tolerance policies, school-based police officers, metal detectors, randomized searches, and security cameras render the learning environment a container of social control. Although recent policy decisions have worked to undo some of these policies, many remain intact while others have been replaced with new prison-like structures. Together, these approaches illustrate what is commonly called the "school-to-prison pipeline" or "school-prison nexus," and underwrite the ideological justifications for the hyper surveillance of students of color. Moreover, punitive discipline policies are an outgrowth of an antiracial racial imaginary that positions Black youth as inherently a problem needing to be monitored and controlled.

This course will examine the multiple ways that schools function as carceral sites for Black, Latinx, and LGBTQ+ youth with special attention to antiracism, education policy, and justice. Through this course, students will have the opportunity to explore expanding notions of carcerality and how carceral approaches inflict physical, psychic, and symbolic violence on vulnerable populations. This course will also explore abolition as a useful praxis to transform schools and improve educational outcomes.

This undergraduate seminar leverages theoretical insights from neighboring disciplines, such as sociology, critical criminology, geography, and philosophy to explore how the carceral regime(s) shapes education policy and school practices. Students enrolled in this course will explore the expanding nature of carcerality and the implications for youth academic outcomes, sense of belonging, school engagement, and conceptions of safety. Given the context-dependent nature of carcerality, students will explore various educational contexts as case studies. In addition to case studies, students enrolled in this seminar will have the opportunity to engage with scholarly texts, podcasts, and films and learn through active class discussion, lectures, and group activities.

EDST349 Urban Education Policy and the Politics of Reform

This course examines enduring issues embedded in the policy and politics of urban education reform. This course will introduce students to a broad range of education reform strategies, such as market-based approaches to education, state takeover of school districts, and enhancing school, family, and community partnerships. Additionally, we will examine the political dynamics that propel reform efforts. This course conceptualizes urban as a geographic location and as a specific set of issues associated with urban environments. Although we will primarily focus on the policy and politics of education reforms within the context of urban centers across the United States, students will have opportunities to apply their knowledge to a wide range of contexts. This course fulfills the Category 2 requirement of the Education Studies Major and Minor.

EDST352 Human Rights and Education

Since the end of World War II, the idea of human rights has spread around the world with numerous documents, laws, and programs created to promote human rights in and through education. Within human rights discourses, education has emerged as simultaneously a right in and of itself, a crucial space that can either reproduce discriminatory practices or subvert and resist them, and a means through which knowledge of human rights can be promoted. But what do these developments in human rights and education mean in the everyday lives of formerly and currently colonized and oppressed peoples in the US and around the world, for whom education has been and continues to be used explicitly as a tool of oppression, forced assimilation, and violence? This class will explore this and other key questions related to human rights and education. What does it mean to be human, and how do we learn to be human? What rights mark a human being, who has them, and how do we learn who has them? Who, if anyone, should have a right to education? If they have a right to education, what kind of education is it? How does education as a human right relate to human rights education, and what are the implications of this

relationship for our understanding of what changes to existing schooling systems might accomplish in terms of expanding and improving all humans' rights?

EDST354 Seminar on Intelligence and Creativity

What does it mean to be smart? Who decides whether something or someone is creative? The answers to these questions are of great consequence as they often determine who gets access to scarce resources. This course will introduce students to some of the most vibrant and lively debates in the fields of intelligence and creativity. Our goal will be to discuss relevant theories and evaluate empirical data associated with various perspectives and approaches to understanding these important constructs. In addition, students will gain familiarity with and critically evaluate how intelligence and creativity are measured, as well as the usefulness of different measures for predicting the success of individuals and organizations.

EDST355 The Long Struggle: Examining New Perspectives on Education Reform

Black Teachers' ongoing struggle to enact anti-racist practices and policies while navigating segregation and significant resource challenges provide powerful testimony of the peculiar limitations of traditional urban education reform movements.

This course will help students understand the inextricable links between student achievement, opportunity, and community progress by examining African American teachers' experiences in schools. The historical and present-day experiences of Black teachers will be used to anchor the analysis of education reform through the eyes of too often marginalized communities. This course will review historical narrative, examine present-day policy, and allow students to gain first-hand perspectives from "front-line" education and policy leaders.

EDST358 Fugitive Perspectives on Education and Civil Society

In 1946, the African American novelist Ann Petry imagined what a white schoolteacher might think about working with black students in Harlem, New York: "Working in this school was like being in a jungle. It was filled with the smell of the jungle, she thought: tainted food, rank, unwashed bodies." Petry had herself worked in Harlem schools. She also held credentials from well-heeled white schools in Connecticut. Despite her own academic success, she questioned the inherent value of schools that regarded black children as if they were untamed savages. Challenging prevailing narratives of excellence and achievement, this course examines fugitive perspectives of black, Indigenous, LBGTQ, and poor folks who resisted compulsory schooling and avoided conscription into so-called civilized society. If, as historian Michael B. Katz has argued, US schools "are imperial institutions designed to civilize the natives; they exist to do something to poor children, especially, now, children who are black or brown," then why should any self-respecting black or brown child endure such schooling? What might so-called truants, illiterates, failures, burnouts, dropouts, and delinquents teach us about education and civil society? The history of education, however, has largely been interpreted from a biased perspective--namely, those who have been successfully schooled. We will therefore search for contrary voices in fragments of oral culture, ranging from slave narratives to folktales and recorded music. Contemporary scholarship will inform our analysis. Interdisciplinary scholars such as James Scott, Eric Hobsbawm, Tera Hunter, Saidiya Hartman, Lisa Brooks, and Audra Simpson will illustrate how to read against the grain and unearth hidden transcripts from classic authors such as W.E.B. Du Bois, Carter G. Woodson, Anna Julia Cooper, and Gertrude Simmons Bonin.

EDST364 Race, Nation, Empire, and Education

This course engages students in developing frameworks for understanding the historical and contemporary role of education in race-making, nation-building, and imperial projects. We focus on how educational processes shape the material, cultural, social, and political aspects of people's lives, and how these contend within a changing global landscape. Topics include education's dual role in settler colonialism and its potential for decolonization; scientific racism and discourses about intelligence; institutions of higher education and their entanglements with slavery and imperialism; education in colonial and post-colonial settings; legislating bodies and intimacies among young women of color; and education as a site for producing hegemonic notions of ideal citizen-subjects.

EDST373 Religion, Science, and Empire: Crucible of a Globalized World

The development of modern science--and of modernity itself--not only coincided with the rise of European imperialism, it was abetted by it. Meanwhile, religion was integral to both the roots of European science and Western encounters with others. This class will explore how the intersections of religion, science, and empire have formed a globalized world with examples of European engagement with the Americas, Middle East, and, particularly, India from the age of Columbus through to the space race. We will examine how the disciplines we know today as biology, anthropology, archaeology, folklore, and the history of religions all crystallized in the crucible of imperial encounter and how non-Westerners have embraced, engaged, and resisted these epistemes.

EDST399 Abolitionist University Studies

This course explores historical materialist theorizations of the practices and future possibilities of the U.S. university as a tool of social reproduction and space of potentially revolutionary thought. In so doing, the readings, assignments, and discussion will be inspired by Stefano Harney and Fred Moten's provocation to reinterpret abolitionism as "not so much the abolition of prisons but the abolition of a society that could have prisons, that could have slavery, that could have the wage, and therefore not abolition as the elimination of anything but abolition as the founding of a new society." Students will consider how conventional renderings of the university in higher education studies, critical university studies, and the popular cultural imaginary are predicated upon an often romanticized and fundamentally limited geographic and historical understanding of the work of colleges and universities. In response, the course cultivates a more capacious conceptualization of the historical and contemporary function of the university as a social form. In taking up abolitionism as both a method and critical analytic, the course will challenge students to imagine the revolutionary possibilities of an abolition university that aligns itself with movements beyond the institution, while reflecting on the particular importance and challenge of enacting such a vision in our current political moment.

This course will explore American literature of the 21st century and in so doing, we will consider the portrayals of race, class, ethnicity, religion, trauma, citizenship, migration and sexuality. We will approach these portrayals in engaged class discussion as well as in writing, both analytical and creative. We will also discuss the ways in which these authors conceptualize and problematize American identity.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-ENGL**Prereq: **None****ENGL112F Reading Black Culture (FYS)**

Blackness is the lifeblood of the culture industry. U.S. popular culture--which traverses national boundaries due to the workings of imperialism and global capital--has a predominantly Black face, at the same time that Black people, in the United States and across the globe, are made to live in unrelenting proximity to death and destitution. This introductory course aims to tackle this seemingly contradictory state of things by considering the manifold ways Blackness circulates in the global cultural landscape. With the ultimate aim of increasing cultural literacy, we will engage with key questions such as: What makes a Black text? What, if any, political duty does the Black cultural worker have to the larger "Black community"? How does a critique of capital figure into Black culture? How might we conceptualize intellectual work as central to Black cultural traditions? This course traces these questions through the analytic of "reading"--as a mode of critical engagement that exceeds the textual. We will contend with Blackness in its varying permutations and figurations across the domains of literature, music, film, sport, visual art, and performance.

ENGL123Z Love, Sex, and Marriage in Renaissance Europe

This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, Italy, the Low Countries, Spain, and Sweden. (N.B. Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about "homosexual" love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how do contemporary (21st-century) writers reimagine Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. Students will also have the opportunity to write creatively should they so choose.

ENGL141F The Revolutionary Rupture: Slavery, Latifundio & Rev. in Caribbean & Lat. Amer. Lit. & Cinema (FYS)

The word "Revolution" often evokes a vertical and/or eruptive image: a standing militant who was once a "premodern," non-European figure; a bottom-to-top explosion of imperial and colonial disorder and normative violence; a rising and world-overturning wind or "natural event." Does the eruption of an "event" worthy of the name "Revolution" begin on the imagined x-axis, say, of the earth's surface? Or does it point beyond that plane of seemingly commonly shared life? Or to that notion itself--i.e., commonly shared life--as a question? How do configurations of hell, heaven, God, Satan, the dead--what's below, what's above--come to bear in representations of "Revolutions"?

In this course, we will slow down, read, and work through these and other questions and figurations on the verge, in the midst, and/or seemingly on the other side of revolutionary ruptures--ruptures which are also returns. We will read select literatures and cinemas of Haiti, The Dominican Republic, Mexico, Guatemala, Puerto Rico, and Cuba that convey refusals of "given" life and death and that render different imperial, colonial, and neo-liberal systems of oppression and their attendant philosophies of the human, non-human, animal, native, enslaved, and blackened. The Haitian Revolution of the late 18th and early 19th century, insurrections in Chiapas before and after the Mexican Revolution of 1910, and 20th-21st century armed movements against U.S. economic and military invasions of the Caribbean and Central American regions would be the historical "flashpoints" of the course. While de-romanticizing the commercialized Che-t-shirt notion of "Revolution" in the U.S., we will, more importantly, encounter and deconstruct discourses of hetero-masculinity, modernization, mestizaje, whitening, and "development" that sometimes appear radical and/or revolutionary.

ENGL162 Poetry Lab

The Poetry Lab is intended for first-year students interested in literature or creative writing. Come join us for a semester of hands-on experiments with the stuff of poetry--interpreting and translating but also taking apart, writing over, scrambling, collaging. Throughout, we will ask big questions: What is poetry, anyway? How and why do we read it? We will read some of the most powerful poems in the English tradition and explore how modern poets speak back to them or make new poems from their pieces. We will engage with important scholarly debates and encounter different theoretical and methodological approaches, inviting us to approach poetry as a self-enclosed artifact, as historical evidence, as a kind of thinking, or as political action. But we will also constantly tinker with poems, imitate them, creatively play as we investigate the fundamental workings of language and meaning.

ENGL163F Literature of London (FYS)

This course examines the role of London in the literary imagination of 19th-century Britain. A vibrant multiclass and multiethnic jigsaw puzzle, London was a "world city" at the center of the empire, the seat of crown and parliament, and a place of both danger and opportunity. In addition to being the economic and political center of Great Britain, some authors viewed London as the nation's narrative center as well. Together, we will explore how writers depicted the city, how they envisioned the relationship between urban living and modern life, how they understood London's inhabitants and their plots, and how they placed the city in networks of stories reaching around the world.

ENGL178F The Literature of Business, and Vice Versa (FYS)

This course will consider some of the ways that business, markets, and commercial enterprise have been depicted in American fiction from the 19th century to the current moment. Our focus will be on the ways that writers sought, at various stages in history, to understand the changing features of capitalism. At the same time, we will consider the development of the American publishing industry and the ways that it influenced literary production and literary values.

ENGL190F Place, Character, and Design: Techniques in Writing Nonfiction and Fiction (FYS)

We begin this writing course with questions central to students' work in both nonfiction and fiction: how to establish characters and a narrator's voice and how to frame the spatial and emotional world of the piece. The course encourages students to explore questions of design and structure while focusing also on style and technique at the sentence level. This creative writing course explores features of narrative and design that are central to work in fiction and creative nonfiction. We will also compare the design of college papers, written for academic courses, with pieces written for general readers. Readings include works by writers interested in these questions, including, in fiction, Andre Aciman, Vladimir Nabokov, Henry James, Robert Stone, Deborah Eisenberg, and Edward P. Jones, and, in nonfiction, Brian Doyle, Junichiro Tanizaki, Joan Didion, Charles Bowden, Mark Doty, Linh Dinh, Dubravka Ugresic, and George Orwell.

ENGL200 The Narratives of Illness and Recovery

This course provides a detailed examination of primarily first-person accounts of illness and recovery. The focus will be on narratives that deal with mental illnesses and trauma or the psychological aspects of physical illnesses. We will explore the relationship of story and narrative to the healing process. Students will analyze across texts the common psychological traits that lead to recovery and generativity, as well as the response to loss and the experience of suffering.

Particular emphasis will also be placed on the role of "the wounded healer," those persons who have suffered and then choose to assist others who face similar predicaments.

ENGL201A Ways of Reading: Originality and Its Opposites

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL 201 series may be taken for credit.

Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life.

Believe it or not, the idea that a work of art should be unique, new, and inventive has a history, and it's a fairly recent one. In this section we will read novels, poems, and plays that embody or somehow resist the ideal of originality. We will start with theories of originality that emerged at the end of the 18th and beginning of the 19th century, and with contemporaneous texts that exemplify that aesthetic philosophy. Then we will turn to originality's many opposites: translations, collaborations, adaptations, forgeries and hoaxes, parodies, hymns and vernacular songs, and works that are so conventional or derivative as to fail the originality test. Throughout, since this is a section of "Ways of Reading," we'll pay attention to our expectations, experiences, and strategies as readers as well as to developing skills in discussing and writing about literature.

ENGL201B Ways of Reading: Unreliability

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit. In this "Ways of Reading" course we will examine how notions of unreliability and indeterminacy shape literary writing and interpretation alike. We see this most obviously in the figure of the unreliable narrator in fiction, but we also grapple with the (un)reliability of poetic speakers in lyric poems. In fact, unreliability might as well be another way of naming and representing subjectivity. Learning to recognize and parse signs of subjective and/or unreliable accounts is a keystone of literary analysis because it helps us make sense of--and take pleasure in--how the story is told in addition to the content of story. Conversely, some literary texts turn the mirror on us (the readers); that is, they prompt us to reevaluate how our own assumptions, biases, and blind spots figure in our interpretations of texts and dynamics. In this course, students will read and

write about a wide range of literary genres including novellas, short stories, lyric poems, and plays that thematize unreliability, confusion, and misprision. In so doing, they will learn to develop their own interpretations of literary texts and craft compelling and nuanced arguments.

ENGL201D Ways of Reading: Stories and Storytelling

In this section we will read literary, philosophical, and scholarly works that explore stories and storytelling. Some of the questions we will consider are: what makes a story a story? What are its building blocks? How does it matter if a story is told in verse or prose, in a book or onstage, orally or in print? What human, personal, and societal needs are served by telling and consuming stories? How do literary texts incorporate or represent the activities of telling stories and of listening to, reading, and watching them? We will define and examine foundational aspects of literary narration, including first-person and third-person narrators, events, plot, voice, and setting and worldbuilding. We will also practice and develop skills in literary analysis and interpretive, scholarly writing.

ENGL201H Ways of Reading: Influence, Imitation, Invention

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit. Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life. This "Ways of Reading" course will consider how works of literature respond to one another, imitating and departing from what has come before. We will learn to identify a writer's stylistic, rhetorical, and generic commitments, and we will develop a set of technical and conceptual approaches to reading to generate a facility and ease with the practice of close reading. At the same time, we will remain alert to the influence of historical, geographic, and social contexts on the production and reception of works of literature. As responsible readers, we will combine attention to a text's formal properties with an awareness of its situatedness within worlds--and literary histories--outside the text.

ENGL201K Ways of Reading: Borrowing and Stealing: Authorship and Originality in Literature

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit.

Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life.

This course will explore the meaning of authorship and originality in literary study. What does it mean to be original within a literary tradition? How do genres retain their coherence while also enabling originality? When does inspiration become plagiarism? Where do we draw the line between borrowing and stealing in literature? What legal, ethical, and historical frameworks help us to distinguish between them? How do such norms vary across genres and media? This course will focus on the different ways that poetry, fiction, and drama foster the recirculation of particular plots, figures, and formal structures while still maintaining the value of originality. We will pay particular attention to the crises of authorship that mark what Walter Benjamin famously called the "Age of Mechanical Reproduction." But we will also look at the central role that borrowing and rewriting has played in the very constitution of the idea of a literary tradition.

ENGL201L Ways of Reading: Forms of Difference

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit.

Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life.

This course will focus on the politics of literary form--that is, how literary form and content work together to produce arguments about the social world. We will pay special attention to how 20th- and 21st-century writers use literary form to explore, illuminate, negotiate, and challenge categories of social difference, including race, gender, and sexuality. In addition to practicing techniques of close reading on a range of texts from different genres, we will also read literary criticism from a variety of theoretical and political perspectives--psychoanalytic, feminist, postcolonial, historicist, etc.

ENGL201M Ways of Reading: Literature and/as Philosophy

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit.

Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life.

This course will consider what lies at the intersection of literature and philosophy. We will read philosophies of literature-texts that consider the function, context, and fundamental characteristics of literary production--alongside literary texts that foreground key philosophical questions. We will consider the literary dimensions of philosophical writing alongside the philosophical dimensions of literary writing, toward a way of reading that destabilizes the notion of a fixed boundary between the two categories.

ENGL201N Ways of Reading: Adaptations: From Page to Stage

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit.

Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature.

So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life.

This course investigates dramatic adaptations that have originated from poetry, short stories, novels, and historical events. Through multiple modes of inquiry, we interrogate form, genre, narrative, aesthetic, and intended audience as well as the social, political, gender, sexuality, and/or racial context of each literary piece. Within these various "page to stage" adaptation processes, we track the evolution of our source texts and chart the longevity and changeable dynamics of elements, such as character, theme, plot, point of view, setting, and time, as they appear within each dramatic iteration.

ENGL201P Ways of Reading: Autobiography

"Ways of Reading" introduces students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major, and only one of the ENGL201 series may be taken for credit.

"Ways of Reading" courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry, drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays; but also in political speech, in popular culture, and in the discourses that shape everyday life.

This "Ways of Reading" course will explore autobiography as an elusive and multifaceted literary form. We will ask: Who or what is the subject of autobiography? Who besides the author is implicated in the acts of writing and reading autobiography? How elastic are the distinctions between fiction and fact, self-reportage and self-fabrication within autobiography? What kinds of narratives and artistic forms count as autobiographical? To pose these questions, we will explore hybrid texts that splice together varying genres and forms under the umbrella of autobiography, including poems, memoirs, graphic memoirs, personal essays, metafictional novels, documentary films, performance pieces, and biomythographies.

ENGL201R Ways of Reading: Strange Inheritance

Language precedes us. Nay, writing does. What do "we" do, then, with what we inherit? (For that matter, who is this "we"?) How do we think about what literary forms bequeath, force, and upend? About representations of democracy? About "the after-life of slavery" on the level of representation? This foray into the English major will teach you some theories and modes of reading rhetorical configurations of the self and the other, (in)hospitality, racialization, gendering, colonialism, history, and so on. Weaving together works of literature with literary and critical theory that meditate sometimes literally on each other, and always on the shared linguistic and colonial heritages, we will consider the ethics and politics of reading in (and against) a strange inheritance—one made strange (as it is made familiar) by the violent, imperial, colonial, enslaving forces at its inception(s). We will trace what is sometimes unwanted but must be reckoned with, and what is sometimes inextinguishably desired, across some of a matrix of these possible lineages: {Charlotte Brontë's *Jane Eyre*; Jean Rhys' *Wide Sargasso Sea*; Gayatri Spivak's *Towards A Critique of Postcolonial Reason*; and Jamaica Kincaid's *Lucy*}; {select works of Négritude poetry (especially by Aimé Césaire); Frantz Fanon's *Black Skin, White Masks*; Shola von Reinhold's *Lote*; select works of Frank Wilderson III; and select works of David Marriott}; and/or {Homer, Derek Walcott, and Ocean Vuong}. We will read key works of structural linguistics, the New Criticism, and deconstruction, with emphasis on the thinking of Jacques Derrida regarding inheritance.

ENGL201S Ways of Reading: Imitation and the Real Thing

Are artworks imitations of "the real world," or are they "real things" in themselves? And what happens when one artwork imitates another? This Ways of Reading course explores the relationship between artistic representation and the reality it tries to capture, paying particular attention to what happens when

literature engages with other kinds of art. We'll read variations of the Pygmalion myth--in which an artist falls in love with his creation and it comes to life--across a range of genres: poems, short fiction, novels, plays, and film. We'll also turn to various forms of literary critical inquiry, from close reading to psychoanalytic theory, and various kinds of historicism to ask how these depictions imagine the act of artistic creation and the kind of truth-claims that literature makes. Along the way, we'll think about the ways that these meditations on the mediated nature of literature--depictions of the relationship between the art objects and the world, the act of reflection, copying, or imitation--are used to imagine social difference, including questions of class, gender, race, and national identity. Throughout the course, we'll be paying attention to the ways that texts construct and convey meaning.

ENGL201T Ways of Reading: Literature About Literature

Ways of Reading courses introduce students to the characteristics thought of as literary and the methods for studying them. This is a gateway course into the English major. Only one of the ENGL201 series may be taken for credit.

Ways of Reading courses develop strategies for careful and close reading, and techniques for the analysis of literary forms such as poetry and drama, and prose narratives such as novels and short stories. They familiarize students with some of the protocols of the literary-critical essay, examine the idea of literature as a social institution, and explore ways of connecting textual details and the world beyond the text. The ways of reading learned in the course are powerful tools for critically assessing discourses that expand far beyond the realm of literature. So while students will become adept literary critics, they also will learn quickly that to be a literary critic is to read critically and carefully all the time: in poems, novels, and plays, but also in political speech, in popular culture, and in the discourses that shape everyday life.

This "Ways of Reading" course will ask: What is literature? We will read literature written by authors in their most playfully self-aware, self-interrogating moods: William Shakespeare raising questions about the nature and limits of imagination, Jane Austen dramatizing the perils of novel reading, and Adrienne Rich pondering female forms of making. We will engage recent theoretical debates about what literature is, but we will also read literature that does not share our 21st-century ideas, literature that works from different world views and strives for different effects. For instance, enslaved poet Phillis Wheatley embraced neoclassical forms of ordering--the weight of multiple historical traditions informing her sense of what poems are and do. Throughout, we will reckon with literary texts on their own terms but also with the ways they have been read at different moments in history. What is literature and what was it? How do we read it? What methods and theories have been ascendant at different moments? And why do we read it? What are its pleasures, problems, and possibilities? How did we end up with an English Department organized like this anyway?

ENGL202 Investigative Storytelling

This creative writing workshop is designed for students who aim to craft new narrative work through investigative or documentary research. Students might create a play, a screenplay, poetry, fiction, creative nonfiction, a digitally driven project, or something else. We will study some existing investigative artworks--dramatic pieces by Moises Kaufman, nonfiction by Leslie Jamison, poetry by Robin Coste Lewis, documentary film by the Maysles brothers, long-

form journalism by Nikole Hannah-Jones, and podcasts by Brian Reed. We will cover interview techniques, research strategies, issues of rights and intellectual property use, and structure/dramaturgy as we plan, research, write, and workshop material together. Class members will regularly share work-in-progress and offer feedback to one another. By the end of the semester, students will be well acquainted with best practices for crafting investigation-based pieces and will have completed full or partial drafts of their projects, depending on project scope. Students are expected to have some workshop experience.

ENGL202Z Contemporary Short Stories in Translation

This course will introduce students to a wide range of contemporary short stories from around the world, translated into English. We will read fiction from four geographical clusters--Nordic Europe, Latin America, East Asia, Western Europe--as well as from outside these relatively well-defined categories. Along with exploring the fiction itself, we will consider how the English-language publishing industry treats these different zones, as we acknowledge the risk of ending up with national or regional stereotypes. We will also keep in mind the translator's role as an active creator of the works we are reading. In week two, we will pay special attention to the crucial professional role of the translator in getting these authors published and recognized, and there will be in-class visits from one translator in each cluster. The objective of the course is to get a basic overview of different contemporary trends and traditions, and their various paths to publication in English, as well as hopefully finding one or two new favorite writers.

ENGL203 American Literature to 1865

This lecture course charts a selective path through the English-language literatures of conflict in North America. Our optic will be double: one eye on history, the other on literary form, and we will experiment with ways of dialectically combining these two lines of vision. The scope of the course is wide, but we will proceed in the style of an anti-survey. Rather than unifying America through a gathering of textual parts, we will attempt to understand how literary forms supply an important index of historical evidence even as their pleasures and contradictions refuse the stabilities of the evidentiary. We will close the course with a late-20th-century speculative fiction that gives an alternative history of the continent after a successful anti-slavery revolution in 1859 (resulting in the formation of the socialist Black republic of Nova Africa), which will incite us to revisit the materials and the historical record we will have constituted during the semester.

ENGL203A American Literature on Fire: Conquest, Capitalism, Resistance: 1492-1865

We begin with a 1938 Langston Hughes poem, a north star shining light on American unexceptionalism and then move back in time: from Columbus's dismemberment and enslavement of the Arawaks when demanding gold; to Cabeza de Vaca's feel-good handbook for the conquest of indigenous peoples;

to Puritan inventions of a "God" that pulls the trigger; to Franklin's blowing the whistle on a mercantile capitalism he supercharged with a secular work ethic; to a Declaration of "Independence" in 1776 that provoked alternative declarations written by workers, women, and formerly enslaved persons in the 19th century; to Poe's readings of a Divided States of America (race, gender, domesticity) as gothic; to Douglass's representations of the tactical artfulness and subversions of "slave" culture; to Hawthorne's deconstruction of the Americanization of power; to Thoreau's entwining of collective protest and what he hoped would be an individualized escape route; to Melville's attacks on imperialism, racism, and class domination; to Elizabeth Stuart Phelps's critique of domestic slavery; to Stowe's socially transformative antislavery novel (whose sentimentalization recirculated stereotypes). Along the way, we will draw on Howard Zinn's classic *A PEOPLE'S HISTORY OF THE UNITED STATES* to help historicize the Americanization of inequality. During our literary-intellectual time travel, we will engage some of America's most "on fire" writers who make possible insights into the ideological foundations of American cultures, identities, and hegemonies that provocatively illuminate America's situation today (and offer some lessons for how to change it). And, not least of all, we will have critical fun throughout.

ENGL204 American Literature, 1865-1945: The Americanization of Power

Together we'll explore not only the complexities of American literature from the 1860s to 1940s, but also how this literature is usable today and excels as critical equipment that can advance our understanding of the modern Americanization of power (put narrowly, we'll develop insights into a "democratic" capitalism, what some called a "Robber Baron" plutocracy, that pulled off and contrived to maintain systemic class, gender, and ethnoracial hierarchies to reproduce its power). As we unpack the relationship of literary form and social form, we'll trace connections between historical developments such as the gothic genre and gender ideologies, domestic romance and the social reproduction of labor, realism and mass-urbanism, naturalism and immigration, modernism and imperialism, and narrative experimentation and anti-racism. The creative works of Emily Dickinson, Mark Twain, Stephen Crane, Henry James, Charlotte Perkins Gilman, Charles Chesnutt, F. Scott Fitzgerald, Langston Hughes, Ernest Hemingway, Eugene O'Neill, Nathanael West, William Faulkner, Richard Wright, and Zora Neale Hurston will help teach us to be more imaginative readers of literature, ourselves, and what America was, is, and might be. While pooling ideas about this, we'll savor the pleasures of reading inspiring and transformative writing. This is very much a thinking-intensive course.

ENGL204A American Literature, 1865--1945

This course considers the way a large range of American writers responded to the industrial transformation of the United States. We will look at the way writers conceived and understood the rise of the corporation, the growth of the metropolis, the surge of migration, and the expansion of American power through war and settlement, and we will consider the way such visions related to the writers' understanding of the nature of American culture and the significance of literary expression. Among the authors discussed will be William Dean Howells, Charles Chesnutt, Henry James, Mark Twain, Stephen Crane, Sarah Orne Jewett, Mary Wilkins Freeman, Kate Chopin, Edith Wharton, Frank Norris, T. S. Eliot, Willa Cather, F. Scott Fitzgerald, Langston Hughes, Ernest Hemingway, Jean Toomer, and Richard Wright.

ENGL205 Shakespeare

This lecture course is designed to introduce students to the often-demanding texts of Shakespeare's plays, their major genres (comedy, history, tragedy, and romance or tragicomedy), and the contexts in which they were produced. Shakespeare's career spanned a period of remarkable social, political, religious, and economic change, including the Protestant Reformation, the transition from feudalism to mercantile capitalism, early colonialism, global trade, and the rise of the first purpose-built, commercial theaters. Innovations in dramatic form and genre, which Shakespeare helped craft, sought to make sense of these momentous shifts for a diverse public theater. The lectures assume no prior knowledge of Shakespeare or his times and are designed to illuminate the texts of the plays by examining their cultural contexts.

ENGL206 British Literature in the Enlightenment: Individualism, Consumer Culture, and the Public Sphere

England was changing rapidly in the 17th and 18th centuries. Indeed, it is often said that this period was crucial for the emergence of individualism, consumer culture, and the public sphere—for the modern world itself. The period is sometimes described as the Age of Reason, but it was also an age of bawdy laughter, intense emotion, brazen self-promotion, serious faith, and gossip in coffeehouses and magazines. It was an age, too, of flourishing marketplaces, imperial expansion, slavery and abolition. This course will track how literary writers celebrated, condemned, participated in, or simply tried to make sense of their changing moment (and the changing understandings of literature available in it).

ENGL207 Chaucer and His World

In this course, we will read Chaucer's fascinating dream-visions, *The Book of the Duchess* and *The House of Fame* and his best-known work, *The Canterbury Tales*. We will also read selections from Chaucer's sources and consider how he adapts these texts in his own literary works. Some of the topics we will explore are the various genres of Chaucer's poetry (allegory, epic, romance, satire), medieval ideas about psychology and dreams, the ideology of chivalry, Chaucer's reinvention of the classical world, and views of gender and sexuality. All readings will be in Middle English, so we will read slowly and carefully, with attention to the language.

ENGL209 From Seduction to Civil War: The Early U.S. Novel

This course examines the relationship between nation and narrative: the collective fantasies that incited reading and writing into the 19th century. We will study the novel as a field of literary production both in dialogue with European models and expressive of changes in national culture, a form that both undermined and reinforced dominant ideologies of racial, gender, and class inequality during this turbulent period of national formation and imperial expansion. We will consider the ways the pleasure of novel-reading depends upon, even as it often disavows, the world outside the story. Throughout our reading, we will trace the ways these novels both reflect and participate in the historical development of the United States during a period that spans national founding, the consolidation of northern capitalism and an exacerbated North/South division, expansion into Mexico and the Pacific, and civil war. Through close attention to literary form, we will continually pose the question, What is the relationship between literary culture and historical change? We will examine who was writing, for whom they wrote, and the situation—political, commercial—in which the American novel was produced and consumed. We will begin with the novel of sentiment and seduction and conclude with reflections on slavery and racial revolution on the eve of the Civil War, all the time asking about the ways the novel might seduce us into either tolerating or resisting the way of the world.

ENGL210 The Rise of the Novel

The novel as we know it emerged in 18th-century England. The real questions are, how and why? Were novels first written by white men, expressing the attitudes and capitalizing on the reading practices of an emergent middle class? Or did they evolve from a somewhat less respectable tradition of romance writing by and for women? Did novelistic prose draw on scientific and economic discourses as it naively sought to present a realistic picture of the world? Or was the genre playfully self-aware, from its very origins, of the difficult relationship between reality and language? This course will explore some of the complexities of the rise of the novel, one of the most important and oft-told tales of literary history. As we read fictions full of criminals, love letters, scandals, and satirical self-referentiality, we will think about the differences between early novels and the not-quite novels that preceded them. We will focus on how novels work through plot, character, and realist prose, as we also explore the ideological work that the form does. We will ask, too, about the workings of scholarly narratives like "the rise of the novel": how do these critical narratives help us, as novel readers, understand our relationship to the past and to the novel as a form?

ENGL211 Calderwood Seminar in Public Writing: Writing Science, Writing Science Studies

This Calderwood Seminar in Public Writing will give students practice writing about science, technology, and medical studies for general audiences. It will also function as a capstone experience for SISP majors: students will have a chance to reflect on the methodologies and theories they have learned during their time in the program, while also using those methodologies and theories to analyze issues and texts in our world today. Students will work collaboratively, editing each other's work, and significant class time will be spent workshoping student writing. The aim will be to produce publishable pieces of cultural analysis for the popular press.

ENGL212 Victorian Fictions of Research

This course will investigate the relationship between literary production and new models of scientific evidence during the heyday of Britain's global power. We'll ask how novels grappled with new scientific paradigms and forms of evidence--the invention of anthropological fieldwork, the police archive, the geological and fossil record, the statistical average--and explore how those developments were reimagined through British fiction between 1830 and 1900. We'll focus on the theories of self and other that accompanied new scientific methods--the categories of primitive, deviant, minor, pathological, everyday--and the relation of this research to the construction of evidence, the scientific self, labor, and gender as social, historic, and economic processes. We will read fiction by Gaskell, Eliot, and Carroll, alongside social theory by foundational thinkers of the nineteenth century (Marx, Simmel, Martineau) and our own (Barthes, Said, Steedman). As a part of the course, we will also extend the conceptual questions raised by research to our own work, as we explore a range of scholarly tools and methods--from special collections archives to digital databases--in reflecting on the practices and infrastructures of research. The class will include trips to Wesleyan Special Collections.

ENGL213 Literature and Black Feminism: The Dramas of Black Capital

This class explores Black women's fiction as a mode of critique and intervention into Black Americans' complicated relationships with social and economic capital in the wake of US chattel slavery. How do Black people negotiate the transition from being to owning property? How does the persistence of capital, even in the absence of the system of racial slavery that ushered it into being, continue to shape Black institutional access and Black intramural relations? How are white, Western regimes of value--constructed as they are through the production of racial-sexual difference in dominant habits of thought and representation--contested and, at times, recapitulated in Black social life? How does Black women's literature take up these questions, and what about Black women's literature uniquely equips it to meet this challenge? Ultimately, the course takes seriously Black women's literature as Black feminist thought, exploring how it indicts and imagines beyond the violence of modern racial capitalism.

ENGL215 Place, Belonging, and Sound in the 20th c. Latina/o/x, Black, & Caribbean Imaginations--NYC

Throughout the latter 20th century, various aesthetic renderings of New York City have positioned it as a site of voyeuristic allure and racialized excess and pleasure--simultaneously posh, unfriendly, tourist-trapped, "seedy," "gritty," and segregated. Through select literary, cinematic, and performance optics of Latina/o/x, black, and Caribbean writers and artists, especially queer and bisexual writers and artists, this course will focus on memory, representation, form, sound, and the imagination in the layered and shifting site of mid-20th- to 21st-century New York City--and even more specifically, of Harlem, the Bronx, the Lower East Side, Brooklyn, and Elizabeth, N.J. Fictionalizations, poetizations, and performances of first-person memories and reimaginings of overheard stories from older generations about life in the U.S. South and life in the Caribbean will feature in the works that we will study in this course.

ENGL216 Techniques of Poetry: Prosody and Poetic Form

By examining select Western and non-Western poetic forms, with the haiku and sonnet serving as formal anchors, students will study poems across the centuries and into the contemporary moment—and thus sharpen their aesthetic eyes and ears in preparation for drafting their own poems. Students will practice further as they read and provide feedback on each other's drafts in modified workshop sessions, wherein the poet, rather than the classroom, sits at the center. Students will exercise the forming of images, the uses of rhetoric by way of the volta, and develop an ear for the pentameter line. By the end of the semester, students will have developed a more sensitive attention to their writerly decisions; and will have a firm grasp on the occasions that might call for particular forms.

ENGL216A Techniques of Poetry: Hidden Histories

Through a series of immersive reading and writing experiments, we will work toward uncovering and preserving histories that might otherwise be forgotten. In order to do this, we will study the documentary and investigative techniques poets have employed while attempting to write about hard-to-articulate events like grief, secrecy, unrecorded events, ecological disasters and environmental concerns, traumas, racism, gender politics, bright-but-fleeting moments of existence, and hauntings of all kinds. We will read and record accounts that cannot be told but must be told. We will work to uncover—and possibly heal—areas of historical numbness. We will explore poetry's relationship to preservation and the dynamic bonds between representation and reparation. And we will rewire history through history, making use of archival materials, public testimony, newspaper accounts, photographs, family documents, and more.

Guided by critical and creative investigations, in-class writing experiments, and extended projects, students will compose poems inspired by their own research. There will be presentations on the literature we read, as well as class discussions and workshops of one another's creative work. The class will culminate in a book arts project and a reflective essay.

Special attention will also be given to cultivating community and the benefits of sustaining an embodied artistic practice during extreme times and how doing so may benefit the health of the whole artist.

ENGL218 "The History that Hurts": Reading Saidiya Hartman

This course will introduce students to the major works of the black literary theorist and cultural historian Saidiya Valarie Hartman (b. June 25, 1961), who was named a 2019 MacArthur "Genius" Fellow in Literary History and Criticism and American History. After graduating from Wesleyan in 1984, Hartman earned her Ph.D. in American Studies from Yale in 1992; she is currently a professor in the Department of English and Comparative Literature at Columbia University. Students enrolled in this course will read and write about Hartman's trilogy of scholarly monographs: *SCENES OF SUBJECTION: TERROR, SLAVERY, AND SELF-MAKING IN NINETEENTH-CENTURY AMERICA* (Oxford University Press, 1997); *LOSE YOUR MOTHER: A JOURNEY ALONG THE ATLANTIC SLAVE ROUTE* (Farrar, Straus and Giroux, 2007); and *WAYWARD LIVES, BEAUTIFUL EXPERIMENTS: INTIMATE HISTORIES OF RIOTOUS BLACK GIRLS, TROUBLESOME WOMEN, AND QUEER RADICALS* (W. W. Norton, 2019). Finally, if her new book project is published before the syllabus is finalized, then students enrolled in this course will also read and write about Hartman's fourth scholarly monograph (tentatively titled "N Folio: An Essay on Narrative and the Archive").

ENGL223 The African Novel II: After Achebe

Chimamanda Ngozi Adichie's 2003 novel, *PURPLE HIBISCUS*, summons Chinua Achebe, the "grandfather of African literature," in its opening line: "Things started to fall apart at home when my brother, Jaja, did not go to communion." While Achebe is a formative influence on Adichie and on many other contemporary African writers, the central preoccupations of African literature have shifted considerably in recent years. This class will consider recent topics animating the field. These include debates about Afropolitanism, the role of publication houses and prize committees in the canonization and circulation of texts, queer African literature, African-language literature, and the position of African literature vis-à-vis world literature. Readings will be chosen from among the newest novels and short stories in publication.

ENGL225 Transpacific Ecologies: Race, Literature, Environment

Although our climate emergency is undoubtedly planetary, the writer Amitav Ghosh has argued that the continent of Asia is in fact "conceptually critical to every aspect of global warming." This course explores how writers from both sides of the Pacific confront the Anthropocene and its related disasters of climate change, species extinction, deforestation, chemical pollution, and oceanic waste. Theoretical readings will address the challenges that the Anthropocene poses to literary representation, the literary innovations and strategies that have emerged in response to environmental crisis, and the question of what a specifically Asian/American (or transpacific) perspective on the environment introduces to ecocriticism. Fictional works will address specific ecological crises such as the 2011 Tohoku earthquake and tsunami and also attend to less punctual conundrums, including: recognizing nonhuman interests and assemblages; envisioning collective human agency; representing vast and complex planetary systems; coordinating human and geological histories; and assimilating scientific models and perspectives. In all cases, we will be particularly attuned to the question of how ecological problems impact literary form, asking which tools writers use to capture the new realities of today's climate emergency?

ENGL226 Sublimity, Visions, and the Self in British Literature, 1789-1830

This course is an introduction to British literature from the 1790s to the 1820s. We will trace three central thematic and formal preoccupations through the poetry, fiction, and philosophical prose of the era: (1) sublimity and the Gothic; (2) the imagination, dreams, and visions; and (3) individualism and interiority.

No experience with philosophy, history, or British literature is expected; the course functions as an introduction to all of them and, in this sense, to the interdisciplinary study of literature.

ENGL227 Reading The Victorians

Why read the Victorians? To know more about how an industrializing, urbanizing, commercial, and imperial nation imagines itself; to understand better how

middle-class culture is established and comes to work all by itself; to explore the power of representations of sexual difference--the famous separate spheres for 19th-century men and women--and of the great divide that opens between the public and the private; to understand how sexuality extends the reach of disciplinary power, and how money, increasingly nothing but paper, extends value. Our primary focus will be on novels. We will study how large Victorian "triple-deckers" project intricately detailed worlds populated with compelling, three-dimensional characters. We will consider how novels represent the way we live now.

This course will examine both the power and the complexities of writing that derives from personal experience. Topics to be addressed, in turn, are memory (and its reliability); experience (authoritative/reportorial vs. interpretative/symbolic); identity and voice of the narrator; and agency (the degree to which the narrator is in control, or not in control, of the narrative). Types of life writing that will be explored are coming-of-age narratives, illness and trauma narratives, confessional narratives, autobiographical poetry and song lyrics, and interviews/oral histories. Readings and materials include William Styron, Mary Karr, Ta-Nehisi Coates, Malcolm X, Donna Tartt, and others.

ENGL229 Afro-Surrealism

Amiri Baraka coined the term "Afro-Surreal" to describe the writer Henry Dumas's "skill at creating an entirely different world organically connected to this one." In his 2009 "Afro-Surrealist Manifesto," D. Scot Miller builds on Baraka's observations and distinguishes Afro-Surrealism from Afrofuturism in the former's concern with the "RIGHT NOW." Indeed, in the "right now" of 2018, Afro-Surrealism seems to be having a moment, with the success of films like "Sorry to Bother You" and "Get Out," the musical and filmic work of Donald Glover/Childish Gambino, the visual art of Kara Walker and Kehinde Wiley, and the literature of Paul Beatty and Colson Whitehead, among others. This course will examine this contemporary resurgence of the Afro-Surreal, and trace its echoes in black popular music, in the work of African American literary figures like Dumas, Toni Morrison, Bob Kaufman, Ralph Ellison, Jean Toomer, and Zora Neale Hurston, and through its African and Afrodiasporic foundations in the work of artists inspired by Léopold Senghor's Négritude movement. All of these

artists "distort reality for emotional impact," as Miller puts it, and we will aim to connect these distortions of the "right now" to the material reality of life under regimes of anti-blackness and racial oppression that these Afro-Surreal works lays bare.

ENGL230 Introduction to Asian American Literature

This course introduces students to Asian American literature, culture, and literary criticism. In addition to exploring narratives concerning Asian American migration, exclusion, citizenship, and intersectionality, we will also focus on newer critical trajectories. These include Asian Americans and the U.S. and Global South, genealogies of violence, recent trends in Asian American and diasporic popular culture, climate change, and critical refugee studies. By examining a range of genres and critical methods, this course will advance understanding of how Asian America has shaped the making of American culture and history.

ENGL231 Foundations: Nation, South Asia, Diaspora

This course examines the relationships between the central narratives of South Asia and those of the global diaspora. What stories have been central to the idea of South Asian identity, experience of imperialism and colonialism, and nationhood? How have those stories been useful in navigating going to and living in global diasporic locations? Beginning with The Ramayana, our class will see its characters, plots, and messages adapted to diaspora, in such works as Life Isn't All Ha Ha Hee Hee, and Sita Sings the Blues. Salman Rushdie's Midnight's Children and The Satanic Verses respond to fairy tales and even the Koran, as they circulate globally. India's much loved R.K. Narayan's The Guide serves to direct us to the worldwide phenomenon of Bollywood films, particularly those considering what it means to be South Asian in diaspora, such as Dilwale Dulhania Le Jayenge or Swadesh.

ENGL232 Mystics and Militants: Medieval Women Writers

In this class we will read a wide range of works written by European women between ca. 1100--1400, including courtly, devotional, and polemical texts. The course will explore ideologies of gender in the Middle Ages and examine the ways in which our authors confronted the antifeminist discourses of their eras with learning and imagination. We will consider such topics as constructions of sexuality and the body, "courtly love," mystical religious experience, heresies, humanism, and utopian realms. In short, we will read works by women who created their own forms of authority and in doing so, both influenced and defied the authorities of their time.

ENGL233 All Ah We: Contemporary Afro-Caribbean Drama & Performance

What are the dramatic utterances of Afro-Caribbean artists? How do Afro-Caribbean playwrights and other narrative-based performance artists present "Caribbean" and/or "West Indian" subjectivities in ways that are shared, yet critically different? In what ways are Afro-Caribbean dramas and performance pieces repositories for the practical, the theoretical, the sociological, the political, the imagined, and the lost? In answering these questions and more, we examine these textual and embodied expressions from the complicated crossroads of class, creolization, diaspora, ethnicity, folklore, gender, history, indentured servitude, isolation, language, race, religion, and slavery. At all times, this course reveals in the polyphony that is Afro-Caribbean drama and performance.

ENGL234 Introduction to Postcolonial Studies

The 1978 publication of Edward Said's *Orientalism* signaled the presence of postcolonial studies, a field of intellectual inquiry that proved influential in the humanities and social sciences. How, from our vantage point in the latter end of the 20th century, do we understand both the age of imperialism/colonialism, and what happens afterwards? What are the conditions of decolonization and national independences? How do the cultures of the formerly colonized countries use and modify imperial vestiges, and invent themselves anew? Central to our course will be the work of three major theorists in the field of postcolonial studies: Edward Said, Gayatri Spivak, and Homi Bhabha. Among other important ideas, we will discuss Orientalism, subalternity, and mimicry.

ENGL236 British Modernist Fiction

This course will introduce students to British novels from the modernist period of 1900-1945, a time of massive formal innovation. We will explore the formal, thematic, and philosophical features of British modernist fiction through close readings of novels and through occasional readings in essays of the period and more recent criticism. This course will provide a broad, if necessarily selective, picture of modernist fiction in all its considerable variety. In addition to some iconic examples of high modernism, we will read some arguably minor novels as well. Much of our attention will be on modernism's recurrent concern with the meaning of modernity itself. Are modernism and modernity identical, antagonistic, or mutually dependent? How is modernism implicated in Britain's

waning imperial fortunes? Is modernism avant-garde or canonical, elitist or engaged with popular culture?

ENGL238 Russian and American Poetic Encounters

The fascination of Russian poets with American authors, and the curiosity of Anglophone poets about the culture of Russia and the USSR, are trends that accompany the turbulent twentieth century, when the political relationships between Russia and the USA were largely inimical. But it was also a period when poetry mattered. In this course, we will focus on some of the most significant poets of the twentieth century.

We will study six Russian poets (Vladimir Mayakovsky, Boris Pasternak, Osip Mandelstam, Joseph Brodsky, Olga Sedakova, and Arkadii Dragomoshchenko), and six American poets (William Carlos Williams, Robert Frost, T. S. Eliot, Langston Hughes, John Ashbery, and Lyn Hejinian), and also one Caribbean poet (Derek Walcott).

We will learn how to analyze lyric poetry, and how to study it comparatively. We will explore the poets' dialogues with each other across cultures. For example, we will learn how Mayakovsky's "ladder" might have influenced Williams' *vers libre*, or how Joseph Brodsky learned T. S. Eliot's theory of impersonality in poetry even though Eliot was banned in the USSR. We will also explore where poetry and politics meet. For example, we will discuss why Langston Hughes found his visit to the USSR inspirational as an African-American poet, and we will see whether the myth that Robert Frost's visit to the USSR contributed to the Cuban Missile Crisis is true.

The course is taught in English. No knowledge of Russian is required.

ENGL238Z Jane Austen and Her World

In this course we will explore Jane Austen's unique approach to the realist novel and her distinctive engagement in contemporaneous debates about art, personhood, and politics. Austen was a sharp, subtle, and principled writer who tended to explore competing arguments and assumptions rather than

render explicit judgments. She weighed in on aesthetic controversies involving beauty and the picturesque, the appropriate language for literature, the ethics of readers' identification with characters, and the truth claims inherent in realism. She considered philosophical questions about how individuals come to know the world and themselves, and the value and danger of a complex inner life of emotion and imagination. She examined the competing claims her contemporaries made for the primacy of the individual, the family, and the community, and for local rootedness and cosmopolitan independence. Our course reading will consist of three novels by Austen as well as works of painting, literature, and nonfiction prose. Students will complete frequent exercises designed to open up new ways of encountering and investigating a literary text. Curiosity and a willingness to experiment are the only prerequisites.

ENGL239 Anticolonial/Decolonial: Literature and Film

This course examines how histories of twentieth century anti-imperialist writing and cinema are relevant for contemporary decolonizing agendas. We will compare works by colonial and postcolonial theorists, writers and filmmakers, to examine how literature and film address processes of colonization, anti-imperialist struggle, decolonization, and neo-colonization. Readings will be drawn from a range of countries in both the Global North and South and films include Ousmane Sembène's *La Noire de...*/Black Girl (1966), Gillo Pontecorvo's *The Battle of Algiers* (1966), Sarah Maldoror's *Léon G. Damas* (1994), Stephanie Black's *Life & Debt* (2001), and Ciro Guerra's *Waiting for the Barbarians* (2019).

ENGL240 Introduction to African American Literature

This course will introduce students to African American literature. It will be divided into two parts. The first will pay particular attention to the experience of enslavement by focusing on several unique primary and secondary textual couplings, including (but not limited to): Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) and Saidiya Hartman's "Scenes of Subject: Terror, Slavery, and Self-Making in Nineteenth-Century America" (1997); and Harriet Jacobs's "Incidents in the Life of a Slave Girl" (1861) together with Hortense Spillers's "Mama's Baby, Papa's Maybe: An American Grammar Book" (1987). In addition to these classic 19th-century slave narratives and contemporary sources, then, the first part will also include supplementary readings by Kenneth Warren, David Blight, Angela Davis, Alexander Weheliye, Spillers, Hartman, Farah Jasmine Griffin, Shelly Eversley, Jennifer Morgan, and Frank Wilderson. The second part will focus on 20th- and 21st-century African American literature and literary criticism. It will bring together a wide range of readings from across genres and disciplines, attempting to sketch out the major aesthetic and political features of the black literary project. Authors here will include W. E. B. Du Bois, Booker T. Washington, Michael Rudolph West, Hazel Carby, Cheryl Townsend Gilkes, Alain Locke, Shane Vogel, Alice Walker, Zora Neale Hurston, Richard Wright, Ralph Ellison, Asia Leeds, Roderick Ferguson, Claude McKay, Amiri Baraka, James Baldwin, Toni Morrison, Samuel Delany, Octavia Butler, Teju Cole, Ta-Nehisi Coates, Cornel West, Claudia Rankine, Warren, and Fred Moten.

ENGL242 Longform Narrative

This course will explore techniques and theories that sustain multifaceted and long narratives in fiction and nonfiction. Students will read texts that transpire over many pages, over long periods of time, and which involve deep explorations of character, setting, and theme. Readings will draw on various genres: classics ("Crime and Punishment" and Thomas Mann's "The Magic Mountain"), crime fiction (Donna Tartt's "The Secret History"), and narrative nonfiction (Rebecca Skloot's "The Immortal Life of Henrietta Lacks" and Gay Talese's "Honor Thy Father"). We will examine and explore the elements that sustain long and complex stories. Students will write one very long (50-page) essay or piece of fiction over the course of the semester.

ENGL244 Kill Anything That Moves: The Vietnam War in Literature and Film

This course examines various forms of literature and film to understand the legacies of one of the most transformative events in American culture and history: the Vietnam War. "Kill anything that moves" was the order that American soldiers reportedly received while on the ground in Vietnam, yet, to a large extent, the historical focus on the American experience of the conflict has overshadowed other perspectives. Thus, this class will take a comparative approach, exploring works by canonical and noncanonical American, Southeast Asian, and Southeast Asian American authors and directors. Among the diverse genres we will study are prose, poetry, graphic narrative, and narrative and documentary film. To think about the Vietnam War's broader relevance, we will situate the works under study within current debates concerning refugees, genocide, human rights, and the complex politics and aesthetics of

war representation. Students will have the opportunity to investigate an understudied aspect of the Vietnam War toward the end of the semester.

ENGL245 Introduction to Literary Theory: Suspicion, Ideology, Deconstruction

There are ways of reading concerned with fixing, policing, and reifying assumed meanings, as well as the violent, normative structures that ground them, and there are ways of reading to the limits of what is (un)certain yet articulatable--reading that renders visible so as to destabilize antiblack, colonial, sometimes literalist and other times deceptively metaphorical constraints on language and invention. This course is devoted to the latter, as it is to disturbing normativity's self-entrenched truths, for normativity's colonial and imperial impunity and sedimentation are not the same things as eternal. While some approaches to language, and the ideologies they shroud and animate, might promise the seeming comforts of sudden breaks with history and complicity, or safekeep status quo notions of prophetic fulfillments of history as it was allegedly supposed to be, the texts of this course are less pious, and move more slowly, suspiciously, and "weirdly" with the linguistic structures of being and time. The reading modes featured in the course (i.e., deconstruction, black critical theory, Afro-Caribbean negative thought, speculative theories, and mysticism) would compel ideologically gnarly forces to tremble--exposing their violence and suspending any swift retrenchment to the very mechanisms that made such possible. And they ask us: what transformations might be necessary to not restore power to the very juggernauts we, as readers, have worked to possibly make tremble? In other words, how do we read literature and theory to learn how to read any use of language for ideology and not only locate, say, representations of sovereign violence in such, but even--dare we think it?--initiate depositions of power, and invent?

ENGL246 Personalizing History

How much are we shaped by our historical times and places? How much power do we have to make our historical conditions respond to our needs and desires? These questions and others are at the foundation of this course, which includes both memoir writing and memoir reading. We will construct narratives about our times and selves in a series of writing workshops. There will be some exercises where you will be asked to research specific aspects of your times and places. For example, you might be asked to research and write about such questions as when and where were you born, what were the major cultural or political currents of that time, and how was your early childhood influenced by them? Or you may be asked to bring in a photograph of someone important in your personal history and write about that person.

The memoir is a distinct genre, with topics/themes particular to it. Some of the most important are memory itself, childhood, place and displacement, language, loss/trauma/melancholia/nostalgia, self-invention or transformation, family, and generational differences. The class will engage with these topics in the analysis of the readings and also in the writing of memoirs. Specific techniques will be highlighted for writing practice: the catalog, diction, dialogue, metaphor, description, point of view, and narrative structure, including temporal organization, the doubled narrative, and the narrative frame.

ENGL247 Imperial Education: Colonial Template

Where, how, and for what reasons did our modern structures of education originate? Beginning with the sketching out of an educational model in the British Raj, we will examine the dissemination of that model globally, in the British and French colonies of Asia, Africa, the Americas, and among immigrants and the proletariat. How and where does that model change, and to what effect? History will provide the context for our major subject matter: literature focussing on the educational experience. Among our historical and theoretical readings will be Macaulay's Minute on Indian Education, Viswanathan's *The Beginnings of English literary study in British India*, Wa Thiong'o's *Decolonizing the Mind*, Freire's *Pedagogy of the Oppressed*, and José Martí's *On Education*. We will also analyze literary texts and films, including Narayan's *The English Teacher*, Beti's *Mission to Kala*, Dangarembga's *Nervous Conditions*, Adichie's *Purple Hibiscus*, the film *Sugar Cane Alley*, and others.

ENGL248 Shakespearean Revolutions

Shakespeare's works emerged during a period of revolutionary social, political, religious, economic, and cultural change, including the Protestant Reformation, the rise of print culture, the transition from feudalism to mercantile capitalism, early colonialism, global trade, and the emergence of the first, purpose-built, commercial playhouses. Innovations in dramatic form and genre, which Shakespeare helped craft, sought in varying ways to make sense of these momentous shifts for diverse theater publics. Revivals and adaptations of his works on stage and screen during times of revolutionary change have rendered the Shakespearean canon a site of subsequent social and cultural contestation. This class considers the "revolutionary" dimension of four Shakespeare plays both in their own time and place, and in later theatrical and filmic productions and adaptations. We will trace first-, second-, and third-wave feminist reimaginings of *"The Taming of the Shrew"*; Second World War- and Vietnam War-era renderings of *"Henry V"*; civil rights and anti-apartheid era restagings of *"Othello"*; and attempts to decolonize *"The Tempest"*.

ENGL249 Data and Culture

What does the mass digitization of the print cultural record mean for the making and study of literature, art, and culture? This course introduces students to the critical and cultural study of data by introducing key debates around the meaning of data in the humanities. Like "slow food"--a movement where diners, farmers, and chefs rethink what and how we produce and consume--we will explore data as local, embedded, and requiring careful critical reflection. How can computational tools help us to understand art and literature? What do digital archives reveal (or obscure) about the people who make them? What kinds of writing have, historically, been seen as "uncreative" or automatable and what might this reveal about ideas of labor, gender, race, class, and computation? We will explore the foundations of this field while also discussing concerns that emerge when accessing and maintaining digital cultural artifacts in time and across global and local contexts. Weekly readings will introduce concepts

for understanding the cultures (and cultural artifacts) that produce and are produced by data and key techniques that humanities researchers use to organize, mediate, and analyze digital sources. This course will draw on a range of critical traditions, including history of the book, media studies, science & technology studies, computational literary studies, and critical data studies. Students will explore these methods through reflection papers, short code assignments, exercises in data curation and critique, and final projects. Course meetings will alternate between discussions and workshops with data from local libraries and special collections, including Olin Library Special Collections & Archives.

ENGL250 Technologies of the Self

Where does the idea of an authentic self come from? The desire to represent the authentic self informs the narrative genres of the confession and memoir and visual ones of the selfie and self-portrait alike. Yet both the memoir and the selfie "self" are mediated, first, via the technologies of print and screen, and second, via the conventions of particular genres that make these legible as a memoir and selfie, as opposed to, for example, an interview or a portrait. In this course, we will examine how different technologies not only represent but produce the self. These technologies include "writing" technologies: print and digital; genre and medium (autobiography, the slave narrative, memoir, self-portraits, and selfies); and technologies of the state, which produce citizens, subjects, and humans.

ENGL252 Animal Theories/Human Fictions

The question of "the animal" has become a recent focus of theory, although depictions of nonhuman animals can be traced to the very origins of representation. This course will move among literature, philosophy, art, and theory in an effort to trace the changing conceptions of human-animal difference and human-animal relations from 18th-century fictions of savage men and wild children to current theories of the posthuman. We will consider the ways that the representation of "the animal" intersects with theories of gender and race as it also contests the grounds of representation itself. Authors may include Rousseau, Poe, Sewall, Mann, Colette, Coetzee, Heidegger, Agamben, Derrida, and Harway.

ENGL253 Science and/as Literature in Early Modern England

Seventeenth- and 18th-century Britain saw the development and popularization of the "new science." Microscopes, telescopes, air pumps, automata, and experiments captured the popular imagination. The first important scientific societies and journals were founded, and the public learned about new discoveries through sermons and coffeehouse lectures. British science was brought to its colonies across the globe, and it was shaped, in turn, by the different natural products and the brutal realities of slavery there. This course will trace the literary reaction to these cultural changes. A woman natural philosopher wrote utopian science fiction, and satirists skewered mathematicians and experimenters. While the best of early 18th-century nature

poetry takes Newton quite seriously as it depicts the way light glimmers off objects, by the century's end William Blake villainized Newtonian thought as reductive and deadening. We will try to understand what writers found exhilarating, scary, confusing, hilarious, or important about science at this key moment of its development. At the same time, we will read this science as literature--considering, say, Francis Bacon's symbolically fraught "idols" and Robert Boyle's "literary technology," the role of poetry in spreading scientific ideas and the importance of analogy and metaphor to the very logics that structured scientific thought. The disciplines of science and literature were not as cleanly separated in this period as they are now, and we can better understand both by exploring their intersections.

ENGL254 India: Identity, Globalization, and Empire

In this course, we will read literature and watch films that shed light on how various socio-economic and political trends have impacted India and its inhabitants during the 20th and 21st centuries. We will begin our study in the early 2000s, when the country made international headlines for being a "globalization" success story and a new global superpower, and then move backwards in time to the post-colonial and colonial eras. We will discuss various questions: What exactly is globalization, and is it something new and inevitable? How is it related to empire, and how do entities like globalization and empire impact the evolution of both individuals and communities? We will watch Bollywood and Hollywood films and closely examine the literature of Partition. We will discuss the undying presence of communal violence in modern India, and the rise of the Hindu Right. We will read English-language texts, and also texts translated from Urdu, Hindi, Kannada, Malayalam, and Bengali.

ENGL255 The Comic Novel in the Long Nineteenth Century

This course examines the tradition of the comic novel from the origins of the novel itself to the early twentieth century. We will begin by examining the two models for the comic novel that emerged at the beginning of our period, Fielding's *TOM JONES* and Austen's *PRIDE AND PREJUDICE*: a narrator who is colloquial and digressive or reclusive and ironic; a plot that is episodic and fragmentary or unified and spare; an ethical scheme that relies on satire and social commentary or on poetic justice and the implications of theme. We will then trace the ways later writers drew on and rebelled against those two modes. While enjoying these very funny books on their own terms, we will also take seriously their experiments with narrative form; their complicated relationship to the categories of "the novel," comedy, realism, and modernism; and their engagement with the social, economic, and political tensions of the world they depict, however hilariously.

ENGL255Z Writing the Body

How does the body write? Do we trace our words with fingers and toes, with a pen and paper, with flour or glitter or dust or the soles of our feet? Can the written word remind us that we are more than our eyes or our heads? Writing the body is an attempt to link the worlds of the written and the somatic through

the act of writing. This class is both a generative creative writing course and a theoretical exploration of the ways in which the body has been rendered in literature, poetry, and philosophy. Putting queer studies, disability studies, Black studies, and Indigenous studies into conversation with prose, plays, and poetry, students will explore different strategies of embodied writing. Looking to the work of Maggie Nelson, Jean-Luc Nancy, Eileen Myles, Christina Sharpe, Aisha Sabatini Sloan, Hortense Spillers, Eve Tuck, Billy Ray Belcourt, Torrey Peters, Wendy Ortiz, Lidia Yuknavitch, Jordy Rosenberg, Gabrielle Civil, Ursula Le Guin, adrienne maree brown, and Frank O'Hara students will produce a written work that moves promiscuously between theory and creative nonfiction.

ENGL256 Comedy and the Comic Spirit in the Long 19th Century

This course follows the Comic Spirit (as novelist George Meredith called it) as it frolics through 19th-century literature and popular culture. We will examine how writers experimented with traditional elements of comedy such as courtship plots, playful language, and eccentric characters as well as with universal aspects of storytelling such as the narrator's voice and the ethical implications of poetic justice. While enjoying these hilarious works on their own terms, we will also take seriously their experiments with narrative form; their complex relationship to the categories of the novel, comedy, and realism; and the ways humor created links between literature and the visual and musical arts. This course fulfills the English Department's Literary History II and British Literature requirements.

ENGL257 Introduction to Detective Fiction

This seminar introduces two intertwined genres: detective fiction and crime fiction. Surveying a range of British, American, as well as postcolonial writers from Kenya and India, we'll explore how novelists and short story writers imagined the operations (and failures) of law, justice, and truth in different historical moments, and towards different ends. We'll learn some techniques for analyzing detective fiction--from its form, to its format in early periodicals, to its social and historical and political subtexts. We will pay particular attention to the ways of knowing the genre enables--from the early colonial detective fictions and constructions of race to the later-day crime fiction that uses the genre to stage problems of adjudicating and redressing imperial harms. Along the way, we'll use these at-times pulpy mysteries to think through the status of genre fiction in the university canon and the relationship of art, entertainment, and commodity.

ENGL258 New World Poetics

God and money, love and beauty, slavery and freedom, war and death, nation and empire: The themes of early American poetry will carry us from London coffeehouses to Quaker meetinghouses, from Philadelphia drawing rooms to Caribbean plantation fields. Our texts will range from pristine salon couplets to mud-bespattered street ballads, from sweetest love poems to bitterest satire. Digging deeply into the English-language poetry written, read, and circulated after the first English settlement in North America, we will trace the sometimes secret connections between history and poetic form, and we will listen to what these links can tell us about poetry and politics, life and literature in our own time. Our poets ignored false divisions between art and society, and so will we.

ENGL259 The Art of the Personal Essay

The personal essay is short-form, first-person, narrative nonfiction that encompasses many genres: memoir, reflection, humor, familial and social history, and cultural criticism. Yet even these boundaries often blur within a single essay, and the personal essay can expand to include almost any topic. Writing personal essays--what author and critic Philip Lopate calls "the self-interrogative genre"--helps us find out what we think, often makes us change our minds, and, ideally, leads us to new insights. In class, we will discuss the assigned readings, participate in group responses to each others' writing (workshops), and write in response to prompts. We will study both traditional and unconventional techniques of nonfiction, focusing on the elements of craft: structure, voice, clarity, the use of descriptive detail, and revision.

ENGL259Z The Art of the Personal Essay

We all have stories to tell. But there is hard work in the act of transforming our intimate experiences into meaningful and captivating stories. This course dives into this labor by focusing on the craft of essay writing. Quite specifically, students will practice a variety of creative nonfiction writing techniques as a means of critically reflecting and analyzing personal experiences in order to produce essays that speak to readers in and outside of our immediate communities and contexts. Course assignments will include a writer's journal, workshop letters to classmates, three short personal essays, and a final essay whose subject and style is decided by the writer. Readings will include essays published in the past 30 years by authors such as (but not limited to) Kiese Laymon, Jesmyn Ward, Jose Antonio Vargas, Zadie Smith, and Karla Villavicencio.

ENGL260 The Word for World is Information: Ideologies of Language in Science Fiction & Film

By the middle of the 20th century, it had begun to seem possible to produce a grand theory of communication that would use language as a basis for understanding all of human thought, behavior, and culture. As competing versions of such a theory circulated through academic disciplines as disparate as anthropology, neurophysiology, and the emerging field of computer science, they also filtered out--sometimes in strangely warped or oversimplified forms--into popular culture.

This course will examine the most interesting and influential of these theories, both in their scholarly origins and in their most puzzling and promising elaborations in works of literary and filmic science fiction. We will be particularly attentive to the ways that the narrative logic of science fiction texts can gloss over certain logical and philosophical inconsistencies in these theories while revealing others.

ENGL261 "Before the 'Body' there is the 'Flesh'": Reading Hortense Spillers

This course will introduce students to the major works of the black feminist theorist and literary critic Hortense J. Spillers (b. April 24, 1942), one of the greatest essayists and most gifted intellectuals of our times. While her published writings are legion, Spillers is perhaps best known for her scholarly article titled "Mama's Baby, Papa's Maybe: An American Grammar Book" (originally published by *Diacritics* in 1987). In addition to "Mama's Baby," then, together we will read and engage at close range with the essays collected in "Black, White, and in Color" (published by the University of Chicago Press in 2003) in order to reveal the extraordinary complexity and clarity of her thought.

ENGL262 Beyond the Talking Book: Reading African American Literature in the Newspapers

The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some lesser known ones) in their original publication context, the magazine archives of *The Christian Recorder*; *The Anglo-African Magazine*; *The Colored American Magazine*; *The Crisis*; *The Crusader*; *Opportunity*; and *Fire!!* The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context--as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students' literary close-readings skills, this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnutt, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins' *Of One Blood*) in its original installment-format, week-by-week. Reading these works serially will also enable them to pay closer attention to each installment's relationship to its surrounding texts and images.

ENGL263 Black Performance Theory

What does it mean to perform identity, to perform race, to perform blackness? How is blackness defined as both a radical aesthetic and an identity? In this course, we will focus on theater and performance as a resource for thinking about black history, identity, and radical politics in excess of the written word. Following recent work in Black Studies and Performance Studies, this class will pay particular attention to the doing of blackness, the visible, sonic, and

haptic performances that give over to a radical way of seeing, feeling, and being in an anti-black world. Plays, films, and texts might include works by Fred Moten, Alexander Weheilye, Brandon Jacobs-Jenkins, Suzan Lori-Parks, Danai Gurira, Shane Vogel, Adrienne Kennedy, Sarah Jane Cervenak, Dee Rees, Celiné Sciamma, Saidiya Hartman, Huey P. Copeland, Darby English, Lorraine Hansberry, Hilton Als, Spike Lee, Isaac Julien, Martine Syms, Tavia Nyong'o, and Daphne Brooks.

ENGL264 Outsiders in European Literature

Modern literature is replete with protagonists who represent a position or identity that is outside an accepted mainstream; they are different, peculiar and/or attractive, and potentially dangerous. This course will focus on the experience of being or being made into such an outsider, or other, and on the moral, cultural, racial, gendered, sexual, or national norms or boundaries such an outsider establishes for the inside. Reading both fiction and theory, we will ask how the terms of inside and outside are culturally and historically constructed as we also look for proposals for dealing with outsiders and their otherness. Authors may include Kafka, Mann, Camus, Colette, Fanon, Sartre, Beauvoir, Duras.

ENGL265 Special Topic: The Power of Mystery: Writing Crime and Noir Fiction

Crime fiction, in its many incarnations, is perhaps the most popular and widely-read genre in the world. In this class, we'll examine why mystery is such an effective tool for engaging readers and how we can use it to create our own powerful fiction, be it detective, cozy, clue-puzzle, or noir fiction. We will read and discuss several stories and short novels that serve as examples of the form. We'll also explore the elements and expectations of the different sub-genres through writing exercises and short assignments that will culminate in the final project, a novelette that centers on a mystery.

Please note that this course does not fulfill the 300-level course or upper-level workshop.

ENGL267 Pessimism, Nihilism, and Black Literature

This course considers Black literature's interventions into philosophical discourses of pessimism and nihilism. In contrast to the pathologization and dismissal with which they are often met, we will take both seriously as schools of thought. How are pessimism and nihilism distinct from each other? What do they offer as interpretative lenses for and approaches to Black art and Black existence? How are they reflected in literary form? We will closely consider these, and related, questions, looking to the work of authors such as Percival Everett, Jesmyn Ward, Dambudzo Marechera, Frank B. Wilderson III, and Gayl Jones.

ENGL268Z Solitude, Society and Loneliness in Romanticism and Modern Culture

We are now living in an age of constant connection to anybody, anywhere, at any time. An indirect result of this is that individual privacy and solitude are being sacrificed (sometimes consciously, sometimes not) for the pleasures as well as the risks of interconnection. The recent COVID-19 pandemic has, however, highlighted the risks of extended solitude, which has made reconnection a newly relevant theme in our lives. We thus find ourselves at a moment in history when we think of both solitude and connection with deep feelings of ambivalence. How can literature, sociology, art, and film about solitude and connection help us to think clearly and deeply about their roles in our lives?

We will read and discuss authors who consider the risks and pleasures both of solitude and interconnection, from early Romantic writers such as Mary Shelley, to American Romantics such as Henry David Thoreau and Emily Dickinson, to modern European writers such as Franz Kafka and Dino Buzzati. We will also examine non-fiction works such as Sherry Turkle's *Reclaiming Conversation: The Power of Talk in the Digital Age* and Virginia Woolf's *A Room of One's Own*. We will use these works ultimately to consider our own culture of interconnectivity. What place and meaning do the solitude and privacy so prominent in Romantic literature have in a modern culture that makes them virtually obsolete? What can films such as Kieslowski's *A Short Film about Love* and Hitchcock's *Rear Window* show us about the relationship of solitude and privacy? More generally, what can these books and films tell us about solitude and interconnection in and since the nineteenth century?

ENGL271 Distinguished Writers/New Voices

Students will read a range of nonfiction and fiction as well as works by writers visiting Wesleyan for our reading series. The class will survey past and contemporary American authors who have successfully captured the artistic, social, and political stakes of the world they inhabit. We will juxtapose literary generations ("distinguished writers" and "new voices"), examine their legacies and ruptures, and explore topics such as the voice, positionality, identity, gender, and the archive. Readings include pieces by well-known writers ranging from Virginia Woolf, James Baldwin, George Orwell, Joan Didion, Claudia Rankine, Cathy Park Hong, Teju Cole, Anne Boyer, Valeria Luiselli, Robin Wall Kimmerer. On several Wednesdays throughout the semester, critically acclaimed and award-winning authors will be reading on campus. You are required to attend and respond to these readings. We will prepare for these authors' visits by reading selections of their work.

ENGL272 Modernist City-Texts

Since the 19th century, the city has been both a privileged and a problematic object of representation for narrative realism: privileged because urban spaces have increasingly been seen as shaping or producing the very social relations and individual experiences that realism wants to describe; problematic because the city itself, as a coherent totality that might explain those relations and experiences, is too vast, heterogeneous, and complex to be represented through the traditional techniques of realism.

This course will approach the problems and possibilities of the city for realism through a close reading of two large, ambitious texts that attempt to represent the city as a totality: James Joyce's novel *ULYSSES* (1922) and David Simon's

television series *THE WIRE* (2002-2008). We will be particularly concerned with two techniques, pioneered by Joyce, for representing the city: stream of consciousness, which creates a tour of the city from the perspective of a single, mobile flâneur; and montage, which creates a map of the city by juxtaposing various cross-sections of social life or various institutions central to the city's functioning.

ENGL273 Translation in Theory and Practice

This seminar is a workshop devoted to helping students from a range of disciplines and departments hone their practices of translation. Translation is part of a wide range of academic, publishing, and creative activities: humanities and social science scholars read texts in translation, translate while doing field work and archival research, and include translations in their articles and books; translation is an engine of creativity for many writers, bilingual or not. This course will begin by looking at various alternate translations of the same texts, to expand our sense of options and possibilities. The next five weeks of reading will introduce students to some of the main debates, theories, and practices of translation into English.

The second half of the course will focus on students' own translation projects. While you are welcome to pursue a project you already have in mind, most students will be choosing and starting a new project, guided by the discussions and topics in the first half of the course. The scope can be small (a single short story, a chapter of a novel or biography, a few poems or song lyrics), or you can have an eye to a bigger project you want to pursue after the end of the semester (a senior thesis, a short-story submission for publication, a book pitch). Week by week, all students will respond in class and in writing to translations-in-progress. In the last week, we will get to see and respond to everyone's revisions.

Facility in a language other than English is required; perfect fluency is not required.

ENGL274 Caribbean Poetry and Cinema: "Fields of Islands" in an Open Sea

In this course, we will consider poetry and cinema that make radical images, sounds, and shapes of the Caribbean as a "field of islands"--islands that presume other islands, islands of foraging, convening, gathering, and concentrating on the small, in the words of Édouard Glissant--in an open, relational sea.

We will trace how the Enlightenment installs itself in the longstanding colonial tropes that render the Caribbean as a space outside of time, outside of history, perpetually under the sun, and, were it not for machetes, filled with redundantly bursting vegetation. This course will present an array of 20th-21st century Caribbean poetics and cinemas that deviate from, challenge, escape, and mangle these tropes and their spatio-temporal unimaginativeness. And we

will investigate the ways that these texts and forms make use of the figures of sea, plantation, slavery, indigeneities, uprising, marronage, desire, revolution, apocalypse, vengeance, and imagination. Concerns of nationalism, development, humanism, capitalism, and subjectivity will manifest.

ENGL275 Introduction to Writing Fiction

Fiction is a lie--a beautiful lie that holds inside it a human truth. In this class, we will explore this apparent contradiction and learn how to craft truthful lies. Over the course of the semester, we will read selected contemporary fiction, with a special emphasis on the craft of writing. We'll discuss characterization, point of view, plot, structure, dialogue, fictional time, and fictional space. You'll write one short story and bring it to class for your peers to critique, in a format commonly known as the "workshop." You will also revise this story, using techniques discussed in class. The aims of this course are: (a) to refine your understanding of the attributes, techniques, and styles of fiction; and (b) to help you improve your own writing through effective use of reader feedback and revision strategies. Readings may include work by Franz Kafka, Alifa Rifaat, J.M. Coetzee, Louise Erdrich, Julie Otsuka, Gabriel García Márquez, and others.

ENGL275Z "Like Herding Cats"

What might it reveal that cats inhabit a common-parlance simile for the unwieldy? For that which cannot be gathered, not only without resistance but also without chaos? Is a simile for uncontrollability itself not a semantic and conceptual quandary? (Also, why are cats so meme-able?)

This course will explore the metaphorical and figurative uses of cats in 20th-century literature, experimental cinema, continental philosophy, and legal studies. What implications might figurative cats have for notions of sovereignty, a body politic, coercive consensus, and so on? We will consider the cultural, linguistic, and affective lineaments of representations of cats, sometimes, by looking at them directly (even though one always risks their disdain or indifference with direct engagement) in select works by Agnès Varda, Chris Marker, Jacques Derrida, Margaret Atwood, and others, and, sometimes, indirectly--through juxtaposition with a bestiary of animals that seem to generate other kinds of metaphors, such as dogs, pigs, possums, and snakes--in select works by Colin Dayan, Jamaica Kincaid, Robin Derby, and others. We will track the linguistic and iconographic tendencies in the Western imaginary of cats to signal something uncontrollable, peripatetic, esoteric, mysterious, luciferian, blackened, marked by the feminine, that understands and perhaps even has speech, but will not lower itself to mirror the limits of "civilized language." The assigned readings and viewings for this class engage Caribbean and "World" literatures, black critical theory, the figurative in representations of the history of slavery, deconstruction, French "New Wave" cinema, and animal studies.

ENGL276 South Asian Literature in the American Diasporas

The South Asian diaspora spans the world; communities are located in Africa, the Middle East, England, North and South America, and the Caribbean, as well as Southeast Asia. Using novels, poems, short stories, and film, as well as scholarship on history, this course will focus upon the literary and cultural production of the South Asian diaspora in the Americas, focusing especially on the United States. We will examine the conditions of historical arrival and identity-making under shifting regimes of politics, economics, and culture. What does being in the United States mean for the claiming of "Indian" and "American" identities, and how is this inflected by relationships with other ethnic or racial communities? The relationship with an often romanticized "India" is a central question, expressed through the concepts of diaspora, exile, and transnationalism. Consequently, what are the conditions of "authenticity," and of cultural authority? What aesthetic forms, questions, and issues express or preoccupy the artists of the South Asian American community?

ENGL277 Writing Fiction

Chinua Achebe was famous for his quote "If you don't like another person's story, write your own." Although disliking another's story could inspire creative writing, there are various reasons why people write, ranging from the basic human desire to understand the world through storytelling down to the desire to respond to the issues of the day--be it moral, political, religious--through fiction. The course is designed to help students gain skills in writing fiction; recognizing the literary conventions of fiction; reading and critiquing published work from a writer's perspective; making deliberate creative choices; engaging the work of others in a workshop setting; and revising their work using feedback from their peers and other writing strategies. As such, our reading list will be diverse in scope, cutting across various continents, races, and creeds. We will hope to use the work on the reading list as stepping points for creating our own stories whether in response to various prompts or as original stories to be discussed in workshops. At the end of the semester, you will not only have read a good chunk of fiction and have a good sense of how fiction works, you will also have produced--and substantially revised--some of that writing.

ENGL278 Writing on and as Performance

This course focuses on developing descriptive critical and creative writing skills in relation to both witnessing and staging live performance. Through close readings of texts by authors including José Esteban Muñoz, Jennifer Doyle, Eileen Myles, Lydia Davis, Toni Morrison, Lidia Yuknavitch, Oliver Baez Bendorf, Glenn Ligon, Eve Sedgwick, Fred Moten, and Billy Ray Belcourt, this course will challenge students to craft ideas and arguments by enhancing critical and creative writing skills. We will experiment with style and form from academic arguments, to performance lectures, artist interviews, and free-form creative prose essays. Students will complete in-class writing assignments and exercises in response to written, recorded, and live performances by a range of contemporary artists. Students will also be asked to complete hybrid creative writing assignments in response to prompts that imagine writing as always in conversation with performance. More specifically, students will write pieces about embodiment, sound, and the visual. This class is particularly interested in ways in which gender, race, and sexuality are shaped by language, and how language as a

performative tool can be a site for "insurrection" (Moten) and "listening in detail" (Vazquez).

This course encourages students to experiment with their writing practices. Over the course of the semester students will be asked to write four separate creative/critical pieces, all of which will be workshopped in the space of the classroom.

ENGL279 Introduction to Latina/o/x Literature and Art

We will study Latina/o/x aesthetics and poetics to ask questions about the history, sociality, and semiotics of Latinidad, as well as the formation of Latina/o/x studies in the U.S. university. The course understands Latinidad as an assimilable disturbance, around which specific ethical questions may emerge. We will study modes of "ethnic," aesthetic, poetic, theoretical, and geographic disturbance--assimilated and unruly--specific to the semiotics of Latinidad and Latinx studies, as well as their relationship to Blackness, anti-Blackness, whiteness, form, language, ontology, race, gender, and assumptions of futurity. Readings, viewings, and listenings focus on the 20th century, but that temporal provision will surely be shot through by reference points from 1500 to 2020.

ENGL283 Old Poetics for New Poets

We today tend to assume that poetry is lyrical, personal, emotional, and short. These assumptions are not universal truths but products of a specific historical moment; they were popularized by Romantic poets such as William Wordsworth at the turn of the 19th century. This class will explore poetry and poetics before Romanticism, when poems were as often public and political as personal, as often philosophical and scientific as emotional, as often book-length as quite short. These are poems in which metaphors are stretched to their furthest limits, and passions pop to life to figure in allegorical plots. In them, the lyric "I" is less important than the didactic "you," the narrative "he"/"she," or the satirical persona. We will explore the workings of different forms and figures in this old poetics, including meter, rhymes, couplets, personas, personifications, periphrases, and conceits. Wonderfully, some of these old techniques are in the ascendant again today: hip hop privileges rhyme, and post-humanism raises new questions about personification.

Students in this course will read poetry, but they will also write it. We will think about how older poetic techniques and tropes offer resources to new poets.

Both trained and amateur poets are welcome!

ENGL284 Literary Perversions: Revolution, Democracy, Identity

The Federalist Papers wrote under the strong impression that the American Revolution was imperiled by an overwhelming debt and the lack of a national authority and identity to bind the States together. Public fear of moral degeneration via the replacement of the "Old World" symbolic order with a "New World" order under the aegis of "representative democracy" loomed over the republic.

Taking these concerns and the dissemination of The Federalist Papers as our point of departure, this course will examine how representations of "non-normative" identities in several major 19th-century works relate to the problems of representing democracy in the aftermath of the American Revolution. Many of the most famous canonical literary texts in the United States during the 19th century write about "non-normative" topics such as maternity, slavery, bestiality, and gender inequality in the context of narratives that attempt to rewrite the legacy of the American Revolution. By focusing on the literary treatment of these "perverse" topics, we shall attempt to understand whether the authors we will undertake close readings of in this course were successful in their endeavors to not only amend the shortcomings of the Revolution, but also to think more rigorously about the history of slavery and gender inequality.

ENGL285 Victorian Modes and Moods

This course offers an introduction to British literature from the 1830s to the 1870s, with an emphasis on the main artistic modes of the era such as realism, gothic, "sensation," scientific essays, and religious meditations. Each half of the course will center on a big novel that incorporates these storytelling styles: Wilkie Collins's *The Woman in White* and George Eliot's *Middlemarch*. We will also examine poetry, nonfiction prose, and paintings to explore how these modes opened up cross-genre and cross-media conversations. Central themes include changing concepts of personhood; relations between science, nature, and faith; the experience of embodiment; the languages of everyday life and of literature; and the role of art in the modern world. Throughout, we will investigate how artists used these modes to capture moods they saw as distinctively modern, from pessimism to optimism, from alienation to friendship and love.

ENGL285Z Fantasy And Speculation

Please note: Students should expect some readings and assignments to be due during winter break, prior to beginning Winter Session. Please visit the Winter Session website for the full syllabus -- <http://www.wesleyan.edu/wintersession>.

In this class we will read fantasy written by multi-ethnic authors in a variety of genres, mostly in the United States in the long nineteenth century (1770-1920). Our readings include texts that feature supernatural beings and events in imaginary settings -- but also texts that take on well-known myths and legends, create fictional characters to participate in historical events, fold time and space

to place historical characters in the midst of fictional events, or gesture toward radically different futures. This broad understanding of fantasy will challenge us to redefine its constitutive features. The choice of readings draws on the work of scholars committed to the recovery of little-known texts, especially by African American authors.

ENGL286 Literature of the Harlem Renaissance

This course will examine the aesthetics and politics of the first modern African American literary movement, known today as the Harlem Renaissance. Students will learn about the national and global contexts of this movement as well as the various debates that it generated, many of which still reverberate with Black writers today. These include the relationship between Black art and propaganda, the burdens of racial representation and the constraints of respectability politics placed on the individual Black artist, the right to opacity, and the relationship between race and form.

In this course, students will become familiar with some of the key texts of the Harlem Renaissance, its national and international contexts, and its recurring themes and debates. Furthermore, by reading and writing across a wide range of texts from this movement—including poems, short stories, novels, essays and manifestos—students will learn how to engage with a variety of genres. The assignments for this course are thus designed to teach students to write about not only specific genres, but also recurring themes in works from the Harlem Renaissance. By the final project, students will be able to pivot from writing about discrete forms and themes to writing to specific audiences.

ENGL286Z "Writing Should Do Something": The Essays of James Baldwin

Baldwin's essays, both deeply personal and political, speak of a divided self in a divided country. As a Black man, he saw himself as a problem for America; as a gay man, he was a problem for many; and as a self-described "maverick," he resisted any identification other than "writer." He wrote frankly of hating, and being hated, while insisting that without love and compassion, even for those who hated him, a decent life was unattainable. In this course, we will consider Baldwin as one of the greatest essayists of his century, a social critic who believed that "writing should do something," in the words of a letter he wrote to his brother.

Baldwin began publishing to acclaim in the 1950s; he was a celebrated public figure in the fight for racial equality in the 1960s. By the mid-1970s, however, his complicated relationship both with white liberals and leaders of the Black Power movement diminished his political stature. With the Obama presidency and the emergence of the Black Lives Matter movement, his work experienced a renaissance: almost 30 years after Baldwin's death, Ta-Nehisi Coates acknowledged "The Fire Next Time," published in 1962, as the inspiration for "Between the World and Me."

This is not a theory course, either social or literary. While our supplementary material will place Baldwin's essays within their historical and social context, our focus will be on the narrative nonfiction techniques Baldwin used to such startling and timeless effect. We will read Baldwin's most famous essays, and some that are less well known. Our supplementary readings and viewings will explore his continuing influence, and the influence of Black music on Baldwin.

ENGL288 British Poetry from the French Revolution to the Death of Byron

This course provides an introduction to major poets of late eighteenth- and early nineteenth-century Britain—Blake, Wordsworth, Coleridge, Byron, Clare, and Keats—and to issues central to the study of Romanticism as an artistic movement. These issues include: how people experience nature; poetry's relationship to music, storytelling, and visual arts; new ideas about originality and literary experimentation; and poetic responses to the French Revolution and the social and economic change that mark the period. No experience with poetry or with British literature is expected; the course functions as an introduction to both.

ENGL289 Intertextual Aesthetics in African American Culture: From Signifyin(g) to Sampling

Intertextuality, the integration of references to multiple texts into a single artistic work, has long been considered a hallmark of postmodern aesthetics. This course will begin from the premise that this intertextual approach was a foundational aesthetic technique for African American cultural producers long before any discourse around postmodernism entered the lexicon. From David Walker's "sampling" of the Declaration of Independence in making his 1830 anti-slavery Appeal, to Kara Walker's incorporations of imageries and artistic techniques of the antebellum South to comment on contemporary realities of blackness, African American artists have long made use of intertextual aesthetics not merely in the service of postmodern indirection, but in order to represent the realities of black lived experience in America. This course will investigate the transmedial history of this intertextual black aesthetic, examining African American literature, music, film, and visual art, and will consider various ways in which black intertextual aesthetics have been theorized, from Henry Louis Gates' notion of "signifyin(g)," to discussions of hip hop sampling and Black Twitter. As mass-mediated technologies have proliferated in the 20th and 21st centuries and representations of "Blackness" writ large have exponentially multiplied in the popular imagery, contemporary artists increasingly sample and signify on these representations themselves. So a significant piece of our work in the course will be in analyzing the ways that the intertextual aesthetic is mobilized in the contemporary moment to speak to material realities of postmodern blackness, and to articulate nuanced black subjectivities in the face of subjection.

ENGL290 Place, Character, and Design: Techniques in Writing Nonfiction and Fiction

The distinction between creative nonfiction and fiction is that nonfiction professes to tell the truth with very little embellishment. Rather than present

reality as a series of raw facts, CNF writers borrow techniques of fiction writing--description, anecdote, scene construction, characterization, and dialogue--to tell dynamic and compelling true stories. In this course we will investigate craft aspects that are relevant in nonfiction and fiction such as establishing characters and a narrator's voice, building the spatial world and emotional tone of the narrative, and using structure to communicate what we want to say with the story or essay. This course will explore topics to help writers mine their lives and experiences for material in both genres. We will emphasize reading, writing, and critical thinking about narrative craft, operating on the philosophy that you must become a skilled critical reader to become a better writer. Students will study the work of a diverse range of established writers, respond to weekly writing prompts and exercises, and participate in several small group workshops leading to a longer narrative along with developing a writing habit founded on the knowledge that, as with any skill, good writing requires consistent practice and revision.

ENGL292 Techniques of Nonfiction

In this course, we will learn how to craft and revise short pieces of nonfiction writing that draw on our own life experiences and our observations of the world around us. To achieve this goal, we will constantly be creating and editing our own prose, and we will perform various writing exercises. Moreover, we will read our colleagues' nonfiction prose and offer them thoughtful, generous feedback. Finally, we will read various published nonfiction essays--memoirs, musings, reviews, and reportage--and we will analyze these pieces in order to understand how veteran authors narrate "real-life" stories in a way that is engaging, beautiful, and meaningful. Upon completing this course, you will have a deeper knowledge of how to construct resonant nonfiction narratives, and a better understanding of various literary concepts, including pacing, arc, imagery, place, and character. You will have learned how to harvest experiences and observations from your own life in order to tell a story that reveals subtle but acute information about the larger world.

ENGL292A Techniques of Nonfiction: Memory and Memoir

Taking the shifting nature of memory--sometimes fluid, often repressed, shape-shifting, nonlinear, occasionally contradictory--as our starting point, we will read and write memoirs, personal essays, and experiments. We will examine how writers convey not only remembered events but also the events' lasting emotional and symbolic significance, almost invisibly, within the technical aspects of their texts. As we read and write, we will consider the relationship between content and form in personal nonfiction, and we will explore the various ways writers employ narrative and anti-narrative structures when writing about oneself and one's own life. In other words, this semester, you--everything that composes who you are as an individual--will be your primary subject matter as we think about memory, consciousness, the (un)reliability of linearity and "truth," and language's relationship with time, presence, and place. We will look

deeply into the complexities of what it means to be a person in the world with language alive inside of us. We will walk into the rooms of our memories and heritages. We will question our relationships with temporality and language, and we will dredge up--in order to write through--our most impossible thoughts.

We will divide our time between reading contemporary investigations into nonfiction forms--the memoir and anti-memoir, experimental fictions that cull from one's life and heritage, the lyric essay, and hybrid essay forms--and writing our own nonfiction texts in response. There will be biweekly presentations, in-class writing experiments, and intensive workshops of one another's work. The class will culminate in a book arts project and a reflective essay.

ENGL293 Afro-Asian Intersections in the Americas

This course explores a range of historical, cultural, and political intersections between African and Asian diasporic people in the Americas from the late 19th century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the United States and abroad, and the 1992 Los Angeles uprising. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to interracial buddy films like *Rush Hour* (1998), to the contemporary fiction of writers such as Patricia Powell and Charles Johnson.

ENGL294 Edith Wharton and the Art and Science of Fiction

Edith Wharton's prolific literary career coincided with two major developments in the history of fiction: the emergence (associated with Flaubert and Henry James) of the novel as a form of high art, and the rise (associated with Zola and Frank Norris) of the "naturalist" novel and its claim to represent a newly scientific depiction of human life. Although these new schools of fiction have often been thought of as antagonists, Wharton participated enthusiastically in both. In this research seminar, we will consider the ways that Wharton responded to both aestheticism and naturalism and the reasons she considered them appropriate to her depiction of contemporary life--especially in relation to the issues crucial to her fiction of gender, marriage, and sexuality.

ENGL296 Techniques of Fiction

This introduction to the elements of fiction and a range of authors is for students who want to write and, through writing, increase their understanding and appreciation of a variety of short stories.

This is a class for those with a deep love of the written word and a boundless curiosity for what transpires when the imagination is given room to roam. We will work together to develop certain skills: a poet's love of metaphor and gift of compression; a playwright's sense of dramatic tension; an essayist's penchant for startling observations and investigation; and a translator's attention to meaning and language. We'll attend to the customary struggles of fiction writers: moving people around in time and space; showing rather than explaining; giving people things to say that sounds natural and revelatory; and making sure everybody wants something they can't have and shouldn't get. In other words, we will be looking at elements of fiction such as action, character development, plot, dialogue, and description. We'll be reading short stories by the acknowledged experts. And we will be focusing intensely on revision as an act of re-visioning your stories. I repeat: Be prepared to revise.

ENGL297 Practical Criticism

In the early twentieth century, I.A. Richards, an instructor in English Literature at Cambridge, ran an experimental class he called "practical criticism." Each week, he distributed a single poem to his students without revealing the poem's title, author, and date of publication. He asked students to take the poem home, read it as many times as they felt necessary, and write a brief essay that simultaneously judged and interpreted the poem. This course revives Richards's experiment for the twenty-first century. We will follow Richards's protocols for a different set of twelve poems, which students must read, judge, and interpret. (Students must vow not to use Google to identify the authors.) The first half of seminar will be spent discussing the poems and the students' judgments of them; the second half will be spent reflecting on the discussions in the first half, with the help of theoretical writings by Immanuel Kant, Jeremy Bentham, Theodor Adorno, Frank Sibley, John Guillory, and Sianne Ngai.

ENGL298 Richard Wright and Company

This course offers an in-depth consideration of the work and career of Richard Wright, a defining figure in 20th-century African American literature, and seeks to understand Wright's interactions with a wide array of mentors, proteges, and enemies. By placing Wright amid the network of supporters, admirers, and detractors who surrounded him, we will gain a deepened understanding of Wright's development and a useful map of 20th-century African American literary expression and American literary history more broadly. Writers to be covered in the course may include, along with Wright, Hannah Arendt, James Baldwin, Gwendolyn Brooks, Horace Cayton, Ralph Ellison, James T. Farrell, Dorothy Canfield Fisher, Chester Himes, Langston Hughes, Zora Neale Hurston, Alain Locke, Gertrude Stein, Margaret Walker, John Williams, and Frank Yerby.

ENGL300A Creative Writing Workshop: Multi-Genre: Writing Ecologies

How can environmental literatures wake us up to the more-than-human world, re-wild our senses and syntaxes, realign our perspectives, and call forth an awakened sense of belonging? How do the lenses of culture, gender, and class affect how we observe and describe the world in which we live? How might thinking, synergistically, as an ecosystem forge new lenses, new emotional and intellectual centers?

In this open-genre workshop, we will read and write texts that honor a wider ecological consciousness, that celebrate the interconnectedness of the biota, and that are a call to action. We will keep field notebooks, perform site-specific writing experiments, apply permacultural perspectives to the ways we language and read our environments, take steps toward bioregional literacy, consider interspecies encounters, climate change, sustainability, environmental justice, geologic time, artistic-practice-as-research, and bear witness as acts of remediation.

We will divide our time between reading environmental literatures in nonfiction, fiction, poetry, and hybrid forms and writing our own texts in conversation. There will be weekly presentations, writing experiments, suggested field trips, and workshops of one another's work. The class will culminate in a book arts project and reflective essay.

ENGL301 1492: States of War

This course approaches 1492 as a signifier and time-stamp of modernity. It signifies and time-stamps an ongoing war against people of African descent. It grounds systems of representation, racialization, and colonization with which we must reckon. By reading richly symptomatic, primary, historical documents about "blood," race, geography, and slavery in Saint Domingue/Santo Domingo, as well as some contemporary fiction, art, and critical theory that re-narrate and theorize Caribbean history, we will focus on the historical frame of 1440 into the 18th century. This frame holds with specific reference to Frank B. Wilderson III's notion of when the "gratuitous violence" of the Middle Ages begins "to mark the Black ontologically." We will read sometimes for imperial notions of sovereignty, Man, selfhood, force, race, land, property, and labor, and other times for Caribbean notions and narratives that are at war with said imperial, Christian, Western onto-epistemological schemata. Conceptually, the course thinks from and about Caribbean literary studies, Black critical theory, aspects of Enlightenment thought, and deconstruction.

ENGL302 Special Topics: Environmental Fiction

In this course, we will study contemporary fiction that grapples with our changing environment alongside critical texts that contextualize environmental literature through the lenses of race, sexuality, and place, as well as post-coloniality, decolonization, and tourism, with a view to understanding what this means for fiction writers interested in writing about such topics. Some

questions we might ask include: What do we mean by terms such as 'wilderness' or 'nature'? To whom does 'nature' belong, and what are the differing or contradictory ways in which different groups of individuals interpret and navigate it? How do we, as creative writers, write about the environment, especially in the current moment, in a manner that is urgent, ethical and fresh? If we believe in the power of fiction to change the world around us, what tools of craft do we have at our disposal to imagine a future we want to live in? This course is a seminar-workshop hybrid, i.e. the first half of the semester will be spent reading and discussing assigned books, the second half of the semester will be a workshop in which students write and discuss their own stories.

ENGL303 Narrative Theory

Narrative, one great critic suggests, may be the central function of the human mind. It is, as another once wrote, "simply there, like life itself." As these claims indicate, narrative gives form to our collective experience: from the shadow of history and the shape of the future to the very texture and meaning of time itself. This course provides an introduction to the tradition of narrative theory--the theory of how stories work and of how we make them work--through a sustained engagement with three core narrative-theoretical concepts: structure, text, and time. A single book will anchor and orient each of the course's units: for structure, Vladimir Propp's MORPHOLOGY OF THE FOLKTALE; for text, Roland Barthes's S/Z; for time, Gérard Genette's NARRATIVE DISCOURSE. Herman Melville's novella BENITO CERENO will supply our "control text," a narrative to which we will return as we study the theory and through which we will test the powers and the limits, both analytical and historical, of our theorists. In each of our units, we will begin with a careful reading of our main theorist, move on to consider work that elaborates on the theory, and then turn to robust approaches--Marxist, historicist, queer, psychoanalytic, sociological--that challenge or modify the theoretical terms with which we started.

ENGL304 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice

Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover's voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet's effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric's history and practice. In this course, we will read from African American, African diasporic, Caribbean, Latina/o/x, and Indigenous poetics, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

ENGL306 Asian American Posthumanisms: Biopolitics, Ecopoetics, and Literature

From 19th-century anxieties concerning subhuman coolies to 21st-century celebrations of suprahuman cyborgs, United States discourses have always figured people of Asian descent as peripheral to the category of the human. While Asian Americanist scholarship has often responded by asserting the humanity of Asian Americans, a number of scholars and writers have begun to explore and even embrace the inhuman character of the Asian American. Drawing from recent scholarship in science studies, political ecology, anthropology, and literary studies, this course will consider what it looks like to shift the scale of analysis from the individual, organismal human to the social logics, biopolitical infrastructures, and ecological entanglements that supersede the human, or conversely, to the bodily fragments, molecular processes, and fragments that subtend the scale of the human. We will pay particular attention to the question of what consequences decentering the human has for the ethnic novel, a genre often valued for its ability to affirm the humanity of racialized subjects. For instance, what kinds of aesthetics and politics emerge from an imaginary centered not on the human individual but on systems, landscapes, entanglements, and other imaginative forms and social practices? What does a novel centered not on a human protagonist but on an object, a clone, or an ecosystem look like?

To explore these non-human centered logics and forms, we will read theoretical texts by Anne Cheng, Rey Chow, Donna Haraway, Aihwa Ong, Rachel Lee, Nikolas Rose, Anna Tsing, and others, alongside a selection of contemporary (and capaciously defined) Asian/American novels by writers such as Kazuo Ishiguro, Larissa Lai, Chang-rae Lee, Ruth Ozeki, and others.

ENGL307 Literature, Laughter, Philosophy: Tristram Shandy

Laurence Sterne's novel, *The Life and Opinions of Tristram Shandy, Gentleman* (1759-67) has been described as a literary masterpiece, a hilarious satire, a sentimental tear-jerker, and an irreligious abomination. It was a favorite of Karl Marx and Friedrich Nietzsche, and it was heralded (in a recent film adaptation) as "a postmodern classic written before there was any modernism to be post about." The book is deeply learned--engaging texts from skeptical philosophy to 18th-century science and from Hamlet to early novels. It is also, indisputably, very odd. Though Tristram is trying to tell the story of his life, he fails to get

himself born in the first hundred pages, and the text is full of doodles, blank pages, madcap digressions, and missing chapters.

In this course, we will read *Tristram Shandy* alongside the many, many texts it references, borrows from, and mocks, as well as the many, many texts it has influenced. Throughout, we will take *Tristram Shandy* as our rich test case for some fundamental theoretical questions: What is literature, and why do we tell stories anyway? How is literature related to philosophy? How do our minds work? What is the meaning of human life--of laughter, learning, love, and death?

This course is a research seminar that will prepare students to write an English thesis. Students will cultivate their skills in writing and research, in engaging thoughtfully and confidently with theoretical and critical secondary sources. The course will culminate in a major research paper.

ENGL308 All the Feels: Affect Theory and Cultural Studies

Butterflies in your chest. Perspiration on your upper lip. A racing heart. Every day we witness and manage sensorial experiences; quite often these negotiations illuminate the ways in which powerful norms and institutions shape our daily lives. This course explores the relationship between the seemingly individualized experience of feeling and the social world of power by introducing students to the vibrant field of affect studies. A recent "turn" in critical theory, affect theory is interested in embodiment, the senses, and sensorial experience, questioning the dominance of rationality and cognition by exploring the role emotions and feelings play in our social worlds. This course will focus predominantly on affect theory as it emerged from queer, feminist, and racialized minoritarian discourses in order to ultimately contemplate the ways theories of affect, feeling, sensation, embodiment, and emotion open up literary and cultural texts.

ENGL309 Entertaining Social Change

"Our problem," Tom Frank writes, "is that we have a fixed idea of what power is, of how power works, and of how power is to be resisted." This is especially true of "entertainment." Power that may not seem like power--only, say, like "fun" or "amusement"--can be especially powerful. A thread that connects all of our texts will be: how has the systemic critique of social contradictions been popularized as compelling and fascinating in modern times? A related concern: what are the seductions and violence built into "enjoyment---"enjoyment" that reproduces "Americans"? We will "entertain" the diverse strategies that progressive moviemakers have developed to entertain Americans--to teach, persuade, seduce, provoke, upset, anger, and move them through laughter, tears, and not least of all ideas--so that Americans will be more inclined to "entertain" social critique that inspires and envisions social change.

Our critical focus will be on the popularizing (and sometimes the selling) of social critique in movies including *Straight Outta Compton*, *Malcolm X*, *Medium*

Cool, Network, El Norte, Smoke Signals, Before the Flood, The Black Panthers: Vanguard of the Revolution, Salt of the Earth, Matewan, and The Big Short. We will place special emphasis on self-reflexive movies about "entertainment" and about labor/social movement organizing. Entertainment, we will see, plays a key role in organizing and reorganizing Americans. In doing so, it can place limits on our vision of what--and who--needs to be changed. By putting our movies in conceptual dialogue and making these limits more visible, we will help one another think, see, and feel beyond these limits. As we are "entertained" (and we will be) we will consider the stakes of being "entertained."

ENGL310 The Medieval Beast

How did medieval writers think about the distinction between human and animal? This course will begin with the categories of soul and body, ruler and ruled, speech and noise--among others. We will also read about human-animal hybrids like werewolves and bird-men in order to think through some of these binaries. Texts will include bestiaries (encyclopedias of animals), treatises on hunting, beast-fables from Christian, Muslim, and Jewish traditions, Marie de France's "Lais" and "Fables," Chrétien de Troyes's "Knight of the Lion," "Sir Gawain and the Green Knight," and Chaucer's "Parliament of Fowls."

ENGL311 Modernist Writers: Virginia Woolf and Jean Rhys

This course will allow readers to explore and engage with the oeuvres of two important but very different female modernist writers. We will read major and minor works of both novelists, but we will also dip into their short stories, essays, diaries, and/or memoirs. In addition, we will also read some of the most significant criticism on both authors to understand how their critical status has been established and modified in the decades since their works were first published.

ENGL312 Vitalism and Black Aesthetics

What is the relationship between Black art and Black life? Does Black art, broadly construed, serve a mimetic function--merely re-presenting reality--or is it a vital expression of the essence of Blackness? These questions are at the root of Black Cultural Studies' engagements with the problem of the aesthetic. In the current conjuncture, reacting to the theorization of Black social death, many theorists have (re)turned to the aesthetic as "proof" of the mattering of Black life and "evidence" of a vibrant sociality. This course will consider the connection between (the theorization of) Black aesthetics and (the affirmation of) Black life. In so doing, we will question the political stakes of Black aesthetics, as well as the value placed upon the concept of life as such, in and through the aesthetic encounter. Additionally, we will explore ways of thinking of the aesthetic that challenge presumptions of its innate liveliness. Readings will include canonical texts in aesthetic theory and vitalist philosophy, as well as more contemporary engagements with these questions from the perspective of Black performance theory, literary theory, and Afro-pessimism.

ENGL313 Literatures of Empire

This seminar will reexamine the literary and cultural history of Britain by tracing the emergence of "English literature" from the same transatlantic crucible as the racial categories of Enlightenment empire. Through readings from English literature's early origins in the Anglo-American transatlantic to its consolidation during the apex of the British empire, we will look at how the genres most frequently associated with liberal individualism (novels, lyric poetry) run parallel to the emergence of visual and rhetorical categories for imagining the boundaries and limits of the human and the individual. We'll focus on the techniques of literary form--and literary study--that helped construct and make sense of empire. Over the course of the semester, we will consider how the conceptual crises and contradictions in the production of British imperial power through the tangled nexus of capitalism, colonialism, and slavery spurred on new genres (the historical novel, the colonial anti-bildungsroman, the imperial gothic), and how novelists wrestled with the period's key categories of race, gender, class, sexuality, and nationality. Along the way, we'll trace how an archive of imperial writings have been taken up by anti- and decolonial theorists and writers.

ENGL314 Circulating Bodies: Commodification, Sex Work, and Enslavement in Eighteenth Century England

In the newly booming consumer culture of Enlightenment England, people were constantly buying and selling things--bespoke suits and manufactured trinkets as well as human bodies. Sex workers used their bodies to enter into trade agreements, and the imperial economy was built on the enslavement of African people. This course will explore how people and things were turned into circulating objects, and it will trace these as they were passed from hand to hand, valued and revalued, used, abused, and discarded. We will listen as the "things" themselves tell ethically and socially urgent stories. In the period, consumer objects, sex workers, and enslaved peoples all wrote memoirs (or had ones imagined for them). We will read these texts alongside contemporary debates about economics, labor, race, abolition, and women's rights, and we will return again and again to fundamental questions about personal identity, individual agency and passivity, commodification, objectification, and the very limits of the human.

ENGL315 Close, Distant, Archival, Experimental: New Methods of Literary Study

What does it mean to craft a "new" approach to literary study? And why is it that since at least the early twentieth century literary critics have insisted on the need for "new" methods? This course examines the different moments in literary history when literary critics developed "new" methods to read literature--particularly efforts to understand literature at scale and in context. We will look at theoretical approaches to literature, ranging from Edith Rickert's obscure 1927 *New Methods for the Study of Literature* through mid-century New Criticism, up to the movements and methods of the late twentieth century and present day, alongside the archives of everyday sites where literature is constituted and practiced--such as colonial lending library records and course syllabi--in order to examine what's at stake in determining the object, scope, and ends of literary study.

ENGL316 Rethinking World Literature

Globalization has changed the speed at which people, goods, information, and ideas circulate in space, altering how we read and write and what we read and write about. This course examines the resurgence of the category "world literature" to explore how globalization affects practices of writing and reading in the 21st century. What does the "world" in "world literature" mean, and who writes world literature? To better understand how economic, environmental, technological, and political transformations affect our understanding of world literature, we will read pivotal theoretical works in the expansive field of world literature alongside several recent novels that thematize these scales of global comparison.

Prereq: **None**

ENGL317 Gothic Bodies

This seminar examines the Gothic mode and its literary afterlives in the texts of the British empire. During the nineteenth-century, the Gothic mode—darkened old houses, discoverable family secrets, mysterious moving objects, threatened bodies—migrated to a wide range of narrative forms. We will read some of this range, exploring early political fiction, science fiction, slave narratives, domestic fiction, and the ghost story. We'll think about how the Gothic mode was used to imagine different kinds of harm to bodies. We'll explore how these formal conventions involving unseen terrors, old family houses, and threatened bodies intersected with some of the key formations of the period: the rise of individualism, industrial and racial capitalism, Orientalism, automation, changes in property and inheritance law, theories of freedom and slavery and sexual consent. Along the way, we'll read key theorists who write about the Gothic as we develop our own theories of how to read the ways this genre still haunts our present.

ENGL318 Black Literary Theory

This course will bring together readings both literary and critical/theoretical, beginning with Frantz Fanon's "Black Skin, White Masks" (1952). Taking Fanon as its point of departure, then, this course will necessarily turn to a discussion of the recent discourse on Afro-pessimism and Black optimism, attempting to introduce students to important issues and questions of race, race relations, anti-Black racism, Black sociality, the universality of whiteness and white supremacy, the fungibility of the Black body, and the vulnerability and precarity of Black life; and together we will think more closely about how the complex and "unthinkable" histories and afterlives of chattel slavery, racial capitalism, settler colonialism, and the Middle Passage, for examples, continue to challenge the representational limits and potentialities of traditional literary genres and modes of emplotment. In addition to Fanon, authors will include Orlando Patterson, Toni Morrison, Hortense Spillers, Saidiya Hartman, Achille Mbembe, Frank Wilderson, Jared Sexton, Fred Moten, and others.

ENGL319 Asian American Posthumanisms: Biopolitics, Ecopoetics, and Literature

From 19th-century anxieties concerning subhuman coolies to 21st-century celebrations of suprahuman cyborgs, U.S. discourses have always figured people of Asian descent as peripheral to the category of the human. While Asian Americanist scholarship has often responded by asserting the humanity of Asian Americans, a number of scholars and writers have begun to explore and even embrace the inhuman character of the Asian American. Drawing from recent scholarship in science studies, political ecology, anthropology, and literary studies, this course will consider what it looks like to shift the scale of analysis from the individual, organismal human to the social logics, biopolitical infrastructures, and ecological entanglements that supersede the human, or conversely, to the body parts, molecular processes, and fragments that subvert the scale of the human. We will pay particular attention to the question of what consequences decentering the human has for the ethnic novel, a genre often valued for its ability to affirm the humanity of racialized subjects. For instance, what kinds of aesthetics and politics emerge from an imaginary centered not on the human individual but on systems, landscapes, entanglements, and other imaginative forms and social practices? What does a novel centered not on a human protagonist but on an object, a clone, or an ecosystem look like? To explore these nonhuman centered logics and forms, we will read a selection of theoretical texts by Asian American and other authors, alongside a selection of contemporary (and capaciously defined) Asian/American novels by writers such as Kazuo Ishiguro, Larissa Lai, Ruth Ozeki, and others.

ENGL320 The Senses and the Subject in Cinema and Poetry

In this course, we will study a mixture of emotionally stimulating and structurally difficult contemporary cinema and lyric poetry, as well as select philosophical and theoretical approaches to the senses and the subject. Do theories and notions of the senses assume the subject, and/or subjectivity? If so, then how? What is the relationship between embodiment, the senses, the world, racialization, blackness, and being? How do select Western theoretical, aesthetic, and poetic frameworks represent and think as such? While cinema and lyric poetry might seem like strange neighbors, this course specifically foregrounds them as "repositor[ies] of synesthesia," where not only the reconstitution of the subject after some disturbance (i.e., sensorial, physiological, social, historical, etc.) will be relevant to how we read, but also when that either does not happen or constitutively cannot happen. (Note that some short fiction may also be part of the course readings.)

ENGL323 Staging the Real in Early Modern England

The stage in Shakespeare's time was by modern standards "relatively bare," lacking illusionistic sets that would later be relied upon to conjure the reality of a particular time and place onstage. What, then, defined the "real" prior to the emergence of modern theatrical realism and the illusionistic conventions associated with it? What representational strategies (of text, costume, props, sound, stage machinery, etc.) were used to convey "realness" onstage at the Globe and other early English theaters, which lacked the "fourth wall" of the proscenium arch that separated the realities of the play-world from those of everyday life?

This course explores the dramaturgy of the "real" in early modern England in conjunction with the Center for the Humanities Spring 2024 theme of "Get Real," in plays by Shakespeare and his contemporaries that experimented with new ways of bringing to life the realities of war, true crime, sex and gender "deviance," street life and lingo in London's underworld, serendipitous wealth gleaned from capitalistic enterprise, and other sensational news ripped from the headlines.

ENGL325 Intermediate Nonfiction Workshop

What is a lyric essay? What happens when we open the sentence to lyricism, inviting poetry into the paragraph? What happens when we leave room for silence, the unknown, wonder or multiplicity within narrative trajectory? What happens if we invite diaspora, queerness, grief, or even the land itself into syntax? Why compose in a liminal form-between-forms? In this generative workshop, we will ask these questions and devote ourselves to reading and writing experiments in the essay. Books will be approached as companion texts and guides. There will be weekly presentations, in-class writing experiments, and intensive workshops of one another's work. The class will culminate in a book arts project and reflective essay. Special attention will also be given to cultivating community and the benefits of sustaining an embodied writing practice during extreme times.

Offering: **Host**

Grading: **A-F**

Prereq: **ENGL224 OR ENGL228 OR ENGL278 OR ENGL292 OR ENGL326 OR ENGL266**

ENGL326 Advanced Nonfiction Workshop

In this upper-level nonfiction workshop, we will read texts that investigate the meanings of place, particularly as they concern intersecting intimacies and violences of home, of migration, of colonial settlement, of environmental racism, and of climate crisis. Being from, leaving, and returning to both actual and imagined spaces are often at stake in these texts, as are forms of enclosure, naming, and mapping. Questions about how language moves on a page are inextricable from these concerns. Your own writing will include short exercises and experiments, a longer essay, revision, and responses to the published work, and throughout the semester, we will attend collectively to your work, as well as to these published texts. This course is part of the Sustainability and Environmental Justice Pedagogical Initiative.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ENGL**

Prereq: **None**

ENGL327 Criticism and Psychoanalysis

This course introduces some classical psychoanalytic methods of reading and interpretation, with accent on the four concepts Jacques Lacan identified as foundational: the unconscious, repetition, the transference, and the drive. We will approach psychoanalysis as a style of close reading whose influence on forms of interpretation--especially literary interpretation--has been immeasurable.

One central concern will be the capacity of psychoanalysis to enable us to read ourselves reading, to make the interpretive situation itself the object of our analysis. Students with an interest in literary-critical methods will benefit from the course, as will students with an interest in the internal logic of an important body of thought.

ENGL328 Researching and Writing Historical Narrative Nonfiction: A Workshop

Historical Nonfiction will be a workshop-based course. Students will have the opportunity to work on a project led by Charles Barber, a book-in-progress of historical narrative nonfiction based in Palm Beach, Florida in the 1920s.

The project involves a decade-long conflict between a gang and two father and son sheriffs, set against the explosive (and often corrupt) growth of Palm Beach as a resort in the early 19th century. Students will work with court and governmental records, as well as archival materials of all sorts. Students will receive professional credit for their contributions. A focus of the first part of the course will be historical methodology and evaluation of records; the second half of the course will address the question of transforming historical materials into compelling narratives. Readings will include models of historically based nonfiction, such as David Grann's *Killer of the Flower Moon* and Patrick Radden Keefe's *Say Nothing*.

ENGL331 Post Cold War Narratives of Migration to the U.S.

In this course, we will study post-cold war U.S. immigrant literature. Published in a period of shifting politics, particularly for racialized migrants, these texts illuminate new iterations of what it means to be and belong in a world where capital, labor, materials, products, and people were experiencing new forms of global im/mobility. We will read a variety of diasporic fiction from a range of localities to consider the ways imperialism, colonialism, militarism, religious proselytizing, and racial capitalism are in dialogue with the murky experiences of family, desire, loss, home, mobility, culture, trauma, and belonging. In doing so, we seek to understand how macro, micro, interpersonal, and intrapsychic experiences and institutions shape migratory routes and the stories that emerge across them. We will address literature through an interdisciplinary lens by reading fiction alongside sociology, history, economics, political theory, and more in order to consider what the world of the fictive can tell us about migration that other disciplines may not be able to articulate with such emphasis and attunement as literature.

ENGL334 Special Topic: Something in the Air: Mining the Oral/Aural Tradition in African American Poetry

In his book-length manifesto, *Poetry as an Insurgent Act*, Lawrence Ferlinghetti claims that "the printing press killed poetry." What he seems to be lamenting--at least, in part--is the privileging of the written word to the detriment of poetry's musical, or aural, qualities. In this advanced-level workshop, we will focus on the poem as something intended to be read aloud and listened to. This course will also examine the roots and evolution of the African American oral poetic

tradition with special attention paid to the rhetorical strategies derived from the black church, adopted by civil rights leaders and speech writers, and used to varying degrees by poets ranging from those of the Black Arts Movement of the 1960s and '70s to practitioners of contemporary hip-hop and spoken word. Some of the poets under consideration include Amiri Baraka, Oscar Brown Jr., Jayne Cortez, Gil-Scott Heron, June Jordan, The Last Poets, Carl Hancock Rux, Sonia Sanchez, Patricia Smith, Jessica Care Moore, Laini Mataka, and Saul Williams.

ENGL335 Wordsworth and Blake

This course examines the long, parallel careers of the two greatest poets of their generation writing in English: William Wordsworth and William Blake. Although they exerted little or no influence upon one another, their writing developed along strikingly similar paths as it responded to--and shaped--the rapidly changing, often disorienting literary, political, and cultural world of late 18th- and early 19th-century Britain. We will examine the artists and events that inspired them, from John Milton to Robert Burns to the French Revolution. We will bring into conversation their songs, autobiographical poems, aesthetic manifestos, and prophetic and visionary works. Throughout, we will pay attention to how they approached traditional and experimental literary forms, engaged with visual arts and with music, and developed a theory and practice of literary and everyday language.

ENGL337A Advanced Poetry Workshop: Radical Revision

"Poetry," writes Yusef Komunyakaa in his essay collection *Blue Notes*, "is an act of meditation and improvisation. And need is the motor that propels the words down the silent white space." In this intermediate poetry workshop, students will consider various perspectives on the revision process and explore

strategies for redrafting poems-in-progress. While this class is open to any poetry student with previous workshop experience, those who stand to gain the most are those who've already amassed a sizable body of work--poems, drafts, notes--with which they are, for the most part, dissatisfied and eager to improve. It is imperative that students come with an open mind and a willingness to surprise themselves and one another.

ENGL338 Serial Sensations

Regardless of their medium or period, serial texts are often associated with sensationalism. Not only do they frequently feature sensational plots, but by virtue of producing intense fan cultures the texts themselves become public sensations. From "Bleak House" to Marvel comics, and from "Game of Thrones" to the podcast "Serial," serials have produced vibrant if not fanatical fan forums and fan cultures. This course will examine the aesthetics and politics of serial texts ranging from didactic novels to gory and racy ones, and from television shows to podcasts and audio books. Throughout the course of the semester, students will engage in forms of serial reading, listening, and writing, and will discuss the effect of the serial format on plot, characterization, and genre. Moreover, they will examine the ways in which the serial format shapes narrative desire, and the ways in which it molds reading and viewing habits--that is, the mechanisms and logics through which a serial reader, listener, or viewer is produced.

ENGL339 Intermediate Fiction Workshop

This course may be repeated for credit. This workshop is for students who already have a basic understanding of how to write literary fiction, either by having taken an introductory course (e.g., ENGL296 Techniques of Fiction) or by other means.

Our task in this fiction workshop will be to expand our writing beyond the simple good vs. bad plot, to a more complex and real understanding of the existence of both in everyone. I will encourage you to consider the struggles and conflicts in your own life, whether they involve personal, global, or community-specific ideals, and blur the lines between "good" and "evil," and even between fiction and nonfiction. We will also look at some of the most pertinent aspects of fiction: plot, place, voice, and character development. We will ask each other what it is about this story that demanded writing? What is it about these characters that make them unforgettable? What idiosyncratic tendencies does the writer reveal that makes this their story? This class will focus not only on what you create, but how you re-write your work. This class will be centered on revision.

ENGL340 Special Topics: Ecopoetics - Experimental Poetry in the Anthropocene

How do poets speak for and from a world in flux and crisis? How do poets register and attempt to restore the degradation of the planet through language? How might altering the boundaries of conventional language use "through poetry" alter the bounds of conventional thinking and behaving, thus leading to more engaged and sustainable modes of living? This course, in part, will serve as a tour of contemporary eco-poets invested in looking at and caring for the current state of our planet through poetry. We will read poems that reflect the most critical environmental concerns of our time, and we will learn to see how these poems resist closure and are instead guided by exploration and interrogation in an attempt at reorienting our attention and intention as inheritors of this planet.

This is an advanced workshop for students committed to developing an understanding of eco-poetry's place in the more-than-literary world, as well as developing a personal eco-poetics from which to write. Students will choose an environmental topic to research and write in service of for the semester and, by the end of the semester, will have a project-centered collection of poems. There will be bi-weekly presentations on the poetry collections we read, in-class writing experiments, in-the-field experiments, and intensive workshops of participants' work. The class will culminate in an eco-book arts project and a reflective essay.

Special attention will also be given to cultivating community and the benefits of sustaining an embodied artistic practice during extreme times and how doing so may benefit the health of the whole artist.

ENGL341 Archiving America

The guiding questions of this class will be: What is an archive, and how does it shape the production and suppression of knowledge? We will study authors who illustrate the importance of archiving experiences and events across scale, from pandemics to poverty, deportation to day-to-day survival, environmental disaster to the smallest of environmental shifts. Another central issue we will grapple with is the politics of the archive, or how race and empire affect what is considered worthy of archiving and how archival materials are interpreted. Also, to consider archival concepts alongside practice, we will familiarize ourselves with the language and key concepts of archival processes and work with Wesleyan's Special Collections and Archives. Students will have the option of delving into their own materials or the University's archives to undertake projects that illuminate something valuable about the archive.

ENGL343 The Library: Its Past, Present, and Future

The library is both a repository and a site for disciplining information. It is, at once, a space for democratizing knowledge and a locus of exclusion. A lifeline and a tomb. A place of radicalization and community, but also the handmaiden of state power. Indeed, the library's vexed role in the history of Western colonization has prompted scholars of African and postcolonial literature like Simon Gikandi to ask whether one can be a revolutionary in the library. This question has shaped the archiving sensibilities of African American collectors and librarians like Arthur Schomburg and Dorothy Porter Wesley as well as those of contemporary Black librarians and artists. This will be one of the central questions we explore in this course, too. We will examine artistic and literary representations of libraries, archives, and museums ("The Library of Babel," The Shadow Book, Lote, The Name of the Rose, Voyage of the Sable Venus, Yinka Shonibare's "The British Museum"), paying special attention to the fantasies, nightmares, and cultural narratives that cohere around the idea of the library. We will pay special attention to the place of the library in the Black literary imagination and to the theoretical and political interventions that Black librarians and bibliophiles brought into systems for categorizing and recovering knowledge.

ENGL344 Women's Lib, Women's Lit

The social movement known as second-wave feminism, but often referred to at the time as "Women's Lib," took center stage in much of the best-selling fiction of the 1970s. This course will look at popular fiction that concerned itself with women's issues and the way it popularized, memorialized, complicated, and contested feminism in the popular imagination. We will look at a range of novels that focused attention on the nature of and possible solutions to women's political, material, and sexual subjection by men. Although our focus will be on the 1970s, we will look at both some important pretexts, and some later responses to the ongoing crises of gendered inequality in the 1980s. We will pay particular attention the gendering of publishing and reception, exploring the contexts in which these books were produced, marketed, reviewed, and read.

ENGL345 Plague and Care-Work in Shakespeare's England

Plague exerted an enormous influence on the plays of Shakespeare and his contemporaries, and indeed on theater as a commercial enterprise. Pandemic theater closures and quarantines were frequent throughout his career, and it is likely that his son Hamnet died of plague. This seminar examines four Shakespeare plays (Romeo and Juliet, Hamlet, King Lear, The Winter's Tale) and their preoccupations with time, temporality, belatedness, mortality and ephemerality (of theater and the world-as-stage) and with an ethics and recognition of the work of care, as these are shaped by the recurrence of plague—a perspective that will allow us to draw connections and discern differences between Shakespeare's time and our own.

ENGL346 Utter Nonsense: Modernist Experiments with Meaning

In "The Use of Poetry and The Use of Criticism" (1933) T.S. Eliot wrote, "The chief use of the 'meaning' of a poem, in the ordinary sense, may be [...] to satisfy one habit of the reader, to keep his mind diverted and quiet, while the poem does its work upon him: much as the imaginary burglar is always provided with a bit of nice meat for the house-dog."

To extend this analogy: this course will look at texts by meatless burglars, writers who set out not to sedate but to conscript the sense-sniffing house-dog as they pillage the house for things of value.

This course will survey some of literary modernism's most defamiliarizing texts, ones that challenge interpreters by withholding or avoiding that digestible (and perhaps soporific) "meaning" Eliot referred to. We will look at modernist formal experiments from Gertrude Stein and Guillaume Apollinaire through Dada, surrealism, the French New Novel, and the theater of the absurd, alongside the less prominent but equally influential exploration of aleatory, procedural, and machine-generated poetry by writers such as Jackson Mac Low and the Oulipo. Working with authors' manifestos and critics' interpretations alongside the primary texts, we'll pay special attention to the varied relationships to meaning that can be found at work in texts that a casual reader might lump together as simply meaningless or nonsensical.

As the semester progresses and we get a clearer sense of what these texts require from their readers, we'll begin to ask (with the help of some basic readings in semiotic and psychoanalytic literary theory) how our interpretive behavior when confronted with seeming nonsense might relate to the various things we do when we read normal or typical texts--ones that strike us as already or obviously meaningful. Is making sense something that a text can ever do on its own or something that we must always do to (or for) the text?

ENGL347 Black Grammars

In her text *In the Wake: On Blackness and Being*, Christina Sharpe argues that Blackness, due its rearrangement of and resistance to hegemonic modes of meaning making, is "anagrammatical." As a concept, anagrammatical Blackness points to "the failure of words and concepts to hold in and on Black flesh." Taking this provocation as a point of departure, this course will consider the relationship between Blackness and the grammatical, with a particular focus on rhetoric and poetics. Each week will focus on a particular rhetorical figure or grammatical concept: subject, metaphor, metonymy, apostrophe, tense, irony, catachresis, parataxis, etc., considering how Blackness shifts our understandings of their operations. Readings will include Ronald Judy, Barbara Johnson, Jacques Derrida, Zakiyyah Iman Jackson, Fred Moten, and Paul de Man, among others.

ENGL348 Refugee Literature

In this course, we will explore literature by and about refugees to consider what might define the emerging category of "refugee literature." As the official number of refugees continues to climb, the media typically portrays refugees as dependent figures who exist in a state of crisis and emergency and require immediate humanitarian aid. However, tendencies to depict refugees in such terms can obscure the historical and political contexts that cause forced migration and statelessness, as well as overshadow the perspectives of refugees. We will study the complexity of refugee voices while also situating texts historically and alongside theories of forced displacement and human rights. While the course is literature-based, we will also deal more broadly with narrative and consider how refugee narratives might serve as a premise for engaging broader rubrics of American culture and history. This course has a service-learning component through which we will extend what we learn in the classroom by working with refugees affiliated with a local organization.

ENGL350 The Law, the Citizen, and the Literary and Cinematic Imaginations

In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimagined in literature and cinema. Among the topics discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporalities. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they reveal the rifts and conjunctions among the categories citizen, "savage," "gente sin razón," slave, illegal, pervert, and deviant.

ENGL352 Flaunting: Extreme Fashion on the Early Modern Stage

Frilly ruffs and cuffs, bulging codpieces, towering "chopines" (platform shoes)--oh my! This course considers the early modern stage as an engine of fashion and the forms of sartorial ostentation to which it gave rise. How did fashion contribute the rise of the commercial theater? How did clothing shape gender, sexuality, class and race in plays by Shakespeare and his contemporaries, which were performed by adult men and gender-fluid, "boy" actors? How did sartorial excess and the sumptuary laws that sought to control it affect social status and mobility during the rise of capitalism? And how were early modern fashion trends updated in later productions of these plays?

ENGL353 Race, Ethnicity, and Religion in Medieval Literature

Why do white supremacists celebrate the European Middle Ages as a lost era of racial and religious purity? This course approaches that question by considering the emergence of medieval ideas of race, ethnicity, and religious difference. We will also think through the meaning of these categories in medieval studies. Our focus will be on a selection of texts dealing with encounters--real and imaginary--of Western European Christians with cultures from the Mongol Empire to the Jewish communities in their own territories. The readings will begin historically with the Crusades and the gruesome chronicles written by Christian, Muslim, and Jewish authors. We will move on to religious polemics, travel accounts, and romances: fictions that re-imagine the past in terms of exoticized sexuality, racial transformation, cannibalism, and nationalist fantasy.

ENGL354 Why Literary History?

Why should poems, novels and plays written centuries ago engage our attention? Why should we care? And how have answers to these questions themselves changed over the course of literary history? We will dwell, in particular, on two key historical turning points: eighteenth-century Britain, when influential canonizing projects in print worked to define a native "English" tradition at the same time as the country pursued imperial expansion, and mid-twentieth-century America, when New Criticism institutionalized certain modes of reading historical literature just as English as a discipline was taking something like its modern shape. And, of course, we will grapple with the purposes, the pleasures, and the possibilities of literary history now. Throughout, we will also be attending to the practical work of doing literary history - students will work in Special Collections to produce their own edition of a historical text.

ENGL356 Theories of Translation

This course will examine a range of predominately 20th-century theoretical approaches to literary translation in the fields of philosophy, linguistics, literary criticism, and translation studies. In an effort to derive a definition of literary translation, we will focus on two questions. First: What is literal (or word-for-word) translation? How does it differ from other kinds of translation; how does it conceptualize meaning; what are its purposes; and what oppositions (e.g., literal vs. figurative) can we use to make sense of it? Second: What is the relationship between language and culture? Can translation give us access to an unfamiliar culture; can literary translation affect the culture in which it is produced; or does translation simply colonize foreign texts by transforming them into something legible to a domestic culture?

ENGL357 Black Texts, Lost and Found

This course examines histories of loss and recovery of black texts in the US and the Atlantic world more broadly. We will bring a three-pronged approach to our subject matter. We will analyze first the constitutive silences of the archive: epistemic and material neglect, or what Michel Trouillot has termed the "silencing of the past"; second, the preservation efforts of black newspaper editors, librarians, and bibliophiles; and third, the "counter-archiving" work of Afro-diasporic historical and speculative fiction. As we traverse different periods and empires we will consider what the concepts of the "black archive" and "black ephemera" mean to different disciplines. We will study the repressions of black Arabic writing practices in the US South and our fragmentary recovery of them in the late 20th century, unfinished novels about Black Atlantic revolutions such as Martin Delany's "Blake," incomplete runs of historic black newspapers, debates about the illusions and desires of "recovery," and the criteria that determine what counts as ephemeral and when.

We will move across different media, from print--"I, Tituba," "M Archive," "Blake," "(Dis)forming the American Canon: African-Arab Slave Narratives and the Vernacular"--to films--"The Watermelon Woman," "Looking for Langston," "The Last Angel of History"--and from digitized databases of photographs at the ongoing archiving project The Missing Chapter: Black Chronicles to digitized newspaper archives.

ENGL358 Writing the War on Terror: Crafting Literary Responses to Fiction, Film, and Television after 9/11

In this interdisciplinary, mixed-genre writing seminar, students will create works of creative non-fiction--book and film reviews, op-ed pieces, and memoirs--and short fictional pieces as they explore the ways contemporary literature and film have depicted the post-9/11 War on Terror. They will watch documentaries by Laura Poitras, as well as Alex Gibney's We Steal Secrets: The Story of WikiLeaks. They will read fiction by Mohsin Hamid, Elina Hirvonen, Deborah Eisenberg, and Martin Amis, and nonfiction prose by Dunya Mikhail, Pankaj Mishra, and George Packer. There will be a significant workshop component to this course. Students

will focus on presenting their ideas in sophisticated, accessible prose, paying close attention to language, style, and syntax at the line and paragraph levels.

ENGL359 Criticism and Marxism

This course introduces students to the Marxist (or historical-materialist) tradition, with an accent on its centrality to interpretative methods in literary studies and to related fields in the human sciences. We will study foundations, beginning with Marx and Engels, and our reading will carry us through the range of Marxisms that inform contemporary critical practice. We will focus on historical materialism as a style of dialectical thought, uniquely equipped to grasp both our immediate objects of study (literary texts and other cultural productions) and the social forces through which those objects are determined. In the same dialectical mode, we will reflect often on the relation between our work in the classroom and our contemporary social and historical situation. Students with an interest in literary and social theory will benefit from the course, as will students who know a little bit about Marxism but want to understand the logic of this crucial body of thought.

ENGL360 Special Topics: Writing Lives

In this course, students will read profiles, biographies, and theories of biography, texts that focus on the stakes of writing the lives of women, people of color, people with disabilities, and queer subjects. As we analyze these attempts to capture a life, to define the problems of this form, and to expand its possibilities, students will work on their own biographical writing. Throughout the semester, we will ask: Whose lives get written, and by whom? What constitutes evidence of a life, according to whom--and what gets left out? What kinds of research are necessary? How does a writer's relationship to her subject inform such a portrait, and what are the ethics of that relationship?

ENGL361 After Orientalism: Asian American Literature and Theory After 2000

From early articulations of cultural nationalist pride to today's transnational, intersectional, deconstructive, feminist, and queer critiques, Asian American studies is a field that has radically expanded and transformed since its original emergence out of the Third World and student strikes of the late 1960s. This course seeks to take the temperature of Asian America today by exploring a range of contemporary works published after the millennium, more than 30 years after the field's inception. Alongside a selection of novels, poetry, short stories, and graphic novels by some of the most acclaimed contemporary writers in America, we will also consider critical and theoretical texts that offer different perspectives on our contemporary historical moment, exploring frameworks of modernity, postmodernity, neoliberalism, and the university as ways of situating contemporary Asian America's aesthetic innovations. Though not required, it is strongly recommended that students have taken ENGL230 Introduction to Asian American Literature or a comparable substitute prior to enrolling.

ENGL362 Friendship and Collaboration: In Theory, In Practice

How do we conceive of friendship, collaboration, love, and collectivity? In an interview, Michel Foucault stated that the relational task of the homosexual was to "invent, from A to Z, a relationship that is still formless, which is friendship: that is to say, the sum of everything through which they can give each other pleasure." This course considers theories and performances of relationality, queer belonging, and friendship with an emphasis on forms of belonging and recognition that exceed normative protocols. We will ask how queer practices, Black thought, and Indigenous epistemologies inform our own imaginings of collaborative projects. Beginning with philosophical determinations of friendship, we will branch out to imagine ways in which artists, lovers, friends, and/or co-habitators enact togetherness. This class will focus on theoretical readings and creative exercises and will culminate in a collaborative project.

This counts as an Expanded Field of Theater course for the Theater Major.

ENGL363 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of reparation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and reparation?

ENGL364 Destroying the Audience: Limits of Performance and Representation in the Theater of (Non) Being

Young Jean Lee's Theatre Company, active between 2003 and 2016, is most known for a series of "racial-identity plays," written and directed by Lee, which adopt an experimental approach to the critique of racial politics, driven by the motto "destroy the audience." On the one hand, this course will explore literary and artistic works that express an ambivalent, if not antagonistic, relationship to the presence of an audience. On the other hand, this course will consider the role and function of the audience as a social category by considering how the concept of audience (broadly understood) contributes to cultural production about race and gender as a potentially active element in the creative process. Students can expect to read and/or view drama, visual art, performance, film, and self-writing (autobiography and memoir) which, explicitly or implicitly, address the presence of the audience as a way of tackling larger social and cultural problems related to race and ethnicity. The goal will be to foster an understanding of the politics of gender, sexuality, ability, language, and class that determine how these issues are conceptualized and articulated. This course will employ an interdisciplinary approach to the discussion of primary and

secondary texts, engaging audience studies, performance studies, ethnic studies, and disability studies, in addition to queer/trans of color, postcolonial, and legal theory, to historically contextualize and theoretically ground a cultural understanding of the relation between audience and racial performance.

ENGL365 Ethics and Literature

P.B. Shelley's claim that "the great instrument of moral good is the imagination" lacks the twentieth-century pessimism of his inheritor, W.H. Auden, who wrote that "poetry makes nothing happen." Beginning from this disagreement about the influence of creative work on social and material relations, this course explores the ethical effects of aesthetic production. Drawing on a historically broad set of readings, from the Enlightenment and Romantic period through the twenty-first century, we will look at how writers and philosophers address the relationship between literature and moral transformation. These works help us examine Wittgenstein's assertion that "words are also deeds."

ENGL366 Dangerous Realisms

The aim of this course is to explore realism's ideological possibilities, past and present. We will begin with an introduction to realism as the preeminent formal technique for narrating novels and proceed by looking at other genres that either adapt, or respond to, realist writing. Readings will be drawn from 19th-century Europe and 20th-century Africa and will include works of realism, naturalism, and modernism. These will be considered alongside theories of realism and the novel. Theorists may include Aristotle, Armstrong, Barthes, Hartman, Jameson, Lukács, and Watt. We will read novels by Chinua Achebe, Ayi Kwei Armah, Miguel de Cervantes, J.M. Coetzee, Daniel Defoe, and Gustave Flaubert.

ENGL367 Nature Description: Literature and Theory

What happens to the world when we describe it using language? What happens to language? How much can we really know about nature as it is, in itself, outside of our representational strategies? In what ways do different kinds of description--and the often unexamined assumptions that structure them--limit what we can see? Do different modes of description and figurative language do different things to the world? And what do they do *in* the world--what ideological or political work? How, in short, does language reflect, touch, and transform the material world?

This course will grapple with big questions about nature, language, race, class, history, science, literary form, and human minds, as well as the complex interactions between and among these. We will seek answers by attending closely to literary, scientific, and theoretical texts.

ENGL369 Performance Remains: Slavery in the Black Dramatic Imagination

As sociologist Orlando Patterson notes, "In the absence of historical records, one way to explore the inner lives of slaves is to exercise one's literary imagination" (Slavery and Social Death, 2018). Taking direction from Patterson, this course is interested in mining the literary imagination of contemporary Black playwrights who are interested in recovering, reconstructing, rewriting, repairing and, in some cases, revolting against the fragmented and muted histories of the African slave trade and the lost experiences of the Black lives therein. From Aimé Césaire's *A Tempest* (1969), a bold postcolonial adaptation of Shakespeare's *Tempest*, to Winsome Pinnock's *Rockets and Blue Lights* (2020), an examination of British history inspired by two 19th-century paintings by the English romantic painter J.M.W. Turner, our plays originate from the Caribbean, England, and the United States. As African diasporic texts, these plays are exercises in the dramatic power of Sankofa, a principle derived from the Akan people of Ghana, meaning that the plays become the vessels through which audiences, readers, and characters return to the past in order to better understand and move forward in the present. We will engage in a thorough exploration of form, region, dialect, adaptation, and aesthetics, among other aspects, as we align lost and documented histories with dramatic conjuring.

ENGL370 The Novel as History

Ever since the historical novel's appearance in the early 19th century, the genre has flourished as a way to describe and invent the past. But historical novels tend to narrate history differently than traditional historiography, supplementing historical records, attending to overlooked psychic and material experiences, reimagining past lives and events to do work in the present. This course will examine the historical novel to explore how its formal strategies amend or improve upon conventional modes of writing history. Each week we will read historical novels paired with theoretical readings. Together this will allow us to think about how fiction might be uniquely positioned to address a range of topics including, but surely exceeding: memory, utopia, nationalism, romance, trauma, commemoration, objectivity, war, archives, realism, speculation, and the everyday.

ENGL371 Sister Acts: Black Feminist/Womanist Theater of the African Diaspora

This course surveys the dynamism and scope of contemporary feminist/womanist drama written by black women playwrights of the African Diaspora. Reading select plays from Africa, Canada, the Caribbean, England, and the United States, alongside theory and criticism, we examine the impact of race, gender, identity, and sexuality politics on black feminist/womanist theater. Throughout

our study of these dramatic texts, their performances, and their subsequent critiques, we are equally invested in the bridges and the gaps, the audibles and the silences, and the overlaps and the divides, as they are formed. Significantly, this analytic undertaking involves a simultaneous critique of the role of the playwright, the spectator, and the critic of black feminist/womanist theater. At all times, consideration is given to the ways in which these playwrights collectively use theater as a platform to explore black and female and diasporic subjectivities across regional, national, and, at times, linguistic differences.

ENGL372 Special Topics: Poets in Translation

In this craft seminar, students will perform close readings of translations of some of the most influential poets of the 20th century, always with an eye toward "stealing" techniques that may enhance our own work. Some of the poets under consideration include Anna Akhmatova, Aime Cesaire, Federico Garcia Lorca, Rainer Maria Rilke, Czeslaw Milosz, and Adelia Prado, among others. Students are invited to think critically about the challenges and opportunities presented by the act of translation as well as the imperative of engaging with world literatures.

ENGL373 From Courtly Love to Cannibalism: Medieval Romances

Romance is the narrative form of medieval sexualities and courtly love, but it also gives literary shape to social worlds in which a protagonist switches genders, skin color changes with religion, and a dog might be the hero of a narrative. In this course, we will begin with texts that date from the Romance's origins in 12th-century France and continue with the form's development up to the well-known Middle English texts of the 14th century, including Sir Gawain and the Green Knight set at King Arthur's court. Some of the topics we will consider are Romance's engagement with "chivalry," the religious and racial conflicts of the Crusades, and of course, Christian mysticism and the Holy Grail.

ENGL374 Literature in the Age of Social Media

What does it mean to write, and to read, when the predominant form of self-expression for many of us resides in social media? What does it mean to construct a digital self, separate and apart from the selves that exist IRL? To interact primarily through the mediation of screens? In what ways do we commodify ourselves, and are we commodified? What risks do we run in revealing our inner most thoughts and feelings in an age of autocratic and capitalist surveillance, in which algorithms direct the attention once guided by more organic social forces? And how do all these issues affect the core mission of literature, which is to tell stories that reflect both the public self and the private one? We'll examine all these questions through a collection of texts, ranging from novels (Megha Majumdar's *A Burning*, Patricia Lockwood's *No One Is Talking About This*, Tao Lin's *Taipei*), essays (Jia Tolentino's *Trick Mirror*, Samantha Irby's *wow, no thank you*), and poems (Emily Berry's "Paris," Tommy Pico's "Junk"). We'll also consider these questions through some short writing assignments that ask students to engage in the creative act through the lens of social media.

ENGL375 Black Global Cities

In this course, we will analyze representations of cities and Black urban modernity in Afro- diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial sites Black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week's readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discreet, bounded places. To this end, we will trace how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabea Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as *Girlhood* (2014), *Black Panther* (2018), *The Harder They Come* (1972), *Bad Friday: Rastafari After Coral Gardens* (2011), *Welcome to Nollywood* (2007).

ENGL376 Negativity in Black Critical Thought

Lack, nothingness, negation, the void, the abyssal, absence, wretchedness these and other corollary terms are omnipresent grammars within Black critical thought's attempts to explicate the singularity of Blackness. Conversant with philosophical genealogies of pessimism, nihilism, and negativity, this course will examine various theorizations of the relationship between Blackness and the negative. Rather than framing negativity as essentially apolitical or unproductive, this course will consider what a fidelity to the negative portends for questions of Black politics, Black theorizing, and revolutionary action. In so doing we will pay particular attention to questions of affect, gender, sexuality, aesthetics, and psycho-politics.

ENGL377 Shakespeare's Islands

How did England's insularity and expansionist ambitions on the world's stage shape Shakespearean dramaturgy in his many plays with island settings? This course, taught in conjunction with the Center for the Humanities' spring 2022 theme of "Islands as Metaphor and Method" considers how Shakespeare's island locales (e.g., in ancient and medieval Britain, the Mediterranean, and the Americas) transformed the Globe theater into a physical and conceptual site for imagining the utopian and dystopian potential of early English nation-building and colonial expansion, and for exploring the poetics of relation and alterity, peripherality and centrality, archaism and futurity. In addition to studying the play-texts themselves, we will consider how their island settings are explored in subsequent theatrical and film productions and adaptations.

ENGL378 Creative Writing, Post-Modernism, and Future Theories

Two main lines of inquiry will guide this class. First, what historically has been the place of creative writing workshops and the products they have galvanized? Second, how has post-modernism been defined in the past and how is it defined now? With various strategies and daily practice alongside long-term goals, we will think and write to create assemblages of compositions that go beyond traditional expectations, and potential exhaustion with generic form, towards renewed inspiration and commitments.

ENGL379 Special Topic: Writing the Sonnet

The sonnet is one of our oldest and most ubiquitous poetic forms. For centuries, writers as disparate as William Shakespeare, Marilyn Nelson, Wanda Coleman, and David Wojahn have dabbled, innovated, succeeded, and sometimes failed with the form. In this course, we will explore the demands and nuances of the sonnet, in an effort to discover what has attracted and continues to attract so many practitioners. By semester's end, students will possess greater facility with the form itself, as well as skills and techniques that may be of use when composing future poems, whether formal or free-verse.

ENGL381 The Gothic and the Sentimental

The gothic and the sentimental are hallmarks of modern literary imagination. Since the late 18th century, storytellers have returned time and again to tales of obsession and horror and to narratives of emotional affiliation, continually reinventing the trappings of the genres while seeming nevertheless to preserve their core concerns. Why did these two imaginative modes spring up contemporaneously, and why have they proven to be so durable? In this course we will examine classic texts in the gothic and sentimental traditions while reading them alongside influential theoretical texts that seek to explain the force of their preoccupations. Students will evaluate a range of critical approaches and develop a research project examining a contemporary example of gothic and/or sentimental narrative.

ENGL382 Reading Between Freedom and Necessity

Mostly the culture of literacy has taken shape within a realm of freedom, seemingly distant from the needs of the body and the demands of sustenance. At the same time, the world represented within so much of the world's narratives, both truth and fiction, has been saturated in struggle and deprivation. In this seminar we will try to make some sense of this juxtaposition, freedom on one side and necessity on the other, to explore the flip side of the drama of revolution in modern times. For us, revolutions, those great upheavals that unite hope with practical action, will be the background against which we will try to understand the gravity and persistence of dispossession itself: the pull of past or residual forms of unfreedom in the sphere of cultural representation, within and against new or emerging expressions of emancipation, themselves accompanied or countered in modern times by ever-novel styles of exploitation.

ENGL383 Fascism and American Literature

American writers were deeply engaged by the rise of 20th-century European fascism. A number of American writers took part in a generational critique of liberal democracy and thus played a role in establishing the intellectual context for the success of fascist ideology. Some American writers were fascinated by the seeming dynamism and innovation of fascist regimes. Others recognized early on the rising threat of authoritarianism and militant nationalism. In the years after World War II, many American writers surveyed the wreckage of global war and the consequences of genocidal racism and worried about their significance for art and literary expression. Were literary writers meaningfully complicit in the rise of fascism? Had totalitarianism discredited literature and culture? Or could art be a challenge to the forces that drove the rise of fascism? This research seminar will examine a range of ways in which American writers responded to fascism. We will consult the historiography and theory of fascism, as well as scholarship in the sociology of culture, with the aim of understanding how the rise of fascism affected American writers' fundamental beliefs about literature, democracy, and modern society.

ENGL384 Special Topic: Between Forms: Intermedia Arts Workshop

This advanced project-based workshop is for poets and artists interested in interdisciplinary practices crossing over between poetry, visual art, and performance. It is taught in conversation with the Fall 2021 exhibition, *The Language in Common*, in Zilkha Gallery including the work of Cecilia Vicuña, Tanya Lukin Linklater, Julien Creuzet, Jasper Marsalis, and Alice Notley.

Facilitated by Professors Benjamin Chaffee and Danielle Vogel, with modules taught by visiting artists from across the arts, this workshop is designed for students interested in working outside of--or between--their primary mediums. Professors will guide students as they choose "companion mediums" to work in for the semester while employing interdisciplinary approaches to writing and art-making in order to discover their own unique and hybrid forms.

We will divide our time between intensive laboratory-like spaces for composing work, conversations with visiting artists, student presentations and workshops, and studying the works of artists working between forms, all in an attempt to root ourselves more dynamically in our individual practices. The course will culminate in a reflective essay or artist statement, as well as an exhibit of poems, objects, installations, and performances created during our time together.

ENGL385 Staging Blackness: African American Theater

This course surveys the dynamism and scope of African American dramatic and performance traditions. We begin with a deep historical examination of 19th century blackface minstrelsy that then progresses into a long-view of how black American dramatists and theater-makers have self-fashioned black dramatic narratives, black aesthetics, and black representations into the twenty-first century. In all cases, we are interested in surveying the ways in which these artists work within varying modes of dramatic expression and focus their plays and performances on such topics as class, ethnicity, era, fragmentation, gender, history, region, revolution, nationality, race, sexuality, and spectatorship.

ENGL386 Special Topics: Improvisation--Collaborating with the Unknown

To improvise is to compose as one goes along, to arrange the unexpected, to make work from whatever materials and sources are at hand without previous planning. In this course, students will cultivate their relationships with what lies outside their realm of knowledge or experience in order to invent unforeseen but dynamic written works. We will study contemporary practitioners (e.g., poets, composers, essayists, dancers, and visual artists), who use found materials, somatic experiments, creative acts of translation, divination, and other innovative modes of improvisation to generate work. Together, while always keeping language close, we will create a forum in which bewilderment guides us. The class will culminate in an installation of creative writing projects spanning fields.

ENGL387 Literature of London

This course examines the role of London in the literary imagination of nineteenth-century Britain. A vibrant multi-class and multi-ethnic jigsaw puzzle, London was a "world city" at the center of the empire, the seat of crown and Parliament, and a place of both danger and opportunity. In addition to being the economic and political center of Great Britain, some authors viewed London as the nation's narrative center as well. Together, we will explore how writers depicted the city, how they envisioned the relationship between urban living and modern life, how they understood London's inhabitants and their plots, and how they placed the city in networks of stories reaching around the world. Along the way, we will read works of literary and social theory from the nineteenth century to the present, and we will conduct our own investigations. Students will choose whether to undertake a single project culminating in a long research paper (fulfilling the requirement for honors thesis writers) or a combination of papers and targeted research projects, which may have a creative component.

ENGL389 Blackness and Affect

Critical theory and the humanities are in the throes of what has been termed "the affective turn," wherein scholars theorize affect--broadly construed as social feeling or bodily intensity--as central to understanding (post/human) relationality, the social, ethics, and the political. Haunting this field of inquiry is a series of questions: Can a turn to affect account for the figure of the Slave? Can an embrace of affectivity, as potential, bring Blackness into the realm of our understanding "without trying to fill in the void" (Hartman)? Rather than conceptualizing affect as the connective thread between bodies and worlds, or as a purely relational force, how might we think about affect and non-relationality; affect outside of and against the world; affect without the body? This seminar will engage these, and related, questions through extended explorations of the relationship between affect theory and Blackness. Readings will include: Frantz Fanon, Lauren Berlant, Brian Massumi, Sarah Ahmed, Rizvana Bradley, Xine Yao, Sianne Ngai, and Darieck Scott, among others.

ENGL390 Special Topics: Generative Novel Workshop

In this course, students will study contemporary novels, including the work of Toni Morrison, Julie Otsuka, Namwali Serpell and Kazuo Ishiguro with an eye for what differentiates the craft of writing a novel from that of writing a short story. Students then will conceptualize, explore, and write a substantial portion of a new novel project in class. They will submit outlines and excerpts for peer critique and participate in workshoping their peers' writing. The focus of this course will be generative rather than critical; that is, we aim to formulate questions, spark inspiration, and create momentum for a new novel project, rather than seek answers or completeness.

ENGL391 Unsovereign Elements, Caribbean Poetics

This course aims to study and question sovereignty, begin to theorize "unsovereignty," and stake out what may be meant by "anticolonial imagination" in literary and other aesthetic forms, as well in the theories of history that it arranges under its name, "Unsovereign, Caribbean." Unsovereignty and the

anticolonial will not be imagined as exact and liberated opposites of sovereignty and colonialism, but rather as epistemically and linguistically entangled therewith, and inviting further thought from Afro-Caribbean historical and deconstructive vantages. By reading richly symptomatic, primary, historical documents about race, geography, and slavery in San Domingue/Santo Domingo, as well as contemporary fiction, art, and criticism that re-narrate and theorize Caribbean history, we will focus on the historical frame of ~1492 into the 19th century. This frame holds with specific reference to Sara E. Johnson's notion of a foundational "state of war" against black people in the Americas and Frank B. Wilderson III's notion of when the "gratuitous violence" of the Middle Ages begins "to mark the Black ontologically." The 19th century will be studied comparatively, and not as the era of heralded "emancipation," but of abduction, re-enslavement, "travestied freedom" (Hartman), anti-emancipation (Eller), and white psychosis. We will read sometimes for imperial notions of sovereignty, force, race, property, and labor, and other times for Caribbean notions and narratives that are sometimes at war with and sometimes in bed with said imperial schema and this episteme. In the face of some contemporary critical theoretical tendencies to use terms like "fugitivity," "resistance," "freedom," "abolition," "the commons," etc., as ones that are equally at stake for all, or that signify one shared known, fixed, and agreed-upon meaning, we will, rather (and especially), attend to the historical specificity and signifying work of marronage in the Caribbean region and the complex tropology of unsovereignty and "unruliness" in the Caribbean. Conceptually, the course thinks from and about Caribbean studies, Black critical theory, Black studies, Enlightenment thought, and Deconstruction. Students who want to nerd-out on critical theory, history, and Caribbean aesthetics are encouraged to apply.

We will study digitized versions of imperial naval and commercial maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal documents), including the writing and thinking of Christopher Columbus, Moreau de Saint Mery, Baudry des Lozieres, María de las Mercedes Santa Cruz, Immanuel Kant, and G.W.F. Hegel. We will also read selections from some of the following scholars, artists, writers: Colin Dayan, Sara E. Johnson, Evelynne Trouillot, Jacques Derrida, Robin Derby, Maryse Conde, Alejo Carpentier, Demetrius Eudell, Anne Eller, Dixa Ramírez D'Oleo, Ronald Mendoza de Jesús, Frank Wilderson III, Walter Benjamin, Gayatri Spivak, Aimé Césaire, Beatriz Santiago Munoz, Joiri Minaya, Jean Rhys, and others.

ENGL393 Special Topic: Difficult Novels, Uneasy Narratives

How have writers learned to accommodate histories and experiences that feel too overwhelming to describe? How have the techniques of fiction and nonfiction helped to construct narratives that take into account the incoherence and confusion of political and personal events? In this class, we will be reading challenging works that seek to embrace complexity. We will be asking ourselves

how novels, plays, and nonfiction can both verbalize and quiet some of the questions we have all been asking as one inevitable occurrence seems to lead to the next. In this class, you will be thoroughly immersed in literary exchanges. You will be asked to reckon with the questions that spring from each literary work, and to set several books in conversation with each other to see what surprising, new dialogue emerges. This is a class deeply engaged in the ideas that spring from your own interpretations and considerations of what you read.

ENGL395 Hell: An Introduction

An inquiry into the changing experience of damnation, from sin to despair, in Dante's *Inferno* and Milton's *Paradise Lost*. Both are epics, poems of history, but their notions of history and of its lessons, belong to the specific historical moments of their composition. Both struggle, as Milton puts it, "To justify the works of God to man" but in different ways: Dante, through a representation of how hell represents divine justice as an expression of divine love: his sinners are not so punished for their sins as by them. Their torments are representations of the false good they pursue in their sins. They pursue damnation. For Milton, as for Shakespeare, original sin is not so much pride, an inborn sense of superiority, as ambition, an inborn sense of lack and intolerable sense of inadequacy that can be dispelled only by equaling the "most high," even if it means to reign in hell rather than serve in heaven.

ENGL450 Senior Seminar in Creative Writing

This course is for seniors interested in the chance to devote more time to their creative writing. Structured as a space for workshop and exchange, the goal of this class will be to foster a community of ideas for students working on their own, independently directed creative writing projects. Our concerns and topics will be generated as a group with an eye toward flexibility with commitments.

In part we will be exploring what it might mean to be a writer beyond the classroom. A spirit of generosity and adventure will be expected. We will be open to considering work in all its stages, and participants will have a part in setting readings to introduce issues and supplement concerns pertinent to ongoing writing, as we embark from inspirations to questions of generating goals, both as a group of writers and as individual artists.

ENVIRONMENTAL STUDIES (ENVS)

ENVS105Z Plant Communities of New England

Students will become familiar with diverse plant communities of various New England ecosystems. Fundamentals of plant structure, physiology, reproduction, ecology, and evolution will be applied to studies of key native species. We will also explore community interactions, the role and impact of disturbance, invasive species and strategies in conservation. The course will provide students with foundational information traditionally associated with introductory botany courses. Specific New England plant communities and species will be cited as exemplars, with an emphasis on terrestrial angiosperms. Species and communities will generally be from four New England ecosystems of interest: Northern Mountains, Temperate Deciduous Forest (of S. New England), Atlantic Pine Barrens region (Outer Cape Cod), and natural and managed early succession habitats throughout. While this is a lecture course and there is no formal lab, you will still have some field and lab activities to provide hands-on observation and application of information. In addition to individual work, there is one group project and group activities during class.

Over break, students will plant seeds and observe and record their germination. Seeds, directions, and access to an online journal will be provided by the instructor before the end of fall term. Students must procure a magnifying glass or hand lens for this work and for additional work throughout the class (capable of 10x).

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-ENVS**

Prereq: **None**

ENVS125F Community Gardening (FYS)

This course will provide students with skills and hands-on training so they can garden and grow food for themselves and their community.

Students will participate in UConn's Master Gardener Program, which has been offered to members of the community for 40 years and is well-respected in the gardening and farming community. Course topics will include: "botany, plant pathology, soils, entomology, pesticide safety, integrated pest management (IPM), woody ornamentals, herbaceous ornamentals, vegetables, trees and small fruits, turf grass, invasive plants, weeds, water quality, environmental factors affecting plant growth, and diagnostic techniques for the home gardener."

Hands-on training and application of the skills learned from the UConn Master Gardener Program will take place at Long Lane Farm on Wesleyan University's campus or at home for students learning remotely.

Students who complete this course will receive a certificate and name badge designating them as a University of Connecticut Certified Master Gardener.

This course is offered in partnership by the College of the Environment, Allbritton Center for the Study of Public Life, and UConn Extension Master Gardener Program.

ENVS130F Thinking Animals: An Introduction to Animal Studies (FYS)

In 1789, British philosopher Jeremy Bentham wrote: "The question is not, 'Can they reason?' nor, 'Can they talk?' but, 'Can they suffer?'" This question, which challenged the social and legal norms of the 18th century that denied sentience to non-human animals, has influenced disciplines across the social sciences and humanities to focus on what has more recently become known as, "the question of the animal." Bentham's question has sparked centuries of debate about the sentience of non-human animals and our relationship to them. In this course, we will examine a range of theories and representations of "the animal" to understand the desire to tame or objectify animals (through zoos, factory farming, and taxidermy), as well as why they are often conceived of as guardians of inaccessible experience and knowledge, and how the human and its various gendered, classed, and racial manifestations have been conceived of through and

against notions of animality. Readings may include Poe, Kafka, Derrida, Bataille, Haraway, and Coetzee (among others).

ENVS186 Justifying Space: The History and Future of Space Exploration Visions

This will be a seminar class about the changing visions and motivations for space exploration, historically and to the present day. Readings will include historical perspectives such as those of K. Tsiolkovsky, H.G. Wells, Arthur C. Clarke, Gerard O'Neil, and Carl Sagan, the poetry of Diane Ackerman, the newsletters of space enthusiast organizations such as the National Space Society, the LS society, and the Planetary Society, as well as more current readings from the popular and space policy literature. Perspectives will also include other cultural reference frames through readings from the literatures of Afrofuturism and Chinese science fiction. Through selected readings from both the fiction and nonfiction literature, students will become familiar with the history of space advocacy, and the various idealistic and utopian predictions and visions that have been associated over time with ideas of human crewed and uncrewed space exploration. We will look critically at how past visions and promises have measured up against the reality of space exploration and also, through this lens, critically examine the visions and motivations being espoused by today's range of government and corporate space organizations and enthusiasts.

ENVS188 Neotropical Aquatic Ecosystems: Their Importance, Sustainable Use, and Conservation (CLAC 1.0)

(English translation below Spanish text) El curso de Ecosistemas Acuáticos Neotropicales permitirá a los estudiantes buscar información y discusión sobre la diversidad y complejidad de los ambientes acuáticos en la América tropical. Comenzaremos a aprender definiciones, características, distribución y ejemplos de humedales, lagos, ríos y muchos otros hábitats acuáticos en todo el neotrópico. El origen del sistema hidrológico. Evolución de las principales cuencas: Amazonas, Magdalena, Orinoco y Paraná. El Paleo Orinoco-Amazonia: Importancia geológica y biótica. Dinámica geológica. Evidencia geológica y biológica. Hipótesis evolutivas de la fauna piscícola. Evolución del paisaje amazónico como parte del conocimiento para comprender los diversos procesos y patrones de riqueza y distribución de la biodiversidad. Los humedales (sabanas inundadas) de Colombia-Venezuela como ejemplo de humedales neotropicales. El Pantanal brasileño y las llanuras colombo-venezolanas como "áreas de criadero" para la biota acuática y terrestre y su importancia para el mantenimiento de la biodiversidad. Los estudiantes también leerán y buscarán información sobre el Sistema Fluvial Orinoco como ejemplo de estudio. La

importancia biótica, el desarrollo sostenible y la conservación. Identificar los factores antrópicos que afectan al sistema. El desarrollo social y económico, y las contribuciones a través de los Programas de Evaluaciones Acuáticas Rápidas (RAP's) como metodología para producir información que permitió proponer áreas para la conservación de la biodiversidad. Terminamos con un análisis de los recursos y la importancia pesquera de las principales cuencas neotropicales: Amazonas, Orinoco y Paraná-Paraguay. Seguridad alimentaria. Ejemplos de ríos en riesgo.

This course will examine why the Orinoco and Amazon basins in South America harbor a biological richness much larger than other river basins around the world. About 50% of all higher plant species of the world are included in these basins. Data on vertebrates showed that about 3,000 freshwater fish species, thousands of birds (migratory and local), and hundreds of amphibians, reptiles, and mammals have been found so far in those basins geographically included in six countries: Bolivia, Brazil, Colombia, Ecuador, Peru, and Venezuela. We will examine the key factors that have affected their historical-geological development, the actual richness, and the threats to sustainable development and conservation. We will ask questions about the nature and interactions of the key factors and agents that harbor and transformed the high ichthyological and other aquatic biota diversity, reflected by the wide range of landscapes and aquatic ecosystems included in those basins. We will try to identify fragile aquatic ecosystems depending upon the biological richness, endemism, importance for local communities, and potential threats. We will examine the current trends in the fisheries, forest exploitation, and agriculture for human consumption, noting that stocks of many species of fish are in steep decline, and that current fishing practices are not sustainable. Finally, the major impacts and threats faced by the fishes and aquatic ecosystems of the Orinoco River Basin are discussed with the purpose of studying potential plans for sustainable development. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

ENVS195 Environment and Society: Introduction to Environmental Studies through the Social Sciences

The environmental social sciences (ESS) examines how humans interact with their surroundings and the contexts for their behaviors that have impacts across local, regional, and global scales. ESS draws from multiple disciplines that address various aspects of environmental experience including, but not limited to anthropology, geography, psychology, public health, and sociology.

This course utilizes ESS as a framework to explore the interdisciplinary field of environmental studies to better understand the characteristics of human interaction with, and dependence on, the environment and the causes and consequences of environmental degradation at local and global scales. We will explore the disciplinary frameworks in ESS, as well as touch on key elements of related research approaches commonly utilized across this interdisciplinary field.

This is a fundamental, introductory, survey course. In addition to providing the opportunity to apply and synthesize material, the course will likely fill in

knowledge gaps. Many students will find that some information will be a review--but what that information is, will vary with the student!

Offering: **Host**

ENVS201 Body and Earth: Emergent Strategies for Reimagining the Human-Environment Relationship

We live in a world in which humans are inextricably connected to nature, humanity's life support system. Yet at the same time we live on a planet in peril, in which environmentalists across the globe are working to catalyze societal transformation for sustainable living on Earth. This course explores these themes by 1) analyzing how social and ecological systems are intertwined, 2) exploring diverse ways of knowing nature through movement and mindfulness exercises, and 3) investigating and communicating mechanisms of sustainable environmental practice. The course will introduce conceptual frameworks and methodologies to explore the embeddedness of humans in nature--a task that remains critical for addressing today's environmental challenges. Students will engage with interdisciplinary frameworks engaging in environmental problem solving, as well as movement and place-based approaches for experiential learning. Through case studies and individual storytelling projects, we will examine how embeddedness in nature, interdisciplinary perspectives, and human agency provide sustainable pathways for both people and planet.

ENVS202 Constructing the Human: Humans and Animals in the Hebrew Bible

How do we define "humanness" and what assumptions do we make about our own distinctions between "humans" and "animals" through this definition? This course will look at the process of constructing the human category in the ancient world and Hebrew Bible and then compare that process to our own modern conceptions of humanness. In what ways are they similar and in what ways are they different? How can ancient examples of the human category inform our own ethical understandings of what it means to be human?

ENVS203 The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology

New analyses of ancient DNA preserved for millennia in bones and soils have revolutionized the field of archaeology. Suddenly, archaeologists have gained new insight into human origins, past population migrations, ancient diseases, plant and animal domestication, and even the factors that contributed to the extinctions of megafauna such as woolly mammoths. Recent genetic case studies will provide a lens for learning about the archaeology of diverse world regions and time periods, from Oceania to Mesoamerica and from the Paleolithic through recent history. Topics will include: human evolution and genetic relationships between humans, Neanderthals, and Denisovans; the peopling of the globe; extinction and de-extinction; domestication and the origins of agriculture; paleodiseases and paleodiets; and ethics in genetic research.

ENVS204 Extreme Landscapes of the Anthropocene

The "Anthropocene," a term coined to categorize the current geological epoch, has become a way in which social scientists can critically and creatively engage with the impact of humanity on the ecological well-being of the Earth. The interdisciplinary and uncertain nature of this subject matter provides space for experimental writing styles, innovative approaches to storytelling, and critical discussion and debate. This course is designed to explore and challenge the term "Anthropocene," questioning how narrative and drama are entangled in the dissemination of complex truths, for better or worse.

In this course, we will consider texts, short films, and other mixed media that investigate the everydayness of extreme landscapes, from "capitalist ruins" to the depleting seas. We will dive into the social, political, economic, and scientific power-scapes that influence narratives about the environment, from late liberal ideology to corporate influence on science and the news. Through the course materials and activities, we will question how to communicate complex information with a broad range of people, particularly surrounding issues of climate change, sustainability, and environmental justice. Each student will build their own writing portfolio of short essays for specific audiences. The class will collectively build and design a storytelling website where they can share their work. Students are encouraged to apply an ethics of care and the art of "non-judgmental attention" to their critical engagement with the Anthropocene.

ENVS206 Public Policy

"Public policy" describes the patterns of actions employed by the government to achieve a variety of social goals. Some of these actions may be of great consequence (e.g., incarcerating prisoners, providing income maintenance to the poor, preventing deaths from pollution or workplace hazards). This course provides a survey of several key public policies in the United States. It will begin with an exploration of the policy-making process, policy design, and policy evaluation. The remainder of the course will be devoted to the examination of several key public policy areas including criminal justice, education, social welfare, economic management, health care, and environmental protection regulation. By integrating theoretical debates and the historical evolution of

core public policies, the course aims to develop analytical skills as well as an appreciation for the technical and political complexities of policy-making.

Prereq: **None**

ENVS207 Introduction to Archaeology

What can fragments of pottery, stones, and bones reveal about the lives of people who lived thousands or even millions of years ago? What does the archaeological record reveal about human evolution, past human diets and health, ancient socioeconomic systems, and the emergence of early cities? And how can we preserve archaeological sites and artifacts for future generations? This course will introduce students to the interdisciplinary field of archaeology. We will discuss key methods and principles that archaeologists use to study the human past while covering a survey of world prehistory from the earliest stone tools to the archaeology of contemporary material culture. Students will have the opportunity to examine real archaeological artifacts—including artifacts excavated from historic Middletown—and will be encouraged to think critically about the ways that archaeology informs our understanding of both the past and the present.

ENVS208 System Mapping for Social and Environmental Impact

In recent years, growing interest in social entrepreneurship has pushed students to "solve" complex social and environmental problems with new ventures of their own design. Unfortunately, this approach often overlooks a critical foundation of social change: understanding the root causes of problems and the contexts that surround them before seeking solutions.

In this six-week, half-credit class, students will study a problem and the systems that surround it. By the end of the course, students will create a "systems map" that documents the economic, political, and cultural factors behind their problem, as well as the current "solutions landscape."

ENVS209F Interrogating Sustainability (FYS)

In 1987, the United Nations' publication "Our Common Future" -- also known as the "Brundtland Report" -- elevated sustainability as a central concern in international policymaking. The report focused on sustainable development as an essential method for achieving sustainability, defining it as development that "meets the needs of the present without compromising the ability of future generations to meet their own needs." Since then, sustainable development and other methods for fostering sustainability have played an important role in debates related to environmental, economic, and social policies at multiple scales around the world. In this course, we will interrogate the concept of sustainability, examining its history, its impact on environmental policies and social and economic development, critiques of the sustainability concept, and alternative visions for securing equity between current and future inhabitants

of the earth. As a first year seminar, the course will use a variety of scaffolded writing assignments along with readings, discussions, and films to explore concepts including the commons, climate change, water scarcity, petrochemical and plastic pollution, land use, biodiversity loss, industrial agriculture, One Health, degrowth, ethical consumers, and circular economies.

ENVS210 Evolution in Human-Altered Environments

Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.

ENVS211 History of Ecology

The word "ecology" has come to have many meanings and connotations: a scientific field dealing with the relation of organisms and the environment, a way of thinking about the world emphasizing holism and interconnection, a handmaiden of the environmental movement, to name a few. This course covers the history of ecology as a scientific discipline from the 18th-century natural history tradition to the development of population, ecosystem, and evolutionary ecology in the 20th century, situating the science in its cultural, political, and social contexts. Along the way, it traces the connections between ecology and economic development, political theory, ideas about society, the management of natural resources, the preservation of wilderness, and environmental politics. How have scientists, citizens, and activists made use of ecological ideas, and to what ends? How have they understood and envisioned the human place in nature? How have the landscapes and places in which ecologists have done their work shaped their ideas? Other major themes include the relationship between theories of nature and theories of society, ecology and empire, the relationship between place and knowledge about nature, the development of ecology as a professional discipline, the role of ecologists as environmental experts, the relationship between the state and the development of ecological knowledge, and the relationships among ecology, conservation, agriculture, and environmentalism.

Gen Ed Area: **SBS-HIST**

Identical With: **HIST221, STS221**

Prereq: **None**

ENVS212 Introduction to Ethics

This course will begin with some ancient questions about values. We find that two ancient approaches to right living (Platonic-Stoic and Aristotelian) differ radically over how much experience or society can teach us about what is good. Yet both insist that moral life is essentially connected to individual happiness.

Turning next to modern ideas of moral action (Kantian and utilitarian), we find that they both emphasize a potential gulf between individual happiness and moral rightness. Yet, like the ancients, they disagree over whether morality's basic insights derive from experience.

The last third of the course explores more recent preoccupations with ideas about moral difference, moral change, and the relation between morality and power. Especially since Marx and Nietzsche, moral theory faces a sustained challenge from social theorists who allege moral norms and judgments serve hidden ideological purposes. Some have sought to repair universal ethics by giving an account of progress or the overcoming of bias, while others have argued for plural or relative ethics. Ecological critics have challenged moral theorists to overcome their preoccupation with exclusively human interests and ideals. What kinds of moral reflection might be adequate to problems of global interdependence?

Students will come to understand the distinctive insights and arguments behind all of the positions considered, to recognize more and less cogent lines of response to them, and to shape their own patterns of moral reasoning through careful reflection.

ENVS213 Invoking the Earth Mother: Ecofeminisms and Indigenous Spiritual Ecologies

Over the past 50 years, a radical reshaping of our relationship to the organic world has infused national economic strategies, United Nations discourses, indigenous land rights movements, environmental legal frameworks, and a subtle mainstreaming of neopagan ritual practices and goddess worship in the Americas. This seminar will explore the social, legal and metaphysical aspects of myriad eco-feminist and indigenous spiritual ecologies. We will explore these worldviews and ritual practices from animist, pantheist, monist, and panentheist perspectives, with a particular focus on gender constructs, implicit and explicit, within these movements. What is the relationship between the 1970s environmental movement and the rise of Goddess worship in the U.S.? Between the United Nations and Amazonian ayahuasca practitioners? Legally, Should Trees Have Standing (Stone 1972)? Politically, Is the Goddess a Feminist (Hiltebeitel & Erndl 2000)? Is Mother Earth, ultimately, empowering for LGBTQ2S folks? Engaging emerging podcasts, shamanic documentaries, social manifestos, and provocative religious studies texts, students will wrestle with a profound set of humanistic questions that may prove crucial to our survival as a species, namely: under what circumstances do we successfully invoke the gods to self-regulate the ecologically destructive practices of our late-stage capitalism? Who invokes who, how and when, shared where? To whom do we tend to listen on these matters, and why are they quaked to speak?

Prereq: **None**

ENVS216 Ecology

Ecology is the scientific study of interactions between organisms and their environment, both biotic and abiotic. We will look at how these interactions shape fundamental characteristics of populations, communities, and ecosystems. Topics will include predation, competition, symbioses, and effects of stress and resource limitation in diverse environments. We will cover important consequences of interactions such as coevolution, population outbreaks, ecological coexistence, patterns of biodiversity, ecological succession, species invasions, food web dynamics, nutrient and energy cycling, variation in ecosystem goods and services, and global change.

This course emphasizes several learning goals in biology, including skill in formulating original ideas and experiments, using quantitative and graphical tools and interpreting quantitative information, and scientific writing.

ENVS217 The Environment, The Bible, and Moral Debate

The environment is a pressing concern for many people and is the center of much modern debate. Within this debate, many people draw on biblical texts for a source of religious or moral superiority. These biblical texts have been used to support many different, and often contradictory, arguments within the environmental debate. So what does the bible actually say about the environment? Is there a singular "biblical" view about what the environment is and how one should treat it? This course aims to look at how the bible has been

used in environmental debate and then look at the texts cited, analyzing both in a modern and ancient context.

ENVS218 Nature/Culture

In this course, we are going to explore--and problematize--the boundary between the so-called "natural" world and human social and cultural life. Rather than assuming that "nature" is something that already exists in the world that humans have systematically excoriated and transformed, we consider instead the idea that nature and culture are fundamentally co-constitutive concepts--that is to say, that one cannot exist without the other. As we go, we will explore pressing concerns such as the boundaries between human and non-human, the nature of the Anthropocene, the question of what it means to be "modern," and the power of ecological politics in our contemporary orders of global capitalism.

Offering: **Crosslisting**

ENVS222 Metabolism and Technoscience

This course will investigate the scientific idea of metabolism through the lens of technoscience. Metabolism is a flexible and mobile scientific idea, one that has been applied at the micro-level of analysis within biological organisms, at the meso-level of social collectivities, and at the macro-level of global ecologies. Metabolism encompasses all of the biological and technosocial processes through which bodies (both human and not human) and societies (again, human and not) create and use nutrients, medicines, toxins, and fuels. The lens of technoscience enables us to investigate the technological and scientific practices that define and drive metabolic processes within sciences, cultures, and political economies. These processes implicate forces of production, consumption, labor, absorption, medicalization, appropriation, expansion, growth, surveillance, regulation, and enumeration. Accordingly, as we will learn, metabolism is also a profoundly political process that is inextricably linked to systems that create structural and symbolic violence as well as modes of resistance and struggle. In these contexts, we will interpret some of the most pressing metabolic crises facing human societies, including ecological disaster, industrial food regimes, metabolic health problems, and industrial-scale pollution.

ENVS223 Chinese Eco-Civilization: History, Experience, and Myths

The course traces the historical roots of the ideas of eco-civilization, a policy platform that appeared in the twenty-first century by examining how Chinese agrarian civilizations and their nomadic neighbors transformed the bio-physical environment over the course of 3,000 years of history.

We will draw on translations of Chinese literary texts including poetry, classical prose, and novels to explore the relationship between power and social inequities as we explore the everyday politics of agrarian civilizations through China's transformation from feudal ages to the modern period. How did Confucian, Legalist, Buddhist, and Daoist teachings alter the dynamics of production and consumption? To what extent did traditional Chinese philosophies promote the ethos of ecojustice? Did competing regimes/dynasties create a sustainable political and economic system? Did bureaucrats improve the well-being of the population and maintain the balance of the ecosystem? Or did they deplete natural resources to meet their short-term needs?

ENVS224 Intro to History: Biodiversity and its Histories

Biodiversity loss may portend the next mass extinction, but what is biodiversity? Euro-American concepts of biodiversity have become a category of policy and politics at local, regional, national, and international levels. This course will track the development of these concepts from the 18th century to the present, paying special attention to the growth of natural history collections to document taxonomy, evolution, biogeography and ecology of species. How does the idea of living variation in genes, traits, species, and ecosystems relate to human and non-human beings?

Identical With: **HIST179**

Prereq: **None**

ENVS225 Liminal Animals: Animals in Urban Spaces

This course examines the major ways in which nonhuman animals influence and are influenced by human-built environments, with specific attention to the ethical, political, and social dimensions of human-animal interactions in these spaces. Discussions, films, readings, and an independent research project will introduce students to key concepts related to urban/suburban animal life. Specifically, it will focus on topics including the use of animals for food, the use of animals as spectacle or entertainment, animals as human companions, urban wildlife, "invasive" species, "vermin" and "problem" animals, animals and the law, ecological webs, and human encroachment in animal spaces.

Identical With: **STS223**

Prereq: **None**

ENVS226 Invasive Species: Biology, Policy, and Management

Invasive species account for 39 percent of the known species extinctions on Earth, and they are responsible for environmental damages totaling greater than \$138 billion per year. However, the general population has little knowledge of what invasive species are or what threats they pose to society. In this course, we will explore the biological, economic, political, and social impacts of invasive species. We will begin by exploring a definition of an invasive species and looking at the life history characteristics that make them likely to become pests. Then we will consider the effects of invasive species expansion on the conservation of biodiversity and ecosystem function, as well as their global environmental and political impacts. Finally, we will explore the potential future changes in invasive species distributions under a changing climate.

ENVS227 A Thousand Years of Iteration: Design for an Uncertain Future

The climate emergency is a product of design. Centuries worth of aesthetic and industrial innovation have created extractive infrastructure, efficient machines, and disposable products that make it increasingly easy to consume energy and resources on a global scale. As new conversations about just transitions, a circular economy, and a Green New Deal have begun to proliferate among designers, the discipline's troubled relationship to notions of "progress" remains largely unquestioned.

This reading- and research-intensive studio asks students to examine this history of technology and to critically evaluate shifting theoretical perspectives on nature and human development as they relate to design. Topics will include the lifespan of buildings and products, relationships with and obligations to materials and resources, and strategies for de-growth in indigenous and vernacular design precedents. These will be studied through assigned readings and in-class discussion, a series of design exercises, and the production of a final project from materials immediately at hand in Middletown.

ENVS228 Going Green, German-Style: The Relationship to Nature, 1800--Today

Few countries display as active a commitment to protect natural resources and the environment as Germany. Its focus on renewable energies, recycling, and conservation in general is unique even by European standards, and in the U.S., Germany's policies on sustainability and environmental preservation are often held up as models. It is important to recognize, however, that Germans did not achieve this degree of environmental awareness overnight. Rather, it represents the result of centuries of contemplating, controlling, and conserving nature and cannot simply be transferred to other cultures. In this course, we will examine the German (and European) cultural tradition by analyzing artworks and texts from the past two centuries that have both expressed and shaped salient attitudes and emotional responses. The goals of the course are to provide insight into Germany's long and complicated history of defining and relating to nature and to allow you to reflect critically on your own attitudes toward nature and the environment.

ENVS229 What Can the Middle Ages Teach Us About Nature?

Today nature is at the center of our preoccupations. This course will go back to a time before human beings thought they were the masters of nature, when nature was at the same time teaching and allegory, metaphor and science. We will explore the different functions of nature in bestiaries, poems, romances, and herbaria from the Middle Ages to the beginning of the Early-Modern period (in modern French translation). We will be able to see a real herbarium in the Special Collections & Archives. Students will also visit the Davison Center for the Arts and the Joe Webb Peoples Museum to explore visual representations of nature as well as scientific displays. During the semester, students will put together a herbarium that will be displayed in an exhibition at the end of the semester.

ENVS230F The Simple Life (FYS)

As the human population grows toward nine billion and our planet's carrying capacity comes under increasing pressure, many observers believe the human project itself is at risk. What human beings have accomplished is probably unique in the history of the universe; once lost to war, famine, and ecological collapse, the understandings and physical creations of our cultures will be irrecoverable. We must ask ourselves, with considerable urgency, the following questions:

How do our values, our economic systems, and our behaviors--as individuals, groups, societies, and cultures--affect the conditions under which we, future generations, and the plants and animals with which we share the earth might live in the future? To what extent and at what cost can technology enable us to adapt to changes already under way? Should we take an "après moi, le déluge" attitude or try to prolong the life of our species, and if so, in what form? Does the so-called simple life, as conceptualized in different times and places, offer any useful models? Does living "green" make sense? What about environmental (in)justice? This course will draw on texts from a variety of periods and disciplines, written in a range of styles and from many perspectives, to examine how these questions and others can be approached. Creative thinking will be strongly encouraged. We will pay particular attention to contemporary sustainability initiatives and threats to the environment in the present moment.

ENVS232 Ecological Design I: Being at Home in the World

Being at Home in the World is an introduction to the skills and thinking involved in the ecologically responsible creation of objects. This course is intended to provide a foundational understanding of the language of design, sources of materials, and energy systems. The studio encourages students to develop a rigorous, iterative working method to deeply analyze the nature of land and resources, explore options, and test ideas. This process of making is complemented and supported by an introduction to the history and theory of design, training with techniques and equipment, and active practice in keeping a sketchbook. Early exercises and projects in the course build familiarity and confidence with analytical drawing, making, and modeling techniques, which build toward the creation of a novel piece of design work presented at the final review.

ENVS233 Geobiology

Fossils provide a glimpse into the form and structure of ancient ecosystems. Geobiology is the study of the two-way interactions between life (biology) and rocks (geology). Typically, this involves studying fossils within the context of their sedimentary setting. In this course, we will explore the geologic record of these interactions, including the fundamentals of evolutionary patterns, the origins and evolution of early life, mass extinctions, and the history of the impact of life on the climate.

ENVS234 A Tale of Three Food Systems: Accessing Food in the US

The US food system is complex and characterized by both abundance and scarcity. In this course we will investigate the three main streams of the food system (conventional, alternative, and emergency) to understand the various ways food is procured in everyday life. We will utilize interdisciplinary food studies and health equity approach to explore the social, ecological, and health implications of these various streams and the impacts on different communities, with a focus on populations experiencing food insecurity. The course is intended

as an introductory foundation in food systems and will include historical background and ongoing policies that have shaped the current food landscape, access, and inequities. We will also explore alternatives and actions in the ongoing struggle for food justice. We will use a range of texts from a variety of disciplines, as well as materials from popular culture including films, TV, and podcasts.

ENVS235 Calderwood Seminar in Public Writing: Radical Sustainability

The environmental challenges widely known and discussed for the past 50 years not only remain: they have grown. Maybe we haven't worked hard enough, or maybe we've been going about sustainability the wrong way. Radical sustainability explores the intersection of these now-critical challenges--extinction, climate change, and many others--as well as the physical and social constraints on action to address them. Our aim is to identify the pressure points for an effective response within the geo-ecosystem and the human systems embedded within it, and then to focus on making change through writing.

Calderwood Seminars in Public Writing are writing-intensive courses that emphasize writing for general audiences about expert subject matters. Students work with their peers to hone the skills that enable them to translate scientific understanding of sustainability for the public. Using an intensive author/editor model, students will explore public communication in a variety of forms, including news articles, radio features, and editorials. The goal is prose that is polished and persuasive. Course readings are chosen to highlight the physical nature of human systems as they relate to natural systems. While there is no prerequisite, the course is intended for upper-level students with experience in environmental and sustainability studies.

ENVS236 Nuclear Power Plant Design and the Three Mile Island, Chernobyl and Fukushima Accidents

This course provides an introduction to radiation, nuclear physics, and nuclear power plant design. It will trace the steps that led to the three most well-known nuclear power plant accidents: Three Mile Island, Chernobyl, and Fukushima. It provides information useful for evaluating the impact of nuclear power on environmental decision-making.

Starting with a history of the atomic discoveries and fundamental physics that led to the atomic bomb production at the end of WWII, the course will then trace the design steps that allowed commercial nuclear power plants to evolve from those weapon-making discoveries. Finally it will trace the accidents and the aftermath from the Three Mile Island, Chernobyl, and Fukushima nuclear power accidents.

ENVS237 Introduction to History: Environment

Humans have profoundly altered the character of Earth's environment since the advent of agriculture and settled societies some 10,000 years ago. This course is a study of the historical relationship between human beings and their habitats, with additional attention to arid lands as places of settlement, cultivation, and development. We explore how global problems such as climate change, biodiversity attenuation, and depletion of fossil soils, fuels, and water are linked to social problems such as economic inequality, food insecurity, conflict, and declining public health. The course reviews evidence of major environmental problems; considers how varied academic disciplines address them; and models a historical approach to understanding environmental change.

The course is divided into two parts: "Environmental Concepts," and "Case Studies." In Spring 2022, the case studies will be devoted to biodiversity.

ENVS238 Bioethics and the Animal/Human Boundary

In this course, we will explore the construction of the animal/human boundary through the lens of bioethics. We will define bioethics as the study of the ethical consideration of medical, scientific, and technological advances and their effects on living beings. At the same time, we will pay close attention to the cultural contexts in which these advances emerge, imagining the realms of scientific progress and popular culture as mutually constitutive. We will consider topics such as cloning, organ transplantation, pharmaceutical testing, and gestational surrogacy, with a focus on the late 20th and early 21st centuries. We will begin by interrogating how ideas of the "animal" and the "human" are constructed through biomedical and cultural discourses. We will ask, How is the human defined? By intelligence or consciousness levels? By physical capabilities or esoteric qualities? Similarly, how has the human been defined against ideas of the animal? Or, what ethical justifications have been cited in the use of animals in biomedicine? What makes certain species "proper" research subjects and others not? What do these formulations tell us about our valuation of animal and human life, and what kinds of relationships exist between the two? To answer these questions, we will consult a wide range of interdisciplinary scholarship, from authors in the fields of animal/ity studies, bioethics and medicine/science history, sociology, anthropology, and philosophy. Students will also be exposed to the basics of biopolitical theory.

ENVS239 Renewable Energy

This course is an introduction to renewable energy from an Earth science perspective, covering the physical principles of power generation from natural energy flows and the transformation, transmission, and storage of energy on the electrical grid, as well as topics from energy markets and utilization. We focus on hydroelectric, wind, solar, geothermal, wave, and tidal energy, along with modern bioenergy. For comparison, we also briefly cover the conventional energy technology of fossil fuels and nuclear power. We discuss each renewable-energy resource, including the advantages, disadvantages, and environmental impacts of its accompanying technology. The course is quantitative with bi-

weekly problem sets. Students are expected to gain theoretical and practical knowledge of renewable energy.

Prereq: **None**

ENVS240 Abolition Geographies

"Space always matters, and what we make of it in thought and practice determines, and it is determined by, how we mix our creativity with the external word to change it and ourselves in the process. In other words, one need not be a nationalist nor imagine self-determination to be fixed in modern definitions of states and sovereignty, to conclude that at the end of the day, freedom is a place. How do we find the place of freedom? More precisely, how do we make such a place over and over again?"

--Ruth Wilson Gilmore, "Abolition Geographies"

This course is not only an introduction to the burgeoning field of abolition geographies, introduced through the work of Ruth Wilson Gilmore, but invites students to engage with abolition geography as an intellectual and political practice. In this seminar, we will consider the relationship between freedom and place-making (the production of places) by examining Ruth Wilson Gilmore's analytics and by also engaging in a range of geographic struggles. For example, students will consider the extent to which enslaved rebellions, not limited to the Haitian Revolution, remade what we envision today as the Atlantic. Students will also have the opportunity to apply an abolitionist framework to their own research.

ENVS242 Quantitative Methods for the Biological and Environmental Sciences

This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulae. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

ENVS243 Averting Catastrophe: Public Policy and Risk Management

COVID-19 revealed the weaknesses of the federal government's capacity to manage the risk of pandemics and the tragic ramifications. The U.S. faces several significant risks that, if poorly managed, could have significant implications for the economy, the environment, and public health. This course focuses on the government's role as risk manager. We will explore how public policies can be used to manage risk, mitigate the extent of damages to the environment, the

economy, and public health, and avert catastrophic outcomes. After examining the concept of risk, decision-making under conditions of uncertainty, and competing policy instruments, we will turn to a number of case studies, including offshore oil spills, nuclear accidents, financial crises, the COVID-19 pandemic, and climate change. In each case, we will seek to better understand the factors that shaped performance and consider the implications for strengthening the government's role as risk manager.

ENVS244 Strategies in Conservation and Environmental Action

This course is only open to Wesleyan sophomores and above, with permission of instructor during pre-registration. This course provides students with a framework for better understanding how environmental policy, programs, and change goals are developed and actions are taken. Content will provide students with information from different disciplines in order to better understand the context, challenges, and intent of a specific environmental project to be addressed by the class over the course of the semester. The class project will have a land or material management focus and be developed with an environmental partner. Content topics may include logistics and impacts of various management systems; ecosystem function and landscape ecology; environmental policy and stakeholder dynamics; data collection and analysis; and communications and education. Project work will include research, meetings, and field work, including service work that contributes to short-term goals and tests protocol. Time required may vary by week. Class periods, assessments, and readings will be right-sized to facilitate this time commitment. Students will be assigned project tasks according to their major and skills. The class will collectively produce and present finished products to the environmental partner. Projects change with each semester and vary in emphasis and ecological vs. social components.

ENVS246 People and Places: An Introduction to Environmental Psychology

This course explores human-environment interactions and the relationships between natural, social, and built environments in shaping people as individuals, and in turn, how people shape their environment(s). This course will critically explore theories and research that serve as the foundation of the field, as well as examine applications to real-world problems. This course will incorporate inquiry-based approaches to environmental psychology including the methods of participant observation and PhotoVoice.

This course will engage ecological approaches and multi-level concepts in understanding human-environment dynamics and interactions from the home/personal space, community, and urban life, among others, as well as reflect on students' experience of their physical and social environments. As a survey course, this course will cover myriad topics with consideration to social justice, and varying conceptualizations and experiences addressing gender, race, class, age and people with disabilities. Considering the COVID-19 pandemic, this course will give special consideration to public space and home environments. As a discussion-based seminar, topics will ultimately be driven by student interest. Several films and podcasts may be incorporated into class.

ENVS247 Ecologies of Attention: Biosemiosis, Attunement, and Ethics

We consider variants on biosemiotic accounts of meaning, following one thread through Emerson to Nietzsche, another from Peirce and James to Bateson (Ecology of Mind, 1972) and Gibson (Ecological Approach to Visual Perception, 1979), and a third through contemporary indigenous thinkers and anthropologists attempting to bridge scientific ecology and animist panpsychism--Kimmerer, Whyte, Kohn, Ingold, Strathern. While most of the texts here focus on the nature of meaning as a living process, they are also in constant dialogue with normative concerns, being both motivated by subversive or non-humanist ecological values and inspiring distinctive insights about how to lead meaningfully connected lives.

ENVS250Z Pandemic and the Environment

The COVID-19 pandemic is a global disturbance with important environmental causes, effects, and interactions. We will explore four key topics, evaluating what occurred and implications for future policy and practice. Wildlife: SARS-CoV-2 is a zoonotic disease, facilitated by "bush meat" markets and development of habitat that bring wildlife in close proximity to each other and humans. Stay-at-home orders, and temporary abandonment of human spaces released wildlife from constraints, while exposing the nature of our interdependence. Air pollution: Rates of hospitalization and mortality are greatest for those living with chronically high levels of air pollution, particularly PM

We will examine these themes through readings and apply our understanding of scientific process, peer-review, sources of data, context, voice, and audience.

ENVS254 Architecture of the 20th Century

The course considers influential works in architecture, its theory and criticism, and ideas for urbanism, mostly in Europe and the United States, from about 1900 to the present. Early parts of the semester focus on the origin and development of the modern movement in Europe to 1940, with attention given to selected American developments before World War II. Later parts of the course deal with Western architecture from 1945 to the present, including later modernist, postmodernist, and deconstructivist work, urbanism and housing, computer-aided design, green buildings, and postwar architecture in Latin America and Japan and in postcolonial India and Africa. Major movements and architects considered include the Viennese Secession, the Bauhaus, Le Corbusier, Mies van der Rohe, Frank Lloyd Wright, Alvar Aalto, and Louis Kahn, among many others.

ENVS257 Environmental Archaeology

Archaeological materials provide long-term records of how humans have modified past environments and how human societies respond to environmental change. In this course, students will learn how data from ancient plants, animals, and soils can be analyzed in order to draw interpretations about past human-environmental interactions. We will also discuss key topics in environmental archaeology, including the long-term environmental impacts of plant and animal domestication and debates over environmental causes for the "collapse" of civilizations such as the ancient Maya. The course will involve hands-on preparation and cataloging of plant and animal specimens to add to the Wesleyan Environmental Archaeology Laboratory comparative collections. Students must be available for one weekend class meeting to complete the first stage of animal skeleton preparation.

ENVS259 Development, Disasters, and Beyond: The Global Politics of Aid

Development is one of the most important ideas of our times. It is a powerful way of reorganizing the world into the Global South and the Global North (or the Third and First Worlds) and promising modernity to "backward" places and people. It is an equally powerful way of intervening in "underdeveloped" regions in the name of progress and beneficence through aid programs. Our purpose in this course is to use the spy lens of anthropology to critically examine the global politics of development aid, whether given for poverty alleviation, infrastructure projects, disease and healthcare, or disaster relief. While development aid is certainly a potent way to exert power over and regulate Third World Others, it is also a fiercely contested space of struggle. This course approaches it as a "problematic"—an unsettled, contentious, and unpredictable formation.

ENVS260 Global Change and Infectious Disease

This course will cover how human demands upon the environment have come back to bite us through infectious diseases. The most devastating infections, now and in the past, have spilled into humanity from other animals through our quest for food, either through hunting and trade of wild animals (COVID-19 and HIV) or through agriculture (smallpox and measles). Additionally, taking over huge swaths of land has fragmented natural habitats, with the result that some pathogens have increased in abundance (Lyme disease) and some pathogens have moved closer to humanity when humans have encroached on natural lands (Ebola). Living at high density in interconnected cities has sustained the severe infections that became humanity's childhood diseases (mumps, measles, smallpox); high densities have also brought us diseases brought by fecally contaminated water, as well as those diseases brought by the animals that cohabit our cities and suburbs (rats, robins). Our demand on energy has brought us global warming, which is transporting tropical diseases, such as malaria, poleward from the tropics; the extreme weather events of a changed world are leading to outbreaks of zoonotic diseases (hantaviruses). Moreover, our penchant for transporting wild animals and ourselves has had the potential to spread any local flare-up of any novel disease to the whole world (plague, COVID-19). We will discuss how, even if we mitigate every existing human infection, we should expect an unending stream of new pathogens. We will discuss technological solutions to infectious diseases, as well as how changes in our ethics might help contain existing pathogens and avoid future spillovers. Lectures will cover these and other topics. There will be two 65-

minute lectures each week, with frequent opportunities for students to break out into smaller sections to figure out interesting biological challenges. There will also be a 30-minute discussion each week for each of 11 discussion sections (probably about 15 students each). These discussions will focus mostly on how policy changes might best mitigate the environmental disturbances that are bringing us infections. The course has no formal prerequisites and will introduce material from ecology and microbiology, as needed, to allow students to read and interpret the recent literature on global change and infectious disease.

ENVS261 Science Materials For a Malagasy Classroom

Students will design and produce a variety of educational science materials to be used in a fifth grade classroom in Madagascar. These items include a science logo, bookmarks, educational science games, posters, and a comic book with conservation themes for children. Students who are interested in design and natural history as a means through which to communicate science themes on wildlife endemism, evolution, and climate change would be appropriate for this course. All students will need to conduct independent research into science topics, distill down the salient features, and use that information to design elementary school materials. Working both individually and in teams, students will conceive, design, critique, and move into product production (MakerSpace). In addition, prototypes of the materials will be reviewed and rated by fifth graders in a Middletown elementary school for feedback.

ENVS262 Archaeology of Food, Trade, and Power in South India

This course examines patterns of life in premodern South India, focusing on the millennium from about AD 600 to 1600. It explores the persistent practices and institutions that structured social life--agricultural regimes of food production, patterns of local and long-distance trade, and elite discourses of power and authority--as well as historical events and processes that brought change to those patterns. The course capitalizes on South India's rich array of archaeological evidence, from surface remains and excavated finds to standing architectural monuments, donative inscriptions on stone and copper plates, and various forms of coinage and coin hoards informing on economic life. Specific topics investigated include the articulation of cultural space and landscapes; food, subsistence, and modes of agricultural production; domestic architecture and habitation; trade, markets, and monetary systems; and the roles of religion and ritual in legitimating political power. There is an explicit emphasis on methods and their application, including those of epigraphy (the analysis of inscriptions), numismatics (the materially based study of coinage and monetary systems), surface archaeology (survey, documentation, and analysis of exposed surface remains), and the archaeology of buildings. Many class sessions will be devoted to active discussion and analysis of data.

ENVS263B Curatorial Workshop: Art and the Ecological Imagination, 1840-1870

This course examines the emergence of an "ecological consciousness" in art during the mid-19th century through readings, discussion, and firsthand study

of works in the Davison Art Center print collection. Although the term "ecology" was first coined in 1866, 19th-century thinkers had long been concerned with the interrelationship of organisms, including humans' place and impact on nature. This class examines how visual artists before Impressionism contributed to the 19th century's "ecological imagination" through their representations of landscapes. Known as the "Barbizon School," this group of artists left the metropolis of Paris to immerse themselves in the wild and rugged terrain of the Fontainebleau Forest while also embarking on journeys to remote regions of France. These members of the first artists' colony seceded from the French Academy of Fine Arts and pursued strategies of independence that were allied at the time with radical politics. In their works they experimented with new materials and approaches to composition that included but no longer prioritized humans, in order to foreground processes of transformation internal to nature itself. The consciousness that artists forged through painting and printmaking led them to become among the world's first conservationists; they successfully petitioned the French government to protect parts of the Forest of Fontainebleau some 20 years before the creation of the first National Park in the United States.

The first half of the course will be devoted to reading and discussion; the second half will center on the study of works in the Davison Art Collection, which includes a superb collection of original and experimental prints by Barbizon School artists. The final project will be the curation of a temporary exhibition of works from the collection, including a selection and arrangement of works, explanatory texts, and a public gallery talk.

ENVS264 Waterways: Maritime World History

Human history has been shaped by the sea. Whether as a source of food, a frontier, a boundary, or a bridge, the sea has represented a site of both opportunity and danger. This course will examine the way humans have responded to their marine and maritime environments, both in terms of the technologies they have developed to navigate and exploit them but also insofar as the sea has shaped the way humans think about themselves. While our inquiry will extend into the deep past and the early development of human culture and civilization, we will focus on maritime history over the past millennium, the development of oceanic worlds, the rise of the "age of sail" between the 16th and 19th centuries, and the transformation of global navigation and politics with the rise of steam, diesel, and nuclear power.

ENVS265 Environmental Justice & Health Equity

The environmental justice movement (EJM) has evolved over the last several decades, both in the US and globally. The EJM seeks to respond to environmental inequalities that directly impact human health and safety, particularly among people who live or work in settings that put them at higher risk of exposure to environmental hazards. The Agency for Toxic Substances and Disease Registry (ATSDR, part of the Centers for Disease Control and Prevention) describes the goal of environmental justice as "...when everyone enjoys the same degree of protection from environmental and health hazards, and equal access to the decision-making process to live, learn, and work in a healthy environment." In

this course we recognize the current environmental crisis as rooted in systemic inequities that are implicated in social determinants of health (SDOH) and have major implications for health outcomes of affected populations. Therefore, we will explore the EJM from a health equity lens, including racial capitalism, intersectionality, and other forms of structural violence that serve as SDOH, to explore the implications of environmental injustices on health equity. In addition, we will examine how academics, nonprofit/community-based organizations, community members, and government agencies collaborate to address environmental justice-related health equity. Finally, we will look at the notion of "just sustainabilities" to investigate and imagine solutions to these ongoing challenges that build community power to advance sustainable communities and health equity.

ENVS266 Free the Land: Histories of Environmental Racism

This course will introduce students to the study and discussion of environmental racism and environmental justice in the United States that centers the histories and experiences of communities of color. Environmental racism is defined by Dr. Robert Bullard ("the Father of Environmental Justice") as "any policy, practice or directive that differentially affects or disadvantages (where intended or unintended) individuals, groups or communities based on race." This course expands and illuminates this definition through examinations of watershed moments--from the Transatlantic Slave Trade to struggles in the greater Connecticut River Valley today--in which communities of color in the United States bear the deadly brunt of toxic fumes, poisoned groundwater, nuclear waste, perilous disaster work, land theft, and the slow violence of biological extermination. Throughout the semester, we will read scholarly texts, engage primary sources, analyze popular and independent media, and study testimony and self-published materials from activists and eyewitnesses.

ENVS267 Development in Question: Conservation in Africa

"Why not plant trees?" In 1977 Wangari Maathai started the Green Belt Movement, a popular environmental revolution, in Kenya. Then in the 1990s Nigeria Ken Saro-Wiwa fought for the rights of local communities against the multi-national oil industry. Like many African activists, scientists, and farmers, they placed African experiences at the center of environmental policy and conservation. Yet, popular images of the continent's environment in perpetual crisis blame African practices or disregard African efforts. Such depictions of "desertification" or "over grazing" have impacted international and governmental policy. Recent scholarship suggests that such common perceptions of the environment in Africa and conservation policy are misleading. This course will allow students to critically study the history of environmental management on the continent and the development of the idea of conservation. We will examine game park politics, the history of resource extraction, climate change, and other pressing environmental concerns. We will also study diverse African environmental perspectives from the guardians of sacred forests to activists such as Wangari Maathai and Ken Saro-Wiwa.

ENVS268Z Environmental Justice Advocacy: Assessing Law, Community-Based Engagement, and More

ONLINE COURSE: Synchronous class meetings via Zoom, 10am-noon and 2-5pm. Classes held Jan 4, 6, 8, 10, 12, 14, 16, 18. (Please note: Students should expect some readings and assignments to be due during winter break, prior to the beginning of Winter Session class meetings.) The concept of "environmental justice" focuses on the equitable distribution of pollution and health burdens--such as the siting of fossil fuel infrastructure and pollution-emitting facilities--as well as benefits such as clean air and clean water. Procedural justice and restorative justice are also key demands of the environmental justice movement. In addition, as communities of color and low-income communities disproportionately bear the burdens of climate change and resulting "climate gentrification," the overlap between environmental injustice and climate change is becoming increasingly apparent. After a brief introduction to the concept of environmental justice, this course will focus on advocacy efforts to promote environmental justice and, in particular, the benefits and limitations of various tools including the law, grassroots organizing, and policy work. For their final project, students will use what they learn in the course to design and propose their own environmental justice intervention. By the end of the course, students will understand the history, foundational theory, and key case studies of environmental justice as well as the tools and strategies that environmental justice advocates use. Syllabi for Winter Session courses will be posted to <https://www.wesleyan.edu/wintersession/courses.html> as soon as they are available.

ENVS269 Drones and Change

Civilian use of unoccupied aerial vehicles or drones to capture data and measure change can enhance our understanding of the natural and built environments. While drones are increasingly available for entry-level to professional level adoption, there remains value in understanding how the infrastructure for their development and deployment have evolved and what is required to ensure their continued safe and ethical utility of these devices. In this class, we will explore the legal and infrastructure elements of drone development and deployment for civilian utility of drones, while working on data collection, analysis, and interpretation that will allow students to better appreciate the value and utility of drones. Over the course of the semester, students will work on understanding and building drones, collecting data with small drones, examining the commercial versus open-source platforms for drones, and preparing to take the Federal Aviation Authority Part 107 license to allow them to fly drones safely.

ENVS270 Environmental Philosophy

This course offers philosophical resources for understanding and addressing environmental concerns. At the same time, we will recognize how ecological insights challenge some of the most influential ideas in the European philosophical tradition--human-centered and individualist accounts of existence, agency, knowledge, and value.

Shared questions may include:

Is there a coherent way of distinguishing "nature" from the non-natural?

What can we understand about non-human experience and value?

How do people become motivated to recognize and respond to problems whose effects play out in far-away or unfamiliar bodies?

How do concepts of moral responsibility apply to climate change?

How does environmentally directed action relate to social justice?

When there are ecological impacts attached to choices that are conventionally seen as matters of personal liberty (such as food choices, living arrangements, reproductive choices), how do we constructively engage with one another?

Despite near consensus about our times being rife with environmental crises, concepts like "environment" and "nature" defy any straightforward account. Similarly, it seems even when people come together around problems of injustice and unsustainability, they may not share any clear positive account of justice or of sustainability.

Rather than be defeated by the lack of shared foundational concepts, students will become familiar with at least three patterns of critique--each of these being not a theory or kind of information but a set of skills with perceptual, conceptual, and dialogical aspects. These three patterns of critique are ecological critique, standpoint critique, and sustainability critiques, and they correspond roughly to three traditional domains of philosophy: inquiry into being (metaphysics), inquiry into knowledge and understanding (epistemology), and inquiry into norms and ideals for action (ethics).

Understanding these three patterns of critique allows students to address emerging environmental problems more effectively, recognizing the intertwined relations among empirical inquiry, moral accountability, and social justice.

ENVS271 Biodegradable Design: Soft and Hairy

In this course, we will develop an understanding of soft materials and how softness is explored in design. We will explore the notion of softness in design with particular focus on how soft, biodegradable materials can form our experience of a product. We will study how soft materials, plants, and living organisms can be utilized as a living material to form a built ecology. In particular, we will learn how mycelium used in novel ways can produce experiential affect in spaces, especially in relation to the human body. We will study how to design for impermanence--sometimes using waste materials--

and develop an understanding for material recovery. The goal of the course is to introduce students to bio and living materials used in design as well as zero-waste design methodology, and develop digital and physical skills associated with the making of soft products. Students will work both individually and collaboratively in a studio environment. Field trips to New York City museums, fabricators, and galleries may be expected as part of this course.

ENVS272 Knowing Their Place: Two Centuries of Women Generating Wonder in the Natural World

This seminar will examine the intersection of natural science, women's history, and poetic prose through the writings of Rachel Carson, author of the groundbreaking environmental manifesto *Silent Spring*, and the women who both preceded and succeeded her. What does it mean to know a landscape or an ecosystem intimately? How does a sense of place become political? How does gender affect perspective on the natural world and environmental stewardship? In addition to Carson, we will read authors including Susan Fenimore Cooper, Mary Treat, Anna Botsford Comstock, Terry Tempest Williams, Robin Wall Kimmerer, Camille Dungy, and Margaret Renkl. Writing assignments will include both textual analysis and personal nature writing.

ENVS273 Environmental Politics in East Asia

This is an upper-division course on the environmental politics of East Asia. It will focus on the major environmental issues of our time (pollution, conservation, energy, waste, environmental justice, etc.), and how East Asian countries are coping with them from both policy and politics perspectives. It will cover both transnational and international efforts, as well as national and local initiatives. The course will require that students "do" environmental politics as well as study environmental politics through a civic engagement component.

ENVS276 Law and Policy of Water, Air, Climate & Biodiversity: Protecting Natural Resources & the Environment

How do we protect our environmental and natural resources, and why have we chosen this path? When and how do the public, NGOs, and regulated industries have a voice? When is an environmental impact statement required and which alternatives must be considered? When and how are environmental considerations part of the decision-making process? Is there a path forward to better address greenhouse gases and climate change? How can we protect endangered and threatened species and preserve their habitats? Where do we go from here as we confront the more complex issues associated with greenhouse gases/climate? How do our energy sources impact our environment?

This highly interactive course will examine the source of environmental and natural resource law, its evolution, and boundaries. It will explore how

and when we have access to the process and then turn attention to the programs most central to natural resource and environmental protection: the National Environmental Policy Act, The Clean Water Act, The Clean Air Act, as well as certain land-focused state and municipal programs. Given renewed commitments to alternative energy and environmental justice (EJ), the course devotes time to considering both through the lens of environmental law and policy.

The course concludes with a capstone project in which students are assigned to a team as either proponent or opponent. Each team is then provided an information packet setting a scenario, setting, certain facts, and any legal information beyond course coverage. Following this, each team prepares for and advances technical, legal, and policy arguments in support of its goals and is afforded the opportunity to cross-examine the opposition.

ENVS277 Law and Policy of Chemicals, Contamination, Communities (Environmental Justice), and Calamities

How do we protect our environment and ourselves from wastes and chemicals? Why have we chosen this path? When and how do the public, NGOs, and regulated industries have a voice? When is something that is not used considered waste, and when is that waste a hazardous waste? When does someone need to clean up the contaminated environment? Who is that someone? How clean is clean? How have chemicals ended up in commerce? When and under what circumstances can new chemicals enter our lives? When and how are environmental and health considerations part of the decision-making process? How do we avoid environmental disasters? What is required in terms of thinking about and planning for the "unthinkable"? What drives sustainability initiatives, beneficial reuse, and life cycle analysis?

This highly interactive course will examine the source of environmental law, its evolution, and boundaries. Students will explore how and when we have access to the process and examine: (i) the Resource Conservation Recovery Act, Superfund, and related brownfield initiatives; (ii) the Toxic Substances Control Act and international counterparts; (iii) the Emergency Planning and Community Right To Know Act; (iv) environmental justice in the context of waste and chemical management; and (v) sustainability, product stewardship, and related initiatives.

The course concludes with a capstone project in which students are assigned to a team as either proponent or opponent. Each team is then provided an information packet setting a scenario, setting, certain facts, and any legal information beyond course coverage. Following this, each team prepares for and advances technical, legal, and policy arguments in support of its goals and is afforded the opportunity to cross-examine the opposition.

ENVS278 Introduction to GIS

Geographical information systems (GIS) are powerful tools for organizing, analyzing, and displaying spatial data. GIS has applications in a wide variety of fields including the natural sciences, public policy, business, and the humanities; literally any field that uses spatially distributed information. In this course, we will explore the fundamentals of GIS with an emphasis on practical application of GIS to problems from a range of disciplines. The course will cover the basic theory of GIS, data collection and input, data management, spatial analysis, visualization, and map preparation. Coursework will include lectures, discussions, and hands-on activities.

ENVS279 Eating Others: Histories and Cultures of Animal Edibility

For many people, animals form a significant and cherished part of their diet. Indeed, humans have used other animals as sources of nutrients for hundreds of thousands of years. What can these animal-based dietary practices tell us about humans and their relationships with other animals? Of course, these inter-species relationships have varied as radically across time and cultures as the dietary practices that have shaped them. To better understand some of these practices and the relationships they generate, this course will explore the following questions: How did animal-based food practices develop from pre-domestication to the contemporary era of industrialized animal agriculture? How have cultural categories of "edibility" developed in different cultural contexts? What is meat, and how does it differ from inedible flesh? How have gender, class, race, sexuality, and other categories of difference intersected with and shaped animal consumption practices in different times and contexts? How has animal consumption shaped and been shaped by animal ethics, philosophy, and scientific knowledge production? How has large-scale animal consumption contributed to the ecological crises of the Anthropocene, and how have these in turn affected animal consumption practices? What is the future of animal-based food?

This course will use ethnographies, historical and legal analyses, and philosophical inquiries to examine the histories and cultures of animal edibility. Specifically, it will focus on topics including human evolution, animal domestication, slaughter practices, industrialized animal agriculture, indigenous ecological ontologies, hunting, dairy and egg consumption, cannibalism, cultural conflicts over the edibility of specific species, and recent technological innovations that can produce animal products without animals.

ENVS280 Environmental Geochemistry

This course is a qualitative and quantitative treatment of chemical processes in natural systems such as lakes, rivers, groundwater, oceans, and the atmosphere. General topics include equilibrium thermodynamics, acid-base equilibria, the carbonic acid system, oxidation-reduction reactions in nature, and isotope geochemistry. The associated lab course (E&ES 251) must be taken concurrently if offered. The lab course will be a service-learning course in which students work with a community organization to solve an environmental problem or a semester-long research project.

There are no official prerequisite classes, but students should be comfortable with chemical concepts or should have taken introductory college chemistry or advanced high school chemistry courses.

ENVS283 Venezuela: The Effect of Oil Discovery on People, the Environment, and on Democracy (CLAC 1.0)

(English translation follows below) Este curso examinará los factores clave que han afectado el desarrollo de Venezuela y su entorno desde el período precolonial hasta el presente. Dividiremos la historia de Venezuela en dos períodos críticos: antes y después del descubrimiento de petróleo. Haremos preguntas sobre la naturaleza y las interacciones de los factores y agentes clave que transformaron a Venezuela de una colonia a la de un país económicamente independiente. Al examinar los períodos económicos anteriores y posteriores al petróleo por separado, aprenderemos que los factores clave, como la agricultura, el uso de la tierra y la influencia colonial europea, cambiaron drásticamente, transformando así muchas instituciones sociopolíticas. Los contrastes incluirán la resiliencia y la erradicación de enfermedades, los derechos humanos y la esclavitud, la propiedad de la tierra, la salud humana, los impactos en la biodiversidad y la salud humana, y la protección de las culturas indígenas. En última instancia, examinaremos los factores que han llevado al colapso de la democracia. Leeremos una literatura interdisciplinaria que incluye antropología, religión, sociología, ciencias ambientales, derecho e historia. El curso se presenta en un formato de lectura / discusión en el que todas las lecturas, escritos y discusiones serán en español.

This course will examine the key factors that have affected the development of Venezuela and its environment from the pre-colonial period to the present. We will divide the history of Venezuela into two critical periods: before and after the discovery of oil. We will ask questions about the nature and interactions of the key factors and agents that transformed Venezuela from a colony to that of an economically independent country. By examining the pre- and post-oil economic periods separately, we will learn that the key factors, such as agriculture, land use, and European colonial influence, changed dramatically, thereby transforming many sociopolitical institutions. The contrasts will include resilience to and eradication of diseases, human rights and slavery, land ownership, human health, impacts on biodiversity and human health, and protections of indigenous cultures. Ultimately we will examine the factors that have led to the collapse of democracy. We will read an interdisciplinary literature that includes anthropology, religion, sociology, environmental sciences, law, and history. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

ENVS288 Community Paleoeecology

The study of community paleoecology seeks to derive ecological meaning from the reconstruction of ancient ecosystems. From this vantage point, fossil assemblages are used to observe long-term patterns in biogeography, evolution, and organism-environment interactions. The overarching themes in this course will emphasize theoretical frameworks in community ecology and stratigraphic paleobiology that advance the collective understanding of how to read and interpret the fossil record to document ecosystem interactions over geologic history. Case studies from across Earth's history will underscore the necessity of examining past ecosystems to contextualize modern and future ecosystem structure. We will accomplish these aims with lectures, readings and discussion of the primary literature, and student presentations. Pre/co-requisites: BIOL182, E&ES101, E&ES115, E&ES155, E&ES197, or E&ES199.

ENVS289 Introductory Ecological Methods in R

This lab class is required of students enrolled in the accompanying lecture (EES 258). We will learn to use R to analyze paleontological records with multivariate methods and specifically become familiar with the vegan package for interpreting large ecological datasets such as species abundance data. Prior knowledge of or experience with R is not a prerequisite and beginners are especially encouraged to enroll in this course. Students with intermediate and advanced R skills are still welcome to enroll, but should recognize that much of this course will focus on the beginner experience. Assignments and projects will be collaborative, such that students across experience levels will work together to complete the course material. Pre/co-requisites: BIOL181/BIOL182, E&ES101, E&ES115, E&ES155, E&ES197, or E&ES199.

ENVS290 Oceans and Climate

Earth's climate is not static. Even without human intervention, the climate has changed, but mostly at a slower rate. In this course we will study the major properties of the ocean and its circulation and changes in climate during the Cenozoic Era (the past 66 million years). We will examine the effects of variations in greenhouse gas concentrations, the locations of continents, and the circulation patterns of oceans and atmosphere. Once a basic understanding of the climate system is attained, the focus will be on how we know about past climates. Through reading and in-class exercises students will look at data from sediment cores, ice cores, and tree rings to learn about past climates. The final project will investigate measures humans can take to slow the rate of climate change. It is possible and must be done.

ENVS291 East Asian Archaeology

This course will introduce students to remarkable archaeological discoveries from East Asia, focusing on the archaeology of ancient China, but also including finds from Japan, Korea, and Mongolia. Beginning with "Peking Man" and Asia's earliest hominin inhabitants, we will explore the lives of Paleolithic hunter gatherers, the origins of domestic rice and pigs, the emergence of early villages and cities, the origins of writing, ancient ritual systems, long-distance interactions through land and maritime Silk Roads, and the archaeology of Chinese diaspora populations living in the 19th-century United States. We will also consider the current state of archaeological research in East Asia, focusing on site preservation, cultural heritage management, and the political roles of archaeology.

ENVS293 Environmental Justice: Community-based Participatory Research

This course provides a foundation for addressing environmental and food justice through community-based participatory research (CBPR). Students will develop competencies to prepare them to work with communities to identify and understand environmental, food security, health, and social conditions that impact their communities and organizations. We will be drawing on theoretical and practical approaches from across the environmental social sciences (ESS) including psychology, anthropology, sociology, community health, and geography to help us frame ways of looking at critical community issues. Specifically, we will discuss a wide range of mixed methods with an emphasis on participatory approaches to developing research questions and hypotheses, community-engaged evaluation planning, needs assessments, and landscape scans. Students will also learn about ethical issues in research, particularly as pertaining to working with community stakeholders. Over the course of the semester, students complete a variety of practical exercises designed to gain experience with qualitative and quantitative data collection, analysis, and community learning.

ENVS294 Current Environmental Issues in Latin America (CLAC 1.0)

(English translation below Spanish text) Este curso proporcionará información histórica y actual sobre el desarrollo de temas ambientales en América Latina.

La información se dividirá en la evaluación del uso del medio ambiente durante los periodos precolombino y colonial (a); y b) período moderno. Se discutirá la organización, estructura y gobernanza del medio ambiente. El desarrollo de políticas públicas, planes de gestión, factores que se deterioran y los posibles usos sostenibles del medio ambiente y sus recursos. Leeremos literatura interdisciplinaria incluyendo: académica, informes, documentos oficiales gubernamentales y proyectos de ONG dedicados al diagnóstico, desarrollo y uso o nuestros recursos en América Latina. Por último, se estudiarán casos particulares de países latinoamericanos como Argentina, Brasil, México, Costa Rica, Perú y Venezuela. El curso se presenta en un formato de lectura/discusión en el que todas las lecturas, escritos y discusiones estarán en español.

This course will provide historical and current information on the development of environmental issues in Latin America. The information will be divided into assessing the use of the environment during (a) pre-Columbian and colonial periods and (b) the modern period. The organization, structure, and governance of the environment will be discussed, as will the development of public policies, management plans, factors that deteriorate, and the potential sustainable uses of the environment and its resources. We will be reading interdisciplinary literature including academic, reports, official governmental documents, and NGOs' projects dedicated to the diagnostic, development, and use of resources in Latin America. Finally, particular cases of Latin American countries such as Argentina, Brazil, Mexico, Costa Rica, Peru, and Venezuela will be studied. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

ENVS295 Saving Animals: The Politics of Rescue, Captivity, and Care

This course examines the major issues related to captive animal care and rescue across a wide variety of contexts, especially the current global extinction crisis, with specific attention to the ethical, political, and social dimensions of human-animal interactions. Discussions, films, readings, and an independent research project will introduce students to key concepts related to animal care and rescue. Specifically, the course will focus on topics including the ethical dilemmas of care, the politics of extinction and conservation, animal trafficking, wildlife rehabilitation efforts, wildlife refuges, captive animal sanctuaries, and zoos.

ENVS297 Food Security and Environmental Conservation (CLAC 1.0)

(English translation below Spanish text) En este curso los estudiantes investigarán información y discusión sobre la seguridad alimentaria y el uso del medio ambiente en una selección de países de América Latina. Haremos preguntas sobre la base de la producción y disponibilidad de alimentos. También examinaremos la información disponible de las agencias públicas y privadas sobre los programas establecidos por los países para garantizar la seguridad alimentaria de sus habitantes y el uso sostenible y la conservación del medio ambiente. Discutiremos conceptos como: La soberanía alimentaria y la seguridad como un sistema alimentario en el que las personas que producen, distribuyen y consumen alimentos también controlan los mecanismos y políticas de producción y distribución de alimentos; La nutrición como normas mundiales y particulares de consumo de alimentos; La Justicia social relacionada con

la accesibilidad de los alimentos; y el derecho humano a una alimentación adecuada y a la libertad del hambre como uno de los objetivos del milenio de las Naciones Unidas. El estudiante revisará casos particulares en América Latina. El curso se presenta en un formato de lectura/discusión en el que todas las lecturas, escritos y discusiones estarán en español.

In this course students will research and discuss food security and the use of the environment in a selection of Latin American countries. We will ask questions about the basis of food production and availability. We will also examine the available information from public and private agencies about programs established by countries to ensure the food security of their inhabitants and the sustainable use and conservation of the environment. We will discuss concepts such as: food sovereignty and security as a food system in which the people who produce, distribute, and consume food also control the mechanisms and policies of food production and distribution; nutrition as a global and particular standard of food consumption; social justice related to the accessibility of food; and the human right to adequate food and freedom from hunger as one of the United Nations' objectives of the millennium. Students will look at particular cases in Latin America. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

ENVS298 Earthwatch: Satellite Data Storytelling for Science Communication

The fingerprint of human activity on planet Earth continues to magnify as we move deeper and deeper into the Anthropocene. Satellite remote sensing is a rapidly developing field for monitoring and visualizing planetary change in real time. Vast amounts of satellite data are now freely available for documenting, mapping, and communicating the impacts of natural and human disturbances on the Earth system. Students in this course will learn how to 1) analyze remotely sensed imagery using open-source software, 2) make high-quality maps documenting planetary change, and 3) communicate satellite data patterns to broad audiences using data storytelling. Students will master a wide range of techniques for detecting and articulating the stories behind satellite images and data sets through visual, oral, and written assignments aimed at diverse public audiences.

ENVS299 Drones and Change Lab

Civilian use of unoccupied aerial vehicles or drones to capture data and measure change can enhance our understanding of the natural and built environments. While drones are increasingly available for entry-level to professional level adoption, there remains value in understanding how the infrastructure for their development and deployment have evolved and what is required to ensure their continued safe and ethical utility of these devices. In this class, we will explore the legal and infrastructure elements of drone development and deployment for civilian utility of drones, while working on data collection, analysis, and interpretation that will allow students to better appreciate the value and utility of drones. Over the course of the semester, students will work on understanding and building drones, collecting data with small drones, examining the commercial versus open-source platforms for drones, and

preparing to take the Federal Aviation Authority Part 107 license to allow them to fly drones safely.

ENVS301 The Art of Narrative Science

There is neither conflict nor antagonism between the realms of art and science. Indeed, the two infinitely complement and complete one another in ways so intimate, intricate, and oft-times invisible that only great storytelling, artful narrative, can fully reveal them. A poet, through metaphor, builds bridges from entangled inscapes of thought and emotion to a place of shared understanding. A good narrative science writer must do the equivalent with the often recondite minutia of modern scientific exploration, and do so with ever-increasing urgency as new discoveries and insights mount daily across a broad array of disciplines.

As we'll be highlighting in our course readings, writing assignments, and class discussion, all the key tenets of good storytelling are at play in effective narrative science writing: voice, point of view, narrative arc, dramatic tension, setting and scenes, characters, action, and dialogue. Science, in this sense, is incidental to this course's primary concern. The singular challenge that science does pose to writers, however, is how not to be cowed and/or overwhelmed by the daunting complexities of the subject matter; how to, through your own powers of observation, accrued research, and fearless, persistent questioning, own the material in such a way that frees you to imaginatively represent it again to the lay reader as story.

In this course students will learn:

- 1) How to read effective creative nonfiction about scientific subjects and understand what techniques different writers use to achieve both clear and compelling narratives.
 - 2) How to choose the subjects they'd like to write a story about and how to compose a proposal describing that story to prospective editors at a variety of different publications.
 - 3) How to compile research and conduct interviews for their stories.
 - 4) How to construct the story itself using all the techniques of effective storytelling in feature-length narratives.

ENVS302 Extinction/Rebellion: Christianity and the Climate Crisis

Although this course is not devoted specifically to the subject of "XR"--the decentralized environmental activist organization and global campaign of civil disobedience--it borrows the movement's self-designation as a point of departure for an exploration of the historical, conceptual, and geopolitical significance of Christianity to the "Anthropocene." How is Christianity entangled

among the "historical roots of our ecologic crisis"? What is "eco-theology"? How do ancient narratives of creation and traditional Christian teachings regarding the origin of humankind continue to shape modern, scientific, and popular assumptions about the natural world and our place in it? What does the book of Genesis have to say about commercial agriculture, ethical veganism, and the relation of divinity with the more-than-human, animal-vegetal-mineral web of life? Whence this "planet of slums" and whither Paradise or the Promised Land? Which elements of the Christian imagination enabled colonization of the New World, indigenous displacement and genocide, the transatlantic slave trade, and capitalist globalization? Is another world still possible, and could Christian thought and practice play a pivotal part in actualizing an alternative planetarity today? We will pursue these questions together by way of readings in theology, philosophy, critical science studies, ecology, geography, political economy, Black feminism, queer theory, and Indigenous studies. Ultimately, the course analyzes aspects of Christianity's intimate involvement in the history of climate change and considers how critical attention to this history may contribute to collective acts of rebellion against mass extinction.

ENVS303 Ukraine and Its Environment

International perspectives on environmental issues are critical in order to address the challenges facing the world. Developing an international perspective requires more than learning from printed literature--it requires in-country experience and the desire to be able to view issues through different cultural lenses. This course will provide such experience by learning about the diversity of Ukrainian environments, people, and cultures both in the classroom at Wesleyan and by traveling to Ukraine during Spring Break. During our time in Ukraine we will receive lectures in English from noted scholars, politicians, professors and scientists on topics such as environmental law, global environmental security, urban environment, environmental policy in developing states, and sustainable development for the developing world. We will travel and learn from scientists at Chernobyl about the regeneration of forest ecosystems, learn from agronomists about agriculture on the steppes, and learn from politicians and scholars about Ukrainian environmental policy and their views of U.S. policies. We will also enter into round table discussions with university students to exchange ideas about potential international solutions and approaches to environmental problems. These are just some of the experiences that are planned for our visit. Ukraine, as a pivotal democracy of the former Soviet Bloc, is an amazing place to witness how a nation wrestles with dramatic changes in policy. At the same time Ukraine is culturally diverse, which presents interesting challenges to formulating fair and cohesive policies.

ENVS306 Ecology and Natural History of Freshwater Fishes of South America

South America has the highest diversity of freshwater fishes anywhere in the world. In fact, there are more than twice the number of mammals and about the same number of birds in the world. Why has this remarkable radiation occurred in a relatively short period of time? How can so many fishes coexist in the same rivers, utilizing the same resources? In this intensive course, we will travel to Colombia during spring break (March 7-21) in order to gain firsthand knowledge about the ecology and natural history of freshwater fishes in South America. We will learn about the ecological and environmental factors that contribute to perhaps the largest biological radiation on the planet.

Students will obtain firsthand experience with the South American tropics, freshwater fishes, and with doing experiments in the field. Each day there will be a combination of lectures and field or laboratory exercises. We will travel to and explore fish ecology in different types of rivers at different elevations. Students will gather and analyze data about biological, physical, and environmental issues that are covered in the lectures. The habitats that we explore will be both terrestrial and freshwater rivers. Our base will be at the Instituto Humboldt in Villa de Leyva, Colombia. We will interact with Colombian students who are studying ecology and biodiversity at the Institute in order to exchange ideas about current environmental issues.

All the costs of travel, lodging, and meals will be covered by the course.

ENVS307 The Economy of Nature and Nations

On many of the key environmental problems of the 21st century, from climate change to biodiversity conservation, the perspectives of ecology and economics often seem poles apart. Ecology is typically associated with a skeptical stance toward economic growth and human intervention in the environment, while economics focuses on understanding (and often, celebrating) human activities of production, consumption, and growth. At the same time, ecology and economics share a common etymology: both words spring from the Greek *oikos*, or household. They also share much common history. This course thus explores the parallel histories of economics and ecology from the 18th century to the present, focusing on changing conceptions of the *oikos* over this period, from cameralism's vision of the household as a princely estate or kingdom, continuing through the emergence of ideas about national or imperial economic development, and culminating in the dominant 20th-century recasting of economics as being centrally concerned with problems of resource allocation. Simultaneously, the course explores connections between changes in economics and the emergence of ecological science over this period, from Enlightenment natural history and early musings on the "economy of nature," to the design of markets for carbon credits today.

ENVS308 Comparative Urban Policy

Cities are home to more than half of the world's population, generate more than 80% of world GDP, and are responsible for 75% of global CO₂ emissions. Once viewed as minor political players with parochial concerns, they are now--individually and collectively--major players on the global stage. This course will examine how cities are coping with the major policy issues governing our lives--from waste management and public safety to energy and housing policy. We will be examining how policies differ between big cities and small cities, what cities in the global north are learning from the cities in the global south, and how cities are bypassing toxic partisan politics in their nations' capitals to form global networks promoting positive change. The class will involve local field trips and participant observation to see how some of these urban issues are playing out in the city of Middletown.

ENVS309 Animate Landscapes: Spirits and Sovereignty in Indigenous Religions

Scientific understandings of the world are grounded in a distinction between animate beings and inanimate matter, but people all over the world have understood land and landscapes as alive and filled with agency. Indigenous religious practices often include relationships with mountains, rivers, glaciers, and other "other-than-human persons." Using case studies drawn from North America, Siberia, and Mongolia, and the instructor's fieldwork materials with place beings in Buryatia, we will explore the different relationships human beings have with animate and sacred landscapes and think about the ramifications these relationships have for thinking about sovereignty over and in the "natural" world. The course may involve a 4 day/3 night trip to Penikese Island off Cape Cod for an immersive learning experience with the Gull Island Institute during fall break (details tbd). The trip will be fully funded with no cost to the students (hence why it is still tbd). Although the trip is not yet confirmed, please be aware that the trip will be required, and in order to take the class you must be available to participate in this travel during fall break (10/19-10/22).

ENVS311 Global Change Biogeography

On our home planet, Earth, the current geologic epoch is characterized by rapid changes to the environment due to human behavior. Biogeography examines the spatiotemporal distribution of life on Earth, from species to ecosystems and from landscapes to continents. How is anthropogenic climate change modifying the distribution and function of organisms and ecosystems? What can we learn from the evolutionary history of the life-planet system that can help us understand the possible impacts of future climates on the biosphere? To address these questions rigorously, we will explore primary literature from a wide range of theoretical and empirical studies. The course emphasizes inquiry, contact with primary literature, discussion, statistical and spatial coding, learning to obtain data, and visualization. The beginning of the semester provides an overview of physical geography and the Earth System, with field and data experiences that build remote sensing and spatial analysis skills. The second half of the semester is focused on the exploration of relevant scientific literature based on student interests and recent papers, as well as independent research projects.

ENVS312 Economics of the Environment and Climate

This course introduces environmental economics: we begin with the theory, including cost-benefit analysis, externalities, and concepts of economic efficiency that combine standard economic consumption with environmental benefits. We then turn to practical applications of the theory to policy questions: for example, in the contexts of air and water pollution, energy use, the economics of the climate, and sustainability. These topics will be treated mathematically using formal economic models and also acknowledge that the field is heavily influenced by the natural sciences and policy constraints.

ENVS317 Colonizing Space: Exploration, Extraction, and Inhabitation

Under its "Artemis Mission," NASA plans to put "the first woman and first person of color" on the Moon to build a permanent outpost. This lunar base will allow NASA to mine the Moon, extract precious metals from asteroids, and eventually colonize Mars--hopefully before China and Russia do the same. Thanks to recent legislation, NASA will rely throughout this mission on the rocket and extractive technologies of private corporations like SpaceX, Blue Origin, Moon Express, and Deep Space Industries, whose CEOs proclaim they are saving the human race by expanding it into space. It will also rely on the backing of the newly-created sixth branch of the U.S. military: the Space Force.

This course will track the ideological and colonial history of the Apollo era before approaching the scientific, corporate, and legislative landscape of "NewSpace."

It will explore the mythological underpinnings, narrative imaginings, and theological justifications for the unfettered exploitation and inhabitation of the Earth and its cosmic neighbors. Finally, it will ask whether an ethically and ecologically sustainable space program is possible.

ENVS318 The Politics of Death: The Living, the Dead, and the State

This course will explore the intersections between the living, the dead, and the state, focusing on the ways that death and the dead body raise particular questions and problems for different kinds of political regimes. The course will examine the collisions between the state and the dead, both symbolic and material, by investigating spaces where the state and death intersect in revealing ways: cemeteries, cremation, monuments, rituals, and religious institutions and cultures. The course will also follow, borrowing anthropologist Katherine Verdery's term, "the political lives of dead bodies," the ways in which states mobilize dead bodies to reconfigure the political order.

ENVS319 Animals in Film

Some of the oldest known visual art--the paintings on the walls of Chauvet Cave--appear to depict animals in motion. Today, 36,000 years later, humans are still deeply fascinated with depictions of animals and their actions, from television documentaries to animated films to viral Internet videos. John Berger argues in his famous essay "Why Look at Animals?," "animals are always the observed," while the "fact that they can observe us has lost all significance. They are the

objects of our ever-extending knowledge." The history of film provides many examples to support Berger's claim. But can film also help us understand how animals see us, or the rest of the world? And what can film tell us about how we see and attempt to understand other animals? Through an examination of the history of animal depictions in documentary, animated, and live-action fictional films, this course will explore these questions and provide a deeper understanding of how the cinematic medium shapes our relationships with other species. Films may include *Electrocuting an Elephant*, *The Hunters*, *Babe*, *The Bear*, *White God*, *Kedi*, *Stray*, *Gunda*, and *Zootopia*.

Readings will include: John Berger, "Why Look at Animals?"; Andre Bazin, "What is Cinema?"; Anat Pick, "Vegan Cinema"; Anat Pick and Guinevere Narraway, "Screening Nature: Cinema Beyond the Human"; Gregg Mitman, "Reel Nature: America's Romance with Wildlife on Film"; Cynthia Chris, "Watching Wildlife"; Helen Hughes, "The Contemplative Response"; and Akira Mizuta Lippit, "Electric Animal: Toward A Rhetoric of Wildlife."

Examination and Assignments: A final project, film review paper, and weekly reflection papers.

Consent: No special consent required.

ENVS320 More-Than-Human-Worlds: Theories and Fictions

How do we imagine the worlds of other life forms: what they know, what is meaningful to them, their ways of communicating? Which senses must we use and what forms of translation are necessary (if impossible) to turn their languages, their thoughts, their desires into our fictions or poetry or theory? What stories have been told and what stories could or should we tell in order to inspire more responsive and responsible relations between the diverse yet enmeshed worlds of human and non-human lives? These are some of the

questions we will be asking as we move through a diverse range of writings about relations to other animals and to other worlds that are both within and beyond our own.

ENVS321 Ecological Design II: Worn Out/Broken In

This course will function as a design studio that examines the afterlife of material production. While designers have traditionally focused their attention on the creation, distribution, and consumption of new products, this course asks students to carefully consider everything that follows those acts. By scrutinizing the use, care, maintenance, repair, and eventual demise of designed objects, students come to understand the intended and unintended consequences of making. Rigorous observation and research lead to the creation of analytic drawings and models for presentation at project reviews.

Offering: **Crosslisting**

Grading: **A-F**

ENVS322 Community-Engaged Qualitative Research: The Other 1%

This course will focus on context-specific, community-based participatory research methods. The first research project undertaken in this class (2023, 2024) will be investigating agricultural justice in Connecticut, gathering the stories and experiences of the 1% of farmers in Connecticut who are BIPOC. The goal of the project is to uncover and work towards dismantling some of the barriers to farming that currently exist for those populations (including bias in USDA grants, unequal access to resources and information through ag extension, etc.). Students will learn theories and methods of community-engaged research and CBPR through scholarly study and hands-on experience gathering and analyzing qualitative and ethnographic data, primarily interviews and observations, with a focus on using techniques of photo voice and Lightfoot's methods of portraiture in social science research. Students should be prepared to engage deeply with community members. In addition, this course will include a module using movement-based inquiry with a visiting artist/scholar. Some travel within Connecticut and farm visits outside of class time will be required.

ENVS323 It's All Happening in the Cafeteria: The (In)Justice of School Food

The National School Lunch Program (NSLP) is a federally-assisted meal program operating in public and nonprofit private schools across the US. In FY 2022, the NSLP provided nearly 5 billion meals to children in preK-12th grade. Given the scale of this operation, school food serves as an important lever for food systems change and a window into food justice through examining production, procurement, distribution, and consumption. This course will look at school feeding programs to explore a variety of facets of the food system including school food policy (with state-level advocacy for universal free meals), farm-to-school, food service workers, and child and household food security. This course is intended as an advanced seminar for students with a background and interest in the related areas of food systems and social justice.

ENVS328 Human Rights and Spiritual Ecologies of Indigenous Peoples

This seminar will explore the social, legal, and metaphysical aspects of indigenous spiritual ecologies and their relation to United Nations discourses, indigenous community media production, and land rights movements. We will consider how indigenous peoples both respond to legal frameworks and press their positions into national and international human rights standards, on issues ranging from governance to cultural survival, from environmental management to language policy.

A particular emphasis will be put on the Andean and Amazonian regions of South America, the Mesoamerican highlands (Chiapas, Guatemala), the United States, and the United Nations Permanent Forum on Indigenous Issues, but students are encouraged to pursue their research projects across Abya Yala (the Americas).

This course focuses on developing critical thinking skills and places a special emphasis on writing and thoughtfully responding to the materials presented in class. Classes will not only consist of framework lectures and discussion questions, but also a combination of student panel presentations and writing in a collaborative environment. Participation in these activities is crucial to success in this course. Opportunities for student engagement in Manhattan at the April 2024 United Permanent Forum on Indigenous Issues are currently in development.

ENVS329 Fire Ecology and Management

Fire is a fundamental ecological disturbance process that regulates the structure and function of plant communities worldwide. However, increasing aridity under climate change and shifting human land use in recent centuries have altered fire behavior, imperiling many species. This course explores the ecological and social aspects of fire and sustainable fire management on planet Earth. Students examine shifting fire regimes over time, from indigenous use of fire prior to European colonization of the globe, to contemporary fire management. Class participants study the effects of global climate change on fire regimes and how such changes influence contemporary fire regimes and human livelihoods. The course format consists of a mixture of lectures, field exercises, active class discussions, student presentations, and research papers.

ENVS330 Special Topics: Ecopoetics - Experimental Poetry in the Anthropocene

How do poets speak for and from a world in flux and crisis? How do poets register and attempt to restore the degradation of the planet through language? How might altering the boundaries of conventional language use "through poetry" alter the bounds of conventional thinking and behaving, thus leading to more engaged and sustainable modes of living? This course, in part, will serve as a tour of contemporary eco-poets invested in looking at and caring for the current state of our planet through poetry. We will read poems that reflect the most critical environmental concerns of our time, and we will learn to see how these poems resist closure and are instead guided by exploration and interrogation in an attempt at reorienting our attention and intention as inheritors of this planet.

This is an advanced workshop for students committed to developing an understanding of eco-poetry's place in the more-than-literary world, as well as developing a personal eco-poetics from which to write. Students will choose an environmental topic to research and write in service of for the semester and, by the end of the semester, will have a project-centered collection of poems. There will be bi-weekly presentations on the poetry collections we read, in-class writing experiments, in-the-field experiments, and intensive workshops of participants' work. The class will culminate in an eco-book arts project and a reflective essay.

Special attention will also be given to cultivating community and the benefits of sustaining an embodied artistic practice during extreme times and how doing so may benefit the health of the whole artist.

ENVS331 Race, Colonialism, and the Nonhuman

This course responds to growing scholarly attention to the entwinement of racial slavery and settler colonialism as foundational forces in U.S. society as well as to the relationships between colonial, racial, and ecological violence. Through materials from anthropology, Black studies, Indigenous studies, environmental history, and critical animal studies, this class will explore the entanglement of human and nonhuman difference--primarily in North America--both historically and in the present. Students will become familiar with conversations about

racialization, settler colonialism, and the figures of the human/nonhuman that are increasingly prominent in anthropology as well as adjacent fields in the humanities and humanistic social sciences.

ENVS332 Botanical STS: Plants as Nature, Capital, Empire

Interest in the social and technoscientific lives of plants has been rising. Described as the Plant Turn or Critical/Transnational Plant Studies, this multidisciplinary field of study encompasses the social and environmental sciences, experimental humanities, and visual/sonic/literary arts. In this course, we will delve into contemporary works that situate the relationship between plants and botanical studies at the center of critical analysis and creative practice. What happens to notions of agency/intelligence, property/exchange, and power/knowledge when we think with and about plants? We will explore answers to these questions by engaging in three types of activities: readings and film screenings, field visits to botanical collections and agricultural stations, and online use of global plant databases.

ENVS333 Media and Environment: In/Sensible Worlds

In this seminar, we will examine the relationship between media technologies, sensory apparatuses, and changing environments. How do various kinds of media shape perceptions and interactions with our surroundings, multispecies ecologies, and planet Earth? How might we study the environment AS media? These seemingly simple questions matter because, like never before, media and environment co-produce who/what becomes sensible or insensible--and, ultimately, available or not available for life. This seminar will include readings from the fields of Critical Media and Communication Studies, Feminist/Postcolonial Science, and Technology Studies, Environmental/Digital Arts, and Humanities. Importantly, we will examine a range of creative media projects that explore ecology, environment, and earthly survival: films, games, sensors, and web projects.

ENVS337 The Origins of Bacterial Diversity

Wherever there is life, there are bacteria. Free-living bacteria are found in every environment that supports eukaryotes, and no animal or plant is known to be free of bacteria. There are most likely a billion or more species of bacteria, each living in its unique ecological niche. This course will explore the origins of bacterial biodiversity: how bacteria evolve to form new species that inhabit new ecological niches. We will focus on how the peculiarities of bacterial sex and genetics facilitate bacterial speciation. Topics will include the characteristics of bacterial sex, why barriers to genetic exchange are not necessary for speciation in bacteria, the great potential for formation of new bacterial species, the evolutionary role of genetic gifts from other species, and the use of genomics to identify ecologically distinct populations of bacteria.

ENVS347 Ethics, Ecology, and Moral Change

People commonly recognize that in facing global climate crises, we need to change our habits and practices. Yet our activities are bound up with our perceptions and with our embodied experience of value and possibility. This seminar dives into recent attempts to radically rework our ways of understanding and inhabiting the world. As the flip-side of environmental alienation is alienation from our embodiment, our sessions will incorporate movement and other challenges to sedentary classroom habits.

Given an account of thinking and action as always actively embodied and embedded in our surroundings, we will consider the hypothesis that shifts in action emerge together with shifts in perception. Radical accounts of metaphor and its uptake will help us develop accounts of perceptual change. Our readings will follow a variety of metaphorical directions, including animism and animacies, affordance and hyperobject, process, event and intra-action, native and other, inflammation and balance, dwelling and death, consumption and sustainability. How -- and with what risks and unexpected outcomes -- can these patterns of recognition help in orienting us to the challenges of environmental interdependence and volatility?

This course benefits from collaborative visits with philosopher-dancer Jill Sigman, via Wesleyan's Creative Campus Initiative. Sigman will co-shape discussion and activities during at least two of our sessions.

ENVS350 Environmental Justice and Sustainability

The US Environmental Protection Agency defines environmental justice as "the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies." Although we still have a long way to go in achieving this goal, over the last fifty years a vibrant environmental justice movement of racially-diverse activists and international coalitions has struggled to create a more equitable and sustainable world. Specifically, they have worked to expose and end the vastly disproportionate impacts of environmental degradation, climate change, air and water pollution, waste disposal, drought, wild fires, and famine on Black communities, Indigenous communities, and other communities of color around the globe. In this course, students will examine the environmental justice movement, its historical development, its strategies and tactics, and the many contemporary environmental harms it strives to eliminate. Discussions, films, readings, and an independent research project will introduce students to topics including environmental racism, environmental health, (un)natural disasters, climate refugees, agricultural and industrial pollution, international waste export, seed imperialism, food sovereignty, water contamination, reproductive justice, environmental reparations, the extinction crisis, and just forms of sustainability.

ENVS352 Energy and Modern Architecture, 1850-2020

This seminar explores the evolution of mechanical systems for heating, ventilating, and cooling in modern architecture from the mid-19th century to the present. The aim is to show how architects, engineers, fabricators, and urban governments worked to develop modern systems of environmental controls, including lighting, as means of improving both the habitability of buildings and health of their occupants. The course will trace the adaptation of technical innovations in these fields to the built environment and how those responsible for it sought to manage energy and other resources, such as funds and labor, to create optimal solutions for different building types, such as factories, theaters, assembly halls, office buildings, laboratories, art museums, libraries, and housing of various kinds, including apartment buildings for higher- and lower-income residents. An important theme will be the relationship of energy systems for individual buildings and urban infrastructure, including water systems, electrical, and other utilities. The last part of the course focuses on contemporary green, or sustainable, architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling, LEED certification, wind and geo-exchange energy, green skyscrapers, net-zero energy buildings, vertical farming, and zero-carbon cities in the United States, Europe, and Asia.

ENVS359 Space Design for Performance

In this course, students will study, construct, and deconstruct the performative space, whether in the theater or site-based, by analyzing the space as a context to be activated by the body of the performer and witnessed by an audience. Through practical assignments, the class will learn the aesthetic history of the theatrical event (considering plays, rituals, street parades, and digital performances, among others), while developing and discovering the student's own creative process (visual, kinetic, textual, etc.). Students will be guided through each step of the design process, including close reading, concept development, visual research, renderings or drawings, model making and drafting.

In this course, special emphasis is given to contemporary performance as a mode of understanding cultural processes as a relational system of engagement within our ecosystem, while looking at environmental and sustainable design, materials, and the environmental impacts of processing. Students will create and design performance spaces, while realizing scale models and drawings and integrating the notions of design and environmental principles and elements.

Students will have the opportunity to develop skills using 3D-drafting and 3D-modeling software.

This course counts towards the Theater Arts category for the THEA major.

ENVS361 Living in a Polluted World

This course treats the occurrences and origins, natural pathways, toxicologies, and histories of the major environmental contaminants. We all know about lead and its effects on humans, but how about cadmium and hexachromium, or the many unpronounceable organic contaminants, usually referred to by some acronym (e.g., DDT, POPs)? We also deal with the larger topics of CO₂/climate change, the environmental nitrogen-oxide balance, and eutrophication of coastal waters (the "dead zones"). To be effective in this course, students will need basic high school/college-level proficiency in chemistry and math as we will delve into aspects of geochemistry, geology, toxicology, environmental law, and some simple modeling. The class consists of lectures, one problem set, one Hg-in-hair class study, and a class project on lead in drinking water in the Middletown area. This is also a service-learning course, providing environmental outreach to the larger Middletown community on local pollution.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Identical With: **E&ES361**

Prereq: **None**

ENVS369 Ecological Resilience: The Good, the Bad, and the Mindful

This course will examine the concepts of resilience, fragility, and adaptive cycles in the context of ecosystem and social-ecological-system (SES) structures. These concepts have been developed to explain abrupt and often surprising changes in complex ecosystems and SES that are prone to disturbances. We will also include nonhierarchical interactions among components of systems (termed panarchy)

to compare the interactions and dependencies of ecological and human community systems. A systems approach will be applied to thinking about restoration ecology, community reconstruction, and adaptive management theory.

All of the terms--resilience, fragility, adaptation, restoration, reconstruction--are fraught with subjectivity and valuation. We will use mindfulness and meditation techniques (including breathing and yoga) to more objectively and dynamically engage in the subject matter, leaving behind prejudice or bias. Students will be expected to approach these techniques with an open mind and practice them throughout the semester. The objective is to provide students with a more comprehensive framework with which to gain deeper understanding and integration of the science with the social issues.

ENVS374 Food Security: History of an Idea

The Food and Agricultural Organization of the United Nations has held that "food security exists when all people, at all times, have physical, social and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life." This course is a history of food insecurity as a material condition and a geopolitical concept for explaining uneven access to provisions. Although we begin with the emergence of food security as a concept during World War II, we will spend the majority of the course studying other ways of organizing access to the means of subsistence. Topics discussed will include why human beings share food, the invention of agriculture, transportation infrastructure, international trade, food aid, agricultural research and development, poverty, conflict, and famine.

ENVS377 Perspectives in Arts as Culture: Ukrainian Arts and Language as Resistance

Throughout history, arts and language have been central to Ukrainian resilience. This course will introduce students to basic elements of the Ukrainian language as well as the rich tradition of Ukrainian arts--dance, theater, poetry, literature, visual arts and crafts--and the way they have survived and thrived despite 400 years of censorship and persecution. Each week, one class will focus on the basics of the Ukrainian language, its history as a vital element of the Ukrainian culture, as well as current national language policy and practice. The second class will explore the ways that arts in Ukraine foster psychosocial, physical, and political resilience in the face of crisis. Students will engage with traditional arts and crafts, learn about leading experimental artists (1700s-present) and their role in major art movements in history, hear from an array of guest artists from Ukraine, and complete a final creative project that explores the current political moment and conflict in Ukraine.

ENVS382 Physical Chemistry for the Life Sciences

The course is concerned with the basic physicochemical principles and model systems essential to understanding, explaining, and predicting the behavior of biological systems in terms of molecular forces. The course integrates fundamental concepts in thermodynamics, kinetics, and molecular spectroscopy with the structures, functions, and molecular mechanisms of biological processes. The objectives of the course are to (1) familiarize life science students at the advanced undergraduate and beginning graduate level with basic physicochemical laws, theories, and concepts important to the life sciences; (2) provide a working knowledge of mathematical methods useful in life science research; (3) develop a critical perspective on explanation of biological processes and understanding biological systems; and (4) survey the main applications of physical chemistry in the life sciences. Theory, methodology, and biophysical concepts are distributed throughout the course.

ENVS383 Anthropocene as Modern Grand Narrative

The Anthropocene refers to the new age in which humankind started to have a significant impact in altering or rupturing the Earth's systems, where the Earth is now moving out of its current geological epoch (the Holocene) and into "a less biologically diverse, less forested, much warmer, and probably wetter and stormier state." (Steffen, Crutzen, and McNeill 2007, Sciences Module, 614). This course begins by examining the debates on the definition and periodization. It then explores precursors to the concept of the Anthropocene, such as Confucian and Daoist writings on the taming of the natural environment for human needs, the catastrophism versus uniformitarianism debate, and contesting definitions of sustainability. Finally, it looks at how recent works of environmental history engaged with the concept of the Anthropocene and brought our attention to the impact of the transition from organic economy to carbon economy. Is the Anthropocene a new meta-narrative that professes to be the theory that explains all human activity? Is the Anthropocene a call to arms for environmental justice? Is the Anthropocene just a declensionist fairy tale--one that leads us down a dead end, throwing up our arms in resignation over the irreversible destruction of the natural environment?

ENVS392 Senior Colloquium: Environmental Studies

This course provides an opportunity for students to share and workshop their environmental studies senior capstone projects. Each student will present a live or videorecorded report to the class once during each semester. Before their presentation, the student will make available readings and questions they have regarding the most challenging issues about their research project. Classmates will prepare for each student's presentation by reviewing the materials made available before class. During class, students will discuss and critique each project with the goal of 1) improving the depth and content of senior capstone research projects and 2) sharing project content and goals among the wide range of student interests across the environmental studies major.

ENVS403 Senior Essay: Environmental Studies

All ENVS majors are required to complete a senior capstone project in a form that is approved by their primary major with a topic that is approved by the

student's ENVS advisor. In the event that the student cannot find a mentor for their capstone project, the student may complete a special written research project to meet the research requirement. The topic must be approved by the ENVS advisor and progress must be reported to both the ENVS advisor and the Program Director during the fall semester. The written project is a senior essay, using primary sources and must concern an environmental topic from the perspective of the student's primary major. The senior project is due at the senior thesis deadline. It will be the responsibility of the ENVS Program Director to find a suitable reader to evaluate the written work.

FEMINIST, GENDER, AND SEXUALITY STUDIES (FGSS)

FGSS113F Reproductive Politics (FYS)

This course explores the history and current status of reproductive politics in the United States. By prioritizing issues of difference, including race, gender, sexuality, disability, and class, the course will consider how scientific and bioethical concerns intersect with matters of cultural ideology and social control. Issues covered will include: the history and legacy of the birth control movement; the ideological construction of "infancy"; changing attitudes towards pregnancy and childbirth; gendered and racialized conceptions of parenthood; abortion rights; the fetal personhood debates; the regulation of pregnancy within incarcerated and institutionalized settings; genetic engineering; reproductive justice; and so on.

FGSS115F Reporting from the Inside: Journalism, Activism, and Intimacy (FYS)

What is the role of the reporter in today's divided and divisive America? While one approach has been to dip into the lives of others, get the story, and get out, this class will focus on pursuing the deeply human stories that matter most to you, guided by your own experience so that you can intimately connect with your subjects, your world, and yourself. From Black Lives Matter to the #MeToo movement to LGBTQ and Trans Rights, we are seeing writers and activists reporting events in real time, as they happen to and around them, celebrating the journalist as participant. This is hardly a new phenomenon. Many major historical moments--the Great Depression, the fight for Civil Rights and Women's Rights, the AIDS crisis--have had reporters on the inside, covering their own communities. In this First Year Seminar, students will immerse themselves in this kind of "intimate reporting" and its historical contexts, and also create a newsroom of their own design: learning the fundamentals of journalism through story idea meetings, research, and interview strategies; editing and fact-checking techniques; social media engagement; and pitching their work. Students will leave the class with a portfolio of writing that explores, from their own points of view, issues of gender, class, race, and sexuality.

FGSS117F Social Norms / Social Power: Queer Readings of "Difference" in America (FYS)

This American Studies FYS is an interdisciplinary exploration of the privileges and penalties associated with "the normal" in the United States. We'll be centrally concerned with the ways bodily difference and social identity interarticulate with "normalness," locating individuals within hierarchical power structures. What is "normativity," if not a statistical norm? How are regimes of normativity produced, reproduced, and challenged?

Our focus is on queer studies, which we will approach through an intersectional lens, paying careful attention to the ways race, ethnicity, indigeneity, class, disability, gender, and sexuality intersect in social terrains of power. We will unpack and explore key concepts in American studies, including settler colonialism, compulsory ablebodiedness, heteronormativity, biopolitics, neoliberalism, and ideology, drawing on a range of genres and disciplines, including memoir, ethnography, film, and theory in disability studies, queer theory, critical race studies, Marxist feminism, Native American studies, and trans studies. Along the way, we will encounter problematics ranging from disability and the "normal" to the American Dream, the "wedding-industrial complex," sexual "deviance" and desire, racialized state violence, the privatization of the public space, and the politics of queer/LGBT activism.

As a First Year Seminar, this course is writing-intensive and is structured to give you ample practice in core writing, reading, and presentation skills needed at Wesleyan. This course is part of the Queer Studies and the Disability Studies Course Cluster, and it is cross-listed in FGSS.

FGSS121F Are You a Feminist? (FYS)

Taking our cue from Beyoncé and the debates her music has produced, this First Year Seminar investigates the meaning of feminism by considering how writers, artists, activists, academics, and public intellectuals discuss the topic. Students' curiosity about feminism - as topic, politics, identity, and practice - will guide class meetings where we will discuss readings by prominent feminist writers, scholars, and critics. Students will leave the course with a clear sense of themselves as writers and thinkers, as well as an understanding of the ways in which gender and sexuality intersect with race, class, and other social identities and of the multiplicities of feminisms in our contemporary moment.

FGSS123 Love, Sex, and Marriage in Renaissance Europe

This writing-intensive seminar will compare literary and artistic depictions of love, sex, and marriage during the Renaissance by authors and artists from England, Spain, France, Flanders, Germany, and Italy. We will read both male and female writers in genres ranging from poetry, the short story, and theater to the essay, the travel narrative, and the sermon. We will also examine other arts such as painting, sculpture, and the decorative arts (e.g., wedding chests). Questions we will explore include, but are not limited to, How were love and marriage related during the Renaissance? What role did sex, gender, and violence play in relationships between couples and within society? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And what about same-sex unions? Other topics will include virginity and celibacy, erotic literature, family and class structures, and divorce.

FGSS123F Love, Sex, and Marriage in Renaissance Europe (FYS)

This seminar compares literary depictions of love, sex, and marriage from the 14th to the 17th centuries by writers from England, France, Germany, Italy, the Low Countries, Spain, and Sweden. (Students will be able to study writings from other parts of Europe over the course of the semester should they so choose.) We will read texts composed by women and men in genres including poetry, theater, the short story, the essay, the maxim, the travel narrative, and the sermon. Though the seminar is focused on literature, we will also consider painting, engravings, sculpture, and the decorative arts (e.g., wedding chests). We will explore questions such as: How were love and marriage related during the Renaissance? What roles did sex, gender, race, class, and violence play in relationships between couples and within society, and how were they represented in literature and art? How do gender and genre affect the ways in which love, sex, and marriage are depicted? How did cultural differences influence writers' and artists' interpretations of love, sex, and marriage? And

what about homosexual love, same-sex unions, and depictions of dissident sexualities and genders? Finally, how do contemporary (21st-century) writers reimagine Renaissance representations of love, sex, and marriage, and why do Renaissance texts and images matter today? Other topics will include virginity and celibacy, friendship, erotic literature and pornography, religion, family and class structures, and divorce. This seminar engages students with university-level research by navigating search engines and databases (beyond a Google search!), honing their analytical skills, and polishing their academic prose. Students will also have the opportunity to write creatively should they so choose.

FGSS130F Thinking Animals: An Introduction to Animal Studies (FYS)

In 1789, British philosopher Jeremy Bentham wrote: "The question is not, 'Can they reason?' nor, 'Can they talk?' but, 'Can they suffer?'" This question, which challenged the social and legal norms of the 18th century that denied sentience to non-human animals, has influenced disciplines across the social sciences and humanities to focus on what has more recently become known as, "the question of the animal." Bentham's question has sparked centuries of debate about the sentience of non-human animals and our relationship to them. In this course, we will examine a range of theories and representations of "the animal" to understand the desire to tame or objectify animals (through zoos, factory farming, and taxidermy), as well as why they are often conceived of as guardians of inaccessible experience and knowledge, and how the human and its various gendered, classed, and racial manifestations have been conceived of through and against notions of animality. Readings may include Poe, Kafka, Derrida, Bataille, Haraway, and Coetzee (among others).

FGSS164F Hurting (FYS)

This course examines representations of harm (both received and enacted) at the intersections of race, gender, class, and sexuality. Through engagement with both artistic and social movements, we will explore questions about the ethics of representing pain. How do artists navigate depicting pain without simply reproducing violence? What constitutes an effective apology? (How) can complexly narrating the harm one has inflicted on others offer a reckoning rather than an excuse? How might we consider the relationship between identity and formal artistic choices, and how might such considerations open onto a more rigorous engagement of the social spaces texts make? How might we imagine and enact ecologies of care in the midst of ongoing histories of harm? We will consider these questions across media and genre and amidst structured self-reflection.

FGSS175F Staging America: Modern American Drama (FYS)

Can modern American drama—as cultural analysis—teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

FGSS187 From Shirtwaists to Hoodies: Fashion and Public Life

Pictured prevalently and worn close to the body, fashion is a powerful and personal means of expression and documenting public life. This course presents a loose chronology of fashion, from the twentieth century to today, through a selection of themes that will allow students to consider it in terms of its social, political, economic and aesthetic impact. Through the interplay of image, clothing, and text, each week, we will explore the fashion industry from various perspectives, examining the key role makers and consumers play in constructing fashion both historically and today. Specifically, we will question the ways we deploy dress and style to document public life, from the personal to the political, and how it informs our material and visual relationships with the world. In addition to lectures and readings discussion, class time will be allotted to students' fashion documentation projects. Fashion theory will also be introduced to ground our explorations of fashion, variously as a cultural object, embodied practice, site of technological innovation, and tool for shaping one's identity.

FGSS188 Introduction to History: Revolutionary Women

"I do not think the war would have been won without the women.... Now women have to liberate themselves." The fighter Maudy Muzenda's reflection on the role of women in Zimbabwe's liberation war speaks to a broader pattern in global history. Women have been central to the radical transformation of societies in Africa, Asia, Europe, and the Americas from the early modern era to the present. In this course we will examine revolutionary women who took up arms and others who protested for improved working conditions, voting rights, sexual liberty, and human rights. Our cases will include the history of political revolutions in France, Cuba, Russia, and China, as well as in Zimbabwe. We will also explore the critical role of women in the global Industrial Revolution, the Suffrage Movement, the rise of international feminisms, and the everyday struggles of women in multiple sexual revolutions.

FGSS200 Sex/Gender in Critical Perspective (FGSS Gateway)

Feminist, gender and sexuality studies is an exciting interdisciplinary field that addresses gender, sex, and sexuality as well as related issues of race, class, nation, and citizenship across multiple disciplines, epistemologies, methods, and vantage points. At its most fundamental, the field addresses how persons are identified and identify themselves as similar to and different from each other and the relation of these categories of difference to power relations. The study of feminist and queer thought on sex/gender and sexuality offers a critical lens through which to examine social structures and social problems, inequality, difference and diversity, identity and the self, belonging and community, and the possibility of social change, among other topics. This course will offer a broad introduction to the field and provide a foundation for further study of specific areas of interest. The primary goals are to (1) explore the multiple ways feminist and queer scholars have understood sex, gender, and sexuality; (2) explore different methods and styles of feminist thought and expression; (3) situate these in time and place, with attention to historical and cultural contexts; and (4) explore the intersections of sex, gender, and sexuality with race, nation, and other categories of difference. The course will cover aspects of first-wave feminism (e.g., suffrage and the abolitionist movement); second-wave feminism and critical theories of sex/gender; and contemporary feminism, including queer theory, intersectionality and race, and transnational and postcolonial feminism.

FGSS201 Queer Theories: Junior Colloquium

This junior colloquium will give you a solid foundation in queer studies.

Although "queer" is a contested term, it describes--at least potentially--sexualities and genders that fall outside normative constellations. This theory-based, reading-intensive seminar considers multiple genealogies of queer theory, from foundational texts and authors in queer theory, queer of color critique, trans theory, and crip theory, to lesser-known but critically important interventions. Structured as a series of conversations, we explore multiple locations of theory and notions of "queer." Rather than understanding queer studies as a singular school of thought, we will continuously problematize queer studies as a mode of analysis, asking: What kinds of bodies or desires does queer describe? What are the politics of queer? What are the promises of queer theory, and what are its failures? What is the future of queer?

This course is excellent preparation for a queer studies concentration in American studies. Students should expect to end the semester confident of their ability to read and draw on a range of queer theories.

FGSS202 Feminist and Queer Methods Across the Disciplines

This course aims to better equip students to conduct rigorous and politically-engaged interdisciplinary research by exposing them to (and inviting them to reflect on) the range of methodological approaches that feminist and queer thinkers employ across the humanities and social sciences. Engaging feminist and queer uses of such methods as oral history, ethnography, visual-cultural analysis, literary criticism, and archival research, we will explore how feminist and queer thinkers intervene in dominant knowledge production. Further, we will consider how, in our own research, feminist and queer commitments might necessarily reshape how and what kinds of questions we ask, how we select and marshal evidence, and how we engage our subjects and objects of analysis. Students will be expected to practice using methods that are unfamiliar to them and to reflect on their relationships to power, method, and disciplinarity as they develop their own research programs.

FGSS203 Sex and Sexuality in Islam

Islamic societies have long traditions of commentary about the body and sexuality. Medieval Islamic texts are replete with references to homosexual and erotic love that challenge the assumption, common today, that Islamic society is restrictive by its very nature. In this course, we will explore how the body and connected understandings of sex and sexuality have been conceptualized by Muslims, both historically and in the contemporary world. Instead of essentializing the Islamic "viewpoint" on the body, we will survey the variety of opinions and ideas about the body that Muslims have held. We will draw on the Quran, early Abbasid erotic poetry and literature, Islamic medical manuals, philosophical works, belles-lettres, and contemporary sources, in order to trace how different understandings of the body and sexuality have unfolded over time. In particular, we will focus on the notion of complementarity between the sexes, the role of marriage and procreation, the effects of medical theories on understandings of bodily health and illness, the ethical and legal frameworks governing sexual conduct, and the references to homoeroticism, pederasty, and female same-sex desire found in Arabic and Persian love poetry and literature. While the course primarily focuses on the premodern period, it will also delve into contemporary Islamic discourses.

FGSS204 Invoking the Earth Mother: Ecofeminisms and Indigenous Spiritual Ecologies

Over the past 50 years, a radical reshaping of our relationship to the organic world has infused national economic strategies, United Nations discourses, indigenous land rights movements, environmental legal frameworks, and a subtle mainstreaming of neopagan ritual practices and goddess worship in the Americas. This seminar will explore the social, legal and metaphysical aspects of myriad eco-feminist and indigenous spiritual ecologies. We will explore these worldviews and ritual practices from animist, pantheist, monist, and panentheist perspectives, with a particular focus on gender constructs, implicit and explicit, within these movements. What is the relationship between the 1970s environmental movement and the rise of Goddess worship in the U.S.? Between the United Nations and Amazonian ayahuasca practitioners? Legally, Should Trees Have Standing (Stone 1972)? Politically, Is the Goddess a Feminist (Hiltebeitel & Erndl 2000)? Is Mother Earth, ultimately, empowering for LGBTQ2S folks? Engaging emerging podcasts, shamanic documentaries, social manifestos, and provocative religious studies texts, students will wrestle with a profound set of humanistic questions that may prove crucial to our survival as a species, namely: under what circumstances do we successfully invoke the gods to self-regulate the ecologically destructive practices of our late-stage capitalism? Who invokes who, how and when, shared where? To whom do we tend to listen on these matters, and why are they quaked to speak?

FGSS206 Feminist Technoscience: Making Bodies, Bits, and Bombs

This course focuses on feminist transnational approaches to the study of science and technology. It introduces students to a range of critical and experimental figurations, post/decolonial theories and methods, and interdisciplinary reading

and writing practices proposed by leading and emerging scholars who shape today's vibrant field of feminist STS. While the various approaches share strong commitments to justice, difference, and collective agency, they don't always mean the same thing. Students will learn to unpack affinities, tensions, and radical possibilities for living with greater care and less violence in a more-than-human, more-than-Western world. The course has three parts. Part I grounds students in canonical texts that have opened up multiple pathways for critically examining patriarchy, war, and technoscientific progress. These texts challenge binaries and hierarchies of nature-culture, organism-machine, modern-traditional, center-periphery and so on. Part II focuses on analyses of colonialism and racial capitalism, and the material-discursive apparatuses deployed to reconfigure how bodies, bits, and bombs come to matter. Part III looks at new works that refuse the end of history and propose a pluriverse of bold alternatives.

FGSS216 Global America: Gender, Empire & Internationalism Since 1890

This course explores the cultural history of America's relationship to the world across the long 20th century with particular attention to the significance of gender and sexuality. We will locate U.S. culture and politics within an international dynamic, exposing the interrelatedness of domestic and foreign affairs. While exploring specific geopolitical events like the Spanish-American War, World War I and II, and the Global Cold War, this course emphasizes the political importance of culture and ideology rather than offering a formal overview of U.S. foreign policy. How have Americans across the 20th century drawn from ideas about gender to understand their country's relationship to the wider world? In what ways have gendered ideologies and gendered approaches to politics shaped America's performance on the world's stage? How have geopolitical events impacted the construction of race and gender on the home

front? In the most general sense, this course is designed to encourage students to understand American cultural and gender history as the product of America's engagement with the world. In so doing, we will explore the rise of U.S. global power as an enterprise deeply related to conceptions of race, sexuality, and gender. While reading key American studies texts in the history of the United States and the World, we will also examine films, political speeches, visual culture, music, and popular culture.

FGSS217 Key Issues in Black Feminism (FGSS Gateway)

This course surveys key issues in the historical development of black feminist thoughts and practices through readings of canonical works especially from the 1980s and '90s that contribute to this extensive body of knowledge. Our aim is to engage black feminist and womanist theorists, activists and artists from the diaspora who are exploring intersections of race, class, sexuality, religion, and other indices of identity affecting their daily lives. To that end, we will take an interdisciplinary approach to unpacking the historical tensions and politics and poetics in theory/practice, representation/self-making and expression/performance. We will also examine more recent turns in #BlackLivesMatter, #SayHerName and #BlackGirlMagic and conclude with Post-Zora Interventions--feminist interrogations on the borders anthropology, art, and activism.

FGSS218 Introduction to Queer Studies

This course will examine major ideas in the field of queer studies. Relying upon theoretical, historical, and cultural studies texts, we will consider the representation and constructions of sexuality-based identities as they have been formed within the contemporary United States. We will explore the idea of sexuality as a category of social identity, probing the identities of lesbian, gay, bisexual, and transgender to try to understand what they really mean in various cultural, social, legal, and political milieus. In doing so, we will ask, What does it mean to study queerness? What do we mean by "queer studies"? How do institutions--religious, legal, and scientific--shape our understandings of queer identities? In what ways do sexuality and gender interact, and how does this interaction inform the meanings of each of these identity categories? How do other social categories of identification--race, ethnicity, and class--affect the ways in which we understand expressions of queerness? Moreover, what does studying queerness tell us about the workings of contemporary political, cultural, and social life?

FGSS219 "The History that Hurts": Reading Saidiya Hartman

This course will introduce students to the major works of the black literary theorist and cultural historian Saidiya Valarie Hartman (b. June 25, 1961), who was named a 2019 MacArthur "Genius" Fellow in Literary History and Criticism and American History. After graduating from Wesleyan in 1984, Hartman earned her Ph.D. in American Studies from Yale in 1992; she is currently a professor in the Department of English and Comparative Literature at Columbia University. Students enrolled in this course will read and write about Hartman's trilogy of scholarly monographs: SCENES OF SUBJECTION: TERROR, SLAVERY, AND SELF-

MAKING IN NINETEENTH-CENTURY AMERICA (Oxford University Press, 1997); LOSE YOUR MOTHER: A JOURNEY ALONG THE ATLANTIC SLAVE ROUTE (Farrar, Straus and Giroux, 2007); and WAYWARD LIVES, BEAUTIFUL EXPERIMENTS: INTIMATE HISTORIES OF RIOTOUS BLACK GIRLS, TROUBLESOME WOMEN, AND QUEER RADICALS (W. W. Norton, 2019). Finally, if her new book project is published before the syllabus is finalized, then students enrolled in this course will also read and write about Hartman's fourth scholarly monograph (tentatively titled "N Folio: An Essay on Narrative and the Archive").

FGSS220 Literature and Black Feminism: The Dramas of Black Capital

This class explores Black women's fiction as a mode of critique and intervention into Black Americans' complicated relationships with social and economic capital in the wake of US chattel slavery. How do Black people negotiate the transition from being to owning property? How does the persistence of capital, even in the absence of the system of racial slavery that ushered it into being, continue to shape Black institutional access and Black intramural relations? How are white, Western regimes of value--constructed as they are through the production of racial-sexual difference in dominant habits of thought and representation--contested and, at times, recapitulated in Black social life? How does Black women's literature take up these questions, and what about Black women's literature uniquely equips it to meet this challenge? Ultimately, the course takes seriously Black women's literature as Black feminist thought, exploring how it indicts and imagines beyond the violence of modern racial capitalism.

FGSS222 Identity and Jewish Literature: Sexuality, Race, and Gender

What, if anything, is Jewish literature? What, if anything, does it tell us about the history of the people called Jews? This course explores those questions through a variety of sources from Jewish writers, including Sholem Aleichem, Cynthia Ozick, Franz Kafka, I.B. Singer, and others (flexible based on student interest). Through these readings, we will explore how Jewish literature relates to broader questions of sexuality, race, gender, colonialism, etc., as well as specific questions of Jewish history, like the Holocaust and the state of Israel. All works will be read in translation and no previous knowledge of Jewish studies or Judaism is required.

FGSS223 Sex, Money, and Power: Anthropology of Intimacy and Exchange

Sex and money--intimacy and economy--are often imagined to occupy distinct and separate spheres. Sex and intimacy are located in the private or domestic realm, in spaces of leisure, feelings, care, and personal connections. Money and economy, on the other hand, are purportedly public, located in the market and tied to labor, rationality, and impersonal (non)-relations. This course brings these spheres together, focusing on the links, exchanges, and circuits between the intimate and the economic in diverse cultural contexts.

Drawing on anthropological, feminist, Marxist, queer, and critical race theory, we will build

working definitions of key concepts: intimacy, division of labor, domestic labor, sexual labor, exchange, commodity, value, neoliberalism, consumer culture, and more. We'll test, apply, critique, and expand these concepts as we work through ethnographic case studies on contemporary sex work and tourism, marketing and pornography, reproduction and domestic labor, marriage, class and sexual lifestyle, labor and care work, and sex stores and commodities. We will connect economic, cultural, and political formations with race, ethnicity, nation, sexuality, class, and gender, scaling up to consider global and transnational exchanges and down to consider how these circuits impact families and communities. Throughout, we will ask: Whose labor is valued and recognized, and why? How do bodies accrue value, and in what kinds of marketplaces? When are intimacies--sexual and social--commoditized? How is race, gender, and sexuality central to these exchanges? How do new transnational circuits constrain and/or empower people? And finally, who benefits from these relations, and who does not?

FGSS224 Mystics and Militants: Medieval Women Writers

In this class we will read a wide range of works written by European women between ca. 1100--1400, including courtly, devotional, and polemical texts. The course will explore ideologies of gender in the Middle Ages and examine the ways in which our authors confronted the antifeminist discourses of their eras with learning and imagination. We will consider such topics as constructions of sexuality and the body, "courtly love," mystical religious experience, heresies, humanism, and utopian realms. In short, we will read works by women who created their own forms of authority and in doing so, both influenced and defied the authorities of their time.

FGSS225 Place, Belonging, and Sound in the 20th c. Latina/o/x, Black, & Caribbean Imaginations--NYC

Throughout the latter 20th century, various aesthetic renderings of New York City have positioned it as a site of voyeuristic allure and racialized excess and pleasure--simultaneously posh, unfriendly, tourist-trapped, "seedy," "gritty," and segregated. Through select literary, cinematic, and performance optics of Latina/o/x, black, and Caribbean writers and artists, especially queer and bisexual writers and artists, this course will focus on memory, representation, form, sound, and the imagination in the layered and shifting site of mid-20th- to 21st-century New York City--and even more specifically, of Harlem, the Bronx, the Lower East Side, Brooklyn, and Elizabeth, N.J. Fictionalizations, poetizations, and performances of first-person memories and reimaginings of overheard stories from older generations about life in the U.S. South and life in the Caribbean will feature in the works that we will study in this course.

FGSS226 Performance Curation as Relational Praxis

When we hear the word "curator" we might think of the iconic fictional character of Bette Porter--someone who works in a museum or gallery with a vision for how paintings, sculptures, and wall texts are put together for a show. In this class we will expand on this idea of the curator to explore what happens when we add performance to the task of curation. Or, put differently, we will ask what happens when we remove performance from the more theatrical tradition to add it into the gallery and museum space. Thinking between performance studies, visual art, and museum studies, this course explores the role of the performance curator. Connecting performance curation to community engagement, social practice, and transformative justice, we will explore the ways in which performance might address questions of racial inequality, gender variance, class access, and dis/ability. We will ask: How does performance live in art institutions? How do you compensate a performer for a fleeting piece of work? How does performance help us reimagine the space of the art institution itself? Does performance curation make possible new genres of performance? Can, and how, might we apply its practices back to more traditional theater contexts at the university, in the art world, and beyond?

In this class students will explore theories of performance curation as a practice of not only selecting and choosing, but of building relationships. We will look at museum shows, arts organizations, and performance scholars to eventually build individual proposals for our own performance events. Artists and scholars to be discussed include Nivald Acosta, Mariana Valencia, Justin Allen, Morgan Bassichis, Jamie Shearn Coan, Ralph Lemon, Thomas Lax, Adrienne Edwards, Tourmaline, Carolyn Lazard, The Poetry Project, Center for Experimental Lectures, Wendy's Subway, Adult Contemporary, and more.

FGSS227 Queen Mothers, Unruly Women: Histories of Gender and Sexuality in Africa

The 1929 Women's War is a touchstone for women's history in Africa. By 'sitting on a man' women in Nigeria shocked colonial authorities and demanded economic rights and a public voice. These unruly women danced in protest and rioted (sometimes nude), but their actions were not uncommon sights for their African audience. African women across the continent had long wielded power as queen mothers, prophets, and traders. Others challenged the constraints of ordinary domestic life through their labor, dress, or spirit possession.

Gender and contested authority are central to everyday life and politics in Africa. In this course, we will study the history of political and domestic authority on the continent with special consideration for the ways in which gender, sexuality, and power intersect. These histories are diverse both in time and place. For this reason, this course will not present a single narrative of gender in African history. However, students who satisfactorily complete the course will be able to write knowledgeably about the major debates surrounding gender and sexuality in Africa. Major themes include: spiritual authority; domestic and sexual life; the division of labor; and the impact of colonial rule and post-colonial politics. We will examine how women (and also men) have grappled with these intricate social and political relations from the pre-colonial period into the post-colonial era.

FGSS228 Performing Identities (FGSS Gateway)

Despite the ways that "difference" matters in our social world, identity categories--particularly race, class, gender, and sexuality--are largely constructed. This course uses "performance" as a lens through which to better understand the constructedness of identity. Further, it explores how minority artists and theorists mobilize art and "performance" in their efforts to scrutinize these identity categories' coherence and authority. We will explore the following questions: To what extent can "identity" be understood as a biological truth? How do historical and political needs shape how categories of difference appear? What political potential might art and performance generate, especially for helping us to imagine beyond our current identificatory regimes? Ultimately, this course suggests that the "performativity" of identity might suggest possibilities for undoing its real oppressive implications.

FGSS229 Trailblazing French Women in Science, Food, and the Arts

One could argue that all fields are mined for women, but certain domains are more closed than others. Such is the case for "haute" cuisine, haute couture, cinema, and the political sphere among others. This course seeks to examine the destiny of a group of women who established themselves in spaces traditionally reserved for men. Besides retracing and discussing their work, we will examine the discrimination they suffered and their strategies to overcome the norms. Finally, we will study the representations which were or are made of them through texts, articles, and films. These women include known figures such as Simone de Beauvoir and Marie Curie, but also others like the artist Annette Messager, the cook Hélène Darroze, the designer Coco Chanel, and more.

FGSS229Z Thinking with Octavia Butler's "Wild Seed"

Blend: Monday and Thursday class time synchronous; additional class hours asynchronous.

Black speculative fiction writer Octavia Butler's novel "Wild Seed" (1980) begins on the African continent in the 17th century amid the rise of transatlantic slavery and concludes on a plantation in Louisiana on the eve of the 19th-century American Civil War. "Wild Seed" was the last published book in Butler's Patternist series, but it relates the earliest segment of that epic story, which follows a shape-shifter named Anyanwu and a body-jumper named Doro across geographies, centuries, classes, corporealities, genders, races, and even, in Anyanwu's case, across species. To quote one student: "It's the weirdest novel I've ever read." This seminar takes up the myriad and interwoven provocations Butler offers in "Wild Seed" by reading her novel alongside a wide range of scholarly literature in the fields of African and African diaspora studies, Indigenous studies, gender & sexuality studies, animal studies, history, disability studies, religious studies, and cultural studies, as well as visual arts. Rather than "apply" the syllabus texts directly to Butler's novel, we will attend to how

her novel not only reflects--indeed, anticipates--such scholarly and artistic production, but also produces its own aesthetics and epistemologies.

The seminar unfolds part-synchronously (via Zoom) and part-asynchronously (via writing assignments, screenings, and research project check-ins). Twice-weekly virtual meetings will be centered on presentations of research projects that students will develop over the course of the month, engaging a particular theme or question that they will identify in Butler's work. As such, the syllabus texts are subject to change. Students will be expected to read "Wild Seed" in its entirety in advance of the first class and to have begun thinking about topics they might explore for their presentation and research project (the former being preparation for the latter). The seminar's asynchronous component will consist primarily of weekly writing exercises asking students to reflect on how the assigned texts converse with Butler's novel and vice versa and to comment on one another's analyses. Shared annotatable pdfs will be used to generate conversations about the readings outside of class and to identify questions and topics for discussion. The professor will consider proposals for a creative final project, but it, too, will require substantive research.

FGSS230 Gender and Genre in Korean Cinema

This course welcomes students who are interested in the world of Korean cinema, where we will dive deep into the dynamic intersections of gender and genre from the late 1950s to the present. Students will sharpen their analytical skills and gain a profound understanding of film while critically examining a selection of Korean films. Through engaging guided analysis and discussions, we will explore various perspectives, including auteurism, national cinema, cultural studies, and global genres, to enrich our cinematic experience. Along with these perspectives, we will challenge conventional perceptions of femininity and masculinity while questioning how the Korean nation-state and its ever-evolving sociopolitical landscape have impacted gender and sexuality in cinematic narratives. All films will have English subtitles, all readings will be available in English; no prior knowledge of Korean film, history, or culture required to embark on this exciting cinematic journey.

FGSS233 Global Queer Studies

This course explores global experiences of LGBT/Q life, bringing an explicitly transnational lens to a field too often dominated by U.S.-centered perspectives.

Drawing on queer ethnography and film, we will explore the contours of queer and trans life around the globe, from the lives of gay men in Indonesia to Muslim yan daudu in Nigeria, gay tourism in post-Revolutionary Cuba, queer mati work among working-class Afro-Surinamese women, lesbian activism in India, LGBT asylum claims in Canada, the queer art of Carnival in Trinidad and Tobago, the everyday lives of lalas (lesbians) in China, and the transnational lives of Filipino gay men in New York. Our aim is to challenge and expand Western categories and concepts of sexuality, gender, identity, and desire (both hetero- and homo-normative) and to center the ways sexual/gendered identities,

cultures, and politics are shaped by colonialism, imperialism, racialization, migration, transnational media, and global capitalism.

FGSS233Z Writing the Body

How does the body write? Do we trace our words with fingers and toes, with a pen and paper, with flour or glitter or dust or the soles of our feet? Can the written word remind us that we are more than our eyes or our heads? Writing the body is an attempt to link the worlds of the written and the somatic through the act of writing. This class is both a generative creative writing course and a theoretical exploration of the ways in which the body has been rendered in literature, poetry, and philosophy. Putting queer studies, disability studies, Black studies, and Indigenous studies into conversation with prose, plays, and poetry, students will explore different strategies of embodied writing. Looking to the work of Maggie Nelson, Jean-Luc Nancy, Eileen Myles, Christina Sharpe, Aisha Sabatini Sloan, Hortense Spillers, Eve Tuck, Billy Ray Belcourt, Torrey Peters, Wendy Ortiz, Lidia Yuknavitch, Jordy Rosenberg, Gabrielle Civil, Ursula Le Guin, adrienne maree brown, and Frank O'Hara students will produce a written work that moves promiscuously between theory and creative nonfiction.

FGSS234 Queer Russia

Russia is accustomed to playing the role of the "evil empire." The current ongoing war in Ukraine has resurrected the Cold War-era narratives about Russia as a dark, aggressive, and ruthless military power. The notorious legislation of recent years--whose functions range from barring Americans from adopting Russian orphans to criminalizing the so-called "gay propaganda"--have further solidified Russia's reputation as a country with little regard for human rights. Yet generations of Russian poets, artists, and writers have transformed the country's systematic oppression and violence into spectacular forms of protest and self-expression. This course focuses on gender and sexuality in exploring an alternative cultural history of Russia, which highlights its queer legacy from the nineteenth century to the present. We will examine poetry, fiction, art, memoirs, plays, films, performances, and discursive texts that showcase uniquely Russian conceptions of marriage, gender relations, gender expression, and sexual identity. Attention will be paid to the ways in which Russian and Western narratives of queerness align and diverge. In English. No knowledge of Russian is required or expected.

FGSS235 Writing on and as Performance

This course focuses on developing descriptive critical and creative writing skills in relation to both witnessing and staging live performance. Through close readings of texts by authors including José Esteban Muñoz, Jennifer Doyle, Eileen Myles, Lydia Davis, Toni Morrison, Lidia Yuknavitch, Oliver Baez Bendorf, Glenn Ligon, Eve Sedgwick, Fred Moten, and Billy Ray Belcourt, this course will challenge students to craft ideas and arguments by enhancing critical and creative writing skills. We will experiment with style and form from academic arguments, to performance lectures, artist interviews, and free-form creative prose essays.

Students will complete in-class writing assignments and exercises in response to written, recorded, and live performances by a range of contemporary artists. Students will also be asked to complete hybrid creative writing assignments in response to prompts that imagine writing as always in conversation with performance. More specifically, students will write pieces about embodiment, sound, and the visual. This class is particularly interested in ways in which gender, race, and sexuality are shaped by language, and how language as a performative tool can be a site for "insurrection" (Moten) and "listening in detail" (Vazquez).

This course encourages students to experiment with their writing practices. Over the course of the semester students will be asked to write four separate creative/critical pieces, all of which will be workshopped in the space of the classroom.

FGSS236 Activism and Theories of Change

In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education. What strategic, ethical, or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an activist for women's rights, queer rights, and economic justice. In addition, the course will feature a guest teacher for a segment of the semester: Beverly Tillery, Executive Director of the Anti-Violence project in NYC will look at the ways BIPOC and Queer BIPOC communities are reshaping the social justice landscape by addressing the safety of trans women, challenging the gender binary and reforming and ending the carceral legal system. We will allow time to discuss events that may occur in real time over the course of the semester. This course will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

FGSS239 Animal Theories/Human Fictions

The question of "the animal" has become a recent focus of theory, although depictions of nonhuman animals can be traced to the very origins of representation. This course will move among literature, philosophy, art, and theory in an effort to trace the changing conceptions of human-animal difference and human-animal relations from 18th-century fictions of savage men and wild children to current theories of the posthuman. We will consider the ways that the representation of "the animal" intersects with theories of gender and race as it also contests the grounds of representation itself. Authors may include Rousseau, Poe, Sewall, Mann, Colette, Coetzee, Heidegger, Agamben, Derrida, and Harway.

FGSS242 Intimate Histories: Black Women's Sexuality

Black feminist theory teaches us that African American women have historically confronted racism and sexism in addition to other forms of oppression. How has this experience shaped the sexual lives of everyday black women and famous figures? This course places the sexual at the center of African American women's history. It will examine how regimes of violence have intervened in black women's sexual freedom, from intimate bonds to reproduction to same-sex desire. It will cover black women's resistance to these regimes; to their sexual agency in diverse spaces from the plantation to the porn industry. This course will also tackle the enduring impact of the Jezebel stereotype in the history of black women's sexuality. Using primary and secondary sources, this class will fundamentally investigate the significance of African American women's sexual history in the histories of American sexual, racial, gender, and class politics.

FGSS243 Television: The Domestic Medium

Of all the mass media, television is the most intimately associated with domestic and familial life. Its installation in American homes over the postwar decade coincided with a revival of family life that encouraged an emphasis on private over public leisure. Most television is still watched at home, where viewing practices are interwoven with domestic routines and provide a site for negotiating family and gender relations. Television production is shaped at several levels by the images broadcasters and advertisers have of viewers' domestic lives: Broadcast schedules reflect socially conditioned assumptions about the gendered division of family roles; a common televisual mode of address uses a conversational style in which performers present themselves to viewers as friends or members of the family; and families or surrogate families figure prominently in the content of programming across a wide range of genres, including sitcoms, primetime dramas, daytime soaps, and talk shows. Sitcoms, in particular, have responded to and mediated historical shifts in family forms and gender relations over the past 50 years, and they will be a focus in this course. We will explore how television has both shaped and responded to larger cultural discourses about family and gender from the postwar era into the 21st century.

FGSS244 Feminist and Queer Theories of Social Reproduction

This course will introduce students to the study of social reproduction and power with an emphasis on feminist, queer, and transnational approaches to inquiry and action. We will begin by exploring key methodologies and theoretical framings for understanding contemporary "American" cultural, social, and political formations both within and beyond the territorial U.S., focusing on the effectiveness of discursive and historical modes of critical analysis. The subsequent sections of the course will turn to three case studies of the historical routes and transnational implications of U.S.-based political discourses around (1) population control and reproductive justice, (2) abolition and the prison-industrial complex, and (3) debt and higher education. By engaging with each area of inquiry through theoretical, historical, and grounded activist texts, we will think through the possibilities for utilizing academic work in concert with movement-based engaged scholarship to address the uneven distribution of life chances and the potential of imagining the world otherwise.

FGSS246 Girlfriend, Sister, Self: 20th-c. Black Women's Writing

This course will examine textual and visual constructions of the girlfriend, sister, cousin, and daughter in 20th-century black women's writing. We will read works by Toni Morrison, Alice Walker, Veronica Chambers, and Marita Golden as narratives of women loving women (sexually and not) and as sites through which to engage black women's subjectivity more generally. In this course we will attend to the interior landscapes of individual black female subjects as well as the social landscapes that produce and/or complicate notions of love, kinship, friendship, and self. We will draw on African American literary theory, queer and affect theory, and black cultural memory as well as turn to influential works by bell hooks, Deborah McDowell, Kevin Quashie, and Valerie Smith, among others. How do writers of the period imagine and articulate the relationship between black women and their others?

FGSS247 Gender and Power in Chinese Literature

This course explores the intersections of gender, power, and performance in Chinese society. Drawing on literary and historical sources, theories of gender

and sexuality, and with reference to media forms such as theater and film, we assess the significance of gender as an analytical framework for studying Chinese literature, culture, and society. What power dynamics drive conceptions of gender and gender ideology in Chinese literature and history? And how do discussions around gender roles and sexuality change in the modern and contemporary periods? Course topics include: Chinese feminism; depictions of women in classical literature; gender roles, family, and marriage; conceptions of the body; constructing identities; women writers; the "new woman"; themes of cross-dressing; classical romance narratives; gender performance in Chinese theater; queer narratives; and more.

FGSS250 The Renaissance Woman

This course takes seriously the socioeconomic, cultural, religious, and physical restrictions placed on women writing in the 16th and 17th centuries. Through a selection of literary works, we will examine the ways in which early modern women exercised considerable authorial agency in the poetic-fashioning of the literary tropes, genres, and forms of thought that they inherited. Often re-forming, reinventing, revising, and re-imagining poetic spaces, these women developed their own styles of critique and creation from within their historically specific concerns. This course recovers works that were frequently written out of the study of the early modern during the 18th, 19th, and 20th centuries in order to grapple with the imaginative voices of women writing under the constraints of their time.

FGSS252 Guns and Society

Students will discuss some of the key questions that animate the emerging interdisciplinary field of gun studies, considering guns as objects and symbols and as sites of both shared and contested meanings in everyday life. Readings will include recent scholarship about the evolution of gun technologies and the changing place of guns in U.S. society, from the colonial era through to the present day, exploring how the history of guns in U.S. history is relevant to other histories, including studies of race, gender, class, labor and capital, social movements, and military and civilian life. Special focus will be put on visual studies, museum studies and public history, science and technology studies, public health, and legal history. Assignments include four shorter (2-page) papers and a 15-page final research paper. Each student, working in small groups, will also deliver a 10-minute presentation and have opportunities for site visits to local museums and gun violence memorials such as the Coltsville National Historic Park (Hartford), Springfield Armory National Historic Site (Springfield, Massachusetts), and the Connecticut Gun Violence Memorial (New Haven).

(This course is a prerequisite for individualized humanities "labs" designed for students to delve into a particular aspect of the topic of guns and society in a more applied way in the spring semester, through special projects that can include an individually designed research paper, a museum/archives project, a theater sketch, a podcast, a high school teaching module, an art project, an exhibit in a local museum, an oral history project, or a syllabus, among other possibilities to be discussed with the instructor.)

FGSS253 LGBT History in the United States: 1940-Present

The emergence of a distinctive sexual minority in the United States following World War II had a tremendous impact on the society and culture of the modern United States. The push for LGBT recognition, rights, and acceptance intersected with larger discourses of race, sexuality, and class. This course will survey the history of sexual and gender minority communities in the United States from the emergence of the homophile movement through the movement for the legalization of same-sex marriage.

FGSS255 Sex Work and Sex Trafficking: Empowerment, Exploitation, and the Politics of Sex

This course explores the history, politics, and social meaning of sex work. Focusing particularly but not exclusively upon prostitution, we will pay careful attention to the diverse range of social experiences that form sex work, as well as the way in which prostitution is used as a governing metaphor within sexual relations more generally. Some questions the course will consider: How has sex work changed over time, and what do these changes tell us about both the nature of sex work and about the broader society? In what ways is sex work similar to or different from other forms of service labor or other types of intimate relationship? How do questions of race, class, sexuality, and gender alter the meaning and experience of sex work? What sorts of desires and expectations do clients bring to interactions with sex workers, and in what ways have these shifted over time? Recent controversies concerning sex trafficking and underage prostitution will also be addressed, as will the effects of various regulatory schemes that have been developed around the world.

FGSS256 Social Movements

How, when, and why do social movements emerge? What motivates individuals to participate? What transforms problems into grievances and grievances to action? How should movements be organized, and what tactics should they use? What factors explain movement success and failure (and how should success and failure be defined)? What is a social movement, anyway? This course seeks to introduce some of the major ways scholars have approached such questions and, at the same time, to give a sense of both the high drama and the everyday details of social movement activism, using historical and sociological case studies. Course readings concentrate on U.S. movements, including racial justice, class, gender, and sexuality-based activism.

FGSS262 "Before the 'Body' there is the 'Flesh'": Reading Hortense Spillers

This course will introduce students to the major works of the black feminist theorist and literary critic Hortense J. Spillers (b. April 24, 1942), one of the greatest essayists and most gifted intellectuals of our times. While her published writings are legion, Spillers is perhaps best known for her scholarly article titled "Mama's Baby, Papa's Maybe: An American Grammar Book" (originally published by *Diacritics* in 1987). In addition to "Mama's Baby," then, together we will read and engage at close range with the essays collected in "Black, White, and in Color" (published by the University of Chicago Press in 2003) in order to reveal the extraordinary complexity and clarity of her thought.

FGSS264 Black Feminisms in the Americas: Politics, Representation, and Queer Ruminations of Elsewhere

This course will explore Black feminist intellectual productions, highlighting the many theoretical, political, and critically imaginative elements found throughout early and contemporary works. Our discussions will reflect on power, the production of knowledge, identity, inequality, and the politics and perils of Black feminist struggle. Relying on a variety of texts and media—such as writings, visual & performance arts, poetry, music, and film—students should expect to engage with key issues and debates, along with the epistemological challenges offered by queer of color critique, trans/national perspectives, and social alternatives emerging from across the Black (feminist) diaspora.

FGSS267 Revolution Girl-Style Now: Queer Performance Strategies

Looking to the rich cultural history of queer and feminist performance in the U.S., this course examines performances of gender, sexuality, obscenity, and refusal. In this class, we will ask how the terms "feminist" and "queer" come to determine a specific piece of theater or performance art. Is it the author's own political affiliation that establishes the work as feminist? Is it the audience's

reading that gathers a work of art under a queer rubric? Furthermore, where does feminist performance meet queer performance? Topics will include feminist body art, AIDS activism, queer nightlife, installation and performance art, video art, and memoir. Focusing in on strategies for engaging the many meanings of the words "queer," we will pair theoretical readings with theatrical sites.

FGSS269 Gender and History: Global Feminist Theories and Narratives of the Past (FGSS Gateway)

What is a female husband? In the 1980s an increasing number of feminist scholars posed questions about the relationship between biological sex and gender roles. The African scholar Ifi Amadiume, who studied the history of female husbands in West Africa, asserted that such relationships between sex and gender needed to be studied in a global context. More than two decades after Amadiume's influential book "Male Daughters, Female Husbands: Gender and Sex in an African Society" (1987) was published, the scholarship on global gender and sexuality is vibrant and dynamic. These works have shown gender to be central to understanding society at different periods and geographical locations, but it is far from a universally understood category.

This seminar will introduce first- and second-year students to the history of gender, sex, labor, and feminist activism from a global and comparative perspective with readings from the history of Africa, the Americas, Asia, and Europe. We will also cover the development of influential theories in the field and how they apply to the writing of history. This course is especially appropriate for prospective history and feminist, gender and sexuality majors, though all students interested in using gender as category of historical analysis for their scholarly work in other fields are welcome.

FGSS271 Bad Sex

In a 2003 op-ed in support of same-sex marriage, conservative New York Times columnist David Brooks writes, "Anybody who has several sexual partners in a year is committing spiritual suicide. He or she is ripping the veil from all that is private and delicate in oneself, and pulverizing it in an assembly line of selfish sensations." Brooks is far from alone in this critique of promiscuity. What is it about "casual encounters" and hookup culture that so disturbs? Why is sex a magnet for anxieties about selfishness and irresponsibility? Why do we think of anonymity and intimacy in sex as mutually exclusive? What do we make of desires that are politically troubling? On what basis are particular forms of sex and sexuality vilified or valued? Is love the antidote to sexual hedonism, or hedonism in disguise? This course will consider widespread cultural anxieties about sex, sexuality, desire, and pleasure from sociological and psychoanalytic perspectives.

FGSS272 Knowing Their Place: Two Centuries of Women Generating Wonder in the Natural World

This seminar will examine the intersection of natural science, women's history, and poetic prose through the writings of Rachel Carson, author of the groundbreaking environmental manifesto *Silent Spring*, and the women who both preceded and succeeded her. What does it mean to know a landscape or an ecosystem intimately? How does a sense of place become political? How does gender affect perspective on the natural world and environmental stewardship? In addition to Carson, we will read authors including Susan Fenimore Cooper, Mary Treat, Anna Botsford Comstock, Terry Tempest Williams, Robin Wall Kimmerer, Camille Dungy, and Margaret Renkl. Writing assignments will include both textual analysis and personal nature writing.

FGSS274 Self & Social Transformation

Racism, sexism, and classism are deeply ingrained in our habits and feelings. It seems that in order to change objective conditions we need to change ourselves and our communities. But given that our habits and feelings are often unconscious and resistant to change, how do we philosophically go about doing this? This class tries to answer this question. It starts theoretically with ancient Greek and ancient Chinese virtue ethics as well as Foucault's later work on self-transformation. It then takes these concepts/theories and sees them in action in contemporary movements of self/community transformation. We start with a paradigmatic political activist movement of self-transformation: the Black feminist transformative justice movement with the goal of prison abolition. But as we progress, we will explore less obvious and seemingly more mundane movements of self- and community transformation such as Saba Mahmood's *dawa* movement from Egypt, *Weight Watchers*, and finally "ballroom" culture from Detroit. Anthropological ethnographies of these movements will help show how we can self-reflexively shape our own habits and transform ourselves.

FGSS276 Black Performance Theory

What does it mean to perform identity, to perform race, to perform blackness? How is blackness defined as both a radical aesthetic and an identity? In this course, we will focus on theater and performance as a resource for thinking

about black history, identity, and radical politics in excess of the written word. Following recent work in Black Studies and Performance Studies, this class will pay particular attention to the doing of blackness, the visible, sonic, and haptic performances that give over to a radical way of seeing, feeling, and being in an anti-black world. Plays, films, and texts might include works by Fred Moten, Alexander Weheliye, Brandon Jacobs-Jenkins, Suzan Lori-Parks, Danai Gurira, Shane Vogel, Adrienne Kennedy, Sarah Jane Cervenak, Dee Rees, Celiné Sciamma, Saidiya Hartman, Huey P. Copeland, Darby English, Lorraine Hansberry, Hilton Als, Spike Lee, Isaac Julien, Martine Syms, Tavia Nyong'o, and Daphne Brooks.

FGSS277 Feminist Philosophy and Moral Theory (FGSS Gateway)

This course explores the dialogue between feminist concerns and moral theory. It will explore not only how moral theory might support certain central feminist insights and aims but also why some feminists cast doubt on the project of "doing moral theory." Does the language of existing philosophical moral theories (reason, fairness, equality, utility, human nature, rights) sufficiently allow articulation of feminist problems? If not, how can feminist moral theorists move us beyond the grip of familiar gender-loaded oppositions? After surveying a range of perspectives on feminism and philosophy, we will give a deep reading to three book-length developments of feminist ethics: one from a Kantian perspective, one focused on care, and one focused on virtue ethics. As a gateway course for the FGSS program, this course serves to introduce critical thinking about the construction of gender and the intersection of gender with race, ethnicity, class, and sexuality.

FGSS278 Magick and Her Practices, of Late

In this course we ask why paganism and Goddess worship have become "the fastest growing American religion," examining the tensions between science and society that so often provoke magic-infused social resistance movements. We explore the rise of Goddess worship in the Americas since the 1970s, considering its ties to ecofeminist, womanist, indigenous, and environmentalist movements. We examine the force of agency and its relation to ritual magic.

We then dive into the purported roots of several modern magic traditions, including Wicca, Dianic witchcraft, Feri traditions, and Haitian Vodou, among others, and ask how these cosmovisions define and/or transcend our gendered personhoods.

As we find our way back to a renewed understanding of modern paganisms, students will design individual or small group projects wherein they experience, ethnographically consider and/or perform extant manifestations of magic and ritual, bringing peoples lived experiences into conversation with course readings. This class is taught as a twice-weekly seminar designed around written assignments and engaged discussions, while inviting but not requiring students to engage in phenomenological experiences outside of class that may inform their written work. Students will produce ethnographic essays that are both analytical and personally reflective.

FGSS285 Gender and Slavery in the Atlantic World

For most of the 20th century, historians of slavery in the Atlantic world overlooked the critical role of gender in shaping the marketplace, culture, and experience of the institution. Slaveholding and its attendant violence were presumed to be the domain of men. With a tragically limited archive, the popularity of slave narratives such as Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) reveal how the voices and perspectives of men have dominated our understanding of the enslaved experience. Since the 1980s, the work of black feminist historians such as Deborah Gray White's, "Ar'n't I a Woman?: Female Slaves in the Plantation South" (1985) have unpacked the profoundly gendered nature of slavery in colonial America, the United States, and the Caribbean. This course embarks on an exploration of this important intervention. We will engage primary sources to illuminate the voices of enslaved women and debunk some of the historical myths of slavery and slaveholding. We will also visit classic and fresh secondary literature to understand the evolution of the field. Major themes include but are not limited to the Middle Passage experience, gendered violence, fertility, reproduction and motherhood, the Southern Belle archetype and slaveholding mistresses, notions of beauty and purity in black and white, and fugitivity.

FGSS286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice

This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism--queer left, black radical, trans, immigration, prison abolition, and sex work--in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called

"ivory tower," explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activism, the work of a radical imagination, art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization--past or present--of their choice.

FGSS288 Gender and Sexuality in Chinese Narrative

This course pays particular attention to gender relations and representations of sexuality in Chinese narrative. This course will require close readings of translated Chinese novels, short stories and movies. We will explore themes and motifs such as gender roles in Confucianism, female chastity, same sex desire, cross-dressing, masculinity and femininity, manhood and misogyny, eroticism, the cult of qing (passion), the New Woman, socialist and post-socialist desires, and writing bodies in the era of globalization. In addition to providing a platform for appreciation of the aesthetic beauty of Chinese narrative, the course encourages students to think about how representations of gender and sexuality incorporate or confront the mainstream moral values and social principles in China.

All readings are in English, no prior knowledge of Chinese language or culture is required. No text book requirement.

FGSS290 Global Film Melodrama

Often patronizingly dismissed as 'women's weepies', this course will examine the proliferation and transformation of melodrama film within various national, subnational, postcolonial, queer, and global contexts. The course will focus on the specific language and conventions of melodrama. We will watch a wide range of films from India, China, Japan, South Korea, Hong Kong, Hungary, Iran, Egypt, Kenya, Spain, Venezuela, Cuba, Argentina, and Mexico among various global film contexts. Importantly, this course will ask, what are the stakes and implications of 'Global' in "Global Film Melodrama"? Moving away from an additive model that often present global film histories as an addendum to the "mainstream" cinemas, the focus will instead be on the emergence and significance of melodrama, and its specific idioms within transnational contexts. The course is open to all sophomores including non-film minors and non-film majors at Wesleyan. No previous experience in Film is required.

FGSS295 Queer Opera

Opera is a total art: It weds elaborate fashions with scene design and lighting to create incredible dramas set to music. For this reason, opera forces us to think interdisciplinarily about the narratives it portrays. Every action, every emotion, every decision and recognition in the drama is conveyed to the audience in multiple and sometimes contradictory ways. Operas are also fantastic living experiments in the performative representation of human sexuality. In addition to all of the love and sex that occurs explicitly on the opera stage--and there is plenty of that--operatic narratives also bear witness to changing structures of normativity; regimes of social control are thematized, sometimes lampooned, and often transgressed within the drama, and operas allow us to see how this unfolds within an interconnected ensemble of media. This course serves to introduce students to the world of the opera stage and, through that world, the foundational texts of queer theory. Together we will explore operas from the 17th century to the present day, opera theory of the past century, and queer theory of the past three decades to ask what these bodies of knowledge have to teach each other.

FGSS301 Black Speculative Fictions and the Anthropocene

The genre of black speculative fiction--in the form of literature, art, music, and theory--provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the "future," black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term "Anthropocene" first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which "humans" had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a "species"? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene's attendant catastrophes, which include earthquakes, altered ocean waters,

and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human? Further, how does artificial intelligence complicate definitions of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

FGSS302 Critical Perspectives on the State

This course builds on Marxist, poststructuralist, feminist, anarchist, and cultural analyses to take a critical approach to the state--what it is and what it does. We will examine how the state is imagined by those who write about it and struggle against it. Where does the state begin? How do states act, and what are the consequences of these acts? How is rule consolidated and how are individuals and communities annexed to the project of rule? How do people engage with state acts and ideologies? We will read texts drawn from a variety of disciplines, including anthropology, feminist theory, political theory, philosophy, sociology, and geography, that examine the nature, everyday workings, and effects of state power. Drawing upon ethnographic examples from around the world, we will analyze how states are cultural artifacts that produce and regulate people's identities and bodies, reproduce social inequalities, and engender resistances of all sorts. Some of the topics we will discuss include bureaucracy, governmentality, the security state, the prison industrial complex, terror and militarism, law and justice, citizenship, democracy, refugees, anti-state movements, the "man" in the state, and welfare and post-welfare politics.

FGSS303 Reproductive Politics and the Family in Africa

This course will introduce students to broad discourses and issues related to reproduction and the family in modern Africa. We will study maternal and sexual health and technologies of reproduction, but for us reproduction will be an object of historical inquiry. One of the driving questions for this course will be how reproduction has been given meaning socially. How have African societies understood abortion, infanticide, or other medical means of controlling fertility and childbirth? What has been the relationship between the family and the state? We will also examine ideas about sexuality and love, changing notions of parenthood, childhood health, and what constitutes an ideal family. Finally, we will interrogate how these ideas influenced health policy and political ideologies which, in turn, changed conceptions of motherhood, fatherhood, and the family.

FGSS304 Pantheologies: Animal, Vegetable, Mineral, World

Pantheism teaches that the world itself is divine. The idea seems simple enough, yet it has suffered extraordinary ridicule at the hands of western philosophers and theologians, who have considered "matter" to be lifeless, dark, and feminine

(which is to say, as different as possible from "God.") This course will explore this generalized panic over pantheism--in particular, the anxieties it encodes over gender, race, nationality, and class, and the contribution such anxieties have made to an unequally distributed attack on the "environment."

Seeking an alternative to our raced and gendered ecocidal metaphysic, the course then turns to contemporary pantheologies. To what extent are recent theories of cosmology, complexity, and materiality setting forth subtle pantheisms? What are the feminist, anti-racist, and ecological stakes of these theories? Properly conceived, what is pantheism; is it ultimately distinguishable from atheism; and what use are any of these platforms in developing an ethic and politic of environmental justice?

FGSS305 Techniques of the Liar: Performance, Artifice, Fraud

This seminar is a cultural and intellectual history of fraudulence, fiction, and faking it. We will explore both specific performance practices as well as theorizations of artifice, fraud, and authenticity. Topics will include illusion, ventriloquism, and sleight of hand; mimetic acting and the manufacture of "emotion"; dance technique and the concealment of effort; and musical improvisation and the politics of invention. We will also consider the complexities of drag, camp, and minstrelsy and historicize their surrounding discourses, centering the contributions of feminist, queer, and critical race studies. Looking at a range of (predominantly U.S.-based) practices from the mid-19th century to the present, we will consider how artifice and theatricality have been historically reviled as qualities inherent to femininity and queerness, respectively; how "authenticity" is both gendered and racialized; and how hiding, fabulation, exaggeration, and duplicity have also offered means of freedom or resistance.

FGSS306 Black Feminist and Trans Theories of the Hu/Man

This seminar provides an introduction to Black feminist and trans theories' interventions into the modern Western category of the human and its violent exclusions. Since their inception, Black feminist and trans theories have brought attention to the violence of what Sylvia Wynter has called our "genres of the human," and in so doing, have laid bare the very preoccupations of power that condemn the non-white, non-cisgender being to sub-Human status and death in the material and discursive economies of racial capitalism. Students will develop broad knowledge of Black feminist and trans theories' provocations regarding the intersecting identity categories that organize our world, and will be encouraged to develop their own critical approaches that are attentive to the hegemony of racialized gender and its attendant violences.

FGSS307 Mobilizing Dance: Cinema, the Body, and Culture in South Asia

This course focuses on questions of "mobility"--cultural, social, and political--as embodied in two major cultural forms of South Asia, namely "classical" dance and cinema. Using Tamil cinema and Bharatanatyam dance as case studies, the course focuses on issues of colonialism and history, class, sexuality and morality, and globalization. The course places the notion of "flows of culture" at its center and examines historical, social, and aesthetic shifts in these art forms over the past 150 years.

The course is both studio- and lecture-based. It includes learning rudimentary Bharatanatyam technique, watching and analyzing film dance sequences, and participating in guest master classes in ancillary forms such as Bollywood dance and Kathak (North Indian classical dance). The studio portion of this course is for beginners, and no previous dance experience is necessary.

FGSS310 The Senses and the Subject in Cinema and Poetry

In this course, we will study a mixture of emotionally stimulating and structurally difficult contemporary cinema and lyric poetry, as well as select philosophical and theoretical approaches to the senses and the subject. Do theories and notions of the senses assume the subject, and/or subjectivity? If so, then how? What is the relationship between embodiment, the senses, the world, racialization, blackness, and being? How do select Western theoretical, aesthetic, and poetic frameworks represent and think as such? While cinema and lyric poetry might seem like strange neighbors, this course specifically foregrounds them as "repositor[ies] of synesthesia," where not only the reconstitution of the subject after some disturbance (i.e., sensorial, physiological, social, historical, etc.) will be relevant to how we read, but also when that either does not happen or constitutively cannot happen. (Note that some short fiction may also be part of the course readings.)

FGSS311 Abolitionist University Studies

This course explores historical materialist theorizations of the practices and future possibilities of the U.S. university as a tool of social reproduction and space of potentially revolutionary thought. In so doing, the readings, assignments, and discussion will be inspired by Stefano Harney and Fred Moten's provocation to reinterpret abolitionism as "not so much the abolition of prisons

but the abolition of a society that could have prisons, that could have slavery, that could have the wage, and therefore not abolition as the elimination of anything but abolition as the founding of a new society." Students will consider how conventional renderings of the university in higher education studies, critical university studies, and the popular cultural imaginary are predicated upon an often romanticized and fundamentally limited geographic and historical understanding of the work of colleges and universities. In response, the course cultivates a more capacious conceptualization of the historical and contemporary function of the university as a social form. In taking up abolitionism as both a method and critical analytic, the course will challenge students to imagine the revolutionary possibilities of an abolition university that aligns itself with movements beyond the institution, while reflecting on the particular importance and challenge of enacting such a vision in our current political moment.

FGSS312 Women's Political and Sexual Revolutions--Middle East and South Asia

This course examines the role of politically organized women's movements, individual pioneers, hashtag and virtual campaigns, and the activism of grassroots and working-class movements in 20th-century Middle Eastern and South Asian contexts, with a focus on their political and sexual struggles, demands, and achievements.

The course is divided into two parts; it introduces a brief history of the nature and dynamics of women's movements in the MENA and SA regions. The second half of the course focuses on feminist documentation and debates around Muslim women's piety, sexuality, and political representation in a broader interdisciplinary frame. The course will examine how religious sensibility intersects with sexual orientation, gender identity, violence, sex work, the military, and even fashion. It will study these intersections as reflected in Muslim women's writings, desires, activism, and demands for sexual freedoms or against sex crimes, in different countries and under different legal regimes and geographies.

FGSS313 The Black Charismatic

In this course we will explore the interplay between black politics and popular culture in the post-civil rights era. More specifically, we will examine the aesthetics of affective (commonly called "charismatic") black political leadership by attending to Tavis Smiley's yearly "State of the Black Union" address, 2000-2010. We will rely almost entirely on film, video, and digital archives in order to trace the eleven-year-long evolution of Smiley's annual event, while focusing our hermeneutic attention on the racialized and gendered performances of Louis Farrakhan, Michael Eric Dyson, Cornel West, and others. Through close readings of their televised performances, then, this course will require students to think and write about the practice and rhetoric of the black charismatic. How might the black charismatic threaten to undermine the political opportunities afforded by the success of the modern civil rights movement? How did Smiley's yearly event create the illusion of a black public sphere? What are the unintended consequences of substituting affect for political action? Similarly, what are the potential perils of a politics that results in ephemeral catharsis without dangerous political consequences? While participating in the general discussion across the semester, students will be searching out specific

research topics of their own, topics relating the seminar conversation to original research questions about: the new liberalism of black politics; the crisis of the black public intellectual; the importance of technology (particularly the ways in which new media have changed, even upended the political habitus itself); and the relationship between gender (particularly black masculinity), charismatic leadership, and respectability politics. Authors will include (in no particular order): Adolph Reed, Richard Iton, Hazel Carby, Hortense Spillers, Houston Baker, Erica Edwards, Melissa Harris-Perry, and others.

FGSS314 All the Feels: Affect Theory and Cultural Studies

Butterflies in your chest. Perspiration on your upper lip. A racing heart. Every day we witness and manage sensorial experiences; quite often these negotiations illuminate the ways in which powerful norms and institutions shape our daily lives. This course explores the relationship between the seemingly individualized experience of feeling and the social world of power by introducing students to the vibrant field of affect studies. A recent "turn" in critical theory, affect theory is interested in embodiment, the senses, and sensorial experience, questioning the dominance of rationality and cognition by exploring the role emotions and feelings play in our social worlds. This course will focus predominantly on affect theory as it emerged from queer, feminist, and racialized minoritarian discourses in order to ultimately contemplate the ways theories of affect, feeling, sensation, embodiment, and emotion open up literary and cultural texts.

FGSS315 Entertaining Social Change

"Our problem," Tom Frank writes, "is that we have a fixed idea of what power is, of how power works, and of how power is to be resisted." This is especially true of "entertainment." Power that may not seem like power--only, say, like "fun" or "amusement"--can be especially powerful. A thread that connects all of our texts will be: how has the systemic critique of social contradictions been popularized as compelling and fascinating in modern times? A related concern: what are the seductions and violence built into "enjoyment---"enjoyment" that reproduces "Americans"? We will "entertain" the diverse strategies that progressive moviemakers have developed to entertain Americans--to teach, persuade, seduce, provoke, upset, anger, and move them through laughter, tears, and not least of all ideas--so that Americans will be more inclined to "entertain" social critique that inspires and envisions social change.

Our critical focus will be on the popularizing (and sometimes the selling) of social critique in movies including Straight Outta Compton, Malcolm X, Medium Cool, Network, El Norte, Smoke Signals, Before the Flood, The Black Panthers: Vanguard of the Revolution, Salt of the Earth, Matewan, and The Big Short. We will place special emphasis on self-reflexive movies about "entertainment" and about labor/social movement organizing. Entertainment, we will see, plays a key role in organizing and reorganizing Americans. In doing so, it can place limits on our vision of what--and who--needs to be changed. By putting our movies in conceptual dialogue and making these limits more visible, we will help one another think, see, and feel beyond these limits. As we are "entertained" (and we will be) we will consider the stakes of being "entertained."

FGSS316 Decoloniality, Feminism, and Human Rights

Is decolonialism only about flag-burning, taking a knee, and bringing down statues of colonial figures? The course will study anticolonial critiques and theories about historic and current settler colonialism and connect these with the prevailing racial, gendered, and economic imperial order. Key classic texts will be studied about how former imperial powers continue to neocolonize the world through tax havens, as well as by leveraging the concept of human rights and often at the expense of gender rights. Specific case studies will be examined to illustrate the range of activism and global creative protests that widen the paths to a decolonized feminist future.

FGSS317 Sexuality, Gender, and Science

This course will consider how the concepts of gender and sexuality have been treated in scientific fields, focusing primarily on the 19th and 20th centuries. We will examine the history of ideas about gender and sexuality as reflected in the development of sexology, theories of homosexuality, psychology, and endocrinology. We will also discuss contraceptive and reproductive technologies, the inclusion of women in clinical trials, women in scientific professions, and recent studies that use algorithmic predictions of sex or sexual orientation. Readings may include selections from Sigmund Freud, Siobhan Somerville, Emily Martin, Sarah Igo, Laura Briggs, Ronald Bayer, Sandra Morgen, David Serlin, Allan Bérubé, Dorothy Roberts, Johanna Schoen, Jennifer Terry, Carolyn Herbst Lewis, Steven Epstein, Riley Snorton, Rebecca Jordan-Young, Mar Hicks, and Safiya Noble.

FGSS320 Staging Race in Early Modern England

This course analyzes the dramatic representation of race in the plays of Shakespeare and his contemporaries. We will examine the historical emergence of race as a cultural construct in relation to related conceptions of complexion, the humoral body, gender, sexuality, and religious, ethnic, and national identity. Readings focus on three racialized groups: Moors, Jews, and Native American "Indians." After reading the play-texts in relation to the historical moment in which they were first produced (using both primary and secondary sources) we will then consider their post-Renaissance performance histories, including literary, theatrical, and film adaptations.

FGSS321 BioFeminisms: Science, Matter, and Agency

This course rethinks feminism's relationship to nature, the body, and biological matter in light of new considerations of ontology in science studies, cultural studies, and feminist thought. We will read contemporary treatments of science, of Darwin and evolutionary theory, of neurobiology and epigenetics, and other

fields and disciplines that consider biological matter, and think about them in feminist and queer frameworks. Readings will include "new materialists" alongside other works on the "new biology" and the "new sciences," and we will also revisit some second- and third-wave feminism. The course raises issues that challenge traditional boundaries of the body and self, conventional ideas of agency, and dualisms of mind/body. Readings include works by Donna Haraway, Anne Fausto-Sterling, Elizabeth Grosz, Karen Barad, Vicki Kirby, and Elizabeth Wilson, among others.

FGSS322 Decolonizing Gender and Sexuality

This course seeks to examine ways in which the history and ongoing presence of coloniality (including the deeply embedded forms of racial domination which coloniality generates) have shaped and been shaped by structures of gender and sexuality. The class will examine ways in which gender and sexuality have been mobilized historically and are mobilized today in ways that support imperial projects, even when presenting themselves in the guise of "protecting human rights," humanitarianism, or feminist/LGBT projects. In addition to linking together what Chandra Mohanty has described as the "One Third" and "Two Thirds" worlds, this discussion-based seminar seeks to reconnect the disparately gendered intimate and global spheres, situating the feminized "private" domains of love, sex, and caring within and around fields of action such as geopolitics and global political economy. Decolonial thinkers challenging Eurocentric framings will receive particular attention within the course.

FGSS323 Staging Blackness: African American Theater

This course surveys the dynamism and scope of African American dramatic and performance traditions. We begin with a deep historical examination of 19th century blackface minstrelsy that then progresses into a long-view of how black American dramatists and theater-makers have self-fashioned black dramatic narratives, black aesthetics, and black representations into the twenty-first century. In all cases, we are interested in surveying the ways in which these artists work within varying modes of dramatic expression and focus their plays and performances on such topics as class, ethnicity, era, fragmentation, gender, history, region, revolution, nationality, race, sexuality, and spectatorship.

FGSS324 Interpreting the "New World": France and the Early Modern Americas

The impact and long-lasting effects of the "discovery" of the "New World" on Europeans cannot be overestimated. This advanced seminar will compare and contrast styles of expedition and conquest among the European nations, though the course will focus on the French context and the various events and encounters that occurred in the early modern Americas, particularly between 1492 and 1610, a period that laid the groundwork for the subsequent colonial project. Throughout the course, we will pay special attention to the Amerindians' points of view. In turn, students will examine the insights and blind spots in 16th-century French navigators', cosmographers', cartographers', and intellectuals' interpretations, representations, and negotiations of difference by critically engaging with concepts such as nature, culture, alterity, gender, sexuality,

marriage, religion, exchange, possession, conquest, and war. Reading, writing, and class discussions will be in French.

FGSS327 Litanies for Survival, Plots for Revolution

This seminar centers black-feminist and queer-of-color theory, literature, and art from the 1970s to the present in order to interrogate and reimagine revolution and revolutionary praxes. We will examine the interrelatedness of art and activism, hope and despair, collaboration and erotics. Key questions include: How does "survival" put pressure on "revolution," and vice versa, particularly in light of contemporary and imminent catastrophes, local and planetary? How does a joint consideration of survival and revolution affect interpretations of the past, understandings of the present, and imaginings of the future? What political work might intellectual and creative labor perform? Is revolution an event, a practice, or both? A useful term or a ruse?

This seminar is offered in conjunction with the Center for the Humanities' Fall 2018-Spring 2019 theme, "Revolutions: Material Forms, Mobile Futures." Assigned readings will include the work of scholars participating in the Center's Monday night lecture series, and students will be required to attend several lectures over the course of the semester.

FGSS329 Waiting: Bodies, Time, Necropolitics

This interdisciplinary course draws from social theory, gender studies, medical anthropology, disability studies and science studies to address the social stratification of time in corporeal terms. Many theorists have described the 21st century as marked by acceleration; this course addresses its counterpoint: the slow, interminable wait, the being made-to-wait, and the socially structured scenes and experiences of waiting. How can we understand waiting in the city emergency room for the mentally ill immigrant? What is it in the gender transition clinic? The polluted, toxic neighborhood? The refugee camp? We will begin by surveying multiple frameworks through which we can theorize time and its suspension. We will then focus on experiences of waiting in intersectional terms, that is, in relation to gender and sexuality, race, class, and dis/ability. We will explore how practices that produce life, health, and well-being (biopolitics) can also be necropolitical, when attention, care, or action is given to some, but prolonged or suspended for others. Readings will include works on necropolitical theory (Georgio Agamben, Achille Mbembe), medical and state subordination and abandonment (Javier Auyero, Joao Biehl), and queer and crip time (Lee Edelman, Elizabeth Freeman, Alison Kafer). We will explore a wide range of experiences of waiting, from those related to cancer diagnosis (Sarah Jain), gender assignment surgery (Alexandre Baril), to environmental toxicity (Michelle Murphy) and asylum seeking (Jennifer Bagelman).

FGSS331 Queer and Trans Aesthetics

This seminar will consider contemporary trans and queer theory foregrounding race, class, disability, migration, diaspora, indigeneity, and colonization alongside the work of BIPOC queer and trans artists in particular. The course's animating (and unfixable!) questions include: How do artists produce and intervene in understandings of gender and/or sexuality through their work? What does it mean for an artist or viewer to describe an image, object, or performance as "queer" or "trans"? What constitutes a "queer" or "trans" reading of visual culture? How might various formulations of "queer" and "trans" relate to, put pressure on, and/or resist "aesthetics"? What is the relationship between an artist's self-identification and/or their resistance to categorization (e.g., in terms of race, gender, sexuality, disability, class, nationality) on the one hand, and audiences' efforts to engage and interpret their art on the other? Put another way: What, if anything, does an artist's "identity" (asserted and/or imposed) have to do with their art? And what does a viewer's "identity" (asserted and/or imposed) have to do with how they approach and interpret visual culture? Several artist talks and/or class visits (all virtual) are being organized in conjunction with the seminar.

FGSS333 About Clothes: Styles, Histories, Activisms, Poetics

In this course you will learn about some of the looks, discourses, forms of work, sensory meanings, and embodied histories relevant to/circulating around the wearing and study of clothing, in our time-place and at selected points over the past several hundred years. The syllabus includes works of literature, scholarship, visual art, performance, journalism, and activism. Among the questions we will ask: What does it mean to read clothes? How may we understand the transatlantic and global circuits that have informed various fashion systems, including ideas about who may wear what kinds of clothes? How and why have the labor, products, pleasures, and pains of this (multi-billion-dollar) business been understood as trivial? Throughout the semester, you will conduct your own experiments at the intersections of language, identities, and the materiality of clothing.

FGSS335 The Work of Art Against Work: Art, Labor, Politics

Understandings of late 19th- and early 20th-century avant-gardes are tied inextricably to leftist theory, particularly that of the Frankfurt School. This advanced seminar will consider the legacies of that entwinement, while focusing more specifically on its transformations from the late 20th century to the present: We will examine how artists have engaged the "work" of art in relation to the rise of post-Fordism, a globalized economy, and new theories of work and anti-capitalism. We will pay special attention to gendered notions of work and the division of labor (including "craft," affective labor, domestic work, care work, sex work, and more), to debt and racial capitalism, and to the rise of speculative finance and its links to the art market and the patron class.

Offering: **Crosslisting**

FGSS342 Queer Robotics: Cyborgs in Science Fiction & Anthropology

What do representations of robots and cyborgs in popular film, sci-fi literature, and cultural anthropology tell us about gender, sexuality, race, and what it means to be "human"? In this class we will use critical race studies, queer and feminist theory, disability studies, and science and technology studies (STS) to analyze representations of "cyborg" bodies in speculative fiction and ethnography. Our case examples explore the politics of the body through narratives of military research, artificial intelligence, sex work, urbanism and segregation, biotech research, prosthetics and athleticism, new reproductive technologies, and more. We will engage with poetry, film, visual art, and speculative fiction to explore how bodies are dreamed, crafted, and represented.

Identical With: **STS342**

Prereq: **None**

FGSS343 Imitations of Life: Experimental Bodies at the Interface of Science and Culture

This seminar will examine scientific and cultural practices of corporeal simulation, or, practices of bodily substitution, imitation, and re/modeling. Topics examined will include: reproductive surrogacy; gender reassignment surgeries; experimental subject protocols; prosthetic enhancements; xenotransplantation; biometrics and alternative forms of bodily imaging; the use of nonhuman animals as human proxies; the rise of personalized medicine, and more. Students will engage with a wide range of case studies and theoretical materials from interdisciplinary perspectives. Special attention will be paid to the relationship between scientific discourses of "universality" and "particularity," where socio-cultural forms of difference (e.g., race, gender, disability, etc.) are at once ignored and exacerbated. While most of the material addressed in the class will relate to recent phenomena, we will also be attentive to relevant histories of corporeal differentiation and reimagining.

FGSS345 Women's Lib, Women's Lit

The social movement known as second-wave feminism, but often referred to at the time as "Women's Lib," took center stage in much of the best-selling fiction of the 1970s. This course will look at popular fiction that concerned itself with women's issues and the way it popularized, memorialized, complicated, and contested feminism in the popular imagination. We will look at a range of novels that focused attention on the nature of and possible solutions to women's political, material, and sexual subjection by men. Although our focus will be on the 1970s, we will look at both some important pretexts, and some later responses to the ongoing crises of gendered inequality in the 1980s. We will pay particular attention the gendering of publishing and reception, exploring the contexts in which these books were produced, marketed, reviewed, and read.

FGSS346 Entangled Sounding Objects: Musical Instruments of Central Asia

Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they are at once tangible and symbolic sounding objects that hold significant meanings for

the communities they serve. This course will explore the social roles and cultural meanings of musical instruments in Central Asia, a region once traversed by the Silk Road, which extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south.

Drawing on theories and ideas derived from interdisciplinary studies of material and sound culture, the course will examine how instrument making and performance are shaped by and entangled with social systems of value and cosmology, political ideology, ecology, and economy. Class meetings will focus on case studies of bowed and plucked lutes, zithers, mouth harps, end-blown flutes, and frame drums among historically nomadic and sedentary peoples of Central Asia. Through these case studies, students will learn about the origins and historical trajectories of individual musical instruments from the pre-modern period to the Soviet and post-Soviet eras; consider the social and political connotations of various performance configurations and repertoires; discuss the status of instruments in Islam and indigenous spiritual belief-systems, and the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

FGSS347 Melodrama and the Woman's Picture

Within film history and criticism, the usage of the term "melodrama" has changed over time, as has the presumed audience for the genre. This course will investigate the various ways in which melodrama and the woman's picture have been understood in the United States and around the world, beginning in the silent period; ranging through the 1930s, '40s, and '50s; and culminating in contemporary cinema. We will pay particular attention to issues of narrative construction and visual style as they illuminate or complicate various analytical approaches to melodrama and speak to gender, sexuality, race, and class. Screenings include films directed by D. W. Griffith, Evgenii Bauer, Oscar Micheaux, John Stahl, Frank Borzage, Naruse Mikio, King Vidor, Wu Yonggong, Douglas Sirk, Vincente Minnelli, Max Ophuls, Mizoguchi Kenji, Kim Ki-young, Rainer Werner Fassbinder, Pedro Almodovar, Ann Hui, Lars von Trier, Farah Khan, and Luca Guadagnino, among others.

FGSS351 Queer of Color Critique

This course will examine and interrogate the field of queer studies with particular focus on the ways in which queer scholarship and queer political movements function alongside critical race theory, ethnic studies, and sociopolitical antiracist efforts. Students will be asked to consider the history of queer studies and queer politics, the contemporary state of queer movements, and future visions of queer life. We will take an interdisciplinary approach, and we will rely upon a diverse range of theoretical, historical, and cultural studies texts. We will explore the normative parameters of both sexual and racial identities, probing the terms of identification to consider their meaning in the contemporary moment and in relationship to various cultural, social, legal, and political milieus. Throughout the course we will consider, What does it mean to study queerness and to study race? How do institutions--religious, legal, and scientific--shape our understandings of both queer and racial identities? In what ways do sexuality and race interact, and how does this interaction inform the meanings of each of these identity categories? Furthermore, how have queer movement and scholarship both supported antiracist efforts and, also, how have they been complicit in cultural and institutional forms of racial oppression? How do other social categories of identification such as gender, ethnicity, and class, shape the ways in which we understand expressions of race and queerness?

FGSS352 Black Thought and Critical Theory

This course follows Stuart Hall's insistence in "What is this 'Black' in Black Popular Culture?" that the theoretical articulations of "blackness" are always "conjunctural." We will investigate how black thought has been conjoined with critical theory through phenomenology, pragmatism, Marxism, semiotics, and psychoanalysis. In our readings of a variety of 20th- and 21st-century thinkers, we will elaborate the philosophical richness and contradictory tensions embedded in the notion of "blackness" at specific historical and theoretical conjunctions. How is "blackness" useful for social theory? Must we assume there is a transhistorical identity to "blackness"? In what ways does "blackness" conjoin with the conceptualizations of gender, sexuality, class, and religion? Black thought and critical theory is the provocation that we attend to the tensions these questions raise. In this course, we will read the works of James H. Cone, Cornel West, Hortense Spillers, Saidiya Hartman, Sylvia Wynter, Denise Ferreira da Silva, Frank Wilderson, Calvin Warren, Tommy J. Curry, Stuart Hall, and Frantz Fanon.

FGSS353 Destroying the Audience: Limits of Performance and Representation in the Theater of (Non) Being

Young Jean Lee's Theatre Company, active between 2003 and 2016, is most known for a series of "racial-identity plays," written and directed by Lee, which adopt an experimental approach to the critique of racial politics, driven by the motto "destroy the audience." On the one hand, this course will explore literary and artistic works that express an ambivalent, if not antagonistic, relationship to the presence of an audience. On the other hand, this course will consider the role and function of the audience as a social category by considering how the concept of audience (broadly understood) contributes to cultural production about race and gender as a potentially active element in the creative process.

Students can expect to read and/or view drama, visual art, performance, film, and self-writing (autobiography and memoir) which, explicitly or implicitly, address the presence of the audience as a way of tackling larger social and cultural problems related to race and ethnicity. The goal will be to foster an understanding of the politics of gender, sexuality, ability, language, and class that determine how these issues are conceptualized and articulated. This course will employ an interdisciplinary approach to the discussion of primary and secondary texts, engaging audience studies, performance studies, ethnic studies, and disability studies, in addition to queer/trans of color, postcolonial, and legal theory, to historically contextualize and theoretically ground a cultural understanding of the relation between audience and racial performance.

FGSS354 Social Science, Black Life: Wells-Barnett, Du Bois, and Hurston's Empirical Experiments

This class has two interrelated areas of focus: first, the racist habits of imag(in)ing blackness's presumed racial-sexual difference that preoccupied social science in the late 19th and early 20th centuries; and second, the formative role that social scientific research and methods played in black people's quests for institutional inclusion during this same period. In their early years, canonical sociology and anthropology consistently proved unable to capture the beauty and complexity in black life, instead lending empirical authority to cultural ways of seeing blackness as inherently pathological. A counter-discourse of black expression took shape, attempting to overcome the negative impact that dominant empirical thought might have on black peoples' struggle for normative citizenship. Focusing particularly on the careers of Ida B. Wells-Barnett, W.E.B. Du Bois, and Zora Neale Hurston, we will explore the contradictory relationship that subsequently emerged between blackness and institutional power--discernible in empiricism's primacy during the long era of postbellum black inclusion. Rather than seeking evidence of black intellectuals' departure from empiricism and its attendant violences, we will explore the messiness of their efforts to experiment with and imagine beyond their misrepresentation and erasure in dominant empirical discourses. Indeed, black artists and intellectuals sometimes recapitulated the violence of empiricist paradigms and their enabling truth claims despite their sound political intentions. In considering the nexus of social science and black life in this period, then, we will also consider the intramural politics of racialized gender, the myriad costs of institutional incorporation, and the stubborn durability of epistemological authority.

Secondary texts include works by Hazel Carby, Roderick Ferguson, Kevin Gaines, Julian Go, Avery Gordon, Saidiya Hartman, Katherine McKittrick, Reiland Rabaka, Michel-Rolph Truillot, Autumn Womack, Alexander Weheliye, Sylvia Wynter, and others.

FGSS355 Social Movements Lab

What can we learn from social justice activists about the economic, political, and environmental struggles facing us today, including mass incarceration, immigration, economic precarity, and the violence of the state? Where are the critical sites of queer, trans, left, feminist, black, indigenous, disability, and environmental struggle? How do these movements converge, and where do they diverge? This participatory, interdisciplinary research seminar enables you to embark on an independent, semester-long research project on the social movement or activism of your choice. We'll start with some foundational reading

on multidisciplinary social movement research; archival, ethnographic, and participatory methodologies; and histories of social justice struggles in the U.S. The remainder and majority of the seminar is laboratory style, taking shape around your particular projects. Each week, we will collaboratively analyze one or two projects, mapping out and comparing methods, goals, visions, struggles, and contexts of the movements under study. Our goal is to understand a range of social justice activism in their economic, political, and historical context, with an eye toward integrating activist scholarship and social change. The activism you research can be contemporary or historical; local, national, or global; and can take any shape: direct action, community organizing, activist philanthropy, art as activism, etc. You do not need previous experience or activist contacts for this course—just passion and the desire to learn collaboratively!

FGSS357 Sex and Gender: From Synapse to Society

From movies like *Think Like a Man* to songs like "God Made Girls," from federal policies to gender reveal parties, much of our experience is defined by an ideology of gender dichotomy and an endorsement of fundamental sex differences in behavior. But does science agree? The field of neuroscience is bursting with research that both supports and questions inherent differences in the brains and behavior of men and women. In this course we will be taking an open and critical look at this scientific literature. We will begin by clarifying what it means, biologically, to be male/female, determine the limits to these definitions, and evaluate how these biological elements (genes/hormones/anatomy) interact with our environment and society to influence our behavior and gender identity. Additionally, we will evaluate nonhuman animal and human data regarding sex differences in behaviors (e.g., aggression, verbal communication) and neuropathological states (e.g., addiction, autism spectrum disorder). Student evaluation will include effortful participation, biweekly concept checkpoints, a final paper/presentation, and weekly editorials.

FGSS360 Special Topics: Writing Lives

In this course, students will read profiles, biographies, and theories of biography, texts that focus on the stakes of writing the lives of women, people of color, people with disabilities, and queer subjects. As we analyze these attempts to capture a life, to define the problems of this form, and to expand its possibilities, students will work on their own biographical writing. Throughout the semester, we will ask: Whose lives get written, and by whom? What constitutes evidence of a life, according to whom—and what gets left out? What kinds of research are necessary? How does a writer's relationship to her subject inform such a portrait, and what are the ethics of that relationship?

FGSS361 Queer & Trans Erotic Archives

Is it possible to capture and archive ephemeral, flickering pleasures? This course addresses this question by problematizing the relationship between embodied pleasures and affective memories on the one hand and historical analyses on the other. Based on Derrida's critique of archives' selective preservation mechanisms

and reification of normative narratives, queer studies scholars have tried to create their own "counter-archives," often by means of an alternative reading of conventional archives. First, participants will discuss the ethics of reenactments and appropriations of archived desires, analyzing specific case studies that will be an entry point into broader issues related to the scholar's involvement in the voyeurism of the archive. Second, participants will discuss how a focus on queer cultures leads to a rethinking of what constitutes archival material, expanding this definition to include erotica and porn, feelings, ephemera, performances, and mass media. Course readings will also reveal the artificiality of the established boundaries between high and low culture, between authoritative knowledge and experiments with bodily pleasures. The course interrogates pornography's potential as a historical source that reveals non-normative fantasies. Participants will discuss the relationship between sexual fantasy and social reality, between representations of idealized boundless pleasure, and historical contexts of stigmatization, pathologization, and institutional violence. This will lead to debates on archival sexual activism and minoritized bodies in the archive, in order to fully grasp the contraposition between over-determination and queer utopianism.

FGSS362 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of reparation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and reparation?

FGSS363 Body Politics: Desire, Sexualities, and Gender, Past and Present

Sexuality as a category to define, construct, and control the "self" has been seen as a product of the 18th and 19th c. This course turns to ancient Greek society to look at body politics before sexuality and to examine the different ways in which sex and gender are experienced and constructed. We will approach sex and gender roles as organizing principles of private and public life. Using literary, scientific, historical, legal, and philosophical sources as well as material evidence, we will address issues including the creation of woman, conceptions of the male and female body, the legal status of men and women; what constitutes acceptable sexual practices and for whom (e.g., heterosexual relationships, homoeroticism, prostitution, adultery); and ideas regarding desire, self-control, masculinity and femininity, and their cultivation in social and political contexts. How ancient approaches to gender and sexuality are in dialogue or have informed recent debates will be a question throughout the course by looking at theoretical approaches and contemporary movements and debates. We will end by looking at how ideas about sexuality in classical antiquity were used in *Romer v. Evans*, otherwise known as the 1993 Colorado Gay Rights Case. For CLST Major requirements, this course counts toward the concentrations of Literature and Performance and History, Politics, and Social Justice.

This course focuses on questions of "queering" dance as a historical, cultural, social, and political enterprise. Focusing on both historical and postmodern dance contexts, the course explores key issues around gender and identity, with special reference to the concepts of performativity, impersonation, sexuality, and transformation. The course places the notion of "flows of gender and transformation" at its center, and examines historical, social, and aesthetic shifts in these ideas over the past 50 years. It draws on case studies ranging from female/male dance traditions of impersonation in India, China, Japan, and Indonesia, to postmodern shifts of "classical" dance (such as the all-male cast of Matthew Bourne's "Swan Lake") and more popular forms such as voguing and "RuPaul's Drag Race."

This course surveys the dynamism and scope of contemporary feminist/womanist drama written by black women playwrights of the African Diaspora. Reading select plays from Africa, Canada, the Caribbean, England, and the United States, alongside theory and criticism, we examine the impact of race, gender, identity, and sexuality politics on black feminist/womanist theater. Throughout our study of these dramatic texts, their performances, and their subsequent critiques, we are equally invested in the bridges and the gaps, the audibles and the silences, and the overlaps and the divides, as they are formed. Significantly, this analytic undertaking involves a simultaneous critique of the role of the playwright, the spectator, and the critic of black feminist/womanist theater. At all times, consideration is given to the ways in which these playwrights collectively use theater as a platform to explore black and female and diasporic subjectivities across regional, national, and, at times, linguistic differences.

Offering: **Crosslisting**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-ENGL**Identical With: **ENGL371, THEA371, AFAM371**Prereq: **None****FGSS374 Abolition and Social Praxis**

This course will examine some of the analyses of society, social power, and societal reform advanced and practiced by diverse activists who organize their work around the theme of abolition. Inspired by activist efforts to eliminate prisons and policing, abolition is here understood as an attempt to link a worldview that advocates for the disassembly of existing, oppressive social structures combined with efforts to generate new, more liberatory forms of social relationship in the here and now. As a form of activism, abolition thus brings utopian dreams to bear upon concrete practice, seeking to generate new structures of agency and pointing toward ways in which liberal notions of consent occlude deep forms of structural power and implicit constraint. Students will be asked to take on an activist project as part of the course.

Offering: **Crosslisting**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-CHUM**Identical With: **CHUM374, SOC280**Prereq: **None****FGSS379 Gendered Belonging and the Politics of Inclusion**

If inclusion and belonging are tied to recognition, how do marginalized subjects establish their legibility and "right to appear"? This course addresses social exclusions around gender nonconformity and examines legal, activist, and artistic practices that contest them. Using several contemporary case studies, including fights over the sex segregation of bathrooms, controversies over the diagnosis and treatment of trans* youth, and the movements defending the lives of trans* women of color and advocating for trans* people in immigrant detention, the course will address how U.S.-based social contests over sex/gender are implicated in hierarchies of race, citizenship, and dis/ability, and situated in (neo)colonialism, racial capitalism, and geopolitics in complex ways.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-FGSS**Prereq: **None****FGSS381 Afro-pessimism, Gender, and Performance**

This class engages African and African diaspora critical thought and aesthetic production (dance, visual art, performance art, installation, film) to think about colonial dispossession, objectification, and reparation. We will address topics such as the repatriation of artifacts and other ephemera taken from Europe's colonies that are housed in the archives of European cultural institutions. The objects in question have been described as either artwork, artifacts, or anthropological fetish objects (depending on which field one engages with). How can we rethink our understanding of objecthood as irreducible to "inanimate" things but as also signaling a regime of imperial domination and enslavement that violently turned African personality into a status of objecthood? What does it mean to think about the object (broadly defined) in relation to loss and the (im)possibilities of repatriation and reparation? How does the Black performer's body's disappearance/remains endow the Western art institution? The course will encourage students to think about repatriation as well as certain losses that can neither be repaired/repatriated nor evidenced in conventional ways. In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, as well as the promises and ends of reparation? The assigned readings offer ways to think about colonial archives not merely as neutral repositories of past events, but also as performances; as enactments of power, aesthetic value judgment, and hierarchical arrangements of knowledge production. The theoretical, art historical, psychoanalytic, philosophical, and creative reading materials engage contemporary scholars', artists', and activists' response to both the recorded and ephemeral archives of Black dispossession. Students are encouraged to engage in events and workshops outside of the classroom, such as visiting library archives, attending performances, gallery exhibits, and film screenings.

Race, Capital, and Sexual Consent will focus on the early 19th century through to the Progressive Era. It will explore racialized sexual markets, from what Black feminist historian Adrienne Davis has called "The Sexual Economy of American Slavery," to the Victorian-era marriage market, to continuing and emerging sex work and pleasure economies. This course will focus on areas of overlap, tension, and reinforcement within and between these racialized sexual markets. Fundamental to this class will be the question of if/how sexual consent is configured within these markets, and what this means in the broader evolution of American liberalism in the 19th- and early 20th-century U.S.

FGSS387 Feminist Dispute Resolution

Is feminist negotiation possible? What would egalitarian alternative dispute resolution (ADR) entail? In the first part of this course, we will study and practice traditional dispute resolution techniques. Each student will participate in two-person and multiparty mediations, arbitrations, and quasi-judicial presentations. In the second part of the course, we will study and practice feminist dispute resolution techniques, including "invitational rhetoric." Students will then draw upon the course readings and in-class negotiation exercises to answer questions such as: Should we match dispute resolution strategies to parties' personalities or desired outcomes? Whose conception of fairness and social good should guide our negotiation practices? Are dispute resolution techniques gendered? By the end of the course, students will be more confident negotiators. They will also be able to discuss, debate, and recommend strategies for resolving conflicts and contributing to social justice. Students will be assessed based upon: their preparation for negotiations; their participation in negotiations; their performance on a written mid-term examination; and their performance on a final oral examination addressing the question: "Is feminist negotiation possible?"

FGSS393 The Politics of Authenticity

Is there such a thing as an authentic self? If so, can politics help us realize it? Fifty years ago, authenticity was a thriving political ideal, invoked by radical feminists, black liberation movements, gay and lesbian activists, Marxists and

conservatives alike. Over the past four decades, however, political appeals to authenticity have come under heavy scrutiny. Some claim that appeals to authenticity inadvertently marginalized individuals who are not "true women," "real blacks," or "actual natives." Others argue that the idea of an authentic culture can be deployed to constrain individual members of cultural minorities. Where does authenticity reside--in gender, sexuality, experience, or culture--and how do we know which one is "real"? Is it worth faulting politicians for hypocrisy if there is no such thing as a "true self"? What becomes of certain emancipatory or justice claims--such as those coming from trans-politics or multiculturalism debates--without a notion of authenticity? In this course, we will discuss what authenticity is or might be, how it has been conceptualized in political theory and contemporary social movements, and why it has become an object of widespread suspicion and continuing appeal.

FGSS395 Afterparty: End Times, Pleasure, and Clean Up

What do we do in end times, or "after the party" as Joshua Chambers Letson would have it? Already exhausted, with streamers and confetti scattered on the ground, what happens after the party is over? How do we pick up the pieces and move on? Can narratives of perpetual end times create new beginnings and new horizons? Beginning at the end, this course will engage conversations in science fiction, Black studies, art and performance, Indigenous studies, queer of color critique, and environmental justice to explore the work of endings and beginnings, of hope and hopelessness, of destruction and desire. We will pay particular attention to questions of futurity and pleasure as they are manifest in the aesthetic. Writers and artists to be discussed will include N.K. Jemisin, Sylvia Winter, Ursula Le Guin, Katherine McKittrick, Ohan Breiding, Franny Choi, Saeed Jones, Calvin Warren, Joshua Chambers Letson, Dana Luciano, David Wojnarowicz, adrienne maree brown, Autumn Brown, José Esteban Muñoz, Nick Estes, Dionne Brand, Samuel Delany, Tourmaline, Allison Akootchook Warden (AKU MATU), Jordan Peele, and M.E. O'Brien & Eman Abdelhadi. Students will be invited to craft both creative and theoretical responses to class assignments.

FGSS397 Difficult Women: Post/Feminism in Television Comedies and Dramedies

Although postwar family sitcoms represented women as homemakers, one of the first and most popular sitcom wives also articulated discontent with domestic femininity. Lucy Ricardo became the prototype of the "unruly woman," a figure with feminist potential whose desires exceed and disrupt dominant gender norms. As those norms have shifted, so have TV's unruly women. Second-wave feminism, anticipated in *I Love Lucy*, was incorporated into a 1970s cycle of comedies centered on single working women whose career aspirations were rewarded. Over the following decades, a postfeminist sensibility dominated television comedies and dramas and became central to a gendered neoliberalism in which energetic individuals "empower" themselves. In recent years, a new type of female protagonist has emerged. Alongside the can-do optimism of single-women comedies from *The Mary Tyler Moore Show* to *Sex and the City* to *30 Rock* and *Parks and Rec*, a stream of comedies and dramedies, made largely by and for women, have depicted a variety of flawed, difficult, unruly women coming of age under conditions of socioeconomic precarity, whose less focused energies seem to articulate a more uncertain, downbeat, post-recessional mood. In this course we will situate the latter cycle in relation to both the longer history

of televisual representations of women and to the current state of feminist politics. Among the shows we will look at are: I Love Lucy, Bewitched, The Mary Tyler Moore Show, Sex and the City, Ally McBeal, Girlfriends, The Mindy Project, 30 Rock, Parks and Rec, Girls, Insecure, Broad City, Better Things, Two Broke Girls, New Girl, Crazy Ex-Girlfriend, Jane the Virgin, Unreal, Abbott Elementary, Fleabag, Dear White People, and Somebody Somewhere.

FGSS405 Senior Seminar

This course is a required seminar for senior FGSS majors. Structured as a workshop, the goal of this course is to develop a collaborative intellectual environment for majors to work through the theoretical, methodological, and practical concerns connected with their individual projects. Seminar topics to be examined will be based on students' research projects, and participants are expected to engage critically, yet generously, with the projects of their peers. We begin by addressing feminist methodologies, including questions of praxis, representation, and theory. Participants are expected to lead discussions on readings relating to their own projects, submit written work on their senior research in stages (project proposal, annotated bibliography, drafts), and do class presentations.

FILM STUDIES (FILM)

FILM104 Introduction to Collaborative Documentary Filmmaking

In this immersive, time-intensive, hands-on introduction to the documentary film process, students will create compelling stories where real people are the protagonists and narratives are informed by real life. Through close study and analysis of feature-length and short documentaries, plus active research, writing, producing, directing, shooting, sound recording, editing, and re-editing, students work in three-person crews to rigorously explore the power and possibilities of nonfiction storytelling and record, engage with, and understand our present moment. Each fall, the course has a theme around which film screenings and student projects are organized; for 2024, our focus will be food, farming, and sustainability. Students should expect to spend up to 10 hours of work per week outside the class time shooting, editing, and working collaboratively with their

classmates, including multiple weekends. Film production experience is not required. Lessons include how to craft a compelling nonfiction narrative based on interviews and research, how to build partnerships with the protagonists of the stories you want to tell, how to shoot on-camera interviews and observational footage, how to record and edit sound, and how to edit using Adobe Premiere. Students will present works in progress in all phases of the creative process and actively participate in constructive critical discussions of one another's work. For more information about the course please visit: <https://collaborativedocumentary.wescreates.wesleyan.edu/>

PLEASE NOTE: This course has no prerequisites, is open to non-majors/minors and is not a FILM major/minor elective.

FILM105 Writing the Moving Image: Crafting Visual Stories

Designed for first-year students, this is an introduction to some of the core fundamentals of visual storytelling through an exploration of coming-of-age films. How do characters' emotional worlds guide their actions? How are characters informed by and created by the places they inhabit? How is a scene the building block--as well as a microcosm--for a film as a whole? Through close study and analysis of a wide variety of short and feature length coming-of-age films, weekly writing assignments, and in-class writing workshop sessions, students will explore the power and possibilities of story craft and learn how to write short film loglines, synopses, outlines, and screenplays. Students should expect to spend several hours per week outside of class reading, writing, and watching films. Over the course of the semester students will present works in progress, participate in constructive critical discussions, offer weekly editorial feedback to their peers, and develop a portfolio of original writing.

FILM158 Form, Story, and Genre: An Introduction to Wesleyan Film Studies

What does it mean to "study film" at Wesleyan? Get a taste of the College of Film's approach to visual storytelling in this online course featuring genres and filmmakers from across our curriculum. We will consider how film guides viewers on an emotional journey through image and sound, with classes devoted to melodrama, comedy, action, horror, documentary, film noir, and the movie musical. In all cases, we explore the moment-by-moment experience of the viewer as guided by specific cinematic choices of editing, cinematography, staging, performance, sound, alignment, point-of-view, and placement of the audience. Instead of interpreting what films mean, we will seek to understand how they capture our attention, how they absorb us into stories, and how they make us feel. Guest lecturers will include members of the CFILM faculty. Each week students will watch one or two feature films on their own and gather for two lecture/discussions. This is a for-credit class (pass/fail) with grade determined by participation and two quizzes.

FILM202 Difficult Women: Post/Feminism in Television Comedies and Dramedies

Although postwar family sitcoms represented women as homemakers, one of the first and most popular sitcom wives also articulated discontent with domestic femininity. Lucy Ricardo became the prototype of the "unruly woman," a figure with feminist potential whose desires exceed and disrupt dominant gender norms. As those norms have shifted, so have TV's unruly women. Second-wave feminism, anticipated in *I Love Lucy*, was incorporated into a 1970s cycle of comedies centered on single working women whose career aspirations were rewarded. Over the following decades, a postfeminist sensibility dominated television comedies and dramas and became central to a gendered neoliberalism in which energetic individuals "empower" themselves. In recent years, a new type of female protagonist has emerged. Alongside the can-do optimism of single-women comedies from *The Mary Tyler Moore Show* to *Sex and the City* to *30 Rock* and *Parks and Rec*, a stream of comedies and dramedies, made largely by and for women, have depicted a variety of flawed, difficult, unruly women coming of age under conditions of socioeconomic precarity, whose less focused energies seem to articulate a more uncertain, downbeat, post-recessional mood. In this course we will situate the latter cycle in relation to both the longer history of televisual representations of women and to the current state of feminist politics. Among the shows we will look at are: *I Love Lucy*, *Bewitched*, *The Mary Tyler Moore Show*, *Sex and the City*, *Ally McBeal*, *Girlfriends*, *The Mindy Project*, *30 Rock*, *Parks and Rec*, *Girls*, *Insecure*, *Broad City*, *Better Things*, *Two Broke Girls*, *New Girl*, *Crazy Ex-Girlfriend*, *Jane the Virgin*, *Unreal*, *Abbott Elementary*, *Fleabag*, *Dear White People*, and *Somebody Somewhere*.

FILM203 Hollywood and Big Data

Taught by a media research executive with a long industry experience this course is designed to provide students with an introduction and understanding of how the media industry is using data to make decisions that shape the art landscape of our times. Data around consumer behavior--what, how and why people are watching--has exploded recently and is extensively used in making decisions about what TV shows and movies to produce, how to promote them and how to make them. The course will explore how the media industry quantifies different kinds of content, the ways in which people watch and pay for that content, and how value is attributed across the media landscape. Students will be introduced to essential "media metrics" (e.g. viewership, box office, engagement) and learn to evaluate different data sets for their integrity and representative insights. Visiting media executives will discuss how data informs their jobs ("evidence-based decision making"). Assignments will include written briefs based on different data sets and a final project presentation highlighting skills in analyzing and presenting insights extracted from media research data. By the end of this course, students will be familiar with key decision-making tools in the media industry and be able to analyze and understand the impact on media output

FILM210 The Foundations of Cinema

This course offers a seminar-style, comparative introduction to film form and aesthetics through an exploration of films from around the world spanning a range of eras. Students will learn how to describe and analyze the key formal elements of a film, including plot structure, narration, cinematography, editing, sound, and mise-en-scène (sets and props, costumes and makeup, lighting, and performance). Emphasis will be placed on discerning the functions of formal elements and how they shape the viewing experience.

Classes will integrate lecture, discussion, and creative exercises designed to provide students with the opportunity to both analyze and experiment with the formal elements of film. The course will also highlight Shanghai's pivotal role in China's rich film history, including a field trip to the Shanghai Film Museum. The material in this course will enable students to expand their understanding of global film history; assess the unique visions of individual filmmakers; develop their descriptive and analytical skills; and practice fundamental filmmaking techniques.

FILM230 Introduction to Korean Cinema

During the last few decades South Korean cinema has taken center stage in world cinema with the phenomenal success of its film industry and critical acclaim in the global context. However, Korea has boasted a thriving film culture and aesthetics since the "golden age" of the 1950s, of which renowned contemporary directors such as Bong Joon-ho and Park Chan-wook have claimed they are the inheritors. This course introduces Korean cinema from its beginnings in the colonial era to its recent achievements. While learning the concepts and theories of film studies as well as the cultural and political contexts to which Korean film culture has responded, students will explore films by key directors that constitute the crucial "moments" of South Korean cinema. We will examine the main topics in Korean cinema, including colonial production, the liberation and Western influence, nation and nationalism, modernity and women, gender politics, realist and modernist cinema, popular cinema and cultural depression, the Korean New Wave, democratization and political cinema, the Korean blockbuster, the questions of "Koreanness," and the "Korean Wave" in the global film market.

The course also seeks to establish a balance between understanding Korean cinema as both a reservoir of historical memory and as an example of evolving world cinema. Through engagement with methodological issues from film studies in each week's readings, including the question of archives, national cinema discourse, feminist film theory, auteurism, and genre studies, students in this course will learn to analyze Korean filmic texts not only as a way to understand the particularity of Korean cinema but also as a frontier of cinematic language in the broader history of film.

FILM231 Wartime Film Culture in the Japanese Empire

Just as in many other countries, cinema, within a short time of its emergence, became the most popular entertainment in modern Japan. Mindful of this, the Japanese government tried to turn the country's film industry into an arm of its propaganda machine to support its imperial program, especially the military component. This began with Japan's invasion of the Chinese continent in 1931 and lasted through the end of World War II in 1945. How did Japan's private film studios respond to such governmental efforts? How did wartime Japanese cinema manage to strike a balance between being entertainment and political texts? What are the characteristics of Imperial Japan's wartime film culture, and how are they different from the counterparts in other countries? Was the campaign to support war via movie productions in Japan successful, in terms of providing seamless propagandistic messages? What kind of legacy has the wartime film culture left in contemporary Japan and East Asia?

In order to answer these questions, this course explores film culture of Imperial Japan and its territories during the wartime era, spanning roughly from the early 1930s through 1945. We will watch wartime films, and at the same time examine the ways in which the film culture coexisted along with other forms of visual propaganda practice and political discourses. While probing how the films reflect the "virtues" of wartime conservatism, patriotism, perseverance, and self-control, this course will explore topics that include the propaganda culture of wartime Japan as a whole, Nazi propaganda and Japan, cultural films, monumental cinema, films featuring Japan-China or Japan-Taiwan romances, children-centered films, "kokumin eiga," films of volunteers and Japanese Spiritism, "Military Mothers" and gender, and the defeatist aesthetics and cracks in Imperial Japanese cinema. While we will for the most part watch and discuss films directed by the Japanese of mainland Japan, including such prominent directors as Mizoguchi Kenji and Kurosawa Akira, the films produced in the Japanese colonies of Korea, Taiwan, and Manchuria--whether independent productions or collaborative efforts--will also be examined. Film production in colonial Korea, in particular, was quite vibrant, relative to the cinematic output of Taiwan and Manchuria. We will observe how the films made in Japan's colonies joined the empire-wide filmic war-mobilization campaign, presenting their own justifications for war cooperation. Ultimately, this course will ask what kind of relationship Japanese cinema has had with the state and Japanese nationalism during the mid-century of Japan's tumultuous modern history.

FILM232 Minority Voices in Japanese Film and Literature

Although there is no such thing as a "homogeneous nation" in the world, Japan often has been falsely regarded as a country of a singular ethnicity and civilization. Is Japan a nation-state of one race and unified culture? Who are the voices in Japan defying this kind of Japanese myth? How do they claim their rights and agencies as members of Japanese society? What peoples have been discriminated against by other communities, despite their indigenous Japanese roots? What kind of relationship do these internal "others" have with the Japanese state?

This course explores Japan's domestic minorities as depicted in Japanese literature and film, whose stories and images have been largely untold and invisible in the mainstream culture. Among the various minority groups in Japan,

we will pay special attention to four groups: (1) the country's culturally defined minority group since the feudal era, burakumin (the untouchables); (2) the country's oldest and biggest foreign ethnic group, Koreans ("zainichi"), and other Asians; (3) the people of Japan's internal colony, Okinawa; and (4) Japan's medical outcasts, the victims of atomic disasters in Hiroshima and Fukushima. Students will deal with materials about the specified groups produced by prominent figures in Japanese literary and cinema history. At the same time, students will examine materials created by the otherized subjects themselves to probe how marginalized beings represent themselves in ways that are different from the dominant media portrayals.

FILM234 Introduction to Russian and Soviet Cinema (CLAC.50)

This course provides an introduction to the history and poetics of Soviet and Russian cinema--in Russian. From the avant-garde experimentation of Lev Kuleshov, Sergei Eisenstein, and Dziga Vertov to the masterpieces of Andrei Tarkovsky, Sergei Parajanov, and Kira Muratova, the course will explore the development of Russian film as artistic medium and as national tradition. The discussion and comparative analyses of different forms and genres, including silent cinema, propaganda films, blockbusters, and auteur cinema, will be situated within the cultural, political, and aesthetic contexts of the Soviet Union and contemporary Russia. Students will learn the key works, names, events, and concepts of the Russian cinematic tradition. They will develop skills in analyzing and interpreting films and will acquire the basic critical terminology of film studies in Russian and English. They will also learn how film form and aesthetics are conditioned by technology, ideology, economics, theory, tradition, and culture. The overarching goal is to see how cinema in Russia and the Soviet Union has created and contested narratives of history and identity, how cinema has served the interests of the state, and how it has defied them. This class consists of lectures and focused discussion of films. It will be taught in Russian and is open to students who have successfully completed RUSS202, as well as to heritage and native speakers. Students can expect to practice speaking Russian and honing their writing skills. Credit: 0.5

FILM290 Global Film Melodrama

Often patronizingly dismissed as 'women's weepies', this course will examine the proliferation and transformation of melodrama film within various national, subnational, postcolonial, queer, and global contexts. The course will focus on the specific language and conventions of melodrama. We will watch a wide range of films from India, China, Japan, South Korea, Hong Kong, Hungary, Iran, Egypt, Kenya, Spain, Venezuela, Cuba, Argentina, and Mexico among various global film contexts. Importantly, this course will ask, what are the stakes and implications of 'Global' in "Global Film Melodrama"? Moving away from an additive model that often present global film histories as an addendum to the "mainstream" cinemas, the focus will instead be on the emergence and significance of melodrama, and its specific idioms within transnational contexts. The course is open to all sophomores including non-film minors and non-film majors at Wesleyan. No previous experience in Film is required.

FILM302 Not Just Neorealism: Italian Cinema, Its History and Politics

This introductory course on Italian cinema, taught in English, investigates major silent and sound films and contextualizes them, their production, and the subjects they treat within a historical, cultural, and political framework.

We will trace the intersection among politics, ideology, and Italian cinema, from its Golden Age of silents through fascism and neorealism (as well as its contested legacy), from a consideration of the "exquisite" examples of the auteur directors like Fellini and Sorrentino to the ways these and other directors enter into dialogue with genre cinema (the giallo, spaghetti westerns, melodrama, etc.), and beyond. Featured filmmakers will be drawn from this list: Pastrone, Rossellini, De Sica, Fellini, Bertolucci, Antonioni, Wertmüller, Cavani, Pasolini, the Taviani Brothers, Leone, Sorrentino, Rohrwacher, Nicchiarelli, Crialese, and others. Additional material includes readings in film theory and criticism, Italian history, literary sources, screenplays, and interviews. For interested students with advanced competency in Italian, there will be a .50 credit (CLAC) discussion section, ITAL245/CGST245, at a time to be determined but very likely after our second class of the week. Italian and Romance Studies Majors, please see additional comments below.

FILM305 Sophomore Colloquium for Declaring Majors

This course is designed for sophomores who have completed the CFILM gateway courses and wish to deepen their exploration of film art. The curriculum aims to draw connections across different eras, origins, and story forms by linking films in comparative units. For example: we might compare a documentary to a heist film, a melodrama to a horror movie, a musical to a superhero movie, a studio-era Western to an Italian independent film, and so on.

Potential units include:

- forms of adaptation (silent to sound, stage to screen)

- non-linear narratives

- internal vs. external conflicts

- challenges to audience alignment around "difficult" characters

- conflicts based around migration, community, family

We're searching for different cinematic solutions to shared questions, or different applications of common cinematic tools. Through close viewing of films from many eras and origins, in-class discussions, and analytical papers, students will strengthen their engagement with cinema in preparation for continued study in film.

Hopefully, this course also encourages students to find new favorite movies in unexpected places, to discover topics that draw them to further study in future film electives, and to better know their sophomore classmates via a collaborative, small class setting.

FILM307 Cinematic Storytelling: Styles, Tools, and Journeys

This history and analysis course explores how fundamental changes in film technology affected cinematic storytelling. We will consider the transition to sound, to color, to widescreen, and more recent "digital revolutions." Each change in technology brought new opportunities and challenges, but the filmmaker's basic task remained the emotional engagement of the viewer through visual means. We will survey major directors and genres from across history and point forward to contemporary cinema. Our aim is to illuminate popular cinema as the intersection of business, technology, and art. Through film history, we will learn about the craft of filmmaking and how tools shape art.

FILM308 The "Hollywood" Musical

The musical genre, born in the Hollywood studio system and taken up by filmmakers around the world, has been a wellspring of cinematic invention for nearly a century. We will trace the history of the form and examine specific

approaches to the genre (Busby Berkeley, Astaire/Rogers, Freed Unit, etc.). Through the musical, we will consider: the relationship of emotion to form in cinema; how filmmakers control audience perception of the cinematic world; the interplay between story and spectacle; popular film's personal and communal address; the potential for abstract experimentation in studio films; and the complexity and value of entertainment. We will study the contributions of individual stars, producers, directors, composers, and art directors and consider how different filmmakers define the genre. Songs will get stuck in your head.

FILM316 Cinema and Moviegoing in American Chinatowns: Digital Tools and Storytelling

In the latter decades of the twentieth century, movie theaters dedicated to the screening of Chinese-language cinema dotted Chinatowns and Chinese ethnoburbs across the United States. What historical and economic forces explain the development of these unique exhibition sites, and how can we understand their social and cultural impacts? This seminar explores the production, distribution, and exhibition of Chinese-language films for overseas audiences and the moviegoing cultures that emerged around cinemas in Chinatowns and Chinese ethnoburbs. Units will explore Chinese immigration to North America, the establishment of Chinatowns, and early cinema spaces; Chinese immigrant and American-born Chinese filmmaking pioneers, the growth of "Chinese Hollywood," and challenges to Hollywood's dominant representations of Chinese characters and communities; the significance of diaspora audiences for Hong Kong movie studios and the creation of affiliated film distribution chains in the US; the expansion of Chinese-language cinemas in the 1960s and 1970s; the Mandarin and Cantonese films seen by overseas audiences and their range of appeals; and the social and cultural functions served by Chinese-language movie theaters. Students will learn qualitative and quantitative digital tools for film history research and use them to analyze original data sets, visualize research results, and create interactive GIS maps, storymaps, digital timelines, databases, web pages, oral histories, and other digital work related to cinema and moviegoing in American Chinatowns.

FILM318 Awesome Cinema: Religion, Art, and the Unrepresentable

How does one represent the unrepresentable? In particular, how might a medium like cinema, founded on recording the visible world, move us to sense something beyond human experience? Various artistic, religious, and religiously artistic traditions use mystery, horror, surprise, disgust, and pleasure to evoke the uncanny, the majestic, the terrifying, and even the sublime in us. This class examines how filmmakers prompt audiences to feel awe (which might be awesome, awful, or both) and how that relates to religious engagement with the non-rational. Noting parallels in painting, ritual, architecture, and other means of expression, we consider how art structures emotion, perception, and cognition to exceed representation of the known. This class will examine how

aliens, avatars, black holes, death, deities, demons, saints, saviors, superheroes, and nature have been conduits to that which appears to escape reason.

FILM323 Film and Anthropology

Film & Anthropology is an exploration of the cross-pollinating relationship between ethnographic and filmmaking methods and styles. This is, in part, an effort to understand the contributions of both to the observed and documented experience of cultural life. We will watch films weekly and discuss them, as well as respond to them individually in weekly critical précis. We will, in the course of these viewings, come to some consensus as to what we mean by

ethnographic and cinematic elements. The films themselves will cross genre boundaries, running the gamut from "traditional" ethnographic films to various forms of documentary and experimental film that in some way address or explore what I consider ethnographic elements. We will cover canonical early ethnographic work (Gardner, Asch, Marshall), feminist experimental interventions in ethnographic film (Minh-Ha, Varda, Deren), and contemporary work that experiments with ethnographic elements, and we will synthesize various genres into new forms of long-form documentary, ethnofiction, and trance film (Marker, Oppenheimer, Sensory Ethnography Lab, Gonzalez, Rosi, Minervini, Kuchar). We will observe the progression of style through the 20th century into the 21st, with the various intellectual threads of post-structuralism, creating modifications of centering the experience and voice of the oppressed, narrative reflexivity/abstraction/unreliability, formal experimental editing styles, the decolonial method as filmmaking practice, and the historicization and interrogation of anthropology as a fraught discipline.

FILM324 Visual Storytelling: The History and Art of Hollywood's Master Storytellers

This course studies distinctive auteurs including: Frank Borzage, Howard Hawks, Dorothy Arzner, John Ford, and Vincente Minnelli. Each director uses popular genres to build unique cinematic worlds. Together, their films form the bedrock of a visual language for telling stories, engaging emotion, and shaping perception. Studying some of the studio era's greatest filmmakers reveals the possibilities of narrative cinema and provides models for new creative work. In addition to these auteurs, we consider how a broad range of subsequent filmmakers have developed and renewed their techniques. This class makes the craft of Hollywood visible so that students gain access to the tools of cinematic storytelling. The course includes analytical and creative projects.

FILM326 At Home in the World: Transnational Women's Cinema

What does women's cinema signify? Is it cinema created exclusively by women, for women? Is it cinema that puts women at its center? Do these narratives privilege one type of woman over another? How do we understand and investigate these questions within non-Western and global contexts?

This course delves into the multiple subjectivities, sociocultural geographies, media practices, and politics that are folded into the category called "women's cinema." Beginning with an exploration of the 1970s "cine-feminism" that focused on women's filmmaking and political activism, we will expand our discussion to transnational contexts and explore how feminist politics advocated by female and male filmmakers influence an understanding of women-oriented issues, forms, and values in circulation. We will examine women's films produced within national and transnational geo-cultural spaces and pose questions about national, exilic, or postcolonial auteur subjectivities. We will analyze the films' aesthetics, institutional contexts, and global circulations and situate them within the frameworks of feminist theory, authorship, postcolonial studies and transnational feminist scholarship. We will study women's cinema from South Asia, North Africa, the Middle East, Europe, and the Americas. The course screenings will include films such as "Fire," "Water," "Like Water for Chocolate," "Bhaji on the Beach," and "Silent Waters/Khamosh Pani."

FILM328 Moving Images Beyond the West: An introduction to Global Media

The globalization of media has become a key issue of debate around the world. Yet, many discussions about globalization tend to obscure the often complex and contradictory relationships among global, national and local forces. This course critically examines the role that film, television, video games, and other media play in shaping our sense of global, national, and local cultures and identities. Focusing on Indian, Chinese, South Korean, African and other media producers, it examines how diverse audiences use global media to negotiate with issues of cultural identity in everyday life.

FILM329 Bollywood and Beyond: Introduction to Indian Cinema

India is one of the world's largest film-producing nations, releasing over 900 films every year. The Indian film industry remains an exceptional industry, holding its own against Hollywood's expansion into markets like India. This course will provide a historical and thematic introduction to Indian cinema commonly known as "Bollywood." We will examine the codes and conventions that are unique to Indian films as we attend to the ways in which Indian cinema addresses the socio-political issues of caste, class, religion, and gender. The course is open to all sophomores including non-film majors and non-film minors at Wesleyan. No previous experience in film is required.

FILM330 The Art and Business of Contemporary Film

Taught by a leading professional in independent film distribution, acquisition, and marketing, this course explores the contemporary cinema marketplace and its relationship to filmmaking. We will consider the process of defining and finding the potential audience for independent and studio films. The class mixes case studies of production, marketing, and reception with film screenings and analysis. Students will hone their skills of practical analysis: articulating a film's essential appeal, distilling its story, and assessing its artistic and commercial merits. Visiting producers and filmmakers will discuss their work in light of its intended audience and reception. Assignments include written briefs on recent releases and their market profiles, analyses of exemplary independent American films, and a collaborative case-study presentation. This is a master class in the film business taught from the perspective of effective cinematic storytelling.

FILM331 Video Games as/and the Moving Image: Art, Aesthetics, and Design

Video games are a mess. As a relatively new medium available on a range of platforms and in contexts ranging from the living room to the line for the bathroom, video games make new but confusing contributions to the meaning and possibilities of the moving image. We will work to understand what games are, what they can do, and how successful games do what they do best. Students will complete game design exercises, create rapid prototypes, playtest their

games, and iteratively improve their games with play and their players in mind. They will complete analyses of games and game design projects both alone and in groups and participate in studio-style critiques of one another's work. Experience with computer programming is helpful but not essential.

FILM332 Women Make Movies: Histories of Women's Contributions to World Cinema

This course is not only about the cinema BY women but also work of women IN cinema. The course will engage critically with a variety of roles that women perform--from directors, writers, actors, film editors, critics, producers, costume designers, cinematographers, singers, and more. Attending to global feminist historiography, it will foreground the ways in which women shape the content, style, and development of the movie business globally as they navigate social, political, cultural, and industrial contexts. Addressing film cultures from Asia, Latin America, Iran, Africa, Europe, and the US, the course will expand the western cine-feminist critical tradition and ask: How does an investigation of women's contributions at all levels of filmmaking change our conception of film history?

The course is open to all sophomores including non-film minors and non-film majors at Wesleyan. No previous experience in film is required.

FILM333 Introduction to Russian and Soviet Cinema

This course provides an introduction to the history and poetics of imperial Russian, Soviet, and post-Soviet Russian cinema. From the avant-garde experimentation of Lev Kuleshov, Sergei Eisenstein, and Dziga Vertov to the masterpieces of Andrei Tarkovsky, Sergei Parajanov, and Kira Muratova, the course will explore the development of film from the Soviet and post-Soviet periods as artistic medium and as national tradition. The discussion and comparative analyses of different forms and genres, including silent cinema, propaganda films, blockbusters, and auteur cinema, will be situated within the cultural, political, and aesthetic contexts of the Soviet Union and contemporary Russia, Ukraine, and Armenia.

FILM336 Silent Storytelling

This course examines the development of visual storytelling from the post-nickelodeon cinema's presentational styles to the expressionistic filmic poetry of silent cinema's twilight years. Taught by noted film historian and accompanist Ben Model, it explores how silent-era filmmakers developed creative ways to invoke the audience's imagination as a storytelling component. Major filmmakers include Griffith, Keaton, Pudovkin, Lubitsch, Chaplin, Weber, and Vidor. We will look closely at silent film comedy, melodrama, and action. Our work will be based on close viewing of films and attention to the interaction between image,

music, and the viewer's journey through each film. Films will be screened with live piano accompaniment in class sessions.

FILM341 The Cinema of Horror

This course focuses on the history and development of the Horror film, and examines how that genre has been blended with Science Fiction. We will seek to understand the appeal of Horror. One of our guiding questions will be: "Why do audiences enjoy a genre that, on the surface, seems so unpleasant?" Toward this end, we will take up several distinct theories of how the genre is constructed, defined, and used by producers and viewers. Horror has been a watershed topic for scholars interested in film, and this course gives us the chance to critically engage with important arguments and methodologies in contemporary film studies. The genre has been equally inspiring for filmmakers interested in playing with form to elicit audience reaction. So, we will also be concerned with the aesthetics of horror: how film technique has been developed to terrify viewers.

FILM346 Contemporary East Asian Cinema

This is a seminar on comparative narrative and stylistic analysis that focuses on contemporary films from Hong Kong, Taiwan, China, South Korea, and Japan, regions that have produced some of the most exciting commercial and art cinema in the last thirty years. We will begin by examining the basic narrative and stylistic principles at work in the films, then broaden the scope of our inquiry to compare the aesthetics of individual directors. Our goals are to analyze the narrative and stylistic tendencies of filmmakers while considering their work in a historical, cultural, and industrial context, and to develop our film analysis skills via formal comparison. Films from Bong Joon-ho, Fei Mu, Hong Sang-soo, Hou Hsiao-hsien, Kitano Takeshi, Kore-eda Hirokazu, Jia Zhangke, Jeong Jae-eun, Kon Satoshi, Lee Chang-dong, Mizoguchi Kenji, Ozu Yasujiro, Suo Masayuki, Tian Zhuangzhuang, Johnnie To, Tsai Ming-liang, Tsui Hark, Wai Ka-fai, Wang Xiaoshuai, Wong Kar-wai, Yim Soon-rye, Yoon Ga-eun, Yuen Kuei, and others will be featured.

FILM347 Melodrama and the Woman's Picture

Within film history and criticism, the usage of the term "melodrama" has changed over time, as has the presumed audience for the genre. This course will investigate the various ways in which melodrama and the woman's picture have been understood in the United States and around the world, beginning in the silent period; ranging through the 1930s, '40s, and '50s; and culminating in contemporary cinema. We will pay particular attention to issues of narrative construction and visual style as they illuminate or complicate various analytical approaches to melodrama and speak to gender, sexuality, race, and class. Screenings include films directed by D. W. Griffith, Evgenii Bauer, Oscar Micheaux, John Stahl, Frank Borzage, Naruse Mikio, King Vidor, Wu Yonggong, Douglas Sirk, Vincente Minnelli, Max Ophuls, Mizoguchi Kenji, Kim Ki-young, Rainer Werner Fassbinder, Pedro Almodovar, Ann Hui, Lars von Trier, Farah Khan, and Luca Guadagnino, among others.

FILM348 Postwar American Independent Cinema

What exactly defines an "independent" film or filmmaker? How do independent filmmakers situate themselves in opposition to mainstream filmmaking and/or work in tandem with major studios? How have notions of independence changed over time? This course addresses these and other questions as it examines various models of American independent filmmaking in use from the studio era to the present day. We will explore the methods of production, distribution, and exhibition used by independent filmmakers and their range of reliance on the major studios. In addition, we will consider the aesthetic and cultural relationship between independent films and mainstream filmmaking, focusing in particular on how independents have used film form, narrative, and content to differentiate their product. Screenings will likely include films directed by Ida Lupino, Sam Fuller, Herbert Biberman, Dwane Esper, Roger Corman, Russ Meyer, Melvin Van Peebles, John Waters, Morris Engel and Ruth Orkin, John Cassavetes, Shirley Clarke, Maya Deren, Su Friedrich, Sadie Benning, Kenneth Anger, Andy Warhol, Mike and George Kuchar, Barbara Kopple, Julie Dash, Marlon Riggs, Charles Burnett, Wayne Wang, Jim Jarmusch, Chris Eyre, Todd Haynes, Ramin Bahrani, Kelly Reichardt, Aurora Guerrero, Joe Talbot, and Sean Baker, among others.

FILM349 Television: The Domestic Medium

Of all the mass media, television is the most intimately associated with domestic and familial life. Its installation in American homes over the postwar decade coincided with a revival of family life that encouraged an emphasis on private over public leisure. Most television is still watched at home, where viewing practices are interwoven with domestic routines and provide a site for negotiating family and gender relations. Television production is shaped at several levels by the images broadcasters and advertisers have of viewers' domestic lives: Broadcast schedules reflect socially conditioned assumptions about the gendered division of family roles; a common televisual mode of address uses a conversational style in which performers present themselves to viewers as friends or members of the family; and families or surrogate families figure prominently in the content of programming across a wide range of genres, including sitcoms, primetime dramas, daytime soaps, and talk shows. Sitcoms, in particular, have responded to and mediated historical shifts in family forms and gender relations over the past 50 years, and they will be a focus in this course. We will explore how television has both shaped and responded to larger cultural discourses about family and gender from the postwar era into the 21st century.

FILM352 From Caligari to Hitler: Weimar Cinema in Context

This course offers a critical introduction to German silent and sound films from 1919 to 1932. It will test the thesis of Siegfried Kracauer's classic study that expressionist films in particular prepared the way for Hitler's rise to power. The focus will be on canonical films of the era including *THE CABINET OF DR. CALIGARI*, *NOSFERATU*, and *THE LAST LAUGH* (Murnau); *METROPOLIS* and *M* (Fritz Lang); and *THE JOYLESS STREET* and *PANDORA'S BOX* (Pabst). Some attention will also be given to films made at the ideological extremes of Weimar culture: *KUHLE WAMPE* (with a screenplay by Brecht), Leni Riefenstahl's *THE BLUE LIGHT*, and Pabst's *THREEPENNY OPERA*. Readings will include screenplays, essays, and reviews from the period as well as selected literary works such as Brecht's *THREEPENNY OPERA* and Irmgard Keun's novel *THE ARTIFICIAL SILK GIRL*.

FILM357 Fassbinder & Sirk: Limitations of Life

The relationship between Hollywood and Germany has always been both uneasy and productive. This course will examine the well-known interaction

between the master of the postwar melodrama and the enfant terrible of the New German Cinema. Initially, we will follow the lead of Fassbinder's famous essay, "Imitation of Life: On the Films of Douglas Sirk," and consider the films that ostensibly influenced the young German director most immediately. Special focus will be on *FEAR EATS THE SOUL*, Fassbinder's provocative remake of *ALL THAT HEAVEN ALLOWS*, and on the late melodramas of so-called FRG Trilogy, including *THE MARRIAGE OF MARIA BRAUN*. We may also look at some of Fassbinder's important films before his encounter with Sirk, as well as some of Sirk's German films.

FILM358 Italian Cinema: 1945-1965

The decades just after World War II were a transformational period in the history of Italy--and of Italian cinema. After the traumas of war and fascism, the country underwent social and economic changes that affected every aspect of life, changes that fed the imaginations of the nation's filmmakers. Religion, family, gender relations, class struggle, and regional conflict provided themes for comedy, melodrama, and the characteristically Italian hybrid of fiction and documentary known as neorealism.

In examining some of the great films of this period, the course will explore some of these themes, and it will also emphasize the extraordinary creative power and artistic variety of the films themselves. We will examine the contrasting styles and approaches of some of the great Italian auteurs--including Federico Fellini, Luchino Visconti, Roberto Rossellini, and Vittorio de Sica. We will also attend to the careers of charismatic actors like Marcello Mastroianni, Sophia Loren, and Anna Magnani, whose emergence as global movie stars enhanced the glamour and prestige of a national cinema rooted in local experience.

FILM366 Elia Kazan's Films and Archives

Elia Kazan was one of the most successful and influential cross-platform artists of the 20th century. In the world of theatre, he rose to success with the famed Group Theatre, he co-founded the Actor's Studio, and he directed the first runs of landmark works by Arthur Miller and Tennessee Williams. Upon moving to cinema, he directed major films such as *Gentleman's Agreement*, *A Streetcar Named Desire*, *On the Waterfront*, *East of Eden*, and *A Face in the Crowd*. This course serves as an exploration of Kazan's directorial style in the medium of cinema—how he discovers, defines, and experiments with the form as he goes—and his lasting impact on American filmmaking. Kazan made movies about difficult protagonists and could himself be described as such, earning notoriety for his friendly testimony to the House Un-American Activities Committee as well as his many extramarital dalliances. But his work was also personal and frank, emerging from his own struggles as a Greek immigrant trying to find a place in an American culture defined as much by its hostility as its opportunity. Kazan's films involve audiences in irreconcilable conflicts built around misfits and outcasts, propelled by pain and desire, trying to assert their individuality in the face of social forces. They consider contradictory questions like: When can love be destructive? When can anger be communicative? How can a synthetic art form capture authenticity and truth? This course is designed to combine both analytical and research-based approaches to understanding Kazan and his work. Screenings will encompass selections from Kazan's career as well as the work of influences, acolytes, and other filmmakers whose movies illuminate the distinctiveness of Kazan's approach. Additionally, students will be tasked with performing archival research with the primary documents in the Elia Kazan Collection at Wesleyan University's Reid Cinema Archives.

Prereq: **None**

FILM379 The Artist on Film

How can we get the essence of a painter, dancer, musician on film? The Artist on Film comes with the aesthetic challenge of translating artistic expression from one medium to another. Part of the problem is that the reason artists interest us in the first place is that they transmitted themselves so effectively into a different shaped box. We will consider what cinema shares with its neighboring arts, how it can evoke other media, and how distinctions between art forms shape our experience. Through creative assignments, this class will look at how filmmakers tackle the challenge of creatively representing artists and transforming their works into a new medium.

This course is taught in the Basinger tradition of combining filmmaking with film watching. It is taught by a writer/director and a particularly good course for those interested in screenwriting and/or directing, but all cinephiles are welcome.

The course is designed for majors but will consider sophomores who have completed 304 and 307. Assignments are screenplays and the course will not be covering basic screenwriting format, so some coursework or familiarity with screenwriting is recommended.

Class will consist of two screenings a week with lecture and discussion.

Prereq: **FILM304 and FILM307**

FILM381 The Films and Influences of Martin Scorsese

Martin Scorsese is a student of the cinema who, for over 60 years, has openly processed his fascination with the medium into strikingly original work. His fiction features--such as *Raging Bull* and *Goodfellas*--and documentaries--such as *Italianamerican* and *Rolling Thunder Revue*--exhibit the same love for cinema that motivates his parallel efforts as film historian and preservationist. His directorial style has continued to evolve across his career, finding new approaches to form and content that engage and provoke audiences.

In this course, students are asked to:

- Define Scorsese's film style and its evolution over time.

- Make comparisons between Scorsese's work and films from which he drew inspiration and reference.

- Navigate the confrontational "push-and-pull" around difficult protagonists in social worlds defined by sexism, racism, and violence.

- Develop tools of film analysis and an understanding of cinema that they can, in turn, carry into their own academic and creative work.

FILM384 Documentary Storytelling

This course explores the range approaches, methods and techniques employed by a diverse set of documentary filmmakers to tell their stories. After an introduction to elements of creative nonfiction storytelling, we will spend the semester looking at films organized by topical lens. Through close reading of documentary texts, filmmaker statements and academic writing, we will examine how past and current documentaries successfully - and sometimes unsuccessfully - have tackled a wide variety of subject areas including poverty, gender, ethnography, conflict/war, class, nature and science, sexuality, current affairs, ethnicity, arts, culture and history. During the semester, students also will develop an original documentary film idea based on a book or long magazine article and demonstrate their storytelling knowledge through final verbal pitches and a pitch deck. Industry guests visit to share their insight into documentary storytelling and provide students with additional pitch feedback.

FILM386 Documentary Since Television

This course continues our introduction to documentary film by tracing the story back to the advent of television and moving forward to include the streaming era of today. Students will consider the ways and means that documentaries moved from the margins to the mainstream, and learn about the filmmakers, films, and institutions that contributed to this phenomenon as well as those who critique the commercialism of this filmmaking traditionally associated with social change. Issues of accountability, representation, access, and ethics loom larger in the documentary ecosystem in this second chapter of the nonfiction filmmaking story, particularly with the 21st century's massive technological changes including the rise of social media and AI.

FILM387 Seminar on Television Series and Aesthetics

Through frequent viewing of episodes, classroom discussion, and written exercises, students will consider television programs over multiple seasons and series as they work to describe and differentiate models of television series construction. Of primary interest is the creative decision making that goes into creating this commercial art form--recognizing patterns of intention, choice, and effect; how these operate on a variety of scales; and what attitudes a program may manifest toward the medium and the viewer. Series viewed may include *I LOVE LUCY*, *ATLANTA*, *THE X-FILES*, *RUSSIAN DOLL*, and others, including student-generated selections.

FILM388 Global Film Auteurs

This course offers a comparative introduction to film auteurs from around the world spanning the 1930s to the present day. Our aim is threefold: to analyze the narrative and stylistic tendencies of each filmmaker while considering their work in a historical and industrial context; to develop our film analysis skills via formal comparison; and to consider the formation, redefinition, and influence of film canons. Emphasis will be placed on describing and analyzing the functions of narrative and stylistic elements and their effects on the viewing experience. Each week will include two film screenings, a lecture, and a discussion. Screenings will include films directed by Andrea Arnold, Julie Dash, Fernando Eimbcke, Krzysztof Kieslowski, Akira Kurosawa, Jafar Panahi, Satyajit Ray, Ousmane Sembène, Céline Sciamma, Wong Kar-wai, Agnès Varda, Yim Soon-rye, and Zhang Yimou, among others.

FILM389 Film Genres: The Western

Once the most popular Hollywood genre for decades, the Western still has a palpable impact on the form and content of present-day cinema. This course is devoted to aesthetic and cultural analysis of key films belonging to the Western genre throughout its more than 100-year history. Our aesthetic approaches will include discussions of typical components of the Western, authorship in the Western, narrative structure, and the construction of the West via visual space and sound. Our cultural analysis will place particular emphasis on the myth of the frontier, the relationship between the Western and political rhetoric, and the genre's treatment of race, ethnicity, and gender. Roughly equal weight will be placed on these two approaches. We will also address the historical trajectory of the Western from its early silent days through its decline in the early 1970s to its present-day status.

FILM390 History of Film Sound

Sound is one of the most powerful tools at a filmmaker's disposal, yet in comparison to visuals, it remains difficult to describe and poorly understood. This course aims to do for the ear what film studies more commonly does for the eye by examining basic sound practices over the course of narrative film history. Focusing especially on U.S. cinema, but also devoting time to sound-conscious auteurs, we will develop an understanding of basic film-sound methods, look at more experimental uses, and track the technological developments of sound from its beginnings to the present day. The focus throughout the course will be on how such elements as music, sound effects, dialogue, and even silence play covert yet vital roles in telling stories and affecting viewers.

FILM391 Sex and Violence: American Film-making Under Censorship

This course examines how US filmmakers have used narrative and stylistic techniques to address censorship requirements in US cinema. Though the course will cover early cinema through recent cinema, a major emphasis will be placed on studio-era filmmaking from 1930 to the 1950s, when censorship was at its tightest. Through close film analysis, we will examine how censorship altered films and how filmmakers manipulated film form and style to convey their intended meanings. Our analysis will serve as a way to reflect broadly on methods for making films within constraints, the range of cinematic techniques available to filmmakers, and how creative decisions can impact viewers.

FILM392 Cinema Stylists: Sternberg, Ophuls, Sirk, Fellini

This course analyzes the films of four international renowned auteurs--Josef von Sternberg, Max Ophuls, Douglas Sirk, and Federico Fellini--whose work is consistently defined by the use of highly noticeable, expressive, and even dazzling stylistic techniques. The course will cover the major works of all four filmmakers and will examine each director's films in terms of narrative techniques, personal worldview and--especially--a distinct set of stylistic concerns. Relevant film style topics will include, but are not limited to, lighting, set design, costume, camera movement, color, sound, and editing. Studying these four filmmakers will reveal how filmmakers can define cinema in deeply personal terms and employ a flashy--even flamboyant--style to achieve their goals.

FILM395 Autobiographical Storytelling

How do filmmakers and writers negotiate memory, identity, and the author's voice to create original work drawn from life? Through analysis of a broad range of autobiographical narratives by experimental, documentary, and fiction filmmakers and writers, we will investigate various modes of working with personal source material, and explore the capacity and complexities of family and individual narratives to showcase diverse perspectives and interrogate assumptions about the self on screen. Inspired by the films and writing we will study, the creative work produced in this course may be drawn from a variety of sources: one's own lived experience, the lived experience of a family or community member, an event, a place, an artistic and/or cultural tradition. Thinking through the fluid nature of autobiography and the vast range of narrative possibilities for representing autobiographical material on screen will be part of class discussions. In this reading- and writing-intensive course, students should expect to spend several hours reading and writing outside of class per week. For most class periods, students will use Perusall to read and annotate either scholarly articles or pieces of autobiographical writing, or to read and comment on their peers' screenplays via Google Drive. Weekly screenings and readings may include work by Pedro Almodovar, Chantal Akerman, Radha Blank, Julie Dash, Mati Diop, Nathalie Léger, Barbara Loden, Lucrecia Martel, Jonas Mekas, Nanni Moretti, Alice Rohrwacher, Céline Sciamma, Agnès Varda, and others. In addition, the course will include screenings and discussions of videographic criticism (e.g., audiovisual work that critically reappropriates existing works of film and media).

FILM396 Black Cinema in the U.S.

What is Black Cinema? Is it, as Tommy Lott has claimed, a critical intervention that resists the "Hollywood master narrative"? Or, as Michael Gillespie claims, does it enact and perform the visual possibilities beyond any commitment to a "Black lifeworld"? This class does not attempt to answer these questions. Instead, it turns the lens of these questions onto the stakes, creativity, and possibilities of what we will encounter as Black Cinema. This class explores Black Cinema in the United States, examining the works of Oscar Micheaux, Spencer Williams, Melvin Van Peebles, Kathleen Collins, Boots Riley, Terrance Nance, and more.

FILM397 Cinema and City in Asia

This course will look at the representation of the city in Asian cinema. It will explore links between urban and cinematic space across a range of thematic, historical, and cultural concerns. We will watch a wide range of films from China, Hong Kong, Japan, South Korea, Taiwan, India, Philippines, and Singapore--and learn to critically examine the ways in which cinema becomes an innovative and powerful archive of urban life as it engages with the events and experiences that shape the cultural, social, and political realities of the past, present, and future in Asia.

The course is open to all sophomores including non-film minors and non-film majors at Wesleyan. No previous experience in Film is required. Among other assignments like videographic criticism, students will also have an opportunity to make short city films using their phone-cameras and readily available editing software as an option for their final class projects.

FILM398 Music Videos: Visualizing Sound

Music videos are fascinating objects. They function in part as marketing assets (promoting albums and singles, for instance) and spaces of intense visualsonic experimentation within popular culture. While the language of cinema and the conventions of its production tend to foreground the visual, music videos are typically designed around a song. Accordingly, music videos can deploy elements of cinematic form, such as editing and mise en scene, to visualize the rhythms, timbres, and movements of music.

In this class, we will think critically with and about music videos. We will watch a wide range of music videos by various music artists and directors (Tierra Whack, Beyonce, Flying Lotus, Shabazz Palaces, Hiro Murai, Kahlil Joseph, Hype Williams, Michel Gondry). We will also watch shorts and feature films that are relevant to the course topic (St Louis Blues, Black and Tan Fantasy, As Told to G/d Thyself, A Hard Day's Night).

Assignments will include annotated playlists (lists of music videos and close readings), an annotated bibliography, and a final presentation.

FILM430 Documentary Production

In this course, documentary history and theory meet production: "What does it take to make different style documentaries--including observational, poetic, expository, participatory, and reflexive?" Students will explore documentary story elements and film grammar as they learn how to capture sound, record video, edit material, light subjects, conduct an interview, and work with archival materials, graphics, and music. They will learn through practice and by screening and analyzing a wide range of long-form documentaries made by a diverse set of filmmakers.

FILM435 Directing the Documentary

Students embark on an intensive journey into the world of short-form documentary filmmaking through a hands-on course designed to help foster the emergence of their cinematic voices. The methods that many documentary filmmakers use to develop and craft their work serve as a model for the coursework. In a supportive environment, students engage in progressive learning to allow each to tackle many of the same key creative, practical, financial, and ethical decisions working researchers, directors, producers, writers, camera operators, sound recordists, and editors make during research and development, pre-production, production, and post. Students screen and analyze documentary shorts throughout the semester. During the first half of the semester, students complete exercises designed to help them to improve their technical skills while completing research and development and a written proposal for a five-to-seven-minute documentary. In the second half of the course, students direct, shoot, and edit their work. Ongoing feedback during the entire semester is provided. The course includes self-directed online training

assignments and in-class workshops. Students enrolled in this course should anticipate heavy and unevenly distributed time demands.

FILM448 Directing Actors for the Camera

Working with actors is an essential component of cinema and television. This workshop course leads students through exercises both as actors in front of the camera and directors behind the camera. Topics include: directing actors for the camera, casting actors, the analysis of screen performance, script analysis from the actor and the director's POV, on-camera acting technique, introduction to the craft of staging dramatic scenes for single-camera shooting, director/actor collaboration, and communicating with actors to create successful performances.

Gen Ed Area: **HA-FILM**

Prereq: **FILM304 AND FILM307**

FILM448Z Directing Actors for the Camera

The actor is arguably the most important instrument in the director's arsenal for storytelling. This course aims to give students a set of tools to draw on when facing the actual task of telling a story through a lens with performers. Through discussions and exercises, we'll cover script analysis, casting, rehearsing, staging, framing, editing, and more. Emphasis will be on creating strategies for getting the desired performance. Students will be acting in scenes as well as directing them. The goal throughout is to demystify all elements and for each student to understand better what kind of director they want to be. The instructor has been a member of the Directors Guild of America since 1990 and a member of the Writers Guild of America since 1985. As director, writer, and producer, he has credits on over 500 episodes of television. Smartphones with cameras are strongly recommended and will be used for class exercises.

FILM453 The Art and Craft of Film Adaptation

Film adaptations of literary texts have been a staple of cinematic production from the silent era to the present day, and remain both an enduringly popular phenomenon and an occasional source of derision or disbelief: Can the movie ever be as good as the book? In this course we will interrogate the long-held assumption that source materials for adaptations are the authoritative texts while secondary works are necessarily inferior. Adopting a lateral approach that allows us to examine how stories change and are changed by new iterations and new mediums, we will examine the varied modes, motives, and techniques of film adaptations, analyzing how filmmakers transform character, plot, setting, and point of view as they adapt varied source material into feature films. Students will be asked to annotate and analyze literary sources, film scholarship, screenplays, and films, and should expect to spend several hours reading, writing, and video editing outside of class time per week. In addition to film analysis assignments, in-class writing exercises, and presentations, students will develop, pitch, and write original adapted screenplays as well as works of videographic criticism (e.g. audiovisual work that critically reappropriates existing works of film and media). Familiarity with Adobe Premiere Pro is helpful but not required.

FILM458 Screenwriting: The Short Film

This is a writing course and study of the short film that will start from ground zero: separating the screenplay from other forms (e.g., the play and the novel), and grounding students in visual language as the basis of the medium. How do we write in pictures? We will study four feature screenplays, but place particular emphasis on how to scale a project for the short form. We screen 12 short films in class, and perform case studies of previous student films from first draft to finished film.

This course is designed for students intending to make a film or write a screenplay for their thesis.

The course prioritizes majors, but will consider sophomores who have completed Film 304 and 307 and intend to major.

Offering: **Host**

FILM459 Writing for Television II

This advanced course requires that each student act as writer, producer/network executive, and lead discussant on one of the professional scripts we read. Students will be responsible for two meetings with the professor during the semester, two to three meetings with their producing partners, and one meeting with their actors (who will perform a short scene from the student's script at the end of the semester). Each student will conceive of and pitch three story ideas in the first classes, winnowing down to one idea for which they will write a story area, an outline, and a final script (which will go through three major revisions). Students are expected to come to class with a background in creative writing, focusing on character and dialogue as well as having completed one TV screenplay.

Prereq: **FILM304 AND FILM307**

FILM461 Nicholas Ray and Robert Bresson

Nicholas Ray and Robert Bresson are two master filmmakers who had opposite cinematic approaches to express their deep spiritual struggles. We are going to compare these two seekers as a way to deepen our understanding of directorial style.

This course is taught in the Basinger tradition of combining filmmaking with film watching. It is taught by a writer/director and is a particularly good course for those interested in screenwriting and/or directing, but all cinephiles are welcome. Assignments will be screenplays, leading a discussion, acting, and shooting exercises.

The course is designed for majors but will consider sophomores who have completed 304 and 307. Assignments are screenplays and the course will not be covering basic screenwriting format, so some coursework or familiarity with screenwriting is recommended.

Class will consist of two screenings a week with lecture and discussion.

FRENCH LANGUAGE AND LITERATURE (FREN)

FREN101 Elementary French I

This course is designed for first-time French learners who wish to acquire and develop listening, speaking, reading, and writing skills by learning basic vocabulary, useful expressions, and fundamental grammatical structures. Students will also gain cultural insights into the French-speaking world, from Senegal to New Caledonia, from Quebec to Louisiana, from Belgium to Guadeloupe, and beyond. In class, students will participate in activities that promote communicative proficiency and cultural competence through vocabulary and grammar exercises, games, skits, conversation, authentic readings, and the use of various audio-visual materials. Classes are conducted in French. FREN 101 is the first semester of the elementary French language sequence.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-RLAN**Prereq: **None****FREN102 Elementary French II**

This second-semester elementary French course is designed for students who have taken FREN101 or have had one or two years of French in high school and placed into FREN102 through the language placement test. The main goal of this course is to enable students to achieve intermediate communicative proficiency in French by developing their listening, speaking, reading, and writing skills. Students will thus increase their vocabulary, learn more advanced grammatical structures, and gain further cultural insights into the French-speaking world. In class, students will participate in activities that promote communication and cultural competence through vocabulary and grammar exercises, games, skits, conversation, authentic readings, and the use of various audio-visual materials. Classes are conducted entirely in French.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-RLAN**Prereq: **None****FREN110 Accelerated Intermediate French I & II**

This course combines two semesters of intermediate French into one to allow for a faster track in French. The course develops students' abilities in the four basic skills of listening, speaking, reading, and writing through oral and written practice. It focuses on grammatical structures and vocabulary at the intermediate level and introduces students to contemporary French-language cultures from around the world through discussion of cultural and literary texts and use of audiovisual material.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-RLAN**

Prereq: **None**

FREN111 Intermediate French I

Students will develop their abilities in the four basic skills of listening, speaking, reading, and writing through oral and written practice. The course focuses on grammatical structures and vocabulary at the intermediate level and introduces students to contemporary French-language cultures from around the world through discussion of cultural and literary texts and use of audiovisual material.

Offering: **Host**

Grading: **A-F**

FREN112 Intermediate French II

This is a course for students who have taken FREN 111 or arrive at Wesleyan with a good command of French and are ready to develop their reading, writing, and speaking skills through exposure to a variety of challenging cultural and literary materials in various media. It includes a review of basic grammar but emphasizes more complex linguistic structures.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-RLAN**

Prereq: **None**

FREN215 Advanced Intermediate French

This course prepares students for upper-level French courses and for study abroad. It offers students the opportunity to review and strengthen their speaking, writing, and reading abilities in French. Class time is devoted to grammar review and to discussions of short reading assignments (literary and non-literary) from the French-speaking world (France, Africa, and the Caribbean). The semester ends with students reading an entire novel in French. Daily class discussions, oral presentations, weekly discussions with French teaching assistants, outside-of-class grammar review, and compositions are to be expected.

FREN217 Exoticism: Imaginary Geographies in the 19th-century French Short Story

In this seminar we will consider the fascination with the exotic--with foreign landscapes, customs, and culture--in 19th-century French fiction, particularly in the genre of the short story. Discussions will focus on the representation of foreignness, the construction of the exotic woman, and the status of the European gaze. Major authors may include Bernardin de Saint-Pierre, Chateaubriand, Balzac, Merimee, Loti, Flaubert, Hugo, Baudelaire, and Théophile Gautier. Although a 20th-century text, we will also read Duras's *L'Amant*.

FREN220 Lancelot, Guinevere, Grail: Enigma in the Romances of Chretien de Troyes

Chretien de Troyes, the greatest writer of medieval France, was the first to tell the stories of Lancelot and Guinevere's fatal passion and of the quest for the Holy Grail. Written at the height of the Renaissance of the 12th century, his Arthurian tales became the basis for all future retellings of the legend. We will read these tales in depth, paying particular attention to their enigmatic quality.

FREN221 French Mythologies

Starting from "Mythologies" by Roland Barthes (1957) and "Nouvelles Mythologies" edited by Jerome Garcin (2007), this course examines how contemporary social values are turned into modern myths and some of the domains that seem to define France in the 21st century. How do the representations of food, fashion, le chic, la laïcité, strikes, colonialism and post-colonialism, etc., in contemporary novels and films still define France today?

FREN222 Love and Loss in Medieval and Early Modern French Literature and Culture

The interconnected themes of love and loss encompass others such as desire, passion, friendship, death, separation, and grief. This course introduces students to the uses of these themes in French literature of the medieval and early modern periods by reading a range of texts, from the courtly romance and lyric poetry, to the essay, the novella, and theater. We will examine how men and women treat these themes, and we will be especially sensitive to the ways in which women write in genres traditionally dominated by men. Topics of study will include the body, virtues and vices, marriage, sexuality, seduction, chastity, and violence. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.

FREN223 French Way(s)

What are "French" ways? What is important to the French, and how do they view themselves? What do they think about issues facing their country, Europe, and the world at large? What relationship does France have with the francophone world? What does it even mean to be "French?" Students in this course will explore these questions by examining a variety of materials including the press, comic strips, films, music, vlogs, television and radio broadcasts, and other selected readings. This course is designed for highly motivated students with a firm foundation in French who wish to refine their skills in listening, speaking, reading, and writing while gaining more insight into French life and culture.

FREN224 Cultural Mo(uve)ments from the 19th to 21st Centuries

The purpose of this course is to familiarize students with movements such as romanticism, realism, surrealism, and the Nouveau Roman, to name a few. Some of these movements stem directly from the political context, while others seem to have grown almost organically. Though the course will primarily rely on literary texts, it will also examine the "passerelles" between literature, music, and painting.

FREN226 From the Diary to the Graphic Novel, Women Writers from the 17th to the 21st Centuries

While women in France were for a long time not welcomed in the literary sphere, they have nonetheless participated in the various movements that have affected literature from the 17th century on. The purpose of this course is to discuss women's space within the literary field. Through the study of various texts, this course will examine women's compliance and defiance towards literary trends. Far from only writing diaries and fairy tales, French women writers have considerably expanded their presence in genres that seemed resolutely closed to them.

FREN227 Trailblazing French Women in Science, Food, and the Arts

One could argue that all fields are mined for women, but certain domains are more closed than others. Such is the case for "haute" cuisine, haute couture, cinema, and the political sphere among others. This course seeks to examine the destiny of a group of women who established themselves in spaces traditionally reserved for men. Besides retracing and discussing their work, we will examine the discrimination they suffered and their strategies to overcome the norms. Finally, we will study the representations which were or are made of them through texts, articles, and films. These women include known figures such as Simone de Beauvoir and Marie Curie, but also others like the artist Annette Messager, the cook Hélène Darroze, the designer Coco Chanel, and more.

FREN228 Fight like the French: Debates, Quarrels and Polemics in French Culture

In the age of "fake news" and polarization, knowing how to debate is essential. The French are notoriously practiced in debate; the importance of public opinion and the figure of the public intellectual have made French society as a whole particularly prone to the agonistic discussion of ideas. This course will survey foundational aesthetic and political debates in French culture from the 15th century to this day, focusing on those that were led by writers, philosophers, and intellectuals and that have entered French literary and cultural history. The course will show how controversies mark and make paradigmatic changes in the cultural landscape, advancing the arts and sciences and voicing political dissent. Throughout the course we will read literary works, treatises, letters, and newspapers.

FREN229 What Can the Middle Ages Teach Us About Nature?

Today nature is at the center of our preoccupations. This course will go back to a time before human beings thought they were the masters of nature, when nature was at the same time teaching and allegory, metaphor and science. We will explore the different functions of nature in bestiaries, poems, romances, and herbaria from the Middle Ages to the beginning of the Early-Modern period (in modern French translation). We will be able to see a real herbarium in the Special Collections & Archives. Students will also visit the Davison Center for the Arts and the Joe Webb Peoples Museum to explore visual representations of nature as well as scientific displays. During the semester, students will put together a herbarium that will be displayed in an exhibition at the end of the semester.

FREN230 Knights, Fools, and Lovers: An Introduction to Medieval and Renaissance French Culture

The study of history and past literature provides intellectual, psychological and emotional resources that make one more resilient in adapting to new circumstances, enable one to see new possibilities of being-in-the-world, and provide new capacities for self-understanding. A knowledge of the European past, moreover, can be an advantage for people seeking to study, live, or work in Europe. This course will help students develop those resources and knowledge through a study of various forms of short fiction and poetry from the French Middle Ages and the Renaissance (12th-16th centuries). We will focus on the representations of human relations, above all romantic relations and their inherent conflicts of power, in these works. We will also view a couple of historical films in order to develop our visual imagination.

FREN231 By Sword, By Cross, and By Pen: An Introduction to Early Modern French Literature and Culture

This course introduces French literature and culture from the 15th to the 17th centuries, when the French territory expanded to its present borders with the rise of the French monarchy. Historical developments include religious upheaval

and civil war, overseas exploration and conquest, and the greater dissemination of written works with the invention of the printing press. In this evolving context we will read a variety of literary works of prose and poetry. We will follow the emergence of genres such as the essay and the novel, and observe how different literary forms served to express ideas ranging from personal experiences to sociopolitical aspects of contemporary society. Several film representations of this period will also help us consider how we envision the past.

FREN232 French Society in Music From the Roaring Twenties to Today

Music has kept the beat of French history through its ordinary and extraordinary chapters. How has music supported France's cultural power and interacted with its external influences? How do songs guard dominant narratives or rally people under revolutionary banners of protest? Over the course of the semester, we will explore music (and its multimodal nature) as a site of cultural expression and a means of understanding social and political movements of modern French society over the last 100 years.

In the first part of this course, we will situate the music of artists such as Josephine Baker, Edith Piaf, Boris Vian, and Serge Gainsbourg in relation to major 20th-century events, from post-World War I *Années folles* to May '68. We will consider how songs engage political events and discover the ways in which music shapes and is being shaped by its society. The second part of the course focuses on contemporary music of French expression (Indochine, Orelsan, Yseult, Angèle, Stromae) as related to questions of gender and sexuality, the legacy of decolonization, immigration, technology, and consumerism. Listening to the voices of France and its "others," we will examine expressions of belonging and alienation within a society that constantly reinvents itself while endeavoring to preserve its "inherent" characteristics. Close readings of lyrics paired with historical contextualization will be supplemented with theoretical and literary texts, excerpts from films and documentaries, posters, and photography.

FREN233 French and Francophone Gastronomy

This course explores the variety of French and Francophone gastronomy through texts, recipes, and other media such as films and cooking shows. Through these materials, students will reflect on the relationship between food and culture and the shape it takes in French and Francophone cultures. They will develop a deeper knowledge and appreciation for various foods and dishes.

The course will include a hands-on component through which students will cook and taste foods from various areas in the Francophone world. The course will culminate in a final public event during which students will introduce and share foods from the Francophone world, which attendees will have the opportunity to taste.

This course is a CLAC course conducted entirely in French. In addition to weekly meetings, there will be a few cooking workshops. Grade will be based on class participation, weekly reflection journals, a final presentation, and a final paper.

FREN234 Francophone Belgian Culture

The Kingdom of Belgium gained its independence from the United Kingdom of the Netherlands after the Belgian revolution of 1830 and has since then developed as one of the central powers of the European Union, of which it was a founding member and whose principal institutions are located in the Belgian capitol, Brussels. The kingdom contains four linguistic regions: Dutch-speaking Flanders, French-speaking Wallonia, German-speaking Eupen-Malmedy, and bilingual (French-Dutch) Brussels. This course will study the development of Francophone Belgian culture since the mid-20th century. We will focus on authors like Georges Simenon, Marguerite Yourcenar, Jean Bofane, Joseph Ndwanaye, Amélie Nothomb, Nicolas Ancion, and Bernard Quiriny; musicians like Toots Thielemans, Jacques Brel, Cecile Kayirebwa, Princesse Mansia M'Bila, Dieudonné Kabongo, Zap Mama, Hooverphonic, Stromae, Damso, Romeo Elvis, and Angèle; and cineastes like Chantal Akerman, Jaco Van Dormael, Jean-Pierre and Luc Dardenne, Lucas Belvaux and Bouli Lanners. The course will also include a unit on the well-known *bandes dessinées* (comic books) created by Belgian authors and artists, like Herge (Tintin), Morris et Goscinny (Lucky Luke), Jean Van Hamme (Thorgal, XIII, Largo Winch), Hermann (Jeremiah), and Spenale (Wonder Pony).

FREN236 Going South: "Le Sud" and Its Representations in French Literature and Culture

The course explores representations of "le Sud" across media, from myths and legends to songs, literature, film, and television. We will learn the origins of Provençal identity and how its portrayal has evolved over time. We will gain a greater knowledge of the many artists and thinkers who have been drawn to the South. Eventually, we will work out a new definition of "le Sud," from Provence to one that includes other Souths such as the global South represented by immigrants from former French colonies.

Although a geographical denomination, a cardinal point, "le Sud" is a contradictory and moving space. The French anthem was first sung on one of Marseille's streets (rue Thubaneau), and the city remains a cosmopolitan port, open to migrations. The 2005 riots did not affect Marseille, yet the first elected mayors from the far-right Front National were in Orange, Toulon, and Vitrolles. The South remains a place of light and sun that attracted numerous painters and a place of dark and shady business run by local and international mafias. How have these contradictions shaped "le Sud" as territory, community, and idea, and how do they function within definitions of French identity?

FREN237 Francophone North America: French-Canadian, Cajun, Creole, and Haitian Cultures in North America

This course introduces students to key cultural and political mo(ve)ments that made the Francophone (French-speaking) communities in Canada, Maine, and Louisiana. From the tragic Grand Dérangement of Acadians (1755-1763), and the Creole Saint-Domingue refugees in Louisiana (1792-1809), to the more recent arrival of French-speakers from Haiti, Africa, and Asia, Francophone cultures in North America continue to evolve as their diversity grows with each new migration. Special attention will be paid to Canadian and U.S. linguistic policies, migration policies, and the role of art (literature, cinema, etc.) and activism in shaping Francophone identities in an Anglophone context.

Writers studied may include Réjean Ducharme (Québec), Dany Laferrière (Québec-Haïti), Kim Thùỵ (Québec-Vietnam), Victor Séjour (Louisiana), Zachary Richard (Louisiana), as well as a few writers in English such as Kate Chopin (Louisiana), Edwidge Danticat (US-Haïti), Louise Penny (Québec), and singer-songwriter Josée Vachon (Québec-Maine) who straddle the Francophone-Anglophone divide.

The course will be conducted entirely in French except for a few readings in English.

FREN238 Representing the Self, Representing Yourself

In our digital age, with the pervasiveness of Facebook, Instagram, and other forms of social media, what can testimony do? What stories are told? How are they told? What do they mean? How do writers, artists, musicians, intellectuals, and politicians represent themselves? As students, how can you give your memories material substance? How do others' narratives influence the way you interpret your own being? In this course, we will begin to answer these questions by reading, watching, and examining a vast selection of French and Francophone texts, films, and images that recount the self from the Middle Ages to today. There will be a particular focus on queer people, women, and people of color, and how they negotiate difference and alterity in their work. Throughout the course, you will also journal your own experiences and imitate other writers' modes of expression (e.g., memoirs, autobiographies, autofiction, the graphic novel, film, documentary, theater, poetry, music, photography). The course will culminate in the creation of your own story, which will in turn prepare you to think critically about the world around you and how to tell your story in interesting, creative, and provocative ways. We will also place emphasis on improving French pronunciation and on developing oral presentation and written skills. Readings, papers, and discussions will be in French.

FREN241 Seeing Is Believing?: The Search for Cinematic Truth

The French director Jean-Luc Godard once remarked that, "Cinema is the truth 24 times per second." Godard refers here to an interplay between truth, time, and the mechanics of film. But does cinema really show us the truth? What kind of reality is it able to capture and how does "truth" relate to its means of representation? This course examines how Francophone film treats the relationship of cinema to truth, covering aspects of film history, theory, and its technical construction. The course is organized around four main areas of inquiry: we first consider the role of fantasy and spectacle in the early films from Georges Méliès and the Lumière Brothers, before exploring how cinema re-orientates its relationship to the "real" via social realism and the experimental documentary style of the French New Wave. We then discover how cinematic "truth" is reclaimed by filmmakers outside of France, before finally turning to the highly-aestheticized, non-narrative films of "Cinéma du look."

This course will familiarize students with the basics of film analysis and critique, while also providing a foundation in the technical aspects of cinema and how it has evolved as both an art and a science. Each film will be accompanied by readings, and the theoretical framework of the course will derive from André Bazin's *Qu'est-ce que le cinéma?* and excerpts from Gilles Deleuze's *Cinéma II: L'image-temps*. For their final project, students may submit either a traditional research paper or an original film project that engages with cinematic theories and techniques discussed over the course of the semester.

FREN248 Colonial/Decolonial

In recent years, the translation and production, in French, of postcolonial and decolonial theories have had a polarizing impact on the French academic and political worlds, particularly in the wake of the Paris terror attacks, the Black Lives Matter movement, and the rise of right-wing ethnonationalism. Colonial/Decolonial, a course taught in French and open to anyone who successfully completed Intermediate French II (or equivalent), is an introductory exploration of the (sometimes highly contentious) debates surrounding the role of colonization and its aftermaths in the formation of French and Francophone culture and society. In the first half of the course, we examine the genesis and justification of the French colonial projects of the 16th, 17th, and 19th centuries. Readings of this first half include start from the architects of the French empire to some of the main figures of Francophone anticolonial thought (Nguyen

Ai Quoc, the Nardal sisters, etc.) The second half of the course investigates the "postcolonial" and "decolonial" as both historical phases and distinct but communicating schools of thought. In this second part, we discuss the specificities of the process of decolonization from France; the evolution of the status of former French colonies; and the exchanges between the Francophone world and other formerly colonized parts of world. In this respect, we examine how the "French postcolonial" borrows and distinguishes itself from intellectual movements such as Subaltern Studies, Decoloniality, and Critical Race Theory. Guiding us through some of these questions will be writers and thinkers such as Patrice Lumumba, Thomas Sankara, Assia Djebar, and Maboula Soumahoro, among others.

FREN254 Paris to Saigon: French Representations of Asia

The course explores the ways in which French explorers, writers, and artists traveled to Asian countries, such as Japan, China, and Vietnam, in the 19th, 20th, and 21st centuries and represented "Extrême-Orient," a Eurocentric designation. Attentive analysis of their works will allow us to question the colonial construction of the Far East as "other"; examine Asian influences on cultural, aesthetic, and literary expressions; and discuss Asian presence in postcolonial France. Issues such as orientalization, eroticization, and hybridization of genres and identities will be the subjects of our study.

FREN273 The Business of Letters: The French Epistolary Novel

Before the 18th century, the first-person narrative was often perceived as self-indulgent, not to mention distasteful. Eighteenth-century readers, however, became fascinated with the intimacy, immediacy, realism, and confessional aspect of highly charged first-person perspectives. It comes as no surprise, then, that this was the golden age of the ROMAN EPISTOLAIRE, the novel composed entirely of letters. In this class we will read a number of epistolary novels that allowed for the development of highly subjective, and often challenging, points of view. Sample works include Madame de Graffigny's critique of European society (LETTRES D'UNE PERUVIENNE), Mme de Charrière's praise of female independence (LETTRES DE MISTRESS HENLEY), Montesquieu's political satire of French life (LETTRES PERSANES), and Laclos's tale of seduction and aristocratic libertinage (LES LIAISONS DANGEREUSES). We will also read one example of the epistolary novel's stylistic counterpart, the ROMAN-MEMOIRE.

FREN275 Histories of Race: Science and Slavery in an Age of Enlightenment

The concept of race was first "invented" during the 18th century by anatomists, natural historians, and, ultimately, the century's classifiers. This class will come to grips with the birth of this concept in two ways. First, we will read excerpts from travelogues to Africa and the Caribbean (as well as short excerpts from natural history) in order to chart the slow and halting creation of the concept of race as it crystallized in European thought during the 18th century. Having studied this "proto-raciology," the class will then examine 16 unpublished manuscripts that were submitted to a contest on the source of "blackness" organized by the Bordeaux Royal Academy of Sciences in 1739. These include essays submitted by priests, anatomists, and partisans of climate theory. Students in this class will actively engage with these materials by producing glossary definitions that will be published along with the entire collection of essays. The ultimate goal of this course is to provide students with an understanding of the concept of race that will inform their reactions to this question as both a historical concept . . . and an ongoing problem that affects all of us in the present.

FREN301 The Race Makers: How the Enlightenment Invented the Most Dangerous Idea in History

The concept of race was first "invented" during the 18th century by anatomists, natural historians, and, ultimately, the century's classifiers. While this seminar is constructed as something of an intellectual history seminar, it will also delve into the lives and (often messy) psychologies of several of the people who helped develop the idea of race during the eighteenth century. We will become familiar with a French king and the signatory of the Code Noir (Louis XIV), the Swedish inventor of the term Homo sapiens (Linnaeus), the theorist

of human degeneration from a white prototype (Buffon), the most famous philosopher of the eighteenth century (Voltaire), the theorist of human stage theory (Robertson), a skull-measuring naturalist (Blumenbach), and an American president, in Thomas Jefferson. The class will also examine 16 manuscripts that were submitted to a contest on the source of "blackness" organized by the Bordeaux Royal Academy of Sciences in 1739. The goal of this course is to provide students with an understanding of the origins of race that will inform their reactions to this question as both a historical concept, and an ongoing problem that affects all of us in the present.

FREN302 West African Literatures and Cultures in French

This course explores major texts in modern and contemporary Francophone African literature by delving into four major themes that traverse the recent cultural, literary, and political history of Francophone West Africa.

The course starts by investigating the relationships between orality and literature through the lens of often-intersecting debates around tradition and modernity; the focus will then shift to articulations of nation, liberation, and the promises of independence, war, and memory, and finally the ruptures and continuities of the post-colonial, neoliberal present.

By spending significant time with primary sources that span over a century of literary and cultural production from and about Francophone Africa, students will have a deep understanding of the urgencies animating writers wrestling with the weight of the colonial past, the violence of decolonization, the brightness of independence, and the uncertainty of the present. A thorough engagement with some of the most important authors of the last 60 years (e.g. C. H. Kane, B. Diop, Y. Ouloguem, M. Condé, among others) will allow us to deep-dive into the possibilities of literary expression, as well as questions of belonging, nation, and evolving ideas of "Africa."

FREN305 Negotiating French Identity: Migration and Identity in Contemporary France

With the largest minority in France being of Maghrebi origin, Islam has become the second largest religion in France today. What are the repercussions of this phenomenon for French identity? How did French society understand its identity and regard foreigners in the past? What do members of the growing Franco-Maghrebi community add to the ongoing dialogue surrounding France's republican and secular identity? This course will analyze the recent attempts at redefining French identity through a study of literary texts, films, and media coverage of important societal debates (e.g., the Scarf Affair, French immigration laws, the Algerian war). Readings, discussions, and papers will be in French.

FREN306 Spectacles of Violence in Early Modern French Tragedy

The French Kingdom endured decades of socio-political unrest and religious wars during the sixteenth and early seventeenth centuries. The tragedies that emerged from these bloody conflicts--many of which staged physical violence--not only reflected but also actively participated in the debates surrounding the 'troubles civils.' In this advanced seminar, we will study such tragedies in order to examine the uses, functions, and ethics of spectacular violence, in plays that adapt mythological stories (e.g., Medea), religious narratives (e.g. David and Goliath, Saint Cecilia), and current events (e.g., executions, assassinations, and regicides) for the stage. We will read the plays alongside and against the competing theoretical frameworks of violence found in various poetic treatises of the time period, yet we will also keep in mind the practical constraints and conditions of performance in early modern France. Finally, we will reflect on why we should read these plays today and how they inform our contemporary moment. Readings, written assignments, and discussion will be in French.

FREN307 Exoticism: Imaginary Geographies in the 19th-century French Short Story

This course will consider the fascination with the exotic--with foreign landscapes, customs, and culture--in 19th-century French fiction, particularly in the genre of the short story. Discussions will focus on the representation of foreignness, the construction of the exotic woman, and the status of the European gaze. Major authors may include Bernardin de Saint-Pierre, Chateaubriand, Balzac, Merimee, Loti, Flaubert, Hugo, Baudelaire, Myriam Harry, and Théophile Gautier.

FREN308 Southern France Today: Villages, Territories, and Metropolises

This course offers an interdisciplinary exploration of Southern France, with a focus on Marseille, through historical, literary, sociological, and comparative approaches. It is designed to encourage students to question prevalent stereotypes and controversial contemporary issues related to the region.

Throughout the course, students will examine various topics such as migration, ethnic and social segregation, economic growth, safety, the environment, housing, transportation, urban planning, metropolization, education, and culture. By using Marseille as a case study, students will reflect on the notion of scale in the context of French and European governance.

Students will engage with a range of materials, including novels, short stories, graphic novels, journalistic investigations, films, archival footage, and testimonials from residents, association representatives, experts, and researchers. Additionally, the course will include a comparative analysis with Paris, other French cities, and Mediterranean regions.

By the end of the course, students will gain a deeper understanding of the region's place in French politics, society, and culture, while also developing critical thinking, research, and analytical skills.

FREN309 Writing Childhood in Contemporary French Literature

In the 20th century, children's literature and writings about childhood expanded alongside commercial book publishing, greater literacy, and theories on childhood. This course will follow the development of formal and creative expressions of childhood by turning first toward children's literature, including picture and comic books and classic works such as "Le Petit Prince." Literary depictions of childhood, as memory, testimony, and social commentary, will compose the second half of the course. Visual imagery (book illustrations, films) will be studied as well to consider the connections between childhood and its representations—for example, how children's literature reflects modernity and how childhood is a means to make sense of adulthood.

FREN310 French Crowds, Mobs, and Mobilities

Under the date of 14th July 1789, Louis XVI entered in his diary but one word: "Rien." That day, a crowd of sans-culottes flooded the streets of Paris, overwhelmed the guards, and captured the Bastille. What the king could not foresee is the political power of a mob, a "foule," deriving its etymology and strength from the pressure of thousands of feet pounding the pavement. From this founding event on, the building of the French nation could be read as a history of mobile crowds kept alive today in yearly student and union demonstrations. How does "rien" become the emblematic event of French national identity? What moves a crowd, and what does a crowd move? What do such gatherings accomplish, and how do they form in France and why? Can governments bring crowds to a stop? What does immobility mean for the French?

Drawing on French sociology and literature, this course will explore the influence that crowds have exerted on French politics, society, and aesthetics. We will discuss the power of numbers by focusing on major events in French history from the 18th century to contemporary France: the French Revolution, the Paris Commune, May 1968, the 1983 March for Equality and Against Racism, the Yellow Vests, and the COVID-19 lockdowns. Students will be encouraged to

relate the course to their own experience of mobile crowds, in concerts or sports events, on more quotidian moves such as commuting, and to draw comparisons across time and space.

FREN312 Clandestins, Sans-Papiers, Migrant/e/s: 100 Years of Illegalization in the Francophone Mediterranean

Who is illegal, and why? When did "migrating illegally" across the Mediterranean start, and how? How did we come to think about certain ways of moving across borders as a criminal act?

Using sources and literature on and about empire, borders, citizenship, seafaring, smuggling, and human rights, the course will attempt to answer these questions in the specific context of the Francophone Mediterranean, intended here as a space of migration much broader than the sea itself.

We will read about Algerian workers hidden in the hull of steamships at the turn of the century, watch Tunisian border policemen helplessly patrol an endless stretch of desert in a sandstorm, and read from "illegal" Africans seeking refuge inside the church of St. Bernard, in Northern Paris, in the hot summer of 1986, before police broke in.

Through this heterogenous set of encounters, students will be able to explore, engage critically, and respond to some of the discursive, legal, and logistical devices that made and still make people on the move "illegal" in contemporary France and in the long wake of its colonial empire.

FREN314 From the Diary to the Graphic novel, Women Writers from the 17th to the 21st Centuries

While women in France were for a long time not welcomed in the literary sphere, they have nonetheless participated in the various movements that have affected literature from the 17th century on. The purpose of this course is to discuss women's space within the literary field. Through the study of various texts, this course will examine women's compliance and defiance towards literary trends. Far from only writing diaries and fairy tales, French women writers have considerably expanded their presence in genres that seemed resolutely closed to them.

FREN315 The Politics of the French Language and the Birth of the French State

Today, the advantages of national borders and monolingual language policies are being trumpeted all across the world. And yet, the study of premodern languages and literatures reveals that the history of national languages has always been a multicultural affair. In this course, we will look at the case of the French language, particularly the establishment of French as a literary language through strategies of legitimization. Starting with an examination of the first text written in the language that would later become French, from the 9th century, we will then go on to study (in modern French) a series of medieval

and early-modern poems, plays, treatises and essays that borrow from other languages and literatures, even as they establish French as a literary and a national language. The final portion of this class will include a meditation on the status of French language in contemporary Francophone countries based on Derrida's essay "Le monolinguisme de l'autre."

FREN316 Women Writing in the Renaissance

Women writing in 16th-century France--the French Renaissance period--had the recent advantage of print publication to circulate their works despite great social limitations on women's roles and education. This course explores their writing--including fiction, poetry, epistolary, and polemic--and choices of subject matter with a focus on references to writing as/by women. We will situate these writers in their historical, cultural, and literary environments and read critical scholarship on this field of study. We will also take a comparative approach by looking at 15th- and 17th-century authorship to see how circumstances evolved and at several contemporary perspectives to consider the currency and perhaps continuity of early modern women's literary production and creations.

FREN317 The New World Bites Back: Cannibalism and the Colonial Encounter

What is the cannibal? Perhaps it makes us think of Hannibal Lecter or zombies from *Dawn of the Dead*. How do we understand the horror and fascination the cannibal, whose monstrosity depends in some sense on its humanity? An emblematic figure of the tension between alterity and resemblance, this course examines the diverse political, cultural, literary and economic representations of cannibalism that underly the relationship between Europe and the "New World."

Major Readings: Montaigne's "Des Cannibales," Voltaire's *Candide*, Dutertre's *Histoire des Antilles*, Marx, *Capital* (excerpts) Aimé Césaire's *Une Tempête*, Suzanne Césaire's *Le Grand camouflage*. 40-50 pages of reading per week.

FREN324 Interpreting the "New World": France and the Early Modern Americas

The impact and long-lasting effects of the "discovery" of the "New World" on Europeans cannot be overestimated. This advanced seminar will compare and contrast styles of expedition and conquest among the European nations, though the course will focus on the French context and the various events and encounters that occurred in the early modern Americas, particularly between 1492 and 1610, a period that laid the groundwork for the subsequent colonial project. Throughout the course, we will pay special attention to the Amerindians' points of view. In turn, students will examine the insights and blind spots in 16th-century French navigators', cosmographers', cartographers', and intellectuals' interpretations, representations, and negotiations of difference by critically engaging with concepts such as nature, culture, alterity, gender, sexuality, marriage, religion, exchange, possession, conquest, and war. Reading, writing, and class discussions will be in French.

FREN333 Asia and the Making of France

Enlightenment philosophers, impressionist painters of the 19th century, and French Maoist intellectuals in the 1960s were all influenced by Asia. Although these influences from Asia were at times the fruit of solid knowledge, they were also often the result of imagination. In addition to attracting French intellectuals and artists, Asia also contributed very concretely to the economic development of modern France and its geopolitical position in the world. This relationship relied on voluntary exchanges but also on violence and French exploitation of Asian territories and people. Through the study of historical documents, films, and literary texts, this course aims to understand the various ways Asia shaped France. We will consider the various representations of Asia conveyed in 19th- and 20th-century France and the historical context of their production by focusing on key moments such as the Opium Wars in China, French colonialism

in Indochina, and the two world wars. Reading, writing, and discussion will be in French.

FREN345 Weird Literature: Tales of the Supernatural, Inexplicable, and Bizarre

In this course we'll look at fantastic literature (broadly defined) from 19th century France: tales of the supernatural, the inexplicable, and the bizarre. This genre flourished in post-enlightenment, post-revolutionary France. Part of our task will be to consider what made stories of the strange so appealing to French authors at this point in time, and how writers used the genre to grapple with societal changes and scientific advances. We will examine some formal definitions of the fantastic and the uncanny, and work towards our own characterizations, as we consider issues such as madness and sanity, provincial superstition, the clash of science and the inexplicable, and the place of gender within such narratives. We will also consider the reception of these texts: how they were illustrated and/or adapted and where (if at all) we can find echoes of them in modern culture. Authors to be studied include Maupassant, Mérimée, and Villiers de L'Isle-Adam.

FREN348 Artistic Creation in Fin-de-siècle France

The end of the nineteenth and beginning of the twentieth century--the so-called fin de siècle--was a period of remarkable creative energy, production, and upheaval in France. Many of the most-recognized names in the art world were active there during that time: Debussy, Monet, Picasso, Stravinsky, Matisse, Baudelaire, Van Gogh...and many of them collaborated across media. In this course, we'll dig deep into the music, visual arts, and literature of the period, relying on contemporaneous primary sources (literature, of course, but also newspapers and popular periodicals, artists' letters and manifestos, performance reviews and notes, etc) as well as relevant secondary analyses, to get a sense of the competing energies of liberation and decadence that nourished so many remarkable and influential works of art.

FREN357 Autobiography and Photography; Text and Image

Over the last decades, the question of autobiography as a genre has been thoroughly analyzed. The issue is further complicated by the use of photography within autobiographical texts, whether they are included in the text or merely described. In this course, we will examine the various roles of photography in autobiography. Is photography a way to trigger memory? Is it more referential than the word? How is the reader to read the coexistence of word and image? Such are some of the questions that will be discussed.

FREN363 (Un)Popular Performances/Performances (Im)Populaires

In 1607, a young Scotsman named William Drummond was studying law in Bourges, France, a popular "study-abroad destination" for Scottish students as well as an important stopover city on the routes of itinerant professional and amateur actors. While in Bourges, these actors performed a variety of different kinds of plays, including tragedies, comedies, tragicomedies, pastorals, and farces. Although these performances were often met with hostility from the city's religious authorities, Drummond attended several plays during his stay and, lucky for us, took rather detailed notes about them. His observations from the 1607 "season" are preserved in his personal papers in the National Library of Scotland. This course will use Drummond's notes as a guide to discover and examine other forms of evidence--both traditional and nontraditional--that help us understand what was at stake in theater, performance, and (un)popular culture in late 16th- and early 17th-century France. We will study the ways the past has been organized and cataloged, how traditional sources and research have shaped our view of the past, and how unconventional methodologies can help us locate new sites of knowledge and culture. Written assignments, class discussions, and (most) readings will be in French.

FREN382 Jungle and Desert in Francophone African Literature

This course analyzes the constellation of images and sensations conjured up by the terms "jungle" and "desert," which are opposite but equally extreme. We will explore European adventure tales and travelogues, contemporary non-Western novels, children's books, and films in a quest to understand the imaginative power of these landscapes.

Through our readings of such a wide range of texts, we will ask questions such as, What do these landscapes signify? How do descriptions of landscape convey a sense of individual and collective identity? What psychological terrain is explored when writing about extreme landscapes? And, finally, how do we each see ourselves in relation to landscape? What is our own version of an "extreme" landscape?

FREN390 Directed Research in European Studies

This course is intended for students who wish to undertake a significant research project or get a head start on a senior essay or thesis devoted to any aspect of European civilization from 500 to 2021. The course will begin with three weeks of regular meetings devoted to the purpose of academic research in the humanities and social sciences, developing and refining a research topic, organizing one's research, bibliographies and sources, the construction of an argument, and the organization of a research paper. Students will work on their research projects individually during the rest of the semester, although the class will meet as a group from time to time so students can present and discuss the state of their work. Students will also have weekly tutorials with the instructor to discuss their progress and plan their next steps. Students who are able to do so are encouraged to engage with research materials in languages other than English.

FREN391 Diderot: An Encyclopedic Mind

In this class we will come to know the most progressive and often radical thinker of the French Enlightenment, Denis Diderot (1713-1784). We will begin this seminar with an examination of how this country abbot grew into the most well known atheist of his generation. We will then move onto his famous 74,000 article Encyclopédie, a book that not only dragged sacrilege and freethinking out into the open, but triggered a decades-long scandal that involved the Sorbonne, the Paris Parliament, the King, and the Pope. (During this portion of the class, students will undertake translations of select entries [from French to English] of the "dictionnaire" for possible publication.) In the second half of the semester, we will also study the writer's freewheeling art criticism. Finally, we will read two groundbreaking novels. The first of these, "La Religieuse", is a gripping pseudo-memoir of a nun who suffers unspeakably cruel abuse after she announces that she wants to leave her convent. The second, "Jacques le Fataliste", is a freewheeling anti-novel where Diderot used fiction to take up the problem of free will. In the final portion of the class, we will also read selections from his anticolonial and antislavery writings.

FREN397 Forbidden Love: From the Middle Ages to the French Revolution

This seminar examines the notion of "forbidden love" in prose fiction, memoirs, poetry, and theater written in French from the Middle Ages to the French Revolution. Students will gain a theoretical and historical understanding of concepts such as love and desire, and how they inform ideas of race, gender, and sexuality in the early francophone world. Students will also watch 20th- and 21st-century film and theatrical adaptations of selected works. By the end of the course, students will have acquired an appreciation for a central but often neglected dimension of francophone literature and culture, become familiar with a method combining a historical approach with the use of essential theoretical concepts, explored how attention to noncanonical and/or "nonliterary" material can extend their knowledge of the period, and provided evidence of competence in critical reading and in the presentation of independent research.

FREN399 French Histories: National Identity and Narratives since the Third Republic

At the end of the nineteenth century, schooling became free and mandatory in France. Since then, politicians have often considered the teaching of history as key to the construction of French national identity. Even today, some argue that the role of school is to equip children with a national narrative. French historians have questioned and resisted this instrumentalization, denouncing oversimplifications and ideological distortions. They also acknowledge that some biases have pervaded French history.

Through readings of historical novels, biographies, essays, and graphic novels as well as selected film and documentary viewings, this course will explore some of these national narratives and the way French historians, philosophers, and artists have participated in the construction of a French national identity.

The course will focus on France and its colonies since the 1870's and the Third Republic. Preliminary knowledge of the period is not required for this class. The final project will be a re-telling of a French historical event through students' preferred medium (video, graphic novel, essay, or podcast). The assignments during the semester will help students accumulate material and hone their skills toward this goal.

GERMAN LITERATURE IN TRANSLATION (GELT)

GELT228 Going Green, German-Style: The Relationship to Nature, 1800--Today

Few countries display as active a commitment to protect natural resources and the environment as Germany. Its focus on renewable energies, recycling, and conservation in general is unique even by European standards, and in the U.S., Germany's policies on sustainability and environmental preservation are often held up as models. It is important to recognize, however, that Germans did not achieve this degree of environmental awareness overnight. Rather, it represents the result of centuries of contemplating, controlling, and conserving nature and cannot simply be transferred to other cultures. In this course, we will examine the German (and European) cultural tradition by analyzing artworks and texts from the past two centuries that have both expressed and shaped salient attitudes and emotional responses. The goals of the course are to provide insight into Germany's long and complicated history of defining and relating to nature and to allow you to reflect critically on your own attitudes toward nature and the environment.

GELT230F The Simple Life (FYS)

As the human population grows toward nine billion and our planet's carrying capacity comes under increasing pressure, many observers believe the human project itself is at risk. What human beings have accomplished is probably unique in the history of the universe; once lost to war, famine, and ecological collapse, the understandings and physical creations of our cultures will be irrecoverable. We must ask ourselves, with considerable urgency, the following questions: How do our values, our economic systems, and our behaviors--as individuals, groups, societies, and cultures--affect the conditions under which we, future generations, and the plants and animals with which we share the earth might live in the future? To what extent and at what cost can technology enable us to adapt to changes already under way? Should we take an "après moi, le déluge" attitude or try to prolong the life of our species, and if so, in what form? Does the so-called simple life, as conceptualized in different times and places, offer any useful models? Does living "green" make sense? What about environmental (in)justice? This course will draw on texts from a variety of periods and disciplines, written in a range of styles and from many perspectives, to examine how these questions and others can be approached. Creative thinking will be strongly encouraged. We will pay particular attention to contemporary sustainability initiatives and threats to the environment in the present moment.

GELT239 Modernism and the Total Work of Art

The term "total work of art" refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner's ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner's works and writings provided the dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

The collected folk tales of Wilhelm and Jacob Grimm have had a substantial impact on the cultural history of Germany and beyond. Despite our sense that we already know these texts, it is worth taking a closer look at their messages. Deceptively simple, these little tales communicate and negotiate extraordinarily important and complicated messages about what it means to be human, to behave in acceptable ways, to have and control unwelcome desires, and to (be able to) imagine a better world. We will read selected fairy tales from the Grimm collection and other texts, investigate the historical context in which the Grimms undertook their ambitious project, learn about ways in which scholarship has framed fairy tales, and discuss adaptations of the fairy-tale tradition in films and texts of the 20th century.

GERMAN STUDIES (GRST)

GRST101 Elementary German

This course is an introduction to German and leads to communicative competence in German by building on the four primary skills--speaking, listening, reading, and writing--while developing participants' awareness of life and culture of German-speaking countries. Learning German and its structure will also enhance students' awareness of commonalities between the English and the German languages. The GRST101/102/211 course sequence will help students appreciate that contemporary Germany is economically and politically the leading country in the European Union and has a dynamic, multicultural society. The German language opens vistas into a world of ideas that is as complex as it is elemental. It provides access to many fields, from philosophy to the natural sciences and many disciplines between: history, musicology, art history, and environmental studies. These three courses prepare students to study abroad in Germany, on one of the two Wesleyan-approved programs in Berlin and Hamburg or continue with GRST212 here at Wesleyan.

Offering: **Host**Grading: **A-F**Credits: **1.00**

Gen Ed Area: **HA-GRST**

Prereq: **None**

GRST102 Elementary German

This is the second part of the two-part sequence in Elementary German (see GRST101). Students will continue their study of the four primary skills--speaking, listening, reading, writing--plus German grammar and culture. They will read a variety of authentic texts, listen to native speakers, handle everyday conversational situations, and write short compositions. At the end of the semester, students will write, perform, and videotape a skit based on the material learned this semester. GRST211 is the course following GRST102. Students who take GRST211 can apply to study abroad in Germany on one of Wesleyan's approved programs in Berlin and Hamburg or continue with GRST214 here at Wesleyan.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-GRST**

Prereq: **GRST101**

GRST211 Intermediate German

This course typically follows GRST101 and 102 and increases students' proficiency in the German language while they learn about different cities and regions in the German-speaking world. Working collaboratively, students engage in cultural activities with authentic readings and contextualized grammar in a unifying context. Through exposure to a variety of texts and text types, students develop oral and written proficiency in description and narration, as well as discourse strategies for culturally authentic interaction with native speakers. Classes focus on active use of the language. Film, music, and other audio clips are regularly integrated into the course to increase students' listening comprehension. Through regular writing assignments, students expand their vocabulary and practice varied styles and techniques. Among the course goals are improved communication and reading skills, an expanded vocabulary, more accurate and nuanced written expression, and increased insight into historical and cultural features of the German-speaking world. After the successful completion of this course, students can study abroad through Wesleyan's approved German programs in Berlin and Hamburg or continue with GRST212 at Wesleyan.

Prereq: **GRST102**

GRST212 Practice in Speaking and Writing German

This course is designed to build and strengthen skills in oral and written German. It functions as a bridge between the basic language series (GRST101&102 and 211) and the more advanced literature/culture courses. This course extends the focus on language and culture through reading, interpreting, and discussing longer German texts (including poems and short stories) begun in GRST211. Moreover, students will research various aspects of the history and culture of Germany and gain practice writing about and presenting the results of their research. Grammar instruction and review as well as vocabulary-building are integral parts of this course, since mastery of the structures of German will facilitate students' ability to express more complex ideas. We will supplement the textbook with additional readings, music, and films. Class discussion will be conducted in German.

Credits: **1.00**

Gen Ed Area: **HA-GRST**

Prereq: **GRST211**

GRST213 German Culture Today

Readings, class discussion, and written work will be based on current and recent events and developments in Germany. Topics will include Germany's place in the new Europe and the world, Germany as a multicultural society, and German contemporary culture. The course will provide extensive practice in speaking, reading, listening, and writing in German and using literary and nonliterary texts, as well as audio and visual materials. Structured conversation, debates, and analysis of different types of texts, along with writing assignments in a variety of genres, will strengthen proficiency in German and prepare students for 300-level courses. This course can be taken either before or after study in Germany.

GRST221 Moscow/Berlin: Dreamworld and Catastrophe

The October Revolution of 1917 in Russia and the November Revolution of 1918 in Germany ushered in an era of imagining and building an anti-capitalist world based on the ideals of universal equality, freedom, and comradeship. Between World War I and World War II, Soviet Moscow and Weimar Berlin developed into centers of the international leftist movement that was committed to the cause of global proletarian revolution. While the revolutionary cause proved to be unattainable and costly, the period's artistic and intellectual achievements, known as the avant-garde, offer an extraordinary archive of utopian experimentation across borders.

Focusing on Moscow and Berlin, this course maps the socialist modernist aesthetic in interwar Europe and provides a comparative review of the transnational circulation of leftist and reactionary ideas registered in a variety of -isms: dadaism, expressionism, futurism, suprematism, and constructivism, as well as the New Objectivity, Bauhaus, and the practice of factography. The alignment of art and ideology will be explored through literature, art, and film and will consider the entanglements of egalitarian aspirations with nationalist agendas and emancipatory ideals with patriarchal residues. The course will also review the cultural production of Russian exiles living in Weimar Berlin and their conception of an "off-modern" path. The course will conclude with a discussion of the revolutionary avant-garde's legacy in the East Berlin underground and post-Soviet Moscow.

GRST224 The Holocaust in Contemporary Popular Culture

How to describe the indescribable and to speak the unspeakable? Long after the end of World War II, filmmakers still grapple with these questions, and their answers vary ethically and aesthetically. This course will discuss depictions of the Holocaust in contemporary popular culture. We will touch on graphic novels, TV sketches, and social media, but mainly focus on film. While the time frame will be limited to mainly the last two decades, we will explore a vast range of texts including: Hollywood fare and East European art-house movies; gritty dramas and dark comedies; reenactments of real-life events and alternative history. From Hipster Hitler to the Jojo Rabbit, from "Inglorious Basterds" to "Son of Saul," what all these examples share is an artistic and thematic audacity. We will examine how they try to propose new and unsettling answers to old but ever-vital questions: How did the Holocaust happen and might it happen again?

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**Gen Ed Area: **SBS-CJST**Identical With: **CJST224**Prereq: **None****GRST227 Criticism and Psychoanalysis**

This course introduces some classical psychoanalytic methods of reading and interpretation, with accent on the four concepts Jacques Lacan identified as foundational: the unconscious, repetition, the transference, and the drive. We will approach psychoanalysis as a style of close reading whose influence on forms of interpretation--especially literary interpretation--has been immeasurable. One central concern will be the capacity of psychoanalysis to enable us to read ourselves reading, to make the interpretive situation itself the object of our analysis. Students with an interest in literary-critical methods will benefit from the course, as will students with an interest in the internal logic of an important body of thought.

Offering: **Crosslisting**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-ENGL**Identical With: **ENGL327, RL&L327**Prereq: **None****GRST228 Going Green, German-Style: The Relationship to Nature, 1800--Today**

Few countries display as active a commitment to protect natural resources and the environment as Germany. Its focus on renewable energies, recycling, and conservation in general is unique even by European standards, and in the U.S., Germany's policies on sustainability and environmental preservation are often held up as models. It is important to recognize, however, that Germans did not achieve this degree of environmental awareness overnight. Rather, it represents the result of centuries of contemplating, controlling, and conserving nature and cannot simply be transferred to other cultures. In this course, we will examine the German (and European) cultural tradition by analyzing artworks and texts from the past two centuries that have both expressed and shaped salient attitudes and emotional responses. The goals of the course are to provide insight into Germany's long and complicated history of defining and relating to nature and to allow you to reflect critically on your own attitudes toward nature and the environment.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-GRST**Identical With: **GELT228, ENVS228**Prereq: **None****GRST230F The Simple Life (FYS)**

As the human population grows toward nine billion and our planet's carrying capacity comes under increasing pressure, many observers believe the human project itself is at risk. What human beings have accomplished is probably unique in the history of the universe; once lost to war, famine, and ecological collapse, the understandings and physical creations of our cultures will be irrecoverable. We must ask ourselves, with considerable urgency, the following questions: How do our values, our economic systems, and our behaviors--as individuals, groups, societies, and cultures--affect the conditions under which we, future generations, and the plants and animals with which we share the earth might live in the future? To what extent and at what cost can technology enable us to adapt to changes already under way? Should we take an "après moi, le déluge" attitude or try to prolong the life of our species, and if so, in what form? Does the so-called simple life, as conceptualized in different times and places, offer any useful models? Does living "green" make sense? What about environmental (in)justice? This course will draw on texts from a variety of periods and disciplines, written in a range of styles and from many perspectives, to examine how these questions and others can be approached. Creative thinking will be strongly encouraged. We

will pay particular attention to contemporary sustainability initiatives and threats to the environment in the present moment.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-GRST**Identical With: **ENVS230F, GELT230F**Prereq: **None****GRST231 Reading Theories**

In this survey of theories that have shaped the reading of literature and the analysis of culture, emphasis is on key concepts--language, identity, subjectivity, gender, power, and knowledge--and on key figures and schools such as Marx, Freud, Nietzsche, Saussure, Barthes, Gramsci, Benjamin, Althusser, Foucault, Lacan, Deleuze, Jameson, Berlant, Moten, postmodernism, and U.S. feminism.

Offering: **Crosslisting**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-ENGL**Identical With: **COL339, CLST393, CEAS340, RL&L290, RUSS340, RULE340, REES340, ENGL295**Prereq: **None****GRST232F Marxism and Abolitionism (FYS)**

This course explores the historical encounter of Marxist revolutionary theory, with its roots in German idealism (Kant, Schiller, Fichte, Hegel), and abolitionist causes. How have abolitionist movements historically informed, expanded, and challenged Marxist theory and its tactical playbook? What made Marx a touchstone for so many black revolutionary thinkers, including W.E.B. du Bois, Franz Fanon, C.L.R. James, and Angela Davis? How have anticommunist, racist, security-statist ideologies been mobilized to undermine and defeat transformative social movements? We will begin with the Haitian Revolution and work our way through the abolition of slavery in the US and the anticolonial and civil rights struggles of the mid-20th century to the prison abolition movement today. In addition to the above mentioned authors, readings will include Toussaint L'Ouverture, Frederick Douglass, Otilie Assing, V.I. Lenin, Rosa Luxemburg, Georg Lukács, Max Weber, Martin Luther King, Jr., Herbert Marcuse, and the Combahee River Collective.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-GRST**Identical With: **AFAM230F, AMST132F**Prereq: **None****GRST233F Holocaust Remembrance in Germany: The Third Generation (FYS)**

Remembering the Nazi past is a fundamental aspect of postwar German culture. In this course, we will trace the Holocaust's aftermath in contemporary German literature and thought. We will pay close attention to the socio-cultural and historical-political changes in attempts to glean new meanings from a past that is both omnipresent and highly evanescent. It will be our particular concern to encounter versions of Jewish identity and attempts to prescribe different narratives. We will focus especially on contrasting the creative works of the immediate postwar period and "the third generation." These contemporary writers explore a historical trauma that has become an integral part of specific Jewish-German identity. At the same time, their temporal and personal distance to the actual events necessitates new imaginative approaches to the past. Careful readings of literary, theoretical, journalistic, and historical texts, as well as personal discussions will enable us to critically think about the challenges and limits of how to write about the Holocaust 70 years after it occurred, and how the difficulties in doing so might inform other kinds of writing about historical and personal trauma. Students need to read Olga Grjasnowa's "All Russians Love Birch Trees" prior to the start of the course. Students will have Zoom class discussions and intensive peer-feedback-driven writing practice.

GRST234F Instances of Collective Memory (FYS)

Both history and fiction tell stories. They evaluate facts, construct contexts, and foreground patterns and associations—all using language as their primary tool. In this course, we will analyze key moments in the formation of collective and cultural memories in 20th-century history, philosophy, and literature. We will think about how individual memory and collective remembrance connect, how larger stories are built up from archives and personal stories, and how these narratives are shaped by changes in the world around them. We'll pay special attention to how the World Wars and the Cold War are memorialized and to the importance of these narratives to contemporary Jewish identity and remembrance in Germany, Israel, and the United States.

GRST238 Bauhaus: Art, Craft, Design

This seminar examines the theory and practice of the Bauhaus, the most influential art school of the 20th century. The Bauhaus proposed a radical concept: to reconstruct the material world of war-torn Europe to reflect principles of unity in the arts and within all world cultures. In the 15 years of its existence, from 1919 until 1933, the Bauhaus underwent many changes, including moves from Weimar to Dessau and Dessau to Berlin, as well as the reorientation of its curriculum from craft to industrial production. Nevertheless, its core principles persisted: the coordination of fine with applied arts and form with function; a commitment to de-hierarchized, experimental learning in workshops; and the desire to unite art with life and to make art accessible to the broader population. Attracting men and women from Western and Eastern Europe, the Americas, and East Asia, the Bauhaus adopted an international and gender-inclusive orientation from the beginning. After the school's forced closure in 1933 by the National Socialists, many of its teachers and students left Germany to found art schools throughout the globe, and its core principles continue to shape art pedagogy and practice today. This course will examine the origins, core products and theories, and afterlife of the Bauhaus in Germany, America, and East Asia.

GRST239 Modernism and the Total Work of Art

The term "total work of art" refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner's ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner's works and writings provided the

dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

GRST241 Introduction to European Avant-Garde, 1880-1940

This course will introduce students to the major avant-garde art movements from the first half of the 20th century as they took root in France, Germany, Italy, Holland, and Russia. Our focus will be on painting, but we will also look at attempts to go beyond painting in an attempt to gain greater immediacy or social relevance for art. Topics that will receive special emphasis include the relationship between abstraction and figuration, the impact of primitivism and contact with non-Western arts, modernism's relationship to mass culture, war and revolution, gender and representation, art and dictatorship, and the utopian impulse to have the arts redesign society as a whole.

GRST249 Catching Glimpses: Perceiving Infinitesimals in the Scientific Revolution

The rise of mathematical natural science in the early modern period marked the dissolution of objective reality as it had previously been known. Since Aristotle, perceptible objects had been understood to be enduring substances whose identities were inscribed in their very being and which retained these identities through change. The mechanistic worldview of the 17th and 18th centuries exploded this stable order into a telescoping multiplicity of material systems, from the infinitesimally small to the infinitely large. Rather than encountering a world of enduring and identifiable substances—animals, vegetables, and minerals; people and artifacts—the perceiver was instead confronted with fleeting constellations of homogeneous matter in a perpetual flux, no sooner glimpsed than gone. This metaphysical picture of infinitary flux was complemented by a new branch of mathematics, the infinitesimal calculus, which proved immensely successful both in uncovering new theorems and in modeling empirical phenomena.

Both the metaphysics and the mathematics of the new science were, however, rife with paradox. If material objects not only harbor a microscopic substructure but are, in fact, divisible without end, then we are faced with pluralities of pluralities without any underlying unities—parts of parts of parts...and not a whole among them. Conceptual instability afflicted the infinitesimals used in calculus, as well. In some contexts they were treated as very small but non-zero quantities, in others as strictly zero—provoking one critic to call them "ghosts of departed quantities."

In conjunction with the CHUM theme "Ephemera," this class will study the philosophical turbulence induced by the new science—in particular, by the mechanical philosophy and infinitesimal calculus. We will pay special attention to its consequences for the philosophy of perception. Aristotle compared perceptible objects to signet rings impressing their distinctive forms on the receptive wax of the human sensorium. But if there are no enduring substances or determinate forms, how are we to understand our perceptual relation to the world? How must perceptual experience be reconceived so as to accommodate the fleetingness and flux of material phenomena? And how is it that, though we are awash in ephemera, we nevertheless enjoy an (illusory?) impression of endurance and stability?

GRST250 Cultural Criticism and Aesthetic Theory: Walter Benjamin and Theodor Adorno

This seminar introduces and explores the cultural criticisms and aesthetic theories of Walter Benjamin and Theodor Adorno, two of the 20th century's most notable Marxist thinkers and critics. Our aim will be to illuminate the intimate interconnections between cultural criticism and aesthetic theory taking place concurrently with the rise of the artistic avant-gardes (with which both thinkers felt deep affinities). We will study the intellectual origins, cultural contexts, methods, and critical aims of Benjamin's and Adorno's uniquely individual yet also closely related practices of cultural criticism. Further, we will examine the assumptions underlying their aesthetic writings and seek to reconstruct their respective contributions to aesthetics.

Over the course of the semester, we will study the works of our protagonists both on their own terms and in comparison to each other. Major thematic units will include (but are not limited to) their writings on literary aesthetics, narrative, and translation; architecture and the city (Naples, Moscow, Paris, Berlin); landscape and nature; mass culture and aesthetic autonomy. Our starting point will be Georg Lukács's *Theory of the Novel*, a work to which both Benjamin and Adorno were much indebted. On occasion, we will supplement our explorations with asides from the 1920s and 1930s (by Alfred Sohn-Rethel, Siegfried Kracauer, Bertolt Brecht, Asja Lachs, Ernst Bloch) as well as scholarship for optional reading (by Susan Sontag, Hannah Arendt, Fredric Jameson, Susan Buck-Morss, Miriam Bratu Hansen, Susan Ingram, Judith Butler, Esther Leslie).

GRST251 Kafka: Literature, Law, and Power

Elias Canetti claimed that among all writers, Kafka was "the greatest expert on power." In this course we will focus on Kafka's narratives of power relations. We will read and discuss Kafka's sometimes painfully precise descriptions of how power is exerted in the family and in personal relationships and how scrutiny and discipline are exercised over the body. We will also consider Kafka's depictions of physical violence and of apparatuses and institutions of power and the ethical and political implications of these depictions. The working hypothesis of this course is that Kafka not only tells stories about power, but that his stories also contain an implicit theory of how power works in modern society.

GRST252 From Caligari to Hitler: Weimar Cinema in Context

This course offers a critical introduction to German silent and sound films from 1919 to 1932. It will test the thesis of Siegfried Kracauer's classic study that expressionist films in particular prepared the way for Hitler's rise to power. The focus will be on canonical films of the era including *THE CABINET OF DR. CALIGARI*, *NOSFERATU*, and *THE LAST LAUGH* (Murnau); *METROPOLIS* and *M* (Fritz Lang); and *THE JOYLESS STREET* and *PANDORA'S BOX* (Pabst). Some attention will also be given to films made at the ideological extremes of Weimar culture: *KUHLE WAMPE* (with a screenplay by Brecht), Leni Riefenstahl's *THE BLUE LIGHT*, and Pabst's *THREEPENNY OPERA*. Readings will include screenplays, essays, and reviews from the period as well as selected literary works such as Brecht's *THREEPENNY OPERA* and Irmgard Keun's novel *THE ARTIFICIAL SILK GIRL*.

GRST259 Criticism and Marxism

This course introduces students to the Marxist (or historical-materialist) tradition, with an accent on its centrality to interpretative methods in literary studies and to related fields in the human sciences. We will study foundations, beginning with Marx and Engels, and our reading will carry us through the range of Marxisms that inform contemporary critical practice. We will focus on historical materialism as a style of dialectical thought, uniquely equipped to grasp both our immediate objects of study (literary texts and other cultural productions) and the social forces through which those objects are determined.

In the same dialectical mode, we will reflect often on the relation between our work in the classroom and our contemporary social and historical situation. Students with an interest in literary and social theory will benefit from the course, as will students who know a little bit about Marxism but want to understand the logic of this crucial body of thought.

GRST261 Reading Nietzsche

Friedrich Nietzsche, trained philologist and self-proclaimed "free spirit," remains one of the most controversial figures in modern thought, a source of fascination and outrage alike. Best known as the philosopher of the "Dionysian," the "will to power," the "eternal return of the same," the "transvaluation of all values," and the "over-man," Nietzsche also proudly considered himself the most accomplished prose stylist in the German language. In this course, we will examine two closely interrelated issues: (1) the genesis of Nietzsche's major philosophical thoughts in the areas of epistemology, aesthetics, ethics, and the critique of religion, from his earliest to his latest writings; (2) the cultivation of a philosophical style that, in its mobilization of highly artistic modes of aphoristic reduction, metaphorization, personification, and storytelling, aspires to turn critical thinking into a life-affirming art form.

The course will combine philosophical interpretation with textual analysis. No prior knowledge of Nietzsche's works is expected; however, a willingness to set aside significant chunks of time to dwell in Nietzsche's texts is required. Students with reading knowledge in German are encouraged to read at least some of the assignments in the original. Guidance in doing so will be provided based on individual need.

GRST263 Inside Nazi Germany, 1933--1945

This survey course seeks to give a firm historical grounding in the processes that led to Hitler's rise to power, the nature of the National Socialist regime, and the origins and implementation of policies of aggression and genocide. The basic premise of this course is that National Socialism was from the outset driven by a belligerent and genocidal logic. The course will therefore critically analyze the racial, eugenic, and geopolitical ideology of National Socialism and the policies of discrimination, conquest, economic exploitation, and extermination that followed from it. At the same time, the role of structural factors in explaining these outcomes will also be explored in great depth. We will analyze how German society was shaped by Nazism, considering conformity and opposition in the lives of ordinary people in both peacetime and war. The course seeks to impart an awareness of the complex of factors that produced a regime of unprecedented destructiveness and horror, and it aims to develop a critical understanding of the ongoing problems of interpretation that accompany its history. Just as importantly, we will consider the continued relevance of the legacy of National Socialism and the Holocaust to our evaluation of national and international affairs in the 21st century.

GRST264 Crisis, Creativity, and Modernity in the Weimar Republic, 1918--1933

Born in defeat and national bankruptcy; beset by disastrous inflation, unemployment, and frequent changes of government; and nearly toppled by coup attempts, the Weimar Republic (1918--1933) produced some of the most influential and enduring examples of modernism. Whether in music, theater, film, painting, photography, design, or architecture, the Weimar years marked an extraordinary explosion of artistic creativity. New approaches were likewise taken in the humanities, social sciences, psychology, medicine, science, and technology, and new ideas about sexuality, the body, and the role of women were introduced. Nevertheless, Weimar modernism was controversial and generated a backlash that caused forces on the political right to mobilize to ultimately bring down the republic. This advanced seminar explores these developments and seeks to understand them within their political, social, and economic contexts to allow for a deeper understanding of Weimar culture and its place within the longer-term historical trajectory of Germany and Europe. This perspective allows for an appreciation of the important links between Weimar modernism and Imperial Germany, as well as an awareness of some of the important continuities between the Weimar and Nazi years.

GRST266 Ethics After the Holocaust

The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human after Auschwitz. In this course, we will investigate how the Holocaust orients contemporary discussions on questions of guilt, forgiveness, and evil. What does it mean to remember, to forgive, and to forget? Can one ethically represent the Holocaust in art? We will explore these questions using various sources, including works by Hannah Arendt, Adorno, and Emmanuel Levinas, as well as museums, memorial sites, and cinematic representations.

GRST266F Ethics After the Holocaust (FYS)

The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human. We will engage films, graphic novels, art, and philosophical works as we try and grapple with the contemporary presence and relevance of the Holocaust. Are comparisons of other genocides to the Holocaust helpful or offensive? Was the Holocaust a lapse into barbarism or a dark side to the logic of modernity? We will see how thinkers such as Hannah Arendt, Emmanuel Levinas, and Martin Buber grappled with these and related questions such as the problem of evil, the meaning of suffering, and the presence of God in the death camps.

GRST267 Losers of World War II

This course explores the experiences of Germany and Japan in the postwar era. These countries faced the dual challenge of making political transitions to democratic government and recovering from the economic ruin of World War II. Japan and Germany both were occupied and rebuilt by the United States, and both were blamed for the devastation of the war. How did Japan and Germany respond to being cast as worldwide villains? How strong were the democracies that developed? This course explores these questions by comparing the culture, history, and institutions of these two countries.

GRST268 Foundations of Critical Theory: Marx, Nietzsche, and Freud

This course serves as an introduction to the main ideas of Marx, Nietzsche, and Freud, and their distinct yet similar techniques of interpretation. Michel Foucault once claimed that Marx, Nietzsche, and Freud "have changed the nature of the sign and modified the fashion in which the sign can in general be interpreted" -- which means that they changed the way in which we interpret and make sense of the world and of ourselves. Marx did so by leading his readers, in *Capital*, to "the hidden abode of production" where "the secret of profit-making must at last be laid bare;" Nietzsche did so by inviting his readers, in his *Genealogy of Morality*, to "go down and take a little look into the secret of how they fabricate ideals on earth;" Freud did so by teaching that we cannot know ourselves and are hence "not the master in our own house."

This course is designed to make critical theory and contemporary discourses in the humanities and social sciences more accessible by providing the modern historical and philosophical foundations for key critical concepts such as interpretation, subject/agency, history, origin, society and social power, value, modernity, capitalism, socialism, and religion/morality. We will explore some of the most influential writings of the respective authors in a comparative manner and, thus, come to a better understanding of the genesis of critical modern thinking.
