WESLEYAN UNIVERSITY 2023-2024 CALENDAR

2023-2024 Academic Calendar (https://webapps.wesleyan.edu/academic_calendar/2023/2024/)

WESLEYAN UNIVERSITY: A BRIEF HISTORY

Wesleyan University was founded in 1831 by Methodist leaders and Middletown citizens. Instruction began with 48 students of varying ages, the president, three professors, and one tutor; tuition was \$36 per year.

Today Wesleyan offers instruction in 46 departments and 45 major fields of study and awards bachelor of arts and graduate degrees. The master of arts degree and the doctor of philosophy are regularly awarded in 11 fields of study. Students may choose from more than 900 courses each year and may be counted upon to devise, with the faculty, some 900 individual tutorials and lessons.

The student body is made up of approximately 2,900 full-time undergraduates and 140 graduate students, as well as 100 part-time students in Graduate Liberal Studies. A full-time faculty of about 300 is joined each semester by a distinguished group of visiting artists and professors. But despite Wesleyan's growth, today's student/instructor ratio remains at 8 to 1, and about three-quarters of all courses enroll fewer than 20 students.

Named for John Wesley, the founder of Methodism, Wesleyan is among the oldest of the originally Methodist institutions of higher education in the United States. The Methodist movement was particularly important for its early emphasis on social service and education, and from its inception Wesleyan offered a liberal arts program rather than theological training. Wesleyan's first president, Willbur Fisk, a prominent Methodist educator, set out an enduring theme at his inaugural address in September 1831. President Fisk stated that education serves two purposes: "the good of the individual educated and the good of the world." Student and faculty involvement in a wide range of community-service activities reflected President Fisk's goals in the 19th century and continues to do so today.

Wesleyan has been known for curricular innovations since its founding. At a time when classical studies dominated the American college curriculum, emulating the European model, President Fisk sought to put modern languages, literature, and natural sciences on an equal footing with the classics. When Judd Hall, now home to the Psychology Department, was built in 1870, it was one of the first American college buildings designed to be dedicated wholly to scientific study. Since the 1860s, Wesleyan's faculty has focused on original research and publication in addition to teaching.

The earliest Wesleyan students were all male, primarily Methodist, and almost exclusively white. From 1872 to 1912, Wesleyan was a pioneer in the field of coeducation, admitting a limited number of women to study and earn degrees alongside the male students. Coeducation succumbed to the pressure of male alumni, some of whom believed that it diminished Wesleyan's standing in comparison with its academic peers. In 1911, some of Wesleyan's alumnae helped to found the Connecticut College for Women in New London to help fill the void left when Wesleyan closed its doors to women.

Ties to the Methodist church, which were particularly strong in the earliest years and from the 1870s to the 1890s, waned in the 20th century. Wesleyan became fully independent of the Methodist church in 1937. Under the leadership of Victor L. Butterfield, who served as president from 1943 to 1967, interdisciplinary study flourished. The Center for Advanced Studies (now the Center for the Humanities) brought to campus outstanding scholars and public figures who worked closely with both faculty and students. Graduate Liberal Studies, founded in 1953, is the oldest program of its kind and grants the master of arts in liberal studies (MALS) and the master of philosophy in liberal arts (MPhil) degrees. During this same period, the undergraduate interdisciplinary programs, the

College of Letters, the College of Social Studies, and the now-defunct College of Quantitative Studies, were inaugurated. Wesleyan's model program in world music, or ethnomusicology, also dates from this period. Doctoral programs in the sciences and ethnomusicology were instituted in the early 1960s.

During the 1960s, Wesleyan began actively recruiting students of color. A number of Wesleyan faculty, students, and staff were active in the Civil Rights Movement, and the Reverend Martin Luther King Jr. visited campus several times. By 1968, women were again admitted as exchange or transfer students. In 1970, the first female students were admitted to Wesleyan's freshman class since 1909. The return of coeducation heralded a dramatic expansion in the size of the student body, and gender parity was achieved within several years.

Wesleyan's programs and facilities expanded as well, and new interdisciplinary centers were developed. The Center for African American Studies, which grew out of the African American Institute (founded in 1969), was established in 1974. The Center for the Arts, home of the University's visual and performance arts departments and performance series, was designed by prominent architects Kevin Roche and John Dinkeloo and opened in the fall of 1973. The Mansfield Freeman Center for East Asian Studies was established in 1987. The Center for the Americas, which combines American studies and Latin American studies, was inaugurated in 1998. The Center for Film Studies, with state-of-the-art projection and production facilities, opened in 2004.

An addition to the Freeman Athletic Center opened in 2005 with the 1,200-seat Silloway Gymnasium for basketball and volleyball, the 7,500-square-foot Andersen Fitness Center, and the Rosenbaum Squash Center with eight courts.

Fall 2007 marked the opening of the Suzanne Lemberg Usdan University Center and the adjacent renovated Fayerweather building, which retains the towers of the original Fayerweather structure as part of its facade. The Usdan Center overlooks Andrus Field (home of Corwin Stadium and Dresser Diamond), College Row, and Olin Library, and houses dining facilities for students and faculty, seminar and meeting spaces, the Wesleyan Student Assembly, the post office, the box office, and retail space. Fayerweather provides common areas for lectures, recitals, performances, and other events; it contains a large space on the second floor, Beckham Hall, named for the late Edgar Beckham, who was dean of the college from 1973 to 1990. In winter 2012, the historic squash courts building (41 Wyllis Avenue) on College Row was renovated; now renamed Boger Hall, it is the state-of-the-art home for the Gordon Career Center, the Paoletti Art History Wing, and the College of Letters.

Michael S. Roth '78 became Wesleyan's 16th president at the beginning of the 2007–08 academic year. He has undertaken a number of initiatives that have energized the curriculum and helped to make a Wesleyan education more affordable for many. He has emphasized a three-year degree program that can save families as much as \$50,000; eliminated loans for most students with a family income below \$60,000, replacing them with grants; and ensured that other students receiving financial aid are able to graduate without a heavy burden of debt. Allbritton Hall, opened in 2012, has become a hub of civic engagement—encompassing the Patricelli Center for Social Entrepreneurship, the Allbritton Center for the Study of Public Life, and the Jewett Center for Community Partnerships. Four new interdisciplinary colleges also have been launched: the College of the Environment, the College of Film and the Moving Image, the College of East Asian Studies, and the College of Integrative Sciences. Another new initiative, the Shapiro Creative Writing Center, brings together students, faculty, and visiting writers seriously engaged in writing. Since 2011, applications for admission have increased substantially to record levels. During this time Roth oversaw the most successful campaign in Wesleyan's history. The campaign raised a total of \$482 million, including more than \$270 million in support of one of Wesleyan's highest priorities: new endowment and annual funding for financial aid.

WESLEYAN'S CURRICULUM

Wesleyan University is dedicated to providing an education in the liberal arts that is characterized by boldness, rigor, and practical idealism. At Wesleyan, students have the opportunity to work at the highest levels, discover what they love to do, and apply their knowledge in ways the world finds meaningful. While Wesleyan has no core requirements, the University has established General Education Expectations that are designed to encourage breadth within the student educational experience. Students select courses in consultation with advisors, creating customized itineraries of study in three intellectual spheres: the arts and humanities (HA), the social and behavioral sciences (SBS), and the natural sciences and mathematics (NSM).

OPEN CURRICULUM

When students direct their own education in consultation with intensively engaged faculty advisors, they learn to think independently, explore questions from multiple points of view, and develop habits of critical thinking that are hallmarks of a liberal education. Wesleyan upholds the principle that student choice fosters the drive to explore freely and seek connections across courses, generating the intellectual excitement that can fuel liberal education as a lifelong pursuit. With the freedom to sample liberally from across the curriculum, students are able to experience the surprise of unexpected ability in fields new to them and to make fruitful connections across subject areas that do not traditionally intersect. This can generate innovative depth of study and new ways of seeing—with students posing questions from one discipline to the assumptions of another.

MAJORS, MINORS, AND CERTIFICATES AT WESLEYAN — AREAS OF STUDY

With a large variety of majors, minors, and certificates (<http://www.wesleyan.edu/academics/>), Wesleyan students have the opportunity to work at the highest level, discover what they love to do, and apply their knowledge in meaningful ways.

MAJORS

A degree of disciplined mastery in a major field of learning is an important dimension of a liberal arts education. The major may help a student prepare for a specific profession or may be necessary for a more specialized education in graduate school or another postbaccalaureate educational institution. Majors can take several forms—a departmental or interdepartmental major or a college program (College of Letters or College of Social Studies). Generally, students declare a major in the second semester of their sophomore year—when they have sampled widely from different areas of the curriculum, have completed the first stage of their General Education Expectations, and are ready to develop deeper knowledge in a particular area of study.

LINKED MAJORS, MINORS, AND CERTIFICATES

Some majors (College of Integrative Sciences, environmental studies) may only be declared as linked majors in conjunction with another major. In addition to major fields of study, Wesleyan also offers optional minor fields of study and

certificates (similar to interdisciplinary minors). Students may not declare more than a combined total of three majors, certificates, and minors.

GENERAL EDUCATION EXPECTATIONS

Wesleyan's open curriculum challenges students to create their own plan for general education. Academic coherence here does not rely on a core curriculum or a set of required courses; instead, students propose their academic plan to their faculty advisors and recalibrate it with their advisors each semester as their discoveries lead them to pursue new areas or deepen existing strengths. By the end of the first two years, students are expected to have earned at least two course credits in each of the three areas (HA, SBS, NSM), all from different departments or programs. In the last two years, students are expected to take one additional course credit in each of the three areas. A student who does not meet the expectation of a total of nine general education course credits by the time of graduation will not be eligible for University Honors, Phi Beta Kappa, honors in general, and honors in certain departments, and may not declare more than a combined total of two majors, certificates, and minors.

COMPETENCIES

To help students identify and describe the skills they gain on their journey through Wesleyan's open curriculum, we've developed a flexible framework of four competencies to reflect on and consider as students build—and share—their own personal narrative about their Wesleyan experience. The four competencies are: **Mapping:** Navigating Complex Environments; **Expressing:** Writing and Communication; **Mining:** Empirical Analysis and Interpretation; and **Engaging:** Negotiating Cultural Contexts.

Mapping is defined as the ability to examine the relationship of objects, concepts, spaces, and environments in the material and imagined worlds. It involves developing tools to create, manipulate, and navigate constructed and natural environments and charting movement through and interactions with space and its consequences. *Expressing* is defined as the ability to express thoughts, ideas, and emotions to others effectively and concisely through a variety of mediums and modalities. *Mining* is defined as the ability to use logical and empirical reasoning and methods to explicate, analyze, and quantify one's material and social realities. It involves learning about the measurement, analysis, summary, and presentation of information, including about the natural world, as well as answering questions, solving problems, making predictions, and testing and constructing theories by employing mathematical, statistical, logical, and scientific reasoning. *Engaging* is defined as the ability to comprehend, appreciate, and negotiate human and cultural differences as well as the complexity of one's own relation and accountability to wider sociohistorical dynamics. It involves reading, speaking, or understanding a second or third language (contemporary or classical); gaining experience working, studying, or traveling abroad, or in other unfamiliar cultural contexts; and participating in the political and social life of local and global communities.

ACADEMIC ADVISING

An academic advisor is assigned to each first-year student from faculty who teach in a field in which the student has expressed interest. Once a student declares a major, the advisor is assigned from that department or program. Students, with the help of faculty advisors, typically put together an academic itinerary that includes lecture-style courses, smaller seminars, laboratories, and performance courses. Every student is given the opportunity to take a seminar course specially designed for first-year students. These first-year seminars (FYS) vary dramatically—from presenting the work of a specific thinker to introducing

an unfamiliar area of study—but all tend to emphasize the importance of writing at the university level and the methods used to collect, interpret, analyze, and present evidence as part of a scholarly argument. Faculty teaching these classes highlight the type of writing associated with their respective disciplines and help students improve how they develop, compose, organize, and revise their written work.

WESMAPS AND WESPORTAL

WesMaps (<http://www.wesleyan.edu/wesmaps/>) is the indispensable online guide to the curriculum used by students to map their academic schedule each semester. WesPortal contains both personal information added by students and official information that helps track their progress toward fulfilling General Education Expectations, majors, and University requirements. WesPortal is an important advising tool for students and their faculty advisors. WesPortal applications provide students with online access to their course schedule, grades, academic history, Moodle, course registration, student accounts, campus events, and more. Using these applications, students and their advisors are able to make informed decisions leading to a thoughtful academic experience.

STUDENT ACADEMIC RESOURCES

Wesleyan provides a range of academic services to students in support of learning both inside and outside the classroom. The Writing Workshop and Math Workshop are important resources available to all students. Student Academic Resources (SAR) includes programs for intellectual enrichment and academic support. One key element of SAR is the work of Academic Peer Advisors (APAs). APAs are upperclass students who work during new student orientation and throughout the academic year to support Wesleyan's faculty advising program, enhance student access to academic resources, and strengthen students' academic skills. In addition, the Deans' Peer Tutoring program provides content-based tutoring services for most courses and is available to all students.

The goals of SAR are to foster a community culture that recognizes the relationship between intellectual growth and personal development; to ensure that students know about and are encouraged to seek out appropriate services; and to share information among programs and constituents to ensure the provision of high-quality and accessible services that facilitate academic achievement for all students. More information is available on the academic resources (<http://www.wesleyan.edu/sar/>) website.

CAREER ADVISING

Employers and graduate schools look for applicants who can write well, think critically, and solve problems independently. Because of their liberal arts training, Wesleyan students attain these skills in the context of a wider knowledge of human experiences. While students need not prepare narrowly for their careers, Wesleyan encourages them to give careful thought to their lives after graduation.

The Gordon Career Center works with students of all class years to:

- Translate their liberal education, and campus and community experiences, into a lifetime of meaningful work
- Explore their interests, personality, skills, and experiences to identify potential career options that fit their unique profile
- Write professional resumes, CVs, cover letters, and personal statements for job, internship, fellowship, and graduate/professional school applications
- Find meaningful summer opportunities to bolster and build professional skills and experiences related to their career aspirations
- Conduct successful job and internship searches, prepare and practice for interviews, and build strong relationships with employers and Wesleyan alumni
- Research and connect with professional schools, graduate schools, and degree programs; craft competitive applications; and navigate the school decision-making process
- Transition to life after Wesleyan, whether through employment, a fellowship, graduate or professional school, a service program, volunteer opportunity, or personal adventure

The Gordon Career Center uses an intuitive and modern career management platform, Handshake (<http://wesleyan.joinhandshake.com/>). This mobile-ready recruiting application is designed to help students discover and explore jobs, internships, organizations, and events all personalized to their specific career interests.

HEALTH PROFESSIONS AND PREMEDICAL ADVISING

Health professions graduate schools welcome students with a liberal arts background. A liberal arts education does not exclude the scientific and quantitative knowledge required to become an outstanding health professional; rather, it includes courses from these disciplines within a larger intellectual context.

Please note that health professional schools (medical, dental, veterinary medicine, nursing, optometry, etc.) do not require a specific major, readily accepting applicants from diverse academic backgrounds. However, they do require that applicants take specific courses (mostly in the sciences) in order to apply. Therefore, your choice of major should be based on a variety of factors—ideally your preferred area of study, and what you do well in, rather than what you think health professional schools want to see. As a health provider, you may want to work in a Spanish-speaking community; if so, a Hispanic Literature and Cultures or Latin American Studies major would be a great advantage. Perhaps you will want to prepare yourself for some of the tougher ethical questions that physicians face, and therefore choose Philosophy, Religion, or Science in Society as your major. An Economics major can help you when you confront the variety of market forces that affect health care practice and research. You should choose some of your courses with these types of considerations in mind, as well as giving yourself the opportunity to develop as a whole person, thereby taking courses for no other reason than the fact that they intrinsically appeal to you.

Students are encouraged to explore and test their interest in a given health profession through internships, summer employment, volunteer positions in a clinical setting, and shadowing health professionals before applying to graduate school. The Gordon Career Center (<https://wesleyan.edu/careercenter/>) and the Office of Community Service (<http://www.wesleyan.edu/jccp/>) provide information about volunteer opportunities on campus and in the local community for students considering the health professions. Experience in conducting research may also be very useful in learning about a field and developing the skills needed to contribute to the field and to evaluate the work of others. Students with a particular interest in the natural sciences have the opportunity to participate in laboratory research projects under the supervision of Wesleyan faculty who are principal investigators with on-campus research groups that may also include graduate students. In recent years, undergraduates have also participated in public health and clinical research both on and off campus. Some student researchers have been coauthors of papers published in scientific journals or have presented the results of their research at scholarly meetings. Beginning with the first week of the first year and continuing beyond graduation, a specialized health professions advisor is available to assist students and graduates interested in any of the health professions with academic planning, identification of summer opportunities and meaningful post-graduation employment, and preparation for and navigation of the application process to health professions graduate schools. The Wesleyan Health Professions Panel offers current students and those within five years of graduation a letter of institutional sponsorship at the time of application to medical, dental, or veterinary school. The success of Wesleyan's alumni in various health fields attests to the quality of our undergraduate curriculum and our health professions advising. For more information go to our health professions site (<https://www.wesleyan.edu/careercenter/students/health/>).

PREBUSINESS

Wesleyan alumni are sought after in the business world. A significant number of the organizations that recruit Wesleyan students are business concerns. Recent top employers have included Amazon, Bloomberg, BlackRock, Booz Allen Hamilton, Citi, Facebook, Google, IBM, JPMorgan Chase, and Venture for America. Wesleyan has a reputation among employers for producing students who have well-developed organizational and leadership skills. A Wesleyan

student in almost any major who does well and plans his or her courses with an eye toward meeting entrance requirements for professional study will be well prepared for business school. It is rare for undergraduates to go directly to a top-tier business school without work experience. In fact, many of the top-tier business schools require two to four years of work experience for competitive candidates. Students interested in fields such as banking and consulting should plan to take quantitative courses offered by a number of academic departments to seek an internship in their field of interest as early as sophomore year.

PRELAW

Law schools have long recognized that liberal arts institutions provide the best possible preparation for future attorneys. They look for students who possess particular intellectual skills: the ability to think critically, analyze a situation, extract pertinent information, and communicate effectively, both orally and in writing. Any academic major is acceptable to a law school. Wesleyan students who major in the traditionally popular subjects of study for prelaw: History, Government, Economics, English, American Studies, and Philosophy; and now the less traditional, in the sciences and the arts; are admitted each year to the top law schools in the country. Outside the classroom, Wesleyan students participate in a variety of activities that develop the character and leadership skills they will need to succeed in law school, including political and social activism and community service. Over the summer, students intern at such organizations as the Northern Virginia Capital Defender Office, the Bronx Defenders Office, the Center for Court Innovation, Ungvarsky Law LLC (a capital defense firm), and the CT Commission on Human Rights and Opportunities. The Gordon Career Center (<http://www.wesleyan.edu/careercenter/>) has a designated prelaw advisor who provides resources and information for students considering careers in and related to law. Students and graduates are encouraged to meet with the advisor individually, attend informational workshops and guest speaker events (e.g., human rights law, careers in law and policy, careers in “Big Law”), and seek faculty assistance to navigate the law school selection and application process.

ACADEMIC REGULATIONS

- Degree Requirements (p. 11)
- Major (p. 11)
- GenEd Expectations (p. 12)
- Academic Standing (p. 13)
- Honors (p. 13)
- Academic Review and Promotion (p. 14)
- AP, IB, and Other Prematriculation Credit (p. 15)
- Acceleration (p. 16)
- Nondegree (p. 16)
- Transfer Students (p. 16)
- Study Abroad (p. 17)
- Internal Special Study Programs (p. 18)
- External Special Study Programs (p. 19)
- Advanced Degrees (p. 20)
- General Regulations (p. 21)

DEGREE REQUIREMENTS

Degrees are awarded once a year at Commencement. Students who complete the requirements for the degree at other times during the year will be recommended to receive the degree at the next Commencement. A student is expected to satisfy the requirements for the degree of bachelor of arts within eight semesters. Based on a modification voted by the faculty, the requirements for this degree specified below are for students entering Wesleyan in and after the fall of 2000. Students who entered Wesleyan prior to the fall of 2000 must refer to the appropriate section of the degree requirements and academic regulations at wesleyan.edu/registrar/academic_regulations/prior_2000.html (https://wesleyan.edu/registrar/academic_regulations/prior_2000.html).

GRADUATION REQUIREMENTS

The requirements are (1) satisfaction of requirements for a major; (2) satisfactory completion of 32 course credits, no fewer than 16 of which must be earned at Wesleyan or in Wesleyan-sponsored programs; (3) a cumulative average of 74 percent or work of equivalent quality; and (4) for bachelor of arts students, at least six semesters in residence at Wesleyan as full-time students for students entering in their first year (for students entering as sophomore transfers, at least five semesters in residence at Wesleyan as full-time students; for students entering as midyear sophomores or junior transfers, at least four semesters in residence at Wesleyan as full-time students; Approved participation in one semester of study abroad will count as a semester in residence). A semester in residence is defined as any semester in which a student attends classes on the Wesleyan campus*, has attempted at least three credits, and received at least one grade. If a conversion to semester hours is required, each Wesleyan credit may be assigned a value of four semester hours.

*or via online classes offered by Wesleyan as a response to the COVID-19 pandemic.

All courses taken at Wesleyan will be listed on the student's transcript. However, there are limits on the number of credits students can count toward the total of 32 course credits required for the bachelor of arts. No more than 16

credits in any one subject (i.e., course code) can be counted toward the degree requirements. All course credits posted to a student's academic records will be considered for oversubscription including prematriculant, study-abroad, and/or transfer credits. A course offered in more than one subject designation (i.e., cross-listed) will count in all subjects in which it is offered. A student who exceeds these limits will be considered oversubscribed, and the additional course credits may not count toward the 32 required for the bachelor of arts.

In addition, the student may count toward the 32 credits a maximum of the following credits:

- A maximum of four credits in any combination of the following:
 - maximum of one credit in physical education (PHED)
 - maximum of one credit in self-paced language courses
 - (LANG 104), and no more than one-half credit in any one language
 - maximum of two student forum credits (419, 420)
 - maximum of four independent study and education-in-the-field credits (any combination of 467, 468, 469, 470)
 - maximum of one-half internship credit (CSPL 493)
 - maximum of two teaching apprentice credits (491, 492)
- A maximum of four individual and group tutorial credits (401, 402, 403, 404, 411, 412, 421, 422, CSPL480)
- A maximum of four times each of repeatable courses

While a maximum of two credits earned before matriculation by entering first-year students may count toward the Wesleyan degree, all such credits that have been duly approved by Wesleyan departments will be listed on the student's transcript. This applies to Advanced Placement (AP), International Baccalaureate (IB), and Advance-Level exams, as well as any college-level courses taken with college students and taught by a college teacher on a college campus, provided that the course meets Wesleyan's transfer credit criteria. Aside from AP credits and other credits regularly awarded on the basis of centrally administered examinations, no course that is listed for credit on a student's high school transcript may be used for Wesleyan credit.

MAJOR

To satisfy the major requirement, a bachelor of arts student must complete a departmental major, an interdepartmental major, or a collegiate program (College of East Asian Studies (p. 71), College of Education Studies (p. 74), College of Integrative Sciences (p. 79), College of Letters (p. 86) or College of Social Studies (p. 91)). A bachelor of liberal studies student must complete a standard concentration or approved self-designed concentration. A student will graduate if the requirements of one major are fulfilled in conjunction with the completion of other degree requirements.

Students may apply for a major any time after the drop/add period in the semester in which they have reached second semester sophomore standing. However, application for admission to the College of East Asian Studies, the College of Letters or the College of Social Studies should be submitted by first-year students during their second semester. Eligibility requirements are set by the department, program, or college, which may deny access or the privilege of continuation to any student whose performance is unsatisfactory. Students who have not been accepted into a major by the beginning of their junior year have a hold placed on their enrollment. Students may not declare more than a combined total of three majors, certificates, and minors.

DEPARTMENTAL MAJOR PROGRAMS

The departmental major is an integrated program of advanced study approved by the major department. It consists of a minimum of eight course credits numbered **201** or higher. No more than four course credits in the departmental major may be elected from other than the major department. Please see Graduation Requirements for the number of credits that may be counted toward the bachelor of arts degree and oversubscription.

COMPREHENSIVE EXAMINATION

In those departments in which a comprehensive examination is required, passing the examination is a condition of graduation. The major departments determine the nature and scope of the examinations, the amount of supervision to be given to the student in preparation for them, and the time and place of their administration. Both oral and written examinations may be required.

A student who passes the comprehensive examination with a grade deemed creditable by the major department may be excused by the department from the final examination of the last semester in any course in that department and in any other departmental course included in the major program. The student may substitute the grade attained in the comprehensive examination for the final examination grade in each of the designated courses. In all such cases, permission of the course instructor is required to substitute the final examination grade.

If a student fails to qualify for the degree in the senior year solely through failure to attain a satisfactory grade in the comprehensive examination but has satisfied all other requirements for graduation, the student may be permitted to take a second comprehensive examination.

INTERDEPARTMENTAL MAJOR PROGRAMS

The University offers two kinds of interdepartmental majors:

- **Interdepartmental majors.** These are archaeological studies; environmental studies; feminist, gender, and sexuality studies; Latin American studies; medieval studies; Russian, East European, and Eurasian studies; and science in society. The list may change from time to time.
- **University majors.** A student may propose a university major program involving two or more departments, provided that an ad hoc group of at least three members of the faculty approves and supervises the program. Students contemplating a university major should be accepted for admission to a regular departmental major, since the proposal for a university major must be approved by the Committee on University Majors. Deadlines for application are November 1 for the fall semester and April 1 for the spring semester. Additional information about the application procedure may be obtained from the Office of the Deans.

All interdepartmental major programs, like departmental major programs, must include at least eight course credits numbered **201** or higher. Other conditions, including additional courses, may be imposed.

COLLEGIATE PROGRAMS

In the spring of the first year, an undergraduate may apply for admission to the College of Letters, the College of Social Studies, or the College of East Asian

Studies. All of these programs offer an organized course of study continuing through the sophomore, junior, and senior years that leads to the degree of bachelor of arts.

GENERAL EDUCATION EXPECTATIONS

The inclusion of courses that fulfill Wesleyan's general education expectations is vital to the student's educational experience at Wesleyan. To assist in the experience, the faculty has divided the curriculum into three areas: natural sciences and mathematics (NSM), the social and behavioral sciences (SBS), and the humanities and the arts (HA). The faculty has assigned a general education designation to a course when appropriate, as well as established a distributional expectation for each general education area. In consultation with their advisors, first-year and sophomore students are encouraged to select courses from all three areas to experience the full dimension of intellectual breadth vital to a liberal education.

General education courses in the natural sciences and mathematics introduce students to key methods of thought and language that are indispensable to a liberal education as well as to our scientifically and technologically complex culture. They are intended to provide scientific skills necessary for critically evaluating contemporary problems. These courses apply scientific method, utilize quantitative reasoning, and enhance scientific literacy. They also provide a means of comparison to other modes of inquiry by including historical, epistemological, and ethical perspectives. The natural science and mathematics division has made special efforts to design and present a variety of courses that meet these objectives and are appropriate for future majors in the humanities, arts, and social sciences, as well as those interested in majoring in one of the natural sciences or mathematics.

General education courses in the social and behavioral sciences introduce students to the systematic study of human behavior, both social and individual. They survey the historical processes that have shaped the modern world, examine political institutions and economic practices, scrutinize the principal theories and ideologies that form and interpret these institutions, and present methods for analyzing the workings of the psyche and society.

General education courses in the humanities and the arts introduce students to languages and literature, to the arts and the mass media, and to philosophy and aesthetics—in short, to the works of the creative imagination as well as to systems of thought, belief, and communication. These courses provide both historical perspectives on and critical approaches to a diverse body of literary, artistic, and cultural materials.

The General Education Expectations are divided into Stages 1 and 2. The expectation for Stage 1 is that all students will distribute their course work in such a way that they will have earned at least two course credits in each of the three areas, all from different departments or programs. To meet the expectation of Stage 2, students must also take one additional course credit in each of the three areas prior to graduation, for a total of nine general education course credits. Credits earned prior to matriculating at Wesleyan as a first-year student cannot be used to fulfill Wesleyan's General Education Expectations. However, courses taken prior to matriculating at Wesleyan may be considered for general education equivalency credit for transfer students. Students may also request in advance that individual courses taken on an approved study-abroad program or a sponsored domestic study-away program be considered for

equivalency. Courses taken on Wesleyan-administered study-abroad programs or through the Twelve-College Exchange are coded for equivalency.

There may be some instances in which a student must be Stage 1 compliant by the end of their fourth semester (for example, certain majors (https://www.wesleyan.edu/registrar/majors_information/general-education.html#:~:text=860%2D685%2D2810-,General%20Education,all%20in%20different%20departments%2C%20by%20the%20end%20of%20the%204th%20semester,-Stage%202%2C%20A0requires) require this timeframe, e.g. Psychology). Additionally, if they are seeking any form of honors (University Honors (https://www.wesleyan.edu/registrar/honors/university_honors.html), Phi Beta Kappa (<https://catalog.wesleyan.edu/academic-regulations/honors/#:~:text=the%20Honors%20Committee-,Phi%20Beta%20Kappa,-The%20oldest%20national>), honors in general scholarship, etc.) they should ensure they follow timelines listed for those accolades. Students seeking three programs (majors/minors/certificates), must complete Stage 1 and Stage 2 by their last semester.

When a course has multiple general educational area assignments (NSM, SBS, HA), a student must select one general education area assignment by the end of the drop/add period. Student forums and individual and group tutorials never carry a general education designation.

ACADEMIC STANDING

SEMESTER CREDITS AND COURSE LOAD

Bachelor of Arts students are expected to satisfy the requirements for the bachelor of arts degree within eight semesters and they are expected to earn four credits in each semester. Students who plan a course schedule with fewer than four credits must have the approval of their class dean and faculty advisor. Students who enroll in fewer than three credits may have their enrollment in the University revoked. A student who plans a course schedule with five or more credits must have the approval of the faculty advisor. Candidates for the bachelor of arts degree may not enroll as part-time students (fewer than three credits). A three-credit program is the minimum required to be considered a full-time student and for which full tuition will be charged. The exception is for seniors completing the second half of their senior thesis who need only this credit to fulfill all degree requirements. They may enroll for only the one thesis credit in their last semester, which will not count as a semester in residence.

GRADING SYSTEM

A student's academic performance in individual courses taken at Wesleyan will be evaluated either by letter grades (A-F) or by the designations credit (CR) or unsatisfactory (U). At the discretion of the instructor, all the students in a course may be restricted to a single grading mode, or each student may be allowed to choose between the two modes, also referred to as student option (OPT). Instructors announce the grading options in WesMaps. In courses in which students have a choice of grading mode, the final choice must be made no later than 14 days after the drop/add period ends.

Whenever the credit/unsatisfactory mode is used, the faculty member is expected to submit to the Office of the Registrar a written evaluation of the student's work in the course.

A student's work in courses using letter grades is evaluated as follows: A, excellent; B, good; C, fair; D, passing but unsatisfactory; E, failure; and F, bad

failure. These letter grades (with the exception of the grade of F) may be modified by the use of plus and minus signs.

The numerical equivalents of the letter grades are

A+	98.3
A	95.0
A-	91.7
B+	88.3
B	85
B-	81.7
C+	78.3
C	75.0
C-	71.7
D+	68.3
D	65.0
D-	61.7
E+	58.3
E	55.0
E-	51.7
F	45.0

SEQUENCE COURSES

The granting of credit in two-semester courses (indicated by the "Required Course Sequence" notation in WesMaps) is contingent upon successful completion of both semesters. A student who has failed the first semester of a required course sequence may not continue in the second semester without the permission of the instructor and the class dean. A student who receives the grade of E (but not F) at midyear in a course running through the year and who is permitted by the instructor to continue the course in the second semester may receive credit for the first semester at the completion of the course upon the recommendation of the instructor to the class dean. At that time, the instructor may also recommend a revision of the first-semester grade. If this is not done, the grade for the first semester will remain recorded as E, but credit will be given for the first semester's work. A student who fails the second semester of a two-semester course loses credit for both semesters.

HONORS

DEAN'S LIST

Wesleyan acknowledges high academic achievement at the end of each semester. Students who earn a semester GPA of 93.350 or better will be named to the Dean's List and will have a permanent transcript notation of this achievement. To be eligible, a student must have earned the GPA on at least three letter-graded credits at Wesleyan during the semester and have no unsatisfactory or failing grades. Students with incomplete grades or outstanding credit will be evaluated after the grade and/or credit is posted to the Wesleyan transcript and, if eligible then, they will be added retroactively to the appropriate semester's list. The Dean's List is only applicable to current undergraduate Wesleyan Students and does not include visiting students who's host institution is not Wesleyan.

HONORS PROGRAM

A degree with honors can be earned two ways: (1) departmental honors will be awarded to the student who has done outstanding work in the major field of study and has met the standards for honors or high honors set by the respective department or program; (2) honors in general scholarship will be awarded to the student who is a university major or whose thesis topic or methodology is outside of the domain appropriate for the award of honors in the student’s major department(s) or program(s). The candidate for honors in general scholarship must have a minimum grade point average of 90.00, fulfill general education expectations, and submit a senior thesis that meets the standard for honors or high honors set by the Honors Committee.

Honors recognizes a bachelor’s degree attained with distinction, either in the major or in general scholarship. Honors recognizes the successful completion of a mentored, independent honors capstone project that has been evaluated by qualified examiners and that meets the standards for excellence in the major or those of the Honors Committee when completed in general scholarship. A student may receive no more than 2.0 credits for any one thesis. Students who major in more than one department, program, or college may submit a thesis in one of their majors or separate theses in more than one major. With the agreement of each of their departments, programs, or colleges, students may submit the same thesis for honors in more than one major.

In the fall semester of the senior year, all candidates for honors must either enroll in a senior thesis tutorial or, if they are pursuing an alternate route to honors, must ask their department to forward their names to the Honors Committee as candidates. Students who wish to pursue Honors in General Scholarship must follow the established guidelines and apply to the Honors Committee, normally in the second semester of the junior year. Thesis registration normally takes place in April. Beginning with the Class of 2018, honors candidates who complete their graduation requirements in December and who are not registering for classes or for a thesis tutorial in the spring are required to submit and register their thesis with the University on the first day of classes of the following spring semester.

University Honors is the highest award Wesleyan bestows. To be eligible, a student must fulfill General Education Expectations, earn high honors (either departmental or in general scholarship), be recommended for University Honors, and qualify in an oral examination administered by the Honors Committee.

PHI BETA KAPPA

The oldest national scholastic honor society, Phi Beta Kappa at Wesleyan is limited to 12 percent of the graduating class each year. Election to the society is based on grades and fulfillment of the eligibility requirements described below.

Fall election is based on grades through the end of a student’s junior year and fulfillment of the General Education Expectations (stages I and II). Normally, between 10 and 15 students are elected in the fall; Bachelor of Liberal Studies and transfer students are not eligible for consideration in the fall.

Spring election is based on grades through the end of a student’s first semester of the senior year and fulfillment of the General Education Expectations (stages I and II). Bachelor of Liberal Studies and Transfer students are eligible for consideration in the spring. It is preferred that students complete their General Education Expectations in their first semester senior year. However, a rationale for second-semester completion is not required, provided that the secretary

of the Gamma Chapter continuously monitors those students to guarantee completion of stage II of the General Education Expectations.

In addition to fulfilling the General Education Expectations, students are expected to have a grade point average of 92 or above to be considered for election in the spring. The minimum grade point average for the fall election is 93. Students are nominated by their major departments. Bachelor of Liberal Studies student and University majors can be nominated by their class dean.

ACADEMIC REVIEW AND PROMOTION

The University expects students to make good use of Wesleyan’s educational resources. A student is expected to satisfy the requirements for the degree of bachelor of arts within eight semesters. To remain in academic good standing, an undergraduate is expected to maintain a cumulative average of 74 percent and to satisfy the following earned-credit requirements. Pending credit for an incomplete or absent-from-final-examination with a provisional failing grade may not be considered credit earned. Students who are provisionally required to resign over the summer due to a credit deficiency or who are at risk for required resignation due to failing provisional grades on incompletes must submit earned credit or completed work two to three weeks prior to the start of fall semester classes. Upon submission of a grade for an incomplete or absent-from-final grade, a student’s academic status will be reviewed. Promotions in class standing are made at the end of each semester.

REQUIREMENTS FOR ACADEMIC GOOD STANDING

Semester Completed	Expected Credits Earned	Minimum Credits Earned
First	4	2
Second	8	6
Third	12	10
Fourth	16	14
Fifth	20	18
Sixth	24	22
Seventh	28	26

REQUIREMENTS FOR PROMOTION

- **To be promoted to sophomore standing**, a student must have satisfactorily completed at least six credits.
- **To be promoted to junior standing**, a student must have satisfactorily completed at least 14 credits and been accepted into a department/program major.
- **To be promoted to senior standing**, a student must have satisfactorily completed at least 22 credits and made acceptable progress toward the completion of the major.

ACADEMIC DISCIPLINES

Students whose academic performance is deficient will be subject to the following forms of academic discipline, according to the seriousness of the deficiencies. For purposes of academic review, one course is the equivalent of .75 to 1.50 credits. Failing grades on partial-credit courses (.25 and .50) are treated as the equivalent of a D.

Warnings. The mildest form of academic discipline, applied to students whose academic work in one course is passing but unsatisfactory (below C-) or bachelor of arts students who have earned fewer than three but more than two credits in a single semester.

Probation. The category of academic discipline used when the academic deficiency is serious, usually involving failure to achieve the requisite cumulative average of 74 percent, failure in one course, or passing but unsatisfactory work in two. One passing but unsatisfactory grade continues a student on probation. A student on probation is required to meet regularly with the class dean and perform at a satisfactory level in all courses. Failure to do so usually results in more serious discipline. A student who receives more than two incompletes without the class dean's permission may also be placed on probation.

Strict probation. The category of discipline used in very serious cases of academic deficiency, usually involving at least one of the following conditions:

- Failure in one course and passing but unsatisfactory work in another
- Passing but unsatisfactory work in three or four courses
- One failing grade or passing but unsatisfactory work in two courses while on probation
- Credit deficiency for promotion
- Earning two or fewer credits in a single semester for bachelor of arts students

Students on strict probation are required to attend all classes, to complete all work on time, and to meet regularly with their class dean. They may not receive an incomplete without the class dean's approval. One passing but unsatisfactory grade continues a student on strict probation.

Required resignation. The category of discipline used when the student's academic performance is so deficient as to warrant the student's departure from the University for the purpose of correcting the deficiencies. The notation "resigned" will be entered on the student's official transcript. The performance of students who are required to resign will usually involve at least one of the following deficiencies:

- **For all students:**
 - Failure to earn the required number of credits for promotion
- **If a student is in good standing:**
 - Failure in two or more courses, or
 - Failure in one course and passing but unsatisfactory work in two others
- **If a student is on probation:**
 - Failure in one course and passing but unsatisfactory work in one other, or
 - Passing but unsatisfactory work in three or more courses
- **If a student is on strict probation:**
 - Failure in one or more courses
 - Passing but unsatisfactory work in two or more courses

Students who are required to resign may not be on campus or in university housing, nor may they participate in student activities or the life of the university

community while on this status. Students who are required to resign may apply for readmission through their class dean after an absence of at least two semesters. The process of application for readmission requires a demonstration of academic preparedness and fulfillment of all the specified requirements for return. Students readmitted after being required to resign will be placed on strict probation.

Separation. The category of discipline used when the student's academic deficiencies are so serious as to warrant the student's departure from the University without eligibility for readmission. The notation "separated" will be entered on the student's official transcript. Separation is imposed if a student's academic performance warrants required resignation for a second time.

Appeals. Students who are required to resign or are separated from the University may appeal their status to the Academic Review Committee, a subcommittee of the Educational Policy Committee. A student who wishes to appeal must notify his or her class dean two days prior to the scheduled date on which appeals will be reviewed. Information about the appeals procedure will be provided by the student's class dean. Appeals are reviewed by members of the subcommittee of the Educational Policy Committee with attendance by the class deans and the vice president for student affairs. A student may elect to attend his or her review or participate via telephone. The committee's decisions are final.

ADVANCED PLACEMENT CREDIT, INTERNATIONAL BACCALAUREATE CREDIT, AND OTHER PREMATRICATION CREDIT

A student who has completed an Advanced Placement (AP) course or its equivalent while in secondary school and has achieved a score of 4 or 5 in the corresponding AP examination may be granted one or two credits toward the Wesleyan bachelor's degree with the appropriate department approval.

Students who have completed the International Baccalaureate (IB) course of study and have received a score of 5, 6, or 7 on the corresponding IB examinations may be granted one or two credits for the higher level examination and .75 credits for the subsidiary-level examination toward a Wesleyan bachelor's degree with the appropriate department approval.

Students wanting to post any prematriculation credit (e.g., for advanced exams, including but not limited to Advanced Placement, International Baccalaureate, and A-level) must consult their class dean. The awarding of prematriculation credit is determined at the discretion of the relevant department. The department may stipulate additional conditions for the award of such credit, such as successful completion of a specific University course or courses. Detailed information about prematriculation credit may be obtained from the Registrar's website or the Deans' Office.

Other prematriculation credits that the University will post on the Wesleyan transcript are courses taken with college students and taught by a college teacher on a college campus, provided the courses meet Wesleyan's transfer credit criteria. Please see Transfer of Credit (p. 19) for further details.

Any credits earned at Wesleyan prior to matriculation may apply toward Wesleyan degree requirements, but a maximum of two credits earned elsewhere may apply. This includes Advanced Placement credit, International Baccalaureate credit, and college transfer courses posted to the Wesleyan transcript. While a maximum of two credits will be counted toward the Wesleyan degree, all such credits that have been duly approved by Wesleyan departments will be listed on the student's transcript. These credits may contribute to oversubscription in any one department.

Students may use up to two prematriculation credits awarded for the purpose of class promotion. However, students are not permitted to use this credit to reduce the course load, to clear up failures or unsatisfactory work, or to count toward fulfillment of the general education expectations.

ACCELERATION

A student may complete work for the bachelor of arts degree in fewer than the expected eight semesters, but in no less than the required semesters in residence. Please see Degree Requirements for semester-in-residence requirement. Requests for acceleration should be made in writing to the student's class dean. This may be accomplished by (1) applying up to two prematriculation credits, such as approved transfer credits, Advanced Placement credits, A-level or Cambridge Pre-U credits, or International Baccalaureate credits; (2) transferring preapproved summer credit at Wesleyan or another institution; (3) completing independent study or education-in-the-field projects during a summer or an authorized leave of absence; (4) transferring preapproved credit taken at another institution while on an approved leave of absence; or (5) completing additional Wesleyan credits (beyond the expected course load per semester) during the academic year.

NONDEGREE UNDERGRADUATE STUDENTS

Wesleyan offers the following opportunities to take undergraduate courses on a nondegree basis. All nondegree students are subject to the following policies:

- An application is required; students must have a high school diploma or the equivalent (with the exception of High School Scholars) and must be approved for admission by one of the programs below.
- Admission to nondegree status does not constitute admission to Wesleyan University. Nondegree students who wish to apply for admission to Bachelor of Arts degree candidacy may do so through the Office of Admission (<http://www.wesleyan.edu/admission/>) and those who wish to apply for admission to Bachelor of Liberal Studies degree candidacy may do so through Continuing Studies. Their applications will be reviewed according to the same rigorous standards as those of other candidates for admission. Nondegree undergraduates who become admitted to degree candidacy will be expected to satisfy normal degree requirements. Please note that candidates admitted as first-year students may only count two non-Wesleyan credits taken prior to matriculation (admission to degree candidacy) toward the degree.

Auditor. Subject to any conditions set by the instructor, permission to audit does not include permission to have tests, examinations, or papers read or graded. Wesleyan alumni and members of the community who are not registered students are permitted to audit undergraduate courses, subject to the following conditions:

- That the auditor register their contact information with the registrar's office;
- That the presence of an auditor not compromise undergraduates' access to the course;
- That the auditor receive permission of the instructor;
- That the terms of the auditor's participation in the work of the course be mutually agreed upon in advance with the instructor;
- That no academic credit be awarded to an auditor and no transcript issued.

Center for Prison Education. Wesleyan offers the Center for Prison Education (<http://www.wesleyan.edu/cpe/>), awarding undergraduate credit to incarcerated students who are admitted to and complete courses in the center. All students in the center are subject to Wesleyan academic and nonacademic policies as well as center policies. Center courses are offered on-site at the correctional institution.

Community Scholars. Admissions will be handled by Continuing Studies (<http://www.wesleyan.edu/nondegree/>); admissions of international students will be reviewed by the director of the Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>). Individuals accepted for this category may enroll in up to four courses per semester with the instructors' approval as long as their enrollment does not displace a degree-seeking student. The tuition is a per-credit charge, based on Wesleyan's full-time tuition. Housing and financial aid are not available. For information about becoming a Community Scholar, please visit [wesleyan.edu/nondegree/](http://www.wesleyan.edu/nondegree/) (<https://wesleyan.edu/nondegree/>).

Residential Scholars. Admission will be handled by Continuing Studies (<http://www.wesleyan.edu/nondegree/>); admission of international students will be reviewed by the director of the Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>). Individuals accepted for this category must enroll full-time, pay full tuition, and live in university housing. Financial aid is not available. For information about becoming a Residential Scholar, please visit [wesleyan.edu/nondegree/](http://www.wesleyan.edu/nondegree/) (<https://wesleyan.edu/nondegree/>).

High School Scholars. Wesleyan permits outstanding juniors and seniors from selected area high schools to take one course in the fall semester and one course in the spring semester at Wesleyan. Application is made through the guidance counselor at each high school. The completed application should be submitted to the Office of Admission (<http://www.wesleyan.edu/admission/>). Permission is granted by the course instructor.

TRANSFER STUDENTS

Students wishing to apply to Wesleyan as transfer students must have been enrolled for at least one full academic year at another postsecondary academic institution and must have obtained the equivalent of at least six Wesleyan credits. Students who do not meet these conditions must apply for admission as a first-year student.

It is expected that transfer students will keep pace with the class to which they are officially assigned by the Office of the Deans; that is, the number of Wesleyan semesters available to transfer students to earn the Wesleyan degree will be determined by their class standing on entry. For certain exceptional cases and upon petition to the class dean, students may be granted an additional

semester to complete requirements for the bachelor's degree. Please see Degree Requirements (p. 11) for semester-in-residence requirement.

Transfer students entering as first-semester sophomores are expected to apply for acceptance into a major after the drop/add period of their second semester at Wesleyan. Transfer students entering as second-semester sophomores are expected to apply for acceptance into a major after the drop/add period of their first semester at Wesleyan. Transfer students who enter as juniors must apply for acceptance into a major program as soon as possible, but no later than the end of their first semester at Wesleyan.

Credits approved for transfer from other institutions may be considered by the student's major department for inclusion in the major.

Wesleyan's partnership with Middlesex Community College provides an articulation agreement for the Center for Prison Education Program. Students in this program who complete the associate degree at Middlesex Community College and are admitted to the Bachelor of Liberal Studies program will receive a minimum of 16 Wesleyan credits upon transfer into the BLS program; contingent upon having earned a minimum of 16 (3.00 or 4.00 semester hour) courses with a grade of C- or better.

Transfer students are encouraged to comply with Wesleyan's general education expectations. Transfer credits earned prior to matriculation at Wesleyan may be evaluated for general education equivalency. Please note that grades in courses must be a C- or better to be eligible for transfer of credit. No more than two credits may be transferred from one summer.

STUDY ABROAD

Bachelor of arts students may earn Wesleyan credits by enrolling for nonresident study in either of the following types of programs abroad:

- Wesleyan-administered programs
- Wesleyan-approved programs

The only way in which courses taken abroad during the academic year can be credited toward a Wesleyan bachelor of arts degree is by prior approval from the Office of Study Abroad (OSA). Details regarding the application process are available in the OSA, on the OSA website (wesleyan.edu/cgs/osa), and through a student's electronic portfolio.

WESLEYAN-ADMINISTERED PROGRAMS

The Wesleyan-administered programs are:

- **France:** Vassar-Wesleyan Program in Paris
- **Italy:** Eastern College Consortium (ECCO) Program in Bologna
- **Spain:** Vassar-Wesleyan Program in Madrid

One semester of study on these programs does count toward the semester-in-residence requirement.

WESLEYAN-APPROVED PROGRAMS

The Office of Study Abroad maintains a list of programs preapproved for Wesleyan credit in a wide range of countries in Africa, Asia, Europe, the Middle East, Oceania, and the Americas. In certain circumstances, the Office of Study Abroad may grant ad hoc approval for a program not included on the preapproved list. See the OSA website for details (wesleyan.edu/cgs/osa), including the preapproved program list.

STUDY ABROAD REGULATIONS, GUIDELINES, AND FINANCIAL PROCEDURES

Copies of the regulations, guidelines, and financial procedures are available on the OSA website and through a student's electronic portfolio.

Up to four Wesleyan credits are normally allowed for each of two semesters. Permission for up to a fifth credit in any given semester may be granted by the program director in the case of Wesleyan-administered programs and by the Director of Study Abroad for Wesleyan-approved programs. Grades earned will be reported on the Wesleyan transcript and will be counted in GPA calculations. Students have the option of selecting CR/U grading mode for one course per semester for transfer credit. The deadline for this varies by program.

Credit toward graduation is approved by the Office of Study Abroad. For credit toward completion of a major, certificate, or minor, students must consult with the relevant chair or advisor when applying for study abroad. Students must have courses for major, certificate, or minor credit preapproved before departure or, in the event that course information is not available before the program begins, at the point of course registration. Such credit is not granted retroactively, and students who need to change course selections on arrival abroad must seek approval at the time of registration through their advisor and the Office of Study Abroad. It is the responsibility of the student to check with the class dean concerning progress toward graduation and the possibility of oversubscription. Each course taken abroad and approved will carry the appropriate General Education designation if one can be determined from the available information about the course.

Students placed on strict probation at the end of the semester and students on medical leave are not eligible to study abroad the following semester; exceptions may be made with the approval of the Deans and the Office of Study Abroad. Any grade of incomplete (IN), deferred grade (X), or absent from final exam (AB) must be resolved two weeks prior to the student's departure date, and students with such grades on their transcript should consult with their class dean about the resolution process.

All university academic regulations apply to students studying for Wesleyan credit abroad, and withdrawal from a study-abroad program will be treated in the same way as withdrawal from the University. Wesleyan may withdraw a student from a program abroad or place a student on medical leave, should it be deemed advisable to do so.

Fees. Students are considered to be enrolled at Wesleyan while abroad. They are therefore charged Wesleyan tuition and are eligible for financial aid. Application for financial assistance should be made to the Financial Aid Office. Tuition charges cover the academic and administrative portions of the program expense. Expenses such as room and board, transportation, and cultural activities will be paid by students either through Wesleyan or directly, depending on the program. This financial arrangement applies to all study abroad for credit during the academic year.

- **Wesleyan-administered programs.**For information and application, students should contact the Office of Study Abroad.
- **Wesleyan-approved programs.**Besides applying directly to the sponsoring institution, students must fill out and submit to the Office of Study Abroad a Wesleyan application for permission to study abroad.

INTERNAL SPECIAL STUDY PROGRAMS

WESLEYAN INTERSESSIONS: SUMMER AND WINTER SESSIONS

The University offers two interessions: Summer Session and Winter Session. Course credit earned through interessions is eligible to count toward the graduation requirement. Participation in interessions does not count as a semester in residence. An interession does not constitute an academic semester at Wesleyan. All students in interessions are subject to Wesleyan academic and nonacademic policy and are also subject to interession policies. Courses taken during interessions are subject to the same academic regulations as courses taken during the regular academic year. Students should consult their class dean about how interession performance may affect their academic standing or check the Deans' Office website for clarification. Students are not eligible to do independent study or education in the field and take an interession course simultaneously. (For summer transfer credit, please see External Special Study Programs - Transfer Credit)

Graduate Liberal Studies (GLS). Wesleyan undergraduates, normally rising juniors and seniors, may take courses in the Graduate Liberal Studies program subject to approval by the instructor of the course, their class dean, faculty advisor or major department chair, and the GLS director. Participation in this program does not count as a semester in residence. Wesleyan undergraduates attending GLS are subject to its academic rules and regulations. All grades and course work attempted by Wesleyan undergraduates in GLS courses will be recorded on the student's undergraduate record and transcript. For more information, visit wesleyan.edu/masters/ (<https://wesleyan.edu/masters/>), e-mail masters@wesleyan.edu, or visit the office at 74 Wyllys Avenue.

Independent Study. A student may obtain academic credit for certain forms of independent study during a summer or an authorized leave of absence. Activities such as independent reading, special work under supervision, and educational tours may earn credit provided that (1) these plans have been approved in advance by the relevant Wesleyan department and the class dean, and (2) all requirements specified by the approving department in the form of an examination, paper, or equivalent assignment have been satisfied. Please note that senior theses or senior projects may be undertaken only as senior thesis tutorials or projects and not as independent study. No more than two credits may be earned in a semester or summer for such special work. See "Fees," below. Forms for independent study, along with other useful resources, are available in the Office of the Deans or online at wesleyan.edu/studentaffairs/forms.html (<https://wesleyan.edu/studentaffairs/forms.html>).

Education in the Field. Approved education-in-the-field programs are listed under the sponsoring departments or colleges. They may be taken during the summer, during an authorized leave of absence, or during an academic term. At the discretion of the department involved, up to two course credits per

semester may be granted for education in the field. Students must consult with the department in advance of undertaking education in the field for approval of the nature of the responsibilities and method of evaluation. Credit and a grade for education in the field will be posted to the student's transcript once a grade report has been submitted by the faculty sponsor.

Students pursuing an education in the field during the summer or while on an authorized leave of absence during the academic year are not eligible for financial aid and will be charged a special tuition rate (see below). Students enrolled full time may also pursue an education in the field in conjunction with regular courses (for a combined total of at least three credits) and will be charged the full tuition rate. In no case will financial aid to a student in this category exceed the amount of aid the student would have received as a regular full-time student at the University.

Education-in-the-field programs are under the general supervision of the Educational Policy Committee. Information concerning specific procedures for the supervision and evaluation of education-in-the-field programs may be obtained from the sponsoring department or college. Forms for education in the field are available at the Office of the Deans or on the Office of the Deans' website.

No more than four credits earned through independent study and education in the field combined can be counted toward the graduation requirements.

FEES FOR INDEPENDENT STUDY AND EDUCATION IN THE FIELD AND CREDIT FROM UNACCREDITED INSTITUTIONS

Students should contact the Student Accounts Office (237 High Street; wesleyan.edu/studentaccounts/tuition.html (<https://wesleyan.edu/studentaccounts/tuition.html>)) for information about fees for pursuing an independent study, enrolling only in an education in the field, or taking a course at an unaccredited institution.

TEACHING APPRENTICE PROGRAM

The Teaching Apprentice Program offers undergraduate students the opportunity to participate with a faculty member (who serves as a master teacher) in the teaching of one of the faculty member's courses. The apprentice is enrolled in an apprenticeship tutorial conducted by the master teacher. The tutorials focus in varying degrees on the subject matter of the course and on the teaching activity itself. Apprentices are awarded one course credit for successful completion of the semester tutorial.

The Teaching Apprentice Program has two main objectives:

- To provide an opportunity for advanced students to deepen their understanding of a subject while gaining insight into the teaching process; and
- To improve the learning environment in courses designed primarily for first-year and sophomore students by adding a student teacher who can bridge the intellectual gap between instructors and beginning students. The apprentice is viewed as a member of a teaching team rather than as a teaching assistant. While the interaction between the apprentice and the master teacher can take many forms, faculty are urged to design the role of the apprentice to stimulate greater participation in the learning activity by students in the course. Normally, the apprentice and master teacher have,

in some prior activity, established the sort of intellectual rapport that will promote an effective team relationship.

Apprentice proposals should be developed by the master teacher with input, when possible, from the prospective apprentice. Applications should describe the teaching role to be played by the apprentice, the academic course work to be done in the apprenticeship tutorial, and the basis on which the apprentice will be evaluated. Applications must also meet the guidelines for apprenticeships established by the department or program and approved by the Educational Policy Committee. Faculty members must submit applications to the Office of Academic Affairs in October to apply for a spring semester apprentice and in April to apply for a fall semester apprentice. The following policies apply to teaching apprentices and teaching apprenticeships:

- If a student serves as an apprentice in the same course more than once, the student may receive no more than a total of one credit for teaching in that course.
- Teaching apprentices may not teach in group tutorials or student-forum courses.
- A student may not count more than two course credits earned in apprenticeship tutorials toward degree requirements.

TUTORIALS

Individual tutorials, numbered **401-402** and **421-422**, are available only to sophomores, juniors, and seniors. A tutorial may not be given when a comparable course is available in the same academic year. Students may not count more than four course credits combined of individual and group tutorials toward degree requirements. Tutorial forms must be approved by the chair of the department or program in which the tutorial is given.

Tutorial applications should include a concise description of the work to be done, including the number of hours to be devoted to the tutorial, the number of meetings with the tutor, a reading list, and a description of the work on which the student's performance will be evaluated. Tutorials should be submitted through the drop/add system.

Tutorials for one credit should be added during the drop/add period. Partial-credit tutorials beginning after the drop/add period must be added to a student's schedule within five days of the start of the academic exercise. The minimum credit amount for any tutorial is .25 credit.

Group tutorials, numbered **411-412**, are proposed and taught by a faculty member. Tutorials should be submitted through the drop/add system. For information about tutorials during the summer term, please contact the Summer Session office.

STUDENT FORUMS

Student-run group tutorials, numbered **419-420**, must be sponsored by a faculty member and approved by the chair of a department or program and by the relevant academic dean. Proposals for a student forum must be submitted by the department or program chair to the Office of Academic Affairs by the end of exams prior to the semester in which the course will be offered. Application forms and instructions are available at the Office of the Registrar. A student may count two student forum course credits toward degree requirements but is limited to a combined maximum of two credits in physical education and student forum courses.

EXTERNAL SPECIAL STUDY PROGRAMS

TRANSFER OF CREDIT

A student may obtain credit toward the Wesleyan degree for courses taken during the academic year at another accredited U.S. institution or in the summer session of another accredited U.S. or international institution if (1) the courses have been approved in advance by the relevant Wesleyan department, program, or college, and (2) the grades in the courses are C- or better. (Courses taken prior to matriculation do not require preapproval and may include courses taken at an accredited international institution during the academic year.) Departments, programs, or colleges may impose other conditions for the transfer of credit, such as a higher minimum grade, review of coursework, passing a departmentally administered exam, etc. The Wesleyan academic record will not reflect grades earned at another institution; only credits may be transferred. The final amount of credit transferred to the Wesleyan transcript will be determined in accordance with Wesleyan's policy on transfer credit and the evaluation of the appropriate department. (As a guideline, it should be noted that one Wesleyan unit is equivalent to four semester hours, or six quarter-hours.) A bachelor of arts student may post a maximum of two non-Wesleyan credits (2.5 credits with a course that offers a lab) in any given summer. Study-abroad credits earned by students who currently are withdrawn or required to resign will not be accepted. Forms for permission to transfer credit are available at the Office of the Deans or on the Office of the Deans' website.

A student who wishes to receive Wesleyan credit for work done at an unaccredited institution must secure the sponsorship of a Wesleyan faculty member, the approval of the chair of the corresponding Wesleyan department, and the approval of the class dean prior to undertaking the work. (Courses taken prior to matriculation do not require preapproval.) To apply for credit, a student should write a statement that describes the work to be done and indicates the amount of academic credit sought. The statement should be endorsed by the faculty sponsor and the department chair and submitted to the class dean. The faculty sponsor will be responsible for evaluating the completed work and reporting the amount of credit earned to the class dean. For fees please see wesleyan.edu/studentaccounts/tuition.html (<https://wesleyan.edu/studentaccounts/tuition.html>).

TWELVE-COLLEGE EXCHANGE PROGRAM

The Twelve-College Exchange Program is a cooperative program for residential student exchange between Wesleyan and the following colleges: Amherst, Bowdoin, Connecticut, Dartmouth, Mount Holyoke, Smith, Trinity, Vassar, Wellesley, and Wheaton. Two special programs associated with the Twelve-College Exchange Program are the Williams-Mystic Seaport Program in American Maritime Studies in Mystic, Connecticut, sponsored by Williams College, and the National Theater Institute, in Waterford, Connecticut, sponsored by Connecticut College. Wesleyan sophomores, juniors, and seniors in good standing are eligible to apply to any of the participating institutions for either one semester or the full year. Participation in the Twelve-College Exchange Program by Wesleyan students does not count toward Wesleyan's residence requirement, but courses are coded for general education equivalency. Catalogs of participating colleges and information about the programs are available in the Office of Study Abroad (<http://wesleyan.edu/cgs/osa/>). All courses taken on a Twelve-College Exchange

Program will post to the student's Wesleyan transcript with grades and count toward the Wesleyan GPA.

Tuition and fees are paid to the host colleges; no fees are paid to Wesleyan. Financial-aid students may apply their Wesleyan assistance, with the exception of work/study benefits, toward expenses at the host college. It is the student's responsibility to complete any loan negotiations before leaving the Wesleyan campus. A Wesleyan student who participates in the exchange program is expected to abide by the rules and regulations of the host institution.

Students who wish to participate in the Twelve-College Exchange Program must apply through the Office of Study Abroad (<http://wesleyan.edu/cgs/osa/>). Students may apply to only one college at a time. The deadline for submission of completed applications is February 1 for either one or both semesters of the subsequent academic year. However, applications will be considered as long as space is available at the desired institution. Completed and approved applications are sent by Wesleyan to the respective colleges. If rejected by the college of their first choice, students may apply to a second college.

OTHER NONRESIDENT PROGRAMS

A small number of programs considered by the faculty to be of importance in supplementing the Wesleyan curriculum for bachelor of arts students with certain academic interests are treated as approved nonresident study programs. Participants continue to be Wesleyan students, pay regular tuition to the University, and are not placed on leave of absence. Information about these programs can be obtained from the Office of Study Abroad or the faculty member or office listed below. Students planning to participate in these programs should check with their faculty advisor and class dean concerning their progress toward completion of the major and graduation requirements. Participation in these programs does not count as a semester in residence.

The Woods Hole SEA Semester. Through this 12-week program, students spend six weeks at the Woods Hole Center for Oceanographic Research studying the chemistry, biology, physics, and geology of the oceans; marine history and literature; and maritime policy; and designing an independent research project. The second six weeks of the program entail lab research and sailing, navigating, and maintenance aboard a 135-foot vessel. See the chair of the Department of Earth and Environmental Sciences for information about the curriculum and application process.

Semester in Environmental Science (SES) at the Marine Biological Laboratory, Woods Hole. The purpose of this program is to instruct students in the basic methods and principles of ecosystems science in a manner that enhances and supplements existing curricula in natural and environmental sciences at the colleges participating in the SES consortium. The program is interdisciplinary and offers a core curriculum, stressing team research and team study. See the chair of the Department of Earth and Environmental Sciences for information about the curriculum and application process.

The Urban Education Semester. This is a fully accredited academic immersion program combining an interdisciplinary examination of inner-city public education with supervised practical teaching experience in selected New York City public school classrooms. Each semester, students enroll in graduate courses at the Bank Street College of Education and work three days per week under the guidance of distinguished teachers. The Urban Education Semester introduces students to the theory and practice of urban education. Interested students should contact the Gordon Career Center (<http://www.wesleyan.edu/careercenter/>).

Wesleyan-Trinity-Connecticut College Consortium. By special arrangement with Connecticut College and Trinity College, Wesleyan students may enroll, without

additional cost, in courses given at these institutions. Normally, students will be permitted to take only courses not offered at Wesleyan. Enrollment is limited to one course per semester. Arrangements for enrollment may be made through the Office of the Registrar (<http://www.wesleyan.edu/registrar/>).

Dual-Degree Programs—Engineering. Wesleyan maintains dual-degree programs with Columbia University, Dartmouth College, and the California Institute of Technology. These programs allow students to earn two degrees in five years combined (three years at Wesleyan, two at the engineering school). While all three partners participate in the sequential 3-2 version, Dartmouth also makes a 2-1-1-1 track available in which students spend the first two years and their senior year at Wesleyan. In addition, Columbia University offers the so-called “4-2 option” in which students complete four years at Wesleyan before pursuing the BS engineering degree at Columbia. Provided that the necessary math and science courses are taken, this option allows students to pursue a wide range majors at Wesleyan before entering the engineering school.

AFROTC. Qualified Wesleyan students may participate in the Air Force Reserve Officer Training Corps (AFROTC) program hosted by Yale University's AFROTC detachment. Students who wish to transfer credits for courses they successfully complete through this program may do so if (1) the courses have been approved in advance by the relevant Wesleyan department, and (2) the grades in the courses are C- or better. Students who wish to request the transfer of credit to their Wesleyan degree must do so through the same process and under the same guidelines as transfer credit from any other accredited institution. For details on how to transfer credit, please refer to Transfer of Credit from Other Institutions. For general information or assistance with Wesleyan AFROTC participation, please contact your class dean. For more information about Yale's AFROTC program, please contact Yale AFROTC Detachment 009, 203-432-9431 or airforce@yale.edu.

ADVANCED DEGREES

BA/MA PROGRAM IN THE NATURAL SCIENCES, MATHEMATICS, AND PSYCHOLOGY

Wesleyan offers a BA/MA program as a formal curricular option for students who are interested in an intensive research experience. The program has a research orientation and includes course work, seminars, and, in some cases, teaching. The program provides a strong professional background for either further advanced study or employment in industry. The expected period for completion of the program is 10 semesters for those students who complete the BA in eight semesters. Students who finish the BA degree in less than eight semesters are eligible to apply. Departments and faculty advisors will pay careful attention to the course work and research backgrounds of students completing the BA in less than eight semesters to be sure they are able to meet all the expectations of the program in less than 10 full semesters of study and research. Further information on the BA/MA program is available at wesleyan.edu/grad/degree-programs/bama.html (<http://www.wesleyan.edu/grad/degree-programs/bama.html>).

MA AND PHD PROGRAMS IN PHYSICAL SCIENCES, MATHEMATICS, AND MUSIC

The University offers work leading to the MA degree in astronomy, computer science, earth and environmental sciences, mathematics, and music, and to the PhD in biology, chemistry, ethnomusicology, mathematics, molecular biology and biochemistry, and physics. Theses and dissertations are required for these degrees. An interdepartmental program leading to the PhD is offered jointly by the chemistry and physics departments. An interdepartmental program in molecular biophysics leading to the PhD is offered by the departments of molecular biology and biochemistry and chemistry.

Graduate instruction is scheduled within an academic year consisting of two academic semesters from September to June. Summer work consisting of independent study or research is expected. No evening courses or summer school courses are available. Tuition remission and service as a teaching assistant are parts of the financial aid package offered to MA and PhD students. Information on the graduate programs is available at wesleyan.edu/grad/ (<https://wesleyan.edu/grad/>).

MA IN CURATORIAL PRACTICE

This program is designed to enhance the professional student's skills as a performing arts presenter, manager, producer, and curator, allowing each participant to advance in the field or, if the student is new to the field, enable him/her to pursue a position at a presenting institution or as an independent curator. Students gain an understanding of performance and movement-based artistic and curatorial practice; the social, cultural and historical context of these practices; and the ability to write and speak about this work in a variety of contexts. For more information, visit wesleyan.edu/icpp (<https://wesleyan.edu/icpp/>).

THE MALS AND MPhil IN GRADUATE LIBERAL STUDIES

Graduate Liberal Studies offers courses in the arts, humanities, mathematics, sciences, and social sciences leading to the master of arts in liberal studies (MALS) or the master of philosophy in liberal arts (MPhil). Courses meet on campus or in various combinations of online teaching modes, featuring schedules designed for professionals who are part-time students. Students are expected to complete all graduation requirements within six years. For more information, visit wesleyan.edu/masters (<https://wesleyan.edu/masters/>), e-mail masters@wesleyan.edu, or visit the office at 74 Wyllys Avenue.

GENERAL REGULATIONS

The University expects all students to fulfill faithfully and effectively their responsibilities as members of the Wesleyan community. A student may be suspended or be required to withdraw from the University or from any course at any time when, in the judgment of the class dean or the faculty, respectively, the student fails to meet this obligation satisfactorily.

UNIT OF CREDIT

One unit of Wesleyan credit requires 120 to 160 hours of academic work. This work typically consists of 40 hours of scheduled class time, which is made up of 39 hours of class meeting time,¹ and one scheduled final exam or the equivalent of at least one hour of additional work. In addition, 80 to 120 hours of out-of-class work are expected. A one-credit course that does not conform to a standard meeting pattern of at least 40 hours must still require 120 to 160 hours of academic work. For courses that award more or less than one unit of credit, the required hours of academic work are normally prorated to conform to the above formula.

¹ The established standard meeting times allow up to 10 minutes for transition to and from other classes.

ENROLLMENT

Students must comply with the regulations for matriculation with the University as announced by the registrar. A student who does not enroll in the University by the announced deadline will be considered administratively withdrawn from the University. Bachelor of Arts students who enroll in fewer than three credits may be subjected to disenrollment.

MEDICAL REPORT

Every student entering the University for the first time must submit health information as requested by the director of University Health Services.

PAYMENT OF BILLS

It is the student's responsibility to see that payment deadlines are met. Failure to do so prevents the student from enrolling, participating in course preregistration, and participating in the housing selection process. Diplomas, grades, and transcripts also will be withheld until university bills have been paid.

SELECTION OF COURSES

Detailed information concerning course offerings is given in the Wesleyan University Course Catalog; WesMaps (<http://www.wesleyan.edu/wesmaps/>), Wesleyan's online curriculum home page; and the Course Supplement, a condensed listing of all course offerings for each semester. These publications should be consulted for information concerning time and place of class meetings, additions or changes, and cancellations.

CHANGES IN AND WITHDRAWAL FROM COURSES

Students may not add courses (including tutorials) to their schedules after the drop/add period. Exceptions will be made for courses that start after the beginning of the semester, provided that the required drop/add or tutorial forms are submitted to the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) within five class days after the start of the course.

A student who withdraws from a course, the only option after the drop/add period, will receive a notation of "W" and the course will remain on the student's transcript. The deadline for withdrawal by choice and without penalty from a full-semester course is one week before the end of classes. A student may withdraw from a first- and third-quarter course one week before the end of the corresponding quarter. For second- and fourth-quarter courses, the deadline for withdrawal corresponds to the withdrawal deadline for full-semester courses. To withdraw the student must submit to the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) by the stated deadline a withdrawal slip signed by the instructor, the faculty advisor, and the class dean.

An instructor may require a student to withdraw from a course if the student fails to meet the announced conditions of enrollment. The student will be required to submit a completed withdrawal slip to the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) to make the withdrawal from the course official.

Students who withdraw from the University before the stated withdrawal deadline will also be withdrawn from their courses. For a student withdrawing after the stated withdrawal deadline, the courses will remain on the transcript and they will be graded accordingly.

AUDITING

Subject to any conditions set by the instructor, a registered Wesleyan student may be permitted to audit a course without charge. The instructor may add to the grade roster the name of any student who has attended with sufficient regularity to have the course listed in the academic record as audited, without credit. Permission to audit does not include permission to have tests, examinations, or papers read or graded. Wesleyan alumni and members of the community, please see *Nondegree Undergraduate Students* (p. 16).

CLASS ATTENDANCE

A student is expected to attend class meetings regularly. Since the faculty intends that class attendance be primarily the student's responsibility, no precise limitation of absences has been prescribed for all students. It is understood, however, that absence from class is regarded as the exception, not the rule. An instructor should notify the class dean of any student who is absent from class for one week or three consecutive classes, whichever comes first. Students on strict probation must attend all classes in which they are enrolled.

Instructors are entitled to establish definite and precise rules governing attendance. Any student who is repeatedly absent without excuse from scheduled academic exercises at which attendance is mandatory may be required to withdraw from the course.

UNSATISFACTORY PROGRESS REPORTS

It is expected that faculty will submit in a timely manner an Unsatisfactory Progress Report (UPR) to the class dean for any student who is doing unsatisfactory work. UPRs help the class deans identify students who are having academic difficulties and allow the deans to work with instructors to reach out and work with these students. Early intervention proves to be the most effective method for helping students experiencing academic difficulties. UPRs should be submitted for:

- Students who are doing unsatisfactory work (lower than C-) or experiencing difficulties that will result in unsatisfactory work;

- Students who are experiencing substantial difficulty with the course even though they may have a satisfactory grade of C or better;
- Students who are on strict probation. The Deans' Office notifies instructors if such a student is in their course.

SUBMISSION OF GRADES

Under normal circumstances, only the instructor of record can submit a course grade. However, in cases where the instructor is no longer employed by the University or has become unavailable, the department chair, or a faculty member designated by the chair, may, upon review of the student's work, submit a grade. Grades can only be given for work assigned and submitted during the academic term, except in the case where a student has requested an incomplete (please see *Incompletes/Completion of Work in Courses*).

CHANGE OF SUBMITTED GRADE BY THE INSTRUCTOR

A change of a submitted grade may be made by the instructor on the following grounds:

- Administrative error
- Error in calculation of grade
- Lost work submitted during the academic term was found
- Submission of outstanding work from an incomplete whereby the final grade is not lower than the provisional grade

STUDENT GRIEVANCE PROCEDURE INCLUDING APPEAL FOR A GRADE CHANGE

The process for appealing a grade or contesting any aspect of a course (including the scheduling of classes and examinations) is:

- The student discusses the grade or the contested issue with the instructor of the course; if the student is not satisfied that a reasonable explanation has been provided, or if the student wants to address an issue in confidence, then
- The student appeals to the department/program chair; if not satisfied, then
- The student appeals to the academic dean of the department or program's division (Arts and Humanities, Social Sciences, or Natural Science and Mathematics); if not satisfied, then
- The student appeals to the provost.

All appeals of grades received in the fall or winter term must be initiated by the student before the end of the following spring term; all appeals of grades received in the spring or summer term must be initiated by the student before the end of the following fall term.

Under normal circumstances, a grade appeal beyond the instructor will only be granted with the consent of the instructor. In cases where the instructor has become unavailable or an official investigative proceeding has determined that the instructor behaved discriminatorily toward the student, however, the department chair, or a faculty member designated by the chair, may determine the result of a grade appeal.

INCOMPLETES/COMPLETION OF WORK IN COURSES

All the work of a course must be completed and submitted to the instructor by the last day of classes. The only exceptions to this are final examinations and, in courses without a registrar-scheduled final examination, significant assignments such as final take-home exams, semester-long projects, and term papers, which must be due no sooner than the first day, and no later than the last day, of the exam period, and preferably at the time slot reserved for the registrar-scheduled examination. A student who is unable to meet these deadlines, for the reasons listed below, may request the permission of the instructor to meet the requirement no later than 30 days after the last day of exams. If the instructor grants the extension, a grade of Incomplete (IN) must be submitted to the registrar at the time grades are due. Grades of Incomplete must be accompanied by a provisional grade. If the student does not submit the outstanding work in the course by the deadline, the provisional grade will become the final grade.

All work is due by 5 p.m., 30 days after the last day of exams, unless an earlier date is stipulated by the instructor of if student is planning to participate in winter/summer session. Students must submit all outstanding work for a fall/spring incomplete in order to participate in winter/summer sessions. The work must be submitted before the first day of the session.

Any provisional incomplete grades remaining by the end of the drop/add period of the subsequent semester will automatically be converted to the provisional final grade by the Office of the Registrar (<http://www.wesleyan.edu/registrar/>).

A student may receive up to two incompletes per semester by this method. To receive incompletes in more than two courses, the student must petition his or her class dean. The petition can be granted only on grounds of illness, family crisis, or other extraordinary circumstances. To petition for a brief extension of the Incomplete deadline, based on these same criteria, students must make a request to their class dean. The class dean will make the decision about whether the petition will be granted in consultation with the Vice President for Student Affairs and the course instructor.

Incompletes will not be granted for summer or winter sessions. Rare exceptions to this policy may be made in the case of serious emergencies, by petitioning the class dean. For the impact of incompletes on students' records for the purposes of academic review, students should consult their class dean. Students on strict probation will not be allowed to receive incompletes without the prior approval of their class dean.

Students who started at Wesleyan prior to Fall 2018 can petition for an extension of the incomplete deadline based on the policy that was in place in 2017.

REPEATABLE COURSES

Courses that may be repeated receive a designation in WesMaps and may be taken twice at most for a letter grade (AF). Please see Graduation Requirements (p. 11) for additional regulations governing repeatable courses.

COURSES RETAKEN FOR LOW GRADE

A student who receives a C- or below in a non-repeatable course may repeat the course once. The original grade remains on the transcript and both grades are

calculated in the grade point average. The course may count only once toward general education expectations and the 32 graduation credits.

Failed Courses (below D-): Students who fail a course may add this course to their plans during pre-registration or drop/add.

Low Grades (C- to D-): A student who wants to retake a course due to a low grade may submit an enrollment request for the class only during the drop/add period. The registrar will flag the enrollment request to indicate that the course is being repeated due to low grade.

REGULATIONS GOVERNING THE SCHEDULING OF CLASSES

Classes will meet each week for three class periods of 50 minutes each, for two class periods of 80 minutes each, or for one class period that corresponds as closely as possible to the standard time periods described below.

MEETING PATTERNS

Classes that meet three times weekly may meet only on Monday, Wednesday, and Friday. Classes that meet twice weekly may meet within regulated times on Tuesday and Thursday or Monday and Wednesday afternoons, or on any two mornings combining Monday, Wednesday, or Friday (MW, MF, or WF). Courses that meet once weekly may meet in the afternoon or evening on any day. Classes and laboratory sessions should be scheduled between 8 a.m. and 4:10 p.m. and in the evenings after 7:10 p.m.

MORNING CLASSES

On Monday, Wednesday, and Friday, classes are scheduled for three periods of 50 minutes each beginning at 8:50 a.m., 9:50 a.m., or 10:50 a.m. On Tuesday and Thursday, classes are scheduled for two 80-minute periods beginning at 8:50 a.m. and 10:20 a.m.; any combination of two on Monday, Wednesday, or Friday (MW, MF, or WF) may be scheduled at 8:20 a.m. or 10:50 a.m.

AFTERNOON CLASSES

On Monday, Wednesday, and Friday, classes are scheduled for three periods of 50 minutes each. Monday and Wednesday or Tuesday and Thursday classes are scheduled for two periods of 80 minutes each. All afternoon classes should begin at 1:20 p.m. or 2:50 p.m.

Exceptions to these rules require approval by the Educational Policy Committee. Ordinarily, classes should not overlap more than one standard period between 8 a.m. and 3 p.m. Saturday classes may be scheduled as desired by departments.

All additional required components of class schedules beyond the regular meetings should be announced, with dates and times if possible, on the online course catalog listing before the preregistration period begins. All dates and times should be announced no later than the first class meeting. Thereafter, additional components may only be required if alternatives are available for students who have academic or required varsity athletic schedule conflicts.

READING PERIOD

This period is designated for students to prepare for examinations and complete assignments due at the end of the semester. To protect the integrity of that period, the faculty have established the following regulations:

- Final exams, comprehensive examinations covering materials from the course of the entire semester, are to be given only during the formal exam period established by the faculty.
- Classes can be held only during the class period established by the faculty; make-up classes should be held during that established class period.
- In courses without a registrar-scheduled final examination, significant assignments such as final take-home exams, semester-long projects, and term papers must be due no sooner than the first day, and no later than the last day, of the exam period, and preferably at the time slot reserved for the registrar-scheduled examination.
- Student organizations should not schedule retreats, programs, or meetings that require student attendance during Reading Period.
- Departmental, program, and college activities that require student participation should not be held during Reading Period, with the exception of oral and written examinations covered by alternative exam calendars.
- Sessions or information programs that require student attendance should not be held during Reading Period.
- No required assignments should be due during the Reading Period.

SCHEDULED FINAL EXAMINATIONS

The schedule of final examinations will be issued in advance. The time of any examination may be changed by unanimous request of the class and with the approval of the instructor, but it must be set within the period designated by the faculty for examinations, and the change must be reported promptly to the registrar. The faculty has voted to comply with the following guidelines:

- That “hour exams” be limited to 50 minutes so that students who are scheduled to leave for other classes may not be placed at a disadvantage
- That final examinations be limited to three hours unless otherwise announced before the examination

If a student is absent from the final examination with the permission of the instructor, a grade of absent will be assigned. A grade of absent will be accompanied by a provisional grade that will become the final grade if the final examination is not made up by the end of the first full week of classes of the subsequent semester. The exam should be scheduled at a time mutually agreed upon by student and instructor, where both should be aware of the policy governing on-campus housing availability during times when the University is not in regular session. Grades are due in the Office of the Registrar (<http://www.wesleyan.edu/registrar/>) no later than the last day of drop/add in the subsequent semester.

If a student has three or more final examinations on one day or four in two days, the student may request a rescheduled examination from one instructor.

LEAVE, WITHDRAWAL, READMISSION, AND REFUND POLICY

The following categories indicate the conditions under which a student’s registration at Wesleyan may be interrupted. These designations are recorded on the student’s permanent record.

Leave of Absence – Undergraduate

Wesleyan permits students to interrupt their college careers for a semester or year to pursue other experiences. A Leave of Absence is limited to one year but may be extended upon request to the faculty advisor and class dean. Students

will be reclassified to the appropriate class year at the end of the semester in which they file their leave. Students who have obtained prior approval may earn academic credit while on leave and will be reclassified, if appropriate, once these credits are posted to their transcript. *Students may not go on a leave to study abroad.*

Credits earned while on leave must be processed two weeks prior to the semester in which a student returns for purposes of class-year classification. Students who interrupt their enrollment at Wesleyan by taking a leave for more than four consecutive semesters must apply for readmission.

A leave of absence will not be granted after the drop/add period at the beginning of each semester. Students who do not enroll or renew their leave by the end of the drop/add period in the expected semester of return will be administratively withdrawn from the University. Application for readmission is available online and will be considered by the Office of the Deans.

Leave of Absence – Graduate Studies

Students in a Graduate Studies program may temporarily interrupt study due to personal exigencies or for medical reasons. There are two types of graduate leave: Graduate Leave of Absence and Graduate Medical Leave.

Guidelines for Graduate Leave of Absence and Graduate Medical Leave may be found in the Graduate Studies Handbook (<https://www.wesleyan.edu/grad/academics/Graduate%20Handbook.html>).

Medical Leave

A medical leave is authorized by the vice president for student affairs on the basis of a recommendation from the medical director of University Health Services (UHS) or the director of Counseling and Psychological Services (CAPS). Students on a medical leave must leave campus and focus on the evaluation of, treatment for, and management of the illness or condition that necessitates the leave. The appropriate class dean will communicate the terms of the leave as well as the conditions and procedures for returning to Wesleyan. When a medical leave is authorized, students are withdrawn from the courses in which they are enrolled. In exceptional cases, some incomplete grades may be granted, depending on course content and the date of the leave. (Note that any semester in which a student takes a leave and receives at least one grade is counted as a semester in residence for purposes of graduation.)

Full policy and additional information are available at: [wesleyan.edu/studentaffairs/wellbeing/medicalleave.html](https://www.wesleyan.edu/studentaffairs/wellbeing/medicalleave.html) (<https://www.wesleyan.edu/studentaffairs/wellbeing/medicalleave.html>).

WITHDRAWAL

The five forms of withdrawal fall into three main categories: voluntary, involuntary for academic reasons, and involuntary for nonacademic reasons. Withdrawal from the University does not include withdrawal from courses if it occurs after the course withdrawal deadline.

VOLUNTARY

Withdrew. A student has voluntarily left Wesleyan.

INVOLUNTARY FOR ACADEMIC REASONS

- *Required resignation.* A student has been asked to leave the University for academic reasons, with the privilege of applying for readmission after the recommended period of absence.
- *Separation.* A student has been asked to leave the University for the second time for academic reasons and does not have the privilege of applying for readmission.

INVOLUNTARY FOR NONACADEMIC REASONS

- *Suspension*. A student has been asked to leave the University for other than academic reasons for a specified period.
- *Dismissal*. A student has been asked to leave the University for other than academic reasons without the privilege of applying for readmission.

READMISSION

Students who have withdrawn or have been required to resign may apply to the Office of the Deans (<http://www.wesleyan.edu/studentaffairs/forms.html>) for readmission. The readmission application requires a \$50 fee and other accompanying materials specified at the time of departure. Students wishing to enter the University for the fall semester must notify the Office of the Deans (<http://www.wesleyan.edu/studentaffairs/about/>) of their intent by May 1 and submit readmission materials by June 1; for the spring semester, notification must be made by November 1 with materials submitted by December 1. Candidates are strongly urged to meet all requirements well in advance of deadlines, since housing assignments and financial aid awards cannot be made until readmission is granted. Credits earned while away are subject to the conditions described in Transfer of Credit (p. 19). Bachelor of arts students who wish to be admitted to the bachelor of liberal studies program upon readmission to the University must have been away from the University for at least three years before they would be allowed to switch degree programs in this manner. Bachelor of liberal studies students who wish to be admitted to the Bachelor of arts program at any point must apply as transfer students to the Admissions Office.

REFUNDS

For guidelines governing refunds to students who terminate enrollment, please visit <https://www.wesleyan.edu/studentaccounts/refunds.html>.

For guidelines governing VA Pending Payment Compliance, please visit https://www.wesleyan.edu/registrar/enrollment/veteran_certification.html.

STUDENT RECORDS

Wesleyan University maintains strict confidentiality of student records, sharing information internally for legitimate educational purposes only. Legitimate purposes include matters related to the institution's operations, individual student welfare, or the welfare of other students.

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their educational records. These rights include:

1. The right to inspect and review the student's educational records within 45 days of the day Wesleyan University receives a request for access. Students should submit to the registrar written requests that identify the record(s) they wish to inspect. A registrar's office official will make arrangements for access and notify the student of the time and place where the records may be inspected.
2. The right to request the amendment of the student's education records that the student believes are inaccurate, misleading, or otherwise in violation of the student's privacy rights under FERPA. A student who wishes to ask the university to amend a record should write to the Wesleyan official responsible for the record, clearly identify the part of the record the student wants changed and specify why it should be changed. If Wesleyan decides not to amend the record as requested by the student, the university will notify the student in writing of the decision and the student's right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when they are notified of the right to a hearing.
3. The right to provide or not provide written consent before Wesleyan discloses personally identifiable information contained in the student's educational records, except to the extent that FERPA authorizes disclosure without consent.
4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Wesleyan University to comply with the requirements of FERPA. The name and address of the office that administers FERPA are:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5920

Public Notice Designating Directory Information:

Wesleyan University designates the following information as public or "Directory Information" under FERPA, that is, information that can be made available to the general public by Wesleyan without the student's prior consent:

- Name
- Local and home addresses
- Local and home telephone number
- Email address
- Major field of study
- Degree sought
- Weight and height of athletic team members
- Expected date of completion of degree requirements and graduation
- Degrees and awards received
- Honor societies
- Dates of attendance

- Full- or part-time enrollment status
- Participation in officially recognized activities and sports

Parent/Family Notification Practices

FERPA regulations assign students the right to release information contained in their education records even when they are under the age of 18. Consistent with Wesleyan's efforts to promote each student's personal growth and autonomy, the University will not release information about a student's education record to parents/guardians without the student's consent, except as described in this policy.

Students wishing to grant access to certain individuals in accordance with FERPA and University Policy may complete and sign the Consent to Release Student Information form:

<https://www.wesleyan.edu/generalcounsel/documents/FERPA%20Consent%20Wesleyan%20University1-fillable.pdf>

In all cases, any release of student information remains at the discretion of the University.

Wesleyan may notify parents/guardians of their student's status in situations not specifically listed below if the circumstances warrant and with the approval of the vice president for student affairs.

Common examples of when Wesleyan will notify parents/guardians include:

Notice of a Student's Enrollment and Academic Standing

Wesleyan communicates only with students regarding their academic progress and performance unless a student specifically requests in writing to their class dean that such information be released to their parents/guardians. Students are encouraged to share information regarding their academic progress with their parents/guardians but are not mandated to do so.

However, a change of student status (e.g., when a student withdraws or is placed on academic probation, required resignation, academic separation, or a leave) constitutes a change in enrollment status and the class dean will typically notify parents/guardians with or without the student's consent.

Notice of a Student's Disciplinary/Conduct Standing

Wesleyan expects each student to take responsibility for their actions. Each student must agree to abide by the Honor Code and Code of Non-Academic Conduct when they enroll in the University.

Wesleyan will communicate about disciplinary matters directly with the student, and parents/guardians will not be notified unless the student chooses to inform them. However, if a serious disciplinary case results in a change in the student's enrollment status (e.g., probation, suspension, or dismissal), the dean of students office will typically ensure that communication has been made with the student's parents or guardians. Consistent with Federal law, Wesleyan reserves the right to inform parents/guardians of all violations of campus regulations regarding the use or possession of alcohol or illegal drugs.

Notice of a Student's Health/Welfare Standing

Information regarding a student's health and/or psychological welfare is protected by strict policies that protect the student's confidentiality. Students are encouraged to share information regarding their health and/or psychological welfare with their parents/guardians but the University cannot share this type of information without the student's informed consent (typically in writing).

Situations may arise in which a student is unable to give informed consent. If a student is transported to the hospital for a life or health emergency, the parents/

guardians of the student may be notified by the class dean (or on-call dean if after hours).

If a student is deemed to present a direct threat of harm, Wesleyan may notify parents/guardians without the consent of the student. Wesleyan may also share information with parents/guardians where there is a pressing personal health or public health emergency

DEGREE CONFERRAL & STUDENT RECORDS

The University maintains a single degree conferral date. An academic record is permanently frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

KEY TO SYMBOLS AND ABBREVIATIONS

The number of the course indicates the general character and level of the course.

101–200	Elective for all classes; not credited in the major program of the department
201–400	Intermediate and advanced courses and seminars that may be credited in the major program of the department
401–402	Individual tutorials. Permission of the tutor and the department chair is required.
403–404	Department/program project or essay
407–408	Senior tutorial (only enroll through Honors Coordinator)
409–410	Senior thesis tutorial. Permission of the tutor and the department chair is required.
411–412	Group tutorials. Permission of the tutor and the department chair is required.
419–420	Student forum
421–422	Undergraduate research in the sciences. Permission of the tutor and the department chair is required.
423–424	Advanced Research Seminar, Undergraduate
431–460	Studio work, by individual or group
461–464	Research projects done off campus
465–466	Education in the field
467–468	Independent study project
469–470	Education in the field/independent study project—summer
471–500	Nonrepeating courses, seminars, group tutorials, and colloquia
491–492	Courses credited to teaching apprentices and undergraduate teaching assistants
495–496	Research apprenticeship. Permission of faculty research mentor and the department chair is required.
501–600	Graduate-level courses, undergraduates by permission

AFRICAN AMERICAN STUDIES

The African American Studies major and minor offer a substantial interdisciplinary, comparative, and cross-cultural approach to the study of the experiences of people of African descent in the black Atlantic world, especially in the United States and the Caribbean. The major and minor, which feature courses in the humanities, social sciences, and the arts, enables students to apply, critique, and reimagine the methodologies and insights of many disciplines to their understanding of the cultural, historical, political, and social development of people of African descent. The curriculum enables students to better understand the social structures and cultural traditions created by Africans in the diaspora and to better understand Western conceptualizations of race, the relationship between issues of race and identity, and the histories and influences of people of African descent.

Students who graduate with a major in African American Studies go on to pursue advanced degrees and careers in fields such as law, medicine, literature, education, business, public policy, African American studies, and the sciences.

The intellectual work of the African American Studies Department is enriched further by the programming of the Center for African American Studies. The center's offerings deepen classroom and campus wide conversations about contemporary and historic matters relating to African American Studies and to the African diaspora.

DEPARTMENTAL ADVISING EXPERTS

Professor Ashraf Rushdy, Chair

AFRICAN AMERICAN STUDIES MAJOR

MAJOR DESCRIPTION

The Major in African American Studies enables students to better understand the social structures and cultural traditions created by Africans in the diaspora, Western conceptualizations of race, the relationship between issues of race and identity, and the histories and influences of people of African descent. The major offers an interdisciplinary, comparative, and cross-cultural approach to studying the experiences of people of African descent in the Black Atlantic world, especially in the United States and the Caribbean.

Students will apply, critique, and reimagine the methodologies and insights of many disciplines through coursework in the humanities, social sciences, and the arts. Wesleyan's Center for African American Studies provides resources that deepen classroom and campus-wide conversations about contemporary and historical matters.

The African American Studies major is attractive to students from diverse backgrounds seeking a deeper understanding of African American experiences and perspectives. Students may have particular areas of interest, such as African

American history's impact on contemporary society, social justice, and civil rights, the effects of systemic racism, or a desire to better understand one's own identity and heritage. Others want to explore the rich vibrancy of African American literature, art, music, and culture in depth.

Students who graduate with a major in African American Studies not only develop critical thinking skills and cultural competence, but also gain a competitive edge in their pursuit of advanced degrees and careers in fields such as law, medicine, literature, education, business, public policy, and the sciences.

ADMISSION TO THE MAJOR

Students usually declare their major in African American Studies in the second semester of their sophomore year. Students are admitted to the major if they have earned a grade of B- or better in AFAM 101 (https://owaprod-pub.wesleyan.edu/reg/!wesmaps_page.html?stuid=&facid=NONE&crse=015838&term=1209), or at the discretion of the Chair, if they have taken other courses in the Department.

MAJOR REQUIREMENTS

The African American Studies major consists of eleven semester courses. The two required courses are AFAM 101: Intro to Africana Studies and AFAM 301: Junior Colloquium. At least five other courses must be cross-listed with African American Studies: the three different area courses and the two elective courses (described below). All courses must be letter-graded and must be completed at Wesleyan. One individual tutorial can be counted toward the eleven required courses, as can two courses taken away from Wesleyan and used to fulfill the student's chosen area of concentration. The major program must include the following:

AFAM 101: Introduction to Africana Studies. This course will provide an overview of the field and locate African American Studies in the broader context of the African Diaspora. Students must earn a B- or better in AFAM 101 in order to major.

One 200-level (or above) course in three different areas:

- African American History
- African American Literature
- Relevant Social Science course

AFAM 310: Junior Colloquium

Two elective courses that originate in or are cross-listed with AFAM. Majors will meet these requirements by selecting from a list of pre-approved and cross-listed courses. They may also bring another relevant course to the Chair's attention and request that it count. The Department encourages majors to take at least one course in the Arts.

Field of concentration (4 courses). Each major must take four courses that represent an area of concentration. Concentrations may be conceived either disciplinarily (with the four courses coming from a single department) or thematically (with courses selected from different disciplines but designed around a specific topic). Concentration courses do not necessarily have to be cross-listed with **AFAM**. One **100**-level course can count for the concentration. None of the four courses taken in the field of concentration can count toward the **AFAM** core courses or the **AFAM** elective courses. We strongly recommend that students design their concentrations in consultation with their major advisor.

Code	Title	Hours
Required Courses		
AFAM101	Introduction to Africana Studies: Examining the Spatial Dynamics That Constitute Diasporic Life	1
AFAM301	Junior Colloquium: The Possibilities of Diaspora	1
Area Courses #		3
	African American History	
	African American Literature	
	Relevant Social Science Course	
Field of Concentration Courses *		4
Electives ^		2
Total Hours		11

One 200-level (or above) course in three different areas

* Each major must take four courses that represent an area of concentration.

^ Two elective courses that originate in or are cross-listed with AFAM.

COURSES FOR NON-MAJORS

The African American Studies Department offers FYS courses especially designed for first-year students. First-year students also are admitted to many other courses, and students should review the individual course listings on WesMaps for details about enrollment.

GENERAL EDUCATION

Majors are encouraged to complete Gen Ed requirements.

STUDENT LEARNING GOALS

Our students are trained in cross-cultural, interdisciplinary, and critical approaches to the study of the experience of people of African descent in the Atlantic world, especially in the United States and the Caribbean. The major in African American Studies features an array of courses in the humanities, the social sciences, and the arts.

Students who major in African American Studies:

- will develop sophisticated critical reading, writing, and research skills and will apply these in their studies of the histories and influences of people of African descent.
- will demonstrate their familiarity with the foundational ideas, theories, and methodological approaches of African American Studies.
- will develop and apply analytical skills that are rooted in the discipline of African American Studies and that are informed by interdisciplinary approaches to research.
- will use their enhanced analytical skills to demonstrate their understanding, assessments, and critiques of Western conceptualizations of race, issues of race, and identity, African American intellectual traditions, cultural production, and political histories.
- will apply, critique, and reimagine the methodologies and insights of many disciplines to their understanding of the cultural, historical, political, and social development of people of African descent.

HONORS

The honors thesis is produced during a student's senior year and is a yearlong independent research project. Students are eligible to write an honors thesis if they have achieved at least a B+ average in all of their African American Studies courses. Eligible students who wish to write a thesis must apply to the program by the last day of classes in their junior year. A detailed description of the process for earning honors in African American Studies is available on the program website.

CAPSTONE EXPERIENCE

Majors are required to undertake one substantial research or artistic project under faculty supervision. This may take the form of an honors thesis, a senior essay done through a yearlong individual tutorial, or a research paper of at least 15 pages in length that is generated in a **300**-level African American Studies Department seminar. Any work done to fulfill the research requirement must receive a grade of B- or better.

ALLBRITTON CENTER FOR THE STUDY OF PUBLIC LIFE

The Allbritton Center for the Study of Public Life continues Wesleyan's commitment to preparing students for lives as active citizens and for leadership. It seeks to support Wesleyan's tradition of the scholar-teacher by encouraging faculty research in a manner that directly benefits and enhances student learning. The center reflects changes that have transpired across the social-scientific disciplines. These include the creation of new multidisciplinary ventures, the growing number of studies employing multiple methodologies, and the rethinking of the idea of the public in a variety of intellectual and social movements. In addition, university-based intellectuals have been rethinking their connection to the greater public and, consequently, are forging knowledge-seeking alliances with innovators and leaders in government and the corporate world. Social scientists are developing innovative and productive relationships with other sectors of the public, including artists, grassroots activists, and independent scholars. Our students are energized and excited by these developments. The center enables Wesleyan to focus resources; encourage curricular innovation, new research, and scholarship; and foster greater public understanding and responsibility.

AMERICAN STUDIES

Wesleyan’s Department of American Studies provides a broad grounding in the study of the United States in a hemispheric and global context. American studies majors draw on the intellectual resources of a variety of departments including anthropology, English, history, religion, and sociology, as well as interdisciplinary programs such as Latin American studies, African American studies, and feminist, gender, and sexuality studies. Individually designed concentrations, which are the hallmark of the department, allow students to forge interdisciplinary approaches to the particular issues that interest them, from visual culture and aesthetics to racial politics and gender systems.

Alongside its interdisciplinary emphasis, American studies at Wesleyan stresses a comparative approach to the study of the United States. Such prominent features of U.S. cultural development as settler colonialism, franchise colonialism, slavery, immigration, imperialism, capitalism, mass culture, gender and sexuality, race and ethnicity, political culture, the importance of modern social and political identities, and state development are juxtaposed to similar processes and phenomena in a variety of nations in the Americas. By studying cultural phenomena across national boundaries, American studies majors develop a rich understanding of the complex histories that have resulted from the conflict and confluence of European, Indigenous, African, and Asian cultures throughout the Western Hemisphere and the Pacific.

AMERICAN STUDIES MAJOR

MAJOR DESCRIPTION

Wesleyan’s interdisciplinary Department of American Studies provides a broad grounding in the study of the United States in a hemispheric and global context. American Studies majors draw on the intellectual resources of a variety of disciplines—Anthropology, Art History, English, History, Religion, and Sociology, as well as interdisciplinary programs such as Latin American Studies, African American Studies, and Feminist, Gender, and Sexuality Studies. Individually designed concentrations, which are the hallmark of the department, allow students to forge interdisciplinary approaches to particular issues that interest them, from visual culture and aesthetics to racial politics and gender systems.

Alongside its interdisciplinary emphasis, American Studies at Wesleyan stresses a comparative approach to the study of the United States. Such prominent features of U.S. cultural development as colonization, slavery, immigration, imperialism, capitalism, mass culture, gender and sexuality, race and ethnicity, political culture, the importance of modern social and political identities, and state development are juxtaposed to similar processes and phenomena in a variety of nations in the Americas. By studying cultural phenomena across national boundaries, American Studies majors develop a rich understanding of the complex histories that have resulted from the conflict and confluence

of European, Indigenous, African, and Asian cultures throughout the Western Hemisphere and the Pacific.

ADMISSION TO THE MAJOR

To major in American studies, students should submit a major declaration request through their WesPortal and present a completed application to the administrative assistant of American Studies. The AMST chair will review applications and approve accepted applications through the WesPortal system. Majors are expected to complete an Introduction to American Studies course (AMST174 to AMST179) before the end of their junior year. Transfer students should meet with the department chair to discuss which courses taken elsewhere can be offered as substitutes for Wesleyan courses.

MAJOR REQUIREMENTS

Majors in American studies must take 11 courses (12 for honor candidates). The department recommends that first-year students and sophomores considering the major enroll in a survey course. These courses offer an introduction and overview of important issues and questions in American studies and provide a solid foundation for advanced work in the major.

AMST MAJOR REQUIREMENTS

Code	Title	Hours
Introduction to American Studies		1
Junior Core Courses		
AMST200	Colonialism and Its Consequences in the Americas	1
Junior Colloquium		1
Upper Level Electives		3
Senior Requirement		1
Pre-20th Century		1
Hemispheric Americas & Transnational American Studies		2
Concentration		4
Total Hours		14

JUNIOR CORE COURSES

Junior core courses constitute the foundational base for the major. AMST200 and one junior colloquium are required of every major. The colonialism course situates American studies in a hemispheric frame of reference and introduces a variety of theoretical and methodological approaches to an intercultural analysis of the Americas. Junior colloquia explore in-depth a range of theoretical perspectives utilized in American studies, consider the history and changing shape of the multifaceted American studies enterprise, and engage students in research and analysis. Students may take more than one junior colloquium and count the second one as an elective.

CONCENTRATION AND ELECTIVES

In addition to junior core courses and the senior requirement, the major includes seven upper-level electives that focus on the cultures of the Americas. The heart of each major’s course of study consists of a cluster of four courses among those electives that forms an area of concentration (these should be numbered AMST201 and above).

A concentration within American studies is an intellectually coherent plan of study (developed in consultation with an advisor) that explores in detail

a specific aspect of the culture(s) and society of the United States. It may be built around a discipline (including history, literary criticism, government, or sociology), a field (such as cultural studies, ethnic studies, or queer studies), or a “problematic” (such as ecology and culture or politics and culture). As models and inspiration for prospective concentrators, we have developed descriptions of seven standing concentrations—queer studies, race and ethnicity, cultural studies, material culture, visual culture, historical studies, and literary studies—that we encourage majors to select or adapt. Majors may also devise their own concentrations. Among the latter in recent years have been concentrations in urban studies, disability studies, media studies, social justice, education, and environmental studies. In addition, to ensure chronological breadth, majors must include in their major at least one course that has a majority focus on American culture(s) in the period before 1900.

HEMISPHERIC AMERICAS AND TRANSNATIONAL AMERICAN STUDIES

Students are also asked to consolidate a hemispheric/transnational American studies focus by taking two courses that build on the comparative foundation supplied in AMST200. Hemispheric Americas and transnational American studies courses are identified on the AMST website (under “for majors”). Courses used to meet this requirement may also, as appropriate, be counted toward concentration, elective, or senior seminar requirements. A senior essay or thesis that utilizes a hemispheric or transnational American studies approach may count toward this requirement.

AMST229	Hymnody in the United States Before the Civil War	
AMST231	Guns and Society	1
AMST232	American Architecture and Urbanism, 1770–1914	1

LANGUAGE REQUIREMENT

There is no language requirement for the Major in American Studies.

PRIZES

The Marni Goldstein White Award recognizes the best Honors Thesis written in American Studies each year.

STUDENT LEARNING GOALS

Ultimately, our goal for our majors is that they develop a critical, theoretically informed understanding of the United States as a political, social, and cultural formation that exists in and had its inception in a transnational context of settler colonialism, imperial expansion, and global capitalism. In addition, we want our majors to develop the skills in research and writing that will allow them to apply that understanding to concrete and particular issues and convey the results of their analysis effectively. Our majors learn about the interdisciplinary field of American studies in its most expansive and robust form, including emphases on indigeneity, race/ethnicity, gender, sexuality, disability, and class.

HONORS

Candidates for honors in American studies must complete and receive honors on a senior thesis. The American Studies Department requires students who want to write an honors thesis submit a completed application to the department. Consult the chair of the department for information about the application. See also the link to Honors (<http://www.wesleyan.edu/amst/Honors.html>) on the AMST website (<http://www.wesleyan.edu/amst/>) for more information about the honors process in American studies.

CAPSTONE EXPERIENCE

Every American studies major must complete a capstone experience to fulfill the major. This capstone experience can be fulfilled in one of three ways. Theses in the American Studies Department include research projects on a range of topics with a variety of methods. A senior can undertake a two-term honors thesis in an honors thesis tutorial (AMST409 and AMST410) with a thesis advisor. This enables the major to stand as a candidate for honors in American studies. Second, a senior can enroll in a one-semester senior essay/project tutorial (AMST403 or AMST404) to undertake an essay or project (for instance, a play or screenplay). Third, a major may take an advanced 300-level seminar originating in or cross-listed with American studies, or, with the permission of the American studies faculty advisor, outside of American studies, for AMST capstone credit. Most majors who enroll in an advanced 300-level seminar are seniors, though some students take a capstone seminar earlier. A major can have more than one capstone experience. For instance, a major could take more than one advanced 300-level seminar and write an honors thesis or a senior essay or project.

ANTHROPOLOGY

Anthropology is the study of the complexity and diversity of human and nonhuman life in an interconnected world. The Anthropology Department at Wesleyan offers courses on anthropological theories and methods, and topics including urban anthropology, globalization, media studies, consumer culture, social movements and activism, development and humanitarianism, and race, gender, and sexuality. Anthropology provides excellent preparation for a variety of careers that require an understanding of cultural difference in a transnational world. Social justice and ethical concerns have always been central to the discipline of anthropology.

DEPARTMENTAL ADVISING EXPERT

Margot Weiss

ANTHROPOLOGY MAJOR

MAJOR DESCRIPTION

The major in Anthropology enables students to investigate the complex and diverse cultures and societies developed throughout our interconnected world. Coursework in this major includes anthropological theories and research methods and the study of topics such as urban anthropology, globalization, media studies, consumer culture, art and performance, archaeology, social movements and activism, migration, development and humanitarianism, race, gender, and sexuality. Social justice and ethical concerns have always been central to the discipline of anthropology.

Students of anthropology draw meaningful interdisciplinary connections through an approach that involves strong observational and analytical skills, an open mind and willingness to challenge their own cultural assumptions, and a deep curiosity about how history and culture impact the most important and compelling contemporary social issues.

The Anthropology major provides excellent preparation for all kinds of careers that require an understanding of cultural differences in a transnational world, including education, journalism, law, art and media, medicine and public health, development, and social justice organizing, as well as graduate and professional studies.

ADMISSION TO THE MAJOR

If you plan to major in anthropology, you should take ANTH101, the department's required gateway course, during your first or second year. A minimum grade of B in ANTH101 is required for acceptance into the major. Students enrolled in ANTH101 during the spring of their sophomore year may declare the major if their midterm grade is a B or higher.

MAJOR REQUIREMENTS

Anthropology majors are required to earn a **minimum of 10 anthropology credits, at least eight of which must be numbered 201 or higher**. Students should work out their plans to fulfill the major requirements with their advisor by keeping their Major Certification Form up to date.

ANTH MAJOR REQUIREMENTS

Code	Title	Hours
ANTH101	Introduction to Cultural Anthropology	1
ANTH208	Crafting Ethnography	1
Anthropological Theory Courses (ANTH295 series, choose two)		2
Area of Concentration (4 courses required in 1 concentration area)		4
Difference, Inequality, and Social Justice		
Local Distinctions, Global Connections		
Producing, Consuming, and Performing Culture		
ANTH Electives (1 FYS allowed and/or courses 201 or higher for a total of 2)		2
Capstone		
Total Hours		10

ANTHROPOLOGICAL THEORY COURSES

Majors must take any two core ANTH295 courses in anthropological theory, offered in the fall and spring.

Code	Title	Hours
ANTH295A	Theory in Anthropology: Anthropology and the Experience of Limits	1
ANTH295B	Theory in Anthropology: Anthropology of Affect	1
ANTH295C	Theory in Anthropology: Anthropology of Conspiracy	1
ANTH295D	Theory in Anthropology: Anthropology and the Modern Media	1
ANTH295E	Theory in Anthropology: Anthropology of Time	1

ANTHROPOLOGICAL METHODS COURSE

The department recommends that students take ANTH208 in their sophomore or junior year.

CONCENTRATIONS

Concentrations are flexible specializations that reflect your particular specialization within anthropology. Working with your major advisor, you decide on a coherent set of four courses as your concentration. We encourage you to include one course from outside anthropology. There are three standing concentrations:

- Difference, Inequality, and Social Justice
- Local Distinctions, Global Connections
- Producing, Consuming, and Performing Culture

You can also design your own concentration in consultation with your major advisor. Full descriptions of our concentrations are here (<http://www.wesleyan.edu/anthro/concentrations.html>).

CAPSTONE EXPERIENCE

The capstone may consist of a thesis, essay, or a senior seminar paper (see Honors/Capstone tab).

STUDENT LEARNING GOALS

Our overarching goal is to provide students with sophisticated ways of understanding both human unity and human difference. We want students to think critically about discourses that divide the world into fully modern western Selves and not-yet-modern non-western Others, but to do so without romanticizing cultural differences. We want them to appreciate how anthropological theory is constructed and used in understanding particular cases. Our approach is premised on complex global interconnectivity that interrogates boundary-making projects and explores the fabrication of national, cultural, and regional differences in a historical perspective. This means zooming in to understand how translocal ideologies and forces are negotiated in local settings, but also zooming out to link up localities and build a contingent picture of the interconnected world we inhabit.

STUDY ABROAD

Majors are encouraged to take advantage of study abroad programs and, with the approval of their advisor via the Major Certification Form, students may count up to three of their study abroad courses for concentration or elective credit. Theory and methods courses may not be substituted. A grade of B or higher is required for study abroad courses to count toward the major. The Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>) has information about specific programs, application procedures, major credit, etc.

ADDITIONAL INFORMATION

Cross-listed courses: Various departments and programs offer cross-listed or other courses that can be counted toward the anthropology major. These include African American studies, American studies, archaeology, biology, classical studies, Earth and environmental sciences, history, religion, sociology, and feminist, gender, and sexuality studies. If outside courses are to be counted toward the anthropology major, your advisor must approve them using the Major Certification Form.

Double majors: Anthropology majors have combined anthropology with a range of other majors, including Science in Society; feminist, gender, and sexuality studies; American studies; environmental studies; English; dance; music; African American studies; film; and both art history and art studio; as well as the certificates in writing and in social, cultural, and critical theory. All the requirements for the two majors must be met, except when faculty representatives of the two departments approve alterations in your program. We generally expect students writing a thesis for honors in both majors to enroll in ANTH400 in their fall semester and enroll in a tutorial in the other department or program in their spring semester. Please consult with the department chair and/or a department advisor.

HONORS

Only theses are eligible for honors or high honors. A minimum grade of B+ in either ANTH295A, ANTH295B, ANTH295C, ANTH295D, or ANTH295E is required for the pursuit of honors.

CAPSTONE EXPERIENCE

Senior majors are required to complete a **thesis, essay, or a senior seminar paper** as their capstone experience.

Theses. Only theses are eligible for departmental honors. A thesis is an independent, two-semester (or more) research project. In the fall semester of their senior year, students writing a thesis should enroll in ANTH400, a research and writing seminar in which students pursue individual research projects in a group context. In the spring semester of their senior year, thesis candidates should enroll in an individual thesis tutorial (ANTH410). It is strongly recommended that students contemplating a thesis either enroll in an individual tutorial (ANTH402) in the spring semester of their junior year, in which they would begin library research on their area of interest, or else take a course that is relevant to their research concerns.

Essay. An essay is also a serious research commitment: It is an independent, one-semester (or more) research project. In the fall semester of their senior year, essay writers should enroll in ANTH400. They will complete a draft of their essay in the fall semester and submit a final version by the first day of the spring semester.

Seminar papers. Students who select this option should take a 300-level course (or an advisor-approved 200-level course) that involves a substantial research paper in their senior year. The course will ordinarily (but not necessarily) be one that facilitates advanced work in the student's area of concentration. The course must be designated and approved by the major advisor in the student's Major Certification Form prior to spring break of their senior year.

Students wishing to write a thesis must submit a proposal to the department. Students wishing to write a thesis or essay involving field work with human subjects must complete the Ethics Questionnaire. Both are due the Friday before spring break of their junior year.

- more on **Thesis Proposals**
- more on **Ethics Questionnaires**
- more on the **Goffe Wesleyan Summer Experience Grant** (to support summer field work in anthropology)
- Check out previous anthropology thesis projects on WesScholar here (http://wescholar.wesleyan.edu/anth_etd/)!

ARCHAEOLOGY PROGRAM

Archaeology is the discipline most directly concerned with the understanding and explanation of past societies through the study of their material remains. The reconstruction of these societies through the interpretation of material culture permits archaeology to span both the prehistoric and the historic periods. While certain archaeology courses originate within the program, others are cross-listed from the departments of Anthropology, Art and Art History, and Classical Studies. Majors design their own curriculum in close consultation with their advisor according to the specific area of concentration within the discipline.

DEPARTMENTAL ADVISING EXPERTS

Kate Birney, Douglas Charles, Clark Maines, Christopher Parslow, Phillip Wagoner

ARCHAEOLOGY MAJOR

MAJOR DESCRIPTION

The Major in Archaeology trains students to analyze and reconstruct past societies and their environments through their material remains. Students engage the past in ways that can address modern questions, such as what drives culture change, what creates resilient societies, the role of archaeology in construction of modern identities, and how we can rediscover sustainable technologies meet climate challenges. The major is fundamentally interdisciplinary and hands-on. Faculty specialize in a range of geographic regions and methodologies. Students apply analytical and interpretive frameworks from the humanities, sciences and social sciences, with many courses involving lab or experimental components and the opportunity to work directly with artifacts and eco-facts. Archaeological fieldwork provides experiences in excavation techniques and landscape survey.

Majors may pursue either the standard major or the archaeological science track in which they specialize in a particular analytical method, such as experimental archaeology, archaeological residue analysis, environmental archaeology, zooarchaeology, materials analysis, 3D modeling, or GIS/spatial analysis.

The Archaeology program draws students who are excited by ancient cultures, and who enjoy interdisciplinary research that invites them to apply a variety of methods from the sciences, social sciences, and the humanities to a range of material data. Students enjoy the process of making new discoveries in fieldwork, and the opportunity for extensive hands-on work with ancient objects from archaeological sites or Wesleyan's own collections. Archaeology students work critically, creatively, and cross-culturally.

The multidisciplinary nature of archaeology ensures that graduates develop the ability to document, research, and interpret both humanistic and scientific data at a high level of detail. Because Archaeology is also community-oriented, connecting people to their pasts, majors learn to translate detailed academic research into human stories that can be widely shared, which makes them strong writers and communicators. The skills they develop prepare them for any career track, but they are often drawn to careers in law, public policy, environmental

research, natural resource development, historic preservation, museum curation, education, and cultural heritage management.

ADMISSION TO THE MAJOR

To apply to become a major in archaeology, a student must have taken or be currently enrolled in a Gateway course and earn a grade of B or better. Students intending to pursue the archaeological science track in the major must identify which scientific method(s) they intend to study and apply to their capstone research. Following electronic application, admission will be determined by a meeting of the ARCP faculty.

GATEWAY COURSES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP204	Introduction to Archaeology	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP223	Survey of Roman Archaeology and Art	1
ARCP260	Art and Archaeology of Ancient India	1

MAJOR REQUIREMENTS

The major in archaeology consists of at least nine different courses numbered 200 and above, in addition to a capstone project (senior essay or thesis).

Code	Title	Hours
Gateway Course		1
Area Courses (1 course in each area)		4
Anthropology		
Art History		
Classical Civilization		
Methods		
Archaeological Theory in Action Symposium (two required) *		1
Electives (in ARCP or related discipline) **		3
Senior Essay/Thesis		1-2
Recommended Fieldwork		
Total Hours		10-11

* recommended junior and senior fall

**One course in science or research methods originating outside the ARCP Program may be applied toward the major by those pursuing the archaeological science track, provided the student can demonstrate its application toward their capstone or other archaeological research projects. This course must be declared upon admission to the major.

The archaeology major and minor was revised in spring of 2021. Majors declaring *prior to Spring 2022* may opt to follow the old pathway in which the Thinking Through Archaeology requirement was met by a single course with that designation; those declaring in spring 2022 or later will follow the new major.

ANTHROPOLOGY

Code	Title	Hours

ARCP350	Animals in Archaeology	1
ARCP352	Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean	1
ARCP382	Numismatics and the Archaeology of Money	1
ARCP285	Off with its Pedestal! The Greek Vase as Art and Artifact	1

FIELDWORK

Archaeological fieldwork, typically carried out over the summer, is an excellent way to acquire hands-on experience and training in archaeological methods and excavation techniques. It also allows students to explore the history and material culture of a region in greater depth and, in some cases, even to conduct research

on primary materials from a site that can then serve as the basis for a senior thesis or capstone project.

Fieldwork opportunities are offered both by our Wesleyan faculty as well as through a number of programs worldwide. For more information and a list of archaeological field programs, visit wesleyan.edu/archprog/fieldwork/ (<https://wesleyan.edu/archprog/fieldwork/>). **Excavation experience is strongly encouraged, and completion of an approved archaeological field school program may be substituted for the methods and theory requirement.**

COURSES FOR NON-MAJORS

Since there are no **ARCP** courses with prerequisites, all of our courses are suitable for non-majors.

STUDENT LEARNING GOALS

Archaeology is the discipline most directly concerned with the understanding and explanation of past societies through the study of their material remains. Archaeology majors are expected to master four of seven themes or topics:

- History and theory of the discipline
- The nature of archaeological evidence
- The construction of archaeological arguments
- Chronology
- The materiality of social, political, and economic organization
- The intersection of archaeological evidence with past and present identities
- Scientific approaches to archaeological analysis

Majors are also required to take at least one course in each of the departments that contribute to the archaeology program (anthropology, art history, classical civilization) in order to expose them to different disciplinary approaches to the study of material culture.

STUDY ABROAD

Study abroad is possible at a number of institutions with well-established archaeology programs, some of which include tours of archaeological sites in addition to coursework. Wesleyan students have recently participated in semesters abroad at these institutions:

- University College London (UK)
- St. Andrews University (Scotland, UK)
- Intercollegiate Center for Classical Studies in Rome (Italy)
- College Year in Athens (Greece)

Interested students should consult the Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>) for details about transferable credit.

ADDITIONAL INFORMATION

- We encourage students to take the Gateway courses first as these provide the best entry points into the discipline. However, as we have no prerequisites for entry to archaeology courses, it is possible for students to complete the requirements in variable order.

- With prior approval from the chair of the archaeology program, the methods and theory requirement may be fulfilled by academic credit from a field school program. We strongly encourage minors to gain fieldwork experience in archaeology.
- Upon the discretion of the archaeology chair, one non-fieldwork archaeology credit may be transferred in to cover a Gateway or area requirement.
- No more than two courses cross-listed with the student’s major will be counted toward the archaeology minor.

HONORS

See Capstone Experience below.

CAPSTONE EXPERIENCE

In their senior year, ARCP majors are required to undertake an original research project culminating in either a one-semester essay ARCP403 or two-semester thesis project ARCP409 - ARCP410. These projects should be centered upon the analysis and interpretation of material remains, and may include work on objects in the archaeology and anthropology collections, materials tied to field projects of a Wesleyan faculty member, or experimental approaches to archaeological data. Students should begin planning their research focus together with their faculty tutor during their junior year, and should plan to have fully defined their data set by the summer prior to their senior year.

Students pursuing honors both in archaeology and in a second major are required to take at least one of their two required thesis tutorials in the archaeology program (i.e., either ARCP409 or ARCP410).

Honors Evaluation

In order to be considered for Honors, each thesis will be evaluated by two ARCP readers, of whom one may be the tutor. In circumstances where a student is submitting the thesis for multiple majors, or is drawing on techniques or methods which require expertise from outside ARCP faculty, a third reader from outside the department shall be included in addition to the two from within ARCP. Readers will be determined by the tutor in consultation with the student by the beginning of spring semester of senior year.

Readers shall write a short evaluation of the work, and offer an estimation of its merit in the form No Honors/Honors/High Honors. In cases where there is a disagreement between Readers about whether a work merits Honors, a third ARCP Reader will serve as a tie-breaker.

ARCHAEOLOGY MINOR

MINOR DESCRIPTION

The Minor in Archaeology trains students to analyze and reconstruct past societies and their environments through material remains. Students engage the past in ways that can address modern questions, such as what drives culture change, what creates resilient societies, the role of archaeology in construction of identity, and how we can rediscover sustainable technologies to meet climate challenges. Archaeology is fundamentally interdisciplinary and hands-on. Students apply analytical and interpretive frameworks from the humanities,

sciences, and social sciences, with many courses involving lab or experimental components and the opportunity to engage directly with artifacts.

There are three tracks possible in the Minor: the Interdisciplinary Minor, with a regional focus; the Archaeological Science minor, with a focus on specific scientific methods of analysis; and the Experimental Archaeology linked minor with the College of Design and Engineering (CoDES), which focuses on reverse-engineering ancient technologies. The Interdisciplinary and Arch Sci Minors require six credits, including a gateway course, and classes in Theory, Anthropology, Classical Civilization, Art History, and Analytical Methods. The Experimental Archaeology/CoDES linked minor requires 7 credits, including the Archaeology gateway, 3 CoDES core courses for design/engineering fundamentals, and 3 experimental and project-based seminars in Archaeology.

ADMISSION TO THE MINOR

To declare the Minor, a student must achieve a grade of B or above in a designated Gateway course.

GATEWAY COURSES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP204	Introduction to Archaeology	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP223	Survey of Roman Archaeology and Art	1
ARCP260	Art and Archaeology of Ancient India	1

MINOR REQUIREMENTS

The Minor in Archaeology requires a minimum of six credits in archaeology.

- 1 Gateway course
- 1 Elective course:
The Elective requirement can also be met with two 0.5 credits of the Thinking Through Archaeology Symposium, offered each fall semester (beginning Fall '22)
- 1 course in each of four areas (Anthropology, Classical Civilization, Art History, Methods). For a listing of the different courses in each of these categories, please see Major Requirements (p. 38).

The Minor in Archaeological Science requires a minimum of six credits in archaeology:

- 1 Gateway course
- 1 Elective course:
The Elective requirement can be met by two 0.5 credits of the Thinking Through Archaeology Symposium Course. With the approval of the Chair, students in the ArchSci Minor can also apply one extra-departmental course in the sciences to their ARCP Minor.
- 1 course in each of three areas (Anthropology, Classical Civilization, Art History)
- 1 300-level lab-based ARCP course (this meets the Method requirement)

Archaeological and Design Approaches to Ancient Objects and Ancient Technologies

The new Linked IDEAS/ARCP Minor is a project-based curricular pathway that blends training in the fundamentals of Design and Engineering with robust study of archaeological methods and materials for the analysis of ancient artifacts and technologies. Through introductory and experimental courses, the Minor introduces students to the practices of experimental archaeology and materials analysis as methods embedded within anthropological and historical frameworks.

It requires 3 IDEAS courses and 4 ARCP courses:

- 1 Gateway: ARCP 204 Introduction to Archaeology
- 3 IDEAS Core requirements
 - IDEAS 170
 - IDEAS 180
 - IDEAS 220
- 1 ARCP course introducing experimental approaches (see list below)
- 2 ARCP project- based courses (see list below)

IDEAS CORE COURSES (ALL 3 REQUIRED)

Code	Title	Hours
IDEA170	Introduction to Mechanical Design and Engineering	1
IDEA180	Design Studies	1
ARST220	Ecological Design I: Being at Home in the World	1

Archaeology Required Course

Code	Title	Hours
ARCP204	Introduction to Archaeology	1

ARCHAEOLOGY COURSES INTRODUCING EXPERIMENTAL APPROACHES (1 REQUIRED)

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP257	Environmental Archaeology	1
ARCP350	Animals in Archaeology	1

ARCHAEOLOGY PROJECT-BASED COURSES (2 REQUIRED)

Code	Title	Hours
ARCP234	Art and Society in Ancient Pompeii	1
ARCP257	Environmental Archaeology	1
ARCP285	Off with its Pedestal! The Greek Vase as Art and Artifact	1
ARCP291	East Asian Archaeology	1
ARCP293	Numismatics and the Archaeology of Money	1
ARCP352	Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean	1

seeking to apply a science courses to meet their Elective requirement must explain the course they intend to apply and its application to archaeological research.

To apply for the minor, please submit a declaration to add the minor through the Major/Minor/Cert Declaration application in your student portfolio. Students

ART AND ART HISTORY

The Department of Art and Art History is the administrative umbrella for two distinct major programs: art history and art studio. Majors within the department can be pursued in both areas. Students majoring in one area are allowed to count toward the 32 courses required for graduation up to 16 courses in the department. (University regulations regarding the maximum number of courses allowed in a department should be applied to the major itself: art history or art studio. Thus, majors in either program may count toward their graduation requirements no more than 16 credits in their major program [of which no more than 3 may be 100-level courses, and no more than 13 may be 200-level and above. These 16 would include 2 credits of thesis in the case of students majoring in art studio or writing a senior thesis in art history.]) Students double-majoring in both programs of the department are permitted to take up to 20 credits in the department, providing that 2 of these credits are for senior thesis tutorials. In addition to listed courses, a limited number of tutorials, internships, and teaching apprenticeships are available under special conditions. Prior approval must be obtained to transfer credit from another institution. Review and approval by a faculty member in the area of study must also be made after completion of such course work.

DEPARTMENTAL ADVISING EXPERTS FOR ART STUDIO

Elijah Huge, *Architecture*; Ilana Harris-Babou, *Time-Based Media*; Yu Nong Khew, *Product Design*; Christian Nakarado, *Ecological Design*; Tammy Nguyen *Printed Matter*; Julia Randall, *Drawing*; Sasha Rudensky, *Photography*; Jeffrey Schiff, *Sculpture*; Keiji Shinohara, *Japanese-Style Woodcuts and Ink Painting*; Tula Telfair, *Painting*

DEPARTMENTAL ADVISING EXPERTS FOR ART HISTORY

Joseph S. Ackley, *Medieval Art History*; Nadja Aksamija, *Renaissance and Baroque Art History*; Talia Andrei, *East Asian Art History*; Claire Grace, *Modern and Contemporary Art History*; Katherine Kuenzli, *Modern European Art History*; Okechukwu Nwafor, *African Art History*; Joseph Siry, *Modern Architectural History*; Phillip Wagoner, *South Asian and Islamic Art History*

ART HISTORY MAJOR

MAJOR DESCRIPTION

The Major in Art History provides students with a strong understanding of the visual and material environment created by humankind and how those creations both embody and shape the culture, beliefs, and values of the people who made them. Taking artworks as primary objects of study, students will critically analyze their form and materials and draw upon written texts and/or oral sources to interpret their aesthetic, social, economic, political, philosophical, and religious significance. Students will gain an understanding of languages pertaining to material and cultural production, iconographical and historical

analysis and archaeological methodologies, in addition to attaining intermediate-level proficiency in a foreign language.

The ideal student of art history is open-minded and insatiably curious about all aspects of human civilization, diverse cultures, and the historical contexts that have shaped—and been shaped by—human creativity through time. They are visually aware and perceptive, with an empathetic appreciation for the aesthetic choices made by artists. They are eager to explore all kinds of art in varying forms and settings and to engage in rigorous research using multiple sources. They are critical thinkers and effective communicators with excellent writing skills and the ability to participate in thoughtful discussions using sound reasoning and evidence.

The Art History program prepares students to pursue various professional careers in fields such as higher education, museum work, the art market, architectural history and practice, urban planning, landscape architecture, historic preservation, publishing, and cultural property law.

ADMISSION TO THE MAJOR

A prospective major should plan to take one 100-level introductory course and at least two other courses in art history by the end of sophomore year. The student must have at least a B average in art history courses, and a B average overall.

MAJOR REQUIREMENTS

Coursework requirements ensure that students gain geographic breadth and historical depth, while having the opportunity to define their interests and chart their own path through the major.

A minimum of 10 courses—all taken on a graded basis—is required for the Art History major. These include: one introductory course (numbered in the 100 range) plus seven intermediate and advanced courses (numbered in the 200 and 300 ranges) fulfilling the geographic and historical requirements outlined below. In addition, students must select two electives (see below for parameters). Among required courses in Art History, two must be seminars (numbered in the 300 range). Finally, students must demonstrate proficiency in at least one foreign language.

To take full advantage of the program, students are encouraged to take more than the 10 required courses and to pursue honors in Art History.

Code	Title	Hours
Introductory Course		1
Geographic Areas (1 course in 4 different geographic areas)		4
The Americas		
Europe		
East Asia		
South and Southwest Asia		
Africa		
Historical Periods (1 course in 3 different historical periods)		3
Historical Period 1 (up to ca. 1400)		
Historical Period 2 (ca. 1400 to ca. 1800)		
Historical Period 3 (ca. 1800 to the present)		
Electives (200-level or above)		2

Foreign Language Proficiency (second semester intermediate-level course or equivalent)

Total Hours

10

Any single course may be counted toward only one geographic area or historical period requirement. All eight required courses (the introductory course, both seminars, and all courses fulfilling historical and geographical requirements) must originate in Wesleyan's Art History program, with the exception of courses in ancient art offered through the Classical Studies department.

[Click here to view a comprehensive list of ARHA Courses and Categories.](#)

ELECTIVES:

Two of the courses required for the major are electives. Electives may be drawn from additional courses in Art History or: art history courses taken abroad, or classes in cognate fields, such as anthropology, archaeology, art studio, CEAS, FGSS, film, foreign languages, history, music, religion; social, cultural, or critical theory; sociology; and/or urban studies. An additional 100-level Art History course may count for elective credit as well.

To count as electives toward the Art History major, courses outside Art History must be petitioned prior to enrollment—and approved by the major advisor.

Up to two courses in a foreign language may count as electives toward the Art History major.

For the purposes of planning, students may access the following links:

- Course projections, which estimate when specific courses are likely to be offered during a three-year period.
- ARHA major planning worksheets, which may be used to help students map out a course of study.

GENERAL EDUCATION

Candidates for Honors in Art History must comply with the University's General Education Expectations (through Stage 2).

STUDENT LEARNING GOALS

Art History majors acquire the following skills:

- Visual analysis of the form, materials, and meanings of specific works, buildings, and sites.
- Textual analysis of primary and secondary sources in both historical and theoretical genres.
- Historical awareness, or understanding of how a given object, building, or site relates to the culture(s) that produced them.
- Intercultural literacy, including proficiency in at least one foreign language and knowledge of artistic production in several world regions.

- Methodological sophistication, including experience with more than one art historical methodology and knowledge of critical theories.

- Expository writing.

- Research, including how to formulate a research question and relevant methodology, and to locate and evaluate appropriate sources.

- Originality, or the ability to think independently and create new knowledge.

Students will demonstrate their knowledge and abilities through research projects, critical analysis papers, participation in class discussions, collaborative group work, and multimedia presentations. Written exams, peer review, and self-assessments also foster student learning.

STUDY ABROAD

Many Art History majors study abroad, most commonly during the fall or spring semester of their junior year. Students visit collections and museums in other parts of the world and may apply and deepen their foreign language skills. When selecting a study abroad location, students should consider their language abilities and the requirements of programs of interest. Many programs involving language immersion require completing at least two years of language study at the college level before studying abroad. While abroad, advanced students may want to use their time to identify artworks or collections that could serve as the basis for an honors thesis during their senior year. Students may also consider studying abroad during the summer months, whether on a shorter-length study abroad program or to undertake independent research. Juniors may apply for John T. Paoletti Summer Travel Fellowships.

ADVANCED PLACEMENT

A student who has completed an Advanced Placement (AP) Art History course or its equivalent while in secondary school and who has achieved a grade of 5 in the art history AP examination will be granted one AP course credit, but only after completing an introductory or intermediate-level course in art history at Wesleyan and receiving a grade of B+ or higher. Credit is not awarded for an AP score of less than 5.

AP credit may not be counted toward the completion of major requirements.

LANGUAGE REQUIREMENT

To become conversant in art history as a global practice, students must demonstrate proficiency in at least one foreign language. Proficiency consists of at least two full years of study at the college level, or the equivalent, as measured by a placement test administered by the language department in question.

German, French, and Italian are normally considered the most useful for the study of European art. Students concentrating in the history of Asian art are encouraged to study a relevant Asian language. Other languages may be relevant depending on a student's course of study. The Fries Center for Global Studies provides resources to study languages not formally taught at Wesleyan. For more information, visit the Language Resources and Technology page.

PRIZES

Alumni Prize in Art History

Awarded to a senior who has demonstrated special aptitude in the history of art and who has made a substantive contribution to the major.

Beulah Friedman Prize

Awarded to seniors to recognize outstanding achievement in the history of art.

James E. Lieber ('84 P'24) Art History Internship Award

Provides grant support to outstanding Art History majors or minors pursuing summer or post-graduate internships in the field.

John T. Paoletti Travel Research Fellowship in Art History

Supports student research and travel related to a senior thesis project advised by an Art History faculty member.

TRANSFER CREDIT

To receive credit for elective courses in the art history major, Art History students should provide their major advisor with a course description and detailed syllabus in advance of taking the course. All courses taken off-campus for the major must be preapproved by the student's major advisor. The Office of Study Abroad must also preapprove courses taken abroad. Preapproved courses taken abroad or at other U.S. institutions can be used to satisfy the major's 200-level electives but will not be counted toward the major's geographical or chronological distribution requirements.

Students who wish to receive general education credit for Art History courses taken off-campus should send the Art History program director a copy of the course syllabus, indicating the number of contact hours, readings, and assignments. This course information is required in addition to the transfer credit petition available through the student portal.

Transfer students wishing to receive credit towards the Art History major for courses taken at their prior institution must provide the Art History program director with course syllabi indicating the number of contact hours, readings, and assignments. For transfer students majoring in Art History, a minimum of five courses within the major must be taken at Wesleyan.

Approval of a course for transfer credit will be based on the number of contact hours and the academic rigor of the readings and assignments, which must be comparable to a Wesleyan course.

ADDITIONAL INFORMATION

Students interested in pursuing museum internships may apply for education-in-the-field credit. To be approved, the internship must involve work that is the equivalent in intellectual content and rigor to a Wesleyan Art History course, as demonstrated in substantive research and writing. Students must provide a description of projects they will be working on and the name of their supervisor, who will coordinate with an on-campus advisor. Before credit is given, students must provide examples of the work they did.

Wesleyan University charges additional tuition for education-in-the field credits earned in the summer or while on an authorized leave of absence during the academic year.

Individual Majors in Art History or Art Studio:

Students majoring in one area can count toward the 32 courses required for graduation up to 16 courses in the department. University regulations regarding the maximum number of courses allowed in a department should be applied to the major itself: Art History or Art Studio. Thus, majors in either program may count toward their graduation requirements no more than 16 credits in their major program (of which no more than 3 may be 100-level courses, and no more than 13 may be 200-level and above). These 16 would include 2 credits of thesis in the case of students majoring in Art Studio or writing a senior thesis in Art History.

Double Majors in Art History and Art Studio:

Students double-majoring in Art History and Art Studio can take up to 20 credits in the department, providing that 2 of these credits are for senior thesis tutorials. In addition to listed courses, a limited number of tutorials, internships, and teaching apprenticeships are available under specific conditions. Prior approval must be obtained to transfer credit from another institution. Review and approval by a faculty member in the area of study must also be made after completion of such course work.

HONORS

Honors candidates must earn a minimum GPA of B+.

Students seeking Honors in Art History enroll in a two-semester tutorial (ARHA 409/410) and undertake an independent, two-semester research project under the guidance of a faculty advisor, which results in an honors thesis. Honors students will formulate a research question, master the relevant literature, propose a research methodology, and work independently to achieve a significant outcome with the goal of making an original contribution to the field.

Honors candidates will participate in a senior colloquium and will present 20-minute "senior talks" on their completed theses.

For students considering graduate or postgraduate studies in the humanities or related fields (including law, medicine, or business), the successful completion of a yearlong independent research project is a mark of distinction. For students applying to MA or PhD programs in Art History, an honors thesis is often the most significant component of an application.

Honors candidates should begin discussing ideas with relevant faculty tutors early in the spring semester of their junior year. Applications are due the third Friday in February, with all thesis decisions announced by the program director in early March. For detailed information and instructions, please visit the Honors in Art History page.

CAPSTONE EXPERIENCE

The Art History Capstone consists of two seminars in Art History, which foster more advanced skills in reading, writing, and independent research.

ART HISTORY MINOR

MINOR DESCRIPTION

The Art History Minor enables students to incorporate the study of artworks and architecture into their courses of study in other disciplines. The minor maintains the geographical breadth, historical depth, and academic rigor of the major but comprises fewer courses and does not require the study of a foreign language. Art history minors may not write honors theses.

ADMISSION TO THE MINOR

A prospective student must have taken a minimum of three art history courses, have a B average in Art History, and a B average overall.

To apply for the minor, students need to complete the minor declaration form found in WesPortal. Students are assigned a minor advisor and are encouraged to take part in program events.

MINOR REQUIREMENTS

To complete the Art History Minor, students take six credits, including one introductory course (100-level) and five intermediate (200-level) and advanced courses, one of which must be a seminar (300-level). The intermediate and advanced courses must encompass study in the following geographical areas and historical periods:

Geographic Areas (1 course in 3 of the 5 different geographic areas)

- The Americas
- Europe
- East Asia
- South and Southwest Asia
- Africa

Historical Periods (1 course in 2 of the 3 historical periods)

- Historical Period 1 (up to ca. 1400)
- Historical Period 2 (ca. 1400 to ca. 1800)
- Historical Period 3 (ca. 1800 to the present)

Seminar (300-level)

- Completion of a 100-level course.

- Completion of five intermediate and advanced courses (200-level or above), including one advanced seminar (numbered 300).

- These five courses must encompass study in the following geographical and historical areas:

- The Americas, Europe, East Asia, South and Southwest Asia, and Africa.

- study in two of the following three historical periods: 1 (up to ca. 1400), 2 (ca. 1400-1800), 3 (ca. 1800 to the present) Any one course may be counted toward only one of these area or period requirements. See the list of courses organized by the categories they may fulfill.

- All courses originating in the Art History program are eligible for the minor.

- No courses numbered 401 or higher may count toward the minor.

- One course in art history taken elsewhere may count toward the minor, subject to approval of the program director. This course may count as a 200-level course. The 100- and 300-level courses must be taken in Wesleyan's Art History program.

- All courses for the minor must be taken on a graded basis. Exceptions will be made for COL and CSS majors.

ADDITIONAL INFORMATION

For the planning purposes, students should review the following documents:

- Course projections, which estimate when specific courses will be offered during a three-year period.
- ARHA minor planning worksheets, to help students map out a course of study.

ART STUDIO MAJOR

MAJOR DESCRIPTION

The Art Studio Major enables students to become fluent in visual languages—their analytical and critical vocabularies and the rigors of their techniques and methods—to explore intellectual issues and human experience. Students learn techniques associated with various media while developing a personal creative vision, beginning with basic studies in drawing and introductory art history. More focused studies train students in the practices of Architecture, Drawing, Ecological Design, Product Design, Painting, Photography, Printmaking, and Sculpture. The program seeks to reflect the diversity of technical and intellectual approaches of current artistic practices and is open to interdisciplinary experimentation. Ultimately, each student will work closely with a dedicated faculty advisor over two semesters towards the major's

comprehensive thesis requirement—the development of a focused body of work and a solo exhibition in the spring of their senior year.

Students who gravitate towards the Art Studio major tend to be creative, visual thinkers with a passion for art and ideas, an experimental mindset, and a desire to develop their technical aptitude. They are self-motivated, open to criticism, and dedicated to investing the time and effort to formulate their unique, creative vision.

Art Studio majors develop broad awareness of current and historical art practices and their theoretical concerns and social impacts and acquire the ability to analyze art from diverse intellectual traditions. Critical thinking, technical proficiency, and observational skills are used to communicate ideas through artistic means and are applicable to a wide range of creative fields and careers in fine art, arts education, advertising, design, business, curation, art conservation and many others.

ADMISSION TO THE MAJOR

At the time of application for major status, a student is expected to have completed ARST131 (Drawing I) and one art history course, along with another art studio course. The prospective major must consult with an art studio faculty member (in the proposed area of study) who is willing to serve as advisor. Most faculty expect the student to have completed outstanding work in a second-level course within a particular medium (for example, ARST352 or ARST340) before agreeing to advise a major applicant. Together, student and major advisor devise a program of study for the final two years. Admission to the major requires a review by the art studio faculty and a minimum academic average of B and an average of B+ for at least three courses in the department, two of which must be in the Art Studio Program.

MAJOR REQUIREMENTS

Students majoring in art studio must satisfactorily complete 11 courses in the department.

Code	Title	Hours
ARST131	Drawing I	1
Studio Courses (200-level or above) *		4
ARST350	Senior Seminar	1
Art History (3 courses in different geographic areas) **		3
The Americas		
Europe		
East Asia		
South Asia		
Africa		
Senior Thesis ***		2
Total Hours		11

* one must be a three-dimensional course
**A global survey course or a multi-continental course may substitute for one of the geographic area courses.
***In the rare case a student finishes all of their graduation requirements in December of their senior year, they may complete the major with only one semester of thesis tutorial, still exhibiting in the Spring.

That breaks down to six art studio courses, three art history courses, and two semesters of thesis. Further course study in art studio and art history is

recommended. Majors are required to fulfill their general education as described by the University guidelines, since all majors are required to complete a senior thesis for honors. Teaching apprentice tutorials in the department will not be counted toward the major.

In the final year of study, each student will develop a focused body of work and mount a solo exhibition. That exhibition is the culmination of a two-semester thesis tutorial and is developed in close critical dialogue with a faculty advisor. The exhibition is critiqued by the faculty advisor and a second critic and must be passed by a vote of the faculty of the art studio program. The senior thesis exhibition provides a rare opportunity for the student to engage in a rigorous, self-directed, creative investigation and in a public dialogue about their work.

All art studio majors are required to complete an honors thesis, the senior thesis exhibition. The studio faculty vote to determine high honors, honors, pass, or fail, on the criteria of originality, mastery of medium, depth and range of investigation, and coherence of the exhibition.

GENERAL EDUCATION

Art studio majors are required to fulfill their general education requirements as described by the University guidelines, since all are required to complete a senior thesis for honors.

STUDENT LEARNING GOALS

- The art studio program faculty has set the following goals for student achievement or success in the major:
- Exploration of and proficiency with a wide range of media and technique, at the introductory level and beyond
 - Honing observational skill
 - Fluency in visual language
 - The development of technical facility enabling students to explore their personal visions through making art
 - Broad awareness of current and historical art and its theoretical and historical context
 - Critique methodologies, and the ability to analyze art from diverse intellectual traditions and technical approaches
 - Development of independent studio practice, ideation, and methodology, culminating in a one-person exhibition senior year

ADVANCED PLACEMENT

No Advanced Placement credit is accepted in art studio.

PRIZES

Jessup Prize • Awarded to two undergraduates each year who are deemed to show the greatest talent and promise for even greater excellence in sculpture, printmaking, architecture, photography, painting, or drawing. The prize is given in memory of Pauline Jessup, a noted interior designer, who practiced her craft for over 60 years throughout the United States. Mrs. Jessup was noted for her unerring eye, her extraordinarily refined taste, and her steadfast commitment

to her clients—many of whom she served over three generations. The award is determined by the Department of Art and Art History.

Elizabeth Vermeer Tishler Prize—Art • Established in 1981 by a gift from Mrs. Tishler. Awarded annually for an outstanding senior exhibition in painting, drawing, printmaking, sculpture, photography, or architecture.

TRANSFER CREDIT

A major is obliged to consult with his/her advisor and receive approval for off-campus study, leaves, or addition of a second major. Off-campus study in the senior year is not encouraged and requires additional approval of the program director. Students should also consult carefully when planning off-campus study before they have been accepted to the major. An art studio faculty member must approve coursework taken outside of Wesleyan in advance, and a portfolio review is required after the course is completed to transfer credit toward the major. Transfer of course credit toward the major is not automatic, even from a Wesleyan-approved program. A student may count no more than three art studio and art history courses taken outside the Wesleyan department toward the major without specific permission of the faculty. Students transferring to Wesleyan who wish to receive credit toward the major for art studio courses taken at another institution should seek approval from the department prior to enrollment; portfolio review is required, transfer of course credit is not automatic.

HONORS

All art studio majors are required to complete and pass an honors thesis, the senior thesis exhibition. The studio faculty vote to determine high honors, honors, pass, or fail, on the criteria of originality, mastery of medium, depth and range of investigation, and coherence of the exhibition.

There are two pathways to pursue honors in Art Studio:

- ARST430
- ARST409 and ARST410

Astronomy

The Wesleyan Astronomy Department provides outstanding opportunities for undergraduates who wish to major in this fascinating subject, either in preparation for graduate school or as an end in itself. Our unique program blends coursework with research opportunity and provides students access to professional-quality telescopes, instrumentation, and computers. A principal strength is our active research faculty who will work one-on-one with undergraduates employing state-of-the-art instrumentation and computers to investigate areas of current astronomical interest.

Our students go on to graduate programs, including the best in the country, or to a variety of rewarding careers in and out of science. Many of our students are co-authors on research papers based on work performed during their undergraduate careers. In addition, we offer a comprehensive range of coursework that will prepare students for a variety of directions in life, including graduate study.

Undergraduate Program Departmental Advising Experts

William Herbst, Edward Moran, Seth Redfield

Astronomy Major

Major Description

The Major in Astronomy (ASTR) enables students to explore the foundational concepts and recent discoveries that have shaped the modern study of celestial objects, space, the phenomena of the cosmos, and the universe. Students develop advanced proficiency with the theoretical concepts and observational tools employed in distinct subfields of astrophysics. The program blends coursework with research opportunities and provides students with access to professional-quality telescopes, instrumentation, and computers. All majors complete an in-depth senior capstone project and present their research in a public forum, e.g., by speaking in the research seminar, presenting a poster at the Wesleyan summer research program, or presenting at a professional conference.

The Astronomy program attracts students who have a passionate interest and curiosity about space, celestial objects, and the universe, along with an aptitude for mathematics and physics, the ability to work with complex data and technology, and the patience for long-term research projects.

Astronomy graduates may continue their studies in a graduate program or pursue a variety of careers in fields such as astronomy, astrophysics, data science, planetary science, aerospace engineering, space missions, science communications, education, and public outreach.

Admission to the Major

The standard introductory course for potential majors and other science-oriented students is ASTR155. It may be taken in the first or sophomore year. It assumes a good high school preparation in physics and some knowledge of calculus. ASTR211 is a sophomore-level course appropriate for interested non-majors as well as a gateway course to the major. Coding skills are required for ASTR211 and all upper-level astronomy courses. Prospective majors should take ASTR210 prior to ASTR211 or demonstrate their proficiency in coding to the ASTR211 instructor prior to taking that course. View courses in our Academic Catalog (<https://catalog.wesleyan.edu/departments/astr/ugrd-astr/>).

Major Requirements

The astronomy major is constructed to accommodate both students who are preparing for graduate study and those who are not.

The basic requirement for the major is the successful completion of the required courses as well as four upper-level astronomy courses. The required upper-level courses are taken one each semester in the junior and senior years.

Code	Title	Hours
Required Courses:		
ASTR155	Introduction to Astrophysics	
ASTR210	Fundamentals of Scientific Computing in Astronomy	
ASTR211	Observational Astronomy	
MATH121	Calculus I	
MATH122	Calculus II	
MATH221	Vectors and Matrices	
PHYS113	General Physics I	
PHYS116	General Physics II	
PHYS213	Waves and Oscillations	
PHYS214	Quantum Mechanics I	
PHYS215	Special Relativity	
Four Upper-Level Astronomy Courses*:		
ASTR221	Galactic Structure and Formation	
ASTR222	Modern Observational Techniques	
ASTR224	Exoplanets: Formation, Detection, and Characterization	
ASTR231	Stellar Structure and Evolution	
ASTR232	Galaxies, Quasars, and Cosmology	
ASTR240	Radio Astronomy	
*Upper-level Astronomy course offerings may vary year-to-year.		

Code	Title	Hours
Strongly Recommended Courses:		
MATH222	Multivariable Calculus	
PHYS324	Electricity and Magnetism	
PHYS219	Introduction to Contemporary Physics (if PHYS215 is not offered)	

Additional upper-level physics courses are also recommended but are not required. Prospective majors with graduate school aspirations should complete or place out of the basic physics and mathematics courses listed above,

preferably by the end of their sophomore year, and should also take ASTR155, ASTR210, and ASTR211 during their first two years.

Since physics preparation is an important admission criterion at most astronomy graduate schools, those planning to go on for a PhD should consider a double major in physics. This can be accomplished by taking several of the following additional courses, normally in the junior and senior years: PHYS324, PHYS313, PHYS315, and PHYS316. Check the published requirements for the physics major for more details and speak to your advisor.

Additional mathematics courses, such as MATH229, may also be chosen.

Click here (https://www.wesleyan.edu/academics/journey/Astronomy_Advising_Information.pdf) for more detailed information about the astronomy major, including a sample eight-semester course plan.

STUDENT LEARNING GOALS

In this major, students are expected to acquire or develop:

- a broad understanding at an introductory level of the foundational concepts and recent discoveries that have shaped modern astronomy and astrophysics
- proficiency at an advanced level with the theoretical concepts and observational tools employed in four or more distinct subfields of astrophysics
- firsthand experience with the process of science through participation in research
- the technical and research skills needed to pursue graduate study in astronomy
- analytical abilities and computing skills useful for careers outside of professional astronomy

BA/MA PROGRAM

[wesleyan.edu/grad/degree-programs/bama.html (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html)]

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience.

ADDITIONAL INFORMATION

All astronomy majors are to enroll each year in the .25-credit courses ASTR430 and ASTR431. These discussion courses provide a broad exposure and introduction to research and education topics of current interest to the astronomical community. Majors are also encouraged to serve as teaching apprentices in a general education course at least once during their junior or senior year, to take part in the observing program with the department's 24-inch telescope, and to participate in the department's public outreach activities.

HONORS

Students considering graduate school are strongly urged to do a senior thesis project (ASTR409/ASTR410); honors in astronomy requires completion of a senior thesis. Students with an interest in planetary science are advised to look at the course cluster information on that topic.

CAPSTONE EXPERIENCE

Research is an integral part of an undergraduate education in astronomy, and all majors are required to complete a senior research capstone that provides experiences beyond those obtained as part of their academic coursework. The capstone, to be completed during the twelve months prior to graduation, can take several forms:

- completion of a senior thesis project
- non-thesis related astronomy research
- in-depth investigation of a current research topic, including a short written report

In all cases, students must present some aspect of their experience in a public forum, e.g., by speaking in the ASTR 431 research seminar, presenting a poster at the Wesleyan summer research program poster session, or making a presentation at a professional conference.

MASTER OF ARTS IN ASTRONOMY

The Astronomy program blends coursework with research opportunities, providing students access to state-of-the-art instrumentation and computers to investigate areas of current astronomical interest. Primary research activities in the Astronomy department include mapping the local interstellar medium, probing the atmospheres of extrasolar planets, observations of young stars and circumstellar disks, investigations of x-ray binary star systems, and studies of the massive black holes that reside at the centers of galaxies. Facilities include a network of MacOS X workstations, a CCD attached to a 24-inch reflector, a 20-inch refractor equipped for observational work, and the substantial astronomical library of the Van Vleck Observatory. Faculty members are frequently awarded observing time on world-class telescopes, including the Hubble Space Telescope, Chandra X-ray Observatory, and dozens of ground-based telescopes.

The Astronomy Department offers graduate work leading to the degree of Master of Arts. Two years are usually necessary to complete the requirements for the MA degree. Alternatively, the department offers the 5-year combined BA/MA program for Wesleyan students. Wesleyan also offers an MA Concentration in Planetary Science, an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology.

Six to ten non-seminar credits—including two credits for research leading to the thesis—are required for the MA degree. Master's candidates are expected to become involved in the department's research programs early in their graduate careers and to select courses offered in observational and theoretical astronomy and astrophysics. Additional courses in physics, mathematics, computer science,

or planetary science are recommended according to individual student needs. The small size of the department permits individualized instruction and a close working relationship between students and faculty.

BA/MA students are not required to be teaching assistants; however, graduate students are expected to improve their communication skills through classroom teaching, formal interaction with undergraduate students, and presentations to the observatory staff and the community. MA students work as teaching assistants for one class each semester.

Each MA candidate must write a thesis on a piece of original research. Many thesis projects are ultimately submitted to a journal for publication.

COURSES

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. Students will normally enroll in at least one 500-level course in astronomy each semester. Depending on the year, the courses are ASTR521, ASTR522, ASTR524, ASTR531, ASTR532, or ASTR555. These courses are similar in content to the 200-level courses of the same name but with some supplementary materials and special assignments. These supplements are designed especially for graduate students. In order to show proficiency in astronomy, physics, and mathematics, a minimum of 6-10 non-seminar credits, with grades of B- or better, is required for the MA degree. These include two credits for research leading to the thesis, which is also required. The student may expect to take two to four courses in physics, mathematics, or other sciences after consultation with the faculty of the department. In each semester of the first year of a 2-year MA program, students typically take three courses: one 500-level astronomy course and two courses in physics or math to match the level of proficiency expected in the Department's BA in astronomy. In each semester of the final year of the MA program, students typically take one 500-level astronomy course and one credit of thesis research. In addition, students are required to participate in the department's seminars on research and pedagogy in astronomy, which are offered each semester.

PROGRESS AND QUALIFYING EXAMS

To be admitted to candidacy, an MA student must take a written and oral qualifying examination demonstrating satisfactory understanding of several areas of astronomy, fundamental physics, and mathematics. This examination should be taken prior to the last year of study. If performance in this examination is not satisfactory, the student will either be asked not to continue or to repeat the examination. BA/MA students do not take a written or oral qualifying examination if ASTR155 has been successfully completed.

TEACHING

The emphasis in the program is on research and scholarly achievement, but graduate students are expected to improve communication skills by classroom teaching, formal interaction with undergraduate students, and presenting talks to the observatory staff and to the community. BA/MA students are not required to be teaching assistants.

RESEARCH

The research interests of the current faculty are:

- Dr. Ed Moran—extragalactic X-ray sources and supermassive black holes
- Dr. Seth Redfield—exoplanets and the interstellar medium
- Dr. Roy Kilgard—high-mass X-ray binary populations and statistical challenges in high energy astrophysics
- Dr. Meredith Hughes—planet formation
- Dr. Sarah Wellons—galaxy formation theory

The department is well-equipped for instruction and research. Facilities include a network of MacOS X workstations, a CCD attached to a 24-inch reflector, a 20-inch refractor equipped for observational work, and the substantial astronomical library of the Van Vleck Observatory. Members of our faculty are frequently awarded observing time on world-class telescopes, including the Hubble Space Telescope, Chandra X-ray Observatory, and dozens of ground-based telescopes.

THESIS AND DEFENSE

Each candidate is required to write a thesis on a piece of original and publishable research carried out under the supervision of a faculty member. A thesis plan, stating the purpose and goals of the research, observational and other materials required, and uncertainties and difficulties that may be encountered, must be submitted to the department for approval after admission to candidacy. The thesis, in near-final form, must be submitted to the faculty at least one week prior to the scheduled oral examination. In this examination, the student must defend his or her work and must demonstrate a high level of understanding in the research area. The oral examination may touch on any aspect of the student's preparation. It is expected that the student will submit the results of his or her work to a research journal for publication.

CONCENTRATIONS

Wesleyan offers an MA Concentration in Planetary Science. Planetary science is an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology. The subject matter is planets, including those around other stars (exo-solar systems). The science questions include the most important of our times: How do planets (including Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? The discovery of even microbial life beyond Earth would rank as one of the greatest human achievements of all time, and this quest lies squarely within the purview of planetary science. For more information and course requirements see <https://www.wesleyan.edu/planetary/Graduate.html>.

<https://www.wesleyan.edu/grad/graduate-programs/masters.html>.

BIOLOGY

These are thrilling times to study biology. Advances in molecular biology, epigenetics, and bioinformatics are leading to extraordinary new insights in every field, from evolution and ecology to development, cell biology, genetics/genomics, and neuroscience. These research areas are providing essential information as we address the urgent challenges of biodiversity conservation, global climate change, epidemiology, and human health and well-being. Biology is also at the heart of new ways of understanding ourselves as human beings in relation to other living things. Connections between biological disciplines are raising key questions in new ways, while biological knowledge has become fundamentally integrated with social and medical ethics, public policy, and journalism.

The Biology Department offers a broad range of courses that emphasize the process of scientific inquiry and current experimental approaches. Our courses also consider real-world implications of biological issues: the ethics of embryonic stem cell research, gender issues and reproductive technologies, the AIDS epidemic, and the impact of human activity on natural communities. Biology courses can be the start of a dedicated career in research, medicine, conservation, public health, bioethics, sustainable resource use, and many other areas. They can also bring the intellectual excitement of these investigations to students whose major focus is in the arts, humanities, or social sciences. We welcome students of all backgrounds and interests to join us.

UNDERGRADUATE PROGRAM DEPARTMENTAL ADVISING EXPERTS

All departmental faculty

BIOLOGY MAJOR

MAJOR DESCRIPTION

The major in Biology provides students with the skills to perform scientific inquiry using current experimental approaches as they pursue a deeper understanding of the interconnections among living things. We study how recent advances in the biological sciences are driving extraordinary new discoveries and innovations in areas such as evolution, ecology, cell biology, genetics/genomics, and neuroscience. Biological research provides essential information as we address urgent challenges of biodiversity conservation, global climate change, epidemiology, and human health and well-being. Increasingly, biological issues are playing a fundamental role in social and medical ethics, journalism, and public policy.

Biology students are curious, keen observers who seek answers about the natural world. Coursework requires analytical and critical thinking skills and a sense of imagination. Students are encouraged to nurture abilities to understand complex processes, follow detailed protocols, analyze data, and communicate about their research. As biology deals with living organisms and potentially sensitive research, the model biology student should possess strong ethics, respect for life, and a commitment to responsible practices.

A major in Biology can form the foundation of a career in research, medicine, conservation, public health, bioethics, sustainable resource use, and many other areas.

ADMISSION TO THE MAJOR

Students who begin the Biology Major their first year are able to take maximum advantage of upper-level biology courses and research opportunities in later years. The major can successfully be completed if begun during sophomore year. Biology students may consider taking a semester abroad.

The required introductory courses do not have prerequisites or corequisites, but it is recommended to have some chemistry background or to take General Chemistry (CHEM141/CHEM142 or CHEM143/CHEM144) concurrently.

MAJOR REQUIREMENTS

The Biology Major's required course of study includes:

- Two introductory courses with their associated labs:
 - BIOL181 with lab BIOL191 is offered every fall semester.
 - BIOL182 with lab BIOL192 is offered every spring.
- Two semesters of general chemistry (CHEM141-CHEM142 or CHEM143-CHEM144)
- Any three additional semesters of related courses from at least two different departments. These are courses that address approaches and methodologies applied in biology and include:
 - Organic Chemistry: CHEM251, CHEM252
 - Physics: PHYS111, PHYS112, PHYS113, or PHYS116 and PHYS207
 - Mathematics: MATH117 or higher
 - Statistics: MATH132, ECON300, PSYC200
 - Quantitative Analysis Center: QAC201, QAC231
 - Computer Science: BIOL265, BIOL266 (0.5 credit), BIOL271 (0.5 credit), COMP112, COMP114, COMP115, COMP211, or a course higher than COMP211
 - Earth and Environmental Science: BIOL242/E&ES270, E&ES280, E&ES380
 - Archaeology: ARCP350
- Six or more elective biology courses at the 200 and 300 levels, which must include:
 - One mid-level cell/molecular course (either MB&B208, BIOL210, BIOL212, or BIOL218)

- One mid-level organismic/population course (either NS&B213/BIOL213, BIOL214, BIOL215, BIOL216, or BIOL217)
- One capstone experience

Important Notes:

- No more than three of the mid-level courses listed above may be counted towards the six advanced elective requirements.
- At least three elective courses (200-level and above) that are counted toward the Biology major cannot be simultaneously used to fulfill any other major.
- Biology majors are allowed to apply at most one elective course or one cognate course taken credit/unsatisfactory toward fulfilling the major requirements. However, this is discouraged because good performance in major courses is an important aspect of a student's transcript.
- A strong background in chemistry is recommended for students planning to enter graduate or medical school. Most medical and health-related graduate programs require two years of college-level chemistry, including laboratory components and a biochemistry course.
- Students planning to attend medical, dental, or other health professions graduate school should note that admission requires a year each of introductory biology, physics, and math (such as calculus or statistics) and two years of chemistry (general and organic), including any laboratory components.

Important Requirements for Double Majors:

- At least three elective courses (200-level and above) that are counted toward the Biology major cannot be simultaneously used to fulfill any other major.
- For double-major in Biology and Neuroscience and Behavior, NS&B/BIOL213 cannot count toward the six electives required for the Biology major; however, NS&B/BIOL213 will fulfill the Column 2 breadth requirement.
- Two Statistics courses, even from different departments, cannot both be counted as cognates.
- Students cannot use E&ES280 if they use QAC231 .

Electives may be chosen from among the following courses at the 200, 300, or 500 levels. See WesMaps for current course offerings. The courses are grouped thematically below for your convenience only.

CELL AND DEVELOPMENTAL BIOLOGY

Code	Title	Hours
BIOL/MB&B223	The Molecular Basis of Cancer	1
BIOL/MB&B228	Introductory Medical Biochemistry	1
BIOL/MB&B232	Immunology	1
BIOL/MB&B237	Signal Transduction	1
BIOL241	Cell-Cell Interactions in Development	1

BIOL/IDEA267	Engineering Biology: Cells and Tissues	1
BIOL295	Physiology and Cell Biology of Cancer	1
BIOL317	Genes and Mechanisms in Vertebrate Sex Determination	1
BIOL322	Cell Migration in Development and Disease	1
BIOL/NS&B325	Stem Cells: Basic Biology to Clinical Application	1
BIOL332	Genomics Era Cell and Development	1
BIOL334	Shaping the Organism	1
BIOL340	EvoDevo: Origins of Variation in the Phenotype	1
BIOL/NS&B343	Muscle and Nerve Development	1
BIOL/NS&B345	Developmental Neurobiology	1
MB&B375	The Cell-Division Cycle and Cancer	1

EVOLUTION, ECOLOGY, AND CONSERVATION BIOLOGY

Code	Title	Hours
BIOL/ENVS220	Conservation Biology	1
BIOL/ENVS226/ E&ES240	Invasive Species: Biology, Policy, and Management	1
BIOL/ENVS233/ E&ES234	Geobiology	1
BIOL235	Comparative Vertebrate Anatomy	1.5
BIOL290/ENVS286	Plant Form and Diversity	1
BIOL/E&ES312/ ENVS311	Global Change Biogeography	1
BIOL316	Plant-Animal Interactions	1
BIOL318	Nature and Nurture: The Interplay of Genes and Environment	1
BIOL/COMP/CIS327	Evolutionary and Ecological Bioinformatics	1
BIOL/ENVS337	The Origins of Bacterial Diversity	0.5
BIOL346/E&ES238/ ENVS340	The Forest Ecosystem	1
BIOL365	Calderwoods Seminar in Public Writing: 21st-Century Biology	1
ARCP/E&ES350/ ENVS348	Animals in Archaeology	1
BIOL368/ENVS369/ E&ES342	Ecological Resilience: The Good, the Bad, and the Mindful	1

GENETICS, GENOMICS, AND BIOINFORMATICS

Code	Title	Hours
MB&B/BIOL231	Microbiology	1
BIOL242	Quantitative Methods for the Biological and Environmental Sciences	1
BIOL/NS&B257	Neurogenetics	1
BIOL/CIS263	Demystifying Data: Introductory Data Analysis and Modeling	1
BIOL/MB&B/ CIS265/COMP113	Bioinformatics Programming	1
BIOL/CIS270	Systems Biology with Programming	1
MB&B306	Epigenetics	1
BIOL/CIS310/ MB&B311	Genomics Analysis	1
BIOL/CIS/COMP327	Evolutionary and Ecological Bioinformatics	1
MB&B/BIOL333	Gene Regulation	1

MB&B394	Advanced Laboratory in Molecular Biology and Genetics	1
---------	---	---

NEUROBIOLOGY AND BEHAVIOR

Code	Title	Hours
BIOL/NS&B224	Hormones, Brain, and Behavior	1
BIOL/NS&B/PSYC239	Functional Anatomy of the Human Brain	1
NS&B/BIOL243	Neurohistology	1
BIOL/NS&B244	Neuropharmacology	1
BIOL/NS&B245	Cellular Neurophysiology	1
BIOL/NS&B247	Laboratory in Neurophysiology	1
BIOL/NS&B250	Laboratory in Cellular and Behavioral Neurobiology	1
BIOL/NS&B251	Laboratory in Basic Practices in Neuroscience	1
BIOL/NS&B252	Cell Biology of the Neuron	1
BIOL/NS&B254	Comparative Animal Behavior	1
BIOL/NS&B299	Waves, Brains, and Music	1
NS&B302	Neurobiology of Aging	1
NS&B304	Glia: Not just neuronal glue!	1
NS&B/BIOL328	Chemical Senses	1
BIOL/NS&B345	Developmental Neurobiology	1
BIOL/NS&B347	Mammalian Cortical Circuits	1
BIOL/NS&B351	Neurobiology of Learning and Memory	1
NS&B/BIOL/PSYC353	Neurobiology of Neurological Disorders	1
BIOL/NS&B/PSYC356	Neurodevelopmental Disorders	1
BIOL/NS&B/FGSS357	Sex and Gender: From Synapse to Society	1
BIOL/NS&B358	Neurobiology of Movement	1
NS&B/BIOL360	Neuroplasticity and Neurogenesis in Health and Disease: Molecules, Cells, and Circuits	1
BIOL/NS&B373	Exploring the Brain-Body Interface: The Neuroscience of Basic Survival	1

ADDITIONAL COURSES THAT CAN BE CREDITED TO THE ELECTIVE REQUIREMENT

With permission from the department, the following courses may be applied toward fulfilling the mid-level elective requirement for the Biology major.

Code	Title	Hours
ARCP/ENVS/SISP/IDEA203/ANTH212	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP/ENVS/ANTH/E&ES257	Environmental Archaeology	1
CHEM/NS&B323	Biochemistry of Neurodegenerative Disease	1
CHEM/MB&B325	Introduction to Biomolecular Structure	1
CHEM/MB&B383	Biochemistry	1

Additional notes on fulfilling the Biology major:

- Cross-listed courses that are included on the list above are automatically credited to the biology major.

- At least three elective courses (200-level and above) that are counted toward the biology major must be used to fulfill only the biology major and cannot be simultaneously used to fulfill another major.

- Depending on the student's specific program, and with prior permission of the chair, up to two biology courses from outside the department may be counted toward the major as electives. Wesleyan courses that fall into this category are: ARCP203 /ANTH212 , ARCP257 , CHEM323, CHEM325, and CHEM383 .

- Courses in the BIOL 400 series (such as research tutorials) contribute toward graduation but do not count toward the major, although they can be used to fulfill the capstone requirement (see below).

COURSES FOR NON-MAJORS

The following courses do not have prerequisites and, as such, are appropriate for non-majors.

Code	Title	Hours
BIOL106	The Biology of Sex	1
BIOL140	Classic Studies in Animal Behavior	1
BIOL146	Primate Behavior: The Real Monkey Business	1
BIOL173	Global Change and Infectious Disease	1
BIOL/MB&B181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
BIOL/MB&B182	Principles of Biology II	1
BIOL/ENVS/E&ES197	Introduction to Environmental Studies	1

STUDENT LEARNING GOALS

Biology majors acquire the following knowledge and competencies:

- A broad and integrative understanding of the theory and practice of biology
- Critical and quantitative thinking
- Creative problem solving
- Scientific reasoning
- Ethics of biological research
- Understanding of the role of biology in society and sustainability practices
- Designing and conducting original research
- Written and oral communication about scientific concepts and research findings

- Comprehension and critical interpretation of primary scientific literature

Students will use their biological knowledge and skills to become effective, scientifically-informed citizens and professionals.

Students will demonstrate their knowledge and abilities through research projects, critical analysis papers, participation in class discussions and collaborative group work, and presentations. Written exams, peer review, and self-assessment will also evaluate their class performance.

ADVANCED PLACEMENT

Students who have received a grade of 4 or 5 on the AP Biology exam may receive one University credit toward graduation.

Students with a score of 4 or 5 may place out of one of the two Introductory Biology courses (BIOL181 or BIOL182) but must first consult with an instructor teaching these courses.*

Students interested in placing out of MB&B181 in the fall semester should contact Professor Cori Anderson (canderson05@wesleyan.edu) regarding the placement exam.*

*Note: We recommend against “placing out” of MB&B181/BIOL181 for almost all students interested in the Biology major. Although some of the material from a high school AP course will be familiar, the depth and rigor of MB&B181/BIOL181 provide a strong foundation as you move forward to more advanced courses.

PRIZES

Dr. Neil Clendeninn Prize – Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed their sophomore year and should exemplify qualities of character, leadership, and concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

The Peirce Prize – Awarded in successive years for excellence in biology, chemistry, and geology.

TRANSFER CREDIT

Up to two outside credits for biology courses may also be applied from another institution (during a study abroad program, for example). Prior permission must be obtained from the departmental liaison, Professor Michael Singer (msinger@wesleyan.edu), to ensure creditability of specific courses from other institutions.

RELATED PROGRAMS OR CERTIFICATES

Environmental Studies Minor

The Environmental Studies (ENVS) program is interdisciplinary and offers both a minor and a linked major. The ENVS-linked major is a secondary major and requires a student also to have a primary major in another department, program, or college. ENVS majors write a senior thesis or essay in environmental studies

that is mentored by a professor in another department, program, or college (e.g., biology). There is also an opportunity to earn an ENVS minor, which does not require a senior thesis or essay.

Informatics and Modeling Minor

The Integrative Genomic Science pathway within this minor will be of particular interest for life science majors. See wesleyan.edu/imcp/igs.html.

Neuroscience and Behavior Program

Several faculty members in the Biology and Psychology Departments also participate in the Neuroscience and Behavior Program that, at the undergraduate level, constitutes a separate major. Information about that program can be found at wesleyan.edu/nsb.

BA/MA PROGRAM

The BA/MA program provides an attractive option for life science majors to gain graduate level research experience. Students are advised to begin research by their junior year if they intend to pursue the BA/MA in biology. Admission is competitive and based on GPA, faculty recommendations, and research experience.

ADDITIONAL INFORMATION

The BIOL/MB&B 338/339 seminar series features distinguished scientists from other institutions who present lectures on their research findings. These seminars aim to relate material studied in courses, tutorials, and research to current scientific activity. These seminars are usually held on Wednesday at noon and are open to all University community members. Undergraduates are especially welcome.

HONORS

To be considered for departmental honors, a student must:

- Be a biology major and be recommended by a faculty member.
- Have at least a B average (GPA of 85 or above) in courses credited to the major.
- Submit a thesis based on laboratory research, computational research, or mathematical modeling. The thesis is carried out under the supervision of a department faculty member.

CAPSTONE EXPERIENCE

The Capstone Experience is required for Biology majors and students must complete at least one of the following:

- One semester of a 300-level seminar, lab, or field course
- One semester of BIOL338 or BIOL339

- One semester of a 500-level journal club: BIOL505, BIOL506, BIOL507, BIOL508, BIOL509, BIOL510, BIOL547 or BIOL548
- Two semesters of a Senior Thesis tutorial
- One semester of a 400-level research tutorial (BIOL423 or BIOL424)
- A summer research internship in biology or a related life sciences area

- Genetics/Genomics/Bioinformatics
- Evolution/Ecology
- Physiology/Neurobiology/Behavior
- Cell biology/Developmental Biology
- Biochemistry/Molecular Biology

The adequacy of courses that have been taken at other institutions will be evaluated by the Pre-Candidacy Committee through its meeting with the student. Students whose focus is bioinformatics may substitute two upper-level courses in computer science for one of these five areas.

All PhD students must take a minimum of two 1 credit advanced (**300 or 500**) lecture, lab, or seminar course approved by the First Year Advisory committee. At least one of these should be taken during the student's first year. Departmental and interdepartmental seminars and journal clubs are included in the program, and additional individual reading in particular areas may also be required. First-year students are exposed to research in the department through usually two, occasionally three, one-semester lab rotations or research practica. Toward the end of each semester of the first two years, each student will meet with the Pre-Candidacy Committee to review progress and to discuss any modification of the proposed program.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

Working with the Pre-Candidacy Committee, graduate students design their own program of courses to complement and strengthen their previous background knowledge. All students are required to participate in one of the journal clubs, during which recent journal articles are presented and discussed. Four journal clubs meet once a week:

- Ecology/Evolution
- Cell/Development/Genetics
- Neuroscience/Behavior
- Environmental Biology

PROGRESS AND QUALIFYING EXAMS

A PhD student's career in the Department of Biology at Wesleyan University is divided into three phases:

1. Preparation, rotations, and qualifier exam

Students are required to spend a one-semester rotation in two research laboratories during their first year. A third rotation is occasionally appropriate. After settling into a lab, a qualifying examination will be taken at the end of the second year no later than June 30. The examination is designed to test the student's knowledge of biology and ability to think critically. It includes a written research proposal, followed by an oral examination to discuss the proposal and evaluate the student's breadth in biology. The examination will be administered by four faculty members of the department (or associated departments and including the advisor), chosen by the student and his or her research advisor. The examining committee will include the research advisor and one member whose research field is clearly outside the student's area of special interest.

2. Active PhD thesis research

Within a year of passing the qualifier examination the student should meet with a thesis committee selected in consultation with his/her advisor to discuss research progress and proposed research. The student should submit to the committee an updated thesis proposal. The thesis committee will include the thesis advisor and three additional members; at least two of the latter three

DOCTOR OF PHILOSOPHY IN BIOLOGY

The Biology Department offers a broad range of courses that emphasize scientific inquiry and current experimental approaches. These research areas provide essential information as we address the urgent challenges of biodiversity conservation, global climate change, epidemiology, and human health and well-being. Students consider real-world issues at the heart of how we understand ourselves as human beings in relation to other living things.

Students pursuing the Doctor of Philosophy in Biology are expected to study related biological fields through an individual program of courses, seminars, and readings, primarily emphasizing an intensive research experience culminating in a thesis. Graduate students design their own program of courses to complement and strengthen their previous background knowledge. The low student-faculty ratio ensures close collaboration between students and their dissertation advisors. Faculty and invited outside speakers offer regular research seminars, and graduate students present their work as it progresses at a biweekly departmental colloquium. All students are required to participate in one of the journal clubs, which meet weekly to discuss Ecology/Evolution, Cell/Development/Genetics, Neuroscience/Behavior, or Environmental Biology. Additional courses and lectures of interest offered by other departments are also available to biology students.

All PhD students must teach for three semesters (two in the introductory series), under faculty training and supervision. Teaching assistants are involved in preparing materials for and assisting in laboratory courses and in evaluating student work. Some classroom teaching opportunities may be offered in the later years of the PhD program.

COURSES

The PhD is a research degree demanding rigorous scholarly training and creativity; the result is an original contribution to the candidate's field. The student and the Pre-Candidacy Committee will work out a program of study for the first two years at the time of matriculation. This program will take into account the student's proposed field of interest and prior background in biology and related sciences. No specific courses are required, but, rather, a subject-matter requirement is used to ensure a broad background. Before taking the qualifying examination, all students must have at least one substantive course above the introductory level (at Wesleyan or elsewhere) in each of five subject areas:

must be a member of the biology department faculty. The third member may be from another Wesleyan department or another institution if appropriate. The committee will meet with the student twice a year thereafter, or more frequently if it is appropriate.

3. Preparation of the PhD thesis and defense

The thesis committee determines when sufficient experimental work has been completed and must approve the final written document. After the committee's determination, a public thesis defense will be scheduled.

TEACHING

A minimum of three semesters as a teaching assistant is required.

RESEARCH

PhD students start their research experience with two or more semester-long practica in laboratories. These are designed to provide complementing experiences to prepare students for their thesis research. Research projects are available in the following areas:

- **Aaron Lab**—epilepsy, the hippocampus, and the cortex
- **Chernoff Lab**—conservation, evolution, and genetics of fish
- **Cohan Lab**—evolutionary genetics and speciation of bacteria
- **Coolon Lab**—ecological and evolutionary functional genomics
- **Feng Lab**—behavioral neurobiology of hibernation, with thirteen-lined ground squirrels as a model
- **Johnson Lab**—regulation of cell movement during development
- **Melón Lab**—Neurobiological mechanism that drive sex differences in the development of disorders associated with alcohol exposure
- **Mitchel Lab**—emergent phenomena in biological systems, mechanobiology, epithelial cell biology
- **O'Neil Lab** (*Biology Dept. Affiliate*)—protein aggregation in neurodegenerative disease
- **Singer Lab**—evolution and ecology of plant-animal interactions
- **Sultan Lab**—evolutionary ecology of phenotypic plasticity in plants
- **Tezak Lab**—Incubation environment influence of cell fate decisions and organ development; gonadal sex determination in reptiles
- **Weir Lab**—molecular genetics; bioinformatics

All PhD students present their research in bi-monthly seminars (BIOL557) attended by all members of the department, to encourage students to become fluent and comfortable with their presentation skills.

DISSERTATION AND DEFENSE

The most important requirement is a PhD thesis, an original contribution to biology that merits publication. The candidate will receive advice and guidance from the thesis director but must demonstrate both originality and scientific competence. Normally, the candidate will choose a thesis topic during the second year of graduate work in consultation with appropriate faculty. The thesis committee determines when sufficient experimental work has been completed and must approve the final written document. At this point a public defense will be scheduled after which the documents will be signed if the candidate has fulfilled all the requirements.

ADDITIONAL INFORMATION

BA/MA PROGRAM

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are encouraged to begin research by their sophomore year if they intend to pursue the BA/MA in biology. Admission is competitive and based on GPA, faculty recommendations, and research experience. For information about the BA/MA program: [wesleyan.edu/grad/degree-programs/bama.html](http://www.wesleyan.edu/grad/degree-programs/bama.html) (<http://www.wesleyan.edu/grad/degree-programs/bama.html>)

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the University.

For additional information, please visit wesleyan.edu/bio/graduate (<https://wesleyan.edu/bio/graduate/>).

MASTER OF ARTS IN BIOLOGY

The Biology Department provides a broad range of courses emphasizing scientific inquiry and current experimental approaches. These research areas provide essential information as we address the urgent challenges of biodiversity conservation, global climate change, epidemiology, and human health and well-being. Students consider real-world issues at the heart of how we understand ourselves as human beings in relation to other living things.

The Biology Department offers graduate work leading to the degree of Master of Arts through the BA/MA program. The department may also grant the Master of Arts degree to students in the biology PhD program who do not complete the PhD.

Candidates for the BA/MA in Biology will follow a program that includes coursework, seminars, and, in some cases, teaching. Wesleyan undergraduate life science majors may apply to earn their MA in Biology alongside their BA through an intensive course of study and research. Admission to the BA/MA program is competitive, and students are encouraged to begin research by their sophomore year. Students hoping to enter the program should discuss their intention with a research advisor in the first semester of their junior year to permit the design of an acceptable program.

Students in the BA/MA or terminated Ph.D. programs must earn at least six credits in addition to the 32 necessary for the Wesleyan BA in Biology.

Course requirements include two journal clubs, two credits of advanced research (BIOL549 and BIOL550) and .50 credit in the Research Seminar (BIOL557). Remaining credits will be earned through lecture, lab, or seminar courses determined by the student and their mentor. Students will submit a master's thesis and give a public presentation describing their research.

COURSES

Students in the BA/MA or terminated Ph.D. programs are required to earn a minimum of 6 credits in addition to the 32 necessary for the Wesleyan BA.

Three credits will be earned through the following:

FALL

- Required: one Journal Club – BIOL505, BIOL507, BIOL509, or BIOL547 (0.25 credits)
- Required: Advanced Research – BIOL549 (1.0 credit)
- *Optional: Research Seminar – BIOL557 (0.50 credits)*

SPRING

- Required: one Journal Club – BIOL506, BIOL508, BIOL510, or BIOL548 (0.25 credits)
- Required: Advanced Research – BIOL550 (1.0 credit)
- Required: Research Seminar – BIOL557 (0.50 credits)

The remaining credits will be earned through lecture, lab, or seminar courses (200, 300, or 500-level) determined by the student and mentor; a minimum of two of these must be one-credit courses. MA credit will only be awarded for academic work in which grades of B minus or higher have been earned. A student in the BA/MA program who earns more than 32 credits during the BA may apply any excess credits toward the MA, providing that they are relevant to the research area and they have not been used to fulfill an undergraduate major requirement.

PROGRESS AND QUALIFYING EXAMS

A 3-member committee of the faculty will be established upon acceptance into the BA/MA program. The candidate will be in contact with their committee in early stages of research and meet with them in the second semester of their MA year. This committee determines when sufficient experimental work has been completed and must approve the final written document. Students in this program will be expected to submit a MA thesis describing the research which they have carried out in partial fulfillment of the degree requirements.

TEACHING

There are no requirements for BA/MA candidates to teach although the opportunity may arise.

RESEARCH

All MA students will present their research during a meeting of the department's BIOL557 seminar attended by all members of the department to encourage students to become fluent and comfortable with their presentation skills.

THESIS AND DEFENSE

Students in this program will submit a MA thesis describing their research and give a public presentation during the BIOL557 seminar describing the research they have carried out as partial fulfillment of the degree requirements.

ADDITIONAL INFORMATION

BA/MA PROGRAM

This program provides an attractive option for life science majors to substantially enrich their research and course background and to earn an advanced degree while at Wesleyan. Students are encouraged to begin research by their sophomore year if they intend to pursue the BA/MA in biology. Admission is competitive and based on GPA, faculty recommendations, and research experience.

For information about the BA/MA Program please visit: https://www.wesleyan.edu/grad/graduate-programs/bama_program.html

FRIES CENTER FOR GLOBAL STUDIES

MISSION

The Fries Center for Global Studies is committed to helping all members of the Wesleyan community achieve the knowledge, language skills, and sensitivity each person will need in order to exercise effective and responsible citizenship in an increasingly interdependent world.

VISION

Our emphasis on intercultural communication, experience, and knowledge reflects the value we place on adaptability, compassion, and cultural self-awareness with respect to the world beyond our borders. These qualities and practices put Wesleyan's liberal arts program at the forefront of global education and are the hallmark of responsible global citizenship.

GOALS & STRATEGIES

The Fries Center for Global Studies pursues its goals by drawing on resources at hand: the Wesleyan curriculum, faculty, student body, and staff; the Office of Study Abroad; Fellowships; Language and Intercultural Learning; and Language Resources and Technology. Our strategies are designed specifically to:

- Identify and expand opportunities for students and faculty wishing to pursue a global perspective in the field of their choice;
- Offer the support needed for each department, program, center, and college to develop global perspectives in accordance with its own aims and in partnership with other academic units;
- Provide a forum for inquiry and debate concerning the pedagogies and administrative strategies best suited to the cultural demands of the contemporary world;
- Help students transcend disciplines while coordinating their curricular, cocurricular, and extracurricular experiences in accordance with the demands of a global education;
- Increase the mobility of the Wesleyan student body and faculty in support of a more vibrant cross-cultural debate and in accordance with the needs and goals of each academic unit;
- Increase the vibrancy of global discussions on campus through facilitating visits to campus by key scholars, artists, and activists;
- Promote relevant partnerships with peer institutions in the United States and with targeted institutions abroad;
- Promote collaborative teaching and research across disciplinary and cultural boundaries;
- Develop curricular opportunities that will allow students to develop a global education tailored to their needs and aspirations.

CENTER FOR JEWISH STUDIES

The Center for Jewish Studies offers interdisciplinary courses in Jewish and Israel studies. All courses (required and elective) are counted toward the Minor in Jewish and Israel Studies. The Center for Jewish Studies courses and workshops are taught by its core and affiliated faculty, as well as by distinguished visitors and scholars including film directors and internationally acclaimed writers and artists. The Center for Jewish Studies offers an innovative Hebrew program based on a unique model of incorporating language skills with cultural events, and all Hebrew courses are counted toward the Minor. In addition, the Center for Jewish Studies offers Wesleyan and the general community rich and innovative events and series linked to other departments, programs, and colleges at the University. Among them, the annual *Contemporary Israeli Voices* series in the fall, the annual *Ring Family Wesleyan University Israeli Film Festival* in the spring, the annual Samuel and Dorothy Frankel Memorial Lecture, and the annual Jeremy Zwelling Lecture. To be engaged with the larger Wesleyan community, the Center for Jewish Studies sponsors WESeminars, presented by its faculty.

CENTER FOR THE HUMANITIES

The Center for the Humanities at Wesleyan University provides high-level academic programming to energize the campus and promotes innovative research and scholarship through our faculty and visiting fellows program. In addition, faculty offer courses that are either based on current research projects or experimental in nature.

CHEMISTRY

Chemistry is the science of molecules: what they are, how they are made, and what they do. We are embedded in a world of naturally occurring and synthetic molecules. A familiarity with chemistry is not only fundamental to other sciences, but is relevant to government, art, economics, and archaeology.

Students and faculty in the Wesleyan Chemistry Department study important modern chemical problems in both the classroom and the research laboratory. Research in the department spans organic and inorganic nanomaterials, new recyclable polymers, the molecular basis of neurodegenerative diseases, understanding the structures and dynamics of proteins, the development of biofuels, the structures of molecules in the interstellar medium, the development of new therapeutic and diagnostic drugs, and computational approaches to complex chemical systems.

UNDERGRADUATE PROGRAM DEPARTMENTAL ADVISING EXPERTS

All departmental faculty.

CHEMISTRY MAJOR

MAJOR DESCRIPTION

The Major in Chemistry provides students with a solid foundation in the chemical sciences and experience with practical laboratory skills. Students will apply the scientific method to develop and test hypotheses, perform lab experiments, critically analyze data, and communicate findings. The Chemistry department offers two pathways for completing the major: The Standard Chemistry Track (A-track) is appropriate for students who are interested in studying chemistry with the breadth and depth of a traditional chemistry major. The Biological Chemistry Track (B-track) is intended for students who prefer to focus their studies on biochemistry and chemical biology at the molecular level.

The Chemistry program appeals to students who have a strong interest in science and how matter behaves at the molecular level, have an aptitude for mathematics and data analysis, can grasp abstract concepts, and are attentive to detail and precision.

Chemistry majors typically continue their studies in a doctoral program, medical school, or other advanced education programs, though many students have gone on to pursue diverse career opportunities in fields such as scientific research, chemical engineering, pharmaceuticals, materials science, environmental studies, patent examination, technical writing, forensic science, and education.

ADMISSION TO THE MAJOR

To declare the chemistry major students must have earned a grade of C or better in all 100- and 200-level chemistry courses completed at the time of declaration.

MAJOR REQUIREMENTS

The Chemistry Department offers two general pathways to completing the major. The Standard Chemistry Track (A-track) is appropriate for most students whose interests lie primarily in the synthesis and characterization of molecules and their applications in important scientific problems. Students with focused interests in biochemistry and chemical biology at the molecular level may elect to complete the Biological Chemistry Track (B-track) major.

Regardless of which track is pursued, students who intend to be multiple majors or to study abroad are strongly encouraged to consult with the chemistry faculty as early as possible for planning an appropriate plan of study.

FOR BOTH TRACKS

All students majoring in chemistry should complete a year of general chemistry, preferably CHEM143/CHEM144 (although CHEM141/CHEM142 also fulfills this requirement), and the associated laboratory course, CHEM152. Students who have been granted Advanced Placement credit are exempt, however, and may choose to begin their study at Wesleyan with CHEM251. A year of organic chemistry (CHEM251/CHEM252) and the concurrent laboratories (CHEM257/CHEM258) is required for all majors. Chemistry majors must also complete two semesters of Chemistry Symposium, CHEM521/CHEM522.

THE STANDARD CHEMISTRY TRACK (A-TRACK)

A-track Required Chemistry Courses: To complete the A-track chemistry major students must, in addition to the common requirements noted above, complete a year of physical chemistry (CHEM337/CHEM338) and one year of advanced laboratory (CHEM375/CHEM376).

A-track Chemistry Electives: The A-track major requires completing a total of at least three credits from **300-level** courses (other than CHEM337/CHEM338). Students who have not completed CHEM144 must take CHEM361 as one of their **300-level** electives. One of the three **300-level** electives may be replaced by a total of 2.0 credits in research courses (CHEM409, CHEM410, CHEM423, or CHEM424). All chemistry courses counted toward the major (except for seminars, colloquia, or research tutorials) must be taken with an A–F grading mode. Seminars or journal clubs may not be used as electives.

A-track Other Required Courses: In addition to the required chemistry courses, students must either (i) complete calculus courses through MATH122, (ii) receive an Advanced Placement score of a 4 or 5 on the BC calculus exam, or (iii) place into a course beyond MATH122 on the Math Placement Exam. Students must also complete the equivalent of one year of physics (PHYS111/PHYS112 or PHYS113/PHYS116, or an Advanced Placement score of a 4 or 5 on the AP physics exam).

THE BIOLOGICAL CHEMISTRY TRACK (B-TRACK)

B-track Required Courses: To complete the B-track chemistry major students must, in addition to the common requirements noted above, complete one year of biology (BIOL181/BIOL182), MB&B208, CHEM383, and CHEM381. The standard physical chemistry sequence, CHEM337/CHEM338, may be substituted for CHEM381 and the second semester of this sequence may be used as one of the three required electives. One year of advanced laboratory (CHEM375/CHEM376) is also required. (MB&B395/CHEM395 may be substituted for one semester of CHEM375/CHEM376 by petition to the chemistry curriculum committee.)

B-track Chemistry Electives: The B-track major requires completing a total of at least two elective credits from 300-level courses (if the student takes the

CHEM337/CHEM338 sequence only the second semester may be used as an elective). Students who have not completed CHEM144 must take CHEM361 as one of their 300-level electives. One of the 300-level electives may be replaced by a total of 2.0 credits in research courses (CHEM409, CHEM410, CHEM423, or CHEM424). All chemistry courses counted toward the major (except for seminars, colloquia, or research tutorials) must be taken with an A–F grading mode. Seminars or journal clubs may not be used as electives.

While any other 300-level (or higher) chemistry courses (excluding CHEM383, CHEM381, and CHEM375/CHEM376) may be used as electives for B-track chemistry majors, the following courses are particularly appropriate: CHEM309, CHEM/MB&B321, CHEM/MB&B325, CHEM/MB&B386, and CHEM390/MB&B340.

B-track Other Required Courses: In addition to the required chemistry courses, students must either (i) complete calculus courses through MATH122, (ii) receive an Advanced Placement score of a 4 or 5 on the BC calculus exam, or (iii) place into a course beyond MATH122 on the Math Placement Exam. Students must also complete MB&B208 (prior to CHEM383).

ADDITIONAL CONSIDERATIONS FOR ALL CHEMISTRY MAJORS

A chemistry major planning graduate work in chemistry usually takes at least one additional 300-level chemistry course (excluding CHEM337/CHEM338) and two semesters of undergraduate research tutorials, CHEM409, CHEM410, CHEM423, or CHEM424. When feasible, an intensive continuation of research during at least one summer is encouraged. Financial support for summer research is usually available through the Research in the Sciences Program. The preparation of a senior thesis based on this research is an extremely valuable capstone experience and is strongly recommended.

A chemistry major planning to attend medical school, teach in a secondary school, or do graduate work in such fields as biochemistry, geochemistry, environmental science, or chemical physics may petition the chemistry curriculum committee to replace one of the elective requirements with an appropriate course offered by a Wesleyan science or mathematics department. A similar substitution may be requested when appropriate as part of an interdepartmental major.

COURSES FOR NON-MAJORS

The Chemistry Department offers a variety of 100-level general education courses, including CHEM141 and CHEM142, which non-science students should consider in their program to meet general education expectations in NSM. All of these courses are appropriate for students who have little or no previous background in chemistry.

Scientists majoring in areas other than chemistry can prepare themselves better for work in their discipline by having a grounding in chemistry, which will enable them to understand molecular phenomena. The Chemistry Department offers two yearlong tracks of General Chemistry (CHEM141/CHEM142 or CHEM143/CHEM144). The CHEM143/CHEM144 sequence requires some prior chemistry and provides a more in-depth introduction and represents a better preparation for science majors. The CHEM141/CHEM142 sequence requires no previous exposure to chemistry. CHEM152 is taken concurrently with CHEM141 and CHEM143 in the fall semester or with CHEM142 or CHEM144 in the spring semester. CHEM251/CHEM252 normally follows General Chemistry. The laboratory courses, CHEM257 and CHEM258, are usually taken concurrently with CHEM251/CHEM252, respectively. The two courses, General Chemistry and Organic Chemistry, plus the laboratory sequence, CHEM152, CHEM257,

CHEM258, satisfy requirements for admission to medical, dental, and veterinary schools.

STUDENT LEARNING GOALS

Students graduating with a BA degree in chemistry should be able to:

- **Apply the scientific method.** The student should understand how to develop and test scientific hypotheses.
- **Understand data.** The student should understand how chemical data is produced, interpreted, and applied.
- **Perform laboratory experiments.** The student should have the ability to carry out standard chemical experimental procedures safely and successfully.
- **Apply quantitative tools.** The student should be able to select and apply appropriate quantitative techniques (e.g., calculus, statistics, chemical group theory, or computational modeling) to chemical questions.
- **Use the primary literature.** The student should be able to search for and understand publications from the primary scientific literature.
- **Critically evaluate scientific claims.** The student should be able to critique claims and arguments made in the chemical literature.
- **Communicate.** The student should be able to present chemical data and their interpretation effectively in written, visual, and oral formats.
- **Practice science with integrity.** The student should adhere to established professional ethical standards in the generation, documentation, and presentation of chemical data.
- **Appreciate chemistry as an interdisciplinary science.** The student should understand how to apply chemical perspectives to topics from related fields.

STUDY ABROAD

A semester abroad is possible if adequately planned in advance. Students should discuss plans with a chemistry faculty member as early as possible.

ADVANCED PLACEMENT

For freshmen and new students to receive 2 credits:

Score of AP 5. Students can receive 2.00 credits by completing one full year of organic chemistry (CHEM251 and CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, CHEM143, or CHEM144.

For freshmen and new students to receive 1 credit:

Score of AP 5. Students can receive 1.00 credit by completing CHEM144 with a minimum grade of B. No credit will be granted if a student takes either CHEM141, CHEM142, or CHEM143.

Score of AP 4. Students can receive 1.00 credit by either completing CHEM144 with a minimum grade of B or completing a full year of organic chemistry (CHEM251 & CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, or CHEM143.

Special note: AP students who intend to major in chemistry should consult with the department chair as soon as possible.

ADVANCED PLACEMENT CREDIT FOR THE INTERNATIONAL BACCALAUREATE (IB) COURSES IN CHEMISTRY

For freshmen and new students to receive 2 credits:

Score of IB 6 or 7. Students can receive 2.00 credits by completing one full year of organic chemistry (CHEM251 and CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, CHEM143, or CHEM144.

For freshmen and new students to receive 1 credit:

Score of IB 6 or 7. Students can receive 1.00 credit by completing CHEM144 with a minimum grade of B. No credit will be granted if a student takes either CHEM141, CHEM142, or CHEM143.

Score of IB 5. Students can receive 1.00 credit by either completing CHEM144 with a minimum grade of B, or completing a full year of organic chemistry (CHEM251 & CHEM252) with a minimum grade of B. No credit will be granted if a student completes any of the following courses: CHEM141, CHEM142, or CHEM143.

Score of IB 4. Students are not eligible to receive Wesleyan credit.

Note: A chemistry major is required to study inorganic chemistry. The requirement can be met by taking either CHEM144 or CHEM361 or both.

Special note: AP students who intend to major in chemistry should consult with the department chair as soon as possible.

ENGLISH A-LEVELS

For freshmen and new students:

Students with a grade of A on the Chemistry A-Levels can receive 1 credit by completing CHEM144 with a minimum grade of B or completing the yearlong organic chemistry (CHEM251 and CHEM252) with a grade of B or higher. No credit will be granted if the student has completed any of the following courses: CHEM141, CHEM142, or CHEM143.

Special note: Students with Chemistry AP, IB, or A-Levels scores who intend to major in chemistry should consult with the department chair as soon as possible.

LANGUAGE REQUIREMENT

There is no language requirement for the chemistry major.

TRANSFER CREDIT

Not all general chemistry or organic chemistry courses taken at other institutions will satisfy the criteria for transfer credit to Wesleyan. It is the students' responsibility to find an acceptable course(s) and to have the course(s) preapproved by the Chemistry Department. Below are general guidelines for requests for transfer of credit for general and organic chemistry.

For Transfer of Credit:

- The instructor of the equivalent Wesleyan course (CHEM141 or CHEM142 for General Chemistry and CHEM251/CHEM252 for Organic Chemistry) for

the current academic year must approve all transfer of credit requests. Such approvals are solely at his/her discretion.

- Permission should be requested **before** the course is taken. The student should submit:
 - o the Permission to Transfer Credit From Another College or University form (<https://www.wesleyan.edu/studentaffairs/pdfs/Permission%20Transfer%20Credit%20form.pdf>) available on the Office of Student Affairs website,
 - o the title, author(s), and edition of the textbook used in the course,
 - o the syllabus for the course, including which specific chapters of the textbook are actually covered in the course,
 - o the length of each lecture meeting,
 - o the total number of actual class hours, *excluding* time taken for examinations, and
 - o the name and contact information for the course instructor.

These materials must be compiled by the student and sent to the faculty member currently teaching the equivalent Wesleyan course; simply sending a copy of the syllabus or a link to a course website is not sufficient.

- The student must achieve at least a B- to get credit for the course.
- Courses taken elsewhere may not be counted toward a chemistry major at Wesleyan (except by special petition to the Curriculum Committee of the Chemistry Department).
- The Chemistry Department will not normally accept an online chemistry course for Wesleyan credit.

ADDITIONAL INFORMATION

Undergraduate research. Research is an important part of the program for most majors. Wesleyan's small but excellent graduate program makes it possible for majors to work at the cutting edge of discovery in chemistry. Every tenured/tenure-track faculty member is involved in significant research. Undergraduates participating in the departmental research program normally attend a research seminar in their area, and most research groups have weekly meetings to discuss new results. Students involved in significant research have an opportunity to continue in the BA/MA program.

Seminars. Seminars are a vital part of the intellectual life of the Chemistry Department. Weekly departmental colloquia on Friday afternoons (CHEM521/CHEM522) bring accomplished scientists from other universities, research laboratories, and industry to campus and provide opportunities for informal meetings and discussions. In addition, chemistry students and faculty speak at weekly research seminars in chemical physics, organic/inorganic chemistry, and biochemistry. Programs for each semester are available on the chemistry website.

HONORS

Honors are awarded by the faculty on the basis of the evaluation of a senior thesis.

CAPSTONE EXPERIENCE

The recommended capstone experience is a significant research project culminating in a senior thesis. Successful completion of the Integrated Lab sequence CHEM375/CHEM376 is considered an alternative capstone for other students.

CHEMISTRY MINOR

MINOR DESCRIPTION

The Minor in Chemistry provides students with an essential foundation in the chemical sciences. Emphasis is placed on the principal theories on the chemical nature of the world around us, as well as critical thinking and problem-solving skills. The Chemistry minor is ideal for students working to complete prerequisites for graduate programs in medicine and other health-related fields.

ADMISSION TO THE MINOR

Students who have completed and earned a grade of C or better in the required 100-level courses, CHEM251, and CHEM257 may declare the chemistry minor. Students who receive a grade of C- or below in any of these courses may submit a petition to the department chair requesting to declare the chemistry minor and, if applicable, providing context relevant to the grade of C- or below.

MINOR REQUIREMENTS

All 200-level and higher courses for the minor must be completed at Wesleyan. Transfer students may, however, be allowed to apply equivalent courses completed at their previous institution. All courses that are required for the chemistry minor must be taken under a letter-grading mode (A–F). All 100- and 200-level courses required for the minor must be completed with a grade of C or better.

Required Lecture Courses: Students may fulfill the general chemistry requirement for the minor by completing either i) General Chemistry I & II (CHEM141 and CHEM142); ii) Honors General Chemistry I & II (CHEM143 and CHEM144); iii) CHEM144 with 1.0 AP/IB/A-Level credit; or iv) 2.0 AP/IB/A-Level credits. All students must complete Organic Chemistry I & II (CHEM251 and CHEM252).

Required Laboratory Courses: Students must complete Introductory Chemistry Laboratory (CHEM152), unless they have earned 2.0 AP/IB/A-Level credits. All students must complete Intermediate Chemistry Laboratory (CHEM257) and Organic Chemistry Laboratory (CHEM258).

Required Elective Course: Students must complete one 300-level chemistry elective (1.0 credit). Cross-listed electives may only be applied to the minor requirements if they are hosted in the Chemistry Department. Note that chemistry electives used to fulfill a requirement for another major/minor are not excluded from being used to also fulfill the chemistry minor.

Total number of credits = 6.5

Four lecture courses: CHEM141/142/251/252 (4 credits)

Three lab courses: CHEM152/257/258 (1.5 credits)

One elective course (1 credit)

DOCTOR OF PHILOSOPHY IN CHEMISTRY

The Chemistry Department engages students in the science of the molecules—what they are, how they are made, and what they do—studying important chemical problems in both the classroom and the research laboratory. Research in the department spans organic and inorganic nanomaterials, new recyclable polymers, the molecular basis of neurodegenerative diseases, understanding the structures and dynamics of proteins, the development of biofuels, the development of new therapeutic and diagnostic drugs, and computational approaches to complex chemical systems.

The Department of Chemistry offers a graduate program leading to a Doctor of Philosophy in Chemistry. The program offers a breadth of research opportunities and course offerings, providing PhD students with exposure to many subfields of chemistry. Students develop close working relationships with faculty mentors, who help them design and follow their own customized program of study. PhD candidates acquire the skills to be independent chemical researchers and are qualified to design, carry out, interpret, and communicate the results of significant research projects.

Students pursuing the PhD in Chemistry are expected to write two research proposals, one during the second year related to the student's dissertation and a second in the fourth year, on a novel idea not directly related to the student's current work. PhD candidates may also choose a concentration in the interdisciplinary studies of either Chemical Physics or Molecular Biophysics. Students must complete at least two semesters as a teaching assistant as a means of developing communication and teaching skills. To earn their degree, the PhD candidate must complete a significant body of original research and defend their dissertation to their faculty advisory committee, the department, and the broader community.

COURSES

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled at the University.

Course requirements are designed to achieve two basic goals:

1. **Acquisition of background knowledge.** A central common core of material is expected for all chemists. Graduate students take appropriate one-semester core courses in the areas of organic chemistry, inorganic chemistry, biochemistry, physical chemistry, and quantum chemistry. Students with previous equivalent coursework may be exempted from one core course not in their primary field of study by petition.
2. **Continued scholarly growth.** Graduate students are required to take at least one course every semester. This may be a regular advanced course in chemistry or a related discipline, a weekly seminar, or a research tutorial.

LANGUAGE REQUIREMENT

There is no language requirement associated with this program.

PROGRESS AND QUALIFYING EXAMS

Progress examinations are open-book, take-home exercises that are offered approximately monthly during the academic year. These examinations are based on articles in the current literature and are designed to assist graduate students in keeping up with recent developments in chemistry. They also provide valuable training in reading the chemical literature critically and for suggesting areas in which the student may benefit from additional study. PhD students are required to pass 15 elementary and seven advanced progress exams, which is typically completed by the end of the second or early in the third year of the program.

TEACHING

Completion of at least two semesters as a teaching assistant is generally required for the PhD degree. These assignments are provided as a means of developing communication and teaching skills. Graduate students may be given more advanced teaching responsibilities as appropriate.

RESEARCH

Writing research proposals is an important part of the PhD program in chemistry. Writing scientific proposals develops expertise in evaluating the scientific literature, integrating knowledge from several areas, formulating interesting scientific questions, designing a research project to answer those questions, writing clear scientific prose, and defending a project proposal. Two proposals are required: one during the second year related to the student's dissertation research plans and a second, in the fourth year, on a novel idea not directly related to the student's current work.

DISSERTATION AND DEFENSE

The successful completion of a significant body of original research and the defense of a dissertation is the single most important requirement for the PhD. The candidate will defend the dissertation to their faculty advisory committee, followed by a seminar open to the department and the broader community.

CONCENTRATIONS

CHEMICAL PHYSICS

Guiding Committee: Lutz Hüwel, *Physics*; Carlos Jimenez-Hoyos, *Chemistry*; Stewart E. Novick, *Chemistry*; Brian Stewart, *Physics*

Upon admission and while in their first year, students in the chemistry or physics graduate programs may petition their department for admission to the interdisciplinary program in chemical physics. The philosophy underlying the program is that the solution to contemporary problems must increasingly be sought not within a single traditional specialty but from the application of different disciplines to particular problems. Students in the program will pursue a course of study and research that will familiarize them with both the Physics

and Chemistry Departments and, in particular, with those areas of overlapping interest that we broadly categorize as chemical physics.

Students entering the chemical physics program will be assigned an interdepartmental committee to oversee their progress toward the PhD degree. Chemistry graduate students will receive a PhD in chemistry and are expected to choose a research advisor in the Chemistry Department. Students in the Chemical Physics Program will be expected to enroll in courses from both departments and choose an advisor in the Chemistry Department. The core of the program of courses consists of quantum chemistry (offered by the Chemistry Department), quantum mechanics (offered by either department), electrodynamics (offered by the Physics Department), statistical mechanics (either department), and mathematical physics (Physics Department). For details of the course offerings, see the listings under the Chemistry and Physics Departments on WesMaps.

Seminars. Students will participate in the Chemical Physics Seminar series and will be expected to present at least one talk per year.

Examinations. Chemistry students in the Chemical Physics program will follow the requirements of the Chemistry Department, including two research proposals, oral defense of the second year proposal, and the submission and oral defense of the research dissertation. Students in the Chemical Physics program are expected to take all progress exams offered in the general area of physical chemistry and are required to pass 10 elementary and five advanced exams (in any area).

Research Rotations. Students in the Chemical Physics program complete three rotations in the first semester to choose a research advisor from among the participating faculty.

MOLECULAR BIOPHYSICS

The Chemistry Department participates in an interdisciplinary program of graduate study in molecular biophysics with the Departments of Molecular Biology and Biochemistry (MB&B), Biology, and Physics. The program provides a course of study and research that overlaps the disciplinary boundaries of chemistry, physics, biology, and molecular biology and is designed for students with an undergraduate background in any one of these areas. Students in the program are enrolled in one of the participating departments and fulfill canonical requirements of that department. In addition, they take advanced courses in molecular biophysics and pursue dissertation research with one of the faculty in the program. Centerpieces of the program are the weekly interdepartmental journal club in molecular biophysics and an annual off-campus research retreat. Both activities bring together students, research associates, and faculty from all participating departments and foster interdisciplinary collaborative projects.

Students interested in this program may indicate their interest on the application for admission to the Chemistry, MB&B, Physics, or Biology Departments. Application forms for these departments are available at: <https://admission.wesleyan.edu/apply/>.

MASTER OF ARTS IN CHEMISTRY

The Chemistry Department engages students in the science of the molecules—what they are, how they are made, and what they do. Research in the department spans organic and inorganic nanomaterials, new recyclable polymers, the molecular basis of neurodegenerative diseases, understanding

the structures and dynamics of proteins, the development of biofuels, the development of new therapeutic and diagnostic drugs, and computational approaches to complex chemical systems.

The Chemistry department offers graduate work leading to the degree of Master of Arts through the BA/MA program. The department may also grant the degree of Master of Arts to students in the chemistry PhD program who do not complete the PhD.

Candidates for the BA/MA in Chemistry will follow a program with a strong research orientation that includes coursework, seminars, and, in some cases, teaching. Prospective students should declare their interest early enough in their undergraduate careers to permit the design of an acceptable program. Students are encouraged to begin research no later than their junior year. Admission to the BA/MA program is competitive and based on academic transcripts, faculty recommendations, and previous research experience. Students apply in their senior year and must complete the master's degree requirements in one additional post-baccalaureate year. The MA year is tuition-free and financial aid may be available for eligible students.

MA in Chemistry candidates must earn a minimum of six credits toward the MA degree. This must include at least two credits of advanced research, at least two credits in chemistry elective courses at the 300-level or higher, two semesters of upper-level seminars, and two semesters of the departmental colloquium. There are no teaching requirements. Candidates will submit a master's thesis describing their research and give a public presentation during the Advanced Research Seminar.

COURSES

Students in either the BA/MA program or a terminating PhD program are required to earn a minimum of 6.0 credits in order to fulfill the requirements of the master's degree. The minimum 6.0 required credits must include at least 2.0 total credits of advanced research, at least two 1.0 credit chemistry elective courses at the 300-level or higher, two semesters of upper-level seminars (CHEM547/548 or CHEM571), and two semesters of the departmental colloquium (CHEM521). Students may petition to have one or more advanced elective courses from other departments count toward the 300-level chemistry elective requirement.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the University.

PROGRESS AND QUALIFYING EXAMS

Students in the BA/MA program or a terminating PhD program are not required to take the progress examinations required of PhD candidates.

TEACHING

Teaching is not required as part of the BA/MA program, however many students in the BA/MA program choose to contribute to the department to build their pedagogical skills as teaching assistants. Students in a terminating PhD program have the same teaching responsibilities as those in the PhD program.

RESEARCH

Students in both the BA/MA and terminating PhD programs are required to enroll in 1.0 credits of advanced research each semester.

THESIS AND DEFENSE

An oral defense of the master's thesis before a faculty committee is required for successful completion of the master's degree for both BA/MA and terminating PhD students. An open public defense is not required for the Master of Arts degree.

CLASSICAL STUDIES

Under Construction

Under Construction

CLASSICAL STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Classical Studies (CLST) offers a multidisciplinary approach to the civilizations of ancient Greece, Rome, and the broader Mediterranean world. Drawing connections to this shared past expands our notions of the present and introduces new perspectives on modern challenges. There are three concentrations within the Major: Literature and Performance; History, Politics, and Social Justice; and Archaeology and Archaeological Science. Students use diverse theoretical approaches spanning the sciences, social sciences, and humanities and delve into politics, media, history, identity, philosophy, religion, literature, material culture, and the environment. Regardless of concentration area, students will acquire proficiency in Latin or Greek, enabling them to access original texts and source materials.

Students interested in the Classical Studies major bring a scholarly passion for ancient history, culture, society, and politics. They see the ancient world as a formative foundation for modern Western civilization in areas like government, law, arts, language, and rationality. They demonstrate attention to detail and abilities in research, writing, languages, and critical analysis.

The Classical Studies program prepares students to pursue careers in such diverse fields as academia and research, education, cultural institutions and heritage organizations, media, publishing, law, and government. The analytical and conceptual skills developed through their studies are also valuable in industries or professions not directly related to classical studies, such as finance or medicine.

ADMISSION TO THE MAJOR

To declare the Major, students must complete a Major Declaration Form. The form is non-binding—interests and circumstances may change—but this important initial outline helps them to plan their prospective curricular pathway through the Classical studies program, and to envision the ways in which their work in Classics can connect with their other courses and interests at Wesleyan.

Students must first select which area of concentration they intend to pursue when they complete the Major Declaration Form. If they intend to apply a course (previously taken or planned) outside of the department towards their elective credit, they should identify the course and explain how it will be combined with the major course selections to form a meaningful curricular whole.

After declaring, the student can ask a faculty member to be their major advisor or ask the Chair to make the assignment.

Students are not expected to have any background in Latin or Greek in high school to become Classical Studies majors. We recommend that potential majors start language study in their first year at Wesleyan. The elementary Latin sequence begins in the fall semester, and elementary Greek starts in the spring. If you have already taken some languages, you do not have to start over. We do

not have a placement exam. Instead, you can talk with any of the Department faculty to determine which course would be best for you. The same is true for transfer students who have done work in Classical Studies at another institution.

MAJOR REQUIREMENTS

The Classical Studies Major requires a total of ten credits, four of which must be within their selected area of concentration (see Course Lists, below).

All Majors must take:

- Four credits in Language Courses (Latin or Greek, level 102 or higher). One of these must be at the 300-level. Two half-credit language courses may be counted together as one credit.
- One credit in Ancient History Survey, to be completed by the end of junior year.
- One credit in Material Culture.
- Two, 300-level seminars.
- Two electives. Students can apply one course from outside the department toward their concentration. They must first demonstrate its specific application to that concentration and obtain permission from the advisor.

Area Concentration Requirements:

Upon declaring the Major, students will determine which of the three concentration areas they intend to pursue. (Literature and Performance; History, Politics and Social Justice; or Archaeology and Archaeological Science). The courses for each concentration are listed below. [The listings are subject to change.]

AREA CONCENTRATION REQUIREMENTS

Upon declaring the Major, students will determine which of the three concentration areas (*Literature and Performance; History, Politics and Social Justice; or Archaeology and Archaeological Science*) they intend to pursue. The courses in which fall under each concentration are listed here.

LITERATURE AND PERFORMANCE

Code	Title	Hours
CLST202	Greek Drama: Theater and Social Justice, Ancient and Modern	1
CLST205	Myths, Monsters, and Misogyny: An Introduction to Greek and Roman Mythology	1
CLST220	Homer and the Epic	1
CLST228	Classical Allusions in Film	1
CLST327	Dangerous Acts: Theater, Transgression, and Social Justice, Ancient and Modern	1
LAT201	Catullus and Cicero: Love and Life in Republican Rome	1
GRK252	Dionysiac Transformations: Gender, Violence, and Justice in Euripides' Hecuba	1
GRK365	Greek Tragedy: Euripides	1
LAT230	Love and Suffering in Ancient Rome (CLAC.50)	.5
LAT331	Vergil: AENEID 2	1
LAT202	Latin Lyric Poetry	1
LAT221	Roman Comedy	1

HISTORY, POLITICS, AND SOCIAL JUSTICE

Code	Title	Hours
CLST202	Greek Drama: Theater and Social Justice, Ancient and Modern	1
CLST221	Law, Politics, and Order in the Ancient World	1
CLST221Z	Whose Rights? Law, Personhood, and Democracy, Ancient & Modern	1
CLST248	Language Matters: Etymology and the Roots of Social Injustice	1
CLST324	Tales of Hope or States of Delusion? Utopias, Past and Present	1
CLST255	Democracy and its Discontents	1
CLST363	Body Politics: Desire, Sexualities, and Gender, Past and Present	1
CLST327	Dangerous Acts: Theater, Transgression, and Social Justice, Ancient and Modern	1
LAT353	Demagogues and Tyrants in the Roman Historians	1
LAT360	Constructing Masculinity and Identity in Roman Elegy	1
GRK205	Reading Greek Prose: Court Room Dramas, Selections from Athenian Oratory	1
GRK291	"Sexuality" in the Making: Gender, Law, and the Use of Pleasure in Ancient Greek Culture (CLAC.50)	.5
GRK365	Greek Tragedy: Euripides	1

ARCHAEOLOGY AND ARCHAEOLOGICAL SCIENCE

Code	Title	Hours
CLST201	Art and Archaeology of the Bronze Age Mediterranean	1
CLST214	Survey of Greek Archaeology and Art	1
CLST223	Survey of Roman Archaeology and Art	1
CLST283	Off with its Pedestal! The Greek Vase as Art and Artifact	1
CLST329	Roman Villa Life	1
CLST341	Visualizing the Classical	1
CLST352	Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean	1
CLST390	Making Rome: Monuments of Life in Ancient Rome	1
LAT375	Set in Stone: Reading Roman Life through Inscriptions	1
GRK355	Homer in Bronze Age Context	1

STUDENT LEARNING GOALS

Classical Studies majors acquire the following skills: close reading and analysis of complicated evidence, both textual and material; the ability to identify and explain the most significant elements of such evidence; the ability to apply a variety of interpretive methods and to evaluate their effectiveness. Classical Studies majors also acquire an appreciation of linguistic registers and cultural differences, and a sense of perspective on urgent contemporary issues.

Students have the opportunity to develop and demonstrate their abilities through research and creative projects in the context of their courses, research tutorials, campus events, and presentations at conferences, among others.

LANGUAGE REQUIREMENT

Majors in Classical Studies acquire an intermediate level of proficiency with either Latin or Greek.

No experience in either language is required upon entry into the major, but, as noted above, students should plan to begin the language as soon as possible.

Students with previous experience in either language should consult with the department chair for placement advice.

ADDITIONAL INFORMATION

HONORS

Students wishing to pursue Honors in the Major must complete a senior thesis or substantial essay. These are original research projects that deal directly with primary sources (in the form of archaeological data sets or texts in the original language), show knowledge of and critical engagement with current scholarship on the subject, and present an original argument developed in response to these sources. Both the thesis and the essay should be considered serious academic undertakings and students should plan to begin research and/or data collection in the semester or summer which precedes their senior year.

Students who intend to write a thesis should begin planning with their potential thesis advisor in the fall of their junior year, and must submit a thesis proposal to the Department by May 1 of their junior year. Students who wish to write a Senior Essay must submit their proposal to the Department by the end of the previous semester (May 1 for an essay to be written in the fall semester, November 15 for the spring). For details on the evaluation and awarding of Honors, consult the departmental website.

CAPSTONE EXPERIENCE

Upon completion of the major, students will complete a form where they will have the opportunity to explain changes in this initial trajectory and reflect briefly on their choices and development as a whole.

COLLEGE OF DESIGN AND ENGINEERING

TBD

Professor X

INTEGRATED DESIGN, ENGINEERING, ARTS & SOCIETY MAJOR

MAJOR DESCRIPTION

The Major in Integrated Design, Engineering, Arts & Society (IDEAS) challenges students to think broadly, design responsibly, and respond critically to the complex social, technological, cultural, and environmental conditions surrounding them. Through a curriculum that brings together iterative creation, experimentation, and critique, IDEAS majors gain proficiency in making as a form of inquiry and research.

Students attracted to the IDEAS major bring a high level of intellectual curiosity, an interdisciplinary mindset, and an inventive imagination to improve systems and solve problems. Hands-on, collaborative, project-based courses form the core of the major. Drawing on Wesleyan's liberal arts tradition, students complete courses across all three academic divisions before establishing an area of focus. The linked IDEAS major is secondary to a primary major (e.g., Art Studio, Biology, Computer Science, Theatre, Physics, etc.) and students must complete all the graduation requirements from their primary major in addition to those of the IDEAS major. Each student works closely with an IDEAS advisor to develop their individual course of study, including a major capstone project, and assemble a portfolio encompassing work developed within IDEAS courses.

IDEAS majors graduate with an understanding of how design and engineering choices shape—and are shaped by—social structures. They bring a combination of strategic thinking and technical skill to a broad range of fields, including architecture, systems design, user-experience design, robotics and human-computer interaction, urban planning, sustainability, and service design.

ADMISSION TO THE MAJOR

The linked major in Integrated Design, Engineering, Arts & Society (IDEAS) is the secondary major to a primary, companion major (e.g., art studio, biology, computer science, physics, theater, etc.). Students cannot obtain the BA degree with IDEAS as their only major. Students must complete all the requirements for graduation from their primary major in addition to those of IDEAS as their linked major. Each student will work closely with an IDEAS advisor to develop an individual course of study within an established major track. Students are encouraged to declare the IDEAS linked major in the spring of their sophomore year.

MAJOR REQUIREMENTS

IDEAS Core (4 Courses)

Comprising four courses, the IDEAS major Core is designed to introduce students to hands-on, project-based studio, laboratory, and critical coursework in design and engineering. There are multiple possible introductory courses to fulfill three of the four core course requirements. The fourth course within the core (IDEA 292: Interdisciplinary Project Lab) acts as the gateway to the major.

1. Introductory Design Studio (ARST220, ARST235, or ARST270)
2. Engineering Foundations Lab (IDEA170 or IDEA175)
3. Design & Technology Seminar (IDEA180) or another approved Social Science course
4. Major Gateway (IDEA292). All students intending to major must enroll in the Interdisciplinary IDEAS Project Lab after completing a foundations lab or introductory design studio course (1 or 2 above). Completion of the gateway courses is recommended prior to completion of sophomore year, but not required.

Range (4 Courses)

Building on the interdisciplinary foundation of the Core, the second set of course requirements collectively enhance students' design and engineering range. Like the Core, the Range consists of four courses:

1. Design Studio elective
2. Engineering/Quantitative elective
3. History/Theory elective
4. Programming elective (COMP112, IDEA285 or approved alternate)

Except where explicitly excluded by course prerequisites, the Range courses may be taken simultaneously with Core courses to increase the flexibility of student scheduling. Some of these courses may also overlap with the linked major.

Focus (4 Courses)

These four upper-level elective courses are specific to each major track, constitute the focus area of the student's major, and must be at the 200-level or higher. Students are strongly encouraged to select from pre-approved listings of courses for their chosen track, detailed below. At least two of these elective courses should be listed (or cross-listed) by the IDEAS program. Students may develop an alternate sequence with approval from their IDEAS advisor and program director.

Senior Capstone Project (1-2 Credits)

A team-based or independent original project culminating in a public presentation, exhibition, or publication. The capstone may be one to two credits, depending on scope of project. In many cases, this project will take the form of a senior thesis, and may be advised in coordination with the student's primary major. More details are provided in Section I below. Seniors will participate in colloquium lunches where they will make a brief presentation of their project, followed by discussion with students and participating faculty. Students will distribute a summary of their findings in the week prior to presenting to facilitate discussion. All declared IDEAS majors will be invited to the colloquium luncheons to build community and encourage them to plan future projects.

Student Portfolio:

Students will assemble a portfolio of their work. An initial portfolio will be developed in the required IDEAS Project Lab (IDEA292). The portfolio should document the student's work from IDEAS project-based courses, and may include appropriate work from a student's primary major. The portfolio may incorporate both physical and digital forms, as appropriate. Students are strongly advised to add to this portfolio each semester, based on their ongoing work. The portfolio will be reviewed by the student's advisor as one of the major requirements. Students are encouraged to create a portfolio that can be used to present their work for future employment or graduate studies.

IDEAS Major Tracks and their requirements are available on the CoDES website at this link (<https://www.wesleyan.edu/codes/program/major-tracks.html>).

STUDENT LEARNING GOALS

- Building a foundation of knowledge that includes the technical, aesthetic, and social aspects of design and engineering.
- Learning how to apply theoretical knowledge to the creation of objects, systems, or methods.
- Understanding how design and engineering choices are influenced by social structures and pressure, and vice-versa.
- Learning how to use the design process as a framework for creative exploration and problem solving.
- Learning how to effectively work in group settings and how to harness complementary skills of group members.

STUDY ABROAD

Study abroad is encouraged for IDEAS major students. Students should consider programs that offer courses in the areas of design and/or engineering. Students should request approval for any courses they wish to transfer for credit prior to study abroad.

LANGUAGE REQUIREMENT

There is no language requirement for IDEAS.

TRANSFER CREDIT

IDEAS Core courses must be taken at Wesleyan. Up to three course requirements for the IDEAS major can be fulfilled with transfer credits, subject to approval from an IDEAS advisor and program chair.

HONORS

Student honors projects may be pursued with an IDEAS Core faculty member or through a project with a mentor from the student's companion major that has prior approval from the student's IDEAS advisor. Such honors projects would fulfill the capstone described above. Projects completed in the companion department are not evaluated by IDEAS. For Departmental Honors in IDEAS, a student must have a minimum GPA of 85.0 and complete both Stage I and Stage II general education expectations. Depending on the focus area, an IDEAS

mentored thesis may be a written thesis, exhibition, or body of work, and must be evaluated by the thesis advisor and two additional faculty members to meet the standards for honors or high honors.

CAPSTONE EXPERIENCE

Students will complete a team-based or independent original project culminating in a public presentation, exhibition, or publication. The capstone may be one to two credits, depending on scope of project. There are several ways to fulfill the capstone requirement.

1. The project may take the form accepted by the companion department as a senior project (e.g., senior thesis, senior essay, senior performance, senior exhibition, senior film thesis). The final project is submitted to the companion department and is not evaluated by IDEAS.
2. The student may register for and complete a senior thesis in the IDEAS major. The mentor can be any Wesleyan faculty member, but the topic must be approved by the student's IDEAS advisor. The thesis material may take the form of a written publication, public presentation, or exhibition, with the form approved by the student's IDEAS advisor and the College of Design & Engineering Studies chair.

COLLEGE OF EAST ASIAN STUDIES

The College of East Asian Studies (CEAS) challenges students to understand China, Japan, and Korea through the rigors of language study and the analytical tools of various academic disciplines. This process demands both broad exposure to different subjects and a focused perspective on a particular feature of the East Asian landscape. Japan, China, and Korea are related yet distinctive civilizations. Each has its own traditions and patterns of development. These traditions have played an important role in the development of culture around the globe and remain formative influences today.

Students interested in East Asian studies will be guided by the expectations for liberal learning at Wesleyan and by the CEAS's interdisciplinary approach. Language, premodern history and culture, and the sophomore Proseminar provide the common core of our program. The Proseminar exposes students to a wide variety of intellectual approaches to East Asian studies and thereby provides a foundation for students to focus in more depth in particular areas.

DEPARTMENTAL ADVISING EXPERTS

All program faculty

COLLEGE OF EAST ASIAN STUDIES MAJOR

MAJOR DESCRIPTION

The East Asian Studies Major (CEAS) is designed to give students a broad knowledge of East Asian cultures with a deeper focus on a single country—China, Japan, or Korea. Cultural studies are grounded in one of four concentrations: Archaeology and History, Literature and Culture, Philosophy and Religion, or Political Economy. Students are expected to develop fluency in an East Asian language and are highly encouraged to study abroad to experience living in an East Asian country while practicing the language in its appropriate cultural context.

Students interested in this major bring an open-minded, interdisciplinary mindset and a global perspective. They are culturally curious and eager to hone their critical thinking, reading, writing, and language skills. Adaptability, patience, and dedication are key traits to apply to studying languages and complex cultural nuances.

CEAS majors gain strong language acquisition abilities, wide-ranging knowledge about East Asian cultures, and an area of expertise through engagement with both historical and contemporary issues in the region. These skills prepare students for careers in international relations, business, academia, translation, and cultural exchange.

ADMISSION TO THE MAJOR

Prospective majors are urged to start their language and Foundations core courses early in their Wesleyan careers. This will leave more time for study abroad and for more meaningful work in the concentration of the student's choice. To help students chart their way, the college faculty members have designed the concentrations listed below. Admission to the college is most commonly requested during the spring semester of a student's first year, although students may join the major at any time, so long as they have a viable path towards completing the major's requirements.

In order for us to learn a bit more about you and to help us match you with an advisor, we ask all students to fill out and submit the new major student information form (https://docs.google.com/forms/d/e/1FAIpQLScf6XmieaLGH_-817Yp6HHLs-GobrpJHEsJnro7L3f9Y5R5Q/viewform/) prior to submitting your major declaration form via WesPortal.

MAJOR REQUIREMENTS

Majoring in the College of East Asian Studies (CEAS) requires seven courses. These include two core courses, four in a concentration, and one elective.

Code	Title	Hours
CEAS201	Proseminar	1
CEAS207	Introduction to History: Foundations of East Asian Cultures	1
Concentration (4 courses in one concentration area)		4
Archaeology and History		
Literature and Culture		
Philosophy and Religion		
Political Economy		
Elective		1
Senior Capstone		
Total Hours		7

Other requirements include language courses and a senior capstone project. In addition, although not required, there is an expectation that students will study abroad, which for most students forms a vital part of their learning experience. Up to one full credit of CLAC courses may be counted toward major credit. All other courses counting toward the major (unless only offered as Cr/U) must be taken for a grade. Please note that courses taken C/U during 2020 may also count towards the major in recognition of the difficulties that many students face as a result of the pandemic.

Core courses. Each CEAS major is expected to take an introductory "Foundations of East Asian Culture" course (usually taken in the spring semester of the first year) and our interdisciplinary Proseminar (CEAS201) (usually taken in the fall of the sophomore year). The goal is to ensure that each CEAS major is firmly anchored in the classical texts and key events that shaped the development of East Asian cultures before the 19th century as well as the basic methodologies and main areas of scholarship within East Asian studies. Details on the courses that count for the core courses are available at wesleyan.edu/ceas/majoring/core.html (<https://wesleyan.edu/ceas/majoring/core.html>).

Concentrations. Each CEAS major must choose one of the four concentrations listed below. Our goal is to ensure that each major's course of study has methodological coherence in a specific area of study. Course offerings for each concentration may vary in some years according to faculty on campus. Details

on the courses that count for the concentrations are available at wesleyan.edu/ceas/majoring/concentrations.html (<https://wesleyan.edu/ceas/majoring/concentrations.html>).

- Archaeology and History
- Literature and Culture
- Philosophy and Religion
- Political Economy

STUDENT LEARNING GOALS

The College of East Asian Studies (CEAS) has two mutually reinforcing core missions: to cultivate an outstanding group of students with strong language abilities, wide-ranging knowledge about East Asia, and an area of particular expertise; and to promote knowledge of and engagement with the histories, cultures, and contemporary significances of East Asia across the campus, curriculum, and broader community.

STUDY ABROAD

Experience living in East Asia and use of language in its appropriate cultural context is viewed as a vital component of East Asian studies. Accordingly, although not required, CEAS majors are expected to study abroad to develop their language competency and acquire a more concrete grasp of a specific East Asian cultural context. This expectation may be fulfilled through a semester or one year in an approved program.

For more information, see wesleyan.edu/ceas/majoring/studyabroad.html (<https://wesleyan.edu/ceas/majoring/studyabroad.html>).

Questions about study abroad should be addressed to Prof. Wei Gong (China), Prof. Naho Maruta (Japan), or Prof. Hyejoo Back (Korea).

LANGUAGE REQUIREMENT

CEAS majors are expected to reach a minimum of advanced-level (completed third year) competency in Chinese, Japanese, or Korean. Majors who are native speakers of Chinese, Japanese, or Korean are expected to study another East Asian language. All students need to maintain a grade of B or above by the time they reach advanced-level competency. All students must take a minimum of four semesters of East Asian language courses; this may mean being required to take language classes beyond the advanced level. Evaluation of an individual student's language competence will be undertaken by the relevant language coordinator, who will also determine how language courses not taken at Wesleyan count toward this requirement.

Questions about Chinese should be addressed to the Chinese language and co-curriculum coordinator, Prof. Wei Gong. Questions about Japanese should be addressed to the Japanese language and co-curriculum coordinator, Prof. Naho Maruta. Questions about Korean should be addressed to the Korean language and co-curriculum coordinator, Prof. Hyejoo Back.

CAPSTONE EXPERIENCE

All majors must complete a written or (with approval) creative project during their senior year. This should involve the use of East Asian language materials

to the extent that the student's preparation permits. There are several ways in which this requirement can be fulfilled:

- Write a substantial essay, focusing on East Asia, as assigned in a regular class. The instructor must approve of this project and may suggest revisions as needed. Similarly, faculty approval is required also for a creative project done in the context of a class or as a tutorial. If the class instructor is not a CEAS faculty member, the essay or the creative arts project must be approved by the student's CEAS advisor. Please note that this class can simultaneously fulfill other requirements.
- Write a one-semester senior essay in a tutorial, preferably given by a CEAS faculty member. The tutorial may be for a full credit or for 0.5 credit.
- Write a senior thesis, typically in a two-semester tutorial with a CEAS faculty member.
- Furthermore, each student will be expected to present his or her research at a poster presentation toward the end of the spring semester of the senior year. This presentation is in addition to and apart from the actual research project.

COLLEGE OF EAST ASIAN STUDIES MINOR

MINOR DESCRIPTION

The East Asian Studies Minor (CEAS) enables students to enhance their knowledge of the history, culture, contemporary issues, and the languages of China, Japan, and Korea. Students complete any five CEAS courses, one of which may be from an approved study-abroad program. Courses may include archaeology, history, literature, culture, philosophy, religion, and political economies of the region. A key component of the CEAS Minor is the study of Chinese, Japanese, or Korean languages, in which students are expected to reach an intermediate competence level.

ADMISSION TO THE MINOR

Upon completion of any College of East Asian Studies (CEAS) course, students may apply to enter the CEAS minor. Students must fill out an online CEAS new minor student information form (<https://docs.google.com/forms/d/e/1FAIpQLScnBK33CD9ypUTFW9uBS6rOubPLyD69FFpJ4yVxaExlq4Jgdg/viewform/>) and then submit a minor declaration via the Minor Declaration Tool in the electronic portfolio.

MINOR REQUIREMENTS

The minor requires completion of any five CEAS courses and intermediate-level competence completed second year in Chinese, Japanese, or Korean. Starting with the class of 2020, only courses taken for a grade (unless they are only offered CR/U, such as CLACs and some specific courses) can be counted towards the minor.

No more than two of the five courses may be language courses. No more than two of the five courses can be performance or studio art courses. No more than one of the five courses can be a study abroad course.

The rule that no more than two of the five courses can be language courses means that students beginning their Chinese, Japanese, or Korean language study at Wesleyan may have to take as many as seven courses to fulfill the minor (because four courses would be required to reach intermediate competence, but only two will count toward the minor).

Note that while the CEAS major requires that native speakers of a Chinese, Japanese, or Korean language must study a different Chinese, Japanese, or Korean language, that does not apply to the minor, so a native speaker of Korean, for example, can pass the intermediate competence standard without taking any language classes and can simply take any five CEAS classes. All students, including native speakers, must contact a language instructor and pass a placement exam in order to certify intermediate competence. Please contact the appropriate language coordinator (Chinese—Gong, Japanese—Maruta, Korean—Back) immediately, or no later than one year prior to graduation (i.e. Spring of Junior year), if you intend to exercise this option to allow for sufficient time to take additional language if necessary.

To graduate with a minor in CEAS, seniors must complete their minor certification form in their portfolio.

COLLEGE OF EDUCATION STUDIES

The Education Studies Major is designed to help students acquire a deeper understanding of education and its relationship to society. Through a range of courses across the curriculum, students look critically and analytically at educational institutions, practices, and thinking, from early childhood through adulthood, using local, national, and global lenses. Foundation courses provide a theoretical background on philosophy, history, and psychology of education. Further requirements empower students with the knowledge, tools, and skills for analyzing different aspects of education, on topics such as human development and cognition, pedagogy and curriculum, and sociocultural approaches to the study of education. Students complete a methods course relevant to education studies as well as a practicum experience to gain hands-on experience complementing their academic work.

Education Studies is a linked major. It can only be declared and completed in addition to a primary major. There are no restrictions on the choice of a primary major. Students are encouraged to declare the Education Studies linked Major in spring of the sophomore year. Late declarations of the Major will be accepted through spring of the junior year.

ADVISING EXPERTS

EDUCATION STUDIES MAJOR

MAJOR DESCRIPTION

The Education Studies Major is designed to help students acquire a deeper understanding of education and its relationship to society. Through a range of courses across the curriculum, students look critically and analytically at educational institutions, practices, and thinking, from early childhood through adulthood, using local, national, and global lenses. Foundation courses provide a theoretical background on philosophy, history, and psychology of education. Further requirements empower students with the knowledge, tools, and skills for analyzing different aspects of education, on topics such as human development and cognition, pedagogy and curriculum, and sociocultural approaches to the study of education. Students complete a methods course relevant to education studies as well as a practicum experience to gain hands-on experience complementing their academic work.

ADMISSION TO THE MAJOR

Students intending to major in Education Studies should simultaneously submit a major request through their WesPortal. It is best to do this as early as possible so that you can receive emails and updates about the major that will help you with academic planning. Students who declare at the canonical time (spring of sophomore year) should simultaneously enroll in EDST101 , the Sophomore Gateway Course, which will be taught in the second half of spring term (4th quarter) every year.

Education Studies is a linked major. It can only be declared and completed in addition to a primary major. There are no restrictions on the choice of a primary major. Students are encouraged to declare the Education Studies Linked Major in the spring of the sophomore year. Late declarations of the Major will be accepted through the spring of the junior year.

MAJOR REQUIREMENTS

Students must take a minimum of 10 credits plus a practicum experience equivalent to at least .5 credit. Some courses can count toward different requirements, but students need to choose which requirement is being fulfilled by which course: an individual student cannot use the same course to fulfill multiple requirements toward the Major.

The courses may be completed in any order consistent with their prerequisites.

Students can use the same course to fulfill requirements in two academic programs (for example, a cross-listed course in ITAL and EDST could count toward both the EDST Minor and the ITST Major) if that is acceptable to the other department.

These are the requirements for the Major in Education Studies:

Code	Title	Hours
Cohort Courses		
EDST101	Introduction to Education Studies	0.5
EDST301	Senior Seminar in Education Studies	1
Foundations Course		1
Breadth Requirement		
Category 1: Cognition, Development, & Science of Learning		1
Category 2: Social & Structural Analyses of Education		1
Category 3: Research Methods & Data Analysis		1
Foundations Electives		3
Broader Contexts		1
Pedagogy		.5
Practicum		.5
Total Hours		10.5

COURSE PETITIONS

Students can always petition to substitute a different course to meet any Education Studies requirements by completing this petition form (<https://forms.office.com/Pages/ResponsePage.aspx?id=eWz9qXfT80mREQyOWR3D0ZrbgMi0a91AqegIpgTx3ytUNDVQQ0FUU0NNWEExRzVPS1ly>)

The petition form asks students to justify the substitution and, for non-Wesleyan courses, to upload a syllabus or other supporting information. Students will be notified if their petition requests are approved. Once approved, they can request the override in their Minor or Major Certification page in WesPortal.

COURSE LISTS AND ARCHIVE

Click here to view all courses for the current year, as well as the course archive of all approved courses that fulfill requirements for the Education Studies Major. (https://docs.google.com/document/d/1gtZCuuzvRH8epYls8AF5EhE_RVAuGv6A-gONyk-D_k/edit?usp=sharing)

The following course list is a **representative, but not comprehensive**, list of courses that may count towards the Education Studies Major. This list is intended to provide an example of the types of courses that fall into each Category. For all **current** Education Studies courses and a comprehensive archive of all courses ever offered by the College, click the link above.

Courses that have specific prerequisites that must first be completed are indicated with an asterisk.

COHORT COURSES

Students must take two courses, one just after declaring the Major and one in the fall of senior year, that will (1) function to build a cohort in the College of Education Studies, (2) help students make sense of the interdisciplinary contributions to Education Studies, and (3) help students understand the faculty, research, and resources in Education Studies at Wesleyan.

Code	Title	Hours
EDST101	Introduction to Education Studies [!]	.5
EDST301	Senior Seminar in Education Studies [#]	1

[!] Gateway course - normally taken in sophomore spring; can be taken junior spring for students who enter the Education Studies Major late.

[#] Taken in the fall of senior year.

FOUNDATIONS COURSE

Students must take one foundational course in Education Studies that broadly covers the field.

ELECTIVE COURSES

Students round out their Education Studies coursework with electives, in any combination of courses in the Foundation or Breadth categories.

Code	Title	Hours
Elective: Other courses in Foundations, Cat 1, Cat 2, Cat 3		3

BROADER CONTEXTS COURSE

Students take one course that addresses broad theoretical influences on how systems of knowledge or schooling are understood, constructed, transmitted, and changed. This course should sharpen students' ideas about what is taught, why it is taught, and how it is taught in the current U.S. or other contexts.

Students must take 1 credit in the Broader Context category. There are many courses that will satisfy this requirement.

Code	Title	Hours
Broader Contexts (1 credit)		Minimum of 1
AFAM202/ AMST275/ENGL240	Introduction to African American Literature	1
AMST174	Popular Culture and Social Justice: An Introduction to American Studies	1
AMST176	Critical Race Theory: An Introduction to American Studies	1

PEDAGOGY & PRACTICUM

Students must complete two aspects of a practicum experience: pedagogy and practice.

- Students must take a minimum .5 credit course focused on pedagogy; there are several .5 and 1 credit courses with this focus offered at Wesleyan. Pedagogy courses are listed below.
- Students must also complete a teaching practicum/in-school experience with a minimum of 20 hours of student contact. The practicum experience does not need to be credit-bearing, as long as the 20 hour requirement is met.
- Students can meet both the pedagogy and practicum portions of the requirement separately, or they can meet them with a single 1-credit course (i.e., a service learning course that provides 20 hours of student contact and covers elements of pedagogy). Apart from service-learning courses, many options exist to fulfill the practicum requirement through JCCP programs, summer programs, teaching apprenticeships, and internships while studying abroad. Some ideas are listed below.
- If the practicum experience is something other than one of the approved ~~listed~~ courses listed below, students must submit a petition (<https://forms.office.com/r/NGNdKLRucW/>) to get the experience approved in advance. Keep in mind that the experience must be fully documented with at least 20 hours of student contact.

Code	Title	Hours
Pedagogy (.5 credit)		
ASTR430	Seminar on Astronomical Pedagogy *	.25
CSPL277	Community Impact: Building Capacity to Support Educational Enrichment and Socioemotional Development	.5

WRCT/EDST400	Ford Seminar	.5

Code	Title	Hours
Practicum Courses or Experiences		20 Hours
CHEM241	Informal Science Education for Elementary School Students I	1
CHEM/MB&B242	Informal Science Education for Elementary School Students II	1
DANC447	Dance Teaching Practicum	.5
EDST223	Second Language Acquisition and Teaching (RL&L223)	1
EDST310	Practicum in Education Studies	1
EDST311	Community Impact Practicum: Building Capacity to Support Educational Enrichment	1
MUSC463	Teaching Music Lessons to Children in Local Schools	1
PSYC328	Current Research in Early Childhood	1
PSYC355	Psychology of Reading	1
QAC301	Statistics Education Practicum	1
RL&L/EDST223L	Second Language Acquisition & Pedagogy - Teaching Romance Languages	1
WRCT/EDST140L/ENGL143L	Teaching English to Speakers of Other Languages	1
WRCT/EDST202	Pedagogy for Teaching English to Speakers of Other Languages Tutors	.5
WRCT/EDST400	Ford Seminar	.5

Examples of a practicum experience include:

Tutoring in a school setting for 10h per week for a semester or 5h per week for two semesters, designing a tutorial on education with a service-learning component in a school, or developing an internship in a school.

Serving as a Teaching Apprentice for an introductory course (e.g., first year foreign language or gateway science or social science course).

Student teaching at the Bank Street School of Education (Urban Education Semester).

Teaching in an intensive summer program (Breakthrough, Summerbridge, CTY) and providing a letter confirming completion from the program.

STUDENT LEARNING GOALS

1. Understanding the foundations of Education Studies including history, theory, and philosophy of key movements and approaches (e.g., formal and informal education; experiential education; privatization movements; canon; relationship between schools and education)
2. Understanding of, and ability to apply, critiques of educational systems, policies, and practices from the lens of equity, opportunity, power, and transformative justice (e.g., civil rights; global education; gender; race; class; and disability)
3. Understanding the science and psychology of learning as a framework for examining education
4. Understanding of the relationship between culture and education, and between different cultures and their education systems (e.g., multiculturalism and multilingualism; globalization; goals of education within a culture or country; comparative studies of education systems, immigrants' experiences in unfamiliar systems)
5. Understanding education as an art as well as a science or system (developing a practical art of teaching, imagining critical generative interventions and experimental approaches to education including embodied arts practices or relationship making)
6. Practice applying one or more methodological approaches to research questions in education (e.g., quantitative and experimental methods; qualitative data collection; archival research; data science and 'big data' approaches; historiography; pedagogical research)
7. Practice working in and connecting theory to real-world educational settings (e.g., educational practice, advocacy, critique).

STUDY ABROAD

Many study abroad programs are appropriate for Education Studies majors and offer courses that could be used in the service of the major.

The Education Studies homepage maintains a list of study abroad programs that are relevant to Education Studies and that offer courses students could use to fulfill major requirements. Students are encouraged to study abroad if that makes sense for their educational goals, but are not required to do so. Education Studies faculty are supportive of study abroad experience for many reasons, particularly the broad cultural perspective that it affords.

PRIZES

Four Education Studies fellowships will be awarded to students each year for faculty-supervised research.

TRANSFER CREDIT

Foundation, Gateway, and Senior Seminar courses have to be taken at Wesleyan. All other course requirements can be fulfilled with transfer credits. Courses that fit logically into one of the Category 1, 2, or 3 courses will count toward those requirements. Courses that do not fit logically into Category 1, 2, or 3 but cover content relevant to Education Studies will count toward electives. There are no restrictions on how many transfer credits can count toward the major.

The College of Education Studies is pleased to sponsor credit transfer requests for students who have taken Education Studies courses elsewhere. Students who wish to transfer credit in Education Studies courses at other institutions should email the chairs with their request, a completed transfer credit form from the registrar, and a syllabus of the course.

HONORS

Following Wesleyan's guidelines for Departmental Honors, students in Education Studies must meet two requirements to be eligible for Departmental Honors in Education Studies.

1. Either a minimum GPA of 85.0 in Education Studies OR endorsement of two Core faculty in Education Studies; and
2. Completion of a Thesis that is determined by the thesis advisor and the second reader to meet the standards for honors or high honors.

Students should submit a declaration of interest to the department chair(s) in the spring of their junior year.

CAPSTONE EXPERIENCE

Students have many opportunities for capstone experiences within the Major: (1) senior Honors Theses; (2) individual and group tutorials supervised by Education Studies faculty; (3) annual fellowships to conduct mentored research in Education Studies; (4) a capstone Senior Seminar to weave together the threads of the interdisciplinary program of study; and (5) internships, fellowships, and practica to try out academic theories in real world settings.

EDUCATION STUDIES MINOR

COLLEGE OF INTEGRATIVE SCIENCES

The College of Integrative Sciences (CIS) aims to equip students with the creative and quantitative skills needed to address current and emerging global challenges in science and technology. These challenges are multifaceted, requiring problem-solving approaches that integrate expertise from multiple perspectives.

The CIS promotes an interdisciplinary and integrative approach to scholarship and learning across mathematics and the life, physical, and behavioral sciences. By encouraging creative synergies among faculty and students of disparate disciplines, the CIS academic structure complements existing departments and has the flexibility to evolve with the needs of an ever-changing world.

Research is key to the CIS. With a faculty mentor, student researchers pursue inquiry-based learning that explores open questions and provides new perspectives. They develop the necessary problem-solving skills and build expertise at the frontiers of science. Through research, students are transformed from consumers into creators of knowledge.

Students interested in the CIS are advised to follow a course of study that emphasizes a core science background, achieved by pursuing a major in one of the departments or programs in natural science and mathematics (NSM). The linked major offered by the CIS combines the intellectual depth in one area (the major) with breadth achieved through courses and research in the linked major.

COLLEGE OF INTEGRATIVE SCIENCES MAJOR

MAJOR DESCRIPTION

The College of Integrative Sciences (CIS) offers a linked major that equips students with the skills needed to address current and emerging global challenges. These multifaceted challenges require flexible, innovative problem-solving approaches that draw upon scholarship in science, technology, and other perspectives. With a key focus on research, students are transformed from consumers into creators of knowledge. Guided by a faculty mentor, students explore open questions and develop new perspectives on the frontiers of science.

A linked major in CIS enables creative synergies among faculty and students of disparate disciplines and departments. Curious, ambitious students with a wide range of interests in the STEM fields may be attracted to this broad investigative approach of the CIS combined with the intellectual depth of a major in the Natural Science and Mathematics (NSM) program.

Graduates of the College of Integrative Sciences are primed to take a 'big picture' approach to solving complex, real-world problems that involve and contribute to multiple domains of knowledge and industry.

ADMISSION TO THE MAJOR

Students must apply for admission to the College of Integrative Sciences (CIS) by completing the following application materials (https://forms.office.com/Pages/ResponsePage.aspx?id=eWz9qXFt80mREqYOWR3D0RcLGAhK_YRHoLSNINFMlQlUQTIRQuDOS0JYNjJWlGxUkVNR1) which include:

- A description of the proposed research project
- A description of the proposed course of study
- A letter of reference from the proposed faculty mentor

Normally, the deadline for applications is the Friday immediately prior to spring break. Please allow time to prepare your project description prior to the application deadline. If you miss the deadline, contact the director of the CIS to submit your application.

Students are eligible for the CIS linked major if they have chosen a Natural Sciences and Mathematics (NSM) major and have completed or are enrolled in at least one semester of the Research Frontiers Seminar (CIS221 or CIS222). Students should have an interest in interdisciplinary scientific research.

MAJOR REQUIREMENTS

In addition to majoring in one department or program in NSM, students in the CIS must take a minimum of six and a maximum of nine credits from the following courses:

OUTLINE OF THE LINKED MAJOR

- **CIS221 and/or CIS222 (0.5 credits/semester).** This course is designed to introduce students to ongoing research projects in the NSM division. Potential CIS students are encouraged to take the course as early as their first year or during their sophomore year to get exposure to the variety of research conducted in the NSM division.
- **Two interdisciplinary electives (2 credits).** These courses provide core skills from a discipline and department outside the primary major. Selections are made in consultation with your CIS linked-major advisor. The elective courses must be in Division III, outside the host major, and have a theme.
- **Two semesters of a journal club or seminar (0.5–1 credit).** The two journal clubs/seminar series must be in different disciplines. CIS221/CIS222 cannot be used to fulfill this requirement.
- **CIS321 and CIS322 Senior capstone colloquium (0.5 credits/semester).** Two semesters of the capstone colloquium are required. In this course, students learn about and discuss inherently integrative scientific topics, such as the Drake Equation. The capstone course also focuses on developing writing and presentation skills that will be useful going forward. Senior CIS majors present their research to their peers, junior CIS majors, and potential CIS majors.
- **Research (2–4 credits).** Research credits are typically earned in an Advanced Research Seminar or Senior Thesis Tutorial. Two credits of research is the minimum requirement. Four research credits are achieved by taking research for a full credit each semester in the junior year and the senior year. Students are strongly encouraged to write a thesis based on their research during their senior year. In unusual cases, the two-credit minimum can also be satisfied through credits for summer research.
- **One summer research experience.** All students are required to spend at least one summer performing research (<https://www.wesleyan.edu/cis/>)

summer-program/), preferably the summer after their sophomore year, immediately following acceptance to the College. Students are supported during the summer by a CIS fellowship or doing research for credit.

STUDENT LEARNING GOALS

Students in the College of Integrative Sciences will acquire the following knowledge and capabilities:

- A breadth of knowledge and creative synergies across various scientific disciplines.
- Skills related to scientific research such as developing a testable hypothesis, formulating research questions, evaluating experimental approaches, troubleshooting, analyzing data, and synthesizing conclusions.
- Applying quantitative and creative tools to address challenges in science and technology.
- Using primary scientific literature.
- Scientific communication in writing (research proposal and final paper), visuals (scientific posters, slideshows), and oral presentations.

Students will demonstrate their knowledge and abilities through research projects, critical analysis papers, participation in class discussions, collaborative group work, and multimedia presentations. Written exams, faculty review, peer review, and self-assessments will also evaluate their class performance.

RELATED PROGRAMS

Students are eligible for the CIS linked major if they have chosen a Natural Sciences and Mathematics (NSM) major. Students should have an interest in interdisciplinary scientific research. There are many established and emerging fields of study that lie at the intersection of two or more disciplines. Examples of pathways to completing the CIS major that include synergies across departments are available on the CIS web page (<https://www.wesleyan.edu/cis/about/pathways.html>).

HONORS

Students pursuing a CIS linked major can pursue a senior thesis in either CIS or the department of their linked major. Honors in CIS requires completion of a senior thesis. Three thesis readers will evaluate the thesis work. One reader must be your research mentor, and the readers cannot all be from the same department.

CAPSTONE EXPERIENCE

Research is a cornerstone of the CIS major. A minimum of two credits of research and participation in at least one summer research program (<https://www.wesleyan.edu/cis/summer-program/>) constitutes the Capstone Experience in CIS.

MASTER OF ARTS IN THE COLLEGE OF INTEGRATIVE SCIENCES

The College of Integrative Sciences (CIS) BA/MA program would enable students involved in interdisciplinary research, either CIS linked-majors or other NSM majors, to participate in a five-year combined BA plus MA program for Wesleyan students. Eligible students who complete their undergraduate requirements can obtain a master's degree upon successful completion of an additional year of graduate coursework and a thesis.

COURSES

The CIS promotes an interdisciplinary and integrative approach to scholarship and learning across mathematics and the life, physical, and behavioral sciences. Similar to the CIS linked-major, the curricular emphasis is on building a knowledge base spanning multiple departments.

In order to show proficiency across multiple scientific disciplines, a minimum of 6 credits, with grades of B- or better, is required for the MA degree.

- Two credits will be earned for research leading to the MA thesis (CIS549/CIS550, Advanced Research Seminar, 1.0 credit each).
- At least two journal club/seminar courses are required and must be in two different disciplines (0.5-1.0 credits). CIS321 (Special Topics in Integrative Sciences) and/or CIS322 (Senior Colloquium II: Integrative Sciences) may be taken to fulfill up to 1.0 credit. For students that earned a CIS major as part of their BA these courses can be repeated, whereas MA students that were not CIS linked majors are required to take CIS321/CIS322.
- The remaining credits will be earned through lecture or lab courses (200, 300, or 500-level) determined by the student and mentor; a minimum of two of these must be one-credit courses and in two different disciplines. The courses may be driven by the interdisciplinary research being conducted. The course catalog contains a list of courses identified as interdisciplinary and appropriate for the college. Courses not on this list may potentially be used to fulfill elective requirements, based on consultation with the student's CIS advising committee.

A student in the BA/MA program who earns more than 32 credits during the BA may apply excess credits toward the MA, providing that they are relevant to the research area and they have not been used to fulfill an undergraduate major requirement. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

A 3-member committee comprised of the research mentor and two CIS affiliated faculty will be established upon acceptance in the BA/MA program. The candidate will meet with their committee in early stages of research (summer/fall of fifth year) and meet with them in the second semester of their MA year (around spring break). This committee determines when sufficient experimental

work has been completed and must approve the final written document. Students in this program are required to submit a MA thesis describing the research which they have carried out in partial fulfillment of the degree requirements.

TEACHING

BA/MA students are not required to be teaching assistants.

RESEARCH

Research is a cornerstone of the CIS. With a faculty mentor, student researchers pursue inquiry-based learning that explores open questions and provides new perspectives. They develop the necessary problem-solving skills and build expertise at the frontiers of science. Two credits of research during the fifth MA year are required (CIS549/CIS550). The summer prior to the MA year is a valuable period to make significant progress on MA thesis research and summer funding opportunities exist for BA/MA students. Students conduct research and complete a written thesis in partial fulfillment of their MA degree. For the most recent information regarding the research carried out by faculty in the CIS, please visit the CIS website: <https://www.wesleyan.edu/cis/>.

THESIS AND DEFENSE

Each candidate is required to write a thesis on a piece of original and potentially publishable research carried out under the supervision of a faculty member. A thesis plan, stating the purpose and goals of the research, observational and other materials required, and uncertainties and difficulties that may be encountered, should be presented and discussed in the early meeting with the thesis committee. The thesis, in near-final form, must be submitted to the committee at least one week prior to the scheduled closed-door oral defense. In this examination, the student must defend their work and must demonstrate a high level of understanding in the research area. The oral defense may touch on any aspect of the student's preparation.

ADDITIONAL INFORMATION

BA/MA Program

The College of Integrative Sciences (CIS) BA/MA program enables students involved in interdisciplinary research—either CIS linked-majors or other NSM majors—to participate in a five-year combined BA plus MA program for Wesleyan students. Eligible students who complete their undergraduate requirements can obtain a master's degree upon successful completion of an additional year of graduate coursework and a thesis.

Similar to the CIS linked major, the curricular emphasis is on building a knowledge base spanning multiple departments, and on conducting interdisciplinary research.

Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience.

COLLEGE OF FILM AND THE MOVING IMAGE

The College of Film and the Moving Image explores the motion picture in a unified manner, combining the liberal arts tradition of cultural, historical, and formal analysis with filmmaking at beginning and advanced levels. The department offers a major and a minor.

DEPARTMENTAL ADVISING EXPERTS

Jeanine Basinger, Stephen Collins, Lisa Dombrowski, Leo Lensing, Scott Higgins, Michael Slowik

FILM STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Film Studies enables students to explore the moving image through a distinctive blending of history, analysis, and production. Studies focus on the art and craft of visual storytelling and the language of filmmaking in all its various forms—fiction, documentary, live-action, or animated—and venues such as cinema, television, and the internet. Film Studies majors in the College of Film and the Moving Image (CFILM) avail themselves of Wesleyan’s rich and unique resources in the Film Studies Department, the Jeanine Basinger Center for Film Studies, WesDocs, the Student Film Series, and the Ogden and Mary Louise Reid Cinema Archives. Courses in history, analysis, and hands-on production facilitate a deep understanding of the medium.

Film Studies majors often bring an imaginative, creative mindset, a passion for visual storytelling, technical curiosity, and a collaborative nature. They may have a broad, eclectic taste in movies and television, a critical eye, an awareness of the industry, and multidisciplinary interests in the humanities and sciences.

Film Studies students develop a critical and creative approach to the medium based on a strong visual vocabulary, extensive viewing, and a grasp of film production. Upon graduation, majors know how to make a movie, are experienced in film and television writing, understand film history, can offer original visions, and can extend our knowledge of the moving image. We encourage students to develop a personal vision, collaborate, take risks, solve problems, and learn from both failure and success.

ADMISSION TO THE MAJOR

The requirements for admission include a minimum overall academic average of B (85.0) and the successful completion of two designated entry-level courses with a grade of B+ or better in each. Entry to the major is possible only after completion of these two courses and application to the film major. To apply, students must meet with one of the Film Department Advisors by the end of the first semester of their sophomore year and place their names on the list of potential majors. The Film Department Advisors are Stephen Collins, Scott Higgins, Anuja Jain, Marc Longenecker, Sadia Shepard, Michael Slowik, and Tracy

Strain. Students on this list will receive an application form. Applications will be evaluated based on performance in film studies classes (including but not limited to grades) and any other factors deemed pertinent.

Because of the prerequisites and major requirements, students transferring to Wesleyan after their first semester sophomore year are not eligible to declare the film studies major.

MAJOR REQUIREMENTS

To fulfill the major, students must satisfactorily complete 10 Film Studies courses, including:

- Two introductory courses—Film 304: History of Global Cinema and Film 307: The Language of Popular Cinema
- One basic production course—Film 450: Sight and Sound Workshop
- A minimum of six Film elective courses and
- FILM 456 (senior thesis) or one additional elective
- Students may count a maximum of 16 credits in any single department toward the 32 credits required for graduation. Credits that exceed this limit will count as oversubscription.
- The film major does not require a senior thesis.

ADDITIONAL OPTIONS

Please see our departmental website for further information regarding the specifics of our major (wesleyan.edu/cfilm).

Please be aware that cross-listed courses must be counted in all departments in which they are listed.

Course offerings vary from year to year and not all courses are available every year. With prior approval by the department chair, one history/theory course from another institution may be transferred to the Wesleyan major from study abroad. The department does not offer credit for internships or student forums, but uncredited opportunities to work on senior films are available. Consult the chair of film studies for further details. The Film Studies Department does not offer credit for internships.

Students may become involved in film studies in ways other than class enrollment. The College of Film and the Moving Image houses the Wesleyan Cinema Archives and the Wesleyan Documentary Project. The Film Board (composed of Wesleyan students) runs the Wesleyan Film Series. The College of Film also hosts the Wesleyan Freshman/Sophomore Filmmaking Workshop.

FILM312	The Short Film: Study and Practice	1

OPTIONAL FILM/TELEVISION COURSES - DOES NOT COUNT TOWARD ELECTIVE CREDIT

Code	Title	Hours
FILM410	Senior Thesis Tutorial	
FILM457	Advanced Filmmaking	

Note: The oversubscription rule limits students to a maximum of 16 credits in a single department before oversubscription occurs, at which point further credits earned in the department cannot count toward the 32 credits required for graduation.

STUDENT LEARNING GOALS

MISSION OF THE FILM MAJOR

The mission of the film studies major is to deliver the finest undergraduate film, television, and media education through our distinctive blending of history, analysis, and production. The major explores moving image art and culture by looking at what is on screen using the language of filmmakers. We highlight visual storytelling. No matter the level of the course or the nature of the discussion, we maintain a direct route from our intellectual activity to filmmakers' choices and audience experiences. In contrast to graduate programs, which separate practice from study or teach methods of scholarship, we teach about the films themselves in a jargon-free classroom.

MISSION OF THE FILM MINOR

The film studies minor offers the same fundamental orientation as the major, but with fewer requirements and an emphasis on cross-listed classes. Its mission is to deliver an encompassing curriculum in film and media studies through an interdisciplinary approach.

OUR PEDAGOGICAL GOALS

Our broad goal is to foster the critical understanding of cinema and television as art forms. To all students, both general education and majors, we offer a unified perspective that enables students to think critically about form and the choices that visual storytellers face. No other liberal arts film program features such a broad and deep background in analysis, culture, and history coupled with

sensitivity to film and television’s immediate and intimate relationship with audiences.

Our majors develop a critical and creative approach to the medium based on a strong visual vocabulary, extensive viewing, and a grasp of film production. Production and studies are mutually reinforcing in this environment. Our 16mm and digital production courses facilitate deeper comprehension of film and television’s complexities and demand a higher level of critical and analytical thinking. Likewise, students steeped in history and analysis bring a robust visual vocabulary and awareness of form and culture to the tasks of storytelling. Upon graduation, majors know how to make a movie, are experienced in film and television writing, understand film history, can offer original visions, and are capable of extending our knowledge of the moving image.

Our major demands and rewards critical thinking. We believe that true learning involves synthesis, discovery, and original thought. Our students must face the challenge of defining and resolving artistic, historical, and analytical problems on their own, while also learning to work in collaboration. We encourage students to develop a personal vision, take risks, solve problems, and learn from failure as well as success.

HONORS

Film studies majors are not required to complete Gen Ed requirements to be Honors Candidates in Film.

Film studies majors are not required to complete senior thesis projects to fulfill their major program of study. However, large percentages of majors do opt for a senior thesis, which can take the form of a written history thesis, a screenplay, a 16mm film, a digital video, an advanced television project, or a film criticism project. Senior theses provide majors with the opportunity to advance what they have learned in their previous coursework through an extended individual project. Film Studies maintains a rigorous approach to evaluating theses, but also provides close, one-on-one advising.

Those students wishing to make a senior thesis film, video, or virtual project must complete their introductory production course (Sight and Sound or Introduction to Digital) during their junior year.

CAPSTONE EXPERIENCE

The College of Film and the Moving Image provides an array of Capstone Experiences, including:

- Advanced senior 16mm filmed thesis
- Advanced senior digital thesis
- Advanced documentary thesis
- Advanced senior screenplay thesis
- Advanced television thesis
- Advanced film criticism project
- Senior paper
- Senior film board participation
- Senior presentation week participation

- Optional Capstone outside major
- No Capstone

FILM STUDIES MINOR

MINOR DESCRIPTION

The Minor in Film Studies enables students to explore the history and craft of filmmaking. Students begin with an introductory course in the language of cinematic storytelling, exploring how advances in technology bring new challenges and opportunities, surveying major directors and genres, and demonstrating how film exists at the intersection of business, technology, and art. Additionally, students choose five additional courses in film history, visual storytelling, criticism, or production. The Minor provides a flexible format that complements a major course of study in a different department at Wesleyan.

Students in the Film Studies minor develop a critical and creative approach to the medium based on a strong visual vocabulary, extensive viewing, and a grasp of film production.

ADMISSION TO THE MINOR

In accordance with the University guidelines, students minoring in film studies must complete six courses for a grade (courses taken as Credit/Unsatisfactory will not count) and achieve a B average. Internships and student forums do not count toward the minor.

Before becoming eligible for the minor, you must complete FILM307 as a prerequisite with a grade of B or better. You must also activate a minor course registration chart with the department (see the minor administrator). Transfer courses cannot be used for the prerequisite. After acceptance into the minor, you may submit courses taken overseas or at other universities to be considered on a case-by-case basis for credit.

MINOR REQUIREMENTS

FILM307 should be taken during the first or sophomore year. Students must meet with the minor administrator, Lisa Mingione at lmingione@wesleyan.edu to declare the minor. After that, they must complete five additional courses before graduation. Some course selections are subject to prerequisites from other departments.

Courses

The list of courses currently recognized as part of the film studies minor includes. (Please note that not all courses will be available every semester.)

Code	Title	Hours
FILM301	History of Spanish Cinema	1
FILM304	History of Global Cinema	1
FILM305	Sophomore Colloquium for Declaring Majors	1
FILM307	Cinematic Storytelling: Styles, Tools, and Journeys	1

COLLEGE OF LETTERS

The College of Letters (COL) is a three-year interdisciplinary major for the study of European literature, history, and philosophy, from antiquity to the present. During these three years, students participate as a cohort in a series of five colloquia in which they read and discuss (in English) major literary, philosophical, and historical texts and concepts drawn from the three disciplinary fields, and also from monotheistic religious traditions. Majors are invited to think critically about texts in relation to their contexts and influences—both European and non-European—and in relation to the disciplines that shape and are shaped by those texts. Majors also become proficient in a foreign language and study abroad to deepen their knowledge of another culture. As a unique college within the University, the COL has its own library and workspace where students can study together, attend talks, and meet informally with their professors, whose offices surround the library.

COLLEGE OF LETTERS MAJOR

MAJOR DESCRIPTION

The College of Letters (COL) was founded in 1959 as a three-year interdisciplinary humanities program unique to Wesleyan University. The COL major integrates cultural competence, freedom of inquiry, critique, and rigor within a collaborative learning community, as manifest in our library where offices open into a shared space for study, discussion, research, workshops, readings, meals, and socializing. The structure of the major, smallness of classes, and openness to student concerns sustain a close rapport and lively dialogue between and among all COL professors and majors.

The COL curriculum coheres the benefits of rigorous requirements, small classes, and student-specific design. All majors take a sequence of five core co-taught colloquium seminars which integrate interdisciplinary and critical study of cultures and languages from all across the Mediterranean, Europe, and the Atlantic, and from antiquity to the present. Each student also collaborates with their academic advisor to choose electives in history, language, literature, and philosophy, to select a study abroad program, and to design a capstone project suited to their own academic and creative ambitions.

The COL pedagogy combines high expectations with creative exploration and communal support. In all courses taken for the major students receive honest written evaluations rather than letter grades. And, at the major’s midpoint, students are independently evaluated by non-Wesleyan professors in the Junior Comprehensive Examinations. Constructive feedback is contextualized by an ethos of care in which professors actively equip students as collaborators in a shared intellectual project.

The flexibility and cultural range of the COL major equips graduates for success in vocations and careers as varied as Wesleyan students in general. The rigor of the COL major explicitly sets up our students for graduate degrees across the

humanities, social sciences, law, professional schools, as well as (when combined with another major) science and medicine. Recent graduates from can be found in traditional and new media, government and intelligence, advocacy and policy NGOs, tech and AI, business and marketing, education administration and teaching, library science and art curation, medicine and healthcare, psychiatry and counseling, data and software, publishing and editing, business and finance, communications and creative writing, scriptwriting and film production, and more.

ADMISSION TO THE MAJOR

The College of Letters is a three-year major that students typically declare in the spring semester of their first year at Wesleyan. Declaration forms and further information can be found on the COL website under “Declare the Major (<https://www.wesleyan.edu/col/apply.html>).” Submission of these forms provides the department with information needed to advise an incoming major on all aspects of their academic career, including their choice of a foreign language and study abroad planning. Students will be assigned a COL advisor within two weeks of declaring the major. Sophomore transfer students may declare the major before or during orientation.

MAJOR REQUIREMENTS

The program consists of five components and leads to eleven course credits:

- Five colloquia designed to acquaint students with works of predominantly European literature, history, and philosophy in (respectively)

Code	Title	Hours
Colloquia		
COL241	Sophomore Colloquium 1: Antiquity	1
COL242	Sophomore Colloquium 2: The Middle Ages	1
COL243	Junior Colloquium: The Early Modern Period	1
COL245	Senior Colloquium 1: The 18th and 19th Century	1
COL246	Senior Colloquium 2: The 20th and 21st Century	1

- Four electives. The minimum required is one in history, one in philosophy, one in literature/representation, and one in the major’s target foreign-language literature. These specialized seminars allow students to shape their COL major around a particular interest.

- Capstone Project. A two-semester capstone project on a topic chosen in discussion with the COL major advisor, supervised by a professor with expertise appropriate to the project. This project should bring together the student's work in the COL with their own intellectual journey. The capstone is taken on either the "Thesis Track" or "Essay Track"
 - Thesis Track: (a) COL409 **and** (b) COL410 (or the equivalent in another department if the thesis is to also be submitted there)
 - Essay Track: (a) Either COL403 or COL404 **and** (b) an additional elective (in history, philosophy, literature/representation, or Foreign Language)
- Study abroad, in the spring semester of the junior year (or in certain situations, in the summer following the sophomore or junior year), usually in Europe or in another country (if approved by the director of the COL) where the major's selected foreign language is spoken.
- One comprehensive examination in November/December of the junior year, covering the texts read in the first three colloquia.

In all these contexts, much emphasis is put on the development of skills in writing, speaking, and analytical argument. Students are encouraged to take intellectual risks, and for this reason letter grades are not given in courses taken for COL major credit; also, COL seminars generally require papers rather than final examinations. Instead of giving grades, tutors write detailed evaluations of their students' work at the end of each semester, and these are kept on record (and discussed with each student upon request). Our general goal is cultivation of "the educated imagination."

Courses that students take as first-years before their declaration of the COL major cannot count for major credit or as an elective. The four electives required are designed to be taken in conjunction with the COL colloquium to foster intellectual synergy for all students in the major and their cohort.

STUDENT LEARNING GOALS

The College of Letters (COL) is a three-year, interdisciplinary major for the study of European literature, history, and philosophy, from antiquity to the present. During these three years, students learn how to think and write critically about texts in relation to their contexts and influences—both European and non-European—and in relation to the disciplines that shape and are shaped by them.

Through a required sequence of five colloquia in Antiquity, the Middle Ages, the Early Modern period, the 19th and then the 20th and 21st centuries, students

learn about the emergence of the constitutive idea of Europe out of Jerusalem, Athens, and Rome, and the contested history of Europe's diverse and changing social norms and cultural expressions. Over these three years, students also learn about the emergence and change of the disciplines as well as the forms of argumentation associated with each. Collaborative team-teaching in the first three colloquia fosters this pedagogical goal, ensuring that distinct disciplinary perspectives are both represented in conversation and in the classroom. Finally, majors become proficient in a foreign language through study abroad, where they also deepen their knowledge of another culture.

Assessment of these goals takes place continuously over the three years of the major. In lieu of grades, students receive detailed written evaluations for each of their COL courses, which address both written work and class participation. Study abroad is required in the second semester of the junior year, and in order to be accepted for the study abroad program of their choosing, students must prove that they have acquired the necessary level of language proficiency. When abroad they take courses taught in the foreign language and when they return they must continue to maintain proficiency by taking at least one upper-level seminar in that language. Toward the end of the fall semester of their junior year, majors take comprehensive examinations that are planned, administered, and graded by two external examiners, representing different disciplines and with specializations in different time periods. The written portion of the comprehensive exam tests knowledge of the material covered in the first three colloquia and evaluates the students' ability to analyze and draw from a variety of sources in order to develop and support coherent, integrative, and interdisciplinary arguments about them. The oral portion of the exam tests the students' ability to orally defend and/or expand their arguments in a face-to-face conversation. In keeping with the COL's preference for evaluations over grades, the examiners' grading scale of Credit, Honors, and High Honors accompanies a written evaluation of each student's work on both parts of the exam. During the senior year, students must complete an honors project in their choice of disciplines and media. Senior theses (taking place over two semesters) are evaluated by two professors who are not the student's advisor, in order to assure an objective assessment. One of the two evaluators is always a non-COL professor. Honors essays (over one semester) require one evaluating professor who is not the advisor.

By virtue of the Junior Comprehensive Examinations, the COL also undergoes its own yearly self-evaluation. The evaluations written for each student by the external examiners are also made available to the COL director, who looks to see if there is a trend in the overall strengths and weaknesses among the students. In addition, the examiners are asked to give their assessment of the entire COL program, first in a meeting with us and then in a letter that they may write together or individually. These assessments are shared with the department as a whole and any suggestions for changes to the program or the teaching are taken seriously. Indeed, it is because of these yearly assessments that we have made significant changes in our curriculum and, most notably, in the sequence of the colloquia.

ADDITIONAL INFORMATION

Life in COL. The College of Letters attempts to integrate the social and intellectual lives of its members by inviting guest lecturers and by providing opportunities for students and faculty to meet such guests (and one another) informally. There are also regular informal social gatherings in the College of Letters library. The structure of the College of Letters and the smallness of its classes bring about a close rapport between tutors and students and a lively and continuing dialogue among students of different classes.

After graduation. The academic standards of the College of Letters are reflected in the fact that its graduates have consistently entered the best graduate

and professional schools, including schools of law, medicine, and business administration, as well as communications and the liberal arts. They also have won national fellowships and scholarships.

COLLEGE OF SOCIAL STUDIES

The College of Social Studies (CSS) offers a distinctive blend of teaching methods, subject matter, and educational structure. Its collegial organization combines tutorials and courses in social theory within the college with individually selected courses from other departments and programs in the University to achieve an integrated education in the social sciences. Founded in 1959, the CSS has provided an unusual educational opportunity for many Wesleyan students whose careers upon graduation have ranged from medicine to law, forestry to college teaching, international business to screenwriting.

DEPARTMENTAL ADVISING EXPERTS

Giulio Gallarotti; Cecilia Miller

COLLEGE OF SOCIAL STUDIES MAJOR

MAJOR DESCRIPTION

Founded in 1959, the College of Social Studies (CSS) is a three-year multidisciplinary major featuring courses in economics, government, history, and social theory. The CSS curriculum features highly interactive, reading- and writing-intensive classes encouraging intellectual independence within a vibrant and supportive learning environment.

CSS students seek to gain understanding of social structures and relations through intense study and critical assessment of competing perspectives. They learn to accommodate and respect difference by engaging complex social issues, such as discrimination, forms of inequality, and the sources and misuse of power, with their peers and tutors. All majors undertake a capstone independent research project on a topic of their choosing.

CSS graduates have gone on to a wide array of careers in fields such as law, social activism, public service, consulting, and academia.

ADMISSION TO THE MAJOR

Interested students apply for admission to CSS during the spring of their first year. Each applicant is interviewed by a team consisting of a CSS tutor and two current CSS students. All CSS majors must complete the economics prerequisite by taking either ECON101 or ECON110 (for which a full-year of college-level calculus is required) and achieving a grade of at least C- before taking the sophomore tutorial in Economics. Students are advised to have completed this required course before entering the College to promote flexibility in scheduling the tutorials over the academic year. However, some students who have not completed the Economics prerequisite are admitted each year on the understanding that they will complete the requirement in the fall semester of the sophomore year. A student who has taken an introductory Economics course in the first year but has not achieved a grade of C- or higher must take another

Economics course, which will normally be a 200-level elective, and achieve a C- or better. A score of 4 or 5 on the AP exams in BOTH Microeconomics and Macroeconomics or a score of 5 or higher on the IB exam in Economics is sufficient to satisfy the Economics requirement for the CSS. Failure to complete the Economics requirement by the end of the fall semester in the sophomore year will result in separation from the college.

MAJOR REQUIREMENTS

Code	Title	Hours
Sophomore Tutorials/Colloquium		
CSS220	Sophomore Economics Tutorial: Markets, Welfare & the State	1.5
CSS230	Sophomore Government Tutorial: State and Society in the Modern Age	1.5
CSS240	Sophomore History Tutorial: The Emergence of Modern Europe	1.5
CSS271	Sophomore Colloquium: Modern Social Theory	1
Junior Tutorials (choose 2)		2
CSS320 Junior Economics Tutorial		
CSS330 Junior Government Tutorial		
CSS340 Junior History Tutorial		
Junior Colloquium		
CSS371	Junior Colloquium: Liberalism and Its Discontents	1
Senior Colloquium		
CSS391	Senior Colloquium: Big Powers and Small Wars	1
Senior Research Requirement (Essay or Thesis)		1-2
Total Hours		10.5-11.5

Sophomore year. There are no letter grades in the sophomore year. At the heart of the program in the sophomore year is the tutorial (normally Friday afternoon). The tutorial essay is designed to develop the student's conceptual and analytic skills as well as promote precision in writing and argument. The academic year is composed of three trimesters of eight weeks each. Each student takes a tutorial in History, Government, and Economics. Due to their intensive nature, tutorials account for roughly half of the student's academic work during the year as the student earns a total of 4.5 course credits for work in the three tutorials. A semester-length colloquium in Social Theory in the fall and selected courses within and outside the social sciences complete the sophomore program. Comprehensive Examinations, administered by external examiners at the end of the sophomore year, yield the only official grade for work during the sophomore year. The CSS courses and the courses taken outside the College by sophomores appear on the academic histories as graded CR/U.

Junior year. In the first semester of the junior year, no CSS courses are required. This allows the student flexibility to take courses outside the College to work on completing a second major (a choice selected by about half of the CSS juniors) or to take a semester of study abroad or elsewhere (about half our majors take this option). The second semester of the junior year consists of a semester-long Social Theory Colloquium focusing on the modes of inquiry in the social sciences and a sequence of two seven-week tutorials, each carrying one course credit for a total of 3 course credits. Each student chooses two from among the three tutorials offered in the three disciplines, namely Government, History, and Economics. Students also take one or at most two elective courses outside of the CSS to complete the spring course work. Attention should be given to

courses that develop further the student's research skills and ability to complete a substantial writing project in the social sciences in the senior year.

Senior year. In addition to a CSS Senior Colloquium in the fall semester, the senior year requires a substantial capstone project. This project is often a two-semester Senior Thesis but the requirement may also be satisfied by a one-semester (fall or spring) Senior Essay. In either case, the capstone project involves a large-scale, sustained, and serious investigation of an intellectual topic in the social sciences.

GENERAL EDUCATION

Completion of the University's General Education Expectations at both stages I and II is required of CSS majors. Because the intensive nature of the CSS sophomore year schedule requires that the bulk of the student's time and course work be done in the College, CSS majors are given until the end of the junior year to complete Stage I expectations. Stage II expectations must be completed no later than the final semester of the senior year.

STUDENT LEARNING GOALS

CSS Learning Goals:

- Critical Thinking
- Creative Thinking
- Ability to write a high-quality academic paper with supportive evidence and argumentation
- Experience to debate and discuss, in a respectful manner, in the classroom
- Learning how to use comments from tutors to improve written work
- Comfort in talking about academic subjects and current events in informal settings with peers and tutors

ADDITIONAL INFORMATION

Regularly scheduled social events (Monday Lunch Talks, Friday post-tutorial Social Hours, semester banquets) provide a sense of community that enhances the educational mission of the College.

CAPSTONE EXPERIENCE

CSS students complete one of the following during their senior year:

- Senior honors thesis (two semesters)
- Senior essay (one semester)

COLLEGE OF THE ENVIRONMENT

The Bailey College of the Environment at Wesleyan University was created with a belief in the resilience of the human spirit and a desire to develop a long-term vision of human and ecosystem health. There are four parts to the College of the Environment: the environmental studies (ENVS) linked major or a minor, an annual think tank, research opportunities, and community outreach. Our mission, simply stated: to change the world.

The linked-major program (p. 93) in environmental studies (ENVS) is the secondary major to a primary major (see Undergraduate tab, at top right, for details). Students cannot obtain the BA degree with ENVS as their only major. Students must complete all the requirements for graduation from their primary major in addition to those of ENVS as their linked major. Each student will work closely with an ENVS advisor to develop an individual course of study. From the class of 2025 forward, ENVS requires an introductory course, seven elective courses, the senior colloquium, and a senior capstone project (thesis, essay, performance, etc.) on an environmental topic that is researched, mentored, and credited in the primary major program, although other options are possible. In addition, students must take one course in any subject that fulfills the writing essential capability.

A minor in environmental studies is also offered (see Undergraduate tab, at top right, for details).

More information about the Bailey College of Environment can be found here. (<https://www.wesleyan.edu/coe/>)

DEPARTMENTAL ADVISING EXPERTS

ENVIRONMENTAL STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Environmental Studies (ENVS) empowers students to evaluate, comprehend, communicate, and solve various environment-related issues. ENVS is multi-disciplinary: students take course work that spans the entire curriculum of Wesleyan, including courses in environmental science ethics, philosophy, economics, government, policy, history, humanities, art, film, sciences, and writing.

Environmental Studies is a “linked major,” in which students complete all the requirements from their primary major in addition to those of ENVS. This prepares them with both specialty knowledge and a breadth of perspective,

enabling them to interpret environmental information, understand the linkages to social, political, or ethical issues, and formulate well-reasoned opinions.

The Environmental Studies program is suitable for students who are strongly interested in or concerned about environmental issues such as: environmental justice, food security, sustainability, global warming, and the impact of human activities on the planet. Students drawn to this program possess scientific and humanistic curiosity, analytical thinking, an interdisciplinary mindset, and a desire to find ethical solutions.

Environmental Studies graduates are prepared for careers spanning various sectors such as government, nonprofit organizations, education, research, environmental law, journalism, and sustainable business management.

ADMISSION TO THE MAJOR

One of the following introductory courses serves as the gateway to the ENVS linked-major program:

Code	Title	Hours
Environmental Science AP Exam with score of 4 or 5		
ENVS197	Introduction to Environmental Studies	1
ENVS195	Environment and Society: Introduction to Environmental Studies through the Social Sciences	1
E&ES155	Earth System Science	1.25
E&ES199		
ENVS219F	Knowing the Natural World (FYS)	1

MAJOR REQUIREMENTS

Major Requirements for the Class of 2025 & Beyond

Code	Title	Hours
Intro Course		
ENVS197	Introduction to Environmental Studies	1
or ENVS195	Environment and Society: Introduction to Environmental Studies through the Social Sciences	
or ENVS219F	Knowing the Natural World (FYS)	
or E&ES199		
or E&ES155	Earth System Science	
Core Electives		
Core Area 1: Environmental Justice, Philosophy, Ethics		1
Core Area 2: Economics, Policy, and Law		1
Core Area 3: Natural Sciences		1
Additional Electives		
Four additional electives, whether or not designated as Core Electives		4
Senior Colloquium		
ENVS391	Senior Colloquium: Environmental Studies	0.5
ENVS392	Senior Colloquium: Environmental Studies	0.5
Senior Capstone		2
Total Hours		11

Notes:

- Four additional electives from the Comprehensive List of Core and Additional Electives Offered since 2017 (<https://bit.ly/wes-envs/>)
 - Four core or electives courses must cohere into an environmental theme of your choice (e.g., climate change, food security, environmental justice, etc.)
- With the exception of an introductory course (ENVS195, ENVS197, E&ES199, or E&ES155), and ENVS188 and PHYS105, all other courses must be at 200 level or higher
- Up to two courses that are either student forums or research tutorials may be substituted for non-core electives
- Up to three courses can count as electives if used for another major
- One course in any subject that fulfills Wesleyan's essential capability in writing

CORE AREA ELECTIVE LIST

Below is a list of Core 1, 2, 3 electives offered in 2024-25. **The most updated Core 1, 2, 3 course information for 2024-25 and a comprehensive list of all core and additional electives since 2017 can be found at <https://bit.ly/wesenvs/> (<https://bit.ly/wes-envs/>).**

CORE ELECTIVES AREA 1 (ENVIRONMENTAL JUSTICE, PHILOSOPHY, AND ETHICS)

Fall Semester 2024

Code	Title	Hours
ENVS234	A Tale of Three Food Systems: Accessing Food in the US	1
ENVS282	Sustainable Agriculture and Food Systems	1
ENVS295	Saving Animals: The Politics of Rescue, Captivity, and Care	1
ENVS350	Environmental Justice and Sustainability	1
PHIL212	Introduction to Ethics	1
PHIL215	Humans, Animals, and Nature	1

Spring Semester 2025

Code	Title	Hours
ENVS265	Environmental Justice & Health Equity	1
PHIL270	Environmental Philosophy	1

CORE ELECTIVES AREA 2 (ECONOMICS, POLICY, AND LAW)

Fall Semester 2024

Code	Title	Hours
ECON210	Climate Change Economics and Policy	1
ENVS276	Law and Policy of Water, Air, Climate & Biodiversity: Protecting Natural Resources & the Environment	1
GOVT206	Public Policy	1
GOVT308	Comparative Urban Policy	1
HIST267	Development in Question: Conservation in Africa	1

Spring Semester 2025

Code	Title	Hours
ECON310	Economics of the Environment and Climate	1
ENVS297	Food Security and Environmental Conservation (CLAC 1.0)	1
GOVT222	Averting Catastrophe: Public Policy and Risk Management	1
HIST307	The Economy of Nature and Nations	1
PHIL283	Animal Law and Policy	1

CORE ELECTIVES AREA 3 (NATURAL SCIENCES)

Fall Semester 2024

Code	Title	Hours
BIOL173	Global Change and Infectious Disease	1
BIOL216	Ecology	1
E&ES260	Oceans and Climate	1
E&ES282	Earthwatch: Satellite Data Storytelling for Science Communication	1.5

Spring Semester 2025

Code	Title	Hours
E&ES234	Geobiology	1
E&ES250	Environmental Geochemistry	1
E&ES280	Introduction to GIS	1
ENVS344	Renewable Energy and Negative Emission Technologies	1

Students will choose an additional four electives with their ENVS advisor. These electives may be selected from the entire list of electives since 2017 (see link in previous paragraph), in addition to those courses listed in core elective areas 1–3 above.

ADDITIONAL INFORMATION ON MAJOR REQUIREMENTS

- With the exception of the introductory courses (ENVS195, ENVS197, E&ES 155, E&ES199), plus ENVS188 and PHYS105, all other courses must be at 200 level or higher.
- Up to three courses from the primary major may be counted toward the ENVS linked major.
- Students may substitute two reading or research tutorials, or one tutorial and one student forum, for two electives with approval of the ENVS advisor.
- Up to three credits from study abroad programs may be used for non-core elective courses, with prior approval of the ENVS advisor and as long as the credits from abroad are accepted by Wesleyan.
- One course in the student’s entire curriculum must satisfy the essential capability for writing.
- With the approval of the advisor and a written petition by the student, certain internships (e.g., Sierra Club, state agency, EPA, NOAA) may be substituted for one non-core elective.

STUDENT LEARNING GOALS

- Competence beyond the major-track introductory level in interpreting environmental information
- Develop a deeper understanding of the complex connections between environmental issues and social or political issues

- Develop the analytical and critical capacities necessary to formulate compelling arguments about environmental issues
- Engage both scholars and the lay public in discourse about environmental issues (mode of expression varied)
- Engage both scholars in the field who are making important environmental contributions
- Undertake a senior capstone encompassing practical and theoretical experiences in environmental issues

METHOD OF EVALUATION

Self-assessment. Upon entering the major, students will write a one-page self-assessment. This assessment will be posted to the student's electronic portfolio and made available to the student's advisor. In the assessment, students will describe their reasons for selecting the major, their current strengths and weaknesses with respect to environmental studies, and their personal goals within the major, including plans for a concentration. They will be encouraged to integrate the program's learning goals in their self-assessment.

Students will periodically meet with their environmental studies advisor to reflect on their progress in the major, using their self-assessment as a frame of reference. At minimum, these meetings will occur once per semester during the course scheduling period. Because environmental studies is inherently multidisciplinary and because every student is linked to a primary major, ENVS student trajectories within the major are highly individualized. The self-assessment will make these plans explicit, and will help both the student and advisor chart the most successful path through the major.

Senior capstone and senior colloquium. Every major completes a capstone project during their senior year. The format of the capstone is typically determined by the student's primary departments (e.g., thesis, essay, performance, exhibit). The purpose of the capstone experience is to challenge students to think creatively, deeply, and originally about an environmental issue and to produce a significant work that uses their expertise from their primary major. Students formally propose their capstone projects at the end of their junior year, and the proposals are evaluated and approved by the Chair of ENVS. Several times throughout their senior year, students present progress reports of their projects in the senior colloquium; faculty and student-peers attending the colloquia provide feedback for improvement. Finished capstone projects that are written under the auspices of the student's primary major are evaluated by the primary major department; capstones written for ENVS are evaluated by the ENVS program.

Senior reflection. As a bookend to the self-assessment, seniors will be asked to reflect on their experiences in the major. They will analyze their personal development in environmental studies and how the program impacted their development. These reflections will be recorded in the form of a questionnaire. Also, during one of the final colloquia in the spring, students will be encouraged to share their thoughts in a group setting and this will be recorded.

HOW THE DEPARTMENT/PROGRAM USES ASSESSMENT INFORMATION

The self-assessment and the subsequent iterative process between student and advisor of discussing the assessment will help to maximize student success in the program. The capstone projects and, more informally, the oral presentations in the senior colloquium, will help the ENVS faculty evaluate the success of the curriculum in fulfilling the learning goals of the program. Both the iterative process of the self-assessment and the senior reflection will help inform curricular needs. For a multidisciplinary program with its faculty spread across all three divisions, the three common experiences (self-assessment, senior capstone/senior colloquium, and senior reflection) will be critical for the

evaluation of both students and the program. Once a year, a committee will use information from these common experiences to discuss the state of the program. A summary of these discussions, including any recommendations for change, will be shared with the full ENVS faculty.

HONORS

SENIOR THESIS IN ENVIRONMENTAL STUDIES

Options for pursuing honors. Environmental Studies majors are required to complete a capstone project in their senior year. A senior thesis is one type of capstone project that will fulfill the ENVS major requirement. The other type of capstone is a Senior Essay (see Capstone Experience, category 3, below). You are strongly encouraged to pursue a capstone project, especially senior theses, in your primary major. You should consult with faculty in your primary major about qualifications and procedures for undertaking a senior thesis in your primary major.

Circumstances may arise that prevent you from pursuing a senior thesis in your primary major. It may be possible for you to undertake a senior thesis in Environmental Studies. A senior thesis in Environmental Studies will be approved only if (1) the student's primary major department/program is unable to provide a suitable advisor, or (2) the subject is deemed to fall outside the strict purview of that department/program.

You must receive approval prior to registering for a senior thesis in Environmental Studies in the fall of your senior year, during drop/add. Two signatures of approval will be required for you to proceed with a senior thesis in Environmental Studies: (i) your thesis tutor and (ii) the Chair of Environmental Studies.

Environmental Studies Major. Your thesis prospectus must contain the main questions or thesis of the project, a statement of importance of the project and how you intend to carry out the project. Please also indicate who will serve as mentor for the project. That person must also send an email approving the basis for your project at this early date.

Please send your thesis proposal and ask your thesis mentor to send an email of approval for your project to Chair of Environmental Studies and Director of the College of the Environment Barry Chernoff at bchernoff@wesleyan.edu. The Chair of ENVS will consider your application for approval. You, your tutor, and your ENVS advisor will be informed of the Chair's decision. For any case that is unclear (e.g., suitability of the topic for ENVS), the Chair may consult with the College of the Environment Governing Board.

HONORS IN ENVIRONMENTAL STUDIES: ELIGIBILITY, CANDIDACY, AND BESTOWAL

Requirements for eligibility. To be eligible for honors in environmental studies you must (1) be an environmental studies major on track to complete the major requirements in a timely fashion; (2) achieve a grade point average of 90.00 or higher in courses that count towards the environmental studies linked major, calculated at the end of the spring semester of the junior year; and (3) have completed Stage I of the General Education Expectations.

Process for applying for admission to candidacy. To become a candidate for honors in environmental studies, you must meet the three eligibility conditions and also obtain official permission to undertake a senior thesis in environmental studies. The optimal time to try to find a faculty tutor and obtain permission is by the end of the spring semester of your junior year.

Once you have secured a thesis tutor and permission to undertake a senior thesis in environmental studies, you must enroll during the add/drop period of the

fall semester of your senior year in ENV5409, "Senior Thesis Tutorial." You can't include this tutorial in course planning during pre-registration; you have to add it during the in-semester add/drop period. You enroll in the tutorial electronically, following instructions in the Tutorial Manual on the Tutorial Registration page (http://www.wesleyan.edu/registrar/information/tutorial_registration.html) on the website of the Office of the Registrar. Enrolling in ENV5409 will indicate to the honors coordinator in the Office of the Registrar that you are an honors candidate from the standpoint of the University as well as Environmental Studies. Then, during the add/drop period of the spring semester of your senior year, you must enroll electronically (using the same procedure) in a second tutorial, ENV5410, which is also entitled "Senior Thesis Tutorial." Enrolling in ENV5410 will indicate to the honors coordinator in the Office of the Registrar that, just over halfway into your senior year at Wesleyan, you remain in good standing as an honors candidate from the standpoint of the University as well as the Department.

Finally, to actually receive honors in environmental studies, you must (1) complete the environmental studies linked major; (2) complete both Stage I and Stage II of the General Education Expectations; (3) write a thesis judged to be of honors quality; and (4) maintain a grade-point average of at least 90.00 in courses that count towards the environmental studies linked major through the first semester of your senior year.

Environmental Studies prohibits double honors for the same thesis.

UNIVERSITY HONORS REGULATIONS

To abide by Wesleyan's university-level honors regulations, which are formulated by a university-wide faculty Honors Committee (<http://www.wesleyan.edu/acaf/governance/rosters.html>) and detailed on the Honors webpages (http://www.wesleyan.edu/registrar/honors/honors_program.html) maintained by the Office of the Registrar, is a requirement for receiving honors in environmental studies. Especially useful are the Jellybean Papers (http://www.wesleyan.edu/registrar/honors/jelly_bean_papers/) (so-called because they used to come in many colors), which will tell you how to register your thesis project with the coordinator of the university-wide Honors Program (http://www.wesleyan.edu/registrar/honors/honors_program.html) at the beginning of your senior year. You may apply to the Thorndike Fund (http://www.wesleyan.edu/registrar/honors/jelly_bean_papers/thorndike_fund.html) for help in paying the production costs of creating the bound copy of their thesis/essay you must deposit with Olin Library.

EVALUATION OF HONORS THESES IN ENVIRONMENTAL STUDIES

Soon after theses are submitted, the honors coordinator will deliver electronic copies of your thesis to your thesis tutor and faculty committee. Your thesis will be evaluated by three faculty members: your thesis tutor and two readers designated by the department chair in consultation with your tutor. One reader will be close to your field and one will be farther afield. Your tutor and readers will read the thesis, will write a commentary on it, will evaluate it independently as worthy of high honors, honors, or credit (no honors); will recommend a grade for the thesis tutorial. The evaluations will be sent automatically to the chair of Environmental Studies.

If the tutor and the readers agree that the thesis deserves honors, or if they agree that the thesis deserves credit (no honors), the chair of Environmental Studies in deliberation with the governing board of the College of the Environment, awards the thesis the grade that the tutor and readers agreed upon.

If the tutor and the readers disagree with respect to honors or no honors, the following procedure will be used. If there are two evaluations of honors and one of credit (no honors), the chair of Environmental Studies and the governing board of the College of the Environment will consider you for being honors in

Environmental Studies. If there is one evaluation of honors and two of credit (no honors), the chair of Environmental Studies will bring the case to the governing board of the College of the Environment with the recommendation of credit (no honors).

The Environmental Studies Department has stringent regulations governing high honors. High honors will be considered by the chair of Environmental Studies and the governing board of the College of the Environment if (and only if) the tutor and the readers agree that the thesis deserves high honors. High honors in environmental studies requires unanimity among the three thesis-readers that the thesis deserves high honors. In this respect, it is more difficult to achieve high honors in environmental studies than it is to achieve high honors in many other departments or programs at Wesleyan.

When all comments and evaluations have been received by the Department and when your thesis and achievements have been deliberated by the governing board of the College of the Environment, the chair of environmental studies will submit in writing the evaluations (but not the comments or the tutorial grades) to the coordinator of the university-wide honors program. The administrative assistant records the honors recommendation electronically and retains a copy of the comments and the recommended tutorial grades.

CAPSTONE EXPERIENCE

The ENV5 linked-major program provides a capstone experience that includes a senior project and a full year of senior colloquia. The purpose of the ENV5 capstone experience is to challenge students to think creatively, deeply, and originally about an environmental issue and to produce a significant work that uses their expertise from their primary major. The students will then have the opportunity to present and discuss their research in the senior colloquium (ENV5391/ENV5392) with seniors and the faculty.

Senior capstone project. The creative exploration of a critical environmental issue through independent research is an essential part of ENV5. All ENV5 majors must complete a senior capstone project in one of the four categories discussed below, though students are encouraged strongly to pursue a project in one of the first two categories. The topic must concern an environmental issue and must be approved in advance by the ENV5 advisor and the Chair of ENV5. The student must be officially enrolled in one or more courses while they complete the research project. The students must submit to the director of ENV5 no later than the last day of classes in the spring semester in their junior year a two page research prospectus on their planned course of research. This plan must be signed by the potential mentor of the senior research. The mentor does not have to be a member of the ENV5 faculty.

- **Category 1.** The capstone project may take any of the forms accepted by the primary department as a senior project (e.g., senior thesis, senior essay, senior performance, senior exhibition, senior film thesis). The topic must be approved by the ENV5 advisor and Chair of ENV5. The senior project is submitted only to the primary department and is not evaluated by ENV5. Students may select an interdisciplinary thesis topic such that they solicit the help of more than one mentor if permitted by the primary department.
- **Category 2.** The capstone project may be a thesis submitted in general scholarship. The student must have a mentor for the thesis, and the topic must be approved by the ENV5 advisor.
- **Category 3.** In the event that the student cannot satisfy the conditions for the above categories, the student may register for and complete a senior essay in environmental studies (ENV5403/ENV5404). The mentor can be any Wesleyan faculty member and the topic must be approved by the ENV5 advisor. If the student cannot find a mentor, then it will be the responsibility of the chair of environmental studies to find a suitable reader or to evaluate

the written work. The due date for the senior essay is set between the student and the mentor.

- **Category 4.** In the event that the student cannot satisfy the conditions for the above categories, the student may register for and complete a senior honors thesis in environmental studies (ENVS409/ENVS410). The mentor can be any Wesleyan faculty member and the topic must be approved by the ENVS advisor. If the student cannot find a mentor, then it will be the responsibility of the chair of environmental studies to find a suitable mentor or to serve as mentor. The due date for the senior honors thesis is set by the Office of the Registrar, usually in mid-April.

- Courses that may count toward the six electives are ENVS courses at the 200 level or higher, plus other courses listed here (<https://bit.ly/wes-envs/>).

Senior colloquium. The ENVS Senior Colloquium provides students opportunity to discuss, workshop, and improve their senior capstone projects. Each student will present either a live or video recorded report on their capstone work once each semester. Before the presentation, the student will make available reading materials and questions they have about how to work through their most challenging issues. Students must be formally enrolled in the colloquium each semester of their senior year. Attendance at all senior colloquium classes is mandatory for all senior ENVS majors.

ENVIRONMENTAL STUDIES MINOR

MINOR DESCRIPTION

The Minor in Environmental Studies (ENVS-MN) is a flexible program that allows students to tailor their studies to their interests. It prepares students to evaluate, comprehend, communicate, and solve environmental issues, with an interdisciplinary curriculum that may include studies in environmental science, economics, and the humanities. The minor requires at least seven credits—an introductory course plus six electives that provide both depth and breadth in Arts & Humanities, Social & Behavioral Sciences, and Natural Sciences & Mathematics.

ADMISSION TO THE MINOR

No admission requirements.

MINOR REQUIREMENTS

The minor is granted for a minimum of seven credits:

- Either a 4 or 5 on the Environmental Science AP Exam or one of the following introductory courses: ENVS197/BIOL197/E&ES197, ENVS195, ENVS 219F, E&ES 155, or E&ES199.
- **Plus six elective courses related to the environment as follows:**
 - Three must come from one department (depth requirement)
 - The courses must come from three departments or programs (breadth requirement)
 - The courses must come from two divisions of the three academic divisions: Arts & Humanities, Social & Behavioral Sciences, and Natural Sciences & Mathematics (breadth requirement)

DANCE

Dance deepens one’s knowledge and expression of human experience. We believe in the creative and intellectual potential of each person. Dance can change the world.

The Dance Department at Wesleyan is a contemporary program with a global perspective. The curriculum centers on the creative act – imagining, making and doing. Our program is interdisciplinary, embodied, collaborative, physically and intellectually rigorous, and fosters personal and social transformation.

DEPARTMENTAL ADVISING EXPERTS

Pedro Alejandro; Katja Kolcio; Hari Krishnan; Joya Powell and Nicole Stanton

DANCE MAJOR

MAJOR DESCRIPTION

The Major in Dance is centered on the creative act—envisioning, making, and doing—to cultivate artistry and inspire personal and social transformation. It is an interdisciplinary, hands-on, and collaborative journey, demanding both physical and intellectual rigor. Our curriculum covers contemporary dance with a global lens, featuring historical and experimental approaches in Bharata Natyam, Ghanaian, Afro-Brazilian, ballet, Javanese, jazz, and hip hop, and contemporary dance. Students explore choreography, improvisation, pedagogy, research methods, dance ethnography, history, and techniques that embrace diverse learning styles.

Dance majors are driven by a passion for expressing themselves through movement. The artistic practice of dance requires physical strength, flexibility, endurance, and a dedication to refining their craft. Alongside their academic pursuits, they may have some performance experience or interests in other areas of dance, theater and arts production.

Dance majors develop keen intercultural competence and understanding of dance in its cultural manifestations, leading them to a deeper celebration of difference. They become articulate in movement, words and action, honing their skills to articulate original ideas and collaborate with fellow artists and scholars to create powerful original work.

ADMISSION TO THE MAJOR

- Successful completion of one .5 credit dance technique course and one additional 1.0 credit course in the Dance Department. These two classes will count towards Major Requirements.
- An admissions interview with the Prospective Major Advisor, Katja Kolcio.

MAJOR REQUIREMENTS

Code	Title	Hours
Choreography Workshop *		2
Dance Tech Lab		.5
Dance Techniques		2.5
Advanced Dance Performance Practice		.75
Advanced Research in Dance **		2
Applied Tech Practice		.75
Elective ***		1
Senior Research (Project or Thesis) #		1-2
Total Hours		10.5-11.5

- * Choreography workshops should be taken freshman, sophomore, or junior years
- **At least one of the two credits in advanced research must be a hybrid methodology course with a substantial written component.
- ***Any Advanced Research course can be counted as an elective after the 2-credit research requirement is met.
- # either a 1 credit essay or 2 credit thesis

Advanced Research in Dance Course Options

At least one of these two credits must be a hybrid methodology course with substantial written component.

Code	Title	Hours
DANC249	Making Dances I: Solo Work	1
DANC250	Dance Composition: Choreography Workshop	1
DANC371	Site-Specific Choreography	1
DANC375	Dance History: Why Dance Matters	1
DANC376	The Artist in the Community: Civic Engagement and Collaborative Dancemaking	1
DANC377	Perspectives in Arts as Culture: Ukrainian Arts and Language as Resistance *	1
DANC379	Dance as Activism	1

- * Perspectives in Dance, including:
- Perspectives in Dance: Queering the Dancing Body: Critical Perspectives on LGBTQ Representation
 - Perspectives in Dance: South Indian Cinema: An Ethnography of Dance and Film

Total Credits: 10.5 (Project) or 11.5 (Thesis)

STUDENT LEARNING GOALS

The major is designed to provide broad and deep exposure to the discipline of dance as a critical, embodied, reflexive, and socially engaged research method. The department conceives of dance performance broadly, embracing traditionally staged performances and site-based works as well as mediated and interdisciplinary performative modes. Students take courses in choreography, improvisation, pedagogy, research methods, dance ethnography, history, and

dance techniques as well as unique interdisciplinary courses that integrate varied modes of learning. The curriculum focuses on providing students with the skills to develop new knowledge and produce original research expressed through performance, writing, and their vital intertwining into new hybrid forms.

1. Majors will develop keen intercultural competence. One of the fundamental tenets of the major is that the analysis of dance through practice and observation is central to the study of cultures and is a vital aspect of exploration in cross-cultural inquiry. Students should develop a proficiency in the understanding of dance in its cultural manifestations, leading them beyond knowledge of a culture or an appreciation of diversity to an understanding and celebration of difference.
2. Majors will develop an awareness of the ways in which dance structures and is structured by culture. This includes a thoughtful understanding of the problematics of spectatorship and the role of the artist in society; as well as issues of embodiment, difference, and performativity.
3. Majors will develop an understanding of the basic principles of dance-making through creative process work including choreography, improvisation, and public enactments. They will acquire the ability to develop an idea or research question through the elements of dance performance such as: the skillful exploration and application of movement vocabulary; choreographic form; and the consideration of framing devices. They will develop the ability to structure original ideas and to create powerful original work.
4. Majors will develop an intercultural understanding of the elements of physical expression and performance artistry and will attain and/or maintain intermediate (or above) technical proficiency, based on sound kinesiological principles. They will develop these skills in at least two of the following techniques: modern/contemporary, Bharata Natyam, West African, ballet, black vernacular forms/hip hop, and South East Asian dance forms (when available).
5. Majors will develop strong reflective and critical awareness of the research methodologies available in dance studies articulated in written, choreographic, and performative forms.
6. Majors will develop the ability to work collaboratively to complete complex tasks through engagement with all elements of performance production, including technical theater, scenographic design, and publicity.

HONORS

Dance majors who wish to be candidates for departmental honors must complete senior research in the form of a thesis. Projects are not eligible for the award of honors. The student's proposed research design will be revised and finalized in consultation with the student's prospective tutor and should reflect the special interests and talents of the individual student. The award of honors or high honors is based on the scope and excellence of the thesis and on the student's creative work.

To receive the award of honors, a thesis must follow these guidelines:

- The honors thesis typically consists of approximately 20 minutes of group choreography (usually two 10-minute dances) and an 80- to 100-page research paper situating the choreography within an aesthetic and historical context.
- It must involve enough work to warrant two credits.

Each honors candidate is required to make a commitment to candidacy in advance. The student must file a written statement of his or her intention to stand for departmental honors with both the department and the Honors College. The department will nominate candidates for departmental honors to

the Honors College. Nominations will occur only if it appears reasonably certain that the candidate's work will be completed on time and in the desired form. The department in cooperation with the Honors College will arrange suitable mid-April deadlines for performances and the submission of theses.

Each honors thesis will have two readers. One of these must be chosen from outside the Dance Department. The department will base its recommendation for departmental honors upon the readers' written evaluations and joint recommendations.

CAPSTONE EXPERIENCE

All majors complete a capstone experience, either a one-semester senior project or a two-semester senior thesis.

DANCE MINOR

MINOR DESCRIPTION

The Minor in Dance introduces students to aspects of the creative act of dance—imagining, making, and doing. Students minoring in Dance will combine classes in physical practice and technique with elective courses in which performance projects are conceived and created, and other electives and hybrid courses that explore topics such as the cultural history of dance as a form of research, writing about dance, and anatomy and kinesiology.

Dance minors will gain interdisciplinary knowledge and abilities that can enhance their opportunities for future study or careers, such as creativity, performance, body awareness and mechanics, discipline, and time.

ADMISSION TO THE MINOR

MINOR REQUIREMENTS

The Minor in Dance consists of 5.25 credits:

Physical Practice in Dance Techniques 2 credits

Four courses (two credits at .5 credits per course) in a physical practice representing at least two traditions, and achieving level 2 in at least one tradition.

Elective 1 credit

One additional credit (any level) within the Dance Department. This can be in the form of one 1 credit course, or two .5 credit courses.

Performance .25 or .5 credit

One Advanced Dance Practice experience (either DANC435 .25 credit or DANC445 .5 credit).

Project-Based courses 2 credits

Two credits must be in project-based courses within the Dance Department that culminate in making. At least one of these must be an upper-level course. These may be dance-making courses or hybrid courses that require a substantial final practical project in the form of a public performance or event. The culminating project does not need to be a choreographed dance. Projects could be events, workshops, site-specific happenings, social media platforms, etc., that have an embodied component and circulate in a public context. Projects need to be approved by a Dance Department advisor.

Physical Practice Courses include: West African Dance I, West African Dance II, West African Dance III, Bharata Natyam I, Bharata Natyam II, Bharata Natyam III, Contemporary Techniques I, II, III, Afro Brazilian Dance I, Ballet I, Ballet II, Javanese Dance I and II, Dance Forms of the African Diaspora I and II, Hip Hop, Contact Improvisation, and Delicious Movements.

Project Based Courses include:

Dance making courses such as Solo Dance Composition, Group Dance Composition, Site Specific Choreography, Choreography Workshop, and Hybrid courses such as Dancing Bodies, Perspectives in Dance as Culture: Queering the Dancing Body, Research Methods, Auto-Ethnographic Methods, Dances of the African Diaspora, Repertory, Performance Art, and Media for Performance.

Other elective options include, in addition to those listed above: History, Repertory, Dance FYS courses, Introduction to Dance, Space Design for Performance, and Forays into Dance (TBA currently being developed).

Physical Practice Courses include:

Code	Title	Hours
DANC202	Ballet I: Practice and Theory	0.5
DANC211	Contemporary Dance Technique I	0.5
DANC213	Jazz Technique	0.5
DANC244	Delicious Movement: Time Is Not Even, Space Is Not Empty	1
DANC251	Javanese Dance I	0.5
DANC260	West African Dance I	0.5
DANC261	Bharata Natyam I: Introduction of South Indian Classical Dance	0.5
DANC360	West African Dance II	0.5
DANC362	Bharata Natyam II: Embracing the Traditional and the Modern	0.5
DANC365	West African Dance III	0.5

PROJECT BASED COURSES

Includes dance making courses, such as:

Code	Title	Hours
DANC249	Making Dances I: Solo Work	1
DANC250	Dance Composition: Choreography Workshop	1
DANC371	Site-Specific Choreography	1

and hybrid courses such as:

Code	Title	Hours
DANC103	Dancing Bodies	1
DANC237	Performance Art	1

DANC244	Delicious Movement: Time Is Not Even, Space Is Not Empty	1
DANC364	Media for Performance	1
DANC375	Dance History: Why Dance Matters	1
DANC377	Perspectives in Arts as Culture: Ukrainian Arts and Language as Resistance	1
DANC378	Repertory and Performance: The Jewel Thief: A Ballet of the Mind	1
DANC381		1.5

OTHER ELECTIVE OPTIONS

In addition to the courses listed above, elective options include:

Code	Title	Hours
DANC104F	Introduction to Contemporary Dance from Global Perspectives (FYS)	1
DANC107	Writing Is Dancing, Dancing Is Writing	1
DANC111	Introduction to Dance	1
DANC301	Anatomy and Kinesiology	1
DANC447 & DANC378	Dance Teaching Practicum and Repertory and Performance: The Jewel Thief: A Ballet of the Mind	0.5

DIGITAL DESIGN COMMONS

The Digital Design Commons is a newly formed multimedia center on Wesleyan's campus, currently in its second phase of construction. Formerly home to the Davison Art Center, the DDC engages students in creative research and artistic practice across a range of disciplines. Once completed, the DDC will feature a series of production spaces, including a motion capture studio, and several video editing and sound recording suites. Courses offered within the DDC deepen conceptual and technical knowledge of multimedia approaches within a variety of artistic practices. The DDC also offers student-led training and workshops, along with a growing inventory of multimedia equipment.

EARTH AND ENVIRONMENTAL SCIENCES

The Earth and Environmental Sciences Department (E&ES) at Wesleyan University covers many aspects of the natural world, on Earth and on other planets. Course topics range from active volcanoes to climate change to eco-conservation. The E&ES major is designed to prepare students for graduate school, as well as provide a basis for a variety of careers in the private or public sectors. Courses in geology, environmental science/environmental chemistry, environmental science/ecology, and planetary geology lead to different areas of specialization and career options.

Many E&ES students work with faculty on research projects that range from climate studies to active volcanoes in the Andes, from the structure of the Grand Canyon to the structure of the planet Venus, from nearby coastal areas (Long Island Sound) to faraway lagoons (Vieques Island, Puerto Rico). The culmination of the major is a capstone course where students perform independent research in the field (Puerto Rico, Death Valley, the Connecticut River Valley, or Hawaii).

UNDERGRADUATE PROGRAM DEPARTMENTAL ADVISING EXPERTS

All program faculty

EARTH AND ENVIRONMENTAL SCIENCES MAJOR

MAJOR DESCRIPTION

The Major in Earth and Environmental Sciences (E&ES) provides students with a broad base of knowledge of the natural world. Topics of study range from planetary evolution to climate change to ecosystem conservation. Courses in geology, environmental science, environmental chemistry, ecology, and how the Earth’s spheres—geosphere, hydrosphere, atmosphere, biosphere—interact with each other prepare students to choose their own areas of specialization. E&ES majors work with faculty on research projects that range from research into past climates using terrestrial and ocean proxies to the geological makeup of the planet Venus, and from nearby coastal areas to faraway lagoons. The major culminates in a capstone course where students perform independent research in the field.

Students drawn to this major may have a passion for environmental awareness and responsibility, understanding natural systems, or an orientation toward problem-solving. They may enjoy spending time in nature doing fieldwork as well as working in the lab and communicating complex concepts to diverse audiences.

Earth and Environmental Sciences majors are equipped with the knowledge and skills to decipher the structure, composition, and dynamics of the Earth system, conduct research, analyze data, evaluate scientific claims, and communicate their findings. They are well prepared to pursue advanced post-graduate

opportunities or various careers in fields like education, environmental consulting, conservation science, planetary science, sustainability, urban planning, renewable energy, and climate analysis.

ADMISSION TO THE MAJOR

GATEWAY COURSES FOR THE MAJOR

To declare E&ES as a major, students are required to have completed an E&ES gateway course (E&ES101, E&ES115, E&ES155, E&ES197), and to have completed (or be currently taking) two gateway courses (or higher) in biology, chemistry, mathematics, or physics.

Code	Title	Hours
E&ES101	Dynamic Earth	1.25
E&ES115	Introduction to Planetary Geology	1
E&ES155	Earth System Science	1.25
E&ES197	Introduction to Environmental Studies	1

SOPHOMORE SEMINAR

Code	Title	Hours
E&ES195	Sophomore Field Course	0.5

MAJOR REQUIREMENTS

The Department of E&ES does not require completion of Wesleyan's General Education Requirements to complete the major. Honors students are required to complete Wesleyan's General Education Requirements through stage II.

The following is a list of required courses for the major (14 credits total):

Code	Title	Hours
E&ES Gateway Course		
E&ES101	Dynamic Earth	1.25
or E&ES115	Introduction to Planetary Geology	
or E&ES155	Earth System Science	
or E&ES197	Introduction to Environmental Studies	
Natural Science Courses & Mathematics *		
BIOL181 & BIOL182	Principles of Biology I: Cell Biology and Molecular Basis of Heredity and Principles of Biology II	4
or CHEM141 & CHEM142	General Chemistry I and General Chemistry II	
or CHEM143 & CHEM144	Honors General Chemistry I and Honors General Chemistry II	
or PHYS111 & PHYS112	Introductory Physics I and Introductory Physics II	
or PHYS113 & PHYS116	General Physics I and General Physics II	
or MATH121 & MATH122	Calculus I and Calculus II	
Upper-Level Electives **		7
E&ES195	Sophomore Field Course ***	.5
E&ES497	Senior Seminar #	1

* E&ES majors are required to take one year (two semesters) of gateway courses from two of these disciplines for a total of four courses.

**Students must complete seven upper-level courses.

***This course is typically taken during the spring semester of the sophomore year.

This course is typically taken during the senior year.

NATURAL SCIENCE COURSES

Upper-level courses in these disciplines can be substituted, as can statistics courses for mathematics. Students are urged to complete these introductory courses within their first two years. Students considering professional work in the sciences are encouraged to take gateways in more than two disciplines, including any associated lab courses, as well as upper-level coursework in other natural science and mathematics disciplines.

UPPER-LEVEL ELECTIVES

Students must complete seven upper-level courses. Five of these courses must cover the following thematic areas: two from "Earth and Planets" (numbered 201-233 and 301-333), two from "Hydrosphere, Biosphere, and Atmosphere" (numbered 234-266 and 334-366), and one from "Methods" (numbered 267-299 and 367-399). Lab courses associated with the primary courses are required. The remaining two courses may come from any thematic area. Also, the following can be used: up to two upper-level natural science or math courses taken in other departments, and up to two pre-approved courses from study-abroad programs. At least four of the upper-level courses must be Wesleyan E&ES courses. Tutorials and the senior thesis do not count towards the requirement.

THEMATIC AREAS EARTH AND PLANET COURSES

Code	Title	Hours
E&ES201	Geology of Connecticut	1
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES215 & E&ES216	Earth Materials and Earth Materials Laboratory	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES230 & E&ES231	Sedimentology and Sedimentology/Stratigraphy Techniques	1.5
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	1.5
E&ES319 & E&ES320	Meteorites and Cosmochemistry and Meteorites Laboratory	1.5
E&ES321	Planetary Evolution	1
E&ES325	Geologic Field Mapping	1
E&ES327	The Microbial Fossil Record	1

HYDROSPHERE, BIOSPHERE, AND ATMOSPHERE COURSES

Code	Title	Hours
E&ES234 & E&ES235	Geobiology and Geobiology Laboratory	1.5

E&ES238	The Forest Ecosystem	1
E&ES240	Invasive Species: Biology, Policy, and Management	1
E&ES244 & E&ES245	Soils and Soils Laboratory	1.5
E&ES246	Hydrology	1
E&ES248	Environmental Investigation and Remediation	1
E&ES250 & E&ES251	Environmental Geochemistry and Environmental Geochemistry Laboratory	1.5
E&ES254	Renewable Energy	1
E&ES257	Environmental Archaeology	1
E&ES258	Community Paleoecology	1
E&ES260 & E&ES261	Oceans and Climate and Techniques in Ocean and Climate Investigations	1.5
E&ES312	Global Change Biogeography	1
E&ES327	The Microbial Fossil Record	1
E&ES329	Fire Ecology and Management	1
E&ES342	Ecological Resilience: The Good, the Bad, and the Mindful	1.25
E&ES350	Animals in Archaeology	1

METHOD COURSES

Code	Title	Hours
E&ES270	Quantitative Methods for the Biological and Environmental Sciences	1
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES368	Isotope Geochemistry	1
E&ES375	Modeling the Earth and Environment	1
E&ES380	Advanced GIS and Spatial Analyses	1
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	1.5
E&ES399	Calderwood Seminar in Public Writing: Environmental Science Journalism	1
E&ES568	Isotope Geochemistry	1
E&ES274	Strategies in Conservation and Environmental Action	1

CAREER OPTIONS AND THE E&ES MAJOR

Earth and environmental sciences majors go on to pursue a wide range of careers, limited only by their own imaginations. **E&ES** courses can be selected to help prepare for a student's long-term interests. The course listings below are not requirements, but suggested guidelines. Students interested in academic or research careers should consider involvement in research or producing a senior thesis.

Geology. These courses can help prepare students for academic careers or jobs in industry or government in natural resource or geohazard management (e.g., USGS, water resources, mining and energy industries).

Code	Title	Hours
E&ES101	Dynamic Earth	1.25
E&ES115	Introduction to Planetary Geology	1
E&ES155	Earth System Science	1.25
E&ES201	Geology of Connecticut	1

E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES230 & E&ES231	Sedimentology and Sedimentology/Stratigraphy Techniques	1.5
E&ES246	Hydrology	1
E&ES260 & E&ES261	Oceans and Climate and Techniques in Ocean and Climate Investigations	1.5
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	1.5
E&ES321	Planetary Evolution	1
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	1.5
E&ES497	Senior Seminar	1

Environmental Science/Environmental Chemistry. These courses can help prepare students for jobs in consulting, government, or nonprofit organizations (e.g., EPA, NOAA, USGS, state agencies), or for academic careers in climate science and water resources.

Code	Title	Hours
E&ES155	Earth System Science	1.25
E&ES197	Introduction to Environmental Studies	1
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES234 & E&ES235	Geobiology and Geobiology Laboratory	1.5
E&ES244 & E&ES245	Soils and Soils Laboratory	1.5
E&ES248	Environmental Investigation and Remediation	1
E&ES250 & E&ES251	Environmental Geochemistry and Environmental Geochemistry Laboratory	1.5
E&ES260 & E&ES261	Oceans and Climate and Techniques in Ocean and Climate Investigations	1.5
E&ES270	Quantitative Methods for the Biological and Environmental Sciences	1
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES380		1
E&ES368	Isotope Geochemistry	1
E&ES497	Senior Seminar	1
BIOL216	Ecology	1

Planetary Geology. These courses can help prepare students for jobs in government and industry (e.g., NASA, remote sensing, and GIS contractors) or for academic careers in space science and remote sensing.

Code	Title	Hours
E&ES101	Dynamic Earth	1.25
E&ES115	Introduction to Planetary Geology	1
E&ES155	Earth System Science	1.25
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	1.5
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	1.5
E&ES223 & E&ES224	Structural Geology and Field Geology	1.5
E&ES280 & E&ES281	Introduction to GIS and GIS Service-Learning Laboratory	1.5
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks	1.5
E&ES321	Planetary Evolution	1
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory	1.5

GENERAL EDUCATION

Candidates for honors in E&ES are required to complete the University's General Education Expectations through stage II.

STUDENT LEARNING GOALS

Students graduating with a BA degree in Earth and environmental sciences should be able to:

- **Decipher the structure, composition, and dynamics of the Earth system.** The student should understand the structure and composition of Earth's spheres (geosphere, hydrosphere, atmosphere, biosphere), and how these spheres interact with one another and change over time.
- **Apply the scientific method.** The student should be able to develop and test scientific hypotheses.
- **Understand data.** The student should understand how earth and environmental sciences data are produced, interpreted, and applied.
- **Apply quantitative tools.** The student should be able to select and apply appropriate quantitative techniques to Earth and environmental sciences questions (e.g., calculus, statistics, spatial analysis).
- **Use the primary literature.** The student should be able to search for and understand publications from the primary scientific literature.
- **Critically evaluate scientific claims.** The student should be able to critique arguments made in the Earth and environmental sciences literature.
- **Communicate.** The student should be able to present Earth and environmental sciences data and their interpretation in a variety of written, visual, and oral formats.
- **Conduct research.** The student should be able to carry out an original research project, including: the identification of a research problem; the formulation of a hypothesis; the design of the methodology; the collection,

processing, and interpretation of data; and the presentation of findings in written, visual, and oral formats.

RELATED PROGRAMS OR CERTIFICATES

- **The College of the Environment**, which includes the environmental studies-linked major and Environmental Studies Certificate, provides a linkage between the sciences, public policy, economics, and the arts and provides a wide variety of career options.
- **The Planetary Science Group and the Planetary Science Course Cluster** seek to understand the origin and evolution of the solar system in which we live and the other solar systems that we have identified in our galaxy.
- **The Service-Learning Center and Service-Learning Course Cluster** seek to broaden students' understanding of course content through activities that are, at the same time, of service to the community.

BA/MA PROGRAM

Wesleyan offers a BA/MA program for exceptional Wesleyan students. The E&ES Department requirements for the BA/MA degree are the same as those of the MA degree outlined above, however please note the expectations for BA/MA students in the timeline.

For details about the BA/MA program see: https://www.wesleyan.edu/grad/graduate-programs/bama_program.html

For additional information, please visit wesleyan.edu/ees/graduate/ (<https://wesleyan.edu/ees/graduate/>)

HONORS

Candidates for honors in E&ES are required to complete the University's General Education Expectations through stage II.

CAPSTONE EXPERIENCE

Code	Title	Hours
E&ES409	Senior Thesis Tutorial	1
E&ES410	Senior Thesis Tutorial	1
E&ES497	Senior Seminar	1
E&ES498	Senior Field Research Project	.5

MASTER OF ARTS IN EARTH AND ENVIRONMENTAL SCIENCES

The Earth and Environmental Sciences Department (E&ES) at Wesleyan University covers many aspects of the natural world, on Earth and on other planets. Course topics range from active volcanoes to climate change to eco-conservation.

The Department of Earth and Environmental Sciences offers a program leading to the degree of Master of Arts in Earth and Environmental Sciences. This program is designed for students who desire further training prior to initiation of a doctoral program at another university or for whom the master's degree will be the terminal degree. Wesleyan also offers a BA/MA program for exceptional undergraduate students. Graduate students are offered a unique opportunity for accelerated and personal instruction in a small department setting with strengths in geology, paleoclimate, ocean sciences, planetary science, and environmental science. MA or BA/MA students may elect a course of study resulting in the planetary science concentration.

MA candidates typically take six upper-level science or math course credits and two MA thesis research credits. All students are expected to enroll in a graduate pedagogy course in the first semester of enrollment and the Research Discussion in Earth and Environmental Sciences course. Conducting original research is an important component of graduate studies. Students should identify a project and advisor in the course of their first semester so that they can start their research as soon as possible. The E&ES Department requirements for the BA/MA degree are the same as those for the MA degree.

All admitted MA students are offered a full tuition waiver, stipend, and benefits for this two-year program. Graduate students are typically offered one 9-month and one 12-month stipend. Teaching assistants are assigned specific duties by their supervising faculty. Duties may include supervising laboratories, assisting the faculty in lecture preparation, providing help sessions, and grading.

To complete their MA degree, students will submit a written thesis describing their research, give a public oral presentation and defend the results before the faculty.

COURSES

Students typically take six upper-level science or math course credits (of which at least four must be in E&ES) and two MA thesis research credits (E&ES549 and E&ES550). Based on a student's background and research interests, the thesis committee will decide on the program of study, which may include increasing or decreasing the number of required courses. Students who enter the MA program with greater than eight upper-level science or math courses (the minimum necessary for a Wesleyan E&ES BA) may use those courses in place of Wesleyan MA credits. Students must earn a minimum of six credits (including the two MA thesis research credits) at Wesleyan. All students are expected to enroll in a graduate pedagogy course in the first semester of enrollment and E&ES557, Research Discussion in Earth and Environmental Sciences, each semester it is offered.

Full-time graduate students are expected to complete all courses with a grade of B- or better. Failure to achieve these minimal expectations may result in dismissal from the program. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

There is no language requirement for the MA in Earth and Environmental Sciences.

PROGRESS AND QUALIFYING EXAMS

Qualifying Exam. Competence in general knowledge about the Earth and environmental sciences will be assessed by a written examination taken after the end of the second semester. The thesis advisor, in concert with the E&ES faculty, will construct several questions. The student will then have two days to answer these questions. The student can use any written source for guidance ("open book" format), and each answer should not exceed one page (single-spaced). The committee and any interested E&ES faculty will then meet with the student to have a 30-minute conversation about the questions and answers. Based on the outcome of the exam, the committee may suggest coursework or independent study on particular topics.

TEACHING

FUNDING

Upon admission, graduate students are typically offered one 9-month and one 12-month stipend. The terms of the teaching stipend require that the student devote approximately 10 hours per week on departmental responsibilities, such as driving the departmental vans, assisting in laboratory maintenance, or teaching assistantships. Teaching assistants are assigned specific duties by their supervising faculty. Duties may include the supervision of laboratories, assisting the faculty in lecture preparation, providing help sessions, and grading.

Instructional holidays and university breaks apply to academic course meetings, but not necessarily to research. Be aware that the faculty uses much of these breaks to perform research as they have other commitments during the academic year. As a student's research often involves close collaboration with the faculty, graduate students will commonly devote university breaks to research. Students' vacations should be planned with the faculty advisor to ensure continuity of research.

Graduate students are expected to fully participate in the scholarly activities in the department, including teaching opportunities, attending departmental seminars, and presenting their own work to the Wesleyan and scientific communities.

PRACTICAL INFORMATION

Graduate Office. Each student has access to the shared graduate student office (SC 307). A telephone is available there for local calls. Some students may have their desk in one of the laboratories, depending on their research topic.

RESEARCH

Conducting original research is an important component of graduate studies. Upon arrival, students are expected to discuss their research interests with the E&ES faculty. Students should identify a project and advisor in the course of their first semester so that they can start their research as soon as possible. Students must realize that they will spend much of their time on the chosen research project, so they should ensure that the topic indeed represents their interests.

Areas of faculty specialization (also check faculty webpages):

- Raquel Bryant (starting Fall 2022): Ancient earth-ocean interactions, paleoceanography and paleoenvironmental reconstructions, quantitative paleoecology, and marine micropaleontology
- Barry Chernoff: Systematics and biogeography of freshwater fishes of Latin America; morphological evolution; conservation of aquatic ecosystems
- Kim Diver: Island biogeography, Geographic Information Systems (GIS)
- Martha S. Gilmore: Planetary geomorphology; remote sensing of Mars, Venus, southwest U.S., and Long Island Sound
- James Greenwood: Cosmochemistry, hydrogen, oxygen and sulfur isotopic systematics of lunar rocks, chondrites and martian meteorites, Mars analogue studies in St. Lucia
- Tim Ku: Aqueous geochemistry; isotope geochemistry; the biogeochemistry of marine and terrestrial sediments of the tropics (Panama, St. Lucia) and North America
- Suzanne O'Connell: Sedimentology; marine geology, paleoceanography/ climate change, continental margin sedimentology in the North Atlantic and Southern Oceans
- Helen Poulos: Forest and fire ecology, plant ecophysiology, forest disturbance dynamics
- Phil Resor: Structural geology and crustal deformation, Geographic Information Systems (GIS)
- Dana Royer: Terrestrial paleoclimatology and paleoecology, paleobotany, carbon cycle, plant physiology

MA or BA/MA students in the natural sciences and mathematics may elect a course of study resulting in the planetary science concentration. Details may be found here: <http://www.wesleyan.edu/planetary/Graduate.html>.

THESIS AND DEFENSE

Thesis Proposal

Upon admission to the program, the student will meet with the E&ES Graduate Program committee to discuss the general requirements and goals of graduate study. Students should select an advisor, thesis topic, and thesis committee by the end of the first semester. After students have made a choice of faculty advisor and thesis committee, they must, in cooperation with the advisor, write a 1-2 page thesis proposal, in which they provide an outline of the proposed research. The thesis committee will read the proposal, and discuss it with the student before acceptance of the research project.

Meetings with the Thesis Committee

At the beginning of each semester, and at the beginning of the summer, each graduate student will be asked to prepare a written summary (2-3 pages) of his or her progress and accomplishments and meet with their thesis committee. This summary will be reviewed by the thesis committee and used to discuss and evaluate the student's progress; failure to make adequate progress can be grounds for dismissal from the program. The discussion of the committee will be summarized by the student's advisor and relayed to the student in writing. Typical topics of discussion by the committee include:

1. Review of objectives and status of research and plans for future work.
2. Review of performance in course work taken. Outline of courses planned for the future, and their relationship to research and career goals.
3. Review of other accomplishments (i.e., department assistance, teaching).
4. General progress and comfort in the program.

In addition to a written statement of progress, the student is required during the 3rd semester to deliver an oral presentation about their research to the department (typically as part of EES 557). The purpose of this exercise is to give the student an opportunity to organize and present their work in a semi-formal setting and receive direct feedback.

An ideal timeline of student responsibilities is:

Beginning of first semester: Orientation meeting with E&ES graduate program committee.

Beginning of second semester (BA/MA last semester of senior year): Identification of and meeting with advisor and thesis committee. Submission of thesis proposal.

End of second semester/Beginning of summer: Written statement of progress/meeting with thesis committee.

Early Summer: Qualifying exam.

End of Summer/Beginning of third semester: Written statement of progress/meeting with thesis committee.

Early third semester (BA/MA first semester MA year): Oral presentation of results to date.

Beginning of fourth semester (BA/MA last semester MA year): Written statement of progress/meeting with thesis committee.

End of program: Thesis and Defense.

Thesis and Defense

Competence in research will be assessed by a written thesis and an oral presentation of research results before the faculty. The format of the written work is to be discussed and agreed upon with the student's advisor and committee.

The advisor and thesis committee in consultation with the student will agree upon the schedule of the defense. All members of the thesis committee must have read and must approve, in writing, a complete thesis before a defense can be scheduled. Practically, this requires that a thesis draft, already vetted by the advisor, be made available to the remainder of the thesis committee at least one month before any proposed defense date. Once the committee has agreed that the thesis is ready to defend, the form for scheduling the defense can be obtained from the E&ES department.

There are three readers on a thesis, including the thesis advisor. The thesis advisor gives the research grade; the two readers determine the quality of work with an emphasis on the thesis as a written document. One reader from outside Wesleyan University or from another department within Wesleyan University is allowed. The defense is attended by the readers plus other members of the E&ES faculty.

The oral defense typically consists of:

- A 30-minute presentation of the research results by the student.
- A 30-minute question and answer period about the thesis.

Directly after the defense the faculty meets to decide whether to award the Master of Arts degree.

Please consult Wesleyan's Office of Graduate Student Services.

Graduation Requirements for the MA <https://www.wesleyan.edu/grad/academics/graduationrequirementsma.html> for information about the format

of the thesis, scheduling of the defense, exit appointments and due dates for participating in Commencement. The student is responsible for following all University requirements.

CONCENTRATIONS

Planetary science is an emerging interdisciplinary field at the intersection of geology and astronomy with substantial contributions from physics, chemistry, and biology. The subject matter is planets, including those around other stars (exosolar systems). The science questions include the most important of our times: How do planets (including Earth) form? How common are they in the universe? What is their range of properties and how do they evolve? Is there or was there ever life on other planets? Certainly, the discovery of even microbial life beyond Earth would rank as one of the greatest human achievements of all time, and this quest lies squarely within the purview of planetary science.

Program of Study. MA or BA/MA students in the natural sciences and mathematics may elect a course of study resulting in the planetary science concentration. The concentration is designed to engage students in the research results, skills, and methods of planetary science. The planetary science concentration requires:

- **Completion of a minimum of four courses from the list below with a grade of B- or better.** At least one of these courses must be from a department outside the student's home department.
- **Students are also required to attend the Planetary Science Seminar, ASTR555/E&ES555.**
- **All students must complete a written thesis on a topic relevant to planetary science.** A member of the student's thesis committee will be from the planetary science concentration committee. The planetary science concentration will be designated on the student's transcript upon the successful completion of this program of study and MA requirements of the student's home department. For more information, please contact the any of the members of the planetary science concentration committee or the graduate school.

Planetary Science Concentration Committee: Martha Gilmore, *Earth and Environmental Sciences*; James Greenwood, *Earth and Environmental Sciences*; William Herbst, *Astronomy*; Meredith Hughes, *Astronomy*; Seth Redfield, *Astronomy*

PHYS213	Waves and Oscillations
MATH AND COMP courses as appropriate in consultation with advisor	

Seminar

ASTR/E&ES555	Planetary Science Seminar (offered each semester; take a minimum of three semesters)	0.75
--------------	--	------

Thesis

The MA degree program requires a thesis that demonstrates the student's ability to perform original, independent research in planetary science. The specific guidelines for the thesis are those of the student's home department.

ADDITIONAL INFORMATION

THE BA/MA PROGRAM

Wesleyan offers a BA/MA program for exceptional Wesleyan students. The E&ES Department requirements for the BA/MA degree are the same as those of the MA degree outlined above, however please note the expectations for BA/MA students in the timeline.

For details about the BA/MA program see: https://www.wesleyan.edu/grad/graduate-programs/bama_program.html

For additional information, please visit wesleyan.edu/ees/graduate (<https://wesleyan.edu/ees/graduate/>)

ECONOMICS

Economics involves the study of social relationships pertaining to the production and allocation of the means of life. One branch, macroeconomics, addresses issues relating to the performance of the economy as a whole, such as economic growth, unemployment, and inflation, while the other, microeconomics, studies the relationships that make up an economy, addressing problems of income and wealth inequality, corporate power, industrial performance and global trade, and financial flows. Students majoring in economics find that they acquire an excellent preparation for careers in academics, business, consulting, law, or government.

DEPARTMENTAL ADVISING EXPERT

Gilbert Skillman

ECONOMICS MAJOR

MAJOR DESCRIPTION

The Major in Economics introduces students to the ways people, businesses, governments, and other entities allocate and manage finite resources to meet societal and individual needs. Students will examine various theories, principles, and analytical methods to learn about microeconomic topics like supply and demand, means of production, distribution of goods and services, market structures, and consumer choice. They will also learn about macroeconomic dynamics in trade, national income, employment, inflation, wealth inequity, public finance, and monetary policies. Students will gain an understanding of the historical evolution of economic thought and the factors that contribute to economic growth, development, or decline. Research and analysis methods rely on quantitative modeling, so mathematical techniques like statistics, calculus, and econometrics are used to help explain and predict economic phenomena.

The study of economics attracts a diverse range of students who bring an analytical mindset to learning more about human behavior, incentives, and decision-making processes—especially regarding the sharing and trading of scarce resources. Students may be interested in global issues and the economic factors behind current events. Some are drawn to the theoretical aspects of economics, while others are eager to apply these principles to real-world situations.

A Major in Economics affords students a broad and flexible base of knowledge that can be applied to a large range of pursuits. Students will be prepared for advanced study or future careers in fields such as academics, research, business, finance, consulting, entrepreneurship, law, and government.

ADMISSION TO THE MAJOR

Students intending to major in Economics must complete Introduction to Economic Theory (ECON110). Students can be exempted from the ECON110 course requirement if they have a score of 4 or 5 on both AP Micro and AP Macro or equivalent IB scores.

To be accepted into the major, students must also have either completed or be enrolled in Introductory Econometrics (ECON300). The pre-requisites for ECON300 are a probability and statistics course and either (i) completion of ECON110 or (ii) receiving the bypass for ECON110 and completing both a 200-level ECON elective and the math pre-requisite for ECON110. The probability and statistics prerequisite can be fulfilled by completing ECON103, MATH132, or PSYC200, or by receiving a score of 4 or higher on AP Statistics or a 5 or higher on the IB Higher Math test. A student who fails to obtain a grade of C+ or better in ECON110 may be admitted to the major only after obtaining a grade of C+ or better in ECON300. Prospective economics majors are strongly encouraged to complete ECON300 and one other core course by the end of sophomore year.

MAJOR REQUIREMENTS

The Economics curriculum consists of three types of courses: Introductory, Core, and Elective. All students majoring in economics must complete or pass out of the introductory course, ECON110, and complete at least eight letter-graded courses numbered 201 or above. Of these eight, three must be the core courses, and five must be electives. All courses counted toward the economics major must be taken for a letter grade. All core courses must be taken at Wesleyan.

Economics majors fulfill the capstone requirement by successfully completing three upper-level electives, each of which requires a substantial research paper or project.

Code	Title	Hours
Required Courses		
Core Courses		3
ECON300	Introductory Econometrics	
ECON301	Microeconomic Analysis	
ECON302	Macroeconomic Analysis	
Electives		5
200-Level Electives *		
300-Level Electives (3 required) ^		

* Both CSS220 and CSS320 may count as 200-level electives.

^ At least 3 of the electives must be at the 300-level.

STUDENT LEARNING GOALS

Economics majors acquire the following knowledge and competencies:

- The cultivation of a critical mindset and rigorous logical reasoning
- The capability to read and understand scholarly literature
- Quantitative methodologies and statistical skills, and working with large data sets
- The capability to engage in theoretical and empirical analysis of economic problems
- Research, analysis, and communications skills

- A fundamental knowledge of how resources and wealth have been created, consumed, and transferred through human history
- An understanding of economic principles and market forces and how they shape society such as macroeconomics, microeconomics, supply and demand, market structures, economic growth, inflation, employment, and international trade
- Adaptability and versatility in strategic problem-solving.

Students will demonstrate their knowledge and abilities through research projects, critical analysis papers, participation in class discussions, collaborative group work, and multimedia presentations. Written exams, peer review, faculty committees, and self-assessments will also evaluate their class performance.

ADVANCED PLACEMENT

Please see the department web page for the latest information the advanced placement policy.

ADDITIONAL INFORMATION

ACADEMIC OPPORTUNITIES

Phi Beta Kappa

This is a national honor society for the liberal arts. The department nominates senior Economic majors based on an evaluation of their GPA in economics courses, their overall GPA, their fulfillment of General Education expectations, and their performance in the department's core courses.

Omicron Delta Epsilon

This is an international honor society for economics. The current student leadership invites eligible students to join. The ODE faculty advisor screens students who have taken at least four economics courses, with at least three at the 200-level or higher. Their economics GPA must be B+ or better. Students do not need to be economics majors to qualify and may meet eligibility criteria as early as their sophomore year.

CONTACT INFO

Linda Mascaro
Telephone: (860) 685-2348
Email: lmascaro@wesleyan.edu

HONORS

Honors and high honors in economics are awarded based on a completed honors thesis representing two semesters of independent research. To be considered for departmental honors, a student may choose one of two options:

1. Enroll in the two-semester senior honors thesis tutorial sequence (ECON409 and ECON410). The student begins thesis research with a faculty advisor in the fall and completes the thesis by the spring term.

2. Expand a research paper completed in a 300-level elective with a suitable faculty advisor and complete the thesis in the spring term (ECON410) .

Honors candidates present their work in progress to the faculty at the end of the fall semester. Theses are evaluated by a committee of readers, including the thesis advisor and two other faculty members.

All candidates for honors should have at least a B+ average in their economics courses before their senior year and a three-year cumulative average of B or better for all courses.

A student who does not meet these requirements may petition the department for an exception; the petition must be signed by the student and by the faculty member who has agreed to supervise the project. The petition should address the student's capability to undertake independent research and the feasibility of the proposed project.

CAPSTONE EXPERIENCE

Economics majors will fulfill the department's capstone requirement by completing three upper-level electives, each of which requires the successful completion of a substantial research paper/project.

ECONOMICS MINOR

MINOR DESCRIPTION

The Minor in Economics provides students with a solid historical, theoretical, and analytical basis for understanding the ways goods and services are produced, allocated, and distributed within societal structures. Numerous fields value the skills and knowledge gained from studying economics, including research, quantitative and statistical analysis, strategic problem-solving, and understanding the dynamics of human behavior, markets, and institutions.

ADMISSION TO THE MINOR

Students intending to minor in Economics must complete Introduction to Economic Theory (ECON110). Students can be exempted from the ECON110 course requirement if they have a score of 4 or 5 on both AP Micro and AP Macro or equivalent IB scores.

To be accepted into the minor, students must also have either completed or be enrolled in Introductory Econometrics (ECON300). The pre-requisites for ECON300 are a probability and statistics course and either (i) completion of ECON110 or (ii) receiving the bypass for ECON110 and completing both a 200-level ECON elective and the math pre-requisite for ECON110. The probability and statistics prerequisite can be fulfilled by completing ECON103, MATH132, or PSYC200, or by receiving a score of 4 or higher on AP Statistics or a 5 or higher on the IB Higher Math test . A student who fails to obtain a grade of C+ or better in ECON110 may be admitted to the minor only after obtaining a grade of C+ or better in ECON300.

MINOR REQUIREMENTS

The Economics Minor curriculum consists of three types of courses: Introductory, Core, and Electives. All students minoring in economics must complete five courses (three core courses and two electives) in addition to completing or passing out of ECON110. All courses counted toward the economics minor must be taken for a letter grade. All core courses must be taken at Wesleyan.

- The three core courses are: ECON300, ECON301, and ECON302
- The elective courses are numbered 201 and higher.
- One of the two electives must be an upper-tier elective, numbered 303 to 399.
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments, including CSS, may count toward the minor.

One elective course in economics taken at another institution may count toward the minor as the lower-tier elective only, subject to the department chair's approval

ENGLISH

The English Department offers courses that foster critical thinking about the relationships among literature, culture, and history. Students of English become adept critics of poetry, novels, essays, and plays. They develop knowledge of the history of literary culture and about the evolving genres, forms, and ideologies of literary expression. They study the relation of literary texts to their historical contexts, and they learn to read both literary and non-literary texts critically. As they develop their knowledge, students of English hone their skills as critical writers and explore their potential as creative voices.

DEPARTMENTAL ADVISING EXPERTS

Several professors serve as Advising Experts each year. Responsibility for transfer of credit and study-abroad courses for non-majors is assigned to a specific faculty member and can change from year to year. Please refer to the department website: wesleyan.edu/english/contact/ (<https://wesleyan.edu/english/contact/>).

ENGLISH MAJOR

MAJOR DESCRIPTION

The Major in English helps students hone their skills as critical writers and explore their potential as creative voices. English courses foster critical thinking about the relationships among literature, culture, and history. Students of English become adept critics of poetry, novels, essays, and plays. They develop knowledge of literary culture and about the evolving genres, forms, and ideologies of literary expression. They study the relation of literary texts to their historical contexts. They refine their craft as creative writers.

Students who pursue the Major in English often have a deep love for literature, language, and the written word. They seek to build upon their strengths in reading, writing, communications, and critical interpretation. They bring an open-minded intellectual curiosity to engage with complex social, cultural, and philosophical issues and ideas.

Studying English at the collegiate level prepares students for various career possibilities, including teaching, creative writing, journalism, publishing, marketing, information science, law, and business. Strong writing and communication skills are valued in nearly every profession and field of advanced study.

ADMISSION TO THE MAJOR

Students considering majoring in English should consult the department website (<https://www.wesleyan.edu/english/students/index.html>) (<https://www.wesleyan.edu/english/students/>). Potential majors must take ENGL201: Ways of Reading in their first or second year. Students who have taken the course and received a grade of B- or better will be admitted as majors during the spring term of their sophomore year. Students who take the course during that term will be admitted provisionally, pending receipt of a grade of B-

or better. In exceptional circumstances, and with the approval of the department chair, students who have not taken ENGL201 by the end of the sophomore year may be admitted to the major contingent on completion of ENGL201 in the junior year.

MAJOR REQUIREMENTS

The English major at Wesleyan consists of requirements and electives totaling 10 distinct, full-credit courses, or the equivalent of partial-credit courses. Students choose one of two pathways to complete the major, Literature or Creative Writing.

All major courses must be sponsored or co-sponsored by English, with the exception of one "related course." A "related course" 200-level or above that bears on the study of literature but is not sponsored or co-sponsored by English may count as an elective with the approval of the English advisor (more information below). One English-sponsored or co-sponsored FYS may also count as an English major elective.

Remaining credits must be at the 200-level or higher, with at least one 300-level course required for the Literature Pathway and three 300-level creative writing courses required for the Creative Writing Pathway. All but three of the 10 total credits must be taken at Wesleyan. Appropriate credits transferred from other institutions may count toward the 10-credit requirement in consultation with the department's Transfer of Credit coordinator (https://www.wesleyan.edu/english/contact/dept_contact.html). Students who believe that courses they have taken or will take at other universities should fulfill core course requirements may "petition" (<https://www.wesleyan.edu/english/students/petitions.html>) the Department for an exception. Requests to petition should be submitted to the chair.

The Major Program:

English major requirements consist of the gateway course (ENGL201: Ways of Reading), core requirements, Literature or Creative Writing pathway requirements, and electives.

Core Requirements: In addition to the gateway course, **ENGL201: Ways of Reading**, eight additional core requirements must be fulfilled to complete the major. These courses must be taken within the English department. An individual course may fulfill up to two core requirements. **Thus, core requirements may be completed with as few as four or as many as eight courses.**

- **Literary History:** 3 courses (Literary History 1: to 1660, Literary History 2: 1660-1870, Literary History 3: 1870-present)
- **Literary Geography:** 3 courses (World Literature, British Literature, American Literature)
- **Theory:** 1 course
- **Creative Writing:** 1 course

Paths through the Major (10 total credits required):

- **Literature Pathway:** ENGL201, core requirements (see above), plus electives, with at least one 300-level course.
- **Creative Writing Pathway:** ENGL201, core requirements (see above), electives, plus four creative writing courses that meet the following criteria:
 1. One creative writing course at any level. (Completion of the Creative Writing core requirement noted above fulfills this requirement.)
 2. Two 300-level creative writing courses (workshops and special topics) with minimum grade of B+.
 - 3.) One upper-level creative writing workshop with minimum grade of B+.

- As noted above, for both the Literature and Creative Writing pathways, a “related course” at the 200-level or above that bears on the study of literature but is not sponsored or co-sponsored by English may count as an elective with the approval of the English advisor. For example, this course may be in literature in translation or in another language. An English-sponsored or co-sponsored FYS may also count as an elective. Remaining electives must be numbered above 201.

GENERAL EDUCATION

English majors do not need to fulfill the GenEd requirements to complete the major or write an English Honors thesis. However, GenEd fulfillment is required to declare more than a combined total of two majors, certificates, and minors and to be eligible for Phi Beta Kappa and University Honors (not English Department Honors).

COURSES FOR NON-MAJORS

The department offers several FYS courses especially designed for first-year students. Non-major students may also be admitted to many other department courses; please check individual listings for details.

STUDENT LEARNING GOALS

- Develop skills in reading, interpreting, discussing, and writing about literature. English majors learn to be adept critics of a range of genres, including poetry, novels, essays, plays, and more.
- Experiment with or develop the ability to produce new works of literature.
- Build knowledge of the history of literature and develop critical thinking about the relationships among literature, culture, and history.
- Become conversant with literary theory.

STUDY ABROAD

The English Department encourages its majors to consider the valuable experience of study abroad. Study abroad policies are described in detail on the departmental website. (<http://www.wesleyan.edu/english/students/studyabroad.html>)

ADVANCED PLACEMENT

Students with AP scores of 4 or 5 in either English Literature or English Composition, or with scores of 5–7 on an English A1 or English A2 International Baccalaureate exam, will receive one course credit. No extra credit is given for taking more than one exam. This credit does not count toward the major.

LANGUAGE REQUIREMENT

There is no language requirement for the English major.

PRIZES

The Department of English annually gives out an array of academic awards, fellowships, and prizes. Fellowships and writing prizes may require applications and submission of writing samples. Full explanations are available on the department website (<http://www.wesleyan.edu/english/>).

TRANSFER CREDIT

Students may obtain transfer credit in English for courses taken at other universities in the United States in the summer or during a leave of absence. Courses must be approved by the English Department’s Transfer of Credit coordinator (https://www.wesleyan.edu/english/contact/dept_contact.html). Students should expect to provide documentation from a course catalog to receive advance permission. In most cases, on completion of courses taken at other universities, students will need to show additional documentation (e.g., syllabi and assignments) demonstrating their coursework to receive transfer credit. No more than two credits may be earned during a summer. More detailed information about transfer credit can be found on the department website (<http://www.wesleyan.edu/english/students/credit.html>).

HONORS

The bachelor’s degree with honors in English is awarded on the basis of an outstanding academic record and an honors thesis written during the senior year. Students are eligible to write a critical thesis if they have an average of 91.7 in the courses counting toward the major (at least six courses by the end of the junior year) and have completed a substantial research paper in a departmental course designated research or research option. Students wishing to write a creative thesis need not fulfill the research requirement, but they must have a 91.7 average in courses counting toward the major and have received an A- or better in at least two creative writing courses that count toward the major, one of which must be an intermediate or advanced workshop taken at Wesleyan. English majors do not need to fulfill the GenEd requirements to write an English Honors thesis. However, GenEd fulfillment is required to declare more than a combined total of two majors, certificates, and minors and to be eligible for Phi Beta Kappa and University Honors (not English Department Honors). A detailed description of the process for earning honors can be found on the department website (<http://www.wesleyan.edu/english/students/honors.html>).

CAPSTONE EXPERIENCE

English majors may undertake capstone experiences in several ways. Students who are eligible and who qualify to be candidates for honors may enroll in a two-semester honors tutorial that culminates in the submission of an honors thesis.

Students may also propose a one- or two-semester senior essay project. In addition, in each major pathway, students are required to complete a 300-level seminar. This seminar may be taken before the senior year.

FEMINIST, GENDER, AND SEXUALITY STUDIES

The Feminist, Gender, and Sexuality Studies (FGSS) Program is administered by the chair and other members of the program's core faculty. Core faculty are those who are actively involved in the program, who teach FGSS courses, advise FGSS majors and senior theses, and may serve as program chair. The program sponsors an annual symposium and the Diane Weiss Memorial Lecture.

DEPARTMENT ADVISING EXPERT

Victoria Pitts-Taylor

FEMINIST, GENDER, AND SEXUALITY STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Feminist, Gender, and Sexuality Studies (FGSS) engages students in critical analyses of gender and sexuality within the broad context of race, class, and ethnicity, and the ways in which these categories shape institutional systems, cultures, and societies. FGSS majors have excellent opportunities to develop their own concentrated area of study and individually designed research.

Students drawn to the FGSS Major are typically interested in understanding social norms, power structures, and systemic inequalities related to gender and sexuality. They may be motivated by a desire to advocate for marginalized groups, promote inclusivity, and advance social justice and equity.

A degree in Feminist, Gender, and Sexuality Studies prepares students for careers in various fields, including activism and advocacy, education, human resources, social work and counseling, law and public policy, media and communications, and non-profit organizations.

ADMISSION TO THE MAJOR

The prerequisite for becoming a feminist, gender, and sexuality studies (FGSS) major is taking one of the gateway courses. These courses are designated annually. Students ordinarily take a gateway course during either semester of the sophomore year and declare the major in the spring semester. Gateway courses include:

Code	Title	Hours
FGSS200	Sex/Gender in Critical Perspective (FGSS Gateway)	1
SOC245	Intersectionality and Identity (FGSS Gateway)	1
FGSS277	Feminist Philosophy and Moral Theory (FGSS Gateway)	1

MAJOR REQUIREMENTS

Students are assigned to faculty advisors and should familiarize themselves with requirements for writing a senior honors thesis, since these may affect curricular choices for the junior year. In the fall semester of the junior year, the student ordinarily takes FGSS209. During this semester the student, in consultation with the advisor, develops a major proposal that lists the courses that will compose the student's major course of study, including a written rationale for the student's chosen concentration within the major. The Major Proposal Form, approved by the advisor and with the concentration rationale attached, is submitted to the Feminist, Gender, and Sexuality Studies Department office by the end of the fall semester of the junior year.

The concentration rationale is a brief explanation (500 words) of the student's chosen concentration within the major and describes the courses the student has chosen to constitute it. The major as a whole consists of 9 courses as follows: Three core courses (a gateway course, FGSS209 and FGSS405), two distribution courses (FGSS courses from an area outside the concentration), and the four courses comprising the concentration. All FGSS majors complete senior research, either in the form of a senior essay (completed as part of the Senior Seminar) or a senior honors thesis (through a two-semester tutorial with a faculty member, normally in addition to the Senior Seminar). The senior year is devoted to completion of the coursework for the concentration, work on a senior essay or thesis, and participation in the senior seminar. Non-FGSS courses may count toward the concentration if approved by the student's faculty advisor. Only two credits transferred from another institution may be applied to the major.

Every major must take the following courses:

- **One gateway course.** These are designated annually and serve as introductions to the interdisciplinary field of feminist, gender, and sexuality studies. Gateway courses examine gender as a factor in the politics and practices of the production of knowledge and of social and cultural life, with particular attention to the intersection of gender with other identity categories and modes of power—race, class, sexuality, and ethnicity.
- **FGSS209.** This course traces contemporary developments in feminist theory and considers how feminism has been articulated in relation to theories of representation, subjectivity, history, sexuality, technology, and globalization, among others, paying particular attention to the unstable nexus of gender, sexual, racial, and class differences.
- **FGSS405.** Set up as a workshop, the goal of this course is to develop an enabling and challenging intellectual environment for majors to work through intensively the theoretical, methodological, and practical concerns connected with their senior research projects.

CORE COURSES GATEWAY AND REQUIRED COURSES

In 2019-2020, these include:

Code	Title	Hours
FGSS200	Sex/Gender in Critical Perspective (FGSS Gateway)	1
FGSS209	Feminist Theories	1
FGSS277	Feminist Philosophy and Moral Theory (FGSS Gateway)	1
FGSS405	Senior Seminar	1

Distribution requirement. A distribution requirement of two **FGSS** courses that must be from two different disciplines and should not overlap in their content with courses that make up the student's concentration in the major.

Concentration. Four courses forming the area of concentration should represent a coherent inquiry into some issue, period, area, discipline, or intellectual approach related to feminist, gender, and/or sexuality studies. Normally, the courses will be drawn from various departmental offerings and will be selected in consultation with an advisor.

STUDENT LEARNING GOALS

The Feminist, Gender, and Sexuality Studies (FGSS) Department is an interdisciplinary program staffed by faculty with wide-ranging research interests from across the university. The FGSS Department major and curriculum enable students to engage in critical analyses of the construction of gender and sexuality as categories of analysis and experience within the broad matrices of race, class, and ethnicity, and the ways in which these categories inform knowledge production. Our curriculum has a broad offering of courses with wide subject, geographic, and thematic coverage. Majors have excellent opportunities for developing their own areas of concentrated study and for individually designed research. Our courses offer students historical and contemporary explorations of women, gender, and sexuality from a variety of disciplinary and interdisciplinary perspectives on Africa, the Caribbean, East Asia, Europe, Latin America, and South Asia, as well as the U.S.

FGSS expects its majors to:

- become skilled at reading and writing critical feminisms;
- have a well-developed understanding of the interdisciplinary, transnational and intersectional concerns of the field; and
- interrogate the historical and contemporary, local and transnational forces underlying social and economic injustice and inequality in order to promote greater possibilities for freedom and social justice.

In order to achieve these goals, students should be able to:

- form an argument using evidence
- critically evaluate the arguments of others
- analyze texts from a variety of disciplines
- situate social and political issues in their historical context
- assess how activism and intellectual inquiry are interrelated

TRANSFER CREDIT

Only two credits transferred from another institution may be applied to the major.

HONORS

Rising seniors wishing to write a Senior Honors Thesis (click here for more information (https://www.wesleyan.edu/fgss/major/senior_research.html)) must have, at the end of their junior year, an average of at least B+ in all of the courses that count for the major. These courses include the following: gateway course, FGSS 209 (Feminist Theories), two distribution courses, and the four courses from the student's area of concentration within the major. Prospective thesis writers must submit to the FGSS Chair by the last Friday in April of their

junior year a transcript reflecting that they have met this requirement (or will have done so by the end of the junior year). Only students who complete the two-semester thesis can stand for honors. Students who have not achieved a B+ average will undertake the one-semester senior essay project.

CAPSTONE EXPERIENCE

Completion of a senior essay (one credit) or an honors thesis (two credits) on a theme or topic related to the student's area of concentration within the major is required. Rising seniors wishing to write a senior honors thesis must have an average of B+ in all courses that count toward the major, including the gateway course, FGSS209, and three of the four courses from the student's area of concentration. Prospective thesis writers must submit to the feminist, gender, and sexuality studies department chair by the last Friday in April in the second semester of the junior year a statement indicating the topic of the thesis and name of the thesis tutor.

GERMAN STUDIES

Interdisciplinary in nature, the academic field known as German studies has undergone rapid development in recent years. At Wesleyan, the German Studies Department takes an active part in internationalizing the curriculum, educating students for a world in which a sophisticated understanding of other cultures and their histories has become increasingly important. A background in German studies can prepare students for careers in many fields. Among them are teaching, translation, publishing, arts administration, journalism, law, international business, and library sciences. German studies also prepares students for graduate study in literature, linguistics, philosophy, art history, history, psychology, the natural sciences, music, and other disciplines. At every level, the department's courses taught in German stress the four basic skills: reading, writing, listening, and speaking. These courses develop students' awareness of how language functions to convey information, express emotions, and communicate thought. The department's courses taught in English focus on the specific historical experiences of German-speaking countries and the contributions of those countries to many realms of human endeavor. These courses often raise the question of translation, asking how successfully cultural phenomena specific to a particular place and time can be expressed in another language.

The topics of courses offered by members of the department and the affiliated faculty include German literature from the 18th century to the present, philosophy, literary theory, art history, German film from its origins to the present, political science, environmental studies, and history. A number of courses, taught in English in other departments, are cross-listed and can be counted toward the major.

For more information about German Studies, please visit our department website. (<http://www.wesleyan.edu/german/>)

DEPARTMENTAL ADVISING EXPERTS

Iris Bork-Goldfield, Martin Baeumel, Ulrich Plass

GERMAN STUDIES MAJOR

MAJOR DESCRIPTION

The Major in German Studies provides students with a strong foundational understanding of German language, literature, and thought as they explore the rich and diverse cultures of German-speaking countries. The department offers courses both in German, at all levels of proficiency, and in English. The department's interdisciplinary program is organized around three major periods in German history: Enlightenment, Weimar Classicism, and Romanticism (1650–1830); Liberalism, Modernism, Fascism (1830–1945); and Cold War, Postmodernism, and Neoliberalism (post-1945). Students will strive for insight and understanding about the development of German-language cultures while achieving fluency and accuracy with spoken and written German in a variety of contexts. Study abroad in a German-speaking country is highly encouraged and supported by the department.

There are no prerequisites for students seeking to pursue the major. The department offers two sections of elementary German every semester, and the quick pace of learning in the department's language sequence enables students to study abroad as early as the spring semester of their sophomore year. The department's student body represents a diversity of intellectual backgrounds and academic interests. Students typically combine their German Studies major with an additional major, such as College of Letters, History, English, Psychology, Biology, or Computer Science.

German majors develop linguistic, transcultural, and analytic skills that can lead to advanced study and various career opportunities in fields such as international relations, business, academia, publishing, or cultural exchange.

ADMISSION TO THE MAJOR

To become a German studies major, a student should have no grade lower than a B in any language course taken in the department. All German language courses below the 300-level counted toward the major must be taken for a letter grade. The department recognizes the diversity of student interests and goals by giving its majors great flexibility in designing their programs of study. Students should work closely with their major advisors to put together coherent courses of study and assure that they will make steady progress toward their German language proficiency goals. The department strongly recommends that majors fulfill Stages I and II of the General Education Expectations.

MAJOR REQUIREMENTS

The German studies major requires satisfactory completion of nine credits' worth of courses. At least six credits must be earned in courses taught in German above the level of GRST102, with at least three of the six being GRST seminars at the 300-level or courses taken at a university in Germany. The remaining three courses may be in either English or German. All German language courses below the 300-level counted toward the major must be taken for a letter grade. Majors are strongly encouraged to spend a semester or a summer participating in an approved program in Germany. We encourage students to study at our Smith/Wesleyan program in Hamburg during their spring semester of the sophomore or junior year. A fall semester option is also available. Courses taken in Hamburg count toward the major, provided the subject matter is relevant to German studies and the instruction and assignments are in German. A maximum of four courses in one semester or six courses in two semesters taken in Germany may be counted toward the major. For students who have not taken GRST213, one credit of intensive language instruction in Germany may count toward the major. Before enrolling in courses in Germany, students must obtain approval from their major advisor. Students must take at least one 300-level German studies course at Wesleyan upon their return. Please note GRST101 and GRST102 do not count towards the German Studies minor.

STUDENT LEARNING GOALS

The German studies major is designed to allow students to explore the rich and diverse cultures of the German-speaking countries through a flexible interdisciplinary program that stimulates the students' creative and critical capacities and can serve as the basis for future academic or professional study or employment.

The specific goals are as follows:

- **Knowledge of the German language:** Courses are designed to enable students to achieve at least advanced mid-level proficiency in speaking and comprehending spoken German, according to the ACTFL guidelines. Students will have ample opportunity to become fluent and accurate writers in German in a variety of genres and contexts.
- **Intercultural literacy:** Students can expect to gain insight into unfamiliar cultural attitudes and artifacts, which enables them to be open-minded and competent participants in their own and foreign environments.
- **Historical breadth:** Students will be able to acquire insight into the development of German-language cultures and thought from the Enlightenment to the present and those cultures' and ideas' impact in Europe and across the globe.
- **Knowledge in the field of German studies:** Through their courses, majors become acquainted with techniques of textual interpretation, with the scope of the field, and with prevailing research methods and scholarly concerns.
- **Experience in German-speaking countries:** Students will receive strong encouragement and support to experience a German-speaking country firsthand through study abroad during the academic year or the summer, internships, thesis/capstone research, or study or teaching after graduation.

STUDY ABROAD

For more information about studying abroad in Germany, please visit our department website. (<http://www.wesleyan.edu/german/studyabroad.html>)

Please make sure to check the application procedures and deadlines for your program as well as those for Wesleyan's Office of Study Abroad (<http://www.wesleyan.edu/cgs/osa/>), located in Fisk Hall 201.

Those students for whom study abroad is not possible during the fall or spring semester should consult with the department about the possibility of taking courses during the summer.

ADVANCED PLACEMENT

See Advanced Placement Credit (http://www.wesleyan.edu/registrar/general_information/ap_ib_credit.html) information. Students with prior knowledge of German should take the online placement examination before registering for courses. For information about the placement test, please contact Emmanuel Paris-Bouvret (eparis@wesleyan.edu) in the Fries Center for Global Studies.

PRIZES

Students who demonstrate excellence in the study of German may be candidates for prizes given from the Scott, Prentice, and Blankenagel funds. Students seeking funding for special projects or summer language study can apply for the Helmut and Erika Reihlen Fund (http://www.wesleyan.edu/german/scholarships_prizes.html).

ADDITIONAL INFORMATION

German Haus is a wood-frame house at 65 Lawn Avenue, with six single rooms and one double, that provides a vibrant center for German-themed events and activities on campus. Whether discussing current events over coffee and pastries, interpreting poems, watching classic or contemporary films, or hearing

about faculty members' research, the residents and their guests can explore a multitude of interests.

HONORS

- **Eligibility.** To become a candidate for honors in German studies, a student must have earned a B+ or better in all German Studies courses above GRST102 taken for a grade.
- **Candidacy.** A prospectus must be handed in and approved by the prospective tutor or the department chair by the end of the Reading Period in the spring of the junior year. Enrollment in senior thesis tutorials (GRST409 and GRST410) is required. Candidates for honors in German studies and another department or program may be required to have two thesis tutors. The two departments or programs must agree in advance about the tutoring arrangement and evaluation of the honors project.
- **Honors projects.** Honors can be earned only for two-semester projects.
- **Deadlines.** Deadlines for nomination to candidacy and submission of the honors project are set by the Committee on Honors.
- **Evaluation and award of honors.** Honors projects will be evaluated by the tutor(s) and at least two other readers. A student receiving high honors may, at the department's discretion and subject to the guidelines of the Committee on Honors, be nominated to take the oral examination for University Honors.

CAPSTONE EXPERIENCE

Students who wish to undertake a one-semester capstone project have wide latitude as to the topic, medium, and form they choose. They should discuss their idea with a member of the department and enroll in an individual tutorial (GRST401 or GRST402) supervised by a German studies or affiliated faculty member.

GERMAN STUDIES MINOR

MINOR DESCRIPTION

The Minor in German Studies is interdisciplinary in nature. It combines the close study of German language, literature, history, and culture with broad humanistic inquiry into trends and structures of German-speaking societies. Four of the six required courses are taught in German on the Wesleyan campus, with other electives available as local classes or study-abroad coursework.

Students who minor in German Studies develop transferrable language skills along with cultural knowledge and understanding that will enhance their career opportunities in the global job market.

ADMISSION TO THE MINOR

Any student who intends to earn the minor in German studies should speak with a faculty member of the department by the end of the sophomore year. Satisfactory completion of the minor will be certified by the department.

MINOR REQUIREMENTS

The minor requires six course credits with a minimum GPA of B. Four of the courses must be taught entirely in German and must be above the GRST102 level and; at least three of these must be taken at Wesleyan. The other two courses may be in either English or German. All German language courses below the 300-level counted toward the minor must be taken for a letter grade. Please note GRST101 and GRST102 do not count towards the German Studies minor.

GLOBAL SOUTH ASIAN STUDIES

TBD

- Global South Asian Studies Major (p. 119)
- South Asian Studies Minor (p. 120)

GLOBAL SOUTH ASIAN STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Global South Asian Studies (GSAS) enables students to explore the region's cultures within a worldwide context. South Asia (including India, Pakistan, Bangladesh, Nepal, Sri Lanka, Bhutan, the Maldives, and the Tibetan cultural world) is home to more than a quarter of the world's population, with a diaspora of 24 million people. Students will study many aspects of this rich and diverse heritage using a variety of disciplinary methods and theories, including postcolonial critique, embodiment theory, and feminist and queer theory, while cultivating an awareness of transnational dynamics. The global/diasporic aspect of GSAS will also give students an understanding of worldwide movements of labor, capital, and culture. The program encourages the study abroad experience in which students gain insights through immersion in local cultures.

Students with a strong cultural curiosity and interest in regional dynamics, history, and contemporary issues may be attracted to the Major in Global South Asian Studies.

In addition to a level of regional and global expertise, students will exercise their critical thinking, research, language, and communications skills in this course of study. This makes them valuable job candidates in fields such as education, government, diplomacy, business, and international trade and relations.

ADMISSION TO THE MAJOR

Students may apply for the major no earlier than their second semester of their sophomore year. There are no prerequisites for application. The same process applies to transfer students.

MAJOR REQUIREMENTS

Students are required to take a minimum of 11 courses (10 courses for one credit each and .25 credit capstone experience) designated as appropriate for the major. A maximum of 15.25 credits—including thesis credits—may be taken. Except for language courses (which have no limit), up to two of these may be

taken away from Wesleyan (e.g., on a study abroad program). The 11 required courses must include:

- GSAS 150: Foundations in Global South Asian Studies.
- The equivalent of at least four credits in South Asian languages. There is no limit to the number that can be taken off campus in approved programs.
- The capstone experience.
- At least one course in each of the four distribution categories.
- No more than six courses that count towards the major can come from any one of these categories.
- The distribution categories are as follows:
 - Contemporary Society and Practice (CSP): Courses primarily concerned with the study of contemporary South Asian communities, their practices, and their productions
 - Historical Inquiry (HI): Courses primarily concerned with the historical study of South Asia
 - Creative Arts (CA): Courses in which students obtain training in the practice of a specific form of art deriving from South Asian communities
 - Language (L): Courses in which students gain comprehension in South Asian languages

GENERAL EDUCATION EXPECTATIONS

Among other expectations, honors will only be awarded to those who have completed at least stage I of the general education expectations.

STUDENT LEARNING GOALS

Students completing the major will be expected to have:

- Expertise in the cultural breadth and historical depth of South Asia and the global South Asian diaspora complemented by experience with some creative artistic traditions.
- Intermediate or advanced language proficiency in a South Asian language.
- Analytic skills in intercultural interpretation with an awareness of the necessity for a coherent, multi-methodical approach to study. Understanding of the development of South Asian studies as a field (and its most recent iteration as “Global South Asian Studies”), and of “area studies” more generally.

STUDY ABROAD

Majors are encouraged to study abroad for at least one semester, if not two. Ordinarily, study abroad would be conducted in a South Asian country. However, as the South Asian diaspora is global, students may profit from study abroad in a country with a significant South Asian diasporic population, such as Trinidad, Guyana, Canada, Fiji, Singapore, South Africa, etc. It is recommended that students discuss such choices with their faculty advisor in the major.

LANGUAGE REQUIREMENT

The major requires the equivalent of at least four credits in South Asian languages. There is no limit to the number that can be taken off campus in approved programs.

The language requirement signals to students how essential linguistic understanding is not only for communication but for understanding the cognitive worlds involved in spoken and written interaction.

TRANSFER CREDIT

The program accepts only one credit from courses taken off-campus, except in the case of foreign study. This must be for a course not available at Wesleyan. It accepts up to two approved credits taken before arrival at Wesleyan by transfer students for each year of work they transfer (i.e., two credits from incoming sophomores, four credits from incoming juniors).

HONORS

Candidates must declare their interest in undertaking a thesis and a general idea of their topic in a 2-3 page proposal, to be given to the program chair by the last Friday in April.

The proposal should contain a focused description of the work to be undertaken, and a thoughtful articulation of a student's interest in—and history with (such as a list of relevant coursework)—their discipline of choice. In the case of a research project, a bibliography should be included. Students must meet with at least one potential advisor to get feedback on the project before submitting their proposal. Securing the consent of a particular faculty member (named in the proposal) to serve as thesis advisor will facilitate approval of the proposal. The program will determine which proposals will be approved, and students will be notified of the program's decision before classes end in May.

The student must have a minimum of a B+ or 88.3 GPA in the program's courses by the end of their junior year to proceed with the project.

Honors is available for majors who (a) have successfully completed a senior honors thesis, (b) who have at least a 88.3 GPA in the major, and (c) have completed at least stage I of the general education expectations.

Thesis courses may not count toward the 11 required courses for the major.

CAPSTONE EXPERIENCE

Required capstone experience:

Assessment Portfolio and Capstone Symposium. During their time in the major, students will assemble a portfolio of three papers (at least four pages in length each) or works of creative art that they have created during three separate semesters. Taken together, these should give evidence of the student's personal, creative, and intellectual development, as well as their command of critical, analytical, creative, and interpretative skills.

In the drop/add period of the spring term, all senior majors enroll in a .25 credit Cr/U tutorial (GSAS 404), for which they will write a three- to four-page paper reflecting on the portfolio they have assembled and perhaps on other work in the program. This paper allows students an opportunity to assess the arc of their intellectual development as a GSAS major. Papers will be submitted to the program chair and distributed to faculty members for evaluation. At the end of the spring semester, all faculty and graduating majors will meet for a symposium banquet during which faculty will offer detailed feedback on these self-assessments as a prelude to a general discussion about student experiences.

Optional additional capstone experiences:

- Senior essay (one semester, one credit)
- Senior thesis – written, visual, or performative (two semesters, two credits)
- In regard to both, note:
 1. Seniors writing theses and essays will present to faculty and majors their work to date at a November gathering each year.
 2. Seniors who have completed a thesis will present to faculty and majors their work a week after its submission.

SOUTH ASIAN STUDIES MINOR

MINOR DESCRIPTION

The Global South Asian studies minor offers opportunities to study these cultures through disciplines as diverse as anthropology, art history, music performance and theory, cultural studies, creative writing, film studies, dance, history, literature, language, government, and religion. The minor allows students to cultivate critical thinking skills using a variety of disciplinary methods and theories, including postcolonial critique, embodiment theory, and feminist and queer theory, while cultivating an awareness of transnational dynamics.

ADMISSION TO THE MINOR

There are no requirements for admission to the Global South Asian studies minor.

MINOR REQUIREMENTS

Students are required to take five courses designated as appropriate for the minor. Up to two of these may be taken away from Wesleyan (e.g., on a study abroad program). Of the five required courses:

- One must be GSAS 150: Foundations in Global South Asian Studies
- At least one course in three of the distribution categories
- No more than three courses can come from any one of these categories
- The distribution categories are as follows:
 - Contemporary Society and Practice (CSP): Courses primarily concerned with the study of contemporary South Asian communities, their practices, and their productions
 - Historical Inquiry (HI): Courses primarily concerned with the historical study of South Asia
 - Language (L): Courses in which students gain comprehension in South Asia's languages
 - Creative Arts (CA): Courses in which students obtain training in the performance or creation of a specific form of art

ADDITIONAL INFORMATION

CONTACT

Interested students should contact Indira Karamcheti (ikaramcheti@wesleyan.edu), William Pinch (wpinch@wesleyan.edu), or Jennifer Collingwood (jcollingwood@wesleyan.edu).

GOVERNMENT

Wesleyan's Department of Government is dedicated to exploring "who gets what, when, and how," as Harold Lasswell defined political science in 1935. The department might well be called a department of political science or a department of politics; it is called the Department of Government for historical reasons. Department faculty today uphold a tradition, more than a century old, of distinction in scholarship and teaching. Each tenured or tenure-track Department of Government faculty member is affiliated with a concentration representing one of the four major subfields of political science: American politics, comparative politics, international relations, or political theory. We offer introductory courses in each of these four concentrations (American is GOVT151; international, GOVT155; comparative, GOVT157; and theory, GOVT159), a range of upper-level courses (**201-368**), and specialized research seminars (**369-399**). In addition, we offer courses in research methodology, individual and group tutorials, and tutoring of senior honors theses. Courses numbered **201-368** are ordered according to field of study, not level of difficulty.

DEPARTMENTAL ADVISING EXPERT

Don Moon

GOVERNMENT MAJOR

MAJOR DESCRIPTION

The Major in Government provides students with a broad knowledge of political science, or the cultural issues and social structures that determine how and why power is distributed, decisions are made, and policies are implemented. Government majors choose a concentration area for in-depth study—either American politics, comparative politics, international relations, or political theory. Each concentration has its own introductory course, survey courses, and advanced seminars.

Students who are drawn to the study of government and political science are typically fascinated with the dynamics of power, authority, and governance at local, national, and international levels. They may have a keen interest in current events and global affairs, or bring a passion for social issues, public service, and activism.

Government majors are prepared to pursue various career paths including public service, government relations, diplomacy, law, education, research, business and corporate sector, non-profits and NGOs, journalism, political campaign consulting, communications, and fundraising.

ADMISSION TO THE MAJOR

To be admitted as a government major, your academic history must show that you have completed at least one government course with a grade of B- or better.

MAJOR REQUIREMENTS

BASIC REQUIREMENTS

- To complete the major requires nine approved government credits
- You may count toward the major only one introductory course (GOVT151, GOVT155, GOVT157, or GOVT159)
- Five of the eight remaining courses must be upper-level Wesleyan **GOVT** courses in the range **201-399**
- The remaining three courses numbered **201** or higher may be:
 - Tutorials in the Government Department (maximum two; only one thesis tutorial may count)
 - A course in a "cognate" discipline (maximum one; must be approved by your GOVT advisor)
 - Political science courses at other U.S. institutions or abroad (maximum two; or three in a year of study abroad)
 - Additional Wesleyan government courses in the range **201-399**

THE FOLLOWING MAY NOT COUNT TOWARD THE MAJOR:

- Student forum courses
- Teaching apprenticeships
- First-year seminars except FYS versions of GOVT151, GOVT155, GOVT157, or GOVT159, which count the same as the regular versions of each course
- Internships either in the United States or abroad
- The Government Department does not grant credit or waive prerequisites for Advanced Placement, International Baccalaureate, or courses taken on ad-hoc programs (e.g., summer study abroad) prior to matriculation at Wesleyan. The only pre-matriculation credits that the department will accept are the government (political science, politics, etc.) credits that the University has authorized from a transfer student's previous full-time institution.

MAJORS MUST CHOOSE AND COMPLETE A CONCENTRATION:

- Four courses, at least three of which must be taken at Wesleyan, complete a concentration. (American Politics, International Relations, Comparative Politics, or Political Theory.)

BREADTH ACROSS THE DISCIPLINE:

- In addition to taking four courses within the chosen concentration, majors are required to take at least one course each in at least two of the three subfields outside the concentration. This requirement assures that majors acquire breadth across the discipline as well as depth in at least one subfield.

GENERAL EDUCATION EXPECTATIONS

- **Stage 2** must be complete to receive honors in government.

PACING

- Majors with fewer than four Government courses by the end of the junior year must drop the major.

For more information, please visit the department's majoring page (http://www.wesleyan.edu/gov/about_major/majoring.html).

COURSES FOR NON-MAJORS

Many students take government courses without majoring in government. Sometimes First-Year Seminars (FYS) are offered, but demand for our regular courses is high, so we cannot offer as many FYS courses as we would like. First-year students and sophomores are welcome, however, to take the introductory courses we offer in each of our four concentrations. Another option is QAC201, the social science methodology course that is offered by the Quantitative Analysis Center and that is cross-listed as GOVT201 (it counts toward the government major). Most of our survey courses are open to first-year students and sophomores, although majors usually have preference.

GENERAL EDUCATION

- **Stage 2** must be complete to receive honors in government.
- For more information about Government Department regulations involving the General Education Expectations, please visit the Government Department's majoring page. (http://www.wesleyan.edu/gov/about_major/majoring.html)

STUDENT LEARNING GOALS

Students who complete the government major should be able to explore systematically a range of political issues and modes of argumentation, drawing on the knowledge, analytical abilities, and quantitative or qualitative skills they have acquired through their courses. They should also be better prepared to think critically, write clearly, and speak effectively. By acquiring these capabilities, government majors prepare themselves for lives of contribution in public service, education, law, business, journalism, and other fields.

STUDY ABROAD

For more information about deciding to study abroad, applying to study abroad, and getting faculty preapproval for study-abroad courses, please visit the department's study abroad page (http://www.wesleyan.edu/gov/department_policies/studyabroad.html).

Up to two courses on an approved one-semester study-abroad program may count toward the major. Majors on full-year programs may count a third course with the approval of their major advisor. A student seeking major or University credit for a study abroad course must give the **preapproving** faculty member a course title and a written course description **before** the first meeting of the study-abroad course, either in person before departing (preferable) or by e-mail from abroad (if the title and course description are unavailable before departure).

No credit will be approved toward the major for internships, introductory courses, or certain School for International Training courses.

Students may count toward the major no more than two credits earned in courses taken away from Wesleyan, whether in a study-abroad program or in another U.S. institution, except in the case of a full year of study abroad, in which case the faculty advisor has full discretion on whether to authorize credit for a third course toward the major.

Independent study projects conducted abroad may be included among the two study-abroad courses that may be counted toward the government major (up to

three for a student studying abroad for a whole year). A student's major advisor may choose to give tentative approval for an independent study project, subject to a review of the written work after the student's return.

ADVANCED PLACEMENT

The Government Department does not grant credit or waive prerequisites for Advanced Placement, International Baccalaureate, or courses taken on ad-hoc programs (e.g., summer study abroad) prior to matriculation at Wesleyan. The only pre-matriculation credits that the department will accept are the government (political science, politics, etc.) credits that the University has authorized from a transfer student's previous full-time institution.

PRIZES

In addition to honors and Phi Beta Kappa nomination, the department offers six prizes to students who excel in the government major. These prizes are listed on the Wesleyan Government Department website.

Davenport Prize: To senior majors who show excellence in the study of political science

Parker Prize: To a sophomore or junior who excels in public speaking

Rich Prize: To a senior whose orations are judged best in composition and delivery

Skirm Prize: To the best research or writing project completed by a government major in his or her junior year

Titus Prize: To support the summer studies of a deserving Wesleyan junior majoring in government, the College of East Asian Studies, or the College of Social Studies

White Fellowship: To majors who show excellence in the study of political science

The department is also formally represented in the Public Affairs Center (<http://www.wesleyan.edu/pac/>) on committees that award Davenport Grants and the Hallowell Prize in the study of social science, as well as on the committee that awards the Carol A. Baker '81 Memorial Prize for the development and recognition of the accomplishments of junior faculty.

TRANSFER CREDIT

For information on how to apply for Government Department authorization to transfer credit from U.S. academic institutions, please visit the department's transfer of credit page (http://www.wesleyan.edu/gov/department_policies/transfercredit.html). For information on how to apply for Government Department authorization to transfer credit from approved study-abroad programs, please visit the department's study abroad page (http://www.wesleyan.edu/gov/department_policies/studyabroad.html).

Requests for Government Department-approved transfer of credit from U.S. academic institutions must be made before the first class meeting of the course whose credit you wish to transfer.

Approval will be granted if, and only if, the course for which you wish to transfer credit is

- Upper level. Introductory courses may not be counted.
- In the field of government (political science, politics).
- Equivalent in terms of contact hours, content, and requirements to Wesleyan courses.
- Offered at a four-year, accredited institution.
- Graded. Credit/no credit courses may not be transferred.

RELATED PROGRAMS OR CERTIFICATES

- Civic Engagement Minor
- Environmental Studies Minor
- Global Engagement Minor
- Human Rights Advocacy Minor

For a full list of all minors and certificates, please visit Wesleyan's course listing (WesMaps (<http://www.wesleyan.edu/wesmaps/>)). Government courses count toward several of them, and Government Department faculty are involved in several minors and certificates in addition to those listed above.

HONORS

For more information on honors at Wesleyan in general, University Honors regulations, evaluation of honors theses, and recipients of honors in government in previous years, please visit the department's Honors page (http://www.wesleyan.edu/gov/about_major/honors.html).

To be eligible for honors in government you must (1) be a government major on track to complete the major requirements in a timely fashion; and (2) have completed Stage I of the General Education Expectations.

To become a candidate for honors in government, you must meet the two eligibility conditions, submit the Thesis Application Form (<http://www.wesleyan.edu/gov/forms/GOVTThesisApplication.pdf>), and have your application accepted by the Government Department. As a general minimum guideline for Government Department acceptance at the time of application, candidates should at least have completed or be enrolled in five government courses and have a grade point average of 91.7 in all government courses.

Optimally, you will meet with a potential tutor (tenured, tenure-track, or full-time visitor in the Government Department) and discuss a thesis project prior to submitting an application. After the Government Department faculty review the applications, you will be notified as to whether you will be a candidate for honors, and as to the name of the faculty member who will serve as your tutor.

If you have become a candidate for honors, you must enroll during the drop/add period of the fall semester of your senior year in GOVT 409, "Senior Thesis Tutorial." You cannot include this tutorial in course planning during pre-registration; you have to add it during the in-semester drop/add period. You add the tutorial electronically, following instructions in the Tutorial Manual on the Tutorial Registration page on the website of the office of the Registrar. Enrolling in GOVT 409 will indicate to the Honors Coordinator in the Office of the Registrar that you are an honors candidate from the standpoint of the University as well as the department.

Before the end of the fall semester, you must submit to your tutor a thesis chapter and thesis outline. The Government Department faculty will review your progress in the honors program. If you are making satisfactory progress you will be approved to continue your honors thesis by enrolling in GOVT 410. If you are making unsatisfactory progress on your honors thesis you will be informed that

you will not be able to continue in the honors program. In this case, alternative options, such as completing the project as a senior capstone, will be identified.

Then, during the drop/add period of the spring semester of your senior year, you must enroll electronically (using the same procedure described above) in a second tutorial, GOVT 410, which is also entitled "Senior Thesis Tutorial." Enrolling in GOVT 410 will indicate to the Honors Coordinator in the Office of the Registrar that, just over half-way into your senior year at Wesleyan, you remain in good standing as an Honors Candidate from the standpoint of the University as well as the department. You may count either GOVT 409 or GOVT 410, but not both, toward the eight upper-division courses you need to complete the government major. Only one thesis tutorial credit may count toward the major.

Finally, to actually *receive* honors in government, you must (1) complete the government major; (2) complete both Stage I and Stage II of the General Education Expectations; and (3) write a thesis judged to be of honors quality.

CAPSTONE EXPERIENCE

A government thesis involves one-on-one tutorials (GOVT409/GOVT410) with a supervising faculty member for a full year, culminating in the submission of an honors thesis, many of which are about 100 pages long.

Seniors seeking a capstone experience lasting a single semester can choose either an individual undergraduate tutorial (GOVT401/GOVT402) or a survey course or seminar that requires a final independent research paper at least 15 pages in length whose topic is chosen by the student. It is not unusual for students to take several such courses during their junior and senior years, sometimes exploring related topics from several different angles. In some advanced survey courses or seminars, students may engage in a capstone experience that culminates in a work of nontraditional scholarship—service learning, public blogs, civic engagement, etc.—rather than a standard research paper.

HISTORY

Why history?

History is a way of understanding the whole of the human condition as it has unfolded in time. Without history, nothing makes sense: from the meaning of words to the formation of identities, to institutions, states, and societies. History straddles the boundary between the social sciences and humanities. Like the other social sciences, it has established methods of investigation and proof, but it differs from them in that it encompasses, potentially, every area of human culture from the beginning of recorded time. Like the other humanities, it uses ordinary language and established modes of telling its stories, but it is constrained by evidence left us from the past.

Majoring in history will help you develop valuable skills transferable beyond the classroom: critical thinking, interpretation, and persuasive writing, as well as analytical and research skills for tackling complex questions. These are all essential to doing a job well after you leave Wesleyan. History is inherently complex and requires the ability to acquire knowledge from large amounts of information and assess evidence and conflicting interpretations of the past. As a history major you will learn to make sense of complexity and to tell a good story.

DEPARTMENTAL ADVISING EXPERTS

For Fall 2020, all members of the history department on duty, except Valaria LopezFadul, William Johnston, Laura Ann Twagira, and Cecilia Miller.

For Spring 2021, all members of the history department on duty, except Valaria LopezFadul, William Johnston, Cecilia Miller, and Nathanael Greene.

HISTORY MAJOR

MAJOR DESCRIPTION

History is one of Wesleyan University's most intellectually diverse majors, offering the possibility to investigate nearly every region and time period of the global past. The study of history is excellent preparation for careers in many fields, including law, journalism, the entertainment industry, business and finance, education, politics and public policy, social activism, and the arts.

ADMISSION TO THE MAJOR

Go to your portfolio and declare the history major.

Any history faculty member may serve as an advisor by agreement with the student. If you are not certain which faculty member would be an appropriate advisor for your intended course of study, you should meet with the department chair, William Johnston.

MAJOR REQUIREMENTS

Nine History Courses Total

N.B. -**higher level** History courses may be substituted for **lower level** ones

Courses taught on campus by History Department faculty but not cross-listed as HIST courses can count toward the major.

Courses to Satisfy the Major

- **One 150-199 "Intro to History"** course, normally taken as a first-year or sophomore at Wesleyan, can count toward the nine history courses in the major.
- **Five History courses 200 level or higher**
- **HIST300 "Issues in Contemporary Historiography" (usually taken first semester junior year).**
- **Two History courses 301 level or higher**
 - One 200 or 300 level History course must devote at least 50% of its attention and content to the period before 1800.
 - One semester of essay or thesis coursework can count toward completion of the History major (HIST403, HIST404, HIST409, or HIST410)
- **Pre-Industrial Era**
 - One 200 or 300-level course required from a pre-approved list.

Capstone Project

Every History Major is required to complete a substantial research project at Wesleyan under departmental faculty supervision. This can take the form of:

1. a senior thesis (HIST409-HIST410)
2. a senior essay (HIST403 or HIST404)
3. an approved research paper for a 300 level seminar indicated by enrollment in .25 credit tutorial (HIST401 or HIST402)

STUDENT LEARNING GOALS

Majoring in history develops valuable skills transferable beyond the classroom. Learning goals broadly include: critical thinking, flexible interpretation of diverse source material, and persuasive writing, as well as analytical and research skills for tackling complex questions that will prepare majors for the changing professional world.

Departmental learning goals are met incrementally as students combine diverse courses and course types:

Category 1: 100-level history courses (numbered 150–189) are in lecture and discussion format and provide introduction to history, including key foundational elements of historical work. Students learn to:

1. Develop historical analysis through critical reading of primary and secondary sources
2. Develop historical writing in terms of argument and style
3. Navigate historical research resources, including libraries, internet sources, archives

Category 2: 200-level history courses are in a lecture and discussion format and continue learning goals from category 1 while developing expertise in specific places, times, and themes. Students learn to:

1. Understand change over time in the context of specific regions, periods, and themes
2. Synthesize and analyze historical material in written work and oral presentations
3. Apply historical research methods and resources

Category 3: 300-level history courses are in a seminar format and focus on specific areas of knowledge to develop subject expertise and research acuity. Students learn to:

1. refine their expository skills in writing and oral presentations
2. identify research questions and master historiography by critically assessing previous historical work
3. develop and execute original, independent research projects

Assessment occurs within each individual course and assignment but also through the History major's relationship with their advisor who monitors the student's overall progress.

LANGUAGE REQUIREMENT

There is no foreign language requirement for history majors, but the department strongly advises all history majors to learn at least one foreign language.

TRANSFER CREDIT

History majors wishing to count transfer credit toward the History Major must consult with their history advisor in advance, and upon their return to Wesleyan provide their advisor with syllabi and other materials, such as exams and papers, from the course(s) that they wish to apply toward the history major. Once approved by the advisor, the course may count for major credit.

CAPSTONE EXPERIENCE

The senior research project gives all history majors the opportunity to apply their skills in historical research toward a topic about which they are passionate. The Capstone Project can be a senior thesis (HIST 409-410) or a senior essay written in a tutorial (HIST 403 or 404) or as an approved research paper in a 300-level seminar indicated by enrollment in a .25 credit tutorial (HIST 401 or 402).

HISTORY MINOR

MINOR DESCRIPTION

History is one of Wesleyan University's most intellectually diverse departments of study, offering the possibility to investigate nearly every region and time period of the global past. The study of history is excellent preparation for careers in many fields, including law, journalism, the entertainment industry, business and finance, education, politics and public policy, social activism, and the arts.

The minor in history offers students interested in history an avenue to gain coherent expertise in the field without committing to the nine-credit coursework and research required for the major.

ADMISSION TO THE MINOR

Students can declare the minor through the Minor Declaration tool in WesPortal.

MINOR REQUIREMENTS

(Approved by History Department on 2 February 2023) ~~7 April 2021~~)

Six History Courses Total

N.B. ~~-Higher~~ **higher** level History courses may be substituted for **lower** level ~~ones.~~ ~~ones~~

-Courses must be taken at Wesleyan; however, up to three courses taken by transfer students at their previous institution may count towards the minor. ~~Wesleyan.~~

-Courses taught on campus by History Department faculty but not cross-listed as HIST courses can count towards the minor.

Courses to Satisfy the History Minor

- **Three History courses 150 or higher**
- **Two History courses 300 level or higher**
 - One History course must devote at least 50% of its attention and content to the period before 1800.
 - Only courses taught by faculty appointed in or affiliated with the History Department may count toward the minor.
 - Tutorials, education in the field, and student forums cannot be counted toward the minor.
 - AP or IB credit cannot count toward the minor.

LATIN AMERICAN STUDIES PROGRAM

Latin American Studies (LAST) is an interdisciplinary program designed to provide an integrated view of Latin America and the Caribbean. The program draws on faculty with expertise in Latin America whose home departments are History, Government, Economics, Hispanic Literatures & Cultures, and Theater. Courses in the humanities and social sciences taught by faculty who are not formally affiliated with the program but that are centrally concerned with Latin America are often cross-listed with Latin American Studies.

DEPARTMENTAL ADVISING EXPERT

The Latin American Studies Advising Expert is the LAST Program Chair, which in 2020-21 is Melanie Khamis.

LATIN AMERICAN STUDIES MAJOR

MAJOR DESCRIPTION

Latin American Studies (LAST) is an interdisciplinary program that is designed to provide an integrated view of Mesoamerica, South America, and the Caribbean. This interdisciplinary approach is complemented by a concentration in a specific department. A student who completes the major will receive a degree in Latin.

American studies with a concentration in Economics, Hispanic Literatures and Cultures, History, or Government. The purpose of the concentration is to assure that Latin American Studies majors, even as they advance their interdisciplinary expertise in Latin American societies and cultures, master the substance and methods of at least one established academic discipline. Wesleyan students majoring in Latin American Studies have a wide range of opportunities to develop their skills in research, writing, Spanish language and intercultural literacy, cross-cultural communication, and critical thinking.

ADMISSION TO THE MAJOR

Admission to the Latin American Studies major requires (a) competence in Spanish; (b) an academic record that shows ability both in Latin American Studies and in the intended department of concentration; and (c) a judgment by the core Latin American Studies faculty that a prospective major is likely to be able to maintain a grade point average of B- or better in all courses taken at Wesleyan that are cross-listed with Latin American Studies. Find details on how to apply here (<https://www.wesleyan.edu/last/formajors/>).

MAJOR REQUIREMENTS

Ten semester courses are required to complete the Latin American Studies major, at least six in Latin American Studies, and at least four in a department of

concentration. The four concentration courses need not be cross-listed with Latin American Studies. Concentration options include only departments with a Latin American Studies faculty member, which are currently Anthropology, History, Government, Economics, Hispanic Literatures and Cultures, and Theater.

The purpose of the concentration is to assure that the student majoring in Latin American Studies, which is an interdisciplinary program, has mastered the substance and methods of at least one established academic discipline. Accordingly, Latin American Studies majors may not *concentrate* in another program (e.g., Science in Society), or in an interdisciplinary department (e.g., American Studies), or in a college (e.g., College of Social Studies). Of course, the Program does not preclude its majors from *minoring* or *double-majoring* in any program, department, or college they choose.

To graduate as a Latin American Studies major, students must maintain an average of B- or better in all courses taken at Wesleyan that are cross-listed in the Latin American Studies major (regardless of whether a student elects to include each such course on the major certification form), complete a research requirement paper (see details here (<https://www.wesleyan.edu/last/formajors/researchrequirements.html>)), and complete Stage II of the General Education Expectations.

Mandatory Latin American Studies courses at Wesleyan: Of the ten courses required to complete the Latin American Studies major, at least seven must be taken at Wesleyan. On petition to the chair, an exception may be made for (1) students who transferred to Wesleyan and who seek LAST major credit for courses taken at their previous institution(s) or (2) students participating in the Twelve-College Exchange Program who seek LAST major credit for courses taken at one of the other participating colleges.

Of the six LAST courses counted toward the major, at least four must be taken at Wesleyan. At least two of the six LAST courses must be cross-listed with Wesleyan Social and Behavioral Science department courses (SBS designation) and at least two must be cross-listed with Wesleyan Humanities and Arts department courses (HA designation). Of the two courses cross-listed with Humanities and Arts department courses, one must be LAST 226 (https://owaprod-pub.wesleyan.edu/reg/!wesmaps_page.html?crse_list=LAST&offered=Y), Survey of Latin American Literature, Cultures, and Ideas. This required course is taught in Spanish. Admission to the major requires competence in Spanish.

Non-Latin American Studies courses at Wesleyan that may count toward the Latin American Studies major: In exceptional circumstances, Wesleyan courses that have significant Latin American content but are not cross-listed with Latin American Studies may count toward the major. Students must petition the Latin American Studies chair to obtain Latin American Studies major credit for such courses.

Courses at Wesleyan that may NOT count toward the Latin American Studies major: No Spanish *language* courses (100-level or SPAN 203 (https://owaprod-pub.wesleyan.edu/reg/!wesmaps_page.html?stuid=&facid=NONE&crse=012580&term=1211), Spanish for Heritage Speakers) may count toward the major. The only SPAN courses that may count toward the major are SPAN 221 and SPAN courses numbered higher than SPAN 221 that focus on Latin America (usually numbered SPAN 270 to SPAN 299). If the Latin American Studies major's concentration is HISP, however, courses numbered SPAN 225 to SPAN 269 may be counted toward the four *concentration* courses required to complete the LAST major, provided that no such course has also been counted toward the six LAST courses required to complete the major.

No student forum courses may count toward the Latin American Studies major. Also, Latin American Studies does not sponsor student forum courses.

Restrictions on counting particular types of courses toward the Latin American Studies major:

No more than one introductory (100-level) course in a student's department of concentration.

No more than one music course involving primarily or exclusively performance.

No more than one thesis tutorial credit.

COURSES FOR NON-MAJORS

Non-majors are welcome in any course with a Latin American Studies crosslisting, unless the course's host department imposes a limitation or restriction. For example, ECON 101 or ECON 110 is a prerequisite for ECON/LAST 219 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=003644&term=1211), Latin American Economic Development.

GENERAL EDUCATION

Latin American Studies majors must complete Stage II of the General Education Expectations.

STUDENT LEARNING GOALS

The Latin American Studies major provides students with an interdisciplinary understanding of the historical, cultural, political, and socioeconomic contours of this diverse region and encourages them to develop expertise in the substance and methods of at least one established academic discipline. Students who complete the Latin American Studies major should be able to explore systematically a range of social-scientific and humanistic issues and modes of argumentation, drawing on the knowledge, analytical abilities, and quantitative, qualitative, and linguistic skills they have acquired through their coursework. Latin American Studies majors should also be better prepared to think critically, write clearly, and speak effectively. By acquiring these capabilities, Latin American Studies majors prepare themselves for lives of diverse contribution.

STUDY ABROAD

Find out more about how studying abroad in Latin America can count towards the major here (<https://www.wesleyan.edu/last/studyabroad.html>).

ADVANCED PLACEMENT

Find out more here (<https://www.wesleyan.edu/last/formajors/Advanced%20Placement.html>).

LANGUAGE REQUIREMENT

Admission to the major requires competence in Spanish. LAST 226 (https://owaprod-pub.wesleyan.edu/reg/lwesmaps_page.html?stuid=&facid=NONE&crse=007142&term=1209), a required course, is taught in Spanish.

PRIZES

The Latin American Studies Program awards the Levy-Spira Prize for Distinction in Latin American Studies.

TRANSFER CREDIT

Find out more here (<https://www.wesleyan.edu/last/formajors/Transfer%20Credits.html>).

ADDITIONAL INFORMATION

HONORS

Find out more about honors theses here (<https://www.wesleyan.edu/last/formajors/theses.html>).

CAPSTONE EXPERIENCE

A research paper, senior essay, or honors thesis constitutes the capstone experience for LAST. Find out more here (<https://www.wesleyan.edu/last/formajors/researchrequirements.html>).

LESS COMMONLY TAUGHT LANGUAGES

Instruction in Less Commonly Taught Languages is offered through the Alternative Language Study Options Program. Located in the Fries Center for Global Studies, this program is designed to extend Wesleyan's already rich language offerings by expanding the range of opportunities for students wishing to learn a language not offered at Wesleyan through traditional language departments.

This program is well suited to prepare for study abroad experiences or to continue learning a language picked up while studying abroad. Students have also taken advantage of these opportunities to enhance their qualifications when applying for international fellowship, to pursue more personal goals like learning more about the heritage language of their family - or simply because they like learning new languages.

Students can register for regularly scheduled courses listed on Wesmaps such as American Sign Language, which includes a three semester study sequence, Modern Greek or Swahili. They can also petition to study a language via individual or group tutorials or more independently through the Mango Languages online platform. Full, partial, not for credit, graded or CR/U options are available, depending on the type of modality offered for each language.

For more information about the various options available, please visit the Alternative Language Study Options website. (<https://www.wesleyan.edu/cgs/also/>)

MATHEMATICS AND COMPUTER SCIENCE

The Department of Mathematics and Computer Science offers undergraduate majors in mathematics and in computer science. We also participate in the College of Integrative Sciences, the Data Analysis minor, the IDEAS minor, and the Informatics and Modeling minor. The department's graduate programs include a PhD in mathematics and MA programs in mathematics and in computer science.

Each student's course of study is designed to provide an introduction to the basic areas of mathematics or computer science and to provide the technical tools that will be useful later in the student's career. The course of study is planned in consultation with the student's faculty advisor and the department's advisory committees, DADCOM for mathematics and CADCOM for computer science.

The department's graduate programs include a PhD program in mathematics and MA programs in mathematics and in computer science. The research emphasis at Wesleyan at the doctoral level is in pure mathematics and theoretical computer science. One of the distinctive features of our department is the close interaction between the computer science faculty and the mathematics faculty, particularly those in logic and discrete mathematics.

Graduate students at Wesleyan enjoy small classes and close interactions with faculty and fellow graduate students. Graduate students normally register for three classes a semester and are expected to attend departmental colloquia and at least one regular seminar. The number of graduate students ranges from 17 to 21, with an entering class of three to six each year. There have always been both male and female students, graduates of small colleges and large universities, and U.S. and international students, including, in recent years, students from Australia, Chile, Ecuador, Iran, Nepal and Turkey. All of the department's recent PhD recipients have obtained faculty positions. Some have subsequently moved to mathematical careers in industry and government.

For additional information, please visit wesleyan.edu/mathcs/graduate/ (<http://www.wesleyan.edu/mathcs/graduate/>).

DEPARTMENTAL UNDERGRADUATE ADVISING EXPERTS

DADCOM provides advice and transfer credit approval for students in mathematics. CADCOM provides advice and transfer credit approval for students in computer science.

COMPUTER SCIENCE MAJOR

MAJOR DESCRIPTION

The Major in Computer Science (COMP) gives students an understanding of the foundational concepts and technical tools used for solving computational problems and building computational systems. Students learn to program in high-level programming languages, analyze the efficiency and correctness of

programs, and create original computational structures. Each student's course of study is planned in consultation with their faculty advisor and the department's advisory committee.

Computer science spans a spectrum between mathematics and engineering, and students choose to study computer science for a variety of reasons. For example, a COMP major might be interested in the mathematical foundations of computation and programming, or in creating software and hardware systems, or in the applications to other fields of study. To that end, the Computer Science program helps students both to develop a rigorous foundation of logical and mathematical thinking and to apply those foundations in a principled way to topics including robotics, privacy, networks, computational science, and the foundations themselves.

After graduation, Computer Science majors pursue a range of advanced study and professional roles. Some students go on to advanced study in masters and PhD programs in computer science, software engineering, computer engineering, computational science, and related fields. Some students go on to professional roles in fields such as software engineering, data science, cybersecurity, information systems, and information technology. These roles span various industries, including technology, finance, healthcare, and entertainment. Some students complete a second major in addition to computer science and apply computational skills in a job or further degree program related to their second major.

ADMISSION TO THE MAJOR

To declare the computer science major, a student must have

- earned a C- or higher in COMP211;
- either earned a C- or higher in COMP212 or be enrolled in COMP212 and be earning a grade of C or higher based on completed work; and
- either earned a C- or higher in MATH228 or MATH261 or be enrolled in MATH228 or MATH261 and be earning a grade of C or higher based on completed work.
- Courses taken in Spring 2020, Fall 2020, or Spring 2021 may be taken Cr/U to satisfy the major declaration requirements, in which case a student must have earned Cr.

MAJOR REQUIREMENTS

To complete the computer science major, a student must complete the following courses:

Code	Title	Hours
Gateway Courses		
COMP211 & COMP212	Computer Science I and Computer Science II	2
Core Courses*		4
Electives		
Any COMP courses 300-level or higher except COMP409 and COMP410		2
Mathematical Foundations		
MATH228 or MATH261	Discrete Mathematics Introduction to Abstract Algebra	1

Any other MATH course 200-level or higher	1
---	---

Total Hours	10
--------------------	-----------

* Must take one course from each of the following four areas:

- Models of computation: any **COMP** course numbered **300-305**.
- Algorithms: any **COMP** course numbered **310-315**.
- Programming languages: any **COMP** course numbered **320-325**.
- Systems: any **COMP** course numbered **330-335**.

Notes:

- No course may be used to satisfy more than one requirement.
- At most one individual or group tutorial may be used to satisfy major requirements unless prior approval is given.
- An individual or group tutorial may be used to satisfy a core area requirement only if prior approval is given.
- Only 1.0-credit courses taken A–F may be used to satisfy major requirements.
- Courses taken in Spring 2020, Fall 2020, or Spring 2021 may be taken Cr/U to satisfy major requirements, in which case a student must have earned Cr.
- In some circumstances, a 1.0 credit graded research experience may be split over 2 consecutive semesters. Such an experience must include work that is equivalent to a 1.0 credit graded 300-level course. The faculty member directing the research must request approval from CADCOM prior to the end of the first semester; the student may not make this request independently.

STUDENT LEARNING GOALS

- Understanding abstraction: At its heart, computer science is the study of abstractions for the purpose of understanding computation, and as such, students must learn appropriate levels of abstraction for solving computational problems. All courses in the curriculum contribute to this goal.
- Programming: Students must learn how to program in a high-level language, as such programming is the primary tool in computer science. This is typically how students are first exposed to the field, and our majors achieve this goal in their first or sophomore years by taking the gateway sequence COMP211–212.
- Analysis: Students must learn how to reason about computation; this includes analyzing algorithms and proving properties such as correctness and complexity, and requires an understanding of appropriate mathematical tools. The courses that focus primarily on this goal are COMP312 (Design and Analysis of Algorithms) and COMP321 (Design of Programming Languages).
- Creation: Students must learn how to create original computational structures; this requires an understanding of fundamental techniques in algorithm and data structure design and an ability to combine established techniques in novel ways. All courses in the curriculum contribute to this goal.
- Limits: Students must understand not only how to analyze and create computational structures, but also the limits of computation itself; this requires an understanding of the mathematical foundations and formalisms of computer science. This goal is primarily addressed in COMP301 (Automata Theory and Formal Languages).

TRANSFER CREDIT

The transfer credit policy for the COMP major is:

- You can transfer at most 2 courses per semester (or summer, or winter session) away towards the COMP major.
- You can transfer at most 4 courses in total towards the COMP major.
- You must take at least 2 of COMP211, COMP212, and MATH228 at Wesleyan.
- You must take at least three 300-level COMP courses used to satisfy the major requirements at Wesleyan.

RELATED PROGRAMS OR CERTIFICATES

Informatics and Modeling Certificate. The department is an active participant in the Informatics and Modeling Certificate (wesleyan.edu/imcp (<http://wesleyan.edu/imcp/>)). The certificate provides a framework to guide students in developing analytical skills based on the following two pathways:

- Computational Science and Quantitative World Modeling (CSM): wesleyan.edu/imcp/csm.html (<http://wesleyan.edu/imcp/>)
- Integrative Genomic Sciences (IGS): wesleyan.edu/imcp/igs.html (<http://wesleyan.edu/imcp/>)

The CSM pathway introduces students to modeling techniques and provides students with a foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena. The IGS pathway introduces students to the interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics. The department offers courses that support both pathways, such as COMP211 and COMP212, and also offers special interdisciplinary courses for the IGS pathway, such as COMP327 and COMP350. The certificate requirements are described in the links for the two pathways.

BA/MA PROGRAM

This program provides an attractive option for mathematics and computer science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit wesleyan.edu/grad/degree-programs/ba-ma.html (<http://wesleyan.edu/grad/degree-programs/ba-ma.html>). Advanced undergraduates may enroll in graduate (500-level) courses.

ADDITIONAL INFORMATION

COLLOQUIA AND SEMINARS

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in the computer science seminar.

HONORS

An undergraduate may achieve the BA with honors in computer science via the following route:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.

CAPSTONE EXPERIENCE

We encourage all students to participate in faculty research via individual tutorials and/or a Senior thesis. There is no mandatory capstone experience.

MATHEMATICS MAJOR

MAJOR DESCRIPTION

The Major in Mathematics broadly explores the relationships between numbers, shapes, measurements, structures, and patterns. Students gain strong computational abilities, abstract mathematical reasoning skills, an understanding of how to apply mathematical theories in practice, and the ability to write and speak clearly and elegantly about mathematics.

Students who are interested in developing strong analytical reasoning and logical thinking skills, attention to detail, and persistence in tackling complex problems should consider majoring in mathematics.

Mathematics majors graduate with knowledge and skills that are valued in many fields, including data analysis, software development, accounting, finance, insurance, operations, statistics, quantitative research, business, the physical and biological sciences, engineering, and education.

ADMISSION TO THE MAJOR

Every student is welcome to major in mathematics. Students are advised to finish calculus up to MATH222 and linear algebra (either MATH221 or MATH223), and MATH228 before making the decision.

MAJOR REQUIREMENTS

- A year of differential and integral calculus (typically MATH121 and MATH122)
- MATH221 or MATH223
- MATH222
- An elementary knowledge of algorithms and computer programming. (Successful completion of either COMP112 or COMP211 satisfies this requirement.)
- MATH261 and MATH225 (recommended for juniors or seniors)

- A coherent selection of four additional electives, chosen in consultation with an advisor from the department. Any 1.0 credit **MATH** course at the **200+** level can be used as an elective for the major.

Notes:

- Students who have completed a year of calculus in high school may place out of one or both of MATH121 and MATH122.
- An AP score of 4 or 5 on the AB calculus exam indicates the student should begin in MATH122.
- An AP score of 4 or 5 on the BC calculus exam indicates the student should consider beginning in any of MATH221, MATH222, or MATH223.
- Students may not earn credit for both MATH221 and MATH223.
- Students must complete either MATH228 or MATH261 by the end of their junior year.
- With advance approval from the departmental advisory committee, mild adjustments are allowed. For example, a Wesleyan course with substantial mathematical content but that is not listed in **MATH** may be used toward the four-electives requirement. Please note, however, that both MATH225 and MATH261 must be taken at Wesleyan to complete the major, and substitutions for these courses will not be approved.

STUDENT LEARNING GOALS

The department has the following learning goals for mathematics majors:

- Develop a basic understanding of, and computational facility with, major objects of mathematical and applied interest, such as differentiable functions, graphs, groups, manifolds, rings, or vector spaces.
- Understand abstract mathematical reasoning, e.g., understand an abstract system of rules, find examples of objects that satisfy those rules, conjecture theorems from those examples, and prove those theorems.
- Understand some mathematical applications and ways to use mathematics in practice, and be able to make connections to topics outside of the strict course content.
- Students should be able to write about and speak about mathematics, clearly and elegantly.

LANGUAGE REQUIREMENT

Undergraduate majors in mathematics are encouraged to study languages while at Wesleyan; majors who are considering graduate study in mathematics should note that graduate programs often require a reading knowledge of French, German, and/or Russian.

BA/MA PROGRAM

This program provides an attractive option for mathematics majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, visit wesleyan.edu/grad/degree-programs/bama.html (<http://www.wesleyan.edu/grad/degree-programs/bama.html>). Advanced undergraduates may enroll in graduate (**500-level**) courses.

ADDITIONAL INFORMATION

COLLOQUIA, SEMINARS, AND MATH CLUB

Lectures. The departmental colloquium series presents lectures on recent research by invited speakers from other institutions. Advanced undergraduates are welcome and encouraged to attend these colloquia and to participate in graduate seminars. All students interested in mathematics are invited to attend the annual Coven-Wood Lecture Series in Mathematics. The first talk in the series is accessible to students at all levels. The undergraduate Math Club hosts informal talks in mathematics and other mathematical activities.

HONORS

An undergraduate may achieve the BA with honors in mathematics via one of two routes:

- The honors thesis, written under the supervision of a faculty member under conditions monitored by the University Committee on Honors.
- A strong performance in a suitable sequence of courses, normally including some graduate courses, selected in consultation with a member of the department's advisory committee. The candidate also is expected to prepare a public lecture on a topic chosen together with a faculty advisor.

CAPSTONE

* SENIOR THESIS-two semesters

* HONORS PRESENTATION

* APPROVED GRADUATE COURSEWORK IN MATH

* TUTORIAL WITH FACULTY

Students pursuing the Mathematics major are not required to complete a capstone experience. However, there are several options available if they wish to pursue one. These include:

- * ***Graduate Coursework***: completing one or more approved graduate mathematics courses with a performance deemed satisfactory by the instructor(s). Students should consult with their major advisor or the department advisory committee to select appropriate coursework.
- * ***Honors Presentation***: satisfactorily completing the public presentation related to departmental Honors
- * ***Senior Thesis***: satisfactorily completing a Senior thesis under conditions monitored by the University Committee on Honors
- * ***Tutorial with Mathematics Faculty***: Students may register for a tutorial with a faculty member to pursue study or research on a topic that will deepen or broaden the student's knowledge. Tutorials may involve independent research by the student, but this is not a requirement for the tutorial. To qualify as a capstone experience, the tutorial should culminate in a project or presentation by the student at the end of the semester.

In practice, students often complete more than one of the above experiences. Sophomores and juniors who are considering adding a capstone experience during their senior year may enjoy participating in the department's directed reading program and attending events and talks in the departmental Math Club.

MASTER OF ARTS IN MATHEMATICS OR COMPUTER SCIENCE

MASTER OF ARTS IN MATHEMATICS

The Mathematics and Computer Science department's Master of Arts program in mathematics is designed to ensure basic knowledge and the capacity for sustained independent scholarly study. The MA in Mathematics degree requires six one-semester 500-level courses in addition to the Advanced Research Seminars (MATH549 and MATH550). Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree.

Students enrolled in the BA/MA program in mathematics must meet the full requirements of the MA degree in mathematics, and may not reuse any courses they have counted towards their BA degree.

Guided by a faculty advisor, master's candidates produce a thesis based on independent research and a study of the current topical literature. In the final defense of their thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill along with indications of original insight.

MASTER OF ARTS IN COMPUTER SCIENCE

The Mathematics and Computer Science department's Master of Arts program in Computer Science is designed to ensure basic knowledge and the capacity for sustained independent scholarly study. There are two distinct routes to an MA in Computer Science, one designed for students who have not received an undergraduate degree in Computer Science from Wesleyan and those applying through Wesleyan's BA/MA program.

The standard MA in Computer Science requires six one-semester courses in addition to the Advanced Research Seminars (COMP549 and COMP550). These courses, which may include individual and/or group tutorials, must be at the 500-level and chosen with the permission of the MA advisor and the department's Graduate Education Committee (GRECO)."

Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree.

The BA/MA program in Computer Science requires six one-semester courses including the Advanced Research Seminars (COMP549 and COMP550). These courses may include individual and/or group tutorials and should be chosen with the permission of the department's Graduate Education Committee. Two semesters of full-time study beyond obtaining a Computer Science BA from Wesleyan are usually needed to complete the requirements for the MA degree.

MA students receiving a graduate stipend must serve as teaching assistants for 10 hours per week during the fall and spring academic semesters. Those who do not receive a stipend are also eligible to work as teaching assistants.

Guided by a faculty advisor, master's candidates produce a thesis based on independent research and study of the current topical literature. In the final defense of their thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill along with indications of original insight.

COURSES

Six one-semester courses are required for the MA degree in Mathematics in addition to research units MATH549 and MATH550. These courses must be at the 500-level and chosen with permission of the MA advisor and the department's Graduate Education Committee (GRECO).

A total of six one-semester courses are required for the MA degree in Computer Science. The six courses must include COMP549 and COMP550. These courses are expected to be 500-level and chosen with permission of the MA advisor and the department's Graduate Education Committee (GRECO). Any alternative choices must be approved by the MA advisor and GRECO.

PROGRESS AND QUALIFYING EXAMS

Three semesters of full-time study beyond an undergraduate degree are usually needed to complete all requirements for the MA degree. For students completing the BA/MA program, relevant coursework usually begins in the final year of undergraduate student. Any program leading to the MA degree must be planned in consultation with the departmental Graduate Education Committee.

TEACHING

MA students receiving a stipend are obliged to serve as teaching assistants for 10 hours per week during the fall and spring academic semesters. Those who do not receive a stipend are also eligible to work as teaching assistants.

THESIS AND DEFENSE

The thesis is a written report of a topic requiring an independent search and study of the literature under the supervision of the advisor. Performance is judged largely on scholarly organization of existing knowledge and on expository skill, but some indications of original insight are expected.

In the final examination, an oral presentation of the MA thesis, the candidate is expected to exhibit an expert command of the chosen specialty and a high degree of expository skill. The defense may include an oral examination on coursework, including material associated with the general preliminary exam. A faculty committee evaluates the candidate's performance.

ADDITIONAL INFORMATION

For additional information, please visit wesleyan.edu/mathcs/graduate/ (<http://wesleyan.edu/mathcs/graduate/>).

DOCTOR OF PHILOSOPHY IN MATHEMATICS

The Mathematics and Computer Science department's doctoral studies emphasize pure mathematics and theoretical computer science. The close interaction between the computer science faculty and the mathematics faculty—particularly those in logic and discrete mathematics—is a distinctive feature of the department. Students enrolled in the program enjoy small classes and build close connections with faculty and fellow graduate students.

The Doctor of Philosophy in Mathematics degree demands a breadth of knowledge, an intense specialization in one field, a substantial original contribution to the field of specialization, and a high degree of expository skill. Possible fields of specialization for PhD candidates include algebraic geometry, analysis of algorithms, arithmetic geometry, arithmetic theory of quadratic forms, combinatorics, complex analysis, computational logic, dynamical systems, enumerative combinatorics, ergodic theory, geometric group theory, graph theory, higher-order languages, homogeneous dynamics, homotopy type theory, hyperbolic geometry, information security, knot theory, logic programming, mathematical logic, metric geometry, model theory, network and data science, non-Euclidean geometry, number theory, probability theory, proof theory, and topological dynamics.

At least 16 one-semester courses are required for the PhD degree, and graduate students are expected to attend departmental colloquia and the regular seminars. Five years are usually needed to complete all requirements for the PhD, and two years of residence are required. Proficiency sufficient for reading the mathematical literature in French, German, or Russian is required. Every PhD student in satisfactory academic standing is supported by an annual stipend. Most students work as teaching assistants to faculty members for 10 hours a week during the Fall and Spring semesters, but a student who has passed all written preliminary examinations may teach up to one course a year as a lecturer under the guidance of a faculty member. The PhD dissertation is written under the mentorship of a faculty advisor. It must contain a substantial original contribution to the candidate's field of specialization and meet the quality standards of the current research journals in mathematics.

COURSES

At least 16 one-semester courses are required for the PhD degree. Several of the courses are to be in the student's field of specialization, but at least three one-semester courses are to be taken in each of the three areas: algebra, analysis, and topology. First-year students are expected to take the three two-semester sequences in these areas. However, students interested in computer science may replace coursework in one of these areas with coursework in computer science, with the permission of the departmental Graduate Education Committee.

LANGUAGE REQUIREMENT

Students must pass reading examinations in either French, German, or Russian. It is strongly recommended that PhD candidates have or acquire a knowledge sufficient for reading the mathematical literature in all three of these languages. Knowledge of one of these three languages is required.

PROGRESS AND QUALIFYING EXAMS

General preliminary examinations. The general preliminary examinations occur in the summer after the student's first year of graduate study and cover algebra, analysis, and topology (or computer science, in the case of students including this option among their three first-year subjects).

Special preliminary examination. For a graduate student to become an official PhD candidate as recognized by the department, the student has to pass the Special Preliminary Examination, an oral examination that must be passed by the end of the student's third year of graduate work. The student's Examination Committee determines the subject matter content of the Special Preliminary Examination. This committee is chaired by the student's dissertation advisor and must include at least two additional faculty members of the department. The Special Preliminary Examination will be based primarily, but perhaps not exclusively, on the student's field or specialization. Specific details of the form and content of the examination shall be determined by the Examination Committee at the time the subject matter content is discussed.

TEACHING

Most students work as teaching assistants beginning in the first year of study. After passing the general preliminary examinations, most PhD candidates teach one course per year (typically of 20 students, supervised by senior faculty) working as teaching assistants in the remaining semester.

DISSERTATION AND DEFENSE

- **Dissertation.** The dissertation, to be written by the PhD candidate under the counsel and encouragement of the thesis advisor, must contain a substantial original contribution to the field of specialization of the candidate and must meet standards of quality as exemplified by the current research journals in mathematics.
- **Selection of dissertation advisor.** A graduate student should select a dissertation advisor by the end of the student's second year of graduate work.
- **Defense of dissertation.** The final examination is an oral presentation of the dissertation in which the candidate is to exhibit an expert command of the thesis and related topics and a high degree of expository skill.

MEDIEVAL STUDIES PROGRAM

The medieval studies program provides an interdisciplinary context for students who wish to study the European Middle Ages. Students normally concentrate on one of three fields: art history and archaeology, history and culture, or language and literature. They are also expected to do coursework in the other fields. In certain cases the program may also provide a framework for students wishing to cross the temporal, topical, and geographical boundaries of medieval studies to consider such problems as the relationship between classical and medieval literature or art, or the broader history of the preindustrial European societies.

Students have a number of opportunities to experience medieval materials firsthand, including working with rare manuscripts in Special Collections, singing in the Collegium Musicum, or participating on an archaeological dig. The Medieval Studies Department brings distinguished visitors to campus each year to give public talks and to work one-on-one with students. Field trips to places such as the Cloisters Museum in New York City and to concerts in the nearby area foster a sense of community in addition to providing access to materials.

The skills typically acquired by medieval studies students—knowledge of European culture, ability to analyze “foreign” texts, experience handling artifacts and manuscripts, and familiarity with Latin—provide good preparation for advanced degrees, whether in the humanities, law, or other professional schools.

DEPARTMENTAL ADVISING EXPERTS

Jeff Rider

MEDIEVAL STUDIES MAJOR

MAJOR DESCRIPTION

The Medieval Studies program fosters an ability to interpret intersections among cultures, religions, ethnicities, races, and identities, the critical use of historical evidence, and the ability to construct arguments informed by ideas of temporalities and geographies. Medieval Studies majors undertake an interdisciplinary approach to the study of a primary, secondary, and third area within the field. The areas of concentration are typically art history and archaeology, history and culture, and languages and literature. Classes in the College of Letters (COL), music history, and religious studies can also fulfill MDST electives.

Proficiency in at least one modern foreign language is required, and knowledge of Latin, Greek, or Arabic is strongly encouraged. Students are expected to complete a capstone project that may be a senior thesis, a senior essay, or a seminar paper. This can be evaluated for Honors or High Honors (by two MDST faculty). Those recommended for high honors may be nominated for University Honors.

The skills acquired by Medieval Studies students—knowledge of historic cultures, manuscript study and text analysis, experience handling artifacts, and familiarity

with historic and modern languages—provide good preparation for advanced degrees, whether in the humanities, law, or other professional schools.

ADMISSION TO THE MAJOR

No specific courses are required for admission to the Medieval Studies major.

MAJOR REQUIREMENTS

Medieval Studies majors take 10 classes in a broad range of fields that include art history, archaeology, history, languages, literature, music, manuscript studies, and religious studies. Majors develop expertise in three areas of concentration (art history and archaeology, history and culture, and languages and literature). Selections are typically structured according to the following distribution:

- 4 courses in the student’s chosen primary area of MDST
- 2 courses in the student’s second area of MDST
- 1 course in the student’s third area of MDST
- 3 additional courses in any area of Medieval Studies, or in another field deemed, in consultation with the advisor, to be closely related to the student’s work, in subject matter or method

STUDENT LEARNING GOALS

Medieval Studies majors will be expected to master the following skills:

- An ability to interpret intersections among cultures, religions, ethnicities, races, and identities.
- The critical use of historical evidence across a range of disciplines.
- The ability to construct arguments informed by ideas of temporalities and geographies.

STUDY ABROAD

Students majoring in the program are encouraged to spend at least one semester studying abroad. Programs of study must be approved in advance by the student’s advising committee.

LANGUAGE REQUIREMENT

Proficiency in at least one modern foreign language is required, and knowledge of Latin, Greek, or Arabic is strongly encouraged.

HONORS

Honors and high honors are awarded by vote of two Medieval Studies faculty to students whose coursework is judged to be of sufficiently high quality and who have done outstanding work on one or more of the following writing projects: a senior thesis, a senior essay, or a seminar paper nominated for honors or high

honors by the instructor in the seminar. Those recommended for high honors in the program may be nominated for University Honors.

CAPSTONE EXPERIENCE

Students in the program are normally expected to complete at least one long paper that may be a senior thesis, a senior essay, or a seminar paper.

MEDIEVAL STUDIES MINOR

MINOR DESCRIPTION

The Minor in Medieval Studies (MDST) provides students with a basic knowledge of the history and culture of the European Middle Ages in an interdisciplinary context. Students complete six courses cross-listed with MDST, with at least two in the arts and humanities and two in the social sciences. Minors are strongly encouraged to take at least two years of a modern foreign language. Minors who anticipate going on to graduate work in the medieval or early modern period are strongly encouraged to take at least two years of Latin as well.

ADMISSION TO THE MINOR

No specific courses are required for admission to the Medieval Studies minor.

MINOR REQUIREMENTS

Students minoring in Medieval Studies complete 6 courses within MDST or approved by the chair of the Medieval Studies program. At least 2 must be taken in arts and humanities and 2 in social sciences.

Minors are expected to be proficient in a modern foreign language and encouraged to gain some knowledge of Latin, Greek, or Arabic.

MOLECULAR BIOLOGY AND BIOCHEMISTRY

DEPARTMENTAL ADVISING EXPERTS

- Informatics and Modeling: Robert Lane (<http://wesleyan.edu/academics/faculty/rlane/profile.html>)
- Pre-Majors and General Undergraduate Program: Michelle Murolo (<https://www.wesleyan.edu/academics/faculty/mmurolo/profile.html>)
- General Graduate Program: Don Oliver (<http://wesleyan.edu/academics/faculty/doliver/profile.html>)

MOLECULAR BIOLOGY AND BIOCHEMISTRY MAJOR

MAJOR DESCRIPTION

The Major in Molecular Biology and Biochemistry (MB&B) is designed to accommodate a broad range of academic interests and allow students to concentrate on particular disciplines such as molecular biology, biochemistry, biophysics, structural biology, cell biology, genetics, epigenetics, genomics, and computational modeling.

While focused on exploring and understanding the molecular basis of life, the MB&B major allows for flexible, interdisciplinary studies, enabling students to couple their affinity for biological sciences with other majors.

Curious students who bring a passion for learning about the intricacies of the natural world, have a keen interest in science, and apply a logical, analytical, meticulous approach to their studies are likely to find great meaning and satisfaction in the MB& B major. Students with mathematical aptitude, perseverance, patience, and effective communication skills are those who excel in this course of study.

The Major in Molecular Biology and Biochemistry provides foundational training for various professional careers in medicine, public health, the pharmaceutical/ biotechnology industry, public policy, science journalism, and teaching, among others.

ADMISSION TO THE MAJOR

Students are encouraged to begin coursework toward the MB&B major in their first year to take maximum advantage of upper-level MB&B courses, research, and study-abroad opportunities in later years. However, the major can certainly be completed successfully if initiated during sophomore year.

MAJOR REQUIREMENTS

The requirements for the MB&B major are described in detail on this page. See the (<https://www.wesleyan.edu/mbb/major/pathway.html>)**Pathway Through the Major** page for a recommended path to fulfill the MB&B requirements.

The MB&B major begins with the core introductory biology series (the MB&B181 and MB&B182 lecture series and the associated laboratory MB&B191 and MB&B192) and/or the core general chemistry series (CHEM141/CHEM143 and CHEM142/CHEM144 lecture plus the associated laboratory, CHEM152). Our introductory cell and molecular biology course, MB&B181, is offered in small sections featuring problem-based learning to help students acclimate to their first semester of university-level biology. Visit Frequently Asked Questions About Introductory Biology for more information (<https://www.wesleyan.edu/mbb/major/intro-faq.html>).

The Molecular Biology and Biochemistry major requires the following coursework:

Code	Title	Hours
Introductory Biology		
MB&B181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
MB&B191	Principles of Biology I--Laboratory	0.5
MB&B182	Principles of Biology II	1
MB&B192	Principles of Biology II: Laboratory	0.5
General Chemistry		
CHEM141/143	General Chemistry I	1
CHEM142/144	General Chemistry II	1
CHEM152	Introductory Chemistry Laboratory	0.5
Gateway Molecular Biology		
MB&B208	Molecular Biology	1
Organic Chemistry		
CHEM251	Organic Chemistry I	1
CHEM252	Organic Chemistry II	1
Mathematics		
Select one Mathematics course (calculus or statistics recommended)		1
Physical Chemistry		
MB&B381	Physical Chemistry for the Life Sciences	1
Biochemistry		
MB&B383	Biochemistry	1
Advanced Laboratory		
MB&B394	Advanced Laboratory in Molecular Biology and Genetics	1
or MB&B395	Structural Biology Laboratory	
Electives		
Select two elective courses, at least one of which must be a 300-level MB&B course		2

We require one semester of a chemistry lab course, which would typically be satisfied by introductory lab CHEM152 (offered in both fall and spring). This lab course requirement can also be satisfied by taking the intermediate chemistry lab, CHEM257.

One semester of college mathematics, typically calculus or statistics, is required (AP credit is not accepted). Students with deep theoretical knowledge in areas

of mathematics, as evidenced by advanced coursework (e.g., in physics) or quantitative forms of research, may petition for the use of a less theoretical mathematics course (e.g., QAC courses) to satisfy the MB&B math major requirement.

One advanced laboratory class is required. Majors interested in a concentration in molecular biology should take MB&B394, which is offered every spring semester and generally taken in the junior or senior year. Students interested in the molecular biophysics minor should take MB&B395, which is offered every other year in fall semester. The Chemistry Integrated Laboratory courses (CHEM375 and CHEM376) do not satisfy the lab course requirement. Students taking both of the advanced lab courses (MB&B394 and MB&B395) may count one of the two courses as their 300-level elective.

MB&B381 may be replaced by two semesters of Introductory Physics (PHYS111 and PHYS112, or PHYS113 and PHYS116) or by Physical Chemistry (CHEM337 and CHEM338). Students who take two semesters of physics or physical chemistry may count MB&B381 as one of their required 300-level electives.

One of the two required electives must be a 300-level MB&B course. This may be fulfilled by taking a 1.0-credit 300-level course, or by taking two 0.5-credit 300-level courses.

The second elective may be a 200-level or 300-level MB&B course. Two consecutive semesters of research (in the same laboratory) for credit (MB&B423 and MB&B424, Advanced Research Seminar) with an MB&B faculty member (or a pre-approved faculty member in another department conducting research in molecular biology/biochemistry/biophysics) can be substituted for the 200-level elective, provided that it is taken for 1.0 credit each semester and a grade of B or higher is achieved. Honors Thesis (MB&B409 and MB&B410) may not be used to satisfy an elective requirement.

For potential elective courses outside of MB&B, including study abroad courses, students must consult with their faculty advisor and the MB&B chair in a timely manner. Prior approved courses outside MB&B that can be taken to satisfy the lower-level elective requirement include BIOL218 Developmental Biology, BIOL334 Shaping the Organism, and CHEM396 Molecular Modeling and Design. These courses offered by other (non-MB&B) departments may only be used to satisfy the 200-level elective requirement for completion of the MB&B major (even if the course has a 300-level designation).

All courses credited toward the MB&B major, both those hosted inside and outside the department, must be taken for a letter grade.

Pre-meds and pre-grads: Organic chemistry laboratory courses (CHEM257 and CHEM258) are requirements for virtually all graduate and medical schools. Most medical schools also require one year of physics with related labs and two semesters of mathematics. Many MB&B majors take more than the two required electives to better prepare for graduate or medical school.

All of the life science community is enriched by the weekly departmental seminar series (<https://www.wesleyan.edu/mbb/seminars/>) held on Wednesdays at 12:10 p.m. during the academic year, in which speakers are invited from different institutions to speak about their research. All are welcome to come learn about the latest cutting-edge work in the life sciences. You may receive a quarter credit for your attendance by enrolling in MB&B338 and/or MB&B339.

COURSES FOR NON-MAJORS

MB&B offers several courses designed to broadly introduce molecular biology to non-life science majors. Examples include MB&B103, MB&B107, and

MB&B117. Alternatively, many non-science majors will take one of our introductory courses, MB&B181, or MB&B182 to meet NSM requirements. See WesMaps (<https://www.wesleyan.edu/wesmaps/>) for current course offerings.

MB&B228 is an introductory biochemistry course for non-majors intending to pursue a medical degree.

STUDENT LEARNING GOALS

- Acquire mastery of core foundational knowledge of molecular biology and biochemistry
- Acquire selective familiarity with our primary literature and key resources
- Achieve familiarity with major questions at the forefront of our field
- Acquire mastery of analytical, quantitative, and creative approaches to analyze problems in our field and to synthesize them in order to create logical hypotheses and experimental plans
- Acquire ability to use multidisciplinary approaches to synthesize a cogent experimental plan
- Acquire mastery of important methodologies in our field
- Acquire hands-on experience with key experimental techniques in our field
- Acquire proficiency in oral, written, and visual modes of effective scientific communication

STUDY ABROAD

Like all Wesleyan students, MB&B majors often choose to study abroad for a semester or more. In recent years, MB&B majors have visited Australia, Chile, Denmark, South Africa, England, France, Tanzania, and Germany, among other countries. During their semester abroad, MB&B majors may choose to take courses that satisfy their major or general education requirements, and may also arrange to do research at the host institution. Decisions about whether courses taken abroad can count for credit towards the MB&B major are made by the department on a case-by-case basis. Students should consult with their major advisor and receive course approval from the chair of the MB&B department prior to their departure.

ADVANCED PLACEMENT

Wesleyan awards one credit to students with AP Biology scores of 4 or 5. High school AP Biology courses rarely include the full range of topics or depth covered in MB&B181, our introductory cell and molecular biology course. Students with exceptional preparation can place out of MB&B181 by passing a placement exam. Interested students should contact Professor Cori Anderson (canderson05@wesleyan.edu (canderson@wesleyan.edu/)) to schedule a placement exam.

Prospective MB&B majors with a score of 4 or 5 in AP Chemistry must meet the Chemistry Department requirements for advanced placement credit.

AP credit is not accepted for the math requirement.

PRIZES

Majors are eligible for several prizes based on their academic performance and contributions to the MB&B Department.

Hawk Prize: The gift of Philip B. Hawk, Class of 1898, as a memorial to his wife, Gladys, to the students who have done the most effective work in biochemistry.

Scott Biomedical Prize: Awarded to a member or members of the Molecular Biology and Biochemistry senior class who have demonstrated excellence and interest in commencing a career in academic or applied medicine.

William Firshein Prize: In honor of founding faculty member William Firshein, awarded to the graduating MB&B student who has contributed the most to the interests and character of the Molecular Biology and Biochemistry department.

American Society for Biochemistry and Molecular Biochemistry Honor Society: The ASBMB Honor Society recognizes exceptional undergraduate juniors and seniors pursuing a degree in the molecular life sciences. Students are recognized for their scholarly achievement, research accomplishments, and outreach activities in the molecular life sciences.

American Society for Biochemistry and Molecular Biochemistry Research Award: The ASBMB rewards exceptional rising seniors pursuing a degree in the molecular life sciences who have developed an exciting research project. More information is available on the ASBMB web page (<http://www.asbmb.org/education/studentchapters/awards/ugresearch/>).

Dr. Neil Clendeninn Prize: Established in 1991 by George Thornton, Class of 1991, and David Derryck, Class of 1993, for the African American student who has achieved academic excellence in biology and/or molecular biology and biochemistry. This student must have completed his or her sophomore year and in that time have exemplified those qualities of character, leadership, and concern for the Wesleyan community as shown by Dr. Neil Clendeninn, Class of 1971.

RELATED PROGRAMS OR CERTIFICATES

Molecular Biophysics Minor (<https://www.wesleyan.edu/molbiophys/>). Molecular biophysics is an interdisciplinary area of research situated at the intersection of molecular biology, chemistry, chemical biology, physical chemistry, and molecular physics. Wesleyan's program includes faculty in the MB&B, chemistry, physics, and biology departments. Students are strongly encouraged to conduct independent research in the laboratory of a molecular biophysics program faculty member.

Informatics and Modeling Minor (<https://www.wesleyan.edu/imcp/>). The Integrative Genomic Sciences (IGS) pathway is an integrative program of coursework and research in the areas of bioinformatics, genomics, computational biology, and bioethics. IGS involves faculty and students in the life sciences, physical sciences, information sciences, and philosophy.

BA/MA PROGRAM

This program provides an attractive option for life science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. More information is available here (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html).

ADDITIONAL INFORMATION

UNDERGRADUATE RESEARCH OPPORTUNITIES

Undergraduate research is an important part of the curriculum for many MB&B majors. Wesleyan's small but excellent graduate program makes it possible for majors to work alongside PhD and MA students at the cutting edge of discovery in molecular biology and biochemistry. To complement laboratory experiences, MB&B majors are also encouraged to gain exposure to current research through journal clubs and seminars. Undergraduate research encompassing multiple semesters or summers may be used towards completion of a senior honors thesis, or form the basis for pursuing a Master of Arts in MB&B through the BA/MA program.

Students interested in independent research for credit must find a faculty research mentor and submit an electronic tutorial form (Research Tutorial, MB&B423 or MB&B424) using the drop/add system in their portal. Based on discussions with the faculty research mentor, students may sign up for 0.25, 0.5, or 1.0 credits. Students enrolling for 1.0 credit are expected to dedicate at least 10 hours per week to their research project, which includes attendance in weekly group meetings and reading and discussion of current literature with group members, in addition to planning and performing experiments. Students will discuss specific expectations with their research mentor.

MB&B majors not participating in research tutorials will gain research experience in the Department's advanced laboratory courses; they are also encouraged to gain exposure to current research through journal clubs and seminars.

HONORS

To be considered for departmental honors, a student must:

- Be an MB&B major and be recommended to the department by a faculty member. The student is expected to have a B average (grade point average 85) in courses credited to the major.
- Submit a thesis based on laboratory research or library research, performed under the supervision of an MB&B faculty member or pre-approved faculty member in another department conducting research in the fields of molecular biology, biochemistry, or biophysics.

Two readers (in addition to the research mentor) must be selected for review of honors theses in MB&B. It is expected that these readers will be MB&B research faculty; any exception requires approval of the MB&B department chair.

CAPSTONE EXPERIENCE

Independent laboratory research is strongly encouraged as it provides students with an exceptionally valuable learning experience. As research students, MB&B majors interact with faculty and graduate students in an environment that fosters strong intellectual and social connections. Moreover, many graduate and professional schools specifically recruit candidates with research experience. MB&B majors not participating in laboratory research can get a measure of this experience through participation in departmental and inter-departmental seminar series and journal clubs.

Faculty research interests cover an exciting range of current topics in molecular and cellular biology and biochemistry. Research areas include DNA replication and repair mechanisms, membrane transport processes, DNA-

protein interactions, gene regulation, genome organization and structure, and membrane protein structure-function and dynamics. Students are encouraged to learn more about ongoing research (https://www.wesleyan.edu/mbb/grad_studies/research_areas.html) in the MB&B department. Many MB&B majors gain research experience at Wesleyan and other institutions in the summer months; the MB&B office and Wesleyan Career Resource Center can direct students to research opportunities.

All MB&B majors participate in independent research projects as part of our experiment-based advanced laboratory courses MB&B394 and MB&B395, at least one of which is required.

DOCTOR OF PHILOSOPHY IN BIOLOGY AND BIOCHEMISTRY

The Molecular Biology and Biochemistry (MB&B) Department program focuses on the molecular basis of life—on mechanisms by which cells process, integrate, and act on information to create and propagate living organisms. The PhD program focuses on advanced scientific inquiry in molecular genetics, molecular biology, biochemistry, and molecular biophysics. The program's low student-faculty ratio (2.5:1) ensures close contact between students and their mentors and enables students to customize their course of study.

The emphasis of the program is on an intensive research experience culminating in a dissertation. Within this general framework, an individual program of study tailored to fit the student's background and interests is designed in consultation with their advisor. PhD candidates will normally complete two lab rotations during their initial two semesters, gaining exposure to various research techniques and topics. The program of study also includes a series of courses covering the major areas of molecular biology, biochemistry, and biophysics; journal clubs in which current research is discussed in an informal setting; practica designed to introduce first-year students to the research interests of the faculty; and several seminar series in which either graduate students or distinguished outside speakers participate. Two specialized interdisciplinary paths in the areas of Molecular Biophysics (<https://www.wesleyan.edu/molbiophys/>) and Informatics and Modeling (<https://www.wesleyan.edu/imcp/>) are also offered. PhD candidates are expected to participate as teaching assistants (TAs) in undergraduate courses for at least their first 3 semesters.

The program culminates in the student's writing and defense of their PhD thesis—an original contribution to the field that merits publication. The PhD candidate will receive advice and guidance from their advising committee, and the thesis is expected to demonstrate both originality and scientific competence.

COURSES

Ideally, incoming students will have completed courses in general biology, cell and molecular biology, genetics, biochemistry, general chemistry, organic chemistry, physical chemistry, and calculus. Deficiencies in any of these areas would normally be made up in the first year on a case-by-case basis. A core curriculum of graduate courses in the following general areas is offered on a two-year cycle:

- regulation of gene expression
- regulation of chromosome dynamics and the cell cycle

- structural mechanisms and energetics of nucleic acid structure and protein-nucleic-acid interactions
- protein structure, folding, and trafficking in cells
- molecular genetics
- the cell cycle
- biological spectroscopy and physical techniques
- bioinformatics and functional genomics
- molecular, biochemical, and cellular bases of cancer and other human diseases

Within this general framework, an individual program of study tailored to fit the student's background and interests is designed in consultation with the graduate committee and the student's advisor. Graduate students must take at least 3.0 credits of 'lecture-style' courses in order to be eligible to take the Stage I Qualifying examination, which is generally taken in January of the second year of study.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

The criteria for admission to candidacy for the PhD will be performance in courses, aptitude for research, and two qualifying examinations taken in the second year. The Stage I Qualifying Examination is a written examination taken in January, and the Stage II Qualifying Examination is an oral defense of an original research proposal presented by the middle of the fourth semester.

TEACHING

PhD candidates in the MB&B department are expected to participate as teaching assistants (TAs) in undergraduate courses for at least their first 3 semesters. If available, some students may then receive research assistant stipends (RAs) from extramural grants for the remainder of their PhD studies; otherwise, students may continue to receive TA stipends with associated teaching responsibility for the remainder of their PhD studies.

RESEARCH

PhD students will normally complete two lab rotations during their initial two semesters, gaining exposure to a broad range of research techniques and topics in molecular biology. Students generally select one of these rotation labs to pursue their PhD thesis work by the end of the first year, and will begin working on their thesis project during the first summer. The overarching goals of the research experience are to: (i) develop expertise in research methodologies; (ii) develop expertise at the cutting edge of a scientific field, including mastery of relevant literature; (iii) to contribute to the advancement of the field, typically culminating in two published papers in international peer-reviewed scientific journals; (iv) to become effective presenters of scientific data, in the context of their own published manuscripts, seminar presentations, written reports and thesis documents, evaluating published data in journal clubs and coursework, and by presenting at a professional scientific meeting. The MB&B department offers research opportunities across a broad range of topics including but not limited to:

- molecular mechanisms of cell differentiation
- biological roles of transition metals
- mechanisms of DNA repair

- cell and molecular biology of meiosis
- single-molecular studies of protein-DNA interactions
- structural dynamics of nucleic acids and proteins
- chromatin control of chromosome dynamics and gene expression
- UV resonance Raman spectroscopy of biological macromolecules
- biological assembly mechanisms
- structural studies of bacterial virulence factors
- the mammalian olfactory system
- see individual faculty web pages (https://www.wesleyan.edu/mbb/grad_studies/research_areas.html) for specific research projects

CONCENTRATIONS

Molecular Biology and Biochemistry offers two interdisciplinary paths in the areas of Molecular Biophysics (<https://www.wesleyan.edu/molbiophys/>) and Informatics and Modeling (<https://www.wesleyan.edu/imcp/>). Specialization in these areas is achieved through course work, seminars, journal clubs, and dissertation work performed under the guidance of program faculty.

DISSERTATION AND DEFENSE

The most important requirement is a PhD thesis, an original contribution to the field that merits publication. The candidate will receive advice and guidance from their advising committee but must demonstrate both originality and scientific competence. Normally, the candidate will choose a thesis topic during the second year of graduate work in consultation with faculty mentors. Students will select a thesis committee consisting of three additional faculty members, chosen by the student and thesis advisor, with at least two of these members being from the MB&B department. Thesis committee meetings must be scheduled at least once per year in order to provide committee members with updates on progress towards the degree. This committee determines when sufficient experimental work has been completed to begin writing the thesis towards a defense of the body of work. This committee serves as the final examination committee that must approve the final written document and its defense.

ADDITIONAL INFORMATION

For additional information, please visit the department website (<https://www.wesleyan.edu/mbb/>).

MASTER OF ARTS IN MOLECULAR BIOLOGY AND BIOCHEMISTRY

The Molecular Biology and Biochemistry (MB&B) Department program focuses on the molecular basis of life—on mechanisms by which cells process, integrate, and act on information to create and propagate living organisms.

The MB&B department offers graduate work leading to the degree of Master of Arts through Wesleyan's BA/MA program. The MB&B Department may also

grant the degree of Master of Arts to students in the PhD program who do not complete the PhD.

Undergraduate students interested in the BA/MA program may declare their interest as early as their sophomore year—and no later than early in their senior year—to permit the design of an acceptable program with a research advisor.

The program has a strong research orientation, supplemented by advanced coursework, seminars, and, sometimes, teaching. MA candidates continue the research they began as undergraduate students, including at least one summer of full-time research. Students will develop expertise in cutting-edge methodologies in molecular biology and biochemistry, extensively read the literature relevant to their thesis project, produce a scholarly thesis document, and present their results at a departmental seminar. While not a formal requirement, MA students often contribute their data towards the publication of a co-authored, peer-reviewed journal article.

COURSES

Masters students are required to complete six credits. A typical schedule for five of the six credits can be found in the chart below. With permission from the department, students who received credit in 300-level MB&B electives that were not used to fulfill major requirements for their BA degree (in MB&B or another major) may apply them towards the MA degree requirements. BA/MA students are expected to give an oral presentation on their research as part of our graduate seminar series.

First Year		
Fall		Hours
MB&B 500-LEVEL ELECTIVE		1.0
MB&B549	Advanced Research Seminar, Graduate	1.0
MB&B585 or MB&B507	Molecular Biology Journal Club I or Molecular Biophysics Journal Club I	.5
MB&B557	Research Seminars in Molecular Biology	0.25
MB&B338	Biology and MB&B Symposium I	.25
Hours		3
Spring		
MB&B 500-LEVEL ELECTIVE		1.0
MB&B550	Advanced Research Seminar, Graduate	1.0
MB&B586 or MB&B508	Molecular Biology Journal Club II or Molecular Biophysics Journal Club II	.5
MB&B558	Research Seminars in Molecular Biology	0.25
MB&B539	Biology and MB&B Symposium II	.25
Hours		3
Total Hours		6

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

PROGRESS AND QUALIFYING EXAMS

There are no qualifying exams. BA/MA students will select a thesis committee in the first semester of the MA year. The thesis committee will consist of their research advisor and two additional faculty members, including at least one from

the MB&B department. At the student or advisor's discretion, the student may convene a committee meeting in the fall of their BA/MA year.

TEACHING

There are no requirements to TA for the BA/MA program.

RESEARCH

MA students will continue research they began as undergraduate students. This includes at least one summer of full-time research. MA students will pursue a thesis topic that addresses important scientific questions in the field. MA students will develop expertise in cutting edge methodologies in molecular biology and biochemistry, extensively read the literature relevant to their thesis project, and present their results at a departmental seminar. MA students often contribute their data towards publication of a co-authored, peer-reviewed journal article, but this is not a formal requirement for the degree.

CONCENTRATIONS

Students in the BA/MA program in MB&B may petition the department to pursue a concentration in Molecular Biophysics. To complete their certification in Molecular Biophysics, the student must engage in research under the mentorship of one of the program faculty, choose elective courses within the field (<https://www.wesleyan.edu/molbiophys/Graduate%20Program/courses.html>), and participate in the Molecular Biophysics Journal Club.

THESIS AND DEFENSE

MB&B's BA/MA and terminal MA students are expected to submit and orally defend a formal thesis document that describes the research they have carried out in partial fulfillment of the Master's degree requirements. Upon completing the research goals for the thesis, and in consultation with their thesis committee, students will complete their MA thesis document and schedule an oral defense. The thesis committee serves as the final examination committee that must approve the final written document and its defense.

ADDITIONAL INFORMATION

Students may declare their interest in the program as early as their sophomore year. They should discuss it with their faculty mentor/Principal Investigator and their major advisor in order to prepare for the graduate program while an undergraduate. Students are admitted to the BA/MA program in the home department of their faculty mentor/PI regardless of their undergraduate major. Admission is based on faculty sponsorship and a comprehensive evaluation of academic performance.

Application requirements include a research proposal, proposed program of study, personal statement, academic transcript, and two letters of recommendation. The application is online. There is one application period of Sep 1 – Jan 13 for both fall and spring entry terms. The online application opens on Sep 1 and closes on Jan 13. More information is available on the Graduate Studies webpage (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html).

MUSIC

The Music Department is based on the premise that *all the world's musics warrant close study*. This is reflected in the cultural diversity of the Department's faculty and the range of courses in music history, culture, composition and theory they offer. In addition, the department recognizes that *the study of music necessarily involves the practice of music making*. To this end, the Department has a particularly active performance program which provides private instrumental and vocal instruction opportunities and ensemble courses in a wide variety of traditions and approaches. Finally, the department sees *the ability to engage with unfamiliar musical traditions as an essential aspect of 21st century musicianship*. To this end inter-cultural references are woven into many of the Department's History and Culture, Theory and Composition courses and Performance courses are offered in musics from across the world. In addition, the Department's graduate program attracts an internationally and musically diverse collection musicians and scholars who contribute to this intercultural engagement both formally as teaching assistants and informally as fellow musicians. In these varied ways the Music Department seeks to create an exceptional artistic and educational environment where students can develop their existing musical commitments while also expanding their awareness of the full range of the world's musics.

PRIVATE MUSIC LESSON INSTRUCTORS

Jesse Ofgang - Bagpipes

Stan Scott - Banjo

Roy Wiseman - Bass

Morgan Pope - Bassoon

Julie Ribchinsky - Cello

Alexander Kollias - Clarinet

Pheeroan Aklaiff - Drums

Craig Edwards - Traditional Fiddle Styles

Aleksandra Newland - Flute

Robert Hoyle - French Horn

Cem Duruoz - Guitar

Tony Lombardozi - Guitar - Jazz and Blues

Tom Crean - Guita - Jazz, Blues, Rock and Experimental

Scott Kessel - Hand Percussion/Drums

Megan Sesma - Harp, Classical and Folk

Stan Scott - Mandolin/Guitar/North Indian Vocal

Libby Van Cleve - Oboe

Eugene Bozzi - Percussion and Drums

Carolyn Halsted - Piano

Yvonne Troxler - Piano

Noah Baerman - Piano - Jazz

Carrie Koffman - Saxophone

Matthew Russo - Trombone

Nancy Brown - Trumpet, Classical

Steven Wilkison - Tuba

Marvin Warshaw - Viola

Perry Elliot - Violin Performance

Priscilla Gale - Voice

Giacomo Gates - Voice - Jazz

UNDERGRADUATE DEPARTMENTAL ADVISING EXPERTS

Su Zheng

MUSIC MAJOR

MAJOR DESCRIPTION

The Major in Music program is built around the individual interests and needs of the student while providing a solid foundation in the study of music history and culture, music analysis, theory, composition, and performance. Wesleyan's Music department enjoys an international reputation for innovation in the study of World Music, and majors will study at least one musical tradition outside their prime concentration. The Music Major at Wesleyan emphasizes how the combined experience of music with the study of music reinforces and inspires each other. Students may focus on areas such as Western classical music; new and experimental music; African American, Indonesian, Indian, and African musics; and European and American music outside the art tradition.

Students committed to pursuing their musical aspirations at a collegiate level possess a unique passion for music combined with broad intellectual curiosity, a strong appreciation of artistic expression, dedication to their craft, a collaborative spirit, open-minded creativity, and a strong work ethic.

Careers in music may include performance, music instruction, music therapy, arts journalism or criticism, arts administration, music production or direction, event coordination, entrepreneurship, and more.

ADMISSION TO THE MAJOR

Individual programs of study in the Music Major are developed by students with academic advisors. A student must have already taken at least one course in each capability area: theory/composition, history/culture, and performance, before applying for the major. The Music Theory Gateway course (MUSC103) is a requirement of all majors which may be waived based on a placement test.

MAJOR REQUIREMENTS

Music majors take three courses in each capability area: theory/composition, history/culture, and performance. Two additional courses from the MUSC300-level Seminars for Music Majors bring the number of music credits to 11.

The required senior project or senior honors thesis brings the total number of music credits to 12 or 13, respectively.

Diversity of musical experience is a core value of the Music Department and is expected of all music majors. Towards that goal, each major's program of study must include at least two Music credits out of the major's main area of interest.

Many Music majors, particularly those taking private lessons, end up taking more than 16 credits in music. However, since no more than 16 credits in music may be counted toward the 32 credits required for graduation, students must always complete at least 16 credits outside of music.

COURSES FOR NON-MAJORS

With the exception of Music Major Seminars, all classes offered by the Music Department are open to non-majors.

GENERAL EDUCATION

Music majors are advised to complete their General Education expectations (three each of Arts and Humanities, Natural Sciences and Mathematics, and Social Sciences courses). Prospective majors who have not taken enough courses outside the Music department may be refused entry into the major. Students who fail to fulfill the General Education expectations are not considered for department prizes and honors.

STUDENT LEARNING GOALS

At graduation, music majors will be able to:

- Think analytically and critically about musical languages, histories, and cultures
- Write effectively about music
- Perform and/or create music with proficiency and creativity
- Engage unfamiliar traditions and paradigms of humanly organized sound with sensitivity and insight
- Apply their musical knowledge and skills within broader investigations of the human experience

ADVANCED PLACEMENT

AP THEORY CREDIT IS CONSIDERED AS FOLLOWS: AP THEORY CREDIT ON THE STUDENT'S WESLEYAN TRANSCRIPT

- A score of 4 or 5 will provide one Wesleyan credit towards graduation
- Student will still need to complete 3 additional theory/composition credits for the major

STUDENTS WITH QUESTIONS REGARDING AP THEORY

- Should meet with the theory faculty of the Music Department teaching MUSC103 to discuss options

PRIZES

MERIT-BASED AWARDS THAT MAY BE AWARDED ANNUALLY ELIZABETH VERVEER TISHLER PRIZE

Established in 1981 by a gift from Mrs. Tishler. Expanded in 1989 for excellence in piano performance.

GWEN LIVINGSTON POKORA PRIZE

Established in 1993, awarded annually to the outstanding undergraduate student in music composition.

LEAVELL MEMORIAL PRIZE

Awarded annually to a senior who has done outstanding work in music and whose work manifests the ideals of the World Music Program in the Music Department.

LIPSKY PRIZE

The gift of the Reverend and Mrs. Bailey G. Lipsky in memory of their son, Francis Jules Lipsky, Class of 1931, to the member of the choir possessing in the highest degree unflinching kindness, quiet dignity, and brilliant scholarship.

SAMUEL C. SILIPO PRIZE

Awarded annually for the most valuable player(s) of the Wesleyan orchestra.

ADDITIONAL INFORMATION

SPECIAL ACTIVITIES

The department supports a number of unusual activities, many of which are available to the student body in general as well as to music majors. Among them are ensembles in various Asian, African, American, and European traditions, as well as a variety of chamber ensembles.

PRIVATE LESSONS PROGRAM

Private lessons are available for many instruments and voice in Western art music, African American music, and a variety of other musics from around the world. Lessons are considered one-credit-per-semester courses. An additional fee, \$780 per semester, is charged for these private lessons (financial aid may be available to students eligible for university financial aid). Approved music majors in their junior and senior years are eligible for partial subsidy when taking one (1) private lesson, per semester, for academic credit with a private lessons teacher.

DEPARTMENTAL COLLOQUIUM

An ongoing departmental colloquium is intended for the entire music community. It includes presentations by Wesleyan faculty, students, and outside speakers and encourages general discussion of broad issues in the world of music.

FACILITIES

The study facilities include a working collection of musical instruments from many different cultures; a music-instrument manufacturing workshop; a 45-piece Javanese *Gamelan* Orchestra; a large formal concert hall and a small multipurpose concert hall; an electronic music studio coupled to a professional recording studio; a computer-arts studio capable of producing electronic music, video art, and environmental simulations; a music and record library; an electronic keyboard lab; and an archive of world music.

COURSES

The following is a listing according to categories of courses offered by the department:

Code	Title	Hours
FYS Courses		
MUSC116F	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation (FYS)	1
MUSC117F	Musicking Body (FYS)	1
MUSC118F	Bob Dylan and His World: Sources and Legacies (FYS)	1
MUSC119F	Jazz in the 1960s (FYS)	1
MUSC120F	Music, Place, and Culture: An Exploration of African American Soundscapes and Traditions (FYS)	1
MUSC124F	Mapping Culture (FYS)	1
MUSC125F	Music and Downtown New York, 1950-1970 (FYS)	1
MUSC126F	Poetry and Song (FYS)	1
MUSC128F	Music and the Moving Image: From Music Video to Film to Digital Media (FYS)	1
MUSC130F	Wagner and Wagnerism: Richard Wagner's Music and Influence from the 1840s to the Present (FYS)	1
MUSC131F	Gender and Sexuality in Hip Hop (FYS)	1
MUSC133F	Caribbean Connection: Music and Culture of Trinidad and Tobago Music (FYS)	1
Music Theory and Composition		
MUSC103	Materials and Design	1
MUSC104	Rhythms of the World: An Introduction to Rhythm, Meter, and (Musical) Time	1
MUSC105	MF DOOM and Pierre Henry	1
MUSC201	Tonal Harmony	1
MUSC202	Theory and Analysis	1
MUSC203	Chromatic Harmony	1
MUSC204	20th Century Compositional Techniques	1
MUSC205	Song: Music and Text	1
MUSC206	18th-Century Counterpoint	1
MUSC207	Orchestration	1

MUSC208	Post-Tonal Music Theory	1
MUSC210	Theory of Jazz Improvisation	1
MUSC212	South Indian Music: Solkattu	1
MUSC220	Composing, Performing, and Listening to Experimental Music	1
MUSC221	Live-Electronics for Composition, Improvisation, and Sound Art	1
MUSC222	Sound Art, Music, and Interactive Media	1
MUSC223	Music, Recording, and Sound Design	1
MUSC225	Sound Systems and Chamber Electronics	1
MUSC230	Music Theater Workshop (cross list)	1
MUSC240	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation	1
MUSC308	Composition in the Arts	1
Music History and Culture		
MUSC102	World Music	1
MUSC106	A Thousand Years of Music History	1
MUSC108	History of Rock and R&B	1
MUSC109	Introduction to Experimental Music	1
MUSC110	Introduction to South Indian Music	1
MUSC111	Music and Theater of Indonesia	1
MUSC115	Introduction to North Indian Music	1
MUSC116	Visual Sounds: Exploring the Landscape and Architecture of Musical Notation	1
MUSC117	Musicking Body	1
MUSC121	Queering Russian Music	1
MUSC125	Music and Downtown New York, 1950-1970	1
MUSC127	C-Pop in the Shadow of a Rising China	1
MUSC129	The Art of Listening	1
MUSC241	Mystical Visions, Medieval Women, and the Performance of Early Music (cross list)	1
MUSC242	Baroque and Classical Music	1
MUSC243	Music of the 19th Century	1
MUSC244	Music of the 20th Century	1
MUSC245	Music in the United States in the Nineteenth Century	1
MUSC246	The Symphony: Evolution of Genre	1
MUSC248	Music in Outer Space	1
MUSC249	Calderwood Seminar in Public Writing: Music Journalism and Public Musicology	1
MUSC250	Film and Folk Music of India	1
MUSC261	Music and Modernity in China, Japan, and Korea	1
MUSC265	African Presences I: Music in Africa	1
MUSC269	Sacred and Secular African American Musics	1
MUSC272	History of Jazz in American Culture	1
MUSC273	BlaQueer Sounds: Queer Negotiations in African American Music	1
MUSC274	Hymnody in the United States Before the Civil War	1
MUSC275	Music and Downtown New York	1
MUSC277	Jazz Avant-Gardes	1
MUSC278	Survey of Jazz Styles	1
MUSC285	Global Hip Hop of the Non-Anglophone World (CLAC .50)	0.5

MUSC290	Research Skills in Ethnomusicology--IRL & Digital	1	MUSC455	Jazz Ensemble	1
MUSC291	The Gendering of Music in Cross-Cultural Perspective	1	MUSC456	Jazz Improvisation Performance	1
MUSC293	Mapping Culture	1	MUSC457	Jazz Orchestra I	1
MUSC294	Queer Opera	1	MUSC458	Jazz Orchestra II	1
MUSC295	Global Hip-Hop	1	MUSC459	Methods of Improvisation Ensemble	1
MUSC296	Soundscapes of Islam	1	MUSC461	Sound Systems: The How of Hearing	1
MUSC297	Music of Central Asia: From Throat-singing to Heavy Metal	1	MUSC463	Teaching Music Lessons to Children in Local Schools	1
Music Major Seminars			MUSC464	Laptop Ensemble	1
MUSC300	Seminar for Music Majors	1	Graduate Courses		
MUSC304	Arranging and Composing for Jazz Orchestra	1	MUSC500	Graduate Pedagogy	0.5
MUSC308	Composition in the Arts	1	MUSC505	Topics in Applied Ethnomusicology/Public Musicology	1
Music Performance			MUSC506	Reading Ethnomusicology	1
MUSC405	Private Music Lessons for Nonmusic Majors	1	MUSC507	Practicing Ethnomusicology	1
MUSC406	Private Music Lessons for Declared Music Majors	1	MUSC508	Graduate Seminar in Composition	1
MUSC413	Korean Drumming and Creative Music Ensemble	1	MUSC509	Special Topics in Contemporary Music	1
MUSC414	Korean Drumming and Creative Music Ensemble Advanced	1	MUSC510	Graduate Proseminar in World Music Studies	1
MUSC416	Beginning Taiko--Japanese Drumming Ensemble	1	MUSC513	Improvisation in Cross-Cultural Perspective	1
MUSC418	Taiko II: Japanese Drumming Ensemble	1	MUSC515	Mapping Music as/in Motion: The Cartographies and Circulation of Aural Culture	1
MUSC428	Chinese Music Ensemble	1	MUSC517	Sex/Gender/Queerness in Music and Music Scholarship	1
MUSC429	Voice Technique & Improvisation	1	MUSC518	Music and Embodiment	1
MUSC430	South Indian Voice--Beginning	1	MUSC519	Current Issues in Ethnomusicology	1
MUSC431	South Indian Voice--Intermediate	1	MUSC520	Explorations in Musicology	1
MUSC432	South Indian Voice--Advanced	1	MUSC521	Seminar in Interdisciplinary Studies	1
MUSC433	South Indian Music--Percussion	1	MUSC522	Seminar in Comparative Music Theory	1
MUSC434	Improvisational Techniques in South Indian Music	1	MUSC530	Department of Music Colloquium	0.25
MUSC435	Keyboard Techniques for Composers and Conductors	1	HONORS		
MUSC436	Wesleyan Concert Choir	1	The senior project requirement may be satisfied by the completion of an honors project, a project that may encompass a composition, a concert, etc., but the honors project always contains a substantial written component; for this reason it is called the honors thesis. An honors thesis satisfies the departmental requirement for a senior project, even if it is not awarded honors. The honors thesis tutorial is always a two-semester undertaking.		
MUSC437	Singing to Your Instruments	1	CAPSTONE EXPERIENCE		
MUSC438	Wesleyan University Collegium Musicum (cross list)	1	All music majors are required to complete a senior project by the end of their final year. The purpose of the project is to give focus to the major by means of independent, creative work and to encourage independent study with the close advice and support of a faculty member. Students who choose to undertake an honors thesis may count this as their senior project.		
MUSC439	Wesleyan University Orchestra	1			
MUSC440	Instrumental Conducting	1			
MUSC441	Piping Performance: An Exploration of Artistic Expression through the Pipe Organ	1			
MUSC442	Chamber Music Ensemble	1			
MUSC443	Wesleyan Wind Ensemble (WesWinds)	1			
MUSC444	African Popular Music Performance	1			
MUSC445	West African Music and Culture: Beginners	1			
MUSC446	West African Music and Culture--Intermediate	1			
MUSC447	West African Music and Culture--Advanced	1			
MUSC448	Ebony Singers: Gospel Music	0.5			
MUSC450	Steelband	1			
MUSC451	Javanese Gamelan--Beginners	1			
MUSC452	Javanese Gamelan--Advanced	1			
MUSC453	Keyboard Techniques II: Conducting and Score Reading	1			

DOCTOR OF PHILOSOPHY IN MUSIC

The Music Department offers degrees at both the master's and doctoral levels. The PhD is offered in ethnomusicology. Coursework takes the form of seminars and individual study with faculty members. The faculty represent many musical traditions teaching, performing and composing African American, East Asian, Central Asian, Euro-American, Indonesian, South Indian (Karnatak), West African, contemporary and experimental composition and improvisation.

PhD candidates in ethnomusicology typically enter the program with a grasp of ethnomusicology and its methods equivalent to that developed in the MA. Those with a different disciplinary background must complete the two MA ethnomusicology seminars together with their other work. PhD candidates are required to complete a dissertation and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices. Course work consists of six graduate seminars, two performance courses, a course outside of the department, four semesters of the Music Department Colloquium and thesis tutorials. Candidates must successfully complete the Qualifying Examination before they begin their dissertation writeup. PhD students are required to pass a proficiency exam in a field or research language, determined in consultation with their thesis advisor.

Most often, candidates complete coursework and the Qualifying Exam, undertake field work for a year or longer, and then return to complete the writing of their dissertations.

COURSES

Satisfactory completion of courses totaling at least 12 credits. Students are required to take one core seminar (MUSC519, MUSC521, MUSC520/MUSC522), five elective graduate-level seminars other than the core seminars (two of which may be satisfied with appropriate courses already taken at the master's level), two credits of performance (in different musics), one course outside the department, two credits of thesis tutorial (MUSC591/MUSC592), and four semesters of MUSC530. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

Two foreign languages are required for the PhD: one field language and one research language. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

PROGRESS AND QUALIFYING EXAMS

At the conclusion of the second year in residence, students take a qualifying examination consisting of a set of essays and a follow-up oral examination.

RESEARCH

PhD candidates in ethnomusicology are required to complete a dissertation and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/music/graduate/ (<http://wesleyan.edu/music/graduate/>)

MASTER OF ARTS IN MUSIC

The Music Department offers degrees at both the master's and doctoral levels. The MA in music has concentrations in scholarship (ethnomusicology/musicology), experimental music/composition, and performance. Coursework takes the form of seminars and individual study with faculty members. The faculty represent many musical traditions teaching, performing and composing African American, East Asian, Central Asian, Euro-American, Indonesian, South Indian (Karnatak), West African, contemporary and experimental composition and improvisation.

The MA in Music is a two-year program with concentrations in scholarship (ethnomusicology/musicology), experimental music/composition, and performance. All MA students begin their studies with the Graduate Proseminar in World Music Studies. In addition, all MA students are required to pass a proficiency exam in a field or research language, determined in consultation with their thesis advisor.

MA students in ethnomusicology complete a unique thesis and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices. An ethnomusicology thesis must constitute an archivable product displaying mastery of and an original contribution to the understanding of an aspect of world music.

MA students in composition complete a thesis which includes the presentation of their work in a performance, installation or other public forum and a written essay. The research expectations of the thesis essay are developed in consultation with a thesis advisor and other music faculty. Creative work can range through many forms of auditory culture, including musical compositions, sound installations, and the design of musical instruments and systems.

MA students in performance define a program of study best suited to their interests from the seminar offerings in ethnomusicology and composition. The performance thesis includes the presentation of a performance or series of performances together with a written essay.

COURSES

A total of 11 credits of coursework. Students are required to take MUSC510, four graduate seminars other than MUSC510 (two in the area of concentration), two performance courses, a course outside the department, a two-semester thesis

tutorial (MUSC591/MUSC592), and four semesters of MUSC530. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

One foreign language is required for the MA. All incoming students are required to take the language examination administered by the department at the beginning of their first term.

PROGRESS AND QUALIFYING EXAMS

Students in ethnomusicology submit a written thesis of original research and, if relevant, a public presentation of original work to a thesis committee. The final review or original works culminates in a thesis defense.

For students in composition, the essay may discuss the nature and form of their creative work, but it must also include a researched discussion of the broader context of that work, such as the musical discourse or social context within which it was conceived. Alternatively, the thesis may also forgo any discussion of the student's creative work and focus fully on a research topic.

RESEARCH

Masters students in ethnomusicology are required to complete a unique thesis and defense in their area of expertise. Research may include field work, archival research, engagement in performance, and learning a field language, among other practices.

The creative work of MA students in composition can range through many forms of auditory culture, including musical compositions, sound installations, and the design of musical instruments and systems. The composition thesis includes the presentation of this work in a performance, installation or other public forum and a written essay. The research expectations of the thesis essay are developed in consultation with a thesis advisor and other music faculty.

THESIS AND DEFENSE

An ethnomusicology thesis must constitute an archivable product displaying mastery of and an original contribution to the understanding of an aspect of world music. The MA thesis may follow various formats and modes of musical investigation, but performance per se does not constitute a thesis without substantial written ancillary materials. Work such as bibliographies, translations, and journals do not normally constitute theses. After completing all department requirements and acceptance of the thesis by the committee, the candidate is scheduled for an oral thesis defense administered by the committee.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/music/graduate. (<http://wesleyan.edu/music/graduate/>)

NEUROSCIENCE AND BEHAVIOR

Neuroscience is a discipline that probes one of the last biological frontiers in understanding ourselves. It asks fundamental questions about how the brain and nervous system work in the expression of behavior. As such, the field takes on a clear interdisciplinary character: All scientific levels of organization (behavioral, developmental, molecular, cellular, and systems) contribute to our understanding of the nervous system. Neuroscience has been a field of particularly active growth and progress for the past two decades, and it is certain to be an area where important and exciting developments will continue to occur. At Wesleyan, the neurosciences are represented by the teaching and research activities of faculty members in the departments of biology, psychology, and chemistry. The neuroscience and behavior (NS&B) curriculum is both comprehensive and provides diverse approaches to learning. Through lecture/seminars, lab-based methods courses, and hands-on research experience, students are afforded a rich educational experience. Unique among schools of comparative size, Wesleyan has small but active graduate programs leading to BA/MA and PhD degrees. This attribute, together with the high success rate of faculty in obtaining research grant support, further enhances the education of undergraduates by providing additional mentoring, more research opportunities, and access to state-of-the-art laboratories. The mission of the NS&B program is to provide the foundation for a variety of career options in science, medicine, and private industry. For more information, see wesleyan.edu/nsb/ (<http://wesleyan.edu/nsb/>).

DEPARTMENTAL ADVISING EXPERT

Barbara Juhasz

NEUROSCIENCE AND BEHAVIOR MAJOR

MAJOR DESCRIPTION

The Program in Neuroscience and Behavior (NS&B) opens avenues for students to explore the role of the brain in expressing behavior in animals including humans. Students who major in NS&B learn the details of how the nervous system works and how it functions with other biological and psychological systems. New technologies in contemporary neuroscience have helped to bring about many important discoveries, with more on the horizon. Wesleyan neuroscience students learn in an interdisciplinary environment that includes coursework in biology, psychology, and chemistry. Students often expand their learning to include topics such as statistics, computer programming, design, and philosophy of science. Lab-based methods courses and hands-on research in state-of-the-art laboratories give students a rich educational experience that provides a foundation for various career options that include medicine, basic and applied research in the public or private sector, and scientific writing or reporting.

Students who pursue the NS&B major bring a strong curiosity about the intricate workings of the brain and nervous system. They strive to integrate knowledge and research from relevant areas of science to understand behavior. They develop analytical, detail-oriented problem-solving expertise and they learn how to stay current with the latest advancements in neuroscience.

ADMISSION TO THE MAJOR

One or more of the foundation courses in biology (BIOL181, BIOL182) are prerequisites for the advanced **NS&B** courses offered by the Biology Department. Although not legislated as prerequisites, NS&B213 and **NS&B** laboratory courses provide important conceptual and practical background for independent research in the junior and senior years.

A recommended course sequence for students with a strong background in science would include BIOL181 and BIOL182 (and associated labs) along with introductory chemistry in the first year. Other students may wish to take the Introductory Chemistry Sequence in the first year prior to the Introductory Biology sequence. In the sophomore year, one would take NS&B213. The other required courses and research tutorials would be spread out over the last two years. For information on the pathway through the major, please visit wesleyan.edu/nsb/pathways.html (<http://www.wesleyan.edu/nsb/pathways.html>) for further information.

To be admitted to the major during March of the sophomore year, a student must have completed, with grades of C- or better, at least two of the full-credit courses listed in foundation and core courses that follow. At least one of these credits must be either NS&B213 or BIOL181.

MAJOR REQUIREMENTS

FOUNDATION COURSES

Code	Title	Hours
BIOL181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
BIOL191	Principles of Biology I--Laboratory	.5
BIOL182	Principles of Biology II	1
BIOL192	Principles of Biology II: Laboratory	0.5
CHEM141 & CHEM142 or CHEM143 & CHEM144	General Chemistry I and General Chemistry II Honors General Chemistry I and Honors General Chemistry II	2
CHEM251 & CHEM252	Organic Chemistry I and Organic Chemistry II	2

Two additional courses from the following (beginning with the graduating class of 2016):

PSYC105	Foundations of Contemporary Psychology	1
PHYS111 or PHYS112 or PHYS113	Introductory Physics I Introductory Physics II General Physics I	1
MATH117	Introductory Calculus (or higher)	1
COMP112	Introduction to Programming (or higher)	1

Core Course

Code	Title	Hours
NS&B213	Behavioral Neurobiology	1

ADVANCED COURSES

Five advanced courses from the following list are required for students; two must be cross-listed with biology; two cross-listed with psychology; and one, a research tutorial or methodological course. Some courses appear in both Biology and Psychology lists but may be counted only once, in either category.

Cross-listed with Biology

Code	Title	Hours
NS&B224	Hormones, Brain, and Behavior	1
NS&B239	Functional Anatomy of the Human Brain	1
NS&B244	Neuropharmacology	1
NS&B245	Cellular Neurophysiology	1
NS&B252	Cell Biology of the Neuron	1
NS&B254	Comparative Animal Behavior	1
NS&B299	Waves, Brains, and Music	1
NS&B303	Receptors, Channels, and Pumps: Advanced Topics in Membrane Protein Structure and Function	1
NS&B317	Neuroethics	1
NS&B320	Neuroscience of Learning and Memory	1
NS&B325	Stem Cells: Basic Biology to Clinical Application	1
NS&B328	Chemical Senses	1
NS&B343	Muscle and Nerve Development	1
NS&B345	Developmental Neurobiology	1
NS&B347	Mammalian Cortical Circuits	1
NS&B351	Neurobiology of Learning and Memory	1
NS&B353	Neurobiology of Neurological Disorders	1
NS&B357	Sex and Gender: From Synapse to Society	1
NS&B356	Neurodevelopmental Disorders	1
NS&B358	Neurobiology of Movement	1
NS&B360	Neuroplasticity and Neurogenesis in Health and Disease: Molecules, Cells, and Circuits	1
NS&B373	Exploring the Brain-Body Interface: The Neuroscience of Basic Survival	1

Cross-listed with Psychology

Code	Title	Hours
NS&B220	Cognitive Psychology	1
NS&B222	Sensation and Perception	1
NS&B225	Cognitive Neuroscience	1
NS&B227	Motivation and Reward	1
NS&B228	Clinical Neuropsychology	1
NS&B238	Psychological Theories of Learning and Motivation	1
NS&B239	Functional Anatomy of the Human Brain	1
NS&B316	Schizophrenia and Its Treatment: Neuroscientific, Historical, and Phenomenological Perspectives	1
NS&B317	Neuroethics	1
NS&B320	Neuroscience of Learning and Memory	1

PSYC322	Psychology of Decision-Making	1
NS&B329	Neural Costs of War	1
PSYC332	Seminar in Cognitive Neuroscience	1
NS&B335	Behavior Genetics	1
NS&B341	Psychology of Human Memory	1
NS&B348	Topics in Cognitive Development	1
NS&B353	Neurobiology of Neurological Disorders	1
NS&B356	Neurodevelopmental Disorders	1
NS&B358	Neurobiology of Movement	1
PSYC382	Advanced Research in Decision Making	1

Research Methods and Practica

Code	Title	Hours
MATH132	Elementary Statistics	1
PSYC200	Statistics: An Activity-Based Approach	1
NS&B210	Research Methods in Cognition	1
NS&B215		1
BIOL242	Quantitative Methods for the Biological and Environmental Sciences	1
NS&B243	Neurohistology	1
BIOL247	Laboratory in Neurophysiology	1
NS&B250	Laboratory in Cellular and Behavioral Neurobiology	1
BIOL251	Laboratory in Basic Practices in Neuroscience	1
NS&B280	Applied Data Analysis	1
PSYC378	Advanced Research in Cognitive Neuroscience	1
NS&B383	Advanced Research in Learning and Memory	1
NS&B390	Experimental Investigations into Reading	1
NS&B392	Behavioral Methods in Affective Neuroscience	1
NS&B399		1.25
The following are taken for two semesters, both in the lab of the same faculty member:		
NS&B409	Senior Thesis Tutorial	1
& NS&B410	and Senior Thesis Tutorial (two semesters, both in the lab of the same faculty member)	
or NS&B423	Advanced Research Seminar, Undergraduate	
& NS&B424	and Advanced Research Seminar, Undergraduate	

Note: MATH132 can be taken to meet requirements for either the methodological or foundation major requirements, but not both. Methodological courses cannot be credited toward the requirements of advanced courses cross-listed with biology or psychology. *Courses listed in both categories A. or B. but not both.

Courses of relevance outside the program. Though not requirements of the major, students should be aware that courses in organic chemistry and molecular biology, as well as courses in non-neuroscience areas of biology and psychology, complement the **NS&B** major and should be considered, in consultation with your advisor, when planning your program of study.

SUBSTITUTING OUTSIDE COURSES FOR CREDIT TO THE MAJOR

Foundation courses: A student who has taken foundation courses outside of Wesleyan may be able to apply them to the major. As a general rule, courses acceptable to the biology, chemistry, and physics departments for university

credit are acceptable to the NS&B program for substitution for foundation courses.

Advanced courses: Advanced courses, inside or outside of the University, might be acceptable as substitutes for the advanced courses of the NS&B major. In general, only one such course can be substituted, and approval must be obtained in advance from the program director.

UNDERGRADUATE RESEARCH

NS&B majors are encouraged to become involved in the research of the faculty. Research tutorials and senior thesis tutorials are taken with mode of grading and amount of credit to be arranged with the research supervisor. Research tutorials are numbered NS&B411/NS&B412, NS&B409/NS&B410, and NS&B423/NS&B424. These courses can fulfill the research methods requirement or can receive graduation credit. For the most up-to-date information on NS&B faculty research, please visit our department website (<http://www.wesleyan.edu/nsb/>).

STUDENT LEARNING GOALS

Our program offers a curriculum that encourages fluency across multiple disciplines in the field of neuroscience and behavior. Immersion in this field requires thinking across multiple levels of analysis and an appreciation for how complex and broad questions can be made amenable to scientific inquiry. In terms of goals, we have three areas of knowledge that we expect all students to acquire by the time they have completed the NS&B major:

- **Structure:** The parts and how they connect. Structural knowledge includes neural development, neuroanatomy, neurotransmitters, and the cell and molecular biology of the neuron.
- **Function:** How the parts come together to produce systems. Such systems include various sensory, motor, and neuroendocrine systems. Knowledge concerning function is gained by studies of structures and studies of perception, learning and memory, behavior, and cognition.
- **Theory:** Governing principles that can be proposed from all the above. Examples of theories include those that address the relationships between brain and behavior, articulate how brain structure and function changes over time, and explain cognitive and perceptual processes.

In addition, it is our goal that all students can skillfully apply and analyze knowledge gained from their studies. Statistics courses, lab-based methods courses, and/or direct experience in research projects serve this goal.

ADVANCED PLACEMENT

AP credit may be used to place out of any of the foundation courses, subject to the guidelines of the department hosting these courses.

PRIZES

George H. Acheson and Grass Foundation Prize in Neuroscience: Established in 1992 by a gift from the Grass Foundation, this prize is awarded to an outstanding undergraduate in the Neuroscience and Behavior Program who demonstrates excellence in the program and who also shows promise for future contributions in the field of neuroscience.

BA/MA PROGRAM

This program provides an attractive option for science majors to enrich their course and research background. Students are advised to begin research by their junior year if they intend to pursue the BA/MA. Admission is competitive and based on GPA, faculty recommendations, and research experience. For more information, please visit <https://catalog.wesleyan.edu/departments/nsb/grad-nsb/> as well as the Graduate Studies page: <http://wesleyan.edu/grad/degree-programs/bama.html> (<http://www.wesleyan.edu/grad/degree-programs/bama.html>).

ADDITIONAL INFORMATION

- **Teaching apprenticeships.** Students may be appointed teaching apprentices with the approval of the participating faculty member and the Office of Academic Affairs. The apprenticeship position involves assisting a faculty member in the teaching of a course. Concurrently, the apprentice enrolls in an apprenticeship tutorial (NS&B491/NS&B492) that is usually a one-credit course and operates in either the graded or credit/no credit mode.
- **Petitioning for exemptions.** A student may request a variance from the requirements of the major or for honors by submitting a written petition to the chair of the program. The petition should indicate why the requirement cannot be met and the educational justification for the alternative. The petition will be considered by the NS&B faculty, and the student will receive a statement of the decision by letter.
- **Seminars.** The program periodically invites neuroscientists from outside Wesleyan to come here and describe their research. These seminars frequently complement course material and give students the opportunity to interact with noted researchers. The talks are usually scheduled for noon on Wednesdays. Students are encouraged to attend.

HONORS

To be considered for honors, a student must be an NS&B major and have a B average (grade average 85) in the courses credited to the major. The student must submit a laboratory research thesis that was supervised by a member of the NS&B faculty and be recommended for honors by the NS&B faculty.

MASTER OF ARTS IN NEUROSCIENCE AND BEHAVIOR

The Program in Neuroscience and Behavior (NS&B) opens avenues for students to explore the role of the brain in expressing behavior in animals including humans. Students learn the details of how the nervous system works and how it functions with other biological and psychological systems. New technologies in contemporary neuroscience have helped to bring about many important discoveries, with more on the horizon. Wesleyan neuroscience students learn in an interdisciplinary environment that includes coursework in biology, psychology, and chemistry. Students often expand their learning to include topics such as statistics, computer programming, design, and philosophy of science. Lab-based methods courses and hands-on research in state-of-the-

art laboratories give students a rich educational experience that provides a foundation for various career options that include medicine, basic and applied research in the public or private sector, and scientific writing or reporting.

The NS&B program offers graduate study leading to the degree of Master of Arts through the BA/MA program. Admission to the program is competitive and requires completion of an independent research thesis. In their MA year, students work closely with faculty research mentors while they complete coursework and participate in seminars. Prospective candidates are expected to declare their intention to enter the BA/MA program in the first semester of their junior year to permit the design of an acceptable program of study.

MA candidates complete at least six credits in addition to the 32 credits required for the Wesleyan BA. Three MA credits are earned through Journal Club, Advanced Research, and the Research Seminar. The remaining MA credits are earned through lecture, lab, or seminar courses determined by the student and mentor and approved by the Office of Graduate Student Services. Students in the MA program will submit a written thesis describing their research that they will present orally to their committee in a closed-door defense of the thesis and present publicly during the research seminar.

COURSES

BA/MA PROGRAM

The MA will require a minimum of 6 credits in addition to the 32 necessary for the Wesleyan BA. Three credits will be earned through Journal Club I & II (0.25 credits x 2 = 0.50), Advanced Research NS&B549/NS&B550 (1.0 credits x 2 = 2.0) and Research Seminar (.50 credits). The remaining credits will be earned through lecture, lab, or seminar courses (200, 300, or 500-level) determined by the student and mentor; a minimum of two of these must be one-credit courses. MA credit will only be awarded for academic work in which grades of B minus or higher have been earned. A student in the BA/MA program who earns more than 32 credits during the BA may apply any excess credits toward the MA, providing that they are relevant to the research area and they have not been used to fulfill an undergraduate major requirement. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

LANGUAGE REQUIREMENT

There are no language requirements for the BA/MA Program in NS&B.

PROGRESS AND QUALIFYING EXAMS

A 3-member committee of the faculty will be established upon acceptance in the BA/MA program. The candidate will meet with their committee in early stages of research and meet with them in the second semester of their MA year. This committee determines when sufficient experimental work has been completed and must approve the final written document. Students in this program are required to submit a MA thesis describing the research which they have carried out in partial fulfillment of the degree requirements.

TEACHING

There are no requirements for BA/MA candidates to teach although the opportunity may arise.

RESEARCH

Students conduct research and complete a written thesis in partial fulfillment of their MA degree. For the most recent information regarding the research carried out by faculty in the NS&B program, please visit the NS&B website: <https://www.wesleyan.edu/nsb/faculty.html>

THESIS AND DEFENSE

Students in this program will submit an MA thesis describing the research and will present this to their committee in a closed-door oral defense of the thesis. Following the oral defense with the thesis committee, the students will receive two grades for their thesis work: one for the oral component and one for the written component of the thesis. Additionally, students are required to give a public presentation during the research seminar (BIOL557 or CHEM587/CHEM588) describing their research as partial fulfillment of the degree requirements.

PHILOSOPHY

Doing philosophy means reasoning about questions that are of basic importance to the human experience—questions like, What is a good life? What is reality? How are knowledge and understanding possible? What should we believe? What norms should govern our societies, our relationships, and our activities? Philosophers critically analyze ideas and practices that often are assumed without reflection. Wesleyan’s philosophy faculty draws on multiple traditions of inquiry, offering a wide variety of perspectives and methods for addressing these questions.

DEPARTMENTAL ADVISING EXPERTS

All departmental faculty

PHILOSOPHY MAJOR

MAJOR DESCRIPTION

The Major in Philosophy provides students with a solid grounding in historical knowledge and skillful reasoning as they explore perennial human questions about the nature of reality, truth, knowledge, values, reason, ethics, beliefs, and the individual’s place in relation to society.

Wesleyan’s philosophy curriculum is organized into three broad categories: history, value, and mind and reality. Historical courses focus primarily on classical philosophical texts. Courses in the value area engage with ethical, political, and cultural practices. Mind and reality courses consider philosophical questions about language, reasoning, and the nature of reality.

The philosophy major at Wesleyan offers two tracks: general philosophy and social justice. The general philosophy track encourages students to explore issues and approaches from various historical periods and cultural traditions. The social justice track emphasizes philosophers’ roles as theorists and as agents of social and political change.

Intellectually curious students who consider themselves open-minded, cerebral, and analytical, with a strong passion for discourse and debate, may gain great satisfaction from the study of philosophy.

The philosophy major’s emphasis on critical thinking, problem-solving, and effective communication prepares graduates for a wide range of professions, including writing, law, education, business and management, research, and academia.

ADMISSION TO THE MAJOR

Because philosophy encompasses subjects in other disciplines, such as economics, government, mathematics, physics, psychology, and religion, students considering philosophy as a major are strongly advised to choose a balanced combination of solid liberal arts courses consistent with Wesleyan’s General Education Expectations.

Prospective majors should pay particular attention to the prerequisites for intermediate and advanced courses when planning their schedules. Among other courses, PHIL201, PHIL202, PHIL205, PHIL212, and PHIL231 are required or recommended for various subsequent courses.

Students who intend to apply for the social justice track will work with an advisor to submit a concentration proposal by the end of drop/add during their fifth semester.

MAJOR REQUIREMENTS

To complete the philosophy major’s required coursework, both the general philosophy track and social justice track require at least ten courses, including eight PHIL courses.

General Philosophy Track

The general philosophy track encourages students to explore a range of issues and approaches from various historical periods and cultural traditions.

Courses must include:

- One History course
- One Value course
- One Mind & Reality course
- Two Advanced seminars taken as juniors/seniors
- Five electives, including up to two non-PHIL
- Optional Thesis Project

Of the ten courses counted toward the general major track, at least eight must be offered by the Department of Philosophy; as many as two may be given in other programs (e.g., College of Letters, Religion) that are relevant to the student’s plan of study in philosophy and are approved by the philosophy faculty.

Social Justice Track

The social justice track emphasizes philosophers’ roles not only as theorists but also as agents of social and political change. Philosophical methods of conceptual and contextual analyses and careful argumentation provide important tools for grappling with real-world injustices. The social justice track supports students in tailoring their philosophical understanding and skills around a particular concern in an area of social justice, such as human rights, equality, social responsibility, environmental justice, etc.

Courses must include:

- One History or One Mind & Reality course
- Five-course concentration, including two non-PHIL

- Two advanced seminars taken as juniors/seniors

- Two electives from PHIL

- Optional Thesis Project

At the core of the social justice major track is a social justice concentration that brings together a student's specific interests in social justice. Majors will submit proposals for acceptance to the track that will include three philosophy courses and two non-philosophy courses that fit together in a coherent concentration.

Below are two sample concentrations:

Sample Concentration 1: Human Rights in China

PHIL272

Human Rights Across Cultures

PHIL278

Political Philosophy

CEAS271

Political Economy of Developing Countries

CEAS297

Chinese Politics

PHIL263

Modern Chinese Philosophy

Sample Concentration 2: Challenging The Carceral State

PHIL214

Reasoning About Justice

PHIL368

The Ethics of Captivity

ANTH302

Critical Perspectives on the State

PHIL211

Critical Philosophy of Race

GOVT159

The Moral Basis of Politics

COURSE LIST

The introductory philosophy courses (200-249) are intended for both prospective majors and non-majors. (General-Education-only courses, with course numbers below 200, do not count toward the major.)

Intermediate courses (250-300) are generally not appropriate for first-year students, and some have explicit prerequisites. Intermediate-level classes tend to introduce students to a particular area of philosophy or to the discipline's historical development at a higher level and in more depth than introductory classes.

Advanced courses (301-399) are typically organized as seminars for majors and other students with significant related preparation. Students often participate in exploring an area of particular relevance to a professor's research program. Advanced classes may focus on a particular figure in the history of philosophy or on a topic of contemporary importance.

COURSES FOR NON-MAJORS

Courses numbered below **250** are designed to be appropriate as first courses in philosophy. In addition, many of our courses numbered **250** and above are of interest to majors in related departments. (For example, students majoring in neuroscience or psychology often take PHIL286.)

STUDENT LEARNING GOALS

The Major in Philosophy equips students with the following knowledge and skills:

- Open-minded learning and constructive, critical engagement with the ideas and values of others.
- Close reading to follow and evaluate paths of reasoning
- Recognizing alternative ways of framing and addressing a problem
- Knowledge and appreciation of multiple philosophical approaches, thinkers, traditions, and themes
- Appreciation of historical and cultural differences
- Recognizing connections across the philosophy curriculum and beyond
- Understanding how philosophical inquiry both relates to and challenges their own perspectives and priorities

Graduates will be well prepared for success in a wide range of careers and life paths, including but certainly not limited to graduate work in philosophy.

LANGUAGE REQUIREMENT

Knowledge of foreign languages is particularly useful for the study of philosophy and indispensable for serious study of the history of philosophy. It is therefore strongly recommended that students achieve reading fluency in at least one foreign language.

PRIZES

The Department of Philosophy annually awards the Wise Prize for the best paper written in philosophy in the current year. This prize is usually awarded to a senior thesis written in philosophy, but it is not restricted to philosophy theses.

TRANSFER CREDIT

Students who entered Wesleyan as first-year students may count up to two courses taken outside Wesleyan toward the 10 required to fulfill the major. These should be pre-approved by the student's advisor. Under special circumstances, such as a full year spent studying philosophy at a British

university, it is possible to count more external credits toward the major. Students transferring into Wesleyan should review their academic histories with their departmental advisor as soon as possible to determine which will be counted toward the major requirements.

ADDITIONAL INFORMATION

Philosophy colloquia.

Every year the department arranges a series of public presentations of papers by visiting philosophers or Wesleyan faculty or students.

Majors Committee and Philosophy Club.

The department encourages its majors to attend departmental talks and social events. Students are also encouraged to organize student-led events and discussions.

HONORS

To qualify for departmental honors in philosophy, a student must achieve an honors level of performance in courses in the department, must declare the intention to work for departmental honors at the beginning of the senior year, must register for senior thesis tutorials in each semester of the senior year, and must write a thesis at an honors level. Theses must be submitted in accordance with Honors College procedures and will be judged by a committee made up of members of the department.

PHYSICAL EDUCATION

Wesleyan does not offer a major program in physical education. A for-credit program emphasizes courses in fitness, aquatics, lifetime sport, and outdoor education activities.

No more than one credit in physical education may be used toward the graduation requirement. Physical education (.25 credit) courses may be repeated once only.

Limited-enrollment courses. Students taking a class for the first time are given preference over students wishing to take a class a second time, and upper-class students have preference over lower-class students. Performance tests may be required to qualify for intermediate and advanced classes.

ATHLETICS AND PHYSICAL EDUCATION AT WESLEYAN—A STATEMENT OF PHILOSOPHY

"I have always thought that sports are an integral part of liberal education...The reason has to do with the difference between being active and remaining passive. Sports provide the occasion for being intensely active at the height of one's powers. The feeling of concentrated and coordinated exertion against opposing force is one of the primary ways in which we know what it is like to take charge of our own actions."—Louis Mink

Professor Mink, in *Thinking About Liberal Education*, said that liberal education is an intensive quest for fulfillment of human potential. It challenges the whole person—mind, body, emotions, and spirit—to pursue mastery of skills, broad and focused knowledge, coherent understanding of human experience, and a passionate desire to exploit one's capacity in the service of human freedom and dignity. As Mink suggests, structured physical activity is a key part of that pursuit. When it is in harmony with the broader educational purposes of an institution, it contributes to them, draws significance from them, and enhances the educational result.

The Department of Physical Education and Athletics provides the Wesleyan University community with a spectrum of activities that will be of benefit in developing healthy, energetic, and well-balanced lives. The objective is to meet the needs of students and to engage other campus constituencies in physical activity. Physical education and athletics at Wesleyan also reflect a commitment to equal opportunity for men and women at all levels of achievement.

Intercollegiate athletics provides the student with the advantage and privilege to achieve a more sophisticated mastery of skills through practice and contests. The pursuit of excellence can be realized through elite NCAA Division III competition with a focus on regular season and New England Small College Athletic Conference (NESCAC) conference play. In the pursuit of excellence, the Athletic Department strives to be the most innovative and successful athletic program in the prestigious NESCAC and a leader at the national level.

Wesleyan University pursues excellence in all of its programs. Athletics, as an integral part of the overall educational process, is uniquely positioned to enhance a liberal arts education. Wesleyan coaches share the same goal as the entire Wesleyan community: to transform the lives of our students. To achieve this goal, the University is committed to support our highly trained and dedicated faculty-coaches who practice their craft in state-of-the-art facilities.

Programmatic balance is a key criterion of physical education. The program is internally balanced to ensure equal opportunity for the pursuit of its several objectives. Moreover, physical education at Wesleyan is designed within the controlling context of liberal education.

PHYSICS

"Physics is the liberal arts education for a technological society."—Joseph Pimbley

Participation in research and proficiency in the main subject areas of physics are the twin goals of the physics program. The major program is designed to develop competency in quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed-matter physics. Preparation in mathematical and computational methods is an integral part of the program.

Interested and qualified students may pursue several opportunities for advanced work, including graduate courses and participation with graduate students and faculty in research. The department encourages its students to "do physics" at the earliest opportunity by making arrangements to work with one of the research groups or by arranging an independent research tutorial. Research may be experimental or theoretical and may, but need not, result in a senior honors thesis. Most majors who intend to write a thesis begin research no later than the junior year and continue it through the summer into the senior year. Current research interests include quantum computing, single molecule biophysics, soft condensed-matter physics, charge transport in photovoltaic devices, fluid dynamics, laser plasmas, spectroscopy, collision studies involving excited atoms and molecules, and wave transport in complex media.

Many students also take advantage of Wesleyan's computing facilities in their research or coursework. The University has a large computer cluster available to all who are doing research.

Each semester, opportunities exist to serve as a teaching apprentice, course assistant, or department assistant in one of the introductory or intermediate-level courses. Many physics majors have found that this is a stimulating way to learn more about the fundamentals of the discipline and how to teach them. The Cady Lounge in the department serves as a focus for the major by providing a place where students can study and discuss physics. There is also a study room where students in the introductory courses can come to get help and to work together. Students are encouraged to attend the weekly colloquium series and to participate in the weekly research seminars in atomic and molecular physics, chemical physics, condensed-matter physics, and theory. The Society of Physics Students is also a great resource for sharing ideas and questions with like-minded students.

- Francis Starr and Min-Feng Tu, *Class of 2024*

PHYSICS MAJOR

MAJOR DESCRIPTION

The Major in Physics equips students with an understanding of the fundamental laws that shape the universe and develops the skills needed to succeed in a technology driven society. Students develop competency in the main subject

areas of quantum theory, electromagnetism and optics, thermodynamics and statistical mechanics, classical dynamics, and condensed matter physics. Preparation in mathematical and computational methods is an integral part of the program. Students are encouraged to consider faculty-mentored research, working collaboratively with other undergraduate and graduate students. Additionally, opportunities are available to work as a teaching assistant and to pursue advanced coursework in graduate courses.

The model Physics student is insatiably curious about the workings of the universe and has a healthy intellectual humility that enables them to learn through investigation. Students conduct experiments with precision, analyze the results, critically grasp deeper concepts, and communicate complex theories and real-world applications. Physics students are encouraged to cultivate an analytical mindset, strong quantitative aptitude, and the ability to understand complex mathematical models with the ultimate goal of expanding the boundaries of human knowledge through meaningful discovery. In addition, students should develop their communication skills for both technical and lay audiences.

Armed with problem-solving skills and a deep understanding of physics principles, Physics graduates have a wide range of career options in various industries. Example career paths include research and development, engineering, data analytics, computational science, education, finance and banking, medical physics, geophysics, and environmental science.

ADMISSION TO THE MAJOR

The appropriate course for each student depends primarily on their level of preparation and previous coursework. Prospective majors should consult with a member of the Physics faculty to determine their most suitable course of study. There are four common paths into the Physics major.

1. PHYS113 : A calculus-based introductory mechanics course requiring one semester of calculus, taken in either secondary school or in college, at or about the level of MATH121. A student who has had no calculus may take calculus during the first year, then PHYS113 in the first semester of the sophomore year, or they may take PHYS113 simultaneously with their first calculus course.
1. PHYS215/PHYS219: A available to first-year or other students who have had both integral and differential calculus at about the level of MATH121/MATH122 and a solid course in mechanics with calculus at the level of PHYS113.
1. PHYS116: Students from both of the above gateways merge into the electricity and magnetism course, PHYS116, in the spring. Students intending to major in physics should complete either track no later than the end of their sophomore year, preferably by the end of their first year. The PHYS113/PHYS116 sequence has associated laboratory courses, PHYS123 in the fall and PHYS124 in the spring. These sections are half-credit courses associated with the lecture courses. The laboratory course PHYS124 is required to enter the major.

1.

PHYS213 : Exceptionally well-prepared students who have already mastered the material of PHYS113/PHYS116 should consult with a member of the Physics faculty to pursue this gateway to the major.

MAJOR REQUIREMENTS

The sequence of gateway courses describes the foundation for the core major courses.

By the end of sophomore year, students should complete the following courses:

PHYS113; PHYS116; MATH121; MATH122; MATH221; and MATH222. Students considering graduate work in physics should also complete PHYS213 and PHYS214 by the end of sophomore year.

Note: Completion of PHYS116 in your first year will add flexibility to planning for your major coursework.

Some advanced courses may not be offered every year, and you should plan accordingly.

To fulfill the major in physics, a student must complete eight lecture courses and two laboratory courses.

The lecture course requirements include four core physics courses which must be taken graded (A-F): PHYS213; PHYS214; PHYS316; and PHYS324. In addition, four elective lecture credits at the 200, 300, or 500 level are required. At least one of the elective courses must be a PHYS lecture course at the 300 level, usually PHYS313 or PHYS315.

The two required laboratory courses can be chosen from PHYS342, PHYS345, PHYS340, or a 1-credit research tutorial with a Physics faculty member. One of the two laboratory courses must be an advanced experimental laboratory class, currently PHYS342 or PHYS345, or an experimentally focused research tutorial.

Students planning graduate study in physics are advised to take a minimum of 14 credits at the 200 level or higher in physics, mathematics, and computer science. PHYS313, PHYS315, and PHYS358 are essential. The department strongly recommends PHYS565, MATH226, and MATH229. Graduate physics courses may be selected with permission, and experience in computer programming is extremely valuable.

Students not planning graduate study in physics and who are interested in applying their knowledge of physics to other areas of the curriculum may substitute up to two upper-level lecture courses from other departments. This must be done in consultation with the Physics Major advisor, and the selections must constitute a coherent, coordinated program of study. Substitution of more than two courses requires approval from the department. Preapproved tracks that may include electives from outside Physics are available here.

PHYSICS MAJOR REQUIREMENTS

COURSE CODE

COURSE TITLE

Gateway courses: The necessary foundation for the physics major.

PHYS113	General Physics I
PHYS116 and PHYS124	General Physics II and General Physics Laboratory II
MATH221 or MATH223	Vectors and Matrices or Linear Algebra
MATH222	Multivariable Calculus

Core Courses: Four required courses which must be taken graded (A-F)

PHYS213	Waves and Oscillations
PHYS214 (prerequisite MATH221 or MATH223. Math requirement can be taken concurrently)	Quantum Mechanics I
PHYS324 (prerequisite PHYS124 and MATH222)	Electricity and Magnetism
PHYS316	Thermal and Statistical Physics

Electives: Four credits from the following list of lecture courses.* **One of the four needs to be a 300-level physics course.**

PHYS207	Introduction to Biophysics
PHYS215 (half credit)	Special Relativity
PHYS217	Nonlinear Dynamics and Chaos
PHYS219 (half credit)	Introduction to Contemporary Physics
PHYS313	Classical Dynamics
PHYS315	Quantum Mechanics II
PHYS358 (Pre-requisite PHYS315)	Condensed Matter Physics

Laboratory Courses:** Two laboratory courses

PHYS342 (half credit)	Experimental Optics
PHYS345 (half credit)	Electronics Lab
PHYS340 (half credit)	Computational Physics
PHYS423/PHYS424 (1 credit)	Research Seminar, Undergraduate

* It is possible for elective credits to be substituted by upper-level lecture courses in other departments. This must be done in consultation with the physics major advisor, and the selections must constitute a coherent, coordinated program of study. Preapproved tracks that satisfy the elective lecture course requirement are available.

** One of the laboratory courses must be an advanced experimental lab, currently either PHYS342 or PHYS345.

COURSES FOR NON-MAJORS

The Physics department offers two two-semester survey courses covering many of the main subject areas of physics (mechanics, electromagnetism and optics, thermodynamics, and kinetic theory):

- PHYS111/PHYS112 uses less calculus and is often the choice for students studying physics for life science applications.
- PHYS113/PHYS116 uses more calculus and is the foundation for future work in physics, engineering, and related fields.

Associated laboratory courses, PHYS121/PHYS122/PHYS123/PHYS124, are also offered. Either of these two-semester course sequences (with the lab) typically satisfy the Physics requirement for admission to most schools of medicine, dentistry, or architecture. However, some graduate-level programs require a calculus-based series. It is recommended that students confirm the specific requirements with their prospective schools.

GENERAL EDUCATION

There are no General Education requirements imposed by the Physics Department for either the Physics major or honors in Physics. However, students should be aware that several forms of university honors do require completion of stage 2 general education expectations.

STUDENT LEARNING GOALS

Physics majors acquire the following knowledge and competencies:

- Application of precision and predictive mathematics to expand the description of natural phenomena
- Observation of physical phenomena through experimentation and research
- Determining the relevant parameters to quantify a complex system
- Open-ended problem-solving skills
- Quantum theory
- Electromagnetism and optics
- Thermodynamics
- Statistical mechanics
- Classical dynamics
- Condensed-matter physics
- Mathematical and computational methods

Students will demonstrate their knowledge and abilities through research projects, critical analysis papers, participation in class discussions and collaborative group work, and multi-media presentations. Written exams, peer review, and self-assessment will also evaluate their class performance.

STUDY ABROAD

Study abroad provides Physics majors an opportunity to gain appreciation of their potential as citizens of the world scientific community. Careful planning in consultation with a Physics advisor is recommended to determine the optimum semester for a study abroad experience, and to ensure that requirements for the major can be fulfilled.

ADVANCED PLACEMENT

Students may receive a maximum of two AP Physics credits if they have obtained a score of 5 on the AP Physics C, Mechanics exam, or the AP Physics C, Electricity

and Magnetism exam. Special regulations apply to other Physics credits. Please check with the registrar or a departmental advisor.

PRIZES

Bertman Prize - Awarded to a senior majoring in physics who emulates the qualities that made Bud Bertman a valuable friend and respected colleague, e.g., physical insight and intuition, enthusiasm, resourcefulness, perseverance, and eagerness to help others.

Van Dyke Prize - Awarded to students majoring in physical science who show outstanding academic achievement and a promise of productivity in a professional career.

Outstanding Contribution to Science Education Award - Awarded to a senior who has demonstrated exceptional skills as an undergraduate course assistant.

Johnston Prize - In recognition of those first-year students or sophomores whose performance in their first two semesters of physics shows exceptional promise.

TRANSFER CREDIT

Up to two registrar-approved outside credits for physics courses may be applied toward the Physics major from another institution. Prior permission must be obtained from both your Physics advisor and the departmental liaison, Professor Brian Stewart (bstewart@wesleyan.edu), to ensure the creditability of the specific courses.

RELATED PROGRAMS OR CERTIFICATES

Dual-degree programs in science and engineering.

Wesleyan maintains dual-degree programs with Columbia University, the California Institute of Technology, and Dartmouth College for students wishing to combine the study of engineering with a broad background in the liberal arts. For all options, participating students receive two degrees: a BA from Wesleyan and a BS or BE in engineering from our partner school.

- The “3-2 program”: Students spend their first three years at Wesleyan, followed by two years at the engineering school. At the end of the fifth year —after completing all degree requirements from both schools—students receive the two bachelor’s degrees. During the first three years, prospective 3-2 students complete the minimal requirements of their elected Wesleyan major and, in addition, fulfill science and mathematics requirements for the first two years of the engineering school and engineering major of their choice. During the two years at the engineering school, students follow the regular third- and fourth-year curriculum in their selected engineering field. During that time, other courses may also be taken to satisfy the degree requirements of Wesleyan and/or the engineering school.
- The “4-2 option,” offered by Columbia University. Students complete four years at Wesleyan before pursuing an engineering degree.
- The “2-1-1-1” option is offered by Dartmouth University. Students spend their junior year at Dartmouth, returning to Wesleyan for their senior year and graduation. A fifth year is at Dartmouth required to finish their engineering degree.

Contact the dual-degree advisor for further information and consult with your class dean to ensure that you can meet all Wesleyan University requirements for graduation.

ADDITIONAL INFORMATION

The Physics department encourages students to become creators of physics knowledge through faculty-mentored research or by arranging independent research tutorials. Research can be experimental or theoretical and may culminate in a senior honors thesis or a peer-reviewed publication. Students planning to write a senior thesis should begin research no later than their junior year and continue through the summer into their senior year. Faculty research expertise includes quantum computing, soft condensed matter physics, computational materials science, charge transport in photovoltaic devices, fluid dynamics, laser plasmas, spectroscopy, collision studies of excited atoms and molecules, wave transport, and photonics. Many students also utilize Wesleyan's shared high-performance computing facilities for their research.

Opportunities are also available to serve as a teaching apprentice or course assistant, which many students find to be a stimulating way to improve their understanding of physics fundamentals. Serving as a course assistant is also an excellent opportunity to develop communication skills and learn the art of teaching.

The Cady Lounge provides a community space where students can study, discuss physics, and connect with peers. Additionally, there is a study area in the science library (the "STEM zone") where students in introductory courses can get help and collaborate.

Colloquia: This seminar series features distinguished scientists from other institutions who present lectures on their research findings. Seminars are usually held on Thursdays at noon in Exley 058 and are open to all members of the university community. Students may enroll in the colloquium course for credit.

Topical Seminars: The department hosts weekly seminars highlighting cutting-edge research in various areas, including condensed matter physics and atomic and molecular physics. These seminars include student-led research presentations, discussions of recent research literature, and advanced topics selected collaboratively by faculty and students.

Society of Physics Students (SPS): SPS is a national association of undergraduates interested in sharing their physics experiences. Wesleyan's SPS chapter meets to support each other in the scientific community, plan department activities, and pursue community outreach. The chapter mentor is Professor George Paily (gpaily@wesleyan.edu).

BA/MA PROGRAM

This is a curricular option for those students who, along with their research mentor, desire an intensive research experience that an additional year of study can afford. During the additional year, the student will complete additional coursework and write an MA thesis based on original research. Interested students should consult their research mentor as early as possible.

HONORS

Honors candidates in Physics must submit a thesis describing the investigation of a project carried out by the candidate under the direction of a member of the

Physics department. The candidate must also have attained a minimum average of B (85.0) for honors and B+ (88.3) for high honors in the eight lecture courses applied to the major (except those taken in the final semester of the senior year). Honors status is recommended by the faculty thesis readers and confirmed by the department.

CAPSTONE EXPERIENCE

The Physics department offers the following capstone experiences:

Two-semester senior thesis
Seminar in atomic and molecular physics (PHYS507/PHYS508)
Seminar in condensed matter physics (PHYS505/PHYS506)
Seminar in theoretical physics (PHYS509/PHYS510)

Physics Colloquium (PHYS521/PHYS522)

PHYSICS MINOR

MINOR DESCRIPTION

Physics is the foundation of a liberal arts education for innovations in science and engineering and prepares students for quantitative problem solving in any field. The Physics minor provides exposure to the primary areas of Physics with minimal electives. Through the minor, students develop a core understanding of the quantitative and predictive description of natural phenomena using the rigorous language of mathematics.

Successful Physics students exhibit a strong curiosity about the natural world and a willingness to learn through empirical investigation. Students are encouraged to cultivate an analytical mindset, strong quantitative aptitude, and the ability to understand complex mathematical models. The Physics minor will help students develop problem-solving skills and knowledge of complex physics principles that are valuable in diverse applications, including engineering, data analytics and computational science, education, finance and banking, medical physics, geophysics, and environmental science.

It is important to note that the Physics Minor is not sufficient preparation for graduate study in physics.

ADMISSION TO THE MINOR

Students are welcome to declare a physics minor in the spring of their sophomore year or later, and must have completed, or be taking, PHYS116, General Physics.

MINOR REQUIREMENTS

To complete the Physics Minor, students must take 6 Physics credits including 5 lecture courses, 1 introductory laboratory class (0.5 credit), and 1 advanced laboratory class (0.5 credit). Three math courses are also required; these may be satisfied by meeting the placement requirements of the Mathematics Department.

Required Lecture Courses (5 credits)

Code	Title	Hours
PHYS113	General Physics I	1
PHYS116	General Physics II	1
PHYS213	Waves and Oscillations	1
PHYS214	Quantum Mechanics I	1

PHYS3XX: Any Physics lecture course at the 300-level

Note: Courses must be taken as graded (A-F) to fulfill the minor, unless the course is offered only Cr/U.

If a student places out of PHYS113, they may substitute one credit from any 200-level course not listed among the required courses. Currently, these include PHYS170 (Mechanical Design & Engineering), PHYS206 (Electrical Design & Engineering),PHYS207 (Biophysics), PHYS210 (How things fail), PHYS217 (Nonlinear Dynamics) , or the combination of 0.5 credit courses PHYS215 (Special Relativity) and PHYS219 (Contemporary Physics).

Required Lab Courses (1 credit)

Students must take one introductory lab class, and one advanced lab class, 0.5 credit each.

Code	Title	Hours
PHYS123	General Physics Laboratory I	0.5
or PHYS124	General Physics Laboratory II	
PHYS342	Experimental Optics	.5
or PHYS345	Electronics Lab	
or PHYS395	Structural Biology Laboratory	
or PHYS340	Computational Physics	

Math Prerequisites (3 credits, if not placed out)

Code	Title	Hours
MATH121	Calculus I	1
& MATH122	and Calculus II *	
MATH222	Multivariable Calculus	1
or MATH221	Vectors and Matrices	
or MATH223	Linear Algebra	

ADDITIONAL INFORMATION

The Cady Lounge provides a community space where students can study, discuss physics, and connect with peers. Additionally, there is a study area in the science library (the “STEM zone”) where students in introductory courses can get help and collaborate.

Colloquia: This seminar series features distinguished scientists from other institutions who present lectures on their research findings. Seminars are usually held on Thursdays at noon in Exley 058 and are open to all members of the university community. Students may enroll in the colloquium course for credit.

Society of Physics Students (SPS): SPS is a national association of undergraduates interested in sharing their physics experiences. Wesleyan’s SPS chapter meets to support each other in the scientific community, plan department activities, and pursue community outreach. The chapter mentor is Professor George Paily (gpaily@wesleyan.edu).

DOCTOR OF PHILOSOPHY IN PHYSICS

The Physics program equips students with the foundational skills to become innovators in science and engineering, providing cutting-edge education and research at#Bachelor, Master, and PhD levels. Students perform both experimental and theoretical research, mastering topics in focus#areas that include quantum computing, high-energy plasmas, low-temperature superfluids, photonics, materials science, biomolecular interactions, the physics of animal behavior, fluid#mechanics, and more. Degree candidates work side-by-side with faculty on research that is supported by major national granting agencies, such as the National Science Foundation (NSF), the National Institute of Standards & Technology, Defense Department agencies, and others.

The small size of the program permits the design of individual programs of study and the development of a close working colleagueship among students and faculty. Students engage in physics research from the start of their graduate studies, rather than spending one or two years focused on coursework before starting research. Thus, graduate students join the department's research activities upon arrival.

PhD candidates must take (or place out of) five PhD-level graduate core courses and five advanced topics courses.#Each student is given the opportunity for undergraduate teaching under direct faculty supervision. Direct classroom teaching experience is also a possibility for more advanced and qualified students. Each PhD candidate must write and defend a dissertation on original and significant research. It is expected that the candidate will submit the results of their work to a scholarly journal for publication.

COURSES

PhD students must take (or place out of) five PhD-level graduate core courses and five advanced topics courses. All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. Students must have demonstrated proficiency in the main subject areas of physics by the time they have completed the program. Incoming students plan a course of study in consultation with the graduate advisor to prepare for the qualifying examination. Each student, after passing the first examination (see below), selects an advisory committee of three faculty members. The committee assists the student to design a program of study, monitors progress, and makes annual recommendations to the department regarding the student's continuation in the program. The advisory committee also administers subsequent examinations.

LANGUAGE REQUIREMENT

There is no foreign language requirement.

PROGRESS AND QUALIFYING EXAMS

Three formal examinations serve to define the various stages of the student’s progress to the degree. The qualifying examination, usually taken at the end of the first year, is a written examination on material at an advanced

undergraduate level. Advancement to the second stage of candidacy depends on passing this examination as well as on coursework and demonstrated research potential. After passing the qualifying examination, each student should form an advisory committee in consultation with their research advisor. Usually by the end of the second year, each student takes the PhD candidacy examination, which consists of an oral presentation before the student's advisory committee, describing and defending a specific research proposal. (The proposal might, but need not, grow out of previous research or be adopted by the student as a thesis topic.) The committee then recommends to the department whether to admit the student to the final stage of PhD candidacy or whether to advise the student to seek an MA degree.

Each student who has passed the candidacy examination is required to present an annual informal talk on his or her thesis work in a departmental seminar.

TEACHING

Although the emphasis in the program is on independent research and scholarly achievement, graduate students are expected to improve their skills in teaching and other forms of oral communication. Each student is given the opportunity for some undergraduate teaching under direct faculty supervision. While this usually consists of participation in teaching undergraduate laboratories, direct classroom teaching experience is also possible for more advanced and qualified students.

RESEARCH

Current experimental research areas are concentrated in atomic/molecular physics and condensed matter physics. Current interests include Rydberg states in strong fields, molecular collisions, photo-ionization, laser-produced plasmas, wave transport, granular and turbulent fluid flows, single-molecule biophysics, and optoelectronics of renewable energy materials.

Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, and wave transport in complex media.

DISSERTATION AND DEFENSE

Each candidate for the PhD degree is required to write a dissertation on original and significant research supervised by a member of the faculty. The work must be defended in a final oral examination administered by the advisory committee. This oral examination covers the dissertation and related topics and is open to all members of the Wesleyan community. It is expected that the candidate will submit the results of his or her work to a scholarly journal for publication.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/physics/graduate (<http://wesleyan.edu/physics/graduate/>).

MASTER OF ARTS IN PHYSICS

The Physics program equips students with the foundational skills to become innovators in science and engineering, providing cutting-edge education

and research at the Bachelor, Master, and PhD levels. Students perform both experimental and theoretical research, mastering topics in focus areas that include quantum computing, high-energy plasmas, low-temperature superfluids, photonics, materials science, biomolecular interactions, the physics of animal behavior, fluid mechanics, and more.

The Physics department offers graduate work leading to the degree of Master of Arts through Wesleyan's BA/MA program. Students interested in the master's program should consult their Physics major advisors as early as possible to permit time to complete the course requirements for both the BA and MA degrees.

At least six credits are required for the MA degree, three of which are advanced coursework at the 300 level and above. The remaining credits may be earned through research and seminar courses. Current experimental research areas are concentrated in atomic/molecular physics, condensed matter physics, fluid dynamics, and animal behavior. Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, materials science, and wave transport in complex media. Master's students have the opportunity for some undergraduate teaching under direct faculty supervision.

The MA candidate must complete at least two semesters of research culminating in a thesis. The candidate is expected to submit the results of his or her work to a scholarly journal for publication.

COURSES

All degree seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university. A minimum of six credits are required for the MA. Of these, three must be in advanced coursework at the 300 level and above. The remaining credits may be earned through research and seminar courses. The student must complete at least two semesters of thesis research culminating in an MA thesis. MA credit will only be awarded for courses in which grades of B minus or higher are earned.

LANGUAGE REQUIREMENT

There is no foreign language requirement.

PROGRESS AND QUALIFYING EXAMS

Students pursuing an MA through the BA/MA program or through termination of pursuit of a PhD should form an advisory committee early in their program in consultation with their research mentor.

Each MA student is required to present an annual informal talk on his or her thesis work in a departmental seminar.

TEACHING

Although the emphasis in the program is on independent research and scholarly achievement, graduate students are expected to improve their skills in teaching and other forms of oral communication. Masters students have the opportunity for some undergraduate teaching under direct faculty supervision.

RESEARCH

Current experimental research areas are concentrated in atomic/molecular physics and condensed matter physics. Current interests include Rydberg states in strong fields, molecular collisions, photo-ionization, laser-produced plasmas, wave transport, granular and turbulent fluid flows, single-molecule biophysics, and optoelectronics of renewable energy materials.

Current theoretical and computational research areas include nonlinear dynamics, quantum chaos, properties of nanostructures, soft condensed matter, and wave transport in complex media.

THESIS AND DEFENSE

Each candidate for the MA degree is required to write a thesis on original and significant research supervised by a member of the faculty. The work must be defended in a final oral examination administered by the advisory committee. This oral examination covers the thesis research and is open to all members of the Wesleyan community. It is expected that the candidate will submit the results of his or her work to a scholarly journal for publication.

ADDITIONAL INFORMATION

For additional information, please visit the department website at wesleyan.edu/physics/graduate (<http://wesleyan.edu/physics/graduate/>).

PSYCHOLOGY

Psychology is the scientific study of mind, brain, and behavior. Areas of psychology represented in the department include human development, social psychology, cognitive psychology, cultural psychology, neuroscience, and psychopathology. Psychology majors receive broad training across these areas, have opportunities to pursue topics of particular interest in greater detail, and develop skills in research methods and statistics. Many majors also take advantage of opportunities to work in research laboratories, to serve as teaching assistants, and to participate in service learning courses. Students interested in this major are strongly encouraged to visit the Psychology Department (<http://www.wesleyan.edu/psyc/>) and to download and read the Department Majors Manual for more detailed information, as early planning is important for preparing to declare and complete the major.

DEPARTMENTAL ADVISING EXPERTS

Sarah Carney, Kyungmi Kim

PSYCHOLOGY MAJOR

MAJOR DESCRIPTION

Psychology is the scientific study of behavior, mind, and brain. We seek to understand how people think and act, both as individuals and in groups. The department has 18 faculty providing expertise in six subareas of study: cognitive, cultural, developmental, social, psychopathology, and neuroscience. Features of the major include foundational courses, training in statistics and research methods, small advanced seminars, and opportunities to conduct original research.

ADMISSION TO THE MAJOR

Students wishing to declare a major in psychology should prepare as early as possible because declaration must be done in the second semester during sophomore year. Thus, by the end of the first semester in the sophomore year, students should have completed all requirements for entry into the major.

At the time of application, a student must demonstrate that he or she (1) has taken two full-credit courses in the field of psychology at Wesleyan and received a B or higher in each course; (2) has completed the introductory psychology (or a replacement breadth course that allows an AP or IB credit in place of introductory psychology), research methods, and statistics requirements for the major (these same courses may be used to fulfill the first requirement as well); and (3) has fulfilled the University's stage I General Education Expectations. Students with outstanding requirements to complete are required by the Dean's Office to either declare a second major or submit a major deferral form to their class dean in the event they are unable to successfully complete the admission requirements for psychology. Transfer students must receive a B or higher in each of two psychology courses from their previous institution. Junior transfer

students have until the end of the first week of the junior year and must meet all admission requirements at their previous institution.

MAJOR REQUIREMENTS

Ten full-credit psychology courses and General Education Expectations stages I and II are required for completion of the major. Nine of the 10 credits required for the major must be taken for a grade. (This has been temporarily waived for Spring 2020 and AY2021.) Courses in introductory psychology and introductory statistics must be taken for a grade. Required elements of the major are introductory psychology (one credit), an introductory statistics course (one credit), research methods (one credit), one breadth course from each of three areas of psychology (three credits), a specialized course (one credit), and three additional elective credits that can come from any courses and tutorials associated with the major. All courses must be completed by the end of the senior year.

INTRODUCTORY PSYCHOLOGY

PSYC105, a lecture class that provides a broad overview of the field, is required for the major and should typically be the first course taken in the major. The course must be taken graded if used for the major. (This had been temporarily waived for Spring 2020 and AY2021.) The course should be taken in the first or second year. One can alternatively transfer a psychology AP or IB credit in place of this course (see the Advanced Placement section). Only one can be counted toward the major.

INTRODUCTORY STATISTICS

A psychological statistics course provides an introduction to data analysis in psychology. PSYC200, PSYC201, or PSYC280 is typically used to fulfill this requirement, but ECON300 and MATH132 are acceptable as well. The course must be taken graded if used for the major. (This had been temporarily waived for Spring 2020 and AY2021.) A course in introductory statistics should be taken in the first or second year (some research methods courses require statistics as a prerequisite). Only one can be counted towards the major.

RESEARCH METHODS

A research methods course trains specific skills for evaluating and performing research. Research methods courses are numbered **PSYC202-219**. Some of these courses are more general, while others are focused on particular applications as indicated by their titles. A 200-level course in research methods should be taken in the first or second year (some research methods require statistics as a prerequisite).

BREADTH REQUIREMENT

Students are expected to develop knowledge across the entire field of psychology. Toward this goal, students must choose a minimum of one course from each of the three columns below. These breadth courses (numbered **PSYC220-279**) can be taken throughout one's four years. When possible, a student should start with breadth courses of particular interest so that he or she can later do more advanced work in these areas.

Code	Title	Hours
Column 1		
Select a minimum of one of the following:		1
PSYC220	Cognitive Psychology	
PSYC222	Sensation and Perception	
PSYC225	Cognitive Neuroscience	1

PSYC226	Psychological Theories of Learning and Motivation
PSYC227	Motivation and Reward
PSYC228	Clinical Neuropsychology
PSYC239	Functional Anatomy of the Human Brain
PSYC240	Behavioral Neurobiology

Column 2

Select a minimum of one of the following: 1

PSYC230	Developmental Psychology
PSYC245	Psychological Measurement
PSYC246	Behavior Change, Clinical Interventions and Health Promotion
PSYC248	Adolescence and Emerging Adulthood
PSYC251	Psychopathology
PSYC253	Educational Psychology
PSYC259	Discovering the Person
PSYC271	Life-Span Development

Column 3

Select a minimum of one of the following: 1

PSYC260	Social Psychology
PSYC262	Cultural Perspectives on Mental Health
PSYC265	Culture in Psychology: An Introduction to Theory and Research
PSYC277	Psychology and the Law

SPECIALIZED

These courses (**PSYC311-399**) aim to ensure that students study at least one subfield of psychology in depth. These courses have a variety of formats, including seminars (**PSYC311-369**) and advanced research labs (**PSYC370-399**), and admission is typically by permission of instructor. A student must take at least one specialized course that deepens the knowledge she or he gained in a breadth course.

ELECTIVES

To reach the 10 course credits necessary for the major, one may count any three other courses, tutorials, or teaching apprenticeships offered by the department or creditable to the major. Exceptions include: (A) only one introductory psychology course; (B) one introductory statistics course (PSYC200, PSYC201, QAC201/PSYC280, ECON300, or MATH132); (C) no more than two teaching apprenticeship tutorials; and (D) four tutorials (or six including senior thesis tutorials). The teaching apprenticeship can be repeated with the same course number. For electives, two half-credit courses may be used in place of one full-credit course. Some courses (cross-listed with psychology or hosted in other departments) can be used as electives for the major but fulfill no other requirements and cannot be used for admission to the major. See Department Majors Manual (http://www.wesleyan.edu/psyc/about/major_guides.html) for details.

COURSES FOR NON-MAJORS

PSYC105 is appropriate for non-majors.

GENERAL EDUCATION

Stage I General Education Expectations must be satisfied at the time of admission to the major (six different departments, please refer to WesMaps for Gen Ed Area Dept.). Fulfilling stage II General Education Expectations is required for completion of the major.

STUDENT LEARNING GOALS

The psychology department learning goals are organized by four objectives:

Objective 1: Knowledge Base in Psychology

- To understand and interpret basic theoretical perspectives, scientific principles, and empirical findings in three major content areas of psychology: (1) neuroscience and/or cognition, (2) psychopathology and/or developmental psychology, and (3) social and/or cultural psychology.
- To learn how to formulate research questions and conduct psychological studies.
- To obtain skills in statistical and data analysis techniques, quantitative and qualitative, and apply these techniques to psychological studies.

Objective 2: Scientific Inquiry and Critical Thinking

- To critically assess scientific methodologies in psychology, including:
 - understanding hypothesis formation;
 - applying standardized, reliable, and valid outcome measures;
 - applying sound data-analytic techniques; and
 - appreciating the importance of conducting research with samples that reflect the diversity of human experience, behavior, culture, and populations, including participants of color, women, LGBTQ+ people, individuals with disabilities, and other groups that have historically been underrepresented or marginalized in psychological research.
- Integrate knowledge and methodologies across different kinds of observation in the study of human behavior and mental processes, including social, cognitive, perceptual, and biological processes, as well as influences of culture and gender.
- Identify, understand, and address the ways that psychological research has been and often continues to be rooted in white sociocultural norms.

Objective 3: Ethical and Social Responsibility

- Recognize the necessity for ethical behavior in all aspects of the science and practice of psychology.
- Critically evaluate relations of psychological and behavioral knowledge with social policy, public health, and clinical practice.
- Use psychological knowledge to clarify social disparities, and to promote human well-being and change in a multicultural and global context.
- Endeavor to make psychology more inclusive, including practices that help dismantle systemic and structural forms of racism in psychological science, training, and applied settings.

Objective 4: Communication

- Acquire effective communication skills by disseminating research findings through skill-building in oral expression and expository writing.

STUDY ABROAD

Any courses taken abroad must be pre-approved by the department advising coordinator. Study abroad courses for review towards the major are submitted through WesPortal – Academics – Study Abroad Information and Application – Course Approval System. The advising coordinator will need the course description from the university's catalog, and a syllabus if available, as well as to know the purpose of the course, the credit amount transferable to Wesleyan, and the student's class year and major. Starting with the class of 2028, study abroad courses will only count towards University credit and will no longer count towards the psychology major. For students in graduating classes 2027 and earlier, no more than two credits may be transferred from abroad programs.

ADVANCED PLACEMENT

Students who receive a Psychology AP score of 4 or 5 or an IB (International Baccalaureate) score of 6 or 7 and complete a full-credit breadth requirement course (**PSYC220-279**) with a grade of B or better, can receive one credit for the AP/IB score. This credit will replace the introductory course requirement *only* if it appears on the Wesleyan transcript after completing the necessary breadth required course.

AP scores are posted in students' Placement Score and Recommendation link in WesPortal. To have the prerequisite for PSYC105 based on the AP score, students need to have their AP score on file with the University before preregistration begins for the upcoming semester. Once the breadth requirement course is completed, students go through their WesPortal to submit a request to post it on their transcripts. (If the AP is not in the folder, students should contact the Registrar's office.) This will also allow the preregistration system to automatically grant a prerequisite override for courses in which PSYC105 is required. All requests and actions regarding AP score and credit should be done through the Placement Scores and Recommendations link in WesPortal. For IB credit, contact the Dean's Office to have it transferred.

AP/IB credits count as transfer credits. AP/IB credits apply towards oversubscription. The AP/IB credit counts as the one non-graded course allowed towards the major. AP/IB credits may not be used towards major admission.

LANGUAGE REQUIREMENT

No language requirement.

TRANSFER CREDIT

Even though a transfer credit may have been approved toward a university credit, it must also be specifically pre-approved toward the psychology major. Some transfer courses do not give a full (1.00) transfer credit and therefore the 10-credit requirement towards the major needs to be completed with additional psychology courses. Transfer credits cannot be counted toward admission to the program except for transfer students. AP or IB credits count as a transfer credit.

- Transfer students should request the Registrar's Office or their class dean to send a copy of their transcript from their previous institution to the advising coordinator so that all their psychology courses can be reviewed toward the major. Transfer credits can be counted towards the major. Up to three transfer credits can be counted towards the major.

- Students taking courses at domestic institutions can only transfer up to two credits towards the major.
- Both transfer students and students requesting transfer courses from domestic institutions must submit to the department's advising coordinator an email that includes: A) a course description from the university's catalog; B) a syllabus; C) the purpose of the course; D) the credit amount transferable to Wesleyan; E) the class year; and F) the Permission to Transfer Credit form from the Office of Student Affairs.
- Study abroad courses for review towards the major are submitted through WesPortal – Academics – Study Abroad Information and Application – Course Approval System. Starting with the class of 2028, study abroad courses will only count towards University credit and will no longer count towards the psychology major. For students in graduating classes 2027 and earlier, no more than 2 credits may be transferred from abroad programs.

RELATED PROGRAMS OR CERTIFICATES

Concentrations: Students are not obligated to do a concentration within psychology, and the vast majority of students do not specialize in a particular area. However, we do have two concentrations within the major—in cognitive science and in cultural psychology. These are essentially ways of traversing the major (with a few additional courses) for students who would like to organize their coursework around either of those two themes. Concentrations are not declared at major declaration. Rather, a requirements worksheet for each concentration is to be turned in by early February in the second semester of the senior year. Students who successfully complete the requirements will receive a departmental certificate indicating completion.

- **Cognitive Science Concentration.** Cognitive science is the interdisciplinary study of mental processes. Many areas of psychology contribute to the study of cognitive science, including cognitive psychology, developmental psychology, and cognitive neuroscience, fields that most typically use scientific research methods to study human mental processes. Beyond psychology, scholars use diverse methods to study mental processes in humans and nonhumans, including fields such as philosophy of mind, neuroscience and behavior, artificial intelligence, linguistics, education, and others. The focus of coursework within our department involves understanding the mental and underlying neural processes involved in areas such as human perception, attention, memory, language, and reasoning; as well as the development of these processes over the life span. Participation in laboratory research is expected. See the Cognitive Science Concentration Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.
- **Cultural Psychology Concentration.** Cultural psychology considers how the vast domain of culture and society is studied by psychologists, how cultural dynamics influence individuals, and how cultural practices define the various psychologies we practice. Many areas within psychology contribute to the study of cultures, including psychological measurement; social psychology, both experimental and qualitative; clinical psychology; developmental psychology; historical psychology; and cultural psychology. Beyond psychology, scholars in allied human sciences contribute to better understanding the dynamic relation of culture and psychology. Methods and theories abound in culture and psychology. Some focus on comparative research, others on ways of bringing the presence of underrepresented populations into scholarly projects, and some examine socio-political differences both between and within societies. While investigating social structures such as race, ethnicity, religion, gender, sexuality, and class is often central to works in this area, also of importance is understanding how such forces come to manifest themselves within the field of psychology and in our collective psychologies. See the Cultural Psychology Concentration

Form (https://www.wesleyan.edu/psyc/about/major_guides.html) on the department website for requirement details.

BA/MA PROGRAM

The psychology department offers the BA/MA degree program. Wesleyan non-psychology students can apply to the program to work under the mentorship of a psychology faculty. For more information, please visit the Office of Graduate Student Service (https://www.wesleyan.edu/grad/graduate-programs/bama_program.html)s (<http://www.wesleyan.edu/grad/>).

HONORS

By the beginning of their spring semester junior year, psychology majors who have earned at least a B+ average in all psychology courses and at least a B average in all non-psychology courses are eligible to pursue honors in psychology by writing a thesis. A student must have a faculty advisor to write a thesis. An advisor should be secured by spring of the junior year through discussion with appropriate faculty. Honors will be awarded only if both the advisor and a second faculty reader evaluate the thesis worthy of honors.

CAPSTONE EXPERIENCE

Students interested in research opportunities are encouraged to develop statistics and research methods skills as early as possible, to develop broad knowledge in the research area of interest, and to then apply for permission of the instructor to enroll in an advanced research seminar. Speaking with individual faculty members about research opportunities that might be available in their labs is also appropriate.

MASTER OF ARTS IN PSYCHOLOGY

Psychology offers the Master of Arts degree via the BA/MA program. Upon successful completion of the BA degree requirements, students become graduate students for two semesters and complete the MA. There is no stand-alone MA program in Psychology; the combined BA/MA program is only available to Wesleyan students.

The BA/MA program involves a close working relationship between a student and a faculty advisor who will supervise the research through the conclusion of the MA degree. Students have to be accepted by a faculty mentor before applying to the program. Non-psychology students can apply to the program to work under the mentorship of a psychology faculty, but need to demonstrate preparation for advanced study and research in psychology.

Courses

The MA in Psychology requires a minimum of 6 credits above the 32 credits needed for the BA. These courses include:

- PSYC 549 & 550: Thesis Research/Advanced Research Seminar (2 credits; one credit per term of second year).

- Four credits for advanced coursework: Any other graduate tutorials (PSYC 501/502, 503/504, 511/512; these can be taken during the undergraduate or graduate year), undergraduate tutorials taken for graduate credit (specifically, 401/402, 411/412, or 421/422; these can be taken only during the undergraduate year), undergraduate non-tutorial courses in any department (usually 200- or 300-level courses) taken for graduate credit, or graduate seminars. No more than two of these four credits may come from tutorials.
- Note that teaching assistantships of any kind may *not* be used for graduate credit.

In order for any course to be counted towards the graduate degree, the following conditions must be met.

1. It must not have been counted towards the undergraduate Psychology major or minor as declared on the Major Certification Form or towards any Wesleyan undergraduate graduation requirements.
2. It must be taken for graduate credit.
3. A grade of a B- or better must be earned in the course. Courses taken Pass/Fail cannot be counted towards the degree.
4. The course needs to be reasonably related to the MA thesis student's research. If the course is not directly related to the research project, it needs to make a well-justified contribution to a MA course of study.

All degree-seeking graduate students are required to register for at least one credit in each semester that they are enrolled in the university.

With the approval of the faculty mentor and BA/MA committee, students can apply extra credits from the BA years to the MA degree.

LANGUAGE REQUIREMENT

No language requirement.

PROGRESS AND QUALIFYING EXAMS

The faculty mentor and psychology BA/MA committee review student progress in courses and thesis research.

TEACHING

No teaching required.

RESEARCH

Students are expected to spend at least 20 hours per week engaged in research. The research experience culminates with an MA thesis demonstrating a student's original contribution to knowledge in the field. Many students in the BA/MA program choose not to write an undergraduate honors thesis because they will be writing a more substantial MA thesis.

Ethics approval is required prior to initiating data collection for your research. Faculty mentors should be consulted about preparing the ethics proposal. If your proposed research poses minimal or no risk to participants, does not involve vulnerable populations, or does not include the collection of sensitive data, then you may submit a protocol for your proposed research to the Psychology Ethics Committee (<https://www.wesleyan.edu/psyc/resources/>) (via Catherine Race, administrative assistant). If you plan to conduct higher risk research, study

vulnerable populations, collect sensitive data, or if your research involves other complications, then you are required to submit your protocol to the University IRB (<https://www.wesleyan.edu/acaf/support/reviewboard.html>).

THESIS AND DEFENSE

Work on the MA thesis should progress as follows under the guidance of the faculty advisor.

Developing a proposal and establishing a committee. An MA thesis committee should be established and must include the advisor and two or more additional faculty. Both the advisor and at least one of the additional faculty members must be in Psychology. The student should consult with the faculty mentor about possible committee members and guidelines for the proposal. The Psychology Department requires that students submit a proposal to the committee and meet with the committee at the beginning of the MA process.

Students are encouraged to initiate this process as soon as they have committed to the MA program; some students complete the proposal approval process in May or June, depending on the availability of the committee members.

The approval process must be completed by the end of September; the deadline is for all students, including those starting their MA in the spring. By the first week of the fall semester, the student must get confirmation from committee members for a date for the committee to discuss and approve the thesis proposal (this can be done using an emailed calendar invitation once a satisfactory date is found). The committee meeting and approval of the thesis proposal should be completed by the end of September. The proposal must be sent to committee members at least two weeks before the meeting date. Student should take the Thesis Proposal Approval Form to the thesis proposal meeting and return the signed form along with a copy of the proposal to the faculty advisor immediately afterward.

Summer research. Many students find it advantageous to use the summertime to make progress on literature reviews and research. Funding is available for students who receive financial aid for the MA program. Students not on financial aid should discuss expectations and funding opportunities for summer research with their faculty mentor.

The MA year. During the MA year, the student must complete the thesis. Unlike most other rules and requirements of the program, the rules governing the completion of an MA thesis are largely determined by the University's Office of Graduate Student Services (OGSS); all of the relevant forms are included on the Graduation Requirements – MA website. All forms are electronic and accessible through WesPortal/Academics/Graduate Exit Forms. The electronic forms are automatically routed to the pertinent faculty members for their approval.

Forms required by the Office of Graduate Student Services related to completion of the thesis are available online – see Graduation Requirements-MA: at <https://www.wesleyan.edu/grad/academics/graduationrequirementsma.html>

The **final copy** of the written thesis should be given to committee members by the student at least two weeks before the oral defense date; the specific timing is up to the student's committee. Note that the OGSS has a number of formatting guidelines for preparation of the thesis that are available on the Graduation Requirements – MA website.

Oral Defense. The oral defense/examination must be held during the oral exam period designated by the OGSS. This period is usually 3.5 weeks long and begins in mid-April and ends the first week of May. The specific dates for the beginning and end of the oral exam period are posted on the University's Academic Calendar as well as in the MA exit packet. Corrections/edits from committee members must be completed before the scheduled exit interview.

The exact format of the defense varies by individual faculty in the Psychology Department. You and your advisor should decide a format that works for you and your research. The basic flow is:

You give a research presentation on your thesis.

- The length (somewhere between 15 and 45 minutes) is negotiable.
- Whether it is open (to your friends, faculty, public) or closed (just your committee) is also negotiable.
- There is an open question period after the talk.
- You leave the room while the committee deliberates.
- You return to the room to receive your grade, feedback, and (assuming things have gone as planned) congratulations.
- Your committee will let you know what revisions or corrections **MUST BE MADE** in order for the thesis to be complete and ready for submission.

You will receive separate grades for your written thesis and oral defense. These do not go on your transcript. They do stay in your file. You may decide, at some point in the future, to authorize someone (e.g., another graduate program) to access your grade.

ADDITIONAL INFORMATION

To apply to the program, please go to the Office of Graduate Student Services (OGSS) website. (<https://admission.wesleyan.edu/apply/>)

For additional information and all department forms, please visit Psychology Department BA/MA Guide https://www.wesleyan.edu/psyc/about/bama_guides.html

QUANTITATIVE ANALYSIS CENTER

The Quantitative Analysis Center (QAC) coordinates support for quantitative analysis across the curriculum and provides an institutional framework for collaboration across departments and disciplines in the area of data analysis. Through its programs, it facilitates the integration of quantitative teaching and research activities and provides experiential learning opportunities in statistical computing across academic fields and disciplines. The Center contributes to the development of digital and computational studies initiatives, sponsors data analysis labs, and oversees the Data Analysis Minor (p. 170) and the Applied Data Science Certificate (p. 217) programs.

ADVISORY BOARD

Francis Starr, *Professor of Physics, **Chair***
Erika Franklin Fowler, *Associate Professor of Government*
Daniel Krizanc, *Professor of Computer Science*
Manolis Kaparakis, *Director of Centers for Advanced Computing, **ex officio***
David Baird, *Vice President for Information Technology and CIO*
Marc Eisner, *Professor of Government and Dean of the Social Science*
Diane Klare, *Head of Research Services, Olin Memorial Library*

DATA ANALYSIS MINOR

MINOR DESCRIPTION

The Data Analysis Minor provides students with a basic introduction to data analysis, giving them the theory and practical skills needed to collect and prepare data for analysis, explore and visualize data, build models and test hypotheses, discover insights, and communicate results meaningfully. Students will strengthen their ability to apply statistical, mathematical, and programming methods to traditional areas of empirical research within their fields. To complete the minor, five course credits are required in the following areas: Basic Knowledge, Mathematical, Statistical and Computing Foundations, and selected Applied Electives.

MINOR REQUIREMENTS

Code	Title	Hours
Basic Knowledge Courses		
Select one of the following:		1
BIOL242	Quantitative Methods for the Biological and Environmental Sciences	
MATH132	Elementary Statistics	
PSYC200	Statistics: An Activity-Based Approach	
QAC201	Applied Data Analysis	
QAC201Z	Applied Data Analysis	
QAC211	Digging the Digital Era: A Data Science Primer	
QAC250	An Introduction to Data Journalism	

Mathematical, Statistical, and Computing Foundation Courses		
Select two courses from the following, each from a different group:		2
Mathematical Foundations		
MATH221	Vectors and Matrices	
MATH223	Linear Algebra	
MATH228	Discrete Mathematics	
MATH274	Graph Theory	
QAC220	Applied Vectors and Matrices	
Statistical Foundations		
ECON300	Introductory Econometrics	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
Computing Foundations		
BIOL265	Bioinformatics Programming	
COMP112	Introduction to Programming	
COMP115	How to Design Programs	
COMP211	Computer Science I	
COMP212	Computer Science II	
Applied Electives		
Select two credits from the following:		2
E&ES280	Introduction to GIS	
ECON385	Advanced Econometrics	
ECON386	Introduction to Forecasting in Economics and Finance	
GOVT366	Empirical Methods for Political Science	
GOVT378	Advanced Topics in Media Analysis	
PHYS340	Computational Physics	
QAC216	Introduction to Survey Design and Analysis	
QAC231	Introduction to (Geo)Spatial Data Analysis and Visualization	
QAC239	Proseminar: Machine Learning Methods for Audio and Video Analysis	
QAC241	Introduction to Network Analysis	
QAC251	Data Visualization: An Introduction	
QAC251Z	Data Visualization: An Introduction	1
QAC305	Exploratory Data Analysis and Pattern Discovery	
QAC307	Experimental Design and Causal Inference	
QAC311	Longitudinal Data Analysis (0.5 credit)	
QAC312	Hierarchical Linear Models (0.5 credit)	
QAC313	Latent Variable Analysis (0.5 credit)	
QAC314	Survival Analysis (0.5 credit)	
QAC320	Applied Time Series Analysis	
QAC323	Bayesian Data Analysis: A Primer (0.5 credit)	
QAC356	Advanced R: Building Open-Source Tools for Data Science	
can count QAC 380 or 381, not both		
QAC380	Introduction to Statistical Consulting	
QAC381	QAC Praxis Service Learning Lab	
QAC385	Applications of Machine Learning in Data Analysis	

QAC386 Quantitative Textual Analysis: Introduction to
Text Mining

NOTE: at least one of the electives should be a 300 level course

ADDITIONAL INFORMATION

- There may be prerequisite courses required for some of the courses that count toward the minor, such as calculus. These prerequisites do not count toward the minor, and students attempting to complete the minor are not recused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- Economics majors and minors cannot count ECON300 toward the minor and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course toward this minor that is also counted toward completion of any other of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the minor, subject to the QAC Advisory Committee's approval (where routine approval may be delegated to the QAC Director).
- A more advanced course can substitute for the basic knowledge course, subject to approval. Students with good quantitative skills are strongly encouraged to do this.
- Students cannot receive both the data analysis minor and the Applied Data Science Certificate (p. 217).
- Only graded courses can satisfy the requirements for the data analysis minor and the applied data science certificate. Courses completed with a CR/U grading mode will not satisfy the requirements of the two programs.

RELIGION

The Religion Department offers a cross-cultural, interdisciplinary, and critical program that explores the variety of religious experiences and expressions. In addition to courses that demonstrate the power and limits of various critical approaches to the study of religion, the department provides opportunities to analyze practices of interpretation, systems of belief, and patterns of religious behavior; the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection. Religion classes cultivate the ability to interpret and analyze social and cultural systems, to critically analyze texts, and to craft arguments in a variety of genres.

Most courses are open to all students without prerequisites, although those with no background in the academic study of religion should consider starting with a 100 or 200-level course. A minor is available for those who wish to develop a modest program in religion in support of another major. The major is open to all students seeking an interdisciplinary home in the humanities and social sciences.

DEPARTMENT ADVISING EXPERT

Andrew Quintman (aquentman@wesleyan.edu)

RELIGION MAJOR

MAJOR DESCRIPTION

The Major in Religion (RELI) provides students with a cross-cultural, interdisciplinary, and critical exploration of various religious experiences and expressions. In addition to coursework that demonstrates the power and limits of some approaches to studying religion, students will analyze practices of interpretation, systems of belief, and patterns of religious behavior. Studies include the history of religious traditions; the effects of religion in society; the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration; and various forms of religious phenomena such as myth, ritual, texts, and theological and philosophical reflection. Students are encouraged to study an ancient and/or modern foreign language and ancient and/or modern foreign language and to consider study abroad opportunities.

Students of religion are open-minded and intellectually curious, able to consider different belief systems with empathy, cultural sensitivity, and ethical awareness.

Religion majors will cultivate valuable skills, including the ability to interpret and analyze social and cultural systems, to analyze texts critically, and to craft arguments in a variety of genres. Graduates are prepared to continue their studies in a graduate program or pursue a wide range of careers in fields such as education, media, business, law, medicine, politics, non-profits, advocacy, ministry, and many others.

ADMISSION TO THE MAJOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio.

All majors are required to take RELI151. This introductory course is taught every semester. Majors are required to take it before the end of their junior year. It is strongly encouraged that students take RELI151 in their first two years at Wesleyan.

MAJOR REQUIREMENTS

The Department offers various categories of courses through which students organize their curriculum of studies. Please note that some courses fit more than one category; check the “additional requirements and/or comments” section of the WesMaps listing for a course’s official designation(s). Most courses are open without prerequisites.

- **RELI151.** The purpose of this course is to introduce students to the academic study of religion. It is not designed to survey the religions of the world or present an overview of global religious diversity. Rather, it uses a series of empirical case studies to explore methodological and theoretical issues in the study of religion by examining (1) the various intellectual tools used in religious studies; (2) the social, political, economic, and cultural context of those tools; and (3) the debates arising from their use.
- **Historical Traditions courses.** Many courses in the Department deal with the historical content of major religious traditions such as Buddhism, Christianity, Hinduism, Islam, and Judaism, as well as secular, shamanic, Afro-Caribbean, and classical and modern Chinese traditions. These courses examine the texts, histories, institutions, and rituals of these religions.
- **Method and Theory courses.** These courses review and critically analyze methods, theories, and strategies employed by scholars of religion. Method and theory courses include the Religion Majors Colloquium (RELI398), which is required of all majors and to be taken in the junior year. The task of this course is to reflect upon the theoretical and methodological pluralism in the field of religious studies with the opportunity to apply these theories and methods to specific texts, concrete issues, or other cultural formations.
- **Additional Courses.** These are drawn from any of our course offerings, including those that examine specific problems, questions, or themes that intersect with the study of religion, such as gender, race, politics, sex, law, science, and colonialism. They may focus on one religious tradition or draw comparatively between traditions, but all are intended to provide tools for exploring and analyzing historical and contemporary phenomena.

Completing the Major

To complete a major in religion, students are required to take a minimum of 11 courses (10 credits + the .25-credit capstone, with a maximum of 15.25, including thesis credits). Students may count no more than two courses originating outside the Department (i.e. cross-listed from another department or from Study Abroad) towards the major.

The courses are distributed as follows:

- RELI151
- Four Historical Traditions classes in at least three different traditions.

- Two Method & Theory courses, one of which must be RELI398.
- Three additional courses, which may be drawn from any of our course offerings. Alternatively, the student can include one Hebrew course (HEBR202 or higher) or a different fourth-semester language course with substantial religion content (see the Language section below).
- RELI404 (.25 credit), a capstone exploration of your work in the major to be taken during the spring of senior year.

Note: Although some courses may fit more than one category, they may not be included more than once in the overall count of courses taken.

STUDENT LEARNING GOALS

Our students are trained in cross-cultural, interdisciplinary, and critical approaches to the study of religion. They are expected to understand the power and limits of these approaches to the study of religion, and to demonstrate the ability to analyze practices of interpretation, systems of belief, and patterns of religious behavior. Each student will develop critical reading, writing, and research skills, and apply these to topics in the history, philosophy, and ethnography of religious traditions, including the effects of religion in society; the imbrication of religion with science and secularism; and the ways religions can form collective identity through race, nationalism, gender and sexuality, class, caste, language, and migration. They will demonstrate these skills relative to various forms of religious phenomena such as myths, rituals, and texts.

STUDY ABROAD

The Department enthusiastically encourages students to study abroad and will count up to two courses taken outside Wesleyan toward the major.

LANGUAGE REQUIREMENT

Religion majors are strongly encouraged to develop knowledge in an ancient and/or modern foreign language. One upper-level Hebrew course (202 or higher) can count toward the major as a tenth course. Language courses besides Hebrew (such as Arabic, Sanskrit, etc.) can count toward the major once approved by the Department chair. Such a course should be the equivalent of a fourth-semester language course, whose syllabus includes at least one-third religion content. For example, the course might look at religious writings, it might address some aspect of the role of religion or religious groups in society, or it might explore debates about religion, secularism, or modernity.

HONORS

Religion majors with a B+ (88.3) average in the Department may choose to write a senior honors thesis. Candidates for honors must submit to the Department chair a two- to three-page proposal abstract and bibliography by the last Friday of April of their junior year. The proposal should be a description of the intellectual problem of the thesis and the method to be used (whether it will be historical, ethnographic, etc.). Students should list three faculty members who would make good thesis tutors, in order of preference. The Department will determine which theses will move forward with which faculty and may reject some proposals. Students will be notified of the Department's decision before classes end in May. A student must be general education stage 1-compliant by

graduation to be awarded honors or high honors. A passing grade, honors, or high honors will be awarded after a student's work has been presented to the Department.

In lieu of a traditional thesis, students with significant experience in a creative art form or medium may opt to pursue a creative thesis project. Such a project will consist of a combination of artistic production (music, art, theater, dance, film, etc.) and a written, substantive, analytic essay reflecting on the process and intention of the artistic production. The goal is to explore a religious studies question through artistic practice, while maintaining the analytic rigor expected of a more traditional written thesis. In order to be approved for a creative thesis project, a student must demonstrate significant coursework or other training in the creative medium chosen, and must have a thesis mentor in the relevant Department, in addition to a thesis mentor in Religion. There is no expectation that the student must submit the thesis for credit in two Departments, although double majors may choose to do so.

Creative thesis projects will go through the same approval process as traditional theses, are eligible for departmental honors, and are subject to the same deadlines. The student must find an advisor willing to supervise the artistic portion of the project before submitting their proposal to the Religion Department for approval. The project proposal should take the same format as that of a traditional thesis, as outlined above. The student will register for a variant of the thesis tutorial REL 409C/410C, which will list both the religion advisor and the creative advisor as instructors. If the student is submitting the project in both departments, they can opt to register for one thesis tutorial in Religion during one semester and another thesis tutorial in the secondary department during the other semester.

Details about proposing and writing a Senior Honor Thesis may be found here (<https://www.wesleyan.edu/religion/formajors/thesisguidelines.html>).

CAPSTONE EXPERIENCE

Assessment Portfolio and Capstone Symposium. During their time in the major, students will assemble a portfolio of three papers (at least four pages in length each) that they have written in the Department: one from the introductory course (RELI151), one from the Majors Colloquium (RELI398), and a third of their choice that was written in their junior or senior year. Taken together, these papers should give evidence of the development of the students' learning, as well as their command of critical, analytical, and interpretative skills.

In the drop/add period of the spring term, all senior majors enroll in a .25-credit pass/fail tutorial (RELI404), for which they will write a three- to four-page paper reflecting on the portfolio of papers they have assembled and perhaps on other work in the Department. This paper allows students an opportunity to assess the arc of their intellectual development as a religion major. Papers will be submitted to the Department chair and distributed to faculty members for evaluation. In the spring semester, faculty and senior majors will meet for a symposium discussion of these self-assessments, to be followed by a festive meal.

RELIGION MINOR

MINOR DESCRIPTION

The Minor in Religion (RELI) enables students to explore various religious experiences and expressions throughout the world. The five required courses

include a foundational course, two classes in historical religious traditions, plus two classes of the student's choosing that support their major. Minors in Religion will analyze practices of interpretation, systems of belief, and patterns of religious behavior with empathy, cultural sensitivity, and ethical awareness.

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio.

MINOR REQUIREMENTS

Students wishing to complete the minor must take five courses, arranged as follows:

- REL151
- Two courses in at least two areas of Historical Traditions.
- Two additional courses of the student's choice. One of these courses may include REL398, though this is not required. Students must take REL151 prior to REL398.
- The Department will accept, as one of the courses for the minor, either one course taken abroad or one course that is cross listed but not taught by members of the department.

Generally, tutorials and student forums do not count, though the chair may count one after hearing compelling reasons from the student.

Religion courses must be taken for credit with standard letter grading, though special cases may be considered by the chair.

ROMANCE LANGUAGES AND LITERATURES

The Department of Romance Languages and Literatures (RL&L) is a cornerstone of the humanities at Wesleyan and the University's gateway to the French-, Italian-, and Spanish-speaking worlds. We represent literary and cultural traditions that extend from the Middle Ages to the present. We teach languages, literatures, and cultures that span Europe, Asia, Africa, and the Americas. Our students develop and apply their knowledge and skills through the extracurricular activities and study-abroad opportunities that we promote. Through a network of collaborations across departments and divisions, we support a wide array of majors, academic programs, and initiatives.

ADDITIONAL INFORMATION

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered **101–112**) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as **101–102**), he or she will have priority for the second course, just like first-year and sophomore students.

DEPARTMENTAL ADVISING EXPERTS

Michael Meere, *French Studies*; Octavio Flores-Cuadra, *Hispanic Literatures and Cultures*; Francesco Marco Aresu, *Italian Studies*; Robert Conn, *Romance Studies*

FRENCH STUDIES MAJOR

MAJOR DESCRIPTION

The French Studies Major is designed for students interested in developing a command of the French language sufficient to live and work in a French-speaking environment. Students in the program develop a deep knowledge of French-language literature that informs a larger understanding of Francophone modes of thought, expression, cultures, history, and society. This flexible, interdisciplinary program gives students the opportunity to pursue coursework in several fields, including other Romance cultures, politics, art, literature, and history, all of which may serve as the basis for further academic studies or careers. Study abroad and language immersion in a French-speaking country are encouraged.

Students interested in this major are encouraged to bring an open-minded, interdisciplinary mindset and a global perspective to their study that will allow them to learn more about the diverse cultures of French-speaking societies. Adaptability, patience, and dedication are key traits to apply to studying languages and complex cultural nuances.

French majors gain skills that present various career opportunities in fields such as international relations, business, academia, translation, or cultural exchange.

ADMISSION TO THE MAJOR

Students must have completed FREN215 or a higher-level course with a grade of at least a B to be admitted to the major.

MAJOR REQUIREMENTS

FREN215 or the equivalent is the prerequisite for all FREN courses numbered 220 or higher.

The major consists of a minimum of eight courses beyond FREN215:

- **Four FREN courses numbered 220-399.**
 - These courses must be taken on campus in French.
 - Courses numbered **220-299** are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
 - **300-level** courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- **Four other courses** whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. These courses may be taken on campus or abroad, may be in French or English, and may be chosen from among the following courses:
 - Courses from the French section's normal offering of FREN courses numbered 220-399.
 - Courses listed Romance Lang & Lit In Eng (RL&L).
 - Courses taken through approved study abroad programs.
 - Courses offered by other departments and programs on campus that include a study of French or Francophone culture, politics, or history. These courses must be approved by the student's major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST major or the Romance studies (RMST) major where the student is combining French with another Romance culture.

Students majoring in FRST who receive two grades of B- or lower in FREN courses will be dropped from the major.

STUDENT LEARNING GOALS

The French studies major provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment.

LANGUAGE REQUIREMENT

There is no language requirement for the French Studies Major.

ADDITIONAL INFORMATION

Students who receive a C- or lower in FREN course may repeat the course once.

Students who receive less than a B in FREN102, FREN112, or FREN215 will not normally be permitted to enroll in another FREN course or, in the case of students who receive less than a B in FREN215, to study abroad on the Vassar-Wesleyan Program in Paris.

Students who receive a B-, C+, or C in FREN102, FREN112, or FREN215 may petition the head of the French Section to be permitted to take the following course in the French sequence or study abroad on the Vassar-Wesleyan Program in Paris. In their petition, they must explain in detail what supplemental work they will undertake in order to prepare themselves for the following course in the sequence or for study abroad on the Paris program (for example: they will take a summer course). If their petition is approved, they must complete the proposed supplemental work, take the placement exam at the Fries Center for Global Studies, and place into the course they wish to take (or place above FREN215 if they wish to study abroad on the Paris program) before they will be admitted to it.

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

HONORS

See departmental honors program.

CAPSTONE EXPERIENCE

See departmental description of capstone experiences.

FRENCH STUDIES MINOR

MINOR DESCRIPTION

The Minor in French Studies provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment. Students gain a fundamental background in French-language literature and Francophone modes of thought, expression, cultures, history, and society.

In addition to gaining a solid grounding in language classes taught on campus in French, this flexible, interdisciplinary program gives students the opportunity

to take classes offered by other departments that include the study of French culture, history, and politics. These courses may be taken in French or English and may be offered on-campus or abroad.

Students who minor in French develop transferrable language skills that enhance their career opportunities in the global job market.

ADMISSION TO THE MINOR

Students must have completed FREN215 or a higher level course with a grade of at least a B to be admitted to the minor.

MINOR REQUIREMENTS

The minor consists of a minimum of five courses beyond FREN215:

- **Four FREN courses numbered 220-399.**
 - These courses must be taken on campus in French.
 - Courses numbered **220-299** are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.
 - **300-level** courses are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- **One other course** whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. This course may be taken on campus or abroad, may be in French or English, and may be chosen from among the following courses:
 - Courses from the French section's normal offering of FREN courses numbered 220-399.
 - Courses listed Romance Lang & Lit In Eng (RL&L).
 - Courses taken through approved study abroad programs.
 - Courses offered by other departments and programs on campus that include a study of French or Francophone culture, politics, or history. These courses must be approved by the student's major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST minor.

Students minoring in FRST who receive two grades of B- or lower in FREN courses will be dropped from the minor.

ADDITIONAL INFORMATION

Students who receive a C- or lower in FREN course may repeat the course once.

Students who receive less than a B in FREN102, FREN112, or FREN215 will not normally be permitted to enroll in another FREN course or, in the case of students who receive less than a B in FREN215, to study abroad on the Vassar-Wesleyan Program in Paris.

Students who receive a B-, C+, or C in FREN102, FREN112, or FREN215 may petition the head of the French Section to be permitted to take the following course in the French sequence or study abroad on the Vassar-Wesleyan Program in Paris. In their petition, they must explain in detail what supplemental work they will undertake in order to prepare themselves for the following course in

the sequence or for study abroad on the Paris program (for example: they will take a summer course). If their petition is approved, they must complete the proposed supplemental work, take the placement exam at the Fries Center for Global Studies, and place into the course they wish to take (or above FREN215 if they wish to study abroad on the Paris program) before they will be admitted to it.

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

HISPANIC LITERATURES AND CULTURES MAJOR

MAJOR DESCRIPTION

The Major in Hispanic Literatures and Cultures enables students to gain fluency in the Spanish language and knowledge of the diverse cultures of Latin America, Spain, and other Hispanophone communities in the United States and worldwide. The major emphasizes the history and cultural diversity of a world whose geographic reach is vast and whose legacy extends from the pre-colonial period in Latin America and European classical antiquity to the present. This interdisciplinary program focuses on literary and other modes of representation (such as film, performance, and the visual arts), while offering students opportunities to tailor their course of study to their broad intellectual interests. Study abroad in a Spanish-speaking country is highly encouraged and can count towards the major.

Students who major in Hispanic Literatures and Cultures develop an open-minded, inquisitive mindset and a global perspective. While improving their ability to communicate in Spanish, they acquire a deeper understanding of the vibrant and diverse cultures of the Hispanophone world, including its histories, politics, artistic and philosophical traditions. They also gain the language proficiency, communication and critical skills, and intercultural competencies to live, study, and work in a Spanish-speaking environment, in the United States or abroad.

Hispanic Literatures and Cultures prepares students to pursue their academic and professional interests in fields such as education, law, politics, international relations, social work, the arts, business and the medical professions, among others.

ADMISSION TO THE MAJOR

Students qualify for this major with a grade of B or better in SPAN 221 or the equivalent. Exceptions require a formal petition to the Spanish section.

MAJOR REQUIREMENTS

Nine (9) courses minimum numbered 203 and above.

- Five (5) courses minimum in SPAN numbered 221 or above taken from the Wesleyan Spanish section. To ensure majors work with at least three Spanish-section faculty members, explore the historical and geographic diversity of the Hispanophone world, and make an informed choice about their electives, these courses must be distributed as follows:
 - one course SPAN230-249 (pre-1700)
 - one course SPAN250-269 (post-1700 Spain)
 - two courses SPAN270-299 (post-1800 Latin America)
 - one elective
- At least one (1) course in SPAN at Wesleyan during the senior year

OTHER REQUIREMENTS

- A grade of B or better is required for courses taken for the major.
- Students who count SPAN 203 must also take SPAN 221.
- The following courses **do not** count toward the major:
 - Tutorials (for theses, essays, independent study, and course assistants)
 - Language courses taken abroad
 - Service learning courses
- It is possible to count a credit earned elsewhere (e.g., over the summer) toward the major, but petitions must be pre-approved by the section. The student must establish the course meets our standards for equivalence. Criteria and conditions (along with the petition) are explained here: <https://www.wesleyan.edu/romance/spanish/aptransferofcredit.html> (<https://wesleyan.edu/romance/spanish/aptransferofcredit.html>)
- Exceptions require a formal petition to the Spanish section. On the petition process (including timelines), see below.

COURSES IN RELATED FIELDS TAKEN ABROAD OR ON CAMPUS

We strongly encourage students to pick courses abroad on topics not available in the Spanish section at Wesleyan. Courses taken in Spanish on selected programs abroad may count toward the major if they have a strong interpretive dimension, with a focus on reading, writing, discussion, representation, or form (e.g., how genre, rhetoric, and/or style shape meaning). Such courses may also treat the subject's history or the debates within it. Courses that meet these criteria are ordinarily found in anthropology, art history, history, music, philosophy, and sociology. They can also be found in economics, government, and psychology when the course focuses primarily not on quantitative analysis or method but on the field's history or its use in public debates or contexts.

With the advisor's approval, majors may count courses in related fields as follows:

- Students who study abroad may count up to four (4) courses taken in Spanish on selected programs. Students who count courses taken abroad should aim for as much chronological and geographic diversity as possible.
- Students who do not study abroad may count up to two (2) related-field courses taken in English at Wesleyan on Latin America, Spain, or Latin US. However, bear in mind you can create your own immersion experience at Wesleyan by taking more than one course in Spanish per semester as you would abroad. While you cannot replicate the full experience here, we offer such a wide range of seminars you can replicate the academic one.

PETITIONING FOR EXCEPTIONS TO MAJOR REQUIREMENTS

To ensure students are on-track to fulfill the requirements for the major, the Spanish section collectively reviews the academic histories of all juniors in February of each year, that is, before course selection for the senior year. Students may petition the Spanish section for exemption from a requirement by writing to the head of the section. Such requests should only be made in exceptional circumstances, taking into account the learning goals and rationales for the major requirements explained above. Students and their advisors should plan course selection accordingly, to ensure completion of the major regardless of the petition's outcome. Petitions should be submitted by March 30.

STUDENT LEARNING GOALS

Students who complete the major in Hispanic literatures and cultures have the knowledge and skills needed to successfully pursue their academic and professional interests:

- the language proficiency to live, study, and work in a Spanish-speaking environment, in the United States or abroad;
- strong communicative skills, in both Spanish and their native language;
- the capacity to understand diverse points of view;
- the ability to draw on a wide range of sources to stimulate their own creative and critical capacities; and
- a sense of the rich diversity and creative power of Hispanophone literary texts and films spanning ten centuries (five of them in Latin America) and five continents.

STUDY ABROAD

The following programs abroad are recommended for majors in Hispanic literatures and cultures:

- Vassar-Wesleyan Program in Madrid (Spain)
- Universidad de los Andes in Bogotá (Colombia)
- CIEE in Buenos Aires (Argentina)
- Middlebury in Chile (Various cities)
- CIEE in Santo Domingo (Dominican Republic)
- IFSA Butler at the Universidad Autónoma (Mérida, Mexico)

Students may petition for ad hoc approval of other programs abroad. For more information concerning study-abroad opportunities, visit the Office of Study Abroad, 201 Fisk Hall.

ADVANCED PLACEMENT

See wesleyan.edu/romance/spanish/aptransferofcredit (<http://wesleyan.edu/romance/spanish/aptransferofcredit.html>) for more information.

TRANSFER OF CREDIT

See wesleyan.edu/romance/spanish/aptransferofcredit (<http://wesleyan.edu/romance/spanish/aptransferofcredit.html>) for more information.

HONORS

See wesleyan.edu/romance/spanish/honors (<http://wesleyan.edu/romance/spanish/honors.html>) for more information.

CAPSTONE EXPERIENCE

Students are encouraged to present a substantial piece of work during their senior year that is comparative and transnational in nature, either within the framework of a single course (a term paper, for instance) or as their senior essay or thesis.

ITALIAN STUDIES MAJOR

MAJOR DESCRIPTION

The Italian Studies major provides students with solid training in the spoken and written Italian language, enabling in-depth study of Italian history, culture, and society from the Middle Ages to the present. Students study a variety of texts (literary, film, and cultural), which enhance their acquisition of the language. This flexible, interdisciplinary program allows students to explore their own intellectual interests across other fields and in such departments as History, the College of Letters, Art History, and Classical Studies. Recent graduates have also double majored in Neuroscience, Chemistry, Earth and Environmental Sciences, and Film. Small and highly interactive classes are typically conducted in Italian, and students work closely with their professors. Study abroad in an Italian-speaking country is encouraged with a warm invitation to study on Wesleyan's program in Bologna.

Students interested in the Italian Studies major develop an open-minded, inquisitive mindset as well as a global perspective. They may be passionate about Italian history, art, cinema, literary, or culinary traditions. Adaptability, strong communication and critical skills, creativity, and commitment are key traits that students gain from the study of Italian, its culture, history, and language.

The Italian Studies major develops capabilities including writing, speaking, interpretation, intercultural literacy, and effective citizenship—skills that prepare students for advanced study and are useful in a variety of professions including international relations, politics, business, academia, translation, the arts, travel, and cultural exchange.

ADMISSION TO THE MAJOR

Students qualify for this major with a grade of B or better in ITAL111 or the equivalent.

MAJOR REQUIREMENTS

- Nine courses above the level of ITAL102 (i.e., ITAL111 and higher) are required. Sophomores who are satisfactorily completing ITAL102 and intend

to pursue Italian will be admitted to the major even though that course does not itself count for the major;

- All courses that count toward the major must be taken for a grade. Normally, only courses passed with a B or better will count for the major. Students are expected to request permission from the Italian section to count courses with a lower grade toward the major;
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged;
- One of the nine required courses may be taken in English;
- For students placing into ITAL221 or higher, three of the nine required courses may be taken in English;
- One course in Italian at Wesleyan following study abroad is required;
- All students are required to take at least one course for the major in their senior year.

ADDITIONAL INFORMATION

- The Italian major is designed to allow students to start Italian at Wesleyan in their first or second year and complete the major. Completion is further helped by spending one semester abroad in Italy through the ECCO program or another program.
- Students are highly encouraged to satisfy the post study-abroad course requirement in the semester they return to campus.
- Four credits from the ECCO program in Bologna are accepted: Only one of these may be on a topic that is not Italian in nature (i.e., economy of Russia taken at the UniBo).
- Lecce credit is accepted only for students who have completed ITAL102 only before study abroad.
- If a student attends a study-abroad program other than ECCO, a review of the number of credits that will be accepted into the major is required.

STUDENT LEARNING GOALS

The Italian studies major combines the study of Italian language, literature, film, and culture, bringing humanistic tradition together with current global concerns. The major is designed to provide students with a comparative, international, and interdisciplinary education. Language training at Wesleyan serves as the base from which to explore Italian history, culture, and society from the Middle Ages to the present. Likewise, the in-depth study of a variety of texts (literary, filmic, and cultural) enhances the study of the language. The study of a foreign language and culture complements students' understanding of their own native cultures, enriching their critical understanding of it. Small classes taught through the medium of Italian, along with the extracurricular activities and study-abroad opportunities, allow students to study in detail and collaborate on a variety of critical topics and foster abilities considered essential in an ever-globalizing world, such as critical thinking, intercultural interpretation and literacy, and effective citizenship. These skills, in turn, prepare students for a variety of professions and lifelong inquiries.

STUDY ABROAD

ECCO program in Bologna, Italy. Wesleyan University cosponsors with Vassar College and Wellesley College a program in Italy for up to 15 students from each of the three colleges without regard to their choice of major. ITAL102 or the equivalent of one year of college-level Italian is the prerequisite for participation. Students may choose to participate in either the fall or spring semesters, or (optimally) both. For fall or full-year participants, the program begins with a

seven-week (two-credit) intensive language and culture course that consists of three weeks in Lecce in the month of August, followed by a short break, and then four more weeks in Bologna before the beginning of the academic year. Spring-only participants will have a similar three-week (one-credit) course in Bologna in January. A full complement of courses taught in Italian dealing with Italian literature, history, government, art history, and other areas is offered at the program's center, taught by faculty from the Università di Bologna and by the program director.

Qualified students are strongly encouraged to enroll in courses at the Università di Bologna, and, thus, students with good language skills will have a wide range of fields from which to choose, including economics, government, and the natural sciences. All courses carry one Wesleyan credit. Since the Italian studies major emphasizes linguistic and cultural competency, most courses taken at the Università di Bologna in Italian will normally count for the major. Only one course that is not Italian in nature, yet taught in Italian (i.e., The Economy of Russia) taken at the Università di Bologna will be accepted.

The cost of the program is approximately equivalent to that of staying on the home campus for the same period, and it includes round-trip air transportation between New York and Italy. Applications for the fall semester are due by March 1, for the spring semester, by October 1, and must be submitted to the Office of Study Abroad (<http://wesleyan.edu/ois/>).

Students participating in Wesleyan's Program in Bologna for any duration may receive credit for four courses. Students attending study-abroad programs other than ECCO are required to have those credits reviewed by their advisor before they will be accepted for the major. Learn more at: wesleyan.edu/romance/italian/studyabroad.html (<http://wesleyan.edu/romance/italian/studyabroad.html>).

ADVANCED PLACEMENT

See wesleyan.edu/romance/italian/aptransferofcredit (<http://wesleyan.edu/romance/italian/aptransferofcredit.html>) for more information.

TRANSFER OF CREDIT

See wesleyan.edu/romance/italian/aptransferofcredit (<http://wesleyan.edu/romance/italian/aptransferofcredit.html>) for more information.

ADDITIONAL INFORMATION

Course assistantships in Italian. Majors and other accomplished students returning from overseas may apply to serve as a course assistant for elementary Italian. Students may not receive academic credit for this exercise; rather, they will receive a stipend for their work. Students should express their interest to the faculty advisor in the spring for the following fall semester and in the early fall for consideration for the spring semester. Please note that students may serve as course assistant for only one course at the University per semester.

HONORS

See wesleyan.edu/romance/italian/honors (<http://wesleyan.edu/romance/italian/honors.html>) for more information about honors.

CAPSTONE EXPERIENCE

See wesleyan.edu/romance/italian/honors (<http://wesleyan.edu/romance/italian/honors.html>) for more information about capstone experience options.

ROMANCE STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Romance Studies (RMST) enables students to develop a broad knowledge of two or more languages and cultures — those of Italy, France and the Francophone world, and the Hispanophone world — through a flexible, interdisciplinary program that combines coursework in several fields. Students explore literature, film and other art forms of various periods and regions to compare and gain insight into unique cultural modes of thought, expression, and creative achievement. Students improve their linguistic abilities in French and/or Italian, and/or Spanish, become familiar with the cultural traditions, histories and politics of diverse civilizations and societies, and develop strong communications and critical skills, as well as the intercultural competencies to function effectively across cultures and work with people from different backgrounds. All RMST majors are strongly encouraged to spend at least one semester studying abroad in a Romance-language-speaking country.

The Romance Studies program prepares students to pursue careers in such diverse fields as education, media, politics, international relations, publishing, law, diplomacy, travel and hospitality, academia and the arts, including work in cultural institutions and heritage organizations.

ADMISSION TO THE MAJOR

Students qualify for this major with a grade of B or better in the following courses in their primary language or the equivalent: FREN215, ITAL111, or SPAN221; and a grade of B or better in the following courses in their secondary language or the equivalent: FREN112, ITAL111, or SPAN112.

MAJOR REQUIREMENTS

- Determination of a major (five courses in your primary language) and minor (four courses in your secondary language) focus.
- A minimum of two comparative projects. The idea is to suspend, for a moment, the nationalist assumption that languages and cultures exist in isolation from each other. Writers, artists, scientists, and businesspersons routinely cross borders and languages. We ask you to do the same in two short or long papers, to be completed at Wesleyan or during study abroad. A comparative project means simply that, in consultation with a course instructor, you will draw substantially on both your Romance Studies languages and cultures to explore a problem that interests you. We ask for two papers to encourage you to think comparatively from the primary viewpoint of each of your Romance Studies languages. We suggest you pursue this within courses you are taking anyway (including a senior thesis) because it need not require extra work—just a different way of

thinking about work you must do regardless. The length is less important than the substance of your thinking. The project could be about border-crossing movements, reception, influence or adaptation, intertextuality, or dialogue between languages, literatures, and/or cultures. Or it could be an exploration of an issue that interests you (the environment, health care, urban planning, food, science, queer identities, fashion, etc.) in cross-cultural perspective, drawing on both languages and cultures. The projects may also be more informal or essayistic reflections (the equivalent of two short papers in length) on something significant you have learned or a perspective gained through study of two languages and cultures that you are unlikely to have learned through English only, a single foreign language, or another major. These essays may draw on work or study abroad or on the multiple courses you have taken at Wesleyan in your Romance Studies languages. They may be written in English or in one of your two languages. If you write in English you are expected to draw on sources in both languages.

- Nine courses at or above determined levels (FREN220, ITAL111, SPAN221) in two Romance languages.
- At least one course taken in both the student's primary and secondary languages in the student's senior year.
- Students are expected to earn a B or better in courses that count for the major. Students wishing to count a course with a lower grade toward the major are expected to consult with the chair of Romance Languages and Literatures (who will consult with the department) about it as soon as the grade is recorded.
- Courses must be taken for a letter grade, unless the student is also majoring in COL.

ADDITIONAL INFORMATION

- Study abroad is expected to take place on a Wesleyan-sponsored study-abroad program. Alternatively, students may, with the advisor's prior statement of support, study on another approved program. This practice is intended to promote the intellectual coherence of a major in which students acquire one language more recently than another.
- Students may petition their advisor for special permission to count take one course in English centered on the culture of their primary language towards the major.
- With the advisor's approval, students may satisfy the comparative requirement by way of coursework and/or written work conducted on a study-abroad program.
- Students whose primary language placement is higher than FREN215, ITAL112, SPAN221 are required to complete nine courses, two of which may be in English in the primary language's culture only.
- You may count up to three courses taken during one study abroad toward the major, and up to four courses if going abroad twice (once in each of your language of study). These courses may be taken in one or both of the major languages.
- Except in rare circumstances, students may not double major in any of the majors sponsored by the Romance Languages and Literatures Department: RMST, SPAN, FRST, ITST.
- Senior essays or theses must be comparative and involve the literatures and/or cultures of the student's major languages.
- Essay, thesis, and other (e.g., CA/TA) tutorials and language courses do not count toward the major, although they are encouraged.

STUDENT LEARNING GOALS

The Romance studies major provides students with the proficiency in two Romance languages (among French, Italian, and Spanish) to live, study, and work successfully in the corresponding French-, Italian-, and/or Spanish-speaking environments. They learn about their literatures and other cultural forms such as film and, through them, about their modes of thought, expression, and creative achievement. As a result, they improve their ability to communicate in French, Italian, and/or Spanish as well as their native language; become more adept at understanding other points of view; and learn to draw on a wide range of sources to stimulate their own creative and critical capacities. Students are encouraged to bring the resources of their two Romance cultures to bear together on problems that interest them, providing a depth of perspective unavailable in English only or a single foreign language. Finally, students explore the enormous cultural diversity of the French-, Italian-, and/or Spanish-speaking worlds through a flexible interdisciplinary program (often including study abroad) that can serve as the basis for future work or further academic or professional studies.

STUDY ABROAD

All majors are strongly encouraged to spend at least one semester studying abroad in a Romance-language-speaking country. In addition to Wesleyan's own programs in Bologna, Madrid, and Paris, there are currently Wesleyan-approved study-abroad programs in Argentina, Brazil, Cameroon, Chile, Costa Rica, Ecuador, Italy (Florence, Rome), Madagascar, Mexico, and Senegal. Wesleyan also sends one exchange student each year to the Institut d'Etudes Politiques in Paris. Students who have strong academic reasons for wishing to participate in other programs may also petition the Fries Center for Global Studies for permission to do so. For information on the approved programs and the petition process, contact the Fries Center for Global Studies (<http://www.wesleyan.edu/cgs/osa/>).

ADVANCED PLACEMENT

See wesleyan.edu/romance/romancestudies/aptransferofcredit (<http://wesleyan.edu/romance/romancestudies/aptransferofcredit.html>) for more information.

LANGUAGE REQUIREMENT

Yes.

TRANSFER CREDIT

See wesleyan.edu/romance/romancestudies/aptransferofcredit (<http://wesleyan.edu/romance/romancestudies/aptransferofcredit.html>) for more information.

ADDITIONAL INFORMATION

Students are responsible for ensuring that major communications with the primary language advisor about the essay or thesis work also go to the secondary

language advisor at the same time (and vice-versa: communications with the secondary language advisor should go to the primary language advisor).

HONORS

See wesleyan.edu/romance/romancestudies/honors (<http://wesleyan.edu/romance/romancestudies/honors.html>) for more information about honors.

CAPSTONE EXPERIENCE

See wesleyan.edu/romance/romancestudies/honors (<http://wesleyan.edu/romance/romancestudies/honors.html>) for more information about capstone experience options.

RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

The study of Russia, Eurasia, and East-Central Europe is fundamental in today's world. Solutions to many geopolitical and environmental crises require nuanced understanding of the countries that used to be part of the Soviet Union and the Russian Empire. Wesleyan's REES Department is unique among its peers in its impressive interdisciplinary makeup: The REES faculty specialize in literature, history, politics, music, cinema, art, dance, and religion. In addition to Russian, the REES faculty speak Ukrainian, Buryat, Tatar, and Kazakh languages. Most REES courses are taught in English and are designed for majors and non-majors alike. Our graduates have gone on to careers in research and cultural analysis, education, law, artistic production, diplomacy and public service, business, and communication.

DEPARTMENTAL ADVISING EXPERTS

Susanne Fusso, Peter Rutland, Victoria Smolkin-Rothrock, Roman Utkin

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MAJOR

MAJOR DESCRIPTION

The Major in Russian, East European, and Eurasian Studies (REES) provides students with a thorough, interdisciplinary understanding of contemporary Russia and other post-Soviet states, their culture, society, history, politics, and economic institutions. REES faculty specialize in the literature, history, politics, music, cinema, art, dance, and religion of this region. Students are expected to achieve an advanced level of fluency in Russian or another language of the region and learn to work with target-language sources and media to conduct original research in their chosen area of specialization. Study abroad in the region is encouraged when appropriate.

Students drawn to the REES major bring an interdisciplinary orientation, strong critical thinking and analytical abilities, and a curiosity about learning languages. They may have a cultural interest in the region's rich history, literature, or artistic traditions. Alternatively, they may want to focus on the role of this region--as it transformed from the Russian Empire to the Soviet Union and to its successor states--in global affairs and the worldwide economy.

The REES major can provide insights into different worldviews and social systems, preparing graduates for advanced study or careers in research and cultural analysis, education, law, artistic production, diplomacy and public service, business, and communication.

ADMISSION TO THE MAJOR

Students normally declare a major in Russian, East European, and Eurasian Studies in the spring of sophomore year. Interested students should begin their

study of Russian language as early as possible and should consult a REES faculty member before declaring the major. To be accepted into the program, students must have a minimum overall average of B in courses related to the major.

MAJOR REQUIREMENTS

There are two possible concentrations in the REES major.

- Language, literature, and culture. Majors must complete three years of college-level Russian or the equivalent, as well as five more courses, three of which must be in literature & culture (including either a course or a full-credit tutorial conducted in Russian) and two of which must be in social sciences. If a student places out of one or more semesters of language, they must take enough courses in REES to add up to a total of 11. For example, a student who places out of two semesters of first-year Russian would take four more semesters of language plus seven more courses.
- Social sciences. Majors must complete two years of college-level Russian or the equivalent, as well as seven more courses. These courses must include at least three in the category of social sciences and two in the category of literature & culture. If a student places out of one or more semesters of language, they must take enough courses in REES to add up to a total of 11. For example, a student who places out of two semesters of first-year Russian would take two semesters of language plus nine more courses.

Students who wish to fulfill the language requirement by studying a language of Eastern Europe or Central Asia other than Russian may do so, subject to approval by the chair.

RUSS201 & RUSS202	Intermediate Russian I and Intermediate Russian II	2
RUSS301 & RUSS302	Third-Year Russian I and Third-Year Russian II	2

STUDENT LEARNING GOALS

The major in Russian, East European, and Eurasian studies is designed to provide students with a thorough understanding of contemporary Russian culture and society, its history, its political and economic institutions, and its place in the world. At the end of their studies students should have achieved an advanced level of fluency in the language and should be able to work with Russian sources to conduct original research in their chosen area of specialization. They should be able to read or watch Russian media and understand the historical and cultural references that frame Russians' understanding of their world. Students should also have a basic familiarity with the historical, cultural, social, and political developments of the other post-Soviet states beyond Russia and have the opportunity to explore these countries in more detail if they so desire.

STUDY ABROAD

Given the ongoing armed conflict in Ukraine, students should consult with the faculty about any plans for study abroad. Students may study in Eastern Europe or Central Asia as long as the program includes a language component. For a semester of study abroad on an approved program, four credits will count toward graduation, of which two will count toward the REES major. For a summer of study abroad on an approved program, two credits will count toward graduation, of which one will count toward the REES major.

LANGUAGE REQUIREMENT

Majors must complete two or three years of college-level Russian or the equivalent, depending on their major track. Minors must complete one year of college-level Russian or the equivalent.

PRIZES

Scott Prize, Priscilla Meyer Fund

HONORS

To qualify to receive honors or high honors in Russian, East European, and Eurasian studies (REES), a student must write a senior thesis that will be evaluated by a committee consisting of the tutor, a second reader from the REES faculty, and one additional reader either from REES or from the faculty at large. This committee makes the final decision on departmental honors. Only a two-semester senior thesis may be submitted for honors in REES.

CAPSTONE

No capstone is required. Available capstone experiences include study abroad, seminars conducted in Russian, and senior honors theses.

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MINOR

MINOR DESCRIPTION

The Minor in Russian, East European, and Eurasian Studies (REES) offers students a nuanced, interdisciplinary understanding of contemporary Russia and other post-Soviet states, their culture, society, history, politics, and economic institutions. The REES minor consists of six courses including language study, social sciences, and literature and culture – providing insights into other worldviews and social systems. Study abroad is encouraged.

ADMISSION TO THE MINOR

Any student who intends to earn the minor in REES should speak with the program chair by the end of the junior year at the latest.

MINOR REQUIREMENTS

The minor in REES consists of six courses, in which the student must achieve a GPA of B. These courses must include RUSS101 and RUSS102 or two semesters of Russian language study at the appropriate level and four more REES courses, of which two must be taken in the areas of social sciences and/or literature & culture (see course list). The remaining two courses may be in either of the two areas or in Russian language. Two of the courses may be taken during study abroad (with prior approval). Students should plan the minor in consultation with REES faculty.

If a student places out of one or more semesters of language, they must take enough courses in REES to add up to a total of 6.

Students who wish to fulfill the language requirement by studying a language of Eastern Europe or Central Asia other than Russian may do so, subject to approval by the chair.

Satisfactory completion of the minor will be certified by the program.

SOCIOLOGY

The program is designed to help students develop new frameworks for analyzing a broad array of social relations—from everyday life interactions to large-scale historical and structural transformations—and to cultivate a critical appreciation for the academic discipline of sociology.

DEPARTMENTAL ADVISING EXPERTS

Greg Goldberg; Kerwin Kaye

SOCIOLOGY MAJOR

MAJOR DESCRIPTION

The Major in Sociology enables students to develop new frameworks for analyzing social behavior and human relationships. From everyday life interactions to large-scale historical and structural transformations, sociology concerns itself with traditional and emergent social formations and institutions, seeking insight into intersecting cultures and subcultures.

Students of sociology study a panoply of topics including social theory, social movements, critical media studies, sexualities, family, gender, race & ethnicity, education, inequality, work, leisure, healthcare, urban sociology, religious movements, philanthropy, political sociology, and sociological methods of knowledge production.

The Sociology major is animated by a commitment to critical consciousness that prepares students for a life of self-reflexivity and social awareness. It yields opportunities for creative work in many significant spaces of cultural production and a wide variety of contemporary media platforms. Students often find innovative ways to apply sociological modes of analysis to transformative work in fields as diverse as fashion, education, social policy, journalism, health care and law.

ADMISSION TO THE MAJOR

Students who wish to declare the major must have completed or be currently enrolled in SOC151 and have completed or be currently enrolled in one additional course:

- any Sociology Department course, or
- a sociologically relevant course approved by petition to the department

MAJOR REQUIREMENTS

Majors must complete a total of 10 courses in fulfillment of the major requirements.

- Three sociology department foundations courses
 - SOC151
 - SOC202
 - SOC212
- Four sociology department topical courses, including independent and group tutorials (**SOC220-SOC 402, SOC 411-412**)
 - Note: students who write sociology theses are only required to take three sociology department topical courses.
- Three additional topical courses from any combination of:
 - **SOC220-SOC402**
 - **SOC 411-412**
 - **SOC 465-SOC466** (education in the field)
 - Advisor-approved courses taken outside the Wesleyan Department of Sociology, including study-abroad credit, sociology-relevant courses at Wesleyan, and sociology courses taken at other institutions.

All sociology majors must enter their senior year having taken a minimum of three courses within the Wesleyan Department of Sociology. This includes at least one of the two required courses (SOC202 or SOC212).

Non-Department Major Credit

Three of the seven topical courses needed to complete the major can be completed outside the Sociology Department. These courses include study abroad courses, transfer credit, and courses taken in other departments at Wesleyan. The courses must be sociology-related and require approval from your major advisor. Majors can request a **maximum of three courses (or three credits)** from outside the department.

STUDY ABROAD

Study abroad is fully compatible with completing the major, but students who plan to go abroad for a semester are expected to discuss with their major advisors how such studies will fit into their overall academic program before finalizing their plans. Pre-approved study abroad courses can be transferred to the major as non-departmental major credit (up to 3 credits; see details in Major Requirements and Transfer Credit).

TRANSFER CREDIT

The Sociology Department will consider requests to transfer credit for graded sociology courses taken at other U.S. academic institutions. For currently enrolled Wesleyan students, these requests must be made during the first two weeks of the course the student is requesting a transfer credit. In the event that a course is no longer available or some other circumstance bars a student from enrolling in the pre-approved course, students must contact their major advisor to get permission to have credit for a different course transferred instead.

Along with the transfer credit form (available at <https://www.wesleyan.edu/studentaffairs/forms.html>), a course syllabus must be provided showing that the proposed course is equivalent to Wesleyan courses.

Students who began their studies at other U.S. academic institutions can have their credits transferred upon admission to Wesleyan, and these credits can apply to the major. Already enrolled students who began their studies at Wesleyan can only request to have topical or upper division transfer credit applied to the major, which can count toward the maximum of three sociology-related credits taken outside the Department to fulfill the major requirements.

ADDITIONAL INFORMATION

- **Major advising.** Each major is assigned a faculty advisor with whom the student works out a program of study
- **Education-in-the-field credit.** Students, whether majors or non-majors, seeking education-in-the-field credit must provide the department, in advance, with an acceptable prospectus of their work and assurance of professional guidance during the field experience. Students must submit research papers based on this experience. These papers should refer substantially to sociological literature pertinent to their field experience.

In planning their programs, students should examine the full list of WesMaps (<http://www.wesleyan.edu/wesmaps/>) course offerings. Other information about the sociology major is available in the department office, 212 College St.

HONORS

The Department of Sociology offers a two-semester Honors Thesis Seminar (SOC 405-406) supervised by a member of the sociology department faculty who serves as thesis advisor for students enrolled in the seminar. Students selected for participation in the seminar work individually with the seminar advisor and meet weekly with other thesis writers in a process directed toward the formulation and production of an original piece of imaginative and sophisticated scholarship. Consideration focuses on the potential for successful completion of a project that is both creative and well-formulated.

The Sociology Department's yearlong Thesis Seminar proceeds in three stages:

Stage 1. To apply to write a Sociology Honors project, students will submit a brief proposal and a writing sample that will be used to evaluate a candidate's potential for successful completion of an Honors project.

- The proposal should present a topic for the thesis alongside a discussion of how the student intends to approach their study, what compels them to take on the study, and what kinds of knowledge of/or experience they bring to the work. This should include a discussion of scholarly texts relevant to the project but may also include other ways the student has come to be interested in the topic through experiences or creative texts. Proposals are understood to be preliminary and provisional. It is expected that the shape and topic of the project will change substantially over the course of the thesis writing process.
- The writing sample should be a completed work, selected by the student to reflect the student's best work, i.e., the work of which the student is most proud. The central considerations for evaluation of the sample are formal, not substantive and, as a result, the student writing can be drawn from any creative context, including but not limited to, coursework completed in Sociology or elsewhere. There is no prescribed number of pages required for the submission.

Students who wish to be considered for enrollment in the Honors Thesis Seminar will submit a PDF file of the writing sample by the end of the first week of April (5pm 4/7).

Applications should be emailed to Professor Abigail Boggs, aboggs@wesleyan.edu. Please include THESIS SEMINAR APPLICATION—all caps—in the subject line of the email.

Stage 2. In most instances, the petition process includes an interview, either on-campus or virtual, with the professor leading the seminar in order to explore

tentative ideas for thesis topics and discuss the nature of the commitment required for completion of an independent Honors Thesis. Candidates will be contacted directly in order to schedule an interview.

Stage 3. Enrollment in the two-semester Thesis Seminar is managed as a POI course. Successful candidates will be formally enrolled in the seminar (and, thus, in the university-managed Honors College administrative system) during add/drop at the start of senior year.

Department faculty may also elect to work with a senior major toward completion of an honors thesis outside of the context of the Thesis Seminar. Independent thesis tutorials are established at the discretion of members of the sociology department faculty.

Double-filing theses

Double-majors who are completing honors theses/projects for another department on campus can request to have their thesis considered for honors in Sociology. In this case, the student must complete a thesis tutorial with a member of the Sociology Department for at least one semester their senior year.

CAPSTONE EXPERIENCE

Capstone (optional)

Students who qualify for the honors program may apply to write an honors thesis during the seventh and eighth semesters. See section entitled "Qualifying for Honors" for full information on the honors program.

THEATER

The Theater Department considers the critical and creative study of each theatrical area to be an essential component of a liberal arts education. Offerings include courses in acting; civic engagement and outreach; criticism, ethnography, history, and literature; costume, lighting, scenic, and media-based design; directing; performance studies; theory; performance art; playwriting; puppetry; and solo performance.

Many theater courses are cross-listed with academic departments in all divisions, as well as Wesleyan’s colleges. Theater faculty and majors are committed to collaboration within and across departments. The Theater Department strongly encourages students to attend performances and lectures sponsored by all performing and visual arts departments.

Each year the department sponsors productions and other events in a variety of theatrical forms; some are directed by faculty members or guest artists, while others are directed by undergraduates. Theater courses and productions reflect the interdisciplinary and multiple interests of the faculty and majors. Theater Department productions take place in the Center for the Arts Theater, the Patricelli ’92 Theater, and other spaces on campus. The Center for the Arts (CFA) is a state-of-the-art facility with 400 seats. The Patricelli ’92 Theater is a historic brownstone building with a traditional proscenium. Both theaters are highly flexible and can be used as black boxes. Site-specific performances take place across campus: in the Davison Art Center, the Center for African American Studies, and the Russell House, to name a few. All theaters and alternative spaces are available to faculty and senior thesis productions. The theater department is part of the Center for the Arts, a complex of studios, classrooms, galleries, performance spaces, departments, and programs that provide a rich, interdisciplinary environment for study and performance.

DEPARTMENTAL ADVISING EXPERTS

Ron Jenkins, Marcela Oteiza (Dance Dept)

THEATER MAJOR

MAJOR DESCRIPTION

The mission of the Theater Department (THEA) is to graduate self-empowered, well-informed, creative storytellers engaged in their communities. The Theater Department considers the critical and creative study of the theatrical discipline to be an essential component of a liberal arts education. Offerings include courses in **Theater Arts** (acting, design, directing, playwriting, stage management), **Theater Methods** (dramatic literature and criticism, performance studies, theater history), and **Technical Theater** (lab and hands-on technical production). Foundational coursework introduces theater techniques, theories, literature, and discourses. Advanced courses prepare students to articulate their visions of theater both on stage and in writing, and to engage in deep scholarly and artistic research. The department embraces a broad definition of theater and encourages artistic innovation.

The Theater department welcomes students who seek to develop a strong passion for expressing themselves or communicating about meaningful human

issues through the artistic process. They are interested in developing their confidence and empathy, embodiment, and collaborative skills. Theater majors acquire many valuable and transferable career skills such as public speaking and presentation, teamwork, creative problem-solving, adaptability, emotional intelligence, time and project management, and attention to detail.

ADMISSION TO THE MAJOR

The theater department has created a wide array of options for students to begin their path through the study of theater in areas other than acting, such as playwriting, design, or performance practice.

The following chart details the Gateway Course Categories that must be completed or underway by the fourth semester in order to be approved as a theater major:

Degree type	Area of Study
Gateway Courses	
Technical Theater (0.5 CR)	THEA105 (One 0.5 credit in the technical aspects of scenic/lighting or costumes)
Theater Arts (1.0 CR)	This includes courses in the areas of design, acting, playwriting, advanced technical theater, and performance practice
Theater Methods (1.0 CR)	This includes courses in the areas of dramatic literature, theater history, criticism, applied theater and service learning.

(See list of courses shown below)

MAJOR REQUIREMENTS

Theater Major Requirements (These requirements are in addition to the Gateway courses)

- Three (3) credits in **Theater Arts** courses, which must include one design course (THEA359 - set design, THEA383 - costume design, THEA360 - media design or THEA305 - lighting design). One credit (and only one credit) of Performance Practice* (THEA427/THEA428/THEA431/THEA432/THEA433/THEA435/THEA437) is also required for this category. One instance of the course THEA183 (The Actor’s Experience) or THEA180 (Reading Plays for Production) may be counted towards the Performance Practice requirement (for .5CR).
- Two (2) credits in **Theater Methods** courses. Only one course may be 100-level.
- One (1) credit of **Technical Theater** (THEA329/THEA331/THEA335) earned in .25, .5 and 1.0 credit increments through participation in department production related positions.** These opportunities are posted on the Theater Department Virtual Callboard (<https://bit.ly/CBLanding/>) throughout the year as projects/production needs develop.
- One (1) credit Theater Elective, which includes THEA courses and courses cross-listed with the department in all areas, including Technical Theater, Theater Arts, and Theater Methods. This will allow students to deepen their knowledge within an area of theater that they are interested in, or conversely to increase the diversity of courses that they take in the major during their time at Wesleyan. For this category, majors will need to select

a course to count as their elective and submit that choice in their major certification form to be approved by their major advisor.

*Performance Practice credits are earned by participating in a Theater Department project (Mainstage or Capstone Productions) as a performer/actor, director, assistant director, stage manager, assistant stage manager, dramaturg, designer or assistant designer. Auditions and opportunity info for these will be posted on the Theater Department Virtual Callboard (<https://bit.ly/CBLanding/>) throughout the year as projects/production needs develop.

**Beginning with the class of 2027: in order to be eligible for any senior capstone project, students must have completed their Technical and Performance Practice credits by the end of their junior year.

Total major program requirements: 2.5 credits (Gateways) + 7 credits = 9.5 credits

GENERAL EDUCATION

In order to be eligible for Honors in Theater through a Capstone Thesis Project, students must be Gen Ed Stage1 compliant. In order to be eligible for

High Honors in Theater through a Capstone Thesis Project, students must be Gen Ed Stage 2 compliant. See Guidelines and Proposal Requirements for Senior Capstone Projects in Theater (<https://bit.ly/WesTheaterCapstoneGuidelines/>) for more information.

STUDENT LEARNING GOALS

The theater department teaches the fundamental tools of theater-making and emphasizes collaborative, exploratory work in order to give our students the ability to operate in and change the real world without hesitation and with confidence. Our goal is to graduate self-empowered, well-informed, creative storytellers engaged in their communities.

We believe that theater can be created from multiple points of entry, such as utilizing plays and text; movement and physical composition; objects and visual elements; sound and music, to name a few. Therefore, we invite and welcome all students; particularly, those with a strong passion to express themselves and to be willing to fail, fall, laugh, and grow, while changing themselves and others in the process.

The theater department faculty believes in the power of performance as a transformational discipline, as an embodied process that, through technique, methodology, study, and commitment, has a unique capability to ask hard questions about who we are as a society, and serve as a rehearsal space for alternate futures.

STUDY ABROAD

Students are encouraged to spend a semester at Wesleyan-approved programs abroad or to petition for approval of other programs in countries of their choice. For information, contact the Office of Study Abroad (<http://wesleyan.edu/studyabroad/>).

Wesleyan pre-approved programs with focus on theater:

- British American Drama Academy, London
- CIEE, Buenos Aires
- C.V. STARR, Chile
- For Wesleyan policy on the programs not on the approved list, contact the Office of Study Abroad (<http://wesleyan.edu/studyabroad/>).

PRIZES

Rachel Henderson Theater Prize: Awarded annually to the student who, in the estimation of the theater faculty, has contributed most to theater at Wesleyan over the course of their undergraduate career.

Outreach and Community Service Prize: Awarded to the senior theater major who, through their work in the Theater Department, has done a significant service in the community.

J.Peter Adler '90 Memorial Fund: Established in 1997 with gifts from family and friends in memory of J.Peter Adler '90, the J.Peter Adler Memorial Fund provides two awards per year to support a student theater production: one in the fall and one in the spring semester. An avid theater lover, J.P. participated in Second Stage while at Wesleyan as a non-theater major. He died suddenly in 1995. The Adler Fund is awarded with preference to first-time directors of non-academic theater productions and, whenever possible, to non-theater majors.

The fund may also support student theater productions associated with the Theater Department or other entities, such as senior thesis productions.

HONORS

Preliminary honors proposals are due during spring of junior year. Students can submit proposals for either critical or creative honors theses.

Preliminary proposals will be judged based on clearly expressed objectives and evidence of research and preparation. Judgments will be based equally on preliminary research, clarity of the objectives of the process, and rationale for staging a given production. Please consult Guidelines and Proposal Requirements for Senior Capstone Projects in Theater (<https://bit.ly/WesTheaterCapstoneGuidelines/>) (inclusive of honors thesis projects), as well as honors eligibility details.

The Honors Committee will award honors on the basis of the readers' evaluations. All departmental readers must recommend honors for a candidate to be successful. Students are entitled to copies of the readers' comments. The honors tutor is responsible for assigning a grade for the courses THEA409 and THEA410; this grade need not reflect the decision of the Honors Committee to award or deny departmental honors.

The Honors Committee will evaluate eligible theses according to the following criteria: consideration of the readers' evaluations, originality of research and thesis topic, the student's performance in courses as reflected in his or her transcript, compliance with the General Education Expectations, and the extent to which the student's educational experience reflects the philosophy, goals, and diversity of the department.

CAPSTONE EXPERIENCE

Theater Capstone Optional

SENIOR THESIS - two semesters

SENIOR PROJECT - one semester

WRITING PROGRAM

Wesleyan offers students a vibrant writing community and a multitude of ways to pursue their interest in writing. Writers, editors, and publishers visit campus throughout the year, and students support more than 20 magazines, journals, and literary groups. The curriculum emphasizes academic writing in many subject areas and also offers courses in fiction writing, creative nonfiction, poetry, screenwriting, playwriting, and mixed forms.

The Shapiro Center for Writing on Mount Vernon Street supports students, faculty, and staff in all their work as writers. Established in 2009 with a gift from John Shapiro '74 and Shonni Silverberg '76, the center brings together academic, creative, and public writing. The Center hosts events and visitors, runs peer-to-peer mentor and tutor programs, assists faculty with writing instruction, and collaborates with people across campus to foster a vibrant writing community.

At Wesleyan, we view writing as a powerful tool for learning, creating, and communicating, and as a cornerstone of a liberal arts education, rigorous scholarly endeavor, and a healthy civic life.

UNIVERSITY MAJOR

The University Major affords first and second-semester sophomores the opportunity to design a program that responds to their individual interests and aptitudes, that provides the excitement and the challenge of using the methodologies of two or more disciplines, and that gives sophomores the chance to work independently on an entire program, developing the necessary background and integrating the courses chosen in order to achieve the objectives that are set.

A student who wishes to arrange a University Major should discuss their intended program with members of the faculty in the student's fields of interest. The purpose of the discussions is to help the student clarify preliminary plans and select the three faculty members who will serve as sponsors.

AFRICAN AMERICAN STUDIES MINOR

MINOR DESCRIPTION

The Minor in African American Studies offers a comparative, cross-cultural approach to studying the experiences of people of African descent in the Black Atlantic world, especially in the United States and the Caribbean.

Students in the minor complete at least five courses, including Intro to Africana Studies, one course in African American History, and one course in African American Literature. Wesleyan’s Center for African American Studies provides resources that deepen classroom and campus-wide conversations about contemporary and historical matters.

Students with a minor in African American Studies develop critical thinking skills and cultural competence while gaining a competitive edge in their pursuit of advanced degrees and careers in fields such as law, medicine, literature, education, business, public policy, and the sciences.

ADMISSION TO THE MINOR

MINOR REQUIREMENTS

Students wishing to minor in African American Studies must complete a minimum of 5 semester courses, all of which are housed or cross-listed with African American Studies. (Other courses may be counted with the approval of the chair.) Of these 5 courses, at least 3 courses must be 200 level or higher. Students must take the Gateway course (AFAM101), one course in African American History, and one course in African American Literature. Generally, tutorials and student forms do not count, although the chair may count one after hearing compelling reasons from the student.

AFRICAN STUDIES MINOR

MINOR DESCRIPTION

The African Studies Minor enables students to develop a deeper understanding and engagement with Africa and its contemporary issues in addition to its great historical, cultural, political, and artistic importance to American society and the world. Students take an African History survey course plus at least four courses from across the Wesleyan curriculum: areas of study include art history, dance, economics, English, feminist gender & sexuality studies (FGSS), history, government, music, and Romance languages & literature. Students are also encouraged—but not required—to pursue the study of an African language and to study abroad in Africa.

MINOR REQUIREMENTS

The African studies minor allows students to create a coherent course of study by taking at least 5 courses that offer breadth and depth in the study of the continent. It enables them to develop an understanding of African history, contemporary issues facing the continent, and the creative and intellectual contribution of Africans. The minor consists of a minimum of 5 courses.

Although there is no overall GPA requirement to stay in the minor, a grade of B or higher is required to receive minor credit for a course.

Code	Title	Hours
At least one African History survey course:		1
HIST212	Modern Africa	
HIST217	Empires, Slavery, and Revolution: Africa to 1800	
Four additional African Studies courses from History, the Social Sciences, Humanities, or African Diaspora, with the following conditions:		4
-No more than 3 total History courses may count.		

-No more than 2 MUSC and/or DANC may count.

-No more than 1 African Diaspora class may count

-No more than 1 100-level course may count.

African History (See WesMaps for a complete list)

HIST212	Modern Africa
HIST217	Empires, Slavery, and Revolution: Africa to 1800
HIST226	Queen Mothers, Unruly Women: Histories of Gender and Sexuality in Africa
HIST267	Development in Question: Conservation in Africa
HIST302	Reproductive Politics and the Family in Africa
HIST334	Social History of Islam in Africa
HIST341	Body Histories in Africa

Social Studies (See WesMaps for a complete list)

ECON366	The Economics of Developing Countries
GOVT355	Political Theory and Transitional Justice

Humanities (See WesMaps for a complete list)

DANC260	West African Dance I (and subsequent sections of West African Dance II and III; Two dance courses must be taken to fulfill the one credit requirement)
ENGL131B	Writing About Places: Africa
ENGL221	The African Novel I: Nervous Conditions
ENGL223	The African Novel II: After Achebe
FREN281	French and Francophone Theater in Performance
FREN382	Jungle and Desert in Francophone African Literature
MUSC295	Global Hip-Hop
MUSC445	West African Music and Culture: Beginners
SPAN264	Orientalism: Spain and Africa

African Diaspora

AFAM203	African American History, 1444-1877
AFAM223	20th-Century Franco-Caribbean Literature and the Search for Identity
AFAM233	All Ah We: Contemporary Afro-Caribbean Drama & Performance
ENGL286	Literature of the Harlem Renaissance
ENGL375	Black Global Cities
FREN324	Interpreting the "New World": France and the Early Modern Americas

Students are encouraged, but not required to study Arabic, French, Portuguese, or to pursue study of an African language through the Self-Instructional Program (SILP). Students who complete 1 credit of coursework through SILP may count their language instruction as 1 credit out of the total 5 credits.

Students are encouraged to study abroad in Africa, and they may count 1 course taken abroad to fulfill one of the additional history, social sciences, or humanities course requirements. The study abroad course must focus on the study of Africa, or an African region.

ADDITIONAL INFORMATION

Students may also create their own University Major (<http://www.wesleyan.edu/studentaffairs/resources/majordeclaration/umajor.html>) centered on the study of Africa:

FURTHER RESEARCH, LANGUAGE, AND STUDY ABROAD OPPORTUNITIES RESEARCH

Besides participating in a variety of study abroad programs throughout the year, Wesleyan students often undertake their own original research in Africa as part of completing senior honors theses for their respective departments.

Theses are available here. (<http://wescholar.wesleyan.edu/etds/>)

LANGUAGE

Students who wish to study an African language are encouraged to submit a petition through the Language Resource Center and the Self-Instructional Language Program (<http://www.wesleyan.edu/lctls/silp.html>) (SILP).

STUDY ABROAD

Information on current programs may be obtained from the Office of Study Abroad (<http://www.wesleyan.edu/studyabroad/>), and should be discussed with a member of the African studies faculty cluster.

ANIMAL STUDIES MINOR

MINOR DESCRIPTION

The Animal Studies Minor engages students in multidisciplinary scholarship that provides them with an understanding of important debates and#varying disciplinary approaches in the field. Coursework from such fields as anthropology, ecology, environmental studies, ethnography, feminist studies, legal theory,#literary studies, philosophy, political theory, postcolonial studies, psychology, science studies,#and urban studies can be a part of the minor. Students must take at least 5 approved courses plus complete an internship/summer experience. This combination of scholarly and practical work prepares students for animal-related careers and post-graduate studies.

ADMISSION TO THE MINOR

Meet with coordinator of the minor.

MINOR REQUIREMENTS

Students must take a minimum of 5 credits plus complete an internship/summer experience that must be approved by the coordinator of the animal studies minor.

In order to receive a minor in animal studies, students must take:

- PHIL215 (this course is taught every year)
- 4 other approved courses from the list below, and
- Internship/summer experience

The courses may be completed in any order.

ANIMAL STUDIES COURSE LIST

Code	Title	Hours
AMST203	Biopolitics, Animality, and Posthumanism: Junior Colloquium	1
AMST248	History of African American Art	1
AMST260	Bioethics and the Animal/Human Boundary	1
COL238	Animal Theories/Human Fictions	1
COL310	More-Than-Human-Worlds: Theories and Fictions	1
ENVS225	Liminal Animals: Animals in Urban Spaces	1
ENVS279	Eating Others: Histories and Cultures of Animal Edibility	1
ENVS295	Saving Animals: The Politics of Rescue, Captivity, and Care	1
PHIL283	Animal Law and Policy	1
PHIL357	Animal Minds	1
PHIL368	The Ethics of Captivity	1
PSYC361	The Psychology of Prejudice and Discrimination	1

ADDITIONAL INFORMATION

INTERNSHIP/SUMMER EXPERIENCE

Wesleyan animal studies, with outside funding, has been able to support student summer experiences. We will continue partnering with FGSS to offer the Ecofeminist Summer Internship Experience Grant, will work with the CoE to help coordinate Summer Research Fellowships for animal studies minors. The coordinator of the minor will assist students to facilitate internships/summer experiences. While most internships will be expected to be completed over the summer, the director of the minor may approve alternative arrangements for students who may be engaged in volunteer work or other immersive experiences during the school year.

ARCHAEOLOGY MINOR

MINOR DESCRIPTION

The Minor in Archaeology trains students to analyze and reconstruct past societies and their environments through material remains. Students engage the past in ways that can address modern questions, such as what drives culture change, what creates resilient societies, the role of archaeology in construction of identity, and how we can rediscover sustainable technologies to meet climate challenges. Archaeology is fundamentally interdisciplinary and hands-on. Students apply analytical and interpretive frameworks from the humanities, sciences, and social sciences, with many courses involving lab or experimental components and the opportunity to engage directly with artifacts.

There are three tracks possible in the Minor: the Interdisciplinary Minor, with a regional focus; the Archaeological Science minor, with a focus on specific scientific methods of analysis; and the Experimental Archaeology linked minor with the College of Design and Engineering (CoDES), which focuses on reverse-engineering ancient technologies. The Interdisciplinary and Arch Sci Minors require six credits, including a gateway course, and classes in Theory, Anthropology, Classical Civilization, Art History, and Analytical Methods. The Experimental Archaeology/CoDES linked minor requires 7 credits, including the Archaeology gateway, 3 CoDES core courses for design/engineering fundamentals, and 3 experimental and project-based seminars in Archaeology.

ADMISSION TO THE MINOR

To declare the Minor, a student must achieve a grade of B or above in a designated Gateway course.

GATEWAY COURSES

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP204	Introduction to Archaeology	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP223	Survey of Roman Archaeology and Art	1
ARCP260	Art and Archaeology of Ancient India	1

MINOR REQUIREMENTS

The Minor in Archaeology requires a minimum of six credits in archaeology.

- 1 Gateway course
- 1 Elective course:
The Elective requirement can also be met with two 0.5 credits of the Thinking Through Archaeology Symposium, offered each fall semester (beginning Fall '22)
- 1 course in each of four areas (Anthropology, Classical Civilization, Art History, Methods). For a listing of the different courses in each of these categories, please see Major Requirements (p. 38).

The Minor in Archaeological Science requires a minimum of six credits in archaeology:

- 1 Gateway course
- 1 Elective course:
The Elective requirement can be met by two 0.5 credits of the Thinking Through Archaeology Symposium Course. With the approval of the Chair, students in the ArchSci Minor can also apply one extra-departmental course in the sciences to their ARCP Minor.
- 1 course in each of three areas (Anthropology, Classical Civilization, Art History)
- 1 300-level lab-based ARCP course (this meets the Method requirement)

Archaeological and Design Approaches to Ancient Objects and Ancient Technologies

The new Linked IDEAS/ARCP Minor is a project-based curricular pathway that blends training in the fundamentals of Design and Engineering with robust

study of archaeological methods and materials for the analysis of ancient artifacts and technologies. Through introductory and experimental courses, the Minor introduces students to the practices of experimental archaeology and materials analysis as methods embedded within anthropological and historical frameworks.

It requires 3 IDEAS courses and 4 ARCP courses:

- 1 Gateway: ARCP 204 Introduction to Archaeology
- 3 IDEAS Core requirements
 - IDEAS 170
 - IDEAS 180
 - IDEAS 220
- 1 ARCP course introducing experimental approaches (see list below)
- 2 ARCP project- based courses (see list below)

IDEAS CORE COURSES (ALL 3 REQUIRED)

Code	Title	Hours
IDEA170	Introduction to Mechanical Design and Engineering	1
IDEA180	Design Studies	1
ARST220	Ecological Design I: Being at Home in the World	1

Archaeology Required Course

Code	Title	Hours
ARCP204	Introduction to Archaeology	1

ARCHAEOLOGY COURSES INTRODUCING EXPERIMENTAL APPROACHES (1 REQUIRED)

Code	Title	Hours
ARCP201	Art and Archaeology of the Bronze Age Mediterranean	1
ARCP214	Survey of Greek Archaeology and Art	1
ARCP203	The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology	1
ARCP257	Environmental Archaeology	1
ARCP350	Animals in Archaeology	1

ARCHAEOLOGY PROJECT-BASED COURSES (2 REQUIRED)

Code	Title	Hours
ARCP234	Art and Society in Ancient Pompeii	1
ARCP257	Environmental Archaeology	1
ARCP285	Off with its Pedestal! The Greek Vase as Art and Artifact	1
ARCP291	East Asian Archaeology	1
ARCP293	Numismatics and the Archaeology of Money	1
ARCP352	Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean	1

To apply for the minor, please submit a declaration to add the minor through the Major/Minor/Cert Declaration application in your student portfolio. Students seeking to apply a science courses to meet their Elective requirement must explain the course they intend to apply and its application to archaeological research.

ART HISTORY MINOR

MINOR DESCRIPTION

The Art History Minor enables students to incorporate the study of artworks and architecture into their courses of study in other disciplines. The minor maintains the geographical breadth, historical depth, and academic rigor of the major but comprises fewer courses and does not require the study of a foreign language. Art history minors may not write honors theses.

ADMISSION TO THE MINOR

A prospective student must have taken a minimum of three art history courses, have a B average in Art History, and a B average overall.

To apply for the minor, students need to complete the minor declaration form found in WesPortal. Students are assigned a minor advisor and are encouraged to take part in program events.

MINOR REQUIREMENTS

To complete the Art History Minor, students take six credits, including one introductory course (100-level) and five intermediate (200-level) and advanced courses, one of which must be a seminar (300-level). The intermediate and advanced courses must encompass study in the following geographical areas and historical periods:

Geographic Areas (1 course in 3 of the 5 different geographic areas)

- The Americas
- Europe
- East Asia
- South and Southwest Asia
- Africa

Historical Periods (1 course in 2 of the 3 historical periods)

- Historical Period 1 (up to ca. 1400)
- Historical Period 2 (ca. 1400 to ca. 1800)
- Historical Period 3 (ca. 1800 to the present)

Seminar (300-level)

- Completion of a 100-level course.

- Completion of five intermediate and advanced courses (200-level or above), including one advanced seminar (numbered 300).
- These five courses must encompass study in the following geographical and historical areas:
 - The Americas, Europe, East Asia, South and Southwest Asia, and Africa.
- study in two of the following three historical periods: 1 (up to ca. 1400), 2 (ca. 1400-1800), 3 (ca. 1800 to the present) Any one course may be counted toward only one of these area or period requirements. See the list of courses organized by the categories they may fulfill.
- All courses originating in the Art History program are eligible for the minor.
- No courses numbered 401 or higher may count toward the minor.
- One course in art history taken elsewhere may count toward the minor, subject to approval of the program director. This course may count as a 200-level course. The 100- and 300-level courses must be taken in Wesleyan’s Art History program.
- All courses for the minor must be taken on a graded basis. Exceptions will be made for COL and CSS majors.

ADDITIONAL INFORMATION

For the planning purposes, students should review the following documents:

- Course projections, which estimate when specific courses will be offered during a three-year period.
- ARHA minor planning worksheets, to help students map out a course of study.

CARIBBEAN STUDIES MINOR

MINOR DESCRIPTION

The Caribbean Studies Minor engages students in the multidisciplinary study of this region at the historical center of the Americas. Peopled by indigenous, immigrant, settler, and diasporic communities, today's Caribbean has extraordinary diversity in its languages, political systems, and cultural histories —representing a microcosm of contemporary global challenges.

Coursework draws upon faculty and curricula from many programs, such as African American Studies, American Studies, Anthropology, The College of Letters, English, Latin American Studies, Religious Studies, Music, and Romance Languages (French and Spanish), among others. The minor consists of five credits: a foundational course, AMST 200 Colonialism and Its Consequences, plus four courses from other disciplines.

MINOR REQUIREMENTS

- The Caribbean Studies Minor consists of five credits.
 - AMST 200, Colonialism and Its Consequences, is required as a foundation course for the Minor.
 - The four additional courses may be drawn from courses that fall within the category of Caribbean Studies. While a specific distribution of the four electives across disciplinary and interdisciplinary fields is not required, no more than three courses in a single disciplinary field may be counted for the Minor.
 - All courses counted for the Minor should be 200-level and above.
 - While there is no general GPA requirement to declare the Minor, a grade of B or better is required for courses counted for the Minor.
 - Students who study abroad are allowed to count up to two courses for the Minor so long as the courses are focused on the Caribbean. To be counted for the Minor, study-abroad courses have to be approved in advance by the Coordinator for the Caribbean Studies Minor.

Fall 2024 Courses

Code	Title	Hours
AMST200	Colonialism and Its Consequences in the Americas	1
ENGL231	Foundations: Nation, South Asia, Diaspora	1
GOVT302	Latin American Politics	1
SPAN270	Survey of Latin American Literatures, Cultures, and Ideas	1
SPAN295	Voices, Noises, and Son: Modern Sounds in Hispanic Caribbean Cultures	1
AFAM101	Introduction to Africana Studies: Examining the Spatial Dynamics That Constitute Diasporic Life	1
AFAM141		
AFAM175		

Spring 2025 Courses

Code	Title	Hours
AMST225	Latinidad: Introduction to Latina/o Studies	1
AFAM211	Critical Philosophy of Race	1
AFAM238	Imperial Education: Colonial Template	1
AFAM268	Caribbean Geographies	1
AFAM299	Medicine and Healing in the Black Atlantic	1
AFAM303	1492: States of War	1
AFAM309	Indentured Spatialities	1

CIVIC ENGAGEMENT MINOR

MINOR DESCRIPTION

The Civic Engagement Minor (CEM) enables students to exercise their social consciousness through various formal and informal civic activities in Middletown and around the world. These activities include volunteer work, practica, and community-engaged learning. The minor requires six courses across multiple categories exploring issues related to civic engagement. Categories include: The Individual in Society; The Practice of Democracy; Ethical Reasoning; Volunteerism and Activism; Education and Public Scholarship; and Civic Engagement in a Cross-Cultural Perspective. Students also complete at least 40 hours of service work coordinated through the Office of Community Service and Volunteerism. Students apply for the minor by submitting a reflection paper explaining the place of civic engagement in the applicant's life and their plans to fulfill the CEM requirements.

ADMISSION TO THE MINOR

Students will be admitted to the CEM by self-declaration. They will be considered part of the minor after they have formally applied to participate and discussed their plans with the faculty coordinator. The application will consist, in part, of a reflection paper explaining the place of civic engagement in the applicant's own life and plans to fulfill the CEM requirements.

MINOR REQUIREMENTS

During their sophomore through senior years, Civic Engagement Minor (CEM) students will complete a series of structured academic and cocurricular activities, including courses, volunteering, practica, and opportunities for reflection that will enable them to develop a broad understanding of the varied components of civic engagement.

We can think of civic engagement as applied democratic theory. As "theory," mastery requires the development of a theoretical understanding of both the principles of democracy and the institutional and social requisites of a democratic society (see Requirements 1 and 5 below). As "applied," mastery of civic engagement requires the practical understanding of social processes that results from actual engagement in the community (Requirements 3 and 4). Thus, the minor requires students to take a set of courses to acquire an understanding of how democratic processes (including the practices and institutions of civil society) work; to acquire the firsthand experience of civic engagement and civic life by participating in approved civic activities; and, finally, through both coursework and other means, to reflect on the connections among these and to integrate them effectively (Requirements 1, 2, and 5).

- **Requirement 1:** Six courses dealing with civic engagement are required. Courses are grouped into the following categories (listed on WesMaps (<http://www.wesleyan.edu/wesmaps/>))
 - **The Individual in Society**
 - **The Practice of Democracy**
 - **Ethical Reasoning**
 - **Volunteerism and Activism**
 - **Education and Public Scholarship**

- **Civic Engagement in Cross-Cultural Perspective**
- The six courses must come from at least *three* of these categories and one must be from The Practice of Democracy category.
- **Requirement 2:** Three reflection papers are required, one per year of the minor. These papers, along with one document from each relevant course, will be archived during the process of completing the minor.
- **Requirement 3:** A minimum of 40 hours of service work coordinated through the Office of Community Service and Volunteerism (OCS)
- **Requirement 4:** A practicum
- **Requirement 5:** The senior seminar, a .25 credit capstone course (CSPL302)

Note: CEM requirements fulfilled before a student is admitted may be counted toward the minor at the discretion of the CEM Advisory Panel.

Admission. Students will be admitted to the CEM by self-declaration. They will be considered part of the minor group after they have formally applied to participate and discussed their plans with the faculty coordinator. The application will consist, in part, of a reflection paper explaining the place of civic engagement in the applicant's own life and plans to fulfill the CEM requirements.

ADDITIONAL INFORMATION

CONTACT

Contact a faculty co-coordinator, Amy Grillo at agrillo@wesleyan.edu or Barbara Juhasz at bjuhasz@wesleyan.edu.

COLLEGE OF EAST ASIAN STUDIES MINOR

MINOR DESCRIPTION

The East Asian Studies Minor (CEAS) enables students to enhance their knowledge of the history, culture, contemporary issues, and the languages of China, Japan, and Korea. Students complete any five CEAS courses, one of which may be from an approved study-abroad program. Courses may include archaeology, history, literature, culture, philosophy, religion, and political economies of the region. A key component of the CEAS Minor is the study of Chinese, Japanese, or Korean languages, in which students are expected to reach an intermediate competence level.

ADMISSION TO THE MINOR

Upon completion of any College of East Asian Studies (CEAS) course, students may apply to enter the CEAS minor. Students must fill out an online CEAS new minor student information form (<https://docs.google.com/forms/d/e/1FAIpQLScnBK33CD9ypUTFW9uBS6rOubPLy69FFpJ4yVxaExlq4Jgdg/viewform/>) and then submit a minor declaration via the Minor Declaration Tool in the electronic portfolio.

MINOR REQUIREMENTS

The minor requires completion of any five CEAS courses and intermediate-level competence completed second year in Chinese, Japanese, or Korean. Starting with the class of 2020, only courses taken for a grade (unless they are only offered CR/U, such as CLACs and some specific courses) can be counted towards the minor.

No more than two of the five courses may be language courses. No more than two of the five courses can be performance or studio art courses. No more than one of the five courses can be a study abroad course.

The rule that no more than two of the five courses can be language courses means that students beginning their Chinese, Japanese, or Korean language study at Wesleyan may have to take as many as seven courses to fulfill the minor (because four courses would be required to reach intermediate competence, but only two will count toward the minor).

Note that while the CEAS major requires that native speakers of a Chinese, Japanese, or Korean language must study a different Chinese, Japanese, or Korean language, that does not apply to the minor, so a native speaker of Korean, for example, can pass the intermediate competence standard without taking any language classes and can simply take any five CEAS classes. All students, including native speakers, must contact a language instructor and pass a placement exam in order to certify intermediate competence. Please contact the appropriate language coordinator (Chinese—Gong, Japanese—Maruta, Korean—Back) immediately, or no later than one year prior to graduation (i.e. Spring of Junior year), if you intend to exercise this option to allow for sufficient time to take additional language if necessary.

To graduate with a minor in CEAS, seniors must complete their minor certification form in their portfolio.

DATA ANALYSIS MINOR

MINOR DESCRIPTION

The Data Analysis Minor provides students with a basic introduction to data analysis, giving them the theory and practical skills needed to collect and prepare data for analysis, explore and visualize data, build models and test hypotheses, discover insights, and communicate results meaningfully. Students will strengthen their ability to apply statistical, mathematical, and programming methods to traditional areas of empirical research within their fields. To complete the minor, five course credits are required in the following areas: Basic Knowledge, Mathematical, Statistical and Computing Foundations, and selected Applied Electives.

MINOR REQUIREMENTS

Code	Title	Hours
Basic Knowledge Courses		
Select one of the following:		1
BIOL242	Quantitative Methods for the Biological and Environmental Sciences	

MATH132	Elementary Statistics	
PSYC200	Statistics: An Activity-Based Approach	
QAC201	Applied Data Analysis	
QAC201Z	Applied Data Analysis	
QAC211	Digging the Digital Era: A Data Science Primer	
QAC250	An Introduction to Data Journalism	
Mathematical, Statistical, and Computing Foundation Courses		
Select two courses from the following, each from a different group:		2
Mathematical Foundations		
MATH221	Vectors and Matrices	
MATH223	Linear Algebra	
MATH228	Discrete Mathematics	
MATH274	Graph Theory	
QAC220	Applied Vectors and Matrices	
Statistical Foundations		
ECON300	Introductory Econometrics	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
Computing Foundations		
BIOL265	Bioinformatics Programming	
COMP112	Introduction to Programming	
COMP115	How to Design Programs	
COMP211	Computer Science I	
COMP212	Computer Science II	
Applied Electives		
Select two credits from the following:		2
E&ES280	Introduction to GIS	
ECON385	Advanced Econometrics	
ECON386	Introduction to Forecasting in Economics and Finance	
GOVT366	Empirical Methods for Political Science	
GOVT378	Advanced Topics in Media Analysis	
PHYS340	Computational Physics	
QAC216	Introduction to Survey Design and Analysis	
QAC231	Introduction to (Geo)Spatial Data Analysis and Visualization	
QAC239	Proseminar: Machine Learning Methods for Audio and Video Analysis	
QAC241	Introduction to Network Analysis	
QAC251	Data Visualization: An Introduction	
QAC251Z	Data Visualization: An Introduction	1
QAC305	Exploratory Data Analysis and Pattern Discovery	
QAC307	Experimental Design and Causal Inference	
QAC311	Longitudinal Data Analysis (0.5 credit)	
QAC312	Hierarchical Linear Models (0.5 credit)	
QAC313	Latent Variable Analysis (0.5 credit)	
QAC314	Survival Analysis (0.5 credit)	
QAC320	Applied Time Series Analysis	
QAC323	Bayesian Data Analysis: A Primer (0.5 credit)	
QAC356	Advanced R: Building Open-Source Tools for Data Science	
can count QAC 380 or 381, not both		
QAC380	Introduction to Statistical Consulting	

QAC381	QAC Praxis Service Learning Lab
QAC385	Applications of Machine Learning in Data Analysis
QAC386	Quantitative Textual Analysis: Introduction to Text Mining

NOTE: at least one of the electives should be a 300 level course

ADDITIONAL INFORMATION

- There may be prerequisite courses required for some of the courses that count toward the minor, such as calculus. These prerequisites do not count toward the minor, and students attempting to complete the minor are not recused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the minor. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- Economics majors and minors cannot count ECON300 toward the minor and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course toward this minor that is also counted toward completion of any other of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the minor, subject to the QAC Advisory Committee's approval (where routine approval may be delegated to the QAC Director).
- A more advanced course can substitute for the basic knowledge course, subject to approval. Students with good quantitative skills are strongly encouraged to do this.
- Students cannot receive both the data analysis minor and the Applied Data Science Certificate (p. 217).
- Only graded courses can satisfy the requirements for the data analysis minor and the applied data science certificate. Courses completed with a CR/U grading mode will not satisfy the requirements of the two programs.

ECONOMICS MINOR

MINOR DESCRIPTION

The Minor in Economics provides students with a solid historical, theoretical, and analytical basis for understanding the ways goods and services are produced, allocated, and distributed within societal structures. Numerous fields value the skills and knowledge gained from studying economics, including research, quantitative and statistical analysis, strategic problem-solving, and understanding the dynamics of human behavior, markets, and institutions.

ADMISSION TO THE MINOR

Students intending to minor in Economics must complete Introduction to Economic Theory (ECON110). Students can be exempted from the ECON110 course requirement if they have a score of 4 or 5 on both AP Micro and AP Macro or equivalent IB scores.

To be accepted into the minor, students must also have either completed or be enrolled in Introductory Econometrics (ECON300). The pre-requisites for ECON300 are a probability and statistics course and either (i) completion of ECON110 or (ii) receiving the bypass for ECON110 and completing both a 200-level ECON elective and the math pre-requisite for ECON110. The probability and statistics prerequisite can be fulfilled by completing ECON103, MATH132, or PSYC200, or by receiving a score of 4 or higher on AP Statistics or a 5 or higher on the IB Higher Math test. A student who fails to obtain a grade of C+ or better in ECON110 may be admitted to the minor only after obtaining a grade of C+ or better in ECON300.

MINOR REQUIREMENTS

The Economics Minor curriculum consists of three types of courses: Introductory, Core, and Electives. All students minoring in economics must complete five courses (three core courses and two electives) in addition to completing or passing out of ECON110. All courses counted toward the economics minor must be taken for a letter grade. All core courses must be taken at Wesleyan.

- The three core courses are: ECON300, ECON301, and ECON302
- The elective courses are numbered 201 and higher.
- One of the two electives must be an upper-tier elective, numbered 303 to 399.
- No courses numbered 401 or higher may count toward the minor.
- No courses in other departments, including CSS, may count toward the minor.

One elective course in economics taken at another institution may count toward the minor as the lower-tier elective only, subject to the department chair's approval

EDUCATION STUDIES MINOR

MINOR DESCRIPTION

The Minor in Education Studies (EDST) helps students understand education and its relationship to society. Students will critically analyze educational institutions, practices, and theory—from early childhood through adulthood—using local, national, and global lenses. Foundational courses provide a background in the philosophy, history, and psychology of education, and further study illuminates aspects such as human development and cognition, pedagogy, curriculum

design, methodologies, and sociocultural approaches. Rounding out their academic work, students in the minor will gain direct insight through a hands-on practicum experience.

An education studies minor is excellent preparation for a future career in teaching, educational administration, educational policy, educational research and evaluation, curriculum development, child development, advocacy, educational technology, publishing, educational entrepreneurship, and many other fields spanning the public, private, and nonprofit sectors.

ADMISSION TO THE MINOR

Students intending to minor in Education Studies should submit a minor request through their WesPortal. It is best to do this as early as possible so that you can receive e-mails and updates about the minor that will help you with academic planning. Students who declare at the canonical time (spring of sophomore year) should simultaneously enroll in EDST101, the Sophomore Gateway Course, which will be taught in the second half of spring term (4th quarter) every year.

MINOR REQUIREMENTS

Students must take a minimum of 5 credits plus a practicum experience equivalent to at least .5 credit. Some courses can count toward different requirements, but students need to choose which requirement is being fulfilled by which course: an individual student cannot use the same course to fulfill multiple requirements toward the Minor.

Students can use the same course to fulfill requirements in two academic programs (for example, a cross-listed course in ITAL and EDST could count toward both the EDST Minor and the ITST Major), if that is acceptable to the other department.

These are the requirements for the Minor in Education Studies:

1. Sophomore Gateway (.5 credit)
2. Foundations of Education (1 credit)
3. Category 1: Cognition, Development, & Science of Learning (1 credit)
4. Category 2: Social and Structural Analyses of Education (1 credit)
5. Category 3: Research Methods & Data Analysis (1 credit)
6. Practicum (.5 credit or equivalent)
7. Pedagogy (.5 credit)

The courses may be completed in any order consistent with their prerequisites.

COURSE PETITIONS

Students can always petition to substitute a different course to meet any Education Studies requirement by completing this petition form (<https://forms.office.com/Pages/ResponsePage.aspx?id=eWz9qXFt80mREQyOWR3D0ZrbqMi0a91AqeglpGtX3ytUNDVQQ0FUU0NNWEEExRvPC1kzYVMAQAA&Mq=1>). The petition form asks students to justify the substitution and, for non-Wesleyan courses, to upload a syllabus or other supporting information. Students will be notified if their petition requests are approved. Once approved, they can request the override in their Minor or Major Certification page in WesPortal.

COURSE LISTS AND ARCHIVE

Click [here](https://docs.google.com/document/d/1gtZCuuzvRH8epYls8AF5EhE_RVAuvGu6A-gONyk-D_k/edit/?usp=sharing) to view all courses for the current year, as well as the course archive of all approved courses that fulfill requirements for the Education Studies Minor. (https://docs.google.com/document/d/1gtZCuuzvRH8epYls8AF5EhE_RVAuvGu6A-gONyk-D_k/edit/?usp=sharing)

The following course list is a **representative, but not comprehensive**, list of courses that may count towards the Education Studies Major. This list is intended to provide an example of the types of courses that fall into each category. For all current Education Studies courses and a comprehensive archive of all courses ever offered by the College, click the link above.

Courses that have specific prerequisites that must first be completed are indicated with an asterisk.

COHORT COURSE

Students must take the Gateway course after declaring the Minor, which will (1) function to build a cohort in the College of Education Studies, (2) help students make sense of the interdisciplinary contributions to Education Studies, and (3) help students understand the faculty, research, and resources in Education Studies at Wesleyan.

Code	Title	Hours

- Students must take a minimum .5 credit course focused on pedagogy; there are several .5 and 1 credit courses with this focus offered at Wesleyan. Pedagogy courses are listed below.
- Students must also complete a teaching practicum/in-school experience with a minimum of 20 hours of student contact. The practicum experience does not need to be credit-bearing, as long as the 20 hour requirement is met.
- Students can meet both the pedagogy and practicum portions of the requirement separately, or they can meet them with a single 1-credit course (i.e., a service learning course that provides 20 hours of student contact *and* covers elements of pedagogy). Apart from service-learning courses, many options exist to fulfill the practicum requirement through JCCP programs, summer programs, teaching apprenticeships, and internships while studying abroad. Some ideas are listed below.
- If the practicum experience is something other than one of the approved ~~listed~~ courses listed below, students ~~the~~ experience must submit a petition to get the experience approved in advance. ~~be fully documented with 20 hours of student contact.~~ Keep in mind that the experience must be fully documented with at least 20 hours of student contact.

WRCT/EDST202	Pedagogy for Teaching English to Speakers of Other Languages Tutors	.5
WRCT/EDST400	Ford Seminar	.5

Examples of a practicum experience include:

Tutoring in a school setting for 10h per week for a semester or 5h per week for two semesters, designing a tutorial on education with a service-learning component in a school, or developing an internship in a school.

Serving as a Teaching Apprentice for an introductory course (e.g., first year foreign language or gateway science or social science course).

Student teaching at the Bank Street School of Education (Urban Education Semester).

Teaching in an intensive summer program (Breakthrough, Summerbridge, CTY) and providing a letter confirming completion from the program.

will not count) and achieve a B average. Internships and student forums do not count toward the minor.

Before becoming eligible for the minor, you must complete FILM307 as a prerequisite with a grade of B or better. You must also activate a minor course registration chart with the department (see the minor administrator). Transfer courses cannot be used for the prerequisite. After acceptance into the minor, you may submit courses taken overseas or at other universities to be considered on a case-by-case basis for credit.

MINOR REQUIREMENTS

FILM307 should be taken during the first or sophomore year. Students must meet with the minor administrator, Lisa Mingione at lmingione@wesleyan.edu to declare the minor. After that, they must complete five additional courses before graduation. Some course selections are subject to prerequisites from other departments.

Courses

The list of courses currently recognized as part of the film studies minor includes. (Please note that not all courses will be available every semester.)

Code	Title	Hours

FILM372	Hong Kong Cinema	1

FILM STUDIES MINOR

MINOR DESCRIPTION

The Minor in Film Studies enables students to explore the history and craft of filmmaking. Students begin with an introductory course in the language of cinematic storytelling, exploring how advances in technology bring new challenges and opportunities, surveying major directors and genres, and demonstrating how film exists at the intersection of business, technology, and art. Additionally, students choose five additional courses in film history, visual storytelling, criticism, or production. The Minor provides a flexible format that complements a major course of study in a different department at Wesleyan.

Students in the Film Studies minor develop a critical and creative approach to the medium based on a strong visual vocabulary, extensive viewing, and a grasp of film production.

ADMISSION TO THE MINOR

In accordance with the University guidelines, students minoring in film studies must complete six courses for a grade (courses taken as Credit/Unsatisfactory

FILM390	History of Film Sound	1	CJST248	Designing Reality in Israeli Documentary Film	1
FILM395	Autobiographical Storytelling	1	COL249	Thinking By Analogy: The Philosophical Use of a Literary Form	1

FRENCH STUDIES MINOR

MINOR DESCRIPTION

The Minor in French Studies provides students with a command of the French language sufficient to live and work successfully in a French-speaking environment. Students gain a fundamental background in French-language literature and Francophone modes of thought, expression, cultures, history, and society.

In addition to gaining a solid grounding in language classes taught on campus in French, this flexible, interdisciplinary program gives students the opportunity to take classes offered by other departments that include the study of French culture, history, and politics. These courses may be taken in French or English and may be offered on-campus or abroad.

Students who minor in French develop transferrable language skills that enhance their career opportunities in the global job market.

ADMISSION TO THE MINOR

Students must have completed FREN215 or a higher level course with a grade of at least a B to be admitted to the minor.

MINOR REQUIREMENTS

The minor consists of a minimum of five courses beyond FREN215:

- **Four FREN courses numbered 220-399.**
 - These courses must be taken on campus in French.
- Courses numbered **220-299** are introductory courses intended for students who have completed FREN215, who have taken an equivalent course elsewhere, or who have placed out of FREN215 through the placement test. In general, these courses are designed for students who have not yet studied abroad in a French-speaking country.

- **300-level courses** are upper-level courses intended for students who have already completed two courses in French beyond FREN215 or who have studied abroad in a French-speaking country for at least a semester.
- **One other course** whose content is devoted substantially to the study of French or Francophone literature, history, culture, or society. This course may be taken on campus or abroad, may be in French or English, and may be chosen from among the following courses:
 - Courses from the French section's normal offering of FREN courses numbered 220-399.
 - Courses listed Romance Lang & Lit In Eng (RL&L).
 - Courses taken through approved study abroad programs.
 - Courses offered by other departments and programs on campus that include a study of French or Francophone culture, politics, or history. These courses must be approved by the student's major advisor.

A minimum grade of B is required for courses taken on campus to count toward the FRST minor.

Students minoring in FRST who receive two grades of B- or lower in FREN courses will be dropped from the minor.

ADDITIONAL INFORMATION

Students who receive a C- or lower in FREN course may repeat the course once.

Students who receive less than a B in FREN102, FREN112, or FREN215 will not normally be permitted to enroll in another FREN course or, in the case of students who receive less than a B in FREN215, to study abroad on the Vassar-Wesleyan Program in Paris.

Students who receive a B-, C+, or C in FREN102, FREN112, or FREN215 may petition the head of the French Section to be permitted to take the following course in the French sequence or study abroad on the Vassar-Wesleyan Program in Paris. In their petition, they must explain in detail what supplemental work they will undertake in order to prepare themselves for the following course in the sequence or for study abroad on the Paris program (for example: they will take a summer course). If their petition is approved, they must complete the proposed supplemental work, take the placement exam at the Fries Center for Global Studies, and place into the course they wish to take (or above FREN215 if they wish to study abroad on the Paris program) before they will be admitted to it.

Students interested in enrolling in French, Italian, or Spanish at the elementary or intermediate levels are urged to do so during their first-year and sophomore years. Department policy gives priority to first-year and sophomore students in our language classes (numbered 101–112) to allow students to study abroad and to meet the requirements of those programs requiring language study. Juniors and seniors who wish to take elementary and intermediate language courses should submit an online enrollment request and attend the first class. They may be accepted during the drop/add period if seats become available. Should a junior or senior enroll in the first course of an ampersand sequence (such as 101–102), he or she will have priority for the second course, just like first-year and sophomore students.

GERMAN STUDIES MINOR

MINOR DESCRIPTION

The Minor in German Studies is interdisciplinary in nature. It combines the close study of German language, literature, history, and culture with broad humanistic inquiry into trends and structures of German-speaking societies. Four of the six required courses are taught in German on the Wesleyan campus, with other electives available as local classes or study-abroad coursework.

Students who minor in German Studies develop transferrable language skills along with cultural knowledge and understanding that will enhance their career opportunities in the global job market.

ADMISSION TO THE MINOR

Any student who intends to earn the minor in German studies should speak with a faculty member of the department by the end of the sophomore year. Satisfactory completion of the minor will be certified by the department.

MINOR REQUIREMENTS

The minor requires six course credits with a minimum GPA of B. Four of the courses must be taught entirely in German and must be above the GRST102 level and; at least three of these must be taken at Wesleyan. The other two courses may be in either English or German. All German language courses below the 300-level counted toward the minor must be taken for a letter grade. Please note GRST101 and GRST102 do not count towards the German Studies minor.

GLOBAL ENGAGEMENT MINOR

MINOR DESCRIPTION

The Minor in Global Engagement (GEM) provides students with an opportunity to integrate their academic studies, co-curricular activities, and experiential learning through a lens of “intercultural competence.” Students acquire theoretical knowledge while applying it to their own existing and emerging global interests. They will hone the skills and attitudes needed to interact effectively and appropriately with others based on informed, mutual respect and an awareness of how positions of power and privilege intersect with aspects of our identities. By cultivating attitudes of reflection, curiosity, and openness, GEM students gain a complex understanding of global problems and learn to work toward positive solutions across difference. The program requirements include the introductory seminar, four courses dealing with at least three world regions, intermediate language proficiency in two or more languages, an off-campus cultural immersion experience, a senior capstone seminar, and a cumulative e-portfolio.

ADMISSION TO THE MINOR

Students may apply to the GEM during spring of their first year. The application consists of a short statement of interest describing how and why the Global Engagement Minor fits into the student's academic plans, a breakdown of the students' academic history, and a brief recommendation from a professor at Wesleyan.

Interested students can find the application form and the faculty recommendation form on the Global Engagement Minor page (<https://www.wesleyan.edu/cgs/GEM/>).

Students will be considered part of the GEM group after they have been admitted, have accepted to participate, and have enrolled in the GEM Introductory Seminar offered in the Fall of their sophomore year. Admission of students to the program in the Fall of their sophomore year or later may be possible via petition.

MINOR REQUIREMENTS

During their sophomore through senior years, GEM students will complete a series of structured academic and co-curricular activities including an introductory seminar, global perspective coursework, language studies, off-campus cultural immersion, and a capstone seminar that will enable them to synthesize and reflect on the varied components of intercultural competence.

A key feature of GEM is that all these activities are interrelated, building on one another to support GEM students' reflecting on and cultivating intercultural competence. The global perspective coursework, language proficiency, and cultural immersion off campus are all subject to reflection and discussion in the two dedicated seminars and via the students' individual e-portfolios. In addition, we will encourage students to engage in suitable on-campus activities that would enable them to deepen their intercultural learning and global engagement.

REQUIREMENT 1: INTRODUCTORY SEMINAR

Complete the "Introduction to Global Engagement" seminar (CGST205).

This introductory GEM seminar provides a set of frameworks and activities to help students process their intercultural experiences, and an initial opportunity to collectively reflect on, critically analyze, and brainstorm about how to act on what they have learned. In particular, Introduction to Global Engagement will provide students with the tools to gain insight into their own cultural rules and biases; analyze how their own experiences have shaped these rules, and learn how to recognize and respond to cultural biases. It will also provide students with a framework to articulate a complex understanding of cultural differences and how they are inflected through power, privilege, and oppression. Students will set up and learn to use the e-portfolio software in the introductory seminar and will be able to add to it over their three years in the GEM.

REQUIREMENT 2: GLOBAL PERSPECTIVE COURSEWORK

Complete 4 full-credit courses dealing with at least 3 world regions, defined as:

- Global
- East Asia / Pacific
- Europe and Eurasia
- Latin America

- Middle East and North Africa
- South and Central Asia
- Sub-Saharan Africa
- United States and Canada

A wide range of courses from across the curriculum can satisfy the GEM Global Perspective Coursework requirement. One's "home" region(s) can count; a single region can count for two of the three regions if two courses engage with significantly different aspects of the region (e.g., the experiences of Indigenous peoples and of colonizers); and pan-global courses can also count toward one of the three regions.

Coursework will be tracked within each student's GEM Certification Form; students will consult with their GEM advisor to ensure that a course will count, which will be tracked by selecting the course through the form's "override" function.

REQUIREMENT 3: CAPSTONE SEMINAR

Complete the 0.5-credit GEM Capstone Seminar hosted by the Fries Center for Global Studies.

As part of this seminar, GEM students are expected to complete an e-portfolio that will synthesize their experiences from all requirements. The e-portfolio requires students to reflect on their intercultural development, knowledge, and skills gained throughout the GEM program and to interpret intercultural experience from the perspectives of their own and others' worldviews. GEM seniors will present their e-portfolio to other participants and to the advisors of the program.

REQUIREMENT 4: LANGUAGE PROFICIENCY

Intermediate proficiency in two or more languages, including one's native language(s). This requirement can be met in several ways:

- Taking language courses through the intermediate level (as defined by the relevant department; often four semesters of college-level coursework)
- Demonstrating intermediate (or greater) proficiency gained outside of Wesleyan; native speakers of languages other than English can simply inform their GEM adviser of their proficiency.
- For multilingual students, taking any subject course taught in English shows sufficient proficiency in English.

REQUIREMENT 5: CULTURAL IMMERSION OFF-CAMPUS

GEM students need to choose an off-campus experience as a focus for reflection with their cohort members and via their e-portfolio. Options for satisfying this requirement include:

- Study abroad for at least one semester
- Internationally focused internship or fellowship abroad or in the U.S.
- Internationally focused service-learning abroad or in the U.S.
- Internationally located research experience

ADDITIONAL INFORMATION

Routine administration of the GEM will be handled by staff from the FCGS and overseen by the GEM Advisory Committee, composed of interested faculty and staff. This advisory committee will meet once per semester to review the status

of the program. The core of the initial committee will be the members of the current taskforce.

Each year, faculty or staff of the GEM Advisory Committee will serve as advisors for each entering cohort, and will remain as these students’ advisors throughout their three years in the program. The Associate Director of Intercultural Learning will also provide advising support for all GEM students, as well as take primary responsibility for organizing the Introductory and Capstone Seminars, although these courses will be team-taught with support from both faculty and staff. Please contact fcgs@wesleyan.edu for any questions, comments, or concerns.

HISTORY MINOR

MINOR DESCRIPTION

History is one of Wesleyan University’s most intellectually diverse departments of study, offering the possibility to investigate nearly every region and time period of the global past. The study of history is excellent preparation for careers in many fields, including law, journalism, the entertainment industry, business and finance, education, politics and public policy, social activism, and the arts.

The minor in history offers students interested in history an avenue to gain coherent expertise in the field without committing to the nine-credit coursework and research required for the major.

ADMISSION TO THE MINOR

Students can declare the minor through the Minor Declaration tool in WesPortal.

MINOR REQUIREMENTS

(Approved by History Department on 2 February 2023) ~~7-April-2021~~)

Six History Courses Total

- N.B. ~~-Higher~~ **higher** level History courses may be substituted for **lower** level ~~ones.~~ **ones**
- Courses must be taken at Wesleyan; however, up to three courses taken by transfer students at their previous institution may count towards the minor. Wesleyan.
 - Courses taught on campus by History Department faculty but not cross-listed as HIST courses can count towards the minor.

Courses to Satisfy the History Minor

- **Three History courses 150 or higher**
- **Two History courses 300 level or higher**
 - One History course must devote at least 50% of its attention and content to the period before 1800.
 - Only courses taught by faculty appointed in or affiliated with the History Department may count toward the minor.

- Tutorials, education in the field, and student forums cannot be counted toward the minor.
- AP or IB credit cannot count toward the minor.

HUMAN RIGHTS ADVOCACY MINOR

MINOR DESCRIPTION

The Minor in Human Rights Advocacy engages students in supervised human rights fact-finding, documentation, and advocacy. Students gain a multidisciplinary understanding of human rights norms; social conflict; and abusive conduct by state, corporate, and private actors. Students train in human rights practice under the supervision of experienced, reflective advocates while taking related coursework in the humanities, social sciences, and other fields. A unique partnership with the University Network for Human Rights (UNHR) provides students with an immersive experience that, until now, has been available only in law school human rights clinics. Completion of the minor requires one pre-requisite course introducing human rights standards (CSPL 128), two core courses in advocacy (CSPL 316 and 328), one course in writing for advocacy (CSPL 338), and three additional approved classes relating to human rights.

ADMISSION TO THE MINOR

Admission to the program/minor will be by application to ensure that participating students are committed to its rigorous demands. Wesleyan students may apply to the minor once they have taken, or while they are taking CSPL128: Introduction to Human Rights Standards. The Steering Committee will select students for admission to the Minor. The gateway course for the minor is CSPL316: Human Rights Advocacy.

MINOR REQUIREMENTS

Minor in Human Rights Advocacy requires 7 courses. One course should be taken in either the first or sophomore year. Six of the seven courses are ones that students may take in their sophomore, junior or senior years. Three additional courses related to human rights. Approval from advisor or minor coordinator will be required to ensure that the course choices cohere sufficiently.

Required courses:

Code	Title	Hours
One Pre-Requisite Course		
CSPL128	Introduction to Human Rights Standards	1
Two Core Courses		
CSPL316	Human Rights Advocacy: Critical Assessment and Practical Engagement in Global Social Justice *	1
CSPL328	Advanced Human Rights Advocacy	1
One Course in Writing for Advocacy		

CSPL338 Writing for Advocacy * 1

Three Additional Courses Related to Human Rights

Approval from advisor or minor coordinator will be required to ensure that the course choices cohere sufficiently.

*Course offered once per year

ADDITIONAL INFORMATION

For more information, please contact Professor Jim Cavallaro at jcavallaro@wesleyan.edu.

INFORMATICS AND MODELING MINOR

MINOR DESCRIPTION

The Minor in Informatics and Modeling offers students two distinct pathways to develop computational, analytical, and quantitative reasoning skills that are becoming increasingly important in many fields of study: Computational Science and Quantitative World Modeling (CSM), and Integrative Genomic Sciences (IGS).

The CSM pathway introduces students to modeling techniques, providing them with a solid foundation in the quantitative simulation, evaluation, and prediction of natural and social phenomena such as the collision of galaxies, protein folding, and the behavior of markets.

The IGS pathway introduces students to the emerging interdisciplinary field of bioinformatics and its relationships to molecular genomics, evolution, structural biology, and bioethics.

Each pathway requires five or six courses including courses that introduce computational thinking and modeling applied in several disciplines.

ADMISSION TO THE MINOR

There are no admission requirements for this program.

MINOR REQUIREMENTS

The CSM pathway requires the following:

Code	Title	Hours
PHYS113	General Physics I	1
or PHYS116	General Physics II	
COMP112	Introduction to Programming	1
or COMP211	Computer Science I	
Select one of the following advanced computer science courses:		1
COMP212	Computer Science II	
COMP331	Computer Structure and Organization	
COMP312	Algorithms and Complexity	

PHYS221 1

or PHYS340 Computational Physics

Select one course from the list of applied modeling courses in chemistry, computer science, economics, or science. 1

The IGS pathway requires the following:

Code	Title	Hours
BIOL/MB&B181	Principles of Biology I: Cell Biology and Molecular Basis of Heredity	1
Select one of the following introductory computer science courses		1
COMP112	Introduction to Programming	
COMP211	Computer Science I	
COMP113	Bioinformatics Programming	
an approved alternative		
Select one of the following advanced computer science courses or three 0.5 credit QAC courses:		1 or 1.5
COMP212	Computer Science II	
COMP331	Computer Structure and Organization	
COMP312	Algorithms and Complexity	
QAC150	Working with SQL and Databases	
QAC151	Working with Excel and VBA	
QAC154	Working with MATLAB	
QAC156	Working with R	
QAC157	Working with SAS	
QAC158	Working with Stata	
an approved alternative		
Select one upper-level bioinformatics course (from a list of approved courses)		1
Select one course in each of two of the following categories (from a list of approved courses):		2
Molecular Genetics and Cell Biology		
Evolutionary Biology		
Structural Biology		
Bioethics and Philosophy of Biology		
Applied Quantitative Reasoning		

ADDITIONAL INFORMATION

CONTACT

- Students interested in the CSM pathway should contact Reinhold Blumel (rblumel@wesleyan.edu).
- Students interested in the IGS pathway should contact Michael Weir (mweir@wesleyan.edu) or Danny Krizanc (dkrizanc@wesleyan.edu).

INTEGRATED DESIGN, ENGINEERING, ARTS & SOCIETY MINOR

MINOR DESCRIPTION

The Minor in Integrated Design, Engineering, Arts & Society (IDEAS) prepares students to succeed at the intersection of design, the arts, and engineering in a liberal arts context. Students develop foundational knowledge in these areas by working in collaborative groups and individually on project-based assignments that emphasize making and doing as critical forms of knowledge. A minor in IDEAS requires seven credits and assembly of a portfolio encompassing work developed within IDEAS courses. Three core courses provide a foundation in the technical, aesthetic, and human dimensions of design and engineering. These courses are followed by a focus in one of many concentrations that span design and engineering disciplines.

ADMISSION TO THE MINOR

Students should complete at least one course from the required core courses to be admitted to the IDEAS minor. Declare the IDEAS minor through your WesPortal.

MINOR REQUIREMENTS

A minor in IDEAS requires seven credits. Comprising three courses, the IDEAS minor core is designed to introduce students to hands-on project-based studio, laboratory, and critical coursework in design and engineering. The remaining four elective courses come from course concentrations. Some courses offered on an irregular basis are not listed in concentrations, but may be used for electives subject to approval from the minor advisor.

STUDENT PORTFOLIO

All IDEAS minors will assemble a portfolio encompassing work developed within IDEAS courses. Students participating in the minor will begin the development of a digital and/or physical portfolio in the required project-based minor courses. In consultation with an advisor, projects will be added to this portfolio and reviewed before completion of the minor.

REQUIRED CORE COURSES

Students must complete one course from each group below.

Code	Title	Hours
One Engineering Foundations Lab		1
IDEA170	Introduction to Mechanical Design and Engineering	
IDEA175	Introduction to Electrical Design & Engineering	
One Introductory Design Studio		1
ARST235	Architecture I	
ARST220	Ecological Design I: Being at Home in the World	

ARST221	A Thousand Years of Iteration: Design for an Uncertain Future	
ARST271	Biodegradable Design: Soft and Hairy	
IDEA160	Product Design I	
IDEA185	Form and Code	
IDEA190	Digital Foundations	
IDEA236	Fast & Furious	
IDEA243	Introduction to Graphic Design	
IDEA285	Digital Projects Lab	
One Design & Technology Seminar		1
IDEA180	Design Studies	

Or another approved social science course

ELECTIVE COURSES FROM CONCENTRATIONS:

The concentrations provide topical focus in the wide array of areas in Design, Engineering, Arts & Society. The IDEAS concentrations consist of four courses above the three required courses, to make the total of seven courses in the minor.

Some of the proposed concentrations include courses listed among those that will satisfy the gateway course distribution requirement listed above. Students will work with an advisor to help them achieve the appropriate depth of study in the concentration. Related courses that are not offered on a regular basis or course substitutions may be considered for minor credit, subject to review by the minor advisor. Typically, introductory (100-level) courses may not be counted toward the elective requirement.

The IDEAS Minor Concentrations and requirements are available on the CoDES website (<https://www.wesleyan.edu/codes/program/minor-concentrations.html>).

Additional Minor Information

- There may be prerequisite courses required for some of the courses listed above. These prerequisites do not count towards the minor.
- Some of the courses may be cross-listed with other departments; students can enroll in any listing for the specified course.
- Students may propose a different combination of elective courses in consultation with the IDEAS advisor.
- Some courses may overlap with existing major requirements. A student may only count three course credits toward the IDEAS minor that are also counted towards a major, linked major, certificate, or other minor, unless receiving explicit approval from the IDEAS minor administrator to waive this requirement.

JEWISH AND ISRAEL STUDIES MINOR

MINOR DESCRIPTION

The Minor in Jewish and Israel Studies enables students to explore academic areas such as Jewish religion, Jewish culture, Jewish letters, and Israel Studies. Completion of the minor requires five courses: one in the Hebrew language; three courses in Jewish and Israel studies; and one elective course of

the student's choice, such as a Cultures and Languages Across the Curriculum (CLAC) course, an advanced tutorial course, an Israeli film course, a study abroad course, or a thesis or essay in Jewish Studies from across the curriculum.

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio and e-mail the director, Dalit Katz at dkatz01@wesleyan.edu of their interest.

MINOR REQUIREMENTS

One course as a language requirement (HEBR102 and up). The completion of the language requirement in the case of students with pre-existing knowledge of Hebrew will be determined through consultation with the Hebrew professor.

Three courses in Jewish and Israel Studies offered by current faculty in Jewish Studies and/or other Wesleyan faculty and visitors who teach courses with Jewish Studies and Israel content.

One additional elective course of the student's choice offered by visiting faculty, a CLAC course, an advanced tutorial course (CJST402, CJST412, CJST413), an Israeli film course, a study abroad course, thesis and/or an essay in Jewish Studies from across the curriculum.

MEDIEVAL STUDIES MINOR

MINOR DESCRIPTION

The Minor in Medieval Studies (MDST) provides students with a basic knowledge of the history and culture of the European Middle Ages in an interdisciplinary context. Students complete six courses cross-listed with MDST, with at least two in the arts and humanities and two in the social sciences. Minors are strongly encouraged to take at least two years of a modern foreign language. Minors who anticipate going on to graduate work in the medieval or early modern period are strongly encouraged to take at least two years of Latin as well.

ADMISSION TO THE MINOR

No specific courses are required for admission to the Medieval Studies minor.

MINOR REQUIREMENTS

Students minoring in Medieval Studies complete 6 courses within MDST or approved by the chair of the Medieval Studies program. At least 2 must be taken in arts and humanities and 2 in social sciences.

Minors are expected to be proficient in a modern foreign language and encouraged to gain some knowledge of Latin, Greek, or Arabic.

MIDDLE EASTERN STUDIES MINOR

MINOR DESCRIPTION

The Minor in Middle Eastern Studies allows students to explore and better understand the complex dynamics of the greater Middle East region from Morocco to Bahrain and beyond, and to acquire a deep insight into the global issues related to it. This knowledge covers the economies, governments, religions, histories, artistic culture, and languages of the region. The minor's interdisciplinary curriculum expands and builds upon Wesleyan's course offerings in Middle Eastern studies. Currently, there is a minimum of five (5) courses to fulfill the requirements: one from the courses listed under the Jewish and Israel Studies minor; one on the Muslim Middle East (including the Greater North Africa); two language courses in either Hebrew, Modern Standard Arabic, or any relevant language from the region; and one elective from a different discipline.

ADMISSION TO THE MINOR

Students may declare the minor at any point in their undergraduate career at Wesleyan by submitting the minor declaration form in Wesportal. For tracking, advising, and co-curricular purposes, they are encouraged to sign on early.

MINOR REQUIREMENTS

The Middle Eastern Studies Minor requires five courses, of which at least one course must be from the courses listed under the Jewish and Israel Studies minor and one must be on the Muslim Middle East. Additionally, the five required courses include

- Two language courses in Hebrew, Modern Standard Arabic or any other relevant languages from the region.
- Three electives from at least two different disciplines.

With the approval of the director of the minor, one relevant tutorial and two relevant study-abroad courses may count toward the minor. Normally, no more than one elective may count towards another minor (this does not apply to language courses). Students who are already fluent in one of the languages are encouraged to take either advanced language courses, or to study another language from the region.

MOLECULAR BIOPHYSICS MINOR

MINOR DESCRIPTION

The Minor in Molecular Biophysics provides students with interdisciplinary training at the intersection of molecular biology, chemistry, chemical biology,

physical chemistry, and molecular physics. Students are strongly encouraged to gain foundational knowledge for the minor by pursuing a major in MB&B, Chemistry or Physics. Molecular biophysics is distinguished by an emphasis on analytical, structural and quantitative research investigations of biomolecular and macromolecular systems. The Molecular Biophysics Minor requires seven credits, including an introductory course, advanced laboratory course, journal club, independent research, physical chemistry, and advanced electives. Students can choose from a selection of courses each semester to satisfy requirements. Topics of active research include protein design, structure and folding, molecular models of enzyme mechanisms, protein-DNA interactions, biofilm formation, molecular pores, and other membrane proteins.

ADMISSION TO THE MINOR

As Molecular Biophysics is an interdisciplinary minor, it is strongly recommended that undergraduate students gain foundational knowledge by majoring in one of these three areas: Molecular Biology and Biochemistry, Chemistry, or Physics.

MINOR REQUIREMENTS

The Molecular Biophysics Minor requires a total of seven credits:

Code	Title	Hours
Introductory Course		
PHYS207	Introduction to Biophysics (Introductory Course)	1
or CHEM309	Molecular and Cellular Biophysics	
or CHEM325	Introduction to Biomolecular Structure	
Advanced Laboratory Course		
MB&B/CHEM395	Structural Biology Laboratory	1
Journal Club		
MB&B307 & MB&B308	Molecular Biophysics Journal Club I and Molecular Biophysics Journal Club II	1
Independent Research		
CHEM423 & CHEM424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	1
or MB&B423 & MB&B424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	
or PHYS423 & PHYS424	Advanced Research Seminar, Undergraduate and Advanced Research Seminar, Undergraduate	
Physical Chemistry Course(s)		
MB&B381	Physical Chemistry for the Life Sciences	1,2
or CHEM337 & CHEM338	Physical Chemistry I and Physical Chemistry II	
or PHYS316 & PHYS213	Thermal and Statistical Physics and Waves and Oscillations	
Advanced Elective Course(s)		
Select one or two elective courses from the list below.		1,2

Advanced Elective courses can be chosen from: BIOL265, BIOL266, BIOL310, BIOL322, CHEM321, CHEM342, CHEM382, CHEM383, CHEM386, CHEM387, CHEM396, MB&B237, MB&B340, MB&B516, MB&B520, MB&B523, MB&B535, PHYS214, and PHYS524.

Independent research must be conducted with or in collaboration with a Molecular Biophysics faculty member (<https://www.wesleyan.edu/molbiophys/people/>). Senior thesis research may be used to complete this requirement.

ADDITIONAL INFORMATION

At Wesleyan, students participating in the molecular biophysics program have the opportunity to select research projects with varying degrees of emphasis on biophysics, biochemistry, biological chemistry, bioinformatics, and/or molecular biology. The common element among participants is an emphasis on a quantitative, molecular-based mode of inquiry in research.

All Molecular Biophysics minors complete independent research projects with affiliated faculty and participate regularly in weekly meetings of the Molecular Biophysics Journal Club (MB&B507 and MB&B508), in which research papers from the current literature are presented and discussed. Journal club students also meet regularly with seminar visitors in the area of molecular biophysics. The program hosts an annual retreat where undergraduate and graduate students are expected to present their research either orally or in poster format. (<https://www.wesleyan.edu/molbiophys/activities/retreat.html>) Students are also encouraged to present their work at an international scientific meeting, and the program typically provides some financial support for their expenses.

MUSLIM STUDIES MINOR

MINOR DESCRIPTION

The Minor in Muslim Studies engages students in a multidisciplinary study of the set of communities represented by the term “Muslim.” More than a marker of religion, this term may refer to ethnicities, histories, regions and neighborhoods, politics, and artistic, literary, and musical traditions that may or may not have a recognizable connection to Islam. Students will complete six courses that explore diverse topics, including Contemporary society and practice, literary, artistic, and musical studies, and historical inquiry. Courses will survey Muslim life and culture in the regions of the Middle East and North Africa, South, East, and Southeast Asia, Sub-Saharan Africa, and North America and Europe.

ADMISSION TO THE MINOR

There are no admission requirements for the minor.

MINOR REQUIREMENTS

Students must complete six appropriately designated courses. Each course offered will carry two designations—topic and region—in order to ensure that students engage an appropriately diverse distribution of courses.

All courses will be listed according to one (or more) of the following topical categories:

- Contemporary society and practice: Courses primarily concerned with the study of contemporary Muslim communities (cont)

- Literary, artistic, and musical studies (la&m)
- Historical inquiry (hist)

All courses will be listed according to one (or more) of the following regional categories:

- Middle East and North Africa (MENA)
- South, East, and Southeast Asia (SESA)
- Sub-Saharan Africa (SSA)
- North America and Europe (NAE)

The six courses designated as appropriate for the minor must include:

- One gateway course (i.e., a course entirely about Muslims that serves as a way to offer an introduction to Muslim studies).
- At least one course in each of the topical categories.
- At least one course in three of the regional categories.
- No more than three courses can come from one of the above categories.

These requirements endeavor to diversify the student's exposure to disciplinary and divisional offerings in Muslim studies while allowing him to focus on specific topics of particular interest.

Courses are considered appropriate for the minor if they include at least 25% material on Muslims. Internships in appropriate organizations will be considered for credit so long as they are accompanied by a 10-page assessment of learning outcomes to be assessed by the director.

ADDITIONAL INFORMATION

CONTACT

Interested students should contact Emy Matesan at imatesan@wesleyan.edu.

PLANETARY SCIENCE MINOR

MINOR DESCRIPTION

The Minor in Planetary Science exposes students to an emerging interdisciplinary field that seeks to understand the origin and evolution of the solar system in which we live and the other solar systems that we have identified in our galaxy. Science questions include: How do planets form? How common are they in the universe? How do they evolve? Is there or was there ever life on other planets? This field has grown significantly over the last decade with major advances in our understanding of Mars, asteroids and the outer solar system and the discovery of hundreds of exoplanetary systems. Planetary research is a primary focus of NASA's current and future missions. The minor comprises five graded courses plus at least three offerings of the 0.25 credit Planetary Science Seminar.

MINOR REQUIREMENTS

The planetary science minor consists of 5 graded courses plus at least 3 offerings of the 0.25 credit Planetary Science Seminar.

Code	Title	Hours
Introductory Courses		2
Students are expected to take Introductory Courses to both of the major areas important to our field, Astronomy and E&ES:		
ASTR155	Introduction to Astrophysics	
E&ES101	Dynamic Earth (or an upper level (200+) E&ES course)	
or E&ES115	Introduction to Planetary Geology	
E&ES155	Earth System Science	1.25
Intermediate Courses		3
The minor requires three upper-level courses chosen from a list of relevant offerings in Astronomy and E&ES. At least one of the intermediate courses would need to be from each of the departments, in order to preserve the interdisciplinary nature of the minor. These courses fluctuate from year to year but would currently be drawn from the following set:		
ASTR231	Stellar Structure and Evolution	
ASTR224	Exoplanets: Formation, Detection, and Characterization	
E&ES213 & E&ES214	Mineralogy and Laboratory Study of Minerals	
E&ES215 & E&ES216	Earth Materials and Earth Materials Laboratory	
E&ES220 & E&ES221	Geomorphology and Geomorphology Laboratory	

E&ES223 & E&ES224	Structural Geology and Field Geology
E&ES234 & E&ES235	Geobiology and Geobiology Laboratory
E&ES280 & E&ES281 or E&ES380	Introduction to GIS and GIS Service-Learning Laboratory
E&ES313 & E&ES314	Petrogenesis of Igneous and Metamorphic Rocks and Laboratory Study of Igneous and Metamorphic Rocks
E&ES319	Meteorites and Cosmochemistry
E&ES321	Planetary Evolution
E&ES375	Modeling the Earth and Environment
E&ES385 & E&ES386	Remote Sensing and Remote-Sensing Laboratory

Advanced Courses**0.75**

To qualify for the minor a student must complete AST/E&ES 555 Planetary Science Seminar during at least three of the four semesters available in their junior and senior years. We encourage students to complete all four semesters if possible in order to obtain complete coverage of our cycle of topics.

E&ES/ASTR555 Planetary Science Seminar

Research (Optional)

While research in the area of planetary science is not required, we hope that most students seeking this minor will elect to do research with a member of the Planetary Science Group. Research can be done during the semester or over the summer.

RELIGION MINOR

MINOR DESCRIPTION

The Minor in Religion (RELI) enables students to explore various religious experiences and expressions throughout the world. The five required courses include a foundational course, two classes in historical religious traditions, plus two classes of the student's choosing that support their major. Minors in Religion will analyze practices of interpretation, systems of belief, and patterns of religious behavior with empathy, cultural sensitivity, and ethical awareness.

ADMISSION TO THE MINOR

To enter the minor, students should submit a request via the Major/Minor/Certificate Declaration link in their portfolio.

MINOR REQUIREMENTS

Students wishing to complete the minor must take five courses, arranged as follows:

- RELI151
- Two courses in at least two areas of Historical Traditions.
- Two additional courses of the student's choice. One of these courses may include RELI398, though this is not required. Students must take RELI151 prior to RELI398.
- The Department will accept, as one of the courses for the minor, either one course taken abroad or one course that is cross listed but not taught by members of the department.

Generally, tutorials and student forums do not count, though the chair may count one after hearing compelling reasons from the student.

Religion courses must be taken for credit with standard letter grading, though special cases may be considered by the chair.

RUSSIAN, EAST EUROPEAN & EURASIAN STUDIES MINOR

MINOR DESCRIPTION

The Minor in Russian, East European, and Eurasian Studies (REES) offers students a nuanced, interdisciplinary understanding of contemporary Russia and other post-Soviet states, their culture, society, history, politics, and economic institutions. The REES minor consists of six courses including language study, social sciences, and literature and culture – providing insights into other worldviews and social systems. Study abroad is encouraged.

ADMISSION TO THE MINOR

Any student who intends to earn the minor in REES should speak with the program chair by the end of the junior year at the latest.

MINOR REQUIREMENTS

The minor in REES consists of six courses, in which the student must achieve a GPA of B. These courses must include RUSS101 and RUSS102 or two semesters of Russian language study at the appropriate level and four more REES courses, of which two must be taken in the areas of social sciences and/or literature & culture (see course list). The remaining two courses may be in either of the two areas or in Russian language. Two of the courses may be taken during study abroad (with prior approval). Students should plan the minor in consultation with REES faculty.

If a student places out of one or more semesters of language, they must take enough courses in REES to add up to a total of 6.

Students who wish to fulfill the language requirement by studying a language of Eastern Europe or Central Asia other than Russian may do so, subject to approval by the chair.

Satisfactory completion of the minor will be certified by the program.

CERTIFICATES

Certificates provide curricular options that complement current departmental and interdisciplinary majors. They are designed to bring coherence to programs of study that include courses from many departments and programs. For each program, model curricula are provided to guide students in their choice of courses. Wesleyan currently has twelve certificate programs in place.

- Certificate in Applied Data Science (p. 217)
- Certificate in Social, Cultural, and Critical Theory (p. 218)

CERTIFICATE IN APPLIED DATA SCIENCE

INTRODUCTION

The Applied Data Science Certificate provides students with an introduction to data analysis, including the theory and practical skills needed to collect and prepare data for analysis, explore and visualize data, build models and test hypotheses, discover insights, and communicate results in meaningful ways. The coursework builds on these skills and continues the development of strong statistical computing and programming skills by exposing students to "Big Data" topics such as deep learning, high-performance computing, text mining, machine learning, and AI applications in data analysis.

Through the practicum experience, students will work closely with a faculty member using real-world data to apply these skills to their interests in a semester long research project. To earn the Applied Data Science Certificate, students must complete seven graded courses and the capstone Data Analysis Practicum.

CERTIFICATE REQUIREMENTS

To earn the Applied Data Science Certificate, students must complete seven graded courses and the capstone Data Analysis Practicum. Before admitted to the program students are asked to submit a tentative plan of study.

Code	Title	Hours
Select one of the following basic knowledge courses:		1
BIOL242	Quantitative Methods for the Biological and Environmental Sciences	
MATH132	Elementary Statistics	
PSYC200	Statistics: An Activity-Based Approach	
QAC201	Applied Data Analysis	
QAC211	Digging the Digital Era: A Data Science Primer	
QAC250	An Introduction to Data Journalism	
Select two courses from the following mathematical, statistical and computing foundation courses, each from a different group:		2
Mathematical Foundations		
MATH221	Vectors and Matrices	
MATH223	Linear Algebra	
MATH228	Discrete Mathematics	

MATH274	Graph Theory	
QAC220	Applied Vectors and Matrices	
Statistical Foundations		
ECON300	Introductory Econometrics	
MATH231	An Introduction to Probability	
MATH232	Mathematical Statistics	
Computing Foundations		
BIOL265	Bioinformatics Programming	
COMP112	Introduction to Programming	
COMP115	How to Design Programs	
COMP211	Computer Science I	
COMP212	Computer Science II	
Select two of the following applied data science courses:		2
QAC305	Exploratory Data Analysis and Pattern Discovery	
QAC385	Applications of Machine Learning in Data Analysis	
QAC386	Quantitative Textual Analysis: Introduction to Text Mining	
Select two credits from the following applied electives:		2
E&ES280	Introduction to GIS	
ECON385	Advanced Econometrics	
ECON386	Introduction to Forecasting in Economics and Finance	
GOVT366	Empirical Methods for Political Science	
GOVT378	Advanced Topics in Media Analysis	
PHYS340	Computational Physics (0.5 credits)	
QAC216	Introduction to Survey Design and Analysis	
QAC231	Introduction to (Geo)Spatial Data Analysis and Visualization	
QAC239	Proseminar: Machine Learning Methods for Audio and Video Analysis	
QAC241	Introduction to Network Analysis	
QAC251	Data Visualization: An Introduction	
QAC251Z	Data Visualization: An Introduction	
QAC307	Experimental Design and Causal Inference	
QAC311	Longitudinal Data Analysis (0.5 credits)	
QAC312	Hierarchical Linear Models (0.5 credits)	
QAC313	Latent Variable Analysis (0.5 credits)	
QAC314	Survival Analysis (0.5 credits)	
QAC320	Applied Time Series Analysis	
QAC323	Bayesian Data Analysis: A Primer (0.5 credits)	
QAC356	Advanced R: Building Open-Source Tools for Data Science	
can count QAC 380 or 381, not both		
QAC380	Introduction to Statistical Consulting	
QAC381	QAC Praxis Service Learning Lab	
NOTE: at least one of the electives should be a 300 level course		
The capstone Data Analysis Practicum that includes an ethics and epistemology seminar discussion as well as completing an independent data science project.		1

ADDITIONAL INFORMATION

- Some of the courses that count toward the certificate may have a prerequisite, such as calculus. These prerequisites do not count toward the certificate, and students attempting to complete the certificate are not recused from these prerequisites.
- Mathematics majors cannot count courses in the foundations groups already covered by their major toward the certificate. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively to completing three applied elective courses, they can take either MATH232 or COMP212 and complete two applied elective courses.
- Computer science majors cannot count courses in the foundations groups already covered by their major toward the certificate. They must instead complete one course from the statistical foundations group and complete three applied elective courses. Alternatively, they can complete both MATH231 and MATH232 and complete two applied elective courses.
- It is strongly recommended that students who are not mathematics or computer science majors take courses in the computing foundations group to satisfy the certificate requirements. They can also substitute either MATH232 or COMP212 for one of their applied elective courses.
- Economics majors and minors cannot count ECON300 toward the certificate and must instead complete one course from each of the other two foundation groups.
- Students cannot count more than one course towards this certificate that also counts toward completion of any of their majors or minors.
- One course taken elsewhere may substitute as appropriate for any of the above courses and count toward the certificate, subject to the QAC Advisory Committee's approval (where routine approval may be delegated to the QAC director).
- Students can substitute a course from among the applied data science and applied elective courses for the basic knowledge course, subject to approval.
- Only graded courses can satisfy the requirements for the data analysis minor and the applied data science certificate. Courses completed with a CR/U grading mode will not satisfy the requirements of the two programs.
- Students cannot receive both the data analysis minor and the applied data science certificate.

Director of the QAC

CERTIFICATE IN SOCIAL, CULTURAL, AND CRITICAL THEORY

CERTIFICATE REQUIREMENTS

To help students develop proficiency in the study of social, cultural, and critical theory, this certificate encourages students to seek out theory-intensive courses in a wide range of disciplines and departments at Wesleyan.

To qualify for the Social, Cultural and Critical Theory (SCCT) Certificate, a student must successfully complete six authorized courses, hosted by at least three different departments or programs. All classes must be taken on a graded (A-F) scale. The minimum grade required in each course is a B-. Courses taken on a CR/U scale count only in the case of COL majors and CSS majors; for the latter, only CR/U courses taken during their sophomore year count. Of the six courses that count for the certificate, no more than two may be lecture courses.

Courses that are not listed as SCCT courses on WesMaps or included on the certificate's website (wesleyan.edu/theory (<http://wesleyan.edu/theory/>)) may be used to fulfill certificate requirements if deemed suitable by the certificate director.

Up to two of the six courses may be taken during a semester abroad, and up to three may be taken during a year abroad. With authorization from the certificate director, students may also count up to two courses transferred from another U.S. institution.

ADDITIONAL INFORMATION

Students who wish to earn the certificate should declare it in their WesPortal and then meet with the certificate's director, [Professor Ren Ellis Neyra](mailto:rellisneyra@wesleyan.edu) (rellisneyra@wesleyan.edu), preferably in the fall of their junior year.

CLUSTERS

- Urban Studies Cluster (p. 223)

ASIAN AMERICAN STUDIES CLUSTER

Asian American Studies focuses on exploring the historical and current presence of Asians in the Americas. The field aims to understand both how people from East Asia, Southeast Asia, and South Asia have been racialized in the context of the United States, as well as how Asian Americans have constructed their identity and stories. This cluster also explores ideas of diasporic identity and transnational migrations and how they shape Asian America. Understanding the social and historical presence of Asians in America is crucial to an understanding of racial formation, immigration, citizenship, and nationality in the United States. Asian American Studies examines the experience of Asians in the United States, and how the unique history of marginalization and exclusion informs today's issues within the Asian American community.

The Asian American Studies course cluster introduces students to the central concepts of racialization, migration, and intersectionality as they relate to Asians in the United States. The cluster is interdisciplinary, incorporating perspectives from the humanities and social sciences.

CHRISTIANITY STUDIES CLUSTER

COORDINATOR

- STEVEN HORST ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/SHORST/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/shorst/profile.html))

Christianity has been a defining force in European and Euro-American history and culture, and has profoundly influenced the visual arts, theater, music, poetry, and philosophy. It has also spread throughout the world. The Christianity Studies cluster offers a way to study it without the constraints of a conventional major. As befits its place within a university curriculum, Christianity Studies courses are taught by people who come from a variety of faith commitments, including secular ones.

PATHWAYS

The Christianity Studies cluster offers a set of courses, changing from year to year, which can be grouped under the following headings, as pathways to assist in gaining a coherent understanding of Christianity. These are:

Christian Thought

Christianity's Role in the Development of Modern Institutions

Christianity and Contemporary Social Debates

World Christianity

Christian Origins

Christian Writers

Christianity in Music

Christianity in the Visual Arts*

Although these pathways should provide assistance in devising a more coherent educational experience, those marked with an asterisk also suggest links to various information available through the internet, such as bibliographies, important texts, and musical and video clips.

DISABILITY STUDIES CLUSTER

COORDINATOR

- Megan Glick (<http://www.wesleyan.edu/academics/faculty/mglick/profile.html>)

Disability Studies is an interdisciplinary field that studies the systems of classification—medical, legal, social, cultural, historical—that organize bodily and psychological difference. Scholars in Disability Studies begin from the perspective that definitions of dis/ability vary historically and cross-culturally, and that bodily norms derived from these definitions have political, social, and economic ramifications for both disabled and nondisabled people. The field explores disability as a social and historical construction, a political identity, and a lived experience.

The Disability Studies course cluster at Wesleyan highlights courses across all divisions that explore disability from a wide range of perspectives. Courses in the cluster give students an introduction to the historical origins of disability, social and scientific classifications of embodied difference, artistic and literary representations of disability, and ongoing political struggles around access, power, and normalization. New directions in Disability Studies include questions of ethics and interdependence, global and local disparities in health and illness, human-animal boundaries, and intersections of disability justice with race, gender, sexuality, age, and other embodied forms of power.

HISTORY

Wesleyan's Course Cluster in Disability Studies was a student-led initiative. In 2010, two students active in Wesleyan Students for Disability Rights (WSDR), Ariel Schwartz and Allegra Stout, approached Professor Margot Weiss to discuss strategies for increasing Disability Studies offerings at Wesleyan (see the WSDR 2010 statement of needs and goals here (<https://sites.google.com/a/wesleyan.edu/wesleyan-students-for-disability-rights/statement-of-needs-and-goals/>)). Working with faculty in American Studies, Anthropology, English, FGSS, History, and SISP, Prof. Weiss proposed a Course Cluster in Disability Studies to the Wesleyan faculty in late 2010. The Cluster became part of Wesleyan's curriculum in April 2011 (see Argus coverage here (<http://wesleyanargus.com/2011/04/15/disability-studies-course-cluster-added/>)).

In 2014, Schwartz and Stout published a research article, "'It'll Grow Organically and Naturally': The Reciprocal Relationship between Student Groups and Disability Studies on College Campuses (<http://dsq-sds.org/article/view/4253/3593/>)", in *Disability Studies Quarterly*. The article explores the role student activism can play in developing disability studies on campus.

EVENTS ([HTTP://WWW.WESLEYAN.EDU/DISABILITYSTUDIES/EVENTS.HTML](http://www.wesleyan.edu/disabilitystudies/events.html))

HEALTH STUDIES CLUSTER

Training for the health professions requires knowledge of a broad array of subjects, both science and non-science. For those seeking careers in a wide variety of health professions such broad-based training begins at the undergraduate level. Increasingly, emphasis is placed on the quantitative, medical knowledge required for patient care, the interpersonal and communication skills required for working in health care teams, and the cultural competencies needed for working with a rapidly changing patient demographic.

The health studies course cluster offers students information about the types of courses at Wesleyan that provide appropriate background for those seeking careers in the health professions.

The goal of current health professions graduate programs is to create health professionals who have the knowledge, skills and flexibility to succeed in today's rapidly evolving health care environment. In addition to the commonly required science courses in biology, chemistry, and physics, studying anthropology, sociology, ethics, psychology, and statistics is an important aspect of preparation for any of the health professions, along with the ability to integrate and apply the knowledge obtained to improve health outcomes for all populations. Having appropriate courses listed in the cluster encourages students to sample the breadth of the curriculum while still achieving proficiency in the recommended areas. There are multiple courses in any one disciplinary area that can provide the needed information and conceptual foundation, so the cluster highlights many different courses offering appropriate content. We want to encourage students to pursue an integrative, interdisciplinary approach to their education in this area.

Students and advisors are encouraged to make use of the cluster listing when selecting courses to fulfill major, minor and certificate requirements, as well as general education expectations. By choosing from cluster courses students will gain proficiency in the health studies area while also mastering the in-depth disciplinary perspective that comes with their chosen major.

QUEER STUDIES CLUSTER

COORDINATOR

- **MARGOT WEISS** ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/MDWEISS/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/mdweiss/profile.html))

Queer Studies focuses on the social production and regulation of sexuality, asking: How does sexual normativity structure and shape diverse social and political institutions? What are the intersections of sexual marginality and other axes of difference (gender, race, ethnicity, disability, class, indigeneity, nation)? How does the social organization of desire produce forms of oppression and of resistance in varied places and times?

The Course Cluster in Queer Studies at Wesleyan includes courses across the humanities, the humanistic social sciences, and the interdisciplinary programs.

Particular research and teaching strengths at Wesleyan include queer theory, theories of difference and embodiment (including disability and trans studies), queer of color critique, and transnational sexuality studies. Wesleyan Queer Studies courses are listed on WesMaps (https://owaprod-pub.wesleyan.edu/reg/?wesmaps_page.html?stuid=&facid=NONE&subj_page=XQST&term=1199).

If you have questions regarding Queer Studies at Wesleyan, please contact the cluster's coordinator, Professor Margot Weiss (mdweiss-at-wesleyan.edu) (mdweiss@wesleyan.edu).

SUSTAINABILITY AND ENVIRONMENTAL JUSTICE

In 2019, Wesleyan launched a new course cluster in sustainability & environmental justice (https://iasext.wesleyan.edu/regprod/?wesmaps_page.html?stuid=&facid=NONE&subj_page=XSEJ&term=1189). Encompassing climate

change, ecological sustainability, and environmental justice, this course cluster recognizes that sustainability and environmental justice are (or should be) central to public policy debates, scientific and intellectual inquiry, and the foundations of social and economic life. By framing sustainability and environmental justice together, we draw attention to equitable access to protection to all species without unfairly distributing risk of harm to some individuals and groups that live within them.

This course cluster is intended to cut across Wesleyan's academic divisions and within all disciplines, whether natural, social, or humanistic modes of thought and practice. A course cluster also makes these courses easier to find for both students and faculty advisors (especially important as they cross both disciplinary and divisional lines), attract prospective students to Wesleyan, and raise awareness of this field among students and faculty.

CONTACT

To submit a course to the cluster, please contact Tony Hatch at ahatch@wesleyan.edu.

DESCRIPTION

Topics that fall within sustainability and environmental justice may include but are not limited to the following eight themes and questions:

1. The relationship between power, social inequities and the development of just and sustainable communities.
2. How diversity, including biodiversity and cultural diversity, contributes to sustainable systems.
3. Dynamics of industrial production and mass consumption as they relate to environmental health and human well-being and explore strategies for developing sustainable life practices.
4. How social systems promote, or fail to promote, cultures of sustainability, especially in terms of tolerance, non-violence and peace.
5. How human well-being depends on ecosystem processes and non-toxic materials.
6. The politics and economics of sustainable development including its social benefits and environmental costs raise critical questions about what development and progress mean for different communities.
7. How science and technology shape the environmental realities and public health policies at both the local and global levels.
8. Multiple ways of representing and understanding humans' relationships to the environment, and how taken-for-granted metaphors and stories can promote or damage environmental and public health.

Wesleyan currently has several academic units that house faculty whose interests may fall under the domain of sustainability and environmental justice (e.g., the College of the Environment, Earth & Environmental Sciences), but not entirely nor comprehensively so.

Through the Wesleyan Sustainability Office and with funding from the College of the Environment, we anticipate offering pedagogical support to faculty on an ongoing basis, both increasing and sharpening course offerings in sustainability and environmental justice going forward. This will expand the number of faculty and students focused on this vitally important area of scholarly and policy concern.

COURSES ASSOCIATED WITH THE CLUSTER

For a current list of courses offered, visit WesMaps (https://iasext.wesleyan.edu/regprod/!wesmaps_page.html?stuid=&facid=NONE&subj_page=XSEJ&term=1189).

The course list includes*:

(All courses listed by originating department/program, and with the approval of the instructors)

Code	Title	Hours
AMST174	Popular Culture and Social Justice: An Introduction to American Studies	1
ANTH312	Eat, Grow, Heal: The Anthropology of Food and Justice	1

*This list represents interdisciplinary and interdivisional regularly-taught courses on Sustainability and Environmental Justice. Some courses on this list have emerged through the Sustainability Across the Curriculum initiative while others already fell within the scope of faculty research and teaching interests. Some courses position questions of sustainability and/or environmental justice at the center of inquiry, whereas others may devote only one or two course modules to such inquiry.

URBAN STUDIES CLUSTER

CO-COORDINATORS

- JOE SIRY ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/JSIRY/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/jsiry/profile.html))
- DANIELLE GANDOLFO ([HTTP://WWW.WESLEYAN.EDU/ACADEMICS/FACULTY/DGANDOLFO/PROFILE.HTML](http://www.wesleyan.edu/academics/faculty/dgandolfo/profile.html))

Urban Studies is an area in which Wesleyan students can have both curricular and professional interests. Several University Major proposals in the last few years have been in the area of Urban Studies, and a number of Wesleyan students go on to graduate school and/or careers in areas such as Architecture, Geography, Public Policy, Urban Policy, and Urban Planning.

AFRICAN AMERICAN STUDIES (AFAM)

AFAM101 Introduction to Africana Studies: Examining the Spatial Dynamics That Constitute Diasporic Life

In this course students will be introduced to the political-intellectual projects that have informed Africana thought, such as Negritude, Cimarronaje, and Garveyism. To understand the breadth of Africana interventions requires a geographic lens. That said, students will examine the spatial dynamics (structures and experiences) that constitute diasporic life. One problematic that students will consider is the extent to which the transatlantic has dominated representations of diasporic life.

AFAM112F Reading Black Culture (FYS)

Blackness is the lifeblood of the culture industry. U.S. popular culture--which traverses national boundaries due to the workings of imperialism and global capital--has a predominantly Black face, at the same time that Black people, in the United States and across the globe, are made to live in unrelenting proximity to death and destitution. This introductory course aims to tackle this seemingly contradictory state of things by considering the manifold ways Blackness circulates in the global cultural landscape. With the ultimate aim of increasing cultural literacy, we will engage with key questions such as: What makes a Black text? What, if any, political duty does the Black cultural worker have to the larger "Black community"? How does a critique of capital figure into Black culture? How might we conceptualize intellectual work as central to Black cultural traditions? This course traces these questions through the analytic of "reading"--as a mode of critical engagement that exceeds the textual. We will contend with Blackness in its varying permutations and figurations across the domains of literature, music, film, sport, visual art, and performance.

AFAM115F Freedom School (FYS)

From the point of view of the U.S. nation-state, education has always been a hegemonic means to control knowledge, to calibrate unequal forms of citizenship, and to promote the social reproduction of power. Yet as W.E.B. Du Bois wrote in 1903, "education among all kinds of men [sic] always has had, and always will have, an element of danger and revolution, of dissatisfaction and discontent. Nevertheless, men [sic] strive to know." Drawing inspiration from the 1964 Freedom School Curriculum and spanning from enslavement to emancipation to the long civil rights movement, this course explores how people of African descent in the United States, and black women in particular, have used education to empower themselves, produce social change, and redefine the terms under which change may occur.

AFAM116F The Black Radical Tradition (or Black Radicalism) (FYS)

In a nation that was founded on the liberty of white men and women, and the enslavement of people of African descent, black radical action and movements have steered the history of struggles for freedom, citizenship, equal treatment, social and economic justice, and protection from the state. Figures such as Maria Stewart, Frederick Douglass, W. E. B. Du Bois, Marcus Garvey, Paul Robeson, and Angela Davis constitute part of a long tradition of black radicals. Even as the meaning of "radical" has shifted historically, black radicals are joined by their visions of dismantling existing systems and institutions for a freer and more equitable society. Spanning the periods of black radical abolitionism, black nationalism, Black Power, and the Black Lives Matter movement, this course explores key radical thinkers, activists, and texts in historical perspective.

AFAM122F Race and Identity in 21st Century Literature (FYS)

This course will center on race and identity in contemporary American literature by focusing on novels written by Jhumpa Lahiri, Colson Whitehead, Junot Diaz, Tommy Orange and Ocean Vuong as well as plays by Lynn Nottage, Quiara Alegria Hudes, Ayad Akhtar and Jackie Sibbles Drury. Extra readings will include poems and short stories. We will consider the portrayals of race, identity, class, ethnicity, religion, trauma, citizenship, migration and sexuality in these works, as well as the ways in which these authors conceptualize and problematize American identity.

AFAM141F The Revolutionary Rupture: Slavery, Latifundio & Rev. in Caribbean & Lat. Amer. Lit. & Cinema (FYS)

The word "Revolution" often evokes a vertical and/or eruptive image: a standing militant who was once a "premodern," non-European figure; a bottom-to-top explosion of imperial and colonial disorder and normative violence; a rising and world-overturning wind or "natural event." Does the eruption of an "event" worthy of the name "Revolution" begin on the imagined x-axis, say, of the earth's surface? Or does it point beyond that plane of seemingly commonly shared life? Or to that notion itself--i.e., commonly shared life--as a question? How do configurations of hell, heaven, God, Satan, the dead--what's below, what's above--come to bear in representations of "Revolutions"?

In this course, we will slow down, read, and work through these and other questions and figurations on the verge, in the midst, and/or seemingly on the other side of revolutionary ruptures--ruptures which are also returns. We will read select literatures and cinemas of Haiti, The Dominican Republic, Mexico, Guatemala, Puerto Rico, and Cuba that convey refusals of "given" life and death and that render different imperial, colonial, and neo-liberal systems of oppression and their attendant philosophies of the human, non-human, animal, native, enslaved, and blackened. The Haitian Revolution of the late 18th and early 19th century, insurrections in Chiapas before and after the Mexican Revolution of 1910, and 20th-21st century armed movements against U.S. economic and military invasions of the Caribbean and Central American regions would be the historical "flashpoints" of the course. While de-romanticizing the commercialized Che-t-shirt notion of "Revolution" in the U.S., we will, more

importantly, encounter and deconstruct discourses of hetero-masculinity, modernization, mestizaje, whitening, and "development" that sometimes appear radical and/or revolutionary.

AFAM152F Staging America: Modern American Drama (FYS)

Can modern American drama--as cultural analysis--teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

AFAM171F The Prison State: Race, Law, and Mass Incarceration in U.S. History (FYS)

This first-year seminar course explores the history and effects of the United States' mass incarceration crisis. The U.S. incarcerates more people than any other country in the world. And people of color make up a highly disproportionate number of the over 2 million individuals incarcerated in the U.S. today. Beginning with slavery and continuing through the rise of prisons, debt peonage, Jim Crow, and the Black Lives Matter movement, the course will explore how efforts to police, detain, and control black bodies have been at the center of U.S. law and legal practice since the nation's founding. At the same time, we will compare and contrast how race, gender, and sexual orientation have been policed, controlled, and shaped through incarceration practices throughout U.S. history.

AFAM175F The Black Atlantic, A Religious Interpretation (FYS)

The world as we know it is shaped by The Black Atlantic. This phrase centers the forced movement of enslaved Africans from Africa to the Americas and Europe as the center of a set of complex forces: European global expansion, land expropriation, indigenous extermination and, of course African enslavement. But Africans were not solely objects of dehumanizing subjugation and property. Africans co-created this world through material practices, traditions of knowledge, and meaning making summed up in the word religion. This course will both introduce students to the themes of Black religions formed in and through the Black Atlantic, and specific communities, for example, Rastafarianism, Islam, Buddhism, and Pentecostalism. Students will read scholarly articles and engage multi-sensory sources and first-person accounts of both themes and communities. All resources will be provided in class or via Moodle.

AFAM177F August Wilson (FYS)

During his lifetime, the world-renowned African American playwright August Wilson graced stages with award-winning plays from his "Century Cycle." This course examines the cycle's 10 plays in the order in which the playwright wrote them, from *JITNEY* (1982) to *RADIO GOLF* (2005). In all cases, we pay special attention to the playwright's presentation of language, history, memory, religion, visual art, and music within his oeuvre.

AFAM189F LGBTQ, or LGBT Who? Race, Sexuality, and Community in 20th-century U.S. History (FYS)

Beginning with the early-20th-century construction of the "homosexual" as a distinct identity, this course will explore the evolving, complex, and contested history of the queer community over the past century. The course will especially explore how race and gender frequently shaped marginalized yet resilient social movements for the lives, dignity, and rights of trans and other queer people of color, from the drag balls of a century ago through the Black Lives Matter movement.

AFAM202 Introduction to African American Literature

This course will introduce students to African American literature. It will be divided into two parts. The first will pay particular attention to the experience of enslavement by focusing on several unique primary and secondary textual couplings, including (but not limited to): Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) and Saidiya Hartman's "Scenes of Subjection: Terror, Slavery, and Self-Making in Nineteenth-Century America" (1997); and Harriet Jacobs's "Incidents in the Life of a Slave Girl" (1861) together with Hortense Spillers's "Mama's Baby, Papa's Maybe: An American Grammar Book" (1987). In addition to these classic 19th-century slave narratives and contemporary sources, then, the first part will also include supplementary readings by Kenneth Warren, David Blight, Angela Davis, Alexander Weheliye, Spillers, Hartman, Farah Jasmine Griffin, Shelly Eversley, Jennifer Morgan, and Frank Wilderson. The second part will focus on 20th- and 21st-century African American literature and literary criticism. It will bring together a wide range of readings from across genres and disciplines, attempting to sketch out the major aesthetic and political features of the black literary project. Authors here will include W. E. B. Du Bois, Booker T. Washington, Michael Rudolph West, Hazel Carby, Cheryl Townsend Gilkes, Alain Locke, Shane Vogel, Alice Walker, Zora Neale Hurston, Richard Wright, Ralph Ellison, Asia Leeds, Roderick Ferguson, Claude McKay, Amiri Baraka, James Baldwin, Toni Morrison, Samuel Delany, Octavia Butler, Teju Cole, Ta-Nehisi Coates, Cornel West, Claudia Rankine, Warren, and Fred Moten.

AFAM203 African American History, 1444-1877

This course examines the historical interactions between peoples on three continents--Africa, Europe, and the Americas--and the consequences of European colonization, trans-Atlantic slavery, and racial capitalism. Focusing on a period from the Antiquity to the late 19th centuries, we will explore how European notions concerning Africa its peoples evolved over millennia in response to shifting political, economic, and demographic circumstances. We will chart how Africans and their descendants in the Americas experienced and responded to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.

AFAM204 Introduction to Modern African American History

This course explores the African American struggle for equality, liberation, and justice from Reconstruction through to the present. We will examine how gender, class, sexuality, and ideology, among other factors, have shaped the history of black protest and community. We will visit key periods and themes including Jim Crow/segregation, The Great Migration, World War II, Civil Rights, Black Power, and Black Lives Matter, to understand the intersection of the African American lives and American history. Central to this course are the ways that African Americans have exposed American hypocrisy; have shown their historical patriotism; and have challenged American institutions to live up to their professed ideals.

Offering: **Host**

Grading: **A-F**

AFAM208 History of African American Art

This course will introduce students to a history of African American artistic production from the late 18th century to the present, in a range of media and styles. While we will focus primarily on the visual arts--looking at sculpture, painting, photography, collage, film, performance, and installation--we will also consider the deeply interdisciplinary nature of Black cultural production, highlighting the important role of music, poetry, dance, and theater.

We will explore how African American artists, both individually and collectively, have negotiated the terms made available to them by cultural institutions, whether by struggling for inclusion, acknowledgement, and validation; actively protesting racist and exclusionary policies; or by forming alternative institutions, communities, and spaces in which to work and share support. From the Harlem Renaissance to the Black Arts Movement and "post-Black" exhibitions, art works will serve as a primary source to ask, is there such a thing as a "Black aesthetic" and if so, how would one define it? Why might an African American artist reject such an idea? Other key questions will include: What is the role of visual representation in political struggle? How have artists mobilized portraiture as a tool of liberation? What does it mean to turn away from figuration, toward abstraction or opacity? How have artists grappled with questions of nationhood, belonging, and diaspora?

Together, we will trace how artistic forms, techniques, and motifs have served both as sites of collective history and as speculative propositions to envision new futures, articulating what Robin D.G. Kelley calls "freedom dreams."

AFAM209 Digital and Visual Storytelling

During this seminar, we will develop a digital group project that addresses the question of remembering and denying pasts through the historical and critical relationship between carcerality, race, and storytelling in Connecticut. By engaging with contemporary forms of digital and visual storytelling (ArcGIS StoryMaps), this group project will work with the modalities of archival studies and digital humanities, accompanied by readings in critical race studies, visual and literary theory, and decolonial theory. We will first explore "remembering the past" through two post-Civil War Connecticut landmarks: The Church of the Good Shepherd (1867-69), dedicated to Samuel Colt, and the Mark Twain House (1874), now a museum. Both architectures exist as pivotal markers for a new modern American narrative intertwined with legacies of slavery, manufacturing, firearms, and storytelling. We will then consider how to make visible denied "pasts" by conducting archival research on the formative period of the 1860s and 1870s and in respect of the Connecticut context. Centrally, valuable insights for the project development will be provided by the in-class meetings with scholars, artists, and archivists, whose work rethinks and challenges the bond between carcerality, race, and storytelling.

AFAM211 Critical Philosophy of Race

What is race? Can philosophy account for it or describe it? This class will serve as an introduction to the field of philosophy of race, and examine the general crises or problems that race and racism raise for philosophical projects and methods. We will explore topics such as the ontology of race, its relationship to other social formations like class and gender, its foundations in violence, and its fugitive possibilities. We will read work from classical philosophers of race--like Charles Mills, Linda Alcoff, and David Haekwon Kim--and from scholars at the margins of philosophy--like Gloria Anzaldua, Adrian Piper, and Fred Moten.

Identical With: **PHIL211**

Prereq: **None**

AFAM212 Modern Africa

What is African Modernity? We will examine this question as we survey the major historical transformations in Africa since approximately 1800. Important themes include: African political innovations, the abolition of the slave trade and its effects, European colonialism, African adaptation and resistance, nationalism and decolonization, and Africa's role in shaping major global events. We will also study the impacts of religious and social transformations amid rapid economic and political change. Finally, we will examine African visions for post-colonial development and how to shape the future of the continent.

During the semester we will also cover some of the issues surrounding African history as a discipline. No single course can cover more than a sliver of the complexity and variety in the continent. For this reason, we approach the study of Modern Africa as comparative history. However, students satisfactorily completing this course will be able to write knowledgeably about African history and will have the foundation necessary to undertake further study about Africa with sensitivity to the complexity of its recent past.

AFAM213 Abolition Geographies

"Space always matters, and what we make of it in thought and practice determines, and it is determined by, how we mix our creativity with the external word to change it and ourselves in the process. In other words, one need not be a nationalist nor imagine self-determination to be fixed in modern definitions of states and sovereignty, to conclude that at the end of the day, freedom is a place. How do we find the place of freedom? More precisely, how do we make such a place over and over again?"

--Ruth Wilson Gilmore, "Abolition Geographies"

This course is not only an introduction to the burgeoning field of abolition geographies, introduced through the work of Ruth Wilson Gilmore, but invites students to engage with abolition geography as an intellectual and political practice. In this seminar, we will consider the relationship between freedom and place-making (the production of places) by examining Ruth Wilson Gilmore's analytics and by also engaging in a range of geographic struggles. For example, students will consider the extent to which enslaved rebellions, not limited to the Haitian Revolution, remade what we envision today as the Atlantic. Students will also have the opportunity to apply an abolitionist framework to their own research.

AFAM216 A Small Place

Inspired by both Jamaica Kincaid and Paule Marshall's notion of a "small place," this seminar examines colonial and imperialist binaries of "large" versus "small" that render the Caribbean, the Pacific, and many other archipelagos as existing outside of the "world." How do islands become microsomes of a shared but contested global reality? This one of many questions students will be asked to consider throughout the seminar.

Gen Ed Area: **SBS-AFAM**

Prereq: **None**

AFAM217 Empires, Slavery, and Revolution: Africa to 1800

In this course we will examine the dynamic political and social histories of precolonial Africa. We will study the rise of kingdoms and empires such as Mali and Kongo, as well as revolutions in society from the technological development of iron production, to the emergence of trade networks, the development of

ancient cities, the spread of religious healing and reform movements such as Cwezi spirit possession, and the role of gender in early African societies. Over the course of the semester we will also consider the impact of slavery and the first African encounters with Europeans. The methods for studying the early African past are interdisciplinary. You will have the opportunity to explore how ancient Africa has been imagined in the past by Africans and early Arabic and European observers, and how contemporary scholars write these histories. As we trace a history of early Africa in the world, we will consider several methods: the study of myths and oral traditions, linguistic and archaeological data, as well as ecological and archival records.

AFAM219 "The History that Hurts": Reading Saidiya Hartman

This course will introduce students to the major works of the black literary theorist and cultural historian Saidiya Valarie Hartman (b. June 25, 1961), who was named a 2019 MacArthur "Genius" Fellow in Literary History and Criticism and American History. After graduating from Wesleyan in 1984, Hartman earned her Ph.D. in American Studies from Yale in 1992; she is currently a professor in the Department of English and Comparative Literature at Columbia University. Students enrolled in this course will read and write about Hartman's trilogy of scholarly monographs: *SCENES OF SUBJECTION: TERROR, SLAVERY, AND SELF-MAKING IN NINETEENTH-CENTURY AMERICA* (Oxford University Press, 1997); *LOSE YOUR MOTHER: A JOURNEY ALONG THE ATLANTIC SLAVE ROUTE* (Farrar, Straus and Giroux, 2007); and *WAYWARD LIVES, BEAUTIFUL EXPERIMENTS: INTIMATE HISTORIES OF RIOTOUS BLACK GIRLS, TROUBLESOME WOMEN, AND QUEER RADICALS* (W. W. Norton, 2019). Finally, if her new book project is published before the syllabus is finalized, then students enrolled in this course will also read and write about Hartman's fourth scholarly monograph (tentatively titled "N Folio: An Essay on Narrative and the Archive").

AFAM220 Poetics of Blackness

This course brings together Black critical theory and contemporary Black poetry in order to think through key sites of conflict in the theorization of Blackness. Rather than offer a literary history of Black poetry, this course is interested in approaching poetry as a crucial node of Black critical thought. Throughout this course we will pay particular attention to questions of form, genre, archive, queerness, gender, affect, visibility, ontology, and temporality as they approach and are undone by Blackness.

AFAM221 The African Novel I: Nervous Conditions

This class considers several canonical novels from sub-Saharan Africa. Our focus will be on their aesthetic and thematic properties; the novels are not meant as introductions to African histories, cultures, peoples, or practices. We will explore instead the specific subjects and styles of each work in the context of wider debates about orality, language, colonialism, gender, and the novel. To fathom the political and aesthetic stakes of African literary canon formation, we will also attempt to identify what makes a work canonical.

Gen Ed Area: **HA-ENGL**

Identical With: **ENGL221**

Prereq: **None**

AFAM222 Literature and Black Feminism: The Dramas of Black Capital

This class explores Black women's fiction as a mode of critique and intervention into Black Americans' complicated relationships with social and economic capital in the wake of US chattel slavery. How do Black people negotiate the transition from being to owning property? How does the persistence of capital, even in the absence of the system of racial slavery that ushered it into being, continue to shape Black institutional access and Black intramural relations? How are white, Western regimes of value--constructed as they are through the production of racial-sexual difference in dominant habits of thought and representation--contested and, at times, recapitulated in Black social life? How does Black women's literature take up these questions, and what about Black women's literature uniquely equips it to meet this challenge? Ultimately, the course takes seriously Black women's literature as Black feminist thought, exploring how it indicts and imagines beyond the violence of modern racial capitalism.

AFAM223 20th-Century Franco-Caribbean Literature and the Search for Identity

This course investigates how 20th-century Francophone literature from the Caribbean defines Caribbean identity. Through a study of literary texts, films, and paintings from Guadeloupe, Martinique, Haiti, Guyana, and Louisiana, we will explore the evolution of Caribbean self-definition, focusing on the major concepts of Negritude, Antillanite, Creolite, and Louisianite.

AFAM224F Afrofuturism (FYS)

Mainstream readings of the African American literary and cultural canon have tended to emphasize texts with a social realist bent, those that present their audience with a supposedly "authentic" version of the African American experience. However, as cultural critic Greg Tate observes, 20th-century African American literary history includes "huge dollops of fantasy, horror, and science fiction" because, in his view, "Black people live the estrangement that science fiction writers imagine." While Tate's statement perhaps overly generalizes the black experience, there seems to be something to his notion that, in part because of the fact that they were forced to live an often "alienated" experience in America, there has always been a strong element of the speculative in black literary and cultural expression. This course traces this under-examined speculative strain in 20th and 21st-century African American literature, music, film, and visual art, as black artists explore, or speculate, on the possibilities that imagining alternative realities and modes of living open up. The course will focus especially on speculative and Afrofuturist aesthetics as they manifest in hip hop music and culture. We will examine the ways that black artists have employed elements of the speculative genres in order to re-envision the African American past, present, and future--rendering versions of historical African American experience and subjectivity that exceed traditional notions of "authenticity," complicating contemporary regimes of identification, and presenting alternative visions of the futures of blackness.

AFAM225 The African Novel II: After Achebe

Chimamanda Ngozi Adichie's 2003 novel, *PURPLE HIBISCUS*, summons Chinua Achebe, the "grandfather of African literature," in its opening line: "Things started to fall apart at home when my brother, Jaja, did not go to communion." While Achebe is a formative influence on Adichie and on many other contemporary African writers, the central preoccupations of African literature have shifted considerably in recent years. This class will consider recent topics animating the field. These include debates about Afropolitanism, the role of publication houses and prize committees in the canonization and circulation of texts, queer African literature, African-language literature, and the position of African literature vis-à-vis world literature. Readings will be chosen from among the newest novels and short stories in publication.

AFAM226 Afro-Surrealism

Amiri Baraka coined the term "Afro-Surreal" to describe the writer Henry Dumas's "skill at creating an entirely different world organically connected to this one." In his 2009 "Afro-Surrealist Manifesto," D. Scot Miller builds on Baraka's observations and distinguishes Afro-Surrealism from Afrofuturism in the former's concern with the "RIGHT NOW." Indeed, in the "right now" of 2018, Afro-Surrealism seems to be having a moment, with the success of films like "Sorry to Bother You" and "Get Out," the musical and filmic work of Donald Glover/Childish Gambino, the visual art of Kara Walker and Kehinde Wiley, and the literature of Paul Beatty and Colson Whitehead, among others. This course will examine this contemporary resurgence of the Afro-Surreal, and trace its echoes in black popular music, in the work of African American literary figures like Dumas, Toni Morrison, Bob Kaufman, Ralph Ellison, Jean Toomer, and Zora Neale Hurston, and through its African and Afrodiasporic foundations in the work of artists inspired by Léopold Senghor's Négritude movement. All of these artists "distort reality for emotional impact," as Miller puts it, and we will aim to connect these distortions of the "right now" to the material reality of life under regimes of anti-blackness and racial oppression that these Afro-Surreal works lays bare.

AFAM228Z Thinking with Octavia Butler's "Wild Seed"

Blend: Monday and Thursday class time synchronous; additional class hours asynchronous.

Black speculative fiction writer Octavia Butler's novel "Wild Seed" (1980) begins on the African continent in the 17th century amid the rise of transatlantic slavery and concludes on a plantation in Louisiana on the eve of the 19th-century American Civil War. "Wild Seed" was the last published book in Butler's Patternist series, but it relates the earliest segment of that epic story, which follows a shape-shifter named Anyanwu and a body-jumper named Doro across geographies, centuries, classes, corporealities, genders, races, and even, in

Anyanwu's case, across species. To quote one student: "It's the weirdest novel I've ever read." This seminar takes up the myriad and interwoven provocations Butler offers in "Wild Seed" by reading her novel alongside a wide range of scholarly literature in the fields of African and African diaspora studies, Indigenous studies, gender & sexuality studies, animal studies, history, disability studies, religious studies, and cultural studies, as well as visual arts. Rather than "apply" the syllabus texts directly to Butler's novel, we will attend to how her novel not only reflects--indeed, anticipates--such scholarly and artistic production, but also produces its own aesthetics and epistemologies.

The seminar unfolds part-synchronously (via Zoom) and part-asynchronously (via writing assignments, screenings, and research project check-ins). Twice-weekly virtual meetings will be centered on presentations of research projects that students will develop over the course of the month, engaging a particular theme or question that they will identify in Butler's work. As such, the syllabus texts are subject to change. Students will be expected to read "Wild Seed" in its entirety in advance of the first class and to have begun thinking about topics they might explore for their presentation and research project (the former being preparation for the latter). The seminar's asynchronous component will consist primarily of weekly writing exercises asking students to reflect on how the assigned texts converse with Butler's novel and vice versa and to comment on one another's analyses. Shared annotatable pdfs will be used to generate conversations about the readings outside of class and to identify questions and topics for discussion. The professor will consider proposals for a creative final project, but it, too, will require substantive research.

AFAM229 Reading Toni Morrison: Blackness and the Literary Imagination

This course will introduce students to the major works of the late Nobel laureate Toni Morrison (1931-2019). In addition to the trilogy--"Beloved" (1987), "Jazz" (1992), and "Paradise" (1997)--and "Playing in the Dark: Whiteness and the Literary Imagination" (1992; originally delivered as the William E. Massey, Sr. Lectures in the History of American Civilization at Harvard University in 1990), readings may also include the following novels (in chronological order): "The Bluest Eye" (1970); "Sula" (1973); "Song of Solomon" (1977); "Tar Baby" (1981); "Love" (2003); "A Mercy" (2008); "Home" (2012); and "God Help the Child" (2015).

AFAM230F Marxism and Abolitionism (FYS)

This course explores the historical encounter of Marxist revolutionary theory, with its roots in German idealism (Kant, Schiller, Fichte, Hegel), and abolitionist causes. How have abolitionist movements historically informed, expanded, and challenged Marxist theory and its tactical playbook? What made Marx a touchstone for so many black revolutionary thinkers, including W.E.B. du Bois, Franz Fanon, C.L.R. James, and Angela Davis? How have anticommunist, racist, security-statist ideologies been mobilized to undermine and defeat transformative social movements? We will begin with the Haitian Revolution and work our way through the abolition of slavery in the US and the anticolonial and civil rights struggles of the mid-20th century to the prison abolition movement today. In addition to the above mentioned authors, readings will include

Toussaint L'Ouverture, Frederick Douglass, Otilie Assing, V.I. Lenin, Rosa Luxemburg, Georg Lukács, Max Weber, Martin Luther King, Jr., Herbert Marcuse, and the Combahee River Collective.

AFAM233 All Ah We: Contemporary Afro-Caribbean Drama & Performance

What are the dramatic utterances of Afro-Caribbean artists? How do Afro-Caribbean playwrights and other narrative-based performance artists present "Caribbean" and/or "West Indian" subjectivities in ways that are shared, yet critically different? In what ways are Afro-Caribbean dramas and performance pieces repositories for the practical, the theoretical, the sociological, the political, the imagined, and the lost? In answering these questions and more, we examine these textual and embodied expressions from the complicated crossroads of class, creolization, diaspora, ethnicity, folklore, gender, history, indentured servitude, isolation, language, race, religion, and slavery. At all times, this course revels in the polyphony that is Afro-Caribbean drama and performance.

AFAM234 Black Labor and Working-Class History

This course examines the history of Black people's work experiences, labor activism, and working-class life in the United States. Topics will include wage labor in the emerging market economy of the late 18th century; the many forms of enslaved labor; labor activism and radicalism in the late 19th and early 20th centuries; racial exclusion from the New Deal order; Black socialist and communist politics; changes and continuities in Black women's labor during the 20th century; the "surplus labor" to prisoner pipeline in the late 20th century; and the rise of gig labor and new worker movements (particularly in health care and e-commerce) during the 21st century. Using historical scholarship, novels, films, theory, and music, alongside a wide variety of primary sources, we will consider the changing ideas and practices of workers, their families and communities, and employers. We will highlight persistent themes that challenge the typical (white-centric) narrative of working-class history in the United States, such as the ways in which anti-Black racism has shaped labor politics. We will also discuss the flourishing of creative thought and practice that often happens alongside, or in response to, the seemingly endless demand for Black labor in American society.

AFAM235 Activism and Theories of Change

In this course we will explore strategies and theories of change that shape social justice movements, with particular reference to recent movements in the United States. We will discuss the benefits and risks of the many available strategies including direct action, grassroots mobilization, impact litigation, legislative campaigns, electoral campaigns, artistic protest, and public education. What strategic, ethical, or moral questions are raised by various types of protest and communications? The instructor will draw on her own experiences as an activist for women's rights, queer rights, and economic justice. In addition, the course will feature a guest teacher for a segment of the semester: Beverly Tillery, Executive Director of the Anti-Violence project in NYC will look at the ways BIPOC and Queer BIPOC communities are reshaping the social justice landscape by addressing the safety of trans women, challenging the gender binary and reforming and ending the carceral legal system. We will allow time to discuss events that may occur in real time over the course of the semester. This course will be relevant to students interested in public policy, feminism, gender and sexuality studies, and other social sciences, and will provide useful insight for future organizers and activists, lawyers, and public policy makers.

AFAM236 Introduction to Postcolonial Studies

The 1978 publication of Edward Said's *Orientalism* signaled the presence of postcolonial studies, a field of intellectual inquiry that proved influential in the humanities and social sciences. How, from our vantage point in the latter end of the 20th century, do we understand both the age of imperialism/colonialism, and what happens afterwards? What are the conditions of decolonization and national independences? How do the cultures of the formerly colonized countries use and modify imperial vestiges, and invent themselves anew? Central to our course will be the work of three major theorists in the field of postcolonial studies: Edward Said, Gayatri Spivak, and Homi Bhabha. Among other important ideas, we will discuss *Orientalism*, subalternity, and mimicry.

AFAM237 Technologies of the Self

Where does the idea of an authentic self come from? The desire to represent the authentic self informs the narrative genres of the confession and memoir and visual ones of the selfie and self-portrait alike. Yet both the memoir and the selfie "self" are mediated, first, via the technologies of print and screen, and second, via the conventions of particular genres that make these legible as a memoir and selfie, as opposed to, for example, an interview or a portrait. In this course, we will examine how different technologies not only represent but produce the self. These technologies include "writing" technologies: print and digital; genre and medium (autobiography, the slave narrative, memoir, self-portraits, and selfies); and technologies of the state, which produce citizens, subjects, and humans.

AFAM238 Imperial Education: Colonial Template

Where, how, and for what reasons did our modern structures of education originate? Beginning with the sketching out of an educational model in the British Raj, we will examine the dissemination of that model globally, in the British and French colonies of Asia, Africa, the Americas, and among immigrants and the proletariat. How and where does that model change, and to what effect? History will provide the context for our major subject matter: literature focussing on the educational experience. Among our historical and theoretical readings will be Macaulay's Minute on Indian Education, Viswanathan's *The Beginnings of English literary study in British India*, Wa Thiong'o's *Decolonizing the Mind*, Freire's *Pedagogy of the Oppressed*, and José Martí's *On Education*. We will also analyze literary texts and films, including Narayan's *The English Teacher*, Beti's *Mission to Kala*, Dangarembga's *Nervous Conditions*, Adichie's *Purple Hibiscus*, the film *Sugar Cane Alley*, and others.

AFAM240 From the Banjo to Dembow: Afro-Caribbean Music in Motion

This course analyzes the global circulation of Afro-Caribbean musicians, dancers, audiences, musical styles, and even musical instruments from the beginning of European colonialism to the present day. We will seek to understand the political interconnections between the Caribbean and the wider world by focusing our attention on specific "musical itineraries." These will include, among others, the creation of the banjo by enslaved people in the Caribbean and the instrument's role in black resistance in North and South America, the musical aftershocks of the Haitian Revolution in Cuba and Louisiana, the production of black internationalist politics at weekly "reggae" dances led by Jamaicans in early 20th-century Costa Rica, and the rise of reggaetón between Panama, Puerto Rico, Cuba, the Dominican Republic, and the United States.

We will question how these musical itineraries propelled black political movements and shaped larger ideas about race, nation, diaspora, and the meaning of "the Caribbean" itself. No prior musical knowledge is required for this course.

AFAM242 Intimate Histories: Black Women's Sexuality

Black feminist theory teaches us that African American women have historically confronted racism and sexism in addition to other forms of oppression. How

has this experience shaped the sexual lives of everyday black women and famous figures? This course places the sexual at the center of African American women's history. It will examine how regimes of violence have intervened in black women's sexual freedom, from intimate bonds to reproduction to same-sex desire. It will cover black women's resistance to these regimes; to their sexual agency in diverse spaces from the plantation to the porn industry. This course will also tackle the enduring impact of the Jezebel stereotype in the history of black women's sexuality. Using primary and secondary sources, this class will fundamentally investigate the significance of African American women's sexual history in the histories of American sexual, racial, gender, and class politics.

AFAM244 Girlfriend, Sister, Self: 20th-c. Black Women's Writing

This course will examine textual and visual constructions of the girlfriend, sister, cousin, and daughter in 20th-century black women's writing. We will read works by Toni Morrison, Alice Walker, Veronica Chambers, and Marita Golden as narratives of women loving women (sexually and not) and as sites through which to engage black women's subjectivity more generally. In this course we will attend to the interior landscapes of individual black female subjects as well as the social landscapes that produce and/or complicate notions of love, kinship, friendship, and self. We will draw on African American literary theory, queer and affect theory, and black cultural memory as well as turn to influential works by bell hooks, Deborah McDowell, Kevin Quashie, and Valerie Smith, among others. How do writers of the period imagine and articulate the relationship between black women and their others?

AFAM246 Black Feminisms in the Americas: Politics, Representation, and Queer Ruminations of Elsewhere

This course will explore Black feminist intellectual productions, highlighting the many theoretical, political, and critically imaginative elements found throughout early and contemporary works. Our discussions will reflect on power, the production of knowledge, identity, inequality, and the politics and perils of Black feminist struggle. Relying on a variety of texts and media--such as writings, visual & performance arts, poetry, music, and film--students should expect to engage with key issues and debates, along with the epistemological challenges offered by queer of color critique, trans/national perspectives, and social alternatives emerging from across the Black (feminist) diaspora.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**Gen Ed Area: **SBS-AFAM**Identical With: **FGSS264**Prereq: **None****AFAM248 Race, Ethnicity, and Popular Music**

This course explores race and ethnicity in the United States through sound and song. By studying diverse topics--from the Boston Tea Party, blackface minstrelsy, and the rise of Jim Crow, to Native Hawaiian influences on the Mississippi Delta blues, to the unexpected connection between elevator music and the Spanish American War--we will learn about the history of settler colonialism, anti-black racism, U.S. imperialism, global capitalism, and hetero-patriarchy. We will also remain attentive to music as a transgressive and revolutionary force, one that facilitates hybrid identities and movements that celebrate difference, offering alternate visions for what it means to be and sound free. Investigating primary sources will demonstrate how musical genres may act as reservoirs of shared history and collective identity. As Ronald Radano has argued, discussions about music can have tangible influences because debates about music are a proxy for larger social issues with real-life consequences. Can music make (or unmake) race? Can a song change the world?

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-AFAM**Prereq: **None****AFAM249 Sacred and Secular African American Musics**

Wondering about how you will explain your Wesleyan experience to someone who doesn't get what it is like to attend an eclectic liberal arts institution? Worried about how your experiences at Wesleyan will translate to your post-graduate life? Want to practice talking about yourself so you are ready to enter the job market or apply for graduate school? This course is for you! Throughout the semester, you will practice writing about yourself and will ultimately place what you write in WordPress, the world's most popular platform for website design. Along the way, you will learn about user experience (UX) design principles and research methodologies, so that the website you create draws in your audience and makes them want to learn more about you. Throughout the semester, we will meet once a week to do all of these things in a relaxed, collaborative environment. Join us and bring along some friends!

Offering: **Crosslisting**Grading: **Cr/U**Credits: **0.50**Gen Ed Area: **None**Identical With: **WRCT200, RL&L250, CSPL200, IDEA200**Prereq: **None****AFAM251 Communicating Racial Justice**

This course is focused on racial justice and how it relates to society. It is designed to and will facilitate conversations about racial justice work that foster authentic engagement with learners. In our time together we will discuss how diversity, race, and racism impact the work we do and explore the benefits and challenges associated with diversity in society. We will discuss biases and discriminatory practices' effects on families and talk about the factors that cause a disproportionate representation of minorities. Other areas that

will be discussed and explored are cultural competency, cultural humility, disproportionality, disparity, and how they relate to the impact of culture and perceptions that can communicate multiple messages.

This course will allow students to use and communicate what they know about racial justice and equity to build understanding and agreement. Students will learn how to have conversations about race with presence, grace, and authority.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-AFAM**Prereq: **None****AFAM254 The History of Race and Sex in America**

Everything in our contemporary moment has a historical precedent. This course explores the ways that race, class, gender, ethnicity, and sexual orientation have intersected to shape American lives and group identities. Focusing on the concept of intersectionality, this course looks at the relationship between power, rights, and citizenship; namely who is included and who is excluded at a given time and why. Thinking about how sex has factored into these dynamics, we'll be covering topics such as sexual coercion and consent, interracial marriage, and civil rights in historical perspective. Spanning the early American period through to the present, we will focus specifically on how the understanding of blackness and whiteness, manhood and womanhood, and heterosexuality and homosexuality changed over time.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **SBS-AFAM**Prereq: **None****AFAM257 System Mapping for Social and Environmental Impact**

In recent years, growing interest in social entrepreneurship has pushed students to "solve" complex social and environmental problems with new ventures of their own design. Unfortunately, this approach often overlooks a critical foundation of social change: understanding the root causes of problems and the contexts that surround them before seeking solutions.

In this six-week, half-credit class, students will study a problem and the systems that surround it. By the end of the course, students will create a "systems map" that documents the economic, political, and cultural factors behind their problem, as well as the current "solutions landscape."

AFAM260 On Evidence: Archives, Museums, and Prisons

This course introduces an interdisciplinary study of the idea of evidence in connection to the modern development of archives, museums, and prisons, by setting this in a contemporary dialog with the discourses on state violence, incarceration, and refugee-tude. This course will firstly establish historical and theoretical connections between carcerality, Western archival record-keeping practices (e.g., scientific grids, mugshots, taxonomies, and forms of surveillance), and museological frameworks developed during the transition from the 19th to the 20th century.

Furthermore, it considers how records, artifacts, digital data, bones, sites of "memories," oral traditions, embodied knowledge, or intergenerational trauma can become evidentiary material. Such inquiries are central to decolonial archival studies as they are critical for historically marginalized, racialized, and gendered subjects, whose claims to social justice, human rights, and cultural heritage are tied to the aftermaths of slavery, genocides, and colonialism. Our readings and discussions will specifically draw upon decolonial archival studies, digital humanities, visual studies, human rights discourse, Asian American studies, Black studies, and Indigenous studies, which have continuously challenged what constitutes evidence.

AFAM261 Beyond the Talking Book: Reading African American Literature in the Newspapers

The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some lesser known ones) in their original publication context, the magazine archives of *The Christian Recorder*; *The Anglo-African Magazine*; *The Colored American Magazine*; *The Crisis*; *The Crusader*; *Opportunity*; and *Fire!!* The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context--as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students' literary close-readings skills,

this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnutt, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins' *Of One Blood*) in its original installment-format, week-by-week. Reading these works serially will also enable them to play closer attention to each installment's relationship to its surrounding texts and images.

AFAM263 Critical Race and Art History: Theories and Methods

How does the study of art shift if we begin with questions of race, power, and colonialism, rather than treating them as secondary? Concepts such as mastery, familiarity, strangeness, taste, and beauty are formed by conditions of domination and subjugation. Moreover, the histories of material production and cultural expression are fundamentally entwined with the circuits of enslavement, forced migration, and the extraction of resources, people, goods, and "styles."

For the bulk of the semester, we will focus on a series of case studies drawn from the 15th to 20th centuries, a period of intense European contact and conquest in Africa, Asia, the Caribbean, and the Americas. Topics will include: representations of Africans in Renaissance Germany; African depictions of the Portuguese circa 1492; the appearance of parrots, kraak (Chinese) porcelain, and other goods from "exotic" locales in 17th-century Dutch still lifes; the taxonomies of racial difference in Spanish casta paintings; debates about sculptural polychromy and the "whiteness" of marble; the relationship between expansionism, empire, and the genre of landscape; "primitivism" and European artists' "discovery" of African artistic forms; the critical interest in "racial art" in the interwar U.S.; and contemporary conversations about museums and restitution, among others.

Throughout, works of art are primary sources with which to study the specificities of periods, places, and their social arrangements. While we will emphasize difference and historical contingency, our *longue durée* approach

will enable us to draw connections about art's role in processes of primitive accumulation, dispossession, and racial capitalism.

AFAM264 "Before the 'Body' there is the 'Flesh'": Reading Hortense Spillers

This course will introduce students to the major works of the black feminist theorist and literary critic Hortense J. Spillers (b. April 24, 1942), one of the greatest essayists and most gifted intellectuals of our times. While her published writings are legion, Spillers is perhaps best known for her scholarly article titled "Mama's Baby, Papa's Maybe: An American Grammar Book" (originally published by Diacritics in 1987). In addition to "Mama's Baby," then, together we will read and engage at close range with the essays collected in "Black, White, and in Color" (published by the University of Chicago Press in 2003) in order to reveal the extraordinary complexity and clarity of her thought.

AFAM265 Music and Downtown New York

This course will explore the history and flourishing of four distinct music communities that inhabited and shaped downtown New York City during two especially rich decades (the 1950s and 60s): urban blues and folk revivalists; an African American jazz-based avant-garde; Euro-American experimentalists; and Lower East Side rock groups. These four vanguard musical movements--at the heart of major cultural shifts at the time, with reverberations and legacies that remain relevant up to the present day--are an essential part of U.S. history. We will uncover their points of convergence and divergence, especially in conversation with broader contemporaneous currents, including the Civil Rights Movement and related notions of freedom, shifting youth cultures, music and politics, and avant-garde aesthetics. Drawing from primary sources, we will read about and discuss recordings of a wide variety of musicians, view a broad cross-section of film, identify aesthetic and cultural trends, and study the local industry that supported them. A key theme will be the importance of a place. Projects throughout the semester can include written papers, recordings, artwork, culture mapping, or other creative endeavors somehow related to each of the four topics.

AFAM266 Black Performance Theory

What does it mean to perform identity, to perform race, to perform blackness? How is blackness defined as both a radical aesthetic and an identity? In this course, we will focus on theater and performance as a resource for thinking about black history, identity, and radical politics in excess of the written word. Following recent work in Black Studies and Performance Studies, this class will pay particular attention to the doing of blackness, the visible, sonic, and haptic performances that give over to a radical way of seeing, feeling, and being in an anti-black world. Plays, films, and texts might include works by Fred Moten, Alexander Weheliye, Brandon Jacobs-Jenkins, Suzan Lori-Parks, Danai Gurira, Shane Vogel, Adrienne Kennedy, Sarah Jane Cervenak, Dee Rees, Celiné Sciamma, Saidiya Hartman, Huey P. Copeland, Darby English, Lorraine Hansberry,

Hilton Als, Spike Lee, Isaac Julien, Martine Syms, Tavia Nyong'o, and Daphne Brooks.

AFAM267 The Caribbean in Relation

"For through this experience made you, original victim floating toward the sea's abysses, an exception, it became something shared and made us, the descendants, one people among others. Peoples do not live on exception. Relation is not made up of things that are foreign but of shared knowledge. This experience of the abyss can now be said to be the best element of exchange." -- Glissant, 1997

In this seminar, we will think with Glissant as well as others on how the Caribbean is a space of "relation." One of the main questions that we will address throughout the course is what are the historical, social, and physical mechanisms that define the Caribbean and its relationship to other geographies produced through slavery and colonialism? To answer this question we will engage the work of geographers, historians, and anthropologists, interested in the formation of political, cultural, and economic life in the Caribbean.

AFAM269 Pessimism, Nihilism, and Black Literature

This course considers Black literature's interventions into philosophical discourses of pessimism and nihilism. In contrast to the pathologization and dismissal with which they are often met, we will take both seriously as schools of thought. How are pessimism and nihilism distinct from each other? What do they offer as interpretative lenses for and approaches to Black art and Black existence? How are they reflected in literary form? We will closely consider these, and related, questions, looking to the work of authors such as Percival Everett, Jesmyn Ward, Dambudzo Marechera, Frank B. Wilderson III, and Gayl Jones.

AFAM270 Carceral Connecticut: Policing Race, Gender, and Sexuality in the "Land of Steady Habits"

Often considered a progressive bastion, Connecticut in fact has been at the forefront of carceral practices since the eighteenth century. In 1773, the colony converted a copper mine into the below-ground Newgate Prison. Half a century later, the state constructed one of the nation's first penitentiaries, in operation in Wethersfield, Connecticut, until its demolition in the 1960s. In each of its iterations, Connecticut's carceral system has policed, shaped, and disciplined its subjects along lines of race, class, and gender, constructing the normative and punishing deviation. Through engagement with rich state and local archives, this course will use several case studies to examine how Connecticut's carceral practices have made and re-made the state's legacy of slavery and policed the borders of accepted gender and sexuality in this place nicknamed "the land of steady habits."

The Middlesex County Historical Society's rich collection of late-19th and early-20th-century Middletown police logs, county jail records, and police court proceedings will enable students to analyze on-the-ground carceral practices in Connecticut. The Connecticut State Archives's extensive state penitentiary records, pardon petitions, and other state-level records will enrich and contextualize the local picture in Middletown. In this service learning course, students will share their research with the community through public presentations, online, and by planning exhibits at the historical society and on campus. This course, and students' public-facing research in this course, is part of the Carceral Connecticut Project based at Wesleyan University. See: <https://carceralconnecticut.com>

AFAM271 The Prison State: Race, Law, and Mass Incarceration in U.S. History

This course explores the history and effects of the United States' mass incarceration crisis. The U.S. incarcerates more people than any other country in the world. And people of color make up a highly disproportionate number of the over 2 million individuals incarcerated in the U.S. today. Beginning with slavery and continuing through the rise of prisons, debt peonage, Jim Crow, and the Black Lives Matter movement, the course will explore how efforts to police, detain, and control black bodies have been at the center of U.S. law and legal practice since the nation's founding. At the same time, we will compare and contrast how race, gender, and sexual orientation have been policed, controlled, and shaped through incarceration practices throughout U.S. history.

AFAM272 History of Jazz in American Culture

This course will provide students with a broad-based literacy in the history of jazz while examining its significance and impact within American culture. As a musical style, jazz has been a staging ground for working out some of the most defining issues and aspects of American culture, including the dynamics of race relations, the articulation of gender roles and class distinctions, artistic expressions of freedom and democracy, the creative possibilities of the encounter of European- and African-based cultures on American soil, assimilation versus appropriation, and an extraordinarily influential aesthetic of cool. Jazz was the dance and listening music of choice for most Americans from the 1920s through the '50s, until it was displaced and pushed to the margins by rock and soul in the 1960s. But it has remained an inspiration for diverse artists in rock and rap up to the

present day, including Kendrick Lamar's jazz-drenched "To Pimp A Butterfly" and Janelle Monae's 21st-century Afrofuturism deeply indebted to Sun Ra.

We will explore the early 20th-century origins of jazz in New Orleans, its rise as America's popular dance music in the 1920s and '30s, a shift to a more concert art-oriented form in the 1940s and '50s (representing the epitome of cool and hipness), avant-garde expressions of the 1960s (representing a new kind of universal spirituality), its move into rock and the growth of artist-based collectives of the 1970s, and its emergence in hip-hop samples in the 1990s. We will learn about major artists and their classic recordings, including Billie Holiday, Thelonious Monk, John Coltrane, and Miles Davis, among many others, as well as new directions from recent generations (bringing in guest music department faculty). We will immerse ourselves in a combination of listening to recordings, viewing videos, reading, discussion, and in-class performances. Throughout the semester we will pursue the parallel goals of using jazz history to understand American history and vice versa. This is a jazz history course with a difference, able to accommodate curious newcomers as well as aficionados and those interested in social and cultural dynamics as well as the musical materials.

AFAM273 BlaQueer Sounds: Queer Negotiations in African American Music

The term "BlaQueer," first coined by Tabais Wilson, is an invention of the intersectionality era; an acknowledgment of the unique and multifaceted experiences/identities formed at the nexus of racial, gendered, and sexual marginalization. In creating the portmanteau BlaQueer, Wilson underscores that, for people who are both Black and queer, these identities are inseparable, immutable, and irreducible. While the term BlaQueer, and by extension the concept it represents, is fairly new, there are long histories of Black queer people navigating and negotiating identity, revolutionizing and contributing to discourses on race, class, and gender. This course offers an exploration of the BlaQueer expressions, movements, and (most importantly) people that transformed American culture through music. While this course follows a historical arc, the primary aim of this course is to engage BlaQueer musical lineages through a critical interdisciplinary academic lens; accordingly, this course incorporates gender/women's studies, African American studies, performance studies, queer studies, and musicology.

Intertextuality, the integration of references to multiple texts into a single artistic work, has long been considered a hallmark of postmodern aesthetics. This course will begin from the premise that this intertextual approach was a foundational aesthetic technique for African American cultural producers long before any discourse around postmodernism entered the lexicon. From David Walker's "sampling" of the Declaration of Independence in making his 1830 anti-slavery Appeal, to Kara Walker's incorporations of imageries and artistic techniques of the antebellum South to comment on contemporary realities of blackness, African American artists have long made use of intertextual aesthetics not merely in the service of postmodern indirection, but in order to represent the realities of black lived experience in America. This course will investigate the transmedial history of this intertextual black aesthetic, examining African American literature, music, film, and visual art, and will consider various ways in which black intertextual aesthetics have been theorized, from Henry Louis Gates' notion of "signifyin(g)," to discussions of hip hop sampling and Black Twitter. As mass-mediated technologies have proliferated in the 20th and 21st centuries and representations of "Blackness" writ large have exponentially multiplied in the popular imagery, contemporary artists increasingly sample and signify on these representations themselves. So a significant piece of our work in the course will be in analyzing the ways that the intertextual aesthetic is mobilized in the contemporary moment to speak to material realities of postmodern blackness, and to articulate nuanced black subjectivities in the face of subjection.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-AFAM**Identical With: **ENGL289**Prereq: **None****AFAM277 Defining Black Repair**

Black Reparations is a concept that refers to claims for reparations made by African descendants in the United States as defined in Boris Bittker's (1973) "The Case for Black Reparations." However, the term is not exclusive to the experiences of slavery and other forms of racial violence in the U.S. As demonstrated by reparation activists of the African diaspora, the concept unifies the experiences of all African descendants.

In this seminar students will explore both national and regional movements for reparations, primarily in the context of the Caribbean and the U.S. Students will compare the formation of reparatory struggles in both geographies, from post-emancipation to the present, which is instrumental to understanding the concept of Black Reparations. What constitutes Black Reparations? What are the frictions and connections between reparative struggles in the Caribbean and the U.S.? These are the questions that students will be asked to consider throughout the course. Building on scholarship on Black Reparations and reparation policies, students will be asked to design their own proposals for how Middlesex County could implement practices of Black repair.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-AFAM**Prereq: **None****AFAM278 Race & Slavery in New England**

This course examines struggles over black and Native American slavery, freedom, and community formation in New England. We will explore the lived experiences and freedom struggles of people of color from the beginning of European colonization through the national abolition of slavery in 1865. The course, which satisfies the Early AFAM History requirement for the major, will particularly grapple with Wesleyan's and Middletown's complex relationships to slavery and emancipation. As we will learn, slavery and the slave trade played central roles in New England's culture and economy, especially here in Middletown. Like in other New England ports, Middletown merchants made a fortune from the trans-Atlantic slave trade and the plantation economy that supported it, even selling enslaved people of African and Native American descent on Middletown's Main Street. And southern slaveholders were among the first Wesleyan students in the 1830s. At the same time, free African Americans and their allies made Middletown a stop on the Underground Railroad and a center of the antislavery movement, laying the groundwork for Connecticut's eventual abolition of slavery and for high-profile court cases like the Amistad trial. Complicating popular images of the "free North," this course will examine the central roles of slavery and settler colonialism in New England history, while also exploring how the Connecticut River tied Connecticut to regional and even global currents of slavery and antislavery movements.

AFAM280 Religion and the Social Construction of Race

In this course we examine aspects of the intersections between race and religion in a number of historical and social contexts. We place at the center of our discussions the question of how race and religion are co-constructed categories that function as a prism through which people come to understand and experience their own identities and those of others. We will privilege interpretations that emphasize (a) the intersections of race and religion as a process in which power plays a pivotal role; and (b) the means through which communities form collective identities. We will read a range of historical analysis and primary source materials from the U.S. and the Caribbean. After a theory module, we will examine a colonial-era captivity narrative, antebellum pro-slavery document, missionary works, analyses of anti-Semitism, works on Father Divine, the Nation of Islam, Rastafari, Haitian Vodou, Jonestown, the Christian White Supremacy movement, as well as the contemporary U.S. relationship to the Middle East.

AFAM281 Writing Fiction

Chinua Achebe was famous for his quote "If you don't like another person's story, write your own." Although disliking another's story could inspire creative writing, there are various reasons why people write, ranging from the basic human desire to understand the world through storytelling down to the desire to respond to the issues of the day--be it moral, political, religious--through fiction. The course is designed to help students gain skills in writing fiction; recognizing the literary conventions of fiction; reading and critiquing published work from a writer's perspective; making deliberate creative choices; engaging the work of others in a workshop setting; and revising their work using feedback from their peers and other writing strategies. As such, our reading list will be diverse in scope, cutting across various continents, races, and creeds. We will hope to use the work on the reading list as stepping points for creating our own stories whether in response to various prompts or as original stories to be discussed in workshops. At the end of the semester, you will not only have read a good chunk of fiction and have a good sense of how fiction works, you will also have produced--and substantially revised--some of that writing.

AFAM283 Reading Against "The Propaganda of History": Reading W. E. B. Du Bois

This course will introduce students to the major works of the Black intellectual W. E. B. Du Bois (1868-1963), one of the most profound thinkers and prolific writers in American history. While his published writings are legion, Du Bois is perhaps best known for his early collection of essays titled *The Souls of Black Folk* (originally published by A. C. McClurg and Company of Chicago in 1903). In addition to *Souls*, we will read across Du Bois's oeuvre in order to reveal the extraordinary profundity and historical evolution of his thought. Readings will include (in order): (i) *The Philadelphia Negro* (1899); (ii) *The Souls of Black Folk* (1903); (iii) *Black Reconstruction* (1935); (iv) *Color and Democracy* (1945); and (v) *The World and Africa* (1947).

AFAM284 The Sociology of Reality TV: Race, Colorism, and Xenophobia

The course will explore the ways in which reality television can help us reflect on how different social identifiers such as race, skin complexion, and ethnicity operate within American culture. For many, reality TV can be easily dismissed as a guilty pleasure, escapism, or "trashy" (e.g., Dehnart, n.d.). While reality television can be labeled as an innocuous pastime, its importance and impact in American culture cannot be overlooked or denied. Moreover, the way this form of entertainment reflects American behaviors and shapes or reaffirms thinking within our society around sociological descriptors like race and culture should be studied. Through a critical lens, we will delve into the ways this genre of television portrays women of color, the audiences who watch reality TV, and whether responsibility exists on the networks who help create these shows.

AFAM285 Gender and Slavery in the Atlantic World

For most of the 20th century, historians of slavery in the Atlantic world overlooked the critical role of gender in shaping the marketplace, culture, and experience of the institution. Slaveholding and its attendant violence were presumed to be the domain of men. With a tragically limited archive, the popularity of slave narratives such as Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) reveal how the voices and perspectives of men have dominated our understanding of the enslaved experience. Since the 1980s, the work of black feminist historians such as Deborah Gray White's, "Ar'n't I a Woman?: Female Slaves in the Plantation South" (1985) have unpacked the profoundly gendered nature of slavery in colonial America, the United States, and the Caribbean. This course embarks on an exploration of this important intervention. We will engage primary sources to illuminate the voices of enslaved women and debunk some of the historical myths of slavery and slaveholding. We will also visit classic and fresh secondary literature to understand the evolution of the field. Major themes include but are not limited to the Middle Passage experience, gendered violence, fertility, reproduction and motherhood, the Southern Belle archetype and slaveholding mistresses, notions of beauty and purity in black and white, and fugitivity.

AFAM286 Literature of the Harlem Renaissance

This course will examine the aesthetics and politics of the first modern African American literary movement, known today as the Harlem Renaissance. Students will learn about the national and global contexts of this movement as well as the various debates that it generated, many of which still reverberate with Black writers today. These include the relationship between Black art and propaganda, the burdens of racial representation and the constraints of respectability politics placed on the individual Black artist, the right to opacity, and the relationship between race and form.

In this course, students will become familiar with some of the key texts of the Harlem Renaissance, its national and international contexts, and its recurring themes and debates. Furthermore, by reading and writing across a wide range of texts from this movement—including poems, short stories, novels, essays and manifestos—students will learn how to engage with a variety of genres. The assignments for this course are thus designed to teach students to write about not only specific genres, but also recurring themes in works from the Harlem Renaissance. By the final project, students will be able to pivot from writing about discrete forms and themes to writing to specific audiences.

AFAM287 Psychology and the Law

This course will offer an introduction to the range of topics that are of concern both to psychologists and to members of the legal profession. We will investigate how psychologists may enter the legal arena as social scientists, consultants, and expert witnesses, as well as how the theory, data, and methods of the social sciences can enhance and contribute to our understanding of the judicial system. We will focus on what social psychology can offer the legal system in terms of its research and expertise with an examination of the state of the social science research on topics such as juries and decision making, eyewitness testimony,

mental illness, the nature of voluntary confession, competency/insanity, child testimony, repressed memory, and sentencing guidelines. In addition, this course will look at the new and exciting ways legal scholars and psychologists/social scientists are now collaborating on research that looks at topics such as the role of education in prison, cultural definitions of responsibility, media accounts and social representations of crime and criminals, death penalty mitigation, and gender/race discrimination within the criminal justice system. This course will introduce students to this field, especially to the growing body of applied and theoretical work and resources available for study and review. Students will be encouraged to explore the connections between issues of social science and the law, translating legal issues into social scientific research questions that can then be examined more closely in the literature.

AFAM288Z "Writing Should Do Something": The Essays of James Baldwin

Baldwin's essays, both deeply personal and political, speak of a divided self in a divided country. As a Black man, he saw himself as a problem for America; as a gay man, he was a problem for many; and as a self-described "maverick," he resisted any identification other than "writer." He wrote frankly of hating, and being hated, while insisting that without love and compassion, even for those who hated him, a decent life was unattainable. In this course, we will consider Baldwin as one of the greatest essayists of his century, a social critic who believed that "writing should do something," in the words of a letter he wrote to his brother.

Baldwin began publishing to acclaim in the 1950s; he was a celebrated public figure in the fight for racial equality in the 1960s. By the mid-1970s, however, his complicated relationship both with white liberals and leaders of the Black Power movement diminished his political stature. With the Obama presidency and the emergence of the Black Lives Matter movement, his work experienced a renaissance: almost 30 years after Baldwin's death, Ta-Nehisi Coates acknowledged "The Fire Next Time," published in 1962, as the inspiration for "Between the World and Me."

This is not a theory course, either social or literary. While our supplementary material will place Baldwin's essays within their historical and social context, our focus will be on the narrative nonfiction techniques Baldwin used to such startling and timeless effect. We will read Baldwin's most famous essays, and some that are less well known. Our supplementary readings and viewings will explore his continuing influence, and the influence of Black music on Baldwin.

AFAM291 Afro-Asian Intersections in the Americas

This course explores a range of historical, cultural, and political intersections between African and Asian diasporic people in the Americas from the late 19th century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the United States

and abroad, and the 1992 Los Angeles uprising. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to interracial buddy films like *Rush Hour* (1998), to the contemporary fiction of writers such as Patricia Powell and Charles Johnson.

AFAM291Z Afro-Asian Intersections in the Americas

This course explores a range of historical, cultural, and political intersections between African Americans and Asian Americans from the late nineteenth century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the U.S., and the Los Angeles Uprising of 1992. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to the interracial buddy film *Rush Hour* (1998), and from the contemporary fiction of writers such as Patricia Powell and Charles Johnson to the sounds of hip hop. As this brief overview suggests, we will be examining a diverse selection of texts including history, fiction, ethnography, cultural studies, and film.

AFAM292 Doing Blackness: Performance Studies and Theorizing Black Identity

The idea of blackness is one that is ever shifting, sometimes in conflict with itself, and constantly accommodating new contexts. This course addresses the concept of blackness through performance, through the various methods of doing, being, and feeling that mark bodies, gestures, and places as black. It should be noted that performance, in this context, not only encompasses the framed/staged productions that have come to evoke blackness symbolically in the public imagination, but also performative approaches to evoking blackness in scholarship and the mundane negotiations of black identity in everyday life. This course centers on performance studies, but also pulls from African American studies, gender/women's studies, musicology, and literary theory in order to address both performance and blackness from an interdisciplinary perspective. Ultimately, this is a course that revels in the gray areas that exist between various competing constructions of authentic blackness and offers performance as a useful frame for understanding the simultaneous fixity and fluidity of blackness as a concept.

AFAM298 Richard Wright and Company

This course offers an in-depth consideration of the work and career of Richard Wright, a defining figure in 20th-century African American literature, and seeks to understand Wright's interactions with a wide array of mentors, proteges, and enemies. By placing Wright amid the network of supporters, admirers, and detractors who surrounded him, we will gain a deepened understanding of Wright's development and a useful map of 20th-century African American literary expression and American literary history more broadly. Writers to be covered in the course may include, along with Wright, Hannah Arendt, James Baldwin, Gwendolyn Brooks, Horace Cayton, Ralph Ellison, James T. Farrell,

Dorothy Canfield Fisher, Chester Himes, Langston Hughes, Zora Neale Hurston, Alain Locke, Gertrude Stein, Margaret Walker, John Williams, and Frank Yerby.

AFAM299 Medicine and Healing in the Black Atlantic

This course examines the ways in which Black people have conceived of health, healing, and the body since 1500. Readings, lectures, and documentary films will focus on historical case studies in Western Africa, South America, the Caribbean, and North America. We will cover topics such as herbal and environmental medicine; the intersections of religion and healing; gendered medical knowledge and labor; medical racism and exploitation; health disparities; and health activism. To help us situate these topics in the lived experiences of historical actors, we will use a variety of primary sources, including narratives of formerly enslaved people, court cases, correspondence, interviews, and print culture. The goal of this course is not simply to show how Black people have used healing practices to endure racism, slavery, imperialism, and racial capitalism: We will also emphasize how medicine and healing have been sources of joy, conflict, knowledge production, and entrepreneurship within Black communities. Lastly, we will consider the present and future of Black health and think about what it would take to make medicine and health care for all.

AFAM300 Black Phoenix Rising: Death and Resurrection of Black Lives

The Black Lives Matter Movement has renewed our collective need to theorize the value of black lives within a deluge of death and disappearance in black communities. This movement is part of a deep transnational tradition in black radical praxis that aims to transform scholarly, activist, and public discourse and public policies concerning the systemic and epistemic effects of institutional racism and the prospects for antiracist futures. How might we envision a black radical praxis that simultaneously recognizes the vitality of black lives and challenges the cultural ideas and social practices that generate and justify black people's death and suffering? This seminar traces a genealogy of black radical praxis that interrogates the necropolitics of race and positions this system of power against the prospect of thriving black people. In doing so, the course erects an interdisciplinary theoretical framework that features scholarship in critical race science studies, intersectionality, and transnational cultural studies as they inform how a black radical praxis can contribute to the uprising and raising up of black communities.

AFAM301 Junior Colloquium: The Possibilities of Diaspora

In this course, we will explore the concept of "diaspora" as a way of conceptualizing and understanding the contours of African American cultural and political history. We will read a series of studies of diaspora as a concept for apprehending the historical experience of people of African descent dispersed from an original homeland. We will see in what ways these books are in dialogue with each other, what prior conceptualizations they are contesting, and what creative possibilities they offer for those of us engaged in African American studies. We will also read autobiographies, memoirs, travelogues, and novels

that deal with the issues of diaspora. It is our hope, then, to understand how "diaspora" as a concept, metaphor, or condition can be applied to the historical knowledge we need to bring to contemporary political issues.

AFAM303 1492: States of War

This course approaches 1492 as a signifier and time-stamp of modernity. It signifies and time-stamps an ongoing war against people of African descent. It grounds systems of representation, racialization, and colonization with which we must reckon. By reading richly symptomatic, primary, historical documents about "blood," race, geography, and slavery in Saint Domingue/Santo Domingo, as well as some contemporary fiction, art, and critical theory that re-narrate and theorize Caribbean history, we will focus on the historical frame of 1440 into the 18th century. This frame holds with specific reference to Frank B. Wilderson III's notion of when the "gratuitous violence" of the Middle Ages begins "to mark the Black ontologically." We will read sometimes for imperial notions of sovereignty, Man, selfhood, force, race, land, property, and labor, and other times for Caribbean notions and narratives that are at war with said imperial, Christian, Western onto-epistemological schemata. Conceptually, the course thinks from and about Caribbean literary studies, Black critical theory, aspects of Enlightenment thought, and deconstruction.

AFAM304 Black Feminist and Trans Theories of the Hu/Man

This seminar provides an introduction to Black feminist and trans theories' interventions into the modern Western category of the human and its violent exclusions. Since their inception, Black feminist and trans theories have brought attention to the violence of what Sylvia Wynter has called our "genres of the human," and in so doing, have laid bare the very preoccupations of power that condemn the non-white, non-cisgender being to sub-Human status and death in the material and discursive economies of racial capitalism. Students will develop broad knowledge of Black feminist and trans theories' provocations regarding the intersecting identity categories that organize our world, and will be encouraged to develop their own critical approaches that are attentive to the hegemony of racialized gender and its attendant violences.

AFAM305 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice

Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover's voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet's effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric's history and practice. In this course, we will read

from African American, African diasporic, Caribbean, Latina/o/x, and Indigenous poetics, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

AFAM306 Black Middletown Lives: Documenting and Commemorating Those Enslaved Here

In this service learning course, students will do hands-on history by uncovering, preserving, and sharing Middletown's rich African American past. In particular, we will focus on the lives of the hundreds of African Americans enslaved in Middletown- an international river port built on the trans-Atlantic slave trade- in the 1700s, as well as the neighborhood that their free descendants built in the early 1800s. This early African American neighborhood (the Beman Triangle), now part of Wesleyan's campus, served as a regional and national antislavery and Underground Railroad center and home to one of the nation's first handful of independent Black churches. Students will partner with local archives, libraries, and museums to help preserve and share Middletown's remarkable 18th- and 19th-century African American past, illuminating this community's connections to regional, national, and global slavery and antislavery movements.

AFAM309 Indentured Spatialities

Inspired by many political and intellectual traditions, such as Caribbean Studies and Black Feminism, Indo-Caribbean scholars, activists, and artists have long grappled with the spatial entanglements of indentureship, slavery, and colonialism both in and beyond the Caribbean (Persadie, 2022; Hosein, 2016; Goesine, 2016). However, this canon of thought and practice needs more visibility. So, in this course, students will explore the spatial identities and experiences of "Indo-Caribbeans," descendants of "Coolie" indentureship, but IN RELATION to Black and Indigenous spatial realities that constitute the Indo-Caribbean. Through guest lectures and formal and informal written assignments, students will engage intellectually and creatively, fostering a deeper understanding of indentured spatialities. This course will require students to ground their contributions in the work of Indo-Caribbean thinkers like Patricia Mohammed and Andil Gosine and the activism of organizations such as the Caribbean Equality Project.

AFAM311 Vitalism and Black Aesthetics

What is the relationship between Black art and Black life? Does Black art, broadly construed, serve a mimetic function—merely re-presenting reality—or is it a vital expression of the essence of Blackness? These questions are at the root of Black Cultural Studies' engagements with the problem of the aesthetic. In the current conjuncture, reacting to the theorization of Black social death, many theorists have (re)turned to the aesthetic as "proof" of the mattering of Black life and "evidence" of a vibrant sociality. This course will consider the connection between (the theorization of) Black aesthetics and (the affirmation of) Black life. In so doing, we will question the political stakes of Black aesthetics, as well as the value placed upon the concept of life as such, in and through the aesthetic encounter. Additionally, we will explore ways of thinking of the aesthetic that challenge presumptions of its innate liveliness. Readings will include canonical texts in aesthetic theory and vitalist philosophy, as well as more contemporary engagements with these questions from the perspective of Black performance theory, literary theory, and Afro-pessimism.

AFAM312 Black Speculative Fictions and the Anthropocene

The genre of black speculative fiction—in the form of literature, art, music, and theory—provides a generative framework through which to (re)think understandings of race, gender, sexuality, class, the body, disability, citizenship, and the human. Often couched as taking place in the "future," black speculative fictions also engage the past and critique the present. This makes the genre a critical resource for addressing the Anthropocene. The term "Anthropocene" first emerged from the discipline of geology in 2000. Scientists proposed that Earth had entered a new epoch (following the Holocene) in which "humans" had become geological forces, impacting the planet itself. However, the term Anthropocene raises numerous questions. What does it mean to think about the human at the level of a "species"? What constitutes evidence of the Anthropocene and when did it begin? Who is responsible for the Anthropocene's attendant catastrophes, which include earthquakes, altered ocean waters, and massive storms? Does the Anthropocene overemphasize the human and thus downplay other interspecies and human-nonhuman, animate-inanimate relations? Or does it demand a (potentially fruitful) reconceptualization of the human? Further, how does artificial intelligence complicate definitions of the human and, by extension, of the Anthropocene? Centering the work of black speculative thinkers and placing it in conversation with scientific studies ranging from marine biology and geology to cybernetics, this course takes an interdisciplinary approach to the Anthropocene that endeavors to (re)conceptualize the human, ecological relations, and Earth itself. Texts engaged will include: novels, art, music, theory, and scientific studies.

AFAM314 The Black Charismatic

In this course we will explore the interplay between black politics and popular culture in the post-civil rights era. More specifically, we will examine the aesthetics of affective (commonly called "charismatic") black political leadership

by attending to Tavis Smiley's yearly "State of the Black Union" address, 2000-2010. We will rely almost entirely on film, video, and digital archives in order to trace the eleven-year-long evolution of Smiley's annual event, while focusing our hermeneutic attention on the racialized and gendered performances of Louis Farrakhan, Michael Eric Dyson, Cornel West, and others. Through close readings of their televised performances, then, this course will require students to think and write about the practice and rhetoric of the black charismatic. How might the black charismatic threaten to undermine the political opportunities afforded by the success of the modern civil rights movement? How did Smiley's yearly event create the illusion of a black public sphere? What are the unintended consequences of substituting affect for political action? Similarly, what are the potential perils of a politics that results in ephemeral catharsis without dangerous political consequences? While participating in the general discussion across the semester, students will be searching out specific research topics of their own, topics relating the seminar conversation to original research questions about: the new liberalism of black politics; the crisis of the black public intellectual; the importance of technology (particularly the ways in which new media have changed, even upended the political habitus itself); and the relationship between gender (particularly black masculinity), charismatic leadership, and respectability politics. Authors will include (in no particular order): Adolph Reed, Richard Iton, Hazel Carby, Hortense Spillers, Houston Baker, Erica Edwards, Melissa Harris-Perry, and others.

AFAM315 Black Literary Theory

This course will bring together readings both literary and critical/theoretical, beginning with Frantz Fanon's "Black Skin, White Masks" (1952). Taking Fanon as its point of departure, then, this course will necessarily turn to a discussion of the recent discourse on Afro-pessimism and Black optimism, attempting to introduce students to important issues and questions of race, race relations, anti-Black racism, Black sociality, the universality of whiteness and white supremacy, the fungibility of the Black body, and the vulnerability and precarity of Black life; and together we will think more closely about how the complex and "unthinkable" histories and afterlives of chattel slavery, racial capitalism, settler colonialism, and the Middle Passage, for examples, continue to challenge the representational limits and potentialities of traditional literary genres and modes of emplotment. In addition to Fanon, authors will include Orlando Patterson, Toni Morrison, Hortense Spillers, Saidiya Hartman, Achille Mbembe, Frank Wilderson, Jared Sexton, Fred Moten, and others.

AFAM316 Carceral Connecticut: Middletown Stories of Race and Redevelopment

In the 1970s, during nationwide "urban renewal" or Redevelopment, the city of Middletown demolished an entire African American neighborhood to make parking lots and Route 9 on-ramps. Called the South End, this neighborhood had been Middletown's Black business and community center for decades.

Why did city officials see this neighborhood as disposable and its residents as displaceable? When, why, and how did this Black neighborhood form, and how did its residents experience, respond to, and navigate the displacement of urban

renewal? What can this lost neighborhood--less than half a mile from Wesleyan University's campus--teach us about the history of race, inequality, housing, carcerality, segregation, and Black community and community resilience and resistance in the 20th century, and what lessons can this history teach us today?

In this Community-Engaged Learning course, you will not only read assigned primary and secondary sources. You will also conduct your own archival research and interview former South End residents to record, preserve, and share the largely undocumented history of this neighborhood and its legacies.

Although this course is entitled Carceral Connecticut and is one of the courses associated with the Carceral Connecticut Project (carceralconnecticut.com), of which Prof. Nasta is one of four Wesleyan faculty investigators, we will not focus primarily on prisons or incarceration. Rather, we will explore carcerality as a broader set of practices and policies that have structured the world--including 20th-century Middletown--in ways that reinforce racism and racial inequality, including policing, segregation, and displacement. At the same time, we will pay equal attention to how Middletown's Black community has created institutions and neighborhoods that have resisted and responded to displacement, containment, and other carceral practices.

AFAM320 Integrative Learning Project 2: Website Incubator

Have you developed knowledge or expertise about a topic through an internship, engagement in a student organization, time studying abroad, or through some other experience that you would now like to share with the world? This is the class for you! Throughout out the semester, you will work to translate your experience into a website. I will help you do this by asking you to think about the content you would like to share, the audience with whom you would like to share it, and the goal you have for that audience. Ultimately, you will share your experience through WordPress, the world's most popular platform for website design. Along the way, you will learn about user experience (UX) design principles and research methodologies, so that the website you create draws in your audience and makes them want to learn more about your chosen topic. Throughout the semester, we will meet once a week to do all of these things in a relaxed, collaborative environment. Join us and bring along some friends!

AFAM322 Black Girl Magic?: Survival and Speculative Fiction in the Social World

"Black Girl Magic?" explores and examines the sociological origins, usages, and deployments of the now-popular hashtag. Shortened from "#BlackGirlsAreMagic," coined by CaShawn Thompson in 2013, #BlackGirlMagic has seen its share of celebration and controversy. Used by and for figures such as former First Lady Michelle Obama and Janelle Monae, the hashtag appears almost everywhere to provide exemplars for the resilience of Black women and girls. However, some critics have questioned trending characteristics among those who have been branded with the hashtag--cisgender, well-to-do, fit/thin, non-disabled, and/or famous--and have asked since the beginning: To whom exactly does this phrase belong? Who does it include? And why should we use it? This course aims to survey all those questions and more. It will highlight Black

women, trans and gender non-conforming writers, as well as sociologists and those not officially affiliated with the field, to deepen our understanding of Black life experiences in a global social world. We will dive into and deconstruct what we know about concepts such as "survival," "joy," "imagination," and "community" via Black feminist thought, queer/quare studies, popular culture, political science, speculative fiction, and cultural sociology.

AFAM323 Staging Blackness: African American Theater

This course surveys the dynamism and scope of African American dramatic and performance traditions. We begin with a deep historical examination of 19th century blackface minstrelsy that then progresses into a long-view of how black American dramatists and theater-makers have self-fashioned black dramatic narratives, black aesthetics, and black representations into the twenty-first century. In all cases, we are interested in surveying the ways in which these artists work within varying modes of dramatic expression and focus their plays and performances on such topics as class, ethnicity, era, fragmentation, gender, history, region, revolution, nationality, race, sexuality, and spectatorship.

AFAM325 Blackness and Affect

Critical theory and the humanities are in the throes of what has been termed "the affective turn," wherein scholars theorize affect--broadly construed as social feeling or bodily intensity--as central to understanding (post/human) relationality, the social, ethics, and the political. Haunting this field of inquiry is a series of questions: Can a turn to affect account for the figure of the Slave? Can an embrace of affectivity, as potential, bring Blackness into the realm of our understanding "without trying to fill in the void" (Hartman)? Rather than conceptualizing affect as the connective thread between bodies and worlds, or as a purely relational force, how might we think about affect and non-relationality; affect outside of and against the world; affect without the body? This seminar will engage these, and related, questions through extended explorations of the relationship between affect theory and Blackness. Readings will include: Frantz Fanon, Lauren Berlant, Brian Massumi, Sarah Ahmed, Rizvana Bradley, Xine Yao, Sianne Ngai, and Darieck Scott, among others.

AFAM326 Litanies for Survival, Plots for Revolution

This seminar centers black-feminist and queer-of-color theory, literature, and art from the 1970s to the present in order to interrogate and reimagine revolution and revolutionary praxes. We will examine the interrelatedness of art and activism, hope and despair, collaboration and erotics. Key questions include: How does "survival" put pressure on "revolution," and vice versa, particularly in light of contemporary and imminent catastrophes, local and planetary? How does a joint consideration of survival and revolution affect interpretations of the past, understandings of the present, and imaginings of the future? What political work might intellectual and creative labor perform? Is revolution an event, a practice, or both? A useful term or a ruse?

This seminar is offered in conjunction with the Center for the Humanities' Fall 2018-Spring 2019 theme, "Revolutions: Material Forms, Mobile Futures." Assigned readings will include the work of scholars participating in the Center's Monday night lecture series, and students will be required to attend several lectures over the course of the semester.

AFAM327 Biopolitics, Blackness and Spirit Baptism: The Birth of American Pentecostalism

American Pentecostalism is a conservative, Protestant, Evangelical revival movement that emerges in and through Black practices that constitute an exclusion in the racialized religious, social, cultural, and political formations of early 20th-century United States. Rather than examining Pentecostalism through a single lens called "religion," this course will use the themes of Biopolitics and Blackness to examine Pentecostalism through its most commonly known feature--an experience called the baptism of the Holy Spirit. Pentecostals were narrated in popular and critical accounts in the late 19th and early 20th century as exhibiting criminality, insanity, and raced, gendered, and sexed Black pathology. These marks of abnormality were all part of a formation of power in America known as biopolitics. As an idea, biopolitics is popularized by French

historian/philosopher Michel Foucault. Foucault's concept attempts to explain how different intellectual and professional disciplines emerge in nations during the late 19th and early 20th centuries to best create a thriving population, which could be made to live. The power of the nation-state had traditionally been expressed in and through the power to kill. As a revival movement, Pentecostalism rehearses these themes, as early adherents fight over what it means to be made alive when racial Blackness is almost often seen as a mark of and for death. The course will study original accounts and sources from the historical period, read critical, interpretive accounts, and use a variety of media. All resources will be provided in class or via Moodle.

AFAM331 Queer and Trans Aesthetics

This seminar will consider contemporary trans and queer theory foregrounding race, class, disability, migration, diaspora, indigeneity, and colonization alongside the work of BIPOC queer and trans artists in particular. The course's animating (and unfixable!) questions include: How do artists produce and intervene in understandings of gender and/or sexuality through their work? What does it mean for an artist or viewer to describe an image, object, or performance as "queer" or "trans"? What constitutes a "queer" or "trans" reading of visual culture? How might various formulations of "queer" and "trans" relate to, put pressure on, and/or resist "aesthetics"? What is the relationship between an artist's self-identification and/or their resistance to categorization (e.g., in terms of race, gender, sexuality, disability, class, nationality) on the one hand, and audiences' efforts to engage and interpret their art on the other? Put another way: What, if anything, does an artist's "identity" (asserted and/or imposed) have to do with their art? And what does a viewer's "identity" (asserted and/or imposed) have to do with how they approach and interpret visual culture? Several artist talks and/or class visits (all virtual) are being organized in conjunction with the seminar.

AFAM334 Special Topic: Something in the Air: Mining the Oral/Aural Tradition in African American Poetry

In his book-length manifesto, *Poetry as an Insurgent Act*, Lawrence Ferlinghetti claims that "the printing press killed poetry." What he seems to be lamenting--at least, in part--is the privileging of the written word to the detriment of poetry's musical, or aural, qualities. In this advanced-level workshop, we will focus on the poem as something intended to be read aloud and listened to. This course will also examine the roots and evolution of the African American oral poetic tradition with special attention paid to the rhetorical strategies derived from the black church, adopted by civil rights leaders and speech writers, and used to varying degrees by poets ranging from those of the Black Arts Movement of the 1960s and '70s to practitioners of contemporary hip-hop and spoken word. Some of the poets under consideration include Amiri Baraka, Oscar Brown Jr., Jayne Cortez, Gil-Scott Heron, June Jordan, The Last Poets, Carl Hancock Rux, Sonia Sanchez, Patricia Smith, Jessica Care Moore, Laini Mataka, and Saul Williams.

AFAM335 Fugitives and Freedman: The Politics of Slavery in the Civil War Era

The actions of fugitive slaves and newly-freed people turned the crisis of American union into a war for emancipation. Questions of slavery's expansion, permanence, and end dominated the political discourse of the United States from 1848 through 1877. This course will examine the ways in which political actors, especially African Americans, kept the twin issues of slavery and emancipation in the public sphere to restructure American society in the middle of the 19th century.

AFAM336 Black Texts, Lost and Found

This course examines histories of loss and recovery of black texts in the US and the Atlantic world more broadly. We will bring a three-pronged approach to our subject matter. We will analyze first the constitutive silences of the archive: epistemic and material neglect, or what Michel Trouillot has termed the "silencing of the past"; second, the preservation efforts of black newspaper editors, librarians, and bibliophiles; and third, the "counter-archiving" work of Afro-diasporic historical and speculative fiction. As we traverse different periods and empires we will consider what the concepts of the "black archive" and "black ephemera" mean to different disciplines. We will study the repressions of black Arabic writing practices in the US South and our fragmentary recovery of them in the late 20th century, unfinished novels about Black Atlantic revolutions such as Martin Delany's "Blake," incomplete runs of historic black newspapers, debates about the illusions and desires of "recovery," and the criteria that determine what counts as ephemeral and when.

We will move across different media, from print--"I, Tituba," "M Archive," "Blake," "(Dis)forming the American Canon: African-Arabic Slave Narratives and the Vernacular"--to films--"The Watermelon Woman," "Looking for Langston," "The Last Angel of History"--and from digitized databases of photographs at the ongoing archiving project The Missing Chapter: Black Chronicles to digitized newspaper archives.

AFAM343 Empires of Captivity: The Resurgence of Atlantic Slavery in the Age of Emancipations

The dawn of the 19th century was marked by a series of challenges to Atlantic slavery, epitomized first by the unprecedented victories of the Haitian Revolution and then by the implementation of municipal bans and bilateral treaties that sought to limit the international trade in African captives. Yet seemingly paradoxically, this same period saw the rapid expansion of new zones of enslavement stretching from the U.S. South to Cuba, Brazil, and beyond. Proslavery forces mobilized across these jurisdictions in order to reverse the tide of abolition and to participate in (or simply to profit from) a burgeoning illegal trade in captives. Meanwhile, people of African descent who were enslaved or re-enslaved during this period built upon the precedent of emancipation in Haiti and other antislavery jurisdictions as they mounted claims to freedom for themselves, their families, and their communities. They continuously pushed forward the halting pace of general emancipation, laying the foundations for struggles for recognition and restitution that continue to the present day.

AFAM344 The Haitian Revolution Beyond Borders

In 1791, enslaved people rose up against their masters in the French colony of Saint-Domingue, at the time the most profitable plantation society in the world. Thirteen years later, their efforts would culminate in the declaration of independence of Haiti, a nation founded on the pillars of antislavery, anticolonialism, and racial equality. This course investigates the regional and global significance of this revolution through its interconnections with Haiti's neighbors in the Caribbean and across Latin America. First, we will look at the immediate implications of Haiti's founding for the fate of New World slavery during the Age of Revolutions. Next, we will consider Haiti's long-term impact on national identities, racial formations, and future revolutionary struggles in the Americas over the course of the 19th and 20th centuries.

AFAM345 Writing Against Racism

You are millennials, comfortable with greater diversity than older generations. You are anti-racist and against other interrelated forms of oppression. How will you make your voice heard? This seminar will explore writing that supports students in deploying their academic knowledge in public debates about immigration, abolition, feminism, and in particular, race and anti-racism. Such writing may include op-eds and letters to the editor; book, film, and music reviews; blogs; and interviews with scholars, artists, and activists. Students will write weekly and revise their work in response to comments from the instructor and their peers.

AFAM347 Black Grammars

In her text *In the Wake: On Blackness and Being*, Christina Sharpe argues that Blackness, due its rearrangement of and resistance to hegemonic modes of meaning making, is "anagrammatical." As a concept, anagrammatical Blackness points to "the failure of words and concepts to hold in and on Black flesh." Taking this provocation as a point of departure, this course will consider the relationship between Blackness and the grammatical, with a particular focus on rhetoric and poetics. Each week will focus on a particular rhetorical figure or grammatical concept: subject, metaphor, metonymy, apostrophe, tense, irony, catachresis, parataxis, etc., considering how Blackness shifts our understandings of their operations. Readings will include Ronald Judy, Barbara Johnson, Jacques Derrida, Zakiyyah Iman Jackson, Fred Moten, and Paul de Man, among others.

AFAM350 The Law, the Citizen, and the Literary and Cinematic Imaginations

In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimaged in literature and cinema. Among the topics

discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporalities. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they reveal the rifts and conjunctions among the categories citizen, "savage," "gente sin razón," slave, illegal, pervert, and deviant.

AFAM351 Queer of Color Critique

This course will examine and interrogate the field of queer studies with particular focus on the ways in which queer scholarship and queer political movements function alongside critical race theory, ethnic studies, and sociopolitical antiracist efforts. Students will be asked to consider the history of queer studies and queer politics, the contemporary state of queer movements, and future visions of queer life. We will take an interdisciplinary approach, and we will rely upon a diverse range of theoretical, historical, and cultural studies texts. We will explore the normative parameters of both sexual and racial identities, probing the terms of identification to consider their meaning in the contemporary moment and in relationship to various cultural, social, legal, and political milieus. Throughout the course we will consider, What does it mean to study queerness and to study race? How do institutions--religious, legal, and scientific--shape our understandings of both queer and racial identities? In what ways do sexuality and race interact, and how does this interaction inform the meanings of each of these identity categories? Furthermore, how have queer movement and scholarship both supported antiracist efforts and, also, how have they been complicit in cultural and institutional forms of racial oppression? How do other social categories of identification such as gender, ethnicity, and class, shape the ways in which we understand expressions of race and queerness?

AFAM352 Black Thought and Critical Theory

This course follows Stuart Hall's insistence in "What is this 'Black' in Black Popular Culture?" that the theoretical articulations of "blackness" are always "conjunctural." We will investigate how black thought has been conjoined with critical theory through phenomenology, pragmatism, Marxism, semiotics, and psychoanalysis. In our readings of a variety of 20th- and 21st-century thinkers, we will elaborate the philosophical richness and contradictory tensions embedded in the notion of "blackness" at specific historical and theoretical conjunctions. How is "blackness" useful for social theory? Must we assume there is a transhistorical identity to "blackness"? In what ways does "blackness" conjoin with the conceptualizations of gender, sexuality, class, and religion? Black thought and critical theory is the provocation that we attend to the tensions these questions raise. In this course, we will read the works of James H. Cone, Cornel West, Hortense Spillers, Saidiya Hartman, Sylvia Wynter, Denise Ferreira da Silva, Frank Wilderson, Calvin Warren, Tommy J. Curry, Stuart Hall, and Frantz Fanon.

AFAM353 Blackness in the Anthropocene

To deny the "unprecedented" geological impact of humans' force on nature is now practically untenable. Theorists in the humanities, nonetheless, remain unimpressed with what this "new era" has afforded us in terms of critical potential. From accusations that what we now call the "Anthropocene" has merely established a hegemony of brute facts at the expense of critique, to concerns about the multiple ways in which the term continues to obscure catastrophic socio-ecological relations, it is fair to say that the scenes of the "Anthropocene" are still contested terrains. The aim of this course is to investigate the Anthropocene's many forms of socio-political erasures and theoretical "blind-sights." We will examine the ways in which Anthropocene discourses have been powerful at disavowing racial antagonism in our current ecological crisis. More specifically, in this course, will study the ecological negative effects on black communities around the globe with the aim to questions the shortcomings of ethics in Anthropocene times. We will explore questions like "who are 'recognizable/legitimate' victims in environmental disasters," "do events like hurricane Katrina or the migration crisis teach us anything about our human condition," and "what is the 'post' in post-humanism." We will read philosophical works ranging from Immanuel Kant and Baruch Spinoza to Rosi Braidotti and Karen Barad.

AFAM354 Social Science, Black Life: Wells-Barnett, Du Bois, and Hurston's Empirical Experiments

This class has two interrelated areas of focus: first, the racist habits of imag(in)ing blackness's presumed racial-sexual difference that preoccupied social science in the late 19th and early 20th centuries; and second, the formative role that social scientific research and methods played in black people's quests for institutional inclusion during this same period. In their early years, canonical sociology and anthropology consistently proved unable to capture the beauty and complexity in black life, instead lending empirical authority to cultural ways of seeing blackness as inherently pathological. A counter-discourse of black expression took shape, attempting to overcome the negative impact that dominant empirical thought might have on black peoples' struggle for normative citizenship. Focusing particularly on the careers of Ida B. Wells-Barnett, W.E.B. Du Bois, and Zora Neale Hurston, we will explore the contradictory relationship that subsequently emerged between blackness and institutional power--discernible in empiricism's primacy during the long era of postbellum black inclusion. Rather than seeking evidence of black intellectuals' departure from empiricism and its attendant violences, we will explore the messiness of their efforts to experiment with and imagine beyond their misrepresentation and erasure in dominant empirical discourses. Indeed, black artists and intellectuals sometimes recapitulated the violence of empiricist paradigms and their enabling truth claims despite their sound political intentions. In considering the nexus of social science and black life in this period, then, we will also consider the intramural politics of racialized gender, the myriad costs of institutional incorporation, and the stubborn durability of epistemological authority. Secondary texts include works by Hazel Carby, Roderick Ferguson, Kevin Gaines, Julian Go, Avery Gordon, Saidiya Hartman, Katherine McKittrick, Reiland Rabaka, Michel-Rolph Trouillot, Autumn Womack, Alexander Weheliye, Sylvia Wynter, and others.

In 1946, the African American novelist Ann Petry imagined what a white schoolteacher might think about working with black students in Harlem, New York: "Working in this school was like being in a jungle. It was filled with the smell of the jungle, she thought: tainted food, rank, unwashed bodies." Petry had herself worked in Harlem schools. She also held credentials from well-heeled white schools in Connecticut. Despite her own academic success, she questioned the inherent value of schools that regarded black children as if they were untamed savages. Challenging prevailing narratives of excellence and achievement, this course examines fugitive perspectives of black, Indigenous, LGBTQ, and poor folks who resisted compulsory schooling and avoided conscription into so-called civilized society. If, as historian Michael B. Katz has argued, US schools "are imperial institutions designed to civilize the natives; they exist to do something to poor children, especially, now, children who are black or brown," then why should any self-respecting black or brown child endure such schooling? What might so-called truants, illiterates, failures, burnouts, dropouts, and delinquents teach us about education and civil society? The history of education, however, has largely been interpreted from a biased perspective--namely, those who have been successfully schooled. We will therefore search for contrary voices in fragments of oral culture, ranging from slave narratives to folktales and recorded music. Contemporary scholarship will inform our analysis. Interdisciplinary scholars such as James Scott, Eric Hobsbawm, Tera Hunter, Saidiya Hartman, Lisa Brooks, and Audra Simpson will illustrate how to read against the grain and unearth hidden transcripts from classic authors such as W.E.B. Du Bois, Carter G. Woodson, Anna Julia Cooper, and Gertrude Simmons Bonin.

Offering: **Host**Grading: **OPT**Credits: **1.00**Gen Ed Area: **HA-AFAM**Identical With: **EDST358**Prereq: **None****AFAM361 The Psychology of Prejudice and Discrimination**

This seminar offers a social psychological analysis of different forms of prejudice and discrimination, including racism, sexism, anti-Semitism, heterosexism, and less recognized forms of bias, such as the exploitation and control of indigenous peoples, animals, and the natural environment.

Offering: **Crosslisting**Grading: **A-F**Credits: **1.00**Gen Ed Area: **SBS-PSYC**Identical With: **PSYC361**Prereq: **PSYC260****AFAM363 Visualizing Black Remains**

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of repatriation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and repatriation?

Offering: **Crosslisting**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-CHUM**Identical With: **CHUM362, ANTH362, ENGL363, FGSS362, THEA362**Prereq: **None****AFAM369 Performance Remains: Slavery in the Black Dramatic Imagination**

As sociologist Orlando Patterson notes, "In the absence of historical records, one way to explore the inner lives of slaves is to exercise one's literary imagination" (Slavery and Social Death, 2018). Taking direction from Patterson, this course is interested in mining the literary imagination of contemporary Black playwrights who are interested in recovering, reconstructing, rewriting, repairing and, in some cases, revolting against the fragmented and muted histories of the African slave trade and the lost experiences of the Black lives therein. From Aimé Césaire's *A Tempest* (1969), a bold postcolonial adaptation of Shakespeare's *Tempest*, to Winsome Pinnock's *Rockets and Blue Lights* (2020), an examination of British history inspired by two 19th-century paintings by the English romantic painter J.M.W. Turner, our plays originate from the Caribbean, England, and the United States. As African diasporic texts, these plays are exercises in the dramatic power of Sankofa, a principle derived from the Akan people of Ghana, meaning that the plays become the vessels through which audiences, readers, and characters return to the past in order to better understand and move forward in the present. We will engage in a thorough exploration of form, region, dialect, adaptation, and aesthetics, among other aspects, as we align lost and documented histories with dramatic conjuring.

Offering: **Crosslisting**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-ENGL**Identical With: **ENGL369, THEA369**Prereq: **None****AFAM370 Afro-pessimism, Gender, and Performance**

This class engages African and African diaspora critical thought and aesthetic production (dance, visual art, performance art, installation, film) to think about colonial dispossession, objectification, and reparation. We will address topics such as the repatriation of artifacts and other ephemera taken from Europe's colonies that are housed in the archives of European cultural institutions. The objects in question have been described as either artwork, artifacts, or anthropological fetish objects (depending on which field one engages with). How can we rethink our understanding of objecthood as irreducible to "inanimate" things but as also signaling a regime of imperial domination and enslavement that violently turned African personality into a status of objecthood? What does it mean to think about the object (broadly defined) in relation to loss and the (im)possibilities of repatriation and reparation? How does the Black performer's body's disappearance/remains endow the Western art institution? The course will encourage students to think about repatriation as well as certain losses that can neither be repaired/repatriated nor evidenced in conventional ways. In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, as well as the promises and ends of reparation? The assigned readings offer ways to think about colonial archives not merely as neutral repositories of past events, but also as performances; as enactments of power, aesthetic value judgment, and hierarchical arrangements of knowledge production. The theoretical, art historical, psychoanalytic, philosophical, and creative reading materials engage contemporary scholars', artists', and activists' response to both the recorded and ephemeral archives of Black dispossession. Students are encouraged to engage in events and workshops outside of the classroom, such as visiting library archives, attending performances, gallery exhibits, and film screenings.

AFAM371 Sister Acts: Black Feminist/Womanist Theater of the African Diaspora

This course surveys the dynamism and scope of contemporary feminist/womanist drama written by black women playwrights of the African Diaspora. Reading select plays from Africa, Canada, the Caribbean, England, and the United States, alongside theory and criticism, we examine the impact of race, gender, identity, and sexuality politics on black feminist/womanist theater. Throughout our study of these dramatic texts, their performances, and their subsequent critiques, we are equally invested in the bridges and the gaps, the audibles and the silences, and the overlaps and the divides, as they are formed. Significantly, this analytic undertaking involves a simultaneous critique of the role of the playwright, the spectator, and the critic of black feminist/womanist theater. At all times, consideration is given to the ways in which these playwrights collectively use theater as a platform to explore black and female and diasporic subjectivities across regional, national, and, at times, linguistic differences.

AFAM372 Negativity in Black Critical Thought

Lack, nothingness, negation, the void, the abyssal, absence, wretchedness these and other corollary terms are omnipresent grammars within Black critical thought's attempts to explicate the singularity of Blackness. Conversant with philosophical genealogies of pessimism, nihilism, and negativity, this course will examine various theorizations of the relationship between Blackness and the negative. Rather than framing negativity as essentially apolitical or unproductive, this course will consider what a fidelity to the negative portends for questions of Black politics, Black theorizing, and revolutionary action. In so doing we will pay particular attention to questions of affect, gender, sexuality, aesthetics, and psycho-politics.

AFAM375 Black Global Cities

In this course, we will analyze representations of cities and Black urban modernity in Afro- diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial sites Black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week's readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discreet, bounded places. To this end, we will trace how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabea Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as *Girlhood* (2014), *Black Panther* (2018), *The Harder They Come* (1972), *Bad Friday: Rastafari After Coral Gardens* (2011), *Welcome to Nollywood* (2007).

AFAM391 Unsovereign Elements, Caribbean Poetics

This course aims to study and question sovereignty, begin to theorize "unsovereignty," and stake out what may be meant by "anticolonial imagination" in literary and other aesthetic forms, as well in the theories of history that it arranges under its name, "Unsovereign, Caribbean." Unsovereignty and the anticolonial will not be imagined as exact and liberated opposites of sovereignty and colonialism, but rather as epistemically and linguistically entangled therewith, and inviting further thought from Afro-Caribbean historical and deconstructive vantages. By reading richly symptomatic, primary, historical documents about race, geography, and slavery in San Domingue/Santo Domingo, as well as contemporary fiction, art, and criticism that re-narrate and theorize Caribbean history, we will focus on the historical frame of ~1492 into the 19th century. This frame holds with specific reference to Sara E. Johnson's notion of a foundational "state of war" against black people in the Americas and Frank B. Wilderson III's notion of when the "gratuitous violence" of the Middle Ages begins "to mark the Black ontologically." The 19th century will be studied comparatively, and not as the era of heralded "emancipation," but of abduction, re-enslavement, "travestied freedom" (Hartman), anti-emancipation (Eller), and white psychosis. We will read sometimes for imperial notions of sovereignty, force, race, property, and labor, and other times for Caribbean notions and narratives that are sometimes at war with and sometimes in bed with said imperial schema and this episteme. In the face of some contemporary critical theoretical tendencies to use terms like "fugitivity," "resistance," "freedom," "abolition," "the commons," etc., as ones that are equally at stake for all, or that signify one shared known, fixed, and agreed-upon meaning, we will, rather (and especially), attend to the historical specificity and signifying work of marronage in the Caribbean region and the complex tropology of unsovereignty and "unruliness" in the Caribbean. Conceptually, the course thinks from and about Caribbean studies, Black critical theory, Black studies, Enlightenment thought, and Deconstruction. Students who want to nerd-out on critical theory, history, and Caribbean aesthetics are encouraged to apply.

We will study digitized versions of imperial naval and commercial maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal documents), including the writing and thinking of Christopher Columbus, Moreau de Saint Mery, Baudry des Lozieres, María de las Mercedes Santa Cruz, Immanuel Kant, and G.W.F. Hegel. We will also read selections from some of the following scholars, artists, writers: Colin Dayan, Sara E. Johnson, Evelynne Trouillot, Jacques Derrida, Robin Derby, Maryse Conde, Alejo Carpentier, Demetrius Eudell, Anne Eller, Dixie Ramírez D'Oleo, Ronald Mendoza de Jesús, Frank Wilderson III, Walter Benjamin, Gayatri Spivak, Aimé Césaire, Beatriz Santiago Muñoz, Joiri Minaya, Jean Rhys, and others.

AFAM392 Black Grief Geographies

This course introduces students to literature and practices centered on post-slavery and post-colonial bereavement. Employing an interdisciplinary framework of Black Geography, Feminist Geography, and Post-colonial thought, students will examine the spatial orientations of Black grief and mourning. Here students will also evaluate the connections and frictions between queries on emotional geographies and Black grief. What are the affective and material forces of Black grief and mourning and do they vary by place? How can we read Black grief and mourning beyond narratives of dispossession? What are the human and non-human assemblages that constitute Black grief and mourning? Is it possible to repair infrastructures that mark Black death? This course invites students to meditate on the above questions as well as to apply Black framings on grief to their own research by developing a 15-page visual essay or a 30-minute in-class lecture that draws on any of these questions.

AFAM393 The Library: Its Past, Present, and Future

The library is both a repository and a site for disciplining information. It is, at once, a space for democratizing knowledge and a locus of exclusion. A lifeline and a tomb. A place of radicalization and community, but also the handmaiden of state power. Indeed, the library's vexed role in the history of Western colonization has prompted scholars of African and postcolonial literature like Simon Gikandi to ask whether one can be a revolutionary in the library. This question has shaped the archiving sensibilities of African American collectors and librarians like Arthur Schomburg and Dorothy Porter Wesley as well as those of contemporary Black librarians and artists. This will be one of the central questions we explore in this course, too. We will examine artistic and literary representations of libraries, archives, and museums ("The Library of Babel," The Shadow Book, Lote, The Name of the Rose, Voyage of the Sable Venus, Yinka Shonibare's "The British Museum"), paying special attention to the fantasies, nightmares, and cultural narratives that cohere around the idea of the library. We will pay special attention to the place of the library in the Black literary imagination and to the theoretical and political interventions that Black librarians and bibliophiles brought into systems for categorizing and recovering knowledge.

AFAM395 Black Cinema in the U.S.

What is Black Cinema? Is it, as Tommy Lott has claimed, a critical intervention that resists the "Hollywood master narrative"? Or, as Michael Gillespie claims, does it enact and perform the visual possibilities beyond any commitment to a "Black lifeworld"? This class does not attempt to answer these questions. Instead, it turns the lens of these questions onto the stakes, creativity, and possibilities of what we will encounter as Black Cinema. This class explores Black Cinema in the United States, examining the works of Oscar Micheaux, Spencer Williams, Melvin Van Peebles, Kathleen Collins, Boots Riley, Terrance Nance, and more.

AFAM396 Jazz Orchestra I

This course is for those with commitment to the American musical tradition called jazz. Skill and experience are highly desirable but, consistent practice is the biggest prerequisite. Small and large-ensemble repertoire composed by Duke Ellington, Charles Mingus, Thad Jones, Thelonious Monk, Charlie Parker, Fletcher Henderson, John Coltrane and many other composers will be deeply engaged. Intensive practice and rehearsal of the compositions, as well as class presentations of readings, will lead to development of ensemble and solo skill. The commitment to rehearsal of the compositions, as well as listening and reading assignments, will culminate in an end of semester public concert.

AMERICAN STUDIES (AMST)

AMST110F Hawaii: Myths and Realities (FYS)

This course explores the symbolic myths of Hawai'i and Kanaka Maoli (Native Hawaiians) in contrast to material realities relating to colonialism, land, nation, gender, race, rank, class, self-determination, and contests over indigenous and Western sovereignty. The course covers the pre-colonial period, examines Captain Cook's ventures in the Hawaiian Islands, the founding of the Hawaiian Kingdom, constitutional development of the Hawaiian Nation, the Kamehameha Dynasty, Calvinist missionization, the history of written literacy, the privatization of Hawaiian land use, gender transformations, the colonial regulation of sexuality, plantation labor, Kalakaua's governance, the reign of Queen Lili'uokalani, and the US-backed overthrow of the monarchy. From the US takeover, the class examines the unilateral annexation and 20th-century colonial policy to 1959 statehood with an emphasis on indigenous self-determination, decolonization, and indigenous nationalism through the contemporary period in relation to both US federal policy and international law with a focus on land struggles. Films will complement the course readings.

AMST115F Reproductive Politics (FYS)

This course explores the history and current status of reproductive politics in the United States. By prioritizing issues of difference, including race, gender, sexuality, disability, and class, the course will consider how scientific and bioethical concerns intersect with matters of cultural ideology and social control. Issues covered will include: the history and legacy of the birth control movement; the ideological construction of "infancy"; changing attitudes towards pregnancy and childbirth; gendered and racialized conceptions of parenthood; abortion rights; the fetal personhood debates; the regulation of pregnancy within incarcerated and institutionalized settings; genetic engineering; reproductive justice; and so on.

AMST117F Social Norms / Social Power: Queer Readings of "Difference" in America (FYS)

This American Studies FYS is an interdisciplinary exploration of the privileges and penalties associated with "the normal" in the United States. We'll be centrally concerned with the ways bodily difference and social identity interarticulate with "normalness," locating individuals within hierarchical power structures. What is "normativity," if not a statistical norm? How are regimes of normativity produced, reproduced, and challenged?

Our focus is on queer studies, which we will approach through an intersectional lens, paying careful attention to the ways race, ethnicity, indigeneity, class, disability, gender, and sexuality intersect in social terrains of power. We will unpack and explore key concepts in American studies, including settler colonialism, compulsory ablebodiedness, heteronormativity, biopolitics, neoliberalism, and ideology, drawing on a range of genres and disciplines, including memoir, ethnography, film, and theory in disability studies, queer theory, critical race studies, Marxist feminism, Native American studies, and trans studies. Along the way, we will encounter problematics ranging from disability and the "normal" to the American Dream, the "wedding-industrial complex," sexual "deviance" and desire, racialized state violence, the privatization of the public space, and the politics of queer/LGBT activism.

As a First Year Seminar, this course is writing-intensive and is structured to give you ample practice in core writing, reading, and presentation skills needed at Wesleyan. This course is part of the Queer Studies and the Disability Studies Course Cluster, and it is cross-listed in FGSS.

AMST121F Are You a Feminist? (FYS)

Taking our cue from Beyoncé and the debates her music has produced, this First Year Seminar investigates the meaning of feminism by considering how writers, artists, activists, academics, and public intellectuals discuss the topic. Students' curiosity about feminism - as topic, politics, identity, and practice - will guide class meetings where we will discuss readings by prominent feminist writers, scholars, and critics. Students will leave the course with a clear sense of themselves as writers and thinkers, as well as an understanding of the ways in which gender and sexuality intersect with race, class, and other social identities and of the multiplicities of feminisms in our contemporary moment.

AMST122F Race and Identity in 21st Century Literature (FYS)

This course will center on race and identity in contemporary American literature by focusing on novels written by Jhumpa Lahiri, Colson Whitehead, Junot Diaz,

Tommy Orange and Ocean Vuong as well as plays by Lynn Nottage, Quiara Alegria Hudes, Ayad Akhtar and Jackie Sibbles Drury. Extra readings will include poems and short stories. We will consider the portrayals of race, identity, class, ethnicity, religion, trauma, citizenship, migration and sexuality in these works, as well as the ways in which these authors conceptualize and problematize American identity.

AMST125F Staging America: Modern American Drama (FYS)

Can modern American drama--as cultural analysis--teach us to reread how America ticks? Together we will explore this question as we read and discuss some of the most provocative classic and uncanonized plays written between the 1910s and the present. Plays by Susan Glaspell, Eugene O'Neill, Mike Gold, workers theater troupes, Clifford Odets, Tennessee Williams, Arthur Miller, Amiri Baraka, Arthur Kopit, Ntozake Shange, Luis Valdez, David Mamet, Tony Kushner, Ayad Akhtar, and others will help us think about what's at stake in staging America and equip us as cultural analysts, critical thinkers, close readers of literature, and imaginative historians of culture and theater. This seminar will introduce first-year students to the kind of critical thinking developed in majors such as English; American Studies; African American Studies; Feminist, Gender, and Sexuality Studies; College of Letters; Theater Studies; and the Social and Cultural Theory Certificate.

AMST127F Christianity and Globalization (FYS)

This course focuses on recent developments in global Christianity. We will look at various interlinked dynamics: the rise of spirit-filled Evangelicalism, especially Pentecostalism, faith-based humanitarianism, child-sponsorship programs, and themes of militarism such as spiritual warfare. We will pay attention to the role of U.S. power in the world and how the narratives that various Protestant Christians tell through their writings and media shape life across international spaces. We will sample a variety of methods in how one studies the field of Christianity. These will include historical, sociological, and anthropological methods, all of which challenge traditional scholarly accounts (meaning those in the field of church history) in order to expand our understandings of Christianity in the modern period.

AMST130F Wilderness or Paradise? The Colonial World in the Western Imagination (FYS)

What do William Shakespeare's *Tempest*, Karl Marx's *Capital*, Georgia O'Keefe's *Ram's Head*, Bob Marley's *Redemption Song*, and Sterlin Harjo's *Reservation Dogs* have in common? What about Jean Jacques Rousseau's *Discourse on Inequality*, Mary Shelley's *Frankenstein*, Frida Kahlo's *Two Fridas*, Nina Simone's *Mississippi Goddam*, and George Lucas's *Star Wars*? All these works offer critical reflections on the process of European colonialization of the Americas that started in the late fifteenth century and extends to our days. They all grapple with the question of whether the New World was (and still is) an Edenic utopia

or a hellish dystopia. And they all offer provocative answers and difficult new questions.

This first year seminar will explore how different thinkers and artists have imagined and reimagined colonialism in the Americas, from Alaska to Tierra del Fuego. We will also investigate how the representations they created have contributed to reinforcing or upending colonial relations. We will study cultural creators belonging to different groups, including indigenous peoples, enslaved and free Africans and African Americans, metropolitan and colonial elites, and Asian and European immigrants.

This course will introduce students to different forms of intellectual expression in the Western world--from philosophical treatises to movie series, passing through novels, paintings, and songs. To better understand these works, we will read academic texts and address the practical and theoretical foundations of academic thinking. As we engage with primary and secondary sources on colonialism, the students will also learn practical skills ranging from formatting texts and citations to finding books in the library and articles on the internet to making a compelling argument in an essay or a research paper.

AMST132F Marxism and Abolitionism (FYS)

This course explores the historical encounter of Marxist revolutionary theory, with its roots in German idealism (Kant, Schiller, Fichte, Hegel), and abolitionist causes. How have abolitionist movements historically informed, expanded, and challenged Marxist theory and its tactical playbook? What made Marx a touchstone for so many black revolutionary thinkers, including W.E.B. du Bois, Franz Fanon, C.L.R. James, and Angela Davis? How have anticommunist, racist, security-statist ideologies been mobilized to undermine and defeat transformative social movements? We will begin with the Haitian Revolution and work our way through the abolition of slavery in the US and the anticolonial and civil rights struggles of the mid-20th century to the prison abolition movement today. In addition to the above mentioned authors, readings will include Toussaint L'Ouverture, Frederick Douglass, Otilie Assing, V.I. Lenin, Rosa Luxemburg, Georg Lukács, Max Weber, Martin Luther King, Jr., Herbert Marcuse, and the Combahee River Collective.

AMST137F The Black Atlantic, A Religious Interpretation (FYS)

The world as we know it is shaped by The Black Atlantic. This phrase centers the forced movement of enslaved Africans from Africa to the Americas and Europe as the center of a set of complex forces: European global expansion, land expropriation, indigenous extermination and, of course African enslavement. But Africans were not solely objects of dehumanizing subjugation and property. Africans co-created this world through material practices, traditions of knowledge, and meaning making summed up in the word religion. This course will both introduce students to the themes of Black religions formed in and through the Black Atlantic, and specific communities, for example, Rastafarianism, Islam, Buddhism, and Pentecostalism. Students will read scholarly articles and engage multi-sensory sources and first-person accounts

of both themes and communities. All resources will be provided in class or via Moodle.

AMST150 Indigenous Middletown: Native Histories of the Wangunk Indian People

Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern New England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call "Middletown," also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although regarded as "extinct" by settlers in the aftermath of King Philip's War, 1675-1678, the Wangunk continue to live into the 21st century.

AMST170 Solidarity Forever: An Introduction to American Studies

This course is an introduction to the interdisciplinary field of American Studies. We will explore how American Studies scholarship engages "solidarity" as a subject of study and as a practice. We will consider how conversations in the field relate to resistance and activist movements across time and space, from the US/Indian Country to the transnational and the global. By covering vast topics and themes such as settler colonialism, carceral politics, labor organizing, the war on terror, and more, we will examine the questions, methods, and frameworks that animate and shape American Studies. We will reflect on the role of knowledge production in movements and struggles for justice.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **SBS-AMST**

AMST171 Magick and Her Practices, of Late

In this course we ask why paganism and Goddess worship have become "the fastest growing American religion," examining the tensions between science and society that so often provoke magic-infused social resistance movements. We explore the rise of Goddess worship in the Americas since the 1970s, considering its ties to ecofeminist, womanist, indigenous, and environmentalist movements. We examine the force of agency and its relation to ritual magic.

We then dive into the purported roots of several modern magic traditions, including Wicca, Dianic witchcraft, Feri traditions, and Haitian Vodou, among others, and ask how these cosmovisions define and/or transcend our gendered personhoods.

As we find our way back to a renewed understanding of modern paganisms, students will design individual or small group projects wherein they experience, ethnographically consider and/or perform extant manifestations of magic and ritual, bringing peoples lived experiences into conversation with course

readings. This class is taught as a twice-weekly seminar designed around written assignments and engaged discussions, while inviting but not requiring students to engage in phenomenological experiences outside of class that may inform their written work. Students will produce ethnographic essays that are both analytical and personally reflective.

AMST174 Popular Culture and Social Justice: An Introduction to American Studies

This course explores the interlocking histories of popular culture and social justice in the 20th- and 21st-century United States, with particular focus from mid-century to the current moment. By focusing on the ways in which social justice movements and ideologies have utilized and been informed by trends in art, film, television, music, and commercialism, we will interrogate critical concepts in the field of American studies, such as citizenship, belonging, difference, and equality. Topics covered will include feminism(s), antilynching, civil rights, labor and poverty, pro-choice, disability rights, queer liberation, leftism and countercultures, environmentalism, and animal rights.

Questions addressed will include, How has popular culture both advanced and hindered the progress of social justice movements? How has the idea of "social justice" changed over time? Which groups are included? What aims are articulated? How has the media portrayed and influenced social and political problems, and how has the rise of new media (from radio to television to the Internet and beyond) created new spaces for debating power and inequality?

AMST176 Critical Race Theory: An Introduction to American Studies

This course is intended as an introduction to the interdisciplinary field American studies. Turning to the entangled histories of settler colonialism, slavery, imperialism, immigration, racism, and disenfranchisement, the class will examine how different peoples become American and how differently situated people(s) negotiate state-structured systems of racial exclusion and assimilation in relation to democracy, equality, and self-determination. How has the field of American Studies taken up questions of indigeneity and race? How has the field of ethnic studies challenged American Studies? What are the current linkages between American Studies, Critical Indigenous Studies, and Critical Race Studies? How have nationality and citizenship in the United States been structured by white supremacy? What are the differences between indigeneity, race and ethnicity? What is "color-blind" ideology? What can we make of pervasive assertions that we are living in a "postracial" America? How can American Studies provide the necessary frameworks for understanding the Trump era with regard to race, indigeneity, and citizenship?

AMST177 American Movies as American Studies: An Introduction to American Studies

Our aim is to see how movies from the 1930s to the present can help us grow as critical (and self-critical) American studies thinkers (and have fun—even as we question the effects and implications of this fun—doing it). Talkies appeared as a complex mass-cultural form of American studies, exported all over the world, precisely when the academic field of American studies emerged in the early 1930s. From the get-go, movies involved in mass-disseminating America's inventions of power have made available, in very entertaining ways, critical insight that can blow the whistle on how the reproduction of Americans and American ideologies are pulled off. Together we will explore the modern Americanization of power (hard power, soft power) and focus our exchanges on four intersecting concerns that movies can be particularly good at illuminating: (1) how culture industries (including movies) shape consciousness, needs, desires, incentives, values, and sense of belonging, and frame—limit—our vision of what constitutes problems and solutions; (2) how social critique (even movie critiques of movies) can be mass-popularized; (3) how America makes Americans, especially, into workers (even if they hate what they do and wonder about what and who they are working for) and weapons of various sorts (even if they are frightened and wonder about what and who they are fighting for and against); and (4) how and why America constructs difference (e.g., class, gender, race, individuality, national identity). This lecture/discussion course is a thinking-intensive and imagination-intensive critical project designed to engage compelling big-picture concerns—systemic matters—vital to American studies critiques.

AMST178 Sites of the Self: Maps, Gardens, Houses: An Introduction to American Studies

We are where we are. We make ourselves out of the places we create and inhabit. This course examines three of the artifacts/sites central to culture: maps, gardens, and houses. Each attempts to reveal an immaterial ideal in a material form. Maps give a "god's eye" view of the world's totality; gardens recreate lost paradises; and houses embody their inhabitants. Using literature, images, and film, we will discuss global maps—from medieval mappamundi to satellite imagery; visions of paradise, celestial and earthly; private and public gardens, emphasizing the central role of Frederick Law Olmstead; and ideas

about houses, ranging from the 19th century designer and horticulturalist Andrew Jackson Downing to the 20th century Buckminster Fuller, often credited as the originator of the geodesic dome, one example of which is Spaceship Earth at Epcot Center, in Walt Disney World. We will end with an examination of the recent proliferation of design shows on Home and Garden TV.

AMST180 Entertaining the Masses: An Introduction to American Studies

This course will explore the ways in which people living in the United States entertained themselves from colonial times to the present. From the circus to movie theaters, from pubs to video games, from hunting expeditions to football matches, from church choirs to hip hop battles, we will use mass entertainment as a window into American culture. We will question what American society has considered fun, how leisure became separate from labor, how capitalists have commodified and authorities have disciplined entertainment, how different groups created and/or appropriated different forms of entertainment. Through these questions, we will study classic and new topics of and approaches to American Studies.

AMST200 Colonialism and Its Consequences in the Americas

Why does colonialism matter to the fields of American Studies, Latin American Studies, and Caribbean Studies? What have been the consequences of colonialism for peoples of the Western Hemisphere? This course offers a transnational approach to the study of colonial modernity through a comparative analysis of colonial ventures and their far-reaching consequences. With a focus on the interactions of Indigenous, European, and African peoples, the course introduces a diverse range of issues and topics, such as the organization of production, including chattel slavery, indenture, and free labor; imperial competition and state formation; emancipation struggles; and Indigenous sovereignty.

AMST201 Queer Theories: Junior Colloquium

This junior colloquium will give you a solid foundation in queer studies.

Although "queer" is a contested term, it describes—at least potentially—sexualities and genders that fall outside normative constellations. This theory-based, reading-intensive seminar considers multiple genealogies of queer theory, from foundational texts and authors in queer theory, queer of color critique, trans theory, and crip theory, to lesser-known but critically important interventions. Structured as a series of conversations, we explore multiple locations of theory and notions of "queer." Rather than understanding queer studies as a singular school of thought, we will continuously problematize queer studies as a mode of analysis, asking: What kinds of bodies or desires does queer describe? What are the politics of queer? What are the promises of queer theory, and what are its failures? What is the future of queer?

This course is excellent preparation for a queer studies concentration in American studies. Students should expect to end the semester confident of their ability to read and draw on a range of queer theories.

AMST202 Representing Race in American Culture: Junior Colloquium

This junior colloquium offers an introduction to several key critical issues and debates concerning the representation of race in American culture. In addition to reading several accounts and critiques of how racial minorities have been represented by the dominant culture, we will also consider how racial subjects have theorized ways of representing themselves in response to the burden of such stereotyping and objectification. The course is organized around two case studies. The first of these will focus on one of American culture's "primal scenes" of racial representation: blackface minstrelsy. Considering a variety of critical, literary, and visual texts, we will examine how African American images and culture became a way for working-class and other whites to negotiate their own identities and how African American artists and intellectuals have responded to this troubling legacy. In the second half of the course, we will turn our attention to questions of cultural representation that originate from the racial context often deemed to be the opposite of the African American experience: that of Asian Americans. If African Americans have long been the target of overtly negative stereotypes, Asian Americans have been subjected to what one critic has called "racist love"—that is, a tradition of putatively positive stereotypes that have produced a different set of representational problems for Asian Americans. Together, these case studies will allow us to explore a wide range of models for thinking and writing about race in American culture.

AMST203 Biopolitics, Animality, and Posthumanism: Junior Colloquium

This course asks what it would mean for the field of cultural studies to begin to include the category of the "human" within investigations of more traditional categories of social difference (including race, gender, sexuality, and so on). Historically, the category of the human has been taken for granted, as a biological marker imbued with particular intellectual and physical capabilities. Relatedly, the discourse of the human is often invoked in movements for political equality, inclusion, and enfranchisement (i.e., the call to "human rights"). Yet recent literature within the field of American studies broadly, and, more specifically, within the area of critical animal studies, has called these assumptions into question. In this junior colloquium, we will explore these critical

turns in the field by considering the boundaries between the animal, human, and technological realms.

Important concepts addressed will include the utilization of animals as research subjects, food, and labor; the "nonhuman personhood" movement; intersectionalities between ideas of social difference and the posthuman; concepts of disability, debility, and capacity; technological enhancements of the human body; and cybercultural identities. Students will have the opportunity to engage with a wide variety of materials, including writing from the areas of critical race studies, feminist theory, and postcolonial theory. (Note: Students need not have familiarity with biopolitical theory; rather, the course will provide a primer in this area during the beginning weeks of the semester.)

AMST204 Saving America from Itself? Movie Interventions (Moore, Lee, DuVernay, Kopple): Junior Colloquium

We will convene four interventionist filmmakers—Michael Moore, Spike Lee, Ava DuVernay, Barbara Kopple—in a strategic dialogue to consider the American studies whistleblowing and anti-bamboozling potential of movies. Their movies have tried to sway elections, empower social movements, inspire protest, popularize national self-critique, study the tactics of top-down power (including scapegoating) and bottom-up resistance, and, perhaps, save America from itself. The many cultural-theoretical payoffs of their movies include moving us beyond any oversimple checklist tendency simply to observe representations of gender, race, and class. They help us question why these categories were produced in particular ways and help us interrogate (intersectionally and dialectically) how they interact with, rely on, and sometimes mask one another. Our four independent filmmakers—in trying to be changemakers—dare us not only to take a hard look at what kind of an America we have had and now have, but prod us, at times seduce us, to imagine more expansively what kind of America we might want to create. We will also put their movies in dialogue with related movies by D. W. Griffith, Boots Riley, Robert Reich, and others. And to establish a longue durée historical perspective, we will read Howard Zinn's epic classic *A People's History of the United States*. In terms of fields, our colloquium integrates movie studies, cultural studies, premises studies, resistance studies, and social transformation studies.

AMST205 Interdisciplinary Research Methods: Jr. Colloquium

This course will introduce students to interdisciplinary research methodologies and practices, with particular attention to critical themes within the field of American studies, including race, gender, and sexuality. Methods and practices covered will include (but are not limited to): close textual analysis, archival research, quantitative data procurement, interviewing tactics, ethnographic observation, the application of diverse theoretical frameworks, the Institutional Review Board, research ethics, and so on. Students will complete a variety of short assignments throughout the course of the term that will culminate in a final research paper. The class will be held in a seminar format that requires weekly reading, writing, and discussion.

AMST206 New England and Empire: Junior Colloquium

Using history and literature, this Junior Colloquium focuses on the role of New England in the transformation of the United States from colony to world power. Major forces effecting this metamorphosis have their roots in this area. Mercantile entrepreneurship and the drive of commerce and trade, such as the slave trade, the ivory trade, and the West and East Indies (China and India) trades, opened the larger world to merchants and consumers in New England. Discourses of race, religion, civilization, and science created universities, produced missionaries and merchants, explorers and colonizers, writers and artists who went to the far corners of the world--the Caribbean, Hawaii, China, and Japan--and brought the world back home. The vaunted mechanical and technological ingenuity of the Yankee peddler, seen in a grandiose version in the eponymous inventor of the famous Colt revolver, backed territorial expansion and insinuated New England culture in to those newly acquired territories. A developing sense of racial entitlement and racial confidence legitimated expansion--into Cuba, Puerto Rico, Guam, and the Philippines--and produced military and cultural imperialism. The domestic, woman-centered "parlor" culture of New England both displayed the wealth of empire and hid its existence.

AMST207 Primitive Accumulation: The Beginnings of Capitalism

Karl Marx wrote in Capital, Volume I, "The discovery of gold and silver in America, the extirpation, enslavement and entombment in mines of the aboriginal population, the beginning of the conquest and looting of the East Indies, the turning of Africa into a warren for the commercial hunting of black-skins, signaled the rosy dawn of the era of capitalist production." This course will address the violent beginnings of capitalism from the perspective of the Americas and their connections to other parts of the world. By addressing class struggle, imperial expansion, and environmental degradation, we will analyze the emergence of an unprecedented mode of production that now dominates the world and threatens human existence. But this will not be a simplistic history of good and evil, a moralizing tale. We will unpack the complex historical process and the overwhelming historical forces that go beyond the moral choices of individual human beings. We will look into the interactions between society and nature to reflect on how capital has made an indelible mark in human lives and the rest of living beings on our planet. We will study primary and secondary sources to reconstruct the history of extraction and exploitation that gave birth to the modern era.

AMST208 Visual Culture Studies and Violence: Junior Colloquium

In this course, students will gain important foundational knowledge of the field of visual cultural studies. We will cover theories of the gaze, photographic sight, film and media, spectatorship and witnessing, museums and exhibitions, and trauma and memory, among others. Particular attention will be paid to issues of power, complicity, and resistance as we consider what it means to be "visual subjects" in historical and contemporary contexts. We will address how different media--from photography, to television, to film, to the Internet--transform our understanding of images and what it means to both "look" and "be seen."

As a primary case study, this course will interrogate the politics of violence, focusing on the relationship between the production of visual culture(s) and acts of individual, collective, and state aggression. We will ask, How have images served to propagate climates of violence against marginalized persons? What are the ethics of looking at pain, torture, and exploitation? Do such images help us to work toward social change or create attitudes of indifference? How do images of war, prisons, pornography, death, crimes, famine, and disease shape our understandings of citizenship, nationality, and identity? Finally, how does the representation of difference--race, gender, sexuality, class, and disability--inform and/or transform conceptions of violence and its place in the visual field?

AMST211 History of American English: Junior Colloquium

What is American English, and how did it get to be what it is? This course will begin with the general history and development of the English language, looking at central issues such as sound (e.g., the Great Vowel Shift, Grimms Sound Change laws), sense (e.g., grammar, vocabulary, usage), and standardization (e.g., orthography, dictionaries). What makes our particular kind of English "American"? We will learn about the role of different groups in its development: Native Americans, African Americans, and immigrant languages of various kinds, including Yiddish and Spanish. In addition, we will analyze the workings of class, youth culture, and gender. Throughout, the class will examine questions at the heart of our language debates: a "national language," "Ebonics," and bilingual education. If English is today the international "lingua franca," is American English particularly the language of power? What are the different kinds of power exerted by, for instance, business English and slang?

AMST213 African American History, 1444-1877

This course examines the historical interactions between peoples on three continents--Africa, Europe, and the Americas--and the consequences of European colonization, trans-Atlantic slavery, and racial capitalism. Focusing on a period from the Antiquity to the late 19th centuries, we will explore how European notions concerning Africa its peoples evolved over millennia in response to shifting political, economic, and demographic circumstances. We will chart how Africans and their descendants in the Americas experienced and responded to colonialism. And we will analyze how debates concerning enslavement and freedom, indigeneity and civilization, and pan-Africanism and national citizenship played out across the African Diaspora and in the United States.

AMST214 Performing Property: Legal Experimentation and Activism in Contemporary Art

Who owns works of art-artists, buyers, museums, or the public? Who is granted the privileged status of author? Do artworks comprise a special category of things? Such questions underlie attitudes concerning art and cultural artifacts, and they also inform intellectual property laws. Since the 1960s, conceptual and performance artists have taken up these queries to investigate the nature of authorship and ownership generally, experimenting with aesthetic strategies as well as legal tools like contracts to ask: How do social and visual cues communicate boundaries, shape territories, and perform property into being? What happens when materiality and ownership are contingent? Can artists model alternate property relations through their work? How might art expose fissures and failures in law? Recent calls for decolonization and the restitution of looted objects have also pushed museums and archives to reconsider whether they are the outright owners of cultural artifacts, or stewards responsible for their care. Furthermore, as surveillance technologies increasingly pervade daily life, and digitalization leads licensing to supplant ownership, the future of privacy and property norms is unclear. These developments render contemporary art fertile ground for attending to the ways in which property structures are conceived, take shape, are reproduced, and how they might be reformed, calling upon us to pay attention to intent, consent, and the needs of others.

Seminar readings will be drawn from the burgeoning subfield of Art and Legal Studies with texts by key scholars including Joan Kee and Martha Buskirk, complemented by legal theorists such as Sarah Keenan and Cheryl I. Harris whose work has influenced artists. Alongside, we will closely examine the work of artists who challenge traditional ownership relations to problematize law, such as Felix Gonzalez-Torres, Jill Magid, and Cameron Rowland. Class meetings will be complemented by screenings and visits to local collections, as is feasible. Assignments include a brief paper on an artwork, as well as a final research paper or digital exhibition requiring students to examine a particular theme or artist in-depth.

AMST217 Carcerality and Colonialism in California and Beyond: Junior Colloquium

This course explores the expansive history of surveillance, policing, and incarceration in the territory now known as California. Engaging Indigenous critiques of settler colonial power, we begin in the late 18th century when Spanish Franciscan priests and imperial soldiers enslaved Native people in missions along the Alta California coast. We will move through crucial sites, such as the first California legislature's 1850 Act for the Government and Protection of Indians, to the establishment of the US border patrol in the early 20th century, and the criminalization of mobility of Indigenous, Latinx, and mixed-race people from both sides of the US-Mexican border, considering how these cases illuminate Kelly Lytle-Hernández's insight that "mass incarceration is mass elimination." Reading across scholarship, archival sources, activism, and news coverage, we will discuss the relationship between militarization and carcerality locally and globally, from the American occupation of California during the Gold Rush (1849), to post-WWII racialized urban policing, to the current construction of the "security fence" along the US-Mexico border that cuts through Kumeyaay lands.

AMST218 Introduction to Queer Studies

This course will examine major ideas in the field of queer studies. Relying upon theoretical, historical, and cultural studies texts, we will consider the representation and constructions of sexuality-based identities as they have been formed within the contemporary United States. We will explore the idea of sexuality as a category of social identity, probing the identities of lesbian, gay, bisexual, and transgender to try to understand what they really mean in various cultural, social, legal, and political milieus. In doing so, we will ask, What does it mean to study queerness? What do we mean by "queer studies"? How do institutions--religious, legal, and scientific--shape our understandings of queer identities? In what ways do sexuality and gender interact, and how does this interaction inform the meanings of each of these identity categories? How do other social categories of identification--race, ethnicity, and class--affect the ways in which we understand expressions of queerness? Moreover, what does studying queerness tell us about the workings of contemporary political, cultural, and social life?

AMST219 Introduction to Native American Studies: Paradoxes of Indigenous Life

What does it mean to be Native American today? The term Native American collapses many tribal nations into one category and describes Indigenous peoples within the United States as Native to a continent that existed long before it was called America. This course will look at various paradoxes of Indigenous life under settler colonialism through the approaches of Native American studies, an inherently multidisciplinary field drawing from history, anthropology, and critical and ethnic studies. Reading across classics of Native studies as well as contemporary research, we will unpack the various movements and moments when Indigenous peoples arose to the challenges of continuing their life ways in the United States, Canada, and beyond. How have Indigenous people navigated colonial judicial systems to defend their land? What is the relationship between Native and Black peoples under settler colonialism? In what ways are ancient Indigenous traditions also future-oriented? In addition to scholarly texts, we will also delve into various forms of Indigenous-produced media from film, music,

and literature to explore the dynamic ways Indigenous peoples continue to assert claims to life and land.

AMST220 Currents of Post/Minimalism, 1960-1979

This course examines visual production made in North America between the 1960s and the 1970s with attention to Minimalism and its antecedents. Since its inception, Minimalism has been a measure and benchmark for twentieth century artistic practice. A primary focus will be artistic interpretation of form and to the challenges posed to its political exigency during a period marked by global warfare, new technologies, fierce protest, and economic shift. Each lecture will be anchored by a discussion of an artist whose practice will be the basis for course themes--energy, distance, education for example. With artists as our guides, we will revisit the development of the aesthetic boundaries, (sculpture, film, performance, institutional critique) which were asserted as well as challenged by attuning to exhibition histories and interdisciplinary practices. As this moment of artistic contribution is actively under consideration by curators of contemporary art, this course will also feature practical insight into the methodology and concerns of contemporary exhibitions dedicated to this period.

AMST221 Nationalism and National Identity in the United States: Jr. Colloquium

After decades of (seemingly) hegemonic globalization, recent events brought the issues of nationalism and national identity to the fore again. In this course, we will explore classic and new approaches to the nation state and the cultural phenomena associated with it. We will study the institutions, symbols, rituals, myths, and other elements that make up nationalism and national identity in the United States. We will investigate how different groups and communities in North America reinvent national culture, often creating clashing ideas of what the nation should be. From sports to literature, from holiday celebrations to federal legislation, from culinary to military operations, we will use a wide array of case studies to survey national culture. Our goal is to develop intellectual tools that will allow us to understand nationalism and national identity as contested, ever-shifting, and highly consequential parts of reality.

This course will take transnational and comparative approaches. We will investigate American national culture from the perspective of outsiders such as immigrants and colonized populations. We will also compare American nationalism with other nationalisms, including those of Western empires, non-Western nations, and even peoples without a nation state. These perspectives will help us better understand how global forces such as capitalism and imperialism shape national culture in the United States.

AMST222 Secrets, Lies, and Fictions in the Americas

In 1964, historian Richard Hofstadter underlined the spread of a "paranoid style" in American politics. Although Hofstadter's description seems more appropriate today than ever, in an increasingly interconnected global order the role of misinformation, uncertainty, manipulation, and conspiratorial imaginaries in shaping and limiting democracies and public spheres cannot be exclusively assigned to any particular locale. From a continental standpoint, this course offers analytical tools to explore the political complexity of lies, secrets, and fictions in both the United States and Latin America since the mid-twentieth century to this day. By studying a series of cases--including the Guatemalan civil war, the assassination of John F. Kennedy, the Pentagon Papers, the U.S. intervention in the Middle East, the "dirty war" in Latin America, censorship in socialist Cuba, the arrest of Augusto Pinochet in London, Wikileaks, hacker practices in the early days of internet, or Cambridge Analytica--we will address the relations between surveillance, spectacle, and conspiracies (both factual and imagined) in the contemporary techno-political landscape. Moreover, the course emphasizes the speculative and theoretical potentials of art and literature when it comes to understanding socio-political phenomena. Beyond distinctions between truth and falsehood, fictional constructions are key to our collective capacity to imagine alternative worlds. By mapping out the ways in which fictions circulate as such or rather as truthful versions of reality, we will problematize the limits and uses of truth, lies, and official and alternative narratives, as well as the power of states, corporations, individuals, and collectives to direct attention and frame information.

AMST223 Technologies of the Self

Where does the idea of an authentic self come from? The desire to represent the authentic self informs the narrative genres of the confession and memoir and visual ones of the selfie and self-portrait alike. Yet both the memoir and the selfie "self" are mediated, first, via the technologies of print and screen, and second, via the conventions of particular genres that make these legible as a memoir and selfie, as opposed to, for example, an interview or a portrait. In this course, we will examine how different technologies not only represent but produce the self. These technologies include "writing" technologies: print and digital; genre and medium (autobiography, the slave narrative, memoir, self-portraits, and selfies); and technologies of the state, which produce citizens, subjects, and humans.

AMST225 Latinidad: Introduction to Latina/o Studies

This course will introduce major themes within the field of Latinx studies, using an interdisciplinary approach to analyze the experiences of Latinx people within the United States and throughout the Americas. Employing a range of historical, theoretical, political, and cultural texts, this class will ask students to think about a number of issues central to the field of Latinx studies, including migration, language, nationalism, indigeneity, education, labor, assimilation, and cultural imperialism. This course will also look at the ways in which intersectional identifications, including race, sexuality, and gender, operate within frameworks of Latinidad.

Methodologically, this course will draw from such diverse fields as ethnic studies, history, political science, border studies, gender theory, sexuality studies, critical race theory, and urban studies. As we utilize a broad range of texts and synthesize diverse perspectives and ideas, students will be asked to interrogate formative concepts, such as the border, America(s), and the nation. Central class queries will probe the boundaries of Latina/o identity, the working of intersectional identities, patterns of migration, and the ways in which institutional power shapes the contemporary Latinx experience.

AMST230 Italian and Italian American Cinema: Not Just Mafia Movies

The entanglements of Italian and Italian American cinema date to the medium's silent era. If the Taviani Brothers' 1987 film *Good Morning, Babylon* is to be believed, while filming *Intolerance* (1916) D.W. Griffith lauded and lamented the genius of Giovanni Pastrone's colossus *Cabiria* (1912), doubting that his own epic film would be able to match the virtuosity of the earlier Italian example. Flash forward to 1931-32 and the trio *Little Caesar* (1931), *Public Enemy* (1931), and *Scarface* (1932) sear into the American imaginary the cinematic representation of the Italian mobster. Beyond Italian artistry and aesthetics of the sort Griffith ostensibly applauded, and the numerous examples of the violent, lawless gangster of Italian descent, what are some other (stereo) typical intersections between Italian and Italian American cinema?

Mapping the Transatlantic transmissions of representations, stereotypes, and aesthetic values reveals how these two cinematic traditions co-articulate and condition each other, with "*Hollywood on the Tiber*" offering a chief example of the ways Italian and American industrial contexts invoke and implicate each other. How do Hollywood's glamorized gangsters inform Italian representations of organized crime? How do American cinematic "Latin lovers" draw on Italian models? How have representations of masculinity, men, and fathers; femininity, women, and mothers; (large) families, food, religion, class mobility, questions of race and racism, and immigration unfolded in their respective contexts and what do intersections among them reveal?

Two non-fiction films from Scorsese help draw our parameters for our discussion: *Italianamerican* (1977), for socio-cultural codes; for cinematic contexts, *My Voyage to Italy* (1999), in which the director reviews his Italian influences and which also serves as an introduction to Italian cinema. We subsequently investigate the indicated themes and topics as they range across a corpus of texts which includes, on the Italian American side: *Scarface* (Hawks, 1932), *Not Wanted* (Lupino, 1949), *The Godfather* (Coppola, 1972), *Mean Streets* (Scorsese, 1973), *Rocky* (Avildson, 1977), *Raging Bull* (Scorsese, 1980), *Moonstruck* (Jewison, 1987), *Married to the Mob* (Demme, 1988), *True Love* (Savoca, 1989), *Do the Right Thing* (Lee, 1989), *The Freshman* (Bergman, 1990), *Goodfellas* (Scorsese, 1990), *My Cousin Vinny* (Lynn, 1992), *Household Saints* (Savoca, 1993), *The Sopranos* (Chase, 1999), *The Departed* (Scorsese, 2006),

Wendy and Lucy (Reicherdt, 2008), *The Miracle at St. Anna* (Lee, 2008). Alongside these, we examine Italian films drawn from this list: *Cabiria* (Pastrone, 1912), *Umberto D.* (De Sica, 1952), *I Vitelloni* (Fellini, 1953), *Rocco and His Brothers* (Visconti, 1960), *Eclipse* (Antonioni, 1962), *Amarcord* (Fellini, 1974), *Kaos* (Taviani Brothers, 1984), *Mediterraneo* (Salvatores, 1990), *Johnny Stecchino* (Benigni, 1991), *Lamerica* (Amelio, 1994), *Gomorra* (film Garrone 2008, series 2014), *The Young Pope* (Sorrentino, 2016), and *The Confessions* (Andò, 2016). The films for group presentations will also be drawn from these lists.

This course has no prerequisites. We will work on students' capacity for formal film analysis as we go along and, at the beginning of the course, some students may have greater proficiency in this area. At the same time, other students may initially have a broader knowledge base of Italy and Italian society. Everyone has something to learn. Conducted in English.

AMST231 Guns and Society

Students will discuss some of the key questions that animate the emerging interdisciplinary field of gun studies, considering guns as objects and symbols and as sites of both shared and contested meanings in everyday life. Readings will include recent scholarship about the evolution of gun technologies and the changing place of guns in U.S. society, from the colonial era through to the present day, exploring how the history of guns in U.S. history is relevant to other histories, including studies of race, gender, class, labor and capital, social movements, and military and civilian life. Special focus will be put on visual studies, museum studies and public history, science and technology studies, public health, and legal history. Assignments include four shorter (2-page) papers and a 15-page final research paper. Each student, working in small groups, will also deliver a 10-minute presentation and have opportunities for site visits to local museums and gun violence memorials such as the Coltsville National Historic Park (Hartford), Springfield Armory National Historic Site (Springfield, Massachusetts), and the Connecticut Gun Violence Memorial (New Haven).

(This course is a prerequisite for individualized humanities "labs" designed for students to delve into a particular aspect of the topic of guns and society in a more applied way in the spring semester, through special projects that can include an individually designed research paper, a museum/archives project, a theater sketch, a podcast, a high school teaching module, an art project, an exhibit in a local museum, an oral history project, or a syllabus, among other possibilities to be discussed with the instructor.)

AMST232 American Architecture and Urbanism, 1770--1914

This course considers the development of architecture and urbanism in the United States from the late 18th through the early 20th century. Major themes include the relationship of American to European architectures; the varied symbolic functions of architecture in American political, social, and cultural history; and the emergence of American traditions in the design of landscapes and planning for modern cities, especially Boston, New York, Philadelphia,

Washington, D.C., Chicago, Los Angeles, and San Francisco. The course considers houses for different sites and social classes, government buildings, churches and synagogues, colleges, and commercial architecture of different kinds includes the origins of the skyscraper. Urban environments include cemeteries, public parks, streets, and civic centers. Movements include neoclassicism, the Gothic and Romanesque revivals, the Chicago School, the Arts and Crafts movement, and the City Beautiful movement. Major figures studied include Thomas Jefferson, Benjamin Latrobe, Frederick Law Olmsted, Frank Furness, Henry Hobson Richardson, Louis Sullivan, the early work of Frank Lloyd Wright, Greene and Greene, Bernard Maybeck, Julia Morgan, and McKim, Mead and White.

AMST233 Global Queer Studies

This course explores global experiences of LGBT/Q life, bringing an explicitly transnational lens to a field too often dominated by U.S.-centered perspectives.

Drawing on queer ethnography and film, we will explore the contours of queer and trans life around the globe, from the lives of gay men in Indonesia to Muslim yan daudu in Nigeria, gay tourism in post-Revolutionary Cuba, queer mati work among working-class Afro-Surinamese women, lesbian activism in India, LGBT asylum claims in Canada, the queer art of Carnival in Trinidad and Tobago, the everyday lives of lalas (lesbians) in China, and the transnational lives of Filipino gay men in New York. Our aim is to challenge and expand Western categories and concepts of sexuality, gender, identity, and desire (both hetero- and homo-normative) and to center the ways sexual/gendered identities, cultures, and politics are shaped by colonialism, imperialism, racialization, migration, transnational media, and global capitalism.

AMST235 American Literature, 1865-1945: The Americanization of Power

Together we'll explore not only the complexities of American literature from the 1860s to 1940s, but also how this literature is usable today and excels as critical equipment that can advance our understanding of the modern Americanization of power (put narrowly, we'll develop insights into a "democratic" capitalism, what some called a "Robber Baron" plutocracy, that pulled off and contrived to maintain systemic class, gender, and ethnoracial hierarchies to reproduce its power). As we unpack the relationship of literary form and social form, we'll trace connections between historical developments such as the gothic genre and gender ideologies, domestic romance and the social reproduction of labor, realism and mass-urbanism, naturalism and immigration, modernism and imperialism, and narrative experimentation and anti-racism. The creative works of Emily Dickinson, Mark Twain, Stephen Crane, Henry James, Charlotte Perkins Gilman, Charles Chesnut, F. Scott Fitzgerald, Langston Hughes, Ernest Hemingway, Eugene O'Neill, Nathanael West, William Faulkner, Richard Wright, and Zora Neale Hurston will help teach us to be more imaginative readers of literature, ourselves, and what America was, is, and might be. While pooling ideas about this, we'll savor the pleasures of reading inspiring and transformative writing. This is very much a thinking-intensive course.

AMST236 Ethnography of the American Rural

The rural stands as a fraught American symbol, positioned in stark contrast to its corollary: the urban and its cosmopolitan subjects. The American rural is variously represented as vulnerable, disappearing, backwards, regressive, slow. In this course, we elucidate the texture of the American Rural by engaging with ethnographic writing from the early 20th century into the contemporary. In exploring the rural as a meeting place of working-class expressive cultures, an atmosphere of slow or strange time, a dramatic history of industry and agriculture, a notoriously tense racial zone, an icon of severity, and a place of exuberant stories and poetics, we uncover the vital ideological function of the rural as the urban's dark twin in American myth throughout history and today.

AMST238 Place, Belonging, and Sound in the 20th c. Latina/o/x, Black, & Caribbean Imaginations--NYC

Throughout the latter 20th century, various aesthetic renderings of New York City have positioned it as a site of voyeuristic allure and racialized excess and pleasure--simultaneously posh, unfriendly, tourist-trapped, "seedy," "gritty," and segregated. Through select literary, cinematic, and performance optics of Latina/o/x, black, and Caribbean writers and artists, especially queer and bisexual writers and artists, this course will focus on memory, representation, form, sound, and the imagination in the layered and shifting site of mid-20th- to 21st-century New York City--and even more specifically, of Harlem, the Bronx, the Lower East Side, Brooklyn, and Elizabeth, N.J. Fictionalizations, poetizations, and performances of first-person memories and reimaginings of overheard stories from older generations about life in the U.S. South and life in the Caribbean will feature in the works that we will study in this course.

AMST239 Critical Race and Art History: Theories and Methods

How does the study of art shift if we begin with questions of race, power, and colonialism, rather than treating them as secondary? Concepts such as mastery, familiarity, strangeness, taste, and beauty are formed by conditions of domination and subjugation. Moreover, the histories of material production and cultural expression are fundamentally entwined with the circuits of enslavement, forced migration, and the extraction of resources, people, goods, and "styles."

For the bulk of the semester, we will focus on a series of case studies drawn from the 15th to 20th centuries, a period of intense European contact and conquest in Africa, Asia, the Caribbean, and the Americas. Topics will include: representations of Africans in Renaissance Germany; African depictions of the Portuguese circa 1492; the appearance of parrots, kraak (Chinese) porcelain, and other goods from "exotic" locales in 17th-century Dutch still lifes; the taxonomies of racial difference in Spanish casta paintings; debates about sculptural polychromy and the "whiteness" of marble; the relationship between expansionism, empire, and the genre of landscape; "primitivism" and European artists' "discovery" of African artistic forms; the critical interest in "racial art"

in the interwar U.S.; and contemporary conversations about museums and restitution, among others.

Throughout, works of art are primary sources with which to study the specificities of periods, places, and their social arrangements. While we will emphasize difference and historical contingency, our *longue durée* approach will enable us to draw connections about art's role in processes of primitive accumulation, dispossession, and racial capitalism.

AMST240 Hipsters

This course will focus on the contemporary hipster subculture after examining a critical genealogy and racial history of the origins of the concept. From black jazz artists and zoot-suitors in the 1940s who defined "hip" and "cool," to the post-World War II burgeoning literary scene of the Beat Generation that codified the figure of the hipster as an American bohemian strangled by social conformity, there has been a cultural politics of being "in the know." Derived from the term used to describe these earlier movements, the term "hipster" reappeared in the 1990s and became especially conspicuous in the 2000s to the present. Today's hipsters are generally associated with whiteness, indie music, a vintage fashion sensibility, liberal political views, organic and artisanal foods, as well as racial gentrification in urban neighborhoods in Brooklyn and select cities such as Portland, OR and San Francisco. Perhaps curiously, members of this subculture typically disassociate themselves from this cultural category, as outsiders often use the term hipster as a pejorative. In an attempt to understand why hipsters differentiate their actions from the hipster stigma, students will study the contemporary discourse about hipsters, along with a historical analysis of the term and its use in popular culture to get a better understanding of race, class, gender, and the commodification of style. Other topics for exploration include stereotypes, authenticity debates, hipster racism, so-called "blipsters," the death of irony, hipster chic, "hipster run-off," the resentment of hipsters, and forecasts of "the end of the hipster."

AMST242 The United States in the Long 19th Century

This survey course will introduce important themes in the history of the United States during The Long 19th century (the early Republic to WWI), a period of rapid displacement, settlement, and migration. With a commitment to teaching and learning "history from below," we will examine topics such as territorial expansion; development of capitalist enterprises; African, African American, and Indigenous enslavement and freedoms; overlapping migrant diasporas; and contestations over the meanings of democracy, by uplifting the perspectives of historically marginalized peoples. In doing so, we will come to recognize how formations of race, class, gender, and sexuality are inextricable from the formation of the nation.

AMST243 American Literature to 1865

This lecture course charts a selective path through the English-language literatures of conflict in North America. Our optic will be double: one eye on history, the other on literary form, and we will experiment with ways of dialectically combining these two lines of vision. The scope of the course is wide, but we will proceed in the style of an anti-survey. Rather than unifying America through a gathering of textual parts, we will attempt to understand how literary forms supply an important index of historical evidence even as their pleasures and contradictions refuse the stabilities of the evidentiary. We will close the course with a late-20th-century speculative fiction that gives an alternative history of the continent after a successful anti-slavery revolution in 1859 (resulting in the formation of the socialist Black republic of Nova Africa), which will incite us to revisit the materials and the historical record we will have constituted during the semester.

AMST243A American Literature on Fire: Conquest, Capitalism, Resistance: 1492-1865

We begin with a 1938 Langston Hughes poem, a north star shining light on American unexceptionalism and then move back in time: from Columbus's dismemberment and enslavement of the Arawaks when demanding gold; to Cabeza de Vaca's feel-good handbook for the conquest of indigenous peoples; to Puritan inventions of a "God" that pulls the trigger; to Franklin's blowing the whistle on a mercantile capitalism he supercharged with a secular work ethic; to a Declaration of "Independence" in 1776 that provoked alternative declarations written by workers, women, and formerly enslaved persons in the 19th century; to Poe's readings of a Divided States of America (race, gender, domesticity) as gothic; to Douglass's representations of the tactical artfulness and subversions of "slave" culture; to Hawthorne's deconstruction of the Americanization of power; to Thoreau's entwining of collective protest and what he hoped would be an individualized escape route; to Melville's attacks on imperialism, racism, and class domination; to Elizabeth Stuart Phelps's critique of domestic slavery; to Stowe's socially transformative antislavery novel (whose sentimentalization recirculated stereotypes). Along the way, we will draw on Howard Zinn's classic *A PEOPLE'S HISTORY OF THE UNITED STATES* to help historicize the Americanization of inequality. During our literary-intellectual time travel, we will engage some of America's most "on fire" writers who make possible insights into the ideological foundations of American cultures, identities, and hegemonies that provocatively illuminate America's situation today (and offer some lessons for how to change it). And, not least of all, we will have critical fun throughout.

AMST244 The Invention of America: Remapping 19th-Century US Cultural History

The 19th century was a period of great transformation, and the United States experienced it in a dramatic way. Nineteenth-century Americans witnessed the birth of the nation-state, the emergence of a global market, the multiplication of industrial enterprises, the apex and the downfall of slavery, the consolidation of wage labor, the intensification of imperial expansion, the upsurge in mass migration, the organization of revolutionary movements, the eruption of civil wars, the creation of brutal color lines, and other seismic processes. This course examines how the inhabitants of the United States reinvented their cultures within this most turbulent context. But American culture did not exist in isolation then. In this course, we will go beyond national borders, reexamining the history of the 19th-century United States from a hemispheric perspective and placing American culture in conversation with other cultures of the Americas.

AMST245 Personalizing History

How much are we shaped by our historical times and places? How much power do we have to make our historical conditions respond to our needs and desires? These questions and others are at the foundation of this course, which includes both memoir writing and memoir reading. We will construct narratives about our times and selves in a series of writing workshops. There will be some exercises where you will be asked to research specific aspects of your times and places. For example, you might be asked to research and write about such questions as when and where were you born, what were the major cultural or political currents of that time, and how was your early childhood influenced by them? Or you may be asked to bring in a photograph of someone important in your personal history and write about that person.

The memoir is a distinct genre, with topics/themes particular to it. Some of the most important are memory itself, childhood, place and displacement, language, loss/trauma/melancholia/nostalgia, self-invention or transformation, family, and generational differences. The class will engage with these topics in the analysis of the readings and also in the writing of memoirs. Specific techniques will be highlighted for writing practice: the catalog, diction, dialogue, metaphor, description, point of view, and narrative structure, including temporal organization, the doubled narrative, and the narrative frame.

AMST246 Trump-Evangelicals: the History of Fundamentalism and Evangelicalism in America

This course examines the history of American evangelicalism, seeking to understand the nature of its support for the presidency of Donald Trump. Beginning with a brief overview of religion in the colonial and revolutionary eras, the course examines revivalism, slavery, and the emergence of fundamentalism

during the 19th century. Special attention is paid to the re-emergence of evangelicalism after World War II, the establishment of the religious right, global evangelicalism, and the core evangelical support for the candidacy and presidency of Donald Trump. Students will be challenged to consider the ways issues of gender, race, and economics have shaped 21st-century evangelicalism, and reflect on how the movement's view of American history contributes to its own sense of identity and purpose.

AMST248 History of African American Art

This course will introduce students to a history of African American artistic production from the late 18th century to the present, in a range of media and styles. While we will focus primarily on the visual arts—looking at sculpture, painting, photography, collage, film, performance, and installation—we will also consider the deeply interdisciplinary nature of Black cultural production, highlighting the important role of music, poetry, dance, and theater.

We will explore how African American artists, both individually and collectively, have negotiated the terms made available to them by cultural institutions, whether by struggling for inclusion, acknowledgement, and validation; actively protesting racist and exclusionary policies; or by forming alternative institutions, communities, and spaces in which to work and share support. From the Harlem Renaissance to the Black Arts Movement and "post-Black" exhibitions, art works will serve as a primary source to ask, is there such a thing as a "Black aesthetic" and if so, how would one define it? Why might an African American artist reject such an idea? Other key questions will include: What is the role of visual representation in political struggle? How have artists mobilized portraiture as a tool of liberation? What does it mean to turn away from figuration, toward abstraction or opacity? How have artists grappled with questions of nationhood, belonging, and diaspora?

Together, we will trace how artistic forms, techniques, and motifs have served both as sites of collective history and as speculative propositions to envision new futures, articulating what Robin D.G. Kelley calls "freedom dreams."

AMST249 Art After 1945

This course examines artistic production in the United States between 1945 and 1980, with a primary focus on the United States. The historical conflicts of that tumultuous period presented new challenges for artists as they attempted, in their work, to respond to the "caesura of civilization" brought about by the Holocaust and World War II, to contend with the consolidation of postwar consumer capitalism and mass culture, and to situate their work in relation to the far-reaching social upheavals of the 1960s and '70s. Practices linked to the historical avant-gardes (such as abstraction, the readymade, Dada, and surrealism) echoed in these years as attention shifted from the canvas and studio to greatly expanded contexts of reception and public experience. The boundaries of the art object transformed in turn as artists developed new models of spectatorship to confront a world that had placed enormous pressure on traditional concepts of humanist subjectivity. Topics include New York School painting, pop art, minimalism, process art, conceptual art, performance, institutional critique, and site-specificity.

AMST250 Incorporation of America: Corporate Capitalism and the American Way of Life

This course will examine how corporations have shaped and continue to shape American society and culture. Moreover, we will investigate how corporate capitalism has influenced U.S. relations with other countries. The course will extend from the mid-nineteenth century, when corporate capitalism clashed with alternative ways to organize the economy, to the present, when the neoliberal project faces a major crisis. We will read academic and fictional works, watch movies and TV shows, and analyze works of art that illuminate the history of corporate capitalism. We will explore how corporations have fostered class conflict, imperial expansion, technological change, structural racism, environmental degradation, ideological fundamentalism, among other things. In addition to writing individual papers, we will engage in collaborative and creative works to reflect on how corporations impact our lives.

AMST252 Histories of the Caribbean: New Questions, Methods, and Vantage Points

This course explores some of the most exciting new trends in historical scholarship on the Caribbean. We will consider how recent scholars of the Caribbean have turned a critical eye to existing methods and reimagined "archives" as they have crafted new stories about gender, sexuality, race, the environment, and the rise of modern capitalism. In this way, we will question how these new directions in Caribbean studies have reshaped the study of history more generally. We will use a wide geographic lens in order to gain an expansive vision of the circuits of the Greater Caribbean, stretching from Antigua, Guadeloupe, Barbados, Martinique, Jamaica, Trinidad, Guyana, Cuba, Puerto Rico, and Haiti into the wider Atlantic world.

AMST253 American Modernisms, 1900-1945

Focusing on three case studies--the Stieglitz Circle, the Harlem Renaissance, and Mexican Muralism--this course examines the specifically pluralistic and diverse contributions of American artists to the development of modernism from 1900 through the Second World War. During this period, the United States began to be a terrain on which artists with roots in Europe, Africa, and the Americas developed advanced language in the visual arts and experimented with new mediums and formats for art. Topics we will explore include the relationship between art and industry in painting, sculpture, film, and photography; relationships between cosmopolitan and indigenous cultures; primitivism and its appropriation; interrelationships between the visual arts, music, and poetry; constructions of gender and the emergence of the female artist; racial pluralism; and the articulation of hybrid American (and Pan-American) modernisms.

AMST255 Anarchy in America

In the summer of 2020, Trump effectively declared war on anarchists, casting them as "outside agitators" who had taken over widespread protests of police violence. Anarchism as a political philosophy and practice is an important but little-known aspect of American culture and society. This lecture/discussion course will introduce students to select aspects of anarchist political thought and praxis in the United States and the ways that anarchism has been represented positively, vilified, or dismissed. The class will have three parts: histories; philosophies and theories; and activism. In the history section, we will examine key events and periods from the late 19th century to the early 20th century. In the philosophy and theory segment, we will examine anarchist theory as radical critique and review various political traditions including individualist anarchism, socialist anarchism, anarcho-feminism, Black anarchism, queer anarchism, Indigenous influences and critiques, and additional schools of thought. In the activism section, we will examine the diverse ways, including black bloc tactics and the overlap between antifa actions, by which people mobilize and organize for political change.

Prereq: **None**

AMST256 Race and Medicine in America

This course will trace ideas of race in American medical science and its cultural contexts, from the late 19th century to the present. We will explore how configurations of racial difference have changed over time and how medical knowledge about the body has both influenced and helped to shape social,

political, and popular cultural forces. We will interrogate the idea of medical knowledge as a "naturalizing" discourse that produces racial classifications as essential, and biologically based.

We will treat medical sources as primary documents, imagining them as but one interpretation of the meaning of racial difference, alongside alternate sources that will include political tracts, advertisements, photographs, and newspaper articles. Key concepts explored will include slavery's medical legacy, theories of racial hierarchy and evolution, the eugenics movement, "race-specific" medications and diseases, public health politics and movements, genetics and modern "roots" projects, immigration and new technologies of identification, and intersections of race and disability.

AMST259 Discovering the Person

This course surveys major developments in psychology and psychiatry from 1860 to the present. Through readings and lectures, the course introduces the major schools, theories, and systems in the American "psy" sciences. We examine the kinds of persons who were "discovered," the techniques of discovery, the extensions of psychological ideas to institutions and policy formulations, and the consequences of these discoveries for public as well as private life. We examine phenomena that were located, catalogued, and explained by these sciences, including rationality, gender, cognition, personality, race, emotion, psychiatric disorders, development, intelligence, and the will. Attention is given to the scientific grounds of investigations and the empirical evidence sought in the century-long process of discovering and naming psychological kinds. Readings include primary source documents, histories, and philosophical analyses.

AMST260 Bioethics and the Animal/Human Boundary

In this course, we will explore the construction of the animal/human boundary through the lens of bioethics. We will define bioethics as the study of the ethical consideration of medical, scientific, and technological advances and their effects on living beings. At the same time, we will pay close attention to the cultural contexts in which these advances emerge, imagining the realms of scientific

progress and popular culture as mutually constitutive. We will consider topics such as cloning, organ transplantation, pharmaceutical testing, and gestational surrogacy, with a focus on the late 20th and early 21st centuries. We will begin by interrogating how ideas of the "animal" and the "human" are constructed through biomedical and cultural discourses. We will ask, How is the human defined? By intelligence or consciousness levels? By physical capabilities or esoteric qualities? Similarly, how has the human been defined against ideas of the animal? Or, what ethical justifications have been cited in the use of animals in biomedicine? What makes certain species "proper" research subjects and others not? What do these formulations tell us about our valuation of animal and human life, and what kinds of relationships exist between the two? To answer these questions, we will consult a wide range of interdisciplinary scholarship, from authors in the fields of animal/ity studies, bioethics and medicine/science history, sociology, anthropology, and philosophy. Students will also be exposed to the basics of biopolitical theory.

AMST262 Beyond the Talking Book: Reading African American Literature in the Newspapers

The majority of late-nineteenth and early twentieth century African American writers, such as Frances Harper, Martin Delany, Pauline Hopkins, W.E.B. Du Bois, and Cyril Briggs, published their work in African American periodicals. In this course, we will examine the works of these canonical authors (as well as some lesser known ones) in their original publication context, the magazine archives of *The Christian Recorder*; *The Anglo-African Magazine*; *The Colored American Magazine*; *The Crisis*; *The Crusader*; *Opportunity*; and *Fire!!* The guiding question in our readings is this: how does our understanding of these canonical texts change when we read them in their original context--as either serial novels, or as components of a larger composite magazine, consisting of multiple different texts and images? In addition to honing students' literary close-readings skills, this course aims to teach students how to do original research and critically engage with multi-genre, mixed forms like the magazine.

Authors we will read include: Frederick Douglass, Charles Chesnutt, Frances Ellen Watkins Harper, Langston Hughes, Zora Neale Hurston, W.E.B. Du Bois. In order to get a better understanding of the literary conventions of the serial form, students will read one of the assigned serialized novels (Pauline Hopkins' *Of One Blood*) in its original installment-format, week-by-week. Reading these works serially will also enable them to play closer attention to each installment's relationship to its surrounding texts and images.

AMST263 Post Cold War Narratives of Migration to the U.S.

In this course, we will study post-cold war U.S. immigrant literature. Published in a period of shifting politics, particularly for racialized migrants, these texts illuminate new iterations of what it means to be and belong in a world where capital, labor, materials, products, and people were experiencing new forms of global im/mobility. We will read a variety of diasporic fiction from a range of localities to consider the ways imperialism, colonialism, militarism, religious proselytizing, and racial capitalism are in dialogue with the murky experiences of family, desire, loss, home, mobility, culture, trauma, and belonging. In doing

so, we seek to understand how macro, micro, interpersonal, and intrapsychic experiences and institutions shape migratory routes and the stories that emerge across them. We will address literature through an interdisciplinary lens by reading fiction alongside sociology, history, economics, political theory, and more in order to consider what the world of the fictive can tell us about migration that other disciplines may not be able to articulate with such emphasis and attunement as literature.

AMST264 Introduction to Asian American Literature

This course introduces students to Asian American literature, culture, and literary criticism. In addition to exploring narratives concerning Asian American migration, exclusion, citizenship, and intersectionality, we will also focus on newer critical trajectories. These include Asian Americans and the U.S. and Global South, genealogies of violence, recent trends in Asian American and diasporic popular culture, climate change, and critical refugee studies. By examining a range of genres and critical methods, this course will advance understanding of how Asian America has shaped the making of American culture and history.

AMST265 Theorizing Religion with Zombies

This course introduces students to theories in religious studies in order to investigate the intellectual and cultural histories of two highly influential and essentially religious ideas: the zombie and the apocalypse. We will critically trace their representations in popular culture in order to explore writings in biblical narrative, history, modernity, monster theory, alterity, gender, capitalism, race, epidemiology, film theory, and media studies. We will begin with ancient texts, move to the history of the concept of the zonbi in Haiti, and then trace the trope of this modern monster and its various meanings into the contemporary moment.

AMST266 New York City: Architecture and Urbanism

This course considers the history of architecture and urban development in New York City from colonial times to the present. Emphasis is on major landmarks of each historic period, with attention to related planning, parks, land and water transportation, housing trends, and urban infrastructure. Conditions of settlement, growth, decline, and renewal will be examined from a political, economic, and social perspective in varied neighborhoods. Contemporary topics include neo-liberal policies for urban development, green buildings, gentrification, and planning for the city's future in the era of impending climate change. While the focus will be on architecture, every effort will be made to see built environs as points of intersection between competing ideals and interests that shape the city we see.

AMST267 Jazz Avant-Gardes

What is an avant-garde and what does it mean in the context of jazz? This course will explore this question focusing on the 1950s and 60s and beyond. We will take a holistic approach, examining the music and its surrounding community within the broader social and cultural currents of the times. These currents include European-inherited avant-garde aesthetics, the increasingly urgent civil rights movement and changing conceptions of freedom, artist collectives, and Afrofuturism. Three key artists will provide a focal point: Ornette Coleman, Cecil Taylor, and Sun Ra. Others will expand our view, including Thelonious Monk, John Coltrane, Alice Coltrane, the Art Ensemble of Chicago, Anthony Braxton, Yoko Ono (a non-jazz artist who contributed to an experimental sensibility in NYC), and others. We will immerse ourselves in a combination of reading, listening to recordings, viewing videos, discussion, and some in-class performances. Throughout the semester we will pursue the parallel goals of using this movement in jazz to expand our understanding of avant-garde movements in general and using historical avant-garde movements to expand our understanding of how the phenomenon has played out in jazz. The first two weeks will function as a Jazz 101 boot camp, so no prior experience in jazz is necessary.

AMST269 New World Poetics

God and money, love and beauty, slavery and freedom, war and death, nation and empire: The themes of early American poetry will carry us from London coffeehouses to Quaker meetinghouses, from Philadelphia drawing rooms to Caribbean plantation fields. Our texts will range from pristine salon couplets to mud-bespattered street ballads, from sweetest love poems to bitterest satire. Digging deeply into the English-language poetry written, read, and circulated after the first English settlement in North America, we will trace the sometimes secret connections between history and poetic form, and we will listen to what these links can tell us about poetry and politics, life and literature in our own time. Our poets ignored false divisions between art and society, and so will we.

AMST270 Criminalization, Regulation, and Resistance: Introduction to Native North American History

This course explores Indigenous politics and US settler colonialism across the long 19th century, from the Constitution's Commerce Clause to the 1924 Indian Citizenship Act. We will examine how the US state relied on both criminalization and regulation of Native peoples' gender, sexuality, religion, social relations, and cultural and economic practices to expand and consolidate power on the continent. Readings will address how Native nations sustained their sovereignty and negotiated settler encroachment, covering conflicts around the liquor trade, allotment policy, the Ghost Dance, conservation's consequences, salvage anthropology, Progressive-era activism, and American citizenship.

AMST271 On Evidence: Archives, Museums, and Prisons

This course introduces an interdisciplinary study of the idea of evidence in connection to the modern development of archives, museums, and prisons, by setting this in a contemporary dialog with the discourses on state violence, incarceration, and refugeehood. This course will firstly establish historical and theoretical connections between carcerality, Western archival record-keeping practices (e.g., scientific grids, mugshots, taxonomies, and forms of surveillance), and museological frameworks developed during the transition from the 19th to the 20th century.

Furthermore, it considers how records, artifacts, digital data, bones, sites of "memories," oral traditions, embodied knowledge, or intergenerational trauma can become evidentiary material. Such inquiries are central to decolonial archival studies as they are critical for historically marginalized, racialized, and gendered subjects, whose claims to social justice, human rights, and cultural heritage are tied to the aftermaths of slavery, genocides, and colonialism. Our readings and discussions will specifically draw upon decolonial archival studies, digital humanities, visual studies, human rights discourse, Asian American studies, Black studies, and Indigenous studies, which have continuously challenged what constitutes evidence.

AMST272 Unsettling American Art, 1600-1900

This course examines developments in American art from roughly 1600 to 1900. Core objects in this class will range widely: quilts; maps; baskets; paintings across genres of portraiture, landscape, and still life; engravings; public monuments; daguerreotypes; and more. We will seek to understand the particular concerns and traditions animating objects across this heterogeneous span of materials, forms, and techniques. In so doing, we will also ask how artists and makers--including those whose names were never recorded--variously internalized, articulated, or examined the historical contradictions of their time, including the consolidation of settler colonialism and racial capitalism; rebellion, revolution, abolition, and civil war; industrialization and its ever-expanding and often violently lopsided acceleration of communication networks, labor relations, travel, and exchange; and the contested aim of defining a distinctively American aesthetic tradition in a land born of migration, encounter, forcible displacement, and polyphonic hybridization. Visits to area museums and collections will complement in-class work.

AMST273 South Asian Literature in the American Diasporas

The South Asian diaspora spans the world; communities are located in Africa, the Middle East, England, North and South America, and the Caribbean, as well as Southeast Asia. Using novels, poems, short stories, and film, as well as scholarship on history, this course will focus upon the literary and cultural production of the South Asian diaspora in the Americas, focusing especially on the United States. We will examine the conditions of historical arrival and identity-making under shifting regimes of politics, economics, and culture. What does being in the United States mean for the claiming of "Indian" and "American" identities, and how is this inflected by relationships with other ethnic or racial communities? The relationship with an often romanticized "India"

is a central question, expressed through the concepts of diaspora, exile, and transnationalism. Consequently, what are the conditions of "authenticity," and of cultural authority? What aesthetic forms, questions, and issues express or preoccupy the artists of the South Asian American community?

AMST274 Economics of Wealth and Poverty

Who are the very wealthy and how do they acquire their wealth? Why is poverty still with us after almost 50 years of antipoverty programs? What explains rising inequality in the distribution of income and wealth? These are just a few of the questions that we address in this course. The problem of scarcity and the question of production for whom are basic to the study of economics. Virtually all courses in economics give some attention to this topic, yet few study the distribution of income in depth. This course takes a close look at evidence on the existing distribution of income and examines the market and nonmarket forces behind the allocation process. Our investigation makes use of U.S. economic history, cross-country comparisons, and fundamental tools of economic analysis. Topics include normative debates surrounding the notions of equality and inequality, analytic tools for measuring and explaining income inequality, determinants of wage income and property income, the importance of inheritance, the feminization of poverty, and the economic analysis of racial discrimination. A central subject throughout the course is the role of policy in altering the level of poverty and inequality.

AMST275 Introduction to African American Literature

This course will introduce students to African American literature. It will be divided into two parts. The first will pay particular attention to the experience of enslavement by focusing on several unique primary and secondary textual couplings, including (but not limited to): Frederick Douglass's "Narrative of the Life of Frederick Douglass, an American Slave" (1845) and Saidiya Hartman's "Scenes of Subjection: Terror, Slavery, and Self-Making in Nineteenth-Century America" (1997); and Harriet Jacobs's "Incidents in the Life of a Slave Girl" (1861) together with Hortense Spillers's "Mama's Baby, Papa's Maybe: An American Grammar Book" (1987). In addition to these classic 19th-century slave narratives and contemporary sources, then, the first part will also include supplementary readings by Kenneth Warren, David Blight, Angela Davis, Alexander Weheliye, Spillers, Hartman, Farah Jasmine Griffin, Shelly Eversley, Jennifer Morgan, and Frank Wilderson. The second part will focus on 20th- and 21st-century African American literature and literary criticism. It will bring together a wide range of readings from across genres and disciplines, attempting to sketch out the major aesthetic and political features of the black literary project. Authors here will include W. E. B. Du Bois, Booker T. Washington, Michael Rudolph West, Hazel Carby, Cheryl Townsend Gilkes, Alain Locke, Shane Vogel, Alice Walker, Zora Neale Hurston, Richard Wright, Ralph Ellison, Asia Leeds, Roderick Ferguson, Claude McKay, Amiri Baraka, James Baldwin, Toni Morrison, Samuel Delany, Octavia Butler, Teju Cole, Ta-Nehisi Coates, Cornel West, Claudia Rankine, Warren, and Fred Moten.

AMST276 God & Guns: The History of Faith and Firearms in America

This course examines the history of firearms and religion in the United States, ultimately seeking to understand the significance of gun culture within American Christianity and the powerful "God & Guns" story at the core of many Americans' identity. Beginning with an overview of colonial and revolutionary-era views of firearms and violence, the course examines the influence of slavery, gender, and the wars of the 20th century, paying special attention to the emergence of a masculine, warrior Jesus within evangelical and fundamentalist communities during the Cold War. Students will be challenged to consider the ways in which this story helps explain one facet of popular support for Donald Trump and to reflect on how firearms are central to the identity of many conservative American Christians.

AMST277 Digital and Visual Storytelling

During this seminar, we will develop a digital group project that addresses the question of remembering and denying pasts through the historical and critical relationship between carcerality, race, and storytelling in Connecticut. By engaging with contemporary forms of digital and visual storytelling (ArcGIS StoryMaps), this group project will work with the modalities of archival studies and digital humanities, accompanied by readings in critical race studies, visual and literary theory, and decolonial theory. We will first explore "remembering the past" through two post-Civil War Connecticut landmarks: The Church of the Good Shepherd (1867-69), dedicated to Samuel Colt, and the Mark Twain House (1874), now a museum. Both architectures exist as pivotal markers for a new modern American narrative intertwined with legacies of slavery, manufacturing, firearms, and storytelling. We will then consider how to make visible denied "pasts" by conducting archival research on the formative period of the 1860s and 1870s and in respect of the Connecticut context. Centrally, valuable insights for the project development will be provided by the in-class meetings with scholars, artists, and archivists, whose work rethinks and challenges the bond between carcerality, race, and storytelling.

AMST277Z Thinking with Octavia Butler's "Wild Seed"

Blend: Monday and Thursday class time synchronous; additional class hours asynchronous.

Black speculative fiction writer Octavia Butler's novel "Wild Seed" (1980) begins on the African continent in the 17th century amid the rise of transatlantic slavery and concludes on a plantation in Louisiana on the eve of the 19th-century American Civil War. "Wild Seed" was the last published book in Butler's Patternist series, but it relates the earliest segment of that epic story, which follows a shape-shifter named Anyanwu and a body-jumper named Doro across geographies, centuries, classes, corporealities, genders, races, and even, in Anyanwu's case, across species. To quote one student: "It's the weirdest novel I've ever read." This seminar takes up the myriad and interwoven provocations Butler offers in "Wild Seed" by reading her novel alongside a wide range of scholarly literature in the fields of African and African diaspora studies,

Indigenous studies, gender & sexuality studies, animal studies, history, disability studies, religious studies, and cultural studies, as well as visual arts. Rather than "apply" the syllabus texts directly to Butler's novel, we will attend to how her novel not only reflects--indeed, anticipates--such scholarly and artistic production, but also produces its own aesthetics and epistemologies.

The seminar unfolds part-synchronously (via Zoom) and part-asynchronously (via writing assignments, screenings, and research project check-ins). Twice-weekly virtual meetings will be centered on presentations of research projects that students will develop over the course of the month, engaging a particular theme or question that they will identify in Butler's work. As such, the syllabus texts are subject to change. Students will be expected to read "Wild Seed" in its entirety in advance of the first class and to have begun thinking about topics they might explore for their presentation and research project (the former being preparation for the latter). The seminar's asynchronous component will consist primarily of weekly writing exercises asking students to reflect on how the assigned texts converse with Butler's novel and vice versa and to comment on one another's analyses. Shared annotatable pdfs will be used to generate conversations about the readings outside of class and to identify questions and topics for discussion. The professor will consider proposals for a creative final project, but it, too, will require substantive research.

AMST279 Asians and Pacific Islanders in U.S. Empire

This course forefronts the diversity of experiences between and within the Asian and Pacific Islander communities in the U.S. empire both on the North American continent and in the Pacific. While political and social categories place Asians and Pacific Islanders within the same group, the groups' vastly varied experiences under U.S. empire makes it necessary to challenge the historical narratives that gloss over key contexts that continue to influence Asian American and Pacific Islander American experiences today. Thus, we will engage in an integrated, not conflated, history of Asians and Pacific islanders, paying attention to the specificities of imperial experiences and their effects on race, class, gender, migration, and diasporic patterns. We will explore topics of immigration and migration, labor and trade, citizenship and belonging, race and indigeneity, gender and sexuality, war and militarism, religion and culture in various contexts, including cities such as San Francisco and New York, regions such as the Pacific Northwest and the American South, countries of the Pacific Rim including the Philippines and Vietnam, and the Pacific islands such as Guam, Hawai'i, and American Samoa.

AMST280 Frank Lloyd Wright: Myth and Fact

This course considers the architecture of Frank Lloyd Wright in the context of his own life and development as an artist and in the context of the broader history of modern architecture, of which Wright's work was a part and to which it contributed. The seminar also considers the relationship of Wright's achievements to the social, economic, technical, and ideological history of the United States from the mid-19th through the mid-20th centuries. A major theme will be critical reading of Wright's own statements about his life and work in relation to other sources, later accounts, and his buildings and projects

themselves. Both Wright's residential and public architecture will be considered in conjunction with his designs for landscapes and urbanism. Architectural drawings will also be examined as a medium in themselves, along with textual and physical evidence, as a means of generating maximal insight into Wright's built and unbuilt works.

AMST282 Literature of the Harlem Renaissance

This course will examine the aesthetics and politics of the first modern African American literary movement, known today as the Harlem Renaissance. Students will learn about the national and global contexts of this movement as well as the various debates that it generated, many of which still reverberate with Black writers today. These include the relationship between Black art and propaganda, the burdens of racial representation and the constraints of respectability politics placed on the individual Black artist, the right to opacity, and the relationship between race and form.

In this course, students will become familiar with some of the key texts of the Harlem Renaissance, its national and international contexts, and its recurring themes and debates. Furthermore, by reading and writing across a wide range of texts from this movement--including poems, short stories, novels, essays and manifestos--students will learn how to engage with a variety of genres. The assignments for this course are thus designed to teach students to write about not only specific genres, but also recurring themes in works from the Harlem Renaissance. By the final project, students will be able to pivot from writing about discrete forms and themes to writing to specific audiences.

AMST283 History of Jazz in American Culture

This course will provide students with a broad-based literacy in the history of jazz while examining its significance and impact within American culture. As a musical style, jazz has been a staging ground for working out some of the most defining issues and aspects of American culture, including the dynamics of race relations, the articulation of gender roles and class distinctions, artistic expressions of freedom and democracy, the creative possibilities of the encounter of European- and African-based cultures on American soil, assimilation versus appropriation, and an extraordinarily influential aesthetic of cool. Jazz was the dance and listening music of choice for most Americans from the 1920s through the '50s, until it was displaced and pushed to the margins by rock and soul in the 1960s. But it has remained an inspiration for diverse artists in rock and rap up to the present day, including Kendrick Lamar's jazz-drenched "To Pimp A Butterfly" and Janelle Monae's 21st-century Afrofuturism deeply indebted to Sun Ra.

We will explore the early 20th-century origins of jazz in New Orleans, its rise as America's popular dance music in the 1920s and '30s, a shift to a more concert art-oriented form in the 1940s and '50s (representing the epitome of cool and hipness), avant-garde expressions of the 1960s (representing a new kind of universal spirituality), its move into rock and the growth of artist-based collectives of the 1970s, and its emergence in hip-hop samples in the 1990s. We will learn about major artists and their classic recordings, including Billie Holiday,

Thelonious Monk, John Coltrane, and Miles Davis, among many others, as well as new directions from recent generations (bringing in guest music department faculty). We will immerse ourselves in a combination of listening to recordings, viewing videos, reading, discussion, and in-class performances. Throughout the semester we will pursue the parallel goals of using jazz history to understand American history and vice versa. This is a jazz history course with a difference, able to accommodate curious newcomers as well as aficionados and those interested in social and cultural dynamics as well as the musical materials.

AMST284 Making New Worlds: Encounters on Turtle Island

From before the arrival of the earliest fishing ships off the coast of Newfoundland to the fall of New France at the close of the Seven Years' War, Turtle Island (North America) was the site of entangled encounters. Overlapping imperial claims and the construction of new societies took place on Indigenous homelands with deep histories. This course will examine North America as a contested and negotiated territory in which imperial plans were subjected to local contexts and contingencies. Using primary and secondary sources, we will examine major events (explorations, encounters, and wars), the rise and fall of imperial powers (French, British, Dutch, and Spanish), and the daily realities that shaped experiences in North America (trade, religion, sex, forced migrations, and disease). Throughout, we will focus on the persistence and resistance of Indigenous nations who protected (and still protect) their homelands and lifeways.

AMST286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice

This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism—queer left, black radical, trans, immigration, prison abolition, and sex work—in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called "ivory tower," explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activisms, the work of a radical imagination,

art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization—past or present—of their choice.

AMST287 Contemporary Art Since 1980

This historically-rooted introduction to contemporary art sets an anchor around 1980 and moves through the major debates of the last 35 years. This period gave rise to a bracing range of historical transformations: a post-communist Europe; an economically prominent China; queer and antiracist activism; increasingly molecular degrees of technological mediation in everyday life; asymmetrical consolidations of a globalized network of travel, communication, and capital; climate and refugee crises; and a state of seemingly perpetual war, to name only a few. This course attends to the changing vocabulary of approaches by which artists intervened in these conditions and positioned their work in relation to a longer view of the history of art. Far from a comprehensive survey, the course acknowledges the inherently recursive and unstable condition of contemporary art history, a field of research and inquiry defined as a work in progress. The course is nonetheless structured in a loosely chronological fashion, sequenced according to formal techniques that emerged as timely responses to specific historical moments (photographic appropriation, moving image projection, social practice, painting, institutional critique, web-based art, etc.). Our work throughout will attend to theoretical frameworks that have remained influential in recent practice (postcolonial, feminist, poststructural, etc.).

AMST289 Insular Borders of Latin(x) America

Before and at the same time the United States established itself throughout the 19th century as a major power in the Americas and the world, various Latin American republics inherited and acted upon a similar imperialist agenda to expand their borders not only to neighboring territories but also across oceans. In this class, we will study and compare these imperialist gestures, among them the Spanish Empire's control of its remaining insular colonies in the 19th century (e.g., Cuba, Puerto Rico, the Philippines, and Guam) and the United States' successive claim to these very same islands. We will analyze literary works and films that interrogate these imperialist claims as well as the trajectories of islanders: for instance, the forced migration of the Rapanui (Easter Island people) in the second half of the 19th century (first as slaves to Peru and then to the town of Hanga Roa in Easter Island) and the island-to-island "intra-colonial" (Joanna Poblete) recruitment of Filipino and Puerto Rican laborers in sugar plantations in Hawai'i at the beginning of the 20th century. Some of the questions we will explore are: Why are islands so coveted by old and new empires? How have Rapanui, Filipino, and Puerto Rican migrants and their descendants resisted authorities on the insular borders of empire? How do writers and artists tell these silenced histories? Can we speak of Latinidad and Edouard Glissant's concept of Poetics of Relation in a Pacific Ocean context? Readings will be in Spanish and English. All discussions and assignments will be in Spanish.

AMST290 Color Lines: The U.S. South and the Colonial World

The American South has always been a unique society. But it has never been exceptional or isolated from the world. Although located north of the equator, it shares many features with the Global South. Its history of conquest, slavery, patriarchy, rebellion, and white supremacy makes it similar to many tropical and semitropical countries that have been colonized by Western powers in modern times. In this course we will study the American South from the times of European colonization through the Civil Rights era. We will establish comparisons between the history of the American South and the histories of the Global South. How did the displacement of Native Americans in Georgia compare to the treatment of Indigenous populations in Australia? How did slavery in Virginia compare to slavery in Brazil? How did the emergence of the oil industry in Texas compare to that of Iran? How did Jim Crow in Mississippi compare to apartheid in South Africa? How did the struggle for civil rights in Alabama compare to struggles for decolonization in Vietnam?

In addition to a comparative approach, we will look into how Southerners engaged with people from the Global South. We will study primary and secondary sources that illuminate encounters between Southerners and foreigners. International trade, religious missions, infrastructural enterprises, political activism, and military operations, among many other events, put the American South in touch with the Global South. These encounters remade modernity, placing questions of racism, regionalism, and colonialism at the forefront of political and intellectual debates.

AMST291 Afro-Asian Intersections in the Americas

This course explores a range of historical, cultural, and political intersections between African and Asian diasporic people in the Americas from the late 19th century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the United States and abroad, and the 1992 Los Angeles uprising. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to interracial buddy films like *Rush Hour* (1998), to the contemporary fiction of writers such as Patricia Powell and Charles Johnson.

AMST291Z Afro-Asian Intersections in the Americas

This course explores a range of historical, cultural, and political intersections between African Americans and Asian Americans from the late nineteenth century to the present. Taking an interdisciplinary approach, we will examine key moments in the history of Afro-Asian encounters in the Americas, including the importation of slave and coolie labor in the 19th century, the formation of anticolonial and antiracist "Third World" movements in the U.S., and the Los Angeles Uprising of 1992. We will also study forms of cultural interracialism, from African Americans' mania for kung fu in the 1970s, to the interracial buddy film *Rush Hour* (1998), and from the contemporary fiction of writers such as Patricia Powell and Charles Johnson to the sounds of hip hop. As this brief overview

suggests, we will be examining a diverse selection of texts including history, fiction, ethnography, cultural studies, and film.

AMST292 New Worlds, Indigenous Futures

Indigenous Futurism describes a cultural turn to emphasizing not only the presence of Native peoples in contemporary settler colonial societies but to declaring their resurgence in a transformed future. Since the 2010s, Native American and First Nations writers, artists, and online communities have increasingly used "futurism" to invoke de-colonial horizons and also to describe long-standing tendencies to use science fiction vocabulary and imagery to explore themes of displacement, alienation, and survival. This course will explore these themes in 20th- and 21st-century Indigenous culture in the United States and Canada and consider why the future is a temporal terrain of struggle for Indigenous peoples. In the progress-obsessed orientation of colonial time, Indigenous peoples are often assigned to the past, yet Indigenous political and cultural movements continue to insist on their role in shaping our planetary futures. We will begin from an understanding of Indigenous Futurism's influence from and conversation with Afrofuturism and then pursue topics such as: Indigenous uses of digital technology, the ethics of land stewardship in outer space, and the political implications of nonlinear time.

The course will have an emphasis on speculative literature and theoretical texts by Indigenous authors, including two anthologies of Indigenous speculative fiction, and we will also delve into films (ex. "Black Panther"), music (ex. A Tribe Called Red), and visual cultures by contemporary artists (ex. Jeffrey Gibson).

AMST293 Reenacting Justice: Guns in America

This seminar, developed in collaboration with visiting guest instructor Glenn LaVertu (Parsons), combines readings, discussion, archival research, storyboarding, project-based learning, legal analysis, and filmmaking in presenting new takes on an old genre: Westerns. We will read and watch Westerns alongside study of the development of the American legal system, considering the aesthetics of justice, narrative, and guns. Students will work on film and theater projects related to the manufacturing, use, and mythologization of "Old West" in popular culture, television, and film. Film projects will be screened and discussed at the Center for the Study of Guns and Society's annual undergraduate conference on Thursday, April 25, and Friday April 26, 2024, and at the presentation of "Stories of Carceral Connecticut," a celebration of student projects for the Mellon Foundation project, "Carceral Connecticut," on Friday, May 3, 2024. (Both events are required). The course will consider the aesthetics of storytelling, guns, and justice, as well as be a lab for creating and narrating new stories. Engaging with contemporary debates about Westerns as manifestations of American gun culture, the purpose of the project is to draw parallels between the way in which gun violence is portrayed in film, particularly period, Western movies, and the realities of gun violence today. The final project is an opportunity to expose multiple points of view regarding gun violence and justice and their socio-political effects, and to write and develop new scripts, storyboards, and film scenes, as well as study old ones.

Assignments and Grading System:

Grading is based on weekly assignments and participation, an in-class midterm on the readings, and a final project.

Requirements:

- Class Participation (20%): Regular attendance, submission of weekly 1-2 pg written critical reflections on assigned topics (e.g. a primary source, an advertisement or magazine article, a report about a field trip or movie, etc.) Participation in the April 25 evening student mini-film festival and April 26 all-day undergraduate research conference is required.

- Midterm (40%): In-class midterm on the readings and discussions (in class; Thursday before break).

- Final project (40%): (20% for the project; 10% on the written artist's statement; 10% for the presentation at the April 25 mini-film festival night and April 26 panel).

Required Texts

(Available for purchase at the bookstore, and available for free reading on Olin e-reserve through the Course Moodle).

- *Joyce, Justin A. *Gunslinging Justice: The American Culture of Gun Violence in Westerns and the Law* (Manchester Univ. Press 2018).

- Densley, James ed. *The Conversation on Guns* (JHU Press, 2023).

- Light, Caroline E. *Stand Your Ground: A History of America's Love Affair with Lethal Self-Defense* (Beacon Press 2017).

- McKevitt, Andrew C. *Gun Country: Gun Capitalism, Culture & Control in Cold War America* (Univ of North Carolina, Chapel Hill, 2023).

Additional writings (e-reserve at Olin Library and on Moodle) are by Kelly I. Aliano, *The Performance of Video Games: Enacting Identity, History and Culture through Play* (2022); Vanessa Agnew et al, *Handbook of Reenactment Studies: Key Terms* (2023); and Priya Satia; Roxanne Dunbar-Ortiz; Richard Slotkin;

Gillian Rose; Carol Anderson, Jennifer Carlson, Terrence H. Witkowski, Lindsay Livingston, Peter Boag, Joan Burbick, Jelani Cobb, and more.

AMST294Z Mapping Culture

What is a culture, how can it be intimately wrapped up in a location, and how can that be mapped out to better understand its inner workings? In the face of globalization and pervasive online communities, what can conventional wisdom--"Location, location, location" and "All politics is local"--tell us about the importance of actual places in cultural formations? We will first orient ourselves with a wide range of music mapping projects, as well as projects that directly address the significance of a location (Nile Project, Playing for Change). From a base in the interdisciplinary field of ethnomusicology, we will then examine how scenes and subcultures can congeal in particular places and times, mapping them in New York City's Lower East Side (punk), Greenwich Village (urban folk revival), and South Bronx (early hip hop). Deploying a broad conception of culture, we will cover other art forms (e.g., graffiti and other street art) and social formations. Haight Ashbury (SF) 1960s counterculture, Laurel Canyon (LA) 1970s singer-songwriters, Chicago 1980s post-disco house, and London 1980s post-punk goth and early 2000s grime will provide complementary case studies. These examples will provide models before students embark on their own to map out a culture of their choice as their final project, using either Google maps or Story Maps. Readings on theories of place and of subcultures will provide blueprints for issues to be explored, including how group identity and a sense of community can be locally constructed and the significance of physical in-person contact in a world of increasingly virtual relationships.

AMST295 Kill Anything That Moves: The Vietnam War in Literature and Film

This course examines various forms of literature and film to understand the legacies of one of the most transformative events in American culture and history: the Vietnam War. "Kill anything that moves" was the order that American soldiers reportedly received while on the ground in Vietnam, yet, to a large extent, the historical focus on the American experience of the conflict has overshadowed other perspectives. Thus, this class will take a comparative approach, exploring works by canonical and noncanonical American, Southeast Asian, and Southeast Asian American authors and directors. Among the diverse genres we will study are prose, poetry, graphic narrative, and narrative and documentary film. To think about the Vietnam War's broader relevance, we will situate the works under study within current debates concerning

refugees, genocide, human rights, and the complex politics and aesthetics of war representation. Students will have the opportunity to investigate an understudied aspect of the Vietnam War toward the end of the semester.

AMST298 From Seduction to Civil War: The Early U.S. Novel

This course examines the relationship between nation and narrative: the collective fantasies that incited reading and writing into the 19th century. We will study the novel as a field of literary production both in dialogue with European models and expressive of changes in national culture, a form that both undermined and reinforced dominant ideologies of racial, gender, and class inequality during this turbulent period of national formation and imperial expansion. We will consider the ways the pleasure of novel-reading depends upon, even as it often disavows, the world outside the story. Throughout our reading, we will trace the ways these novels both reflect and participate in the historical development of the United States during a period that spans national founding, the consolidation of northern capitalism and an exacerbated North/South division, expansion into Mexico and the Pacific, and civil war. Through close attention to literary form, we will continually pose the question, What is the relationship between literary culture and historical change? We will examine who was writing, for whom they wrote, and the situation--political, commercial--in which the American novel was produced and consumed. We will begin with the novel of sentiment and seduction and conclude with reflections on slavery and racial revolution on the eve of the Civil War, all the time asking about the ways the novel might seduce us into either tolerating or resisting the way of the world.

AMST299 Christianity and Globalization

This course focuses on recent developments in global Christianity. We will look at various interlinked dynamics: the rise of spirit-filled Evangelicalism, especially Pentecostalism, faith-based humanitarianism, child-sponsorship programs, and themes of militarism such as spiritual warfare. We will pay attention to the role of U.S. power in the world and how the narratives that various Protestant Christians tell through their writings and media shape life across international spaces. We will sample a variety of methods in how one studies the field of Christianity. These will include historical, sociological, and anthropological methods, all of which challenge traditional scholarly accounts (meaning those in the field of church history) in order to expand our understandings of Christianity in the modern period.

AMST300 The American West in the Age of Capitalist Transformation

This course examines the transregional and transnational forces that converged into the locations that, throughout history, American society has called "the West." It also explores how the occupation and development of the American West inspired similar expansionist projects in other parts of world. We will investigate the transformation of vast territories previously inhabited by Native groups into a booming agro-industrial empire controlled by white men. Within

this context, we will study the cultures that developed and clashed in the West. We will use academic texts and primary-source material such as travel narratives, letters, ethnographies, novels, drawings, photographs, and film. We will delve into the lived experience in the West and the images, myths, and visions that different groups produced about it. During the semester, students will write a research paper on a topic of their choice related to the American West in global perspective.

AMST301 Immigration and the Politics of Fear

This course will examine the role of fear in shaping ideas about immigrants. We start from the notion that emotions are social formations with particular histories and political significance. Therefore, we will refrain from assuming that fear is nothing more than a feeling or an automatic response and instead take it as a site that allows us to examine how psychological and legal discourses together define and dispute what is normal, reasonable, credible, plausible, real, appropriate, and timely. The seminar will cover themes such as risk and threat, race and origin, pain and injury, confession and testimony, fiction and figuration, and personhood and representation. We will look at newspaper articles, social media content, legal opinions, case law, court transcripts, and psychological evaluations, as well as texts in politics, anthropology, sociology, philosophy, literature, comics, and films. Students will write a short essay on the politics of fear. Throughout the course, they will develop their toolkit to critically reflect on an emotion of their choice.

AMST302 Lyric Poetry and Music: The Color and Politics of Cry, Sound, and Voice

Lyric poetry may be the most musical of literary forms. In one of its basic definitions, the lyric poem begins after the overhearing of a sound. This sound may be familiar and pleasant, like the timbre and cadence of a lover's voice. Or it may be unrecognizable and terrifying. It may be imbricated with other senses and feelings, provoking a memory that stimulates a sense of touch or smell. Or it may stimulate a sense of horror at the inevitability of death. In any of these cases, sound is thought to reveal an attachment, a memory, and to give rise to composition in the poet's effort to reshape memory and feeling in lyric form. But such articulations do not always come out as evenly as this description may imply. Indeed, moans, screams, stutters, cries, and the madness of possession by the Muses are part of lyric's history and practice. In this course, we will read from African American, African diasporic, Caribbean, Latina/o/x, and Indigenous poetics, and we will consider their relation to myth and musical forms, such as the blues, son, bomba, biguine, jazz, reggae, hip-hop, salsa, among others. The dynamics between lyric speakers and musicians, sound and story, seen and voiced language will play out.

AMST303 Afterparty: End Times, Pleasure, and Clean Up

What do we do in end times, or "after the party" as Joshua Chambers Letson would have it? Already exhausted, with streamers and confetti scattered on the ground, what happens after the party is over? How do we pick up the pieces

and move on? Can narratives of perpetual end times create new beginnings and new horizons? Beginning at the end, this course will engage conversations in science fiction, Black studies, art and performance, Indigenous studies, queer of color critique, and environmental justice to explore the work of endings and beginnings, of hope and hopelessness, of destruction and desire. We will pay particular attention to questions of futurity and pleasure as they are manifest in the aesthetic. Writers and artists to be discussed will include N.K. Jemisin, Sylvia Winter, Ursula Le Guin, Katherine McKittrick, Ohan Breiding, Franny Choi, Saeed Jones, Calvin Warren, Joshua Chambers Letson, Dana Luciano, David Wojnarowicz, adrienne maree brown, Autumn Brown, José Esteban Muñoz, Nick Estes, Dionne Brand, Samuel Delany, Tourmaline, Allison Akootchook Warden (AKU MATU), Jordan Peele, and M.E. O'Brien & Eman Abdelhadi. Students will be invited to craft both creative and theoretical responses to class assignments.

AMST304 The Senses and the Subject in Cinema and Poetry

In this course, we will study a mixture of emotionally stimulating and structurally difficult contemporary cinema and lyric poetry, as well as select philosophical and theoretical approaches to the senses and the subject. Do theories and notions of the senses assume the subject, and/or subjectivity? If so, then how? What is the relationship between embodiment, the senses, the world, racialization, blackness, and being? How do select Western theoretical, aesthetic, and poetic frameworks represent and think as such? While cinema and lyric poetry might seem like strange neighbors, this course specifically foregrounds them as "repositor[ies] of synesthesia," where not only the reconstitution of the subject after some disturbance (i.e., sensorial, physiological, social, historical, etc.) will be relevant to how we read, but also when that either does not happen or constitutively cannot happen. (Note that some short fiction may also be part of the course readings.)

AMST305 On Monsters: Race, Sex, Gender and the Other

The class will consider the category of the monster as a cultural site of meaning. We will explore narratives of the monstrous both literally and metaphorically, working from Jeffery Jerome Cohen's understanding of a monster as "as an embodiment of a certain cultural moment--of a time, a feeling, and a place." In situating the monstrous, we will consider Derrida's reminder that monstrosity is, at its heart, concerned with hybridity, border crossing, and miscegenation. In resisting clear categorization, the monstrous becomes terrifying, improper, and disorienting. As such, we will look at contested sites of American life, such as migration and the US/Mexican border, forms of racial hierarchy and social control, manifestations of postcolonial despair, the violence surrounding gender and sexual difference, as well as biopolitical and technological fears regarding the almost-human. The course will ask students to consider monstrosity as always already interwoven with cultural notions of racial and sexual deviance, which then contend with otherness through the guise of the supernatural. The course will also explore more literal manifestations of the monstrous, including the zombie, the doppelganger, the vampire, and the witch. In doing so, the monstrous takes shape as a way of facing what Cedric Robinson calls the "recovery of human life from the spoilage of degradation," or the idea that monstrosity centers on a politics of purity, a mode of analysis that thinks through the vulnerability of the corporeal self, the ravages of contamination, and the

horror of existence despite, and in defiance of, necropolitical state praxis. This course requires students to watch weekly films in the horror/monster genre.

AMST307 LAND BACK! Indigenous Sovereignty Politics

This advanced research seminar will feature a look at the contemporary LAND BACK movement through current case studies with a focus on tracing the historical and legal genealogies of settler colonial land dispossession, indigenous land title, and self-governance issues bounded to territory (recognized and otherwise). We will examine different historical periods, moments, geographical sites, and case studies to explore the complexities of life for Indigenous peoples in the Pacific Islands and North America subject to the authority of the United States in relation to land as a central part of exercising sovereignty. In relation to these themes, the course will also examine: Indigenous peoples' varied political statuses in settler colonial context; self-determination; structures of domination and resistance; Indigenous agency; Native nationalism and decolonization. Readings will focus on the recognition and assertion of collective land rights, treaty rights, as well as land claims, land recovery, and land reclamation.

AMST309 Theories of Capitalism

Capitalism has profoundly shaped world history, acting as one of the primary drivers of social change, and working to shape a tremendous variety of social institutions ranging from colonialism to our sense of time. This course takes a critical approach to the study of capitalism, looking at the ways capitalism has intersected with and transformed the nature of social oppression (particularly in relation to nation, race, gender, and sexuality), as well as the ways it works to shape everyday consciousness. Historical changes within capitalism will be explored, considering particularly the rise of corporate capitalism and of contemporary neoliberalism. We will examine a wide variety of theoretical approaches to capitalism, taking Marx's thought as a jumping-off point for elaboration and critique. We will conclude by considering alternatives to capitalism that have been proposed in both historical and contemporary contexts, together with an examination of practical efforts to implement these possibilities.

AMST312 Americans Abroad: Mapping Nineteenth-Century Travel Narratives

In this course, we will explore international travel in the long 19th century. We will focus on narratives published by Americans who had the opportunity to travel beyond the United States. Through individual and collective activities, we will survey the trajectories of activists, diplomats, doctors, entertainers, entrepreneurs, journalists, missionaries, sailors, scientists, soldiers, students, teachers, tourists, and many others who engaged with foreign societies. By analyzing travel narratives, we will delve into a globalizing new order of expanding empires and integrating capitalist economies.

The main product of this course will be digital humanities projects. Throughout the semester, we will conceptualize, design, build, and improve StoryMaps. Each student will develop their own individual project focusing on a set of travel narratives. Classes will alternate between historical and conceptual discussions about travel in the 19th century and technical matters related to digital humanities. Our goal is to reflect on the broad history of American foreign relations and the use of new technology to produce and communicate knowledge about the past.

AMST313 After Orientalism: Asian American Literature and Theory After 2000

From early articulations of cultural nationalist pride to today's transnational, intersectional, deconstructive, feminist, and queer critiques, Asian American studies is a field that has radically expanded and transformed since its original emergence out of the Third World and student strikes of the late 1960s. This course seeks to take the temperature of Asian America today by exploring a range of contemporary works published after the millennium, more than 30 years after the field's inception. Alongside a selection of novels, poetry, short stories, and graphic novels by some of the most acclaimed contemporary writers in America, we will also consider critical and theoretical texts that offer different perspectives on our contemporary historical moment, exploring frameworks of modernity, postmodernity, neoliberalism, and the university as ways of situating contemporary Asian America's aesthetic innovations. Though not required, it is strongly recommended that students have taken ENGL230 Introduction to Asian American Literature or a comparable substitute prior to enrolling.

AMST315 Entertaining Social Change

"Our problem," Tom Frank writes, "is that we have a fixed idea of what power is, of how power works, and of how power is to be resisted." This is especially true of "entertainment." Power that may not seem like power--only, say, like "fun" or "amusement"--can be especially powerful. A thread that connects all of our texts will be: how has the systemic critique of social contradictions been popularized as compelling and fascinating in modern times? A related concern: what are the seductions and violence built into "enjoyment---"enjoyment" that reproduces "Americans"? We will "entertain" the diverse strategies that progressive moviemakers have developed to entertain Americans--to teach, persuade, seduce, provoke, upset, anger, and move them through laughter, tears, and not least of all ideas--so that Americans will be more inclined to "entertain" social critique that inspires and envisions social change.

Our critical focus will be on the popularizing (and sometimes the selling) of social critique in movies including Straight Outta Compton, Malcolm X, Medium Cool, Network, El Norte, Smoke Signals, Before the Flood, The Black Panthers: Vanguard of the Revolution, Salt of the Earth, Matewan, and The Big Short. We will place special emphasis on self-reflexive movies about "entertainment" and about labor/social movement organizing. Entertainment, we will see, plays a key role in organizing and reorganizing Americans. In doing so, it can place limits on our vision of what--and who--needs to be changed. By putting our movies in conceptual dialogue and making these limits more visible, we will help one another think, see, and feel beyond these limits. As we are "entertained" (and we will be) we will consider the stakes of being "entertained."

AMST316 Television Storytelling: The Conditions of Narrative Complexity

This course examines the industrial and cultural conditions for the development of relatively complex forms of storytelling in commercial U.S. television. Narrative complexity is a cross-generic phenomenon that emerged over the 1980s and has proliferated within an increasingly fragmented media environment. In class discussions and individual research projects, students will analyze particular programs in-depth, with attention to their industrial and social conditions of production, their aesthetic and ideological appeals, and the cultural tastes and viewing practices they reflect and promote. We will also consider how television studies has responded and contributed to the increased prestige of certain types of programs.

AMST317 Human Rights and Spiritual Ecologies of Indigenous Peoples

This seminar will explore the social, legal, and metaphysical aspects of indigenous spiritual ecologies and their relation to United Nations discourses, indigenous community media production, and land rights movements. We will consider how indigenous peoples both respond to legal frameworks and press their positions into national and international human rights standards, on issues ranging from governance to cultural survival, from environmental management to language policy.

A particular emphasis will be put on the Andean and Amazonian regions of South America, the Mesoamerican highlands (Chiapas, Guatemala), the United States, and the United Nations Permanent Forum on Indigenous Issues, but students are encouraged to pursue their research projects across Abya Yala (the Americas).

This course focuses on developing critical thinking skills and places a special emphasis on writing and thoughtfully responding to the materials presented in class. Classes will not only consist of framework lectures and discussion questions, but also a combination of student panel presentations and writing in a collaborative environment. Participation in these activities is crucial to success in this course. Opportunities for student engagement in Manhattan at the April 2024 United Nations Permanent Forum on Indigenous Issues are currently in development.

AMST319 "The History that Hurts": Reading Saidiya Hartman

This course will introduce students to the major works of the black literary theorist and cultural historian Saidiya Valarie Hartman (b. June 25, 1961), who was named a 2019 MacArthur "Genius" Fellow in Literary History and Criticism and American History. After graduating from Wesleyan in 1984, Hartman earned her Ph.D. in American Studies from Yale in 1992; she is currently a professor in the Department of English and Comparative Literature at Columbia University.

Students enrolled in this course will read and write about Hartman's trilogy of scholarly monographs: *SCENES OF SUBJECTION: TERROR, SLAVERY, AND SELF-MAKING IN NINETEENTH-CENTURY AMERICA* (Oxford University Press, 1997); *LOSE YOUR MOTHER: A JOURNEY ALONG THE ATLANTIC SLAVE ROUTE* (Farrar, Straus and Giroux, 2007); and *WAYWARD LIVES, BEAUTIFUL EXPERIMENTS: INTIMATE HISTORIES OF RIOTOUS BLACK GIRLS, TROUBLESOME WOMEN, AND QUEER RADICALS* (W. W. Norton, 2019). Finally, if her new book project is published before the syllabus is finalized, then students enrolled in this course will also read and write about Hartman's fourth scholarly monograph (tentatively titled "N Folio: An Essay on Narrative and the Archive").

AMST320 Asian American Posthumanisms: Biopolitics, Ecopoetics, and Literature

From 19th-century anxieties concerning subhuman coolies to 21st-century celebrations of suprahuman cyborgs, U.S. discourses have always figured people of Asian descent as peripheral to the category of the human. While Asian Americanist scholarship has often responded by asserting the humanity of Asian Americans, a number of scholars and writers have begun to explore and even embrace the inhuman character of the Asian American. Drawing from recent scholarship in science studies, political ecology, anthropology, and literary studies, this course will consider what it looks like to shift the scale of analysis from the individual, organismal human to the social logics, biopolitical infrastructures, and ecological entanglements that supersede the human, or conversely, to the body parts, molecular processes, and fragments that subtend the scale of the human. We will pay particular attention to the question of what consequences decentering the human has for the ethnic novel, a genre often valued for its ability to affirm the humanity of racialized subjects. For instance, what kinds of aesthetics and politics emerge from an imaginary centered not on the human individual but on systems, landscapes, entanglements, and other imaginative forms and social practices? What does a novel centered not on a human protagonist but on an object, a clone, or an ecosystem look like? To explore these nonhuman centered logics and forms, we will read a selection of theoretical texts by Asian American and other authors, alongside a selection of contemporary (and capaciously defined) Asian/American novels by writers such as Kazuo Ishiguro, Larissa Lai, Ruth Ozeki, and others.

AMST322 Visions of the Future: Capitalism and Colonialism in the World's Fairs

This course will explore the history of the world's fairs from the 1851 Great Exhibition in London to the 1939 New York World's Fair. These events showcased the newest technologies that would revolutionize life and labor for millions of human beings around the world. They also presented to the public new consumer goods and forms of entertainment such as music, dances, and sports. Moreover, they were sites of competition for rising nations and empires. Each participant country brought artifacts that demonstrated their (often idealized) national characteristics and development. Western powers displayed colonial products and peoples to show how they had been advancing in their expansionist enterprises. The students will read works on the humanities and social sciences that delve into the meanings of the world's fairs. They will also analyze primary sources (texts, paintings, film, songs, cartoons, and more) which will allow them to ask their own questions about these events.

AMST324 Biopolitics, Blackness and Spirit Baptism: The Birth of American Pentecostalism

American Pentecostalism is a conservative, Protestant, Evangelical revival movement that emerges in and through Black practices that constitute an exclusion in the racialized religious, social, cultural, and political formations of early 20th-century United States. Rather than examining Pentecostalism through a single lens called "religion," this course will use the themes of Biopolitics and Blackness to examine Pentecostalism through its most commonly known feature—an experience called the baptism of the Holy Spirit. Pentecostals were narrated in popular and critical accounts in the late 19th and early 20th century as exhibiting criminality, insanity, and raced, gendered, and sexed Black pathology. These marks of abnormality were all part of a formation of power in America known as biopolitics. As an idea, biopolitics is popularized by French historian/philosopher Michel Foucault. Foucault's concept attempts to explain how different intellectual and professional disciplines emerge in nations during the late 19th and early 20th centuries to best create a thriving population, which could be made to live. The power of the nation-state had traditionally been expressed in and through the power to kill. As a revival movement, Pentecostalism rehearses these themes, as early adherents fight over what it means to be made alive when racial Blackness is almost often seen as a mark of and for death. The course will study original accounts and sources from the historical period, read critical, interpretive accounts, and use a variety of media. All resources will be provided in class or via Moodle.

AMST326 Queer and Trans Aesthetics

This seminar will consider contemporary trans and queer theory foregrounding race, class, disability, migration, diaspora, indigeneity, and colonization alongside the work of BIPOC queer and trans artists in particular. The course's animating (and unfixable!) questions include: How do artists produce and intervene in understandings of gender and/or sexuality through their work? What does it mean for an artist or viewer to describe an image, object, or performance as "queer" or "trans"? What constitutes a "queer" or "trans" reading of visual culture? How might various formulations of "queer" and "trans" relate to, put pressure on, and/or resist "aesthetics"? What is the relationship between an artist's self-identification and/or their resistance to categorization (e.g., in terms of race, gender, sexuality, disability, class, nationality) on the one hand, and audiences' efforts to engage and interpret their art on the other? Put another way: What, if anything, does an artist's "identity" (asserted and/or imposed) have to do with their art? And what does a viewer's "identity" (asserted and/or imposed) have to do with how they approach and interpret visual culture? Several artist talks and/or class visits (all virtual) are being organized in conjunction with the seminar.

AMST329 Issues in Latina/o Politics and Culture

This course explores the ways in which Latinas/os become legible as subjects in contemporary U.S. political thought and cultural life. We will consider struggles

for Latina/o legal rights, the relationships between the Latina/o workforce and issues of global labor patterns, the workings of transnational economies and power, and popular cultural narratives depicting Latinas/os and U.S.-Latin America relations. This course offers the opportunity to explore, analyze, and decipher the ways in which Latinas/os inhabit a global world, built from a legacy of a colonial past and heading toward a neoliberal, globalized future. We will use an interdisciplinary approach, addressing a range of texts from various scholarly disciplines, including history, cultural studies, postcolonial theory, American studies, and political science, as well as popular cultural texts.

AMST330 Economies of Erasure: Exploring the Violence Concealed by the Liberal Promise of Care

This course will aid students in understanding and recognizing the processes of erasure that maintain ongoing regimes of domination. In particular, we will attempt to understand how the twinned promises of equity and tolerance made by seemingly liberal, multicultural democracies work to conceal the ongoing--and specifically targeted--violence that in fact constitute and continue to subtend these nation-states. How, we will ask, do these regimes make violence disappear through the promise to "care" for their citizens, even as they wield spectacular violence to maintain domination? How are we as subjects of these regimes conditioned to pay attention to certain events, ideas, and systems, and what is made to disappear through such selective forms of attention? What communities, bodies, and individuals are sacrificed by the liberal promise of care? To answer these questions, the course will juxtapose readings in philosophy and social theory with ethnographic and historical case studies, giving students both the conceptual tools to analyze erasure and a set of examples through which to understand how these forms of erasure operate in the world. Crucial to our tool kit is the concept of disavowal, best understood as an active deflection from attending to the obligations of what one knows or should know. Disavowal, as we will see, makes it possible for subjects to imagine the political, social, and cultural spaces in which they live as moral, legitimate, and ethical, taking violence as an aberration rather than as the normative maintenance of an order of domination. This disavowal, the course contends, grounds itself in the ideologically charged embrace of a liberal sense of care that is, in turn, abstracted away from actual and ongoing histories of power and domination. In order to manage the potential scale of this exploration, we will primarily examine examples from North America, examining how white supremacy, patriarchy, and settler colonial domination operate in tandem in order to legitimize regimes of power by disavowing their violence.

AMST333 Race, Colonialism, and the Nonhuman

This course responds to growing scholarly attention to the entwinement of racial slavery and settler colonialism as foundational forces in U.S. society as well as to the relationships between colonial, racial, and ecological violence. Through materials from anthropology, Black studies, Indigenous studies, environmental history, and critical animal studies, this class will explore the entanglement of human and nonhuman difference--primarily in North America--both historically and in the present. Students will become familiar with conversations about racialization, settler colonialism, and the figures of the human/nonhuman that are increasingly prominent in anthropology as well as adjacent fields in the humanities and humanistic social sciences.

AMST334 Black Power and the Modern Narrative of Slavery

The historical moment immediately after the Civil Rights and Black Power movements saw an explosion of African American writing about slavery. In the past half-century, black writers wrote award-winning novels that gave unprecedented attention to the intricacies of the life of people who are enslaved and to slavery as a system that they suggested could help us better understand late-20th-century American culture. We will read some of the most important works written by contemporary African American writers to see how and why they transformed the first autobiographical form for black writers--the slave narrative--into a fictional form that has served them as they dissect their own cultural moment.

AMST337 Missionary Mysteries: the Objects and Archives of Wesleyan's Missionary Past

This course examines the history of Wesleyan University's connections to missionary work in the nineteenth and early twentieth centuries, as seen through the university's archival and object collections. Students will spend the bulk of classroom time in hands-on learning as they engage with the archives of the Wesleyan Missionary Lyceum and cultural heritage collections obtained by missionaries and brought back to the University. Beginning with an overview of historical, archival, and museum methods, the course then will examine objects and written records from the Americas, West Africa, East Asia and the South Pacific. Students will be challenged to consider the ways in which Wesleyan has been engaged in colonialism, imperialism, and global evangelism. Topics of investigation will include: gender, linguistics, museum ethics and repatriation, the use of objects as educational tools.

AMST350 The Law, the Citizen, and the Literary and Cinematic Imaginations

In this course, we will study several major legal events that highlight the contradictions and injustices in the history of U.S. citizenship and the ways this history has been reimagined in literature and cinema. Among the topics discussed will be the slave codes, the Treaty of Guadalupe Hidalgo, the Fugitive Slave Act, the Jim Crow order, the Bracero program, sodomy laws, and SB 1070. We will consider theories of citizen, state, race, and sexuality implicit in these legal structures, with an eye for who may be incorporated into the body politic and who is unassimilable by design, and on what terms. In addition, we will consider the way literary and cinematic texts engage the rhetoric and psychic effects of the law and the way they present different imaginaries of human bodies, communities, and temporalities. Our focus will be on African American, African diasporic, Latina/o/x and Indigenous literatures and cinemas, as they reveal the rifts and conjunctions among the categories citizen, "savage," "gente sin razón," slave, illegal, pervert, and deviant.

AMST351 Queer of Color Critique

This course will examine and interrogate the field of queer studies with particular focus on the ways in which queer scholarship and queer political movements function alongside critical race theory, ethnic studies, and sociopolitical antiracist efforts. Students will be asked to consider the history of queer studies and queer politics, the contemporary state of queer movements, and future visions of queer life. We will take an interdisciplinary approach, and we will rely upon a diverse range of theoretical, historical, and cultural studies texts. We will explore the normative parameters of both sexual and racial identities, probing the terms of identification to consider their meaning in the contemporary moment and in relationship to various cultural, social, legal, and political milieus. Throughout the course we will consider, What does it mean to study queerness and to study race? How do institutions--religious, legal, and scientific--shape our understandings of both queer and racial identities? In what ways do sexuality and race interact, and how does this interaction inform the meanings of each of these identity categories? Furthermore, how have queer movement and scholarship both supported antiracist efforts and, also, how have they been complicit in cultural and institutional forms of racial oppression? How do other social categories of identification such as gender, ethnicity, and class, shape the ways in which we understand expressions of race and queerness?

AMST352 Settler and Native Ecologies of Power in North America

This course examines how settler colonial dis/possession, resource extraction, and spatial domination have generated ecological catastrophes in North America while at the same time shaping discourses of environmental "protection" and "preservation." Reading the work of historians, anthropologists, critical theorists, knowledge-keepers, and activists and examining sites such as national parks and infrastructure projects in the 19th, 20th, and 21st centuries, we will learn how efforts to define, manage, regulate, and exploit "natural" resources occur/red simultaneously with assaults on Native nations' sovereignty. We will explore how Indigenous people(s), in spite of continuous settler state violence and violations, have cared for and defended their lands and human and nonhuman relatives, drawing from a wealth of traditional knowledges and tribal political practices. We will end the course by bringing these critiques to current "environmental issues" such as wildfires, toxic contamination, and pipelines.

AMST353 Health, Illness, and Power in America

In this class, we will explore the interlocking histories of health, illness, and power in America. Special attention will be paid to the ways in which discourses of the healthy body have undergirded notions of citizenship and belonging in the nation. We will consider how processes of disease, disability, and contagion have been imagined through the lenses of social difference, including race, gender, sexuality, and class. We will address civil institutions designed to manage individual and population health, and we will consider theories of political power in the making of the "modern" body.

Sample topics covered will include immigration policies and contagious disease scares; STDs and the politics of public health campaigns; physical fitness and the value of bodily labor under capitalism; the management of diseases that are symptomatic and those that are not; race- and gender-based approaches to medicine and medical difference; clinical trials and the ethics of human experimentation; regulations surrounding blood and organ donation; changing rituals of bodily hygiene; preventative medicine and the call to personal responsibility; mental health policies and institutions; and pride movements surrounding the "unhealthy" body.

AMST354 Destroying the Audience: Limits of Performance and Representation in the Theater of (Non) Being

Young Jean Lee's Theatre Company, active between 2003 and 2016, is most known for a series of "racial-identity plays," written and directed by Lee, which adopt an experimental approach to the critique of racial politics, driven by the motto "destroy the audience." On the one hand, this course will explore literary and artistic works that express an ambivalent, if not antagonistic, relationship to the presence of an audience. On the other hand, this course will consider the role and function of the audience as a social category by considering how the concept of audience (broadly understood) contributes to cultural production about race and gender as a potentially active element in the creative process. Students can expect to read and/or view drama, visual art, performance, film, and self-writing (autobiography and memoir) which, explicitly or implicitly, address the presence of the audience as a way of tackling larger social and cultural problems related to race and ethnicity. The goal will be to foster an understanding of the politics of gender, sexuality, ability, language, and class that determine how these issues are conceptualized and articulated. This course will employ an interdisciplinary approach to the discussion of primary and secondary texts, engaging audience studies, performance studies, ethnic studies, and disability studies, in addition to queer/trans of color, postcolonial, and legal theory, to historically contextualize and theoretically ground a cultural understanding of the relation between audience and racial performance.

AMST361 Thresholds of Art and Activism Since the 1960s

Since the 1960s, a period marked by war and social upheaval, artists have navigated the contested boundaries of art and activism by turning to the street and inventing new strategies of performance, distribution, and collaboration. Exploding the familiar protocols of agitprop, they advanced a politics of representation as much as a representation of politics. Philosophical texts (e.g., Adorno, Benjamin, Debord, Habermas, Ranciere, etc.) support our engagement with recent debates in art historical scholarship (e.g., Bishop, Bryan-Wilson, Lambert-Beatty, McKee, etc.) as we consider contexts as diverse as the social movements of the 1960s, queer liberation, eco-critical activism, and Occupy Wall Street. Extending the 20th-century avant-garde's project to break down the division between art and life, our case studies (focused primarily but not exclusively on the United States: Emory Douglas, the Art Workers Coalition, Gran Fury, Women on Waves, etc.) provoke this seminar's central questions: Where is the line between art and activism? What value might that boundary continue to hold, and why? How must we assess the efficacy, ethics, and aesthetics of such practices? And what historical conditions have made them timely for artists?

AMST375 Black Global Cities

In this course, we will analyze representations of cities and Black urban modernity in Afro-diasporic literature of the twentieth and twenty-first century. Placing special emphasis on the global hubs of London, Cape Town, Kinshasa, Lagos, New York, Marseilles, and Kingston, we will ask what makes these former imperial sites Black global cities? We will read literary works on and from Black Global Cities alongside sociological texts on urbanization, globalization and discuss the extent to which literary representations either collude with or challenge dominant national and transnational narratives about Black urban modernity. Although each week's readings will focus on a different location, we will approach these locales as nodes in larger global networks of people, texts, and goods rather than as discreet, bounded places. To this end, we will trace how histories of racial formation move across borders and are transposed onto different spaces, and to what effect. Authors we will read include: Claude McKay, James Baldwin, Gabea Baderoon, Petina Gappah, Kei Miller, and Teju Cole. We will also watch films such as *Girlhood* (2014), *Black Panther* (2018), *The Harder They Come* (1972), *Bad Friday: Rastafari After Coral Gardens* (2011), *Welcome to Nollywood* (2007).

AMST378 Decolonizing Indigenous Gender and Sexuality

This seminar focuses on the politics of decolonization in Indigenous contexts with regard to gender and sexuality. The seminar examines a variety of settler colonial contexts in North America and Oceania. Beginning with an historical exploration of gender and colonialism, students will examine how colonial processes, along with other forms of domination that include racializing technologies, have transformed gender and sexuality through the imposition of definitions and models of normative (often binary) gender subjectivity and relations, "proper" sexual behavior, preoccupations with "sexual deviance," sexual expression as a territory to be conquered, legacies of control, legal codification, and commodification. We will then assess how diverse modes of self-determination struggles negotiate gender and sexual decolonization, including feminist interventions in nationalist productions that sustain masculinist and homophobic agendas. In relation to these dynamics, we will study the growing body of work on Native feminisms and decolonial feminisms, as well as Two-Spirit and queer Indigenous studies.

AMST381 Unsovereign Elements, Caribbean Poetics

This course aims to study and question sovereignty, begin to theorize "unsovereignty," and stake out what may be meant by "anticolonial imagination" in literary and other aesthetic forms, as well in the theories of history that it arranges under its name, "Unsovereign, Caribbean." Unsovereignty and the anticolonial will not be imagined as exact and liberated opposites of sovereignty and colonialism, but rather as epistemically and linguistically entangled therewith, and inviting further thought from Afro-Caribbean historical and deconstructive vantages. By reading richly symptomatic, primary, historical documents about race, geography, and slavery in San Domingue/Santo Domingo, as well as contemporary fiction, art, and criticism that re-narrate and theorize Caribbean history, we will focus on the historical frame of ~1492 into the 19th century. This frame holds with specific reference to Sara E. Johnson's notion of a foundational "state of war" against black people in the Americas and Frank B. Wilderson III's notion of when the "gratuitous violence" of the Middle Ages begins "to mark the Black ontologically." The 19th century will be studied comparatively, and not as the era of heralded "emancipation," but of abduction, re-enslavement, "travestied freedom" (Hartman), anti-emancipation (Eller), and white psychosis. We will read sometimes for imperial notions of sovereignty, force, race, property, and labor, and other times for Caribbean notions and narratives that are sometimes at war with and sometimes in bed with said imperial schema and this episteme. In the face of some contemporary critical theoretical tendencies to use terms like "fugitivity," "resistance," "freedom," "abolition," "the commons," etc., as ones that are equally at stake for all, or that signify one shared known, fixed, and agreed-upon meaning, we will, rather (and especially), attend to the historical specificity and signifying work of marronage in the Caribbean region and the complex tropology of unsovereignty and "unruliness" in the Caribbean. Conceptually, the course thinks from and about Caribbean studies, Black critical theory, Black studies, Enlightenment thought, and Deconstruction. Students who want to nerd-out on critical theory, history, and Caribbean aesthetics are encouraged to apply.

We will study digitized versions of imperial naval and commercial maps held at the John Carter Brown Library, Archivo de Indias, and in other archives, as well as primary texts of different genres (e.g., pilotes, ledgers, letters, legal documents), including the writing and thinking of Christopher Columbus, Moreau de Saint Mery, Baudry des Lozieres, María de las Mercedes Santa Cruz, Immanuel Kant, and G.W.F. Hegel. We will also read selections from some of the following scholars, artists, writers: Colin Dayan, Sara E. Johnson, Evelynne Trouillot, Jacques Derrida, Robin Derby, Maryse Conde, Alejo Carpentier, Demetrius Eudell, Anne Eller, Dixa Ramírez D'Oleo, Ronald Mendoza de Jesús, Frank Wilderson III, Walter Benjamin, Gayatri Spivak, Aimé Césaire, Beatriz Santiago Muñoz, Joiri Minaya, Jean Rhys, and others.

AMST390 The Redeemed Narrative: Microhistories in Early America

This course will guide students in thinking about American social history, the efforts by historians to recover the lived experiences of those who did not leave substantial archival documentation, through a close examination of examples of microhistory in early America. Microhistory, situated between the New Social

History, influenced by the Annalists and British Marxists, and the Cultural Turn, influenced by critical and linguistic theory, offers a unique opportunity to analyze the ways that early American historians creatively utilize evidence. We will pay particular attention to the ways that microhistory recovers histories of race and gender despite the paucity and problematic nature of archival sources. While students will receive a grounding in the theories of archival source interpretation, emphasis will be placed on the ways that historians have put those theories into practice. The course is designed to be an upper-level seminar, preparing students with the research tools to write their senior thesis or major capstone paper.

AMST391 Difficult Women: Post/Feminism in Television Comedies and Dramedies

Although postwar family sitcoms represented women as homemakers, one of the first and most popular sitcom wives also articulated discontent with domestic femininity. Lucy Ricardo became the prototype of the "unruly woman," a figure with feminist potential whose desires exceed and disrupt dominant gender norms. As those norms have shifted, so have TV's unruly women. Second-wave feminism, anticipated in I Love Lucy, was incorporated into a 1970s cycle of comedies centered on single working women whose career aspirations were rewarded. Over the following decades, a postfeminist sensibility dominated television comedies and dramas and became central to a gendered neoliberalism in which energetic individuals "empower" themselves. In recent years, a new type of female protagonist has emerged. Alongside the can-do optimism of single-women comedies from The Mary Tyler Moore Show to Sex and the City to 30 Rock and Parks and Rec, a stream of comedies and dramedies, made largely by and for women, have depicted a variety of flawed, difficult, unruly women coming of age under conditions of socioeconomic precarity, whose less focused energies seem to articulate a more uncertain, downbeat, post-recessional mood. In this course we will situate the latter cycle in relation to both the longer history of televisual representations of women and to the current state of feminist politics. Among the shows we will look at are: I Love Lucy, Bewitched, The Mary Tyler Moore Show, Sex and the City, Ally McBeal, Girlfriends, The Mindy Project, 30 Rock, Parks and Rec, Girls, Insecure, Broad City, Better Things, Two Broke Girls, New Girl, Crazy Ex-Girlfriend, Jane the Virgin, Unreal, Abbott Elementary, Fleabag, Dear White People, and Somebody Somewhere.

AMST394 Sachem School: Indigenous Lifeways and Settler Radicalism After 1600

In the 21st century, we face a series of interconnected reckonings: environmental collapse, economic disparity, racial inequality, and more. There were, and still are, alternative ways of organizing our economies, reframing our relationships with the land, and creating kinship networks that mitigate against inequality and enmity. This class will explore what settlers learned--and refused to learn--from the Indigenous societies they encountered after contact in northern North America. From Roger Williams's ideas of religious toleration in the 1640s to #landback today, settlers have at times demonstrated a willingness to learn from Indigenous lifeways and employ those lessons in ways deemed "radical" by Western standards. Understanding this history illuminates a path toward a future in which we continue learning from Indigenous nations and work

to repair the damage settler societies have inflicted on each other and our world.

AMST397 United States Overseas Empire

The United States is an empire: an empire that expands beyond the North American continent into many islands across the globe. From Puerto Rico and the U.S. Virgin Islands in the Atlantic to American Samoa and Guam in the Pacific, the US remains an imperial power with unincorporated island territories, a euphemism for replacing the anachronistic term "colonies." The residents of these territories have truncated political rights; they do not have voting representation in U.S. Congress, and they cannot vote in U.S. Presidential elections. Though U.S. territories are usually footnotes in the grand narrative of U.S. history, this course argues that they are integral to understanding the United States as a whole.

We will examine the history of how the U.S. acquired and governed the territories from the perspective of the islands themselves, emphasizing the local effects of U.S. colonial policies. We will analyze how U.S. foreign policy split indigenous peoples into separate political entities, how economic interests changed native political systems, how U.S. militarism affected the ecology of whole islands and the culture of territorial residents, and how public health policies racialized island peoples. We will also explore how self-determination and decolonization movements were stymied by the U.S. government, and how a whole host of other colonial policies and actions has affected and continues to affect the territories.

The course will cover islands currently under U.S. control, including American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, Puerto Rico, the United States Virgin Islands, and Hawaii. It will also examine former territories, Trust Territories of the Pacific, and occupied islands including the Philippines, Cuba, Haiti, the Dominican Republic, among others. With the changing nature of U.S. imperialism, we will also consider the United States expansive military base presence throughout the globe. The history of these islands can tell us much about limits of U.S. citizenship, about the growth of U.S. commerce and militarism globally, about patterns of migration and immigration, and about the changing discourse of race and indigeneity.

ANTH103F Anthropology of Gifts and Giving: Selfless or Selfish? (FYS)

What is a gift? A commonplace understanding is that a gift is something given gratuitously, selflessly, and without the expectation of a return (just look the

word up in any dictionary). Why, then, upon receiving a gift, do we feel indebted to the giver? And rather than free and gratuitous, isn't most gift giving compelled by socially significant events and regulated by relatively rigid rules? This FYS is an in-depth examination of gift giving as one of the most powerful forces binding individuals and groups in society into relationships of reciprocity. Students become familiar with critical anthropological and philosophical debates about the gift and consider their application to contemporary forms of giving, including traditional gift-giving events, sacrifice, philanthropy, volunteering and voluntourism, international aid, and types of giving made possible by advances in technology, such as organ donation and surrogacy. We attend to the economic, political, ethical, cultural, gender, and personal dimensions of gift giving in their remarkable power to make and break social bonds and undo or reinforce hierarchical relations at all levels of local and global society. Students draw a deeper understanding of the connection between generosity and power to inform their own ethics of gift giving, sharing of wealth, and sense of responsibility, wellbeing, and place in the world.

ANTH111F Anthropology of Conspiracy (FYS)

This first year seminar explores the relationship between conspiracy theory and contemporary life through the discipline of anthropology. We learn how to read, discuss, and write about anthropological texts using conspiracy as a starting point. We trace the history of conspiracy theory, read ethnographies of conspiracy, and extend the concept of what counts as conspiracy to anthropological topics such as culture, class, ideology, myth, virtuality, race, affect, gender, and sexuality. We ask what the utility of conspiracy is in world-building, ritual, and belief structure inherent in both cultural cohesion and conflict.

ANTH112F The Anthropology of Godzilla: Unconventional and Monstrous Perspectives on the Anthropocene (FYS)

In this First Year Seminar, we will use anthropology—the study of how humans make cultural, social, and political meaning in the world—in order to better understand contemporary global, ecological conditions through the lens of giant monster movies. It begins from the argument that "monstrous media" reflects our cultural worlds back at us in productive and insightful ways, and that Godzilla, in particular, helps us better understand the ways the Anthropocene is at once a product of human action and seems at the same time to totally exceed human capacities. We will combine some traditional readings with extensive film viewing in order to help students develop their academic writing and analytical skills.

ANTH120F Indigenous Environmental Justice (FYS)

Environmental justice--as both a social movement and an area of scholarship--emphasizes the disproportionate impact of environmental harm on human communities already marginalized because of factors like race, class, and indigeneity. While Indigenous activists and scholars have strategically mobilized under the banner of environmental justice, conventional U.S. environmental justice frameworks have not always acknowledged the status of Indigenous nations as sovereign political and legal entities or their distinctive articulations of justice and environment. Focusing primarily on North America, this First Year Seminar will explore how Indigenous land and water protectors have long put forward visions for collective futures that diverge from intertwined histories of social and ecological violence, including through multiracial collaborations and campaigns. We will engage texts from a wide range of disciplines, as well as non-academic materials and films.

ANTH150 Indigenous Middletown: Native Histories of the Wangunk Indian People

Students will be introduced to the new field of settler colonial studies, the rapidly transforming field of critical indigenous studies, along with Native American history and historiography addressing southern New England. Taking up a decolonizing methodological approach, the class will focus on the sparsely documented history of the Wangunk Indian Tribe, the indigenous people of the place we call "Middletown," also known as Mattabesett. The Wangunk people, part of the Algonquin cultural group, historically presided over both sides of the Connecticut River in present-day Middletown and Portland, while their traditional territory reached as far north as Wethersfield and Chatham. Although regarded as "extinct" by settlers in the aftermath of King Philip's War, 1675-1678, the Wangunk continue to live into the 21st century.

ANTH201 Key Issues in Black Feminism (FGSS Gateway)

This course surveys key issues in the historical development of black feminist thoughts and practices through readings of canonical works especially from the 1980s and '90s that contribute to this extensive body of knowledge. Our aim is to engage black feminist and womanist theorists, activists and artists from the diaspora who are exploring intersections of race, class, sexuality, religion, and other indices of identity affecting their daily lives. To that end, we will take an interdisciplinary approach to unpacking the historical tensions and politics and poetics in theory/practice, representation/self-making and expression/performance. We will also examine more recent turns in #BlackLivesMatter, #SayHerName and #BlackGirlMagic and conclude with Post-Zora Interventions--feminist interrogations on the borders anthropology, art, and activism.

ANTH203 Sex, Money, and Power: Anthropology of Intimacy and Exchange

Sex and money--intimacy and economy--are often imagined to occupy distinct and separate spheres. Sex and intimacy are located in the private or domestic realm, in spaces of leisure, feelings, care, and personal connections. Money and economy, on the other hand, are purportedly public, located in the market and tied to labor, rationality, and impersonal (non)-relations. This course brings these spheres together, focusing on the links, exchanges, and circuits between the intimate and the economic in diverse cultural contexts.

Drawing on anthropological, feminist, Marxist, queer, and critical race theory, we will build

working definitions of key concepts: intimacy, division of labor, domestic labor, sexual labor, exchange, commodity, value, neoliberalism, consumer culture, and more. We'll test, apply, critique, and expand these concepts as we work through ethnographic case studies on contemporary sex work and tourism, marketing and pornography, reproduction and domestic labor, marriage, class and sexual lifestyle, labor and care work, and sex stores and commodities. We will connect economic, cultural, and political formations with race, ethnicity, nation, sexuality, class, and gender, scaling up to consider global and transnational exchanges and down to consider how these circuits impact families and communities. Throughout, we will ask: Whose labor is valued and recognized, and why? How do bodies accrue value, and in what kinds of marketplaces? When are intimacies--sexual and social--commoditized? How is race, gender, and sexuality central to these exchanges? How do new transnational circuits constrain and/or empower people? And finally, who benefits from these relations, and who does not?

ANTH204 Extreme Landscapes of the Anthropocene

The "Anthropocene," a term coined to categorize the current geological epoch, has become a way in which social scientists can critically and creatively engage with the impact of humanity on the ecological well-being of the Earth. The interdisciplinary and uncertain nature of this subject matter provides space for experimental writing styles, innovative approaches to storytelling, and critical discussion and debate. This course is designed to explore and challenge the term "Anthropocene," questioning how narrative and drama are entangled in the dissemination of complex truths, for better or worse.

In this course, we will consider texts, short films, and other mixed media that investigate the everydayness of extreme landscapes, from "capitalist ruins" to the depleting seas. We will dive into the social, political, economic, and scientific power-scapes that influence narratives about the environment, from late liberal ideology to corporate influence on science and the news. Through the course materials and activities, we will question how to communicate complex information with a broad range of people, particularly surrounding issues of climate change, sustainability, and environmental justice. Each student will build their own writing portfolio of short essays for specific audiences. The class will collectively build and design a storytelling website where they can share their work. Students are encouraged to apply an ethics of care and the art of "non-judgmental attention" to their critical engagement with the Anthropocene.

ANTH205 Borderlands in the African Mediterranean and Beyond

The past decade has seen one of the largest mobilizations of human migration in recent history. This migratory flow is usually discussed within spatial frames such as movement across borders, between countries, and across the sea. This course departs from those narratives by bringing into focus the routes, social worlds, and systems of exchange that emerge during time spent between borders, a time often eclipsed as "just waiting." The beginning of the course sets the theoretical tone for our readings and discussions by revisiting how anthropology has questioned the stability of the linkage between culture and space, and placing this into the context of scholarship on liminality and borderlands. Subsequently, we will examine ethnographic studies, as well as some literary texts, that focus on migration and immigration primarily across the African Mediterranean, with comparative examples drawn from South and North America and Western Asia. The course's goal is to trace the communal sentiments enmeshed in these routes and worlds and to inquire what they may imply for political and subjective belonging, beyond narratives centered on the anxieties that emerge once "migrants" enter into European and North American territories.

ANTH206 Ethnography of the American Rural

The rural stands as a fraught American symbol, positioned in stark contrast to its corollary: the urban and its cosmopolitan subjects. The American rural is variously represented as vulnerable, disappearing, backwards, regressive, slow. In this course, we elucidate the texture of the American Rural by engaging with ethnographic writing from the early 20th century into the contemporary. In exploring the rural as a meeting place of working-class expressive cultures, an atmosphere of slow or strange time, a dramatic history of industry and agriculture, a notoriously tense racial zone, an icon of severity, and a place of exuberant stories and poetics, we uncover the vital ideological function of the rural as the urban's dark twin in American myth throughout history and today.

ANTH208 Crafting Ethnography

This course is an introduction to the craft of ethnographic research and writing. In the first half, we will explore some of the research methodologies anthropologists use to understand, interpret, and analyze culture. Each student will choose an ethnographic field project for the semester and practice ethnographic methods (participant observation, interviewing, virtual ethnography, auto-ethnography, visual representation, and more). In the second half of the course, students will begin to write their ethnography, practicing writing in a variety of styles and genres (including realist, reflexive, dialogic, engaged, and experimental). Guided, weekly peer workshops throughout the semester will give students a chance to hash out and talk through questions of ethics, positionality, representational politics, and the improvisational felicities and challenges that arise during fieldwork and writing. This course will give students a solid grasp of ethnographic methods and how anthropologists construct ethnographies. It is ideal preparation for ethnographic theses and essays during senior year.

Spring 2021 changes: research methodologies explored will be determined in the context of our capacity to do in-person research during this time.

ANTH210 The Technological Primate: Archaeological Approaches to Ancient Technology

Humans are reliant on technology, in one form or another, for our survival. This obligate use of technology has been a characteristic of our evolutionary history for over 2.5 million years. This course will explore how technology became central to the human way of life. We will discuss both how and why our use of technology has changed through time. This includes considerations of the adaptive roles that technology plays in our evolution, how technology is shared between individuals and cultures, and the role of technology beyond the purely utilitarian. Students will learn about the ways archaeologists analyze and think about ancient technologies. This includes a wide variety of material types, including stone, ceramic, botanicals, bone, metal, and more. In this course students will have an opportunity to handle both actual archaeological materials and replicas.

ANTH212 The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology

New analyses of ancient DNA preserved for millennia in bones and soils have revolutionized the field of archaeology. Suddenly, archaeologists have gained new insight into human origins, past population migrations, ancient diseases, plant and animal domestication, and even the factors that contributed to the extinctions of megafauna such as woolly mammoths. Recent genetic case studies will provide a lens for learning about the archaeology of diverse world regions and time periods, from Oceania to Mesoamerica and from the Paleolithic through recent history. Topics will include: human evolution and genetic relationships between humans, Neanderthals, and Denisovans; the peopling of the globe; extinction and de-extinction; domestication and the origins of agriculture; paleodiseases and paleodiets; and ethics in genetic research.

ANTH214 Introduction to Archaeology

What can fragments of pottery, stones, and bones reveal about the lives of people who lived thousands or even millions of years ago? What does the archaeological record reveal about human evolution, past human diets and health, ancient socioeconomic systems, and the emergence of early cities? And how can we preserve archaeological sites and artifacts for future generations? This course will introduce students to the interdisciplinary field of archaeology. We will discuss key methods and principles that archaeologists use to study the human past while covering a survey of world prehistory from the earliest stone tools to the archaeology of contemporary material culture. Students will have the opportunity to examine real archaeological artifacts--including artifacts excavated from historic Middletown--and will be encouraged to think critically about the ways that archaeology informs our understanding of both the past and the present.

Offering: **Crosslisting**

ANTH215 Nature/Culture

In this course, we are going to explore--and problematize--the boundary between the so-called "natural" world and human social and cultural life. Rather than assuming that "nature" is something that already exists in the world that humans have systematically excoriated and transformed, we consider instead the idea that nature and culture are fundamentally co-constitutive concepts--that is to say, that one cannot exist without the other. As we go, we will explore pressing concerns such as the boundaries between human and non-human, the nature of the Anthropocene, the question of what it means to be "modern," and the power of ecological politics in our contemporary orders of global capitalism.

ANTH220 Anthropology and (Anti)-Blackness

This course considers the intellectual and institutional developments of psychoanalysis and anthropology in the 19th and 20th centuries and the ways in which these disciplines defined a figure of the human that excluded the "African," the "Black," "the Negro" from the capacity to signify the universal. By examining these constitutive occlusions of race, the course considers the ways in which the "unthought" status of racial blackness, in particular, animates and aggravates the discipline of anthropology. The course will move from introductory readings in classical anthropology and psychoanalysis and a selection of works in Black critical thought towards contemporary scholarship that reappraises these fraught questions.

ANTH227 Ethnographies in Medicine

Biomedicine looks different in different places. Biotechnologies change under new moral frameworks. The same pharmaceutical pill can offer freedom to some and evoke colonialism in others. And in some contexts hunger is more pressing than curing a specific disease. How do we go about challenging our biomedical assumptions and understanding medicine in context? Medical anthropologists have relied on the art and science of ethnography to provide cross-cultural accounts of health and healing that are accessible, provocative, and timely. In this writing-intensive course, we will read exemplary ethnographies in medical anthropology to explore the intersection of medicine, culture, and narrative text. We will explore four themes that cover provocative discourses in the field: the challenges of participant observation during vulnerable encounters with sickness and disease; regimes of power; local-global encounters; and food, eating, and the gendered body.

ANTH230 Anthropology of Cities

This course is an introduction to the practice of urban anthropology. Attention is placed on the intellectual challenges recent local and global urbanization trends present to us in our attempts to think and write about cities today. We will reflect upon the production of space and place, the creation of "other spaces" through borders and limits, and the making of meaning through everyday practices and experiences in the city. We will consider how cities become foremost spaces for the exercise and contestation of power, for social cohabitation and conflict, and for cultural creation and repression. Class discussions will also focus on fieldwork methods and problems of ethnographic

representation and writing in preparation for a research project that will culminate in an urban mini-ethnography.

ANTH233 Global Queer Studies

This course explores global experiences of LGBT/Q life, bringing an explicitly transnational lens to a field too often dominated by U.S.-centered perspectives.

Drawing on queer ethnography and film, we will explore the contours of queer and trans life around the globe, from the lives of gay men in Indonesia to Muslim *yan daudu* in Nigeria, gay tourism in post-Revolutionary Cuba, queer *mati* work among working-class Afro-Surinamese women, lesbian activism in India, LGBT asylum claims in Canada, the queer art of Carnival in Trinidad and Tobago, the everyday lives of *lalas* (lesbians) in China, and the transnational lives of Filipino gay men in New York. Our aim is to challenge and expand Western categories and concepts of sexuality, gender, identity, and desire (both hetero- and homo-normative) and to center the ways sexual/gendered identities, cultures, and politics are shaped by colonialism, imperialism, racialization, migration, transnational media, and global capitalism.

ANTH240 Hipsters

This course will focus on the contemporary hipster subculture after examining a critical genealogy and racial history of the origins of the concept. From black jazz artists and zoot-suitors in the 1940s who defined "hip" and "cool," to the post-World War II burgeoning literary scene of the Beat Generation that codified the figure of the hipster as an American bohemian strangled by social conformity, there has been a cultural politics of being "in the know." Derived from the term used to describe these earlier movements, the term "hipster" reappeared in the 1990s and became especially conspicuous in the 2000s to the present. Today's hipsters are generally associated with whiteness, indie music, a vintage fashion sensibility, liberal political views, organic and artisanal foods, as well as racial gentrification in urban neighborhoods in Brooklyn and select cities such as Portland, OR and San Francisco. Perhaps curiously, members of this subculture typically disassociate themselves from this cultural category, as outsiders often use the term hipster as a pejorative. In an attempt to understand why hipsters differentiate their actions from the hipster stigma, students will study the contemporary discourse about hipsters, along with a historical analysis of the term and its use in popular culture to get a better understanding of race, class, gender, and the commodification of style. Other topics for exploration include stereotypes, authenticity debates, hipster racism, so-called "blipsters," the death of irony, hipster chic, "hipster run-off," the resentment of hipsters, and forecasts of "the end of the hipster."

ANTH241 Critical Interculturality and the Pedagogy of Unlearning

This course is offered by our study abroad partner, Pachaysana, online from their site in Ecuador, with local educators.

An ever-growing number of students, scholars, and activists criticize our educational institutions for upholding colonial structures, and via numerous movements are calling for "decolonization." Any effort to decolonize our education must go well beyond the content of what we teach in the classroom. In addition to what we are learning, we must explore how we learn, where we learn, and with whom we learn. We also must think about what "decolonization" means, taking into consideration the lands on which our campuses and communities are located. This course addresses decolonization through the lens of critical interculturality, referring to Catherine Walsh's critique of multiculturalism as functional or relational interculturality. Bringing in readings from Indigenous and Latin American scholars and taking part in workshops facilitated by local Ecuadorian community members, we will use interactive methods to explore some of the most challenging concepts related to decolonization, including "decolonization is not a metaphor," epistemic justice, border thinking, and embodied methodologies. Those concepts will then be examined with regards to the realities on our college campuses and our communities, and we will begin to dream about moving from the "functional" to the "critical." By the end of the course, informed by the readings and interactions with community-based educators in Ecuador, students will formulate clear questions and identify potential strategies for applying critical interculturality at their college campuses.

ANTH242 Other Worlds Are Possible: Life Against and Beyond Neoliberal Logics

This four-week intensive course examines radical challenges, in theory and on the ground, to mainstream neoliberal capitalism and development strategies promoted by international organizations such as World Bank and the IMF. After the 1980s, considered by many as "the lost decade" of development, some scholars and practitioners declared the development enterprise as fundamentally wrong: It was a misguided and violent neocolonial project that could never provide the answer to inequality and poverty. These radical critics argued for building a "post-development" era. In this course, we look at the conceptual history of the term "post-development" and also examine what post-development life looks like on the ground, among dispossessed communities. We will focus on lived and imagined challenges to neoliberal capitalism. We spend the first week at Wesleyan, brushing up on the critical ideas and movements that have emerged out of Mexico (and Latin America, broadly) over the past four decades in reaction to mainstream development discourse. We will then explore these ideas and lived alternatives in Oaxaca, Mexico. We will spend three weeks learning about and working with marginalized communities that are rejecting capitalist development and building and experimenting with living a "good life" (*buen vivir*) on their own terms.

ANTH243 Medical Anthropology

Situated at the intersection of the clinical and social sciences, medical anthropology seeks to understand bodies, afflictions, healing, and care in cross-cultural contexts. This course serves as an introduction to the exciting field of

medical anthropology. Students will begin by mastering dominant approaches within medical anthropology for studying the body as a site of meaning, a moral battleground, a biosocial entity, an object of regulation and control, and a tool of resistance and change. We will then turn our attention to different kinds of bodies in distress and to the therapeutic responses they invoke (or fail to invoke) from healers, doctors, kin groups, aid workers, and state actors. Of particular concern will be those aspects of healing that challenge commonsense notions of how therapies work and where they may fall short. Specific concepts and topics to be covered include illness narratives, idioms of distress, structural and symbolic violence, culture-bound syndromes, nature/nurture debates, ritual healing, high-tech medicine, and humanitarianism.

ANTH244 Television: The Domestic Medium

Of all the mass media, television is the most intimately associated with domestic and familial life. Its installation in American homes over the postwar decade coincided with a revival of family life that encouraged an emphasis on private over public leisure. Most television is still watched at home, where viewing practices are interwoven with domestic routines and provide a site for negotiating family and gender relations. Television production is shaped at several levels by the images broadcasters and advertisers have of viewers' domestic lives: Broadcast schedules reflect socially conditioned assumptions about the gendered division of family roles; a common televisual mode of address uses a conversational style in which performers present themselves to viewers as friends or members of the family; and families or surrogate families figure prominently in the content of programming across a wide range of genres, including sitcoms, primetime dramas, daytime soaps, and talk shows. Sitcoms, in particular, have responded to and mediated historical shifts in family forms and gender relations over the past 50 years, and they will be a focus in this course. We will explore how television has both shaped and responded to larger cultural discourses about family and gender from the postwar era into the 21st century.

ANTH249 From Metropolis to Megalopolis

What is the urban experience today? Are the old European metropolises, the global cities of New York or Tokyo, and the new megalopolises of the Global South commensurate entities? What are the theoretical and methodological challenges we face in thinking about "the urban" today, given the vastly different histories, trajectories, and physical and social realities of cities around the world? This course is an introductory and interdisciplinary survey of urban theory. We will critically examine "the city" as a transhistorical category of analysis and focus on issues of anthropological concern regarding the experience and epistemology of urbanization and urban life. No prior background in urban studies is expected, but an interest in theory is a must.

ANTH250 Identity and "Pacha" (Land-Based Knowledge and Re-imagining Community) - Taught from Ecuador

This course is taught from Ecuador by our study abroad partner, Pachaysana.

According to indigenous Andean scholars, Pacha refers to the time-space continuum, or as the "everything around and inside us." This course asks students to challenge their identities by broadening their epistemological and ontological lenses to see their individual and collective lives as they relate to Pacha. To synthesize this complicated process, we ask participants to examine who they are as related to the ever-changing ecology in which they live. For this course, ecology is approached broadly, referring to the Greek origin on the word oikos, meaning home. We take advantage of our virtual exchange and examine home as an interconnection of how we relate to "place and space," exploring our ecology as the triad of our immediate territory (llakta in Kichwa), our surrounding natural environment (allpa in Kichwa), and our global and pluriversal space (pacha). Throughout the course, we use an interdisciplinary lens to examine "who we are" as related to this diverse understanding of ecology, taking into consideration that our ever-changing environment includes an ever-changing human story. Readings are transdisciplinary, coming from the fields of anthropology, sociology, human geography, gender studies, ethnic studies, history, the arts, and development studies. Toward the end of the course, after examining certain theories and case studies, we will imagine the reconstruction of our identities contextualized to pacha, space, place, ecology, oikos, and home.

ANTH254 Self and Other in Cross-Cultural Encounters (CLAC.50)

This course is open to students currently enrolled in ANTH101: Introduction to Cultural Anthropology or in ANTH103: Gifts and Giving. It is intended for students with an interest in improving their spoken and written Spanish through an exploration of the problems and possibilities of cultural anthropological practice. This exploration will happen via class discussion and short ethnographic research assignments. The course will be conducted in Spanish and is open to students with some level of proficiency: from intermediate to advanced and to heritage speakers of the language. Students are expected to be currently enrolled in, or to have previously taken, ANTH101 or ANTH103. Email the instructor for information about alternatives to this requirement.

ANTH256 Anthropology of the Senses

How do we know what we know? Is seeing really believing? And what about hearing, smelling, tasting, and feeling? This course explores Anna Tsing's provocation to "look around instead of ahead," asking: what kinds of participatory observation of the senses help us identify what we know about the world? Through readings, lectures, short form writing, and field trips, we examine the role of the senses in forming what we know about ourselves and others. Writing and research assignments develop tools for documenting, analyzing, and communicating our senses and work towards a critical acknowledgment of sensory hierarchies. Our course readings consist of selections from theories of affect, sound studies, and food studies, as well as key texts in cultural anthropology in order to build an appreciation of the range of sensory information available to us and the strategies we use to communicate our sensory worlds. Our goal is to probe how ethnographic work sensitive to the multidimensionality of the human sensorium can discover and propose real strategies for human vitality.

ANTH257 Environmental Archaeology

Archaeological materials provide long-term records of how humans have modified past environments and how human societies respond to environmental change. In this course, students will learn how data from ancient plants, animals, and soils can be analyzed in order to draw interpretations about past human-environmental interactions. We will also discuss key topics in environmental archaeology, including the long-term environmental impacts of plant and animal domestication and debates over environmental causes for the "collapse" of civilizations such as the ancient Maya. The course will involve hands-on preparation and cataloging of plant and animal specimens to add to the Wesleyan Environmental Archaeology Laboratory comparative collections. Students must be available for one weekend class meeting to complete the first stage of animal skeleton preparation.

ANTH259 Development, Disasters, and Beyond: The Global Politics of Aid

Development is one of the most important ideas of our times. It is a powerful way of reorganizing the world into the Global South and the Global North (or the Third and First Worlds) and promising modernity to "backward" places and people. It is an equally powerful way of intervening in "underdeveloped" regions in the name of progress and beneficence through aid programs. Our purpose in this course is to use the spy lens of anthropology to critically examine the global politics of development aid, whether given for poverty alleviation, infrastructure projects, disease and healthcare, or disaster relief. While development aid is certainly a potent way to exert power over and regulate Third World Others, it is also a fiercely contested space of struggle. This course approaches it as a "problematic"—an unsettled, contentious, and unpredictable formation.

ANTH274 Self & Social Transformation

Racism, sexism, and classism are deeply ingrained in our habits and feelings. It seems that in order to change objective conditions we need to change ourselves and our communities. But given that our habits and feelings are often

unconscious and resistant to change, how do we philosophically go about doing this? This class tries to answer this question. It starts theoretically with ancient Greek and ancient Chinese virtue ethics as well as Foucault's later work on self-transformation. It then takes these concepts/theories and sees them in action in contemporary movements of self/community transformation. We start with a paradigmatic political activist movement of self-transformation: the Black feminist transformative justice movement with the goal of prison abolition. But as we progress, we will explore less obvious and seemingly more mundane movements of self- and community transformation such as Saba Mahmood's dawa movement from Egypt, Weight Watchers, and finally "ballroom" culture from Detroit. Anthropological ethnographies of these movements will help show how we can self-reflexively shape our own habits and transform ourselves.

ANTH276 Museum Collections: Ethical Considerations and Practical Applications

Serving as a broad overview of museology, this course introduces students to the principles underlying the foundations of museum work and collections stewardship. Topics covered will include the origins of museums and collecting, the rationale behind museum policies, and the legal frameworks and professional standards that guide collections management. Ethical considerations surrounding issues such as NAGPRA/repatriation, decolonization, accessibility, looted artifacts, and cultural patrimony will also be covered. Finally, students will explore the practical aspects of preventive conservation, museum documentation, and exhibition development. Although topics covered in this course will apply to a variety of museums, the primary focus will be on cultural heritage collections. Readings and class discussions will be supplemented with hands-on exercises using the Wesleyan University Archaeology & Anthropology Collection.

ANTH279 Eating Others: Histories and Cultures of Animal Edibility

For many people, animals form a significant and cherished part of their diet. Indeed, humans have used other animals as sources of nutrients for hundreds of thousands of years. What can these animal-based dietary practices tell us about humans and their relationships with other animals? Of course, these inter-species relationships have varied as radically across time and cultures as the dietary practices that have shaped them. To better understand some of these practices and the relationships they generate, this course will explore the following questions: How did animal-based food practices develop from pre-domestication to the contemporary era of industrialized animal agriculture? How have cultural categories of "edibility" developed in different cultural contexts? What is meat, and how does it differ from inedible flesh? How have gender, class, race, sexuality, and other categories of difference intersected with and shaped animal consumption practices in different times and contexts? How has animal consumption shaped and been shaped by animal ethics, philosophy, and scientific knowledge production? How has large-scale animal consumption contributed to the ecological crises of the Anthropocene, and how have these in turn affected animal consumption practices? What is the future of animal-based food?

This course will use ethnographies, historical and legal analyses, and philosophical inquiries to examine the histories and cultures of animal edibility. Specifically, it will focus on topics including human evolution, animal domestication, slaughter practices, industrialized animal agriculture, indigenous ecological ontologies, hunting, dairy and egg consumption, cannibalism, cultural conflicts over the edibility of specific species, and recent technological innovations that can produce animal products without animals.

ANTH285 Film and Anthropology

Film & Anthropology is an exploration of the cross-pollinating relationship between ethnographic and filmmaking methods and styles. This is, in part, an effort to understand the contributions of both to the observed and documented experience of cultural life. We will watch films weekly and discuss them, as well as respond to them individually in weekly critical précis. We will, in the course of these viewings, come to some consensus as to what we mean by ethnographic and cinematic elements. The films themselves will cross genre boundaries, running the gamut from "traditional" ethnographic films to various forms of documentary and experimental film that in some way address or explore what I consider ethnographic elements. We will cover canonical early ethnographic work (Gardner, Asch, Marshall), feminist experimental interventions in ethnographic film (Minh-Ha, Varda, Deren), and contemporary work that experiments with ethnographic elements, and we will synthesize various genres into new forms of long-form documentary, ethnofiction, and trance film (Marker, Oppenheimer, Sensory Ethnography Lab, Gonzalez, Rosi, Minervini, Kuchar). We will observe the progression of style through the 20th century into the 21st, with the various intellectual threads of post-structuralism, creating modifications of centering the experience and voice of the oppressed, narrative reflexivity/abstraction/unreliability, formal experimental editing styles, the decolonial method as filmmaking practice, and the historicization and interrogation of anthropology as a fraught discipline.

ANTH286 Queer Activism and Radical Scholarship: Beyond Theory vs. Practice

This course explores the relationship between scholarship and activism, with a focus on intersectional radical queer scholarship and activism--queer left, black radical, trans, immigration, prison abolition, and sex work--in the United States. We will aim to connect the too-often bifurcated realms of academia and activism, theory and practice, research and action, so that we might think through the political stakes of knowledge-making in and outside the so-called "ivory tower," explore interdisciplinary methodologies we might use to study and learn from (and with) activists (including ethnography, oral history, and community archive), and gain insight into the histories and current realities of social justice movements, campus activism, the work of a radical imagination, art and activism, and the impasse of the political present. To put their theory into practice, students will undertake a semester-long radical research project on a queer issue or activist organization--past or present--of their choice.

ANTH290 Style and Identity in Youth Cultures

This course focuses on young people's engagements with commercially provided culture and their implications for identity formation. We begin in the postwar United States, when producers of symbolic goods, such as movies, music, and clothes, began aggressively tailoring products for young people; over the rest of the 20th century and into the 21st, new youth-oriented cultural commodities and sites of consumption have been used by young people in diverse ways to define themselves in relationships to adult society and to other young people. We will examine young people's intensifying involvement with the cultural market, with attention to both the diversity of youth-cultural formations that have emerged within the United States and to the global circulation of Euro-American youth culture. Using case studies, we will consider the ways in which young people's consumption practices have both reinforced and transgressed intersecting boundaries of class, race, gender, and nationality. An overarching concern in the course will be to assess whether or to what extent particular cultural practices may help prepare young people for positions of privilege, reconcile them to structural disadvantages, or provide them with resources to challenge the dominant society.

ANTH295A Theory in Anthropology: Anthropology and the Experience of Limits

Theory in Anthropology courses are core courses for the major, designed to elucidate historical influences on contemporary anthropological theory. While precise topics may vary from year to year, the overall goal of the courses remains the same: to familiarize students with the main traditions from which the discipline of anthropology emerged and to explore the diverse ways in which contemporary anthropological practice defines itself both with and against them.

This course considers the possibilities of an anthropology of transgression, excess, and unreason. This is an anthropology of all things cultural that work outside the logic of function and utility—that is, of actions and events that, while being eminently social, exceed reason and rational explanation. We will take as our point of departure an understanding of political economy that no longer has production and rationality as its core principles but rather consumption and waste. For this "general economy," as Georges Bataille called it in opposition to a "restricted economy" focused on utility, he drew from the anthropology of his time and its study of societies organized around complex systems of gift-giving, collective ritual, and periods of wasteful consumption (through festivals, for example). Ultimately, Bataille sought to formulate a critique of the early-20th-century European political and economic order, which emphasized individualism, rationality, and profit and which, he believed, fostered disenchantment with liberal democracy, totalitarian impulses, and war and calamity.

Class readings and discussions will be organized around topics such as profitless expenditure and the festival; gift-giving and sacrifice; taboo and transgression; formlessness and abjection; sex and eroticism; and subjectivity, excess, and the experience of limits. Students will develop research projects on these and other topics of their interest, which could include theoretical and ethnographic explorations of, for example, particular festivals, games of chance, religious experience, the writing of poetry, nonreciprocal giving (organ donation, surrogate motherhood), and the experience of extreme sports and high-risk tourism.

ANTH295B Theory in Anthropology: Anthropology of Affect

Theory in Anthropology courses are core courses for the major, designed to elucidate historical influences on contemporary anthropological theory. While precise topics may vary from year to year, the overall goal of the courses remains the same: to familiarize students with the main traditions from which the discipline of anthropology emerged and to explore the diverse ways in which contemporary anthropological practice defines itself both with and against them.

This semester, our topic is the anthropology of affect. Affect: to affect and be affected. Anthropologists and other social theorists from Durkheim onward have considered questions of bodies, sensation, emotion, and social change. In recent years, the "affective turn" in the humanities and humanistic social sciences has brought renewed attention to these dynamics. For some, affect is contrasted with emotion; it is potential or capacity, not set cultural meaning. For others,

affect is contrasted with structure or form; it is bodily sensation or intensity—dynamic, energetic, mobile. And for others still, affect might enable us to grasp how it feels to inhabit a life world, a particular atmosphere, texture, sensuality, the feel of things.

This course explores the genealogy and range of theories of affect, foregrounding anthropology's distinctive contributions to and critiques of the study of affect. We'll discuss ways that centralizing affect might disrupt dichotomies of structure/agency, opening up modes of analysis that are not centered on cultural meaning-making, and enabling us to explore forms of life that exceed human subjects and socialities. Readings will tack between more theoretical essays and ethnographic representations of affect, sensuality, mobility, and emotion. Weekly experimental sensoriums, designed to attune us to the world, are a central component of the course.

Prereq: **ANTH101**

ANTH295D Theory in Anthropology: Anthropology and the Modern Media

This course considers the relations among symbolic representations, modern media, and social practices of imagination. Taking the Durkheimian theory of collective representation as a point of departure, we will first look at the role of rituals and myths in oral cultures, with emphasis on the notion that human beings add to the world through representation and inhabit the worlds they imagine. We will go on to interrogate the ways in which the formation of media industries in capitalist societies has transformed the role of imagination in social life, both within and beyond the societies where those industries emerged. Cultural forms may have always had extrinsic as well as intrinsic origins, but in a world where the products of large, centralized media industries circulate nationally and globally, the resources of imagination increasingly come from outside of local communities, from urban centers and other nations. The consequences of such national and global flows, however, are neither uniform nor predictable, as images and narratives are locally received and negotiated. In exploring the relations between media production and reception, we will look at critical theories of media in Euro-American societies, as well as ethnographic studies of the reception of Western media forms in other parts of the world, the role of media from both the host country and the home country in immigration, and the production of indigenous media. Methodologically, we will consider the relationship between anthropology and the interdisciplinary fields of cultural and media studies.

Class readings and discussions will be organized around topics such as media technologies and modern societies, the role of the media in the transformation

of time and space, media and modern subjectivities, broadcasting and national identities, the organization of particular mediascapes, taste, identity, and popular media, mediated citizenship, media and cosmopolitanism, movie-going as public experience, the formation of hybrid identities through media consumption, soap opera, melodrama, and gendered subjects.

Readings by Emile Durkheim, Claude Lévi-Strauss, Jean-Pierre Vernant, Pierre Bourdieu, Marshall Sahlins, Raymond Williams, Stuart Hall, John Thompson, John Frow, Arjun Appadurai; as well as ethnographic studies of media consumption and production by Brian Larkin, Lila Abu-Lughod, Faye Ginsberg, Sunaina Maira, Purnima Mankekar, and others.

ANTH295E Theory in Anthropology: Anthropology of Time

In this course, we will examine anthropology's integral (and often fraught) relationship with time. The course is divided into two major segments. In our first half, we explore the philosophical backstory as a particular--and, perhaps, foundational--category of human perception and experience. We will then trace how classic anthropology attempted to pick up these debates via core anthropological concerns with relativism, with cultural particularity, and with the social origins of perception.

With these canonical foundations in place, we will turn in our second segment to the myriad ways in which the concern with time infuses contemporary anthropology. Here we will move from questions of anthropological representation--especially the notorious critique of the "ethnographic present"--to recent anthropological attempts to discuss the cultural, social, and political work inherent in the production of different pasts, presents, and futures. As we will explore, though it may seem intimate and inherent, the production of time cannot be separated from ongoing histories of colonial domination, violence, resilience, innovation, and transformation.

ANTH295G Theory in Anthropology: Anthropology of Semiosis

This course inquiries into the process of semiosis and traces the parallel developments of anthropology and the study of signs, symbols, and how we use language--or language uses us--to make sense of the world. As we move through the foundations of North American anthropology and the then-nascent interest in languages of Turtle Island, and the problematic invention of the category of the primitive, we will also begin to understand the development of structural linguistics around the same time and what led to the differential emergence of social and eventually symbolic and structural anthropology across the Atlantic. As anthropology began to take an interest in the language of the unconscious, social and otherwise, we will look toward how a post-structural approach to anthropology offered a radical new turn in the discipline. We will conclude by questioning if semiosis still poses a radical horizon here not there, now not then.

ANTH301 Immigration and the Politics of Fear

This course will examine the role of fear in shaping ideas about immigrants. We start from the notion that emotions are social formations with particular histories and political significance. Therefore, we will refrain from assuming that fear is nothing more than a feeling or an automatic response and instead take it as a site that allows us to examine how psychological and legal discourses together define and dispute what is normal, reasonable, credible, plausible, real, appropriate, and timely. The seminar will cover themes such as risk and threat, race and origin, pain and injury, confession and testimony, fiction and figuration, and personhood and representation. We will look at newspaper articles, social media content, legal opinions, case law, court transcripts, and psychological evaluations, as well as texts in politics, anthropology, sociology, philosophy, literature, comics, and films. Students will write a short essay on the politics of fear. Throughout the course, they will develop their toolkit to critically reflect on an emotion of their choice.

ANTH302 Critical Perspectives on the State

This course builds on Marxist, poststructuralist, feminist, anarchist, and cultural analyses to take a critical approach to the state--what it is and what it does. We will examine how the state is imagined by those who write about it and struggle against it. Where does the state begin? How do states act, and what are the consequences of these acts? How is rule consolidated and how are individuals and communities annexed to the project of rule? How do people engage with state acts and ideologies? We will read texts drawn from a variety of disciplines, including anthropology, feminist theory, political theory, philosophy, sociology, and geography, that examine the nature, everyday workings, and effects of state power. Drawing upon ethnographic examples from around the world, we will analyze how states are cultural artifacts that produce and regulate people's identities and bodies, reproduce social inequalities, and engender resistances of all sorts. Some of the topics we will discuss include bureaucracy, governmentality, the security state, the prison industrial complex, terror and militarism, law and justice, citizenship, democracy, refugees, anti-state movements, the "man" in the state, and welfare and post-welfare politics.

ANTH303 Ritual

Religion can be defined through beliefs or traditions or texts, but it always takes physical form through ritual. Ritual is the one universal in religion, but the question of how to understand ritual is possibly the most contested question in the study of religion, and not all rituals are religious. Can a ritual be read like a text? How do symbols produce effects, and how should we understand these effects? What is performative speech and how does it work? How does ritual behavior reflect and shape social relationships? This course introduces students to the major approaches to the study of ritual. The readings draw heavily, but not exclusively, on anthropological approaches to ritual, both classic texts and recent innovative approaches focusing on language and embodiment. Students will pick a ritual that they are interested in and will attend that ritual several times over the semester, conducting practical fieldwork exercises and applying the theories we read in class. The assignments culminate in a paper in which students will be required to analyze "their" ritual using the theory we read together in class. For these assignments, students are encouraged to define

ritual broadly and creatively. The goal of the class is to gain an understanding of theoretical approaches to ritual by applying these theories to the social world around them.

ANTH304 Entangled Sounding Objects: Musical Instruments of Central Asia

Musical instruments exist at the intersection of material, cultural, and social worlds. Entangled in webs of human and non-human relationships, they are at once tangible and symbolic sounding objects that hold significant meanings for the communities they serve. This course will explore the social roles and cultural meanings of musical instruments in Central Asia, a region once traversed by the Silk Road, which extends from the borderlands of China in the east to the Caspian Sea in the west, and from Russia in the north to the frontiers of Afghanistan in the south.

Drawing on theories and ideas derived from interdisciplinary studies of material and sound culture, the course will examine how instrument making and performance are shaped by and entangled with social systems of value and cosmology, political ideology, ecology, and economy. Class meetings will focus on case studies of bowed and plucked lutes, zithers, mouth harps, end-blown flutes, and frame drums among historically nomadic and sedentary peoples of Central Asia. Through these case studies, students will learn about the origins and historical trajectories of individual musical instruments from the pre-modern period to the Soviet and post-Soviet eras; consider the social and political connotations of various performance configurations and repertoires; discuss the status of instruments in Islam and indigenous spiritual belief-systems, and the roles of musical instruments as symbols of national identity, objects of cultural heritage, and global commodities.

ANTH305 Semiotics of al-Barzakh: The Grammars of the End of Days and Horizons of Possibility

This course builds from the Islamic eschatological concept of "al-Barzakh" as it has been taken up in anthropological theories, as well as in Islamic thought more generally, with careful attention to the term's semiotic transformations and significations. It does so in order to explore both how the term describes an earthly place and an eschatological hereafter as well as a theoretical and practical alternative to the notion of the liminal personhood.

Since at least the 12th century, thinkers have explored the Islamic concept of al-Barzakh to explore the connection between the earthly present and the heavenly hereafter and the scales of judgment in between. This term, somewhat akin to Christian notion of purgatory or limbo, appears only three times in the Qur'an. It is explained as being like the productive firmament that separates salt and sweet water. In places like Morocco, this is commonly interpreted as referring to the Strait of Gibraltar and the underwater isthmus that separates and produces the waters of the Atlantic Ocean and the Strait of Gibraltar.

We will read both contemporary scholarly apprehensions of this term and its various applications in Muslim-majority contexts such as Morocco, Egypt, Sudan, and Iran--often ethnographic--as well as Islamic philosophy that attempts to bring the concept into relation with earthly personhood. In our approach, we will move through a variety of scholarly genres and epochs in order to trace the genealogies of present-day popular invocations of the term as we contrast it with other apprehensions of the eschatological and the liminal.

We will work to understand how this term contains space for both an imagination of everyday life as well as the boundary-generating difference marking here and there, then and now, by looking at how the term is evoked by artists, scholars, religious adherents, psychoanalysts, and border crossers. As we go along, we will pay special attention to the languages of belonging and difference evoked by this term and attend to how an anthropological approach to semiotics might elucidate new grammars of community and horizons of possibility that exist alongside notions of the liminal, uncanny, dreaming, the hereafter, and the imagination of the end of days.

ANTH306 Mobilizing Dance: Cinema, the Body, and Culture in South Asia

This course focuses on questions of "mobility"--cultural, social, and political--as embodied in two major cultural forms of South Asia, namely "classical" dance and cinema. Using Tamil cinema and Bharatanatyam dance as case studies, the course focuses on issues of colonialism and history, class, sexuality and morality, and globalization. The course places the notion of "flows of culture" at its center and examines historical, social, and aesthetic shifts in these art forms over the past 150 years.

The course is both studio- and lecture-based. It includes learning rudimentary Bharatanatyam technique, watching and analyzing film dance sequences, and participating in guest master classes in ancillary forms such as Bollywood dance and Kathak (North Indian classical dance). The studio portion of this course is for beginners, and no previous dance experience is necessary.

ANTH307 LAND BACK! Indigenous Sovereignty Politics

This advanced research seminar will feature a look at the contemporary LAND BACK movement through current case studies with a focus on tracing the historical and legal genealogies of settler colonial land dispossession, indigenous land title, and self-governance issues bounded to territory (recognized and otherwise). We will examine different historical periods, moments, geographical sites, and case studies to explore the complexities of life for Indigenous peoples in the Pacific Islands and North America subject to the authority of the United States in relation to land as a central part of exercising sovereignty. In relation to these themes, the course will also examine: Indigenous peoples' varied political statuses in settler colonial context; self-determination; structures of domination and resistance; Indigenous agency; Native nationalism and decolonization.

Readings will focus on the recognition and assertion of collective land rights, treaty rights, as well as land claims, land recovery, and land reclamation.

ANTH308 Television Storytelling: The Conditions of Narrative Complexity

This course examines the industrial and cultural conditions for the development of relatively complex forms of storytelling in commercial U.S. television. Narrative complexity is a cross-generic phenomenon that emerged over the 1980s and has proliferated within an increasingly fragmented media environment. In class discussions and individual research projects, students will analyze particular programs in-depth, with attention to their industrial and social conditions of production, their aesthetic and ideological appeals, and the cultural tastes and viewing practices they reflect and promote. We will also consider how television studies has responded and contributed to the increased prestige of certain types of programs.

ANTH309 Reading Ethnography: Toward an Otherwise Anthropology

In this advanced reading-centered seminar, we will consider the challenges and potentials of ethnography as a way of knowing, form of argument, and genre of writing. We will take up contemporary interventions and critical turns including: decolonizing and abolitionist anthropology, the complex politics of witnessing and ethnographic refusal, approaches to more-than-human anthropologies and queer/ing anthropology, and the craft of ethnographic storytelling and experiments in ethnographic poetry, prose, and fiction. Our seminar is structured around collaborative close reading and discussion of a range of cutting-edge ethnographies that challenge the boundaries of disciplinary practice and seek to open up a transformative, otherwise anthropology.

ANTH310 Un/Settled: The Anthropology of Displacement, Migration, Borders, and Refuge

How does one account for the ever-present and growing phenomenon of displaced people on the move in a world of bounded nation-states and citizens? How does one make sense of temporary encampments and refuge in a world of stable home/lands, and exile and fugitivity in a world of legal belonging?

As key political figures, refugees and migrants contest and transect our normative ideas about the national and the global. They force us to reckon with the hardened and profoundly consequential legal categories of borders and citizenship around which our world is organized. This course takes a deep dive into the modern experience of displaced people to understand their predicament and how it unsettles our fundamental notions of the political, nation-states, freedom, home, crises, violence, human rights, and humanitarian care.

Texts: Hannah Arendt, Zora Neale Hurston, Lori Allen, Julie Peteet, Urvashi Butalia, Giorgio Agamben, Amitav Ghosh, Saida Hodzic, Miriam Ticktin, Liisa Malkki, Judith Butler, Justin Hoseby, Simone Browne, Neil Roberts, and others.

ANTH311 Migration and Movement in/between Muslim Worlds

The spectacular migrant crisis across the Mediterranean Sea since 2014 has frozen a particular racialized understanding of migration and flight out of the Middle East and North Africa. This course looks to trouble this singular narrative of movement out of the Middle East and Africa by looking at the multiethnic and transnational flows of workers, capital, fighters, and aid workers in and out of the region since the late 1990s. We read ethnographies of development, war, exile, investment, and activism in order to better understand exchange, change, and fluid continuities in overlapping theaters between Africa, Europe, Asia, and the Middle East.

ANTH312 Eat, Grow, Heal: The Anthropology of Food and Justice

This course uses the lens of justice to examine the politics of food. We will look at the cultural and political-economic dynamics of food production and consumption, considering questions of taste, class, labor, marketing, and food sovereignty. We will also examine the environmental and social impact of food production and the consumption choices we make, from organic, to vegan, to animal proteins, to foraging and hunting. We will use a range of texts, including ethnographies, theory, film/documentary/TV shows, creative nonfiction, fiction, cookbooks, blogs, and magazine articles.

ANTH313 Producing and Performing Anthropology

This course examines the various modes through which anthropology can and has been performed and produced. Partially exploring the historical relationship between film, museum curation, and ethnography, while also looking toward how anthropology has verged into other media such as the audiovisual and digital, this class pairs reading ethnographies with practical projects, which could take performance, written, audiovisual, or even web forms. What does it mean to make an ethnographic website, for instance, or write a performative ethnographic text? How does this differ from a museum, and how are the history and practices of curation related to anthropology? This course draws from theoretical positions in the discipline as well as performance and artistic production, and includes in-class/virtual visits from figures in this field across the U.S., Europe, North Africa, and the Middle East, aimed at fostering opportunities for more long-term mentorship and collaborations.

ANTH314 Curating Religion: Museums, Monuments, and Memorials

Museums, monuments, and memorial sites have long been important sites for public reckoning with the past. But they are not only about the past, they

represent present struggles about the meaning of history and the possibility of imagining different futures. In this multidisciplinary class, we will work as a group to examine diverse case studies in which religion and memorial culture intersect in acts such as curation, representation, conservation, and repatriation. Visiting exhibitions and working with Wesleyan's collections, some of the questions we will ask include: What are the ethics of the treatment of objects in museums and of repatriation? How does space shape religious experience in an arguably secular setting? How do monuments invoke religious imagery and symbolism in their construction of history? In what ways does placing something behind a glass case give it a religious aura, and in what ways does it drain an object of its sacrality?

ANTH315 Cultural Politics of the Body

In this course, we will consider 'the body' as both material and symbolic, imbued with meaning, politicized and expansive. We will ask ourselves: what is a body, where does it begin and end, what does it do? Recognizing the ongoing relations of power that seek to control and exploit different types of bodies (both human and nonhuman), it is critical that we ask ourselves how the body comes into being and how it subverts colonial domination. Accordingly, we will read and discuss texts that examine these themes through many different lenses, including science and technology studies, medical anthropology, environmental studies, disability studies, posthumanism and multispecies ethnography, queer studies, and Black studies.

ANTH316 Critical Global Health

What does it mean to approach global health as not an applied science but an ethnographic object? This course will explore this question by bringing critical, social science perspectives to bear on global health issues and interventions. This course covers three areas of scholarship. First, we will examine the processes by which social inequalities produce patterns of health and disease in globalizing contexts. This will be followed by an interrogation of the term "global health," in which we will trace its emergence as a discourse and enterprise and unpack its contested meanings. While some view global health as a clinical practice, others conceptualize it as a business, security concern, charitable duty, or human right; yet another camp probes the term's ideological construction. We will consider how such vantage points are underpinned by cultural assumptions and ethical agendas that, in turn, can determine how, and to whom, care is delivered. As a third area of inquiry, we will investigate the implications and unintended effects of doing global health by probing such questions as, When are good intentions not good enough? How useful is biomedicine for alleviating locally defined problems? Under what conditions does global health exacerbate the social inequalities it seeks to overcome?

ANTH317 Culture and Consumption

This seminar examines the formation, development, and contemporary forms of cultures of consumption in EuroAmerican societies and their global exportation and adaptation to diverse local situations. The course is premised on the idea

that the spectacular and continuous rise of commodity consumption that began in the late 17th century is as much a cultural as an economic process, one that both shaped and was shaped by shifts in ideas about personal and social development. Once associated with negative meanings of waste, excess, and depletion, consuming, especially of clothes, domestic goods, new foods and beverages, and artistic forms, came to be seen as a critical dimension of self-fashioning and sociability. While the course situates these developments in the context of expanding markets and new modes of distribution, it will emphasize the post-purchase moments of consumption, that is, the ways in which consumers incorporate goods into their everyday lives. Among the themes we will consider are the gendering of consumption, the social dynamics of taste, commodity consumption and ideologies of authenticity, consumption and social inequality, the consequences of consumption, and the emergence of the ethical consumer.

ANTH318 Global Indigenities

This course focuses on theories of indigeneity in examining indigenous peoples' lives, cultural practices, resistance and activism. The term "indigenous" has had varied and contested genealogies across time, geography, political contexts, and fields of study. Although dominant societies tend to claim that indigenous peoples are either entirely extinct due to genocide or diluted due to racial and cultural mixing, indigenous refers to the wide range of relations to region and nation of the more than 370 million indigenous people who are spread across 70 countries worldwide. Some indigenous peoples define themselves by their historical continuity with precolonial and presettler societies; others by ties to territories and surrounding natural resources; others in relation to distinct social, economic, or political systems; and still others by their distinct languages, cultures, and beliefs. Attempts at the historical erasure and subsequent memorialization of indigenous peoples serve the colonial goals of refuting indigenous claims to land and rights and have been the primary means by which dominant populations asserted their own modernity while denying it to putatively "primitive" indigenous peoples. Today, nation-states continue to impose this notion of the "pre-modern" savage as a mechanism of control in their negotiations with indigenous peoples' legal status and land rights. This course will focus on a range of cases studies including indigenous peoples in North America contending with the states of Canada, the United States, and Mexico; Indigenas encompassed by select countries in South America; Aboriginal peoples in Australia, the Sami (across various countries in Scandinavia), the Ainu (Japan), the Maori (New Zealand), and Palestinians (Israel-Palestine). Topics will include indigenous peoples' struggles for autonomy and survival; self-determination and political status under international law; the UN Declaration on the Rights of Indigenous Peoples; the UN Permanent Forum on Indigenous Issues; land struggles and the protection of natural resources; cultural resurgence and revival of select traditions; and varied forms of political resistance and decolonization.

ANTH319 Toxic Sovereignities: Life after Environmental Collapse

What politics emerge at the borders of life and nonlife? Representations of the human species as being on the brink of environmental collapse have become increasingly common, as the specters of climate change and cataclysmic environmental disaster seem to bear down ever more heavily upon us. At the same time, the increasing entanglement of human bodies with various forms of chemical and otherwise man-made pollutants presage a slightly different

future, one in which, if the human species does not outright disappear, it will be fundamentally transformed. This course explores different forms of political and social action that have emerged in response to these seemingly epochal shifts with a particular emphasis on the ever-mutating concept of sovereignty. Our goal is to explore the ways in which the shifting borders between human life and its artificially produced absence can serve as productive sites of new political forms and transformations of older ones, even as they also generate tremendous social and cultural anxiety.

ANTH330 Economies of Erasure: Exploring the Violence Concealed by the Liberal Promise of Care

This course will aid students in understanding and recognizing the processes of erasure that maintain ongoing regimes of domination. In particular, we will attempt to understand how the twinned promises of equity and tolerance made by seemingly liberal, multicultural democracies work to conceal the ongoing--and specifically targeted--violence that in fact constitute and continue to subtend these nation-states. How, we will ask, do these regimes make violence disappear through the promise to "care" for their citizens, even as they wield spectacular violence to maintain domination? How are we as subjects of these regimes conditioned to pay attention to certain events, ideas, and systems, and what is made to disappear through such selective forms of attention? What communities, bodies, and individuals are sacrificed by the liberal promise of care? To answer these questions, the course will juxtapose readings in philosophy and social theory with ethnographic and historical case studies, giving students both the conceptual tools to analyze erasure and a set of examples through which to understand how these forms of erasure operate in the world. Crucial to our tool kit is the concept of disavowal, best understood as an active deflection from attending to the obligations of what one knows or should know. Disavowal, as we will see, makes it possible for subjects to imagine the political, social, and cultural spaces in which they live as moral, legitimate, and ethical, taking violence as an aberration rather than as the normative maintenance of an order of domination. This disavowal, the course contends, grounds itself in the ideologically charged embrace of a liberal sense of care that is, in turn, abstracted away from actual and ongoing histories of power and domination. In order to manage the potential scale of this exploration, we will primarily examine examples from North America, examining how white supremacy, patriarchy, and settler colonial domination operate in tandem in order to legitimize regimes of power by disavowing their violence.

ANTH337 Missionary Mysteries: the Objects and Archives of Wesleyan's Missionary Past

This course examines the history of Wesleyan University's connections to missionary work in the nineteenth and early twentieth centuries, as seen through the university's archival and object collections. Students will spend the bulk of classroom time in hands-on learning as they engage with the archives of the Wesleyan Missionary Lyceum and cultural heritage collections obtained by missionaries and brought back to the University. Beginning with an overview of historical, archival, and museum methods, the course then will examine objects and written records from the Americas, West Africa, East Asia and the South Pacific. Students will be challenged to consider the ways in which Wesleyan has been engaged in colonialism, imperialism, and global evangelism. Topics of investigation will include: gender, linguistics, museum ethics and repatriation, the use of objects as educational tools.

ANTH355 Social Movements Lab

What can we learn from social justice activists about the economic, political, and environmental struggles facing us today, including mass incarceration, immigration, economic precarity, and the violence of the state? Where are the critical sites of queer, trans, left, feminist, black, indigenous, disability, and environmental struggle? How do these movements converge, and where do they diverge? This participatory, interdisciplinary research seminar enables you to embark on an independent, semester-long research project on the social movement or activism of your choice. We'll start with some foundational reading on multidisciplinary social movement research; archival, ethnographic, and participatory methodologies; and histories of social justice struggles in the U.S. The remainder and majority of the seminar is laboratory style, taking shape around your particular projects. Each week, we will collaboratively analyze one or two projects, mapping out and comparing methods, goals, visions, struggles, and contexts of the movements under study. Our goal is to understand a range of social justice activism in their economic, political, and historical context, with an eye toward integrating activist scholarship and social change. The activism you research can be contemporary or historical; local, national, or global; and can take any shape: direct action, community organizing, activist philanthropy, art as activism, etc. You do not need previous experience or activist contacts for this course--just passion and the desire to learn collaboratively!

ANTH361 Calderwood Seminar in Public Writing: The Dark Turn in Television Storytelling

This course, offered in association with the Calderwood Seminars in Public Writing, examines a certain tendency in contemporary television storytelling. Taking the debut of "The Sopranos" in 1999 as a benchmark, we will explore the emergence in dramas and comedies of a dark, uncertain, pessimistic, or disillusioned address within a medium long known for its reassuring tone. We will consider the industrial and social conditions for this tonal shift, as well as the role it has played in elevating public perceptions of television's cultural value.

ANTH362 Visualizing Black Remains

This advanced seminar engages African Diaspora critical thought and aesthetic production (visual art, performance, film, literature) that grapple with the appetite, effects, and stakes of representing Black remains. What does this visual reproduction make possible or obscure, and what is its relationship to violence? The class will also encourage students to think about the ethics of reparation/repatriation in relation to forms of loss and dispossession that can neither be repaired/repatriated nor visually evidenced (in conventional ways). In those instances, how do contemporary critical thinkers and/as contemporary artists help us rethink loss, mourning, objecthood, violence, empathy, and reparation?

ANTH392 Sacrifice

Sacrifice entails the surrender, destruction, or self-denial of something precious or desired in exchange for peace, power, prosperity, freedom, or edification. Destruction by sacrifice, says anthropologist E. E. Evans-Pritchard, is an act of giving of the self that must be costly and "necessarily reciprocated." In sacrifice, humans come face-to-face with death without dying. Through a collection of interdisciplinary readings, this seminar examines the implications of this ruse through the themes of war, animal and human sacrifice, asceticism, acts of political immolation, big-game hunting, high-altitude mountaineering and extreme sports, and the experience of excess in festivals such as Burning Man.

ANTH395 The Anthropology of Religion

What do we study when we study religion? We can observe practices, record speech, examine objects and actions—but what do these things tell us? If religion is about belief, what can we say about belief from documenting actions? Perhaps we must conclude that religion is not about belief, but if so, are in danger of "explaining away" the very phenomena we seek to understand? This course will introduce students to a cross-cultural, comparative perspective on religious practice and belief in order to critically reflect on the role of methodology and

research design in the study of religion and the social sciences more broadly. How do we know what we know? How do we plan research in order to find out what we want to know? The course has a significant methods component. Students will be expected to do field research exercises in a local religious community and prepare a methodology research proposal for a fictional or real project as a final assignment. Methodological exercises will be interspersed with ethnographic texts that allow us to reflect on how religion is studied, experienced, and explained. Students planning theses or other research projects with an ethnographic component, in any social science field, may use the class and the final assignment to conceptualize and plan their projects.

ANTH397 Difficult Women: Post/Feminism in Television Comedies and Dramedies

Although postwar family sitcoms represented women as homemakers, one of the first and most popular sitcom wives also articulated discontent with domestic femininity. Lucy Ricardo became the prototype of the "unruly woman," a figure with feminist potential whose desires exceed and disrupt dominant gender norms. As those norms have shifted, so have TV's unruly women. Second-wave feminism, anticipated in I Love Lucy, was incorporated into a 1970s cycle of comedies centered on single working women whose career aspirations were rewarded. Over the following decades, a postfeminist sensibility dominated television comedies and dramas and became central to a gendered neoliberalism in which energetic individuals "empower" themselves. In recent years, a new type of female protagonist has emerged. Alongside the can-do optimism of single-women comedies from The Mary Tyler Moore Show to Sex and the City to 30 Rock and Parks and Rec, a stream of comedies and dramedies, made largely by and for women, have depicted a variety of flawed, difficult, unruly women coming of age under conditions of socioeconomic precarity, whose less focused energies seem to articulate a more uncertain, downbeat, post-recessional mood. In this course we will situate the latter cycle in relation to both the longer history of televisual representations of women and to the current state of feminist politics. Among the shows we will look at are: I Love Lucy, Bewitched, The Mary Tyler Moore Show, Sex and the City, Ally McBeal, Girlfriends, The Mindy Project, 30 Rock, Parks and Rec, Girls, Insecure, Broad City, Better Things, Two Broke Girls, New Girl, Crazy Ex-Girlfriend, Jane the Virgin, Unreal, Abbott Elementary, Fleabag, Dear White People, and Somebody Somewhere.

ANTH398 Queer/Anthropology: Ethnographic Approaches to Queer Studies

What are the many ways in which queerness obtains meaning across cultures? What does it mean to have a queer relationship to one's world? Queer/Anthropology traces the history and present state of ethnographic studies of queerness, defined here as non-heteronormative sexualities and gender embodiments. We examine the way in which heteronormativity is established as integral to hegemonic order and the manner in which it functions within Western armchair ethnographic studies and sexology of the early 20th century. We look at the binary system as a mode of organization and the way in which anthropological studies of sexuality and gender have nearly always challenged the presumed universality of these modes. We read contemporary ethnographic work in order to compare and contrast different cultures' usage of sexuality and gendered categories in relation to various contexts, such as colonialism, race/

racism, capitalist and non-capitalist economic and political systems, cosmology/religion, and regionality/place.

ANTH400 Cultural Analysis: Senior Capstone Seminar

This seminar is for all senior anthropology majors who intend to write honors theses or senior essays. It is designed to enable students to pursue individual research projects in a group context, with attention to debates on the nature of anthropological interpretation. The seminar is structured as a workshop: each student gives a series of presentations on their own research project to the group; equally important is engaging with and offering constructive criticism of the projects presented by others.

ARABIC (ARAB)

ARAB101 Elementary Arabic I

Arabic 101 is the first introductory course of Modern Standard Arabic (MSA). The course will be conducted primarily in Arabic, except at the very beginning when students are learning the alphabet (Sound and Script). The course is communicative proficiency-based but other methods such as the translation are integrated in the course. While the communicative approach stresses the importance of developing the oral skills in class, all the other skills of language learning be emphasized. Arab culture and history are systematically integrated in the course through student groups cultural presentations as well as other activities.

The class will focus on speaking as an effective way of learning (speak it to learn it). Students will be able to write and create basic words, sentences and eventually write their first essay. The latter will cover—but will not be limited to—FORTE elements (family, occupation, recreation, travel and education). Students will be able to converse basic dialogues comfortably in class, and HW will be assigned on a daily basis. There is a weekly Teaching Assistant's session conducted by a native Fulbright scholar from an Arab country.

Offering: **Host**

Grading: **A-F**

Credits: **1.50**

Gen Ed Area: **HA-LANG**

Prereq: **None**

ARAB101Z Elementary Arabic I

ARAB101Z is the first introductory course of MSA (Modern Standard Arabic) designed for students who have never had any training in MSA while ARAB102 is its sequel appropriate for students who have taken ARAB101 and/or for individuals who are decent heritage speakers of an Arabic regional dialect. By taking ARAB101 & ARAB102, the student would earn 3 credits and would be able to enter ARAB201 if they choose to do so, as well as reach a low-intermediate level in MSA.

MSA is the official medium of oral and written communication in the Arab World and for religious services in the Islamic world. It has derived from Aramaic, has a close kinship to Hebrew, and it is the language spoken first by the Bedouins of the Arabian Peninsula in the fourth and fifth centuries A.D. It is the language used in books, novels, newspapers, conferences, official and religious speeches, business transactions, legal and government documents, court rulings, public signs, TV and radio newscasts and many TV/cinema productions and shows. It is the language of the Holy Quran and Hadith (sayings by the prophet Mohamed (PBUH) and/or his companions), and it is understood practically by every native Arabic speaker from Morocco to Bahrain. Being the language of Islam, more than one billion Muslims use it in their religious daily rituals all around the world, namely central Asia, South East Asia (Indonesia, Malaysia, India & Bangladesh etc.), the Middle East, the Great Sahara & North Africa.

It is very important to note that Modern Standard Arabic is not exactly the language spoken on the streets in the Arab world. However, anyone with a solid knowledge of MSA will have little to no problem "picking up" any of the main regional Arabic dialects (North African, Egyptian/Sudanese, Gulf, Iraqi, or Levantine)

The course will be conducted primarily in Arabic, except at the very beginning stages which will require the use of English (during Sound and Script discussions). The course is communicative proficiency-based, which stresses the importance of developing the oral skills but also aims at developing the other skills of language learning (listening, reading and writing).

Arab Culture and History are systematically integrated in the course and will be referred to, whenever appropriate and possible. References will also be made to the regional dialects for comparison with Modern Standard Arabic. Student Groups in-class presentations will be an excellent tool for students to learn about different aspects of Arab & Muslim culture, society and history.

The course will be supplemented by audio and video material as well as printed handouts provided by the instructor. Students are expected to do daily homework, role-play, group work, and give regular in-class feedback/presentations, and are supposed to come prepared for class on a daily basis.

Offering: **Host**

Grading: **A-F**

Credits: **1.50**

Gen Ed Area: **HA-LANG**

Prereq: **None**

ARAB102 Elementary Arabic II

This course is a second-semester course in modern standard Arabic (MSA) that will continue to stress the basic skills of reading, writing, speaking, and listening. The course will focus on speaking as an effective way of learning (speak it to learn it). Students will continue to learn MSA grammar, write and create paragraphs, and begin to converse comfortably in the target language. Students are expected to develop better listening, speaking, reading, and writing skills in Arabic and to become familiar with Arabic culture. Oral drills and speaking activities will be done in the classroom, and the class will be conducted primarily in Arabic.

Offering: **Host**

Grading: **A-F**

Credits: **1.50**

ARAB201 Intermediate Arabic I

This course is a second-year, lower intermediate course in modern standard Arabic (MSA) designed mainly for students who have completed at least two semesters of Arabic Fusha or those who already possess a basic foundation in Arabic. Students will develop more skills in writing concrete essays and narrating. They will start talking about current events and describing places and people. Narration, in fact, is the hallmark of the intermediate level, so conjugation tenses will need to be memorized. The course will primarily be conducted in Arabic, except for some cases which require the use of English. The course is communicative proficiency-based, which stresses the importance of developing the oral skills, while giving equal attention to the other skills of language learning (reading, writing and listening). The measure chart and the case system will continue to be discussed and practiced. Aspects of contemporary life and culture in the Arab world as well as Arabic regional dialects will be constantly referred to. Students are expected to do daily homework, role-play, group work, and give regular in-class feedback/presentations. The course will be supplemented by audio and video material as well as printed handouts by the instructor.

Offering: **Host**

Grading: **A-F**

Gen Ed Area: **HA-LANG**

Prereq: **ARAB101 AND ARAB102**

ARAB202 Intermediate Arabic II

This course is a second-year, upper intermediate course in modern standard Arabic (MSA) that will continue to focus on the four basic skills of reading, writing, speaking, and listening. In this level, students will be able to speak Arabic comfortably enough to communicate with a native speaker on a variety of topics. Students should be able to write simple texts on everyday themes and read uncomplicated authentic texts on familiar or concrete topics, as well as newspaper articles and storybooks. Culture will continue to be integrated in the classroom. The class will be conducted primarily in Arabic.

Offering: **Host**

Grading: **A-F**

Credits: **1.25**

Gen Ed Area: **HA-LANG**

Prereq: **ARAB101 AND (ARAB102 OR ARAB201)**

ARAB301 Advanced Arabic I

Arabic 301 is the fifth semester of Arabic MSA and is designed for students who have had at least two full years of Arabic MSA or its equivalent.

This first semester of third-year Arabic will continue to emphasize the four skills in language learning mainly through readings that introduce students to more advanced topics that draw from literature, Arab Media, sciences and other disciplines. The course will be conducted entirely in Arabic, apart from cases where intricate grammar concepts necessitate English use.

The course is communicative proficiency-based, and students will continue to do role-play, pair work, write weekly reports and commentaries and give regular in-class feedback/presentations. They are expected to contribute orally to class discussions and lectures.

Arab culture and history will continue to be systematically integrated in the course through constant reference. Regional dialects will continue to be referred to, with the purpose of comparing them to Modern Standard Arabic.

Offering: **Host**

Grading: **A-F**

Gen Ed Area: **HA-LANG**

Prereq: **None**

ARAB311 Introduction to Colloquial Levantine Arabic I

This course offers students an introduction to the spoken Arabic of the Levant (Syria, Lebanon, Jordan, Israel, and the Palestinian territories). One of the difficulties facing nonnative speakers trying to master Arabic is that very few Arabs can carry on a conversation in modern standard Arabic, so students must be familiar with a colloquial dialect as well as the standard literary language to communicate effectively in Arabic. Although Levantine Arabic is not as widely spoken as is the Egyptian dialect, it provides a useful entry for English speakers into colloquial Arabic, as it is about halfway between the Egyptian dialect and that spoken in Iraq and offers a useful bridge to mastering either dialect. The text for this course uses the Arabic alphabet. Students need to have a thorough knowledge of the Arabic alphabet and writing conventions to take this course. As much of the vocabulary used by the speakers of the Levantine dialect is derived from standard Arabic, this course will help build students' knowledge of basic Arabic vocabulary.

ARAB322 Media in the Arab World: From TV and Film to Social Media (CLAC.50)

Media in the Arab world has undergone significant changes in recent times, with the emergence of new technologies, platforms, and voices across various mediums such as movies, newspapers, magazines, and social media. This course will introduce students to some of the main channels for the communication and expression of information in the Arab world today.

While television remains the most popular source of information - with channels such as Al-Jazeera even having an international audience - access to information

has expanded to include online news websites and social media. Social media, in particular, has become an increasingly important source of information, especially among younger generations.

In this course, we will delve into the evolution and impact of media in the Arab world, exploring its role in shaping public opinion, identities, and narratives across different channels. We will look at movies, television series, and social media programs, as well as sources of traditional information, such as newspapers, magazines, and news broadcasts.

This course is open to students studying all levels of Arabic, but is particularly suited to students who have completed Intermediate Arabic as well as native speakers of Arabic.

ARCHAEOLOGY (ARCP)

ARCP150F Myths, Martians, and Monsters: Archaeology and Pseudoscience (FYS)

This FYS will explore fantastic claims about the human past by critically examining pseudoarchaeological claims and comparing them with the actual archaeological record. Emphasis will be placed on the scientific method, critical thinking, and media literacy. We will discuss well known myths, frauds, and misinformation, both past and present, including Atlantis, Ancient Aliens, Piltdown Man, Ancient Apocalypse, the Moundbuilder Myth, and their use and misuse. By the end of the course, students will be able to differentiate reproducible scientific data from the fictitious and fabricated. Additionally, we will discuss the motivations, ethics, and consequences of sensationalized accounts of the human past.

ARCP153F Single Combat in the Ancient World (FYS)

This course celebrates the clash of warriors in warfare, sport, and spectacle in the classical world. Using primary sources and archaeological evidence, the class will survey traditions of combat in ancient art, literature, and society, beginning with Greek and Near Eastern epic; the modes of warfare in Greek society; ancient Olympic combat sports; and, finally, Roman gladiator spectacle. We will examine the role of violent sport in Greek and Roman society, the reception of the competitors, and the use of these events for political or nationalistic ends. Throughout the course we will explore the flexibility of concepts such as military ethics, "western" warfare, violence, honor, and excellence, both in the classical world and in our modern lives.

ARCP201 Art and Archaeology of the Bronze Age Mediterranean

This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.

ARCP203 The Secrets of Ancient Bones: Discovering Ancient DNA and Archaeology

New analyses of ancient DNA preserved for millennia in bones and soils have revolutionized the field of archaeology. Suddenly, archaeologists have gained new insight into human origins, past population migrations, ancient diseases, plant and animal domestication, and even the factors that contributed to the extinctions of megafauna such as woolly mammoths. Recent genetic case studies will provide a lens for learning about the archaeology of diverse world regions and time periods, from Oceania to Mesoamerica and from the Paleolithic through recent history. Topics will include: human evolution and genetic relationships between humans, Neanderthals, and Denisovans; the peopling of the globe; extinction and de-extinction; domestication and the origins of agriculture; paleodiseases and paleodiets; and ethics in genetic research.

ARCP204 Introduction to Archaeology

What can fragments of pottery, stones, and bones reveal about the lives of people who lived thousands or even millions of years ago? What does the archaeological record reveal about human evolution, past human diets and health, ancient socioeconomic systems, and the emergence of early cities? And how can we preserve archaeological sites and artifacts for future generations? This course will introduce students to the interdisciplinary field of archaeology. We will discuss key methods and principles that archaeologists use to study the human past while covering a survey of world prehistory from the earliest stone tools to the archaeology of contemporary material culture. Students will have the opportunity to examine real archaeological artifacts—including artifacts excavated from historic Middletown—and will be encouraged to think critically about the ways that archaeology informs our understanding of both the past and the present.

ARCP210 The Technological Primate: Archaeological Approaches to Ancient Technology

Humans are reliant on technology, in one form or another, for our survival. This obligate use of technology has been a characteristic of our evolutionary history for over 2.5 million years. This course will explore how technology became central to the human way of life. We will discuss both how and why our use of technology has changed through time. This includes considerations of the adaptive roles that technology plays in our evolution, how technology is shared between individuals and cultures, and the role of technology beyond the purely utilitarian. Students will learn about the ways archaeologists analyze and think about ancient technologies. This includes a wide variety of material types, including stone, ceramic, botanicals, bone, metal, and more. In this course students will have an opportunity to handle both actual archaeological materials and replicas.

ARCP214 Survey of Greek Archaeology and Art

This course introduces the art and archaeology of Greek civilization from Mycenaean palaces of the Bronze Age, to tombs of warriors and battlefields of Marathon, through the theatrical and political centers of democratic Athens. Throughout the semester we will survey the major archaeological sites (civic and cultic) for each period and study development of sculpture, painting, ceramics, and architectural trends in light of political (propaganda!) and social changes. More than a tour of monuments and mosaics, however, this course will show students how to interpret and apply literature, material science, anthropology, and art history to address archaeological questions, and to consider the relationship (ancient and modern) between social trends and material evidence.

This course counts toward the archaeology/archaeology science track.

ARCP242 Tablets, Temples, and Cities: Near Eastern Art and Archaeology

History starts in the Near East with many firsts in human culture: domestication, writing, cities... Throughout its long history, the ancient Near East has produced a unique corpus of material culture, architecture, and textual records. In this course, we will survey the art and archaeology of the ancient Near Eastern civilizations with contextual information about the cultures that created them.

Every week we will progress chronologically and will explore broader socioeconomic, political, and cultural changes by discussing art historical, archaeological, and textual evidence. We will look at examples from Anatolia, Mesopotamia, and the Levant, and compare these to one another. Students will gain a larger understanding of commonalities and differences in the cultural expressions of these cultures. The last section of this course will be dedicated to current issues concerning the archaeology and cultural heritage of the Middle East.

This course will also have various hands-on components: We will learn about textile production by using spindle whorls, learn about cuneiform writing by making clay tablets, and create our own seals based on ancient Near Eastern imagery and mythology.

ARCP244 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt

This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

ARCP248 Who Owns the Past? Cultural Heritage, Archaeology, and Politics

"Who controls the past controls the future; who controls the present controls the past." - George Orwell, 1984

When Orwell wrote these words, there was no ISIS destroying non-Islamic monuments, no Saddam Hussein claiming to be a Babylonian king, and no cultural heritage news appearing on our Facebook feeds every day. Yet this statement is still as relevant as it was in Orwell's dystopia. Cultural heritage is an important part of state ideologies, national identities, and politics in the Middle East. The idea of controlling or owning the past is not new however; even ancient Near Eastern kings and rulers used their heritage or their conquests over older temples and monuments as a tool to claim political power.

In this course students will become familiar with the concept of cultural heritage, both tangible and intangible; learn about cultural heritage institutions and laws; and understand how these institutions protect heritage in different situations. By looking at past and modern case studies from Egypt, Turkey, Iraq, Iran, Afghanistan, Palestine, Israel, Syria, the U.S., and examples from other parts of the world, students will learn about the role of archaeology, colonialism, international politics, and indigenous cultures in creating, identifying, and protecting (or destroying) cultural heritage.

ARCP255 The Archaeology of Identities in the Ancient Mediterranean and Beyond

Human beings all hold a wide range of socially constructed and physically lived identities, expressed and experienced sometimes continuously and simultaneously, and sometimes only occasionally under specific circumstances. These identities might include, but are not limited to, race, ethnicity, gender, sexuality, social status, occupation, and health. Many of these identities, expressed and experienced in various tangible and intangible ways in our lived reality, can only be accessed indirectly through the physical proxy of the archaeological record when it comes to people living in the past. This course will explore a variety of archaeological methodologies for accessing the social identities of past lives, as well as the sometimes problematic role that archaeology has played in this type of research over the course of the 20th and 21st centuries (is ancient DNA bringing us back full circle to scientific racism?). The primary focus of the course will be on the ancient Mediterranean, with additional case studies drawn from other parts of the world serving to illustrate the cross-regional applicability of approaches to past identities.

ARCP257 Environmental Archaeology

Archaeological materials provide long-term records of how humans have modified past environments and how human societies respond to environmental change. In this course, students will learn how data from ancient plants, animals, and soils can be analyzed in order to draw interpretations about past human-environmental interactions. We will also discuss key topics in environmental archaeology, including the long-term environmental impacts of plant and animal domestication and debates over environmental causes for the "collapse" of civilizations such as the ancient Maya. The course will involve hands-on preparation and cataloging of plant and animal specimens to add to the Wesleyan Environmental Archaeology Laboratory comparative collections. Students must be available for one weekend class meeting to complete the first stage of animal skeleton preparation.

ARCP260 Art and Archaeology of Ancient India

This course is an introduction to the art and material culture of ancient India, from prehistory through the formation of the classical tradition in the fourth century CE. The broad swath of human experience covered necessitates a thematic approach, focusing on key moments, cultures, object types, and methodological approaches, arranged in a roughly chronological fashion. Thematic units may vary somewhat from year to year, but are likely to include: the meaning and use of the carved stone seals of the Indus Valley civilization; the impact of the Vedic Aryas on the development of Indian ritual and imagery; how to read the iconographic language of the "plant and animal style" in decorative sculpture; the meaning and significance of the Asokan pillars; and the architecture and ritual of Buddhist monastic life in the cave monasteries of western India.

ARCP267 Museum Collections: Ethical Considerations and Practical Applications

Serving as a broad overview of museology, this course introduces students to the principles underlying the foundations of museum work and collections stewardship. Topics covered will include the origins of museums and collecting, the rationale behind museum policies, and the legal frameworks and professional standards that guide collections management. Ethical considerations surrounding issues such as NAGPRA/repatriation, decolonization, accessibility, looted artifacts, and cultural patrimony will also be covered. Finally, students will explore the practical aspects of preventive conservation, museum documentation, and exhibition development. Although topics covered in this course will apply to a variety of museums, the primary focus will be on cultural heritage collections. Readings and class discussions will be supplemented with hands-on exercises using the Wesleyan University Archaeology & Anthropology Collection.

ARCP285 Off with its Pedestal! The Greek Vase as Art and Artifact

This course explores the dual role of the Greek vase—as objet d'art and as material culture. The first half of the course will trace the origins and development of Greek vase painting from Mycenaean pictorial vases to the masters of Attic Red Figure, examining the painters, the themes, and (often titillating!) subject matter in its social and historical context. The second half will focus on the vase as an artifact and tool for reconstructing social values and economic trends throughout the Mediterranean. We will look at rip-offs, knock-offs, and how much Attic pottery was really worth, and evaluate the use of pottery as an indicator of immigration or cultural imitation. The course will include work with 3D scanning and digital optimization, as well as the construction of a virtual museum exhibit.

The course falls under the Archaeology/Archaeological Science track of the Classics/CCIV Major requirements.

ARCP290 Unearthing Early China: Art and Archaeology

This course introduces early China by examining major archaeological discoveries from prehistory through the second century CE. We will analyze the formal and material features of early Chinese artifacts from important archaeological excavations at sites such as Liangzhu, Anyang, Zhouyuan, and Mancheng. We will discuss the ways in which these artifacts and archaeological sites demonstrate early Chinese cosmological beliefs and ritual practices, especially notions related to heaven, afterlife, and the transition from ancestor worship to the pursuit of personal welfare in immortality. In addition, we will study the iconography and symbolism of objects found in these archaeological discoveries, which would serve as a foundation for the inception of visual arts in the later periods of Chinese history.

ARCP291 East Asian Archaeology

This course will introduce students to remarkable archaeological discoveries from East Asia, focusing on the archaeology of ancient China, but also including finds from Japan, Korea, and Mongolia. Beginning with "Peking Man" and Asia's earliest hominin inhabitants, we will explore the lives of Paleolithic hunter gatherers, the origins of domestic rice and pigs, the emergence of early villages and cities, the origins of writing, ancient ritual systems, long-distance interactions through land and maritime Silk Roads, and the archaeology of Chinese diaspora populations living in the 19th-century United States. We will also consider the current state of archaeological research in East Asia, focusing on site preservation, cultural heritage management, and the political roles of archaeology.

ARCP292 Archaeology of Food, Trade, and Power in South India

This course examines patterns of life in premodern South India, focusing on the millennium from about AD 600 to 1600. It explores the persistent practices and institutions that structured social life--agricultural regimes of food production, patterns of local and long-distance trade, and elite discourses of power and authority--as well as historical events and processes that brought change to those patterns. The course capitalizes on South India's rich array of archaeological evidence, from surface remains and excavated finds to standing architectural monuments, donative inscriptions on stone and copper plates, and various forms of coinage and coin hoards informing on economic life. Specific topics investigated include the articulation of cultural space and landscapes; food, subsistence, and modes of agricultural production; domestic architecture and habitation; trade, markets, and monetary systems; and the roles of religion and ritual in legitimating political power. There is an explicit emphasis on methods and their application, including those of epigraphy (the analysis of inscriptions), numismatics (the materially based study of coinage and monetary systems), surface archaeology (survey, documentation, and analysis of exposed

surface remains), and the archaeology of buildings. Many class sessions will be devoted to active discussion and analysis of data.

ARCP293 Numismatics and the Archaeology of Money

In many parts of the world, lost coins numbering in the millions lie buried in the ground. Periodically, some of these coins come to light in the course of plowing, digging to repair a water main, or prospecting with metal detectors. These "treasure-trove" finds--also known as coin hoards--provide the archaeologist of money with rich evidence of how money was actually used in pre-modern times. Which coins occur together in a hoard, the numbers in which they occur, and the spatial patterning of their findspots: all speak volumes about pre-modern economies, circulation patterns, and beliefs about money and value.

In this hands-on course, we explore the evidence of coins and coin hoards, studying them from numismatic perspectives (the images and legends on a given coin type, metals used, weights, fabric), metrological and denominational perspectives (what coins reveal about systems of weights and denominational structures), and statistical approaches (for example, studying patterns of weight loss as indicators of the velocity of circulation and degree of monetization in a given society).

ARCP310 Archaeological Theory in Action: Research Design and Analytical Frameworks

Archaeologists draw upon diverse data sets and approaches to reconstruct rich pictures of ancient ecologies, build environments, economies, cultural and cognitive practices. This 0.5 credit seminar explores, challenges, and evaluates the theoretical frameworks employed by archaeologists in research design and analyses of past societies. Topics will rotate depending upon student interests and current research projects but will be chosen from among anti-racist archaeology, gender and ethnicity studies, object and entanglement theory, frameworks for experimental archaeology, funerary analyses, typology and data management, landscape archaeology, conservation, or ethical approaches to archaeological science, among others. Foundational theoretical texts will be discussed alongside current publications in each topic area. The seminar is designed to prepare students for independent research in archaeology and related fields. This seminar is required for all Archaeology majors and strongly recommended for Archaeology minors, in addition to being open to all students in related disciplines

ARCP329 Roman Villa Life

This seminar will explore life in the Roman countryside, from the luxurious suburban villas near major urban centers to working estates in Italy and the Roman provinces. The course will begin with a general survey of Roman villa life and then move to a more focused inquiry into specific topics including art and

architecture, production, slave life, and transportation. Readings will be drawn from ancient literary sources, inscriptions, and modern social and archaeological studies. The course is intended for students from a variety of disciplines and backgrounds, but some knowledge of the Roman world is recommended.

ARCP341 Visualizing the Classical

This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen--through landscape, sound, light, functionality/monumentality, and spatial relationships--shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

ARCP350 Animals in Archaeology

This laboratory course will explore how zooarchaeological methods for analyzing animal bones and teeth excavated from archaeological sites allow us to reconstruct ancient human-animal-environmental interactions. We will cover a range of topics and techniques, including hands-on sessions for the identification and quantification of faunal remains. By the end of the course, students will be able to identify every bone in the mammalian skeleton and distinguish between the bones of common non-mammalian taxa. Additional topics will include ancient DNA in zooarchaeology, bone stable isotope analyses, human-caused extinctions, animal domestication, bone artifact production, and animal sacrifice.

ARCP352 Ancient Medicine: Potions, Poisons, and Phytochemistry in the Ancient Mediterranean

This course brings a blend of ethnographic, environmental, philological, and scientific frameworks to the study of ancient medicine. For the first half of the class, students will explore the theories and concepts of medicine and the body in classical antiquity from Hippocrates to Galen. Students will tackle case studies (e.g., treatment of war wounds, epilepsy, gynecological ailments) and suggest appropriate treatments. The second half of the course will focus on medicinal plants as discussed in Dioscorides, considering their ecology, archaeology, and phytochemistry, with hands-on lab modules in which students will learn how to extract and analyze bioactive compounds of medicinal plant species. In final group-based projects, students will present a "plant biography," tracking the arc of the medicinal and cultural uses of a particular species from the ancient Mediterranean to the present day.

ARCP380 Relic and Image: The Archaeology and Social History of Indian Buddhism

This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (first to third century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts, then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha's relics, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodhi Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

ARCP390 Making Rome: Monuments of Life in Ancient Rome

The Colosseum, the Circus Maximus, and the Forum are just the most famous monuments to adorn the ancient city of Rome: its streets and temples were cluttered with honorific statues, dedications, and inscriptions; monumental fountains marked the terminus of the great aqueducts supplying the city and its public baths; shops and markets jostled with shrines and workshops in the public plazas; and public works like harbors and warehouses ensured a steady flow of food, wine, and materials into the city. Through in-depth research into the literary and archaeological record of Rome students will examine these monuments in the context of their original urban spaces and reconstruct them digitally or through other visual and written media.

ARCP421 Undergraduate Research, Science

Advanced students in archaeology have an opportunity to work intensively with departmental faculty to contribute to a variety of ongoing faculty research projects. These collaborations offer the chance for students to refine their research skills, gain exposure to conservation and research methods outside the basic curriculum, and work towards tangible research outcomes. Such outcomes may include research posters, creation of online databases, contributions to published works, contributions to or solo exhibit designs, or senior essay/thesis projects. Faculty projects vary from year to year but currently include studies in Mediterranean palaeoclimate, lab-based scientific study and digital modeling of archaeological artifacts, organic residue or ceramic studies (Dr. Birney, the OpenARCHEM project), or museum research projects in the Wesleyan Collections (which comprise approximately 35,000 objects), cataloging and researching artifacts (Dr. Murray, Wesleyan Collections). Participation is POI only. Contact the Archaeology Program Chair for more information.

ART HISTORY (ARHA)

ARHA109 Introduction to Western Art I: Ancient to Medieval

This course introduces the art and architecture of the Western world during the ancient and medieval periods. The artistic traditions of the Near East, Europe, and the wider Mediterranean will be surveyed from the prehistoric era to ca. 1400 CE. Questions of style, content, function, and cultural and historical context will be examined alongside such perennial concerns as religion, rulership, social class, luxury, and the definition of art within its ancient and medieval milieus.

ARHA110 Introduction to Western Art II: Renaissance to Modern

This course surveys the development of European art from the Renaissance through the modern period. We will examine art's changing status within specific social and artistic contexts: from the Church and court of the Renaissance, through the formation of art academies in the late 16th century, to the development of an increasingly individualized artistic practice that led to the formation of an avant-garde. Classes will be organized chronologically and touch upon the following themes and ideas: politics, religion, and patronage; perception and experience; artistic identity and originality; relationships between artistic media; and the rise of a public sphere for art.

ARHA127 Venice and the Renaissance

Venice -- a city built almost impossibly on a forest of stilts sunk into the mud of the lagoon and buttressed by powerful myths of divine origins, permanence, and prosperity - produced some of the most spectacular works of Renaissance art

and architecture. This introductory-level course on the art and culture of Venice's "golden age" considers the works of artists such as Carpaccio, Bellini, Giorgione, Titian, Veronese, and Tintoretto, and architects such as Codussi, Sansovino, and Palladio in the context of the city's unique setting, social and governmental structure, cultural and political milieu, and larger geopolitical significance. It also positions Venice's artistic production within the broader framework of early modern Europe, exploring its connections with Byzantium and the Islamic world. The course also introduces students to key issues and methods of art history.

ARHA140F Van Gogh and the Myth of Genius (FYS)

This seminar will investigate in depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth-making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. We will both investigate the formation of this myth and view it critically, balancing it against the artist's own account of his career in his paintings and prodigious correspondence. Van Gogh's extensive, insightful, and fascinating writing begs the question of how one should treat an artist's statements when interpreting his works. We will also examine the role of biography in art. Finally, rather than viewing the artist as an isolated creator, we will situate his work within the artistic landscape of late 19th-century Europe, and especially France, where he spent his most productive years as an artist, 1886--1890.

ARHA141 Van Gogh: Modernity, Utopia, and Nineteenth-Century Art

This course will investigate in-depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. This class goes beyond the media image of the artist and looks hard at his paintings, drawings, and letters, placing them in their respective artistic, literary, and historical contexts. Van Gogh engaged with social issues, above all the plight of peasants, artisans, the poor, and the marginalized--the most vulnerable members of society. He sought to give form to their experience in ways that were mediated by Dutch and French landscape painting and French naturalist literature. Upon moving to Paris, van Gogh absorbed the lessons of Impressionist, Neo-impressionist, and Symbolist painters before moving to the south of France, where he created his most memorable works of sun-drenched fields, bar and café interiors, and common workers. Toward the end of his life, he increasingly conceived of art as a site for utopian projections and emotional solace. We shall study the work of this immensely productive artist and along the way develop art historical skills, including visual and textual analysis, historical and contextual interpretation, how to evaluate an artist's personal correspondence in relationship to his painted oeuvre, and independent research.

ARHA151 European Architecture and Urbanism to 1750

This course is an introduction to architecture and related visual art as an expression of premodern Western European civilizations, from ancient Greece through the early 18th century, including Roman, Early Christian, Byzantine, early medieval, Romanesque, Gothic, Renaissance, and Baroque architecture, landscapes, and cities. The focus is on analysis of form in architecture and the allied arts. Emphasis is on relationships between style and patronage. In each era, how does architecture help to constitute its society's identity? What is the relationship between style and ideology? How do architects respond to the works of earlier architects, either innovatively or imitatively? How do patrons respond to the works of their predecessors, either locally or distantly? How are works of architecture positioned within those structures of power that the works, in turn, help to define? How do monuments celebrate selected aspects of history and suppress others? How were the major buildings configured, spatially and materially? Emphasis will be on continuities and distinctions between works across time, seeing Western traditions as a totality over centuries. Lectures and readings convey different historiographic approaches to these issues.

ARHA161 Objects of Authority: Arts of African Royal Courts

This course will focus on African arts produced in courtly contexts between the eleventh and twentieth centuries. We will study domestic art objects that were integral to the exercise of power and authority in several African court traditions such as Benin, Ife, Kuba, Ashanti, Igbo, and others. Students will learn about formal qualities and thematic concerns that locate certain artworks exclusively within the royal lineage and monarchy. They will also come to understand how such artworks were deployed within chieftaincy circles to wield great spiritual and mystical power. Class readings and discussions will help us navigate questions of hierarchy and authority to transcend elitist narratives of power regarding African arts.

ARHA162 History of African Art and Material Culture

This course offers an introduction to the rich and varied visual arts of Africa. By examining certain visual practices that evoke a distorted understanding of the continent, the course confronts stereotypes about the African continent. There will be an examination of compelling objects that represent a variety of African visual cultures, both historical and contemporary. The course offers evidence of a continent with a history to counter the idea that Africa is "frozen in time" and that African "traditions" never change. Weekly readings aim to provide a comprehensive overview of the art of diverse ethnicities to counter the notion that "Africa is a country" and "a continent in isolation."

ARHA172 Memory Image: Introduction to Art (as) History

One premise of art history is that works of art necessarily register or encode the time and place of their making. Some art practices, though, operate historically in more than an artifactual sense, whether by revisiting the art historical past through citation, or by actively responding to the socioeconomic, technological, or cultural conditions of their present. Works that comprise the focus of this class engage directly in the project of historical representation and research, recasting

these activities through painting, photography, installation, and performance.

Spanning a series of case studies from the 1960s through the present, this course provides an introduction to the practice of art history by way of recent works of art that have made the resources (and limitations) of historical methodology a subject of investigation. What is the role of art as a form of historical memory in an increasingly image-soaked world?

ARHA172F Memory Image: Introduction to Art (as) History (FYS)

One premise of art history is that works of art necessarily register or encode the time and place of their making. Some art practices, though, operate historically in more than an artifactual sense, whether by revisiting the art historical past through citation, or by actively responding to the socioeconomic, technological, or cultural conditions of their present. Works that comprise the focus of this class engage directly in the project of historical representation and research, recasting these activities through painting, photography, installation, and performance (from experiments in abstraction to queered archives and restaged mass protests). Spanning a series of case studies from post-Holocaust New York School painting to post-Katrina site-specificity, this course provides an introduction to the practice of art history by way of recent works of art that have made the resources (and limitations) of historical methodologies a subject of investigation. What is the role of art as historical memory in an increasingly image-soaked world?

ARHA175 Japanese Narrative Painting

The narrative handscroll (emaki) has been a major form of Japanese pictorial art from its origins in the eighth century. Characterized by a long, horizontal format designed to be unrolled and viewed in shoulder-width sections, the narrative handscroll combines text and image in a linear progression of time and space. This course will cover the historical evolution of the handscroll format, its inter-relation with the written word, as well as its artistic roots and subsequent impact. Special attention will be paid to the translation of the handscroll's narrative modes and imagery to large-scale painting formats, such as six-panel folding screens (byōbu) and hanging scrolls (kakejiku). Among the questions to be considered are: What are the representational and narrative strategies that painters of narrative scrolls employ to tell their stories? How do we define the relationships between written text and visual image, and what roles do they play? What were the viewing practices for narrative scrolls, and in what contexts were they viewed and read? Through an investigation of a dozen masterworks, including the "Illustrated Scrolls of the Tale of Genji," "Illustrated Legends of Mount Shigi," and "Life of Saint Ippen," the course will familiarize students with the major modes—literary, hagiographic, historical, didactic—of Japanese narrative painting from the 12th through 18th century, as well as the major interpretive methods used by art historians to search for "meaning" in the visual arts—authorship, connoisseurship, formalism, iconography/iconology, semiotics, feminism, and social art history.

ARHA181F Mughal India: Introduction to the Practice of Art History (FYS)

Founded in northern India in the early 1500s, the Mughal empire was one of the largest centralized states in the history of the early modern world. During

the two centuries of their effective rule over most of the Indian subcontinent, the Mughal emperors and their subordinates were prolific patrons of the arts, overseeing the production of lavishly illustrated books and picture albums and commissioning such architectural masterpieces as the Taj Mahal. This course offers an introduction not only to the art and culture of Mughal India but also to the practice of art history itself, through a sequence of six thematic units exploring and applying different methods that are central to the discipline. Each unit begins with critical reading and discussion of one or two key theoretical or methodological statements, then continues through application to case studies drawn from Mughal India. The units include (1) techniques of visual description and formal analysis, (2) the concept of style and stylistic analysis, (3) the analysis of meaning in visual images (iconography and iconology), (4) models of time and the historical explanation of change, (5) architectural and historical analysis of buildings and their sites, and (6) historiographic assessment of debates and changing interpretations within art history. Each unit culminates in a writing exercise designed to provide students with structured experience in some of the various modes of art historical writing. The course is appropriate as an introduction both to art history and to Mughal art.

ARHA201 Pyramids and Funeral Pyres: Death and the Afterlife in Greece and Egypt

This course explores the archaeology of death and burial in Egypt and Greece, from the royal burials in the pyramids at Giza, to the cremated remains of warriors in Lefkandi, Greece, to the humble burials of infants under house floors. Drawing upon a blend of archaeological, art historical, and mythological evidence, we will examine how the funerary practices and the very notions of the soul, the body, and the afterlife compare in these two societies. We will also explore how social class, gender, and ethnicity influenced those ideas. The course will also provide an introduction to archaeological theory and the interpretive strategies employed by archaeologists, art historians, and historians in the reconstruction of ancient societies.

ARHA202 Art and Archaeology of the Bronze Age Mediterranean

This course is an introduction to the history, art, and archaeology of the Bronze Age Mediterranean. Throughout the semester we will explore the development of civilization and high society in the Aegean world (mainland Greece, the islands, Cyprus, and Crete), the rise of Minoan and Mycenaean palace power, the origin of the biblical Philistines, and, of course, the historical evidence for the Trojan War. We also look at the contemporary Near Eastern cultures with which these societies interacted, exploring the reciprocal exchange between the Aegean world and Egypt, Syria, and the Hittite kingdoms. For each period we will survey the major archaeological sites (civic and cultic), examine archaeological questions, and study the development of sculpture, painting, ceramics, and architectural trends in light of political and social changes.

Offering: **Crosslisting**

ARHA203 Survey of Greek Archaeology and Art

This course introduces the art and archaeology of Greek civilization from Mycenaean palaces of the Bronze Age, to tombs of warriors and battlefields of Marathon, through the theatrical and political centers of democratic Athens. Throughout the semester we will survey the major archaeological sites (civic and cultic) for each period and study development of sculpture, painting, ceramics, and architectural trends in light of political (propaganda!) and social changes. More than a tour of monuments and mosaics, however, this course will show students how to interpret and apply literature, material science, anthropology, and art history to address archaeological questions, and to consider the relationship (ancient and modern) between social trends and material evidence.

This course counts toward the archaeology/archaeology science track.

ARHA204 Off with its Pedestal! The Greek Vase as Art and Artifact

This course explores the dual role of the Greek vase—as objet d'art and as material culture. The first half of the course will trace the origins and development of Greek vase painting from Mycenaean pictorial vases to the masters of Attic Red Figure, examining the painters, the themes, and (often titillating!) subject matter in its social and historical context. The second half will focus on the vase as an artifact and tool for reconstructing social values and economic trends throughout the Mediterranean. We will look at rip-offs, knock-offs, and how much Attic pottery was really worth, and evaluate the use of pottery as an indicator of immigration or cultural imitation. The course will include work with 3D scanning and digital optimization, as well as the construction of a virtual museum exhibit.

The course falls under the Archaeology/Archaeological Science track of the Classics/CCIV Major requirements.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

ARHA205 Visualizing the Classical

This project-based learning course integrates archaeology, classical texts, and the technologies of virtual construction to rebuild the material remains of the ancient world. Student teams will draw upon theories of urban design, engineering, and performance theory to create a material or virtual reconstruction of a classical built environment or object. Through the reconstruction of such spaces, we will explore how the ancient builders and craftsmen—through landscape, sound, light, functionality/monumentality, and spatial relationships—shaped the experience of the ancient viewer.

The course is divided into three modules. The first module will use case studies to survey the principles of archaeological reconstruction and explore the concepts and language of design and planning used by archaeologists and design specialists. These case studies will range from Greek and Roman temples, to

city blocks and houses, to public spaces for entertainment or governance. In the second module, a series of technology workshops and in-class projects will give students hands-on training in the analytical mapping, modeling, interpretive, and reconstructive approaches such as ArcGIS, CAD, Sketchup and 3D printing. This practical training will form the foundation for the third module, during which student teams will apply these technologies to collaborate on the reconstruction of an ancient built environment or object. During this section of the course, students will discuss and collectively troubleshoot the problems of design and reconstruction they encounter as they go. Students will present their work at the end of the course, and discussion will focus on the insight that the process of reconstruction has offered into principles of ancient design and the values of ancient communities.

This seminar will be of interest to students with experience in classical studies, archaeology, studio arts, and digital design.

ARHA208 ¿Convivencia o conflicto?: Las tres culturas de la España medieval a través del arte (CLAC.50)

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual wellbeing. This Spanish-language section complements the ARHA 310 curriculum, by exploring the resonance between medieval experiences of identity, pluralism, appropriation, and exchange and our own

uneasy attempts at building a multiethnic, multicultural society. This class will be conducted in Spanish. ARHA 208 is open to intermediate and advanced Spanish learners (SPAN 113 and above), bilingual students, and heritage speakers.

Enrollment in ARHA 310 is optional but encouraged.

ARHA209 Mosque and Cathedral: Islam and the West, c. 600-1500

This course examines the interaction between the Islamic world and medieval Europe from the perspective of art and architecture, from late antiquity and the rise of Islam through the end of the Middle Ages. Our approach will seek out both intersections and comparisons: while attending to the borders, crossings, and overlaps that existed between medieval Christendom and the Islamic world, this course will also stage comparisons of key themes specific to these traditions, chief among them the picturing of divinity, the status of a sacred text, the organization of sacred space, and the practice of luxury. We will survey a series of historical encounters, including Byzantine Iconoclasm, the Crusades, and trade and diplomacy in general, before culminating in Renaissance Italy. Special emphasis will be reserved for key geographies of exchange, including Spain, Sicily, North Africa, and the Holy Land. Consideration will be given to the media of architecture, mosaic, painting, relief sculpture, decorated books, ivory, metalwork, and textiles. Questions of geography, ethnicity, the other, the idol, cultural translation, and the status of text vs. image will be threaded throughout.

ARHA213 Cross, Book, Bone: Early Medieval Art, ca. 300-1100

This class surveys the art and architecture of early medieval Europe, beginning with the multicultural world of Late Antiquity, the decline of the Roman Empire, and the spread of Christianity, before continuing through the glory of Byzantium, the rise of Islam, and the development of Germanic kingdoms in Northern Europe. Style, content, function, and historical context shall be examined across monuments of architecture, sculpture, mosaic, manuscripts, painting, and the luxury arts. Questions of religious practice, political messaging, and cross-cultural translation shall be threaded throughout, for example: Could one picture God? How might divinity be conceptualized and accessed? How might one best picture a ruler? How did early medieval Europe define both art and the figure of the artist? How might we see dialogue, overlap, and/or competition between the art and architecture of Islam and Christianity, among other religious traditions? The art historical periods considered will include Late Antique, Byzantine, Umayyad, Abbasid, Migration, Insular, Carolingian, Mozarabic, Ottonian, Anglo-Saxon, and Viking art.

ARHA220 Northern Renaissance Art

The Northern Renaissance, roughly ca. 1400-1600, was a period of thrilling transition in Europe and profound change for the Western tradition of art and architecture. For art history, the period's many paradigm shifts include the rise of oil painting, the spread of the printing press and print media, the growth of middle-class patronage, the Protestant Reformation, radical developments in the practice of portraiture, an increasingly global worldview and mentality, the foundations of what might be referred to as an art market, and a fundamental revision of the purpose and definition of both art and the artist. This course explores these and other histories as they played out within panel painting, book painting, the sumptuous arts (e.g., tapestries and metalwork), printing, sculpture, and architecture, focusing mainly on France, the Low Countries, Germany, and England. We will begin within the late medieval world of Burgundy, Prague, and Germany before progressing through such key artistic personalities as Sluter, Broederlam, the Limbours, Campin, van Eyck, van der Weyden, Fouquet, Riemenschneider, Lucas van Leyden, Bosch, Dürer, Grünewald, Altdorfer, Cranach, Holbein, and Bruegel. Such a narrative will be equally enriched with less familiar and less canonical works. Threaded throughout are questions of mimesis, realism, skill, medium, and the growing cult of genius, as well as the relationship with the Italian Renaissance, the Mediterranean, and the expanding globe.

ARHA221 Early Renaissance Art and Architecture in Italy

This course surveys key monuments of Italian art and architecture produced between ca. 1300 and 1500. Focusing on major centers such as Florence, Milan, Rome, and Venice, as well as smaller courts such as Urbino and Mantua, it considers the works and careers of the most important artists and architects of the period, among them Giotto, Brunelleschi, Donatello, Giovanni Bellini, Botticelli, and Leonardo da Vinci. Monuments are studied in their broader

intellectual, political, and religious context, with particular attention paid to issues of patronage, devotion, gender, and spectatorship. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

ARHA224 Italian Art and Architecture of the 16th Century

In addition to key monuments of 16th-century Italian art and architecture, this course seeks to introduce students to some of the most important figures of the period: artists and architects--such as Leonardo, Michelangelo, Raphael, Bronzino, Titian, and Palladio; their princely and ecclesiastical patrons--such as Cosimo I de' Medici and Pope Julius II; and their critics and biographers--such as Giorgio Vasari and Ludovico Dolce. Our aim will be to understand the complex artistic and architectural landscape of the period against the backdrop of shifting intellectual and religious trends, including the Counter-Reformation. Class discussions will be based on close readings of primary sources and scholarly texts on a wide range of topics.

ARHA233 Art and Culture of the Italian Baroque

This introduction to the arts and architecture of 17th-century Italy addresses one of the core paradoxes of the period: that startling innovation and creativity were not inconsistent with serving the purposes of patrons and ideologies that at first appear rigid and authoritarian. Supported by popes, cardinals, new religious orders, and private collectors, artists and architects such as Caravaggio, Artemisia Gentileschi, Pietro da Cortona, Gianlorenzo Bernini, and Francesco Borromini depicted saintly bodies in moments of divine rapture, opened up painted ceilings to elaborate illusionistic visions, and subjected the classical language of architecture to unprecedented levels of movement. Through lectures and discussions of key primary and secondary sources, we will explore the emotive and ideological power of Baroque art, considering the multitude of ways in which it shaped the visual, political, and religious worlds of its day.

ARHA239 Van Gogh: Modernity, Utopia, and Nineteenth-Century Art

This course will investigate in-depth the career of this immensely popular and influential artist. Van Gogh has been the subject of much myth making--both in his time and today--in which he appears as the quintessential mad genius whose passionate and tormented emotions become the stuff of art. This class goes beyond the media image of the artist and looks hard at his paintings, drawings, and letters, placing them in their respective artistic, literary, and historical contexts. Van Gogh engaged with social issues, above all the plight of peasants, artisans, the poor, and the marginalized--the most vulnerable members of society. He sought to give form to their experience in ways that were mediated by Dutch and French landscape painting and French naturalist literature. Upon moving to Paris, van Gogh absorbed the lessons of impressionist, neo-impressionist, and symbolist painters before moving to the South of France, where he created his most memorable works of sun-drenched fields, bar and café interiors, and common workers. Toward the end of his life, he increasingly

conceived of art as a site for utopian projections and emotional solace. We shall study the work of this immensely productive artist and along the way develop art historical skills, including visual and textual analysis, historical and contextual interpretation, how to evaluate an artist's personal correspondence in relationship to his painted oeuvre, and independent research.

ARHA240 Revolutionary France and the Birth of Modern Art, 1789-1900

This course examines the birth of modern art in the wake of the French Revolution and traces the evolution of modern art throughout what would prove to be an extraordinary century of social transformation and formal experimentation, ending in the Dreyfus Affair and Post-Impressionism. Themes this class explores include the advent of a public sphere for art-making and the relationship between artistic advance and appeals to an ever-widening public; painting and revolution in France and its colonies; the redefinition of history painting in light of the abolition of slavery and the Declaration of the Rights of Man; the expansion of France's colonial empire and the representation of racial difference; the rise of feminism and attempts on the part of women artists to find their own voice in a masculine practice; the destabilization of classicism in light of scientific discoveries and ideas of "primitivism"; and the conflict between the unabashed pursuit of artistic individualism and the need to define collective values and experience. Although these developments took place two centuries ago, they continue to define the field of modern art today.

ARHA241 Introduction to European Avant-Garde, 1880-1940

This course will introduce students to the major avant-garde art movements from the first half of the 20th century as they took root in France, Germany, Italy, Holland, and Russia. Our focus will be on painting, but we will also look at attempts to go beyond painting in an attempt to gain greater immediacy or social relevance for art. Topics that will receive special emphasis include the relationship between abstraction and figuration, the impact of primitivism and contact with non-Western arts, modernism's relationship to mass culture, war and revolution, gender and representation, art and dictatorship, and the utopian impulse to have the arts redesign society as a whole.

ARHA243 American Modernisms, 1900-1945

Focusing on three case studies--the Stieglitz Circle, the Harlem Renaissance, and Mexican Muralism--this course examines the specifically pluralistic and diverse contributions of American artists to the development of modernism from 1900 through the Second World War. During this period, the United States began to be a terrain on which artists with roots in Europe, Africa, and the Americas developed advanced language in the visual arts and experimented with new mediums and formats for art. Topics we will explore include the relationship between art and industry in painting, sculpture, film, and photography; relationships between cosmopolitan and indigenous cultures; primitivism and its appropriation; interrelationships between the visual arts, music, and poetry;

constructions of gender and the emergence of the female artist; racial pluralism; and the articulation of hybrid American (and Pan-American) modernisms.

ARHA244 European Architecture and Urbanism, 1750-1910

This course considers the history and theory of architecture and urbanism in Western Europe from the mid-18th to the early 20th century. A central theme is the relationship between historicism and modernity through the period. Topics include neoclassicism, the picturesque landscape, the Gothic Revival, the Arts and Crafts Movement, the École des Beaux-Arts, the German Rundbogenstil, international expositions, and Art Nouveau. We will focus on specific sites in major cities, including Paris, London, Berlin, Munich, Vienna, Milan, Rome, Brussels, and Barcelona, among others. New or transformed building types include museums, railway stations, apartment blocks, department stores, and theaters. Urban forms include residential squares, boulevards, arcades, and public parks. Architectural culture will be discussed as a response to changing political, economic, technical, and ideological conditions in newly modernizing societies. Urbanism includes the transformation of early modern cities due to industrialization, housing for different social classes, new towns, suburbs, utopian communities, the Garden City, and colonial centers such as Bombay (Mumbai), Algiers, and Hanoi.

ARHA246 American Architecture and Urbanism, 1770--1914

This course considers the development of architecture and urbanism in the United States from the late 18th through the early 20th century. Major themes include the relationship of American to European architectures; the varied symbolic functions of architecture in American political, social, and cultural history; and the emergence of American traditions in the design of landscapes and planning for modern cities, especially Boston, New York, Philadelphia, Washington, D.C., Chicago, Los Angeles, and San Francisco. The course considers houses for different sites and social classes, government buildings, churches and synagogues, colleges, and commercial architecture of different kinds includes the origins of the skyscraper. Urban environments include cemeteries, public parks, streets, and civic centers. Movements include neoclassicism, the Gothic and Romanesque revivals, the Chicago School, the Arts and Crafts movement, and the City Beautiful movement. Major figures studied include Thomas Jefferson, Benjamin Latrobe, Frederick Law Olmsted, Frank Furness, Henry Hobson Richardson, Louis Sullivan, the early work of Frank Lloyd Wright, Greene and Greene, Bernard Maybeck, Julia Morgan, and McKim, Mead and White.

ARHA249 "Public Freehold": Collective Strategies and the Commons in Art Since 1960

Art since 1960 has forged a contradictory alliance between the legal field of intellectual property and the expanded tradition of poststructural thought. Taking its title from conceptual artist Lawrence Weiner, this course navigates that contradiction via four units, each corresponding to a specific artistic strategy: appropriation, scoring, collaboration, and participation. Testing the

limits of the signable, saleable, and stealable, such techniques have thrown traditional concepts of originality and possessive individualism into arrears while giving rise, quite paradoxically, to some of the most celebrated careers and widely reported lawsuits involving allegations of creative property theft. Do such maneuvers amount to specious self-aggrandizement? Or do they indicate a renewed search to locate, foment, and protect sources of creative invention? The ever-expanding horizon of collaborative media access and increased pressures to enclose this new electronic commons have made such questions all the more urgent today.

ARHA250 Unsettling American Art, 1600-1900

This course examines developments in American art from roughly 1600 to 1900. Core objects in this class will range widely: quilts; maps; baskets; paintings across genres of portraiture, landscape, and still life; engravings; public monuments; daguerreotypes; and more. We will seek to understand the particular concerns and traditions animating objects across this heterogeneous span of materials, forms, and techniques. In so doing, we will also ask how artists and makers--including those whose names were never recorded--variously internalized, articulated, or examined the historical contradictions of their time, including the consolidation of settler colonialism and racial capitalism; rebellion, revolution, abolition, and civil war; industrialization and its ever-expanding and often violently lopsided acceleration of communication networks, labor relations, travel, and exchange; and the contested aim of defining a distinctively American aesthetic tradition in a land born of migration, encounter, forcible displacement, and polyphonic hybridization. Visits to area museums and collections will complement in-class work.

ARHA251 Artists Design Exhibitions

This course explores the history and theory of exhibition-making as an artistic form. We examine key episodes in the history of artist-designed exhibitions, focusing on major works since the 1960s with an eye to foundational case studies in the early- to mid-20th century. Our discussions will generate a working typology of the form's various modes and functions, tracking how artist-designed exhibitions have variously served as spaces of public debate and agitation, propaganda spectacles, didactic displays, activist interventions, and sites of aesthetic experimentation. Exhibition design's material supports and conditions have been just as disparate: room-scale interiors, polyform spatial sequences, distributed multiples, and outdoor installations on city streets. Across each of these divergent formats, exhibitions are distinguished by their shared potential to create what Walter Benjamin once described as "simultaneous collective reception." As Benjamin's phrase suggests, exhibitions constitute publics, and in this course special attention will be paid to the types of publics--and the types of subjects--that specific exhibitions and exhibition strategies presuppose.

What can the history of exhibition design show us about the new "curatorial condition" of everyday life, in which data specialists now curate information, an artisan cheese shop curates its merchandise, and anyone with a social media account curates a presentation of self? Artists central to this history, and to which this course attends, include: El Lissitzky, Marcel Duchamp, Charles and Ray Eames, the Rosario Group, the Independent Group, Hélio Oiticica, Marcel

Broodthaers, Louise Lawler, Group Material, Fred Wilson, Philippe Parreno, Mark Leckey, and Camille Henrot.

ARHA252 Contemporary Art Since 1980

This historically-rooted introduction to contemporary art sets an anchor around 1980 and moves through the major debates of the last 35 years. This period gave rise to a bracing range of historical transformations: a post-communist Europe; an economically prominent China; queer and antiracist activism; increasingly molecular degrees of technological mediation in everyday life; asymmetrical consolidations of a globalized network of travel, communication, and capital; climate and refugee crises; and a state of seemingly perpetual war, to name only a few. This course attends to the changing vocabulary of approaches by which artists intervened in these conditions and positioned their work in relation to a longer view of the history of art. Far from a comprehensive survey, the course acknowledges the inherently recursive and unstable condition of contemporary art history, a field of research and inquiry defined as a work in progress. The course is nonetheless structured in a loosely chronological fashion, sequenced according to formal techniques that emerged as timely responses to specific historical moments (photographic appropriation, moving image projection, social practice, painting, institutional critique, web-based art, etc.). Our work throughout will attend to theoretical frameworks that have remained influential in recent practice (postcolonial, feminist, poststructural, etc.).

ARHA253 Art After 1945

This course examines artistic production in the United States between 1945 and 1980, with a primary focus on the United States. The historical conflicts of that tumultuous period presented new challenges for artists as they attempted, in their work, to respond to the "caesura of civilization" brought about by the Holocaust and World War II, to contend with the consolidation of postwar consumer capitalism and mass culture, and to situate their work in relation to the far-reaching social upheavals of the 1960s and '70s. Practices linked to the historical avant-gardes (such as abstraction, the readymade, Dada, and surrealism) echoed in these years as attention shifted from the canvas and studio to greatly expanded contexts of reception and public experience. The boundaries of the art object transformed in turn as artists developed new models of spectatorship to confront a world that had placed enormous pressure on traditional concepts of humanist subjectivity. Topics include New York School painting, pop art, minimalism, process art, conceptual art, performance, institutional critique, and site-specificity.

ARHA254 Architecture of the 20th Century

The course considers influential works in architecture, its theory and criticism, and ideas for urbanism, mostly in Europe and the United States, from about 1900 to the present. Early parts of the semester focus on the origin and development of the modern movement in Europe to 1940, with attention given to selected American developments before World War II. Later parts of the course deal with Western architecture from 1945 to the present, including later modernist,

postmodernist, and deconstructivist work, urbanism and housing, computer-aided design, green buildings, and postwar architecture in Latin America and Japan and in postcolonial India and Africa. Major movements and architects considered include the Viennese Secession, the Bauhaus, Le Corbusier, Mies van der Rohe, Frank Lloyd Wright, Alvar Aalto, and Louis Kahn, among many others.

ARHA256 New York City: Architecture and Urbanism

This course considers the history of architecture and urban development in New York City from colonial times to the present. Emphasis is on major landmarks of each historic period, with attention to related planning, parks, land and water transportation, housing trends, and urban infrastructure. Conditions of settlement, growth, decline, and renewal will be examined from a political, economic, and social perspective in varied neighborhoods. Contemporary topics include neo-liberal policies for urban development, green buildings, gentrification, and planning for the city's future in the era of impending climate change. While the focus will be on architecture, every effort will be made to see built environs as points of intersection between competing ideals and interests that shape the city we see.

ARHA257 Just Cities: Architectures of Public Encounter

What is "the public," and how has it been conceived, relative to notions of the urban--to the web of ideas, forms, and fantasies constituting "the city"? Can art and architecture play a role in defining the public, or does the public's political and social construction place it outside the scope of specifically aesthetic concerns? This course addresses these and other related questions, positioning art and architecture in their broader cultural and historical contexts. It explores a range of socially charged, experiential, and participatory aesthetic and political practices, characterized by their distinctly public character and decidedly architectural and urban settings. At its core, it is concerned with issues of social justice as they relate to the material spaces of the modern city, and the manner in which those spaces are identified, codified, and made operative in the service of aesthetic, social, and political experience.

This course will be taught by M. Surry Schlabs, Yale School of Architecture.

ARHA258 Contemporary World Architecture

This course is a study of architecture and urban design throughout the world from the 1990s to the present. American topics include public and private development in the "neoliberal" city in New York, Chicago, Los Angeles, and post-Katrina New Orleans; contemporary museum architecture; sprawl and New Urbanism; and affordable housing. Major American architects considered include Frank Gehry, Richard Meier, Daniel Libeskind, and Diller Scofidio + Renfro. In Europe, the focus is on contemporary public architecture in Berlin, London,

Oslo, Hamburg, Paris, Valencia, Lisbon, Rome, and Athens, with attention to major works of Sir Norman Foster, Zaha Hadid, Jean Nouvel, Santiago Calatrava, Rem Koolhaas, and Renzo Piano, among others. In China we will study state monuments of the Communist Party in Beijing and issues of preservation and urban development there and in Shanghai. In Japan the recent work of Tadao Ando, Kengo Kuma, and Shigeru Ban is a focus, as are selected projects by other architects in Tokyo, Yokohama, and Osaka. Additional lectures will treat airport architecture in Asia, and sites in India, Jerusalem, Cairo, Abu Dhabi, Guinea, South Africa, Nigeria, Rio de Janeiro, Chile, and Quito, Ecuador. The last quarter of the course focuses on green or sustainable architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling and ventilation, timber and rammed-earth techniques, LEEDs certification, wind and geo-exchange energy, green skyscrapers, vertical farming, and zero-carbon cities.

ARHA259 Currents of Post/Minimalism, 1960-1979

This course examines visual production made in North America between the 1960s and the 1970s with attention to Minimalism and its antecedents. Since its inception, Minimalism has been a measure and benchmark for twentieth century artistic practice. A primary focus will be artistic interpretation of form and to the challenges posed to its political exigency during a period marked by global warfare, new technologies, fierce protest, and economic shift. Each lecture will be anchored by a discussion of an artist whose practice will be the basis for course themes--energy, distance, education for example. With artists as our guides, we will revisit the development of the aesthetic boundaries, (sculpture, film, performance, institutional critique) which were asserted as well as challenged by attuning to exhibition histories and interdisciplinary practices. As this moment of artistic contribution is actively under consideration by curators of contemporary art, this course will also feature practical insight into the methodology and concerns of contemporary exhibitions dedicated to this period.

ARHA261 Performing Property: Legal Experimentation and Activism in Contemporary Art

Who owns works of art-artists, buyers, museums, or the public? Who is granted the privileged status of author? Do artworks comprise a special category of things? Such questions underlie attitudes concerning art and cultural artifacts, and they also inform intellectual property laws. Since the 1960s, conceptual and performance artists have taken up these queries to investigate the nature of authorship and ownership generally, experimenting with aesthetic strategies as well as legal tools like contracts to ask: How do social and visual cues communicate boundaries, shape territories, and perform property into being? What happens when materiality and ownership are contingent? Can artists model alternate property relations through their work? How might art expose fissures and failures in law? Recent calls for decolonization and the restitution of looted objects have also pushed museums and archives to reconsider whether they are the outright owners of cultural artifacts, or stewards responsible for their care. Furthermore, as surveillance technologies increasingly pervade daily life, and digitalization leads licensing to supplant ownership, the future of privacy and property norms is unclear. These developments render contemporary art fertile ground for attending to the ways in which property structures are

conceived, take shape, are reproduced, and how they might be reformed, calling upon us to pay attention to intent, consent, and the needs of others.

Seminar readings will be drawn from the burgeoning subfield of Art and Legal Studies with texts by key scholars including Joan Kee and Martha Buskirk, complemented by legal theorists such as Sarah Keenan and Cheryl I. Harris whose work has influenced artists. Alongside, we will closely examine the work of artists who challenge traditional ownership relations to problematize law, such as Felix Gonzalez-Torres, Jill Magid, and Cameron Rowland. Class meetings will be complemented by screenings and visits to local collections, as is feasible. Assignments include a brief paper on an artwork, as well as a final research paper or digital exhibition requiring students to examine a particular theme or artist in-depth.

ARHA262 Censorship, Culture Wars, and Controversy in Art

Art history is marked by various forms of state, community, or institutional censorship. Such events can be flash points in culture wars, as in the United States in 1989, when four artists--most of them queer--were denied funding from the National Endowment for the Arts after their work was deemed "obscene." Sometimes art that unearths sensitive cultural histories can lead to calls for destruction, as in Sam Durant's 2012 work *Scaffold*, which referenced state violence against the Dakota people, leading tribe members to protest what they felt was Durant's insensitive handling of the subject. Events like these raise key questions within art and broader society: Who should have the authority to decide which art should be exhibited, and to what audiences? What constitutes censorship? When might censorship, or the curtailing of speech, be justified?

This course will examine these questions focusing on the 20th and 21st centuries in the United States, but also global contemporary art. We will consider such issues in the wake of a recent spate of museum exhibitions canceled due to controversial content, the dismantling of monuments to colonialism and the transatlantic slave trade, as well as today's culture wars as conservative book bans make headlines and hate speech abounds. We will also explore new channels for arts funding, exhibition, and publishing that emerge in response to censorship. In addition to important texts by art historians including Sarah Parsons, Aruna D'Souza, and Rosalyn Deutsche, among others, we will also read interdisciplinary legal scholars like Sonya Katyal and Amy Adler who write from the perspective of law and policy. We will also read the landmark Supreme Court case *NEA v. Finley*. Assignments include an in-depth case study of a canceled exhibition.

ARHA263 Curatorial Workshop: Images of the Floating World

This course will provide students with practical training in the design and development of a gallery installation in the Davison Art Center (DAC). The theme for this semester is Japanese woodblock prints. We will carry out the many and diverse components involved in creating a gallery installation, from conception to execution, including concept development, catalog and label entries, accessibility, layout, and design. The course will culminate with an

installation at the DAC, which will include an accompanying publication as well as permanent online catalog entries for individual prints on the DAC's website.

Images of the floating world, or *ukiyo-e*, refers to a genre of Japanese art that emerged in the 17th century to depict the pleasures of life of that period--beautiful women, famous kabuki actors, views of famous places, and erotic pictures, among other subject matter. In most cases, these are woodblock prints, images produced by craftsmen from woodcuts based on originals painted by artists. Because they could be produced quickly, cheaply, and in large numbers, woodblock prints were exceptionally well-suited for the representation of the latest fashions or politics. *Ukiyo-e* prints made their way to Europe in the 19th century and remain the most popular form of East Asian art in the West. The Davison Art Center has around 600 Japanese woodblock prints in its collection, ranging in date from the 17th to 20th centuries and including works from all the major artists of the Edo period (1615-1868).

ARHA263B Curatorial Workshop: Art and the Ecological Imagination, 1840-1870

This course examines the emergence of an "ecological consciousness" in art during the mid-19th century through readings, discussion, and firsthand study of works in the Davison Art Center print collection. Although the term "ecology" was first coined in 1866, 19th-century thinkers had long been concerned with the interrelationship of organisms, including humans' place and impact on nature. This class examines how visual artists before Impressionism contributed to the 19th century's "ecological imagination" through their representations of landscapes. Known as the "Barbizon School," this group of artists left the metropolis of Paris to immerse themselves in the wild and rugged terrain of the Fontainebleau Forest while also embarking on journeys to remote regions of France. These members of the first artists' colony seceded from the French Academy of Fine Arts and pursued strategies of independence that were allied at the time with radical politics. In their works they experimented with

new materials and approaches to composition that included but no longer prioritized humans, in order to foreground processes of transformation internal to nature itself. The consciousness that artists forged through painting and printmaking led them to become among the world's first conservationists; they successfully petitioned the French government to protect parts of the Forest of Fontainebleau some 20 years before the creation of the first National Park in the United States.

The first half of the course will be devoted to reading and discussion; the second half will center on the study of works in the Davison Art Collection, which includes a superb collection of original and experimental prints by Barbizon School artists. The final project will be the curation of a temporary exhibition of works from the collection, including a selection and arrangement of works, explanatory texts, and a public gallery talk.

ARHA263C Curatorial Workshop: The Northern Renaissance Print

The flourishing of the print medium in Northern Europe during the later 15th and 16th centuries is one of the defining hallmarks of the Northern Renaissance, as well as one of the most significant turns in the Western tradition in general. The rise of this medium rested upon the ca. 1450 development and spread of the printing press, which helped spark numerous episodes of historical consequence, including the Protestant Reformation, the spread of Italian humanism, and the continued rise of an increasingly literate, and increasingly image-hungry, middle class. Many of the most influential artistic personalities of the era, including Schongauer, Dürer, van Leyden, Altdorfer, Holbein, Cranach, and Bruegel, pushed this exciting new technology in multiple directions, many of which altered and impacted fundamental concepts of art, the artist, authenticity, and value. Wesleyan is fortunate to possess one of the foremost collections of print media in the country in the collections of the Davison Art Center. This Curatorial Workshop is structured around the study and first-hand examination of the DAC collection, and it will include a class-generated exhibition of Northern Renaissance prints.

ARHA264 Photography and Law: Mugshots, Privacy and Publicity, Obscenity, Copyright, and Evidence

This seminar is designed as an introduction to the major developments in the legal history of photography in transatlantic (US-UK especially) society from the first law cases involving photography in 1840 through to contemporary legal debates about such topics as cameras in the courtroom, sexting, surveillance, photographing police, dash cam and body cam videos, admissibility of photographs as evidence, obscenity and moral boundaries of subject matter, and copyright. A range of secondary historical and theoretical writings will anchor the discussions, but the course will focus primarily on student analysis and interpretation of primary and archival sources (texts of legal cases, law reviews and dissertation, news articles, and documentary and video footage). Students will gain knowledge of how legal history has shaped the history of photography, and new perspectives on the historical origins of contemporary issues in photography and digital imaging. This course should be of interest especially to history majors and non-majors who are interested in law, photography, and

culture and will also contribute to the "Visual and Material Studies" module in History.

ARHA267 Memorials, African Art, and the Burden of Remembering

Throughout history, Africans have preserved the memory of their loved ones through words chanted in songs such as Yoruba Oriki; images rendered in wood, concrete, and metal; and other means. This course explores the multitude of ways in which Africans have memorialized their dead from the 9th century BCE to the present. In Western commemorative paradigms individuals have written poems, books, or essays, produced paintings and sculptures, taken photographs, and recorded videos. In Africa, comparable modes of preserving the memory of the dead have included sculpted ancestral figures, memorial effigies, and potent power objects. For instance, the memory of the 98th king of the Kuba people in the Democratic Republic of the Congo (who was believed to have reigned during the solar eclipse of 1680) was preserved in the sculpture of Shamba Bolongongo, while a mask named mwaash a mbooy memorialized the son of Woot, the iconic ancestor who married his sister, Ngaady a mwaash and founded the ruling Kuba dynasty. In Luba society, visual memory devices such as lukasa have been deployed to trigger memories of past heroes and their exploits during a ritual ceremony known as Mbudyé. In Yoruba society, Ibeji figures have preserved the memory of the late twins, while Dogon sculptures have been used to embody the soul of the deceased. Through weekly readings and lectures, this course will examine these commemorative objects by focusing on their formal qualities and thematic usage in African art over the centuries. The course is divided into two segments. The first segment deals with pre-colonial modes of preserving the memory of the dead, such as sculpted ancestral figures, memorial effigies, masks and masquerades, and potent power objects. The second segment deals with contemporary forms of memorialization through museums, monuments, commemorative art, among others, in Africa from the 19th century to the present. Through weekly readings and lectures, the course will examine these commemorative objects by focusing on their formal and thematic qualities, as well as the larger political questions surrounding their production, usage, and survival in Africa over the centuries.

ARHA268 African Avant-Garde: Contemporary African Art in a Global Dialogue, 1900 to the Present

This course provides an introduction to modern and contemporary art produced by Africans on the continent and in the diaspora. Africa is famous for its dynamic wood and metal sculptures that played a vital role in launching the modern era in Western art. While Pablo Picasso, George Braque, and Henri Matisse were

studying African masks and figurative sculpture, African artists such as Aina Onabolu, Gerard Sekoto, and Kofi Antubam, among others, were beginning to experiment with new idioms of visual expression introduced from Europe. Professional schools of fine art were established in urban centers across the continent as part of the colonial project. Thus, an African avant-garde was born. African artists have been contributing to global visual dialogues in contemporary art; they participate in major biennials, and some have become superstars in the international art world. The work of artists such as Julie Mehretu, Yinka Shonibare, Ibrahim Mahama, and El Anatsui is collected by museums all over the world. This course traces the development of African art during the twentieth and twenty-first centuries, exploring the lives of artists as well as the national and global contexts in which they have worked and in which their art circulates. Class meetings will include lectures and discussions organized around reading assignments and video screenings.

ARHA269 History of African American Art

This course will introduce students to a history of African American artistic production from the late 18th century to the present, in a range of media and styles. While we will focus primarily on the visual arts--looking at sculpture, painting, photography, collage, film, performance, and installation--we will also consider the deeply interdisciplinary nature of Black cultural production, highlighting the important role of music, poetry, dance, and theater.

We will explore how African American artists, both individually and collectively, have negotiated the terms made available to them by cultural institutions, whether by struggling for inclusion, acknowledgement, and validation; actively protesting racist and exclusionary policies; or by forming alternative institutions, communities, and spaces in which to work and share support. From the Harlem Renaissance to the Black Arts Movement and "post-Black" exhibitions, art works will serve as a primary source to ask, is there such a thing as a "Black aesthetic" and if so, how would one define it? Why might an African American artist reject such an idea? Other key questions will include: What is the role of visual representation in political struggle? How have artists mobilized portraiture as a tool of liberation? What does it mean to turn away from figuration, toward abstraction or opacity? How have artists grappled with questions of nationhood, belonging, and diaspora?

Together, we will trace how artistic forms, techniques, and motifs have served both as sites of collective history and as speculative propositions to envision new futures, articulating what Robin D.G. Kelley calls "freedom dreams."

ARHA276 Eccentricity, Gender, and Occidentalism in Edo-Period Art (1615-1868)

The course will explore the history and artistic production of Japan's Edo period (1615-1868). This was a time of unprecedented peace, a time of social, economic, and political change that brought new modes and manners of visual expression and a sharpened focus on the individual artist. New trends in artistic identity emerged during this period, particularly those related to

eccentricity, gender, and Sinophilia (love of Chinese culture). We will study the major artists and artistic movements of the Edo period, considering how these new trends found expression in the works of art produced during this time. Formal examination of the material and expressive qualities of works of art will be followed by a consideration of how other factors such as location, social background, education, and the religious faith of the artist are visible in the works they produced. The interplay between historical and artistic movements will be examined through discussion of issues such as materiality and medium, patronage and individuality, and traditionalism and poetic expression. Students will become familiar with the various media employed by Japanese artists, the techniques of painting and printing, and the sources and theories that inspired the innovative objects under investigation. More broadly, this course aims to teach students how to "read" Japanese art, how to look at a work of Japanese art and understand what it is they are seeing.

ARHA279 Arts of China and Japan: From Shang Bronzes to Erotic Woodblock Prints

The course will introduce students to the visual arts of China and Japan, focusing on painting, sculpture, and the decorative arts from the Bronze Age through the early modern period. We will study key moments in the history of Chinese and Japanese art and the major works that distinguish these moments. The works will include Shang Dynasty bronze vessels, Buddhist art, early calligraphy and figure painting, narrative handscrolls, landscape painting, and popular art. We will apply different critical and analytical methodologies to our study and will pay close attention to social, political, religious, and cultural contexts of artistic production.

ARHA281 Modern Japanese Art

This class is an introduction to the history of Japanese art from the mid-nineteenth century to the present. In this chronological study we will encounter a range of forms--woodblock prints, painting, photography, sculpture, performance, and new media--and we will consider how Japanese artists responded to major societal, political, and economic changes over the last two centuries, including industrialization and modernization, major natural disasters, war, questions of cultural/national identity, and debates centering on what "tradition" meant to artistic practice in the modern and contemporary eras. Using visual analysis as our core skillset, this course will also rely on readings from secondary scholarship, as well as those by Japanese artists and art critics from each time period to help us better understand the historical contexts surrounding each artist, artwork, or art movement.

ARHA284 Buddhist Art and Architecture

Visual imagery plays a central role in the Buddhist faith. As the religion developed and spread throughout Asia it took many forms. This class will first examine the appearance of the earliest aniconic traditions in ancient India, the development of the Buddha image, and early monastic centers. It will then trace the dissemination and transformation of Buddhist art as the religion moved

north and then east through Central Asia, China, Korea, and Japan. In each region indigenous cultural practices and artistic traditions influenced Buddhist art. The class will address topics including the nature of the Buddha image, the expansion of the Buddhist pantheon, the function and reception of Buddhist images, the political uses of Buddhist art, and the importance of pilgrimage, both in the past and the present. Over the course of our study, we will consider four important movements in Buddhist practice: Mahayana, Pure Land, Esoteric, and Zen.

ARHA285 Art and Archaeology of Ancient India

This course is an introduction to the art and material culture of ancient India, from prehistory through the formation of the classical tradition in the fourth century CE. The broad swath of human experience covered necessitates a thematic approach, focusing on key moments, cultures, object types, and methodological approaches, arranged in a roughly chronological fashion. Thematic units may vary somewhat from year to year, but are likely to include: the meaning and use of the carved stone seals of the Indus Valley civilization; the impact of the Vedic Aryas on the development of Indian ritual and imagery; how to read the iconographic language of the "plant and animal style" in decorative sculpture; the meaning and significance of the Asokan pillars; and the architecture and ritual of Buddhist monastic life in the cave monasteries of western India.

ARHA286 Empire and Erotica: Twenty-three Masterworks of Indian Painting

The history of later Indian painting (16th--19th centuries) is dominated by two distinct stylistic traditions, one flourishing at the court of the Mughal empire, the other at the courts of the various Rajput dynasties that held sway in regions along the periphery of the Mughal domain. The course introduces these two traditions through in-depth consideration of twenty-three representative masterworks, paintings that demand sustained close examination to fully unpack their content, their aesthetic dimensions, and the historical milieu in which they were produced and received. The first half of each session is devoted to a collective "close looking" at one of the key paintings (in the form of a high-resolution digital image), which then leads into broader discussion of related works and larger interpretive themes. Topics to be considered include the historical connections between the Mughal and Rajput schools; the relationships between painting, poetry, and music; the concerns of natural history painting; and the manner in which both Mughal and Rajput artists appropriated formal conventions from 16th century European prints and paintings. No previous knowledge of Indian art or the methods of art history is assumed or needed to succeed in this course.

ARHA287 Islamic Art and Architecture

From merchant mosques in China to paintings of lovers exchanged in the urban squares of Iran, Islamic visual culture encompasses a vast geographic and cultural span. What holds this large and diverse corpus--elite and common, religious and secular--together in this class is an interest in how works of art interact with

their communities. This course is an introduction to the art, architecture, and material culture of the Islamic world, from its beginnings in the seventh century, with an emphasis on the premodern periods. Our thematic approach will cover questions of interfaith exchange, race and slavery, and gender and sexuality. We will study manuscript paintings, calligraphy, mosques, palaces, pottery, lacquer, and metalwork.

ARHA290 Mahabharata and Ramayana: The Sanskrit Epics and Indian Visual Culture

This course explores the complex interface between literary texts, painted illustrations, and visual performance traditions in South Asia, taking as our primary focus the two great Sanskrit epics, Mahabharata and Ramayana. Both epics will be read in abridged translation to provide familiarity with the overall narrative structure and thematic concerns of the two texts, and a number of excerpts from unabridged translations will be studied in detail to arrive at a fuller understanding of the contents of key episodes and of the style and texture of the two works. The first part of the course addresses a series of questions pertaining to the literary versions of the two epics: What is epic as a genre, and what are its social roles? Do the Mahabharata and Ramayana manifest similarities that permit us to identify a distinctive Indian epic type? What are the connections between these epics and the early history of India? Why, and how, did the written texts we have today come to be redacted from bodies of oral tradition? In the second part of the course, we will consider the visual manifestations of the Sanskrit epics in the form of painted manuscript illustrations, classical Sanskrit plays (known literally as "visual poetry"), later performance traditions such as Kutiyattam, and, finally, selected films of the Hindi- and regional-language cinemas. This course requires no prior knowledge of Indian literature, history, or art and may serve as an effective introduction to the culture and civilization of South Asia.

ARHA292 Archaeology of Food, Trade, and Power in South India

This course examines patterns of life in premodern South India, focusing on the millennium from about AD 600 to 1600. It explores the persistent practices and institutions that structured social life--agricultural regimes of food production, patterns of local and long-distance trade, and elite discourses of power and authority--as well as historical events and processes that brought change to those patterns. The course capitalizes on South India's rich array of archaeological evidence, from surface remains and excavated finds to standing architectural monuments, donative inscriptions on stone and copper plates, and various forms of coinage and coin hoards informing on economic life. Specific topics investigated include the articulation of cultural space and landscapes; food, subsistence, and modes of agricultural production; domestic architecture and habitation; trade, markets, and monetary systems; and the roles of religion and ritual in legitimating political power. There is an explicit emphasis on methods and their application, including those of epigraphy (the analysis of inscriptions), numismatics (the materially based study of coinage and monetary systems), surface archaeology (survey, documentation, and analysis of exposed surface remains), and the archaeology of buildings. Many class sessions will be devoted to active discussion and analysis of data.

ARHA293 Numismatics and the Archaeology of Money

In many parts of the world, lost coins numbering in the millions lie buried in the ground. Periodically, some of these coins come to light in the course of plowing, digging to repair a water main, or prospecting with metal detectors. These "treasure-trove" finds--also known as coin hoards--provide the archaeologist of money with rich evidence of how money was actually used in pre-modern times. Which coins occur together in a hoard, the numbers in which they occur, and the spatial patterning of their findspots: all speak volumes about pre-modern economies, circulation patterns, and beliefs about money and value.

In this hands-on course, we explore the evidence of coins and coin hoards, studying them from numismatic perspectives (the images and legends on a given coin type, metals used, weights, fabric), metrological and denominational perspectives (what coins reveal about systems of weights and denominational structures), and statistical approaches (for example, studying patterns of weight loss as indicators of the velocity of circulation and degree of monetization in a given society).

ARHA295 Critical Race and Art History: Theories and Methods

How does the study of art shift if we begin with questions of race, power, and colonialism, rather than treating them as secondary? Concepts such as mastery, familiarity, strangeness, taste, and beauty are formed by conditions of domination and subjugation. Moreover, the histories of material production and cultural expression are fundamentally entwined with the circuits of enslavement, forced migration, and the extraction of resources, people, goods, and "styles."

For the bulk of the semester, we will focus on a series of case studies drawn from the 15th to 20th centuries, a period of intense European contact and conquest in Africa, Asia, the Caribbean, and the Americas. Topics will include: representations of Africans in Renaissance Germany; African depictions of the Portuguese circa 1492; the appearance of parrots, kraak (Chinese) porcelain, and other goods from "exotic" locales in 17th-century Dutch still lifes; the taxonomies of racial difference in Spanish casta paintings; debates about sculptural polychromy and the "whiteness" of marble; the relationship between expansionism, empire, and the genre of landscape; "primitivism" and European artists' "discovery" of African artistic forms; the critical interest in "racial art" in the interwar U.S.; and contemporary conversations about museums and restitution, among others.

Throughout, works of art are primary sources with which to study the specificities of periods, places, and their social arrangements. While we will emphasize difference and historical contingency, our *longue durée* approach will enable us to draw connections about art's role in processes of primitive accumulation, dispossession, and racial capitalism.

ARHA301 Making Rome: Monuments of Life in Ancient Rome

The Colosseum, the Circus Maximus, and the Forum are just the most famous monuments to adorn the ancient city of Rome: its streets and temples were cluttered with honorific statues, dedications, and inscriptions; monumental fountains marked the terminus of the great aqueducts supplying the city and its public baths; shops and markets jostled with shrines and workshops in the public plazas; and public works like harbors and warehouses ensured a steady flow of food, wine, and materials into the city. Through in-depth research into the literary and archaeological record of Rome students will examine these monuments in the context of their original urban spaces and reconstruct them digitally or through other visual and written media.

ARHA310 Muslims, Jews, and Christians: Convivencia in Medieval Iberia

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual well-being.

This seminar will explore the works produced by the pluralistic societies of medieval Iberia from the perspectives of art, architecture, history, archaeology, literature, and music. As we study renowned monuments such as the synagogues of Toledo, the Alhambra, and the Way of St. James, we will learn to decode elements such as dress and home decor, food and hygiene, and gardening and agriculture, to expand our picture of culture and lived experience. Finally, we will ask why "convivencia" ultimately failed, and how the medieval Iberian experience can enlighten our own uneasy attempts at building a multicultural, multi-confessional society.

ARHA311 The Body in Medieval Art

Medieval thinkers theorized the body in ways vastly different from how human bodies are conceptualized and defined today in the twenty-first-century West. Indeed, the "medieval body" was not at all a stable or monolithic entity, but rather a shifting constellation of ideas and practices that waxed, waned, and coexisted throughout the European Middle Ages, c. 400-1400. The diversity of medieval attitudes toward the body helped inform its representation in art, which, simultaneously, was also dependent upon conventions of craft, medium, artistry, preciousness, and style. "Body" signals not only earthly bodies--sexed, fleshly, corruptible, and soon to decay--but also the soul (equally fragile), as well as heavenly, angelic, and divine bodies, including that of Christ. This course analyzes medieval strategies of representing these bodies while situating them in their respective intellectual and cultural environments. Primary-source materials will be contextualized by secondary literature, and our inquiries will remain

cognizant of gender-, sexuality-, race-, and performance-critical methods. The bodies examined will include, and are not limited to, saintly, gendered, racialized, clerical, monstrous, virginal, heretical, sickly, healthy, courtly, resurrected, and uncircumscribable bodies.

ARHA312 Medieval Manuscripts

Medieval manuscripts were dense, considered gatherings of text and image, and they are among the richest of artifacts bequeathed to us by the Middle Ages. Manuscripts both crystallized and intervened in many of the key intellectual, religious, and aesthetic foundations of medieval Europe. To step into a luxurious medieval manuscript--into its script, its miniatures, its marginal decoration, its scribbles, its little monsters and unexpected grotesques, its tears and signs of use--is to probe a particular artform, distinct to pre-modernity, in which the definition of painted image and written word differed markedly from later centuries of the Western tradition. Throughout, basic questions of the relationship between text and image, and the linguistic and the pictorial, repeatedly beg attention. How were these books made, who used them (if they were used at all), how did the reading process unfold in the medieval period, and how did pictorial decoration assist in revealing--or, perhaps, obscuring--truth? These questions, and more, will inform this seminar's systematic inquiry of the making, function, and layout of the medieval book, from its Late Antique origins to the 15th century advent of printing.

ARHA325 Eloquent Forms: Topics in Italian Renaissance and Baroque Sculpture

Early modern Italy was a site of vibrant and wide-ranging innovations in the field of plastic arts. Fueled by fierce competition, financed by extravagant expenditures, and created for a range of religious, commemorative, and decorative functions in both public and private realms, the sculptural medium reached a pinnacle of creative expression, material experimentation, and theoretical engagement in this period. From monumental urban commissions such as fountains to small-scale precious objects sought out by the wealthy collectors, sculptural works profoundly shaped the visual worlds of early modern Italy. This seminar on the making and meaning of sculpture in the Renaissance and Baroque periods will engage students with the works and careers of several key artists of the era, including Lorenzo Ghiberti, Donatello, Andrea del Verrocchio, Niccolò dell'Arca, Francesco Laurana, Properzia de' Rossi, Michelangelo, Benvenuto Cellini, Giambologna, Leone Leoni, Gianlorenzo Bernini, and Alessandro Algardi, among others. Seminar readings and discussions will be structured around broad themes such as: making and viewing of early modern sculpture; rhetoric of sculptural materials; verisimilitude and sculptural animation; sculpture and the senses; fragmentation and the "non-finito"; touch, desire, and the nude; representations of force and violence; antiquarianism and sculpture collecting; tombs and sculptural commemoration; and monsters and monstrosity in garden sculpture.

ARHA338 Bauhaus: Art, Craft, Design

This seminar examines the theory and practice of the Bauhaus, the most influential art school of the 20th century. The Bauhaus proposed a radical concept: to reconstruct the material world of war-torn Europe to reflect principles of unity in the arts and within all world cultures. In the 15 years of its existence, from 1919 until 1933, the Bauhaus underwent many changes, including moves from Weimar to Dessau and Dessau to Berlin, as well as the reorientation of its curriculum from craft to industrial production. Nevertheless, its core principles persisted: the coordination of fine with applied arts and form with function; a commitment to de-hierarchized, experimental learning in workshops; and the desire to unite art with life and to make art accessible to the broader population. Attracting men and women from Western and Eastern Europe, the Americas, and East Asia, the Bauhaus adopted an international and gender-inclusive orientation from the beginning. After the school's forced closure in 1933 by the National Socialists, many of its teachers and students left Germany to found art schools throughout the globe, and its core principles continue to shape art pedagogy and practice today. This course will examine the origins, core products and theories, and afterlife of the Bauhaus in Germany, America, and East Asia.

ARHA339 Modernism and the Total Work of Art

The term "total work of art" refers to the German concept of the Gesamtkunstwerk, which took on new urgency in the 19th century amid social upheaval and revolution. Understood as the intention to reunite the arts into one integrated work, the total work of art was tied from the beginning to the desire to recover and renew the public function of art. While there exist many approaches to totality in the modern era, this course focuses on modernist theories and practices that simultaneously critiqued existing society and posited a utopian alternative. We will begin by studying formulations of totality in response to a cultural crisis initiated by the 1789 French Revolution. From there, we turn to German idealism and to an analysis of composer Richard Wagner's ideas and compositions that made the idea of the synthesis of the arts a central focus for European modernism. Yet if Wagner's works and writings provided the dominant reference for subsequent developments from the 1880s onward, these most often consisted of a search for alternatives to his own theory and practice, particularly in the visual arts. We will examine attempts to envision totality after Wagner in Impressionist painting and German Expressionism. Ideas of totality and utopia continued to carry positive associations for modern artists until the 1930s, when they became co-opted by totalitarian governments. The course concludes by examining the perversion of modernist dreams in Nazi festivals and art exhibitions.

ARHA352 Energy and Modern Architecture, 1850-2020

This seminar explores the evolution of mechanical systems for heating, ventilating, and cooling in modern architecture from the mid-19th century to the present. The aim is to show how architects, engineers, fabricators, and urban governments worked to develop modern systems of environmental controls, including lighting, as means of improving both the habitability of buildings and health of their occupants. The course will trace the adaptation of technical innovations in these fields to the built environment and how those responsible for it sought to manage energy and other resources, such as funds

and labor, to create optimal solutions for different building types, such as factories, theaters, assembly halls, office buildings, laboratories, art museums, libraries, and housing of various kinds, including apartment buildings for higher- and lower-income residents. An important theme will be the relationship of energy systems for individual buildings and urban infrastructure, including water systems, electrical, and other utilities. The last part of the course focuses on contemporary green, or sustainable, architecture, including passive and active solar heating, photovoltaics, energy-efficient cooling, LEED certification, wind and geo-exchange energy, green skyscrapers, net-zero energy buildings, vertical farming, and zero-carbon cities in the United States, Europe, and Asia.

ARHA355 Concepts in Contemporary Art

In this interdisciplinary seminar and studio course, we explore key concepts in contemporary discourse across a range of forms, genres, and disciplines. How do works of art respond to and reframe central debates in the wider culture? In what ways do the theory and practice of art supplement or contradict each other? How does research function within the context of art historical study and contemporary artistic practice?

To contend with these questions, students develop a series of projects over the course of the term in response to specific conceptual prompts. These investigations may take the form of studio-based work or written scholarship depending on student interest and will culminate either in a final research paper (for those registering for Art History credit) or a final project in any medium (for those registering for Art Studio credit). Along the way, we study artworks, literary texts, works of social theory, art historical scholarship, films, popular culture, and other objects to ground our research. Parallel activities may include conversations with artists and art historians, methodological workshops, site-visits, trips to museums, and archival research.

Since the course's aim is to cultivate unexpected collaborations, cross-disciplinary encounters, and new ways of conjugating the history, theory, and practice of art, the final portion of the semester will focus on the organization of a collective exhibition, event series, symposium, publication, or other expanded curatorial endeavor. The course meets Fridays 12:30 pm-5:30 pm, with a break during that interval. Class time may on occasion include individual meetings and independent work.

ARHA361 Thresholds of Art and Activism Since the 1960s

Since the 1960s, a period marked by war and social upheaval, artists have navigated the contested boundaries of art and activism by turning to the street and inventing new strategies of performance, distribution, and collaboration. Exploding the familiar protocols of agitprop, they advanced a politics of representation as much as a representation of politics. Philosophical texts (e.g., Adorno, Benjamin, Debord, Habermas, Ranciere, etc.) support our engagement with recent debates in art historical scholarship (e.g., Bishop, Bryan-Wilson, Lambert-Beatty, McKee, etc.) as we consider contexts as diverse as the social movements of the 1960s, queer liberation, eco-critical activism, and Occupy Wall Street. Extending the 20th-century avant-garde's project to break down the division between art and life, our case studies (focused primarily but not exclusively on the United States: Emory Douglas, the Art Workers Coalition, Gran Fury, Women on Waves, etc.) provoke this seminar's central questions: Where is the line between art and activism? What value might that boundary continue to hold, and why? How must we assess the efficacy, ethics, and aesthetics of such practices? And what historical conditions have made them timely for artists?

ARHA364 Architecture: Historiography, Theory, Criticism; Traditional and Contemporary Approaches

This seminar--intended primarily for majors in history of art and architecture, for studio majors concentrating in architecture, and students interested in urban studies--surveys different methods of studying architecture and its history. Emphasis throughout is on comparison of general theories of interpretation in art history and other disciplines and their application to specific works of art and architecture. Topics include monumentality and collective memory, stylistic analysis, philosophical aesthetics, iconography and semiotics, patronage and ideological expression, structural technology and building process, material culture and consumption, vernacular architecture and cultural landscapes, spatial form, urban landscapes, sociology, and affordable housing. Along with colonial, postcolonial, and decolonial studies of architecture, the seminar incorporates feminist architectural history and theory, energy studies, race and histories of modern architecture, and questions of canon formation and canonicity.

ARHA367 African Modernism and the African American Diaspora

This seminar will examine the relationship between African art and the Black diaspora, especially in the United States. We will look at the crosscurrents of artistic ideas and the impact of artists' ongoing travels between Africa and the United States during the twentieth and twenty-first centuries. The seminar will investigate how these exchanges gave birth to a robust intellectual movement and artistic pan-Africanism in the United States and beyond. By juxtaposing the works of a range of artists such as Jacob Lawrence, Aaron Douglas, Ben Enwonwu, Skunder Boghossian, and others, the course will propose an alternative reading of the transnational, transatlantic aesthetic sensibilities that informed these artists' works during the post-WWII period and their wider impact on African modernism.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**Gen Ed Area: **HA-ART**Prereq: **None****ARHA379 Visionary Journeys through Sacred Landscapes: Japanese Art of Pilgrimage**

This course examines the ways in which religious paintings were used and viewed in medieval Japan. Emphasis will be laid on images of sacred landscapes and the visionary journeys they inspired. Though primarily conceived as fundraising tools and advertisements aimed at inspiring viewers to undertake a physical journey to the illustrated site, these images became sacred in their own right and were approached by worshipers as one would approach the enshrined deity of the represented site. They also allowed spiritual travel through the images, providing virtual pilgrims with the karmic benefits of actual pilgrimage without the hardships of travel.

Each week we will immerse ourselves in a sacred site, reading about its history, deities, religious practices, and unique benefits. We will then look at how these were given visual form and the artistic language developed to endow these visual representations with the power to inspire and move contemporary audiences.

Offering: **Host**Grading: **A-F**Credits: **1.00**Gen Ed Area: **HA-ART**Identical With: **CEAS379, MDST378**Prereq: **None****ARHA381 Relic and Image: The Archaeology and Social History of Indian Buddhism**

This course investigates the social history and material culture of Indian Buddhism from the fifth century BCE through the period of the Kushan empire (first to third century CE). The course begins with the examination of the basic teachings of Buddhism as presented in canonical texts, then turns to consideration of the organization and functioning of the early Buddhist community, or sangha. The focus then shifts to the popular practice of Buddhism in early India and the varied forms of interaction between lay and monastic populations. Although canonical texts will be examined, primary emphasis in this segment of the course is given to the archaeology and material culture of Buddhist sites and their associated historical inscriptions. Specific topics to be covered include the cult of the Buddha's relics, the rise and spread of image worship, and the Buddhist appropriation and reinterpretation of folk religious practices. Key archaeological sites to be studied include the monastic complex at Sanchi, the pilgrimage center at Bodhi Gaya (site of the Buddha's enlightenment), the city of Taxila (capital of the Indo-Greek kings and a major educational center), and the rock-cut cave monasteries along the trade routes of western India.

ARST190Z Digital Foundations

This introduction to the digital studio engages software and electronic media as an expanded field of creative production in contemporary art and design. Through a sequence of workshops, exercises, and hands-on digital projects, students will develop their critical and creative toolkits and learn to conceive, refine, and present original work. Open to all skill levels, this course prioritizes sustained and rigorous engagement with digital practice as well as conceptual and formal problem-solving.

Workshops in image manipulation, compositing, motion graphics, and visual communication will be led synchronously online by the instructor. This will be complemented with weekly online studio sessions, discussions, screenings, and reviews. Students will be provided access to all course materials using Google

Drive and other digital platforms. Access to Adobe Creative Cloud software will be provided by Wesleyan, but individual licensing is also encouraged. Course assistants will offer peer mentoring and technical support in person through the DDS and online through Zoom.

ARST220 Ecological Design I: Being at Home in the World

Being at Home in the World is an introduction to the skills and thinking involved in the ecologically responsible creation of objects. This course is intended to provide a foundational understanding of the language of design, sources of materials, and energy systems. The studio encourages students to develop a rigorous, iterative working method to deeply analyze the nature of land and resources, explore options, and test ideas. This process of making is complemented and supported by an introduction to the history and theory of design, training with techniques and equipment, and active practice in keeping a sketchbook. Early exercises and projects in the course build familiarity and confidence with analytical drawing, making, and modeling techniques, which build toward the creation of a novel piece of design work presented at the final review.

ARST221 A Thousand Years of Iteration: Design for an Uncertain Future

The climate emergency is a product of design. Centuries worth of aesthetic and industrial innovation have created extractive infrastructure, efficient machines, and disposable products that make it increasingly easy to consume energy and resources on a global scale. As new conversations about just transitions, a circular economy, and a Green New Deal have begun to proliferate among designers, the discipline's troubled relationship to notions of "progress" remains largely unquestioned.

This reading- and research-intensive studio asks students to examine this history of technology and to critically evaluate shifting theoretical perspectives on nature and human development as they relate to design. Topics will include the lifespan of buildings and products, relationships with and obligations to materials and resources, and strategies for de-growth in indigenous and vernacular design precedents. These will be studied through assigned readings and in-class discussion, a series of design exercises, and the production of a final project from materials immediately at hand in Middletown.

ARST229 Community-Based Public Art: Mosaics on Main

In this course, students will have the opportunity to work directly with an ongoing major community art project in Middletown called "Mosaics on Main/Tunnel Vision." The course will include an overview of this project as well as research into other public art installations. Technical skills introduced in the course will include mold making, mosaic tile setting, and design strategies for

large scale works. There will be field trips to local public art installations as well as Middletown City Hall to meet with members of the Middletown Commission on the Arts. Students will learn about finding funding sources and will review existing grants and grant opportunities. This is a hands-on course that will involve working with members of the Middletown community.

ARST233 Studies in Computer-based Modelling and Digital Fabrication

This course operates at the intersection of design and production, introducing students to digital tools critical to contemporary architecture and design. Throughout the semester, students will develop a series of projects that fluidly transition between design, representation, and fabrication with an emphasis on understanding how conceptual design interfaces with material properties. The course will offer a platform for students to research, experiment, and, ultimately, leverage the potential of digital tools toward a wide array of fields and disciplines. Students will be expected to utilize the Digital Design Studio's resources, including 3D printers, laser cutter, and 4-Axis CNC mill, as well as a selection of fabrication equipment housed in the school's metal and wood shops to represent, model, and realize a series of design projects.

ARST235 Architecture I

This course is a synthesis of fundamentals of design principles and introduction to design vocabulary, process methodologies, and craft. Emphasis is placed on developing students' ability to examine the relationship between production (the process of creating things) and expression (the conveying of ideas and meaning) involved in the making of architecture. The intent of the course is to develop students' awareness and understanding of the built environment as a result of the investigations, observations, and inquiries generated in the studio.

ARST236 Fast & Furious

Fast and Furious is a class which explores the power of the multiple through the production of zines, posters, t-shirts, tote bags, pins and more. Beginning in the 1930s, the production of zines mainly in the sci-fi fan world became popular after the advent of the mimeograph—the first widely available duplicating machine. This way of making content was able to circumvent mainstream and institutional publishing models creating channels for more creatives to distribute their work. Today, there are even more technologies that can be used in the production of zeitgeist material. In this class, we will learn how to create with a Xerox machine, silkscreen, letterpress, polymer, and more. In each assignment we will contend with the power of quantity. What does it mean to make five of something? Ten? Fifty? One hundred? We will also experiment with format. How can a message be told through a wearable garment? How does the narrative change when it's a tote bag? And finally, we will explore the poetics of distribution. What are the artistic possibilities of a zine when it can be sent through the mail or left in a pile for the public?

Offering: **Host**

Prereq: **ARST131**

ARST238 Print Culture 101

Print Culture 101 is an introductory course about the vast medium of printmaking: its techniques, its traditions, and its possibilities. Throughout the semester, students will learn how to use each area of the printshop, and the fundamentals of relief, recessed, planographic, stencil, and photographic processes of printmaking. Additionally, students will gain some elemental skills in working with paper, ink, and adhesives. These skills will also equip students with useful knowledge to experiment with unconventional materials.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST131**

ARST239 Painting I

This introductory-level course in painting (oils) emphasizes work from observation and stresses the fundamentals of formal structure: color, paint manipulation, composition, and scale towards artistic expression. Students will address conceptual problems that will allow them to begin developing an understanding of the power of visual images to convey ideas and expressions. The course will include lectures and individual and group critiques.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST131**

ARST242 Typography

The fundamentals of fonts, letter forms, typographic design, elements of the book, and an introduction to contemporary graphic design are considered through a progression of theoretical exercises. Once working knowledge of the typeshop and InDesign (software for book design) is acquired, each student conceives, designs, and prints: first, a broadside, then a book. Use is made of the collection in the Davison Rare Book Room at Olin Library. While NOT a required sequence, this course is strongly recommended before taking ARST243.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **None**

ARST243 Introduction to Graphic Design

This course will open your mind to the world of graphic design, both past and present. You will learn how to analyze and critique design in addition to how to present your work and convey your ideas to others. You'll explore various tools available to a designer including hand skills and computer software. Computers will simply be a possible tool to help complete each project - this is not a software class.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Identical With: **IDEA243**

Prereq: **None**

ARST245 Sculpture I

An introduction to seeing, thinking, and working in three dimensions, the class will examine three-dimensional space, form, materials, and the associations they elicit. Through the sculptural processes of casting, carving, and construction in a variety of media, students will develop and communicate a personal vision in response to class assignments.

ARST251 Photography I

This is a comprehensive introductory course to the methods and aesthetics of film-based and digital photography. The topics of study will include evaluating negatives and darkroom prints, developing film, Lightroom and Photoshop software, inkjet printing, reading light, visualization, photographic design, and history of photography.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **None**

ARST252 Photography I

This class is only intended for first year students. This is an introductory course to the methods and aesthetics of film-based and digital photography. The class is designed for students with no prior formal experience in photography, though it will still challenge those that are already versed in film and digital. The first few weeks of class will be devoted to comprehensive technical instruction including exposure, film processing, and darkroom enlargement. Subsequently, class time will be split between weekly critiques and lectures covering topics including visualization, reading and evaluating light, and photographic history. The shooting assignments are open ended and conceived to push each student to define their own visual interests as they continue to immerse themselves in the language of the medium. After fall break, we will switch to working digitally. Software instruction will include Lightroom and Photoshop, with significant time devoted to inkjet printing. The course will culminate in a final portfolio that will reflect the formal, technical, and conceptual experimentation that the students will engage in throughout the course.

***Please note that this is an intensive course with a significant work load.

Students should expect to spend at least 15 hours outside of class on weekly shooting and production. Please feel free to reach out to the instructor at arudensky@wesleyan.edu if you have any questions.

ARST260 Introduction to Sumi-e Painting

We will learn basic technique and composition of traditional Japanese sumi-e painting. Sumi-e is a style of black-and-white calligraphic ink painting that originated in China and was introduced into Japan by Zen monks around 1333. We will concentrate on the four basic compositions of sumi-e: bamboo, chrysanthemum, orchid, and plum blossom. We will also study the works of the more famous schools, such as Kano. Students will create a portfolio of class exercises and their own creative pieces.

ARST261 Alternative Printmaking: Beginning Japanese Woodblock Technique

Students are taught traditional Japanese techniques for conceptualizing a design in terms of woodcut, carving the blocks, and printing them, first in trial proofs and editions. After understanding how both of these methods were originally used and then seeing how contemporary artists have adapted them to their own purposes, both for themselves and in collaboration with printers, students will use them to fulfill their own artistic vision. Considerable use is made of the Davison Art Center collection of traditional and contemporary Japanese prints as well as many European and American woodcuts.

Identical With: **CEAS461**

Prereq: **ARST131**

ARST265 Action: Art, Politics, Counterpublics

In this interdisciplinary studio course, we explore action as a category of art practice. What does it mean to take action, either individually or collectively? What does it mean to refuse to take action? Through a series of projects, assignments, and discussions, we work through various possibilities, drawing on methods from public interventions, performance, institutional critique, social practice, experimental film, and work by non-art practitioners. The course is organized around the production of student projects and research, culminating in a self-directed capstone work. In the initial stages, students will be asked to work through three distinct modalities (performance, site-specific intervention, and collaborative practice) while developing their ideas. Time will be devoted to discussion of historic and contemporary examples, including European avant-gardes (Dada, Productivism), feminist film and performance, Happenings, Indigenous performance art, and work connected to political organizing, such as the Black Panther Party, United Farm Workers, Young Lords, ACT-UP, Art Workers' Coalition, and EZLN, among others. Students will be exposed to a variety of techniques and will gain access a range of facilities, including the woodshop, digital technologies through the Digital Design Studio, etc. Depending on Covid restrictions, trips to contemporary exhibitions will provide a theoretical framework. Work in this class can be created individually or collaboratively. Depending on interest, we may also organize an end-of-semester exhibit.

Identical With: **IDEA160**

Prereq: **None**

ARST271 Biodegradable Design: Soft and Hairy

In this course, we will develop an understanding of soft materials and how softness is explored in design. We will explore the notion of softness in design with particular focus on how soft, biodegradable materials can form our experience of a product. We will study how soft materials, plants, and living organisms can be utilized as a living material to form a built ecology. In particular, we will learn how mycelium used in novel ways can produce experiential affect in spaces, especially in relation to the human body. We will study how to design for impermanence--sometimes using waste materials--and develop an understanding for material recovery. The goal of the course is to introduce students to bio and living materials used in design as well as zero-waste design methodology, and develop digital and physical skills associated with the making of soft products. Students will work both individually and collaboratively in a studio environment. Field trips to New York City museums, fabricators, and galleries may be expected as part of this course.

ARST286 Introduction to Time-Based Media

This course will serve as a comprehensive introduction to time-based media in the expanded field. We will explore the ways video can transform our relationship with ourselves, others, and the material world. Through regular technical exercises, readings, and group discussions, students will gain technical facility and a critical eye for time-based art and culture. What sorts of videos do we consider "art"? In an era of selfies, live-streaming, and state-sanctioned violence (and its digital record), how might we use video as a tool of empathy and accountability? We will pursue answers to these questions through the act of making. Students will be introduced to camera operation, sound recording, and lighting, as well as video and sound editing. Screenings of historical and contemporary video art will contextualize each assignment. We will also investigate vernacular applications of video, and the medium's role beyond the studio.

ARST308 Composition in the Arts

Composition, the manner in which elements are combined or related to form a whole in space and time, is a basic practice in all the arts. This course brings together practitioners from diverse art forms and traditions to address the basic issue of composition.

In this seminar, we will explore the compositional process through assignments that address the interacting concepts of site and information. By "site," we mean a semantic field extending through corporeal, environmental, and social dimensions. By "information," we mean representations abstracted from sites, "meaningless" when independent of any specific semantic interpretation. Participants will compose individual and collaborative interventions in a wide range of sites--public, private, physical, and electronic--in response to the problems posed.

This course is permission-of-instructor, and is intended for upper-level majors in Art, Dance, Film, Music, and Theatre, and others with sustained compositional practices suitable to the course.

Identical With: **MUSC308, THEA308**

Prereq: **None**

ARST320 Ecological Design II: Worn Out/Broken In

This course will function as a design studio that examines the afterlife of material production. While designers have traditionally focused their attention on the creation, distribution, and consumption of new products, this course asks students to carefully consider everything that follows those acts. By scrutinizing the use, care, maintenance, repair, and eventual demise of designed objects, students come to understand the intended and unintended consequences of making. Rigorous observation and research lead to the creation of analytic drawings and models for presentation at project reviews.

Offering: **Host**

Prereq: **ARST270 OR ARST235 OR ARST220**

ARST323 Topics in Studio Art: Information

Artists in all media have historically responded to common, formal, and ideological motivations. These motivations encompass the very fabric of a liberal arts education. This course is intended to develop such a conversation among

the various studio art disciplines as the foundation for making art. The course centers on a topic determined by the instructor. The class will function as a study group (of painters, sculptors, photographers, drawers, printmakers, architects and so on) that tackles the topic through the act of art-making. The topic will be introduced through readings and visual precedents, and through discussion we will determine means to respond as artists, each student in his or her own medium. These individual responses will then be analyzed in group critiques. Later in the semester, students will expand their investigations to include studio disciplines other than their own.

Offering: **Host**

Prereq: **ARST235**

ARST337 Codex Unbound

Codex Unbound is a course that investigates the art of the book. It asks: What is a book? And what are the expansive possibilities of this form? Students will explore these large questions through the process of making books in a variety of binding and printing techniques that range in cultural and historical origin. In learning such techniques, students will also be tasked with intervening with forms and creating their own innovations, which can incorporate their own intellectual interests.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST131**

ARST338 Printmaking II

This upper-level printmaking course focuses on the application of various printmaking methods in response to conceptual prompts. There will be instructional units on lithography, the Vandercook letterpress, and digital technologies. In addition to learning these new techniques, students are

expected to build on previous printmaking experience to hone their skills and sharpen their creative vision. Routine print assignments and a final substantial project will task students with the development and presentation of professional, finished work.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST237 OR ARST261 OR ARST361**

ARST339 Surface Tension

Bumpy, smooth, fuzzy, and sharp. These are all surfaces we are familiar with through our experience of the world. In art, the surface of an object, whether it is a sculpture or painting or anything else, is a port of entry into the experience, subject, and appreciation of the work. Tension in visual art can be thought of as the push and pull form has to provoke and/or engage the viewer. These points of strain could appear at the intersection of opposing marks, contrasting color, disharmonious imagery and much, much more. "Surface tension" refers to qualities in visual art related to the superficial veneer of an art object which can support the expression of content more deeply. In printmaking, surface tension can be literally created or optically suggested through a variety of techniques. In this class, we will learn advanced methodologies in intaglio, lithography, relief, letterpress, digital printing and more. Each assignment will task students to combine these mediums in surprising ways that encourage contrast, opposition, and traction. We will explore the possibilities of mixing water and oil based printing techniques, utilize digital medium in tandem with analog processes, apply dry and wet techniques together, and learn to gild metals on a variety of substrates. This class is open to any advanced student of art who wants to experiment with their practice in the arena of printmaking.

Offering: **Host**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **ARST261 OR ARST337 OR ARST238 OR ARST361**

ARST340 Painting II

In this class, students will develop an artistic vision and studio practice while exploring open-ended prompts and engaging in conversations that unpack approaches and methods toward achieving artistic goals. Each individual will work uniquely in both approach and technique in order to become fluent and make conceptual and aesthetic choices that will best convey their singular creative concerns. All prompts and concerns addressed in this course allow for any formal, conceptual, or stylistic method of expression to solve them. The knowledge and skills gained in ARST239 will serve as the foundation for a deeper inquiry into how formal decisions about process inevitably impact expression and the reading of artworks. While analyzing differing approaches to solving the same problem, students will discover how their own practice can transform their relationship with others and the world. Lectures and discussions will provide information and feedback on historical and contemporary issues, project proposals, goals for the work with respect to identifying an ideal audience, and the development of an artist's vision and statement.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **(ARST131 AND ARST239)**

ARST341 Developing a Studio Practice Based in Painting

This course is intended for students with a solid foundation in painting or a related media concentration.

In this class, students will develop an artistic vision and studio practice while exploring open-ended prompts and engaging in conversations that unpack approaches and methods toward achieving artistic goals. Each individual will work uniquely in both concept and technique in order to become fluent and make conceptual and aesthetic choices that best convey their singular creative concerns. The knowledge and skills gained in ARST239 and/or other studio art courses will serve as the foundation for a deeper inquiry into how formal decisions about process inevitably impact expression and the reading of artworks. While analyzing differing approaches to solving the same problem, students will discover how their own practice can transform their relationship with others and the world.

Lectures and discussions will provide information and feedback on historical and contemporary issues, project proposals, goals for the work with respect to identifying an ideal audience, and the development of an artist's vision and statement.

Prerequisite: You must have taken any second level Art Studio course in any concentration.

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ART**

Prereq: **None**

ARST345 FAN FICTIONS: Alternative Universes, Gender Swaps, Ship-ping

In the vernacular, a "fan fiction" is a type of writing that reimagines a piece of popular media such as a book, TV show, or movie. This happens without consent and is used to explore alternative narratives or taboos.

Artists such as Kara Walker have reimagined the Antebellum south as an erotic horror, Mike Kelly created installations based on the cities of Krypton from the comic book Superman.

In our class we will utilize printmaking methodologies to explore strategies of fan fiction, by creating artworks that reconfigure both historical and fictional canons that have historically been entrenched in ideas of authenticity and devotional labor. Students will create etchings, silk screens, and zines.

Students should have print media experience though the class is not strictly restricted to printmaking.

ARST350 Senior Seminar

This is an interdisciplinary critique-based course designed for advanced Art Studio majors. Our primary aim is to provide a structure for the development of each student's thesis work, research, and thinking as it evolves over the course of the semester. Through extensive in-class discussions and reviews, we devote a substantial portion of time to the presentation and discussion of student work. We devote time to the discussion of installation strategies, readings in contemporary criticism, visiting artist lectures and presentations, and, if possible, visits to contemporary exhibitions in the area. The course is also an interdisciplinary workshop, an opportunity to share your work with your fellow students, and to participate in a structured response to one another's work across different types of media. Participation in the class will include leading discussions of readings, attending visiting department lectures, sharing work in class, and responding to/giving feedback to classmates' work. The course is designed as a complement to the Art Studio Senior Thesis process and is an elective for Art Studio majors.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Prereq: **None**

ARST352 Photography II

This is an intensive course intended for students with a solid foundation in photography. Students can choose to work in either film-based or digital media while developing their own unique voice. Topics will include medium-format film cameras, fiber paper, virtual drum scanning, large-format digital printing, and editing and sequencing images. The second part of the course will be devoted to developing a body of work that will result in a photo book project. Lectures and class discussions will provide a historical context, while presentations by visiting artists will introduce students to contemporary work in the medium. Emphasis will be placed on the weekly discussion of students' work.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Prereq: **ARST251 OR ARST352**

ARST355 Concepts in Contemporary Art

In this interdisciplinary seminar and studio course, we explore key concepts in contemporary discourse across a range of forms, genres, and disciplines. How do works of art respond to and reframe central debates in the wider culture? In what ways do the theory and practice of art supplement or contradict each

other? How does research function within the context of art historical study and contemporary artistic practice?

To contend with these questions, students develop a series of projects over the course of the term in response to specific conceptual prompts. These investigations may take the form of studio-based work or written scholarship depending on student interest and will culminate either in a final research paper (for those registering for Art History credit) or a final project in any medium (for those registering for Art Studio credit). Along the way, we study artworks, literary texts, works of social theory, art historical scholarship, films, popular culture, and other objects to ground our research. Parallel activities may include conversations with artists and art historians, methodological workshops, site-visits, trips to museums, and archival research.

Since the course's aim is to cultivate unexpected collaborations, cross-disciplinary encounters, and new ways of conjugating the history, theory, and practice of art, the final portion of the semester will focus on the organization of a collective exhibition, event series, symposium, publication, or other expanded curatorial endeavor. The course meets Fridays 12:30 pm-5:30 pm, with a break during that interval. Class time may on occasion include individual meetings and independent work.

ARST358 Video in Context

We live in a world where screens are often taken for granted. How has the omnipresence of video transformed visual perception? This course will focus on video installation and the ways video can shift our relationship to objects, space, and each other. Students will experiment with lighting and environment building, paying particular attention to how surfaces are transformed by the lens. We will explore projection mapping, live-streaming, installation, and the peculiarities of the screen. We will look at works by artists who have emphasized the physicality or immateriality of video through installation and web-based art. We will read a variety of texts, charting the shifting role video has played in contemporary society. Through weekly exercises and regular group critiques, we will begin to unpack how the videos we make contact with daily shift our relationship with both our own bodies and the material world.

ARST361 Monotype Printmaking

The monotype print is a free form of printmaking more akin to painting or drawing than to traditional printmaking. It is also a process in which the artist encounters fewer technical difficulties than in other traditional printmaking methods. Students in this course will create images using various mediums and methods. We are going to use different material like wood, plexiglass, paper, and textiles. Also, we may use laser cutting or digital printing, to combine with drawing or painting.

The goal of this course is not perfection of technique, but rather students experimenting with material and technique, to produce their own visual images.

ARST362 Sumi-e Painting II

Sumi-e Painting II is an advanced class for which Introduction to Sumi-e Painting (ARST 260) is a prerequisite. In this course, foundation techniques will be expanded upon. We will re-examine traditional techniques and composition, and there will be exploration of new contemporary techniques. There will also be experimentation with tools beyond the brush. This course will introduce a concept based approach to narrative and content. Students will be encouraged to develop a personal style and method.

ARST370 Regenerative Design

This course builds on the exploration and knowledge learned in Product Design I to discover opportunities for systems thinking in product design. Students will study systemic challenges related to aging, education, food, and mobility to investigate potential opportunities through the lens of product design. The course will support students in developing digital modeling skills as well as rapid prototyping and fabrication techniques. Students will work both individually and collaboratively in a studio environment. Field trips to New York City design ateliers, fabricators, and workshops may be expected as part of this course.

ARST380 Interdisciplinary Studio: Politics of Land and Place

Notions of "place" are particularly fraught in North America, where legacies of development and dispossession have etched enduring power relationships onto the land. Contemporary spatial experience is marked by what Mindy Fullilove has called root shock: the reverberating effects of losing one's place and the collective struggle to reclaim it. In this interdisciplinary studio course, we develop artistic responses to the ways in which power shapes the natural and built environment. We look at a range of sites--the home, the city, the border, the wilderness, the commons--as spaces of memory and belonging, sociality and resistance. We explore the ways in which people have engaged with place through a range of forms, including roadside monuments, site-specific sculptures, landscape films, community-based performances, situationist *dérives*, plein air painting, collective rituals, and political protests. Over the course of the term, students will identify a site in the Lower Connecticut River Valley and develop their own aesthetic language in response to it. These works may take the shape of installations, performances, digital media, or texts, and will draw on our discussions of land art, institutional critique, social practice, and experimental film. While the course is geared primarily toward the development of student projects, our work will be informed by a series of site visits, readings, screenings, and discussions of contemporary land struggles, anticolonial movements, and feminist and indigenous geographies.

ARST381 Intermediate Public Practice

What are the possibilities and challenges of making work in the public domain? This intermediate studio course provides students with the framework, conceptual language, and technical means to develop ambitious projects in public space. Over the course of the semester, students will be introduced to a range of working methods, including new genre public art, research-based practices, site-specific projects, and collaborative practices. While the course focuses on contemporary issues and debates, it situates these topics within a set of broader global and historical traditions. Through group discussions, critiques, site visits, and presentations, the course will assist students in developing a series of works that build towards a self-directed final project. We look thematically at a range of sites as spaces of memory and belonging, sociality and resistance. We explore the manifold ways in which people have engaged with place through a range of forms, including roadside monuments, site-specific sculptures, landscape films, community-based performances, architectural interventions, collective rituals, and political protests. Attention will be placed on sites around Middletown in order to situate our research and practice. These may include Harbor Park, Middlesex Historical Society, Beman Triangle, Connecticut Valley Hospital, Colt Armory, Portland Brownstone Quarries, among others. Support will be provided to students along the way in negotiating relationships with local institutions and stakeholders. Supplementary readings will introduce students to questions related to spatial theory and practice, agonism and democracy, monuments and counter-monuments. Successful completion of the course will prepare students for advanced work in the public domain. Course is open to all students. Preference given to students who have taken ARST131 and ARST235 or ARST238 or ARST239 or ARST245 or ARST 251 or ARST286 or other course in a related discipline.

ARST382 Intermediate New Genres

In this interdisciplinary studio course, we make work that traverses traditional disciplinary boundaries in order to develop a methodology that prioritizes questions of context, material, and theme. Building on the history of experimental and avant-garde practices of the 20th and 21st centuries, work in this course may take the form of installations, performances, videos, texts, participatory and collaborative projects, site- and context-specific works, and other as-yet undefined forms.

Our work will not be defined by adherence to any specific discipline or genre.

In this way, the course serves as a springboard for each student to develop a relationship to contemporary interdisciplinary practice as well as an opportunity to explore, collectively and individually, pivotal theoretical frameworks that have shaped the field. Successful completion of the course will provide students with a solid foundation for experimentation in the expanded field of contemporary artistic practice.

Prerequisite: Students must have successfully completed an Introductory- or Intermediate-level Studio Arts course.

ARST384 Special Topic: Between Forms: Intermedia Arts Workshop

This advanced project-based workshop is for poets and artists interested in interdisciplinary practices crossing over between poetry, visual art, and performance. It is taught in conversation with the Fall 2021 exhibition, *The Language in Common*, in Zilkha Gallery including the work of Cecilia Vicuña, Tanya Lukin Linklater, Julien Creuzet, Jasper Marsalis, and Alice Notley.

Facilitated by Professors Benjamin Chaffee and Danielle Vogel, with modules taught by visiting artists from across the arts, this workshop is designed for students interested in working outside of--or between--their primary mediums. Professors will guide students as they choose "companion mediums" to work in for the semester while employing interdisciplinary approaches to writing and art-making in order to discover their own unique and hybrid forms.

We will divide our time between intensive laboratory-like spaces for composing work, conversations with visiting artists, student presentations and workshops, and studying the works of artists working between forms, all in an attempt to root ourselves more dynamically in our individual practices. The course will culminate in a reflective essay or artist statement, as well as an exhibit of poems, objects, installations, and performances created during our time together.

ARST387 Virtual Production: The Music Video

This intensive studio course will explore the breadth and depth of the music video genre. Students will learn advanced post-production, motion capture, and video recording techniques. Class sessions will include technical demonstrations, group discussions, and conversations with practitioners in the field. Readings and screenings will examine the relationship between music videos, technology, contemporary art, and popular culture. Students will learn how to use the 3D motion capture studio and record live musical performances. Software will include Adobe AfterEffects, Blender, and DaVinci Resolve. Through weekly exercises and a final independent project, students will learn to work collaboratively and develop a distinct creative voice. The course will culminate with a final music video project, to be screened at the end of the semester. Previous experience in Adobe Premiere Pro software is required. Preference will be given to students who have successfully completed ARST 286, ARST 386, DDC 108, or DDC 448. All students must be concurrently enrolled in the virtual production lab which meets Fridays 1:20 p.m. - 3:20 p.m. in DDC.

ARST484 Data, Art, and Visual Communication

This course looks at the ways the digital arts--broadly defined--can be used to explore the intersections of research, data, design, and art. Following a creative software "bootcamp," students will execute projects intended to help them generate, manipulate, and remix data for the purposes of visual communication and art. Students will use Adobe Creative Suite and Processing, an open source programming language, and integrated development environment (IDE) built for electronic arts, new media, and visual design. In addition to working in the studio, seminars, readings, and student presentations will explore the role of data visualization, "big data," and the web in culture and society today. No prior software knowledge or coding skills are required. Students working in STEM, humanities, and social sciences are encouraged to enroll.

ASTRONOMY (ASTR)

ASTR102F Planets Near and Far: The Diversity of Worlds in the Solar System and Beyond (FYS)

For the past 4,000 years, ancient and modern astronomers have tracked the motion of the solar system planets across the sky. Thanks to some very recent discoveries and technological innovations, we now know of thousands of additional planets orbiting other stars. With the cumulative knowledge of millennia of solar system research and recent extrasolar breakthroughs, what planetary science questions can we now answer? How do planets form and evolve? Does the solar system look like a typical planetary system? How many planets are similar to Earth and can any support life? Students in this course will explore these questions and more while developing skills vital to scientific inquiry, writing, and communication.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **None**

Prereq: **None**

ASTR103 The Planets

More than 100 planets are now known in the universe, eight of which circle the sun. NASA missions and improved telescopes and techniques have greatly increased our knowledge of them and our understanding of their structure and evolution. In this course, we study those eight planets, beginning with the pivotal role that they played in the Copernican revolution, during which the true nature of the Earth as a planet was first recognized. We will study the geology of the Earth in some detail and apply this knowledge to our closest planetary neighbors--the moon, Venus, and Mars. This is followed by a discussion of the giant planets and their moons and rings. We will finish the discussion of the solar system with an examination of planetary building blocks--the meteorites, comets, and asteroids. Additional topics covered in the course include spacecraft exploration, extrasolar planetary systems, the formation of planets, life in the universe, and the search for extraterrestrial intelligence.

Prereq: **None**

ASTR105 Exploring the Cosmos

This introductory course for non-science majors unveils the universe and how we have come to understand our place in it. We will touch on a full range of astronomical topics, including the mechanics of our solar system, the discovery of planets around other stars, the stellar life cycle, the formation and evolution of galaxies, the big bang, and the ultimate fate of the universe. Occasional evening sessions will provide the opportunity to observe celestial objects through Wesleyan's telescopes.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR106 History of Astronomy from Copernicus to the Modern Age

Since the dawn of human consciousness, we have gazed at the sky with wonder and pondered our place amongst the heavens. In this class, we will discuss the key discoveries of astronomy and the people who made them, placing these discoveries in historical context: what was the world like when humans first discovered the size of the Earth or determined the distances to the stars? How did society influence discovery, and how did achievements in astronomy impact society?

Through discussion, telescopic observation, and demonstration of techniques, we will examine the major astronomical achievements from antiquity to the present day, with an emphasis on the past 500 years. We will discuss astronomy's changing role over time, from mystical (astrology and mythology), to practical (time keeping and navigation), to physical (the nature of stars and planets). Finally, we will gaze to the future and discuss the biggest unsolved mysteries in astronomy, and what we will need to achieve to solve them.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR107 The Universe

This course focuses on the modern scientific conception of the universe, including its composition, size, age, and evolution. We begin with the history of astronomy, tracing the development of thought that led ultimately to the big bang theory. This is followed by a closer look at the primary constituent of the universe--galaxies. We end with consideration of the origin and ultimate fate of the universe.

Offering: **Host**

Grading: **A-F**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR108 Conceptual Astronomy: Science Fact vs. Science Fiction

Our conceptual understanding of the world around us is shaped by our experiences, often in subtle ways. In this media-dominated world, the public's predominant exposure to science comes from science fiction in popular culture, especially TV and movies. In this course, we will examine the ways in which popular culture has influenced our collective knowledge about astronomy: the good, the bad, and the really bad. Wide-ranging topics will include asteroids and comets threatening the earth, travel through space and time, and life in the universe. Through lecture, discussion, and laboratory exercises, we will examine these topics through the lens of science to expose the reality of the universe that is our home.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-ASTR**

Prereq: **None**

ASTR109 Worlds Beyond: The Search for Life in the Universe

We are living through a unique time with the recent discovery of other worlds, planets orbiting nearby stars, and the capability to obtain detailed observations of those planets in the coming decades. This makes tangible the age-old question of whether we are alone in the universe, as the only known life-bearing planet.

This introductory course for non-science majors will explore the fundamental concepts that are needed to place life into a cosmic context. We will discuss planetary systems near and far, stars as the integral hosts of planets, and prospects for finding and identifying life elsewhere in the universe. Occasional evening sessions will provide the opportunity to observe celestial objects through Wesleyan's telescopes.

Offering: **Host**

ASTR111 The Dark Side of the Universe

The physical world we experience is one of normal matter, energy, and—if one looks up at night—stars. But on larger scales, the universe has an exotic and much-less-well-understood side dominated by things we call dark matter, dark energy, and black holes. What are these mysterious components, and what is the relationship between them and the world that is familiar to us? The answers lie at the frontier of modern astrophysics. In this course, we explore the evidence for the existence of these dark components and the current debates regarding their nature and origin. In different ways, each of them has a vital role in the evolution of the universe and its ultimate fate.

Offering: **Host**

Grading: **OPT**

ASTR222 Modern Observational Techniques

This course reviews the practices of modern observational astronomy, focusing primarily on techniques employed in the optical and x-ray bands. Topics will include a description of the use of digital detectors for imaging, photometry, and spectroscopy in a wide variety of applications. Data acquisition, image processing, and data analysis methods will be discussed. In particular, students will gain hands-on experience with the analysis of data obtained from both ground- and satellite-based observatories. An introduction to relevant error analysis methods is included. Students will also become familiar with the fundamental techniques that will be necessary when "big data" projects like LSST come online in the near future: database querying, metadata handling, and modern programming techniques.

ASTR232 Galaxies, Quasars, and Cosmology

This course introduces modern extragalactic astronomy, blending established practices in the field and important recent discoveries. Three major themes will be developed. First, the basics of Newtonian and relativistic cosmologies will be discussed, including modern determinations of the Hubble Law and the observations that have led to the currently favored cosmological model. Next, the universe of galaxies will be investigated: their constituents, structure and kinematics, and multiwavelength properties. Finally, the nature of galactic nuclei will be explored, including the observational consequences of black-hole accretion and the coordinated growth of galaxies and their central black holes. Outstanding research questions related to the topics covered will be highlighted throughout the course.

ASTR521 Galactic Structure and Formation

The fundamentals of astrophysics are applied to galaxies and the objects contained therein. Topics include galaxy formation and evolution, the Milky Way, galaxy scaling relations, stellar populations, morphology and kinematics, clusters and dark matter halos, and the interstellar and circumgalactic media. In addition, we cover some of the basic numerical methods commonly used in astronomy, such as interpolation, numerical integration, and curve-fitting, and apply them to observational and theoretical problems.

ASTR522 Modern Observational Techniques

This course reviews the practices of modern observational astronomy, focusing primarily on techniques employed in the optical and x-ray bands. Topics will include a description of the use of digital detectors for imaging, photometry, and spectroscopy in a wide variety of applications. Data acquisition, image processing, and data analysis methods will be discussed. In particular, students will gain hands-on experience with the analysis of data obtained from both ground- and satellite-based observatories. An introduction to relevant error analysis methods is included. Students will also become familiar with the fundamental techniques that will be necessary when "big data" projects like LSST come online in the near future: database querying, metadata handling, and modern programming techniques.

ASTR524 Exoplanets: Formation, Detection, and Characterization

Our ability to place the earth into a cosmic context has dramatically improved in recent decades with the discovery of planets around other stars (exoplanets). The study of exoplanets has quickly become a dominant field in astronomy. This course will focus on the fundamentals of exoplanet formation, detection, and characterization (interiors and atmospheres) based on astronomical observables. We will also discuss the assessment of habitability for Earth-like exoplanets and the prospects for the detection of biosignatures.

Offering: **Crosslisting**

BIOLOGY (BIOL)

BIOL106 The Biology of Sex

This course is featured as a general education course within the Department of Biology. Serving to complement courses currently offered within biology that only touch upon the subject of sex, this course will dive into specifics regarding sexual behavior and will serve to highlight new discoveries that have been facilitated by novel scientific techniques and approaches. As we study the biology of sex in the animal world, it becomes apparent that sex is achieved in a multitude of ways, many appearing rather bizarre and flamboyant. Yet under these guises, animals are still able to mate and reproduce. Sex is often defined according to sexual reproduction, whereby two individuals that are male and female mate and have offspring. However, many organisms engage in asexual reproduction and/or a combination of the two reproductive strategies. Reproductive anatomy and behavior will be addressed as we explore a variety of organisms, ranging from marine clown fish and their "sex changes" to the (female) marmoset monkey that can give birth to twin male chimeras. As an organism pursues sex, what are the mating strategies? What are the chemicals of sex (pheromones and hormones)? By examining the biology of sex in detail, we will also debate age-old topics such as whether sexual reproduction is sexist, the competing strategies of males and females, and whether human cultural displays are yet another way to decipher quality in a potential mate.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **None**

BIOL118 Reproduction in the 21st Century

This course will cover basic human reproductive biology, new and future reproductive and contraceptive technologies, and the ethics raised by reproductive issues.

Offering: **Host**

Grading: **A-F**

BIOL137 Writing About Evolution

This class will explore various interesting problems in natural history, using short writing assignments to build familiarity with concepts of organismic evolution.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **None**

BIOL140 Classic Studies in Animal Behavior

This course will focus on the major concepts in the field of animal behavior. We will discuss the major selection pressures that shape animal behavior as individuals attempt survival, finding mates, and having offspring in their preferred habitats. What are the limiting resources for male and female animals, and why are some animal species sexually dimorphic? We will commence with the early pioneers in the field of ethology and highlight comparative studies in understanding the role of territorial behavior, alarm calling, kinship, and the role of hormones/pheromones in reproduction. Both instinctual and learned behaviors are important components in an animal's behavioral repertoire and will be explored in a variety of field experiments. This course is designed for

students to gain a clearer understanding of the mechanisms that drive the natural world around them. All biological jargon will be defined as original research is discussed.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **None**

BIOL140F Classic Studies in Animal Behavior (FYS)

This course will focus on the major concepts in the field of animal behavior. We will discuss the selection pressures that shape animal behavior and whether the study of primate social and mating systems can provide insight into human behavior. Other questions include, Why do certain animal species exhibit altruistic behavior and others do not? What are the limiting resources for male and female animals, and why do they behave so differently? This is but a sampling of the subjects to be covered in a course that is specifically designed for students to gain a clearer understanding of the mechanisms that drive the natural world around them. We will commence with the early pioneers in ethology who were the first to describe the behavioral repertoire of a single species and progress onto the more current, comparative approach, in which two animals are compared for a more fine-tuned analysis. Biological jargon will be defined as original research is discussed.

Offering: **Host**

Grading: **A-F**

BIOL149 Neuroethology: Sensory Basis of Animal Orientation and Navigation

This course is about the sensory and neuronal processes underlying the ability of animals to orient in and move through their environments. We will consider the basic functions of sensory and nervous systems that underlie the remarkable abilities of animals to orient themselves in personal space, move through their home range, and move through the world in long-distance migrations and in homing. Animals from invertebrates through fish, birds, and mammals will be

considered. The format of the course will be seminar/discussion and some lectures with heavy student participation. The course is intended for first-year students with high school-level courses in at least two of the following: biology, chemistry, or physics.

Offering: **Crosslisting**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B149**

Prereq: **None**

BIOL155 Tiny Organisms with a Big Effect: The Microbiome

With the advent of advanced sequencing technology, we are able to characterize the microflora that lives on and inside of multicellular organisms, including humans. It follows that there are still many unknowns with respect to the function and dynamics of relationships between bacterial communities and their hosts. These bacterial communities, colonizing humans and other organisms with millions of microbes, have captured the interest of the public. Popular news outlets have made the disparate claims that the right human microbiome can act as a panacea and the wrong microbiome is such a calamity that it can destroy an individual's health. This course will look at the true nature of the microbiome, to the extent that current research has revealed. We will discuss both normal and abnormal bacterial community compositions and any related disease states. Similarly, we will cover changes in microbiome composition over time and with respect to host development. In class, we will also consider the microbiomes of other organisms and how the presence and composition of the microbiome relates to disease states and/or life history.

Offering: **Host**

Grading: **A-F**

BIOL160 Life in the Oceans in the Anthropocene and Beyond

Little is known about life in the deep sea, the largest habitat on Earth, even about the largest animals living there, such as the giant squid. Humans, however, are severely affecting even these most remote areas of our planet, and wildlife populations in the oceans have been badly damaged by human activity. We will look at the amazing diversity of ocean life and the disparate building plans of its animals, and see how oceanic ecosystems are fundamentally different from

land ecosystems. Then we will explore how human actions are affecting oceanic ecosystems directly, for instance by overfishing (especially of large predators and filter feeders), addition of nutrients (eutrophication) and pollutants, and the spread of invasive species, as well as indirectly, through emission of carbon compounds into the atmosphere. Rising atmospheric CO₂ levels lead to ocean acidification and global warming, affecting the all-important metabolic rates of ocean life, as well as oceanic oxygen levels and stratification, thus productivity. We will try to predict the composition of future ecosystems by looking at ecosystem changes during periods of rapid warming in the geological past and see whether future ecosystems will become dominated by jellyfish, as they were 600 million years ago.

BIOL161 Science Materials For a Malagasy Classroom

Students will design and produce a variety of educational science materials to be used in a fifth grade classroom in Madagascar. These items include a science logo, bookmarks, educational science games, posters, and a comic book with conservation themes for children. Students who are interested in design and natural history as a means through which to communicate science themes on wildlife endemism, evolution, and climate change would be appropriate for this course. All students will need to conduct independent research into science topics, distill down the salient features, and use that information to design elementary school materials. Working both individually and in teams, students will conceive, design, critique, and move into product production (MakerSpace). In addition, prototypes of the materials will be reviewed and rated by fifth graders in a Middletown elementary school for feedback.

Identical With: **ENVS261, IDEA261**

Prereq: **None**

BIOL173 Global Change and Infectious Disease

This course will cover how human demands upon the environment have come back to bite us through infectious diseases. The most devastating infections, now and in the past, have spilled into humanity from other animals through our quest for food, either through hunting and trade of wild animals (COVID-19 and HIV) or through agriculture (smallpox and measles). Additionally, taking over huge swaths of land has fragmented natural habitats, with the result that some pathogens have increased in abundance (Lyme disease) and some pathogens have moved closer to humanity when humans have encroached on natural lands (Ebola). Living at high density in interconnected cities has sustained the severe infections that became humanity's childhood diseases (mumps, measles, smallpox); high densities have also brought us diseases brought by fecally contaminated water, as well as those diseases brought by the animals that cohabit our cities and suburbs (rats, robins). Our demand on energy has brought us global warming, which is transporting tropical diseases, such as malaria, poleward from the tropics; the extreme weather events of a changed world are leading to outbreaks of zoonotic diseases (hantaviruses). Moreover, our penchant for transporting wild animals and ourselves has had the potential to spread any local flare-up of any novel disease to the whole world (plague, COVID-19). We will discuss how, even if we mitigate every existing human infection, we should expect an unending stream of new pathogens. We will discuss technological solutions to infectious diseases, as well as how changes in our ethics might help contain existing pathogens and avoid future spillovers. Lectures will cover these and other topics. There will be two 65-minute lectures each week, with frequent opportunities for students to break

out into smaller sections to figure out interesting biological challenges. There will also be a 30-minute discussion each week for each of 11 discussion sections (probably about 15 students each). These discussions will focus mostly on how policy changes might best mitigate the environmental disturbances that are bringing us infections. The course has no formal prerequisites and will introduce material from ecology and microbiology, as needed, to allow students to read and interpret the recent literature on global change and infectious disease.

BIOL181 Principles of Biology I: Cell Biology and Molecular Basis of Heredity

This course presents an exploration of the contemporary view of the cell and an introduction to the molecules and mechanisms of gene function. The course will have two major themes. First, we will focus on the central dogma of molecular biology, describing the process of information transfer from the genetic code in DNA through protein synthesis and function. Topics include DNA replication, chromosome dynamics, transcription, translation, and gene regulation. Second, we will focus on cell theory and the underlying molecular mechanisms of cellular activity, including transport across cell membranes, cellular energetics, protein sorting, cell motility, and cell cycling. Lectures will stress the experimental basis of conclusions presented and highlight important details and major themes. The course will also emphasize problem solving approaches in cell and molecular biology. This course will require about 10 hours per week of engagement. Students should enroll separately in MB&B/BIOL191 Principles of Biology 1 - Laboratory.

Offering: **Crosslisting**

BIOL182 Principles of Biology II

This course covers biological principles at tissue, organ, organismic, and population levels of organization. We will review how animals regulate their internal environment to control or adapt to changes in temperature, salt levels, nutrients, levels of oxygen and carbon dioxide, and the presence of infectious agents. We will examine the molecular, cellular, and tissue mechanisms that underlie the hormonal, neuronal, and behavioral processes that underlie these responses. We will learn how these systems develop in the embryo. At the

population level, we will review evidence for evolution, including the tenets of Darwin's theory of evolution by natural selection. We will also discuss the nature and importance of variation among organisms, stochastic processes in evolution, and modern theories of speciation and macroevolution. Finally, the course addresses ecological aspects of population biology, including patterns and processes that inform the distribution and abundance of biodiversity, population growth, organisms' responses to environmental variation, and interactions among species. Each of the topics of the course is explored from a comparative viewpoint to recognize common principles as well as variations among organisms that indicate evolutionary adaptation to different environments and niches.

BIOL197 Introduction to Environmental Studies

This course explores the interdisciplinary field of environmental studies to better understand the characteristics of human interaction with and dependence on the environment, and the causes and consequences of environmental degradation at local and global scales. We will explore key processes, characteristics, and phenomena of the natural world, and relevant human system and social dynamics. We will apply this information to identifying important issues and trends of global climate change and sustainability. Projects facilitate synthesis and application, skill development, reflection, and independent exploration.

Offering: **Crosslisting**

Grading: **OPT**

Prereq: **None**

BIOL198 Principles of Biology II Laboratory _ Online

This laboratory course, designed to be taken concurrently with BIOL182 or MB&B182, will introduce students to experimental design, laboratory methods, data analysis, and empirical approaches to developmental biology,

physiology, ecology, and evolution. Laboratory exercises use the techniques of electrophysiology, microscopy, computer simulations, and analyses of DNA sequence data. Some exercises will include exploration of physiological processes in living animals.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.25**

Gen Ed Area: **None**

Identical With: **MB&B198, NS&B198**

Prereq: **BIOL192**

BIOL208 Molecular Biology

This course is a comprehensive survey of the molecules and molecular mechanisms underlying biological processes. It will focus on the cornerstone biological processes of genome replication, gene expression, and protein function. The major biomacromolecules--DNA, RNA, and proteins--will be analyzed to emphasize the principles that define their structure and function. We will also consider how these components interact in larger networks within cells to permit processing of external and internal information during development and how these processes become perturbed in disease states.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MBB**

Identical With: **MB&B208**

Prereq: **MB&B181 AND MB&B182**

BIOL210 Genomics: Modern Genetics, Bioinformatics, and the Human Genome Project

Genetics has provided a foundation for modern biology. We will explore the classical genetics and go on to consider how genomics has transformed this field. This course is intended to introduce students to the fields of genetics and genomics, which encompass modern molecular genetics, bioinformatics, and the structure, function, and evolution of genomes. We will discuss important new areas of research that have emerged from the genome projects, such as epigenetics, polymorphisms, transgenics, systems biology, stem cell research, and disease mapping. Students will also discuss bioethical issues we face in this new postgenome era.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **MB&B210**

Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

BIOL212 Principles and Mechanisms of Cell Biology

The cell is the smallest structural and functional unit of an organism. The primary goal of this course is to understand the structure, organization, regulation and behavior of cells, because with this perspective one can begin to ask complex questions including: why does mutating a protein cause a cell to malfunction and how does this cause tissue malfunction or disease? We will examine the cell mainly in the context of the multicellular organism--where cells respond to as well as regulate their local environment. Hence, this course provides students with a firm foundation in cell biology as we examine eukaryotic cell structure, organelle function, cell adhesion and motility, signal transduction and cell differentiation, cell survival and apoptosis, and consider how these mechanisms integrate to generate coherent cell behaviors. Published research will be discussed throughout the course in order to build students' understanding of research in cell biology. Lectures, assignments and assessments include opportunities for students to develop a broad and deep knowledge of cell biology, gain understanding of the scientific process of inquiry, experimentation and interpretation, and develop skill in analytical and critical thinking and scientific writing.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-MBB**

Identical With: **MB&B212**

Prereq: **MB&B181 OR BIOL181 OR BIOL181Z**

BIOL213 Behavioral Neurobiology

This course will introduce the concepts and contemporary research in the field of neuroscience and behavior. The course is intended for prospective neuroscience and behavior majors (for whom it is required) and for biology and psychology majors who wish a broad introduction to neuroscience. The initial few weeks will be devoted to fundamental concepts of neuroanatomy and neurophysiology. Subsequent classes will deal in-depth with fundamental problems of nervous system function and the neural basis of behavior, including neurotransmitter systems; organization of the visual system and visual perception; the control of movement; neurological and neuropsychiatric disorders; the neuroendocrine system; control of autonomic behaviors such as feeding, sleep, and temperature regulation; the stress response; and language, learning, and memory. Experimental results from a variety of species, including humans, will be considered.

Offering: **Crosslisting**

Identical With: **NS&B213, PSYC240**

Prereq: **None**

BIOL214 MacroEvolution, Pattern and Process

Over the last 3.5 billion years, life has taken on a vast array of forms in a multitude of environments. In this class, we will use evolutionary analysis to reveal the key patterns and processes that produced this amazing diversity of life. Topics will include: the evidence for evolution, the nature of variation, adaptive and random evolutionary processes in natural populations, mechanisms of speciation, phylogenetic reconstruction with molecular and morphological data, and major events in the history of life on earth. Motivating examples will be drawn from across the domains of life.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **MB&B182 OR BIOL182 OR BIOL182Z**

BIOL215 Evolution in Human-Altered Environments

Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL515, ENVS210**

Prereq: **[BIOL182 or MB&B182]**

BIOL216 Ecology

Ecology is the scientific study of interactions between organisms and their environment, both biotic and abiotic. We will look at how these interactions shape fundamental characteristics of populations, communities, and ecosystems. Topics will include predation, competition, symbioses, and effects of stress

and resource limitation in diverse environments. We will cover important consequences of interactions such as coevolution, population outbreaks, ecological coexistence, patterns of biodiversity, ecological succession, species invasions, food web dynamics, nutrient and energy cycling, variation in ecosystem goods and services, and global change.

This course emphasizes several learning goals in biology, including skill in formulating original ideas and experiments, using quantitative and graphical tools and interpreting quantitative information, and scientific writing.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **ENVS216**

Prereq: **[BIOL182 or MB&B182]**

BIOL217 Microbial Genomics and Evolution

In this course, students will learn the principles governing the structure, regulation, and evolution of bacterial and viral genomes. We will emphasize the experimental logic and conceptual models that researchers use to link genotype to phenotype. Specific topics will include operons, genetic networks, horizontal gene transfer, phylogenetics, and genome-wide association studies. Motivating examples will be drawn from both medical and environmental microbiology.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **MB&B181 OR MB&B181Z AND MB&B182 MB&B182Z**

BIOL218 Developmental Biology

It's an extraordinary time to learn Developmental Biology: advancements in imaging and experimental strategies, especially those that manipulate gene expression, have led to an explosion in the amount that we know about how an organism develops and how developmental programs are also used in the adult organism. This course covers the mechanisms of development at the molecular, cellular, and organismal levels. We may also cover tissue repair and regeneration, aging, cancer, and other topics that are tied to development. Special attention will be paid to the process of scientific discovery--the experiments--and students will read original research articles. We will discuss ethical and medical considerations for some of the topics covered. Lectures, class discussion, and assignments will include opportunities for students to develop a broad and deep knowledge of developmental biology, gain understanding of the scientific process of inquiry, experimentation and interpretation, and develop skill in analytical and critical thinking and scientific writing.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **BIOL182 OR MB&B182 OR BIOL182Z**

BIOL220 Conservation Biology

This course will focus on the biology of conservation rather than cultural aspects of conservation. However, conservation issues will be placed in the context of ethics, economics, and politics. We will cover the fundamental processes that threaten wild populations, structure ecological communities, and determine the functioning of ecosystems. From this basis, we will explore important conservation issues such as habitat loss and alteration, overharvesting, food web alteration, invasive species, and climate change. We will use readings from the primary literature and field projects to learn about current research methods used in conservation biology.

Offering: **Host**

Grading: **A-F**

Identical With: **ENVS220**

Prereq: **BIOL182 OR MB&B182 OR BIOL182Z**

BIOL223 The Molecular Basis of Cancer

Cancer is a group of diseases characterized by unregulated cell growth and tissue invasion. This course will focus on the molecular events that lead to cancer. We will cover topics in both molecular and cellular biology and genetics that are relevant to understanding the differences between normal and cancer cells. Particular focus will be placed on oncogenes and tumor suppressor genes, DNA damage responses, the p53 signaling pathway, cell cycle regulation, and the molecular basis of cancer therapies. This course will utilize both the textbook and primary scientific literature in the study of cancer.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Identical With: **MB&B223**

Prereq: **MB&B181**

BIOL224 Hormones, Brain, and Behavior

Hormones coordinate the anatomical, physiological, and behavioral changes necessary for developmental, seasonal, and diurnal transition in animals. These molecules have profound effects on the development of the brain and on adult brain function. How do hormones orchestrate brain assembly and the expression of specific behaviors? How do behavior, social context, and the environment influence hormone secretion? This course will provide a critical survey of our understanding of the relationship between endocrinology, the brain, and behavior in a variety of animal systems. Select topics include insect metamorphosis; sexual differentiation of the vertebrate brain and behavior; reproductive and aggressive behavior in birds, lizards, and rodents; song learning and song production in birds; and the effects of hormones on sexual behavior and cognitive function in primates, including humans. The exploration of a variety of systems will provide students with an appreciation of the ways in which the relationships between hormones and behavior vary across species, as well as the extent to which these relationships are conserved.

BIOL226 Invasive Species: Biology, Policy, and Management

Invasive species account for 39 percent of the known species extinctions on Earth, and they are responsible for environmental damages totaling greater than \$138 billion per year. However, the general population has little knowledge of what invasive species are or what threats they pose to society. In this course, we will explore the biological, economic, political, and social impacts of invasive species. We will begin by exploring a definition of an invasive species and looking at the life history characteristics that make them likely to become pests. Then we will consider the effects of invasive species expansion on the conservation of biodiversity and ecosystem function, as well as their global environmental and political impacts. Finally, we will explore the potential future changes in invasive species distributions under a changing climate.

Offering: **Host**

BIOL233 Geobiology

Fossils provide a glimpse into the form and structure of ancient ecosystems. Geobiology is the study of the two-way interactions between life (biology) and rocks (geology). Typically, this involves studying fossils within the context of their sedimentary setting. In this course, we will explore the geologic record of these interactions, including the fundamentals of evolutionary patterns, the origins and evolution of early life, mass extinctions, and the history of the impact of life on the climate.

Offering: **Crosslisting**

BIOL235 Comparative Vertebrate Anatomy

This course will provide a comprehensive overview of the main organ systems in vertebrates, emphasizing phylogenetic relationships and anatomical features of major vertebrate groups. Using a comparative, systems-based approach students will explore the relationships between structure and function, evolutionary and developmental constraints on vertebrate anatomy, and the ways that a comparative anatomical approach informs our understanding of the human body. The course format will consist of two lectures and one lab per week, with lab sessions focusing on detailed dissection of several representative vertebrate species.

Offering: **Host**

Grading: **A-F**

Gen Ed Area: **NSM-BIOL**

Prereq: **([MB&B181 or BIOL181] AND [BIOL182 or MB&B182] AND [MB&B191 or BIOL191] AND [BIOL192 or MB&B192])**

BIOL237 Signal Transduction

Cells contain elaborate systems for sensing their environment and for communicating with neighbors across the membrane barrier. This class will explore molecular aspects of signal transduction in prokaryotic and eukaryotic cells. Topics will include membrane receptors, GPCRs, kinases, phosphorylation, ubiquitination, calcium signaling, nuclear receptors, quorum sensing, and human sensory systems. We will integrate biochemical functional approaches with structural and biophysical techniques.

Offering: **Crosslisting**

Identical With: **MB&B237**

Prereq: **[MB&B208 or BIOL208]**

BIOL239 Functional Anatomy of the Human Brain

The human brain is an organ with the consistency of firm Jell-O, weighing about 2.5 pounds in an adult. It is made of 86 billion neurons and approximately the same number of non-neuronal cells. Contrary to common misconceptions, we use all the neurons in our brains, not just a small fraction of them from the regions dedicated to the function being performed. Brain cells organize in distinctive anatomical structures, which are interconnected through complex circuits that control nearly every function of the body, such as learning and memory, thinking, consciousness, and aesthetic appreciation. Its malfunction results in a variety of diseases, including senility, mood disorders, and motor/sensory dysfunctions. This course will examine in some detail the complex organization of the brain and how it performs some of its basic functions. The course will familiarize students with the medical terminology and neurological concepts for a general understanding of the human brain and spinal cord, being of special interest for pre-med students, NS&B, biology, and psychology majors; and anyone simply interested in how the brain works.

Offering: **Crosslisting**

Gen Ed Area: **None**

Prereq: **(BIOL182 AND BIOL212) OR BIOL218**

BIOL242 Quantitative Methods for the Biological and Environmental Sciences

This course offers an applied approach to statistics used in the biological, environmental, and earth sciences. Statistics will be taught from a geometric perspective so that students can more easily understand the derivations of formulae. We will learn about deduction and hypothesis testing as well as the assumptions that methods make and how violations affect applied outcomes. Emphasis will be on analysis of data, and there will be many problem sets to solve to help students become fluent with the methods. The course will focus on data and methods for continuous variables. In addition to basic statistics, we will cover regression, ANOVA, and contingency tables.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **BIOL542, E&ES270, E&ES570, ENVS242**

Prereq: **None**

BIOL243 Neurohistology

The aim of this course is to study the microscopic structure of the nervous system. Structural and functional relationships between neurons and glia, as well as the organization of major brain regions (cortex, hippocampus, and cerebellum) will be examined. In addition to traditional histological preparations, modern techniques including confocal microscopy and immunohistochemistry will be studied and performed. Laboratory exercises will include the preparation and visualization of microscopic slides using a variety of techniques. While this course will focus on mammalian nervous system, skills learned in this course will be applicable in a variety of research models.

Offering: **Crosslisting**

Gen Ed Area: **NSM-BIOL**

Identical With: **NS&B244, BIOL544**

Prereq: **BIOL182 OR BIOL182Z AND NS&B213**

BIOL245 Cellular Neurophysiology

This neurophysiology course is mostly a study of how neurons send, receive, and integrate the signals that produce nervous system activity. Using the tools of electrophysiology (the electrical recording and manipulation of neurons), we can better understand synaptic plasticity, neuronal oscillations, and network activity. In the last module of the course, students will use their knowledge of a diversity of voltage-gated channels, neurotransmitter systems, and neuron categories to

better understand the neurophysiology of epileptic seizures and sensorimotor systems and locomotion. We will also examine articles about human-machine interfaces that are being developed in the diagnosis and treatment of epilepsy as well for the restoration of motor activity and somatosensation.

Offering: **Host**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **NS&B245, BIOL599**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL247 Laboratory in Neurophysiology

The course is designed to teach techniques and offer independent research experience. Students study living nervous systems and measure the electrical signals at the heart of nervous system function. In the first part, experiments include intracellular recordings of rest and action potentials, synaptic transmission, sensory coding and integration in simple nervous systems. Students learn surgical and electrophysiological recording techniques working with invertebrate and cold-blooded vertebrate animals including crayfish, mollusks (Aplysia), leeches, fish, and amphibians. In the second part of the course, students will use these techniques in novel, independent research projects.

Offering: **Host**

Grading: **A-F**

Identical With: **NS&B247**

Prereq: **([NS&B213 or BIOL213 or PSYC240] AND [BIOL182 or MB&B182])**

BIOL250 Laboratory in Cellular and Behavioral Neurobiology

The goals of the course are to introduce students to a number of contemporary laboratory techniques in neuroscience and behavior. The laboratory introduces students to experimental method and techniques including neuroanatomy, immunohistochemistry, primary neuronal and astrocyte cell culture methods, analyses of electrical activity in the brain, and behavioral analyses of learning, memory, social behavior, and social dominance in inbred strains of mice.

Students will learn to analyze experimental data and write a series of laboratory reports on the experiments done during class. In addition, students will write a term paper related to one of the experimental approaches.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **NS&B250, NS&B555**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL251 Laboratory in Basic Practices in Neuroscience

This course will provide students with the knowledge and some tools to solve problems in neurobiology. Topics covered include a fundamental review of neurobiology and approaches in neuroscience research methods, behavioral studies, tissue/cell preparation, and histology/microscopy.

Students will learn how the applications of advanced neuroscience techniques have answered fundamental questions in neurobiology and neurophysiology. Modern approaches and their applications will be discussed, including behavioral studies, tissue preparation and analysis, histology, and microscopy.

The learning outcomes will be assessed by a project, oral presentation of the project, written laboratory class reports (lab notebooks), and a lab practicum.

Offering: **Crosslisting**

Grading: **A-F**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B251**

Prereq: **NS&B213 OR BIOL213 OR PSYC240**

BIOL252 Cell Biology of the Neuron

Understanding the cellular biology of neurons is critical for understanding neurological disorders as well as neuropharmacological methods for treating the nervous system. In this course, we will explore how neurons function, focusing on structure-function relationships of the molecular building blocks of neurons. We will examine the basic cell biological mechanisms that underlie the formation, function, and plasticity of neurons and circuits. Areas studied will include cytoskeleton, cellular polarity, synapse formation, synaptic transmission, inter- and intra-cellular transport, neuronal plasticity, and regeneration. This course is designed to follow on from NS&B213 Behavioral Neurobiology.

Offering: **Crosslisting**

Grading: **A-F**

Gen Ed Area: **NSM-NSB**

Identical With: **NS&B252**

Prereq: **[NS&B213 or BIOL213 or PSYC240]**

BIOL254 Comparative Animal Behavior

In this survey course, we explore a wide range of animal behaviors at the proximate and ultimate levels of analysis. Main topics include: the principles of communication, genetic regulation of behavior, neuroethology, biological rhythms, hormones and behavior, reproduction, and animal cognition. Students gain foundational knowledge by engaging with textbook readings and traditional lectures. Students practice self-directed inquiry, peer-assisted learning, and scientific communication through in-class work sheets, group discussions, take-home assignments, and presenting topics of their choosing. Finally, students will learn about research and the academic career path through scholar highlights, interacting with guest speakers, and reading primary literature.

Offering: **Host**

BIOL256 Quantifying Evolution: The Genetics of Populations

How can we forecast the survival of an endangered species? How quickly can antibiotic resistance arise? Who is Lucy? Population genetics studies the genetic variation within and between populations that arise from several factors, including natural selection. Migration, mate choice, and habitat all influence the evolution of life. In this course, we will use mathematical modeling to describe how these fundamental forces change populations over time, and we will learn how these principles are used to breed our food supply, build our medicines, and manage our ecosystems. Class sessions will combine lectures with discussion and in-class problem-solving. Using these ideas, students will learn how evolutionary biologists reconstruct history using the principles of inheritance and variation.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Prereq: **MB&B181**

BIOL257 Neurogenetics

Genes are the basic functional units of heredity. This course is an introduction to the study of genes and their role in shaping neuronal structure, neuronal function, and behavior. We will learn about classic and modern approaches used

to probe the relationship between genes and behavior, with a focus on studies using model organisms (e.g., flies, mice, worms). We will discuss the molecular genetics of neurological disorders with high heritability and the use of genetic tools to treat these conditions, and we will consider the ethics surrounding treatment and diagnosis of these disorders. Student assessment will include short written responses, in-class quizzes, and exams.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **None**

Identical With: **NS&B257**

Prereq: **BIOL181 AND BIOL182**

BIOL259 Genes to Greens: The Biology of Food Production

Climate change and rapid advances in biological technology are shifting the ways humans grow food. We can now produce food more efficiently than ever, but are losing arable land to harsh and unforgiving climates. We also must grapple with ethical questions about which natural resources we should sacrifice for the good of the global food supply. In this course, students will gain an understanding of plant physiology, traditional agricultural techniques, and traditional and modern crop breeding strategies. Students will engage in the current debates surrounding food production.

Offering: **Host**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **ENVS251**

Prereq: **None**

BIOL263 Demystifying Data: Introductory Data Analysis and Modeling

How do scientists make sense of the data they collect, especially as datasets grow in size and complexity? In this course, students will learn fundamental concepts in data collection, statistics, and modeling through hands-on analysis of publicly available datasets from the COVID-19 pandemic. We will cover the effects of biases in data collection, models of epidemic growth and spread, and the principles of studying a rapidly evolving pathogen. While we will use motivating examples from the life sciences, students can expect to learn techniques and ways of thinking that will form a foundation for evaluating and analyzing data across scientific disciplines. Students will learn the basics of using the R programming language to visualize, analyze, and model data, so no previous programming experience is expected.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Identical With: **CIS263**

Prereq: **MB&B181 OR BIOL182**

BIOL265 Bioinformatics Programming

This course is an introduction to bioinformatics and programming for students with interest in the life sciences. It introduces problem areas and conceptual frameworks in bioinformatics. The course assumes little or no prior programming experience and will introduce the fundamental concepts and mechanisms of computer programs and examples (e.g., sequence matching and manipulation, database access, output parsing, dynamic programming) frequently encountered in the field of bioinformatics.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **NSM-BIOL**

Identical With: **MB&B265, COMP113, CIS265**

Prereq: **[MB&B181 or BIOL181]**

BIOL266 Bioinformatics

This course is an introduction to bioinformatics for students with interest in the life sciences. The course is similar to BIOL265 but only meets in the second half of the semester (with BIOL265) and is designed for students with programming background, ideally in Python. The course introduces problem areas and conceptual frameworks in bioinformatics and discusses programming approaches used in bioinformatics such as sequence matching and manipulation algorithms using dynamic programming, clustering analysis of gene expression data, analysis of genetic nets using Object Oriented Programming, and sequence analysis using Hidden Markov Models, Regular Expressions, and information theory.

BIOL267 Engineering Biology: Cells and Tissues

This course explores the intersection of biology, medicine, and engineering, where scientists are developing novel platforms to promote understanding, diagnosis, and treatment of human diseases. We cover modern techniques for manipulating biological systems, spanning single molecules to ensembles of cells. We will examine the trajectory of the field from studying cells in a plastic dish to the advent of organ-on-a-chip and organoid models and discuss how this transition from 2D to 3D biology has propelled increased understanding of both normal physiological homeostasis and also the pathophysiology of disease. Topics will include controlling behavior of cells through cell-matrix interactions, learning through building via synthetic biology, and advances in regenerative medicine. These topics will be explored through the thematic lenses of transport processes (supply of nutrients and removal of waste) and mechanoreciprocity (the sensing of and response to the physical properties of the cellular microenvironment). Lectures will review fundamental concepts in cell biology and physiology before delving into topical examples from current literature. Lectures and assessments will include opportunities to develop skill in thinking analytically and critically about using engineering tools to study fundamental questions in human disease, formulating original ideas and experiments, and communicating science through written and oral formats.

BIOL270 Systems Biology with Programming

Systems--collections of entities that interact to form an interconnected whole--are present at every scale of organization in the life sciences. Biologists can take advantage of computational and mathematical tools to understand how these systems function and predict how they might change over time. This approach is critical in applications ranging from epidemic modeling to evolutionary theory. In this course, students will learn how simple rules and interactions can lead to complex behavior using examples from three main areas: regulatory networks, population genetics, and ecology. Students will spend the first part of the course learning how to program in Python in order to model, simulate, and visualize these systems. No previous programming experience is expected.

Offering: **Host**

BIOL299 Waves, Brains, and Music

Pressure waves bounce against the ear, and we create perceptions called sounds from them. We organize sounds to make music, making more waves, and the cycle goes forward. This course will provide an introduction to the fraction of these phenomena that can be measured and analyzed, focusing on the mathematics of signal analysis, auditory physiology, and the physiology of musical perception and production. Periodic waveforms include musical tones and the voltage fluctuations that can be measured from brains. The first third of this course (waves) is an introduction to the quantitative analysis of periodic waveforms, with the goal that the student will have a better understanding of how to interpret the analysis of both musical sounds and neuronal recordings. The second part of the course (brains) examines the known mechanical processes (physiology) by which the mammalian brain analyzes the periodic waveforms that we interpret as sound. The third part of the course uses these lessons to examine original research articles about the neuroscience of music, that is, how neuronal networks produce musical perception.

BIOL302 Neurobiology of Aging

This course is designed to explore the intricate relationship between the aging process and the nervous system. As our population ages, understanding the underlying neurobiology of aging becomes increasingly important. This course delves into the physiological, cellular, and molecular aspects of how the nervous system changes over time and the impact of these changes on cognition, behavior, and overall well-being.

This course will introduce the student to the study of aging (gerontology) and the effects of normal aging and pathological aging on the nervous system. We will discuss general concepts of aging, and biochemical, physiological, and behavioral age-associated changes in the motor, sensory, cognitive, and neuroendocrine systems. By the end of the course, the student should have a clear understanding of what aging is and what effects it has on normal brain function. In class, I will introduce the topic with slide presentation and after that, we will discuss the topic based on the scientific article discussion. After the last class, students will have extensive opportunities for feedback and will write a project and present it in class as an oral presentation. Student evaluation will include weekly quizzes, project, a midterm and final exams, and class participation/attendance.

Course Objectives:

By the end of this course, students will:

1. Gain a Comprehensive Understanding: Develop a comprehensive understanding of the neurobiological processes associated with aging, including neurodegenerative diseases.
2. Explore Structural Changes: Examine structural changes in the aging brain, such as alterations in neuron density, synapse formation, and brain volume.
3. Analyze Functional Changes: Analyze functional changes in the aging nervous system, including changes in memory, cognition, sensory perception, and motor function.
4. Study Neurodegenerative Diseases: Investigate common neurodegenerative diseases associated with aging, such as Alzheimer's disease, Parkinson's disease, and age-related macular degeneration.
5. Explore Cellular and Molecular Mechanisms: Explore the cellular and molecular mechanisms underlying age-related changes in the nervous system, including oxidative stress, inflammation, and genetic factors.
6. Examine Potential Interventions: Review potential interventions and strategies to promote healthy aging and delay or mitigate age-related neurobiological changes.

BIOL304 Glia: Not just neuronal glue!

Historically, neuroglial cells (i.e., astrocytes, oligodendrocytes, and microglia) were considered the space-filling cells of the brain, simply the brain's "glue." Later, their primary role was considered metabolic support of neurons (e.g., buffer extracellular potassium, recycle neurotransmitters, myelination, etc.). However, the notion of glia as inert bystanders has recently been revised. It is now accepted that glial cells play critical physiological roles in normal nervous system development and function, including controlling brain wiring, modulation of synaptic transmission, regulating blood flow, and serving as the brain's lymphatic system just to name a few functions. Moreover, glia contributes to a variety of neurological disorders such as epilepsy, glioma, multiple sclerosis, neurodegenerative diseases, and psychiatric disorders like major depressive disorder and schizophrenia. Hence, these underappreciated cells are long overdue recognition. This is an interdisciplinary course in which students will engage in a focused, in-depth exploration of how glial cells contribute to neurological and psychiatric disorders. Lectures by both basic scientists and clinicians will highlight recent research on the molecular mechanisms by which glial cells contribute to the establishment and progression of neurological and psychiatric disorders.

This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature. After the classes, students will have extensive opportunities for feedback and will be requested to write a simple paragraph for the next class and/or answer a small quiz, based on the new knowledge acquired. Student evaluation will include quizzes and assessments for a lay audience, a midterm and a final exam, class participation, and attendance.

Course Objectives:

1. Describe the development, histology, and normal physiological function of glial cells.
2. Describe the role inflammation plays in neurological and psychiatric conditions.
3. Describe the role traumatic brain injury plays in neurological and psychiatric conditions.
4. Describe the role genetics plays in neurological and psychiatric conditions.
5. Describe the physiology, pathology, and disease mechanisms of neurological and psychiatric conditions.

6. Demonstrate effective written communication skills to construct a succinct "News & Views" style summary of a primary research report for a lay audience.

BIOL306 Ecology and Natural History of Freshwater Fishes of South America

South America has the highest diversity of freshwater fishes anywhere in the world. In fact, there are more than twice the number of mammals and about the same number of birds in the world. Why has this remarkable radiation occurred in a relatively short period of time? How can so many fishes coexist in the same rivers, utilizing the same resources? In this intensive course, we will travel to Colombia during spring break (March 7-21) in order to gain firsthand knowledge about the ecology and natural history of freshwater fishes in South America. We will learn about the ecological and environmental factors that contribute to perhaps the largest biological radiation on the planet.

Students will obtain firsthand experience with the South American tropics, freshwater fishes, and with doing experiments in the field. Each day there will be a combination of lectures and field or laboratory exercises. We will travel to and explore fish ecology in different types of rivers at different elevations. Students will gather and analyze data about biological, physical, and environmental issues that are covered in the lectures. The habitats that we explore will be both terrestrial and freshwater rivers. Our base will be at the Instituto Humboldt in Villa de Leyva, Colombia. We will interact with Colombian students who are studying ecology and biodiversity at the Institute in order to exchange ideas about current environmental issues.

All the costs of travel, lodging, and meals will be covered by the course.

BIOL310 Genomics Analysis

This course is an introduction to genomics and analysis for students with interest in life sciences. It introduces current applications of genomics techniques, covers how to build a genomics workflow, and introduces statistical analyses in R programming language. This course assumes little or no prior programming experience and will provide hands-on experience in taking raw next-generation sequencing data through a custom workflow and ending with analyses in R statistical software. This course emphasizes hands-on computational methodology, bioinformatics data analysis, and interpretation of quantitative information. The primary method of evaluation is through written work and weekly homework assignments and the course will increase students skill in scientific writing and scholarship. Classes will consist of lectures, discussion groups and cloud based computational projects designed to train transferable skills in big data analysis. Lectures, labs, assignments and assessments will promote deep knowledge in genomics and informatics, gaining understanding in the scientific process, thinking analytically and critically about biological questions, and formulating original ideas and testing them with big data. Skills gained during the course will include quantitative, statistical and graphical tools, scientific writing, oral communication and deep thinking about ethics in a genomics-enabled world.

BIOL312 Global Change Biogeography

On our home planet, Earth, the current geologic epoch is characterized by rapid changes to the environment due to human behavior. Biogeography examines the spatiotemporal distribution of life on Earth, from species to ecosystems and from landscapes to continents. How is anthropogenic climate change modifying the distribution and function of organisms and ecosystems? What can we learn from the evolutionary history of the life-planet system that can help us understand the possible impacts of future climates on the biosphere? To address these questions rigorously, we will explore primary literature from a wide range of theoretical and empirical studies. The course emphasizes inquiry, contact with primary literature, discussion, statistical and spatial coding, learning to obtain data, and visualization. The beginning of the semester provides an overview of physical geography and the Earth System, with field and data experiences that build remote sensing and spatial analysis skills. The second half of the semester is focused on the exploration of relevant scientific literature based on student interests and recent papers, as well as independent research projects.

BIOL317 Genes and Mechanisms in Vertebrate Sex Determination

Sex determination in vertebrates is a highly plastic process that centers on the decision within a bipotential organ, the gonad, to differentiate into either an ovary or a testis. Interestingly, the "problem" of how to determine sex has been solved in many different ways across the animal kingdom. This course will explore the basic principles and molecular networks involved in sex determination across vertebrate species including fish, reptiles, birds, and mammals. The format will be primarily seminar-style, involving brief introductory lectures, reading, discussions, and individual and group presentations of key papers on chosen topics.

BIOL318 Nature and Nurture: The Interplay of Genes and Environment

In this advanced seminar, we consider how genetic and environmental factors interact to shape the development and behavior of organisms, including humans. After an initial series of lectures and discussions on foundational readings, the

class will consist of in-depth student presentations on topics of their choice such as genetic and environmental causes of specific human behavioral and disease phenotypes.

Students gain understanding of scientific inquiry and interpretation, as well as fundamental knowledge of biological causation and deep knowledge in the specific area of their own research projects. Through researching the current scientific literature, reading and synthesizing data papers, participating actively in small-class discussions, and giving a substantial oral presentation, students will build their skills in critical thinking about biological questions and related ethical issues, scientific scholarship, and oral communication of scientific information.

BIOL322 Cell Migration in Development and Disease

What do the formation of an embryo, the healing of a wound, the surveillance of the immune system, and the invasion of metastatic cancer all have in common? Each of these processes requires the coordinated movement of cells, alone or in groups. In this course, we will learn how and why cells move, and explore what happens when they stop moving properly. We will build up our knowledge from "small" to "large," spanning biological scales from molecules to tissues. Topics will include: (1) the biomolecules of migration: cytoskeleton, focal adhesions, molecular motors; (2) cellular locomotion: protrusion, adhesion, contraction, retraction; (3) cell mechanics and force generation; (4) collective motions during morphogenesis and repair; (5) mechanisms for steering migration: chemotaxis, haptotaxis, galvanotaxis, durotaxis, etc.; (6) cancer as a disease of aberrant cell migration. Throughout the course we will emphasize model systems, experimental design, and technology and measurement techniques. We will focus on seminal works, with attention paid to how these works rippled forward in time, along with cutting edge research.

BIOL327 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology

and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

BIOL328 Chemical Senses

The least well understood of the senses, chemical sensation, is key to survival and behavior of many species. This course covers the structure and function of sensory neurons in both the gustatory and olfactory systems, as well as in chemosensory irritation. We will examine coding of sensory information to understand how higher cortical areas interpret stimuli. We will look at a variety of animal models and discover common organizing principles across phyla. Emphasis will be placed on the cell biology of these systems. Students will participate in reading, analyzing, and presenting recent studies from different areas within chemical sense to highlight recent findings and where the emphasis in chemosensory research is focused.

BIOL332 Genomics Era Cell and Development

Each decade, technological advances shape the kinds of research questions that can be asked and solved. This past decade, sequencing technologies have delivered rich data sets analyzing genomes and transcriptomes. In this functional genomics course, we'll discuss several cases where the starting point for research was a genetic change (or several genetic changes) found in a tissue, disease, or population. We'll look at the cell and molecular research that was then done and what was learned. For case studies that relate to disease we will also consider how research discoveries shaped treatment options.

This course will greatly expand students' foundational knowledge of cell and developmental biology. Students will also develop their data interpretation and communication skills. Since we all harbor genetic changes that modify our susceptibility to a disease or condition, we will also think critically about moral and ethical issues that arise from the case studies we discuss in class.

Prereq: **BIOL208 OR BIOL210 OR BIOL212 OR BIOL218**

BIOL333 Gene Regulation

This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. We will discuss various "Omics" tools, and in particular, sequencing-based strategies that provide information about the transcriptome and epigenome. We will also discuss current models on how transcriptional regimes unfold during the activation (or silencing) of genes, and how these processes become disrupted in various diseases. Finally, we will consider stochastic attributes of gene regulation that challenge "all or nothing" perspectives on cellular states (e.g., perspectives that genes are either "on" or "off," or that cells are either "differentiated" or not). An overarching theme is how genomes encode and execute regulatory programs in response to environmental and developmental cues.

BIOL334 Shaping the Organism

We are composed of tissues and organs of distinct shapes, but how are these shapes formed? To answer this question, biologists turn to the embryos and developing tissues of model organisms to study the mechanisms that build tissues with distinctive shapes and patterns. These mechanisms include changes in the cytoskeleton and cell adhesion, changes in cell shape, changes in the forces within a cell and across a tissue, and signals that determine whether cells live or die. It turns out that most of the processes required to correctly shape embryos and tissues have also been found to function incorrectly in a variety of human diseases!

This is a part-seminar, part-laboratory course that examines tissue and pattern generation in *Drosophila* (the fruit fly), an accessible model organism that has been extensively used to study the conserved processes and proteins that shape tissues. First, we will examine how the *Drosophila* embryo is shaped and patterned. Second, we examine how the *Drosophila* eye is assembled and patterned. Students will set up *Drosophila* crosses, use popular techniques to manipulate protein expression, and dissect and image fly tissues.

BIOL337 The Origins of Bacterial Diversity

Wherever there is life, there are bacteria. Free-living bacteria are found in every environment that supports eukaryotes, and no animal or plant is known to be free of bacteria. There are most likely a billion or more species of bacteria, each living in its unique ecological niche. This course will explore the origins of bacterial biodiversity: how bacteria evolve to form new species that inhabit new ecological niches. We will focus on how the peculiarities of bacterial sex and genetics facilitate bacterial speciation. Topics will include the characteristics of bacterial sex, why barriers to genetic exchange are not necessary for speciation

in bacteria, the great potential for formation of new bacterial species, the evolutionary role of genetic gifts from other species, and the use of genomics to identify ecologically distinct populations of bacteria.

BIOL340 EvoDevo: Origins of Variation in the Phenotype

This advanced seminar explores the field of evolutionary developmental biology (EvoDevo). EvoDevo seeks to understand the developmental mechanisms underlying the origin of newness in the biological world, by exploring the origin of morphological novelty, understanding how development permits (or constrains) the types of bodies that can be produced, and describing how developmental mechanisms themselves evolve. In this course, we will explore central concepts in EvoDevo, consider the role of development in evolution writ large, and connect both to case studies from the primary literature. The course format will consist of a mixture of lecture, class discussion, guest lectures by visiting evolutionary developmental biologists, and assignments focusing on both oral and written scientific communication skills.

Offering: **Host**

BIOL344 Developmental Biology of the Nervous System

Near the top of the list of unsolved mysteries in biology is the enigma of how the nervous system constructs itself. Here is a part of our body that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies.

In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. We will also discuss some disorders and dysfunctions that may happen during the neurobiology of development, such as cerebral palsy, autism, and attention-deficit hyperactivity disorder (ADHD). We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature. After the classes students will have extensive opportunities for feedback and will be requested to write a simple paragraph for the next class and/or answer a small quiz, based on the new knowledge acquired. Student evaluation will include weekly quizzes and/or assessment, a mid-term and a final exam, and class participation.

BIOL345 Developmental Neurobiology

Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.

BIOL346 The Forest Ecosystem

This course examines basic ecological principles through the lens of forest ecosystems, exploring the theory and practice of forest ecology at various levels of organization from individuals to populations, communities, and ecosystems. Lectures, lab exercises, and writing-intensive assignments will emphasize the

quantification of spatial and temporal patterns of forest change at stand, landscape, and global scales.

BIOL347 Mammalian Cortical Circuits

The mammalian cortex is where conscious perception and thought is generated, but the mechanistic details governing those processes are not well known.

Studies of those circuits have revealed a heterogeneity of neuronal classes in the cortex and their proposed roles in these processes. Detailed wiring diagrams of local and long-distance cortical circuits are emerging, colored with dynamic connections that are helping us understand the cortex with these reverse-engineering strategies. Most of the readings for this course will be taken from the recent primary literature; areas of the cortex that will be studied include sensory cortex as well as studies of hippocampal cortical circuits.

BIOL351 Neurobiology of Learning and Memory

Animals as varied as sea slugs and humans display a number of types of learning, ranging from the capacity to acquire species-specific behavior to the ability to form arbitrary associations. Just as varied are the philosophies governing the choice of how to best study the neurobiology of learning and memory. Through lectures, class discussion, student presentations, and a critical reading of the primary literature, the advantages and disadvantages of these various approaches will be investigated. While the specific focus of this class will be on learning and memory, other ways in which the brain learns will also be explored. Normal brain ontogeny relies to some extent on invariant cues in the animal's environment, making this process somewhat analogous to learning. In fact, the neural substrates for learning are likely to be a subset of the basic steps used during brain development. Moreover, the developmental rules guiding brain assembly place constraints on the what, how, and when of brain function and learning. Therefore, this course will also cover select topics in basic developmental neurobiology.

BIOL357 Sex and Gender: From Synapse to Society

From movies like Think Like a Man to songs like "God Made Girls," from federal policies to gender reveal parties, much of our experience is defined by an ideology of gender dichotomy and an endorsement of fundamental sex differences in behavior. But does science agree? The field of neuroscience is bursting with research that both supports and questions inherent differences in the brains and behavior of men and women. In this course we will be taking an open and critical look at this scientific literature. We will begin by clarifying what it means, biologically, to be male/female, determine the limits to these definitions, and evaluate how these biological elements (genes/hormones/anatomy) interact with our environment and society to influence our behavior and gender identity. Additionally, we will evaluate nonhuman animal and human data regarding sex differences in behaviors (e.g., aggression, verbal communication) and neuropathological states (e.g., addiction, autism spectrum disorder). Student evaluation will include effortful participation, biweekly concept checkpoints, a final paper/presentation, and weekly editorials.

Prereq: **BIOL182 AND NS&B213**

BIOL358 Neurobiology of Movement

This course is designed to take a comparative approach to understanding the major motor systems of the brain and will cover the basic elements of motor "control." However, the motor system does much more than contract muscles. Even the most basic movements such as walking require whole-body coordination that must be learned and adapted to our environment. During active sensation, motor systems even modulate our sensory perceptions. Much of what we have learned about motor systems comes from animals as diverse as crickets, electric fish, and birds. This course uses a comparative approach to understand the functions various brain regions contribute to our active lives.

Prereq: **NS&B213**

BIOL360 Neuroplasticity and Neurogenesis in Health and Disease: Molecules, Cells, and Circuits

This course will examine structural and functional neuroplasticity in the nervous system. The ability of the nervous system to reorganize itself by forming new connections, strengthening existing connections, or pruning away old synaptic connections is regulated by our environment, both within the body and the external world. We'll examine critical periods in development when sensory experiences change and sculpt the wiring of the brain, learn how the birth of new neurons changes across the lifespan, and discover how adult neurogenesis is altered by the aging process, physical exercise, stress, and neuropsychiatric disorders, such as epilepsy and Alzheimer's disease. We'll also learn about potential stem cell therapies for enhancing brain repair and plasticity after brain injuries. Students will prepare for class by reading scientific papers and reviews on the topic. In class, I will introduce the topic with slide presentations, and after that we will discuss the topic based on the scientific article discussion. After the classes students will have extensive opportunities for feedback and will be requested to write a simple paragraph for the next class and/or answer a small quiz, based on the new knowledge acquired. Student evaluation will include weekly quizzes and/or assessment, a final exam, and class participation.

BIOL365 Calderwoods Seminar in Public Writing: 21st-Century Biology

Twenty years ago, the landscape of biology looked very different. As the century began, the "rough draft" of the human genome was nearing release, a year ahead of schedule. Biologists envisioned an era of unparalleled progress leading in a straight line from DNA sequence data to the precise causes of human health and behavior, and to the development of genetically modified crops that would end global hunger. As to populations in natural habitats, any evolutionary impacts of climate change were thought to be far in the future. Instead, 21st-century biologists are scrambling to understand the human-caused evolutionary changes taking place in our lifetimes. Genetically modified crops have led to unforeseen threats to the survival of their wild relatives, while constructed ecosystems provide alternative farming approaches. Molecular insights have uncovered the unexpected roles of epigenetics and the microbiome in development and disease. Tools are available to not just decode genes but to edit them, at once raising new possibilities and urgent ethical questions.

How can we approach this changed biological prospect? The course invites students to engage with these broadly resonant issues by framing them for general audiences rather than in specialized scientific terms. Drawing on common content from recent journal articles, guest research lectures/Q&A sessions, and a field trip to a local kelp-shellfish farm, students will unpack these contemporary themes by explaining the basic science in their own voices while considering them in larger contexts and exploring connections to their own knowledge and experience. The course will build strengths in communication and collaboration through individual writing and revising (in a variety of formats), active peer editing, and in-class workshoping of each piece, in a collective student-led format.

BIOL368 Ecological Resilience: The Good, the Bad, and the Mindful

This course will examine the concepts of resilience, fragility, and adaptive cycles in the context of ecosystem and social-ecological-system (SES) structures. These concepts have been developed to explain abrupt and often surprising changes in complex ecosystems and SES that are prone to disturbances. We will also include nonhierarchical interactions among components of systems (termed panarchy) to compare the interactions and dependencies of ecological and human community systems. A systems approach will be applied to thinking about restoration ecology, community reconstruction, and adaptive management theory.

All of the terms--resilience, fragility, adaptation, restoration, reconstruction--are fraught with subjectivity and valuation. We will use mindfulness and meditation techniques (including breathing and yoga) to more objectively and dynamically engage in the subject matter, leaving behind prejudice or bias. Students will be expected to approach these techniques with an open mind and practice them throughout the semester. The objective is to provide students with a more comprehensive framework with which to gain deeper understanding and integration of the science with the social issues.

BIOL373 Exploring the Brain-Body Interface: The Neuroscience of Basic Survival

Basic survival depends on the brain's regulation of fundamental behaviors and physiological pathways, such as eating, drinking, breathing, digestion, cardiac function, and thermal regulation. How do the brain and body communicate with each other to achieve homeostasis, different physiological states, and what goes awry in disease? How have different animals adapted to thrive under challenging environments, such as extreme temperatures, hypoxia, and resource scarcity?

In this advanced seminar, students will take a deep dive into the exciting research taking place at the brain-body interface. We will explore the main components of the peripheral nervous system, such as the vagus nerve and the dorsal root ganglia, that act as gatekeepers into our internal and external sensory worlds. We will also explore pathways in the central nervous system that regulate our basic bodily functions. By reading primary literature and review papers, as well as participating in in-class discussions, students will gain deep knowledge of this burgeoning field of neuroscience. Through short written assignments and oral presentations on topics of their choosing, students will gain skills in scientific writing and scholarship as well as in oral communication of scientific information.

BIOL515 Evolution in Human-Altered Environments

Human activities have altered natural environments and, indeed, have created entirely novel ecosystems such as cities and high-input farms. This course examines how these human alterations to the environment affect the evolution and coevolution of diverse organisms. Starting with an intensive overview of microevolutionary processes, we will consider a number of contemporary scenarios: evolutionary response to environmental contaminants, exploitation of natural populations, and global climate change; evolution in urban and agricultural ecosystems; and the evolutionary impact of nonnative, invasive, and genetically modified organisms.

Offering: **Crosslisting**

BIOL518 Nature and Nurture: The Interplay of Genes and Environment

In this advanced seminar, we consider how genetic and environmental factors interact to shape the development and behavior of organisms, including humans. After an initial series of lectures and discussions on foundational readings, the class will consist of in-depth student presentations on topics of their choice such

as genetic and environmental causes of specific human behavioral and disease phenotypes.

Students gain understanding of scientific inquiry and interpretation, as well as fundamental knowledge of biological causation and deep knowledge in the specific area of their own research projects. Through researching the current scientific literature, reading and synthesizing data papers, participating actively in small-class discussions, and giving a substantial oral presentation, students will build their skills in critical thinking about biological questions and related ethical issues, scientific scholarship, and oral communication of scientific information.

BIOL527 Evolutionary and Ecological Bioinformatics

Bioinformatic analysis of gene sequences and gene expression patterns has added enormously to our understanding of ecology and evolution. For example, through bioinformatic analysis of gene sequences, we can now reconstruct the evolutionary history of physiology, even though no traces of physiology exist in the fossil record. We can determine the adaptive history of one gene and all the gene's descendants. We can now construct the evolutionary tree of all of life. Bioinformatics is particularly promising for analysis of the ecology and biodiversity of microbial communities, since well over 99 percent of microorganisms cannot be cultured; our only knowledge of these organisms is through analysis of their gene sequences and gene expression patterns. For example, even when we cannot culture most of a microbial community, we can determine which metabolic pathways are of greatest significance through analysis of community-level gene expression. All these research programs are made accessible not only by breakthroughs in molecular technology but also by innovation in the design of computer algorithms. This course, team-taught by an evolutionary biologist and a computer scientist, will present how bioinformatics is revolutionizing evolutionary and ecological investigation and will present the design and construction of bioinformatic computer algorithms underlying the revolution in biology. Students will learn algorithms for reconstructing phylogeny, for sequence alignment, and for analysis of genomes, and students will have an opportunity to create their own algorithms.

BIOL533 Gene Regulation

This course aims to develop a genome perspective on transcriptional gene regulation. The genome sequence, now completed in a number of organisms, is described as a blueprint for development. More than simply a parts list (i.e., genes), this blueprint is an instruction manual as well (i.e., regulatory code). A next critical phase of the genome project is understanding the genetic and epigenetic regulatory codes that operate during development. Through a combination of lectures and discussion of primary literature, this course will explore current topics on promoters and transcription factors, chromatin structure, regulatory RNA, chromosomal regulatory domains, and genetic regulatory networks. We will discuss various "Omics" tools, and in particular, sequencing-based strategies that provide information about the transcriptome and epigenome. We will also discuss current models on how

transcriptional regimes unfold during the activation (or silencing) of genes, and how these processes become disrupted in various diseases. Finally, we will consider stochastic attributes of gene regulation that challenge "all or nothing" perspectives on cellular states (e.g., perspectives that genes are either "on" or "off," or that cells are either "differentiated" or not). An overarching theme is how genomes encode and execute regulatory programs in response to environmental and developmental cues.

BIOL537 The Origins of Bacterial Diversity

Wherever there is life, there are bacteria. Free-living bacteria are found in every environment that supports eukaryotes, and no animal or plant is known to be free of bacteria. There are most likely a billion or more species of bacteria, each living in its unique ecological niche. This course will explore the origins of bacterial biodiversity: how bacteria evolve to form new species that inhabit new ecological niches. We will focus on how the peculiarities of bacterial sex and genetics facilitate bacterial speciation. Topics will include the characteristics of bacterial sex, why barriers to genetic exchange are not necessary for speciation in bacteria, the great potential for formation of new bacterial species, the evolutionary role of genetic gifts from other species, and the use of genomics to identify ecologically distinct populations of bacteria.

BIOL540 EvoDevo: Origins of Variation in the Phenotype

This advanced seminar explores the field of evolutionary developmental biology (EvoDevo). EvoDevo seeks to understand the developmental mechanisms underlying the origin of newness in the biological world, by exploring the origin of morphological novelty, understanding how development permits (or constrains) the types of bodies that can be produced, and describing how developmental mechanisms themselves evolve. In this course, we will explore central concepts in EvoDevo, consider the role of development in evolution writ large, and connect both to case studies from the primary literature. The course

format will consist of a mixture of lecture, class discussion, guest lectures by visiting evolutionary developmental biologists, and assignments focusing on both oral and written scientific communication skills.

BIOL544 Neuropharmacology

This course will introduce students to the physiological and molecular effects of drugs on neuronal activity and behavior. We will cover key concepts in neuropharmacology, including pharmacokinetics and pharmacodynamics, alongside techniques used in modern pharmacotherapeutic discovery as it relates to the treatment of neurological and neuropsychiatric disease. Student assessment will include in-class quizzes and exams.

Prereq: **BIOL182 OR BIOL182Z AND NS&B213**

BIOL545 Developmental Neurobiology

Near the top of the list of unsolved mysteries in biology is the enigma of how the brain constructs itself. Here is an organ that can make us feel happy, sad, amused, and in love. It responds to light, touch, and sound; it learns; it organizes movements; it controls bodily functions. An understanding of how this structure is constructed during embryonic and postnatal development has begun to

emerge from molecular-genetic, cellular, and physiological studies. In this course, we will discuss some of the important events in building the brain and explore the role of genes and the environment in shaping the brain. With each topic in this journey, we will ask what the roles of genes and the environment are in forming the nervous system. We will also discuss developmental disorders resulting from developmental processes that have gone astray. This is a reading-intensive seminar course emphasizing classroom discussions, with readings from a textbook and the primary scientific literature.

BIOL546 The Forest Ecosystem

This course examines basic ecological principles through the lens of forest ecosystems, exploring the theory and practice of forest ecology at various levels of organization from individuals to populations, communities, and ecosystems. Lectures, lab exercises, and writing-intensive assignments will emphasize the quantification of spatial and temporal patterns of forest change at stand, landscape, and global scales.

Grading: **OPT**

BIOL550 Advanced Research Seminar, Graduate

Advanced research tutorial; project to be arranged in consultation with the tutor.

Offering: **Host**

Grading: **OPT**

BIOL557 Advanced Research Seminars in Biology

This course focuses on the specific research projects of individual graduate students in the Department of Biology, and it comprises student presentations and discussion including the department faculty, graduate students and post doctoral fellows. The course offers a forum for presenting new results and exploring new ideas, as well as for providing researchers with feedback and suggestions for solving methodological problems. It also provides an opportunity for students to become familiar with the wide range of biological research taking place in the department.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **None**

Prereq: **None**

BIOL567 Engineering Biology: Cells and Tissues

This course explores the intersection of biology, medicine, and engineering, where scientists are developing novel platforms to promote understanding, diagnosis, and treatment of human diseases. We cover modern techniques for manipulating biological systems, spanning single molecules to ensembles of cells. We will examine the trajectory of the field from studying cells in a plastic dish to the advent of organ-on-a-chip and organoid models and discuss how this transition from 2D to 3D biology has propelled increased understanding of both normal physiological homeostasis and also the pathophysiology of disease. Topics will include controlling behavior of cells through cell-matrix interactions, learning through building via synthetic biology, and advances in regenerative medicine. These topics will be explored through the thematic lenses of transport processes (supply of nutrients and removal of waste) and mechanoreciprocity (the sensing of and response to the physical properties of the cellular microenvironment). Lectures will review fundamental concepts in cell biology and physiology before delving into topical examples from current literature. Lectures and assessments will include opportunities to develop skill in thinking analytically and critically about using engineering tools to study fundamental questions in human disease, formulating original ideas and experiments, and communicating science through written and oral formats.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Prereq: **BIOL182 OR MB&B182 OR BIOL182Z**

BIOL599 Cellular Neurophysiology

This neurophysiology course is mostly a study of how neurons send, receive, and integrate the signals that produce nervous system activity. Using the tools of electrophysiology (the electrical recording and manipulation of neurons), we can better understand synaptic plasticity, neuronal oscillations, and network activity. In the last module of the course, students will use their knowledge of a diversity of voltage-gated channels, neurotransmitter systems, and neuron categories to better understand the neurophysiology of epileptic seizures and sensorimotor systems and locomotion. We will also examine articles about human-machine interfaces that are being developed in the diagnosis and treatment of epilepsy as well for the restoration of motor activity and somatosensation.

CENTER FOR GLOBAL STUDIES (CGST)

CGST131B Writing About Places: Africa

This course is one in a series called "writing about places" that explore the long tradition of writing about travel and places and changing attitudes toward crossing cultural borders. We will examine historical and cultural interactions/confrontations as portrayed by both insiders and outsiders, residents and visitors, colonizers and colonized--and from a variety of perspectives: fiction, literary journalism, travel accounts, and histories. Writing assignments will include critical and analytical essays as well as encouraging students to examine their own experiences with places and cultural encounters.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ENGL**

Identical With: **ENGL131B**

Prereq: **None**

CGST132 Writing Medicine and the Doctor-Writer

In this course students read a range of works across a variety of literary traditions, mainly by writers who were also medical practitioners (including Chekhov, Bulgakov, Lu Xun, William Carlos Williams, and Che Guevara), but also nondoctors who write compellingly about medically related subjects (Camus in *THE PLAGUE*, Tracy Kidder on Paul Farmer, and Anne Fadiman on cultural clashes).

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-ENGL**

Identical With: **ENGL132**

Prereq: **None**

CGST136 Writing for Fellowships

National fellowships are prestigious, competitive awards that enable the recipient to pursue graduate study, a research project, or travel abroad. While fellowship winners experience great personal growth and gain credentials that aid future success, preparing the application itself helps students clarify their goals and learn how to present themselves to an unfamiliar audience, such as future employers. In this course students will learn about various fellowship opportunities, identify steps toward building a strong candidacy, and create a portfolio of compelling application materials. To inspire creative thinking, we will read short writings in various genres; authors may include Octavia Butler, Jose Antonio Vargas, Ruth Bader Ginsburg, N.K. Jemisin, Ursula Le Guin, and Ocean Vuong. We will then craft personal statements and other fellowship materials, taking them through a rigorous writing process with multiple revisions. By completing the course students will grow as writers and gain skills that can also be used in writing grants and seeking a job.

Offering: **Host**

Grading: **Cr/U**

Credits: **0.25**

Gen Ed Area: **None**

Prereq: **None**

CGST141 Depicting Death in Literature

This course analyzes the theme of death primarily within French and francophone writing (in English translation), tracing the evolution of death imagery over time in literary texts. The curriculum will investigate various contexts related to the environment and language usage, offering a nuanced understanding of how the portrayal of death has changed in literature.

Offering: **Host**

Grading: **OPT**

Prereq: **FREN112 OR ITAL112 OR SPAN112**

CGST201Z Teaching English as a Foreign Language (TEFL)

This course is designed for students that are considering teaching English outside of the United States in the future. It may be particularly useful for those considering applying for a Fulbright English Teaching Assistant, the JET program, the Peace Corps, or continuing after Wesleyan to get a TEFL or TESOL certificate or master's degree. The course will include basic language acquisition theory, TEFL teaching techniques, readings by sojourners in various programs, and opportunities to reflect on personal reasons for choosing to teach abroad.

Offering: **Crosslisting**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **HA-WRCT**

Identical With: **WRCT201Z, EDST201Z**

Prereq: **None**

CGST202 Preparing to Study Abroad: Culture and Language

This course is designed to facilitate students' preparations to study abroad during the following term. Through exploration of intercultural and language learning theories, intercultural communication strategies, and theories about culture, students will build a foundation for their learning and achieving their individual goals during the semester abroad. The course is open to those who are studying abroad in English as well as those who are studying a language. The course is graded at the end of the term, but ungraded check-ins during the study abroad experience are required for the credit to be awarded.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **SBS-CGST**

Prereq: **None**

CGST203 Returning from Study Abroad: Integrating Your Experience

This course will facilitate returning students' integration of the study abroad experience into their academic and personal lives. Through guided activities, readings, and weekly writing assignments, students will reflect on the many facets of the study abroad experience and how they relate to identity, academic interests, and future plans, including fellowship applications and career opportunities abroad.

Offering: **Host**

Grading: **A-F**

Credits: **0.50**

Gen Ed Area: **SBS-CGST**

Prereq: **CGST202**

CGST205 Introduction to Global Engagement

This team-taught seminar introduces students to the ideas and practices central to strengthening one's intercultural competence, in part through a critically informed approach to globalization. The course views "cultures" as porous, fluid, internally contested, and often overlapping--and yet still as vital realities shaping the lived experiences of all people. Building intercultural competence requires not just acquiring new knowledge but also practicing the skills and honing the attitudes that are needed to interact effectively and appropriately on a basis of informed, mutual respect. This course is a core requirement of the Global Engagement Minor (GEM); students will begin to work with the eportfolio that they will use over their time in GEM to track, reflect on, and synthesize the various experiences making up the minor.

CGST208 ¿Convivencia o conflicto?: Las tres culturas de la España medieval a través del arte (CLAC.50)

For eight centuries, Muslims, Jews, and Christians lived side by side as neighbors on the Iberian Peninsula in a carefully negotiated state of coexistence known as "convivencia." While much of the written record is full of enmity, religious polemic, and mutual suspicion, the artistic record tells another version, of lives lived in close proximity giving rise to shared cultural practices, artistic tastes, and long interludes of mutual wellbeing. This Spanish-language section complements the ARHA 310 curriculum, by exploring the resonance between medieval experiences of identity, pluralism, appropriation, and exchange and our own uneasy attempts at building a multiethnic, multicultural society. This class will be conducted in Spanish. ARHA 208 is open to intermediate and advanced Spanish learners (SPAN 113 and above), bilingual students, and heritage speakers. Enrollment in ARHA 310 is optional but encouraged.

Prereq: **None**

CGST210 Language and Thought: Introduction to Linguistics

What makes human language unique? This course is an introduction to the study of human language and its underlying properties. Much of our linguistic competence lies below the level of conscious awareness, and linguists seek to uncover the subconscious principles and parameters that govern our knowledge of language. This course first explores the core theoretical areas of linguistics: phonology (sound structure), morphology (word structure), syntax (sentence structure), and semantics (meaning). Then, we will explore such topics as the workings of language use, language variation, and first- and second-language acquisition.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-CGST**

Prereq: **None**

CGST213F How Language Works: The Beliefs and Bias that Affect our Social World (FYS)

This first-year seminar takes an in-depth look at how we communicate. What do we believe about language? How does that affect our interactions on personal and societal levels? Drawing on readings from the fields of linguistics and anthropology, we will challenge common language myths and beliefs related to multilingualism, language and dialectal stereotypes, gendered language, and language learning. To synthesize those ideas, students will write reflectively and discuss their own oral and written language, conduct short research projects, and synthesize their ideas into a final paper related to a topic in the course.

Offering: **Crosslisting**

Grading: **OPT**

Credits: **1.00**

Gen Ed Area: **HA-WRCT**

Identical With: **WRCT135F**

Prereq: **None**

CGST214 Language Shift, Change, and Loss

South Asians (India and Pakistan) are multilinguals or at least bilinguals. Most of the world's population is at least bilingual, if not trilingual or more; nevertheless, fluent bilingualism in the United States is relatively uncommon, and biliteracy is even more rare. However, much of the research on language development and bilingualism has been conducted in the United States, even though we (USA) are a "minority world population" in these matters and we interpret the research findings in ways that most of the world's multilingual speakers would find unusual. In this course, we will study both first language and multiple language development. We will look carefully at both simultaneous bilingualism (early

bilingualism, bilingualism as a first language, or "bilingualism from the crib") and sequential bilingualism (learning a second language, or more, after the first language is established). We will explore language shift (from mother tongues to majority language), and change and loss from South Asians' perspectives and how these perspectives are different from and similar to the rest of the world, and consider what should be done for language maintenance.

Prereq: **None**

CGST215 What is (a) Language?

Scholarly inquiries into language have always faced the distinctive (though not unique) problem of how to define their object of study. What is language? Language in general, human language, a particular language, language as opposed to dialect or idiolect, etc.

This course will not answer these questions. It will, however, examine the most important and influential ways that they have been formulated and answered throughout the Western tradition of linguistic inquiry. Our survey will be organized around two main tendencies that are sometimes distinct but often complementary. First, the question of origins: Where does (a) language come from, and what does this tell us about its nature? We'll look at etymology and theories of language change alongside thought experiments and evolutionary theories that try to narrate the emergence of language from nonhuman forms of animal communication. Second, the questions of structure and function: How does (a) language work; what do we use it to do? We'll look at the medieval trivium of grammar, logic, and rhetoric, alongside the (approximate!) modern analogues of morphosyntax, semantics, and pragmatics. Our goal will be to get a sense of the major theoretical issues that have run through scholarly inquiries into language(s) across disciplines ranging from linguistics and philosophy through anthropology, sociology, and literary theory, to cognitive studies and evolutionary biology.

While our scope is large, our method will be narrow, focusing on close readings of important primary texts in the history of Western linguistic thought. Since our emphasis will be on the coherence of theoretical positions rather the coherence of historical narratives, we'll focus especially on works that have exerted the strongest influence on contemporary understandings of language, particularly those from the 20th and 21st centuries.

CGST218 Teaching Spanish K-12: Second Language Pedagogy (CLAC 0.5)

This is a community engagement course in which students learn basic principles of language pedagogy and language acquisition to inform their teaching of Spanish to children at one of the Middletown public schools. Readings in English and Spanish; class discussion and assignments in Spanish. Students will familiarize themselves with characteristics of second language (L2) learning and teaching, a basic know-how on analyzing and preparing materials for language learning/teaching, and L2 teaching as a profession.

Language and course requirement: Students must have recently taken a SPAN course numbered 221 or above. Preference will be given to EDST and HISP majors, as well as juniors and seniors.

Offering: **Crosslisting**

Grading: **Cr/U**

Credits: **0.50**

Gen Ed Area: **HA-RLAN**

Identical With: **SPAN204, EDST204**

CGST220 Italian Gaming Lab: Using Tabletop Games for Language Learning (CLAC.50)

Italian Gaming Lab is designed as a game-based Italian language laboratory that will focus on why and how tabletop games can be effective tools for language learning; examples will include board games, card games, and tabletop role-playing games (TTRPGs), an increasingly popular type of game that is based on collaborative storytelling in which participants either impersonate one or more characters or create and organize entire worlds.

In this CLAC course, we will explore how a game-informed pedagogy can work in Italian language and culture classrooms and to highlight analog gaming approaches that have worked inside and outside the language classroom. We will discuss the basics of Game-Based Learning (GBL) applied to L2 acquisition, as well as play a series of games that can illustrate the gameful principles previously studies. Participants will discuss the application of gaming principles to L2 acquisition and create reports and playful presentations on their linguistic journey through play. The course offers students the opportunity to use language creatively and to develop critical knowledge within the rising and innovative field of Game-Based Learning and educational game design.

The course will be conducted in Italian, and games will be played in Italian. Both intermediate/advanced learners of Italian (second-year level or above) and native speakers are welcome. If you are unsure about whether your language background is sufficient for the course, please contact the instructor.

CGST221 Food in Japanese Media (CLAC.50)

This 0.50 CLAC section is conducted in Japanese and will feature Japanese-language media (documentaries, films, TV shows, anime, and some texts such as news articles and manga). It is designed to supplement CEAS 210: From Tea to Connecticut Rolls: Defining Japanese Culture Through Food. All materials and discussion will be in Japanese. There may be some writing assignments depending on ability. The section is open to students with Japanese-language ability, from intermediate level to native speakers. With the instructor's approval, this section may be taken independently of the parent course. Evaluation will be primarily based on participation, effort, and completion of assignments.

CGST222 Translating Modern Japanese Song Lyrics (CLAC.50)

This course offers students the opportunity to build skills and experience as translators of cultural texts by producing Japanese-to-English translations of the lyrics to select modern Japanese popular songs. Students will formulate their own individual translations of the assigned song each week, and then work together in class sessions to amend and further develop those translations, learning from each other's choices and strategies in order to arrive at the most effective rendering possible. Successful completion of JAPN 218 required; heritage learners, native speakers of Japanese, and others with advanced Japanese language skills (both spoken and written) are welcome in the course, with advance permission from the instructor.

Offering: **Crosslisting**

Prereq: **JAPN218**

CGST224 Living a Good Life: Chinese Lab (CLAC.50)

This optional "lab" class is intended for students (1) who have taken or are currently taking PHIL 210: Living a Good Life; and (2) who have little or no exposure to classical Chinese. Each weekly session will introduce students to aspects of the classical Chinese language--the written language of pre-20th-century China. Students will be able to read (in Chinese) and discuss (in English) key passages from the Confucian classics on which the Living a Good Life courses is partly based. No previous knowledge of Chinese (classical or modern) is necessary.

Offering: **Crosslisting**

Grading: **Cr/U**

CGST226 French and Francophone Gastronomy

This course explores the variety of French and Francophone gastronomy through texts, recipes, and other media such as films and cooking shows. Through these materials, students will reflect on the relationship between food and culture and the shape it takes in French and Francophone cultures. They will develop a deeper knowledge and appreciation for various foods and dishes.

The course will include a hands-on component through which students will cook and taste foods from various areas in the Francophone world. The course will culminate in a final public event during which students will introduce and share

foods from the Francophone world, which attendees will have the opportunity to taste.

This course is a CLAC course conducted entirely in French. In addition to weekly meetings, there will be a few cooking workshops. Grade will be based on class participation, weekly reflection journals, a final presentation, and a final paper.

CGST227 Writing Short Fiction in Spanish

This course will introduce students to the fundamentals of writing short fiction in Spanish. It will enhance their command of Spanish and their skills as effective writers through the examination and discussion of many aspects of the craft of fiction writing, which will inform students' own writing and development of their personal style. We will examine essential features of fiction (methods of constructing narrative tension, climax, ambiguity, character, dialogues, and structure), as well as various fictional styles through our discussion of the writing of our peers and a study of the texts of a number of contemporary Latin American and Latinx writers working in a genre that has been crucial to the region's intellectual production.

CGST228 Deaf Communities: Facts and Perspectives

This course explores the diversity of the Deaf communities in the United States, examining Deaf cultures and the factors shaping them including history, education, technology, and institutions. We will discuss the prevalent perspectives in American society towards the Deaf experience, clinical and cultural. We will also compare American Deaf cultures and American mainstream cultures.

Offering: **Host**

Grading: **A-F**

Credits: **1.00**

Gen Ed Area: **SBS-CGST**

Prereq: **None**

CGST229 Language and Politics: Making and Unmaking of Nations

This course explores the key topics at the intersection of language and politics, including language choice; linguistic correctness; (self-)censorship and hate speech; the performance of ethnic and national identity in language; gender politics and "powerful" language; rhetoric and propaganda; and changing conceptions of written language, driven in part by technological advances. One of the examples of such topics is Tweet politics or incivility on the web around the globe. This course consists of three modules. In the first two modules the above-mentioned topics will be discussed in general, while in the last module we will see how preferences in language policies and politics played a significant role in making and unmaking of nations in different parts of the world, from South Asia to East Asia to North America.

CGST230 Between Marx and Coca-Cola: European Cinema of the 1960s and 1970s

In the 1960s and early 1970s, a growing sense of alienation and social unrest spread across Europe, making their marks in both society and cinema. Borrowing the words of New Wave director Jean-Luc Godard, these years led to the emergence of "the children of Marx and Coca-Cola." This course, taught in English, will introduce students to a multi-faceted portrait of Europe in the 1960s and 70s through avant-garde and popular cinema from France, Italy, Spain, Germany, and Eastern Europe. We will focus on films that depict global capitalism, gender relations, and government control. Some of the themes we will discuss include the critique of consumerism and materialism, the changing role of women in society, life under socialism and dictatorship, and youth counterculture. Last but not least, students will learn how New Wave directors challenged traditional approaches to narrative cinema.

CGST231 Love and Suffering in Ancient Rome (CLAC.50)

In this CLAC course students with some background in ancient Latin will read selections of the extant sources on love and suffering in Roman myth, history, and thought. The sources that we will cover will be drawn from diverse genres and periods: historiography, epic poetry, lyric poetry, and comedy. This diversity will offer a unique opportunity to students to identify and analyze the intersections of age, class, status, gender, and ethnicity and the way they shaped Roman ideology on "love." We will be looking at how cultural practice shapes language, how ideology shapes law, and how literature challenged cultural norms of love and marriage, all the while unpacking and interrogating the Roman belief that love had no place in the citizen life dedicated to serving the state: love produces suffering. In turn, we will reflect on the ideological shift in the last 150 years that has come to dominate "western" beliefs on love and marriage, that is, "all you need is love," over family, friends, and society, despite the obstacles: suffering produces love.

The selections of readings will be drawn primarily from what the students read in translation in the parent course. The final selection will be based on the level of the students. This CLAC is conceived as appropriate for students on the intermediate and advanced level of ancient Latin.

CGST233 Introduction to ASL / English Interpretation (CLAC 0.5)

Having completed course work in Beginning ASL I, II and Intermediate I, II, students who have demonstrated a strong interest in continuing their studies at a more sophisticated and challenging level may find this course work interesting pursuant to becoming a professional, credentialed Sign Language Interpreter.

This experience will provide students with a working knowledge of the profession of interpreting including the Code of Professional Conduct, certification criteria, the roles and responsibilities of a professional interpreter

and discussions of the role of the interpreter in a variety of professional settings including educational, medical, legal, the performing arts, counseling, and rehabilitation.

Students who attend this course demonstrate that they are able to express in ASL, with some confidence, routine and everyday experiential topics within a conversational format with some elaboration. They demonstrate clear and accurate signing and fingerspelling at a moderate rate of speed.

This coursework uses a process-oriented approach for applying the essential cognitive strategies for interpretation. These strategies include organizing and manipulating visual images, analyzing message for meaning, and self-monitoring for message accuracy. This experience serves as a transition from language learning to beginning interpretation.

CGST234 Introduction to Russian and Soviet Cinema (CLAC.50)

This course provides an introduction to the history and poetics of Soviet and Russian cinema--in Russian. From the avant-garde experimentation of Lev Kuleshov, Sergei Eisenstein, and Dziga Vertov to the masterpieces of Andrei Tarkovsky, Sergei Parajanov, and Kira Muratova, the course will explore the development of Russian film as artistic medium and as national tradition. The discussion and comparative analyses of different forms and genres, including silent cinema, propaganda films, blockbusters, and auteur cinema, will be situated within the cultural, political, and aesthetic contexts of the Soviet Union and contemporary Russia. Students will learn the key works, names, events, and concepts of the Russian cinematic tradition. They will develop skills in analyzing and interpreting films and will acquire the basic critical terminology of film studies in Russian and English. They will also learn how film form and aesthetics are conditioned by technology, ideology, economics, theory, tradition, and culture. The overarching goal is to see how cinema in Russia and the Soviet Union has created and contested narratives of history and identity, how cinema has served the interests of the state, and how it has defied them. This class consists of lectures and focused discussion of films. It will be taught in Russian and is open to students who have successfully completed RUSS202, as well as to heritage and native speakers. Students can expect to practice speaking Russian and honing their writing skills. Credit: 0.5

CGST235 Brazilian Culture and Identity Through Media (CLAC.50)

If asked about Brazil, chances are one may answer by invoking stereotypes that once conveyed Brazil's global image: samba and futebol (soccer). While music, carnival, and soccer are central elements of the national identity, these aspects of Brazilian culture fail to do justice to the complexity of a country of ever-increasing global impact, with a top-ten economy, a massive, continental territory, and some 200 million inhabitants who constitute what may be the most diverse population on the planet.

In this course we will critically examine how the media has helped shape Brazilian identity and how the country is perceived from outside. We will cover topics such as social relations, race, poverty, gender, violence and human rights. Readings will draw upon theories and concepts in media studies and cultural studies. Class discussion will consider cultural texts, television shows, films, music, poetry, fashion, and social media posts. This course will be taught in English and Portuguese (introductory or intermediate level is sufficient).

CGST236 Music, Culture and Social Justice in Latin America (CLAC.50)

This course examines influential Latin American musicians and the relationship between their artistic production and the battles for human rights, democracy, and social justice in the hemisphere. The seminar will focus on the periods of dictatorial rule and transition to democracy in the Americas (mostly, from the 1960s through the late 1980s). We will study the main musical trends and leading artists in Spanish and Portuguese speaking countries in those decades, assessing the role of their music in battles for free expression, democracy, and social justice in human rights. Among the artists whose work we will consider are Victor Jara (Chile), Mercedes Sosa (Argentina), Los Gurugao (Venezuela), Catano Veloso, Gilberto Gil, and Chico Buarque (Brazil). Students will be encouraged to analyze music through lyrics and song form, while understanding the historical, political, and social climates in which these artistic productions developed. Students will understand how music and culture can be powerful tools of resistance, assessing their impact in educating, inspiring, and creating social awareness and commitment in Latin American societies. This course will be taught in English, Portuguese, and Spanish (introductory or intermediate level is sufficient).

CGST237 The Soviet Century (CLAC.50)

This course begins and ends with two crucially important dates of the 20th century. On November 7, 1917, the Bolshevik party launched a revolution against the Russian government with the aim of overthrowing not just the state but capitalism, the economic and social system that defined modern civilization. Over the coming decades, the state they created (eventually named the USSR) embarked on an unprecedented project to remake the world. On December 26, 1991, the Soviet Union collapsed into 15 countries. The Soviet project raises fundamental questions about political systems, economics, and human nature--questions that are a long way from being answered. It also shaped modern history all over the world, including in the United States, which confronted the Soviet Union as its political and ideological archenemy during the Cold War. In charting the USSR's trajectory from pariah nation after World War I to global superpower following World War II, we will explore the ways in which socialist modernity offered an alternative to its capitalist twin. In an effort to understand the contradictions of Soviet life leading up to and during the Cold War, the course will examine how the Soviets sought to rethink issues of class struggle, family structure, education, gender dynamics, race, religion, sexuality, and patriotism. We will consider key theoretical writings in addition to poetry and prose by major Russian and Russophone authors. Particular attention will be paid to underground cultures that arose in response to the repression of free speech, ethnic discrimination, and the Gulag prison system. This class consists of lectures and focused discussion of essays and films. It will be taught in Russian and is open to students who have successfully completed RUSS202, as well as to

heritage and native speakers. Students can expect to practice speaking Russian and honing their writing skills. Credit: 0.5

CGST240 Introduction to Tamazight: The Native Language of North Africa and Beyond (CLAC.50)

This course will introduce students to the language (sounds and script) and culture of the Amazigh people, an ethnic group (commonly known as Berbers) native to North Africa and West Africa, specifically Morocco, Algeria, Tunisia, Libya, Mauritania, northern Mali, and Niger, with some oases in Egypt and the Canary Islands.

The Tamazight language--the alphabet of which is called Tifinagh--has been a written language for almost 3000 years, although it was disrupted throughout history due to various invasions and conquests of the area. The Tuareg people of the Sahara desert in Northern Africa, and as of late Morocco and Algeria, have been using the Tifinagh alphabet (oldest dated inscription from about 200 BC) and the Tamazight language as a secondary national language.

The objectives of this course are: 1. To introduce students to the sounds and script of Tifinagh; 2. To teach students basic conversation and essential elements of the Tamazight language; and 3. To familiarize students with the culture of the different Amazigh peoples.

CGST241 Introduction to ASL in the Performing Arts (CLAC.50)

This course offers an introduction to artistic ASL interpreting. "Artistic ASL Interpreting" does not apply only to performing groups who present songs in sign language on a stage. Nor is it a term that is exclusively linked with theatrical interpreting in a "platform" setting of plays, musicals, or poetry. Artistic interpreting can be explained as a refined, more creative style of interpreting at the highest levels of the profession. For students, it presents challenges that encourage more attention to eye gaze and contact; shifts in body stance

and positioning; size and style of sign production; facial expressions; gestures as communication and sign alternatives in overall concept formations and messaging. These are, in fact, some of the most important components in ASL communication and some of the most challenging aspects to encourage or teach.

CGST245 Not Just Neorealism: Italian Cinema, its History and Politics (CLAC.50)

This 0.5-credit course is conducted in Italian and designed to supplement the English-language Italian cinema course "Not Just Neorealism: Italian Cinema, its History, and Politics" (RL&L 245). The presentations that are part of the requirements for the parent course (RL&L 245) will serve as our basis in this discussion-based section: Students will be responsible for screening films in addition to those required for 245, for presenting them, and, during the discussion sections in Italian, responsible also for linking them to the course material. Further, students enrolled in the CLAC will also make mini-presentations to the broader body of the students enrolled in the parent course only, linking the extra screenings to those that are part of the course syllabus, and enriching the discourse and knowledge base.

Students are required to be simultaneously enrolled in the parent course in order to enroll in the CLAC section. For this reason, enrollment is granted on a POI basis.

Students must have advanced competency in Italian: completed ITAL 221 or a course with a higher number, spent a semester (or more) in Wesleyan's Program in Bologna, or be linguistically proficient. For any questions about linguistic preparation, please contact the instructor.

Please note that at present this section is not acceptable as one of the nine required courses for the ITST major.

CGST250 Body, Soul, and Afterlife Journeys in Ancient Greece (CLAC.50)

The connection between body and soul and their journey in the afterlife were at the center of how the ancient Greeks thought not only of mortality but also of the good life itself. This CLAC course is connected to the Classical Civilization course titled "Death and Afterlife in Egypt and Greece" that will be taught in the fall by Kate Birney. The parent course explores the archaeology of death and burial in Egypt and Greece. It examines how the funerary practices and the very notions of death, the soul, the body, and the afterlife operated in these societies by drawing upon diverse evidence--archaeological, art historical, and mythological.

In this CLAC course students with some background in ancient Greek will read selections of the surviving evidence on death and the afterlife. Sources will be drawn from diverse genres and periods: historiography, Homeric poetry, Platonic philosophy, and religious tablets. This diversity will offer a unique opportunity to identify different registers and to explore how language itself reflects and in turn shapes the ideas and practices for which it is used. We will thus be looking at: how different media and performances are used to express loss, hope, and heroism in the face of death; how social class, gender, and political ideology are reflected in these media and how they influence ideas about death and the afterlife; and, last, how we are to create adequate methodologies as "readers" of such diverse evidence.

The selections of readings will be drawn primarily from what the students read in translation in the parent course. The final selection will be based on the level of the students. This CLAC is conceived as appropriate for students on the intermediate and advanced level of ancient Greek.

CGST251 Classical Chinese Philosophy: Chinese Lab (CLAC.50)

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Classical Chinese Philosophy (PHIL205) course. Students must have taken PHIL205 in the past or be enrolled in it simultaneously. The course will have two main foci: introducing students to modern and contemporary Chinese-language debates about Chinese philosophy and exploring in greater depth the meaning of key passages from the classical works students are reading in translation in PHIL205.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Familiarity with classical Chinese is desirable but not required. Assignments will include presentations in Chinese and some written work in English; evaluation will be tailored to each student's language background. If you are unsure whether your language background is sufficient for the course, please contact the instructor.

CGST252 Chinese Calligraphy (CLAC.25)

This 0.25 CLAC course will provide students with a brief understanding of the art of Chinese calligraphy through calligraphy practice. They will learn about the characteristics of Chinese calligraphy from the "Four Treasures of the Study," as the tools of calligraphy (writing brush, ink stick, ink stone, and paper). They will understand the development history of Chinese calligraphy from five basic scripts of Seal (zhuanshu), Clerical (lishu), Standard (kaishu), Semi-cursive (xingshu), and Cursive (caoshu). The course focuses on imitation and practice of the Standard script kaishu. Prerequisite: Current or future Chinese class students are preferred.

CGST255 Modern History and Culture of Korea: From Imperialism to Two Koreas (CLAC.50)

This course will serve as an introduction to the more recent history and culture of Korea; South Korea's rebirth from the remnants of a devastating war into a globalized country whose cultural influence has grown drastically since the 2000s. We will be discussing politics and diplomacy, economic development and industrialization, the growth of mass culture, and social changes concerning Korean women and family. Key topics will include the colonial period, the Korean War and national division, the struggle for democracy, and Korean pop culture. Course material will include films, dramas, and literature on these topics.

This course will be conducted in Korean. Students who have either completed three years of Korean or meet the language fluency equivalent are encouraged to take this course. Native speakers of Korean are also welcome.

CGST262 Korean Music from Shamanism to Television (CLAC.50)

This course is open to intermediate learners, advanced learners, and native speakers. The discussion topics will be broadly approached, utilizing various music video examples as vehicles to deeper social, religious, and cultural understanding. These various music examples are from ancient to current Korean music practices. Historically, Korean music was integrated with dance, literature, art, song, and ceremony. Therefore, music (sound) was not separated from other elements but was essential to daily life, community activities, religious practice, artistic collaboration, costumes, food, and the very soul of the Korean people. Traditional Korean music is imbued with the history of court ritual, folk village stories, and myths, in addition to religious rituals of Confucianism, shamanism, and Buddhism. The music is central to a broad range of cultural, social, and humanitarian aspects of Korean life.

Korean traditional music has been evolving for over 2,000 years, and it is now rapidly moving in many directions with contemporary life and influence from Western culture. Historically, music was created as a group activity by village people oftentimes working with a spiritual leader shaman. Currently, the most acceptable music is created and performed by individual performers as a repertoire for TV programs. In the 21st century, as society changes, Korean music is changing also, with differing values of popular culture brought in through recordings, film, and of course the internet. Young musicians go beyond traditional music and are developing a new repertoire that mixes Western instruments or electronics with various traditional instruments. This is a new Korean identity. Newly created Korean ensembles and bands such as K-pop are successfully beginning to dominate the international music scene. In contrast to the formerly inner-looking "Hermit Kingdom," Korea has now entered into instant global communications with the production of more individual music in various styles.

CGST266 Neotropical Aquatic Ecosystems: Their Importance, Sustainable Use, and Conservation (CLAC 1.0)

(English translation below Spanish text) El curso de Ecosistemas Acuáticos Neotropicales permitirá a los estudiantes buscar información y discusión sobre la diversidad y complejidad de los ambientes acuáticos en la América tropical. Comenzaremos a aprender definiciones, características, distribución y ejemplos de humedales, lagos, ríos y muchos otros hábitats acuáticos en todo el neotrópico. El origen del sistema hidrológico. Evolución de las principales cuencas: Amazonas, Magdalena, Orinoco y Paraná. El Paleo Orinoco-Amazônia: Importancia geológica y biótica. Dinámica geológica. Evidencia geológica y biológica. Hipótesis evolutivas de la fauna piscícola. Evolución del paisaje amazónico como parte del conocimiento para comprender los diversos procesos y patrones de riqueza y distribución de la biodiversidad. Los humedales (sabanas inundadas) de Colombia-Venezuela como ejemplo de humedales neotropicales. El Pantanal brasileño y las llanuras colombo-venezolanas como "áreas de criadero" para la biota acuática y terrestre y su importancia para el mantenimiento de la biodiversidad. Los estudiantes también leerán y buscarán información sobre el Sistema Fluvial Orinoco como ejemplo de estudio. La importancia biótica, el desarrollo sostenible y la conservación. Identificar los factores antrópicos que afectan al sistema. El desarrollo social y económico, y

las contribuciones a través de los Programas de Evaluaciones Acuáticas Rápidas (RAP's) como metodología para producir información que permitió proponer áreas para la conservación de la biodiversidad. Terminamos con un análisis de los recursos y la importancia pesquera de las principales cuencas neotropicales: Amazonas, Orinoco y Paraná-Paraguay. Seguridad alimentaria. Ejemplos de ríos en riesgo.

This course will examine why the Orinoco and Amazon basins in South America harbor a biological richness much larger than other river basins around the world. About 50% of all higher plant species of the world are included in these basins. Data on vertebrates showed that about 3,000 freshwater fish species, thousands of birds (migratory and local), and hundreds of amphibians, reptiles, and mammals have been found so far in those basins geographically included in six countries: Bolivia, Brazil, Colombia, Ecuador, Peru, and Venezuela. We will examine the key factors that have affected their historical-geological development, the actual richness, and the threats to sustainable development and conservation. We will ask questions about the nature and interactions of the key factors and agents that harbor and transformed the high ichthyological and other aquatic biota diversity, reflected by the wide range of landscapes and aquatic ecosystems included in those basins. We will try to identify fragile aquatic ecosystems depending upon the biological richness, endemism, importance for local communities, and potential threats. We will examine the current trends in the fisheries, forest exploitation, and agriculture for human consumption, noting that stocks of many species of fish are in steep decline, and that current fishing practices are not sustainable. Finally, the major impacts and threats faced by the fishes and aquatic ecosystems of the Orinoco River Basin are discussed with the purpose of studying potential plans for sustainable development. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST267 Current Environmental Issues in Latin America (CLAC 1.0)

(English translation below Spanish text) Este curso proporcionará información histórica y actual sobre el desarrollo de temas ambientales en América Latina. La información se dividirá en la evaluación del uso del medio ambiente durante los periodos precolombino y colonial (a); y b) período moderno. Se discutirá la organización, estructura y gobernanza del medio ambiente. El desarrollo de políticas públicas, planes de gestión, factores que se deterioran y los posibles usos sostenibles del medio ambiente y sus recursos. Leeremos literatura interdisciplinaria incluyendo: académica, informes, documentos oficiales gubernamentales y proyectos de ONG dedicados al diagnóstico, desarrollo y uso o nuestros recursos en América Latina. Por último, se estudiarán casos particulares de países latinoamericanos como Argentina, Brasil, México, Costa Rica, Perú y Venezuela. El curso se presenta en un formato de lectura/discusión en el que todas las lecturas, escritos y discusiones estarán en español.

This course will provide historical and current information on the development of environmental issues in Latin America. The information will be divided into assessing the use of the environment during (a) pre-Columbian and colonial periods and (b) the modern period. The organization, structure, and governance of the environment will be discussed, as will the development of public policies, management plans, factors that deteriorate, and the potential sustainable uses of the environment and its resources. We will be reading interdisciplinary

literature including academic, reports, official governmental documents, and NGOs' projects dedicated to the diagnostic, development, and use of resources in Latin America. Finally, particular cases of Latin American countries such as Argentina, Brazil, Mexico, Costa Rica, Peru, and Venezuela will be studied. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST268 Food Security and Environmental Conservation (CLAC 1.0)

(English translation below Spanish text) En este curso los estudiantes investigarán información y discusión sobre la seguridad alimentaria y el uso del medio ambiente en una selección de países de América Latina. Haremos preguntas sobre la base de la producción y disponibilidad de alimentos. También examinaremos la información disponible de las agencias públicas y privadas sobre los programas establecidos por los países para garantizar la seguridad alimentaria de sus habitantes y el uso sostenible y la conservación del medio ambiente. Discutiremos conceptos como: La soberanía alimentaria y la seguridad como un sistema alimentario en el que las personas que producen, distribuyen y consumen alimentos también controlan los mecanismos y políticas de producción y distribución de alimentos; La nutrición como normas mundiales y particulares de consumo de alimentos; La Justicia social relacionada con la accesibilidad de los alimentos; y el derecho humano a una alimentación adecuada y a la libertad del hambre como uno de los objetivos del milenio de las Naciones Unidas. El estudiante revisará casos particulares en América Latina. El curso se presenta en un formato de lectura/discusión en el que todas las lecturas, escritos y discusiones estarán en español.

In this course students will research and discuss food security and the use of the environment in a selection of Latin American countries. We will ask questions about the basis of food production and availability. We will also examine the available information from public and private agencies about programs established by countries to ensure the food security of their inhabitants and the sustainable use and conservation of the environment. We will discuss concepts such as: food sovereignty and security as a food system in which the people who produce, distribute, and consume food also control the mechanisms and policies of food production and distribution; nutrition as a global and particular standard of food consumption; social justice related to the accessibility of food; and the human right to adequate food and freedom from hunger as one of the United Nations' objectives of the millennium. Students will look at particular cases in Latin America. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST273 Tatort - Window into Germany (CLAC.50)

Few television shows have become anchored in German cultural discourse as firmly as "Tatort," a weekly crime show produced and broadcast by public television since 1970. Watched by up to 40% of all potential viewers, new episodes are prominently reviewed in major daily newspapers and serve as a focus for discussions about German politics, culture, and society. Episodes have tackled questions of police brutality, immigration, gentrification, and the surveillance state, while also shining a light on Germany's changing conception

of itself. Over the years, the show has attracted some of the major directors and actors from German-speaking regions, such as Wolfgang Petersen, Margarethe von Trotta, Dominik Graf, Sibel Kekili, and Götz George. In this course, we will watch current and canonical episodes of the show, using it as a way into discussions about Germany's past, present, and future.

CGST281 Global Economy: Germany and the World in an Age of Extremes, 1870-1957 (CLAC.50)

This Center for Global Studies discussion course explores the experience of globalization in the German-speaking world from the war of German unification in 1870 to the emergence of the European Community in 1957. It will analyze German imperialism and overseas investment before 1914; the deglobalization of the German economy in the First World War; the problem of reparations and other economic challenges faced by the Weimar Republic; and the impact of global protectionism and the Great Depression, the economic forces allowing the rise of Hitler, the economics of war, and the Nazi "New Order." We will explore the reasons for the ultimate failure of the German war effort and the country's catastrophic destruction and defeat in 1945, as well as Germany's postwar division and occupation as well as the gradual reconstruction and reintegration of the West German economy into a European and global division of labor beginning with the Bizone Agreement and GATT (1947), the Marshall Plan (1948), and the London German External Debt Agreement (1953), culminating in the Treaty of Rome (1957) creating the European Economic Community. The course will be using select German-language historical primary sources to explore this topic, supported by short secondary source narratives in both German and English pitched to intermediate to advanced German speakers/readers. Unlike the parent History lecture class (HIST 280: The Origins of Global Capitalism, 1800-present), this is a discussion course aimed at expanding vocabulary and practicing fluent discussions in the fields of history, politics, and economics.

CGST283 Venezuela: The Effect of Oil Discovery on People, the Environment, and on Democracy (CLAC 1.0)

(English translation follows below) Este curso examinará los factores clave que han afectado el desarrollo de Venezuela y su entorno desde el período precolonial hasta el presente. Dividiremos la historia de Venezuela en dos períodos críticos: antes y después del descubrimiento de petróleo. Haremos preguntas sobre la naturaleza y las interacciones de los factores y agentes clave que transformaron a Venezuela de una colonia a la de un país económicamente independiente. Al examinar los períodos económicos anteriores y posteriores al petróleo por separado, aprenderemos que los factores clave, como la agricultura, el uso de la tierra y la influencia colonial europea, cambiaron drásticamente, transformando así muchas instituciones sociopolíticas. Los contrastes incluirán la resiliencia y la erradicación de enfermedades, los derechos humanos y la esclavitud, la propiedad de la tierra, la salud humana, los impactos en la biodiversidad y la salud humana, y la protección de las culturas indígenas. En última instancia, examinaremos los factores que han llevado al colapso de la democracia. Leeremos una literatura interdisciplinaria que incluye antropología, religión, sociología, ciencias ambientales, derecho e historia. El curso se presenta en un formato de lectura / discusión en el que todas las lecturas, escritos y discusiones serán en español.

This course will examine the key factors that have affected the development of Venezuela and its environment from the pre-colonial period to the present. We will divide the history of Venezuela into two critical periods: before and after the discovery of oil. We will ask questions about the nature and interactions of the key factors and agents that transformed Venezuela from a colony to that of an economically independent country. By examining the pre- and post-oil economic periods separately, we will learn that the key factors, such as agriculture, land use, and European colonial influence, changed dramatically, thereby transforming many sociopolitical institutions. The contrasts will include resilience to and eradication of diseases, human rights and slavery, land ownership, human health, impacts on biodiversity and human health, and protections of indigenous cultures. Ultimately we will examine the factors that have led to the collapse of democracy. We will read an interdisciplinary literature that includes anthropology, religion, sociology, environmental sciences, law, and history. The course is presented in a reading/discussion format in which all readings, writings, and discussions will be in Spanish.

CGST285 Global Hip Hop of the Non-Anglophone World (CLAC .50)

Proficiency in a language other than English is required. Each student will present to the class a single piece of their choice in a non-English language every other week (for a total of five presentations). Presenters will provide the class with written lyrics in both the original language and in English translation. In lieu of analyzing recordings by others, students have the option to compose their own non-English rap songs and record (or perform) them for in-class discussion. The final paper will tie the five presentations together in a single formal document (or website). Class discussion will be in English, but the topics will all be rap lyrics and hip hop/youth culture in the non-Anglophone world.

CGST290 Nietzsche als Versucher (CLAC.50)

The term "Versucher" combines three meanings: (i) a writer of essays, (ii) a maker of experiments and hypotheses, and (iii) a tempter who seductively tests convictions and provokes latent desires. Friedrich Nietzsche draws on all these senses when he proposes "Versucher" as "the not-undangerous name [he] dares to bestow" on the "philosophers of the future"--a coming generation of free spirits who will (finally) be capable of appreciating and continuing his intellectual legacy (Beyond Good and Evil, §42).

This course will interrogate Nietzsche's conception of a philosophical Versucher and examine how this concept might apply to Nietzsche himself: as an experimenter with literary style and genre (including the essay form) and as a polarizing cult figure who has attracted the fascination of generations of teenagers and the most diverse (often diametrically opposed) ideological movements. How is it that Nietzsche inspires such passionate attachment in such radically different readers? What is it about his philosophical style and literary form that cultivates a feeling of intimacy and fierce allegiance while also admitting such aggressively divergent interpretations? To explore these questions, we will read and discuss excerpts from Nietzsche's writings and

correspondence alongside texts by his friends and interlocutors--such as Richard Wagner, Paul Rée, and Nietzsche's unrequited paramour, Lou Andreas-Salomé. We will also look at prominent cases of his cultural reception--notably by the Nazi party (due to the influence of Nietzsche's sister, who was a party member) and simultaneously by opponents of totalitarianism such as Robert Musil, Karl Löwith, and Walter Kaufmann.

This course is part of the Fries Center for Global Studies' Cultures and Languages Across the Curriculum (CLAC) initiative. It is taught in German and associated with COL290/PHIL252 "Nietzsche - Science, Psychology, Genealogy," though students can take either course independent of the other. No background in philosophy or literature is required for this course, but advanced-intermediate (B2+) reading and spoken German is a must.

CGST291 "Sexuality" in the Making: Gender, Law, and the Use of Pleasure in Ancient Greek Culture (CLAC.50)

The parent course (CCIV 281/FGSS 281) examines the construction of gender roles in ancient Greece and approaches gender as an organizing principle of private and public life in ancient Greek society by using literary, scientific, historical, and philosophical sources as well as material evidence. Issues addressed include: the creation of woman, conceptions of the male and female body, the legal status of men and women; what constitutes acceptable sexual practices and for whom (e.g., heterosexual relationships, homoeroticism, prostitution etc.); ideas regarding desire, masculinity and femininity, and their cultivation in social, political, and ritual contexts such as rituals of initiation, marriage, drinking parties (symposia), the law court, and the theater.

The textual sources used in the course cover a spectrum of genres: medical texts, Homer, lyric poetry, tragedy, comedy, law-court speeches, and philosophy among others. In the CLAC connected to this course students with some background in ancient Greek will read selections from these genres and will be able to compare different discourses and registers in the original. In the past, even through brief lexical examples--e.g., pointing at the use of *ta Aphrodisia* (the things/matters related to Aphrodite) in a culture that has no one term/concept for our notion of "sexuality"--students were intrigued by how different terms and discursive media in the original may offer access to perspectives, visions, and values that differ from and can, in turn, inform our own. The CLAC will create an opportunity precisely for this kind of access and a better informed and nuanced conversation.

CGST302 Narrating China: Chinese Lab (CLAC.50)

This 0.5 credit course is conducted in Chinese and designed to supplement the standard English-language Narrating China: Introduction to Modern Chinese Literature (CEAS 202) course. It allows students to encounter a selection of modern and contemporary Chinese literary texts in their original Chinese. As the parent course guides students through major literary movements and themes from 20th-century China, students in the CLAC tutorial will read poems,

short stories, or excerpts of longer texts from the same periods in the original Chinese. In weekly meetings, students will discuss the readings in Chinese, to delve deeper into their stylistic and linguistic characteristics unobservable in translations.

Both advanced learners of Chinese (fourth-year level or above) and native speakers are welcome. Evaluation is based on students' preparedness, participation, and formal oral presentations, and will be tailored to students' language background. If you are unsure about whether your language background is sufficient for the course, please contact the instructor.

CGST303 Ukraine and Its Environment

International perspectives on environmental issues are critical in order to address the challenges facing the world. Developing an international perspective requires more than learning from printed literature—it requires in-country experience and the desire to be able to view issues through different cultural lenses. This course will provide such experience by learning about the diversity of Ukrainian environments, people, and cultures both in the classroom at Wesleyan and by traveling to Ukraine during Spring Break. During our time in Ukraine we will receive lectures in English from noted scholars, politicians, professors and scientists on topics such as environmental law, global environmental security, urban environment, environmental policy in developing states, and sustainable development for the developing world. We will travel and learn from scientists at Chernobyl about the regeneration of forest ecosystems, learn from agronomists about agriculture on the steppes, and learn from politicians and scholars about Ukrainian environmental policy and their views of U.S. policies. We will also enter into round table discussions with university students to exchange ideas about potential international solutions and approaches to environmental problems. These are just some of the experiences that are planned for our visit. Ukraine, as a pivotal democracy of the former Soviet Bloc, is an amazing place to witness how a nation wrestles with dramatic changes in policy. At the same time Ukraine is culturally diverse, which presents interesting challenges to formulating fair and cohesive policies.

CGST308Z Dealing with Difference: Intercultural and Multicultural Education

How do students learn about cultural difference in school and college?

Multicultural education, intercultural education, international education, global learning, internationalizing the curriculum -- all are terms related to bringing cultural competence into teaching and learning. These different approaches are often in conflict with each other, while ostensibly teaching the same knowledge, skills, and attitudes. In this course, we will trace the histories of multicultural and international education to the present day. We will explore the purposes, theories, practices, and pedagogies associated with these two fields, as well as their intersections, convergences, and divergences. Finally, we will view these fields through a critical lens to reveal their successes and shortcomings, and formulate our own recommendations for the future direction of each -- or both.

CGST320 La cultura y la historia de la España islamica (CLAC.50)

This course will be taught in Spanish, and spans a timeline between 711 and 1492, i.e., from the date of the conquest/invasion of Iberia by Muslim troops to the fall of Granada and the expulsion of Muslims and Jews from Spain. Before starting discussion of the course material, students will be introduced to Arabic sound and script, as well as some common vocabulary and lexical concepts shared between Spanish and Arabic. This makes sense because Muslim culture and the Arabic language were present in Iberia for the better part of 800 years.

We will discuss not only the main events that took place during the Muslim occupation of parts of Iberia but also the cultural legacy Muslims and Jews left behind in the peninsula after they were expelled in 1492, especially in the realms of art, science, language, architecture, and le savoir-vivre. We will look at the different theories put forth by scholars about the conquest/invasion of the peninsula, in regard to the ease and speed with which the peninsula was overrun by Muslims. We will examine the hereafter and the consequences of the expulsion of Muslims and Jews on the Iberian peninsula as well as the neighboring territories. Finally, we will make a jump to the 21st century and try to connect some dots by looking at the current situation in and around the Strait of Gibraltar, particularly the influx of illegal immigrants from North Africa and sub-Saharan countries, and the ensuing issues.

CGST321 Theatre for Social Change - Taught from Ecuador with Local Participants

This course is taught in Spanish. Students should have Spanish proficiency equivalent to SPAN 112 or higher. This course is designed to lead Wesleyan students and Ecuadorian community counterparts through the process of creating social change by practicing social change. Using exercises and activities that pull from the areas of Theatre of the Oppressed and Performance Activism, as well as traditional theatre tools such as movement and mask-making, we engage challenging concepts and conflicts by dialoguing via our performative work. Our exploration stretches from the theoretical foundations of structural and symbolic oppression to ongoing real-life events related to themes that are selected by the course participants (examples include cultural identity, systemic racism, privilege, power, environmental justice, and gender equality/equity). Each course participant chooses a thematic area and joins a small group with which they will apply learned methods to exploring their theme. Together, Wesleyan students with local counterparts create short virtual theatrical projects to be presented to the whole cohort. Readings cover theory and methods in Applied Theatre, community-based case studies, and articles related to the

chosen themes. The readings are contextualized to the diverse lived realities of the course's participants as well as to our globalized society.

CGST322 Storying and Re-Storying (Storytelling for Social Change) - Taught from Ecuador w Local Participants

This course is taught in Spanish. Students must have proficiency in Spanish equivalent to SPAN 112. When we consciously appropriate the power of stories to collectively reimagine our world, we turn the word story into a verb. We "story" our world. When our "storying" seeks to transform a system founded on unjust stories, we are "restorying" our world. This course begins with our human ability, and need, to tell stories, examining how we use them for communication, as well as how we become empowered or disenfranchised by them. Based on the realities present in our communities (our local community of place, college campuses, cities, neighborhoods, spiritual communities, etc.), students work with their counterparts, combining theory with practice, to create and tell stories with the goal of identifying shared conflicts and inspiring change. Since stories are told in many ways, the course engages the "telling" through various methods: writing stories and poems, Spoken Word, coloring/drawing, mapmaking, and moving our bodies. In each project, we implement the elements of storytelling, balancing distinct narrative traditions, such as myth and legend, with influences of the modern world. Readings look at a wide array of narrative theory and methods, focusing on storytelling as a form of creating and expressing knowledge. The course concludes with the interweaving of local and international stories into "our stories."

CGST323 Hebrew in the Media: From National Literature to International Films and TV Shows (CLAC 1.0)

This new language course is offered as an enrichment opportunity to students with intermediate or advanced Hebrew skills who are interested in improving all their language skills and/or acquiring additional linguistic and cultural preparation for study abroad in Israel. Cultural activities including participating in the 23rd Annual Contemporary Israeli Voices 2024 and Lunch and Learn meetings with native speakers are part of the course. In addition, special writing workshops with internationally renowned Israeli scholars will be integrated into the course curriculum. The course explores the changes in Israeli society as it moves from national ideological literature to the exploration of new multicultural media such as films and TV shows and thus gaining international fame and inspiring widespread emulation. The course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative sponsored by the Center for Global Studies. For more information, please check <http://wesleyan.edu/cgs/eventsprograms/clac/index.html>.

The course counts toward the minor in Jewish and Israel Studies.

CGST324 Cuban Literature and Film: Imagination, Revolt, and Melancholia

This course surveys the major aesthetic and socio-historical movements in modern and contemporary Cuba. Since the late 19th century, the island of Cuba has been at the center of a number of key epochal disputes: between colonialism and independence, racism and racial justice, neocolonialism and revolution, liberalism and socialism, isolationism and globalization. In the arts, the turn of the century launched a period of great imaginative invention. Considering the singular place of Cuba in Latin America, the Caribbean, and the globe, this course addresses some of the most representative works of Cuban literature and film since independence until the present time. Imagination, revolt, and melancholia are the three concepts that will orient our discussion. Imagination refers both to artistic creation and to the collective capacity of projecting new worlds, utopias, or impossible realities. Revolt, as opposed to revolution, is not restrained to politics as usual but relates rather to a deep experience of discontent and a return (from the Latin *revolvere*) to ancient psycho-social strata. Finally, melancholia serves as a point of view to understand what happens when history does not live up to emancipatory expectations. Special attention will be given to Afrocubanismo, ethnographic literature, the avant-garde aesthetics of the group *Orígenes*, Marvelous Realism, testimony, revolution, socialist experimental film, diaspora, the Special Period, and post-Soviet life.

CGST325 Media in the Arab World: From TV and Film to Social Media (CLAC.50)

Media in the Arab world has undergone significant changes in recent times, with the emergence of new technologies, platforms, and voices across various mediums such as movies, newspapers, magazines, and social media. This course will introduce students to some of the main channels for the communication and expression of information in the Arab world today.

While television remains the most popular source of information - with channels such as Al-Jazeera even having an international audience - access to information has expanded to include online news websites and social media. Social media, in particular, has become an increasingly important source of information, especially among younger generations.

In this course, we will delve into the evolution and impact of media in the Arab world, exploring its role in shaping public opinion, identities, and narratives across different channels. We will look at movies, television series, and social media programs, as well as sources of traditional information, such as newspapers, magazines, and news broadcasts.

This course is open to students studying all levels of Arabic, but is particularly suited to students who have completed Intermediate Arabic as well as native speakers of Arabic.

CGST331 Love and Suffering in Ancient Rome (CLAC .50)

In this CLAC course, students with some background in ancient Latin will read selections of the extant sources on love and suffering in Roman myth, history, and thought. The sources that we will cover will be drawn from diverse genres and periods: historiography, epic poetry, lyric poetry, and comedy. This diversity will offer a unique opportunity to students to identify and analyze the intersections of age, class, status, gender, and ethnicity and the way they shaped Roman ideology on "love." We will be looking at how cultural practice shapes language, how ideology shapes law, and how literature challenged cultural norms of love and marriage, all the while unpacking and interrogating the Roman belief that love had no place in the citizen life dedicated to serving the state: love produces suffering. In turn, we will reflect on the ideological shift in the last 150 years that has come to dominate "western" beliefs on love and marriage, that is, "all you need is love," over family, friends, and society, despite the obstacles: suffering produces love.

The selections of readings will be drawn primarily from what the students read in translation in the parent course. The final selection will be based on the level of the students. This CLAC is conceived as appropriate for students on the intermediate and advanced level of ancient Latin.

CGST334 Exploring Personhood in the 20th and 21st Centuries (CLAC 1.0)

The goal of this course is to provide a thorough examination of the concept of personhood in the 20th century by studying how it has been portrayed and understood in diverse cultural contexts across Arabic, English, and Francophone cultures. Through the use of comparative analysis and an interdisciplinary approach to cultural artifacts—such as works of literature, art, and religious texts as well as current debates around AI and personhood—students will explore how

different cultures have approached the question of what it means to be a person and how this has evolved over time. By the end of the course, students will have a deeper comprehension of the various ways in which personhood has been created and perceived throughout different cultural and historical contexts.

The impact of historical occurrences and cultural movements on the construction of personhood, the influence of religion and politics or the fictional writing on conceptions of personhood, the representation of personhood in literature and art, and the emergence of AI as a new frontier in the investigation of personhood are some of the major topics covered in the course. This will open up new discussion topics about posthuman beings and persona status, particularly in science fiction.

CGST340 Identity and "Pacha" (Land-Based Knowledge and Re-imagining Community) - Taught from Ecuador

This course is taught from Ecuador by our study abroad partner, Pachaysana.

According to indigenous Andean scholars, Pacha refers to the time-space continuum, or as the "everything around and inside us." This course asks students to challenge their identities by broadening their epistemological and ontological lenses to see their individual and collective lives as they relate to Pacha. To synthesize this complicated process, we ask participants to examine who they are as related to the ever-changing ecology in which they live. For this course, ecology is approached broadly, referring to the Greek origin on the word oikos, meaning home. We take advantage of our virtual exchange and examine home as an interconnection of how we relate to "place and space," exploring our ecology as the triad of our immediate territory (Ilakta in Kichwa), our surrounding natural environment (allpa in Kichwa), and our global and pluriversal space (pacha). Throughout the course, we use an interdisciplinary lens to examine "who we are" as related to this diverse understanding of ecology,

taking into consideration that our ever-changing environment includes an ever-changing human story. Readings are transdisciplinary, coming from the fields of anthropology, sociology, human geography, gender studies, ethnic studies, history, the arts, and development studies. Toward the end of the course, after examining certain theories and case studies, we will imagine the reconstruction of our identities contextualized to pacha, space, place, ecology, oikos, and home.

CGST341 Critical Interculturality and the Pedagogy of Unlearning

This course is offered by our study abroad partner, Pachaysana, online from their site in Ecuador, with local educators.

An ever-growing number of students, scholars, and activists criticize our educational institutions for upholding colonial structures, and via numerous movements are calling for "decolonization." Any effort to decolonize our education must go well beyond the content of what we teach in the classroom. In addition to what we are learning, we must explore how we learn, where we learn, and with whom we learn. We also must think about what "decolonization" means, taking into consideration the lands on which our campuses and communities are located. This course addresses decolonization through the lens of critical interculturality, referring to Catherine Walsh's critique of multiculturalism as functional or relational interculturality. Bringing in readings from Indigenous and Latin American scholars and taking part in workshops facilitated by local Ecuadorian community members, we will use interactive methods to explore some of the most challenging concepts related to decolonization, including "decolonization is not a metaphor," epistemic justice, border thinking, and embodied methodologies. Those concepts will then be examined with regards to the realities on our college campuses and our communities, and we will begin to dream about moving from the "functional" to the "critical." By the end of the course, informed by the readings and interactions with community-based educators in Ecuador, students will formulate clear questions and identify potential strategies for applying critical interculturality at their college campuses.

CGST352 The Communist Experience in the Soviet Union (CLAC.50)

Like the parent course, HIST353: The Communist Experience in the 20th Century, this CLAC course will engage with the problem of experience through a series

of themes: subjectivity; engaging in the political process of building socialism; aesthetics; travel and tourism; East and West; race and ethnicity; production and consumption; time and space; political engagement and disengagement; science and technology; and emotions. We will work with sources from oral histories, diaries, film, television, and the press. The final project would involve a close reading and paper on a theme covered in class using both primary and preapproved secondary sources in Russian. The student language background appropriate for this class is (preferably advanced) intermediate to native.

CGST380 Arabic in Translation: Arabic-English & vice versa (CLAC.50)

This course is aimed at introducing students of Arabic, who are already advanced in the Arabic language and have a decent command of it, to the art of translation--namely, translation between Arabic and English. After an overview of translation concepts and techniques, we will study and tackle samples from news media, literature, publicity announcements, novels, and a wide range of actual translation assignments. The course will be conducted in Arabic, except for the parts where English has to be used as part of the translation processes.

CGST413 Israeli Cinema (CLAC 1.0)

This Hebrew course will be linked to the film course, taught in English, entitled CJST 250: Eyes Wide Shut: The Eternal Presence of the Absent Arab in Israeli Cinema. This course is targeted toward students with very advanced knowledge of the Hebrew language. Students will mostly view the same films as the parent class, with special attention to the Hebrew language. We will analyze, discuss, and write on each of the films. The focus of the course will be to map the cultural and social changes in Israeli society reflected in the transformation in format and themes of Israeli films. Scholar visits will be part of the course, and students will attend a few cultural enrichment activities. This course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative; for more information, see <https://www.wesleyan.edu/cgs/eventsprograms/clac/index.html>.

CGST414 Israeli Cinema (CLAC 1.0)

This most advanced Hebrew course can be taken either as a language enrichment course to the parent course, CJST223: Israeli Women Filmmakers and Israeli Society, or taken by itself independently as an advanced Hebrew course. The focus of the course will be studying films made by female filmmakers. Students will analyze, discuss, and write on the films with special attention to mapping the cultural and social changes in Israeli society as well as changes in films' formats and themes. Conversing in Hebrew with Israeli film directors and scholars during Lunch and Learn Meetings as well as attending the screening of films in Hebrew in the 18th Annual Ring Family Wesleyan University Israeli Film Festival and writing reflective papers on films will provide a cultural and social framework for the course. In addition, the course will include special workshops delivered by renowned Israeli filmmakers and scholars. The course may be repeated for credit. This course is part of Wesleyan's Cultures and Languages Across the Curriculum (CLAC) initiative sponsored by the Center for Global Studies. For more information, please check <http://wesleyan.edu/cgs/eventsprograms/clac/index.html>.

CGST480 Engaged Projects

Engaged Projects (EPs) are rigorous, self-designed endeavors in which a student studies a topic of their choice and completes a final project intended for a non-academic audience. Students are encouraged but not required to select a topic that is connected to another class or their major. Final projects can take the form of blogs, videos, a website, or other media; a work of art, an event, a workshop, a presentation, or panel; a policy proposal or analysis; a white paper or op-ed series; a business plan; and/or any other piece(s) thoughtfully designed for the public.

EP students will develop a self-directed research and project plan. They must enlist an EP Sponsor who will serve in an advisory/mentor role; Sponsors can be Wesleyan faculty, staff, alumni, or community partners; family members or friends; or other experts or professionals willing to play this role. Seeking and enlisting an appropriate Sponsor is a component of the EP learning experience.

In addition to conducting their own extensive research and producing a summative project by the end of the semester, students will write a series of reflections to document their progress and their learning.

For more information, visit <https://www.wesleyan.edu/patricelli/engaged-projects.html>.

CENTER FOR JEWISH STUDIES (CJST)

CJST114F Netflix and Shul: Jews on TV (FYS)

Jews have always been an inseparable part of the small screen--first, mainly (but not only) as writers and producers, and gradually as characters and protagonists. Today, American television is more Jewish than ever. Jews changed TV. But did it also change them? This course will study the long history of Jews and Jewishness in American Television. Each class will revolve around one episode of a show and discuss how it reflects on different aspects of Jewish life--Jewish humor, Jewish crime, Jewish Upward mobility, Jewish guilt, the Jewish mother, Jewishness and whiteness, antisemitism, and more. In keeping with the Jewish tradition, we will obviously ask many questions, including the most complex one: What does "Jewish" mean?

CJST150F Four Bar Mitzvahs and a Funeral: Being Young and Jewish in America (FYS)

How is the American Jewish experience viewed from the perspective of Jewish children and young adults? This course will discuss depictions of Jewish coming-of-age in American popular culture. We will examine various age groups--from elementary school to college; and through various art forms--literature, film, and television ("Are You There God? It's Me Margaret," "The Plot Against America," "An American Tail," "Wet Hot American Summer," "A Serious Man," "Superbad," "Booksmart," "Glee," "The O.C.," "Big Mouth," "Never Have I Ever," among others). Analyzing these works together will illuminate different facets of Jewish American life including immigration, assimilation, education, tradition, family, anti-Semitism, and more. They will also allow us to broach more universal questions surrounding representation, identity, and the complex relationship between popular culture and society.

CJST151F What is Religion? JewBus, Museums, and the First Amendment (FYS)

Why did the FBI assault the Branch Davidians' compound near Waco, Texas, thinking it was a cult, while those inside viewed the government as serving the anti-Christ? Can one be Buddhist and Jewish at the same time? Are museums religious spaces? Does secularism protect religion from the government or the government from religion? This class will introduce you to the ways in which we study religions by reading critical case studies, including those about Muslims debating the hijab, the treatment of sacred objects in museums, and freedom of religion court cases. This is not a survey of world religions, and once you've taken What is Religion?, you'll know why we don't teach that at Wes. You will also have a critical set of intellectual tools for understanding the role of religion in the contemporary world.

CJST214 Refugees & Exiles: Religion in the Diaspora

Recent years have seen the on-going tragic refugee crisis, with millions of people being displaced because of war and ecological disasters. This course deals with the meaning of refuge, exile, and diaspora through three perspectives: philosophical, historical, and literary. What does it mean to be forced to leave one's home? How is it possible to make sense of such a tragedy? What creative power can diaspora muster to the rescue of culture? In our search for answers, we will examine a variety of case studies including the contemporary refugee crises in the Middle East, the border between the United States and Mexico, the black transatlantic, and the destruction of the temple in the Hebrew Bible. This course is a project-based Service Learning in which all assignments are geared toward the final project, in which each student will produce a radio show based on an analysis of a refugee crisis of their choice. These shows will air on WESU 88.1 FM Middletown. To learn more and listen to previous seasons of last year's radio shows visit <https://reli213.site.wesleyan.edu>

CJST216 Jesus Through Jewish Eyes

In this course, we explore the visual and textual representations of the vexed relation between Jews and Christians throughout history. Looking at the various ways in which Christianity and Judaism define themselves vis-à-vis the other allows us to understand what mechanisms of cultural appropriation, subversion, and hidden polemics are at work. Special attention will be given to the figure of Jesus as a point of artistic and theological contention. How do artistic representations change our understanding of religious themes? What is at stake for each religion in the encounter with the other? What are the political implications of theological debates? Is this dialogue needed, or even possible, in our post-secular age?

CJST219 The Environment, The Bible, and Moral Debate

The environment is a pressing concern for many people and is the center of much modern debate. Within this debate, many people draw on biblical texts for a source of religious or moral superiority. These biblical texts have been used to support many different, and often contradictory, arguments within the environmental debate. So what does the bible actually say about the environment? Is there a singular "biblical" view about what the environment is and how one should treat it? This course aims to look at how the bible has been used in environmental debate and then look at the texts cited, analyzing both in a modern and ancient context.

CJST221 Jewish Identity in the Ancient World

Jewish Identity is not monolithic but instead, wonderfully, varied, and diverse. The Hebrew Bible gives a multitude of accounts of how many different identities within the course of history came to be and through analyzing these accounts, this course will aim to answer the questions of: What did Jewish Identity look like in the time period of ancient Israel? What variety of identities can be seen in the Hebrew Bible itself? What key historical events aided in the development of different identities in the ancient world? What was the process of identity formation in the ancient world? Is that process of identity formation different than how one might construct identity today? Is it right to even speak of Jewish Identity in 600-700 years in which the Hebrew Bible was written?

CJST223 Israeli Women Filmmakers and the Israeli Society

Historically, women filmmakers account for only around seven percent of the films produced in Israel, reflecting the marginalization of the female voice in the local society, culture, and discourse. However, in the last decade, they have

finally moved to the center stage to create some of our time's most successful and essential Israeli films. This course will discuss Israeli women's cinema from artistic and historical vantage points. Students will engage in critical thinking and use film theory and terminology to analyze the featured films, and to contextualize them in the broader context of Israeli history. This analysis will reveal recent shifts in Israeli society, including how women find their place in the army, how they fight the patriarchal religious institutions, and how they turn the Israeli His-tory into the Israeli Her-story. Furthermore, the course will touch on more universal questions on narrative structure, representation, and the male and the female gaze.

CJST224 The Holocaust in Contemporary Popular Culture

How to describe the indescribable and to speak the unspeakable? Long after the end of World War II, filmmakers still grapple with these questions, and their answers vary ethically and aesthetically. This course will discuss depictions of the Holocaust in contemporary popular culture. We will touch on graphic novels, TV sketches, and social media, but mainly focus on film. While the time frame will be limited to mainly the last two decades, we will explore a vast range of texts including: Hollywood fare and East European art-house movies; gritty dramas and dark comedies; reenactments of real-life events and alternative history. From Hipster Hitler to the Jojo Rabbit, from "Inglorious Basterds" to "Son of Saul," what all these examples share is an artistic and thematic audacity. We will examine how they try to propose new and unsettling answers to old but ever-vital questions: How did the Holocaust happen and might it happen again?

Offering: **Host**

CJST230 Antisemitism in Popular Culture

This course will explore how popular culture engages with antisemitism. We will study a wide range of texts from different periods, including short stories and sitcoms, silent films and Netflix hits. We will examine how they engage with antisemitism, challenge and combat it, reflect on it, and sometimes, consciously or subconsciously, reflect it and perpetuate antisemitic stereotypes. Among others, we will discuss how the Austrian novel *City Without Jews* predicted the Holocaust; why Hollywood was so hesitant to produce *Gentleman's Agreement* and *School Ties*, two of the only films that directly confront antisemitism, and how it portrayed Deborah Lipstadt's battle against Holocaust deniers; and how Jerry Seinfeld, Larry David, and French comedians use humor and self-deprecation to tackle attacks against their community. We will also see how popular culture views antisemitism in the broader context of White supremacy and violence directed at other minority groups.

CJST233F Holocaust Remembrance in Germany: The Third Generation (FYS)

Remembering the Nazi past is a fundamental aspect of postwar German culture. In this course, we will trace the Holocaust's aftermath in contemporary German literature and thought. We will pay close attention to the socio-cultural and historical-political changes in attempts to glean new meanings from a past that is both omnipresent and highly evanescent. It will be our particular concern to encounter versions of Jewish identity and attempts to prescribe different narratives. We will focus especially on contrasting the creative works of the

immediate postwar period and "the third generation." These contemporary writers explore a historical trauma that has become an integral part of specific Jewish-German identity. At the same time, their temporal and personal distance to the actual events necessitates new imaginative approaches to the past. Careful readings of literary, theoretical, journalistic, and historical texts, as well as personal discussions will enable us to critically think about the challenges and limits of how to write about the Holocaust 70 years after it occurred, and how the difficulties in doing so might inform other kinds of writing about historical and personal trauma. Students need to read Olga Grjasnowa's "All Russians Love Birch Trees" prior to the start of the course. Students will have Zoom class discussions and intensive peer-feedback-driven writing practice.

CJST244 Introduction to the Hebrew Bible (Old Testament)

The Hebrew Bible is one of the most influential texts in the world. From antiquity to the present, it has served as a source of philosophical, literary, and artistic reflection. It is a fascinating document, combining narrative, poetry, law, prophetic proclamations, and puzzling parables. What kind of book is the Hebrew Bible? Who wrote it and why? How do we approach such a text across the distance of time? Through a systematic reading from the very beginning, we will place the Bible in its historical context while giving special attention to the philosophical and literary questions it raises: Is obedience to authority always justified? Why do good people suffer unjustly? What is God's gender? In answering these and other questions, you will gain an understanding of the ways contesting interpretations make authoritative claims.

CJST248 Designing Reality in Israeli Documentary Film

In the last decade, Israeli documentary films have crossed borders not just geographically but also by their form and style. They are bold, courageous and provocative. They have been participating in prestigious international film festivals, receiving important awards and mostly bringing the Israeli audience back to the cinema, having a crowd power like fiction films. So what makes Israeli documentary films a "hot property"? In this class we will look for the answers by watching and discussing 14 Israeli documentary films (among them "Paper Doll," "In Satmar Custody," "Presenting Princess Shaw," "No.17"). The course will raise questions about reality and the construction of reality in Israeli documentary films.

CJST249 From Black and White to Colors: Israeli Cinema, a Melting Pot Fragmented

The course will focus on Israeli cinema as a reflection of a society that was founded as a melting pot for all Jews and became sectorial. Israeli cinema originated as a tool for establishing a unified national identity evolved over the years into a means of expression for ethnically defined subcultures within society. During the course, the students will explore past and contemporary films and will follow the shift they represent in the current Israeli experience turning away from the original Zionist core into several isolated groups distinguished by ethnicity, traditions, and language. We will examine Moroccan, Persian, Georgian, Russian, Yiddish, Ethiopian, Arab, etc. films produced in Israel by local filmmakers digging deep into the experience of immigration, seclusion, rediscovering their roots, and even expressing yearnings to the countries of origin.

CJST250 Eyes Wide Shut: The Eternal Presence of the Absent Arab in Israeli Cinema

The course will focus on contemporary Israeli cinema and how it reflects shifts in local society; mainly the ways in which a new national identity and culture are being forged at the expense of the Israeli-Palestinian conflict--which is marginalized, repressed, sublimated, or left out altogether. As this concerns mainly the Hebrew-speaking cinema, we will also discuss the emergence of an unprecedented wave of Arab-speaking Israeli-Palestinian cinema, which is thematically groundbreaking. This introduction to the new generation of Israeli filmmakers, who differ dramatically from their predecessors, will help us better understand the ever-changing Israeli society. Watching closely, we will discover that the conflict is always present in the Israeli experience, even when it is seemingly absent. An optional CLAC course, which is conducted in Hebrew and carries a full credit, is offered to students with advanced Hebrew skills. The course will include visits from scholars in the field, watching movies in Hebrew and/or with Hebrew subtitles and students' presentations.

CJST252 The Five Rachels: Jewish Women in Contemporary American Culture

The course will focus on five iconic contemporary female TV characters, actors, and creators; American, Jewish, and incidentally--or not--sharing the same name: Rachel. Rachel Green ("Friends"), Rachel Berry ("Glee"), Rachel Menken ("Mad Men"), and Rebecca Bunch ("Crazy Ex-Girlfriend"), played by Rachel Bloom, and Midge Maisel ("The Marvelous Mrs. Maisel"), played by Rachel Brosnahan. These five complement each other and offer us a panoramic view of the American Jewish female experience: discrimination, inclusion, the generational gap, and their relationship with Israel. In addition, they allow us to explore the three most common stereotypes associated with the Jewish woman: the Jewish nose, the Jewish mother, and the Jewish American princess. We will discuss the conflicts and the societal shifts these characters embody, and how they define themselves, their Jewishness, their femininity, their unique surroundings, and place in history.

CJST253 Jews and Therapy in Films, Books and Television

Popular culture features many depictions of therapy. More often than not, these representations have some kind of Jewish relation: the creators of the media are Jewish, the therapist is Jewish, the patient(s) are Jewish, or all of the above. From Freud's iconic psychoanalytic couch to potato couches watching shows about his legacy, this course will examine the long-time connection between Jews and treatment. We will read books, watch romantic and horror films, binge on limited series, and ask: what can we learn from therapy about Jewish culture and history, and what can Jews teach us about therapy?

CJST254 Four Bar Mitzvahs and a Funeral: Being Young and Jewish in America

How is the American Jewish experience viewed from the perspective of Jewish children and young adults? This course will discuss depictions of Jewish coming-

of-age in American popular culture. We will examine various age groups from elementary school to college, and through various art forms--literature, film, and television. Analyzing these works together will illuminate different facets of Jewish American life including immigration, assimilation, education, tradition, family, anti-Semitism, and more. They will also allow us to broach more universal questions surrounding representation, identity, and the complex relationship between popular culture and society.

CJST272 Ethics After the Holocaust

The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human after Auschwitz. In this course, we will investigate how the Holocaust orients contemporary discussions on questions of guilt, forgiveness, and evil. What does it mean to remember, to forgive, and to forget? Can one ethically represent the Holocaust in art? We will explore these questions using various sources, including works by Hannah Arendt, Adorno, and Emmanuel Levinas, as well as museums, memorial sites, and cinematic representations.

CJST272F Ethics After the Holocaust (FYS)

The philosopher Theodor Adorno declared, "To write poetry after Auschwitz is barbaric." The Holocaust is a challenge to our understanding of modern society, ethics, and what it means to be human. We will engage films, graphic novels, art, and philosophical works as we try and grapple with the contemporary presence and relevance of the Holocaust. Are comparisons of other genocides to the Holocaust helpful or offensive? Was the Holocaust a lapse into barbarism or a dark side to the logic of modernity? We will see how thinkers such as Hannah Arendt, Emmanuel Levinas, and Martin Buber grappled with these and related questions such as the problem of evil, the meaning of suffering, and the presence of God in the death camps.

CJST280 The Jewish Mother

What is a "Jewish Mother"? Is it a technical definition--a mother who is Jewish, a Jew who is a mother? Or is it a more abstract notion--a character trait, a mindset, an attitude? What are the qualifiers required to be crowned (or not) as a "Jewish Mother"? This course will examine how the "Jewish Mother" depiction evolved and became a stock character in American culture. We will engage with different forms of content, from different periods and perspectives: feature films, TV series, pop music, novels, and non-fiction books. Through these texts, we will discuss how daughters and sons view and confront their mothers, and how they reflect on the mother's presence or absence with anger, frustration, confusion, longing, admiration and gratitude. Finally, we will compare the depiction of the "Jewish Mother" to other non-Jewish matriarchs and ultimately ask: in current popular American culture, are all mothers actually "Jewish Mothers"?
